VOLUNTARY ANNOUNCEMENT
PROGRESS ON SELF-DEVELOPED MULTIMODAL INTELLIGENT AGENT SYSTEM

This announcement is made by the board of directors (the "**Board**") of Concord Healthcare Group Co., Ltd. (the "**Company**") on a voluntary basis.

The Board is pleased to announce that the Company has made another significant progress in the field of artificial intelligence. Based on its self-developed optimized large model, the Company has successfully constructed a self-evolving multimodal intelligent agent architecture, and created a revolutionary intelligent physical examination report system that has commenced trial operation at partner institutions.

This system employs a top-tier expert chain-of-thought model to continuously learn and update cutting-edge medical knowledge in real time. It comprehensively analyzes users' multimodal data such as physical examination images, tests and medical histories to generate personalized health reports. By eliminating human errors and precisely identifying complex health risks, the system significantly reduces misdiagnosis and missed diagnosis rates. It also supports real-time integration with telemedicine nodes, and generates expert-level reports within seconds. This ensures primary institutions enjoy the analytical capabilities equivalent to those of Class IIIA hospitals, making high-quality medical resources accessible without boundaries.

The transition from traditional physical examinations to intelligent physical examinations represents not merely a technological advancement but an industry-wide transformation. This system empowers every physical examination dataset to serve as an intelligent guide for precision health management.

Shareholders and potential investors of the Company are advised to exercise caution when dealing in the shares of the Company.

By order of the Board
Concord Healthcare Group Co., Ltd.
