**QUARTERLY RESULTS REPORT FOR THE
PERIOD ENDED 31 MARCH 2010**

* *For identification purpose only*

CHARACTERISTICS OF THE GROWTH ENTERPRISE MARKET (“GEM”) OF THE STOCK EXCHANGE OF HONG KONG LIMITED (THE “STOCK EXCHANGE”)

GEM has been established as a market designed to accommodate companies to which a high investment risk may be attached. In particular, companies may list on GEM with neither a track record of profitability nor any obligation to forecast future profitability. Furthermore, there may be risks arising out of the emerging nature of companies listed on GEM and the business sectors or countries in which the companies operate. Prospective investors should be aware of the potential risks of investing in such companies and should make the decision to invest only after due and careful consideration. The greater risk profile and other characteristics of GEM mean that it is a market more suited to professional and other sophisticated investors.

Given the emerging nature of companies listed on GEM, there is a risk that securities traded on GEM may be more susceptible to high market volatility than securities traded on the Main Board and no assurance is given that there will be a liquid market in the securities traded on GEM.

The principal means of information dissemination on GEM is publication on the internet website operated by the Stock Exchange. Listed companies are not generally required to issue paid reports in gazetted newspapers. Accordingly, prospective investors should note that they need to have access to the GEM website in order to obtain up-to-date information on GEM-listed issuers.

The Stock Exchange takes no responsibility for the contents of this report, makes no representation as to its accuracy or completeness and expressly disclaims any liability whatsoever for any loss howsoever arising from or in reliance upon the whole or any part of the contents of this report.

This report, for which the directors of Qianlong Technology International Holdings Limited (the “Directors”) collectively and individually accept full responsibility, includes particulars given in compliance with the Rules Governing the Listing of Securities on the GEM of the Stock Exchange for the purpose of giving information with regard to Qianlong Technology International Holdings Limited. The directors, having made all reasonable enquiries, confirm that, to the best of their knowledge and belief: (1) the information contained in this report is accurate and complete in all material respects and not misleading; (2) there are no other matters the omission of which would make any statement in this report misleading; and (3) all opinions expressed in this report have been arrived at after due and careful consideration and are founded on bases and assumptions that are fair and reasonable.

PRODUCT DEVELOPMENT

After the reorganization, Shanghai Qianlong High Technology Co., Ltd with its wholly owned subsidiary Shanghai Qianlong Network Technology Co., Ltd and Shanghai Xinlong Information Technology Co., Ltd has upheld the new development structure for Qianlong series products and the business has begun to attain new achievements.

In these ten years, the securities market has undergone staggering adjustments, but Qianlong products had still achieved anticipated results.

On organizational users' market, the Company accepted and completed the Index Disclosure platform for Shenyin Wanguo, consignment transaction platform for A shares for Pacific Securities, Huatai Securities, Minsheng Securities and the Hong Kong stock consignment transaction platforms for Guoxin Hong Kong, Commercial Hong Kong, etc., which have achieved further application.

On individual user products, the Company launched the decision analysis software for Stock Index Futures, named "Futures Index Winners". After the formal launch of stock index futures, the product will bring new profits. The decision analysis model of Futures Index Winners has absorbed the wisdom of professional experts with long years of actual experience in foreign stock index futures, allowing the software to not only disclose live information of stock index futures, but also become a stock index futures decision analysis tool rarely seen in China. The product will be welcomed by investors at the launch of stock index futures. The traditional software Qianlong Golden Eye and Qianlong Gang Gu Tong has also achieved stable development for users. The Golden Eye series have launched an exceptional version in the market, including 10 grades of deep information of L2 for Shanghai and shenzhen markets, becoming the upgraded product of original L2 flash version for Shanghai Securities. Qianlong has also become one of the first brands to obtain the whole market information operation approval from Shanghai and Shenzhen markets.

Qianlong's new generation of system has achieved significant advances and attained opportunities to show and test the system to securities agencies with large market influence. The new system will cover all securities end applications, including information, marketing and consignment to support and help securities agencies to build and develop their individual competitive edge. Once widely launched, this will bring the securities information industry onto a completely new stage.

BUSINESS REVIEW

During the year, the economy of Mainland China continues to be in the recovery process; the progress of the economy brings the improvement of securities markets. Securities market transaction products are improving continuously. Other than stock, debts, funds, futures and these main financial products, financial instruments and stock index futures have launched or will be launching, pushing the securities market to further expand. For the three months ended 31 March 2010, the Group's growth appears very good with increase of sales income and continuous expansion of market scale. To accommodate the changing market, the Group's management team is launching new products, accelerating adjustments to product structure; increasing investment in research, developing new product actively and enhancing the quality of current products; expanding human resource team by method of combining outside recruitment and inside training to establish good human resource and technical reserve; improving current business, encouraging business innovation; strengthening sales team organization, building services structure and improving service standard.

With hardware updates in securities houses and the variance of investors' requirements, the current Novell platform cannot meet the requirements of the fast changes made by securities houses. Therefore, the Company researched and developed a complete solution based on Linux platform. The complete system has been transferred from Novell platform to Linux platform with consideration to practicability and safety. The layout and function on the customers' end retain Qianlong's traditional features and usage, allowing a seamless transfer without users noting a system change at all. This was greatly welcomed by the securities houses, resulting in good sales trend.
