CHARACTERISTICS OF GEM OF THE STOCK EXCHANGE OF HONG KONG LIMITED (THE “STOCK EXCHANGE”)

Given that the companies listed on GEM are generally small and mid-sized companies, there is a risk that securities traded on GEM may be more susceptible to high market volatility than securities traded on the Main Board and no assurance is given that there will be a liquid market in the securities traded on GEM.

The Group had been participating in the following activities:

- Trading of Electronic Hardware Components (Display Modules including mainly IC Drivers and LCD panel) with Compatibilities Solutions Advisory Services; and
- Property Development and Investment

BUSINESS REVIEW

Trading of Electronic Hardware Components (Display Modules including mainly IC Driver and LCD panel) with Compatibility Solutions Advisory Services

Revenue for the three months ended 30 June 2020 decreased by approximately 45.3%, from approximately HK\$124,734,000 for the same period in last year to approximately HK\$68,193,000 in this year's period since our customers adopted prudent marketing strategies for their businesses due to trade war. A turnaround from profit of approximately HK\$358,000 for the same period in last year to loss of approximately HK\$1,675,000 in this year's period was obtained.

Property Development and Investment

The Group has a real estate development project in the area of Yangjiang City, Guangdong Province, PRC. The project the Group held is still in active sales by the associate company on the few remaining residential and commercial units. The Group will continue with its cautious investment approach and will make necessary preparations against possible adverse conditions due to market competition and tightened government policies for the sector.

During the period, the Group has one property investment, which is located in Yangjiang City. The property investment located in Yangjiang City comprises 2 vacant lands of total site area of approximately 16,128 square meters, which are opened for sale currently.

Prospects

The management of ETC Technology Limited (“ETC”) will continue to enforce its effective cost controls including renegotiating favourable credit terms with major vendors. Besides, the management has begun renegotiating credit terms with existing customers for a shorter credit period. Hence, our customer base will be optimised to utilise our financial resources in the most efficient way to reduce the finance costs.

However, the management predicts overall market condition will be difficult as global smartphone shipment declined in 2019 and the outlook for 2020 is still uncertain. Other external factors, such as potential trade war and exchange rate fluctuation may cast darker cloud. The management of ETC will continuously review their business approach and will make necessary preparations against possible adverse conditions due to trade war and market competition.

For the property development business, it is still in an adjustment period since the last quarter of 2017 that the PRC government have lifted the purchase restrictions for properties in some third and fourth-tier cities, including Yangjiang City. The management will continuously and carefully balance our business strategy in this heavily government policy-influenced market. The Group will closely monitor the market conditions in Yangjiang City and will also actively seek for potential business opportunities elsewhere.

Moving ahead, the Group will continue to work hard on our existing businesses, and will actively look for new investment opportunities while optimising our financial resources. We are committed to enhancing the business performance and to bringing better return to our shareholders.

According to the PRC Natural Gas Industry Development Report (2018) (中國天然氣發展報告(2018)) published in August 2018, the PRC government has plans to boost the natural gas usage in the PRC. In view of the overall energy policy, the PRC government also set a goal to increase reliance on natural gas to 10% – 15% of total energy consumption by 2030, while natural gas consumption only accounted for 7.3% in 2017.
