### EMISSIONS

As advocated by the Paris Deal, all nations worldwide have taken decisive steps in response to climate changes. In order to support the green and low-carbon transformation action, China has proposed to achieve the peak carbon dioxide emissions by 2030 and realize the strategic carbon neutrality decision by 2060. To cooperate with the state in achieving the double carbon goals, the Hong Kong Government also announced to realize the carbon neutrality by 2050. The Group has proactively responded to this and maximized its efforts to support the national goal. It will conduct the carbon emission management planning for the comprehensive finance business and the supply chain finance business of the Group, identify all sources of emissions through a thorough check on the carbon emission information, and establish the corresponding carbon reduction goal and action plan through risk analysis and data calculation.

The Group strictly adheres to the state and local relevant laws and regulations and strictly controls various emissions from its business operations so as to ensure that all production processes meet the relevant laws, regulations and industrial standards. During the Reporting Period, the Group did not have any non-compliance incidents relating to air and greenhouse gas emissions, discharges into water and land nor generated any hazardous and non-hazardous wastes.

#### 1. Air Emissions

The comprehensive finance business and the supply chain finance business of the Group will generate greenhouse gas emissions in the process. Specifically, the greenhouse gas emissions from the comprehensive finance business are mainly derived from the direct or indirect emissions from the fuel consumption in the use of business vehicles, external purchase of electricity, paper and water consumption and business flying; the greenhouse gas emissions from the supply chain finance business are mainly deprived from the fuel combustion used for the operation of production equipment in the hog breeding farms in addition to that from above sources.

#### 1. 空氣排放物

本集團的綜合金融業務及供應鏈金融業務在業務開展過程中均會產生溫室氣體排放。其中綜合金融業務的溫室氣體排放主要來源於公務車使用的燃料消耗、外購電力、紙張和用水消耗及商務飛行所致的直接或間接排放；供應鏈金融業務的溫室氣體排放除上述來源外，還來自於生豬養殖場內生產設備運作使用的燃料燃燒。

## 環境、社會及管治報告

During the Reporting Period, there were significant increases in the greenhouse gas emission of the Group, mainly due to the higher greenhouse gas emission arising from the use of resources as a result of the higher consumption of resources, such as electricity and water, required for the production and operation of the hog breeding farms of the supply chain finance business of the Group.

As carbon emissions are an important part of the climate change agenda, the Group will install and utilize biogas generators to convert the biogas in the production process into fuel gas and use the heating power generation for the production and operation of hog breeding farms, so as to reduce waste emissions from electricity consumption of fossil fuel and achieve low carbon development of the Group. In addition, the Group undertakes that it will plant about 100,000 trees and 300 mu of grassland by 2025, thus offsetting the carbon emission from business operations.

In addition, the Group has formulated relevant travel management regulations and management measures for business vehicles to reduce the emissions of greenhouse gas in daily operation, including:

- Reducing carbon emission generated from domestic and overseas business trips by taking priority of using communication means such as conference calls and electronic communications;
- Railways are preferred for short business trips to reduce operating costs while reducing the impact of excessive energy consumption on the environment;
- Prior to the departure of business vehicles, we use map software to understand the traffic condition, plan the itinerary and the expected travel time in advance, so as to select the appropriate route and save the travel time and costs;
- The taking of business vehicles is advocated when all of our employees travel out for business;
- By using the electronic toll collection system, vehicles can save the parking time for passing tunnels or main line toll stations, thereby reducing emissions of vehicle exhaust and improving air quality;
- Carrying out proper maintenance regularly on the business vehicles to inspect the tires to ensure that the pressure of the tires reaches an appropriate level and to extend the useful life of the vehicles;
- Encouraging the employees to achieve green commuting by walking and riding during the pandemic control period.

於報告期間，本集團的溫室氣體排放量有明顯上升，主要是由於本集團供應鏈金融業務的生豬養殖場在生產運營過程中需消耗較多電力和水等資源，其資源使用過程會產生較多溫室氣體排放。

碳排放是氣候變化議題中的重要一環，為了實現集團的低碳發展，我們將於2022年安裝並啟用沼氣發電機，將生產過程中的沼氣轉化為燃料氣，供熱發電用於生豬養殖場生產運營，以減少自化石燃料的電力消耗帶來的廢棄排放。我們還承諾將在2025年前，種植約10萬棵樹木及300畝草地，以抵消因業務開展而產生的碳排放量。

此外本集團亦已通過制定相關差旅管理規定及公務用車管理辦法以減少日常辦公中的溫室氣體排放，其中包括：

- 優先採用電話會議、電子通訊等溝通方式，減少因本地及境外差旅產生的碳排放；
- 在短途差旅中優先使用鐵路，在降低運營費用的同時減少過度耗能對環境造成的影響；
- 於公務車出行前，使用地圖軟件了解行車狀況，提前規劃行程及預計行車時間，從而選定合適的路線，節省行程時間及費用；
- 集體外出公務活動時提倡合乘業務用車；
- 通過使用電子道路收費系統，節省車輛通過隧道或幹線收費站的停車時間，從而減少汽車廢氣排放，幫助改善空氣質量；
- 對公務車定期進行適當的保養，檢驗輪胎以確保胎壓達到適合的水平，延長汽車的使用壽命；
- 疫情防控期間鼓勵員工通過步行、騎行實現綠色通勤。

### 2. Waste emissions

All the wastes produced by the Group are treated in strict accordance with the Law of the People's Republic of China on the Prevention and Control of Environmental Pollution by Solid Wastes, the Law of the People's Republic of China on Animal Epidemic Prevention and other relevant state laws and regulations. The wastes produced by us were mainly from the hog breeding in the supply chain finance business, and the comprehensive finance business also produces a small amount of wastes.

The main harmless wastes from hog farms include hog manure, kitchen wastes and household garbage. We use dry manure cleaning process for hog manure organic fertilizer processing to achieve daily clearance; Household garbage is regularly delivered to local sanitation departments and recycling stations for centralized treatment. We are also equipped with an animal carcass degradation processor for timely and harmless disposal of dead hogs and their discarded internal organs.

For harmful wastes, medical wastes, such as abandoned animal vaccine needles and expired drugs, are the main hazardous wastes generated in the production process of the Group's supply chain finance business. Hazardous and dangerous wastes are stored in the temporary storage rooms with clear hazard labels and warning slogans. The Group has entrusted the state-approved hazardous and hazardous wastes disposal units to conduct regular treatment so as to ensure that there will be no harm to the environment and society during production, collection, storage and treatment.

The hazardous wastes generated by the Group's comprehensive finance business are mainly a small amount of discarded drugs, lamps, batteries, and discarded office equipment such as ink cartridges. The hazardous wastes from our Hong Kong office are handled by the property management office of the office building, thus there is no relevant information. As for the hazardous wastes generated by our mainland offices, we will first classify them and then hand them over to professional organizations with relevant qualifications for disposal so as to ensure that they will not cause pollution to the environment. As the relevant information is small and difficult to calculate, we will not disclose them here. The harmless wastes are mainly waste paper products, and part of waste paper is recycled.

### 2. 廢棄物排放

本集團產生的所有廢棄物均嚴格按照《中華人民共和國固體廢物污染環境防治法》及《中華人民共和國動物防疫法》等相關國家法律法規要求處理。我們產生的廢棄物主要來源於供應鏈金融業務中的生豬養殖，綜合金融業務亦有產生少量廢棄物。

生豬養殖場產生的主要無害廢棄物包括豬糞、廚餘及生活垃圾。我們運用干清糞工藝對豬糞進行有機肥料加工，實現日產日清；生活垃圾定期交由當地環衛部門及回收站集中處理。我們亦配備了動物屍體降解處理機以便及時對死豬及廢棄內臟組織進行無害化處理。

有害廢棄物方面，醫療廢棄物如廢棄動物疫苗針管、過期藥物等是本集團供應鏈金融業務生產過程中產生的主要有害廢棄物。有害危險廢棄物均存放在暫存間，並貼有明確的危險標籤及警示標語，本集團已委託符合國家認可的危廢處理資質單位進行定期處理，確保從生產、收集、存儲到處理過程不對環境和社會造成危害。

本集團綜合金融業務產生的有害廢棄物主要是少量的廢棄藥品、燈管、電池，廢棄的辦公設備如墨盒等。香港辦公室的有害廢棄物均由所在辦公大樓物業管理處統一處理，故並無相關的數據。對於內地辦公室產生的有害廢棄物，我們會先對其進行分類，然後交由具有相關資質的專業機構對其進行處置，確保不會對環境造成污染，相關數據微小且難以統計，故不在此披露。無害廢棄物主要為廢棄紙製品，我們對其中部分廢紙進行回收利用。

## 環境、社會及管治報告

We acknowledge the importance of green operation, and undertake that 100% of hazardous wastes produced in the production will be treated by hazardous wastes disposal units holding the relevant qualifications, and that environmentally-friendly paper will be used for all of the promotional materials and office paper of the Group by 2025.

We take various measures to reduce resource consumption and waste emission so as to minimize the total amount of wastes.

For daily management:

- To reduce the use of disposable paper cups and replace them with porcelain cups that can be used after repeated cleaning;
- To promote the paperless office and replace printed copies with electronic documents whenever possible;
- To select formats with high utilization efficiency of paper for the documents that need to be printed, for example, to choose a small font and line space when printing the documents, and to choose duplex printing whenever possible;
- To place boxes to collect non-confidential papers for recycling and reuse;
- To set up garbage bins to collect discarded face masks, and hand over them to the property management office for disposal;
- To replace LED screen with cloth meeting banner;
- To choose recyclable categories when purchasing stationery and to reuse stationery such as envelopes, folders and document bags.

For hog breeding farms:

- To strictly control the classification and management of non-harmful wastes and hazardous wastes;
- To conduct the utilization of feces resources and to recycle hog manure as organic fertilizers for use in farms;
- To regularly deliver paper packages produced in the production to the collection depots for recycling.

我們深知綠色運營的重要性，承諾生產過程中產生的所有有害廢棄物100%由有危廢處理資質的單位處理，絕不私自處理，同時承諾到2025年本集團所有宣傳資料及辦公用紙100%為環保紙張。

我們還通過多種措施減少資源消耗及廢棄物排放、以最大限度地減少廢棄物總量。

日常管理方面：

- 減少使用一次性紙杯，改以可重複清洗後使用的瓷杯替代；
- 推廣無紙化辦公，盡量以電子文件代替打印；
- 需打印的文件使用空間利用效率高的格式，如打印文件時選用較小的字體及行距，並盡量採用雙面打印；
- 設置容器收集非機密文件紙張以回收再用；
- 設置垃圾桶收集廢棄口罩並交給大廈管理處進行處置；
- 利用LED電子屏幕代替布制會議橫幅；

### 3. Water discharge

The hog breeding farms in the supply chain finance business of the Group will produce wastewater, such as breeding wastewater and household waste. We place high importance on wastewater treatment for which we have built relevant wastewater treatment facilities. The specific wastewater pollution prevention and control process is as follows:

1. Diversion of rainwater and sewage: Rain ditches have been constructed to separate the rainwater and sewage collection and transportation system. Rainwater is drained to the surrounding water body through the municipal storm water pipe network, and the sewage system is adopted using a sewer layout, thus the rainwater and sewage diversion is achieved.
2. Wastewater treatment: Domestic wastewater and breeding wastewater are treated using biotechnologies and the “solid-liquid diversion + black-film anaerobic fermentation + aerobic treatment tank + oxidation pond” process. After being treated, the wastewater can meet the irrigation standards for dry crops in the “Water Quality Standard for Farm Irrigation GB5084-2005” and the stricter value of the maximum permitted daily discharge concentration of water pollutants in intensive livestock and poultry farming (the standard value for the Pearl River Delta) under the “Pollutant Discharge Standards for Livestock and Poultry Industry DB44/613-2009”, the local standard in Guangdong Province.
3. Recycling irrigation: After treatment, the wastewater is irrigated to the surrounding farmland, dry land and economic forests through irrigation pipes.

By actively implementing the concept of green recycling, energy conservation and emission reduction, environmental protection, we achieve the goal of zero sewage discharge through sewage recycling, treatment, reuse, and integrate the concept of ecological harmony into the production and operation so as to realize the wide acceptance of, and to deliver mutual benefits from, the business development and the sustainable development concept.

During the year, the sewage after treatment was used for irrigation in approximately 382.5 mu of twice-ploughed farmland, thus achieving the recycling of resources and promoting the sustainable development of the environment.

### 3. 水的排放

本集團供應鏈金融業務的生豬養殖場在運營期間會產生污水，如養殖廢水、生活污水等。我們十分重視污水處理，為此已建設相關的污水處理設施，具體廢水污染防治流程如下：

1. 雨污分流：建設雨水溝，實行雨水和污水收集輸送系統分離，雨水經市政雨水管網排至周邊水體，污水系統採取暗溝布設，雨污水分流。
2. 廢水處理：生活污水、養殖廢水經生物技術處理後，採用「固液分離+黑膜厭氧發酵+好氧處理池+氧化塘」的處理工藝，廢水經處理後可達到《農田灌溉水質標準GB5084-2005》中旱作作物灌溉標準和廣東省地方標準《畜禽養殖業污染物排放標準DB44/613-2009》集約化畜禽養殖業水污染物最高允許日均排放濃度(珠三角標準值)較嚴值。
3. 回用灌溉：廢水處理後經灌管道澆灌至周邊農田、旱地及經濟林。

我們積極貫徹綠色循環、節能減排、環境保護的理念，通過污水回收、處理、再利用的方法，實現污水零外排的目標，將生態和諧理念融入到生產運營中，以實現業務發展與環境可持續發展理念互通互贏。

本年度，經處理後的污水為約382.5畝復耕地進行澆灌，實現了資源循環利用，促進了環境可持續發展。

### ENVIRONMENT AND NATURAL RESOURCES

The Group is well aware that the hog breeding business in the supply chain finance is water and electricity-intensive, and that it has increasing impact on the environment and natural resources during the course of business. We have proactively responded and tried to adopt a combination of various means to minimize the impact.

The Group values the issue of management and resource utilization of the emissions from the operation of the breeding farms. It achieves the reasonable utilization, promotes the recycling breeding and realizes a virtuous cycle under the guiding thinking of ecological breeding. We collect the feces produced by the breeding farms and return them as organic compost for use in farmland. After the sewage and bio-liquids produced from breeding are intensively treated, they are returned to farmland for irrigation, thus achieving the zero emission of sewage. Meanwhile, we actively prepare for the construction of biogas power generation and collect biogas for power generation, so as to reduce the impact of power consumption of fossil fuels on the environment.
