II. REASONS FOR THE CHANGE IN THE ESTIMATED RESULTS FOR THE PERIOD

In the first half year of 2022, despite various adverse factors such as macroeconomic downturn, spread of the pandemic, shortage of chips and continuous increase in raw material prices, the new energy vehicle industry performed well. The sales volume of new energy vehicles of the Group showed a strong growth momentum, repeatedly hitting record highs, and its market share was far ahead of the market, achieving a rapid year-on-year growth, promoting a significant improvement in profitability, and partially offsetting the profitability pressure brought by upstream raw material prices. In terms of handset components and assembly business, the demand in the consumer electronics industry was weak, but the Group's profitability recovered due to the improvement of cost control capability and product structure adjustment.
