Such expansion of business scale and our multi-scenario coverage have helped to provide our riders with higher income and more choices and have encouraged more riders to join our platform. While generating a large number of flexible part-time jobs opportunities, we continue to strictly implement our platform responsibilities and expand our services to protect the rights and interests of our riders, and are committed to providing professional empowerment and comprehensive support to our riders.

We value riders' personal development and skill enhancement and have built a rider development system. Riders can freely choose among professional path, management path and other aspects, to achieve personal growth. We have enriched the online learning resources offered by the Rider Academy (騎手學院), designing courses around topics that riders are most concerned about, including income enhancement, emergency handling, and safety. The participation rate of riders in online courses has significantly increased compared to the same period last year. Additionally, we have introduced a series of courses exclusively for female riders, covering topics such as family, women's rights protection, experience sharing, and health.

Our Technologies

Technology is the core of our business and is the key to efficiency enhancement and cost improvement. We are committed to advancing digitalization and intelligent decision-making in all business operations. Our City Logistics System (CLS) comprises three core functions: intelligent business planning and marketing management, integrated rider dispatch and intelligent order distribution, and smart operational optimization. Based on big data analysis and AI algorithms, the system can effectively predict order demand fluctuations and comprehensively coordinate factors such as rider distribution and dispatch, route planning, acceptance willingness and subsidies, store waiting time, and delivery time. This enables optimal matching between orders and riders in different industries, scenarios, and complex delivery networks, improving delivery efficiency and reducing delivery costs.

For merchants, as a neutral and open third-party platform, we continue to strengthen our ability to connect merchants with different channels, platforms, and private traffic, providing intelligent distribution and planning to help merchants enhance digital operations efficiency and generate revenue amidst the trend of decentralized traffic.

For riders, we continuously optimize our dispatch and route planning capabilities to improve the efficiency of rider-to-order matching and reduce delivery difficulty, helping riders increase personal productivity and income. The system also enhances rider experience in combination with our riders' rights system, providing personalized dispatch support, and leveraging technology to complement company care, considering the needs of new riders, female riders, and other groups.

Leveraging our accumulated technological capabilities, we have further promoted the "SF Intra-city Delivery Cloud" (豐配雲) SaaS real-time logistics system, providing one-stop intra-city logistics solutions for delivery service providers and brands with their own delivery teams. The core functions of the "SF Intra-city Delivery Cloud" system cover all aspects of intra-city delivery, effectively adapting to the delivery needs of different types of merchants, empowering delivery service providers and businesses to achieve omnichannel order and end-to-end efficient management, thereby improving their efficiency and achieving cost-saving.
