In November 2023, the main reason for the year-on-year increase in shipping volume and shipment turnover was that the volume of business on long-haul routes increased, such as import transportation. The main reason for the year-on-year increase in gross power generation and total power output dispatch was that the loads of thermal power generation of the Company increased due to factors such as the increased demand for heating in some of the areas where the Company's power generation units are located and decreased hydropower output. The year-on-year increase in the sales of polyethylene was mainly due to the low base of the sales of polyethylene in the same period of last year.

From January to November 2023, the main reason for the year-on-year increase in shipment turnover was that the shipping cargo transportation services and traffic on long-haul routes increased. The main reasons for the year-on-year increase in gross power generation and total power output dispatch were that the power demand increased, and the new power generator units brought the growth of power generation.

The major operational data above was calculated based on the internal statistics of the Company. Operational data may show major differences from month to month. The factors giving rise to such differences include, among others, changes in weather, equipment overhaul, seasonal factors and safety inspection. The major operational data may somewhat differ from the data disclosed in the relative periodic reports. Investors are hereby reminded of the risks that may result from inappropriate reliance upon or utilization of the information given above.
