Aspect A1: Emissions

Waste gas and greenhouse gas

As the Group is mainly engaged in the MPCM, it will not have significant impacts on the environment. Exhaust emissions are mainly from the use of fuel in vehicles and the vaporisation of organic solvents during operation. The Group's production does not consume direct-combustion fuel other than the fuel consumed by all vehicles in the transportation process. The greenhouse gas ("GHG") emissions mainly arising from the exhaust of vehicles, Hydrofluorocarbons ("HFC") emissions from the refrigeration, energy consumed from purchased electricity, sewage treatment, paper disposal and business air travel of employees.

During the Reporting Period, the Group's warehouses were equipped with online monitoring devices to monitor the concentration of organic solvent vapour in the air. When the concentration of organic vapour reaches a certain limit, the monitoring device automatically activates the fan for extraction, and the vapours containing organic solvents are transported to the exhaust treatment device and discharged after treatment to meet the standards.

During the Reporting Period, the Group prioritised the use of purely electric vehicles, with a significant reduction of 25,513.5 litres in fuel use compared with the same period of last year. The Group advocated reducing the frequency of vehicle use and improving vehicle utilisation, and gave priority to the use of public transportation when travelling in convenient places.

During the Reporting Period, the cold chain warehouse of the Group located at Chengdu Shuangliu Free Trade Zone was in full operation. Since the Group's core product human albumin requires to be stored under the stringent temperature conditions, temperature control facilities are installed in the cold chain warehouse to ensure that human albumin are stored at all times under the required and controlled temperature condition.

During the Reporting Period, the electricity consumption increased by 1,290.3 MWh compared with the same period of last year, mainly due to the Group is committed to diversifying its business segments that its subsidiary mainly in charge of the medical aesthetic products business has completed the construction during the year. The plant of the subsidiary was put into use and its research and development and production activities commenced, which resulted in an increase in the Group's total electricity consumption with 1,186.4 MWh of electricity consumption by such business during the year. The Group is committed to energy conservation and will use energy reasonably in the coming years by optimising production patterns, centralising production and optimising shift schedules.

層面A1：排放物

廢氣及溫室氣體

由於本集團主要從事營銷、推廣及渠道管理，故不會對環境造成重大影響。廢氣排放物主要為車輛使用燃料產生的廢氣及營運中釋出有機溶劑氣體。除所有車輛在交通運輸過程中消耗燃料外，本集團的生產並無耗用任何直接燃油。溫室氣體排放物主要產生自車輛的廢氣、製冷產生的氫氟烴排放物、購電消耗的能源、污水處理、廢紙處理及僱員乘搭飛機出差。

本報告期內，本集團倉庫安裝有在綫監控裝置，監測空氣中有機溶劑氣體濃度。當有機氣體濃度達到一定的限值後，監控裝置自動啟動風機進行抽排，將含有機溶劑的氣體輸送至廢氣處理裝置，處理達標後排放。

本報告期內，本集團優先使用純電動車輛，汽車燃油使用與去年同期相比大幅減少25,513.5公升。本集團提倡減少車輛使用頻數，提高車輛利用率，如需於交通便利的地方出行，則優先採用公共交通工具。

本報告期內，本集團位於成都雙流保稅區的冷鏈倉庫全面開放使用。由於本集團核心產品人血白蛋白需要在嚴格的溫度條件下儲存，故於冷鏈倉庫安裝溫控設施以確保人血白蛋白一直存儲在規定及受控的溫度環境下。

本報告期內，耗電量與去年同期相比增加1,290.3兆瓦時，主要因為本集團致力於業務板塊多元化，旗下主要負責醫美產品業務的附屬公司已於年內完成搭建；該附屬公司廠房投入使用，研發及生產活動開始進行，該業務於本年度產生耗電量1,186.4兆瓦時，導致集團總體耗電量增加。本集團致力於節約能源，未來年度將通過優化生產模式、集中生產、優化排班時間等方式方法合理運用能源。

During the Reporting Period, the HFC emissions of the Group were generated from the air purifier, which was mainly used in the Group's medical aesthetic products business. The objective of having the air purifier is to provide employees with a conducive working environment where employees can work in a comfortable workplace with clear air. Being conscious of the greenhouse effect from HFC, the Group adopted effective measures to prevent overconsumption, such as setting the optimum temperature with low consumption, equipment power classification according to its operation hours and smart automated lock to turn off the machine timely. During the Reporting Period, the greenhouse gas emissions from the use of air purifier drastically dropped by 519.4 tonnes compared with the same period of last year.

During the Reporting Period, the Group encouraged our employees to reduce the use of paper in the workplace and adopt e-office instead, and replace paper records with electronic records. Priority will be given to double-sided printing mode if printers are required.

During the Reporting Period, the CO₂ emissions from processing sewage increased by 0.83 tonnes compared with last year. The Group has continued to implement water-saving and energy saving measures, actively promoted water conservation among employees and received strong support from employees.

During the Reporting Period, the CO₂ emissions from business air travel by employees increased by 97.56 tonnes compared with the same period of last year, mainly due to the year-on-year increase of the Group's business volume, led to an increase in business travel. The Group will rationally plan business travel in the coming years and actively manage business air travel by employees.

Major Emissions Indicators
Emissions of Vehicle Exhaust

本報告期內，本集團氫氟烴排放物來自空氣淨化器，主要用於集團醫美產品業務。設置該空氣淨化器的目的是為員工提供有利的工作環境，讓員工可於充滿清新空氣的舒適工作場所工作。本集團意識到氫氟烴的溫室效應後，我們採取有效措施防止過度消耗，例如設置最佳溫度減低消耗、根據操作時間進行設備功率分類，以及安裝智能自動鎖以適時關閉機器。本報告期內，使用空氣淨化器產生的溫室氣體排放量與去年同期相比大幅下降519.4噸。

本報告期內，本集團鼓勵員工減少在工作場所中使用紙張，採用電子化辦公，以電子檔案保存代替紙質檔案保存。如需使用列印機則優先採用雙面打印模式。

本報告期內，因處理污水產生的二氧化碳排放量與去年相比增長0.83噸。本集團持續推行節水節能措施，並積極宣導員工節約用水，得到員工的大力支持。

本報告期內，因員工乘搭飛機出差產生的二氧化碳排放量與去年同期相比增加97.56噸，主要原因是集團業務量逐年增加，商務差旅增加。本集團將於未來年度合理規劃商務差旅，積極管理員工乘搭飛機出行。

The Group sets a target for waste generation and expects to continuously control the generation of hazardous and non-hazardous waste in the coming years, aiming to reduce waste. We are committed to strengthening the maintenance of equipment and facilities, thus preventing the increase in waste caused by equipment malfunction and minimising waste generation at source to further reducing environmental pollution. By strengthening the education and training of relevant personnel and regulating their behaviours at work, we can eliminate the increase in waste due to human errors.

本集團對廢棄物產生設置目標，期望在未來年度持續控制有害及無害廢棄物的產生，致力於減少廢棄物。我們致力加強維護設備及設施，從而防止設備故障造成廢棄物增加，儘可能從源頭減廢，以進一步降低環境污染。透過加強對相關人員的教育及培訓並規範其工作行為，我們可消除因人為失誤造成廢棄物增加的情況。

Aspect A2: Use of Resources

During the Reporting Period, the Group's energy and water consumption increased significantly compared with last year due to the growth of the Group's business during the year, the full operation of the cold chain warehouse located at Chengdu Shuangliu Free Trade Zone, the increased energy consumption in production and operation, and the increase in production capacity and storage capacity of the warehouse which led to an increase in resource consumption.

The Group sets a target for energy use and expects to increase the use of new energy vehicles in the coming years, control the use of electricity in production and operation, and eliminate high-energy-consuming machinery to reduce the Group's energy use.

Energy and Water Consumption Indicators

層面A2：資源使用

本報告期內，本集團能源及水消耗與去年相比有較大增幅，原因為本年度本集團業務增長，成都雙流保稅區的冷鏈倉庫全面運作，生產及運營中的能源消耗量提升，產能及倉庫儲量的增加導致資源消耗增加。

本集團對能源使用設置目標，期望在未來年度增加新能源汽車的使用，控制生產營運中電力的使用，淘汰高耗能機器，以減少本集團能源使用。

In this regard, the Group will carry out various measures such as water and energy saving plans to support environmental protection. The Group currently has no problems in obtaining suitable water sources and has actually set the water efficiency target. Taking 2022 as the base year, assuming there is no material change in business model, the water efficiency target set by the Group is to maintain a water consumption intensity of 15.72 tonnes per employee in the next year. During the Reporting Period, water consumption increased by 14,977.96 m³ compared with the same period of last year, primarily due to the completion of the construction of its subsidiary of the Group in charge of the medical aesthetic products business during the year. The plant of the subsidiary was put into use and its research and development and production activities commenced, which resulted in an increase in the Group's total water consumption and a substantial rise of water consumption intensity, with 16,184.00 m³ of water consumption by such business for its technical and cleanliness requirements during the year.

對此，本集團將會推行節水節能計劃等措施以支持環境保護。本集團在求取適用水源上暫無問題，並且實際上設立了水效益目標。以2022年為基準年，假設業務模式沒有發生重大變化，本集團設定的水效益目標是未來一年內保持用水密度為每名員工15.72噸。本報告期內，耗水量與去年同期相比增加14,977.96立方米，主要因為本集團旗下負責醫美產品業務的附屬公司於本年度內搭建完畢，該附屬公司廠房投入使用，研發及生產活動開始進行，由於技術要求及潔淨要求，該業務於本年度產生耗水量16,184.00立方米，導致集團總體耗水量增加，用水密度大大上升。

The Group consumes a certain amount of raw materials and packaging materials in product manufacturing, transportation and sales. Adhering to the philosophy of reducing resource consumption and pollutant discharge at the source, we will give priority to the use of degradable materials and other green materials that met the national quality standards.

本集團在產品製造、運輸及銷售的過程中消耗一定數量的原材料及包裝材料。我們秉承從源頭減少資源消耗及污染物排放的理念，優先選用符合國家品質標準的可降解材料及其他綠色材料。

The Group has identified the transition risks resulted from the trend of global greenhouse gas reduction and anticipated the upcoming official launch of the cleaner electricity transition policies and more stringent environmental regulations. As logistics parks have always been labelled as the “major carbon emitters”, it is clearly mentioned in the “Action Plan for Achieving a Carbon Peak before 2030” that energy-saving and carbon reduction projects will be carried out in parks and a number of energy-saving and low-carbon parks should be built. Hence the Group considers our new-built cold chain warehouse at the logistics park will be facing the challenges from stricter requirements of carbon emissions reduction. To mitigate this potential risk, the Group has developed strategies and targets to reduce our carbon footprint. The Group will stay alert on such issues and include any new observations in the subsequent reports.
