巩固管理体系

北辰实业根据《中华人民共和国节约能源法》《中华人民共和国环境保护法》等国家法律法规、政策方针,立足本公司实际情况,制定、执行《环境保护管理办法》《节约能源管理办法》,将环保工作纳入管理层年终考核体系,并根据制度成立主要领导担任组长的“节能工作领导小组”,明确本公司及旗下各企业管理责任,有效强化环境管理的制度建设与组织保障。

2023年,本公司通过定期开展节能教育、岗位节能培训,淘汰落后用能设备及工艺,实施节能技术改造,制订用能管理规范,建立能源消费统计制度、能源利用状况分析制度、能源计量管理制度、照明管理制度和建立节能运行奖惩办法、建立环保罚款台账报送流程等举措,开展节能降耗、绿色低碳工作,为践行绿色低碳发展理念,完成“碳达峰”工作目标和推进公司绿色转型发展奠定坚实基础。

促进清洁生产

北辰实业大力促进清洁生产工作,从固体废弃物、大气污染物、污水等方面进行严格管控。

为加强对各企业的环境保护工作的管理与监督,本公司制定并执行“一企一策”的环境应急预案,开展对《环境保护设施设备管理台账》《污染源统计台账》的自查与更新工作,保障各企业环境保护设施设备的正常运行和污染源的有效控制。报告期内,各类环保设施良好率达到100%。此外,2023年,本公司开展6项节能技改工程,累计投资330余万元,开展2项环保技改工程,累计投资50余万元,节能、环保技改合计投资380余万元,以提高能源利用效率,降低污染物排放量,减少生产与经营过程对环境的影响。

固体废弃物管理方面,北辰实业致力于从源头减少废弃物的产生,并将资源利用最大化。为此,本公司旗下酒店在采购易耗品时均选用可降解环保型包装材料的产品,不进行过度包装产品,有效减少不可降解垃圾的产生³。同时,本公司持续开展物资回收再利用工作,为废旧毛巾、塑料制品、玻璃制品等常用物资赋予新的“生命”,实现物资循环利用,提升资源使用效率。在废弃物处理环节,各企业与专业垃圾收纳公司签订垃圾收纳协议,生活垃圾、厨余垃圾、其他垃圾和有害垃圾分类进行专业清运及消纳,确保垃圾分类收纳到位,实现废弃物、危险废弃物签订专业垃圾收纳协议100%的目标。

针对大气污染防治,本公司开展厨房油烟废气、锅炉排放废气、工程项目扬尘等潜在挥发性有机物“污染源”的年度摸排,从源头进行污染管控。在改扩建工程中,本公司持有物业严格按照行业主管部门要求,通过苫盖施工现场裸露部分、设置喷淋喷雾设施、优化工艺有效抑制扬尘。

水污染防控方面,本公司根据《北京市排水和再生水管理办法》,对废水直接排放进行严格把控,在废水排放到市政管网前对废水进行预处理,确保水质达标排放,并持续加强水资源循环利用,推广中水使用,引导各企业引入市政中水或建立中水处理系统。2023年,本公司对亚运村园区内中水使用潜力进行了定量评估,为未来开展循环经济园区建设奠定基础。

³ 由于本公司各项业务不涉及大批量采购与使用包装物,故不披露包装物使用数据。

案例：五洲皇冠酒店应用中央空调冷却水处理设备

为减少废水排放，五洲皇冠酒店应用中央空调冷却水处理设备，利用直流电分离分解原理，降解冷却水中钙镁离子，阻隔管路中结垢，同时灭杀水中微生物，起到杀菌灭藻除垢作用，有效避免冷却水排放，实现无污染，节约水资源，助力促进生态可持续发展。

中央空调冷却水处理设备

优化节水工作

为积极贯彻落实《北京市节水条例》，助力节水型社会建设，北辰实业不断夯实计划用水和定额指标的管理，做好用水指标的分解工作，强化监督检查。2023年，本公司积极开展用水情况调查工作，经统计分析，京内持有资产企业2022年计划用水指标完成率100%，同时对可循环水资源的种类、数量、质量等方面进行评估，提出改进和优化节水工作建议，持续提升水资源使用效率，顺利完成水效益目标。自2014年底南水北调中线工程正式通水以来，京津冀地区水资源困乏的局面得以缓解。报告期内，由于本公司绝大部分持有型物业均位于北京，加之本公司日常运营所使用的水源为外购自来水，故报告期内本公司的运营没有面临任何取用水困难的情况。

北辰实业水效益目标

各企业100%不超过北京市、区节约用水办公室2023年下达的计划用水指标。

绿色施工运营

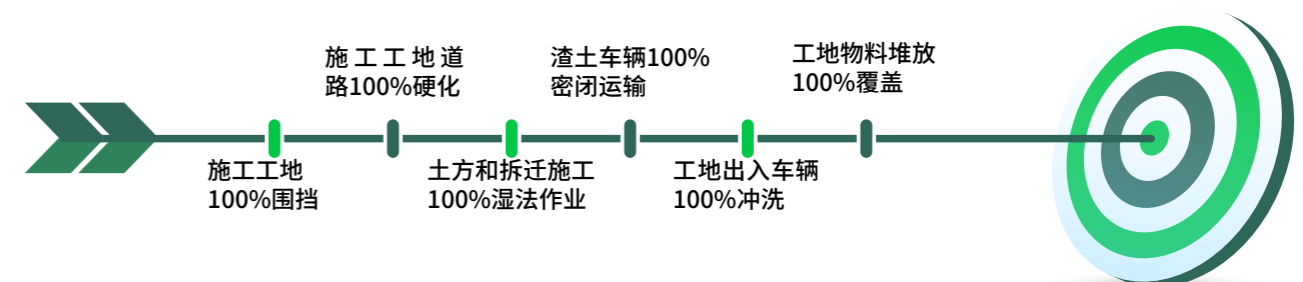

环境友好型施工

北辰实业严格遵循和执行环境保护相关法律法规，报告期内，未出现对环境及天然气源造成重大负面影响事件。多年来，本公司坚持绿色施工理念，已为多个在建项目制定绿色施工方案，明确组织架构，落实人员责任。同时，本公司在节约资源、控制大气污染物、水污染、噪声及固体废弃物排放等方

面做出详细要求，并依据内部规章规范《北京北辰地产集团有限公司装配式建筑全过程管理指引》等，在保障地产项目质量的同时对安全文明施工等方面进行全面管理和严格控制。

“六个百分百”目标

为进一步规范绿色建筑施工规程以及评价标准，北辰实业制定了《建筑工程绿色施工评价标准》《绿色建筑评价标准》《建筑节能工程施工质量验收规范》等相关管理规章制度，明确绿色建筑研发、绿色环保理念倡导、坚持绿色发展、生态优先的基本原则，指导开发及物业运营全流程，全面打造绿色建筑与绿色生活空间。针对新开发物业，本公司多选择节能环保类建材，其中，在北京新建的项目参照《居住建筑节能设计标准》(DB11/891-2020)及《绿色建筑评价标准》(GB/T50378—2019)，北辰地产在全国各地在建的项目中也在积极使用相关标准，为建筑赋予可持续属性。

绿色办公与运营

北辰实业旗下企业积极践行绿色发展理念，推进少纸化/电子化办公、促进再生纸使用，加强行为节能管理，提高资源与能源使用效率。

案例：五洲皇冠多措并举助推绿色办公

1. 数字化管控空调系统，通过楼宇自控系统，根据环境温度和人员需求定期对空调区域温度和空调机组启停机时间进行调整。
2. 逐步更换酒店公共区域照明，在满足现有照明系统的照度、显色指数、色温、功率因数的基础上，降低照明系统的能耗。
3. 硒鼓等有害物品进行统一收集，并交由专业公司进行回收处理。
4. 加强电梯运行调节和维护保养，提倡少乘电梯、多走楼梯。
5. 在办公室内禁止使用移动式大功率取暖设备、电暖炉等电器，保证安全用电同时节约能耗。

能源消耗量¹⁰:

指标	2023年度	2022年度	2021年度
能源消耗总量(兆瓦时)	128,283	114,892	119,992
外购电力(兆瓦时)	54,202	44,990	48,562
天然气(兆瓦时)	4,505	3,428	3,970
汽油(兆瓦时)	272	227	332
柴油(兆瓦时)	18	86	96
外购热力(兆瓦时)	69,287	66,161	67,032
每平方米楼面面积能源消耗总量(兆瓦时)	0.16	0.14	0.15

⁶ 此温室气体排放清单的计算方法及相关排放系数参考了北京市生态环境局发布的《北京市企业(单位)二氧化碳排放核算和报告指南(2018版)》、中华人民共和国生态环境部发布的《关于做好2018年度碳排放报告与核查及排放监测计划制定工作的通知》及世界资源研究所(WRI)和世界可持续发展工商理事会(WBCSD)发布的《温室气体核算体系:企业核算与报告标准》。本公司2023年度的温室气体计算范围包括使用汽油机动车、柴油机动车等以柴油为燃料的设备,及燃气锅炉等以天然气为燃料的设备导致的温室气体直接排放,使用外购电力及外购热力导致的温室气体间接排放。2023年全面复工复产、附属企业经营活动增多,能源消耗量较上一年度增加,故温室气体排放有所上升。

⁷ 外购电力产生的温室气体间接排放量计算使用2022年度全国电网平均排放因子(来自《关于做好2023—2025年发电行业企业温室气体排放报告管理有关工作的通知》)。

⁸ 由于复工复产后会议活动增加、出租率增高、环境数据统计范围扩大等原因,生活垃圾、厨余垃圾产生量有所上升。

⁹ 由于部分企业已不使用含水银灯管,其重量下降较多且占有废弃物产生总量比例较大,因此有害废弃物产生总量、每平方米楼面面积有害废弃物产生总量有所下降;由于环境数据统计范围扩大,部分企业出租率增高,因此电子废弃物、清洗冷气系统的废油重量有所上升。

¹⁰ 计算范围为本公司京内持有型物业年度用量的总和。本报告所披露的各能源消耗量数据根据各能源的实际消耗量及国际能源署提供的相关转换因子计算。2023年全面复工复产、附属企业经营活动增多,能源消耗量较上一年度整体增加;附属企业不再使用柴油锅炉,因此其消耗量同比上一年度有所下降。

Enhanced 'Beijing North Star Service' Standards

CIFTIS Service Team

In 2023, the Capital Convention Group continually upgraded the 'Beijing North Star service' standards for the CIFTIS, formulated the '1+8' service operation model, established one comprehensive coordination group and eight special working groups, and compiled various materials such as the *Investment and Exhibition Publicity Manual*, *Venue Operation Scheme Manual*, *Exhibition Construction Manual*, and *Visitor Guide* to guide the related work.

The Beijing International Convention Centre optimised the venue location arrangements in the exhibition area, added traffic guidance and public service locations at major intersections. The Shougang Exhibition Area, following the CIFTIS 3.0 version's general guideline of 'three upgrades, three optimisations, and three innovations', provided the audience with a more detailed and superior supporting service.

Advancement of Digitalisation

In order to better achieve the goal of a 'never-ending CIFTIS', the digital platform of this year's CIFTIS is continually improving and upgrading to enhance the user experience and exhibition operation efficiency of exhibitors, visitors and platform managers. From the exhibitors' perspective, the regular information release and content-update mechanisms provide smoother services for transactional intentions and information sharing between supply and demand. From the visitor view, the digital platform unblocks the five-in-one ticket purchase channel, adding tools such as fixed information submission, making ticket purchasing and attending the exhibition more convenient. From the platform managers' view, the multi-level organisational structure is accomplished by 'one account, multiple roles', which completely resolves issues such as difficulty in data statistics and unclear hierarchical ownership; the upgrades and optimisation of the platform content management system improve content maintenance efficiency; more flexible and convenient data-reporting tools enhance the timeliness and accuracy of exhibition data analysis.

First-time Realisation of 'Zero Carbon CIFTIS'

In response to the national 'dual-carbon' goals, the Beijing North Star initiated the innovative practice of 'Zero Carbon CIFTIS' for the first time, aiming to create a green service trade brand and provide a demonstration sample for Beijing's carbon-neutral exhibition activities. The company established a special working group for 'Zero Carbon CIFTIS' together with its partners, introducing a 'carbon neutral' project to offset the greenhouse gas emissions from the 2023 CIFTIS through innovative solutions such as carbon assets, carbon credit purchases, and carbon-neutral insurance. In addition, they issued a 'Zero Carbon CIFTIS, Shared by All' initiative, appealing to all attendees to support the 'Zero Carbon CIFTIS' through voluntary actions, and to promote low-carbon green lifestyles to the public.

"As one of the organisers of CIFTIS, Capital Convention Group has fully demonstrated its rich industry experience and the professionalism of its team in terms of exhibition organisation, order, scale, and number of participants. Primary Goals for Carbon Peaking of Beijing North Star

1

Promote the continuous reduction of carbon emissions intensity, make significant progress in optimising the industrial energy structure, and achieve remarkable results in green, low-carbon transition development.

2

Strive to form a group of demonstration applications of green technology + key scenarios in the fields of exhibitions, commercial management, real estate, and other industries, establish a sound green supply chain, improve the green, low-carbon governance system, and help the economy and society achieve carbon peaking.

In terms of governance, Beijing North Star has established a "Carbon Peaking and Carbon Neutrality Working Leading Group", responsible for organising, coordinating, advancing, and implementing the specific work of "dual carbon". Subsidiaries have established corresponding work leading groups, responsible for implementing related work in their respective enterprises. Meanwhile, the Company actively formulates energy-saving, emission-reduction, and environmental protection quantitative indicators, decomposing them to each level, and continuously refining inspection items for each engineering specialty, integrating inspection results into the annual assessment content for its subsidiaries, enhancing the intensity of rewards and penalties, effectively supervising and implementing carbon peaking related work.

In terms of capacity building, Beijing North Star plans to continually strengthen its efforts in publicity and education in the future, making carbon peaking and carbon neutrality an important part of its cadre education and training system, and intensifying the ability of leaders at every level to promote green, low-carbon development. The Company will press every enterprise to normalise energy-saving awareness education, emphasising foundational training in energy-saving knowledge. It also aims to continuously enhance the energy-saving consciousness and legal concepts of energy management personnel, striving to establish a management system constituted by professionals possessing technical capabilities.

In order to orderly advance the realisation of the goals, Beijing North Star has identified four key tasks: making comprehensive deployments in the coordinated planning and leadership and institutional construction, energy transformation and resource conservation, integration of business layout and green development, and specialised actions in the low-carbon field.

Beijing North Star's Key Tasks for Carbon Peak

Case: Public Facilities Management Company Receives Its First "Green Power Certificate"

Actively exploring a low-carbon path, Public Facilities Management Company maximises its business advantage and professional technical advantage, aiming to consume 100% green electricity in office production. It has taken the lead in implementing green electricity policies and participating in green electricity transactions. By 2023, Public Facilities Management Company purchased a total of 3 million degrees of green electricity through the power market, equivalent to a reduction of 2,480 tons of carbon dioxide, 1.4 tons of sulphur dioxide, and 1.29 tons of nitrogen oxides. This act promotes the use of renewable energy and practices Green Development.

Going forward, Public Facilities Management Company will continue to implement green energy development strategies, increase the use of green electricity in the Asian Games Village Park and the National Convention Centre area, and strive to maximise the commercial value of clean energy projects.

Addressing Climate Risk

Climate risk is increasingly affecting companies, and active responses to this risk have become a global consensus. Beijing North Star, together with its subsidiaries, is recognising physical risks and transition risks related to climate, and implementing relevant measures to effectively reduce the impact of risk on business production and operation.

Potential Risk Types	Risk Description	Responses
Physical risk	Extreme weather prevents suppliers from delivering goods on time	Require suppliers to be transparent about supply periods
	During construction, extreme weather (such as windy weather, flood season, etc.) increases employee health and safety risks	Formulate and issue documents such as <i>Tips on Doing a Good Job in Responding to Extreme Weather</i> and <i>Notice on Doing a Good Job in Safety Production during the Flood Season in 2023</i> to ensure construction safety during heavy rains and other extreme weather.
Transition risk	Regulators tighten climate change information disclosure requirements	Disclose information related to climate change for many consecutive years, and optimize relevant disclosures with reference to the TCFD ² framework
	The Beijing Municipal People's Government issued the <i>Beijing Carbon Peaking Implementation Plan</i> , and the State-owned Assets Supervision and Administration Commission of the Beijing Municipal People's Government issued the <i>Municipal Enterprise Carbon Peaking Action Plan</i> requirements.	Through on-site surveys, discussions, data analysis, etc., we develop a carbon peaking action plan that is in line with the company's actual conditions
	Technology	Invest in low-carbon emission technologies
	Market	Climate change affects the prices of some food ingredients, resulting in reduced supplier production capacity and unstable prices.
Reputation	Stakeholders demonstrate concern about climate change issues	Publish news related to energy conservation, carbon reduction work and building green buildings Disclosure of Climate Change Information on Regulatory Authority's Official Website

² The Financial Stability Board of the Group of Twenty (G20) established the TCFD (Task Force on Climate-related Financial Disclosures) in 2015. The TCFD framework for climate-related information disclosure includes four core elements: governance, strategy, risk management, and metrics and targets. This assists investors in gaining a deeper understanding of company's climate risks and responses.

Strengthening Management Systems

Beijing North Star, in accordance with the *Energy Conservation Law of the People's Republic of China*, the *Environmental Protection Law of the People's Republic of China*, and other national laws and regulations and policy guidelines, develops and implements the *Environmental Protection Management Measures* and *Energy Conservation Management Measures* based on the actual circumstances of the company. It integrates environmental protection work into the end-of-year assessment system for the management team and establishes an "Energy Conservation Work Leading Group" with the main leaders as the team leader, according to the system, making clear the management responsibilities of the company and its subsidiaries. This effectively strengthens both the institutional building of environmental management and organisational protection in the quest for carbon peaking and carbon neutrality.

In 2023, Beijing North Star periodically carries out energy-saving education and on-the-job energy-saving training, phase out outdated energy-using equipment and processes, implement energy-saving technical alterations, draw up energy management standards, establish an energy consumption statistics system, an energy utilisation status analysis system, an energy measurement management system, a lighting management system, and establish an energy-saving operation reward and punishment system, establish an environmental protection fine ledger submission process and other measures. The Company has launched energy-saving and consumption reduction, green and low carbon work, laying a solid foundation for practicing the concept of green and low-carbon development, achieving the goal of "Carbon Peaking" and promoting the green transformation development of the company.

Promoting Clean Production

Beijing North Star is vigorously promoting clean production work and strictly controlling solid waste, atmospheric pollutants, and sewage.

To strengthen the management and supervision of environmental protection work in various enterprises, the company has developed and implemented an "individual plan for each enterprise" emergency plan for environmental protection, carries out self-check and update tasks on the *Environmental Protection Facilities Equipment Management Ledger* and *Pollution Source Statistics Ledger* to ensure the normal operation of environmental protection facilities and equipment in various enterprises and the effective control of pollution sources. During the Reporting Period, the rate of good environmental protection facilities reached 100%. In addition, in 2023, the Company carried out 6 energy-saving technical transformation projects, with a total investment of over 3.3 million yuan, and 2 environmental protection technical transformation projects, with a total investment of over 500,000 yuan. The total investment in energy-saving and environmental protection technical transformations exceeded 3.8 million yuan, aimed to improve energy utilisation efficiency, reduce pollutant emissions, and lessen the impact of production and operation processes on the environment.

In terms of solid waste management, Beijing North Star is committed to reducing waste at the source and maximising resource utilisation. To this end, all easily consumable products procured by the company's hotels opt for products using biodegradable environmental packaging materials, avoiding over-packaged products, effectively reducing the production of non-biodegradable waste³. At the same time, the company continues to carry out material recycling and reuse work, giving common materials such as old towels, plastic products, glass products, etc., a new "life", achieving material recycling, and improving resource use efficiency. In terms of waste treatment, each enterprise signs garbage collection agreements with professional waste collection companies. Domestic waste, kitchen waste, other waste and hazardous waste are professionally collected and disposed of by classification, ensuring that waste is sorted and collected appropriately, and the goal of signing a professional waste collection agreement for 100% of waste and hazardous waste is achieved.

In terms of the prevention and control of atmospheric pollutants, Beijing North Star carries out annual investigations of potential "pollution sources" such as kitchen fume exhaust, boiler emission exhaust, and dust from engineering projects, controlling pollution at the source. During renovation and expansion projects, the company, as a property owner, strictly follows the requirements of the industry supervisory department, effectively suppressing dust by covering exposed parts of the construction site, setting up spraying and misting facilities, and optimising procedures.

In terms of water pollution prevention and control, Beijing North Star, in accordance with the *Measures of Beijing Municipality for Administration of Drainage and Water Recycling*, strictly controls direct wastewater discharge. Wastewater is pretreated before being discharged into the municipal pipe network to ensure that the water quality meets the standards. The company continues to strengthen the recycling of water resources, promotes the use of reclaimed water, and guides each enterprise to introduce municipal reclaimed water or establish a reclaimed water treatment system. In 2023, Beijing North Star carried out a quantitative assessment of the potential for the use of reclaimed water in the Asian Games Village Park, laying the foundation for future development of a circular economy park.

³ As the various operations of Beijing North Star do not involve large-scale procurement and use of packaging materials, the company does not disclose data on packaging material usage.

Case: V-Continent Wuzhou Applies Central Air Conditioning Cooling Water Treatment Equipment

In order to reduce the discharge of wastewater, V-Continent Wuzhou applies central air-conditioning cooling water treatment equipment, using the principle of direct current ionisation and decomposition, degrading calcium and magnesium ions in cooling water, blocking scaling in pipelines, and killing microorganisms in the water at the same time, which plays the role of sterilisation, algae and descaling, effectively avoiding cooling water discharge, achieving no pollution, saving water resources, and helping to promote sustainable ecological development.

Central Air Conditioning Cooling Water Treatment Equipment

Optimising Water Conservation Efforts

In order to actively implement the *Beijing Water Conservation Regulation* and support the construction of a water-saving society, Beijing North Star is constantly strengthening the management of planned water usage and quota indicators, fine-tuning the breakdown of water usage targets, and enhancing monitoring and inspection. In 2023, the Company actively carried out a survey on water usage, and through statistical analysis, it was found that the assets holding enterprises in Beijing had a 100% completion rate for the planned water usage targets in 2022. At the same time, an assessment was carried out on the type, quantity, and quality of recyclable water resources. Suggestions were put forward to improve and optimize water conservation efforts, continuously increase water usage efficiency, and successfully achieve water efficiency goals. Since the official launch of the south-to-north water diversion project at the end of 2014, the shortage of water resources in the Beijing-Tianjin-Hebei region has been eased. During the Reporting Period, as most of the properties held by the Company are located in Beijing, and the water used for daily operations is externally purchased tap water, the company's operations did not face any difficulties in accessing water during the Reporting Period.

Beijing North Star's Water Efficiency Target

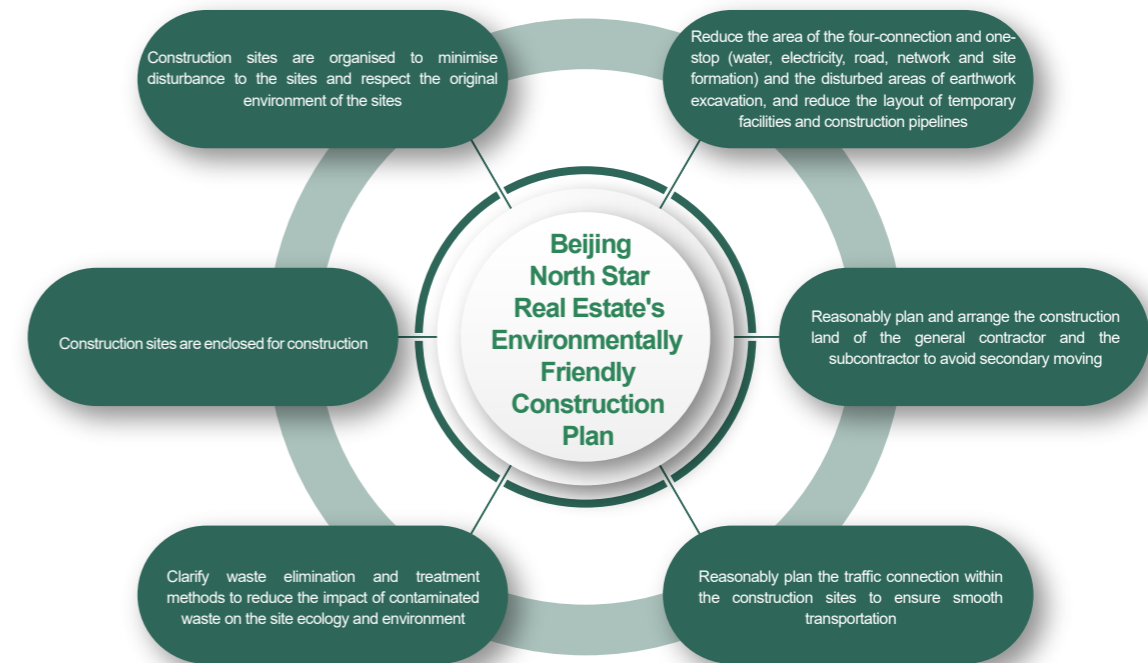

Every enterprise should ensure 100% compliance with the planned water usage indicators issued by the Beijing Municipal and District Water Conservation Offices for the year 2023

Green Construction and Operation

Environmentally Friendly Construction

Beijing North Star strictly follows and implements environmental protection laws and regulations. During the Reporting Period, there were no incidents that had significant negative impacts on the environment or natural gas sources. Over the years, the Company has steadfastly adhered to the concept of green construction, and has developed green construction plans for multiple ongoing projects, with definite organisational structures and clearly defined responsibilities. At the same time, the company has detailed requirements for conserving resources, controlling atmospheric pollutants, water pollution, noise, and the emission of solid waste, managing and strictly controlling aspects such as safe and civilised construction while adhering to internal rules and norms, including the *Guidelines*

for the Management of the Whole Process of Prefabricated Construction of Beijing North Star Real Estate Group, thus ensuring the quality of property projects.

"Six 100 Percent" Targets

To further standardise the green building construction procedures and evaluation standards, Beijing North Star has formulated management regulations and systems like the *Evaluation Standard for Green Construction Projects*, *Standard for Green Building Evaluation*, *Acceptance Standard for Construction Quality of Energy-saving Building Projects*, etc. These documents clearly establish the basic principles of green building research and development, promoting green and environmentally friendly concepts, adhering to Green Development and giving priority to ecology, guiding the full process of development and property operations, and comprehensively creating green buildings and green living spaces. For newly developed properties, the company often opts for energy-saving and environmentally friendly building materials. Among these, in the newly constructed projects in Beijing, *Energy-saving Design Standards for Residential Buildings in Beijing (DB11/891-2020)* and *Standard for Green Building Evaluation (GB/T50378-2019)* are referred to. Beijing North Star is also actively using these standards in projects under construction all over the country, endowing buildings with sustainable attributes.

Green Office and Operations

Enterprises under Beijing North Star are actively implementing the concept of Green Development. They are advancing the use of less paper/electronic office methods while also promoting the use of recycled paper. Stronger behaviour energy-saving management is being emphasised to improve the efficiency of resource and energy use.

Case: Multiple Measures by V-Continent Wuzhou Promote Green Office Practices

1. Digitised Air Conditioning System Management – Through a building automation system, the air conditioning temperature and air conditioning unit start and stop time are adjusted periodically according to the environmental temperature and personnel needs.
2. Renovation of the Hotel Public Area Lighting System – While satisfying the existing lighting system's illuminance, colour rendering index, colour temperature, power factor, infinite dimming, and intelligent control, the energy consumption of the lighting system has been reduced.
3. Collection of Harmful Items – Selenium drums and other harmful items are collected uniformly and handed over to professional companies for recycling.
4. Enhanced Elevator Operation Adjustment and Maintenance – Advocating less use of elevators and more use of stairs.
5. Prohibition of Portable High-Power Heating Devices – The use of mobile, high-power heating devices, such as electric heaters, is banned in the office to ensure safe electricity usage and save energy consumption.

Atmospheric pollutant emissions⁵:

Indicator	2023	2022	2021
NOx (tonne)	4.25	3.25	3.77
SOx (tonne)	0.021	0.016	0.018

⁵ This calculation includes the total atmospheric pollutant emissions caused by the usage of diesel-powered vehicles, boilers, and other diesel-fuelled equipment, as well as natural gas-fuelled equipment such as gas boilers in the Company's properties held in Beijing in 2023. The calculation method of air pollutant emissions was referred from the *Manual for Urban Sources of Pollution Coefficient in the Second National Census* published by the State Council of the People's Republic of China and the *Reply on the Emission Coefficient of Sulfur Dioxide from Gas Facilities (Natural Gas Used in Municipal Pipelines)* in Beijing published by the former Ministry of Environmental Protection of the People's Republic of China. In 2023, with the full-scale resumption of production, the increase in business activities of the enterprises, energy consumption has increased compared with the previous year, thus the atmospheric pollutant emissions have increased.

Use of Resources

Energy consumption¹⁰:

Indicator	2023	2022	2021
Total energy consumption (MWh)	128,283	114,892	119,992
Purchased electricity (MWh)	54,202	44,990	48,562
Natural gas (MWh)	4,505	3,428	3,970
Petrol (MWh)	272	227	332
Diesel (MWh)	18	86	96
Purchased heat (MWh)	69,287	66,161	67,032
Total energy consumed per m ² of floor area (MWh)	0.16	0.14	0.15

⁶ The calculation method and relevant emission factors of this greenhouse gas emission list are based on the *Guidelines for Carbon Dioxide Emission Accounting and Reporting for Enterprises (Units) in Beijing (2018 Edition)* issued by the Beijing Municipal Bureau of Ecology and Environment, the *Notice on the Preparation of 2018 Carbon Emission Reporting and Verification and Emission Monitoring Plan* issued by the Ministry of Ecology and Environment of the People's Republic of China, and the *Greenhouse Gas Protocol: Corporate Accounting and Reporting Standards* issued by the World Resources Institute (WRI) and the World Business Council for Sustainable Development (WBCSD). The scope of greenhouse gas calculation for the Company in 2023 includes direct emissions of greenhouse gases caused by the use of gasoline vehicles, diesel vehicles, and other equipment using diesel fuel, and gas boilers and other equipment using natural gas as fuel, as well as indirect emissions of greenhouse gases caused by the use of purchased electricity and heat. In 2023, with the full-scale resumption of production, the increase in business activities of the enterprises, energy consumption has increased compared with the previous year, thus the GHG emissions have increased.

⁷ The calculation of indirect greenhouse gas emissions from purchased electricity uses the national grid average emission factor for 2022 (from the *Notice on the Management of Greenhouse Gas Emission Reports for the Power Generation Industry Enterprises from 2023 to 2025*).

⁸ With the resumption of production, higher occupancy rates and the expansion of the scope of environmental data, the amount of non-hazardous waste has increased.

⁹ The amount of hazardous waste generated declined because some enterprises no longer use mercury-containing tube, which have declined in weight and accounted for a larger proportion of the total amount of hazardous waste generated; the weight of electronic waste and waste oil for cleaning air-conditioning system increased because the scope of environmental data was expanded and the occupancy rate of some enterprises increased.

¹⁰ The scope of calculation includes the total resources consumption of the Company's property holding projects in Beijing. Energy consumption data was based on the amount of purchased electricity and fuels consumed and the relevant conversion factors provided by the International Energy Agency. In 2023, with the full-scale resumption of production, the increase in business activities of the enterprises, energy consumption has increased compared with the previous year; enterprises no longer use diesel boilers to provide domestic hot water, so the consumption of diesel has decreased compared to the previous year.

Water Consumption¹¹:

Indicator	2023	2022	2021
Total water consumption (m ³)	734,548	559,351	676,075
