This Prospectus is printed in three parts that together form the Prospectus. You should read each part of the Prospectus in conjunction with the other parts in order to understand the matters to which the Prospectus relates, including, without limitation, the Hong Kong Public Offering and the International Offering. Prospective investors should read each part of the Prospectus before making any application in response to the Hong Kong Public Offering. We have adopted a fully electronic application process for the Hong Kong Public Offering. We will not provide printed copies of this Prospectus in relation to the Hong Kong Public Offering. This Prospectus is available at the website of the Stock Exchange at [www.hkexnews.hk](http://www.hkexnews.hk) under the “HKEXnews > New Listings > New Listing Information” section, and our website at [cfgold.com](http://cfgold.com). You may download and print from these website addresses if you want a printed copy of this Prospectus.

Hong Kong Exchanges and Clearing Limited, The Stock Exchange of Hong Kong Limited and Hong Kong Securities Clearing Company Limited take no responsibility for the contents of this Prospectus, make no representation as to its accuracy or completeness and expressly disclaim any liability whatsoever for any loss howsoever arising from or in reliance upon the whole or any part of the contents of this Prospectus.

A copy of this Prospectus, having attached thereto the documents specified in "Documents Delivered to the Registrar of Companies and Available on Display" in Appendix VII to this Prospectus, has been registered by the Registrar of Companies in Hong Kong as required by Section 342C of the Companies (Winding Up and Miscellaneous Provisions) Ordinance (Chapter 32 of the Laws of Hong Kong). The Securities and Futures Commission and the Registrar of Companies in Hong Kong take no responsibility as to the contents of this Prospectus or any other documents referred to above.

The Offer Price is expected to be determined by agreement between the Overall Coordinators (for itself and on behalf of the Underwriters) and our Company on the Price Determination Date, which is expected to be on or before Thursday, March 6, 2025 and, in any event, not later than 12:00 noon on Thursday, March 6, 2025. The Offer Price will not be more than HK\$15.83 per H Share and is expected to be not less than HK\$13.72 per H Share, unless otherwise announced.

The Overall Coordinators (for itself and on behalf of the Underwriters), may, with our Company's consent, reduce the number of Offer Shares being offered under the Global Offering and/or the indicative Offer Price range below as stated in this Prospectus at any time on or prior to the morning of the last day for lodging applications under the Hong Kong Public Offering. In such a case, an announcement will be published on the websites of the Hong Kong Stock Exchange at [www.hkexnews.hk](http://www.hkexnews.hk) and our Company at [cfgold.com](http://cfgold.com) not later than the morning of the day which is the last day for lodging applications under the Hong Kong Public Offering. Details of the arrangement will then be announced by us as soon as practicable. For more details, see the sections headed "Structure of the Global Offering" and "How to Apply for Hong Kong Offer Shares" in this Prospectus.

We are incorporated, and substantially all of our businesses are located, in the PRC. Potential investors should be aware of the differences in the legal, economic and financial systems between the mainland of the PRC and Hong Kong and that there are different risk factors relating to investment in PRC-incorporated business. Potential investors should also be aware that the regulatory framework in the PRC is different from the regulatory framework in Hong Kong and should take into consideration the different market nature of the H Shares. Such differences and risk factors are set out in the sections headed "Risk Factors", "Summary of Principal Legal and Regulatory Provisions" in Appendix V and "Summary of Articles of Association" in Appendix VI to this Prospectus. The obligations of the Hong Kong Underwriters under the Hong Kong Underwriting Agreement are subject to termination by the Overall Coordinators (for itself and on behalf of the Hong Kong Underwriters) if certain grounds arise prior to 8:00 a.m. on the Listing Date. Such grounds are set out in the section headed "Underwriting — Underwriting Arrangements and Expenses — Hong Kong Public Offering — Grounds for Termination" in this Prospectus.

The Offer Shares have not been and will not be registered under the U.S. Securities Act or any state securities laws of the United States and may not be offered or sold in the United States, or to or for the account or benefit of any U.S. person (as defined in Regulation S), except pursuant to an exemption from, or in a transaction that is not subject to, the registration requirements of the U.S. Securities Act and any applicable state or local securities laws. The Offer Shares may only be offered, sold or delivered outside the United States to non-U.S. persons in offshore transactions in accordance with Regulation S under the U.S. Securities Act.

#### ATTENTION

We have adopted a fully electronic application process for the Hong Kong Public Offering pursuant to Rule 12.11 of the Hong Kong Listing Rules. We will not provide printed copies of this Prospectus to the public in relation to the Hong Kong Public Offering.

This Prospectus is available at the website of the Hong Kong Stock Exchange at [www.hkexnews.hk](http://www.hkexnews.hk) and our website at [cfgold.com](http://cfgold.com). If you require a printed copy of this Prospectus, you may download and print from the website addresses above.

## IMPORTANT

---

### **IMPORTANT NOTICE TO INVESTORS: FULLY ELECTRONIC APPLICATION PROCESS**

**We have adopted a fully electronic application process for the Hong Kong Public Offering. We will not provide printed copies of this Prospectus in relation to the Hong Kong Public Offering.**

This Prospectus is available at the website of the Stock Exchange at [www.hkexnews.hk](http://www.hkexnews.hk) under the “*HKEXnews > New Listings > New Listing Information*” section, and our website at [cfgold.com](http://cfgold.com). You may download and print from these website addresses if you want a printed copy of this Prospectus.

To apply for the Hong Kong Offer Shares, you may:

- (1) apply online via the **White Form eIPO** service at [www.eipo.com.hk](http://www.eipo.com.hk); or
- (2) apply electronically through the **HKSCC EIPO** channel and cause HKSCC Nominees to apply on your behalf by instructing your broker or custodian who is a HKSCC Participant to give **electronic application instructions** via HKSCC’s FINI system to apply for the Hong Kong Offer Shares on your behalf.

We will not provide any physical channels to accept any application for the Hong Kong Offer Shares by the public. The contents of the electronic version of this Prospectus are identical to the printed prospectus as registered with the Registrar of Companies in Hong Kong pursuant to Section 342C of the Companies (Winding Up and Miscellaneous Provisions) Ordinance.

If you are an intermediary, broker or agent, please remind your customers, clients or principals, as applicable, that this Prospectus is available online at the website addresses stated above.

Please refer to the section headed “How to Apply for Hong Kong Offer Shares” in this Prospectus for further details on the procedures through which you can apply for the Hong Kong Offer Shares electronically.

## IMPORTANT

Your application through the **White Form eIPO** service or the **HKSCC EIPO** channel must be made for a minimum of 200 Hong Kong Offer Shares and in multiples of that number of Hong Kong Offer Shares as set out in the table below. No application for any other number of Hong Kong Offer Shares will be considered and such an application is liable to be rejected.

If you are applying through the **White Form eIPO** service, you may refer to the table below for the amount payable for the number of Shares you have selected. You must pay the respective amount payable on application in full upon application for Hong Kong Offer Shares.

If you are applying through the **HKSCC EIPO** channel, you are required to pre-fund your application based on the amount specified by your broker or custodian, as determined based on the applicable laws and regulations in Hong Kong.

of interest in the International Offering, the level of  
applications in the Hong Kong Public Offering and the  
basis of allocation of the Hong Kong Offer Shares under  
the Hong Kong Public Offering to be published and on  
the website of the Stock Exchange at [www.hkexnews.hk](http://www.hkexnews.hk)  
and our website at [cfgold.com](http://cfgold.com)<sup>(6)</sup> at or before<sup>(7)</sup> . . . . . 11:00 p.m. on Friday,  
March 7, 2025

---

## EXPECTED TIMETABLE<sup>(1)</sup>

---

The results of allocations in the Hong Kong Public Offering (with successful applicants' identification document numbers, where appropriate) to be available through a variety of channels, including:

- in the announcement to be posted on our website and the website of the Stock Exchange at **cfgold.com** and **www.hkexnews.hk**, respectively . . . . . at or before 11:00 p.m. on Friday, March 7, 2025
  
- from the designated results of allocations website at **www.iporesults.com.hk** (alternatively: **www.eipo.com.hk/eIPOAllotment**) . . . . . from 11:00 p.m. on Friday, March 7, 2025  
12:00 midnight on Thursday, March 13, 2025
  
- from the allocation results telephone enquiry by calling 2862 8555 between 9:00 a.m. and 6:00 p.m. on . . . . . Monday, March 10, 2025  
Tuesday, March 11, 2025  
Wednesday, March 12, 2025 and  
Thursday, March 13, 2025

H Share certificates in respect of wholly or partially successful applications under the Hong Kong Public Offering to be dispatched or deposited into CCASS on or before<sup>(8)</sup> . . . . . Friday, March 7, 2025

**White Form** e-Refund payment instructions/refund cheques in respect of wholly or partially unsuccessful applications under the Hong Kong Public Offering to be dispatched/collected on or before<sup>(9)</sup> . . . . . Monday, March 10, 2025

Dealings in the H Shares on the Stock Exchange expected to commence at . . . . . 9:00 a.m. on Monday, March 10, 2025.

The application for the Hong Kong Offer Shares will commence on Friday, February 28, 2025 through Wednesday, March 5, 2025. The application monies (including brokerage, AFRC transaction levy, SFC transaction levy and Stock Exchange trading fee) will be held by the receiving bank on behalf of us and the refund monies, if any, will be returned to the applicant(s) without interest on Monday, March 10, 2025. Investors should be aware that the dealings in H Shares on the Stock Exchange are expected to commence on Monday, March 10, 2025.

The above expected timetable is a summary only. For further details of the structure of the Global Offering, including its conditions, and the procedures for applications for Hong Kong Offer Shares, please see “Structure of the Global Offering” and “How to Apply for Hong Kong Offer Shares”, respectively.

If the Global Offering does not become unconditional or is terminated in accordance with its terms, the Global Offering will not proceed. In such case, we will make an announcement as soon as practicable thereafter.

---

## EXPECTED TIMETABLE<sup>(1)</sup>

---

*Notes:*

- (1) All times and dates refer to Hong Kong times and dates.
- (2) You will not be permitted to submit your application under the **White Form eIPO** service through the designated website at [www.eipo.com.hk](http://www.eipo.com.hk) after 11:30 a.m. on the last day for submitting applications. If you have already submitted your application and obtained an application reference number from the designated website prior to 11:30 a.m., you will be permitted to continue the application process (by completing payment of application monies) until 12:00 noon on the last day for submitting applications, when the application lists close.
- (3) If there is/are a “black” rainstorm warning or a tropical cyclone warning signal number 8 or above and/or Extreme Conditions in force in Hong Kong at any time between 9:00 a.m. and 12:00 noon on Wednesday, March 5, 2025, the application lists will not open on that day. For further details, please see the section headed “How to Apply for Hong Kong Offer Shares — E. Severe Weather Arrangements — 1. The Opening and Closing of the Application Lists”.
- (4) Applicants who apply for Hong Kong Offer Shares through **HKSCC EIPO** channel should refer to “How to Apply for Hong Kong Offer Shares — A. Applications for Hong Kong Offer Shares — 2. Application Channels”.
- (5) The Price Determination Date is expected to be on or before Thursday, March 6, 2025. If, for any reason, the Offer Price is not agreed between the Overall Coordinators (for itself and on behalf of the Underwriters) and our Company on or before 12:00 noon on Thursday, March 6, 2025, the Global Offering will not proceed and will lapse.
- (6) H Share certificates will only become valid evidence of title at 8:00 a.m. on the Listing Date provided that the Global Offering has become unconditional and the right of termination described in “Underwriting — Underwriting Arrangements and Expenses — Hong Kong Public Offering — Grounds for Termination” has not been exercised. Investors who trade H Shares on the basis of publicly available allocation details prior to the receipt of Share certificates or prior to the H Share certificates becoming valid evidence of title do so entirely at their own risk.
- (7) None of the websites or any of the information contained on the websites forms part of this Prospectus.
- (8) White Form e-Refund payment instructions/refund cheques will be issued in respect of wholly or partially unsuccessful applications pursuant to the Hong Kong Public Offering. Part of the applicant’s Hong Kong identity card number or passport number, or, if the application is made by joint applicants, part of the Hong Kong identity card number or passport number of the first-named applicant, provided by the applicant(s) may be printed on the refund cheque, if any. Such data would also be transferred to a third party for refund purposes. Banks may require verification of an applicant’s Hong Kong identity card number or passport number before encashment of the refund cheque. Inaccurate completion of an applicant’s Hong Kong identity card number or passport number may invalidate or delay encashment of the refund cheque.
- (9) Applicants being individuals who are eligible for personal collection may not authorize any other person to collect on their behalf. If you are a corporate applicant which is eligible for personal collection, your authorized representative must bear a letter of authorization from your corporation stamped with your corporation’s chop. Both individuals and authorized representatives must produce evidence of identity acceptable to our H Share Registrar at the time of collection.

Applicants who have applied for Hong Kong Offer Shares through the **HKSCC EIPO** channel should refer to “How to Apply for Hong Kong Offer Shares — D. Despatch/Collection of H Share Certificates and Refund of Application Monies” for details.

Applicants who have applied through the **White Form eIPO** service and paid their applications monies through single bank accounts may have refund monies (if any) dispatched to the bank account in the form of **White Form e-Refund** payment instructions. Applicants who have applied through the **White Form eIPO** service and paid their application monies through multiple bank accounts may have refund monies (if any) dispatched to the address as specified in their application instructions in the form of refund cheques by ordinary post at their own risk.

H Share certificates and/or refund cheques for applicants who have applied for less than 1,000,000 Hong Kong Offer Shares and any uncollected H Share certificates and/or refund cheques will be dispatched by ordinary post, at the applicants’ risk, to the addresses specified in the relevant applications.

Further information is set out in “How to Apply for Hong Kong Offer Shares — D. Despatch/Collection of H Share Certificates and Refund of Application Monies”.

## SUMMARY

---

*This summary aims at giving you an overview of the information contained in this Prospectus and should be read in conjunction with the full text of this Prospectus. As the following is only a summary, it does not contain all the information that may be important to you. You should read this Prospectus in its entirety before you decide to invest in the Offer Shares.*

*There are risks associated with any investment. Some of the particular risks in investing in the Offer Shares are set out in the section headed “Risk factors” in this Prospectus. You should read that section carefully before you decide to invest in the Offer Shares. Various expressions used in this summary are defined in the sections headed “Definitions” and “Glossary of technical terms” in this Prospectus.*

### OVERVIEW

We are principally engaged in the mining, processing, and sales of gold. As of the Latest Practicable Date, we owned and operated seven gold and polymetallic mines across the world, including China, Southeast Asia, and West Africa. According to Frost & Sullivan:

- we experienced the fastest growth among major gold producers in China. From 2021 to 2023, our gold production achieved a CAGR of 33.1%, which was higher than the 16.4% average growth rate of major gold producers in China;
- we ranked fifth among gold producers in China in terms of gold Resources, with gold Resources of 12.5 million oz as of September 30, 2024, and we ranked fifth among gold producers in China in terms of gold production, with gold production of 461.5 koz in 2023;
- our operational efficiency enhancement surpassed the worldwide industry average and we positioned lower in terms of gold all-in sustaining costs (“AISC”) than that of the global average. For the year ended December 31, 2023, our gold AISC stood at only US\$1,179.1 per ounce, placing us in the first quartile in the worldwide gold mining industry, while the global average for the same period was approximately US\$1,348.5, which is 14.4% higher than ours. In 2023, we beat the global trend of increased costs, as we reduced our gold AISC by 12.0%, whereas the average AISC for international gold producers increased by 7.2% during the same period; and
- among gold producers in China, we had the greatest overseas presence in terms of both total assets and revenue contribution derived from business activities outside of the PRC as of December 31, 2023 and in 2023, respectively. In 2023, approximately 76.9% of our total gold production and 71.9% of our total revenue was generated from our overseas business. As of September 30, 2024, approximately 65.2% of our total assets were contributed by our overseas business.

---

## SUMMARY

---

We conducted our gold production business primarily through six gold mines, including: (i) four mines in the PRC, namely the Jilong Gold Mine, Wulong Gold Mine, Jintai Gold Mine and Huatai Gold Mine; (ii) one mine in Laos, namely the Sepon Gold and Copper Mine; and (iii) one mine in Ghana, namely the Wassa Gold Mine. Furthermore, we operate one polymetallic mine in Jilin Province, China, namely the Hanfeng Polymetallic Mine, the principal products of which are zinc, lead, copper and molybdenum concentrate powder. Also, we are planning to develop rare earth Resources in Laos. In addition to our mining business, we have a resource recycling business, where we recycle waste electronic products and electrical appliances.

As of the Latest Practicable Date, we held a total of 12 valid mining licenses in the PRC, including (i) one mining license for Wulong Mining, (ii) two mining licenses for Jilong Mining, (iii) six mining licenses for Huatai Mining, (iv) one mining license for Jintai Mining, and (v) two mining licenses for Hanfeng Mining. In addition, as of the Latest Practicable Date, we held 5 valid exploration permits in the PRC, including (i) one exploration permit for Jilong Mining, (ii) two exploration permits for Wulong Mining, (iii) one exploration permit for Jintai Mining, and (iv) one exploration permit for Hanfeng Mining. Moreover, as of the Latest Practicable Date, we held one valid mining license and one valid exploration permit in Laos. In addition, as of the Latest Practicable Date, we held two valid mining licenses and three valid exploration permits in Ghana for GSWL, with one mining license having been renewed by the Ministry of Lands and Natural Resources and in the process of being ratified by Parliament. It is stipulated in the subsection 44(4) of the Mining Act of Ghana that if a holder of a mining lease has made an application for extension of the term, the lease shall continue in force in respect of the subject of the application before the outcome of the application is determined. As advised by our Ghana Legal Advisor, this means the lessee is able to continue its ongoing mining operations under the old lease before the new lease is ratified by the Parliament. For details, see “Business — Our Gold Production Business in Ghana — Mining Licenses and Exploration Permits.”

We have high visibility and certainties in our production expansion plans for our gold mines and aim to achieve Resources and Reserve enhancement through exploration activities as set out below:

- in terms of our overseas gold assets, we are accelerating the construction of the open-pit and underground mining projects of the Sepon Gold and Copper Mine, which is expected to increase the annual underground mining capacity to 806,000 tonnes by 2025 from the current capacity of 536,000 tonnes. We plan to also commence copper production in 2025 at Khanong area of Sepon Gold and Copper Mine, which has over 6,000,000 tonnes of copper ore, and over 57,000 tonnes of copper metal contained according to the resource model. Meanwhile, we are accelerating modelling and study of exploration prospects of Discovery West Deeps and Phavat North of the Sepon Gold and Copper Mine with open-pit and underground mining potentials. The annual underground mining capacity is

---

## SUMMARY

---

expected to be further increased after 2026 and 2027. A high-level resource range assessment of Discovery West Deeps and Phavat North prospects estimated a total tonnage of 5,000,000 tonnes, with an average Au grade of 3.5g/t of gold resources expected to be added.

- in terms of our domestic gold assets, we have been undergoing several rounds of technological transformation and we are still working on several technological improvement projects. We have also initiated an expansion project at Jilong Mining to increase its annual mining capacity to approximately 300,000 tonnes by the end of 2025.

### **Plan for Exploration and Development of Rare Earth Resources**

Apart from our core gold business, our planned exploration and development of rare earth resources in Laos also create new growth opportunities. Anomalies in rare earth elements were discovered at the Sepon Gold and Copper Mine during exploration in early 2021. Following further studies, according to SRK report, as of September 30, 2024, the Mineral Resources for rare earth oxides are estimated to be about, 26.78 million tonnes of Indicated Mineral Resource with an average grade of 383.75 g/t TREO, equivalent to 10.28 thousand tonnes of total rare earth oxides within the Project area, and 63.79 million tonnes of Inferred Mineral Resource with an average grade of 339.22 g/t TREO, equivalent to 21.64 thousand tonnes of total rare earth oxides within the Project area. In October 2022, together with Xiamen Tungsten we established a joint venture, Chijin Xiawu, where we hold a 51% equity interest. Chijin Xiawu focuses on the development of rare earth Resources in Laos. The collaboration with Xiamen Tungsten is expected to improve our competitiveness in the development of rare earth and generate new growth opportunities for our business. Our subsidiaries' applications for licenses or permits for rare earth exploration or mining right in Laos submitted to the relevant governmental authorities are currently put on hold by the relevant governmental authorities, as the Laos government has suspended review of all rare earth pilot project applications. Please refer to "Business — Our Rare Earth Business in Laos" for more details.

### **COMPETITIVE STRENGTHS**

We believe that our leading market position is underpinned by the following competitive strengths:

- the largest non-state owned gold producer with leading growth in gold production and revenue in China, possessing robust market prospects;
- overseas experience and global recognition with proven track record in identifying synergetic acquisition targets, executing transactions and integrating global operations;

---

## SUMMARY

---

- continuously improving on the cost curve to enhance efficiency through technological upgrade and to drive profitability;
- distinctive “Mutual Prosperity and Development” corporate culture and effective incentive programs continuously motivate the management and employees to boost continuous growth;
- a strong social responsibility and solid commitment to promoting green and sustainable development with high ESG standards; and
- seasoned and dedicated management team with deep expertise in the gold industry and proven track record in mine operations locally and globally.

Please see “Business — Competitive Strengths” for further details of our competitive strengths.

### **BUSINESS STRATEGIES**

We intend to implement the following business strategies to achieve our goal:

- continue to increase Reserves through exploration activities and expand production volume at existing mines to realize our full growth potential;
- continue to obtain Resources and Reserves and increase production volume through domestic and overseas acquisitions of high-quality gold assets for robust and sustainable growth;
- continue to improve productivity, reduce cost and enhance profitability;
- adhere to our culture of “Mutual Prosperity and Development” to ensure strong motivation for the management team and employees; and
- continue to improve our ESG governance and enhance our standards of environmental protection, safety, social responsibility and corporate governance.

Please see “Business — Business Strategies” for further details of our business strategies.

## SUMMARY

### MINERAL RESOURCES AND RESERVES

#### Our Mineral Resources and Ore Reserves in China

The following table, which is based on the Competent Person's Report prepared in accordance with the JORC Code, sets forth the information of our gold Resources in the PRC as of September 30, 2024:

Mineralized Zone/Block	Category	Tonnage	Au Grade	Au Metal Contained	Au Metal Contained

## SUMMARY

As of September 30, 2024, the Mineral Resources for Wulong Gold Mine are estimated to be about 2,999 thousand tonnes with an average Au grade of 7.61 g/t, including approximately 1,261 thousand tonnes of Indicated Mineral Resources with an average Au grade of 8.17 g/t, and 1,738 thousand tonnes of Inferred Mineral Resources with an average Au grade of 7.21 g/t. The Mineral Resources for Jilong Gold Mine are estimated to be about 1,415 thousand tonnes with an average Au grade of 10.25 g/t, including approximately 484 thousand tonnes of Measured Mineral Resources with an average Au grade of 12.19 g/t, 424 thousand tonnes of Indicated Mineral Resources with an average Au grade of 9.25 g/t, 508 thousand tonnes of Inferred Mineral Resources with an average Au grade of 9.24 g/t. The Mineral Resources for Huatai Gold Mine are estimated to be about 3,812 thousand tonnes with an average Au grade of 7.01 g/t, including approximately 385 thousand tonnes of Measured Mineral Resources with an average Au grade of 5.88g/t, 2,146 thousand tonnes of Indicated Mineral Resources with an average Au grade of 7.27 g/t, 1,281 thousand tonnes of Inferred Mineral Resources with an average Au grade of 6.90 g/t. The Mineral Resources for Jintai Gold Mine are estimated to be about 10,666 thousand tonnes with an average Au grade of 1.30 g/t, including approximately 3,363 thousand tonnes of Measured Mineral Resources with an average Au grade of 1.68 g/t, 4,604 thousand tonnes of Indicated Mineral Resources with an average Au grade of 1.02 g/t, 2,699 thousand tonnes of Inferred Mineral Resources with an average Au grade of 1.29 g/t.

As of September 30, 2024, the Mineral Resources for our PRC Mines are estimated to be about 18,893 thousand tonnes with an average Au grade of 4.12 g/t, including approximately 4,232 thousand tonnes of Measured Mineral Resources with an average Au grade of 3.26 g/t, 8,435 thousand tonnes of Indicated Mineral Resources with an average Au grade of 4.09 g/t, 6,226 thousand tonnes of Inferred Mineral Resources with an average Au grade of 4.75 g/t.

The following table, which is based on the Competent Person's Report prepared in accordance with the JORC Code, sets forth the information of our gold Reserves in the PRC as of September 30, 2024:

<u>Mineralized Zone/Block</u>	<u>Category</u>	<u>Tonnage</u>	<u>Au Grade</u>	<u>Au Metal Contained</u>	<u>Au Metal Contained</u>

*Note:*

- Numbers have been subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them.

As of September 30, 2024, the Probable Ore Reserves for Wulong Gold Mine are about 984 thousand tonnes with an average Au grade of 7.30 g/t. The Ore Reserves for Jinlong Gold Mine are about 919 thousand tonnes with an average Au grade of 8.73 g/t, of which 510 thousand tonnes are Proved Ore Reserves with an average Au grade of 9.81 g/t, and 409 thousand tonnes are Probable Ore Reserves with an average Au grade of 7.38 g/t. The Ore Reserves for Huatai Gold Mine are about 1,694 thousand tonnes with an average Au grade of 6.20 g/t, of which 226 thousand tonnes are Proved Ore Reserves with an average Au grade of 5.21 g/t, and 1,468 thousand tonnes are Probable Ore Reserves with an average Au grade of 6.35 g/t. The Probable Ore Reserves for Jintai Gold Mine are about 1,370 thousand tonnes with an average Au grade of 0.75 g/t.

As of September 30, 2024, the Ore Reserves for PRC Mines are about 4,967 thousand tonnes with an average Au grade of 5.38 g/t, of which 736 thousand tonnes are Proved Ore Reserves with an average Au grade of 8.40 g/t, and 4,231 thousand tonnes are Probable Ore Reserves with an average Au grade of 4.86 g/t.

### Our Mineral Resources and Ore Reserves in Laos and Ghana

The following table, which is based on the Competent Person's Report prepared in accordance with the JORC Code, sets forth the information of our gold Resources in Laos and Ghana as of September 30, 2024:

Mineralized Zone/Block	Category	Tonnage	Au Grade	Au Metal Contained	Au Metal Contained
		(kt)	(g/t)	(koz)	(t)

	<b>Total</b>	<b><u>91,129</u></b>	<b><u>3.41</u></b>	<b><u>9,995</u></b>	<b><u>310.86</u></b>

*Notes:*

1. As to the Sepon Gold and Copper Mine and Wassa Gold Mine, the Mineral Resources include the resources from open-pit, underground and stockpile.
2. Numbers have been subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them.

As of September 30, 2024, the Mineral Resources for Sepon Gold and Copper Mine are estimated to be about 13,498 thousand tonnes with an average Au grade of 4.00 g/t, including approximately 276 thousand tonnes of Measured Mineral Resources with an average Au grade of 7.98 g/t, 7,220 thousand tonnes of Indicated Mineral Resources with an average Au grade of 4.13g/t, 6,002 thousand tonnes of Inferred Mineral Resources with an average Au grade of 3.67 g/t. The Mineral Resources for Wassa Gold Mine are estimated to be about 77,631 thousand tonnes with an average Au grade of 3.31 g/t, including approximately 6,754 thousand tonnes of Measured Mineral Resources with an average Au grade of 2.97 g/t, 9,984 thousand tonnes of Indicated Mineral Resources with an average Au grade of 3.13g/t, 60,893 thousand tonnes of Inferred Mineral Resources with an average Au grade of 3.38 g/t.

As of September 30, 2024, the Mineral Resources for our overseas mines are estimated to be about 91,129 thousand tonnes with an average Au grade of 3.41 g/t, including approximately 7,031 thousand tonnes of Measured Mineral Resources with an average Au grade of 3.17 g/t, 17,203 thousand tonnes of Indicated Mineral Resources with an average Au grade of 3.55 g/t, 66,895 thousand tonnes of Inferred Mineral Resources with an average Au grade of 3.40 g/t.

## SUMMARY

The following table, which is based on the Competent Person's Report prepared in accordance with the JORC Code, sets forth the information of our gold Reserves in Laos and Ghana as of September 30, 2024:

<b>Total</b>	<b>4,814</b>	<b>3,996</b>	<b>260.2</b>	<b>4,380</b>	<b>91%</b>	<b>6,378</b>	<b>6,359</b>	<b>436.2</b>	<b>7,680</b>	<b>83%</b>	<b>6,175</b>	<b>6,493</b>	<b>461.5</b>	<b>7,820</b>	<b>84%</b>	

#### Notes:

- Utilization rate is calculated by dividing the amount of ore processed by the processing capacity. For some of the periods, the utilisation rate were over 100%. This was mainly because the relevant processing plants actually operated for more days than the planned schedule as the annual maintenance work took less than the anticipated time.
- The ore mined, ore processed, gold production, processing capacity and utilisation rate of Huatai Gold Mine began to decline since 2021. This is mainly because the technical renovation and expansion project of Huatai Gold Mine commenced in 2021. Since then, the production of Huatai Gold Mine gradually declined due to the impact from the engineering upgrades. For more details regarding the year-to-year comparison of the gold production volume, please refer to “Our Gold Production Business in China — Overview — Operation Performance.”

---

## SUMMARY

---

3. In January 2023, we completed the acquisition of a 51% equity interest in Xinhenghe Mining, which in turn directly holds a 90% equity interest in Jintai Mining, which operates the Jintai Gold Mine, and we began consolidating the accounts of Jintai Mining from January 31, 2023. As such, ore mined volume, ore processed volume and mine production volume of Jintai Gold Mine prior to January 31, 2023 was not included in our Group. For more details, please see “Financial Information — Key Factors Affecting Our Results of Operations — Acquisitions — Acquisition of Xinhenghe Mining.”
4. The volume of the ore mined of Sepon Gold and Copper Mine declined over the Track Record Period, mainly because we were upgrading the mining systems of Sepon Gold and Copper Mine to enhance the capacity, which affected the mining operations, and we have utilised part of the ore inventory which were mined in past periods. The volume of ore processed decreased as Sepon Gold and Copper Mine started underground mining in 2023 and the underground operation provides higher grade ore but with smaller volume. For more details regarding the year-to-year comparison of the gold production volume, please refer to “— Our Gold Production Business in Laos — Overview — Operation Performance.”
5. In January 2022, we acquired a 62% equity interest in Golden Star Resources, which in turn indirectly holds a 90% equity interest in GSWL, and we began consolidating the accounts of Golden Star Resources from February 1, 2022. As such, ore mined volume, ore processed volume and mine production volume of Wassa Gold Mine prior to February 1, 2022 was not included in our Group. For more details, please see “Financial Information — Key Factors Affecting Our Results of Operations — Acquisitions — Acquisition of Golden Star Resources.”
6. For some of the years, the volume of “ore processed” was higher than the volume of “ore mined.” This was mainly because some of the ore mined during the previous year was kept as inventory and was processed in the following year which added up to the aggregated amount of the “ore processed” for that year.

---

**SUMMARY**

---

**Our Other Mineral Resources Production Volume**

The following table sets forth the ore mined volume, ore processed volume and mine production volume in relation to our other Mineral Resources businesses for the periods indicated:

	Year Ended December 31,			Nine Months Ended September 30, 2023	Nine Months Ended September 30, 2024
	2021	2022	2023		
	<i>(kt)</i>	<i>(kt)</i>	<i>(kt)</i>	<i>(kt)</i>	<i>(kt)</i>

<i>powder</i> <sup>3</sup> . . . . .	–	0.04	0.21	0.07	0.49
Sepon Gold and Copper Mine – Copper cathodes.	5.02	6.43	6.49	4.94	4.03

## SUMMARY

*Notes:*

1. The ore mined volume for the Sepon Gold and Copper Mine’s copper mine dropped to zero in 2022, because Sepon Gold and Copper Mine resumed gold production in 2020, while only keeping a small portion of processing capacity for its copper business since then. For the reason behind the halt in gold production at the copper mine of the Sepon Gold and Copper Mine, please refer to “Business — Our Gold Production Business in Laos — Overview.” As of the Latest Practicable Date, the Sepon Gold and Copper Mine did not have any active copper mining projects while only processed the ore from its stockpile.
2. Utilization rate is calculated by dividing the amount of ore processed by the processing capacity. For some of the periods, the utilisation rate was over 100%. This was because the relevant processing plants actually operated for more days than the planned schedule as the annual maintenance work took less than the anticipated time.
3. There was no molybdenum production volume for the year of 2021, mainly because the Dongfeng Mine was conducting exploration and had not yet initiated molybdenum mining activities.

### Our Revenue Breakdown

During the Track Record Period, we generated revenue from the PRC, Laos and Ghana. The following table sets forth a breakdown of our revenue by origin of our products for the periods indicated:

	Year Ended December 31,						Nine Months Ended September 30,			
	2021		2022		2023		2023		2024	
	<i>RMB'000</i>	%	<i>RMB'000</i>	%	<i>RMB'000</i>	%	<i>RMB'000</i>	%	<i>RMB'000</i>	%
	<i>(unaudited)</i>									
PRC . . . . .	1,259,688	33.3	1,477,471	23.5	2,026,833	28.1	1,301,395	25.7	1,793,374	28.8
Laos . . . . .	2,522,936	66.7	2,998,740	47.9	3,054,614	42.3	2,239,406	44.2	2,327,466	37.4
Ghana . . . . .	—	—	1,790,576	28.6	2,139,505	29.6	1,521,492	30.1	2,101,991	33.8
<b>Total . . . . .</b>	<b><u>3,782,624</u></b>	<b><u>100.0</u></b>	<b><u>6,266,787</u></b>	<b><u>100.0</u></b>	<b><u>7,220,952</u></b>	<b><u>100.0</u></b>	<b><u>5,062,293</u></b>	<b><u>100.0</u></b>	<b><u>6,222,831</u></b>	<b><u>100.0</u></b>

*Notes:*

1. Our revenue in Ghana was generated from Golden Star Resources. In January 2022, we acquired a 62% equity interest in Golden Star Resources, which in turn indirectly holds a 90% equity interest in GSWL, and we began consolidating the accounts of Golden Star Resources from February 1, 2022. As such, the revenue of GSWL prior to February 1, 2022 was not included in our Group. For more details, please see “Financial Information — Key Factors Affecting Our Results of Operations — Acquisitions — Acquisition of Golden Star Resources”.
2. Our gold products are sold globally. Our major clients are refineries located in PRC, Thailand, Australia, Singapore, South Africa and Ghana.

## SUMMARY

During the Track Record Period, we generated our revenue primarily from gold mining, other Mineral Resources and other businesses. The following table sets forth the breakdown of our revenue by business segment for the periods indicated:

	Year Ended December 31,						Nine Months Ended	
	2021		2022		2023		September 30, 2024	
	<i>RMB'000</i>	%	<i>RMB'000</i>	%	<i>RMB'000</i>	%	<i>RMB'000</i>	%
Gold mining . .	2,968,694	78.5	5,304,729	84.6	6,322,263	87.6	5,561,259	89.4

*Note:* The average selling price was determined based on the gold metal contained in the gold products despite the variant grades of the products.

### The Life and the Current Status of our Mines

Wulong Gold Mine, Jilong Gold Mine, Jintai Gold Mine, Hanfeng Polymetallic Mine, Sepon Gold and Copper Mine, and Wassa Gold Mine are currently in operation and each of them has LOM of 12, 9, 11, 8, 7, and 5 years respectively. Huatai Gold Mine has LOM of 28 years and is currently under renovation. LOM is calculated based on Ore Reserves as of September 30, 2024 according to the SRK Report.

### Development Plan and Planned Production Schedule

#### *Development Plan*

For Wulong Gold Mine, we plan to undertake the renovation of shaft and the expansion of tunnels, including shaft deepening projects and technical renovation projects in 2025 and 2026. In 2027, we plan to increase our mining capacity by 33.1% compared to 2024.

## SUMMARY

For Jilong Gold Mine, we plan to undertake the renovation of shaft and ventilation shafts and expand the tunnels in 2025 and 2026. In 2027, we plan to increase our mining capacity by 33.1% compared to 2024.

For Huatai Gold Mine, we plan to continue with the technical renovation projects in 2025. In 2026, we plan to substantially complete the infrastructure development and increase the annual mining capacity by 30,000 tonnes.

For Jintai Gold Mine, we plan to increase the annual gold production to 1 tonnes in 2025.

For Sepon Gold and Copper Mine, we plan to make follow-up investments in the Far West Mine, including the construction of a tailings storage facility, and establish a copper ore processing plant with an annual capacity of 1 million tonnes in 2025. In 2027, we plan to increase our annual gold production to 7 tonnes and our copper annual production to 30,000 tonnes.

For Wassa Gold Mine, we plan to carry out deep and peripheral exploration, as well as intensified drilling operations, and initiate the construction of the transition from surface to underground mining of the Father Brown Mine from 2025 to 2027.

For Hanfeng Polymetallic Mine, we plan to establish a 5,000-tonne ore processing plant for the Dongfeng Molybdenum Mine in 2026.

For details of the development plans of our mines, please refer to “Business — Development Plan and Production Schedule — Development Plan.”

### *Planned Production Schedule*

The following chart sets forth the planned mining and production schedule for the operations in Wulong Gold Mine and Jilong Gold Mine for the periods indicated over the life of mine:

Underground Gold Mine in China	Unit	LOM	2024												
			Q4	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	
<b>Jilong</b>															
Mined Tonnes . . . . .	kt	919	88	184	180	194	109	58	55	38	13	-	-	-	
Milled Tonnes . . . . .	kt	919	88	184	180	194	109	58	55	38	13	-	-	-	
Gold Produced . . . . .	koz	250	24	43	37	46	31	22	22	18	7	-	-	-	
<b>Wulong</b>															
Mined Tonnes . . . . .	kt	984	27	99	99	98	99	108	108	102	101	66	44	33	
Milled Tonnes . . . . .	kt	984	27	99	99	98	99	108	108	102	101	66	44	33	
Gold Produced . . . . .	koz	210	5	22	25	22	21	23	24	21	17	15	10	4	

## SUMMARY

*Notes:*

1. The planned production schedule of the LOM was made based on the data collected of our PRC Gold Mines as of September 30, 2024.
2. LOM is calculated by deducting the forecasted production volume from the Ore Reserves each year since September 30, 2024, until all Ore Reserves are extracted in the final year. The forecasted production volume is estimated based on the designed mining capacity, scheduling strategy and expansion timelines. For details, please refer to the mine schedule set forth in “Business — Development Plan and Planned Production Schedule — Planned Production Schedule.”
3. As Huatai Gold Mine is currently under technical renovation, and Jintai Gold Mine is of less significance of production compared to Jilong Gold Mine and Wulong Gold Mine, we only include details of Jilong Gold Mine and Wulong Gold Mine in the charts above.

The following chart sets forth the planned mining and production schedule for the operations at the Sepon Gold and Copper Mine for the periods indicated over the life of mine:

Type	Unit	LOM	2024 Q4	2025	2026	2027	2028	2029	2030
<b><i>LXML</i></b>									
Mined Tonnes Gold . . . . .	kt	7,896	1,435	2,803	1,909	770	546	402	31
Mined Tonnes Copper . . . . .	kt	1,185	447	738	–	–	–	–	–
Total Mined Tonnes . . . . .	kt	9,081	1,882	3,542	1,909	770	546	402	31
Milled Tonnes Gold . . . . .	kt	7,896	1,435	2,803	1,909	770	546	402	31
Milled Tonnes Copper . . . . .	kt	1,185	447	738	–	–	–	–	–
Total Milled Tonnes . . . . .	kt	9,081	1,882	3,542	1,909	770	546	402	31
Gold Produced . . . . .	kg	15,963	1,568	5,152	4,912	1,803	1,353	1,108	66
Gold Produced . . . . .	koz	513	50	166	158	58	44	36	2
Copper Produced . . . . .	kt	5	2	3	–	–	–	–	–

*Notes:*

1. The planned production schedule of the LOM of 7 years was made based on the data collected from the Sepon Gold and Copper Mine since September 30, 2024.
2. LOM is calculated by deducting the forecasted production volume from the Ore Reserves each year since September 30, 2024, until all Ore Reserves are extracted in the final year. The forecasted production volume is estimated based on the designed mining capacity, scheduling strategy and expansion timelines. For details, please refer to the mine schedule set forth in “Business — Development Plan and Planned Production Schedule — Planned Production Schedule”.

## SUMMARY

The following chart sets forth the planned mining and production schedule for the operations at the Wassa Gold Mine for the periods indicated over the life of mine:

Wassa Gold Mine in Ghana	Unit	LOM	2024Q4	2025	2026	2027	2028
<b>Wassa_Basic Plan</b>							
Mined_Tonnes . . . . .	kt	<b>8,812</b>	979	3,209	2,517	1,614	493
Milled Tonnes . . . . .	kt	<b>8,812</b>	979	3,209	2,517	1,614	493
Gold Produced . . . . .	kg	<b>17,955</b>	1,981	6,000	5,533	3,474	967
Gold Produced . . . . .	koz	<b>577</b>	64	193	178	112	31
<b>Wassa_Upside Plan</b>							
Mined_Tonnes . . . . .	kt	<b>9,986</b>	979	3,209	2,517	1,614	1,667
Milled Tonnes . . . . .	kt	<b>9,986</b>	979	3,209	2,517	1,614	1,667
Gold Produced . . . . .	kg	<b>19,897</b>	1,981	6,000	5,533	3,474	2,908
Gold Produced . . . . .	koz	<b>640</b>	64	193	178	112	94

*Notes:*

1. The planned production schedule for the LOM includes two scenarios: the basic plan and the upside plan. The upside plan includes residual material in the upper area and material in the lower area, which SRK views as a potential economic opportunity but does not classify as Ore Reserves due to insufficient technical studies. Both LOM scenarios span five years and were developed based on data collected from the Wassa Gold Mine as of September 30, 2024.
2. LOM is calculated by deducting the forecasted production volume from the Ore Reserves each year since September 30, 2024, until all Ore Reserves are extracted in the final year. The forecasted production volume is estimated based on the designed mining capacity, scheduling strategy and expansion timelines. For details, please refer to the mine schedule set forth in “Business — Development Plan and Planned Production Schedule — Planned Production Schedule”.

For the charts set forth the planned mining and production schedule for the operations at the Huatai Gold Mine and Jintai Gold Mine, please refer to “Business — Our Gold Production Business in PRC — Planned Production Schedule”. For the chart sets forth the planned mining and production schedule for the operations at the Hanfeng Polymetallic Mine, please refer to “Business — Our Other Mineral Resources Production Business in China — Planned Production Schedule”.

## SUMMARY

### Cash Operating and Production Costs

Cash operating costs for our PRC Gold Mines primarily consist of labor cost, material cost, electricity cost and some other costs. The table below is based on the SRK Report and sets forth a summary of historical and forecast of the cash operating costs and cash operating costs per gram of gold produced of our PRC Gold Mines for the years indicated.

The anticipated fluctuations in future cash operating costs are primarily driven by several factors, which vary across the gold mines. For some mines, the expansion of mining capacity is expected to increase gold production, thereby reducing unit costs. In others, higher gold grades in the deeper zones contribute to greater gold output and further reductions in unit costs. Specifically, the production schedule of each of Wulong Gold Mine and Jilong Gold Mine in the SRK Report solely focuses on stope production and excludes ore from comprehensive utilization as recorded in historical data. As a result, it is anticipated that gold production of these two mines will be lower compared to previous figures, thus leading to an increase in unit costs.

Wulong Gold Mine <sup>1</sup>	Unit	2021	2022	2023	2024Q1-Q3	LOM <sup>2</sup>	2024Q4	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035

*Notes:*

- As Huatai Gold Mine is currently under technical renovation, and Jintai Gold Mine is of less significance of production compared to Jilong Gold Mine and Wulong Gold Mine, we only include details of Jilong Gold Mine and Wulong Gold Mine in the charts above.
- LOM is calculated by deducting the forecasted production volume from the Ore Reserves each year since September 30, 2024, until all Ore Reserves are extracted in the final year. The forecasted production volume is estimated based on the designed mining capacity, scheduling strategy and expansion timelines. For details, please refer to the mine schedule set forth in “Business — Development Plan and Planned Production Schedule — Planned Production Schedule”.
- “Gold Produced” is the total gold production over the LOM, as the aggregated volume of all the annual production volume.
- Each of the cost of “Labor”, “Material”, “Electricity” and “Others” is the average cost over the LOM, which is calculated as the total cost over the LOM divided by the total gold production.
- “Total” is derived by applying the adjusted historical per-ton cost to the forecasted ore ton each year and then summing over the LOM.

For the charts set forth the cash operating costs for the operations at the Huatai Gold Mine and Jintai Gold Mine, please refer to “Financial Information — Cash Operating and Production Costs”. For the chart sets forth the cash operating costs for the operations at the Hanfeng Polymetallic Mine, please refer to “Financial Information — Cash Operating and Production Costs”.

Cash operating costs for our Sepon Gold and Copper Mine primarily consist of labor cost, material cost, electricity cost and some other costs. The table below is based on the SRK Report and sets forth a summary of historical and forecast of the cash operating costs and cash operating costs per tonnes of gold and copper produced of our Sepon Gold and Copper Mine for the years indicated.

## SUMMARY

At the Sepon Gold and Copper Mine, future cost differences are anticipated to primarily arise from a shift in mining methods. In contrast to historical operations, which have combined both open-pit and underground mining, future production is expected to rely solely on underground mining. This transition is anticipated to lead to significant changes in operating costs.

*Notes:*

- All costs at the company level of LXML are borne by the gold mine of the Sepon Gold and Copper Mine.
- LOM is calculated by deducting the forecasted production volume from the Ore Reserves each year since September 30, 2024, until all Ore Reserves are extracted in the final year. The forecasted production volume is estimated based on the designed mining capacity, scheduling strategy and expansion timelines. For details, please refer to the mine schedule set forth in “Business — Development Plan and Planned Production Schedule — Planned Production Schedule”.
- “Copper Produced” is the total copper production over the LOM, as the aggregated volume of all the annual production volume. “Gold Produced” is the total gold production over the LOM, as the aggregated volume of all the annual production volume.
- Each of the cost of “Labor”, “Material”, “Electricity” and “Others” is the average cost over the LOM, which is calculated as the total cost over the LOM divided by the total gold/copper production.
- “Total” is derived by applying the adjusted historical per-ton cost to the forecasted ore ton each year and then summing over the LOM.

## SUMMARY

Cash operating costs for our Wassa Gold Mine primarily consist of labor cost, material cost, electricity cost and some other costs. The table below is based on the SRK Report and sets forth a summary of historical and forecast of the cash operating costs and cash operating costs per gram of gold produced of our Wassa Gold Mine for the years indicated.

At the Wassa Gold Mine, anticipated future cost differences are expected to primarily result from a transition in mining methods. Specifically, whereas historical operations have integrated both open-pit and underground mining, future production is projected to be conducted exclusively through underground mining. This shift is expected to give rise to significant changes in operating costs.

Wassa Gold Mine	Unit	2021	2022	2023	2024Q1-Q3	LOM <sup>1</sup>	2024Q4	2025	2026	2027	2028

## SUMMARY

---

### *GSWL*

Type	Serial Number	Permitted annual production volume (10,000 tons)	Geographical Area (km <sup>2</sup> )	Effective Period	Status
Mining Lease . . . . .	LVDGAST35364682022	–	63.00	January 26, 2022 to January 25, 2047	Lease renewed and in the process of ratification.
Mining Lease . . . . .	LVDGAST37993462020	–	19.45	August 25, 2020 to August 24, 2031	Valid
Mining Lease . . . . .	LVDGAST38000372020	–	43.00	August 25, 2020 to August 24, 2031	Valid
Exploration Permit . . .	LVB9113/1994 & PL 2/155	–	24.81	December 13, 2024 to December 12, 2027	Valid
Exploration Permit . . .	LVB5528/2005 & PL 2/378	–	96.44	March 4, 2022 to March 3, 2025 <sup>1</sup>	Valid
Exploration (prospecting) Permit . . . . .	LVB1624/2006 & RL2/117	–	26.9	September 4, 2024 to September 3, 2027	Valid

*Note:*

1. We will submit our renewal application prior to the expiry date in accordance with the relevant laws and regulations, and we and our Ghana Legal Advisor do not expect any legal impediment in the renewal process for this permit.

The mining rights of the Wassa Gold Mine are pledged to Standard Bank Group in South Africa to secure short-term loans.

### **Mining and Processing Capacity**

We are advancing multiple underground development projects at the Wulong Gold Mine to increase its annual processing capacity from 578,000 tonnes to approximately 700,000 tonnes. The mine's average daily processing capacity increased to over 1,800 tonnes in the second half of 2023. We will continue to invest in exploration and Reserves enhancement at the mine to tap into the potential of Resources in the deep and peripheral areas.

---

## SUMMARY

---

The Jilong Gold Mine has completed the 180,000-tonne gold ore processing plant expansion project, and trial production has commenced since June 2024. We plan to increase annual mining capacity from 120,000 tonnes to approximately 300,000 tonnes by the end of 2025. Additionally, we commenced construction of a new tailings storage facility in November 2023, with other construction projects progressing as planned.

The Huatai Gold Mine will initiate a comprehensive transformation of the mine's infrastructure and commence shaft engineering construction. Upon completion, we expect to increase the Huatai Gold Mine's annual mining capacity by 30,000 tonnes.

In October 2023, we completed the construction project at the Jintai Gold Mine with its annual mining and processing capacity of approximately 140,000 tonnes. Since 2024, we commenced a further expansion project of the Jintai Gold Mine, pursuant to which the Xidengping mining area is expected to reach an annual mining and processing capacity of approximately 50,000 tonnes, and the Tangzhibian mining area is expected to reach an annual mining and processing capacity of approximately 600,000 tonnes.

For the Sepon Gold and Copper Mine, it is expected that its annual underground mining capacity will increase from the current capacity of 536,000 tonnes to 806,000 tonnes. We will also commence copper production at Khanong area, which has over 6,000,000 tonnes of copper ore, and over 57,000 tonnes of copper metal contained according to the resource model.

For Wassa Gold Mine, we will further expand our mining and processing capacity, with a goal to develop the Wassa Gold Mine into a large-scale gold mine and expect to achieve (i) an annual processing capacity of approximately 3.3 million tonnes and (ii) an annual production of 350 koz gold.

### **Hedging Strategy**

We have different measures to hedge against the risk of fluctuations in gold price. To mitigate the risks of future increases in the prices of the gold we intend to lease, we engage in hedging through forward transactions or by purchasing futures products in the futures market for the leased gold. As a gold production enterprise, we take risk management strategy to prevent the risk of gold price declines by selling our gold products in major futures markets, such as the Shanghai Gold Exchange or the COMEX gold exchange in the U.S., to lock in prices. The volume of such transactions each year depends on the trend of gold price fluctuation for that year, but the total volume will not exceed 10% of the annual gold production according to our internal policy.

We have different measures to hedge against the risk of fluctuations in gold price. For details, please refer to "Business — Gold Leasing, Hedging and Streaming — Hedging."

---

## SUMMARY

---

### OUR MINING OPERATIONS AND PRODUCTION FACILITIES

Our gold production operations in PRC, Laos and Ghana can generally be divided into two steps, namely, (i) mining and (ii) processing.

#### PRC

In relation to mining, we primarily utilize the resuing method for our underground mining at the Wulong Gold Mine, the Jilong Gold Mine and the Huatai Gold Mine, and we also utilize the open-pit mining method at Jintai Gold Mine. In relation to processing, the Wulong Gold Mine primarily utilizes the flotation process method, whereas the Jilong Gold Mine and the Huatai Gold Mine primarily utilize the all-slime cyanidation absorption gold extraction method, and the Jintai Gold Mine primarily utilize the carbon-in-pulp gold extraction process method. See “Business — Our Gold Production Business in China — Operating Process of Gold Production Business in the PRC.”

#### Laos

In relation to mining, we generally follow the open-pit mining method, and also adopt the underground mining method. In relation to processing, we utilize the flotation-pressure oxidation method to process both primary ores and oxide ores. See “Business — Our Gold Production Business in Laos — Operating Process of Gold Production Business in Laos.”

#### Ghana

In relation to mining, the Wassa mining area primarily utilizes the open-pit mining method and the sub level open stoping method, the Hwini Butre mining area utilizes the open-pit mining method, and the Benso mining area primarily utilizes the open-pit mining method. In relation to processing, we primarily utilize the gravity-flow all-slime cyanidation absorption gold extraction method. See “Business — Our Gold Production Business in Ghana — Operating Process of Gold Production Business in Ghana.”

### SALES AND MARKETING

During the Track Record Period, our primary products were gold, copper cathodes and other Mineral Resources products.

In relation to our sales of products in PRC, our products are sold to a wide range of customers in China and we adopt different arrangements to determine the price and facilitate our sales. For our gold production, we determine the selling price based on the spot trading price of the Shanghai Gold Exchange and the relevant customer’s agreement. For our other Mineral Resources, we determine sales prices based on the market prices of the relevant metals contained in the concentrates, including zinc, lead, copper, silver and molybdenum. For our other production, we determine the sales prices with reference to the quantity of disassembled products and the market conditions or through bidding process. In relation to our sales of products in the PRC, we generally enter into sales agreements with our customers on an annual basis without entering into any long-term agreement. For details, please refer to the section headed “Business — Sales and Customers — Sales in the PRC.”

---

## SUMMARY

---

In relation to our sales of products in Laos, we generally enter into sales agreements with our customers for one to three years. Given the high quality of our products, various potential customers have approached us. Accordingly, we believe that it would not be difficult for us to find alternative customers for sales of products on terms comparable to those we have with our existing customers. For details, please refer to the section headed “Business — Sales and Customers — Sales in Laos.”

In relation to our sales of products in Ghana, we generally enter into sales agreements with our customers for two years or longer terms. For details, please refer to the section headed “Business — Sales and Customers — Sales in Ghana.”

The mines of our Company are interconnected with local and proximate regions through an extensive road network, and are further integrated with key transportation infrastructure, including land, water, and air routes. During the Track Record Period, the products from our PRC Mines were shipped via land transportation, and the products derived from the Wassa Gold Mine and Sepon Gold and Copper Mine were generally dispatched via air, ensuring expeditious and secure delivery to their intended destinations.

### OUR CUSTOMERS

During the Track Record Period, our top five customers were refiners and trading companies of precious metals and other non-ferrous metals as well as banks. For each year/period of the Track Record Period, revenue contributed by our top five customers amounted to RMB2,946.2 million, RMB5,345.8 million, RMB5,565.6 million and RMB4,904.6 million, respectively, accounting for 77.9%, 85.4%, 77.1% and 78.8% of our total revenue for the same periods. Revenue contributed by our largest customer for each year/period of the Track Record Period amounted to RMB2,126.6 million, RMB2,602.2 million, RMB2,672.1 million and RMB2,140.3 million, respectively, accounting for 56.2%, 41.5%, 37.0% and 34.4% of our total revenue for the same periods.

To the best of our knowledge, during the Track Record Period and up to the Latest Practicable Date, our customers were Independent Third Parties. As of the Latest Practicable Date, none of our Directors, their associates or any of our shareholders (who or which to the knowledge of the Directors owned more than 5% of our issued share capital) had any interest in any of our five largest customers in each year/period of the Track record Period. See “Business — Sales and Customers — Customers.”

### PROCUREMENT AND SUPPLIERS

We conduct our business in China, Laos and Ghana, and we consider that procurement management excellency is one of our key focuses. We have adopted headquarter-supported global centralized procurement system to enhance our procurement management efficiency. As supplemented procurement methods, we also procure individually in each country.

---

## SUMMARY

---

In the PRC, we procure a wide range of raw materials used in our mining operations, such as explosive materials, diesel, sodium cyanide and cement, from local suppliers. And we procure various machinery and equipment for our production activities, including mining and processing equipment which mainly comprises rock drilling machines, drilling jumbos, scrapers, crushing circuits, grinding circuits, flotation circuits, pressure filters, conveyers, and other ancillary equipment. For details, please see “Business — Procurement and Suppliers — Our PRC Operations”. In Laos and Ghana, we also procure various materials, such as diesel fuel, processing chemicals and reagents, explosives, and related consumables, as well as machinery and equipment for our production operations from (i) different local suppliers in Laos and Ghana and/or (ii) the original equipment manufacturers. We also procure various services, such as security services, civil work services, engineering services and loading and hauling services, from various local suppliers. For details, please see “Business — Procurement and Suppliers — Our Operations in Laos and Ghana.”

The following table sets forth the annual procurement amounts of all of our subsidiaries, which are located in PRC, Laos and Ghana, for the periods indicated.

	Year ended December 31,			Nine Months ended September 30,
	2021	2022	2023	2024
	<i>(RMB'000)</i>			
PRC .....	337,744	420,211	557,791	559,475
Laos .....	2,050,845	2,229,796	1,685,296	1,372,992
Ghana .....	1,132,378	1,740,289	1,694,634	1,592,815
<b>Total</b> .....	<b>3,520,967</b>	<b>4,390,296</b>	<b>3,937,721</b>	<b>3,525,282</b>

During the Track Record Period, all of our top five suppliers in the respective year/period were service or commodity providers such as suppliers of electricity, fuel, and transportation. For each year/period of the Track Record Period, purchases from our top five suppliers amounted to RMB647.3 million, RMB855.2 million and RMB666.5 million and RMB633.9 million, respectively, accounting for 25.6%, 19.1%, 13.7% and 17.6% of our cost of sales for the same periods, respectively. Purchases from our largest supplier for each year/period of the Track Record Period amounted to RMB159.5 million, RMB210.6 million, RMB149.5 million and RMB235.5 million, respectively, accounting for 6.3%, 4.7%, 3.1% and 6.5% of our cost of sales for the same periods, respectively.

During the Track Record Period and as of the Latest Practicable Date, we did not experience any material impact to our operation or financial condition due to any significant fluctuation in prices set by our suppliers or breach of contract on the part of our suppliers. During the Track Record Period and as of the Latest Practicable Date, none of our Directors, their associates or any of our shareholders (who or which to the knowledge of the Directors owned more than 5% of our issued share capital) had any interest in any of our five largest suppliers, and the top five suppliers in each year/period of the Track record Period are all Independent Third Parties. See “Business — Procurement and Suppliers — Suppliers.”

---

## SUMMARY

---

### CONTRACTORS

In the PRC, we outsource a portion of our exploration and shaft construction/engineering work to qualified contractors. In Laos, we outsource third-party contractors, especially mining and processing work in our projects in Laos. In Ghana, we engaged third-party contractors to provide excavation, mining, exploration, processing, construction and drilling services. For details, please see “Business — Contractors — Our PRC Operations”, “Business — Contractors — Our Operations in Laos” and “Business — Contractors — Our Operations in Ghana.”

During the Track Record Period and up to the Latest Practicable Date, we did not encounter any material disputes with our contractors in PRC, Laos and Ghana or experience any suspension or delay in our operations as a result of misconduct of our contractors.

### COMPETITIVE LANDSCAPE

The gold industry has become more concentrated due to mergers and resource integration of gold companies. Large gold companies with advantages, such as efficient operations, global presence, financial strength and other advantages, are leading the industry. At the same time, regulatory controls, including safety and environmental protection requirements, have further tightened. Less competitive gold production companies with aging facilities and insufficient resources have been forced to shut down or undergo significant changes. Furthermore, the total production cost of gold mining has increased due to several factors, and smaller gold companies have gradually exited the market. The CR10 Concentration Ratio, which is an indicator used to measure market concentration and represents the total market share of the top ten companies in a specific market, of the gold industry increased from 24.4% in 2021 to 25.6% in 2023. See “Industry Overview — Competitive Landscape” for more details.

### REGULATORY REGIMES

We conduct business in Ghana, and on July 31, 2018, the Ghanaian Minister of Lands and Natural Resources informed the Ghanaian Chamber of Mines of the Government of Ghana’s intention to exercise its right of pre-emption to acquire up to 20% of all gold mined in Ghana for the benefit of Ghanaian refineries. In November 2022, the Government of Ghana directed all gold mining companies, effective January 2023 to sell up to 20% of their products produced in Ghana to the Bank of Ghana at the World Market Spot Price for Ghanaian Cedis. We generally are able to utilize all Ghanaian Cedis for our operating expenses, but there is a risk that our holding of Ghanaian Cedis is subject to fluctuation and foreign exchange loss.

We conduct business in Laos, and Laos is not a member of the IOSCO or a signatory to the IOSCO MMOU. Our Group’s place of central management and control is in the PRC, taking into account, among other things, that: (i) our Group is headquartered in Beijing, and all its Directors and senior management are PRC citizens and/or based in the PRC (including Hong Kong); (ii) the decision-making process and business activities of our Group’s operations in the PRC, Laos and Ghana are centrally managed, monitored and approved by our Group’s

---

## SUMMARY

---

headquarters in Beijing; (iii) as our Group's A shares are listed on the SSE, (a) our principal books and records are located and maintained in the PRC; and (b) we are regulated by the CSRC and the SSE and subject to applicable laws and regulations in the PRC. In particular, our Group and its Directors are obliged to provide the CSRC and the SSE with all the information relating to our Group's affairs (including its Laos operations) to facilitate their understanding of its business operations and respond to their enquiry and/or investigation. CSRC is a full signatory to the IOSCO MMOU. Therefore, this enables the Commission to seek regulatory assistance and information, facilitating its investigations and enforcement actions, and ensuring compliance with Rule 8.02A.

Furthermore, we are subject to Chapter 18 of the Listing Rules as a mineral company.

### **EFFECTS OF THE COVID-19 OUTBREAK**

In 2020, the outbreak of COVID-19 in the PRC and around the globe led to an international public health crisis and, as a result, the global economy in general was materially and adversely affected. Our Group's business operations were briefly impacted by the outbreak in early 2020 due to restrictions on social and work gatherings, mandatory quarantine requirements and suspended public transportation in certain areas in China, Laos and Ghana. As some of our Group's employees had to work from home, the operations that required onsite service were interrupted to a limited extent. However, we resumed normal business operations after the initial disruptions in early 2020. In addition, China experienced widespread COVID-19 resurgence in late 2022 and early 2023, but the emergency measures taken by the Chinese government quickly brought the situation under control. Despite the significance of the pandemic, COVID-19 did not have any material adverse impact on our business operation or key operating performance during the Track Record Period.

### **SUMMARY OF HISTORICAL FINANCIAL INFORMATION**

The following is a summary of our historical financial information as of and for the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2023 and 2024 extracted from the Accountants' Report set out in Appendix IA to this Prospectus. The summary below should be read in conjunction with the consolidated financial information in Appendix IA, including the accompanying notes and the information set forth in the section headed "Financial Information" in this Prospectus.

## SUMMARY

### Summary of Results of Operations

The following table sets forth a summary of our results of operations for the periods indicated. Our historical results presented below are not necessarily indicative of the results that may be expected for any future period.

	Year Ended December 31,			Nine Months Ended September 30,	
	2021	2022	2023	2023	2024
	<i>(RMB'000)</i>			<i>(unaudited)</i>	
Revenue . . . . .	3,782,624	6,266,787	7,220,952	5,062,293	6,222,831
Cost of sales . . . . .	(2,525,121)	(4,471,868)	(4,868,078)	(3,521,863)	(3,600,815)
<b>Gross profit . . . . .</b>	<b>1,257,503</b>	<b>1,794,919</b>	<b>2,352,874</b>	<b>1,540,430</b>	<b>2,622,016</b>
<b>Profit before tax . . .</b>	<b>770,375</b>	<b>822,012</b>	<b>1,206,795</b>	<b>758,254</b>	<b>1,848,035</b>
<b>Profit for the</b>					
<b>year/period . . . . .</b>	<b>613,408</b>	<b>493,880</b>	<b>871,585</b>	<b>562,020</b>	<b>1,264,769</b>
Attributable to:					
Owners of the parent .	581,949	450,976	804,471	526,655	1,115,256
Non-controlling					
interests . . . . .	31,459	42,904	67,114	35,365	149,513
<b>Profit for the</b>					
<b>year/period . . . . .</b>	<b>613,408</b>	<b>493,880</b>	<b>871,585</b>	<b>562,020</b>	<b>1,264,769</b>

Our net profit decreased from RMB613.4 million in December 31, 2021 to RMB493.9 million in December 31, 2022, primarily due to the acquisition of GSWL. The acquisition led to increased financial and administrative expenses, and incurred higher tax rates overseas, resulting in a decrease in net profit.

Our net profit increased from RMB493.9 million in December 31, 2022 to RMB871.6 million in December 31, 2023, primarily due to the year-on-year increase in both the volume and the selling price of gold.

Our net profit increased from RMB562.0 million in September 30, 2023 to RMB1,264.8 million in September 30, 2024, primarily due to the increase in gold sales volume and the average selling price compared to the same period of 2024.

## SUMMARY

### Cost of Sales

Our cost of sales primarily comprises materials expense, labor expense, electricity fees, depreciation and amortization, and others. The fluctuations of our cost of sales are in line with the decreases and increases in our revenue during the Track Record Period.

For the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2023 and 2024, our cost of sales amounted to RMB2,525.1 million, RMB4,471.9 million, RMB4,868.1 million, RMB3,521.9 million and RMB3,600.8 million, respectively.

The following table sets forth a breakdown of our cost of sales by nature for the periods indicated:

	Year Ended December 31,						Nine Months Ended September 30,			
	2021		2022		2023		2023		2024	
	<i>RMB'000</i>	%	<i>RMB'000</i>	%	<i>RMB'000</i>	%	<i>RMB'000</i>	%	<i>RMB'000</i>	%
	<i>(unaudited)</i>

*Note:*

1. “Others” primarily includes contractor expenses, construction expenses, service expenses, safety measure expenses and repair expenses.

For the breakdown of our cost of sales by business segment and the breakdown of our cost of sales by origin of our products during the Track Record Period, please refer to “Financial Information — Description of Key Statement of Profit or Loss Items — Cost of Sales.”

## SUMMARY

### Gross Profit and Gross Profit Margin

Our gross profit consists of revenue less cost of sales. Gross profit margin represents gross profit divided by total revenue, expressed as a percentage. For the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2023 and 2024, our gross profit amounted to RMB1,257.5 million, RMB1,794.9 million, RMB2,352.9 million, RMB1,540.4 million and RMB2,622.0 million, respectively. The following table sets forth a breakdown of our gross profit and gross profit margin by business nature for the periods indicated:

	Year Ended December 31,						Nine Months Ended September 30,			
	2021		2022		2023		2023		2024	
	Gross Profit	Gross Profit Margin	Gross Profit	Gross Profit Margin	Gross Profit	Gross Profit Margin	Gross Profit	Gross Profit Margin	Gross Profit	Gross Profit Margin
	RMB'000	%	RMB'000	%	RMB'000	%	RMB'000	%	RMB'000	%

Ghana <sup>1</sup> . . . . .	—	—	573,573	32.0	650,007	30.4	423,990	27.9	838,722	39.9
<b>Total . . . . .</b>	<b>1,257,503</b>	<b>33.2</b>	<b>1,794,919</b>	<b>28.6</b>	<b>2,352,874</b>	<b>32.6</b>	<b>1,540,430</b>	<b>30.4</b>	<b>2,622,016</b>	<b>42.1</b>

Note:

- Our gross profit in Ghana was generated from Golden Star Resources. In January 2022, we acquired a 62% equity interest in Golden Star Resources, which in turn indirectly holds a 90% equity interest in GSWL, and we began consolidating the accounts of Golden Star Resources from February 1, 2022. As such, the gross profit of GSWL prior to February 1, 2022 was not included in our Group. For more details, please see “— Key Factors Affecting Our Results of Operations — Acquisitions — Acquisition of Golden Star Resources”.

## SUMMARY

### Summary of Consolidated Statements of Financial Position

The following table sets forth a summary of our consolidated statements of financial position as of the dates indicated.

	As of December 31,			As of
	2021	2022	2023	September 30, 2024
	<i>(RMB'000)</i>			
Total non-current asset . . . .	4,295,439	13,434,829	13,822,413	13,570,188
Total current asset . . . . .	3,758,167	4,109,465	4,895,380	6,324,980
Total asset . . . . .	8,053,606	17,544,294	18,717,793	19,895,168
Total current liabilities . . . .	1,341,612	3,279,882	3,722,409	4,597,554
Net current assets . . . . .	2,416,555	829,583	1,172,971	1,727,426
Total assets less current liabilities . . . . .	6,711,994	14,264,412	14,995,384	15,297,614
Total non-current liabilities . .	1,710,963	6,856,109	6,453,176	5,497,716
Net assets . . . . .	5,001,031	7,408,303	8,542,208	9,799,898
Non-controlling interests . . . .	380,614	2,220,733	2,390,218	2,683,412

Our net assets increased from RMB5,001.0 million as of December 31, 2021 to RMB7,408.3 million as of December 31, 2022, primarily due to (i) an increase in the total comprehensive income of RMB1,053.3 million for the year, and (ii) an increase in minority shareholders' equity of RMB1,666.4 million following the acquisition of GSWL.

Our net assets increased from RMB7,408.3 million as of December 31, 2022 to RMB8,542.2 million as of December 31, 2023, mainly due to an increase in the total comprehensive income of RMB981.0 million for the year.

Our net assets increased from RMB8,542.2 million as of December 31, 2023 to RMB9,799.9 million as of September 30, 2024, primarily due to (i) an increase in the total comprehensive income of RMB1,173.5 million, (ii) an increase in the contribution from non-controlling interests of RMB166.6 million, and (iii) payment of dividends of RMB82.4 million.

Our net current assets decreased significantly from RMB2,416.6 million as of December 31, 2021 to RMB829.6 million as of December 31, 2022. This was primarily due to: (i) a decrease in cash and cash equivalents of RMB655.3 million resulting from the acquisition of Golden Star Resources in 2022; (ii) an increase in other payables and accruals of RMB504.2 million mainly for construction projects and equipment; and (iii) an increase in short-term loans of RMB488.4 million associated with the acquisition of Golden Star Resources and a capacity expansion of the Jilong Gold Mine. The decrease was partially offset by an increase in inventories resulting from our acquisition of Golden Star Resources and raw materials for the Sepon Gold and Copper Mine's expanded production.

## SUMMARY

Our net current assets increased from RMB829.6 million as of December 31, 2022 to RMB1,173.0 million as of December 31, 2023. This was primarily due to: (i) an increase in inventories of RMB242.3 million, mainly due to an increase in work in progress at the Sepon Gold and Copper Mine; (ii) an increase in cash and cash equivalents of RMB222.1 million resulting from an increase in free cash flow from operations; and (iii) a decrease in trade and notes payables of RMB298.9 million. The increase was partially offset by: (i) an increase in financial liabilities at fair value through profit or loss of RMB319.7 million resulting from the increase of gold leasing; and (ii) an increase in short-term loans of RMB361.6 million.

Our net current assets increased from RMB1,173.0 million as of December 31, 2023 to RMB1,727.4 million as of September 30, 2024. This was primarily due to the increase in the prepayments, receivables and other assets of RMB531.6 million.

### Summary of Cash Flows Analysis

The following table sets forth a summary of our cash flows for the periods indicated.

	Year Ended December 31,			Nine Months Ended September 30,

---

## SUMMARY

---

For the nine months ended September 30, 2024, we recorded net cash inflow from operating activities of RMB2,044.0 million. This was primarily due to our profit before tax of RMB1,848.0 million, adjusted by non-cash and non-operating items, mainly comprising: (i) depreciation of property, plant and equipment of RMB687.5 million; (ii) amortization of other intangible assets of RMB226.0 million; and (iii) investment losses received from disposal of financial liabilities held for trading of RMB107.4 million. This was partially offset by: (i) an increase in inventories of RMB73.7 million; and (ii) a decrease in other payables and accruals of RMB148.0 million.

In 2023, we recorded inflow from operating activities of RMB2,203.1 million. This was primarily due to our profit before tax of RMB1,206.8 million, adjusted by non-cash and non-operating items, mainly comprising: (i) depreciation of property, plant and equipment of RMB910.8 million; (ii) amortization of other intangible assets of RMB552.4 million; and (iii) increase in other payables and accruals of RMB160.9 million. This was partially offset by: (i) decrease in trade and notes payables of RMB262.1 million; and (ii) an increase in inventories of RMB143.8 million.

In 2022, we recorded inflow from operating activities of RMB1,090.1 million. This was primarily due to our profit before tax of RMB822.0 million, adjusted by non-cash and non-operating items, which primarily included (i) depreciation of property, plant and equipment of RMB761.2 million; (ii) amortization of other intangible assets of RMB582.2 million; and (iii) decrease in trade and notes payables of RMB218.0 million. This was partially offset by: (i) an increase in inventories of RMB329.0 million; and (ii) a decrease in other payables and accruals of RMB300.2 million.

In 2021, we recorded net cash inflow from operating activities of RMB755.1 million. This was primarily due to our profit before tax of RMB770.4 million, adjusted by non-cash and non-operating items, mainly comprising: (i) depreciation of property, plant and equipment of RMB455.7 million; (ii) amortization of other intangible assets of RMB315.9 million; and (iii) increase in trade and notes payables of RMB143.4 million. This was partially offset by: (i) an increase in inventories of RMB815.7 million; and (ii) an increase in prepayments, other receivables and other assets of RMB66.0 million.

### ACQUISITION OF GOLDEN STAR RESOURCES

In January 2022, we acquired 62% of the issued and outstanding common shares of Golden Star Resources through Chijin HK, which in turn indirectly holds a 90% equity interest in GSWL, and the remaining 38% equity interest in Golden Star Resources was acquired by the China-Africa Fund for Industrial Cooperation Co., Ltd. (中非產能合作基金有限責任公司). Pursuant to section 192 of the Canada Business Corporations Act, the consideration was set at US\$3.91 per share in cash, representing a total transaction value of approximately US\$470 million on a fully-diluted, in-the-money basis. The aggregate consideration to be paid by our Company (through Chijin HK) amounted to US\$291 million, which was fully settled in January 2023. The acquisition was completed on January 31, 2022, upon which Golden Star Resources became our non-wholly owned subsidiary. To finance the acquisition of Golden Star Resources,

## SUMMARY

---

we incurred long-term borrowings of in aggregate RMB1,104.0 million at an interest rate of 4.95% per annum. For more information, see “Business — Our Gold Production Business in Ghana” and “Financial Information — Key Factors Affecting Our Results of Operations — Acquisition — Acquisition of Golden Star Resources.”

According to Rule 4.05A of the Hong Kong Listing Rules, the acquisition of Golden Star Resources would have been classified at the date of application for our Listing as a major transaction under Chapter 14 of the Hong Kong Listing Rules. For further details of the financial performance of Golden Star Resources, please refer to the history financial information of Golden Star Resources set out in Appendix IB to this Prospectus.

### KEY FINANCIAL RATIOS

The following table sets forth certain of our key financial ratios for the periods indicated.

	Year Ended December 31,			Nine Months Ended
	2021	2022	2023	September 30, 2024
<b>Rates of return</b>				
Return on assets . . . . .	7.6%	2.8%	4.7%	6.4%
Return on equity . . . . .	12.3%	6.7%	10.2%	12.9%
<b>Liquidity ratios</b>				
Current ratio . . . . .	2.8	1.3	1.3	1.4
Quick ratio . . . . .	1.7	0.6	0.7	0.8
Gearing ratio . . . . .	0.6%	35.1%	32.0%	24.2%

*Notes:*

1. Return on assets ratio is calculated using net profit divided by total assets at the end of the year, multiplied by 100%.
2. Return on equity ratio is calculated using net profit divided by total equity at the end of the year, multiplied by 100%.
3. Current ratio is calculated using total current assets divided by total current liabilities.
4. Quick ratio is calculated using total current assets less inventories divided by total current liabilities.
5. Gearing ratio is calculated by dividing total debt (which includes current and non-current bank loans, lease liabilities and other borrowings) by total equity.

See “Financial Information — Key Financial Ratios” for details.

---

## SUMMARY

---

### LISTING EXPENSE

Listing expenses represent professional fees, underwriting commissions and other fees incurred in connection with the Global Offering. We expect to incur listing expenses of approximately HK\$151.7 million, representing approximately 5.0% of the gross proceeds from the Global Offering (based on the mid-point of the indicative Offer Price range and assuming the Offer Size Adjustment Option and the Over-allotment Option are not exercised). The listing expenses we incurred in the Track Record Period and expect to incur would consist of approximately HK\$91.2 million underwriting-related fees and approximately HK\$60.6 million non-underwriting-related fees (including fees and expenses of legal advisors and the reporting accountant of approximately HK\$28.4 million and other fees and expenses of approximately HK\$32.2 million). Among the total listing expenses which we expect to incur, approximately HK\$134.6 million will be directly attributable to the issue of our Shares and deducted from equity, and the remaining HK\$17.1 million will be expensed upon Listing. Our Directors do not expect such expenses to materially impact our results of operations in 2024. See “Financial Information — Listing Expense” for details.

### PROFIT ESTIMATE FOR THE YEAR ENDED DECEMBER 31, 2024

On the basis set out in Appendix IIB to this prospectus, and in the absence of unforeseen circumstances, we estimate our consolidated profit attributable to owners of our Company for the year ended December 31, 2024 to be not less than RMB1,730.0 million (equivalent to approximately HK\$1,879.2 million). For details about our consolidated profit attributable to owners of our Company for the year ended December 31, 2024, see “Appendix IIB — Profit Estimate.”

### RECENT DEVELOPMENT AND NO MATERIAL ADVERSE CHANGE

As of the Latest Practicable Date, in connection with our proposed acquisition of 90% equity interest in China Investment Mining (Laos) Sole Co., Ltd. (the “**Target Company**”), we have obtained the approval from the Xiamen Development and Reform Commission, and the parties to the transactions were proceeding with the fulfillment of the other conditions of the transaction including changes of the authorized representatives of the Target Company and its subsidiaries (collectively the “**Target Group**”). See “History, Development and Corporate Structure — Post-Track Record Period Acquisition”.

The Phase I Construction Project of the lower mining zone of the Hanfeng Polymetallic Mine was completed in December 2024. It has passed production safety assessment and obtained a production safety permit. The project officially commenced operation on December 30, 2024. It is expected to increase our production volume of copper, lead, and zinc by 435,000 tonnes.

---

## SUMMARY

---

Additionally, the expansion of the scope of mining right (deep-zone) for the Aohan County Zhuanshanzi Gold Mine of Jilong Gold Mine was approved in November 2024. The verification report for additional resources in this area has also been filed with the relevant authority in November 2024. This is expected to enhance our production capacity and utilization rate.

Since September 30, 2024 and up to the Latest Practicable Date, we had continued to receive new purchase orders for our products.

After due and careful consideration, our Directors confirm that, up to the date of this document, there has been no material adverse change in our financial and trading position or prospects since September 30, 2024.

### GLOBAL OFFERING STATISTICS

All statistics in the following table are based on the assumptions that: (i) the Global Offering has been completed and 205,652,000 new H Shares are issued pursuant to the Global Offering; and (ii) the Offer Size Adjustment Option and the Over-allotment Option are not exercised, and our Company will have 1,869,563,378 issued Shares upon completion of the Global Offering:

	Based on an Offer Price of HK\$13.72	Based on an Offer Price of HK\$15.83
Market capitalization of our Shares <sup>1, 2</sup> . . . . .	HK\$38,435 million	HK\$38,869 million
Unaudited pro forma adjusted consolidated net tangible assets per Share <sup>3</sup> . . . . .	HK\$2.03	HK\$2.26

*Notes:*

- 1 The estimated market value of our Company is the aggregate of (i) the estimated market capitalisation of the H Shares upon listing and (ii) the market capitalisation of our Company's A Shares listed on the Shanghai Stock Exchange. For the latest five trading days preceding the Latest Practicable Date, the average closing price of our Company's A Shares was RMB19.74 each and the market capitalisation of our Company's A Shares was HKD35,613,225,199 (approximately RMB32,838,954,956 based on the exchange rate of RMB0.9221: HKD1.0000).
- 2 The estimated market capitalisation of the H Shares upon listing is based on the assumptions that: (i) the Global Offering has been completed and 205,652,000 new H Shares are issued pursuant to the Global Offering; and (ii) the Offer Size Adjustment Option and the Over-allotment Option are not exercised. Based on the offer price range from HKD13.72 to HKD15.83, the estimated market capitalisation of our Company's H Shares should be from HKD2,821,545,440 to HKD3,255,471,160, and market capitalization of our Shares should therefore be from HKD38,434,770,639 to HKD38,868,696,359.
- 3 The unaudited pro forma adjusted net tangible asset per Share as at September 30, 2024 is calculated after making the adjustments referred to in "Appendix IIA — Unaudited Pro Forma Financial Information".

---

## SUMMARY

---

### FUTURE PLANS AND USE OF PROCEEDS

The aggregate net proceeds from the Global Offering, after deducting underwriting fees and other estimated expenses in connection with the Global Offering, assuming that the Offer Size Adjustment Option and the Over-allotment Option are not exercised and an Offer Price of HK\$14.78 per Offer Share (being the mid-point of the indicative Offer Price range of HK\$13.72 to HK\$15.83 per Offer Share) will be approximately HK\$2,887 million, which will be applied as follows:

Use of Net Proceeds from the Global Offering	Amount of Net Proceeds from the Global Offering	Percentage of Net Proceeds from the Global Offering
	<i>HK\$ million</i>	<i>%</i>
Upgrade and exploration of existing mines . . . . .	1,443	50
Potential acquisition . . . . .	1,155	40
General corporate purposes . . . . .	289	10
<b>Total</b> . . . . .	<u>2,887</u>	<u>100</u>

Please see “Future plans and use of proceeds” in this Prospectus for details.

### DIVIDEND

We declared dividends to our Shareholders of nil, nil, RMB82.4 million and nil for the three years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2024, respectively.

Subject to our constitutional documents and the Company Law, we have adopted a general annual dividend policy, according to which we may declare dividend by way of cash dividends, stock dividends, or a combination of cash and stock dividends. We prioritize cash dividends. Other than under certain special circumstances, the accumulated profit distributed in cash in any three consecutive years shall not be less than 30% of the annual distributable profit realized in the same three years. The abovementioned special circumstances include: (i) our Company’s net cash flow from operating activities in the year of the consolidated statement of accounts is negative; and (ii) the single amount of investment projects such as proposed internal investment, external investment or assets acquisition in the current year or within the next twelve months reaches or exceeds 10% of our Company’s latest audited net assets.

According to a Board resolution dated March 29, 2024 and a Shareholder resolution dated April 19, 2024, with a total share capital of 1,663,911,378 shares at the end of 2023, after deducting the 15,182,600 shares held in our dedicated securities account for repurchases, the base for profit distribution was 1,648,728,778 shares. A cash dividend of RMB0.50 per 10 shares (including tax) was paid to all shareholders, totalling RMB82,436,438.90.

---

## SUMMARY

---

There is no guarantee, representation or indication that our Directors must or will recommend and that we must or will declare and pay dividends at all. The dividend distribution record in the past may not be used as a reference or basis to determine the level of dividends that may be declared or paid by us in the future.

### OUR SINGLE LARGEST SHAREHOLDER GROUP

As of the Latest Practicable Date, Ms. Li and Hanfeng Zhongxing directly held 190,410,595 and 51,515,151 A Shares, accounting for approximately 11.44% and 3.10% of the issued share capital of our Company, respectively. Meanwhile, Ms. Li is the sole limited partner of Hanfeng Zhongxing accounting for approximately 99.00% of the committed capital contribution of Hanfeng Zhongxing. Accordingly, pursuant to the Hong Kong Listing Rules and Chapter 1.1C of the Guide published by the Hong Kong Stock Exchange, Ms. Li and Hanfeng Zhongxing are collectively regarded as the Single Largest Shareholder Group of our Company.

Accordingly, the Single Largest Shareholder Group was entitled to exercise voting rights attached to the 241,925,746 A Shares, representing approximately 14.54% of the total issued share capital of our Company as of the Latest Practicable Date. Immediately following the completion of the Global Offering, the Single Largest Shareholder Group will be interested in approximately 12.94% of our total share capital (assuming the Offer Size Adjustment Option and the Over-allotment Option are not exercised) or approximately 12.50% of our total share capital (assuming the Offer Size Adjustment Option and the Over-allotment Option are exercised in full).

### RISK FACTORS

Our business faces risks including those set out in the section headed “Risk Factors.” As different investors may have different interpretations and criteria when determining the significance of a risk, you should read the section headed “Risk Factors” in its entirety before you decide to invest in our Offer Shares. Some of the major risks that we face include:

- Changes in the market price for gold mining and other Mineral Resources, which in the past have experienced significant volatility, affect the profitability of our operations and the cash flows generated by those operations.
- Our business is subject to a number of operational risks and hazards specific to mining industry, which may result in increased costs or losses, personal injuries or casualties, damage to reputation, suspension of operation and other penalties.
- We may not be able to expand or replenish our Mineral Resources and Reserves through exploration.
- We may be subject to risks relating to operating our overseas business.

---

## SUMMARY

---

- We may fail to obtain, maintain or renew the government permits, licenses and approvals required for our mining and exploration activities.
- Artisanal mining, gold theft and robbery may occur on some of our properties. These activities are difficult to control and can disrupt our business and expose us to liability.

For further information and other risks that we face, please see “Risk Factors” in this Prospectus. Past performance is no guarantee of future results.

---

## DEFINITIONS

---

*In this Prospectus, unless the context otherwise requires, the following terms shall have the meanings set out below. Certain technical terms are explained in the section headed “Glossary of Technical Terms” in this Prospectus.*

“2022-2024 Property Lease Agreement”	the property lease agreement entered into between Beijing Eagleleap and our Company on January 1, 2022 in relation to the lease of the Leased Premises for a term of three years from January 1, 2022 to December 31, 2024, details of which are set out in the section headed “Connected Transactions — One-off Connected Transactions — Property Lease Agreements” in this Prospectus
“2025-2026 Property Lease Agreement”	the property lease agreement entered into between Beijing Eagleleap and our Company on August 20, 2024 in relation to the lease of the Leased Premises for a term of two years from January 1, 2025 to December 31, 2026, details of which are set out in the section headed “Connected Transactions — One-off Connected Transactions — Property Lease Agreements” in this Prospectus
“A Share(s)”	ordinary share(s) in the share capital of our Company with nominal value of RMB1.00 each, which are traded in Renminbi and listed on the SSE
“Accountants’ Report”	the accountants’ report set out in Appendix IA to this Prospectus
“affiliate”	any other person, directly or indirectly, controlling or controlled by or under direct or indirect common control with such specified person
“AFRC”	Accounting and Financial Reporting Council
“Articles” or “Articles of Association”	the articles of association of our Company, as conditionally adopted on August 23, 2024, which shall become effective upon Listing (as amended, supplemented or otherwise modified from time to time), a summary of which is set out in Appendix VI to this Prospectus

---

## DEFINITIONS

---

“associate(s)”	has the meaning ascribed to it under the Hong Kong Listing Rules
“AUD” or “Australian dollars”	the lawful currency of Australia
“Audit Committee”	audit committee of the Board
“Beijing Eagleleap”	Beijing Eagleleap Technology Co., Ltd. (北京華鷹飛騰科技有限公司), a private limited liability company established under the PRC laws and is held as to 99% and 1% of its equity interest by Hanfeng United and Lv Xiaoming (呂曉銘), an Independent Third Party
“Benso Gold Mine”	a gold mine operated by GSWL in Ghana
“Board” or “Board of Directors”	the board of directors of our Company
“Board Diversity Policy”	the board diversity policy of our Company
“Business Day”	a day which banks in Hong Kong are generally open for normal business to the public and which is not a Saturday, Sunday or public holiday in Hong Kong
“CAGR”	compound annual growth rate
“Capital Market Intermediaries”	the capital market intermediaries participating in the Global Offering, which includes the Overall Coordinators, Joint Global Coordinators, Joint Bookrunners, Joint Lead Managers and Hong Kong Underwriters as named in the section headed “Directors, Supervisors and Parties Involved in the Global Offering”
“Caystar Finance”	Caystar Finance Co., which is registered in the Cayman Islands and is an indirect wholly owned subsidiary of Golden Star Resources
“CCASS”	the Central Clearing and Settlement System established and operated by HKSCC
“Cedi”, “GHC” or “Ghanaian Cedi”	the lawful currency of Ghana
“Chairman Wang”	Mr. Wang Jianhua, the Chairman of the Board and an Executive Director of our Group

---

## DEFINITIONS

---

“Chenzhou Xiongfeng”	Chenzhou Xiongfeng Environment Protection Technology Co., Ltd. (郴州雄風環保科技有限公司), a former wholly owned subsidiary of our Company. Our Company disposed of the entire equity interests in it in 2020
“Chijin Fengyu”	Shanghai Chijin Fengyu Industrial Co., Ltd (上海赤金豐余實業有限公司), a private limited liability company established under the PRC laws and a direct wholly owned subsidiary of our Company
“Chijin Geoexploration”	Chijin (Tianjin) Geoexploration Technology Co., Ltd (赤金(天津)地質勘查技術有限公司), a limited liability company established under the PRC laws and a direct non-wholly owned subsidiary of our Company holding 60% of its equity interest prior to the completion of its voluntary deregistration on January 3, 2025. See the section headed “History, Development and Corporate Structure — Deregistration of a Subsidiary” for details
“Chijin HK”	Chijin International (HK) Limited (赤金國際(香港)有限公司), a company incorporated in Hong Kong with limited liability and a direct wholly owned subsidiary of our Company
“Chijin Laos”	CHIJIN Laos Holdings Limited, a company registered in the Cayman Islands with limited liability and a direct wholly owned subsidiary of our Company
“Chijin Xiawu”	Xiamen Chijin Xiawu Metal Resources Limited (廈門赤金廈鎢金屬資源有限公司), previously known as Shanghai Chijin Xiawu Metal Resources Limited (上海赤金廈鎢金屬資源有限公司), a private limited liability company established under the PRC laws and a direct non-wholly owned subsidiary of our Company
“China” or “PRC”	the People’s Republic of China, and solely for the purpose of this Prospectus and by reference to region, excluding Taiwan, the Macao Special Administrative Region and Hong Kong Special Administrative Region
“Chixia Laos”	CHIXIA Laos Holdings Limited (赤廈老撾控股有限公司), a company registered in the Cayman Islands with limited liability and wholly owned by Chijin Xiawu

---

## DEFINITIONS

---

“CIRE Mining”	China Investment Rare Earth Mining Co., Ltd, a company registered in Laos with limited liability, a subsidiary of China Investment Mining (Laos) Sole Co., Ltd. as of the Latest Practicable Date (see the section headed “History, Development and Corporate Structure — Post-Track Record Period Acquisition” in this Prospectus for details), and the operator of the trial mining area of the Mengkham Rare Earth Element Project
“CIREX Mining”	China Investment Rare Earth Mining Xiangkhouang Co. Ltd, a company registered in Laos with limited liability and a subsidiary of China Investment Mining (Laos) Sole Co., Ltd. as of the Latest Practicable Date (see the section headed “History, Development and Corporate Structure — Post-Track Record Period Acquisition” in this Prospectus for details), and the operator of the exploration area of the Mengkham Rare Earth Element Project
“close associate(s)”	has the meaning ascribed to it under the Hong Kong Listing Rules
“Companies (Winding Up and Miscellaneous Provisions) Ordinance”	the Companies (Winding Up and Miscellaneous Provisions) Ordinance (Chapter 32 of the Laws of Hong Kong), as amended, supplemented or otherwise modified from time to time
“Companies Ordinance”	the Companies Ordinance (Chapter 622 of the Laws of Hong Kong), as amended, supplemented or otherwise modified from time to time
“Company” or “our Company”	Chifeng Jilong Gold Mining Co., Ltd. (赤峰吉隆黃金礦業股份有限公司), a joint stock company incorporated under the laws of the PRC with limited liability on June 22, 1998
“Company Law” or “PRC Company Law”	the Company Law of the People’s Republic of China (中華人民共和國公司法), as amended, supplemented or otherwise modified from time to time
“Competent Person” or “SRK”	has the same meaning ascribed to it under Rule 18.01 of the Hong Kong Listing Rules and, in the context of this prospectus, means SRK Consulting (China) Ltd., an independent mining and geological consultant, which is an Independent Third Party

---

## DEFINITIONS

---

“Competent Person’s Reports” or “SRK Reports”	the Competent Person’s reports prepared by SRK on the PRC Gold Mines, the Sepon Gold and Copper Mine, the Wassa Gold Mine and the Sepon Rare Earth Element and Mengkham Rare Earth Element Projects, the effective date of which is September 30, 2024 and details of which are set out in Appendices IIIA to IIID to this Prospectus
“connected person(s)”	has the meaning ascribed to it under the Hong Kong Listing Rules
“connected transaction(s)”	has the meaning ascribed to it under the Hong Kong Listing Rules
“core connected person(s)”	has the meaning ascribed to it under the Hong Kong Listing Rules
“Corporate Governance Code”	the Corporate Governance Code set out in Appendix C1 to the Hong Kong Listing Rules
“CSDC”	China Securities Depository and Clearing Corporation Limited (中國證券登記結算有限責任公司)
“CSRC”	the China Securities Regulatory Commission (中國證券監督管理委員會)
“Designated Bank”	HKSCC Participant’s EIPO Designated Bank
“Director(s)”	director(s) of our Company
“Dongfeng Molybdenum Mine”	a molybdenum mine operated by Hanfeng Mining in PRC
“EIT”	the PRC enterprise income tax
“EIT Law”	the Enterprise Income Tax Law of the PRC (中華人民共和國企業所得稅法)
“ESG”	environmental, social, and corporate governance
“ESOPs”	the Phase I ESOP, the Phase II ESOP and the Phase III ESOP, collectively

---

## DEFINITIONS

---

“Exchange Participant(s)”	a person (a) who, in accordance with the Hong Kong Listing Rules, may trade on or through the Hong Kong Stock Exchange; and (b) whose name is entered in a list, register or roll kept by the Hong Kong Stock Exchange as a person who may trade on or through the Hong Kong Stock Exchange
“Extreme Conditions”	the occurrence of “extreme conditions” as announced by any government authority of Hong Kong due to serious disruption of public transport services, extensive flooding, major landslides, large-scale power outage or any other adverse conditions before Typhoon Signal No. 8 or above is replaced with Typhoon Signal No. 3 or below
“Father Brown Mine”	one of the mines within GSWL’s portfolio of mines. The Father Brown Mine is independent of the Wassa Mine, as it is within the Hwini-Butre mining lease (a concession south of Wassa)
“FINI”	“Fast Interface for New Issuance,” an online platform operated by HKSCC that is mandatory for admission to trading and, where applicable, the collection and processing of specified information on subscription in and settlement for all new issues
“Frost & Sullivan”	Frost & Sullivan (Beijing) Inc., Shanghai Branch Co., an independent industry consultant commissioned by us to prepare the Frost & Sullivan Report
“Frost & Sullivan Report”	an independent market research report commissioned by our Company and prepared by Frost & Sullivan
“FVOCI”	fair value through Other Comprehensive Income (OCI) investment
“GDP”	gross domestic product
“General Rules of HKSCC”	the General Rules of HKSCC as may be amended or modified from time to time and where the context so permits, shall include the HKSCC Operational Procedures
“Ghana”	the Republic of Ghana

---

## DEFINITIONS

---

“Ghana Legal Advisor”	REM Law Consultancy, our legal advisor as to Ghana laws
“Global Offering”	the Hong Kong Public Offering and the International Offering
“Group”, “our Group,” “we” or “us”	our Company and its subsidiaries (or our Company and any one or more of its subsidiaries, as the context may require)
“GSR” or “Golden Star Resources”	Golden Star Resources Ltd., a company registered in Canada and an indirect non-wholly owned subsidiary of our Company
“GSQL”	Golden Star (Wassa) Ltd, a company registered in Ghana and an indirect non-wholly owned subsidiary of Golden Star Resources
“Guangyuan Technology”	Anhui Guangyuan Technology Development Co., Ltd. (安徽廣源科技發展有限公司), a private limited liability company established under the PRC laws and a direct non-wholly subsidiary of our Company
“Guide”	the Guide for New Listing Applicants issued by the Hong Kong Stock Exchange (as amended, supplemented or otherwise modified from time to time)
“H Share(s)”	overseas listed foreign shares in the share capital of our Company with nominal value of RMB1.00 each, which are to be subscribed for and traded in HK dollars and are to be listed on the Hong Kong Stock Exchange
“H Share Registrar”	Computershare Hong Kong Investor Services Limited
“Hanfeng Mining”	Jilin Hanfeng Mining Technology Co., Ltd. (吉林瀚豐礦業科技有限公司), a private limited liability company established under the PRC laws and a direct wholly owned subsidiary of our Company
“Hanfeng Polymetallic Mine”	a polymetallic mine operated by Hanfeng Mining in PRC
“Hanfeng United”	Beijing Hanfeng United Technology Co., Ltd. (北京瀚豐聯合科技有限公司), which is directly wholly owned by Ms. Li

---

## DEFINITIONS

---

“Hanfeng Zhongxing”	Yantai Hanfeng Zhongxing Management Consultancy Center (Limited Partnership) (煙台瀚豐中興管理諮詢中心(有限合夥)), a limited liability partnership established under the PRC laws, the sole limited partner of which is Ms. Li, accounting for approximately 99.00% of its committed capital contribution, and the sole general partner of which is Wu Zengxiang (武增祥), accounting for approximately 1.00% of its committed capital contribution
“High and New Technology Enterprise”	an enterprise certified by the Chinese government through the Ministry of Science and Technology (MOST) for businesses
“HK\$”, “Hong Kong dollars”, “HK dollars” or “cents”	Hong Kong dollars and cents, respectively, and being the lawful currency of Hong Kong
“HKSCC”	Hong Kong Securities Clearing Company Limited, a wholly owned subsidiary of Hong Kong Exchanges and Clearing Limited
“HKSCC EIPO”	the application for the Hong Kong Offer Shares to be issued in the name of HKSCC Nominees and deposited directly into CCASS to be credited to your designated HKSCC Participant’s stock account through causing HKSCC Nominees to apply on your behalf, including by instructing your broker or custodian who is an HKSCC Participant to give <b>electronic application instructions</b> via HKSCC’s FINI system to apply for the Hong Kong Offer Shares on your behalf
“HKSCC Nominees”	HKSCC Nominees Limited, a wholly owned subsidiary of HKSCC
“HKSCC Operational Procedures”	the operational procedures of HKSCC, containing the practices, procedures and administrative or other requirements relating to HKSCC’s services and the operations and functions of CCASS, FINI or any other platform, facility or system established, operated and/or otherwise provided by or through HKSCC, as from time to time in force

---

## DEFINITIONS

---

“HKSCC Participant”	a participant admitted to participate in CCASS as a direct clearing participant, a general clearing participant or a custodian participant
“Hong Kong”	the Hong Kong Special Administrative Region of the PRC
“Hong Kong Listing Rules” or “Listing Rules”	the Rules Governing the Listing of Securities on The Stock Exchange of Hong Kong Limited, as amended, supplemented or otherwise modified from time to time
“Hong Kong Offer Shares”	the 20,565,200 H Shares being initially offered for subscription in the Hong Kong Public Offering (subject to reallocation and the Offer Size Adjustment Option as described in the section headed “Structure of the Global Offering” in this Prospectus)
“Hong Kong Public Offering”	the offer of the Hong Kong Offer Shares for subscription by the public in Hong Kong at the Offer Price (plus brokerage of 1%, SFC transaction levy of 0.0027%, AFRC transaction levy of 0.00015% and Hong Kong Stock Exchange trading fee of 0.00565%) on the terms and subject to the conditions described in this document, as further described in the section headed “Structure of the Global Offering — The Hong Kong Public Offering” in this Prospectus
“Hong Kong Stock Exchange” or “Stock Exchange”	The Stock Exchange of Hong Kong Limited, a wholly owned subsidiary of Hong Kong Exchanges and Clearing Limited
“Hong Kong Underwriter(s)”	the underwriters of the Hong Kong Public Offering as listed in the section headed “Underwriting — Hong Kong Underwriters” in this Prospectus
“Hong Kong Underwriting Agreement”	the underwriting agreement, dated February 27, 2025, relating to the Hong Kong Public Offering, entered into by, among others, the Overall Coordinators, the Hong Kong Underwriters and our Company
“Huatai Gold Mine”	a gold mine operated by Huatai Mining in PRC
“Huatai Mining”	Chifeng Huatai Mining Co., Ltd. (赤峰華泰礦業有限責任公司), which is registered in the PRC and is a wholly owned subsidiary of Jilong Mining

---

## DEFINITIONS

---

“IFRS”	the International Financial Reporting Standards, which include standards, amendments and interpretations promulgated by the International Accounting Standards Board (IASB) and the International Accounting Standards (IAS) and interpretation issued by the International Accounting Standards Committee (IASC)
“Independent Third Party(ies)”	any entity(ies) or person(s) which, to the best of our Directors’ knowledge, information and belief having made reasonable enquiries, is not a connected person of our Company within the meaning ascribed to it under the Hong Kong Listing Rules
“International Offer Shares”	the 185,086,800 H Shares being initially offered for subscription under the International Offering together, where relevant, with any additional H Shares that may be issued pursuant to any exercise of the Offer Size Adjustment Option and/or the Over-allotment Option (subject to reallocation as described in the section headed “Structure of the Global Offering” in this Prospectus)
“International Offering”	the conditional placing of the International Offer Shares at the Offer Price outside the United States in offshore transactions in accordance with Regulation S, in each case on and subject to the terms and conditions described in the section headed “Structure of the Global Offering” in this prospectus

“Lianhuashan Gold Mine”	a gold mine operated by Huatai Mining in PRC
“Listing”	the listing of our H Shares on the Main Board of the Hong Kong Stock Exchange
“Listing Committee”	the Listing Committee of the Hong Kong Stock Exchange

---

## DEFINITIONS

---

“Listing Date”	the date expected to be on or about Monday, March 10, 2025, on which dealings in our H Shares first commence on the Hong Kong Stock Exchange
“LXML”	Lane Xang Minerals Limited Company, a company registered in Laos, an indirect non-wholly owned subsidiary of our Company and is the operator of the Sepon Gold and Copper Mine
“Main Board”	the stock exchange (excluding the option market) operated by the Hong Kong Stock Exchange, which is independent from and operated in parallel with GEM of the Hong Kong Stock Exchange
“MEE”	Ministry of Ecology and Environment of the PRC
“Mengkham Rare Earth Element Project” or “Mengkham REE Project”	a rare earth mine operated by CIRE Mining in Laos
“Minerals and Mining Act”	the Ghanaian Minerals and Mining Act, 2006 (Act 703)
“MOF” or “Ministry of Finance”	Ministry of Finance of the PRC (中華人民共和國財政部)
“MOFCOM”	Ministry of Commerce of the PRC (中華人民共和國商務部)
“Ms. Li”	Ms. Li Jinyang (李金陽), a member of the Single Largest Shareholder Group. Ms. Li directly held approximately 11.44% of the shareholding interest in our Company as of the Latest Practicable Date
“NDRC”	the National Development and Reform Commission of the PRC (中華人民共和國國家發展與改革委員會)
“NEEQ”	the National Equities Exchange and Quotations Co., Ltd.(全國中小企業股份轉讓系統有限責任公司), a PRC over-the-counter system for trading shares of public companies
“Nomination Committee”	the nomination committee of the Board
“NPC”	the National People’s Congress of the People’s Republic of China (中華人民共和國全國人民代表大會)

---

## DEFINITIONS

---

“Offer Price”	the final offer price per Offer Share (exclusive of brokerage of 1%, SFC transaction levy of 0.0027%, AFRC transaction levy of 0.00015% and Hong Kong Stock Exchange trading fee of 0.00565%), expressed in Hong Kong dollars, at which Hong Kong Offer Shares are to be subscribed for pursuant to the Hong Kong Public Offering and International Offer Shares are to be offered pursuant to the International Offering, to be determined as described in the section headed “Structure of the Global Offering — Pricing and Allocation”
“Offer Share(s)”	the Hong Kong Offer Shares and the International Offer Shares, together, where relevant, with any additional H Shares which may be issued by our Company pursuant to the exercise of the Offer Size Adjustment Option and/or the Over-allotment Option
“Offer Size Adjustment Option”	the option under the Hong Kong Underwriting Agreement, exercisable by the Company prior to the execution of the International Underwriting Agreement, pursuant to which the Company may issue and allot up to an aggregate of 30,847,800 additional H Shares at the Offer Price, to cover additional market demand, if any, as described in the section headed “Structure of the Global Offering — Offer Size Adjustment Option”
“Over-allotment Option”	the option expected to be granted by our Company to the International Underwriters, exercisable by the Overall Coordinators on behalf of the International Underwriters for up to 30 days from the day following the last day for the lodging of applications under the Hong Kong Public Offering, to require our Company to allot and issue up to 30,847,800 additional H Shares (representing in aggregate approximately 15% of the Offer Shares initially being offered under the Global Offering assuming the Offer Size Adjustment Option is not exercised at all) or up to an aggregate of 35,474,800 additional H Shares (representing approximately 15% of the total number of Offer Shares being offered under the Global Offering assuming the Offer Size Adjustment Option is exercised in full) at the Offer Price to the International Underwriters to cover over-allocations in the International Offering, if any, details of which are described in “Structure of the Global Offering — Over-Allotment Option”

---

## DEFINITIONS

---

“Overall Coordinators”	the overall coordinators as named in the section headed “Directors, Supervisors and Parties Involved in the Global Offering”
“PBOC”	People’s Bank of China (中國人民銀行), the central bank of the PRC
“Phase I ESOP”	the Phase I Employee Stock Ownership Plan adopted by our Company on October 13, 2020 (as revised on May 26, 2021, September 30, 2022 and April 20, 2023), details of which are set out in the paragraph headed “C. Further Information about our Directors, Supervisors and Substantial Shareholders — 4. Employee Stock Ownership Plans” in Appendix VII to this Prospectus
“Phase II ESOP”	the Phase II Employee Stock Ownership Plan adopted by our Company on February 27, 2023 (as revised on March 20, 2023), details of which are set out in the paragraph headed “C. Further Information about our Directors, Supervisors and Substantial Shareholders — 4. Employee Stock Ownership Plans” in Appendix VII to this Prospectus
“Phase III ESOP”	the Phase III Employee Stock Ownership Plan adopted by our Company on January 15, 2025, details of which are set out in the paragraph headed “C. Further Information about our Directors, Supervisors and Substantial Shareholders — 4. Employee Stock Ownership Plans” in Appendix VII to this Prospectus
“PRC GAAP”	Accounting Standard for Business Enterprises — Basic Standard, and the specific accounting standards and other relevant regulations issued by the MOF on February 15, 2006 and in subsequent periods
“PRC Gold Mine(s)”	Wulong Gold Mine, Jilong Gold Mine, Jintai Gold Mine and Huatai Gold Mine, individually or collectively
“PRC Government”	the central government of the PRC and all government subdivisions (including provincial, municipal and other regional or local government entities) and instrumentalities thereof or, where the context requires, any of them

---

## DEFINITIONS

---

“PRC Legal Advisor”	Tianyuan Law Firm LLP, our legal advisor as to PRC laws
“PRC Mine(s)”	PRC Gold Mine(s) and Hanfeng Polymetallic Mine, collectively
“Price Determination Date”	the date, expected to be on or before Thursday, March 6, 2025 (Hong Kong time), or such later time as the Overall Coordinators and our Company may agree, but in any event no later than 12:00 noon on Thursday, March 6, 2025 on which the Offer Price is determined for the purposes of the Global Offering
“Property Lease Agreements”	2022-2024 Property Lease Agreement and 2025-2026 Property Lease Agreement, collectively
“Property Management Services Agreement”	the property management services agreement entered into between Beijing Eagleleap and our Company on August 20, 2024 in relation to the provision of Property Management Services from Beijing Eagleleap to our Company, details of which are set out in the section headed “Connected Transactions — Fully Exempt Continuing Connected Transactions — Property Management Services Agreement” in this Prospectus
“Property Management Services”	the property management services provided by Beijing Eagleleap to our Company under the Property Management Services Agreement, details of which are set out in the section headed “Connected Transactions — Fully Exempt Continuing Connected Transactions — Property Management Services Agreement” in this Prospectus
“Prospectus”	this prospectus being issued in connection with the Hong Kong Public Offering
“R&D”	research and development
“Regulation S”	Regulation S under the U.S. Securities Act

---

## DEFINITIONS

---

“Relevant Persons”	our Company, the Sole Sponsor, the Sponsor Overall Coordinators, the Overall Coordinators, the Joint Global Coordinator, the Joint Bookrunner, the Joint Lead Manager, the Capital Market Intermediaries, the Underwriters, any of their respective directors, officers, employees, partners, agents, advisors and any other parties involved in the Global Offering
“Remuneration and Appraisal Committee”	remuneration and appraisal committee of the Board
“Reporting Accountants”	Ernst & Young
“RMB” or “Renminbi”	the lawful currency of the PRC
“SAFE”	the State Administration of Foreign Exchange of the PRC (中華人民共和國國家外匯管理局)
“SAMR”	the State Administration of Market Regulation of the PRC (國家市場監督管理總局)
“SCNPC”	the Standing Committee of the National People’s Congress of the PRC (中華人民共和國全國人民代表大會常務委員會)
“Securities Law” or “PRC Securities Law”	the Securities Law of the People’s Republic of China (中華人民共和國證券法), as amended, supplemented or otherwise modified from time to time
“Sepon Gold and Copper Mine”	a gold and copper mine operated and managed by LXML, a subsidiary of our Company, which has rare earth minerals potential
“Sepon Rare Earth Element Project”	a rare earth project in Laos operated and managed by LXML, a subsidiary of our Company
“SFC”	the Securities and Futures Commission of Hong Kong
“SFO” or “Securities and Futures Ordinance”	the Securities and Futures Ordinance (Chapter 571 of the Laws of Hong Kong), as amended, supplemented or otherwise modified from time to time

---

## DEFINITIONS

---

“Shanghai-Hong Kong Stock Connect”	a securities trading and clearing links program developed by the Hong Kong Stock Exchange, SSE, HKSCC and CSDC for mutual market access between Hong Kong and Shanghai
“Share(s)”	ordinary share(s) in the share capital of our Company, with a nominal value of RMB1.00 each, comprising our A Shares and our H Shares
“Shareholder(s)”	holder(s) of Share(s)
“Single Largest Shareholder Group”	Ms. Li and Hanfeng Zhongxing collectively
“Joint Bookrunners”, “Joint Global Coordinators”, “Joint Lead Managers”	the joint bookrunners, the joint global coordinators and the joint lead manager as named in the section headed “Directors, Supervisors and Parties Involved in the Global Offering”
“Sole Sponsor”	CITIC Securities (Hong Kong) Limited
“Sponsor-Overall Coordinator”	CLSA Limited
“spot price”	The gold spot price represents the current purchase price of a troy ounce of the precious metal for immediate delivery
“SSE”	the Shanghai Stock Exchange
“Stabilizing Manager”	CLSA Limited
“State Council”	State Council of the People’s Republic of China (中華人民共和國國務院)
“Strategy and Sustainability Committee”	strategy and sustainability committee of the Board
“subsidiary(ies)”	has the meaning ascribed to it under the Hong Kong Listing Rules
“substantial shareholder(s)”	has the meaning ascribed to it under the Hong Kong Listing Rules
“Supervisor(s)”	member(s) of our Supervisory Committee

---

## DEFINITIONS

---

“Supervisory Committee”	the supervisory committee of our Company
“Tietto Minerals”	Tietto Minerals Limited, a company previously listed on the Australian Securities Exchange under the stock code TIE, which our Group acquired a total of approximately 13.05% of the then shareholding interest in by January 2023 and disposed of such shareholding interest in May 2024 through the offer from Zhaojin Mining Industry Company Limited (a company listed on the Main Board of the Stock Exchange, stock code: 1818) pursuant to a bidder statement to acquire all its outstanding issues shares, details of which are set out in the section headed “History, Development and Corporate Structure — Major Acquisitions and Disposals — 3. Acquisitions and disposal of Tietto Minerals” in this Prospectus
“Track Record Period”	the three financial years ended December 31, 2023 and the nine months ended September 30, 2024
“U.S.” or “United States”	the United States of America, its territories, its possessions and all areas subject to its jurisdiction
“U.S. Securities Act”	United States Securities Act of 1933, as amended, and the rules and regulations promulgated thereunder
“Underlying Financial Statements”	the consolidated financial statements of our Group
“Underwriter(s)”	the Hong Kong Underwriter(s) and International Underwriter(s)
“Underwriting Agreements”	the Hong Kong Underwriting Agreement and the International Underwriting Agreement
“US\$” or “USD” or “U.S. dollars”	the lawful currency of the United States
“Wassa Gold Mine”	a gold mine operated by GSWL in Ghana
“ <b>White Form eIPO</b> ”	the application for Hong Kong Offer Shares to be issued in the applicant’s own name, submitted online through the designated website of the <b>White Form eIPO</b> Service Provider at <a href="http://www.eipo.com.hk">www.eipo.com.hk</a>

---

## DEFINITIONS

---

“White Form eIPO Service Provider”	Computershare Hong Kong Investor Services Limited
“Wulong Gold Mine”	a gold mine operated by Wulong Mining in PRC
“Wulong Mining”	Liaoning Wulong Gold Mining Co., Ltd. (遼寧五龍黃金礦業有限責任公司), a private limited liability company established under the PRC laws and a direct wholly owned subsidiary of Jilong Mining
“Xiamen Tungsten”	Xiamen Tungsten Co., Ltd. (廈門鎢業股份有限公司), a company listed on the SSE (stock code: 600549)
“Xinhenghe Mining”	Kunming Xinhenghe Mining Co., Ltd. (昆明新恒河礦業有限公司), a private limited liability company established under the PRC laws and is a direct non-wholly owned subsidiary of our Company
“%”	per cent

*In addition to the terms above, this Prospectus contains a glossary of certain technical terms relating to our industry and business. See “Glossary of Technical Terms.”*

*The English names of the PRC entities, PRC laws and regulations, and the PRC governmental authorities referred to in this Prospectus are translations from their Chinese names and are for identification purposes only. If there is any inconsistency between the Chinese original and the English translation, the Chinese names shall prevail.*

---

## GLOSSARY OF TECHNICAL TERMS

---

*This glossary contains explanations of certain technical terms used in this Prospectus in connection with our Company and our business. Such terminology and meanings may not correspond to standard industry meanings or usages of those terms.*

“all-in sustaining costs” or “AISC”	a metric which means operating costs excluding amortisation and depreciation, plus all costs not included therein relating to sustaining current production including sustaining capital expenditure. It generally comprises of cash costs (including by-product credits), sustaining capital, exploration expenses and general and administrative expenses
“all-slime cyanidation absorption gold extraction method”	a method involves treating the entire ore slurry, including fine particles or slimes, with cyanide to dissolve gold, which is then absorbed onto activated carbon for recovery
“annual mining capacity”	the quantity of ore that a mining operation can extract from the ground within a year
“annual processing capacity”	the quantity of ore that a processing plant can handle and process each year
“annual production capacity”	the maximum annual production capacity within the permitted annual production volume that can be achieved by our Group in the usual and ordinary course of business based on our existing resources and mine design
“Au”	the chemical symbol for of gold
“beneficiation”	a process that improves or benefits the economic value of the ore by removing the gangue minerals, which results in a higher grade product (ore concentrate) and a waste stream (tailings)
“carbon-in-pulp gold extraction process method”	means the carbon-in-pulp process integrates activated carbon directly into the ore pulp, allowing dissolved gold to adhere to the carbon particles, which are subsequently separated and processed to extract the gold
“cathode”	a negative electrode
“CCD”	counter current decantation

---

## GLOSSARY OF TECHNICAL TERMS

---

“concentrate” or “gold concentrate”	a powdery or wet product containing an upgraded mineral content resulting from initial processing of mined ore to remove some waste materials. A concentrate is an intermediary product, which would still be subject to further processing, such as smelting, to effect recovery of metal
“crusher”	a machine for crushing rocks to smaller grain size
“cut-and-fill”	a method of stoping in which ore is removed in slices, or lifts, with the excavation subsequently filled with rock or other waste material (backfill), before the next slice is extracted
“cut-off grade”	the grade threshold above which a mineral material is considered potentially economic and is selectively mined and processed as ore
“deposit”	natural occurrence of a useful mineral, or an ore, sufficient in extent and degree of concentration to invite exploitation
“designed mining capacity”	the production capacity planned based on the mine’s design, equipment, and technical parameters
“dilution”	the reduction of grade for mined ore due to the inclusion of waste material in the mined ore
“doré”	unrefined gold bar produced at the mine site or other gold sources before sending to a refinery where the gold is refined or processed to meet specific requirements
“drilling”	use of a machine to create holes for exploration or for loading with explosives
“exploration”	activity to prove the location, volume and quality of an orebody
“feed grade”	in respect of mineral processing, the relative content of gold compared to the full content, including gold and other substances, in the ore fed at the processing mill, with reference to the mass with gold in the total mass of the ore and expressed in g/t Au

---

## GLOSSARY OF TECHNICAL TERMS

---

“flotation”	a process by which some mineral particles are induced to become attached to bubbles of froth and float, and others to sink, so that the valuable minerals are concentrated and separated from the remaining rock or mineral material
“Flotation-Pressure Oxidation Method”	a method combined approach first concentrates ore through flotation and then subjects it to pressure oxidation, enhancing the breakdown of sulfide minerals and improving metal recovery
“flotation process method”	is a mineral separation technique that uses chemical reagents and air bubbles to selectively attach and separate valuable minerals from the ore slurry
“GFA”	gross floor area
“g”	gram(s)
“g/t”	gram(s) per metric tonne — metal concentration
“gold bullion”	refined gold in the form of bars
“gold mine production volume” or “gold production volume”	production volume of gold that is mined from gold mines and as by-products from non-ferrous metal ores
“gold production”	refers to the total amount of gold extracted and processed from mining operations over a specific period, serving as a key indicator of a mining project’s performance
“gold recovery rate”	the percentage of gold produced compared to the amount of gold contained in the feed ore in the context of a processing plant, or the percentage of gold produced compared to the amount of gold contained in the feed concentrates in the context of a smelting plant
“grade”	ratio of the content of a useful element or its compounds in an ore, for which the greater the content, the higher the grade. For gold, grade is commonly expressed in grams per tonne of milled ore (g/t Au)
“Gravity-Flow All-Slime Cyanidation Absorption Gold Extraction Method”	a method combines gravity separation to concentrate gold before applying cyanidation to the entire slurry, including slimes, ensuring efficient recovery of fine gold particles

---

## GLOSSARY OF TECHNICAL TERMS

---

“Indicated Mineral Resource” or “Indicated Resource”	is that part of a Mineral Resource for which quantity, grade (or quality), densities, shape and physical characteristics are estimated with sufficient confidence to allow the application of Modifying Factors in sufficient detail to support mine planning and evaluation of the economic viability of the deposit. Geological evidence is derived from adequately detailed and reliable exploration, sampling and testing gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes, and is sufficient to assume geological and grade (or quality) continuity between points of observation where data and samples are gathered
“Inferred Mineral Resource” or “Inferred Resource”	is that part of a Mineral Resource for which quantity and grade (or quality) are estimated on the basis of limited geological evidence and sampling. Geological evidence is sufficient to imply but not verify geological and grade (or quality) continuity. It is based on exploration, sampling and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes
“kg”	kilogram(s), the basic unit of mass in the international system of units
“km”	kilometer(s), a metric unit measure of distance equal to 1,000 meters
“km <sup>2</sup> ”	square kilometer(s)
“koz”	thousand ounces, a unit of weight
“kt”	thousand metric tonnes, a metric unit of weight, being equivalent to 1.0 million kg
“ktpa”	kt per annum
“ktpd”	kt of ore per day
“kWh”	kilowatt hours

---

## GLOSSARY OF TECHNICAL TERMS

---

“LBMA”	London Bullion Market Association, a wholesale over-the-counter market for the trading of gold and silver, which sets gold prices twice daily at 10:30 am and 3:00 pm London BST with the price set in U.S. dollars
“LBMA AM”	the daily gold prices set by LBMA at 10:30 am London BST with the price set in U.S. dollars
“LBMA PM”	the daily gold prices set by LBMA at 3:00 pm London BST with the price set in U.S. dollars
“leach”	dissolve minerals or metals out of ore with chemicals
“LOM”	life of mine. It refers to the shortest timeframe that the Ore Reserves of a mine are estimated to be fully utilized after considering the actual situation of the mine and strategic plan of the mining operation. Should the mine owner decide to reduce the mining and processing volume per annum and/or discover additional Ore Reserves, it would take longer time to utilize the Ore Reserves of the mine and the life of mine would be lengthened
“m <sup>2</sup> ”	square metre(s)
“Measured Mineral Resource” or “Measured Resource”	is that part of a Mineral Resource for which quantity, grade (or quality), densities, shape, and physical characteristics are estimated with confidence sufficient to allow the application of Modifying Factors to support detailed mine planning and final evaluation of the economic viability of the deposit. Geological evidence is derived from detailed and reliable exploration, sampling and testing gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes, and is sufficient to confirm geological and grade (or quality) continuity between points of observation where data and samples are gathered
“mineralization”	area with continuous distribution belts of mineralization, including the occurrence of deposits, mine sites and alteration of waste rock, as exploration indicators and under control of same geology conditions. It is a key zone for estimation and further planning of exploration of minerals

---

## GLOSSARY OF TECHNICAL TERMS

---

“mined resources and reserves”	depleted/write-off resources and reserves
“mining loss”	that part of a mineral reserve which is not recovered during the mining process
“mining rights”	the rights to mine Mineral Resources and obtain mineral products in areas where mining activities are licensed
“Modifying Factors”	see the definition under the JORC Code as set out in the section headed “Summary of the JORC Code” in this Prospectus
“Mtpa”	million tonnes per year
“open pit mine”	a deposit from a pit open to surface and usually carried out by stripping of overburden materials
“open-pit mining”	mining of a deposit from a pit open to surface and usually carried out by stripping of overburden materials
“Open-Pit Mining Method”	a surface mining technique that extracts minerals from an open pit in the ground. Open-pit mining is the most common method used throughout the world for mineral mining and does not require extractive methods or tunnels. This surface mining technique is used when mineral or ore deposits are found relatively close to the surface of the earth
“ore”	mineral bearing rock which can be mined and treated profitably under current or immediately foreseeable economic conditions
“orebody”	natural mineral accumulations which can be extracted for use under existing economic conditions and using existing extraction techniques
“ore mined volume”	the volume of ores mined from gold mines
“ore processing” or “processing” or “ore processed”	process which in general refers to the extraction of usable portions of ores by using physical and chemical methods
“ounce(s)” or “oz”	unit of weight for precious metals, and one troy ounce equals 31.1034768 grams

---

## GLOSSARY OF TECHNICAL TERMS

---

“overburden materials”	consists of non-valuable materials such as soil, rock, and vegetation that must be removed to access the underlying mineral deposit during mining operations
“permitted annual production volume”	also known as “permitted mining capacity”, the amount of ore allowed to be mined annually as stated on the mining license
“POX”	concentrate pressure oxidation
“processing/smelting recovery rate”	percentage of metal produced compared to the amount of metal contained in the feed ore in the context of a processing plant, or the percentage of metal produced compared to the amount of metal contained in the feed concentrates in the context of a smelting plant
“Probable Ore Reserve”	is the economically mineable part of an Indicated Mineral Resource and in some circumstances, a Measured Mineral Resource. The confidence in the Modifying Factors applying to a Probable Ore Reserve is lower than that applying to a Proved Ore Reserve. A Probable Ore Reserve has a lower level of confidence than a Proved Ore Reserve but is sufficiently reliable to demonstrate that, at the time of reporting, extraction could reasonably be justified
“Proved Ore Reserve”	is the economically mineable part of a Measured Mineral Resource. A Proved Ore Reserve implies a high degree of confidence in the Modifying Factors. A Proved Ore Reserve represents the highest confidence category of Ore Reserve estimate and implies a high degree of confidence in geological and grade continuity, and in the Modifying Factors
“refining”	final stage of the metallurgical process of refining crude metal products to a pure or very pure end-product
“rehabilitation”	in the context of mining, the process of returning the land to another productive use or the restoration of land and environmental values to a mine site after the mining has been completed

---

## GLOSSARY OF TECHNICAL TERMS

---

“Reserves” or “Ore Reserves”	portion of the measured and/or indicated resources that can be economically mined, which is an estimate after a pre-feasibility study, feasibility study or equivalent technical and economic evaluation, with possible ore losses and depletion, and the reasonable use of conversion factors fully taken into account to make mining technically feasible and economically viable. This contains both probable and proved reserves
“Resources” or “Mineral Resources”	solid Mineral Resources identified by mineral resource exploration, generally reviewed, and expected to be economically minable, which quantity, grade or quality is estimated with reference to geological information, geological understanding and relevant technical requirements including Inferred Resources, Indicated Resources and Measured Mineral Resources
“ROM”	run-of-mine, of or relating to ore that is in its natural and unprocessed state produced from a mine
“smelting”	pyro metallurgical process of separating metal by fusion from those impurities with which it is chemically combined or physically mixed
“standard gold”	gold bullion which satisfies both standard content requirements (Au99.99, Au99.95, Au99.9, Au99.5) and standard weight requirements (50g, 100g, 1kg, 3kg, 12.5kg) set by the Shanghai Gold Exchange
“stope”	an underground excavation from which ore is being extracted
“stockpile”	is a temporary storage area where mined ore are accumulated before processing, allowing for operational flexibility and continuous workflow
“stoping”	removal of the ore from an underground mine leaving behind an open space known as a stope
“stripping ratio”	is the amount of waste that needs to be removed to extract a certain amount of ore, divided by the amount of ore extracted

---

## GLOSSARY OF TECHNICAL TERMS

---

“Sub-Level Open Stopping Method”	ore is recovered in open stopes normally backfilled after being mined. Stopes are often large, particularly in the vertical direction. The ore body is divided into separate stopes. Between stopes, ore sections are set aside for pillars to support the hanging wall. Pillars are normally shaped as vertical beams across the ore body. Horizontal sections of ore, known as crown pillars, are also left to support mine workings above the producing stopes
“tailings”	the waste materials (residue) produced by the processing plant after extraction of valuable minerals
“tailings dam” or “TSF”	a storage facility for tailings
“tonne” or “t”	metric tonne, a metric unit of weight, being equivalent to 1,000 kg
“t/a”	tonne per annum
“t/d”	tonne per day
“underground mine”	openings in the earth accessed via shafts and adits below the land surface to extract minerals
“underground mining method”	is used to extract ore from below the surface of the earth safely, economically and with as little waste as possible. The entry from the surface to an underground mine may be through a horizontal or vertical tunnel, known as an adit, shaft or decline
“vein”	sheet-like body of minerals formed by fracture filling or replacement of host rock

---

## SUMMARY OF THE JORC CODE

---

### SUMMARY OF THE JORC CODE

The Mineral Resources and Ore Reserves statements in this Prospectus have been prepared in accordance with the JORC Code. The JORC Code is an internationally accepted Mineral Resources and Ore Reserves classification system established in Australia, which was first published in February 1989 and last revised in December 2012. The JORC Code is commonly used in competent person's report for reporting resources and reserves for public companies reporting to the Hong Kong Stock Exchange. The JORC Code is used by the Competent Person to report the Mineral Resources and Ore Reserves of our mines in this Prospectus.

The JORC Code defines "Mineral Resource" as a concentration or occurrence of solid material of economic interest in or on the Earth's crust in such form, grade (or quality) and quantity that there are reasonable prospects for eventual economic extraction. The location, quantity, grade (or quality), continuity and other geological characteristics of a Mineral Resource are known, estimated or interpreted from specific geological evidence and knowledge, including sampling. Mineral Resources are subdivided in order of increasing geological confidence into the following categories:

- **Inferred Mineral Resource** — is that part of a Mineral Resource for which quantity and grade (or quality) are estimated on the basis of limited geological evidence and sampling. Geological evidence is sufficient to imply but not verify geological and grade (or quality) continuity. It is based on exploration, sampling and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes;
- **Indicated Mineral Resource** — is that part of a Mineral Resource for which quantity, grade (or quality), densities, shape and physical characteristics are estimated with sufficient confidence to allow the application of Modifying Factors in sufficient detail to support mine planning and evaluation of the economic viability of the deposit. Geological evidence is derived from adequately detailed and reliable exploration, sampling and testing gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes, and is sufficient to assume geological and grade (or quality) continuity between points of observation where data and samples are gathered; and
- **Measured Mineral Resource** — is that part of a Mineral Resource for which quantity, grade (or quality), densities, shape, and physical characteristics are estimated with confidence sufficient to allow the application of Modifying Factors to support detailed mine planning and final evaluation of the economic viability of the deposit. Geological evidence is derived from detailed and reliable exploration, sampling and testing gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes, and is sufficient to confirm geological and grade (or quality) continuity between points of observation where data and samples are gathered.

---

## SUMMARY OF THE JORC CODE

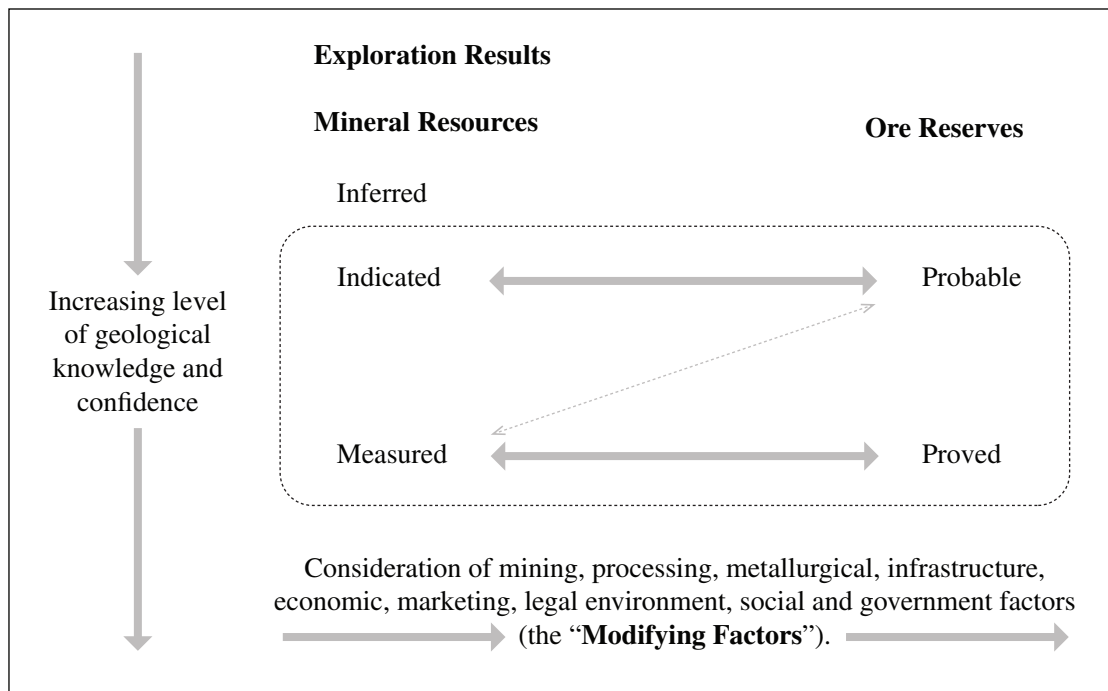

---

The JORC Code defines “Ore Reserve” as the economically mineable part of a Measured and/or Indicated Mineral Resource. It includes diluting materials and allowances for losses, which may occur when the material is mined or extracted and is defined by studies at Pre-Feasibility or Feasibility level as appropriate that include application of Modifying Factors. Such studies demonstrate that, at the time of reporting, extraction could reasonably be justified.

Ore Reserves are sub-divided into the following categories:

- **Probable Ore Reserve** — is the economically mineable part of an Indicated, and in some circumstances, a Measured Mineral Resource. The confidence in the Modifying Factors applying to a Probable Ore Reserve is lower than that applying to a Proved Ore Reserve; and
- **Proved Ore Reserve** — is the economically mineable part of a Measured Mineral Resource. A Proved Ore Reserve implies a high degree of confidence in the Modifying Factors.

The following diagram summarises the general relationship between Exploration Results, Mineral Resources and Ore Reserves under the JORC Code:

Source: the JORC Code, 2012

Ore Reserves are generally quoted as comprising a portion of the total Mineral Resource rather than the Mineral Resources being additional to the Ore Reserves quoted. Under the JORC Code either procedure is acceptable, provided the method adopted is clearly identified. The Competent Person’s Reports in this Prospectus report all of the Ore Reserves as part of the Mineral Resources.

---

## FORWARD-LOOKING STATEMENTS

---

This Prospectus contains certain forward-looking statements relating to our plans, objectives, beliefs, expectations, predictions and intentions, which are not historical facts and may not represent our overall performance for the periods of time to which such statements relate. Such statements reflect the current views of our management with respect to future events, operations, liquidity and capital resources, some of which may not materialize or may change. These statements are subject to certain risks, uncertainties and assumptions, including the other risk factors as described in this Prospectus. You are strongly cautioned that reliance on any forward-looking statements involves known and unknown risks and uncertainties. The risks, uncertainties and other factors facing our Company which could affect the accuracy of forward-looking statements include, but are not limited to, the following:

- our business strategies and plans to achieve these strategies;
- our future debt levels and capital needs;
- changes to the political and regulatory environment in the industry and markets in which we operate;
- our expectations with respect to our ability to acquire and maintain regulatory licenses or permits;
- changes in competitive conditions and our ability to compete under these conditions;
- future developments, trends and conditions in the industry and markets in which we operate;
- general economic, political and business conditions in the markets in which we operate;
- effects of the global financial markets and economic crisis;
- our financial conditions and performance;
- changes in the price of gold and other metals;
- our dividend policy; and
- change or volatility in interest rates, foreign exchange rates, equity prices, volumes, operations, margins, risk management and overall market trends.

---

## FORWARD-LOOKING STATEMENTS

---

Additional factors that could cause actual performance or achievement to differ materially including but not limited to those discussed in the section headed “Risk Factors” and elsewhere in this Prospectus. In some cases, we use the words “aim,” “anticipate,” “believe,” “can,” “continue,” “could,” “estimate,” “expect,” “going forward,” “intend,” “ought to,” “may,” “might,” “plan,” “potential,” “predict,” “project,” “seek,” “should,” “will,” “would” and similar expressions to identify forward-looking statements. In particular, we use these forward-looking statements in the sections headed “Business” and “Financial Information” in this Prospectus in relation to future events, our future financial, business or other performance and development, the future development of our industry and the future development of the general economy of our key markets.

We caution you not to place undue reliance on these forward-looking statements which are based on current plans and estimates, and speak only as of the date they were made. We undertake no obligation to update or revise any forward-looking statements in light of new information, future events or otherwise. Past performance is no guarantee of future results, and forward-looking statements involve inherent risks and uncertainties and are subject to assumptions, some of which are beyond our control. We caution you that a number of important factors could cause actual outcomes to differ, or to differ materially, from those expressed in any forward-looking statements.

Our Directors confirm that the forward-looking statements are made after reasonable care and due consideration. Nonetheless, due to the risks, uncertainties and assumptions, the forward-looking events and circumstances discussed in this Prospectus might not occur in the way we expect, or at all. Statements of or references to our intentions or those of any of our Directors are made as of the date of this Prospectus. Any such intentions may change in light of future developments.

Accordingly, you should not place undue reliance on any forward-looking statements in this Prospectus. All forward-looking statements contained in this Prospectus are qualified by reference to this cautionary statement.

---

## RISK FACTORS

---

*Potential investors should carefully read and consider all the information set out in this Prospectus. In particular, you should evaluate the risks and uncertainties described below before making any investment in our H Shares. This includes (without limitation) the fact that we conduct a large part of our operations in China, the legal and regulatory environment of which in some respects may differ from that in Hong Kong. Any of the risks and uncertainties listed below could have a material adverse effect on our business, results of operations, financial condition, or on the trading price of our H Shares (causing them to decline significantly) and could cause you to lose all or part of your investment. Additional risks and uncertainties not presently known to us or that we currently deem immaterial could also harm our business, results of operations, financial condition, or on the trading price of our H Shares. Past performance is no guarantee of future results.*

### RISKS RELATING TO OUR BUSINESS AND INDUSTRY

**Changes in the market price for gold mining and other Mineral Resources, which in the past have experienced significant volatility, affect the profitability of our operations and the cash flows generated by those operations.**

During the Track Record Period, a substantial portion of our revenue was derived from the sales of gold. Our revenue contribution derived from sales of gold mining grew significantly during the Track Record Period, increasing from 78.5% of our total revenue in 2021 to 84.6% in 2022 and to 87.6% in 2023, and 89.4% for the nine months ended September 30, 2024. We also generated revenue from sales of other Mineral Resources, including, amongst others, copper, for the same period. From 2019 to 2023, the prices of gold mining and other Mineral Resources experienced volatility. See “Industry Overview — Overview of the Gold Industry — Gold Price” for further details of fluctuations in gold price and “Industry Overview — Overview of the Copper Industry — Copper Price” for copper price. Although we hedge against the potential financial impacts due to price volatility from time to time, our hedging strategy may not be effective, and we are exposed to fluctuations in the gold price, which could lead to fluctuations in our results of operations. Gold price has been and may in the future be affected by numerous factors beyond our control, including, among others:

- the strength or weakness of the U.S. dollar (the currency in which gold price generally is quoted) and of other currencies, including the Renminbi, the Lao Kip and the Ghanaian Cedi, among others;
- the demand for gold, including the demand for gold for different uses, particularly use in jewellery, technological or industrial uses, investment (including gold bars, coins and exchange traded funds (“ETF”)), and central bank reserves;
- actual or expected purchases and sales of gold bullion holdings by central banks or other large gold bullion holders or dealers;

---

## RISK FACTORS

---

- international or regional political and economic events or trends;
- demand for ETFs which replicate the exact performance of gold;
- demand for gold for investment purposes;
- demand for gold investment alternatives, including the emerging demand for bitcoin, ether and other cryptoassets;
- investor confidence in gold and the gold business;
- speculative trading activities in gold;
- the overall level of forward sales by gold companies;
- the overall cost of production of gold;
- the global gold supply and demand forecasting;
- inflation; and
- interest rates.

It is not possible for us to predict the aggregate effect of these or other factors. If gold price falls near or below our costs to produce gold, we may experience losses and, should the gold price remain at such levels for any sustained period, our revenue and profit would be materially and adversely affected. As a result, we may be forced to curtail or suspend some or all of our projects or operations or reduce operational expenditures in part or completely. In addition, we might not be able to recover any losses incurred during or after such periods. Moreover, since our gold Resources and Reserves estimates are based on assumed gold prices, our estimates of gold Resources and Reserves may also be affected by significant deviations from and fluctuations in actual gold prices, resulting in material impairments of our investment in mining properties or a reduction in our Resources and Reserves estimates and corresponding restatements of our Resources and Reserves as well as increased amortization, reclamation and closure charges.

Due to the recent changes in the global geopolitical and economic environment, including, but not limited to, the persistent inflation, which resulted in the strengthening of U.S. dollars, the interest rate hikes by major central banks globally, the Russo-Ukrainian War, and the Hamas-Israel War, the gold price has experienced significant volatility. For example, according to Frost & Sullivan, for the years ended December 31, 2021, 2022 and 2023, the average spot price of gold on the Shanghai Gold Exchange was RMB374.3 per gram, RMB392.1 per gram, and RMB449.6 per gram, respectively. For the same period, the LBMA PM gold spot price was US\$1,798.9 per ounce, US\$1,801.3 per ounce, and US\$1,942.1 per ounce, respectively, according to Frost & Sullivan. The fluctuations in gold spot price were

---

## RISK FACTORS

---

primarily influenced by the devaluation of Renminbi, global gold supply and demand forecasting, and political developments and uncertainties according to Frost & Sullivan. The fluctuations in gold prices have contributed to, and may continue to contribute to, fluctuations in our revenue and profitability. As a result, a sustained period of significant gold price volatility may adversely affect our ability to evaluate the feasibility of undertaking new capital projects or continuing existing operations or to make other long-term strategic decisions.

We primarily engage in gold mining activities and process the gold mined into gold doré and gold concentrate, and, to a lesser extent, we also produce the copper cathode as by-product of our gold mining activities as well as other Mineral Resources. During the Track Record Period, changes in current and expected supply and demand have impacted the market price of other Mineral Resources. For example, market prices for copper products experienced fluctuations from 2019 to 2023 according to Frost & Sullivan, primarily as a result of the fluctuations in market demands. Material declines in the market prevailing copper prices could adversely affect our business, results of operations, financial condition and prospects. According to Frost & Sullivan, factors that may impact prices of other Mineral Resources include, but is not limited to, global economic growth, supply and demand dynamics, changes to the cost of production including energy and raw materials costs, changes to the cost of production including labor costs, changes to freight costs, changes to exchange rates, stockpiling of commodities, technological developments, and COVID-19 impact. There is no assurance that a fall in prices of other Mineral Resources will not occur.

As a result, any of these factors may adversely affect our businesses, financial condition, and results of operations.

**Our business is subject to a number of operational risks and hazards specific to mining industry, which may result in increased costs or losses, personal injuries or casualties, damage to reputation, suspension of operation and other penalties.**

Our operations are subject to a number of operational risks and hazards specific to mining industry, some of which are beyond our control and cannot be completely eliminated through prevention efforts. Mining, processing and exploration activities are typically exposed to elements of significant risks and hazards, including, but not limited to, (i) mining risks; (ii) legal and regulatory risks; (iii) infrastructure and equipment risks; and (iv) environmental, social, health and safety risks.

*Mining Risks.* Risks and hazards commonly associated with mining operations include:

- unexpected maintenance or technical problems;
- interruptions to our mining operations due to hazardous weather conditions and natural disasters, such as, floods, including, but not limited to, surface and underground flooding, landslides and earthquakes;
- electricity or fuel supply interruptions;

---

## RISK FACTORS

---

- critical equipment failures in our mining, processing and production operations;
- the handling and storage of certain dangerous substances and the use of heavy machinery;
- unusual or unexpected variation in the mine and geological or mining conditions, such as instability of the slopes and subsidence of the working areas;
- seismic events;
- exposure to health-related hazards, such as inhalable dust, silicosis and noise;
- surface or underground fires and explosions, including those caused by flammable gas or in connection with blasting;
- cave-ins, blockages, wall collapses or gravity induced falls of ground;
- discharges of gases and toxic substances;
- releases of radioactivity;
- electrocution;
- falling from height;
- accidents related to the presence of mobile machinery, including underground trains and shaft conveyances;
- industrial accidents, including, but not limited to, accidents and conditions resulting from drilling, blasting and removing and processing material which would also include, but is not limited to, the inhalation of dust and noise induced hearing loss;
- human errors and conduct;
- environmental degradation, including pollution of ground and surface water, air or soil;
- environmental issues, including production disruption due to weather conditions; and
- other accidents or conditions resulting from mining activities, such as blasting and the transport, storage and handling of hazardous materials.

---

## RISK FACTORS

---

There to, our operations involve the handling and storage of explosives and other dangerous articles. For example, we use sodium cyanide in our gold processing operations. We have implemented a set of guidelines and rules regarding the handling of dangerous articles, which comply with applicable existing laws, regulations and policies. However, there can be no assurance that accidents arising from the mishandling of dangerous articles will not occur in the future.

The above risks and hazards may result in personal injury, damage to, or destruction of, properties or production facilities, environmental damages, business interruptions and damage to our business reputation. Further, dust emission from our production process may adversely affect the health of our on-site employees and in extreme cases, it may cause pneumoconiosis or other occupational diseases.

Legal and regulatory risks. As an integrated gold company engaged in mining, processing and exploration, we are subject to extensive laws, rules and regulations imposed by the governments in the respective jurisdictions in which we operate regarding production safety. As these governments continues to strengthen the enforcement of safety regulations in relation to the mining industry, there can be no assurance that more stringent laws and regulations regarding production safety will not be implemented or that existing laws and regulations will not be more stringently enforced. We may not be able to comply with all existing or future laws and regulations in relation to production safety economically, or at all. Should we fail to comply with any production safety laws or regulations, we may be required to suspend our operations, rectify the production safety problems within a limited period and pay fines.

Infrastructure and equipment risks. Our infrastructure and facilities may contain design defects which may not guarantee the success of commissioning and trial production for smooth operation in the future. By the same token, our operation may be faced by ageing infrastructure, unplanned breakdowns and stoppages that may result in production delays, increased costs and industrial accidents. Once shafts reach the end of their planned lifespan and begin operating under extended life of mine conditions, additional maintenance, condition monitoring and care is required. The infrastructure in some of our PRC operating regions fall into this category. Although we have comprehensive strategies in place to address these issues, incidents resulting in production delays, increased costs or industrial accidents may occur. Such incidents may have a material adverse effect on our business, financial condition and results of operations.

Similarly, the breakdown of facilities or machinery (and the downtime required to fix or modify such facilities or machinery) may delay the production and incur significant costs. We and our third-party contractors may encounter accidents, technical difficulties, mechanical failure or breakdown in mining, processing and exploration activities, as well as possible flooding, mudslides, instability of the slopes, and subsidence of the working areas and the like due to severe weather conditions and natural disasters.

---

## RISK FACTORS

---

In addition, as we increasingly conduct mining at greater depths, we may face higher operational risks associated with deep underground mining, including, but not limited to, increased stress on our mining structures, increased temperatures and ventilation difficulties, higher risk of rock bursts and seismic activities that may affect the operation and safety of our mines. Deeper mining will require us to enhance our mining infrastructure, methods and techniques, and devote more manpower and utilities to our mining activities, which will increase our costs. For example, from time to time the Wassa Gold Mine may be adversely affected by severe weather conditions as its climate, terrain and vegetation are conducive to naturally occurring fires.

Furthermore, our operations rely on the existence and maintenance of appropriate and adequate infrastructure, including, but not limited to, the continuous and stable supply of power, at our mining concessions and surrounding areas. As a result, our operations may be adversely affected where such infrastructure ceases to exist or fails to be properly maintained by the local authorities and/or third parties. This may be beyond our control, and such risks cannot be completely eliminated through prevention efforts.

Environmental, social, health and safety risks. The mining industry is inherently susceptible to work-related injuries and industrial and mining accidents. See “— Our workers are subject to risks of serious injury caused by use of machinery, production equipment and tools and other production-related risks.” Such incidents may also result in breaches of the conditions for our mining and exploration licenses or any other approvals, permits or authorizations, which may result in fines and penalties or even potential revocation of such licenses, approvals, permits and authorizations. There can be no guarantee that accidents will not occur at our operations in the future despite our efforts to comply with safety protocols and applicable laws and regulations. Should we fail to comply with any relevant laws, regulations or policies or should any accident occur, our reputation, business, financial condition, and results of operations may be adversely affected, and we may be subject to penalties, civil liabilities, and/or criminal liabilities. Moreover, our operations may be affected by accidents of third parties. In addition to adversely affecting our business and results of operations, safety accidents in the region may also adversely affect our reputation.

Finally, our operations are subject to health and safety legislation which imposes duties and obligations on the employer to ensure, amongst other things, a working environment which is healthy and safe, as far as is reasonably practicable. For details, see “Regulatory Overview — Laws and Regulations Relating to Safe Production.” In terms of the health and safety legislation, an employer may be subject to significant penalties and/or administrative fines for non-compliance. Depending on the particular circumstances, litigation (criminal and/or civil) may be instituted against the employer in respect of an accident, dangerous occurrence or health threatening occurrence which has resulted in the death of an employee (or contractor staff). Any changes to the health and safety laws which increase the burden of compliance on the employer and impose higher penalties for non-compliance may result in further significant costs for us.

---

## RISK FACTORS

---

**We may not be able to expand or replenish our Mineral Resources and Reserves through exploration.**

The limited life of mines requires us to replenish our Reserves from time to time. Moreover, discovery of new Mineral Resources and Reserves is crucial to our growth. During the Track Record Period, we have continued to carry out exploration work in areas where we hold exploration permits. However, exploration of Mineral Resources and Reserves is speculative in nature, and our exploration activities may not result in the discovery of Mineral Resources. Furthermore, the future mining and development in the areas currently covered by exploration licenses is subject to further government approvals. There can be no guarantee that our future plan to expand our Mineral Resources and Reserves will succeed. Such plans may be delayed or adversely affected by various factors, including, but not limited to, failure to obtain relevant regulatory approvals, failure to secure sufficient financing to fund our expansion and production, the occurrence of geotechnical difficulties, constraints on managerial, operational, technical and/or other resources, and the incurrence of higher-than-expected operational costs. In addition, to the extent we participate in the development or operation of a project through a joint venture or any other multi-party commercial structure, there could be technical, legal or other disagreements, or divergent interests or goals among the parties, which could jeopardize the success of the project.

In addition, if a viable deposit is discovered, it could take several years and a large amount of capital expenditure from the initial phases of exploration to production commencement, during which time the presumed market price of gold may change, and the capital cost and economic feasibility of such deposit may change. There is also no assurance that we will have, or be able to raise, the required funds to engage in these activities or to meet our obligations with respect to any exploration properties in which we have or may acquire an interest. Furthermore, there can be no assurance that reported Resources will be converted into Reserves, and actual results upon production may materially differ from those anticipated at the time of discovery. Accordingly, there can be no assurance that any future exploration activities or development projects will extend the life of our existing mining operations or result in any new economic mining operations. For our future expansion plans, please refer to “Business — Development and Expansion”. In the event we fail to replace our Resources and Reserves depletion, to expand our Resources or Reserves base or our future expansion plans are delayed or fails to deliver the expected economic benefits, our business, financial condition, results of operations and future growth may be materially and adversely affected.

**We may fail to obtain, maintain or renew the government permits, licenses and approvals required for our mining and exploration activities.**

Our right to exploit mineral deposits is governed by the laws and regulations of the jurisdictions in which our mining properties are located. Currently, a significant portion of our deposits are located in countries where mining rights could be suspended or cancelled should we breach our obligations in respect of the acquisition and exploitation of these rights.

---

## RISK FACTORS

---

In all of the countries where we operate, the formulation or implementation of governmental policies on certain issues may be unpredictable. This may include changes in laws relating to mineral rights and ownership of mining assets and the right to prospect and mine, and, in extreme cases, nationalization, expropriation or nullification of existing rights, concessions, licenses, permits, agreements and/or contracts.

Under the PRC Mineral Resources Law, all Mineral Resources in the PRC are owned by the State. Mining companies, including our Company, are required to obtain mining and exploration permits prior to undertaking any mining or exploration activities, and the mining and exploration permits are limited to a specific geographic area and a certain time period. Our mining licenses in the PRC are generally valid for several years to 30 years. Our exploration permits are generally valid for five years and renewed accordingly subject to some conditions. Under the current Laotian laws and regulations, mining concessions provide up to twenty (20) years' mining rights to the holder, with such initial term being extendable for ten (10) year periods at a time. LXML has nevertheless been granted a mining concession by the Government of the Lao PDR under its Mineral Exploration and Production Agreement (MEPA), as amended, with an operating period of thirty (30) years, or until September 29, 2033, with the right to apply for two extensions, with each extension being for a period of ten (10) years, in accordance with mining legislation at the time of the 1st MEPA Amendment, which provided for the period of mining concession of up to thirty (30) years, subject to two extensions of ten (10) year periods. Under the current Ghanaian laws and regulations, mining concessions provide up to thirty (30) years' mining rights to the holder. In addition, pursuant to relevant PRC, Laotian, and Ghanaian laws and regulations, before commencing production, we are required to pass a number of inspections and obtain permits and licenses with respect to environmental protection and production safety, among other things.

As of the Latest Practicable Date, we held a total of 12 valid mining licenses in the PRC, including (i) one mining license for Wulong Mining, (ii) two mining licenses for Jilong Mining, (iii) six mining licenses for Huatai Mining, (iv) one mining license for Jintai Mining, and (v) two mining licenses for Hanfeng Mining. In addition, as of the Latest Practicable Date, we held 5 valid exploration permits in the PRC, including (i) one exploration permit for Jilong Mining, (ii) two exploration permits for Wulong Mining, (iii) one exploration permit for Jintai Mining, and (iv) one exploration permit for Hanfeng Mining. Moreover, as of the Latest Practicable Date, we held one valid mining license and one valid exploration permit in Laos. In addition, as of the Latest Practicable Date, we held two valid mining licenses and three valid exploration permits in Ghana, with one mining license having been renewed by the Ministry of Lands and Natural Resources and in the process of being ratified by Parliament. We need to renew or obtain relevant permits for our operations from time to time, including, but not limited to, mining permits and exploration permits. As of the Latest Practicable Date, although one mining lease of GSWL has been renewed by the Ghanaian Government, it is still pending ratification by the Parliament of Ghana as required by the Ghana Constitution. It is stipulated in the subsection 44(4) of the Mining Act of Ghana that a holder of the mining lease has made an application for extension of the term, the lease shall continue in force in respect of the subject of the application until the outcome of application is determined. As advised by our Ghana Legal Advisor, this means the lessee is able to continue its ongoing mining operations under

---

## RISK FACTORS

---

the old lease until the new lease is ratified by Parliament. It remains uncertain when such mining lease will be ratified. LXML applied for rare earth mining right with respect to an area of 2.96 km<sup>2</sup> located within its mining area. Chijin Laos applied for rare earth exploration right with respect to an area of 50 km<sup>2</sup> in the Kham District of Xiangkhouang Province. Chijin Laos had also submitted two applications in relation to prospecting, exploration, and a technical feasibility study on (i) rare earth minerals within a 19.88 km<sup>2</sup> area in Phouvineg and Phouluang Villages, Hiem District, Huaphan Province and (ii) gold and associated minerals within a 180 km<sup>2</sup> area in Giem District, Huaphan Province, respectively. These applications are currently put on hold by the relevant governmental authorities in Laos, as the Laos government has suspended review of all rare earth pilot project applications. For details, see “Business — Our Rare Earth Business in Laos.”

In addition, to comply with Laos environmental laws, we have submitted an updated environmental and social impact assessment and an environmental and social management and monitoring plan to the Laotian Government for the expanded project scope at our mines in Laos, which is pending review by the Laotian Government. There can be no assurance that the review will be completed in time, as per our current expectation, or at all, which may hinder the expansion of our Laos mining project. During the Track Record Period and up to the Latest Practicable Date, we failed to obtain the environmental impact assessment approvals for two production facilities in the PRC in a timely manner. For details, please refer to the section headed “Business — Licenses and Permits”. There can be no guarantee that all of our applications will be approved by the relevant government authorities. Also, there can be no assurance that we will be able to fully and economically utilize the entire Mineral Resources of all of our mines during the currently effective permit or approval periods.

We meet the substantive and procedural conditions stipulated in the relevant laws and regulations, we may not be able to obtain or renew such approvals, licenses or permits, comply with all conditions requested by governmental authorities to maintain those permits, or obtain, retain or renew other approvals, licenses and permits necessary for our business operations in the future, either in respect of our existing mines or at any mines we may operate in the future. There can be no guarantee that we will at all times maintain or act in compliance with our existing permits by the relevant governmental authorities. In addition, we may require new permit(s), license(s) and/or approval(s) from time to time. Changes in local laws, regulations and policies, including those with respect to environmental protection and mining and exploration activities, are outside of our control may affect our ability to obtain timely renewals for such permits, licenses and/or approvals, and during such time we may be compelled by law or regulators to cease mining and exploration activities in accordance with PRC, Laotian and Ghanaian laws and regulations.

Any failure to obtain, retain or renew, or any delay in obtaining or renewing, such approvals, licenses or permits could subject us to a variety of administrative penalties or other government actions and adversely impact our business, financial condition and results of operations.

---

## RISK FACTORS

---

**Artisanal mining, gold theft and robbery may occur on some of our properties. These activities are difficult to control and can disrupt our business and expose us to liability.**

Artisanal mining activities, theft and robbery of gold bearing materials and production inputs are common in Laos and Ghana. Illegal mining is mining activity that is carried out without land rights, mining license, exploration or transportation permit, or any document that can legitimate the ongoing operations. It is generally associated with a number of negative impacts, including poor working practices, corruption, child labor and human trafficking. Effective local government administration is often lacking in the locations where illegal and artisanal miners operate because of rapid population growth and the lack of functioning structures which can create a complex and unstable social environment. Activities of the illegal miners and artisanal miners may cause pollution or other damage to our properties, including, for example, underground fires, or personal injury or death, for which we may potentially be held liable. In addition, activities of artisanal mining may cause safety concerns and a negative image of our Company. In particular, artisanally-mined gold channeled through large-scale mining operators like us may impact negatively on the reputation of our Company as well as the industry. Illegal miners are often assisted by a syndicate of employees of legal mining operations. Consequently, in the event that our employees are found to be assisting illegal miners we will be required to dismiss all implicated employees, and this may result in labor unrest. Illegal mining activities could also result in depletion of mineral deposits, potentially making the future mining of such deposits uneconomic. The presence of illegal miners could lead to project delays and disputes regarding the development or operation of commercial gold deposits. During the Track Record Period, several illegal surface mining incidents occurred in the exploration rights area of Wassa Gold Mine. The illegal miners caused minor damages to office facilities and disruptions to operations for one to two days.

Any theft or robbery of gold may reduce the amount of gold that we are able to recover from our operations. Rising gold prices may increase the likelihood such thefts or robbery occurring. There can be no assurance that our security measures will effectively prevent illegal activities — which may be committed by third parties, employees or former employees — from happening in the future, or, in such case, that our insurance will be adequate to recover part or all of our loss (if any). Illegal mining, gold theft and robbery could result in lost Ore Reserves, mine stoppages, and have a material and adverse effect on our business, results of operations and financial position.

**We are subject to regulatory or legislative impositions of various costs, and such legislative changes to which may have a material adverse effect on our operations and profits.**

In recent years, governments (local and national), communities, non-governmental organizations and trade unions in several jurisdictions, have sought and, in some cases, have implemented greater costs on the mining industry, including, for example, the imposition of additional taxes and royalties, and relevant policies.

---

## RISK FACTORS

---

For example, in Ghana, the ownership of land on which there are mineral deposits is separate from the ownership of the minerals, as minerals are the property of the Ghanaian Republic and are vested in the president in trust for the people of Ghana. Under the Ghanaian Minerals and Mining Act, 2006 (Act 703) (“**Minerals and Mining Act**”), the Government of Ghana has a statutory right to a free 10% carried interest in the rights and obligations of all mineral operations in Ghana. In addition, stool/land rents of approximately GHC15.00 per acre are payable to the Government of Ghana. The annual ground rent was GHC15.00 for the years ended December 31, 2021, 2022 and 2023 and GHC40.00 for the nine months ended September 30, 2024. In 2021, 2022, 2023 and the nine months ended September 30, 2024, the amount of ground rent paid by the Group was GHC 0.42 million, GHC0.42 million, GHC0.42 million, and GHC1.14 million. Furthermore, under the Minerals and Mining Act the Ghanaian Minister of Lands and Natural Resources has the right of pre-emption over all minerals obtained in Ghana and products derived from the refining or treatment of these minerals. In February 2018, the Government of Ghana announced that it would implement an audit program targeted at mining companies in Ghana, and as such, we may be subject to additional audits that could result in the reversal of currently recorded tax losses or additional tax expenses. On July 31, 2018, the Ghanaian Minister of Lands and Natural Resources informed the Ghanaian Chamber of Mines of the Government of Ghana’s intention to exercise its right of pre-emption to acquire up to 20% of all gold mined in Ghana for the benefit of Ghanaian refineries. In November 2022, the Government of Ghana directed all gold mining companies, effective January 2023 to sell up to 20% of their products to the Bank of Ghana to be paid for at the World Market Spot Price in Ghanaian Cedis. Since then we have been selling 20% of our products to the Bank of Ghana in accordance with the legal provisions. We generally are able to utilize all Ghanaian Cedis for our operating expenses, but there is a risk that our holding of Ghanaian Cedis is subject to fluctuation and foreign exchange loss.

For the details of the taxes and royalties that we are subject to, see the section headed “Regulatory Overview” in this Prospectus. The policies adopted may impose additional restrictions, obligations, operational costs, taxes or royalty payments on gold mining companies, including us, any of which could have a material adverse effect on our business, financial condition and results of operations.

### **We may be subject to risks relating to operating our overseas business.**

Our overseas revenue contributed a substantial portion during the Track Record Period, accounting for 66.7%, 76.4%, 71.9% and 71.2% of our total revenue for the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2024, respectively. An important driver of such overseas revenue growth during the Track Record Period is our global expansion.

---

## RISK FACTORS

---

In November 2018, we acquired a 90% equity interest in LXML. LXML is a large local mining enterprise in Laos focusing on gold and copper mining and processing business, specifically engaged in the production and operation of the mines of Sepon Gold and Copper Mine. The remaining 10% equity interest in LXML is held by the Laotian Government. In January 2022, we acquired a 62% equity interest in Golden Star Resources, which in turn indirectly holds a 90% equity interest in GSWL. GSWL is a large local mining enterprise in Ghana focusing on gold mining and processing business, specifically engaged in the production and operation of the mines of GSWL. The remaining 10% equity interest in GSWL is held by the Ghanaian Government. In January 2023, we acquired a 51% equity interest in Xinhenghe Mining, which directly holds a 90% stake in Jintai Mining. Jintai Mining is a local mining enterprise in China focusing on gold mining and processing business, specifically engaged in the production and operation of the mines of Jintai Mining. In March 2024, an equity transfer agreement was entered into among China Investment, Chixia Laos and Chijin Xiawu, pursuant to which Chixia Laos shall acquire from China Investment 90% equity interest in China Investment Mining (Laos) Sole Co., Ltd., which in turn holds an 86% equity interest in CIRE Mining. CIRE Mining is a large local mining enterprise in Laos focusing on rare earth mining and processing business, specifically engaged in the operation of the trial mining area of the Mengkham Rare Earth Element Project. These acquisitions have further enhanced our mining operations and gold production.

We believe our increased Mineral Resources and enlarged production scale as well as our expansion into overseas markets will present us with further growth opportunities. However, there can be no guarantee that there will not be any material disputes between local government authorities and us in connection with the performance of a party's obligation or the scope of a party's responsibilities under relevant agreements, nor can we guarantee that we will be able to resolve any such disputes through amicable negotiation. In the event a material dispute cannot be resolved, the business and operations of LXML, GSWL, Jintai Mining, and/or CIRE Mining may be adversely affected. Furthermore, any potential social unrest and changes in regimes could have an adverse impact on the business of LXML, GSWL, Jintai Mining, and/or CIRE Mining. In the event that any of the above occurs, our business, financial condition and results of operations may be adversely affected.

Our current overseas operations, namely our operations in Laos and Ghana, as well as any future overseas operations that we set up or acquire, expose us, and may further expose us, to various risks associated with conducting business in foreign countries and territories, which may include, among other risks:

- an increase in competition from local or international competitors or failure to anticipate changes to the competitive landscape in overseas markets;
- difficulties integrating overseas business and management systems with our existing operations;

---

## RISK FACTORS

---

- potential risks, including civil unrest, acts of terrorism, acts of war, regional and global political or military tensions, strained or altered foreign relations, and political instability and uncertainty, which may lead to interruptions in our business operations and/or loss of property;
- economic, financial and market instability and credit risks;
- difficulties and costs associated with complying with, and enforcing remedies under, a wide variety of complex domestic and international laws, treaties, regulations, and rules;
- inability to obtain or maintain the requisite licenses, permits, approvals and certificates in foreign jurisdictions;
- economic sanctions, trade restrictions, trade barriers such as imposition of tariffs, discrimination, protectionism or unfavorable policies against PRC companies;
- potential loss of key employees, and difficulties with staffing and managing overseas operations after localization, including with respect to compliance with local labor laws;
- exposure to litigation or third-party claims outside of the PRC, including labor disputes;
- foreign currency exchange controls and fluctuations;
- uncertainties in the interpretation and application of tax laws and regulations, more onerous tax obligations and unfavorable tax conditions;
- potential disputes with, and loss of, overseas or international customers or other parties we work with;
- cultural differences and language barriers;
- infringement of our intellectual property rights in foreign jurisdictions; and
- lack of a well-developed or independent legal system in certain foreign jurisdictions in which we conduct our business, which may create difficulties in the enforcement of our legal rights.

Any of the above factors could lead to, among other things, business disruptions and increased costs and losses, which could have a material and adverse effect on our business, results of operations and overall growth. In particular, current and future geopolitical tensions globally and political tensions in the jurisdictions we operate could have a material and adverse impact on our existing business and future strategies.

---

## RISK FACTORS

---

**We are subject to risks related to exchange rate fluctuations, because our gold product from overseas operation is priced in U.S. dollars and our operating costs and expenses are incurred in different currencies, including, but not limited to, Lao Kip and Ghanaian Cedi.**

The revenue generated and cost incurred by our Company and PRC subsidiaries are denominated in Renminbi. The revenues of our overseas subsidiaries are denominated in U.S. dollars, while operating costs and expenses of our overseas subsidiaries are denominated in different currencies, primarily in U.S. dollars and in some cases in local currency. In addition, as our group reporting currency is Renminbi and the functional currency of our overseas subsidiaries is U.S. dollar, the financial report of overseas subsidiaries are converted to Renminbi for consolidation. Any exchange rate fluctuation between U.S. dollars, Lao Kip and Ghanaian Cedi, and Renminbi will affect our financial performance.

We operate a significant part of our business in Laos and Ghana. Revenue generated by our operations in Laos and Ghana are denominated in the U.S. dollar through sales of gold and copper where international refineries and traders purchase our products with prices set referencing to LBMA and LME market prices, respectively. In November 2022, the Government of Ghana directed all gold mining companies, effective January 2023 to sell up to 20% of their products produced in Ghana to the Bank of Ghana to be paid for in the Ghanaian Cedi at the World Market Spot Price, which is denominated in the U.S. dollar. Since then we have been selling 20% of our products produced in Ghana to the Bank of Ghana in accordance with the legal provisions. The operating and capital costs for our mines there are predominantly denominated and paid in the U.S. dollar with a minor part of costs denominated in the Lao Kip or the Ghanaian Cedi and paid in the Lao Kip or the Ghanaian Cedi, respectively. As a result, our business, financial condition and results of operations are affected by exchange rate fluctuations between the U.S. dollar and the Lao Kip as well as the Ghanaian Cedi.

As a certain amount of local currency is necessary for daily operation, there is a risk that our holding of Lao Kips and Ghanaian Cedis is subject to fluctuation and foreign exchange gain or loss. For the three years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2024, our net foreign exchange gains of RMB86.2 million, RMB27.2 million, RMB20.2 million and RMB27.8 million, respectively, were primarily due to exchange rate fluctuations. The Ghanaian Cedi has depreciated sharply against the U.S. dollar since the start of 2022, with a decline of more than 55% between January and October 2022, primarily due to lack of access to financial markets and significant debt servicing commitments by the Ghanaian government. The Lao Kip has also depreciated sharply against the U.S. dollar since August 2020, with a decline of approximately 50% from December 2021 to December 2022, primarily due to the economic challenges from the COVID-19 pandemic and public debt and fiscal challenges in Laos.

During the Track Record Period, the Renminbi, our Group's presentation currency, experienced significant depreciation against the U.S. dollar, the overseas subsidiaries' functional currency. We recognized other comprehensive loss on exchange differences on translation of foreign operations of RMB59.2 million and RMB79.9 million in 2021 and for the

---

## RISK FACTORS

---

nine months ended September 30, 2024, respectively, and recognized other comprehensive income on exchange differences on translation of foreign operations of RMB563.0 million and RMB109.5 million in 2022 and 2023, respectively. The amount of transactions denominated in the Renminbi under our overseas subsidiaries are minimal and we normally will not arrange hedging between the Renminbi and the U.S. dollar. There can be no guarantee that future fluctuations of the exchange rate would not have a material and adverse impact on our business, financial condition and results of operations.

We also have four subsidiaries conducting gold mining business in the PRC. Since the trend in gold price in the PRC, which is denominated in the Renminbi, is generally consistent with the trend in international gold price, which is denominated in the U.S. dollar, and the gold price in the PRC takes into account Renminbi/U.S. dollar exchange rate fluctuations, our earnings may be materially affected by a material change in Renminbi/U.S. dollar exchange rate. For example, if the Renminbi depreciates against the U.S. dollar, gold price in the PRC, which is denominated in the Renminbi, may increase, thereby having a positive impact on our revenue in the PRC. As of December 31, 2021, 2022 and 2023 and September 30, 2024, Renminbi to U.S. dollar exchange rate was 6.38:1, 6.96:1, 7.08:1 and 7.00:1, respectively, according to the central parity rate of Renminbi from SAFE. Since December 31, 2022, Renminbi to U.S. dollar exchange rate has also experienced significant volatility.

The value of Lao Kip, Ghanaian Cedi and Renminbi is subject to changes in the local governmental policies and international economic and political environment. The respective local government may adopt further reforms of the local exchange rate system in the future. There can be no assurance that such exchange rate will remain stable against U.S. dollar or other foreign currencies in the market. Volatility of Lao Kip, Ghanaian Cedi and Renminbi against foreign currencies may adversely affect our local and overseas operations.

**Rising inflation may have a material adverse effect on our business, financial condition and results of operations.**

Our business has been, and may continue to be, directly affected by volatile commodity costs and other inflationary pressures. Inflation in the PRC, Laos and Ghana could increase our production costs and expenses, including, for example, raw materials, transportation, wages and power costs. The average annual inflation rate, indicated by the average annual percentage change in the consumer price index was 1%, 2% and 0.2% for PRC, 10.0%, 31.3% and 38.1% for Ghana, and 3.8%, 23.0% and 31.2% for Laos in 2021, 2022 and 2023, respectively, according to the World Bank Group.

Geopolitical risks and conflicts around the world could further disrupt supply chains and create additional inflationary pressures. Specifically, the Russo-Ukrainian War has led to sanctions, travel bans, and asset or financial freezes being levied by the United States, European Union and other countries against Russian entities and individuals, with additional sanctions being proposed. These sanctions and other measures have had a significant impact on commodity prices, including increased oil, gas, ammonia nitrate, copper, steel and gold prices. The oil price is a driver of a number of our input costs, including fuel and transport costs, while

---

## RISK FACTORS

---

gas prices have an impact on power costs, and other commodity prices drive direct mining and processing costs. These inflationary pressures could also cause interest rates and the cost of borrowing to increase and could have a material adverse effect on global financial markets and economic conditions. The extent and duration of the war, sanctions and resulting market disruptions are impossible to predict. Any inflationary impacts or disruptions caused by the war or resulting sanctions may have a material adverse effect on our business, financial condition and results of operations, and may magnify the impact of other risks described in this document.

**Our Mineral Resources and Ore Reserves estimates are based on a number of assumptions, which, if changed, may require us to lower our estimates.**

Our Mineral Resources and Ore Reserves estimates are based on a number of assumptions. Neither Mineral Resource estimates, nor Ore Reserve estimates, are precise calculations. Ore Reserve estimates are based on available assumptions and considerations on extraction of Measured and Indicated Mineral Resources; and the Mineral Resources estimates are dependent on the interpretation of limited information on the location, shape and continuity of the occurrence and on the available sampling results. The accuracy of the estimates depends on the quantity and quality of available data, the assumptions made, and the judgments used in engineering and geological interpretation, which in each case may prove to be unreliable.

The Ore Reserves estimates contained in this Prospectus represent the tonnage and grade of gold and other Mineral Resources that we believe can be economically mined and processed and are estimated based on a number of economic and technical assumptions, including our costs, expenditures, commodity prices, currency exchange rates, geological and design losses, dilutions, metallurgical and mining recovery assumptions, which may prove inaccurate due to a number of factors, many of which are beyond our control. Ore Reserve estimation is a time-related behavior and activity, and the Ore Reserves presented in this Prospectus has reflected the considerations and assumptions made being valid on the date of the Competent Person's Report, and such considerations and assumptions comprise of the Modifying Factors. In the future, we may need to update the Modifying Factors and further our Ore Reserves if, for instance, our production costs increase or the prices of gold and/or other Mineral Resources decrease and as a result the extraction of a portion (or all) of the Ore Reserves at our mines becomes uneconomic. There is no assurance that our estimates will prove accurate or that the Ore Reserves can be mined or processed profitably. For details, please refer to "Appendix IIIB — Competent Person's Report for the Sepon Gold and Copper Mine — 20 Project Qualitative Risk Analysis" and "Appendix IIID — Competent Person's Report for the Sepon Rare Earth Element and Mengkham Rare Earth Element Projects in Lao People's Democratic Republic — 19 Risk Analysis".

---

## RISK FACTORS

---

In addition, compared to Measured or Indicated Mineral Resources, Inferred Mineral Resources have a greater amount of uncertainty as to their existence and as to whether they can be mined economically as such Mineral Resources are inferred from geological evidence and assumed but not verified. It cannot be guaranteed that all or part of the Inferred Mineral Resources will ever be upgraded to a higher category. No Inferred Mineral Resources have been included in LOM plan presented in this Prospectus.

The inclusion of Mineral Resources estimates should not be regarded as a representation that all these amounts can be economically mined or processed, and nothing contained in this Prospectus should be interpreted as assurances of the economic viability of the mines that we hold mining licenses or exploration permits to or the profitability of our future operations. A reduction of our Mineral Resources or Reserves, including due to any of the above could have a material adverse effect on our business, financial condition and results of operations.

We amortize our mining rights based on the units-of-production method. For the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2024, our amortization expenses related to our mining rights amounted to RMB313.8 million, RMB578.3 million, RMB546.8 million and RMB223.1 million, respectively. We review the remaining useful life of our mining rights in accordance with our production plans and Reserves levels of each mine. Any material decrease in the amount of our Reserves for our mines or changes to our production plans may result in impairment of the carrying value of our mining and exploration rights, which may have a material and adverse effect on our business, financial condition and results of operations.

**We may not be able to obtain financing on favorable terms, or at all, to fund our on-going operations, existing and future capital expenditure requirements, acquisitions and investment plans and other funding requirements, and our ability to raise additional funds could be materially affected by the fluctuations in the capital markets. If we do not obtain additional financing, our business may be at risk or execution of our development plan may be delayed.**

As of September 30, 2024, we had cash and cash equivalents of RMB2,094.1 million, and we incurred net profit of RMB613.4 million, RMB493.9 million, RMB871.6 million and RMB1,264.8 million for the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2024, respectively. Our mining, production and exploration activities are highly capital intensive. During the Track Record Period, we had funded our working capital and capital expenditure primarily through cash flow from operations, bank loans and gold leasing contracts. As our capital expenditure is significantly more than the proceeds from our Global Offering, such proceeds may not be sufficient to cover our capital expenditure. To fund our ongoing operations, existing and future capital expenditure requirements, investment plans and other financing requirements, we may need access to additional financing from external sources in addition to internal sources of liquidity.

---

## RISK FACTORS

---

Obtaining additional funding will be subject to various factors, including general market conditions, investor acceptance of our business plans, lenders' perception of our creditworthiness, the global and local economies, regulations that affect the availability and costs of financing, and ongoing results from our construction and commissioning efforts. Any disruptions, uncertainty or volatility in the capital and credit market resulting from any global financial crisis may also limit our ability to obtain financing to meet our funding requirements. These financings could require contractual or other restrictions on our operations or on alternatives that may be available to us. If we raise additional funds by issuing debt securities, these debt securities could impose significant restrictions on our operations. Any such required financing may not be available in amount or on terms acceptable to us, and the failure to procure such required financing could have a material and adverse effect on our development plan and continuous growth.

If we are unable to raise adequate funds, we may have to delay some of our development projects or expansion plans therefore affecting our profitability in the short and long term. If we do not have, or are not able to obtain, sufficient funds, we may be required to delay further development or commercialization of our Mineral Resources. Any of these factors could harm our operating results.

**Our workers are subject to risks of serious injury caused by use of machinery, production equipment and tools and other production-related risks.**

The mining industry is characterized by a higher risk of mining accidents due to the nature of the work environment, which is typically underground, confined, and subject to geological uncertainties. The risk of accidents is further exacerbated by the use of heavy machinery such as drilling machines and scrapers, which are potentially dangerous in our operations. Furthermore, there is risk associated with the use of hazardous, toxic or flammable raw materials and intermediate products. The storage of such materials near our production facilities and the handling of these materials in the mining and production process pose inherent risks.

Despite our efforts to protect our employees' health through executing safety measures, we cannot rule out such risks caused by factors beyond our control. An accident could lead to death or personal injuries and could materially disrupt our mining and manufacturing operations. During the Track Record Period, we had two safety production accidents, for which we received administrative penalties from the relevant authorities in China, and several work-related injuries in Laos. For details, please refer to "Business — Occupational health and safety". We may also be subject to business interruptions caused by equipment shutdowns for government investigation or implementation or imposition of safety measures as a result of the accident. Any such accident may also subject us to adverse publicity and damage to our brand name and reputation. Due to the growing awareness of and concern about safety and environmental protection, the risk of such accident may result in social demonstrations against the construction and operation of our plants and facilities, which may further disrupt our business operations, negatively affect our image and reputation and materially and adversely affect our business and financial condition.

---

## RISK FACTORS

---

**To the extent that we seek to expand through acquisitions, investment in joint ventures and associates, and strategic collaborations, we may experience problems and difficulties in executing, managing and integrating the acquisitions, joint ventures, associates and strategic collaborations.**

From time to time, we evaluate the acquisition of Ore Reserves, development properties or operating mines, either as stand-alone assets or as part of existing companies. The decision to acquire these properties may be based on a variety of factors, including, for example, historical operating results, estimates and assumptions regarding the extent of the Ore Reserves, cash and other operating costs, mineral prices, projected economic returns and evaluations of existing or potential liabilities (including environment liabilities) associated with the relevant property and its operations and how these factors may change in the future. Other than historical operating results, these factors are uncertain and could have an impact on revenue, cash and other operating costs, as well as the process used to estimate the Ore Reserves. To the extent that we are unable to realize the anticipated benefits of such acquisitions, our growth strategy, along with our business, financial condition and results of operations, may be materially impacted.

Over the past few years, we have entered into negotiations relating to certain target companies in which we were interested in acquiring a stake. For example, in November 2018 we acquired a 90% equity interests in LXML. LXML is a large local mining enterprise in Laos focusing on gold and copper mining and processing business, specifically engaged in the production and operation of the Sepon Gold and Copper Mine. In January 2022, we acquired a 62% equity interests in Golden Star Resources, which in turn indirectly holds 90% an equity interest in GSWL. In January 2023, we acquired a 51% equity interest in Xinhenghe Mining, which directly holds a 90% stake in Jintai Mining. This acquisition has further enhanced our mining operations and gold production. In March 2024, an equity transfer agreement was entered into among China Investment, Chixia Laos and Chijin Xiawu, pursuant to which Chixia Laos shall acquire from China Investment 90% equity interest in China Investment Mining (Laos) Sole Co., Ltd., which in turn holds an 86% equity interest in CIRE Mining. CIRE Mining is a large local mining enterprise in Laos focusing on rare earth mining and processing business, specifically engaged in the operation of the trial mining area of the Mengkham Rare Earth Element Project.

To further grow our businesses and increase our competitiveness and profitability, we intend to continue expanding our mining and production operations in various product segments or regions inside and outside of China. We may strategically pursue acquisitions, investment in joint ventures and associates, or strategic collaborations to maintain or expand our operations and our Mineral Resources and Reserves base. Any acquisition, joint venture, associate or strategic collaboration may change the scale of our business and operations and may expose us to new geographic, geological, political, social, strategic, operating, financial, legal, regulatory and contractual risks, including, but not limited to:

- significant changes in commodity prices after we have committed to complete a transaction and established a purchase price or share exchange ratio;

---

## RISK FACTORS

---

- risks arising from historical non-compliance from acquired properties, which we may not be able to identify in spite of pre-acquisition due diligence;
- mineral ore bodies that may not meet expectations;
- difficulties integrating and assimilating the operations and personnel of any acquired companies, realizing anticipated synergies and maximizing the financial and strategic position of the combined enterprise, and maintaining uniform standards, policies and controls;
- higher costs of integration than we anticipated;
- diversion of management's attention from our day-to-day business;
- inability to manage the newly acquired entities due to new operating and regulatory requirements;
- undetected liabilities which may be significant;
- disputes or breaches by our joint venture partners or strategic business partners, or the inability of our joint venture partners or strategic business partners to fulfil contractual obligations due to their businesses or financial condition; and
- difficulties in obtaining various governmental approvals and consents.

We may incur losses in relation to our investments in joint ventures and associates. Any significant investment losses charged against our investments in associates or joint ventures could have a material adverse effect on our business, financial condition and results of operations.

In respect of future acquisitions, we may encounter difficulties in integrating acquired operations, services, corporate culture and personnel into our existing business and operations. Further, we may discover previously unidentified liabilities or other issues that we did not discover in our pre-acquisition due diligence investigations. These activities may divert significant management attention from existing business operations, which may harm our business. In addition, acquisitions may require our management to develop expertise in new areas and manage new business relationships. There can be no assurance that any acquisition, joint venture, associate or strategic collaboration will achieve the results intended. In particular, if any of the new businesses fail to perform as we expected, we may be required to recognize a significant impairment charge, which may materially and adversely affect our business, financial condition and results of operations. There may also be established competitors in these sectors and markets which enjoy significant market share, and it may be difficult for us to win market share from them. Furthermore, some of the overseas markets that we are targeting may have high barriers of entry for foreign companies. There can be no assurance that our acquisition or expansion plans will be successful.

---

## RISK FACTORS

---

Furthermore, there are complex procedures for certain acquisitions of PRC companies as established by the PRC Anti-monopoly Law (中華人民共和國反壟斷法) and the Provisions of the State Council on the Threshold for the Reporting of Undertaking Concentrations (國務院關於經營者集中申報標準的規定), which require us to file anti-monopoly applications for some acquisitions based on the turnover of the acquirer and the target entity. The Provisions on the Examination of Concentrations of Undertakings (經營者集中審查規定) was promulgated SAMR on March 10, 2023 and implemented on April 15, 2023. SAMR is responsible for conducting the anti-monopoly examination of concentrations of undertakings, as well as investigating and punishing illegal concentrations of undertakings.

In addition, the PRC Anti-monopoly Law prohibits monopolistic acts include monopolistic agreements, abuse of a dominant market position and concentration of businesses that may have the effect to eliminate or restrict competition. The relevant restrictions and requirements may affect our ability to expand our operations, result in adjustments to our business plans and limit the growth of our business.

### **We face industry competition.**

We compete with a number of large PRC gold companies and international gold companies, for further details of our competitors, please refer to “Industry Overview — Competitive Landscape”. Our competitors may have certain advantages over us, including, for example, diversified sources of fundings, better financial performance, greater technical and Mineral Resources, greater economies of scale, broader name recognition and more established relationships in certain markets. As a result, these competitors may be able to devote more resources to the discovery of new Mineral Resources and reserves and acquire new Mineral Resources or other gold mining companies. Competition could also have an adverse impact on the demand for, and pricing of, our gold products, which in turn affects our business growth and financial condition. There can be no assurance that we will be able to continue to compete effectively or maintain or improve our market position. If we fail to compete effectively, it will have a material adverse effect on our businesses, results of operations and financial condition.

We also face intense competition for the acquisition of attractive gold mining properties. Industry competition may lessen our opportunities to acquire new Mineral Resources or other gold mining companies and, ultimately, may have a material adverse impact on our business, financial condition, results of operations and growth prospects.

### **We may not be able to meet our estimated gold and other minerals production volume.**

Our production estimates are based on, among other things, Ore Reserves estimates, gold recovery rates, and the assumptions regarding ground conditions and physical characteristics of Ore Reserves, our mining schedule, utilisation of production facilities, costs of production, conditions of the industry, political stability and the general economy. There are uncertainties in our ability to develop sufficient mining flexibility to achieve our mining schedule. Our Ore

---

## RISK FACTORS

---

Reserves estimates are based on assumed price of gold and other minerals, and as a result, our Reserves estimates, production schedule, operation and actual production may be adversely affected if the actual price of gold and other minerals falls below these gold price assumptions.

Actual production may vary from estimates for a variety of reasons, including risks and hazards of the types discussed elsewhere in this Prospectus, including, but not limited to:

- actual ore mined varying from estimates in grade, tonnage, and metallurgical and other characteristics;
- encountering unusual or unexpected geological conditions;
- mining dilution;
- actual gold recovery rate in formal production lower than estimates during the testing;
- restrictions imposed by government authorities;
- industrial accidents;
- equipment failures;
- natural phenomena such as weather conditions, floods, rock slides and earthquakes;
- changes in the costs of utilities;
- decreases in price of gold and other minerals which may cause Ore Reserves that are currently economic to become uneconomic;
- labor unrest, strikes or turnover;
- interference from local communities and competitors;
- socio-economic impact; and
- shortages of supplies needed for operation.

Such occurrences could result in damage to mineral properties, interruptions in production, injury or death to persons, damage to our property or the property of others, monetary losses and legal liabilities. These factors may cause a mineral deposit that has been mined profitably in the past to become unprofitable. New mining operations frequently experience unexpected issues during the initial development phase. Delays can often occur in the commencement of production. Estimates of production from properties not yet in production or from operations that are to be expanded are based on similar factors (including,

---

## RISK FACTORS

---

in some instances, feasibility studies prepared by our personnel and/or outside consultants), but it is possible that actual facilities utilisation, gold recovery rate, cash operating costs and economic returns will differ significantly from those currently estimated. There is no assurance that we will achieve our production estimates. If we are unable to achieve our production estimates, this could have a material and adverse effect on our business, financial condition and results of operations.

**We may be materially and adversely affected by challenges relating to slope and stability of underground openings.**

In general, as mining activities continue and expand, underground mines (including ours) are dug deeper while the waste and tailings deposits increase in size. Under these circumstances, certain geotechnical challenges may arise, including, for example, the possibility of failure of the mine's underground openings or voids. If additional actions are required to prevent such failure, additional expenses could be incurred, and stated Ore Reserves could be negatively affected. While we have undertaken industry standard tests, studies and actions to maintain the stability of our mines and associated waste infrastructure, adverse conditions may nevertheless take place, and additional actions may be required in the future.

**We may not be able to effectively execute our business strategies. In addition, estimates relating to expansion projects of existing operations are uncertain and we may incur higher costs and lower economic returns than estimated.**

The ability to grow our business will depend on the successful implementation of our existing and proposed strategic initiatives, such as to improve productivity, reduce cost and enhance profitability, and to obtain Resources and Reserves and increase production volume through acquisitions of high-quality gold assets for robust and sustainable growth. See "Business — Business Strategies" for further details of our business strategies. The successful implementation of our strategic initiatives depends upon many factors, including those outside our control. For example, while we have identified rare earth resources in Laos, the successful exploration of such rare earth resources will depend on, among other things, our ability to apply for licenses on trial development to the Laotian Government. We may also prove unable to deliver on production targets and strategic initiatives. Unforeseen difficulties, delays or costs may adversely affect the successful implementation of our business strategy and projects, and such strategy and projects may not result in the anticipated benefits. Any such difficulties, delays or costs could prevent us from fully implementing our business strategy, which could have a material adverse effect on our business, financial condition and results of operations.

Our future expansion may place a significant strain on our managerial, operational, technical and financial resources. In order to better allocate our resources to facilitate our growth, we must hire, recruit and manage our workforce effectively and implement adequate internal controls in a timely manner. Our risk management and internal control system may not be effective or adequate. If we fail to maintain sufficient internal sources of liquidity and secure external sources of funding for future growth, we may encounter, among other things,

---

## RISK FACTORS

---

significant delays in production and operational difficulties. If we are unable to effectively manage our growth and the associated increased scale of our operations, the efficiency of our operations, our ability to attract and retain key personnel and our business and prospects could be materially and adversely affected.

**Our operations are exposed to risks in relation to environmental protection and rehabilitation.**

Our operations are subject to extensive environmental laws and regulations in PRC, Laos and Ghana, including, for example, those relating to waste treatment and disposal, emissions and water management. Further, we must comply with permits or standards governing, among other things, land rehabilitation, tailings and waste disposal areas, water use, air emissions, water discharges, naturally occurring radioactive material, transportation of ore or hazardous substances, power use and generation, use and storage of explosives, as well as workers' occupational health and safety. We are required to conduct our mining operations in a manner that minimizes the impact on the environment, such as through rehabilitation and revegetation of mined land. In the future, we may have rehabilitation obligations in respect of areas we have cleared for mining and production purposes. Environmental hazards may occur in connection with our operations as a result of human negligence, force majeure or otherwise. Environmental laws and regulations are continually changing and are generally becoming more stringent. Changes to our environmental compliance obligations or operating requirements could adversely affect our production cost and revenue.

Further, failure to obtain the required environmental approvals with regard to any of our operations could affect our environmental management activities including, but not limited to, tailings disposal facilities and water management projects. For example, the process of obtaining mining, environmental, and other permits and approvals from the Government of Ghana has been taking longer lead times and incurring higher costs. As of the Latest Practicable Date, our Environment Compliance Certificate for LXML issued on January 8, 2024 is valid.

In addition to the above, failure to comply with the conditions thereof, variations in laws and regulations, assumptions made to estimate liabilities, standards or operating procedures, more stringent emission or pollution thresholds or controls, or the occurrence of unanticipated conditions, may require operations to be suspended or permanently closed, and could increase our expenses and provisions.

There can be no guarantee that non-compliance incidents will not occur at our operations in the future. The occurrence of any environmental hazards may delay production, increase production costs, cause personal injuries or property damage, result in liability to us and damage our reputation. Such incidents may also result in breaches of the conditions for our mining and exploration licenses or other approvals, permits or authorizations, which may result in fines or penalties or even possible revocation of such licenses, approvals, permits and authorizations.

---

## RISK FACTORS

---

We may experience increased production costs arising from compliance with environmental laws and regulations. As the PRC, Laotian and Ghanaian economies develop and the living standards of the population improve, heightened awareness of environmental protection may lead to more stringent environmental laws and regulations being implemented in the future, or the existing environmental laws and regulations may be more strictly enforced. We may not always be able to comply with future laws and regulations in relation to environmental protection and rehabilitation economically or at all. Should we fail to comply with any such laws and regulations, we may be subject to penalties and liabilities, including, but not limited to, warnings, fines, suspension of production and closure of the relevant facility that fails to comply with the relevant environmental standards.

Failure to comply with our environmental protection and rehabilitation obligations could have a material adverse effect on our business, financial condition, results of operations and prospects.

In addition to compliance with local laws and regulations, our operations are also increasingly subject to stakeholder expectations concerning the application of stringent internationally recognized environmental, health and safety and social standards and benchmarks. Such standards include the World Gold Council Conflict-Free Gold Standard, the World Gold Council's Responsible Gold Mining Principles, the International Finance Corporation Performance Standards and other World Bank guidelines. The application of such standards could impose significant compliance costs on us. Certain financial institutions from whom we borrow money may also require compliance with any of these standards the subsequent deviation from which could prevent or adversely affect our financial condition, existing financing arrangements and ability to secure future financing.

Any contraventions of environmental statutes may result in compliance and enforcement action being instituted against us by the relevant authorities, including commencement of criminal prosecution. Any related expenses and provisions could adversely affect our results of operations and financial condition.

The failure to comply with these laws and regulations may subject us to the imposition of significant fines, cessation of mining activities, criminal liability (including prosecution of our Directors, agents and/or employees in their personal capacities), and risks of litigation.

**We may fail to maintain our current financial performance, particularly with respect to our AISC.**

In the mining industry, operations such as enhanced exploration and the initiation of mining activities, along with fluctuations in labor and raw material costs, and the growing stringency of environmental regulations, may increase our costs, including both capital cost and operating costs. For details, please refer to "Appendix IIIB — Competent Person's Report for the Sepon Gold and Copper Mine — 20 Project Qualitative Risk Analysis" and "Appendix IIID — Competent Person's Report for the Sepon Rare Earth Element and Mengkham Rare Earth Element Projects in Lao People's Democratic Republic — 19 Risk Analysis". While our

---

## RISK FACTORS

---

operational efficiency has historically exceeded the global industry average, resulting in a competitive AISC of US\$1,179.1 per ounce as of December 31, 2023, and despite our successful reduction of AISC by 12.0% in 2023, we cannot guarantee the continuation of this trend. Our historical AISC performance is not indicative of future results, and the inherent risks associated with cost management in our industry could materially affect our financial outlook. Factors beyond our control, such as fluctuations in commodity prices, changes in production costs, and unforeseen operational disruptions, may lead to an increase in our cost structure. Any such increase could adversely affect our financial results and market position, potentially diminishing our comparative advantage in the industry.

**Our indebtedness and the conditions and restrictive covenants imposed on us by our financing agreements could materially and adversely affect our business, financial condition and results of operations.**

As of December 31, 2023 and as of September 30, 2024, our long-term borrowings amounted to RMB1,640.3 million and RMB1,323.4 million, respectively, which represented approximately 8.8% and 6.7% of our total assets. For example, GSWL's outstanding loan facilities and hedging and guarantee facilities provide creditors with liens on substantially all of its assets, including the mining lease of GSWL, which may cause risks. Timely payment under these facilities is important as failure to do so may cause the creditors to foreclose on and sell substantially all of GSWL's assets to satisfy payment obligations, which could prevent us from accessing these assets for our business and conducting our business as planned. Our business, financial condition, prospects and results of operations could be materially adversely affected as a result of any of these events. For a detailed outline of our indebtedness, see "Financial Information — Indebtedness". This indebtedness could have consequences for our business and operations including, but not limited to:

- limiting or impairing our ability to obtain financing, refinance any of our indebtedness, obtain equity or debt financing on commercially reasonable terms or at all, which could cause us to default on our obligations and materially impair our liquidity;
- restricting or impeding our ability to access capital markets at attractive rates and increasing the cost of future borrowings;
- reducing our flexibility to respond to changing business and economic conditions or to take advantage of business opportunities that may arise;
- requiring us to dedicate a substantial portion of our cash flow from operations to payments of principal and interest on our indebtedness, thereby reducing the availability of our cash flow for other purposes;
- placing us at a competitive disadvantage compared to our competitors that have lower leverage, better financing terms, and/or better access to capital resources;

---

## RISK FACTORS

---

- limiting our ability to dispose of assets that secure our indebtedness or utilize the proceeds of such dispositions and, upon an event of default under any such secured indebtedness, allowing the lenders thereunder to foreclose upon our assets pledged as collateral;
- increasing our vulnerability to downturns in general economic or industry conditions, or in our business; and
- restricting our subsidiaries' ability to pay dividend to us.

In addition, our bank loan agreements include various conditions and covenants that require us to obtain the lending bank's prior consent for certain transactions. We may be required to comply with similar restrictive covenants or other terms under any new loan and other financing arrangements in the future. In addition, we are required to comply with various financial covenants, and new financial covenants may be imposed under any new loan and other financing arrangements.

Should market conditions deteriorate, or if our operating results were to be depressed, we may need to request amendments or waivers to the covenants and restrictions under our debt agreements. There can be no assurance that we will be able to obtain such relief should it be needed. A breach of any of these covenants or restrictions could result in a default that would permit our lenders to declare all amounts outstanding thereunder to be due and payable, together with accrued and unpaid interest, trigger cross-default provisions under other debt agreements and, as applicable, cause the termination of commitments of relevant lenders to make further extensions of credit under our financing agreements or credit facilities. If we were unable to repay our indebtedness to our lenders in such an event, the lenders could, among other things, proceed against collateral, which could include substantially all of our assets. Our future ability to comply with financial covenants and other conditions, to make scheduled payments of principal and interest, or to refinance existing borrowings depends on our business performance, which is subject to economic, financial, competitive and other factors, including, but not limited to, the other risks described in this Prospectus. Any failure to comply with the covenants of our financing agreements or to obtain financing for our business could have a material and adverse effect on our business, financial condition, results of operations and prospects. Any failure to make required debt payments could, among other things, adversely affect our ability to conduct operations or raise capital, which could have a material adverse effect on our business, financial condition and results of operations.

**We may suffer material adverse consequences as a result of our reliance on contractors to conduct a portion of our business activities.**

During the Track Record Period, we outsourced a portion of our exploration, mining and processing activities to contractors at our PRC, Laos and Ghana operations. For instance, we outsourced a substantial portion of our engineering work in the PRC, mining and processing work in our projects in Laos and exploration and drilling services to our operation in Ghana to qualified contractors, see "Business — Contractors". As a result, our operations have been

---

## RISK FACTORS

---

affected by the performance of these contractors. Our operations at sites utilizing contractors or contract mining are subject to a number of risks, some that are outside our control, including, but not limited to, contract risk, execution risk, dispute and litigation risk, regulatory risk and labor risk, which could result in additional costs and liabilities.

We may not be able to control the quality, safety and environmental standards of the works conducted by contractors to the same extent as the works conducted by our own employees. There can be no guarantee that the contractors are in full compliance with all relevant laws and regulations, which may subject them to suspension of relevant licenses, approvals, permits and/or authorizations that would adversely and materially impact our operation. Should this happen, we may not be able to engage replacement contractors on similar terms or at all in a timely manner. We may become engaged in disputes with our contractors, which could lead to additional expenses, distractions and potential loss of production time and additional costs, any of which could materially and adversely affect our business, financial condition and results of operations. In addition, we may be legally obligated, as an owner of the exploration permit or mining license, to ensure operational safety. In the event of any safety-related accident involving a contractor, we may be held directly liable or liable for compensation to the extent of our faults regardless of any contractual provisions to the contrary. Any failure by contractors to meet any of our quality, safety and environmental standards may result in liabilities to us and could also affect our compliance with government rules and regulations relating to exploration, mining and workers' safety.

The occurrence of one or more of these risks could have a material and adverse effect on our business, financial condition and results of operations.

**We may not be able to maintain adequate, uninterrupted, timely and specification-compliant supplies of utilities, materials, equipment and service at commercially acceptable prices, or at all.**

Electricity and water are the main utilities used in our operations. Electricity is used for most of our business and safety-critical operations, including cooling, hoisting and dewatering. We obtained electricity from various sources, including, without limitation, local state grid, licensed state-owned electricity enterprises, local gas-fired power plants and local state electricity power grid. Any power outage, disruption or shortage in power supply available to our operations could therefore have a material adverse impact on our production and employee safety. For instance, since the Wassa Gold Mine in Ghana is subject to extremely high temperature, an increased electrical power demand may lead to power outages. There may be incidents of power cuts in certain areas of the PRC, Laos, and Ghana. There can be no assurance that our production will not be reduced as a result of the power outages. As of the Latest Practicable Date, all our PRC Mines were underground mines except Jintai Gold Mine adopting open-pit mining, the Sepon Gold and Copper Mine in Laos uses the combination of underground mining and open-pit mining, with open-pit mining playing a key role, and the Wassa Gold Mine in Ghana uses a combination of underground mining and open-pit mining, where underground mining plays a key role. As such, an interruption of electricity supply will materially and adversely affect our production and safety by disrupting operations, including

---

## RISK FACTORS

---

water pumping and ventilation. In addition, we may be subject to penalties if our consumption of electricity exceeds the permissible maximum demand pursuant to electricity supply agreements. Our water supplies are sourced from underground water sources and local water companies. As of the Latest Practicable Date, all the water permits for our mines were valid. There can be no assurance that we will be granted extension to our water permits should they expire, and if not, we will not be able to continue to access the relevant water resources. Moreover, for certain of our mines that are situated in more remote areas, there can be no assurance that there will be no interruption in electricity or water.

In addition, we need to compete with other natural resource companies for our overseas mining operations, and shortage of critical parts and equipment may adversely affect our operations and development projects. In the event that our existing suppliers cease to supply us with electricity, water, materials or equipment at commercially acceptable prices or at all, our operations will be interrupted, and our business, financial condition and results of operations will be materially and adversely affected.

In addition to utilities, in the PRC, during the Track Record Period we also procured most of the principal materials used in our production from local suppliers, including, for example, explosive materials, diesel, sodium cyanide, and cement. In Laos, we procured diesel fuel and certain low-value consumables from local suppliers, while we procured industrial chemicals and reagents, explosive materials, equipment maintenance spare parts and other consumables from overseas suppliers (mainly from PRC suppliers). In Ghana, we procured drilling service and various materials, such as diesel oil, electricity, certain low-value consumables, bulk industrial chemicals and reagents, explosive materials, equipment maintenance spare parts and other major consumables from domestic and overseas suppliers. For more information, see “Business — Procurement and Suppliers — Suppliers.”

We regularly monitor the fluctuations in market prices for the materials used in our operations. However, there can be no assurance that such supplies will not be interrupted or that their prices will not increase in the future. Additionally, if the materials, equipment and services provided by our suppliers do not meet our requirements or specifications, it may lead to production disruptions, safety incidents, legal disputes and financial losses. Furthermore, we may face the risk delay in international procurement. We cannot assure that our suppliers will not encounter delays during the customs clearance process. Such unforeseen hold-ups can disrupt our supply chain, potentially leading to production setbacks and increased costs. The complexity of international logistics, regulatory compliance, and geopolitical factors all contribute to the inherent uncertainty in the timely delivery of critical components and materials necessary for our operations. Consequently, any disruption in the flow of goods across borders could adversely affect our ability to meet market demands and maintain our competitive edge, which could impact existing profit margins and have a material adverse effect on our business, financial condition and results of operations.

---

## RISK FACTORS

---

**We received government grants and enjoyed preferential tax treatment during the Track Record Period, and any significant reduction in such grants or any adverse change of tax treatment offered to us may materially and adversely affect our financial condition and results of operations.**

Two of our subsidiaries, namely Wulong Mining and Jilong Mining, were accredited as High and New Technology Enterprises during the Track Record Period and, therefore, enjoyed the preferential EIT rate of 15.0%. In support of our R&D projects and mining activities, we have also recognized income from government grants of RMB1.4 million, RMB4.0 million, RMB17.0 million and RMB0.8 million for the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2024, respectively. We are required to renew our respective accreditations as a High and New Technology Enterprise upon its expiration. While we do not expect any difficulties in such renewal so long as we meet the applicable requirements and conditions and adhere to the procedures set forth in the relevant laws and regulations, there can be no guarantee that we will be granted such extension, and if not, we will not be able to continue to enjoy the preferential tax treatment for High and New Technology Enterprises in the future. In addition, there can be no guarantee that the government grants and preferential tax treatments will continue to be available to us. The discontinuation of any preferential tax treatment currently available to us will cause our effective tax rate to increase, which could have an adverse effect on our results of operations. In addition, the PRC Government from time to time adjusts or changes its policies on business tax and other taxes. Such adjustments or changes, together with any uncertainties resulting therefrom, could have an adverse effect on our financial condition and results of operations. Moreover, as we have substantial overseas operations, we may be subject to the imposition of additional taxes and royalties due to the complexity of tax laws in different jurisdictions.

**We are subject to regulatory risks with respect to our tax compliance.**

In the ordinary course of business we may be subject to inquiries, reviews, claims, assessments or other regulatory actions conducted by relevant tax or revenue authorities in the jurisdictions in which we operate. We may be subject to additional tax or duty liabilities, or increased statutory royalties in relation to our mining and mineral production operations, as a result of any unfavorable decisions made by such relevant tax or revenue authorities, which may materially and adversely affect our business, financial position and results of operations. Such regulatory actions may also divert our management's attention and other resources, especially if they are not resolved in a timely manner. For example, we carried out certain intra-group transactions during the Track Record Period, and our profit allocation and income tax positions in connection with such transfer pricing arrangements are subject to the interpretations by relevant tax authorities of applicable tax law as well as applicable rules and regulations with respect to transfer pricing in relevant jurisdictions. There is no assurance that the respective tax authorities would not challenge the appropriateness of our historical transfer pricing arrangements or that the relevant regulations or standards governing such arrangements will not be subject to future changes. If a competent tax authority later determines that the transfer prices and the transaction terms that we have adopted as well as our historical income tax provisions and accruals are not appropriate, such authority may require the relevant

---

## RISK FACTORS

---

subsidiaries to re-assess the transfer prices and re-allocate the income or adjust the taxable income. If we are considered not to be in compliance with the applicable transfer pricing rules and regulations, the relevant tax authority may also have the power to order us to pay all outstanding tax and statutory interest and/or fines.

**Our insurance coverage may be inadequate to satisfy potential claims and fluctuations in insurance cost and availability could adversely affect our business, financial condition and results of operations.**

Mining, exploration and production activities involve numerous risks, including, for example, unexpected or unusual geological conditions, fire, floods, earthquakes, severe weather conditions, other environmental occurrences and political and social instability. These risks can result in, among other things, damage to and destruction of mining assets or production facilities, personal injury, environmental harm, financial losses and legal liability.

We maintain insurance for our operations in line with law, regulation and industry practice in the PRC, Laos and Ghana, including, but not limited to, social insurance for our PRC employees, directors' and officers' liability insurance, medical and accidental injury insurance of expatriate employees, property insurance, liability insurance (including tailings insurance), cargo transportation insurance, aircraft operation liability insurance, and production safety liability insurance. However, in line with industry practice in the PRC, Laos and Ghana, we have elected not to maintain certain types of insurances, such as business interruption insurance or key man insurance. In addition, insurance may not continue to be available at economically acceptable premiums. The costs of maintaining adequate insurance coverage, most notably property damage insurance and environmental liability insurance, have increased significantly recently and may continue to do so in the future, thereby adversely affecting our results of operations. If such costs continue to increase, we may be forced to accept lower coverage and higher deductibles, which, in the event of a claim, could require significant, unplanned expenditures of cash and inhibit our ability to maintain our profitability.

In addition, we may become subject to liability against potential claims which we have not insured, cannot insure or have insufficiently insured, or are unable to insure the amount needed due to lack of capacity by insurers in the market, including those in respect of past mining activities. Our insurance may not cover a particular event at all or be sufficient to fully cover any losses we may incur, including, without limitation, as a result of natural disasters, public health emergencies and other events that could disrupt our operations, such as pandemics alike COVID-19. Our existing liability insurance contains exclusions and limitations on coverage. For example, should we be subject to any regulatory or criminal fines or penalties, such amounts would not be covered under our insurance program, either due to exclusions or limitations, or because it is prohibited by legislation in some jurisdictions. As a result, in the future, our insurance coverage may not cover the extent of claims against it, including, but not limited to, claims for environmental or industrial accidents, occupational illnesses or pollution or any cross-claims made.

---

## RISK FACTORS

---

**We rely on the continued service of our senior management and technically skilled employees, and we may experience labor shortages, disputes, unrest or strikes.**

Our ability to operate or expand effectively depends largely on the experience, skills and performance of our senior management team and technically skilled employees, particularly Mr. Wang Jianhua, our Chairman of the Board and Ms. Yang Yi-fang, our Chief Executive Officer. We rely on the expertise, experience and leadership of our directors and senior management. Their extensive knowledge and experience in mining industry, extensive managerial experience, as well as their established relationships with our customers and their experience dealing with local government authorities, have played a major role in our attainments. Additionally, the market for employees with industry experience and technical skills can be highly competitive. There can be no guarantee that the services of our senior management and a sufficient number of technically skilled employees in the PRC, Laos and Ghana will continue to be available to us. If one or more of our senior management and other key personnel are unable or unwilling to continue to serve in their present positions, we may not be able to replace them with qualified personnel in a timely manner. Any senior management departures or unavailability (due to death, injury, illness or other reasons) or technically skilled worker shortages could adversely affect our operational efficiency and production levels. We may be unable to hire or retain appropriate management personnel or technically skilled employees or may have to pay higher levels of remuneration than we currently project and intend. In particular, qualified personnel may be scarce in some or all of the regions where our mines are located. If we are unable to hire and retain appropriate management and technically skilled personnel, or if there are inadequate succession plans in place, our business may be materially and adversely affected.

In addition, we may be involved in labor disputes and experience labor unrest or strikes in the ordinary course of our business. During the Track Record Period, we had been involved in certain labor disputes, including termination of employment agreements, work-related injury compensation, etc. There can be no guarantee that labor disputes, unrest or strikes will not occur in the future. In the event that we experience such incidents, our mining activities and production levels may be disrupted, which may have a material and adverse effect on our business, financial condition, results of operations, reputation and future prospects.

**Any negative publicity regarding our Company, Directors, employees or products, regardless of its nature or veracity, could adversely affect our business.**

As an established brand, our image is sensitive to the public's perception of us as a business in entirety, which includes not only the quality of our products, but also our corporate management and culture. We cannot guarantee that no one will, intentionally or incidentally, disseminate information about us, including the quality of our products, our internal management matters and negative information for management, that may result in negative perception of us by the public. Although we had promptly taken clarification or rectification measures when we faced negative publicity in the past, we cannot assure you that such measures will always be effective in the future. In addition, as a listed company, our Company and member of our management or employees are under the supervision of securities

---

## RISK FACTORS

---

regulatory bodies and in the past, we were subject to certain regulatory inquiries and penalties. Any negative publicity about our Company, Directors, employees, spokespersons or products, regardless of nature or veracity, could lead to potential loss of customers or investors' confidence or difficulty in retaining or recruiting talents that are essential to our business operations. As a result, our business, financial condition, results of operations, reputation and prospects may be materially and adversely affected.

**Natural disasters, epidemics, acts of war or terrorism or other factors beyond our control may have a material adverse effect on our business, financial condition and results of operations.**

Natural disasters, epidemics, acts of war or terrorism or other factors beyond our control may adversely affect the economy, infrastructure and livelihood of the people in the regions where we conduct our business. For example, our operations may be under the threat of flood, earthquake, sandstorm, snowstorm, fire or drought, power, water or fuel shortages, critical equipment failures, malfunction and breakdown of information management systems, unexpected maintenance or technical problems, or are susceptible to epidemics, potential wars or terrorist attacks. Serious natural disasters may result in loss of lives, injury, destruction of assets, reduction in our productivity and/or disruption of our business and operations. Severe communicable disease outbreaks (such as COVID-19) could result in a widespread health crisis that could materially and adversely affect the economy and financial markets. Acts of war or terrorism may also injure our employees, cause loss of lives, disrupt our business network and/or destroy our markets. Any of these factors and other factors beyond our control could have an adverse effect on the overall business sentiment and environment, cause uncertainties in the regions where we conduct business, cause our business to suffer in ways that we cannot predict and materially and adversely impact our business, financial condition and results of operations.

**The physical impacts of climate change and relevant regulations may adversely affect our mining operations, workforce and supply chain.**

Our operations, workforce and supply chain may be exposed to a number of physical risks posed by climate change, such as changes in rainfall rates or patterns, rising sea levels, reduced water availability, higher temperatures and more frequent extreme weather events. For example, from time to time our operations in Ghana may be adversely affected by severe weather conditions as its climate, terrain and vegetation are conducive to naturally occurring fires. Such potential physical impacts of climate change on our operations are highly uncertain and would vary by operation based on particular geographic circumstances. As a result, we may face increased operational costs associated with, for example, power and supply chain disruption, delays and increased pricing. In addition, the potential for overall decreases in precipitation could affect the availability of water needed for our operations, leading to increased operating costs, or in extreme cases, disruptions to mining operations. In addition, our operations could be exposed to a number of physical risks from climate change, such as changes in rainfall rates or patterns, reduced water availability, higher temperatures and extreme weather events. Such events or conditions, including, for example, flooding or

---

## RISK FACTORS

---

inadequate water supplies, could disrupt mining and transport operations, mineral processing and rehabilitation efforts, create resource or energy shortages or damage our property or equipment and increase health and safety risks on site. Such events or conditions could have other adverse effects on our workforce and on the communities around our mines, such as an increased risk of food insecurity, water scarcity and prevalence of disease, all of which could have a material adverse effect on our results of operations and financial condition. Each of these potential physical impacts of climate change could disrupt our operations and have a materially adverse effect on our business, financial condition and results of operations.

Our operations may also be affected by climate change regulations. Greenhouse gases are emitted by our operations as a result of fuel and energy consumption. While our operations are not presently subject to specific regulatory measures to address or limit greenhouse gas emissions, the relevant governments in the jurisdictions we operate may be bound by international or local climate change treaties, for example, the Ghanaian Government ratified the 2015 UN Framework Convention on Climate Change (also known as the Paris Agreement). As regulatory requirements in respect of climate change evolve, compliance may require additional costs and involve other unexpected effects, which could have a material adverse effect on our operations, financial condition and results of operations. As producing gold is an energy-intensive business, transitioning to a lower-carbon economy will require significant investment and may entail extensive policy, legal, technology, and market changes to address mitigation and adaptation requirements related to climate change.

**Maintaining and increasing compliance of industry standards and keeping sufficient ESG disclosure to maintain our reputation and care for local communities could increase our operation costs.**

The continued success of our existing operations and future projects are in part dependent upon broad support of and a healthy relationship with the local communities in which our operations are located, in addition to conducting operations in a manner that is not detrimental to the environment. While formal permission to operate is ultimately controlled by host governments, many mining activities require social permission from host communities and influential stakeholders to carry out operations effectively, sustainably and profitably.

The consequences of negative community reaction could therefore give rise to material reputational damage which can pose obstacles to our ability to develop our projects and maintain our operations, and have a material adverse impact on the cost, profitability, ability to finance or even the viability of an operation. If our operations are delayed or shut down as a result of political and community instability, our earnings may be constrained and the long-term value of our business could be adversely impacted. Even in cases where no action adverse to us is actually taken, the uncertainty associated with such political or community instability could negatively impact the perceived value of our assets and mining investments and, consequently, have a material adverse effect on our financial condition. In order to maintain our social license to operate, we may need to design or redesign parts of our affected

---

## RISK FACTORS

---

mining operations to minimize their impact on the relevant communities and the environment, either by changing mining plans to avoid such impact, by modifying operations, by changing planned capital expenditures, or by relocating the affected people to an agreed location.

Specifically, some of our current and potential mining activities are or may be located in or near communities that may regard such operations as having a detrimental effect on their safety or environmental, economic or social circumstances. It has become common in Laos and Ghana for communities surrounding mines to look to the mines to improve standards of living in the area. Such communities may engage in protest action, which may affect access to the mine and production.

For example, the local regulations and MEPA between mining right holders and government stakeholders in Laos stipulate that every mining right holder is required to promote local employment, advance social and economic welfare, contribute to transforming the mining industry and ensure that mining companies contribute to the development of the areas where they operate. In Ghana, the Minerals and Mining (Local Content and Local Participation) Regulations, 2020 (L.I. 2431) was passed to promote, prioritize, and facilitate local content and local participation in the entire mining sector value chain. The regulations came into force on December 22, 2020 and seek to achieve this by stipulating requirements for registration and approval by the Minerals Commission of Ghana of localization program of holders of mineral rights and service providers in the mining industry. The regulations also seek to promote the utilisation of local goods and services by reserving certain specified services to only Ghanaian citizens or Ghanaian owned companies which are registered with the Minerals Commission of Ghana. Failure to comply with the social obligations could have a material and adverse impact upon our operations and may result in the suspension and/or cancellation of the environmental certificate and the corresponding suspension or stoppage of project implementation and activities.

Also, action is increasingly taken by members of the general financial and investment communities, such as asset managers, sovereign wealth funds, public pension funds, universities and other groups, to promote improvements in ESG performance by mining companies, which may impact our ability to raise funds if are perceived to have ESG deficiencies. Voluntary compliance with gold industry standards and reporting against multiple sustainability and ESG indices could result in significant costs. Stringent standards relating to responsible gold, including but not limited to the World Gold Council Conflict-Free Gold Standard and the World Gold Council Responsible Gold Mining Principles have been introduced. Additionally, the increasing demand for disclosure on performance with regard to ESG and the plethora of disclosure formats and indices being demanded, may result in significant costs to ensure and demonstrate compliance (particularly where standards change rapidly or duplication in reporting is required).

The cost of measures and other issues relating to the sustainable development of mining operations has placed significant demands on our resources and could increase capital and operating costs and have a material and adverse impact on our reputation, business, financial condition and results of operations.

---

## RISK FACTORS

---

**The failure of a tailings storage facility could negatively impact our business, reputation and results of operations.**

Mining companies face inherent risks in their operation of tailings storage facilities. Tailings storage facilities are structures designed and managed to contain fine mining waste, known as “tailings”. Tailings are a by-product of mining, consisting of the processed rock or soil left over from separating the commodities of value from the rock or soil within which they occur. However, the use of tailings storage facilities exposes us to certain risks that could be detrimental to operations, the environment, and/or public health and safety that may arise from some present process or future event. Tailings storage facilities designed as upstream raised facilities may present greater risk, particularly where the facility is located in a high seasonal rainfall area or an area of high seismic activity. When tailings storage facilities fail, the consequences can be catastrophic for communities, local economies and the surrounding environment. The occurrence of a dam failure at one of our tailings storage facilities could also lead to the loss of human life and/or extensive property and permanent environmental damage, leading to the need for a large expenditure on contingencies and on recovering the regions and people affected, and the payment of penalties, fines or other monetary damages.

Tailings facilities are in a near-constant state of change, from initial construction, during operations and until closure. This presents a significant challenge in reviewing and assessing their safety, requiring a multi-faceted program with multiple levels of safety assessment in order to be effective. We maintain measures to manage our dams’ safety, including compliance with the International Council on Mining and Metals’ Tailings Governance Position Statement, adoption of new safety measures, and undertaking routine reviews by independent international consulting companies. However, there can be no guarantee of the effectiveness of our designs, the construction quality of the tailings storage facilities, or that any monitoring throughout of the operations of the tailings storage facilities will identify any safety concerns. Nor can there be any guarantee that any of the measures that have been put in place to safeguard our tailings storage facilities will prevent the failure of one or more of them, or that such potential failure will be detected in advance. We also cannot guarantee that our operating partners maintain similar safety precautions or monitoring systems on their tailings storage facilities.

The failure of a dam at a tailings storage facility could lead to multiple legal proceedings and investigations, which could include class action lawsuits, criminal proceedings and public civil actions (against our Company, any of its subsidiaries and/or individuals) for significant amounts of damages.

As a result of any dam failures, additional environmental, health and safety laws and regulations may be forthcoming globally, including in jurisdictions where we operate, which may ban or curtail any storage of wet tailings or the construction or use of upstream tailings storage facilities. In addition, changes in industry standards, laws and regulations may impose more stringent conditions in connection with the licensing process of projects and operations and increased criminal and civil liability for companies, officers and contractors. For example,

---

## RISK FACTORS

---

on August 5, 2020, the International Council on Mining and Metals (ICMM), the United Nations Environment Programme (UNEP) and the Principles for Responsible Investment (PRI) established an international tailings standard, the Global Industry Standard on Tailings Management (GISTM).

The occurrence of any of the above mentioned such risks could have a material and adverse effect on our business, financial condition and results of operations.

**Our existing mining operations have a finite life and eventual closure of our operations will entail costs and risks regarding on-going monitoring, rehabilitation and compliance with environmental standards, which may exceed the provisions we have made.**

Despite our efforts in identifying and acquiring additional resources in the areas surrounding our existing mines and other regions in the PRC and abroad, our existing mining operations have a finite life and will eventually close. The key costs and risks for mine closures relate to (i) long-term management of permanent engineered structures, (ii) achievement of environmental remediation, rehabilitation and closure standards (including the assessment, funding and implementation of post-closure polluted and extraneous water pumping treatment), (iii) orderly retrenchment of employees, and (iv) relinquishment of the site with associated permanent structures and community development infrastructure and programs to new owners. Please also see “Appendix IIIB — Competent Person’s Report for the Sepon Gold and Copper Mine — 20 Project Qualitative Risk Analysis”. The successful completion of these tasks is dependent on our ability to successfully implement of closure plan agreed with the relevant government authorities, community and employees. Any issues relating to the closure of mines in accordance with their closure plans may increase closure costs and result in handover delays, damage to our reputation if a desired outcome cannot be achieved, as well as give rise to potential liabilities if the relevant mines fail to meet the relevant closure standard or if a post-closure accident or environmental incident occurs, all of which could materially and adversely affect our business and results of operations.

**We cannot guarantee that we will not be involved in claims, disputes and legal proceedings in our ordinary course of business.**

From time to time, we may be involved in claims, disputes and legal proceedings in our ordinary course of business. These may concern issues relating to, among others, health and safety accidents, environmental matters, breach of contract, employment or labor disputes and infringement of intellectual property rights. As of the Latest Practicable Date, we were not involved in any litigations and legal proceedings in the PRC, Laos and Ghana that may materially affect our business and results of operations. If we are found liable on any of the claims, we would have to incur a charge against our current earnings to the extent that a reserve had not been established for the matter in our accounts, or to the extent the claims were not sufficiently covered by our insurance coverage. Claims brought by us against our customers may include claims for additional costs incurred in excess of current contract provisions arising out of delays and changes in the initial scope of work. Both claims brought against us and by us, if not resolved through negotiation, are often subject to lengthy and expensive litigation or

---

## RISK FACTORS

---

arbitration proceedings. Amounts ultimately realized from our customers or other claims by us could differ materially from the balances included in our financial statements, resulting in a charge against earnings to the extent profit has already been accrued on a project or other contract. Charges associated with claims brought against us and write-downs associated with claims brought by us could have a material adverse impact on our businesses, financial condition, results of operations and cash flow. Moreover, legal proceedings resulting in judgments or findings against us may harm our reputation and damage our prospects to secure contracts in the future.

**We may not be able to detect and prevent fraud, bribery, other unfair business practices or other misconducts committed by our employees or third parties, and any actual or alleged misconduct may lead to censure, penalties, fines, sanctions, loss of licenses or permits and may negatively impact our reputation.**

We operate globally in multiple jurisdictions and with numerous and complex legal frameworks, applicable rules, codes and standards, and our governance and compliance framework and implemented processes may not always prevent potential breaches of law or accounting or other governance practices. Some of the jurisdictions where we operate may be considered high-risk from an anti-bribery and anti-corruption perspective, and strict compliance with anti-bribery and anti-corruption laws may conflict with local customs and practices. We may be exposed to fraud, bribery, other unfair business practices or other misconducts committed by our employees or third parties that could subject us to financial losses and sanctions imposed by governmental authorities, which may adversely affect our reputation. Our internal control procedures are designed to monitor our operations and ensure overall compliance. However, we cannot assure you that our internal controls, policies and procedures are all the times adequate to protect us from improper conducts by our officers, directors, employees, representatives, third-party intermediaries, business partners or agents. In the event that we believe or have reason to believe that any such party has or may have violated such laws, we may investigate (or have outside counsel investigate) the relevant facts and circumstances. Detecting, investigating and resolving actual or alleged violations can be expensive and require a significant diversion of time, resources and attention from senior management. Furthermore, it is not always possible to detect and prevent fraud, bribery, unfair business practices and other misconducts, and the precautions we take to detect and prevent such activities may not be effective. There can be no assurance that fraud, bribery, or other misconduct will not occur in the future. If such fraud, bribery, unfair business practices or other misconducts does occur, it may cause negative publicity and damage our reputation as a result.

The occurrence of any of these events could have a material adverse effect on our business, financial condition and results of operations.

---

## RISK FACTORS

---

**We are exposed to credit risk in relation to defaults of our trade counterparties.**

During the Track Record Period, we had trade receivables primarily relating to our sale of gold, copper cathode and the concentrate mineral powder of copper, lead and zinc. As of December 31, 2021, 2022 and 2023 and nine months ended September 30, 2024, our trade receivables from comprehensive recycling of resources business amounted to RMB311.4 million, RMB339.2 million, RMB397.5 million and RMB347.2 million, respectively, and our trade receivables from other sales amounted to RMB25.3 million and RMB29.6 million, RMB115.7 million and RMB240.0 million, respectively. Our trade receivables turnover days 31 days, 21 days, 22 days and 25 days for the periods ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2024, respectively. We have implemented a customer credit assessment system to evaluate the creditworthiness and financial condition of our customers. There can be no assurance that all of our counterparties are creditworthy and reputable and will not default on us in the future, despite our efforts to conduct credit assessments on them. In addition, our sales contracts with customers allow them to terminate the contracts upon the occurrence of certain events. There is limited financial or public information on many of our counterparties, and as a result, we are exposed to risks that our counterparties may fail to fulfil their obligations to us under our contracts.

**We face high concentration of customers during the Track Record Period and the loss of one or more of these customers could adversely affect our business, financial condition, and results of operations.**

Due to the nature of our business and industry norm, we have a limited customer base and face high concentration of a small number of customers for a significant portion of revenues. During the Track Record Period, our top five customers were refiners of precious metals and other non-ferrous metals as well as trading companies. For each year/period of the Track Record Period, revenue contributed by our top five customers amounted to RMB2,946.2 million, RMB5,345.8 million, RMB5,565.6 million and RMB4,904.6 million, respectively, accounting for 77.9%, 85.4%, 77.1% and 78.8% of our total revenue for the same periods, respectively. For each year/period of the Track Record Period, revenue contributed by our largest customer, which is a global large-scale precious metal assayer, refiner and mint, amounted to RMB2,126.6 million, RMB2,602.2 million, RMB2,672.1 million and RMB2,140.3 million, respectively, accounting for 56.2%, 41.5%, 37.0% and 34.4% of our total revenue for the same periods, respectively. Although there are readily available customer and a diversified customer portfolio to mitigate potential customer attrition, we cannot assure that our business will be unaffected by changes in our customer composition. Shifts in our customer base may significantly impact our revenue and profitability, particularly in the event of a reduction or termination of business with key customers.

---

## RISK FACTORS

---

**We are subject to risks related to our various financing activities, such as hedging activities. We also face exposure to fair value change. Fluctuations in fair value of our financial assets at FVOCI and derivative financial instruments would adversely affect our financial results.**

During the Track Record Period, we entered into gold leasing contracts, in which we leased gold from commercial banks to supplement our working capital. We usually enter into forward contracts under which we agree to purchase the same amount of gold, at the same price and on the maturity date of the gold leasing contracts to repay the leased gold (as well as payment of the leasing fees) to effectively hedge our position under gold leasing contracts. Hedging instruments, such as gold forward sales contracts, were utilized during the Track Record Period to lock up part of our future gold sales revenue in view of the volatility in gold price. There can be no assurance that the use of hedging techniques will always benefit us. Gold hedging instruments may prevent us from realizing the full benefit of potential subsequent increases in the gold price, which would cause us to record a mark-to-market loss in the consolidated income statements.

The fair value of these transactions is recorded as financial liabilities at fair value through profit or loss in our consolidated statement of financial position. We recorded the gains or losses from, and fair value changes of, these transactions as other gains or as finance costs in our consolidated statement of profit or loss. We recorded fair value loss on gold leasing contracts at RMB3.1 million, RMB30.4 million, RMB63.4 million and RMB83.3 million in 2021, 2022, 2023 and for the nine months ended September 30, 2024, respectively.

Changes in gold price may affect the effectiveness of our hedging and gold leasing contracts. Gold price has been fluctuating in the global market and we will continue to assess whether to enter into further hedging or gold leasing activities. In addition, our business, financial condition and results of operations could be materially and adversely affected if for any reason our gold production is unexpectedly interrupted and, as a result, we are unable to produce sufficient gold to cover any hedging or gold leasing contracts that we have entered into. There is also a risk that the counterparty to any hedging transaction could default on its obligations. Without hedging transactions, we may not be able to lock in our selling price when the gold price decreases, which may reduce the revenue that we may receive. Moreover, we may experience cash flow problems if we do not continue to, or are unable to, engage in gold leasing.

Any of the above could have a negative impact on our business, financial condition and results of operations.

---

## RISK FACTORS

---

**We may incur impairment losses related to our mining rights and related assets, which may adversely affect our results of operations.**

Based on our accounting policy, our subsurface use rights are amortized using the production method, based on proven and probable reserves, from the time of the beginning of ore mining. The process of Reserve estimate is inherently uncertain and complex and requires significant judgments and decisions based on available geological, engineering and economic data. If the value of our mining rights is over-estimated, the over-estimated amounts will be recognized as impairment losses, which in turn may have a material adverse effect on our result of operations. The carrying amount of the property, plant and equipment, including exploration and evaluation assets, is tested by us for impairment whenever facts and circumstances indicate assets' impairment in accordance with our accounting policy. Any material decrease of our Reserve may result in impairment on the carrying value of our mining rights and related assets, and this may have a material adverse effect on our business, financial condition and results of operations.

**We are exposed to the risk of obsolescence and impairment of our inventory.**

Our inventories primarily consist of raw materials, work-in-progress, finished goods and consumable materials. While our work-in-progress and finished goods are not exposed to the risk of obsolescence since they do not deteriorate easily, we made provision for write-down of inventories for certain low-value consumption goods. When the carrying amount of inventories is greater than their net realizable value at the end of a period, we will write down our inventory to net realizable value and record a provision of write-down of inventories. Our provision for write-down of inventories decreased from RMB298.7 million as of December 31, 2021 to RMB250.1 million as of December 31, 2022 and decreased to RMB190.9 million as of December 31, 2023, and increased to RMB196.1 million as of September 30, 2024. Assumptions regarding gold price and recovery rate will have impact on the assessment of the value of our inventories.

We have been actively managing our inventory to effectively plan our production to avoid stocking out and to minimize the risk of obsolescence of our inventory. Maintaining inventory at a proper level due to various factors, including but not limited to delivery delay, product quality not meeting standard, may result in interruptions in our production, failure to achieve anticipated production expansions, excessive purchases, etc. Excessive inventory on hand may increase the risk of inventory obsolescence, we may need to either sell off such inventory at a lower price to third parties or write off such inventory, in the event of which our financial condition and results of operations may be adversely affected.

---

## RISK FACTORS

---

**We rely on information technology and communications systems, the failure of which may significantly and adversely impact our operations and business.**

We rely on our information technology and communications systems, such as our transportation monitoring and GPS system, toxic gas monitoring system, underground personnel locating system, and office approval and financial reporting system. These systems are vital to our operations. Our information technology and communications systems could be exposed to, among other things, damage or interruption from telecommunications failure, unauthorized entry and malicious computer code, fire, natural disaster, power loss, industrial action and human error. While we have backup systems in place, the occurrence of any of the above may also disrupt our information technology and communications systems and may lead to important data (including, for example, geophysical and geological data) being irretrievably lost or damaged.

Such damage or interruption may adversely affect our business, financial condition and/or results of operations.

**We could be adversely affected as a result of any sales we make to certain countries that are, or become subject to, sanctions administered by the United States, the European Union, the United Kingdoms, the United Nations, Australia and other relevant sanctions authorities.**

The United States and other jurisdictions or organizations, including the European Union, the United Kingdom, the United Nations and Australia, have, through executive order, legislation or other governmental means, implemented measures that impose economic sanctions against certain countries or against targeted industry sectors, groups of companies or persons, and/or organizations within such countries. Sanctions laws and regulations are constantly evolving, and new persons and entities are regularly added to the lists of sanctioned persons. We cannot provide any assurance that our future business will be free of sanctions risk or our business will conform to the expectations and requirements of the authorities of the United States or any other jurisdictions. Our business and reputation could be adversely affected if the authorities of the United States, the European Union, the United Kingdom, the United Nations, Australia or any other jurisdictions were to determine that any of our future activities constitutes a violation of the sanctions they impose or provides a basis for a sanctions designation of us.

---

## RISK FACTORS

---

**We are subject to anti-corruption, anti-bribery, anti-money laundering, financial and similar laws, and non-compliance with such laws can subject us to administrative, civil and criminal fines and penalties, collateral consequences, remedial measures and legal expenses, all of which could adversely affect our business, results of operations, financial condition and reputation.**

We are subject to anti-corruption, anti-bribery, anti-money laundering, financial and export control regulations and similar laws and regulations in various jurisdictions in which we conduct activities, including the U.S. Foreign Corrupt Practices Act, or FCPA, the U.K. Bribery Act 2010, and other anti-corruption laws and regulations. If we fail to comply with anti-corruption, anti-bribery, anti-money laundering, financial and export control regulations and similar laws and regulations, we could be subject to whistleblower complaints, adverse media coverage, investigations, and severe administrative, civil and criminal sanctions, collateral consequences, remedial measures and legal expenses, all of which could materially and adversely affect our business, results of operations, financial condition and reputation. Any violation or even an alleged or suspected violation could harm our reputation and cause our suppliers, customers, financial institutions or other counterparties to refuse to do business with us, which may negatively affect our business, our results of operations, or the trading price of our Shares.

**Our risk management and internal control systems may not fully protect us against various risks inherent in our business.**

We have established risk management and internal control systems consisting of the relevant organizational framework policies, risk management policies and internal control procedures to manage our risk exposures, primarily our operational risk, legal risk and liquidity risk. However, during the Track Record Period, there were deficiencies in our internal control and corporate governance measures in relation to anti-fraud management, procurement management, transfer pricing management, HR management, and payment control. We need to continuously improve our internal control systems and fix such deficiencies, failure of which may cause losses from both a financial perspective and regulatory perspective. Moreover, we may not be successful in implementing our risk management and internal control systems. While we seek to continue to enhance such systems from time to time, there can be no assurance that our risk management and internal control systems are adequate or effective notwithstanding our efforts, and any failure to address any potential risks and internal control deficiencies could materially and adversely affect our business, financial condition and results of operations.

Since our risk management and internal control systems depend on their implementation by our employees, there can be no assurance that all of our employees will adhere to such policies and procedures, and the implementation of such policies and procedures may involve human errors or mistakes. Moreover, our growth and expansion may affect our ability to implement stringent risk management and internal control policies and procedures as our business evolves. If we fail to timely adopt, implement and modify, as applicable, our risk management and internal control policies and procedures, our business, financial condition and results of operations could be materially and adversely affected.

---

## RISK FACTORS

---

**Share-based compensation expenses may cause shareholding dilution to our existing Shareholders and have a material and adverse effect on our financial performance.**

We have adopted a share incentive plan for the benefit of our directors, senior management and key employees as remuneration for their outstanding services provided to us to incentivize and reward eligible persons who have contributed to our success. To further incentivize our directors, senior management and key employees to contribute to us, we may grant additional share-based compensation in the future. Issuance of additional Shares with respect to such share-based payment may dilute the shareholding percentage of our existing Shareholders. Expenses incurred with respect to such share-based payment may also increase our operating expenses and, therefore, have a material and adverse effect on our financial performance.

**RISKS RELATING TO DOING BUSINESS IN LAOS AND GHANA**

**Economic, political or social instability and security risks as well as shifts in political and social attitudes affecting Laos and Ghana may have a material adverse effect on our operations and profits.**

We generate a substantial amount of gold and copper production from Laos and Ghana, representing 42.3% and 29.6% of our revenue in 2023, respectively. As a result, changes or instability affecting the economic, political or social environment in Laos and Ghana or in neighboring countries could materially and adversely affect our operations and profitability. The Laotian and Ghanaian environments are subject to changes in a manner that may be materially adverse to us, including changes to government policies and regulations governing mining production, foreign investment, price controls, import and export control, tariffs, subsidies, income and other forms of taxation (including policies relating to the granting of advance rulings on taxation matters), nationalization or expropriation of property, repatriation of income, royalties, the environment and health and safety.

In Laos and Ghana, we are exposed to a greater than average risk of overt or effective expropriation or nationalization. For example, under the Minerals and Mining Act, the Ghanaian Minister of Lands and Natural Resources has the right of pre-emption over all minerals obtained in Ghana and products derived from the refining or treatment of these minerals. On July 31, 2018, the Minister of Lands and Natural Resources informed the Ghanaian Chamber of Mines of their intention to exercise their right of pre-emption to acquire up to 20% of all gold mined in Ghana for the benefit of Ghanaian refineries. In November 2022, the Ghanaian Government directed all gold mining companies, effective January 2023, to sell up to 20% of their produce to the Bank of Ghana at the World Market Spot Price in Ghanaian Cedis.

In recent years, major rating agencies have lowered or maintained a relatively low sovereign credit rating of Laos and Ghana. Downgrading, or the expected downgrading, of Laos and Ghana's sovereign credit ratings to non-investment grade status by major credit rating agencies have caused a loss of investor confidence and resulted in widening credit spreads, increased credit losses and tighter credit conditions, which have generally adversely affected the overall Laotian and Ghanaian economies, as well as their respective gold mining industries.

---

## RISK FACTORS

---

Given that we operate in these jurisdictions, our business, financial condition and results of operations may be adversely affected, as it may be more difficult for us to secure external financing and, where such external financing is secured, may be at greater borrowing costs and on more restrictive terms.

In addition, there are difficult security environments in both Laos and Ghana as a result of high levels of unemployment, inflation and poverty in the countries. Significant security challenges remain in areas where we have operations, and we may experience instances of injury to security personnel, including members of our internal security and third-party security providers we engage, from time to time. Any such instances could disrupt our operations and adversely affect our reputation, results of operations and financial condition.

There is also a skills deficiency across many sectors in Laos and Ghana, including the mining industry, and we face intense competition from other mining companies. As a result, we may have difficulty attracting and retaining key employees at all levels with the appropriate technical skills and operating and managerial experience necessary to operate and supervise the different parts of our business. There has also been regional political and economic instability and civil unrest in certain of the countries surrounding Laos and Ghana. Any similar political or economic instability or other uncertainty in Laos and/or Ghana could have a negative impact on our business operations and our financial performance.

Financial and securities markets in Laos and Ghana are influenced by global economic and market conditions. Laos and Ghana's economies remain vulnerable to external shocks, including those relating to, or similar to, the global financial crisis of 2007-2008 and the uncertainties surrounding the Asia-Pacific and the Sub-Saharan Africa regions. Although economic conditions vary from country to country, investors' perceptions of events occurring in one country may substantially affect capital flows into and investments in securities in other countries. In particular, each of Laos and Ghana's economy is also vulnerable to adverse developments affecting its principal trading partners. Deterioration of the economies of their major trading partners, such as the PRC or the United States, could have a material adverse impact on Laos' and Ghana's balance of trade and adversely affect Laos' and/or Ghana's economic growth and may consequently adversely affect the financial condition and results of operations of LXML and GSWL. Consequently, there can be no assurance that the Laotian and Ghanaian financial system and securities markets will not continue to be adversely affected by events in other regional economies or markets, which could, in turn, adversely affect the Laotian and/or the Ghanaian economy and, as a consequence, the financial condition and results of operations of LXML and GSWL.

In addition, economic and political instability in regions outside of the jurisdictions where we operate and geopolitical events, such as the political instability in Myanmar which is a neighboring country to Laos, the war and war refugees emerging in the area north of the boundary of Ghana, the Russo-Ukrainian War and Israeli-Palestinian conflict, may result in unavoidable uncertainties and events. These uncertainties and events could negatively affect costs of business, cause volatility in commodity prices, currency exchange rates, interest rates and worldwide political, regulatory, economic or market conditions. They could also cause instability in political institutions, regulatory agencies and financial markets.

---

## RISK FACTORS

---

Occurrence of any of the above-mentioned developments could result in our operations experiencing opposition or disruptions. Such opposition or disruption to any of our operations, in particular if it has an adverse impact or cost or causes any stoppages (including, for example, as a result of any protests aimed at government and other mining operations that affect operations), could have a material and adverse effect on our business, financial condition and results of operations.

**It may be difficult for the Hong Kong regulators to obtain information or call for regulatory assistance in Laos where circumstances necessitate in the course of overseeing us as a listed company by the regulations in Hong Kong.**

Our Directors and us, which will be regulated by the SFO and other applicable laws and regulations in Hong Kong upon the Listing, shall be required to provide the SFC with all information relating to our business in Laos that is necessary for its investigation of our affairs as may be required under Hong Kong laws or regulations. However, as the Laos has not signed any regulatory cooperation agreement or memorandum of understanding with the SFC or the Hong Kong Stock Exchange, nor is it a member of the International Organization of Securities Commissions (the “IOSCO”) or a signatory to the IOSCO Multi-lateral Memorandum of Understanding (the “IOSCO MMOU”), it may be difficult for the Hong Kong regulators to obtain information or call for regulatory assistance in Laos where circumstances necessitate in the course of overseeing us as a listed company by the regulations in Hong Kong.

Although we continue to grow our operations in our core markets and expand our presence into further global jurisdictions, we will continuously monitor our local business operations and business expansion rate in Laos on an ongoing basis. Our management will also report periodic information of the revenue generated by our operating entities in Laos to our Board of Directors. We will take necessary steps with respect to access to our Laotian operating entities’ books and records and fully cooperate with regulatory requests in order to facilitate the Hong Kong Stock Exchange and the SFC’s access to information of these operating entities based abroad.

**Our business and operations may be adversely affected by union activity and new and existing labor laws.**

Our employees in Ghana are highly unionized, and unions hence have a significant impact on the general labor relations environment. Trade unions are active in Ghana and advocate for improved conditions of employment and change to labor regulations, and to promote various political and social goals by using their collective power and ability to withhold labor. The broader labor relations climate also remains fragile in Ghana.

In Laos, while employees are not highly unionized, unions are maintained within large organizations and recognized at the organization, provincial and district level, and are organized under the Lao Federation of Trade Unions.

---

## RISK FACTORS

---

Therefore, union involvement in wage negotiations and collective bargaining increases the risk of strike action and rising labor costs. Wage negotiations in other industries and other mining sectors may influence the stance unions take toward the industry in which we operate.

Our employees might exercise their right to strike within the ambit of the legislations, such as the Labor Law of the Lao People's Democratic Republic and Ghanaian Labor Act, 2003 (Act 651), and in which case, it could have a material and adverse effect on both our business and reputation, and the operation of our mines could be disrupted. Our employees might exercise their right to strike per the relevant local laws and regulations, and, in such case, it could have a material and adverse effect on both our business and reputation, and the operation of our mines could be disrupted.

**We may be exposed to various diseases or public health emergency that result in loss of productivity and increased costs.**

In Ghana and Laos, we face the potential risk of various contagious diseases, including tuberculosis, yellow fever, malaria, and dengue fever. An outbreak of such diseases or a public health emergency could have a substantial impact on our operations in terms of reduced productivity and increased medical and other costs. These health threats can impair the health of workers and negatively affect our operations and financial position as a result of workers' diminished focus or skill, absenteeism, treatment costs and allocated resources. Furthermore, our financial position may be jeopardized by the cumulative effects of these factors. Any current or future medical program may not be successful in preventing or reducing the infection rate amongst our employees or in affecting consequent illness or mortality rates. We may incur significant costs in addressing these issues in the future, which could also adversely impact our results of operations and financial condition.

### **RISKS RELATING TO OUR DOING BUSINESS IN THE PRC**

**The economic landscape of PRC is subject to change and the future performance of China's economy is uncertain.**

We conduct our business and generate a portion of our revenue in the PRC. As a result, economic developments in the PRC have a significant effect on our business, financial condition, results of operations and prospects. In recent years, the PRC has been one of the world's fastest growing economies in terms of GDP growth. However, the COVID-19 outbreaks have caused disruption to the global economy, which may in the future continue to have an impact on the PRC's economy. Any significant slowdown in the PRC's economy could have a material adverse effect on our business and operations. In particular:

- during a period of economic slowdown, there is a greater likelihood that more of our customers or contractual parties could become delinquent in respect of their obligations to us;

---

## RISK FACTORS

---

- we may not be able to raise additional capital on terms that are commercially favorable to us, or at all; or
- trade and capital flows may further contract as a result of protectionist measures introduced in certain markets, which could cause a further slowdown in economies and materially and adversely affect our business and prospects.

In addition, factors such as consumer, corporate and government spending, business investment, volatility of the capital markets and inflation all affect the business and economic environment, the growth of the PRC's mining industry and ultimately, the profitability of our business. Our labor and other costs may also increase due to pressure from inflation. Any future calamities, such as natural disasters, outbreaks of contagious diseases or social unrest, may cause a decrease in the level of economic activities and adversely affect the economic growth in the PRC, Asia and elsewhere in the world.

As such, if the PRC's economy experiences significant adverse developments or a significant downturn, our business, financial condition and results of operations would be materially and adversely affected.

**Changes in the economic, political and social conditions in the PRC may have a material adverse effect on our business, financial condition and results of operations.**

A portion of our assets are located in the PRC and a portion of our revenue is derived from our business in the PRC. Accordingly, our business, financial condition, results of operations and prospects are, to a material extent, subject to economic, political and legal developments in the PRC. The PRC economy differs from the economies of developed countries in many respects, including, among other things, government involvement, level of economic development, growth rate and resources allocation.

In recent years, the PRC Government has implemented measures emphasizing the utilisation of market forces in economic reform and the establishment of sound corporate governance practices in business enterprises. These economic reform measures may be adjusted or modified, or applied inconsistently, from industry to industry or across different regions of the country. If the business environment in the PRC changes, our business in the PRC may also be materially and adversely affected.

**You may have limited recourse in effecting services of legal process or enforcing overseas judgments against us, our Directors, Supervisors and our senior management.**

Most of our Directors and executive officers reside within the PRC, and some of our company's assets and the assets of those persons are located within the PRC. It may be difficult, complicated and time-consuming for investors to effect service of process upon us or those persons inside the PRC or to enforce against us or them in the PRC any judgments obtained from non-PRC courts.

---

## RISK FACTORS

---

A judgment of a court of another jurisdiction may only be reciprocally recognized or enforced if the jurisdiction has a treaty with the PRC or if the judgment complies with the principle of reciprocity and do not violate the basic principles of the PRC laws, national sovereignty, security, social interests and public interests, subject to the satisfaction of other requirements. On January 25, 2024, the Supreme People’s Court issued the Arrangement on Mutual Recognition and Enforcement of Judgments in Civil and Commercial Matters by Courts of the Mainland and of the Hong Kong Special Administrative Region (關於內地與香港特別行政區法院相互認可和執行民商事案件判決的安排) (the “**Arrangement**”), which was implemented on January 29, 2024. Under the Arrangement, any relevant party may apply to the relevant PRC court or Hong Kong court for recognition and enforcement of a final court judgment in civil and commercial cases subject to the conditions set forth in the Arrangement. Although the Arrangement has come into effect, uncertainties remain as to the outcome and effectiveness of any action brought under the Arrangement. The recognition and enforcement of foreign judgments are provided for under the PRC Civil Procedures Law. Courts in mainland China may recognize and enforce foreign judgments in accordance with the requirements of the PRC Civil Procedures Law on basis of either on (i) the treaties between mainland China and the country where the judgment is made or (ii) on principles of reciprocity between jurisdictions. In addition, according to the PRC Civil Procedures Law, the courts in mainland China will not enforce a foreign judgment against us or our Directors and officers if they decide that the judgment violates the basic principles of PRC law or national sovereignty, security or public interest. As a result, in case of violation of the above principles, there is no assurance that a judgment rendered by a court outside the PRC would be recognized and enforced in a court in mainland China.

### **Gains on the sales of H Shares and dividends on the H Shares may be subject to PRC income taxes.**

Under the applicable PRC tax laws, both the dividends we pay to non-PRC resident individual holders of H shares (“**non-resident individual holders**”), and gains realized through the sale or transfer by other means of H shares by such Shareholders, are subject to PRC individual income tax at a rate of 20%, unless reduced by the applicable tax treaties or arrangements.

Under applicable PRC tax laws, the dividends we pay to, and gains realized through the sale or transfer by other means of H shares by non-PRC resident enterprise holders of H shares (“**non-resident enterprise holders**”), are both subject to EIT at a rate of 10%, unless reduced by applicable tax treaties or arrangements. Pursuant to the Arrangements between the Mainland of China and the Hong Kong Special Administrative Region for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion with Respect to Taxes on Incomes (內地和香港特別行政區關於對所得避免雙重徵稅和防止偷漏稅的安排) dated August 21, 2006, any non-resident enterprise registered in Hong Kong that holds, directly, at least 25% of the shares of our Company shall pay Enterprise Income Tax for the dividends declared and paid by us at a tax rate of 5% if the Hong Kong non-resident enterprise is the beneficial owner of the equity and certain other conditions are met.

---

## RISK FACTORS

---

For non-resident individual holders, gains realized through the transfer of properties are normally subject to PRC individual income tax at a rate of 20%. However, according to the Circular of the Ministry of Finance and the State Taxation Administration on Issues Concerning Individual Income Tax Policies (財政部、國家稅務總局關於個人所得稅若干政策問題的通知) effective as of May 13, 1994, income received by individual foreigners from dividends and bonuses of a foreign-invested enterprise are exempt from individual income tax for the time being. According to the Circular Declaring that Individual Income Tax Continues to Be Exempted over Individual Income from Transfer of Shares issued by the MOF and the STA (關於個人轉讓股票所得繼續暫免徵收個人所得稅的通知) effective as of March 30, 1998, income from individuals' transfer of stocks of listed companies continued to be temporarily exempted from individual income tax. On February 3, 2013, the State Council approved and promulgated the Notice of Suggestions to Deepen the Reform of System of Income Distribution (國務院批轉發展改革委等部門關於深化收入分配制度改革若干意見的通知). On February 8, 2013, the General Office of the State Council promulgated the Circular Concerning Allocation of Key Works to Deepen the Reform of System of Income Distribution (國務院辦公廳關於深化收入分配制度改革重點工作分工的通知). According to these two documents, the PRC Government is planning to cancel foreign individuals' tax exemption for dividends obtained from foreign-invested enterprises, and the Ministry of Finance and the State Taxation Administration should be responsible for making and implementing details of such plan. However, relevant implementation rules or regulations have not been promulgated by the Ministry of Finance and the State Taxation Administration.

Considering these uncertainties, non-resident holders of our Shares should be aware that they may be obligated to pay PRC income tax on the dividends and gains realized through sales or transfers of the H shares.

**Policies regarding foreign currency conversion may affect our foreign exchange transactions and our ability to pay dividends and meet other obligations.**

During the Track Record Period, we received our revenue both in Renminbi and U.S. dollars. Currently, the conversion of RMB into foreign currency has to comply with the relevant laws and regulations and remittance of foreign currencies are subject to the PRC foreign exchange regulations. We may have to convert a portion of our revenue into other currencies to meet our foreign currency obligations, such as payments of dividends declared in respect of our H Shares, if any, and settlement of foreign investment. Shortage in the availability of foreign currency may restrict the ability of our Group to remit sufficient foreign currency out of the PRC, or otherwise satisfy our foreign currency denominated obligations.

Under existing PRC foreign exchange regulations, payments of current account items, such as profit distributions and trade and service-related foreign exchange transactions, can be made in foreign currencies without prior approval from the SAFE, by complying with certain procedural requirements. However, approval from or registration with appropriate governmental authorities is required where RMB is to be converted into foreign currency and remitted out of the PRC to pay capital expenses under the capital account such as the repayment of loans denominated in foreign currencies.

---

## RISK FACTORS

---

The policies regarding foreign exchange transactions under the current account and the capital account may not necessarily continue in the future. In addition, these foreign exchange policies may restrict our ability to obtain sufficient foreign exchange, which could have an adverse effect on our foreign exchange transactions and the fulfilment of our other foreign exchange requirements. If there are changes in the policies regarding the payment of dividends in foreign currencies to shareholders or other changes in foreign exchange policies resulting in insufficient foreign exchange, our payment of dividends in foreign currencies may be affected.

**If we fail to comply with environmental, health and safety laws and regulations, we could be subject to fines or penalties or incur costs that could have a material adverse effect on the success of our business.**

We are subject to numerous environmental, health and safety laws and regulations and related inquiries in relation to our production processes. For example, our construction projects are subject to Regulations on the Administration of Construction Project Environmental Protection (建設項目環境保護管理條例), and its environmental impact assessment documents shall be approved by the relevant environmental protection department. Our production plants and the facilities we use are subject to regular inspections by the regulatory authorities for compliance with the Safe Production Law of the PRC (中華人民共和國安全生產法) and Regulation on Work Safety Permits (安全生產許可證條例). Furthermore, under the PRC Labor Law (中華人民共和國勞動法) and Law of the PRC on the Prevention and Treatment of Occupational Diseases (中華人民共和國職業病防治法), we must ensure that our facilities comply with the PRC standards and requirements on occupational health and safety conditions for employees.

As of the Latest Practicable Date, we were in the process of obtaining one environmental impact assessment approval for project under construction from the relevant environmental protection department. As advised by our PRC Legal Advisor, the risk of material administrative penalty for such non-compliant incident is remote and does not have a material and adverse effect on our business.

As of the Latest Practicable Date, two of our safety production permits had expired. There are no provisions for administrative penalties against a company for failing to complete the renewal application before the expiration of the certificate if a company is not producing and we had not been imposed administrative actions, nor received any notice from the competent authorities. As advised by our PRC Legal Advisor, it does not have a material and adverse effect on our business operation.

However, there can be no assurance that any new laws and regulations or any changes in the implementation of the existing laws and regulations will not require us to pay any contribution shortfall retroactively or any administrative penalties. In addition, we may incur substantial costs in order to comply with current or future environmental, health and safety laws and regulations. These current or future laws and regulations may impair our research, development or production efforts. Failure to comply with these laws and regulations also may result in substantial fines, penalties or other sanctions, thereby adversely affecting our financial condition and results of operations.

---

## RISK FACTORS

---

**Implementation and enforcement of the labor laws and regulations in China may adversely affect our business and results of operations. Failure to fully comply with PRC labor-related laws may expose us to potential liabilities and penalties.**

Pursuant to the PRC Labor Contract Law (中華人民共和國勞動合同法) that took effect in January 2008, with its amendment that took effect in July 2013, and its implementation rules that took effect in September 2008, (the “**Labor Contract Law**”) employers are subject to strict requirements in terms of signing labor contracts, minimum wages, paying remuneration, determining the term of employees’ probation and unilaterally terminating labor contracts. Due to lack of detailed interpretative rules and broad discretion of the local competent authorities, it is uncertain as to how the Labor Contract Law and its implementation rules will affect our current employment policies and practices. Our employment policies and practices may violate the Labor Contract Law or its implementation rules, and we may thus be subject to related penalties, fines or legal fees. Compliance with the Labor Contract Law and its implementation rules may increase our operating expenses, in particular our personnel expenses. In the event that we decide to terminate some of our employees or otherwise change our employment or labor practices, the PRC Labor Contract Law and its implementation rules may also limit our ability to effect those changes in a desirable or cost-effective manner, which could adversely affect our business and results of operations.

On October 28, 2010, the Standing Committee of the NPC promulgated the PRC Social Insurance Law (中華人民共和國社會保險法), which became effective on July 1, 2011 and was amended on December 29, 2018 and took effect on the same date (the “**Social Insurance Law**”). According to the Social Insurance Law, employers should make the social insurance registration and employees must participate in pension insurance, work-related injury insurance, medical insurance, unemployment insurance and maternity insurance and the employers must, together with their employees or separately, pay the social insurance premiums for such employees. Recently, the PRC Government enhanced its measures relating to social insurance collection, which may lead to stricter enforcement.

Pursuant to the Regulations on Management of Housing Provident Fund (住房公積金管理條例) promulgated by the State Council on April 3, 1999 and took effect on the same date, which was amended, supplemented or otherwise modified from time to time and was lately amended on March 24, 2019 to take effective on the same date, employers must open housing provident fund account and pay housing provident fund for its employees. However, our social insurance and/or housing provident fund policies and practices may in the future be found to have violated the relevant laws regulations, and we may therefore be subject to related administrative measures, penalties, fines or legal fees. Compliance with the relevant laws and regulations may increase our operating expenses, in particular our personnel expenses.

As the interpretation and implementation of labor laws and regulations are still evolving, there can be no assurance that our employment practice policy and will at all times be deemed to be in full compliance with labor-related laws and regulations in China, which may subject us to labor disputes or government investigations. If we are deemed to have violated relevant labor laws and regulations, we could be required to provide additional compensation to our employees and our business, financial condition and results of operations could be materially and adversely affected.

---

## RISK FACTORS

---

As of the Latest Practicable Date, we had not paid the social insurance and/or housing provident funds for some of our employees, and the total unpaid amount calculated based on the minimum contribution base of social insurance is RMB689,989, RMB774,966, RMB810,724 and RMB465,332 for the three years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2024, respectively. We had not been imposed administrative actions, nor received any notice from the competent authorities ordering rectification or specifying deadline for payment of outstanding fees or administrative penalties in respect of social insurance and housing provident fund. As advised by our PRC Legal Advisor, the enforcement risk for such non-compliant incidents is remote and does not have a material and adverse effect on our business operation. However, there can be no assurance that any new laws and regulations or any changes in the implementation of the existing laws and regulations will not require us to pay any contribution shortfall retroactively or any administrative penalties, thereby materially and adversely affecting our financial condition and results of operations.

**We have not obtained title certificates for some of our properties and have not completed registration procedures for some of our leased properties, which could materially and adversely affect our right to use such properties.**

We have certain title defects relating to the lands or properties that we own or use. For example, we have not obtained construction approval documents and failed to apply for changes in the type of land use rights for some of our properties. Under the applicable PRC laws and regulations, the parties to a lease are required to register and file such lease with the relevant government authorities. As of the Latest Practicable Date, three of our leased properties had not been registered or filed. While the lack of registration will not affect the validity of the leases under PRC laws and regulations, we may be ordered by the relevant government authorities to register the relevant leases within a prescribed period, failing which we may be subject to a fine ranging from RMB1,000 to RMB10,000 for each non-registered lease. As advised by our PRC Legal Advisor, the risk of material administrative penalty for such non-compliant incident is remote and does not have a material and adverse effect on our business operation, or materially jeopardize the proposed Listing. Nevertheless, there can be no assurance that we will not be subject to challenges, lawsuits or other actions taken against us with respect to the lands or properties owned, used or leased by us for which we or the relevant lessors do not hold perfected title certificates or fail to complete relevant registration procedures. Furthermore, we may be subject to fines and penalties imposed by government authorities with respect to certain title defects.

**The PRC legal system is evolving and may have uncertainties that could limit the legal protection available to us and investors.**

The PRC legal system is a civil law system based on written statutes. Unlike the common law system, prior court decisions under the civil law system may be cited for reference but have limited precedential value.

---

## RISK FACTORS

---

In late 1970s, the PRC Government began to promulgate a comprehensive system of laws and regulations governing economic matters in general. The overall effect of legislation since then has significantly enhanced the protections afforded to various forms of foreign investments in China. However, recently enacted laws and regulations may not sufficiently cover all aspects of economic activities in China. In particular, the interpretation and enforcement of these laws and regulations involve uncertainties.

In addition, administrative proceedings and judicial procedures in China may be protracted, which could result in higher costs and diversion of resources and management attention. Since PRC administrative and court authorities have discretion in interpreting and implementing statutory provisions and contractual terms, it may be difficult to evaluate the outcome of administrative and court proceedings. These uncertainties may affect our judgment on the relevance of legal requirements and our ability to enforce our contractual rights or tort claims.

### **RISKS RELATING TO THE GLOBAL OFFERING**

#### **Our A Shares were listed in China in 2004, and the characteristics of the A Share and H share market may differ.**

Our A Shares were listed and traded on the Shanghai Stock Exchange in 2004. Following the Global Offering, our A Shares will continue to be traded on the SSE, and our H Shares will be traded on the Hong Kong Stock Exchange. Without regulatory approval, our A Shares and H Shares are neither convertible into nor fungible with each other. The A share and H share markets have different characteristics, including different trading volumes and liquidity and different investor bases. As a result of these differences, the trading price of our A Shares and H Shares may not be the same. Fluctuations in the price of our A Shares may adversely affect the price of our H Shares, and vice versa. Due to the different characteristics of the A share and the H share markets, the historical prices of our A shares may not be indicative of the performance of our H Shares. You should not rely on the prior trading history of our A Shares when evaluating an investment in our H Shares. Past performance is no guarantee of future results.

#### **There has been no prior public market for our H Shares, and an active trading market for our H Shares may not develop or be sustained.**

Prior to the Global Offering, there was no public market for our H Shares. There can be no assurance that the Global Offering will result in the development of an active, liquid public trading market for our H Shares. The initial Offer Price for our H Shares to the public will be the result of negotiations between us and the Sole Global Coordinator (for itself and on behalf of the Underwriters), and the Offer Price may differ significantly from the market price of the H Shares following completion of the Global Offering.

---

## RISK FACTORS

---

We have applied to the Hong Kong Stock Exchange for the listing of, and permission to deal in, the H Shares (including any H Shares which may be issued pursuant to the exercise of the Over-allotment Option). However, there can be no guarantee that (i) an active and liquid trading market for the H Shares will develop; (ii) or, if it does develop, that it will be sustained following the Global Offering; or (iii) that the market price of the H Shares will not decline below the Offer Price. If an active public market for our H Shares does not develop following the completion of the Global Offering, the market price and liquidity of our H Shares could be materially and adversely affected. You may not be able to resell your Shares at a price that is attractive to you, or at all.

**The trading price of our H Shares may be volatile, which could result in substantial losses to you.**

The trading price and volume of our H Shares may be volatile. The market price of our Shares may fluctuate significant and rapidly in response to factors beyond our control, including, but not limited to:

- actual or anticipated variations of our results of operations;
- loss of key suppliers and/or contractors;
- changes in securities analysts' estimates or market perception of our financial performance;
- announcement by us of significant acquisitions, depositions, strategic alliances or joint ventures;
- addition or departure of key senior management or other key personnel;
- fluctuations in the stock market price and volume;
- regulatory or legal developments, including involvement in litigations;
- fluctuations in trading volumes or the release of lock-up or other transfer restrictions on our outstanding Shares or sales of additional Shares by us; and
- general market conditions of the securities markets in Hong Kong, China, the United States and elsewhere in the world.

Furthermore, the performance and fluctuation of the market prices of other companies with business operations located mainly in mainland China that have listed their securities in Hong Kong may affect the volatility in the price of and trading volumes for our H Shares. A number of mainland China-based companies have listed their securities, and some are in the process of preparing for listing their securities, in Hong Kong. Some of these companies have experienced significant volatility, including significant price declines after their initial public

---

## RISK FACTORS

---

offerings. The trading performances of the securities of these companies at the time of or after their offerings may affect the overall investor sentiment towards mainland China-based companies listed in Hong Kong and, consequently, may materially and adversely impact the trading performance of our H Shares.

**You should not place any reliance on any information released by us in connection with the listing of our A Shares on the Shanghai Stock Exchange.**

Since the listing of our A Shares on the SSE, we have been subject to periodic reporting and other information disclosure requirements in the PRC. As a result, from time to time we publicly release information relating to us on the SSE or other media outlets designated by the SSE. However, the information we announce in connection with our A Shares listing is based on regulatory requirements and market practices in the PRC, which differ from those applicable to the Global Offering. Such information does not and will not form a part of this Prospectus. As a result, prospective investors in our H Shares are reminded that in making their investment decisions as to whether to purchase our H Shares, they should rely only on the financial, operating and other information included in this Prospectus. Past performance is no guarantee of future results. By applying to purchase H Shares in the Global Offering you will be deemed to have agreed that you will not rely on any information other than that contained in this Prospectus, and any formal announcements made by us in Hong Kong related to the Global Offering.

**Future sales or perceived sales of substantial amounts of our H Shares in the public market could have a material adverse effect on the price of our H Shares and our ability to raise additional capital in the future.**

The market price of our H Shares could decline as a result of future sales of a substantial number of our H Shares or other securities relating to our H Shares in the public market, or the issuance of new shares or other securities, or the perception that such sales or issuances may occur. Future sales, or anticipated sales, of substantial amounts of our securities, including any future offerings, could also materially and adversely affect our ability to raise capital at a specific time and on terms favorable to us. In addition, our Shareholders may experience dilution in their holdings if we issue more securities in the future. New shares or shares-linked securities issued by us may also confer rights and privileges that take priority over those conferred by the H Shares.

**You will incur immediate and substantial dilution if the Offer Price of the Offer Shares is higher than the net tangible asset value per H Share and may experience further dilution if we issue additional Shares in the future.**

The Offer Price of the Offer Shares is higher than the net tangible asset value per H Share immediately prior to the Global Offering. Therefore, purchasers of the Offer Shares in the Global Offering will experience an immediate dilution in pro forma consolidated net tangible asset value. To expand our business, we may consider offering and issuing additional Shares in the future. If additional funds are raised through the issuance of new equity or equity-linked

---

## RISK FACTORS

---

securities of our Company, other than on a pro rata basis to existing Shareholders, then: (i) the percentage ownership of the existing Shareholders may be reduced, and they may experience subsequent dilution and reduction in their earnings per share; (ii) such newly issued securities may have rights, preferences or privileges superior to those of the Shares of the existing Shareholders; and/or (iii) subscribers and purchasers of our Shares may experience dilution in the net tangible assets value per Share if we issue additional Shares in the future at a price which is lower than our net tangible assets value per Share.

**We have significant discretion as to how we will use the net proceeds of the Global Offering, and you may not necessarily agree with how we use them.**

Our management may spend the net proceeds from the Global Offering in ways you may not agree with or that do not yield a favorable return. See “Future Plans and Use of Proceeds” for details of our intended use of proceeds. However, our management will have discretion as to the actual application of our net proceeds. We may not be able to use the funds in strict accordance with each planned use of proceeds, and there is a possibility that we may deviate from the planned implementation timeframe or fail to allocate the proceeds according to our original plan. This potential divergence could be driven by a range of factors, including but not limited to, fluctuations in market conditions, alterations in the regulatory landscape, challenges in executing our business strategies, and unforeseen external occurrences. Additionally, our use of proceeds may not achieve the expected operational and financial impact on our Group. You are entrusting your funds to our management, upon whose judgment you must depend, for the specific use we will make of the net proceeds from this Global Offering.

**A future significant increase or perceived significant increase in the supply of our H Shares in public markets could cause the market price of our H Shares to decrease significantly, and/or dilute shareholdings of holders of H Shares.**

The market price of our H Shares could decline as a result of future sales of a substantial number of our H Shares or other securities relating to our H Shares in the public market, or the issuance of new shares or other securities, or the perception that such sales or issuances may occur. Future sales, or anticipated sales, of substantial amounts of our securities, including any future offerings, could also materially and adversely affect our ability to raise capital at a specific time and on terms favorable to us. In addition, our Shareholders may experience dilution in their holdings if we issue more securities in the future. New shares or shares-linked securities issued by us may also confer rights and privileges that take priority over those conferred by the H Shares.

---

## RISK FACTORS

---

**The interests of our Single Largest Shareholder Group may not necessarily be aligned with the interests of our other Shareholders.**

The interests of our Single Largest Shareholder Group may differ from the interests of our other Shareholders. They could through their shareholding interest in our Company exert influence in determining the outcome of any corporate transaction or other matter submitted to our Shareholders for approval, including mergers, consolidations, the sale of all or substantially all of our assets, election of Directors, and other significant corporate actions. This as a result, may discourage, delay or prevent a change in control of our Company, which could deprive our Shareholders of an opportunity to receive a premium for their H Shares in a sale of our Company or may reduce the market price of our H Shares. In addition, to the extent the interests of our Single Largest Shareholder Group conflict with the interests of other Shareholders, the interests of other Shareholders may be disadvantaged or harmed.

**Our historical dividends may not be indicative of our future dividend policy, and we may not be able to pay any dividends on our H Shares.**

We declared dividends to our Shareholders of nil, nil, RMB82.4 million and nil respectively, for the three years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2024, in light of our cumulative business growth. All of such dividends declared during the Track Record Period had been fully settled by bank transfer to our Shareholders as of the Latest Practicable Date. See also Note 16 to the Accountants' Report in Appendix IA to this Prospectus. However, our historical dividends may not be indicative of our future dividend policy. There can be no guarantee: (i) when, if at all, will be paid on our H Shares following the Global Offering; or (ii) if dividends are paid, what form they will take. The declaration of dividends is proposed by the Board and is based on, and limited by, various factors, including without limitation, macroeconomic factors, our business and financial performance, capital and regulatory requirements, and general business conditions. We may not have sufficient or any profits to enable us to make dividend distributions to our Shareholders in the future, even if our financial statements indicate that our operations have been profitable. See the section headed "Financial Information — Dividend" in this Prospectus for more details. Past performance is no guarantee of future results.

**If securities or industry analysts do not publish research reports about our business, or if they adversely change their recommendations regarding our H Shares, the market price and trading volume of our H Shares may decline.**

The trading market of our H Shares may be influenced by research reports that industry or securities analysts publish about us or our business. If one or more analysts who cover us downgrade our H Shares or publish negative opinions about us, the market price of our H Shares would likely decline regardless of the accuracy of the information. If one or more of these analysts cease coverage of us or fail to regularly publish reports on us, we could lose visibility in the financial markets, which, in turn, could cause the market price and/or trading volume of our H Shares to decline.

---

## RISK FACTORS

---

### **RISKS RELATING TO THE STATEMENTS MADE IN THIS PROSPECTUS**

**Forward-looking statements contained in this document are subject to risks and uncertainties.**

This document contains certain statements and information that are forward-looking and uses forward-looking terminology such as “aim”, “anticipate”, “believe”, “can”, “could”, “continue”, “estimate”, “going forward”, “intend”, “plan”, “project”, “potential”, “predict”, “seek”, “expect”, “may”, “might”, “ought to”, “should”, “would” or “will” and similar expressions. These statements are, by their nature, subject to significant risks and uncertainties. Prospective investors are cautioned that reliance on any forward-looking statement involves risk and uncertainties and that, even if the Directors believe the assumptions related to those forward-looking statements are reasonable, any or all of those assumptions could prove to be inaccurate and as a result, the forward-looking statements based on those assumptions could also be incorrect.

The risks and uncertainties in this regard consist of those identified in the risk factors discussed above. In light of these and other risks and uncertainties, the disclosure of forward-looking statements in this document should not be regarded as representations by our Company that the plans and objectives will be achieved, and investors should not place undue reliance on such statements. Past performance is no guarantee of future results. Our Company does not undertake any obligation to update publicly or release any revisions of any forward-looking statements, whether as a result of new information, future events, or otherwise. For details of these forward-looking statements including the associated risks, see “Forward-looking Statements.”

**The industry data and forecasts in this Prospectus obtained from various official government publications have not been independently verified.**

This Prospectus includes industry data and forecasts that we obtained from various government publications. However, there can be no assurance of the accuracy or completeness of information obtained from these sources. We have not independently verified any of the data, forecasts and other statistics from such sources, nor have we ascertained that the underlying economic assumptions relied upon in those sources. Also, the Sole Sponsor, the Sponsor Overall Coordinators, the Overall Coordinators, the Underwriters, any of their respective directors, officers, affiliates, advisors and representatives, or any other parties involved in the Global Offering make no representation as to the accuracy or completeness of aforementioned facts, forecasts and other statistics in this Prospectus. Moreover, such facts, forecasts and other statistics may not be prepared on the same basis or with the same degree of accuracy (as the case may be) in other publications or jurisdictions. For these reasons, the information from various government publications contained in this Prospectus may not be accurate and should not be given undue reliance as a basis for making your investment in our H Shares.

---

## RISK FACTORS

---

**You should read the entire Prospectus carefully, and we strongly caution you not to place any reliance on any information contained in press articles and other media regarding us and the Global Offering.**

We strongly caution you not to rely on any information contained in press articles or other media regarding us and the Global Offering. Prior to the publication of this Prospectus, there has been press and media coverage regarding us, our business, our industry, and the Global Offering. There may be additional media coverage regarding us, our business, our industry, and the Global Offering after the date of this Prospectus but prior to the completion of the Global Offering. Such press and media coverage may include references to certain information that does not appear in this Prospectus, including certain operating and financial information and projections, valuations and other information. Neither our Company nor any other person involved in the Global Offering has authorized the disclosure of any such information in the press or media, and none of us accepts any responsibility for any such press or media coverage or the accuracy or completeness of any such information or publication. We make no representation as to, and do not accept any responsibility for, the appropriateness, accuracy, completeness or reliability of any such information or publication. To the extent that any such information is inconsistent or conflicts with the information contained in this Prospectus, we disclaim responsibility for it, and you should not rely on such information.

In preparation for the Listing, our Company has sought the following waivers from strict compliance with the relevant provisions of the Hong Kong Listing Rules.

#### **MANAGEMENT PRESENCE IN HONG KONG**

According to Rule 8.12 of the Hong Kong Listing Rules, a new applicant for a primary listing on the Hong Kong Stock Exchange must have a sufficient management presence in Hong Kong. This normally means that at least two of our executive Directors must be ordinarily resident in Hong Kong. Rule 19A.15 of the Hong Kong Listing Rules further provides that the requirement in Rule 8.12 of the Hong Kong Listing Rules may be waived by having regard to, among other considerations, our arrangements for maintaining regular communication with the Hong Kong Stock Exchange.

We do not have a sufficient management presence in Hong Kong for the purpose of satisfying the requirement under Rules 8.12 and 19A.15 of the Hong Kong Listing Rules. Our management headquarters, senior management, business operations and assets are primarily based outside Hong Kong. Our Directors consider that either by means of relocation of our existing executive Directors or appointment of additional executive Directors who will be ordinarily resident in Hong Kong would not be beneficial to, or appropriate for, our Group and therefore would not be in the best interests of our Company or our Shareholders as a whole. As such, we have applied to the Hong Kong Stock Exchange for, and the Hong Kong Stock Exchange has granted us a waiver from strict compliance with Rules 8.12 and 19A.15 of the Hong Kong Listing Rules. We will ensure that there is a regular and effective communication between us and the Hong Kong Stock Exchange by way of, among others, the following arrangements, which are in line with the guidance in Chapter 3.10 of the Guide:

- (i) pursuant to Rule 3.05 of the Hong Kong Listing Rules, we have appointed and will continue to maintain two authorized representatives, who will act as our principal channel of communication with the Hong Kong Stock Exchange and ensure that our Company complies with the Hong Kong Listing Rules at all times. The two authorized representatives appointed are Ms. Yang Yi-fang (楊宜方) (“**Ms. Yang**”), our executive Director and Chief Executive Officer, and Mr. Wong Hok Bun Mario (黃學斌) (“**Mr. Wong**”), our Vice President, Chief Financial Officer and company secretary. Ms. Yang and Mr. Wong are situated and based in Hong Kong, and will be available to meet with the Hong Kong Stock Exchange in Hong Kong within a reasonable time frame upon the request of the Hong Kong Stock Exchange. Both of our authorized representatives will be readily contactable by telephone and email to deal promptly with enquiries from the Hong Kong Stock Exchange. Our Company has provided contact details of the two authorized representatives to the Hong Kong Stock Exchange and will inform the Hong Kong Stock Exchange promptly in respect of any change in the authorized representatives;

---

WAIVERS FROM STRICT COMPLIANCE WITH THE HONG KONG LISTING RULES AND EXEMPTION FROM STRICT COMPLIANCE WITH THE COMPANIES (WINDING UP AND MISCELLANEOUS PROVISIONS) ORDINANCE

---

- (ii) both authorized representatives have means to contact all Directors (including the independent non-executive Directors) promptly at all times as and when the Hong Kong Stock Exchange wishes to contact our Directors for any matters. Our Company has implemented a policy whereby: (a) each Director has provided their respective valid phone numbers or other means of communication to the authorized representatives; (b) in the event that a Director expects to travel or is otherwise out of office, he/she will endeavour to provide his/her phone number of the place of his/her accommodation to the authorized representatives or maintain an open line of communication via his/her mobile phone; and (c) each Director has provided his or her mobile phone number, office phone number, e-mail address and, where available, fax number to the Hong Kong Stock Exchange and will inform the Hong Kong Stock Exchange promptly if there are any changes to the contact details of the Directors;
- (iii) pursuant to Rule 3.20 of the Hong Kong Listing Rules, each Director has provided his or her contact information to the Hong Kong Stock Exchange and to the authorized representatives. This will ensure that the Hong Kong Stock Exchange and the authorized representatives should have means for contacting all Directors promptly at all times as and when required;
- (iv) all our Directors who are not ordinarily resident in Hong Kong have confirmed that they possess or can apply for valid travel documents to visit Hong Kong and will be able to meet with relevant members of the Hong Kong Stock Exchange in Hong Kong upon reasonable notice, when required;
- (v) pursuant to Rule 3A.19 of the Hong Kong Listing Rules, we have retained the services of Goldlink Capital (Corporate Finance) Limited as our compliance advisor (the “**Compliance Advisor**”) upon Listing for a period commencing on the Listing Date and ending on the date on which we comply with Rule 13.46 of the Hong Kong Listing Rules in respect of our financial results for the first full financial year commencing after the Listing Date, which will act as an additional channel of communication with the Hong Kong Stock Exchange and will be available to respond to enquiries from the Hong Kong Stock Exchange; our Company has provided the Hong Kong Stock Exchange with the names, mobile phone numbers, office phone numbers, fax numbers and email addresses of the Compliance Advisor’s officers who will act as the Compliance Advisor’s contact persons between the Hong Kong Stock Exchange and our Company;

---

**WAIVERS FROM STRICT COMPLIANCE WITH THE HONG KONG LISTING RULES AND EXEMPTION FROM STRICT COMPLIANCE WITH THE COMPANIES (WINDING UP AND MISCELLANEOUS PROVISIONS) ORDINANCE**

---

- (vi) our authorized representatives, Directors and other officers of our Company will provide promptly such information and assistance as the Compliance Advisor may reasonably require in connection with the performance of the Compliance Advisor's duties as set forth in Chapter 3A of the Hong Kong Listing Rules. There will be adequate and efficient means of communication between our Company, authorized representatives, Directors and other officers of our Company and the Compliance Advisor, and to the extent reasonably practicable and legally permissible, we will keep the Compliance Advisor informed of all communications and dealings between the Hong Kong Stock Exchange and us; meetings between the Hong Kong Stock Exchange and our Directors could be arranged through our authorized representatives or the Compliance Advisor, or directly with our Directors within a reasonable time frame. We will inform the Hong Kong Stock Exchange as soon as practicable in respect of any change of authorized representatives and/or the Compliance Advisor;
- (vii) we will appoint other professional advisors (including legal advisor in Hong Kong) after the Listing to assist us in dealing with any questions which may be raised by the Hong Kong Stock Exchange and to ensure that there will be prompt and effective communication with the Hong Kong Stock Exchange; and
- (viii) our Company has designated one of our staff members as the communication officer at our headquarters after the Listing who will be responsible for maintaining day-to-day communication with Ms. Yang and Mr. Wong and our Company's professional advisors in Hong Kong, including our legal advisor in Hong Kong and the Compliance Advisor, to keep abreast of any correspondences and/or enquiries from the Hong Kong Stock Exchange and report to our executive Directors to further facilitate communication between the Hong Kong Stock Exchange and our Company.

**ALLOCATION OF OUR H SHARES TO EXISTING MINORITY SHAREHOLDERS AND THEIR CLOSE ASSOCIATES UNDER RULE 10.04 AND PARAGRAPH 5(2) OF APPENDIX F1 TO THE HONG KONG LISTING RULES**

Rule 10.04 of the Hong Kong Listing Rules requires that a person who is an existing shareholder of the issuer may only subscribe for or purchase any securities for which listing is sought which are being marketed by or on behalf of the issuer either in his or its own name or through nominees if the conditions in Rules 10.03(1) and (2) of the Hong Kong Listing Rules are fulfilled. It is provided in Rule 10.03(1) of the Hong Kong Listing Rules that no securities may be offered to existing shareholders on a preferential basis and no preferential treatment may be given to them in the allocation of the securities and in Rule 10.03(2) that the minimum prescribed percentage of public shareholders required by Rule 8.08(1) must be achieved. Paragraph 5(2) of Appendix F1 to the Hong Kong Listing Rules provides, among other things, that, without the prior written consent of the Hong Kong Stock Exchange, no allocations will be permitted to existing shareholders or their close associates, whether in their

---

WAIVERS FROM STRICT COMPLIANCE WITH THE HONG KONG LISTING RULES AND EXEMPTION FROM STRICT COMPLIANCE WITH THE COMPANIES (WINDING UP AND MISCELLANEOUS PROVISIONS) ORDINANCE

---

own names or through nominees, in the Global Offering unless the conditions set out in Rules 10.03 and 10.04 of the Hong Kong Listing Rules are fulfilled. Chapter 4.15 (Placing-related Matters) of the Guide provides guidance as to the conditions subject to which the Hong Kong Stock Exchange will consider giving consent and granting waiver from strict compliance with the requirements under Rule 10.04 of the Hong Kong Listing Rules to an applicant's existing shareholders or their close associates to participate in a global offering if any actual or perceived preferential treatment arising from their ability to influence the applicant during the allocation process can be addressed.

Our Company is a listed company, and its A shares have been listed on the Shanghai Stock Exchange since April 14, 2004 (stock code: 600988). We have a large and widely dispersed public A Shares shareholder base.

We have applied to the Hong Kong Stock Exchange for, and the Hong Kong Stock Exchange has granted to us, a waiver from strict compliance with the requirements under Rule 10.04 and consent pursuant to Paragraph 5(2) of Appendix F1 to the Hong Kong Listing Rules and Chapter 4.15 of the Guide to permit H Shares in the International Offering to be placed to certain existing minority Shareholders who (i) hold less than 5% of the total number of A Shares of our Company in issue prior to the completion of the Global Offering and (ii) are not and will not become (upon the completion of the Global Offering) core connected persons of our Company or the close associates of any such core connected persons (collectively, the “**Existing Minority A Shareholders**”), subject to the following conditions:

- (a) each of the Existing Minority A Shareholders to whom our Company may allocate H Shares in the International Offering is interested in less than 5% of the total number of A Shares of our Company in issue prior to the completion of the Global Offering;
- (b) each of the Existing Minority A Shareholders is not, and will not be, a core connected person of our Company or any close associate of any such core connected person immediately prior to or following the Global Offering;
- (c) none of the Existing Minority A Shareholders has the right to appoint any Director and/or has any other special rights in our Company;
- (d) allocation to such Existing Minority A Shareholders will not affect our ability to satisfy the public float requirement as prescribed by the Hong Kong Stock Exchange under the waiver from strict compliance with the requirements of Rule 8.08 of the Hong Kong Listing Rules;

---

**WAIVERS FROM STRICT COMPLIANCE WITH THE HONG KONG LISTING RULES AND EXEMPTION FROM STRICT COMPLIANCE WITH THE COMPANIES (WINDING UP AND MISCELLANEOUS PROVISIONS) ORDINANCE**

---

- (e) we will confirm to the Hong Kong Stock Exchange in writing that in the case of participation as placees, no preferential treatment has been, nor will be, given to the Existing Minority A Shareholders, nor is the Existing Minority A Shareholders in a position to exert influence on our Company to obtain actual or perceived preferential treatment, by virtue of their relationship with our Company in any allocation in the placing tranche.
- (f) in the case of participation as placees, the Overall Coordinators will confirm to the Hong Kong Stock Exchange that, to the best of their knowledge and belief, no preferential treatment has been, nor will be, given to the Existing Minority A Shareholders by virtue of their relationship with our Company in any allocation in the placing tranche; and
- (g) the Sole Sponsor will confirm to the Hong Kong Stock Exchange that based on (i) its discussions with our Company and the Overall Coordinators; and (ii) the confirmations provided to the Hong Kong Stock Exchange by our Company and the Overall Coordinators (confirmations (e) and (f) above), and to the best of their knowledge and belief, they have no reason to believe that any of the Existing Minority A Shareholders received any preferential treatment, or is in a position to exert influence on our Company to obtain actual or perceived preferential treatment in the allocation as placees by virtue of their relationship with our Company other than the preferential treatment of assured entitlement following the principles set out in Chapter 4.15 of the Guide, and details of the allocation to the Existing Minority A Shareholders holding more than 1% of the issued share capital of our Company immediately prior to the completion of the Global Offering will be disclosed in this prospectus and/or the allotment results announcement, as the case may be.

**THE POST-TRACK RECORD PERIOD ACQUISITION**

Rules 4.04(2) and 4.04(4) of the Hong Kong Listing Rules require that the new applicant include in its accountants' report the results and balance sheet of any business or subsidiary acquired, agreed or proposed to be acquired, since the date to which its latest audited accounts have been made up, in respect of each of the three financial years immediately preceding the issue of the listing document.

Pursuant to note (4) of Rule 4.04(4) of the Hong Kong Listing Rules, the Hong Kong Stock Exchange may consider an application for a waiver from strict compliance with Rules 4.04(2) and 4.04(4) of the Hong Kong Listing Rules taking into account the following factors:

- (a) that all the percentage ratios (as defined under Rule 14.07 of the Hong Kong Listing Rules) are less than 5% by reference to the most recent audited financial year of the new applicant's trading record period;

---

WAIVERS FROM STRICT COMPLIANCE WITH THE HONG KONG LISTING RULES AND EXEMPTION FROM STRICT COMPLIANCE WITH THE COMPANIES (WINDING UP AND MISCELLANEOUS PROVISIONS) ORDINANCE

---

- (b) if the acquisition will be financed by the proceeds raised from a public offer, the new applicant has obtained a certificate of exemption from the SFC in respect of the relevant requirements under paragraphs 32 and 33 of the Third Schedule to the Companies (Winding Up and Miscellaneous Provisions) Ordinance; and
- (c) (i) where a new applicant's principal activities involve the acquisition of equity securities (the Hong Kong Stock Exchange may require further information where securities acquired are unlisted), the new applicant is not able to exercise any control, and does not have any significant influence over the underlying company or business to which Rules 4.04(2) and 4.04(4) of the Hong Kong Listing Rules relate, and has disclosed in its listing document the reasons for the acquisition and a confirmation that the counterparties and their respective ultimate beneficial owners are independent of the new applicant and its connected persons. In this regard, "control" means the ability to exercise or control the exercise of 30% (or any amount specified in the Hong Kong Code on Takeovers and Mergers as the level for triggering a mandatory general offer) or more of the voting power at general meeting, or being in a position to control the composition of a majority of the board of directors of the underlying company or business; or (ii) with respect to an acquisition of a business (including acquisition of an associated company and any equity interest in a company other than in the circumstances covered under sub-paragraph (a) above) or a subsidiary by a new applicant, the historical financial information of such business or subsidiary is unavailable, and it would be unduly burdensome for the new applicant to obtain or prepare such financial information; and the new applicant has disclosed in its listing document information required for the announcement for a discloseable transaction under Rules 14.58 and 14.60 of the Hong Kong Listing Rules on each acquisition. In this regard, "unduly burdensome" will be assessed based on each new applicant's specific facts and circumstances (e.g. why the financial information of the acquisition target is not available and whether the new applicant or its controlling shareholder has sufficient control or influence over the seller to gain access to the acquisition target's books and records for the purpose of complying with the disclosure requirements under Rules 4.04(2) and 4.04(4) of the Hong Kong Listing Rules).

On March 4, 2024, our subsidiaries, Chixia Laos and Chijin Xiawu entered into an equity transfer agreement with China Investment (Property) Limited (中國投資(置業)有限公司) ("**China Investment**") and China Investment Mining (Laos) Sole Co., Ltd (the "**Target Company**"), pursuant to which Chixia Laos shall acquire from China Investment 90% of the equity interest in the Target Company, which was wholly owned by China Investment, at a consideration of US\$18,963,000.

---

**WAIVERS FROM STRICT COMPLIANCE WITH THE HONG KONG LISTING RULES AND EXEMPTION FROM STRICT COMPLIANCE WITH THE COMPANIES (WINDING UP AND MISCELLANEOUS PROVISIONS) ORDINANCE**

---

The Target Company operates the Mengkham Rare Earth Element Project and has two subsidiaries which held a rare earth mineral processing permit (experimental), a mineral extraction permit (experimental) and a rare earth exploration permit. The project is still at the construction stage covering the mining area of 50 km<sup>2</sup>, whereby the genetic type of the mineral deposit belongs to the weathering crust ion-adsorbed rare earth deposit. To the best of our knowledge, we confirmed that, as of the Latest Practicable Date, (a) there were no outstanding permit or license which were pending approval from the Laos regulatory authorities in connection with this project; and (b) based on the disclosure from the Target Company to us and the due diligence conducted by us during the acquisition process, the Target Company held necessary licenses and/or permits to conduct rare earth exploration and operation in all material aspects.

Based on the accounts provided by the Target Company, the consolidated total assets of the Target Company amounted to approximately KIP228,001,488,000 as of December 31, 2023. Its consolidated net loss before (and after) tax for the years ended December 31, 2022 and 2023 was approximately KIP86,757,701,000 and KIP94,724,614,000, respectively.

As of the Latest Practicable Date, our Company had obtained the approval from the Xiamen Development and Reform Commission, and the parties to the transactions were proceeding with the fulfillment of the other conditions of the transaction including changes of the authorized representative of the Target Group. Accordingly, the above proposed acquisition was yet to be completed. For details, see the section headed “History, Development and Corporate Structure — The Post-Track Record Period Acquisition” in this Prospectus. To the best estimate of the Directors, the proposed acquisition is expected to be completed by the first half of 2025.

The proposed acquisition is in the ordinary and usual course of business of our Company. Our Directors are of the view that: (i) the acquisition represents an opportunity for our Group to tap into the potential for quality rare earth resources with a relatively higher economic value to be realised through the medium-heavy rare earth ore held by the project; and (ii) the terms of the proposed acquisition are on normal commercial terms, and are fair and reasonable and in the interests of our Company and our Shareholders as a whole. The consideration for the proposed acquisition is to be satisfied by the internal resources of our Group and will not use any proceeds from the Global Offering.

---

WAIVERS FROM STRICT COMPLIANCE WITH THE HONG KONG LISTING RULES AND EXEMPTION FROM STRICT COMPLIANCE WITH THE COMPANIES (WINDING UP AND MISCELLANEOUS PROVISIONS) ORDINANCE

---

Our Company has applied to the Hong Kong Stock Exchange for, and the Hong Kong Stock Exchange has granted, a waiver from strict compliance with Rules 4.04(2) and 4.04(4) of the Hong Kong Listing Rules in respect of the above proposed acquisition on the following grounds:

**(i) Immateriality of the acquisition**

The scale of the business operated by the Target Company and its subsidiaries (collectively the “**Target Group**”) as compared to that of our Group is not material. The applicable percentage ratios calculated in accordance with Rule 14.07 of the Hong Kong Listing Rules for the Acquisition are all less than 5% by reference to the most recent financial year or period in the Track Record Period.

In addition, notwithstanding that the proposed acquisition represents a suitable strategic acquisition target of our Group, it will not result in any significant change to our financial position since September 30, 2024, and all information that is reasonably necessary for the potential investors to make an informed assessment of the activities or our financial position has been included in this Prospectus. As such, a waiver from compliance with Rules 4.04(2) and 4.04(4) of the Hong Kong Listing Rules would not prejudice the interests of the investing public.

**(ii) Impracticality and undue burden**

As of the Latest Practicable Date, the proposed acquisition was yet to have been completed. Prior to the completion of the proposed acquisition, given that (i) China Investment and its ultimate beneficial owners are Independent Third Parties; and (ii) our Company has no representation or control over the board of directors of the Target Company, our Group is not in a position to be able to compel the disclosure of financial information to our Group and/or our Reporting Accountants for inclusion in this Prospectus to the standards required under Rules 4.04(2) and 4.04(4) of the Hong Kong Listing Rules. Further, as our Group is not involved in the day-to-day management of the Target Group, and particularly when there is no statutory audit requirement under the laws of Laos, our Company and our Reporting Accountants will unlikely gain full access to the financial information of the Target Group in a readily available manner. In addition, given that there is no local statutory audit requirement, the accounts of the Target Group were prepared for internal management purposes and not for audit purposes. It would require considerable time and resources to become fully familiarized with the accounting system and accounting policies and to gather, compile and audit the necessary financial information and supporting documents for disclosure in this Prospectus. As a result, preparing the financial information of the Target Group in accordance with the IFRS and within a short period of time in order for such audited financial information to be included in the Accountants’ Report in this Prospectus would

present an onerous challenge. Therefore, it would be impracticable and burdensome for our Company to prepare and include the full historical financial information of the Target Group in this Prospectus.

**(iii) Alternative disclosure**

With a view of allowing our potential investors to understand in greater details, we have provided information in this Prospectus the following information regarding the proposed acquisition, which is comparable to the information required for a discloseable transaction under Chapter 14 of the Hong Kong Listing Rules, including, among others: (a) a general description of the principal business activities of the Target Group and the consolidated financial information of the Target Company that are available to us; (b) confirmation that China Investment and its ultimate beneficial owners are Independent Third Parties; (c) the consideration of the proposed acquisition; (d) the basis on which the consideration is determined; (e) how the consideration is expected to be satisfied; and (f) the reasons for and benefits of the proposed acquisition.

**WAIVER FROM STRICT COMPLIANCE WITH RULE 4.04(1) OF THE HONG KONG LISTING RULES AND EXEMPTION FROM STRICT COMPLIANCE WITH PARAGRAPH 27 OF PART I AND PARAGRAPH 31 OF PART II OF THE THIRD SCHEDULE TO THE COMPANIES (WINDING UP AND MISCELLANEOUS PROVISIONS) ORDINANCE**

Rule 4.04(1) of the Hong Kong Listing Rules requires our Company to include in the prospectus an accountant's report covering the consolidated results of our Group in respect of each of the three financial years immediately preceding the issue of the prospectus or such shorter period as may be acceptable to the Hong Kong Stock Exchange.

Pursuant to section 342(1) of the Companies (Winding Up and Miscellaneous Provisions) Ordinance, a prospectus shall include the matters specified in Part I of the Third Schedule to the Companies (Winding Up and Miscellaneous Provisions) Ordinance and set out the reports specified in Part II of the Third Schedule to the Companies (Winding Up and Miscellaneous Provisions) Ordinance.

Paragraph 27 of Part I of the Third Schedule to the Companies (Winding Up and Miscellaneous Provisions) Ordinance requires our Company to include in the prospectus a statement as to the gross trading income or sales turnover (as may be appropriate) of our Group during each of the three financial years immediately preceding the issue of the prospectus as well as an explanation of the method used for the computation of such income or turnover and a reasonable breakdown of the more important trading activities.

---

**WAIVERS FROM STRICT COMPLIANCE WITH THE HONG KONG LISTING RULES AND EXEMPTION FROM STRICT COMPLIANCE WITH THE COMPANIES (WINDING UP AND MISCELLANEOUS PROVISIONS) ORDINANCE**

---

Paragraph 31 of Part II of the Third Schedule to the Companies (Winding Up and Miscellaneous Provisions) Ordinance requires us to include in the prospectus a report by auditors of our Company with respect to the financial results of our Group for each of the three financial years immediately preceding the issue of the prospectus.

Pursuant to section 342A(1) of the Companies (Winding Up and Miscellaneous Provisions) Ordinance, the SFC may issue, subject to such conditions (if any) as the SFC thinks fit, a certificate of exemption from compliance with the relevant requirements under the Companies (Winding Up and Miscellaneous Provisions) Ordinance if, having regard to the circumstances, the SFC considers that the exemption will not prejudice the interests of the investing public and compliance with any or all of such requirements would be irrelevant or unduly burdensome, or is otherwise unnecessary or inappropriate.

Appendix IIA to Chapter 1.1A of the Guide has provided the conditions for granting a waiver from strict compliance with Rule 4.04(1) of the Hong Kong Listing Rules as follows:

- (i) the applicant must list on the Hong Kong Stock Exchange within three months after the latest financial year end;
- (ii) the applicant must obtain a certificate of exemption from the SFC on compliance with section 342(1) of and paragraphs 27 and 31 of the Third Schedule to the Companies (Winding Up and Miscellaneous Provisions) Ordinance requirements;
- (iii) a profit estimate for the latest financial year (which must comply with Rules 11.17 to 11.19 of the Hong Kong Listing Rules) must be included in the prospectus or the applicant must provide justification why a profit estimate cannot be included in the prospectus; and
- (iv) there must be a directors' statement in the prospectus that there is no material adverse change to its financial and trading position or prospects with specific reference to the trading results from the end of the stub period to the latest financial year end.

The Accountant's Report for each of the three years ended December 31, 2023 and nine months ended September 30, 2024 has been prepared and set out in Appendix IA to this Prospectus.

---

**WAIVERS FROM STRICT COMPLIANCE WITH THE HONG KONG LISTING RULES AND EXEMPTION FROM STRICT COMPLIANCE WITH THE COMPANIES (WINDING UP AND MISCELLANEOUS PROVISIONS) ORDINANCE**

---

Pursuant to the relevant requirements set forth above, our Company is required to include three full years of audited accounts for the three years ended December 31, 2024. As such, an application has been made to the Hong Kong Stock Exchange for a waiver from strict compliance with Rule 4.04(1) of the Hong Kong Listing Rules, and such waiver has been granted by the Hong Kong Stock Exchange on the conditions that:

- (i) this Prospectus will be issued on or before February 28, 2025 and the H Shares will be listed on or before March 31, 2025, that is, three months after the latest financial year end;
- (ii) inclusion in this Prospectus a profit estimate for the year ended December 31, 2024 in compliance with Rules 11.17 to 11.19 of the Hong Kong Listing Rules and a Directors' statement that there is no material and adverse change to the financial and trading positions or prospects of our Company, with specific reference to the trading results from October 1, 2024 to December 31, 2024; and
- (iii) our Company obtains a certificate of exemption from the SFC on strict compliance with paragraph 27 of Part I and paragraph 31 of Part II of the Third Schedule to the Companies (Winding Up and Miscellaneous Provisions) Ordinance.

An application has also been made to the SFC for a certificate of exemption from strict compliance with the requirements under section 342(1) of the Companies (Winding Up and Miscellaneous Provisions) Ordinance in relation to paragraph 27 of Part I and paragraph 31 of Part II of the Third Schedule to the Companies (Winding Up and Miscellaneous Provisions) Ordinance and a certificate of exemption has been granted by the SFC under section 342A of the Companies (Winding Up and Miscellaneous Provisions) Ordinance on the conditions that:

- (i) the particulars of the exemption are disclosed in this Prospectus;
- (ii) this Prospectus will be issued on or before February 28, 2025; and
- (iii) our Company shall be listed on the Hong Kong Stock Exchange on or before March 31, 2025.

---

WAIVERS FROM STRICT COMPLIANCE WITH THE HONG KONG LISTING RULES AND EXEMPTION FROM STRICT COMPLIANCE WITH THE COMPANIES (WINDING UP AND MISCELLANEOUS PROVISIONS) ORDINANCE

---

The applications to the Stock Exchange for a waiver from strict compliance with Rule 4.04(1) of the Hong Kong Listing Rules and the SFC for a certificate of exemption from strict compliance with the requirements under section 342(1) of the Companies (Winding Up and Miscellaneous Provisions) Ordinance in relation to paragraph 27 of Part I and paragraph 31 of Part II of the Third Schedule to the Companies (Winding Up and Miscellaneous Provisions) Ordinance were made on the grounds, among others, that the waiver and exemption from the above requirements will not prejudice the interest of the investing public and strict compliance with the above requirements would be unduly burdensome given the following:

- (i) there will not be sufficient time for our Company and the Reporting Accountants to finalize the audited consolidated financial statements for the year ended December 31, 2024 for inclusion in this Prospectus. If the financial information for the year ended December 31, 2024 is required to be audited, our Company and the Reporting Accountants would have to carry out substantial volume of work to prepare, update and finalize the Accountants' Report and this Prospectus, and the relevant sections of this Prospectus will need to be updated to cover such additional period. This would involve additional time and costs since substantial work is required to be carried out for audit purposes. It would be unduly burdensome for the audited results for the year ended December 31, 2024 to be finalized in a short period of time. Our Directors consider that the benefits of such work to the existing and prospective shareholders of our Company may not justify the additional work and expenses involved and the delay of the Listing timetable;
- (ii) our Directors and the Sole Sponsor confirm that after performing all reasonable due diligence work which they consider appropriate, up to the date of this Prospectus, except to the extent disclosed in the section headed "Summary — Recent Development and No Material Adverse Change" in this Prospectus, there has been no material adverse change to the financial and trading positions or prospects of our Group since October 1, 2024 (immediately following the date of the latest audited statement of financial position in the Accountants' Report set out in Appendix IA to this Prospectus) up to the date of this Prospectus and there has been no event which would materially affect the information shown in the Accountants' Report as set out in Appendix IA to this Prospectus, the financial information section, the profit estimate as set out in Appendix IIB to this Prospectus and information regarding our Company's recent development subsequent to the Track Record Period and the date of this Prospectus, since October 1, 2024;
- (iii) our Company is of the view that the Accountants' Report covering the three years ended December 31, 2023 and the nine months ended September 30, 2024, together with the profit estimate for the year ended December 31, 2024 (in compliance with Rules 11.17 to 11.19 of the Hong Kong Listing Rules) included in this Prospectus have already provided the potential investors with adequate and reasonably up-to-date information in the circumstances to form a view on the track record and earnings trend of our Company; and our Directors and the Sole Sponsor confirm that

---

**WAIVERS FROM STRICT COMPLIANCE WITH THE HONG KONG LISTING RULES AND EXEMPTION FROM STRICT COMPLIANCE WITH THE COMPANIES (WINDING UP AND MISCELLANEOUS PROVISIONS) ORDINANCE**

---

all information which is necessary for the investing public to make an informed assessment of the activities, assets and liabilities, financial position, trading position, management and prospects included in this Prospectus. Therefore, the waiver and exemption would not prejudice the interests of the investing public; and

- (iv) our Company will comply with the requirements under Rules 13.46(2) and 13.49(1) of the Hong Kong Listing Rules in respect of the publication of our annual results and annual report. Our Company currently expects to issue our annual results and annual report for the financial year ended December 31, 2024 on or before March 31, 2025 and April 30, 2025, respectively. In this regard, our Directors consider that the Shareholders, the investing public as well as potential investors of our Company will be kept informed of the financial results of our Group for the year ended December 31, 2024.

**WAIVER IN RESPECT OF PUBLIC FLOAT REQUIREMENTS**

Rule 8.08(1)(a) and (b) (as amended by Rule 19A.13A) of the Hong Kong Listing Rules states that there must be an open market in the securities for which listing is sought. This will normally mean that: (a) at least 25% of the issuer's total number of issued shares must at all times be held by the public; (b) where an issuer has one class of securities or more apart from the class of securities for which listing is sought, the total securities of the issuer held by the public (on all regulated market(s) including the Hong Kong Stock Exchange) at the time of listing must be at least 25% of the issuer's total number of issued shares. However, the class of securities for which listing is sought must not be less than 15% of the issuer's total number of issued shares, having an expected market capitalisation at the time of listing of not less than HK\$125,000,000. Rule 19A.13A further provides that Rule 8.08 of the Hong Kong Listing Rules is amended by adding the following provision to sub-paragraph (1)(b): Where a PRC issuer has shares apart from the H shares for which listing is sought, the total securities of the issuer held by the public (on all regulated market(s) including the Stock Exchange) at the time of listing must be at least 25% of the issuer's total number of issued shares (excluding treasury shares). However, the issuer's H shares (for which listing is sought) must represent at least 15% of its total number of issued shares (excluding treasury shares), having an expected market capitalisation at the time of listing of not less than HK\$125,000,000.

**WAIVERS FROM STRICT COMPLIANCE WITH THE HONG KONG LISTING RULES AND EXEMPTION FROM STRICT COMPLIANCE WITH THE COMPANIES (WINDING UP AND MISCELLANEOUS PROVISIONS) ORDINANCE**

We have made an application to the Hong Kong Stock Exchange and the Hong Kong Stock Exchange has granted, a waiver from strict compliance with Rule 8.08(1)(b) (as amended by Rule 19A.13A) of the Hong Kong Listing Rules that the minimum percentage of the H Shares of our Company to be held by the public from time to time shall be the higher of (a) 11% (assuming no exercise of the Offer Size Adjustment Option and the Over-allotment Option) and (b) such percentage of H Shares to be held by the public immediately after completion of the Global Offering, as increased by the H Shares to be issued upon any exercise of the Offer Size Adjustment Option and the Over-allotment Option, of the total enlarged issued share capital of the Company, subject to the following:

- (a) our Company will comply with the public float requirement under Rule 8.08 (as amended by Rule 19A.13A) of the Hong Kong Listing Rules where at least 25% of our Company's total number of issued shares (A Shares and H Shares in aggregate) must be held by the public from time to time;
- (b) our Company will announce the percentage of H Shares held by the public immediately after the completion of the Global Offering (before any exercise of the Offer Size Adjustment Option and/or after any exercise of the Over-allotment Option);
- (c) our Company will confirm the sufficiency of public float in successive annual reports after Listing; and
- (d) our Company will implement appropriate measures and mechanisms to ensure continual maintenance of the minimum public float of H Shares of the higher of (a) 11% (assuming no exercise of the Offer Size Adjustment Option and the Over-allotment Option) and (b) such percentage of H Shares to be held by the public immediately after completion of the Global Offering, as increased by the H Shares to be issued upon any exercise of the Offer Size Adjustment Option and the Over-allotment Option, of the total enlarged issued share capital of the Company.

Furthermore, it is expected that after the Listing, our Company may consider implementing H Shares incentive scheme or other share incentive initiatives involving issuance of new H Shares, which may increase the total number of and size of our H Shares and enhance the public float and liquidity of our H Shares after the Listing.

---

## **INFORMATION ABOUT THIS PROSPECTUS AND THE GLOBAL OFFERING**

---

### **DIRECTORS' RESPONSIBILITY STATEMENT**

This Prospectus, for which our Directors collectively and individually accept full responsibility, includes particulars given in compliance with the Companies (Winding Up and Miscellaneous Provisions) Ordinance, the Securities and Futures (Stock Market Listing) Rules (Chapter 571V of the Laws of Hong Kong) and the Hong Kong Listing Rules for the purpose of giving information with regard to us. Our Directors, having made all reasonable enquiries, confirm that to the best of their knowledge and belief the information contained in this Prospectus is accurate and complete in all material respects and not misleading or deceptive, and there are no other matters the omission of which would make any statement herein or this Prospectus misleading.

### **FILING PROCEDURES WITH THE CSRC**

Our filing procedures with the CSRC for the submission of the application to list our H Shares on the Hong Kong Stock Exchange and for the Global Offering were completed on December 19, 2024. In completing such filing, the CSRC accepts no responsibility for our financial soundness, nor for the accuracy of any of the statements made or opinions expressed in this Prospectus. No other filings in the PRC are required to be completed for the listing of the H Shares on the Hong Kong Stock Exchange.

### **UNDERWRITING AND INFORMATION ON THE GLOBAL OFFERING**

This Prospectus is published solely in connection with the Hong Kong Public Offering which forms part of the Global Offering. For applicants under the Hong Kong Public Offering, this Prospectus contain the terms and conditions of the Hong Kong Public Offering. The Global Offering comprises the Hong Kong Public Offering of initially 20,565,200 H Shares and the International Offering of initially 185,086,800 H Shares (subject, in each case, to reallocation on the basis described in the section headed “Structure of the Global Offering” in this Prospectus and any exercise of the Offer Size Adjustment Option and, in case of the International Offering, to any exercise of the Over-allotment Option).

The listing of the Offer Shares on the Hong Kong Stock Exchange is sponsored by the Sole Sponsor. Pursuant to the Hong Kong Underwriting Agreement, the Hong Kong Public Offering is underwritten by the Hong Kong Underwriters on a conditional basis, with one of the conditions being that the Offer Price is agreed between the Overall Coordinators and us. The International Offering is managed by the Overall Coordinators and is underwritten by the International Underwriters. The International Underwriting Agreement is expected to be entered into on or about the Price Determination Date, subject to agreement on the Offer Price between our Company and the Overall Coordinators. If, for any reason, the Offer Price is not agreed between our Company and the Overall Coordinators on or before the Price Determination Date, or such later date or time as may be agreed between the Overall Coordinators and our Company, the Global Offering will not proceed. Further details about the Underwriters and the underwriting arrangements are contained in the section headed “Underwriting” in this Prospectus.

---

## **INFORMATION ABOUT THIS PROSPECTUS AND THE GLOBAL OFFERING**

---

### **INFORMATION ABOUT THIS PROSPECTUS**

You should rely only on the information contained in this Prospectus to make your investment decision. We have not authorized anyone to provide you with information that is different from what is contained in this Prospectus. Any information or representation not made in this Prospectus must not be relied on by you as having been authorized by us, the Sole Sponsor, the Sponsor Overall Coordinators, the Overall Coordinators, the Joint Global Coordinator, the Joint Bookrunner, the Joint Lead Manager, any of the Underwriters, any of our or their respective directors, officers or representatives or any other person involved in the Global Offering. Neither the delivery of this Prospectus nor any offering, sale or delivery made in connection with the H Shares should, under any circumstances, constitute a representation that there has been no change or development reasonably likely to involve a change in our affairs since the date of this Prospectus or imply that the information contained in this Prospectus is correct as of any date subsequent to the date of this Prospectus.

This Prospectus is published solely in connection with the Hong Kong Public Offering, which forms part of the Global Offering. For applicants under the Hong Kong Public Offering, this Prospectus set out the terms and conditions of the Hong Kong Public Offering.

### **RESTRICTIONS ON OFFERS AND SALES OF THE H SHARES**

Each person acquiring the Hong Kong Offer Shares under the Hong Kong Public Offering will be required to confirm, or be deemed by his or her acquisition of Hong Kong Offer Shares to confirm, that he or she is aware of the restrictions on offers and sales of the Offer Shares described in this Prospectus. In particular, the Offer Shares have not been offered or sold, and will not be offered or sold, directly or indirectly, in the PRC.

No action has been taken to permit a public offering of the H Shares or the general distribution of this Prospectus in any jurisdiction other than in Hong Kong. Accordingly, this Prospectus may not be used for the purposes of, and does not constitute, an offer or invitation in any jurisdiction or in any circumstances in which such an offer or invitation is not authorized or to any person to whom it is unlawful to make such an offer or invitation. The distribution of this Prospectus and the offering of the Offer Shares in other jurisdictions are subject to restrictions and may not be made except as permitted under the applicable securities laws of such jurisdictions and pursuant to registration with or authorization by the relevant securities regulatory authorities or an exemption therefrom.

---

## **INFORMATION ABOUT THIS PROSPECTUS AND THE GLOBAL OFFERING**

---

### **APPLICATION FOR LISTING OF THE H SHARES ON THE HONG KONG STOCK EXCHANGE**

We have applied to the Listing Committee for the listing of, and permission to deal in, the H Shares to be issued pursuant to the Global Offering (including any H Shares which may be issued pursuant to the exercise of the Offer Size Adjustment Option and/or the Over-allotment Option). No part of the H Shares is listed on or dealt in on any other stock exchange, and no such listing or permission to list is being or proposed to be sought in the near future.

Under section 44B(1) of the Companies (Winding Up and Miscellaneous Provisions) Ordinance, any allotments made in respect of any applications will be invalid if the listing of, and permission to deal in, the H Shares on the Hong Kong Stock Exchange is refused before the expiration of three weeks from the date of the closing of the application lists, or such longer period (not exceeding six weeks) as may, within the said three weeks, be notified to our Company by the Hong Kong Stock Exchange.

### **COMPLIANCE WITH HONG KONG LISTING RULES**

We will comply with applicable laws and regulations in Hong Kong (including the Hong Kong Listing Rules) and any other undertakings which have been given in favor of the Hong Kong Stock Exchange from time to time. If the Listing Committee finds that there has been a breach by us of the Hong Kong Listing Rules or such other undertakings which may have been given by us in favor of the Hong Kong Stock Exchange from time to time, the Listing Committee may instigate cancellation or disciplinary proceedings in accordance with the Hong Kong Listing Rules.

### **H SHARES WILL BE ELIGIBLE FOR ADMISSION INTO CCASS**

Subject to the granting of the listing of, and permission to deal in, the H Shares (including any H Shares which may be issued pursuant to the exercise of the Offer Size Adjustment Option and/or the Over-allotment Option) on the Hong Kong Stock Exchange and compliance with the stock admission requirements of HKSCC, the H Shares will be accepted as eligible securities by HKSCC for deposit, clearance and settlement in CCASS with effect from the Listing Date or on any other date as determined by HKSCC. Settlement of transactions between participants of the Hong Kong Stock Exchange is required to take place in CCASS on the second settlement day after any trading day. All activities under CCASS are subject to the General Rules of HKSCC and the HKSCC Operational Procedures in effect from time to time.

All necessary arrangements have been made for the H Shares to be admitted into CCASS. Investors should seek the advice of their stockbroker or other professional advisor for details of those settlement arrangements and how such arrangements will affect their rights and interests.

### **PROCEDURES FOR APPLICATION FOR HONG KONG OFFER SHARES**

The procedures for applying for Hong Kong Offer Shares are set out in the section headed “How to Apply for Hong Kong Offer Shares” in this Prospectus.

### **H SHARE REGISTER OF MEMBERS AND STAMP DUTY**

All H Shares issued pursuant to applications made in the Hong Kong Public Offering and the International Offering will be registered on our Company’s H Share register of members to be maintained by our H Share Registrar, Computershare Hong Kong Investor Services Limited, in Hong Kong. We will maintain our Company’s principal register of members at our current registered office in the PRC.

Dealings in our H Shares registered in the H Share register of members of our Company in Hong Kong will be subject to Hong Kong stamp duty. See the section headed “Taxation and Foreign Exchange” in Appendix IV to this Prospectus for further details.

### **DIVIDENDS PAYABLE TO HOLDERS OF H SHARES**

Unless determined otherwise by our Company, dividends payable in Hong Kong dollars in respect of the H Shares will be paid to the Shareholders as recorded on the H Share register of members of our Company in Hong Kong and sent by ordinary post, at the Shareholders’ risk, to the registered address of each Shareholder.

According to the Guide to the Program for “Full Circulation” of H shares promulgated by CSDC on February 7, 2020, cash dividends to domestic investors of H-share “full circulation” shall be distributed through CSDC. An H-share listed company shall transfer RMB cash dividends to the designated bank account of the Shenzhen subsidiary of CSDC, who shall complete the clearing of cash dividends by distributing the cash dividends to investors through domestic securities companies.

### **REGISTRATION OF SUBSCRIPTION, PURCHASE AND TRANSFER OF H SHARES**

Persons applying for or purchasing H Shares under the Global Offering are deemed, by their making an application or purchase, to have represented that they are not close associates (as such term is defined in the Hong Kong Listing Rules) of any of our Directors or any existing Shareholders or a nominee of any of the foregoing.

---

## INFORMATION ABOUT THIS PROSPECTUS AND THE GLOBAL OFFERING

---

### PROFESSIONAL TAX ADVICE RECOMMENDED

You should consult your professional advisors if you are in any doubt as to the taxation implications of subscribing for, purchasing, holding or disposing of, or dealing in, the H Shares or exercising any rights attaching to the H Shares. We emphasize that none of our Company, the Sole Sponsor, the Sponsor Overall Coordinators, the Overall Coordinators, the Joint Global Coordinator, the Joint Bookrunner, the Underwriter, any of our or their respective directors, officers or representatives or any other person involved in the Global Offering accepts responsibility for any tax effects or liabilities resulting from your subscription, purchase, holding or disposing of, or dealing in, the H Shares or your exercise of any rights attaching to the H Shares.

### EXCHANGE RATE CONVERSION

Unless otherwise specified, this Prospectus contains certain translations solely for your convenience at the following rates:

US\$1.0000	:	HK\$7.7770
RMB0.9221	:	HK\$1.0000
US\$1.0000	:	RMB7.1712

No estimation or representation is made that any amounts in HK\$, RMB and US\$ can be or could have been converted at the relevant dates at the above rates or any other rates at all.

### LANGUAGE

If there is any inconsistency between this Prospectus and the Chinese translation of this Prospectus, this Prospectus shall prevail unless otherwise stated. However, the English names of the PRC national, entities, departments, facilities, certificates, titles, laws, regulations (including certain of our subsidiaries) and the like included in this Prospectus are translations of their Chinese names and are included for identification purposes only. If there is any inconsistency, the names in their original languages shall prevail.

### COMMENCEMENT OF DEALING IN THE H SHARES

Dealings in the H Shares on the Hong Kong Stock Exchange are expected to commence at 9:00 a.m. on Monday, March 10, 2025. The H Shares will be traded in board lots of 200 H Shares each and all Offer Shares will be registered on the H Share Registrar in order to enable them to be traded on the Hong Kong Stock Exchange.

### ROUNDING

Certain amounts and percentage figures included in this Prospectus have been subject to rounding adjustments. Accordingly, figures shown as totals in certain tables may not be an arithmetic aggregation of the figures preceding them.

## INDUSTRY OVERVIEW

---

*The information and statistics set out in this section and other sections of this Prospectus were extracted from the Frost & Sullivan Report prepared by Frost & Sullivan, which was commissioned by us, and from various official government publications and other publicly available publications. We engaged Frost & Sullivan to prepare the Frost & Sullivan Report, an independent industry report, in connection with the Global Offering. The information from official government sources has not been independently verified by us, the Sole Sponsor, the Sponsor Overall Coordinators, the Overall Coordinators, the Sole Global Coordinator, the Sole Bookrunner, the Sole Lead Manager, the Underwriter, any of our or their respective directors, supervisors, officers, representatives, employees, advisors or any other persons or parties involved in the Global Offering, and no representation is given as to its accuracy.*

### SOURCE AND RELIABILITY OF INFORMATION

We have commissioned Frost & Sullivan, an Independent Third Party, to conduct a study of global and China's gold and other non-ferrous metals industry. We agreed to pay Frost & Sullivan a fee of RMB900,000 for the preparation of the Frost & Sullivan Report, and our Directors consider that such fee reflects market rates and are of the view that the payment of the fee does not affect the fairness of conclusions drawn in the Frost & Sullivan Report. Founded in 1961, Frost & Sullivan has over 45 offices globally with more than 3,000 industry consultants, market research analysts, technology analysts and economists.

### RESEARCH METHODOLOGY

During the preparation of the Frost & Sullivan Report, Frost & Sullivan conducted primary research that involved discussing the status of the industry with industry participants and industry experts, as well as secondary research that involved reviewing company reports, independent research reports and Frost & Sullivan's own database. Our Directors have confirmed that there has been no adverse change in the market situation since the date of Frost & Sullivan Report which may qualify, contradict, or have impact on the information of this section.

### BASIS AND ASSUMPTION

The Frost & Sullivan Report was compiled based on the following assumptions: (i) government policies on gold and gold mining industries in China and major overseas countries discussed will remain consistent during the forecast period; (ii) government policies on copper and other industries discussed in China and major overseas countries discussed will remain consistent during the forecast period; (iii) the global and Chinese gold and gold mining market will be driven by the factors which are stated in Frost & Sullivan Report; and (iv) the global and Chinese copper and other industries discussed will be driven by the factors which are stated in Frost & Sullivan Report.

---

# INDUSTRY OVERVIEW

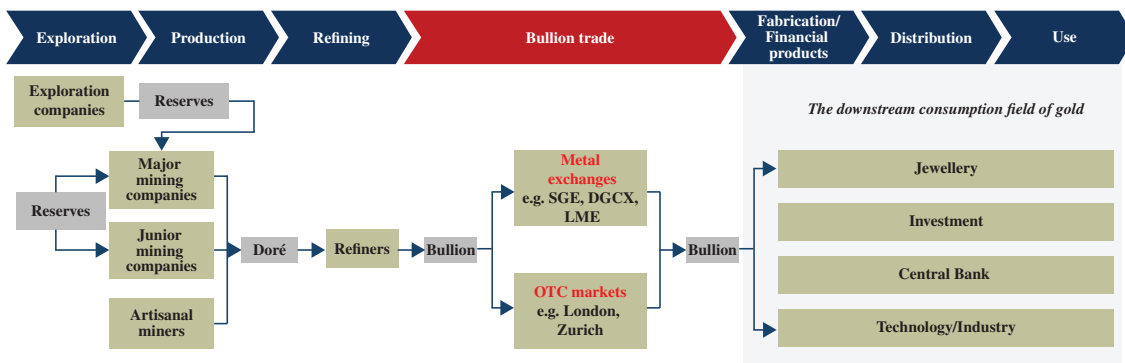

---

## OVERVIEW OF THE GOLD INDUSTRY

### Introduction of Gold

Gold is a precious metal that has been used for coinage, jewellery, and arts throughout recorded history. It is also widely used in high-tech manufacturing, such as electronics, telecommunication, and aerospace. Gold products include physical gold such as gold bullion, gold doré, and gold coins, gold concentrate produced during the smelting of gold products, and gold derivatives. Gold doré, as a semi-pure alloy of gold and silver, is typically refined and further purified with the end product being gold bullion, which refers to high purity physical gold with no less than 99.5% gold content (such as gold bars, coins and medals). Gold concentrate powder refers to the processing of gold ore into mineral powder through crushing, grinding, and beneficiation, with its main components being gold, silicon dioxide, and so on. The semi-finished gold produced in the last step of the gold smelting process is called gold-loaded carbon.

# INDUSTRY OVERVIEW

The following diagram sets forth the gold industry's value chain:

## Value Chain of the Global Gold Industry

Source: Frost & Sullivan

### Relevant information about China's, Lao's, and Ghana's gold industry

China is the world's largest gold producing country with resources in Shandong, Tibet, and Gansu and other regions. In 2023, the gold resources in Shandong Province amounted to 1.4 million oz, accounting for 27.6% of the total national resources. China is also one of the world's largest gold consuming countries. China has introduced a series of plans such as the Opinions on Further Strengthening the Work of Mine Safety Production (關於進一步加強礦山安全生產工作的意見) and Notice on the Guarantee of Mining Land (關於做好採礦用地保障的通知) to ensure the production safety of mines. Laos is one of the main gold producing countries in Southeast Asia, and its Mineral Resources are mainly distributed in the southern and central regions of the country. The Laotian Government actively encourages gold mining and investment and has introduced relevant industrial policies to promote gold mining. As one of the important gold producing countries in Africa, gold is one of Ghana's important export products. The Ghanaian Government has issued a series of policies to strengthen mining regulation.

## INDUSTRY OVERVIEW

### Gold Demand

Global demand for gold is generally divided into the following categories: (i) jewellery, (ii) investment (including gold bars, coins and exchange traded funds (“ETF”)), (iii) central bank reserves, and (iv) technological or industrial use. The following chart sets forth the volume and breakdown of global gold demand for the periods indicated.

**Gold Demand (by End Use), Global, 2019-2028E**

	Jewellery	Investment	Central Bank	Technology/ Industry	Total
CAGR 19-23	0.5%	-7.3%	14.4%	-2.2%	0.6%
CAGR 24E-28E	-2.3%	-0.5%	6.9%	1.2%	0.8%

Source: World Gold Council, Frost & Sullivan

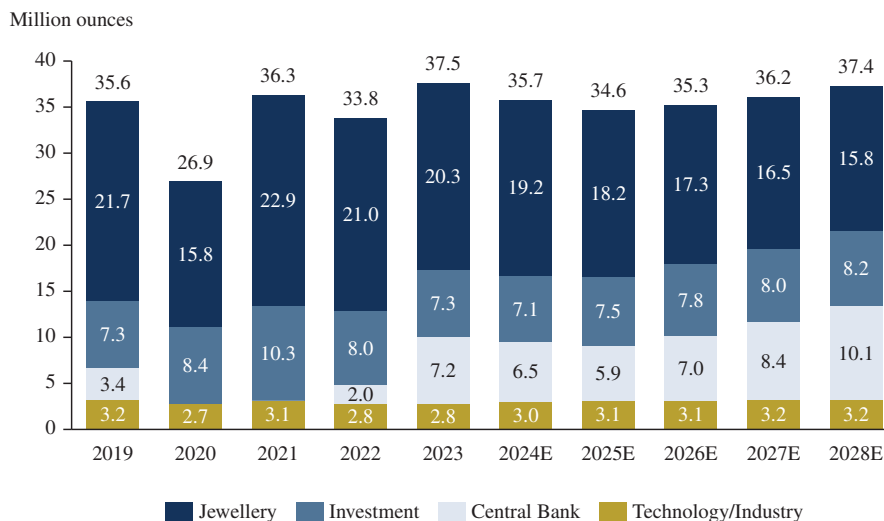

Global gold demand increased at a CAGR of 0.6% from 2019 to 2023, reaching 143.7 million oz in 2023. The decrease in gold demand as compared with 2022 is mainly attributed to decrease in gold reserve demand by investment and central banks. A significant drop in gold jewellery in 2020 followed by a rebound is noted, which was due to the outbreak of the pandemic, rising gold price and economic recession in 2020. In 2021, driven by gradual control of the pandemic, improved consumer sentiment and economic recovery, jewellery demand achieved a rebound in 2021. From 2024 to 2028, global gold demand is expected to grow steadily at a CAGR of 0.8% due to: (i) increase in gold demand by central banks for value preservation and risk diversification, in the context of current geopolitical uncertainties such as the tensions arising from events like the Israel-Palestine conflict and the Russia-Ukraine conflict; and (ii) increase in gold demand for technology and industry.

## INDUSTRY OVERVIEW

The following chart sets forth the volume and breakdown of China gold demand for the periods indicated:

**Gold Demand (by End Use), China, 2019-2028E**

	Jewellery	Investment	Central Bank	Technology/ Industry	Total
CAGR 19-23	-1.8%	0.0%	20.8%	-3.8%	1.3%
CAGR 24E-28E	-4.7%	3.7%	11.7%	2.4%	1.1%

Source: China Gold Association, Frost & Sullivan

Gold demand in China increased from 2019 to 2023 at a CAGR of 1.3%. During this period, China's gold demand experienced fluctuations, mainly influenced by the changes in the demand for jewellery consumption. The decline in gold demand in 2020 was mainly due to the lasting impact of COVID-19 on the consumer economy, which caused a significant decrease in gold jewellery demand. China's gold consumption saw a strong recovery in 2021, as gold jewellery demand grew significantly, driven by economic recovery and a pullback in gold prices from 2020. In 2023 due to the significant increase in the gold reserves of China's central bank, China's gold demand achieved a year-on-year growth rate of 10.9%, with a total volume of 37.5 million ounces. During the forecast period, China's gold demand is expected to maintain a stable level. Concerns about future economic uncertainties may suppress consumers' demand for jewellery, and also stimulate the central bank's reserve growth and investment demand. In the future, there will decrease in gold jewellery demand and increase in gold demand for investment and central bank, resulting a stable level of gold demand in China.

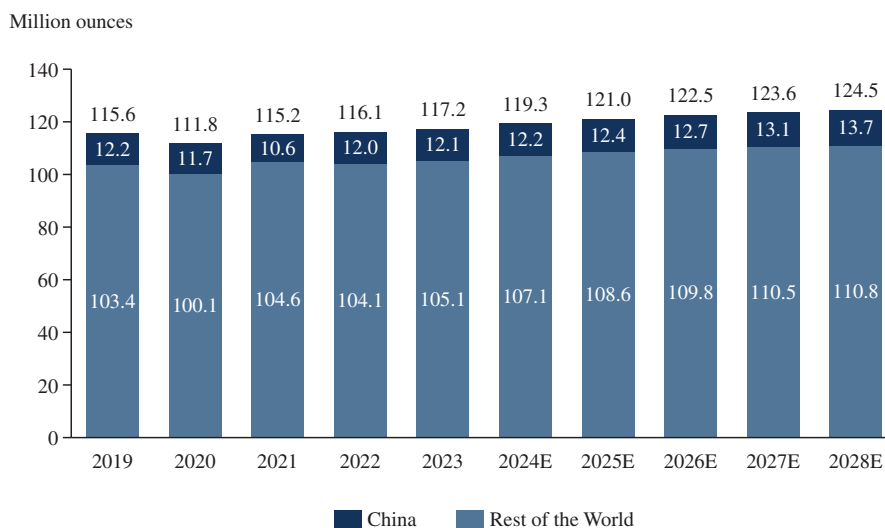

## INDUSTRY OVERVIEW

### Gold Supply

Generally, global and China's gold supply has consistently maintained relatively stable. The supply of gold is influenced by various factors, mainly including the grade, resources and mining difficulty of gold mines, the market demand for gold, fluctuations in gold prices and governments' policies of gold mining industry. The following chart sets forth the global and China's gold mine production volume for the periods indicated:

**Gold Supply\*, Global and China, 2019-2028E**

	China	RoW	Global
CAGR 19-23	-0.3%	0.4%	0.3%
CAGR 24E-28E	3.0%	0.8%	1.1%

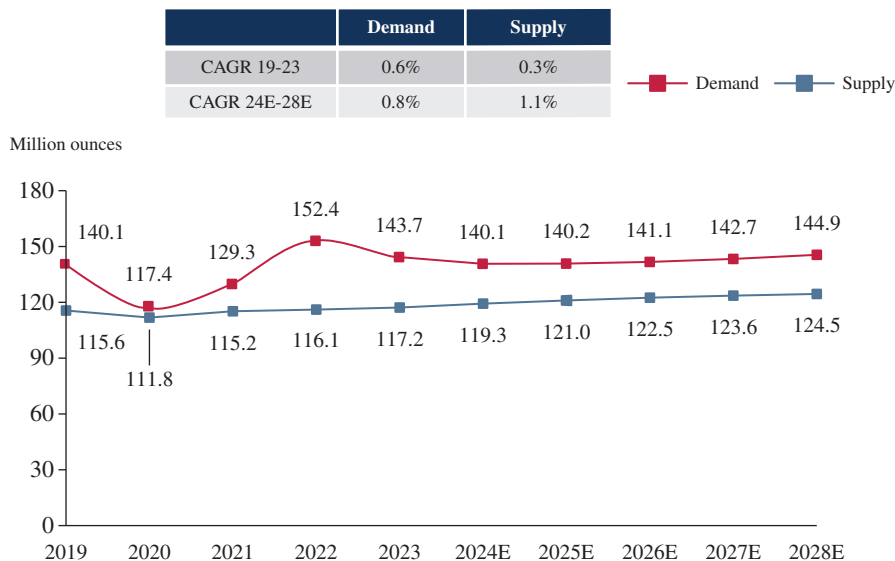

\* Global and China's gold supplies include gold produced from gold mines and gold produced as by-product from NFM ores.

Source: World Gold Council, China Gold Association, Frost & Sullivan

## INDUSTRY OVERVIEW

### Gold Supply and Demand, Global, 2019-2028E

Source: World Gold Council, Frost & Sullivan

In 2023, global mined gold production volume amounted to 117.2 million oz. The major mined gold production countries include China, Russia, Australia, Canada, and the U.S. In 2023, China was the largest mined gold producer with 12.1 million oz production, accounting for approximately 10.3% of global gold supply. Assuming there is ongoing global economic recovery, global gold supply is expected to grow at a CAGR of 1.1% from 2024 to 2028, driven by robust gold demand, rising in gold price, and advancements in mining and exploration technologies.

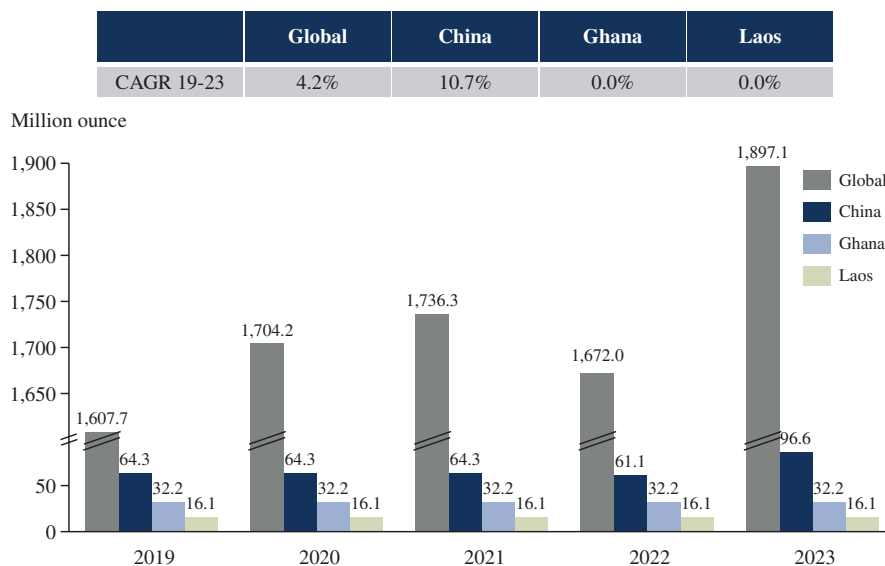

The major areas in China which produced gold include Shandong, Henan, Inner Mongolia, Gansu, Yunnan and Xinjiang. In 2023, Shandong ranked the first with 1,417.0 koz of gold produced from gold mines. Regarding China's gold supply, while production dropped by approximately 10% in 2021, by 2022 production had recovered as companies resumed operations post safety inspections in Shandong from the beginning of February 2021 to the end of March 2021 which resulted in the temporary shutdown of multiple gold mines. It is anticipated that China's mined gold output will increase by 12.3% from 2024 to 2028, which will be supported by advancements in technology and equipment and a steady rise in demand from various sectors.

### Gold Resources and Reserves

From 2019 to 2023, global and Chinese gold Reserves increased with the discovery of newly identified gold mines each year. During the same period, the gold Reserves in Laos and Ghana remained stable. According to the disclosure of the United States Geological Survey (USGS), Ghana's gold reserves have not changed from 2019 to 2023. According to the Ministry of Industry and Commerce of the Lao PDR, Laos had a gold reserve of 500 tons in 2019. Since then, there have been no new changes in the public disclosure of Laos' gold reserves data.

## INDUSTRY OVERVIEW

### Gold Reserves\*, Global, Ghana, Laos and China, 2019-2023

\* “Reserve” refers to part of the reserve base that could be economically extracted or produced at the time of determination and include only recoverable materials.

Source: The U.S. Geological Survey, Frost & Sullivan

As of the end of 2023, there was approximately a total of 1,897.1 million oz of gold Reserves identified across the globe. The following two charts set forth the global gold Reserves by country as of 2023 year end and the gold Resources by provinces in China as of the same date, respectively.

### Gold Reserves\* by Countries, Global, 2023

## INDUSTRY OVERVIEW

\* “Reserve” refers to part of the reserve base that could be economically extracted or produced at the time of determination and include only recoverable materials. Due to data availability, Reserves are usually used to demonstrate the gold resources of different countries.

Source: *The U.S. Geological Survey, Frost & Sullivan*

In terms of identified gold Resources as of 2023-year end in China, Shandong was the largest with approximately 140 million oz of identified gold Resources as of 2023 year end, followed by Gansu and Tibet. Inner Mongolia ranked fourth with approximately 29.9 million oz of identified gold Resources as of 2023 year end.

### Identified Gold Resources\* by Provinces, China, 2023

\* China identified gold Resources in or prior 2019 refers to identified gold Resources as defined in GB/T 17766-1999, after 2019 refers to gold Resources as defined in GB/T 17766-2020. Northeast region contains Heilongjiang, Jilin and Liaoning.

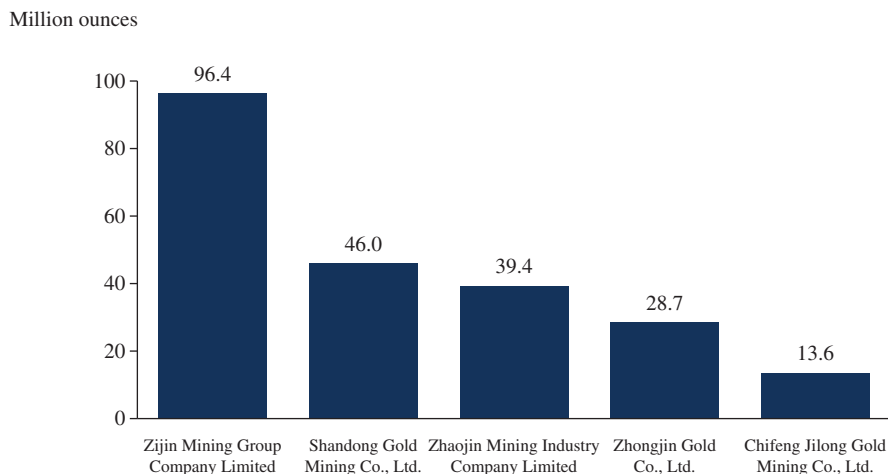

Source: *China Gold Association, Frost & Sullivan*

## INDUSTRY OVERVIEW

### PRC Gold Mining Market

We ranked fifth in terms of gold production and gold resources in China as of December 31, 2023. Moreover, we have a more diversified mineral product profile and larger overseas business coverage than most of the major players in the market.

#### Top 5 Gold Producers (by Resources), China, 2023

### Cost of Supply

The following chart sets forth the global average AISC (quarterly) from 2021Q1 to 2024Q1.

#### Average AISC (Quarterly), Global, 2021Q1-2024Q1

Source: Frost & Sullivan

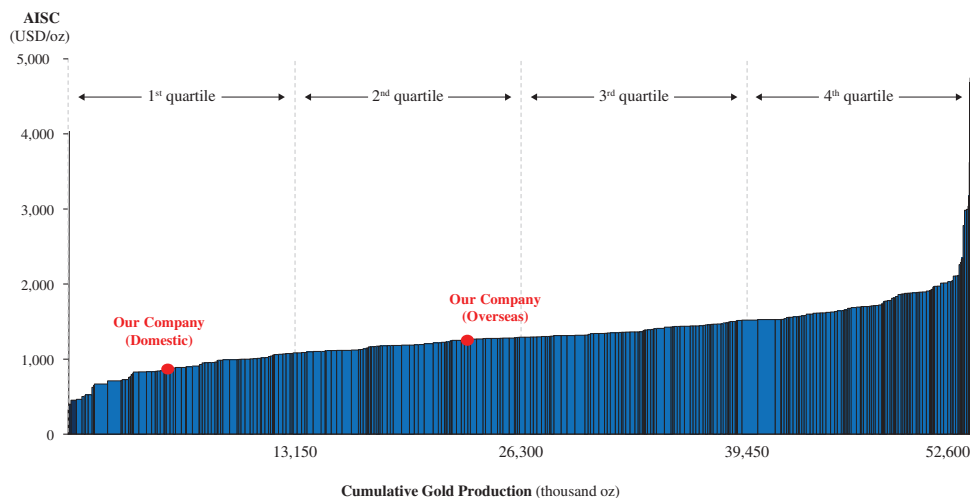

---

## INDUSTRY OVERVIEW

---

The following chart sets forth the global cost curve in 2023:

### Cost Curve\*, Global, 2023

\* Excluding the extreme mining situation, i.e. the Matilda mine. Unforeseen events, such as production accidents or natural disasters, can cause significant output reductions and abnormal increases in AISC for certain sampled gold mines. Excluding these outliers allows for a more accurate representation of the cost curve.

Source: Frost & Sullivan

## Gold Price

### Global Gold Pricing Trend

In 2019 and 2020, the U.S. Federal Reserve and other central banks of major economies introduced financial and monetary stimuli to inject liquidity into the market, causing the U.S. dollar to depreciate, and major asset classes experienced bearish trends. The global market sought gold for value preservation and risk hedging, which raised the gold price in 2020. In 2021, as the economy started to recover and interest in gold investments decreased, the growth of the global gold spot price slowed down. In 2022, the Russia-Ukraine conflict led to a significant increase in the global gold price. Concurrently, the U.S. Federal Reserve began to raise interest rates to address the high inflation issue in the U.S., which led to an increase in gold investment in coins and bars globally. Additionally, central banks increased their gold reserves as a precaution against a potential economic recession. In 2023, global gold spot price continued to increase from USD1,801.3 per ounces in 2022 to USD1,942.1 per ounces in 2023.

Worries of economic downturn under the context of high inflation and high fuel cost is to last in the forecast time period, plus the existing geopolitical uncertainties (e.g. Russia-Ukraine tensions). With the continuous decline in inflation and the employment pressure brought about by the economic slowdown, the U.S. Federal Reserve has initiated a cycle of interest rate cuts. Although lower interest rates are beneficial for the market, concerns about economic slowdown still outweigh the advantages brought by the rate cuts. Therefore, gold is

## INDUSTRY OVERVIEW

needed for investment portfolio diversification to hedge risks and value preservation. Looking ahead, considering the strong demand for gold, global gold spot price is expected to go up steadily during 2024 to 2028 at CAGR of 7.1%, from USD2,357.1 per ounces in 2024 to USD3,097.7 per ounces in 2028.

No single industry player or factor can significantly impact gold prices on its own. Generally, gold mining companies adjust their production plans in response to gold price forecasts. They tend to ramp up production if prices are expected to rise. However, production increases are constrained by various challenges, such as increasing mining cost, license, climate change, etc.

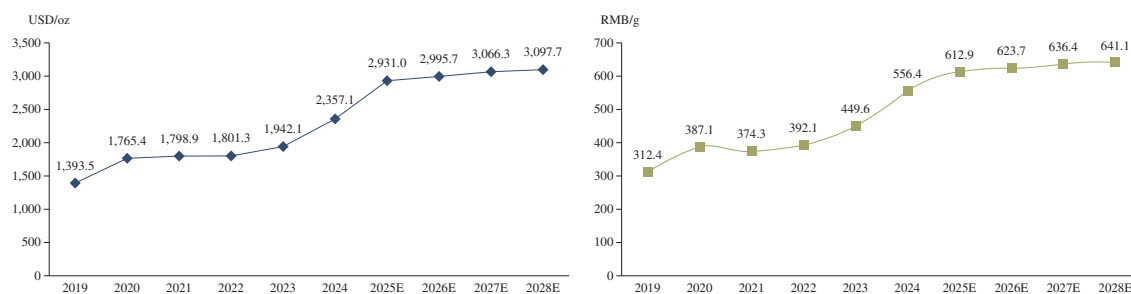

### *Latest development in gold ETFs and their demand*

Investments include purchase of gold bars and coins as well as exchange traded funds (“ETF”). From 2018 to 2020, there was a growing trend towards gold investments, which was attributed to the increase in the gold price and consumers’ purchase of bars and coins for value preservation. In 2021, investments in gold decreased by more than 40% compared with the 2020 level. This was mainly caused by a decrease in gold investments through ETFs. In 2022, investments in gold increased, especially for investments in gold coins and bars, which was largely due to geopolitical concerns and hedging against inflation. In 2023, investments in gold decreased by 15% compared with the 2022 level. This was mainly caused by the rising gold price. As of the second quarter 2024, global gold ETFs have shown an outflow trend, with total global gold ETF holdings decreasing by 7.2 tonnes to 3,105.5 tonnes.

### *Global Average Gold Spot Price*

The following chart sets forth the annual average gold spot price of the London Bullion Market and the Shanghai Gold Exchange for the period indicated.

**Annual Average Gold Spot Price\*, Global & China, 2019-2028E**

\* Global gold price is set as quarterly averaged gold spot price of the London Bullion Market. The price is set in USD per fine troy oz, which is a troy oz (equals approximately 31.1 grams) of 99.5% pure gold. “China gold price” refers to the closing price of Au99.95 traded on the Shanghai Gold Exchange.

Source: London Bullion Market Association, Shanghai Gold Exchange, Frost & Sullivan

---

## INDUSTRY OVERVIEW

---

The gold price is predominantly impacted by factors such as the real interest rate, the value of U.S. dollar, global geographical uncertainties, and inflation expectations. Typically, when there exist instabilities in the political or economic environment or turbulence in the stock market, gold is treated as a risk-hedging tool, and its price will typically exhibit an upward trend. Moreover, monetary policies by central banks (e.g. fluctuations in the currency exchange rate) and macroeconomic factors (e.g. interest rate and inflation expectations) are also important factor that influence the gold price. Upon a long-term observation of gold price trends, it can be observed that there is an overall upward trend of volatility. Even during periods of cyclical adjustments, the bottom of the price is gradually rising, demonstrating the stability and growth potential of gold as a store of value.

From 2019 to 2023, the gold spot price in China grew at a CAGR of 9.5% from RMB312.4 per gram in 2019 to RMB449.6 per gram in 2023. It is expected to climb steadily at a CAGR of 3.6% from 2024 to 2028, from RMB556.4 per gram in 2024 to RMB641.1 per gram in 2028. China's gold spot price in 2023 increased by approximately 14.7% as compared with 2022, which was greater than the 7.8% increase in the global gold spot price across the same periods. This was mainly due to the depreciation of Renminbi against U.S. dollar.

### Raw Materials

Industrial explosives and diesel are key raw materials in gold mining, and their prices can significantly represent the major raw material costs in the industry. Industrial explosives are mainly used in gold mining to break rocks and ores. Diesel, on the other hand, is the energy source for many mining equipment, such as excavators, trucks, drilling rigs, and generators. Overall, the prices of major raw materials for gold mining companies have experienced a slight upward trend in recent years. For instance, the average price of industrial explosives in China rose from RMB5.7 thousand per ton in 2019 to RMB6.4 thousand per ton in 2023, reflecting a CAGR of 3.1%. Similarly, the average price of diesel in China increased from RMB5.7 thousand per ton in 2019 to RMB6.4 thousand per ton in 2023, with a CAGR of 4.3%. The slight upward trend in the price of industrial explosives in the past has mainly been due to the increase in upstream raw material costs. The price of diesel in China is mainly regulated by the National Development and Reform Commission, based on changes in international oil prices.

## INDUSTRY OVERVIEW

---

### Competitive Landscape

#### *Overview*

The gold industry has become more concentrated due to mergers and resource integration of gold companies. Large gold companies with advantages, such as efficient operations, global presence, financial strength and other advantages, are leading the industry. At the same time, regulatory controls, including safety and environmental protection requirements, have further tightened. Less competitive gold production companies with aging facilities and insufficient resources have been forced to shut down or undergo significant changes. Furthermore, the total production cost of gold mining has increased due to several factors, and smaller gold companies have gradually exited the market.

#### *Global Gold Mining Market*

The top 10 global gold producers contributed approximately 25.6% of the global gold mining production in 2023. Among them are various big names such as Newmont Mining, Barrick Gold, Agnico Eagle and PJSC Polyus, etc. Most of the top gold producers are headquartered in U.S., Australia, Canada, South Africa, and Russia, with their footprints spanning across several continents. The global gold mining industry is relatively fragmented; although, a consolidation trend has emerged in the past years. According to Frost & Sullivan, our Company is estimated to be ranked 20th to 30th among global gold producers in terms of gold production volume in 2023.

#### **Gold Production of Top 10 Gold Producers, Global, 2023**

Rank	Company	Gold Production (Million oz)	Market share
1	Newmont Mining	5.5	4.7%
2	Barrick Gold	4.1	3.4%
3	Agnico Eagle	3.4	2.9%
4	PJSC Polyus	2.9	2.5%
5	Navoi MMC	2.9	2.5%
6	Gold Fields	2.6	2.2%
7	AngloGold Ashanti	2.3	2.0%
8	Zijin Mining Group Co., Ltd.	2.2	1.8%
9	Kinross Gold	2.2	1.8%
10	Freeport-McMoRan	2.0	1.7%
	Our Company	0.5	0.4%

#### *PRC Gold Mining Market*

We ranked fifth in China in terms of gold production in 2023, and we have achieved the fastest growth rate in gold production volume from 2021 to 2023 among the top 5 gold producers in China. Moreover, we have a more diversified mineral product profile and larger overseas business coverage than most of the major players in the market.

---

## INDUSTRY OVERVIEW

---

### Gold Production of Top 5 Gold Producers in China, 2023

Rank	Company	Gold Production (Million oz)	Market Share
1	Zijin Mining Group Co. Ltd.	2.2	18.9%
2	Shandong Gold Group Co., Ltd.	1.6	13.6%
3	China National Gold Group Co., Ltd.	0.9	8.1%
4	Shandong Zhaojin Group Co., Ltd.	0.6	5.2%
5	<b>Our Company</b>	<b>0.5</b>	<b>4.0%</b>

In comparison with other leading players in the gold mining market in China, we have comparative advantages in multiple aspects. For example, we offer a more extensive range of mineral products and larger overseas business coverage than most of the major players in the market. In terms of the gold production growth in the past three years, we were the highest among major gold producers in China, representing a gold production growth of 33.1% from 2019 to 2023. Regarding the proportion of overseas business, we maintain the status as the leading player in the market.

#### Entry Barriers

The principal entry barriers to the gold industry include the following:

- **Policy Barrier.** Globally, majority of governments implement an admittance system for the exploitation of gold resources. The application for gold mining and smelting shall comply with the requirements of the national gold industry planning, industrial policies and the state regulations on the approval of investment projects, environmental protection and land administration, etc. Gold mining companies shall be qualified for the exploitation of gold resources in order to obtain the mining license issued by the governments of where the gold mines are located . In addition, gold mining enterprises can only conduct mining within the area stipulated by the state, and comply with increasingly strict safety production and environmental protection regulations. It is difficult for new market entrants to obtain relevant qualifications in a short period of time.
- **Capital Barrier.** The gold industry is a capital-intensive industry, which requires a significant investment in infrastructure and production equipment in the early stage. The costs of exploration, mining, and refining are extremely high, while significant initial investment is required for the purchase of equipment. Notably, gold manufacturing needs a large amount of initial capital for the procurement of gold ore, the construction of manufacturing facilities as well as the purchase or installation of machines in order to produce gold products.

---

## INDUSTRY OVERVIEW

---

- **Technology Barrier.** As the grade of gold ore decreases and mining depths increase, the difficulty and complexity of gold mining procedures rise accordingly, creating a high technical barrier for new entrants. Additionally, it takes a significant amount of time and effort for gold mining companies to acquire qualified professionals capable of applying new mining technologies. Furthermore, only companies with advanced technology and sufficient experience can meet the increasingly strict government requirements for safe production and environmental protection, further increasing the challenges for new entrants.
- **Human Capital Barrier.** As the mining industry shifting towards intelligent mining and green mining as global popular trends, the mining industry will become more technology-intensive in the future. The industry will become more human-capital-intensive as industry demand for talent with experiences in IT, ESG and mining is booming. Professionals with such rich experiences are extremely popular in recruiting market, and new market entrants often struggle to find experienced professionals.

### Market Drivers

- **Increasing Gold Reserve by Central Banks.** Internationalization of Renminbi is the result of national economic development. Since being included in the IMF's Special Drawing Right (SDR) in 2016, Renminbi has become a big part of international reserve currency. As an important means of reserve and settlement, gold reserves are used to hedge the risk of international financial markets. There is a trend by China to increase its central bank gold reserves to meet the demand following Renminbi's internationalization.
- **Sustained Consumer Demand.** The ongoing and long-term consumer demand for gold jewellery and gold as an investment asset plays an essential role in the global gold market. As a traditional pillar of the gold market, the demand for gold jewellery remains relatively stable. Moreover, facing economic fluctuations or uncertainties, individual investors are increasing their investment in gold.
- **Rising Gold Price.** The gold price drives both the supply and demand of gold. On the supply side, the increasing gold price has expanded the profit margins for gold mining operations, encouraging companies to increase gold mining. On the demand side, some individual investors are attracted by the rising gold prices, expecting to purchase gold before prices peak, with the aim of realizing profits. In recent years, under the combined effect of the increasing downward pressure on major economies and pessimism in the global financial, the safe-haven function of gold has been fully highlighted, and the price of gold has begun to trend upward.

---

## INDUSTRY OVERVIEW

---

- ***Increasing Demand for Safe Haven Assets.*** Global socio-economic fluctuations and uncertainties, coupled with geopolitical risks such as the Russia-Ukraine conflict and conflicts in Israel, have collectively fueled market demand for safe-haven assets. Against this backdrop, gold, as a traditional choice for risk aversion, is likely to attract some investors, and countries may increase their gold reserves to protect their economies from exchange rate fluctuations, thereby driving the growth of the global gold market. For Laos and Ghana, gold exports play a crucial role in their economic structures, serving as a significant source of foreign exchange earnings. Given the promising growth of the global gold market, the gold sectors in Laos and Ghana are expected to provide strong impetus for economic development.

### Development Trend

The following are some of the trends of the global and PRC gold mining industry:

- ***Green Mining.*** Governments around the world have successively issued a series of policies calling for the development of environmentally friendly gold mining technologies. Therefore, gold mining companies are bound to renew their technologies to promote environmental-friendly mining.
- ***Deep Mining.*** With the consumption of shallow gold resources, global gold mining industry gradually turns to deep mining. With the gradual depletion of surface resources, many mining companies have begun to turn to deep mining. Deep gold mines may range from several hundred meters to several thousand meters deep, and some specific gold mines may even reach 4,000 meters or deeper. In China, the NDRC issued Guide Catalogue for Industrial Restructuring (2019 edition) encourages the development of deep gold mining. Enterprises with gold mining capabilities in challenging terrain, such as Our Company, are more competitive in the gold industry.
- ***Intelligent Mining.*** With the decrease in the cost of digital technologies and the successful trial and testing of digital solutions, it is becoming increasingly feasible to apply intelligent mining. Intelligent mining will enable the management of resources such as energy, labor, equipment, and infrastructure as variable costs. It integrates with smart automation based on equipment capacity, availability, and utilisation. Optimizing these variable resources across the value chain will improve sustainability, reduce utility consumption, and significantly enhance mining efficiency.
- ***Enterprise Mergers and Acquisitions.*** Gold mining players are facing increasingly higher production cost and lower profit margin due to the large proportion of low-grade ore and refractory gold resources globally. Gold mining companies may turn to seek overseas gold resources, capital, and technology. Global mergers and large-scale acquisitions have become a major trend in the development of the gold industry.

---

## INDUSTRY OVERVIEW

---

### Key Success Factors for Gold Mining Companies

- ***Increasing and Diversified Gold Mine Resources.*** It is crucial for gold mining companies maintaining competitiveness to increase and diversify their gold mine resources. The scale and quality of gold mine resources are foundations for gold mining companies to establish scale economy, maintain long-term growth and attract investments. The geographical diversity of gold mine resources will significantly increase the risk resistance capacity of gold mining companies.
- ***Technological Innovation.*** Chinese gold producers should continue to develop new technologies and strive to achieve low-cost operations and effective resource utilisation through technological innovation and application. Advanced production management systems and technologies help enterprises achieve highly mechanized, digital, and intelligent control and optimization in the gold production process.
- ***ESG Governance.*** The gold industry should continue to adhere to the concept of green development. Chinese gold producers will continue to attach importance to the environment and safety, humanistic care, and social responsibility as one of the important goals of enterprise development.
- ***Supply Chain Management.*** In the process of gold mining and processing, gold mining companies need to procure various types of equipment and raw materials, such as rock drilling machines, drilling jumbos, scrapers, explosives, diesel, sodium cyanide, etc. Additionally, gold mining companies may employ different third-party subcontractors for tasks like refining and logistics. A well-established supply chain management capability is crucial for gold mining companies to maintain efficient production and expand their asset portfolios globally.
- ***Gold Price Fluctuations.*** Gold price is the critical factor affecting a company's revenue and profits. Gold producers must closely monitor gold price trends, flexibly adjust production plans and sales strategies to cope with market opportunities and challenges.

### OVERVIEW OF THE COPPER INDUSTRY

#### Introduction of Copper

Copper is one of the most used and reused of all metals. The demand for copper is due to its good strength, excellent electrical and thermal conductivity, outstanding resistance to corrosion, and ease of fabrication. Copper is often found in areas along the western continental edges of North and South America as well as southwestern part of the U.S. Currently, copper is used in building construction, power generation and transmission, electronic product manufacturing, and production of industrial machinery and transportation vehicles. It is also used in alloys such as brass and bronze, alloy castings, and electroplated protective coating in undercoats of nickel, chromium, and zinc. In 2023, our Company's production of electrolytic copper and copper concentrate powder was approximately 7,900 tons, which is significantly lower than the annual production of copper products from leading copper smelting companies.

---

## INDUSTRY OVERVIEW

---

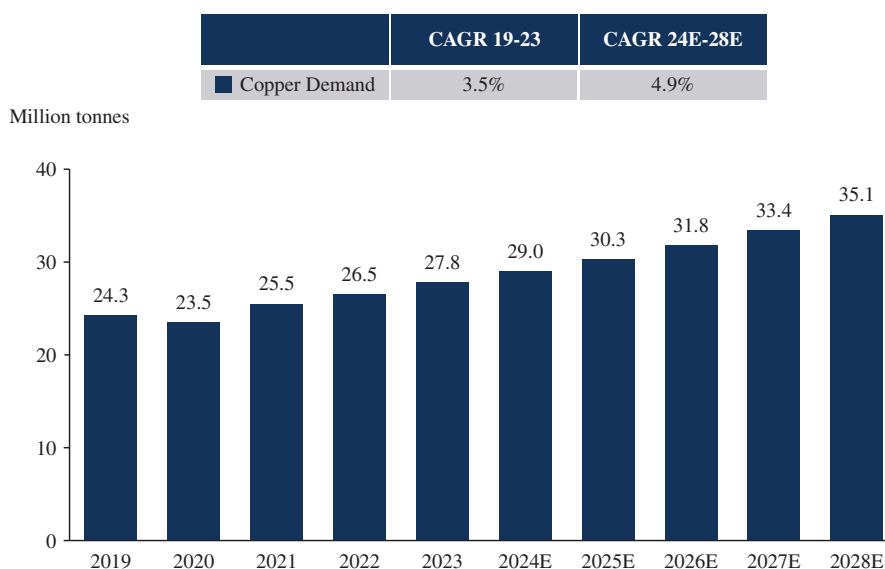

### Copper Reserves

The global copper Reserves reached 1,000.6 million tonnes as of December 31, 2023, and the top three countries in terms of copper Reserves were Chile, Peru, and Australia, with their copper Reserves estimated at 190.0 million tonnes, 120.0 million tonnes, 100.0 million tonnes as of December 31, 2023, respectively. In addition, the copper Reserves in Laos were estimated at 1.7 million tonnes as of December 31, 2023. China's copper Reserves, which were largely concentrated in areas such as Tibet, Jiangxi and Yunnan, were estimated at 41.0 million tonnes and accounted for 4.1% of the global copper Reserves as of December 31, 2023.

### Copper Demand

The following table sets forth the volume of global copper demand by end uses for the periods indicated.

**Copper Demand, Global, 2019-2028E**

Source: Frost & Sullivan

From 2019 to 2023, global copper demand increased at a CAGR of 3.5% from 24.3 million tonnes to 27.8 million tonnes. The significant increases in downstream industries, such as mechanical equipment, construction and power supply, have strongly supported the steady growth in global copper demand. In the future, the wide application of electric vehicles is expected to stimulate copper demand from transportation in global market, which will further drive the steady growth of global copper demand. Over the forecast periods, it is expected that global copper demand will further rise at a CAGR of 4.9% from 29.0 million tonnes in 2024 to 35.1 million tonnes in 2028.

## INDUSTRY OVERVIEW

### Copper Supply

The following chart sets forth the volume of global copper supply for the periods indicated:

**Copper Supply, Global, 2019-2028E**

	CAGR 19-23	CAGR 24E-28E
Recycled Copper	2.9%	7.3%
Mine Production of Copper	1.4%	0.9%
<b>Total</b>	<b>1.7%</b>	<b>2.2%</b>

Source: Frost & Sullivan

Copper mining increased slightly from 20.4 million tonnes in 2019 to 21.6 million tonnes in 2023. Although mined copper outputs in multiple countries were affected by temporary smelter shutdowns for maintenance and upgrades, the post-pandemic economic recovery and the increased demand from downstream industries have stimulated steady growth of global mine production of copper. In the future, the global long-term transition towards renewable energy is expected to further boost copper demand. Over the forecast period from 2024 to 2028, mine production of copper is expected to grow at a CAGR of 0.9%, with production reaching 22.7 million tonnes by 2028. In addition, with the continuous improvement of recycled copper utilisation technology, recycled copper will play a more important role in global copper supply. Over the forecast period during 2023 to 2028, global copper supply is expected to grow at a CAGR of 2.2%, with production reaching 29.3 million tonnes by 2028. In particular, it is estimated that global recycled copper production will increase at a CAGR of 7.3% and reach 6.5 million tonnes by 2028.

---

## INDUSTRY OVERVIEW

---

### Copper Price

#### Copper Price, Global, 2019-2028E

Source: Frost & Sullivan

Due to the economic recovery after the COVID-19 pandemic and insufficient supply of copper mines, the global copper price rose sharply from USD5,999.7/tonne in 2019 to USD8,523.0/tonne in 2023. In the future, it is estimated that the global copper price will increase at a CAGR of 2.4% from 2024 to 2028 and reach USD11,373.0/tonne in 2028. The high demand for copper is expected to increase significantly in 2024, and this positive trend is expected to continue in 2025. To meet increasing copper demand, it is anticipated that the copper supply will undergo expansion in the coming years, which may cause a slight fluctuation after 2025. However, the expectation is that the increased scale of copper supply will be less than that of demand, indicating that the copper price will continue to increase during the subsequent years. Moreover, under the global accelerated transformation to the green economy, global demand for copper is expected to rise steadily and lead to a long-term structural gap between demand and supply, which will stimulate the recovery of the global copper price.

---

## INDUSTRY OVERVIEW

---

### OVERVIEW OF INDUSTRIES RELATED TO OTHER MINERAL RESOURCES AND RESOURCES AND RECYCLING BUSINESSES

#### Rare Earth

Rare earth metals are usually soft, ductile, and malleable, and are particularly reactive in powder form at high temperatures. Rare earths are relatively abundant in the Earth's crust, but minable concentrations are less common than for most other mineral commodities. In 2023, the global Reserves of rare earths amounted to 3,537.0 billion oz, and was mainly distributed in countries such as China, Vietnam, and Brazil. Among them, China has the highest proportion of rare earths Reserves in the world, totaling 1,414.8 million oz. China adheres to a principle of demand-driven allocation for rare earths and strictly controls the supply side of rare earths. The ongoing deepening of supply-side reforms is aimed at accelerating the integration of rare earth resources, promoting relative stability of product prices, and ensuring the safety and continuity of the supply chain.

#### Other Non-ferrous Metals

- *Zinc*

Zinc has good corrosion resistance, ductility, and flowability. Zinc mainly exists in the form of sulphides, and the main zinc containing mineral is sphalerite. In 2023, the global Reserves of zinc amounted to 7,074.0 million oz, and was mainly distributed in countries such as Australia, China, and Russia. Among them, Australia has the highest proportion of zinc Reserves in the world, totaling 2,057.9 million oz.

- *Lead*

Lead has good ductility and corrosion resistance, making it easy to make excellent alloys with other metals. Lead is mainly hidden in galena, a sulphide in the crust. In 2023, the global Reserves of lead amounted to 3,054.7 million oz, and was mainly distributed in countries such as Australia, China, and Russia. Among them, Australia has the highest proportion of lead Reserves in the world, totaling 1,125.4 million oz.

- *Molybdenum*

Molybdenum occurs as the principal metal sulphide in large low-grade porphyry molybdenum deposits and as an associated metal sulphide in low-grade porphyry copper deposits. It is a silver-white metal, with a hard texture, high melting point, and relatively high thermal conductivity. In 2023, the global Reserves of molybdenum amounted to 482,315.1 million oz, mainly distributed in countries such as China, the United States, and Peru. China has the highest proportion of molybdenum Reserves in the world, totaling 186,495.2 million oz.

---

## INDUSTRY OVERVIEW

---

### **Resources Recycling Business**

Our Company's resource recycling business can be classified under urban mining. Urban mining refers to the process of recycling various waste materials from end-of-life products and converting them into new raw materials or usable components for further manufacturing processes. This typically includes the recycling and utilisation of scrap vehicles, electronic waste, waste power batteries, and more.

The development and promotion of urban mining allow for the efficient use of raw materials and components derived from recycled waste, reducing the demand for the production of new materials, which often leads to large volumes of greenhouse gas emissions. Urban mining contributes to achieving carbon reduction goals and improving the ecological environment in the long term. The market size of the urban mining industry in China exceeded RMB80 billion in 2023.

---

## REGULATORY OVERVIEW

---

The following sets out a summary of the significant laws and regulations that affect our businesses in the PRC, Laos and Ghana. Information contained below shall not be construed as a comprehensive summary of all the laws and regulations applicable to us.

### **LAWS AND REGULATIONS RELATED TO OUR PRC OPERATIONS**

#### **Overview**

Our business operations are subject to supervision and regulation by the PRC government. This section sets out a summary of the major laws, regulations and policies which we are subject to.

#### **Principal Laws and Regulations Related to our Businesses in the PRC**

##### *Industry Classification*

According to the Industry Classification of the National Economy (GB/T4754-2017) jointly issued by the General Administration of Quality Supervision, Inspection and Quarantine of the People's Republic of China and the Standardization Administration of the People's Republic of China on June 30, 2017, the industry in which Chifeng Gold is engaged falls within "B0911 copper mining and processing" and "B0921 gold mining and processing" under "B09 non-ferrous metal mining and processing industry".

##### *Laws and Regulations relating to Mineral Resources*

According to the Mineral Resources Law of the People's Republic of China (中華人民共和國礦產資源法) which was promulgated by the Standing Committee of the National People's Congress (the "SCNPC") on March 19, 1986 and revised on August 27, 2009, all Mineral Resources of the PRC are owned by the State. Anyone who wishes to explore or mine Mineral Resources shall separately make an application according to law and shall register after obtaining the right of exploration or mining upon approval, with the exception of the mining enterprises that have, in accordance with the law, applied for and obtained the right of mining and are conducting exploration within the designated mining area for the purpose of their own production. In parallel with the exploitation of the main minerals, the minerals with industrial value that occur in association or as by-products of the ordinary mineral production should be subject to unified planning, comprehensive mining, and integrated utilization to prevent waste.

Administrative Measures for the Block Registration of Mineral Resource Prospecting (礦產資源勘查區塊登記管理辦法) was promulgated by the State Council on February 12, 1998 and latest revised on July 29, 2014. The State implements a unified registration management system for Mineral Resources exploration. Exploration of Mineral Resources listed in the Measures can only be launched with the approval and registration by the competent department of geology and Mineral Resources with the exploration licenses issued.

---

## REGULATORY OVERVIEW

---

### *Rights and Obligations of Holders of Exploration Permits*

When the prospecting right owner conducts an exploration during the validity period of the exploration permit and finds a complex type of deposit that meets the State's requirements about the mineral that can be mined while being explored, it may apply for mining and go through the mining registration formalities after approval by the registration management authority.

Administrative Measures for the Registration of Mineral Resources Exploitation (礦產資源開採登記管理辦法) was promulgated by the State Council on February 12, 1998 and latest revised on July 29, 2014. Mining Mineral Resources listed in the Measures must be examined and registered by the competent department of geology and Mineral Resources, and a mining right license must be issued. The valid period of the exploitation licenses shall be determined according to the construction scale of the mines. The maximum validity period of a mining permit for a big-scale mine, medium-scale mine and small-scale mine shall be 30 years, 20 years and 10 years, respectively.

Interim Measures on the Supervision and Control of Mineral Resources (礦產資源監督管理暫行辦法) was promulgated by the State Council on April 29, 1987 and came into effect on the same day. To develop and utilize Mineral Resources, mining enterprises shall strengthen mining management, select reasonable mining and processing methods, promote advanced technologies and improve the utilisation of Mineral Resources.

Circular on the Issuance of Measures and Technical Guidelines for Determining the Value of Mineral Products Extracted by Illegal Mining and the Value of Damage to Mineral Resources Caused by Illegal Mining or Destructive Mining (關於印發非法採礦採出礦產品價值、非法採礦或破壞性採礦造成礦產資源破壞價值認定辦法及技術指南的通知) was promulgated by the Ministry of Natural Resources on December 9, 2024 and became effective on the same day. The value of mineral products extracted by illegal mining and the value of Mineral Resources destroyed by illegal or destructive mining shall be accounted for in accordance with specific procedural norms and criminal acts of destruction of Mineral Resources shall be punished in accordance with the law.

Measures for the Administration of Bidding, Auction and Listing Concerning Exploration Rights and Mining Right (for Trial Implementation) (探礦權採礦權招標拍賣掛牌管理辦法(試行)) was promulgated by the former Ministry of Land and Resources on June 11, 2003 and came into effect on August 1, 2003. The types of exploration rights and mining rights specified in this Measures shall be granted by the government at or above the county level through bidding, auction and listing. The Ministry of Land and Resources shall be responsible for the supervision and administration of the bidding, auction and listing activities of exploration rights and mining rights nationwide.

---

## REGULATORY OVERVIEW

---

According to the Administrative Measures for the Transfer of Exploration Rights and Mining Rights (探礦權採礦權轉讓管理辦法) which was promulgated by the State Council on February 12, 1998 and latest revised on July 29, 2014, and the Provisions on Issues Concerning the Examination and Approval of the Transfer of Exploration Rights and Mining Rights (探礦權採礦權轉讓審批有關問題的規定) which was promulgated by the former State Land Administration on December 14, 1998 and became effective on the same day, the transfer of exploration rights and mining rights shall meet the conditions stipulated in these Measures. The transferee of exploration rights or mining rights shall meet the conditions for applicants of exploration rights or mining rights stipulated in the Administrative Measures for the Block Registration of Mineral Resource Prospecting (礦產資源勘查區塊登記管理辦法) or Administrative Measures for the Registration of Mineral Resources Exploitation (礦產資源開採登記管理辦法). The transfer of exploration rights and mining rights based on state-funded exploration must be assessed. The cost of exploration right and mining right based on state-funded exploration, shall be assessed by the agencies with mining right assessment qualification. The assessment report shall be filed with the registration and administration authority of exploration right and mining right. If a mining enterprise or individual transfers part of the exploration area under an exploration right or part of the mining area under a mining right, they must complete the alteration and division registration in respect of such exploration right or mining right after obtaining the prior approval of the original registration authority, and submit the application for transfer to the transfer approval authority.

### *Laws and Regulations relating to Production Safety*

The PRC government has formulated a relatively comprehensive set of laws and regulations on productions safety, including the Law on Work Safety of the PRC (中華人民共和國安全生產法) (coming into effect on November 1, 2002 and revised on September 1, 2021), the Interim Measures for the Supervision and Administration of ‘Three Simultaneities’ for Safety Facilities of Construction Projects (建設項目安全設施“三同時”監督管理辦法) (coming into effect on February 1, 2011 and revised on May 1, 2015), the Law on Mine Safety of the PRC (中華人民共和國礦山安全法) (coming into effect on May 1, 1993 and revised on August 27, 2009) as well as the Implementation Rules for the Mine Safety Law of the People’s Republic of China (中華人民共和國礦山安全法實施條例) (coming into effect on October 30, 1996) promulgated by the State Council, covering Mineral Resources exploration, mining and mine construction. The State Administration of Work Safety (國家安全生產監督總局) is responsible for the overall supervision and management of the safety production nationwide, while the departments in charge of safety production at the county level or above are responsible for the overall supervision and management of the safety production within their own jurisdictions.

Regulations on Work Safety Licenses (安全生產許可證條例) was promulgated by the State Council on January 13, 2004 and latest revised on July 29, 2014. The State applies the work safety licensing system to enterprises engaged in mining, construction, and the production of dangerous chemicals, fireworks and crackers, and civil use explosive material. No enterprise may engage in production activities without a work safety license.

---

## REGULATORY OVERVIEW

---

The PRC government implements a licensing system for production safety of mining enterprises under the Regulations on Work Safety Permits (coming into effect on January 13, 2004 and revised on July 29, 2014). No mining enterprise may engage in production activities without holding a valid production safety license. Enterprises which fail to fulfill the production safety conditions may not carry out any production activity. Mining enterprises which have obtained the production safety licenses shall not lower their production safety standards, and shall be subject to the supervision and inspection by the licensing authorities from time to time. If the licensing authorities are of the opinion that the mining enterprises do not fulfill the production safety requirements, the production safety licenses may be withheld or revoked.

Pursuant to the relevant requirements of the Law on Mine Safety of the PRC (中華人民共和國礦山安全法), the Regulations on Reporting, Investigation and Treatment of Work Safety Accidents (生產安全事故報告和調查處理條例) (State Council Order No. 493), the Notice on Regulating the Inspection for Acceptance upon Completion of Safety Facilities in Metal and Non-metal Mine Construction Projects (關於規範金屬非金屬礦山建設項目安全設施竣工驗收工作的通知) issued by the State Administration of Work Safety (SAWS — [2016] No. 14), the authorities in charge of mining enterprises under the people's governments at or above the county level shall exercise the following functions and responsibilities with respect to the control of safety work in mines: (i) to inspect the implementation of laws and regulations on safety in mines by mining enterprises; (ii) to examine and approve designs of safety facilities in mine construction projects; (iii) to supervise the inspection for acceptance upon completion of safety facilities in mine construction projects; (iv) to manage the training of managers of mines and personnel in charge of safety work in mining enterprises; (v) to investigate and handle work safety accidents at mines; and (vi) other controlling functions and responsibilities provided for in laws and administrative rules and regulations.

Upon occurrence of accidents, mining enterprises shall immediately take measures to rescue their workers and report any casualty to the relevant authority. In the event of a general mine accident, the mining enterprise shall be responsible for investigating and handling the case. In the event of a fatal accident, the government, the relevant authority, the labor union and the mining enterprise shall conduct investigation and handle the case together. In addition, mining enterprise shall pay compensation to any staff who was injured or died in the accident in accordance with the national requirements. Such mining enterprise may only resume production after the relevant danger at the scene has been eliminated.

Pursuant to Measures on the Implementation of Work Safety Permit for Non-Coal Mining Enterprises (非煤礦礦山企業安全生產許可證實施辦法) (coming into effect on May 17, 2004 and revised on July 1, 2015), non-coal mining enterprises must obtain the production safety permit and are prohibited from engaging in any production activities without obtaining the permit.

---

## REGULATORY OVERVIEW

---

Pursuant to the Law of the PRC on the Prevention and Control of Occupational Diseases (中華人民共和國職業病防治法), which was promulgated on October 27, 2001 and latest amended on December 29, 2018, and Measures for the Declaration of Projects with Occupational Hazards (職業病危害項目申報辦法), which was promulgated on April 27, 2012 and became effective on June 1, 2012, the facilities for the prevention and control of occupational diseases of a construction project must be designed, constructed and put into production and be used with the principal project at the same time. Besides, where there are occupational disease hazard factors listed in the catalogue of occupational diseases in the work site, production entities shall truthfully declare the hazardous project to the local health administrative department in a timely manner and be subject to their supervision.

### *Laws and Regulations relating to Environmental Protection*

The PRC laws and regulations relating to environmental protection mainly include: Environmental Protection Law of the People's Republic of China (中華人民共和國環境保護法) (revised on April 24, 2014 and implemented on January 1, 2015), Water Pollution Prevention and Control Law of the People's Republic of China (中華人民共和國水污染防治法) (promulgated on June 27, 2017 and implemented on January 1, 2018), Atmospheric Pollution Prevention and Control Law of the People's Republic of China (中華人民共和國大氣污染防治法) (revised on October 26, 2018 and became effective on the same day), Law of the People's Republic of China on the Prevention and Control of Environment Pollution Caused by Solid Wastes (中華人民共和國固體廢物污染環境防治法) (revised on April 29, 2020 and implemented on September 1, 2020) and Implementation Regulation on the Environmental Protection Tax Law of the People's Republic of China (中華人民共和國環境保護稅法實施條例) (promulgated on December 25, 2017 and implemented on January 1, 2018).

Pursuant to the aforesaid laws and regulations, enterprises that discharge and dispose of toxic and dangerous substances such as waste water, waste gas and solid waste must comply with the national and local standards of use, and shall declare to and register with the relevant environmental protection administration authorities and pay pollution discharge fees as required depending on the circumstances.

Law of the People's Republic of China on Environmental Impact Assessment (中華人民共和國環境影響評價法) was promulgated by the SCNPC on October 28, 2002 and latest revised on December 29, 2018. The State implements a classification-based management on environmental impact assessment of construction projects according to the impact of the construction projects on the environment. Construction entity shall prepare the environmental impact report or environmental impact statement or fill out the environmental impact registration form.

---

## REGULATORY OVERVIEW

---

Regulations on the Administration of Construction Project Environmental Protection (建設項目環境保護管理條例) was promulgated by the State Council on November 29, 1998 and latest revised on July 16, 2017. State standards and local standards for the discharge of pollutants must be complied with in building construction projects that generate pollution; requirements for aggregate control of discharge of major pollutants must be met in areas under aggregate control of discharge of major pollutants.

Law of the People's Republic of China on the Prevention and Control of Atmospheric Pollution (中華人民共和國大氣污染防治法) was promulgated by the SCNPC on September 5, 1987 and latest revised on October 26, 2018. Enterprises, public institutions and other producers and operators that build projects having impacts on the atmospheric environment shall conduct environmental impact assessment and disclose the environmental impact assessment documents to the public in accordance with the law; where pollutants are discharged to the atmosphere, the discharging units must comply with the discharging standard for atmospheric pollutants as well as the requirements on control of the total discharging amount of key atmospheric pollutants.

The Law of the People's Republic of China on the Prevention and Control of Environmental Pollution caused by Solid Waste (中華人民共和國固體廢物污染環境防治法) was promulgated by the SCNPC on October 30, 1995, and was latest revised on April 29, 2020 and implemented on September 1, 2020. The construction of projects that produce, store, use, and treat solid wastes shall be performed with environmental impact assessment conducted as legally required and in compliance with the relevant provisions issued by the state concerning the management of environmental protection in respect of construction projects. The facilities for the prevention and control of environmental pollution by solid wastes required to be built as ancillaries determined in the environmental impact assessment document of a construction project shall be designed, built and put into operation at the same time as the main part of the project. A mining enterprise shall adopt scientific mining methods and techniques for mineral separation so as to reduce the production and storage of tailings, coal gangue, waste rock and other mining solid wastes.

The Law of the People's Republic of China on the Prevention and Control of Water Pollution (中華人民共和國水污染防治法) was promulgated by the SCNPC on May 11, 1984 and was latest revised on June 27, 2017. EIA must be carried out according to law for newly-formed projects and reconstruction, or extensions projects that directly or indirectly discharge pollutants to water bodies and other installations on water. The water pollution prevention and control facilities shall meet the requirements of environmental impact assessment documents approved or filed for the record. Enterprises, institutions and other production and operation units directly or indirectly discharging industrial waste water and medical sewage to waters and enterprises, institutions and other production and operation units required to obtain pollutant discharging permit before discharging waste water and sewage must obtain the pollutant discharging permit. When constructing underground facilities or conducting underground exploitation or mining activities, preventive measures must be taken to prevent groundwater pollution.

---

## REGULATORY OVERVIEW

---

The Law of the People's Republic of China on the Prevention and Control of Noise Pollution (中華人民共和國噪聲污染防治法) was promulgated by the SCNPC on December 24, 2021 and will take effect on June 5, 2022. New construction, reconstruction or expansion projects that may cause noise pollution shall be subject to the environmental impact assessment in accordance with the law.

The Regulation on Land Reclamation (土地復墾條例) was promulgated by the State Council and became effective on March 5, 2011, and the Measures for the Implementation of the Regulation on Land Reclamation (土地復墾條例實施辦法) was promulgated on December 27, 2012 and amended on July 24, 2019. A production or construction entity or individual (the "**Land User**") must undertake measures to restore a mining site to its original state within a prescribed time frame if its mining activities result in damage to arable land, grassland or forestry land. The land user is also required to formulate and implement a land rehabilitation plan and to restore the land to a state appropriate for use by rehabilitation if its mining activities result in damage to the land. The land rehabilitation plan shall be approved by the relevant land resources authority. The land user is also required to set aside funds to be used in land rehabilitation. The rehabilitated land is legally required to meet rehabilitation standards and may only be subsequently used upon examination and approval by the land authorities. Any failure to comply with this requirement or failure to restore the mining site to its original state will result in the imposition of fines, rehabilitation fees, rejection of applications for land use rights or rejection of application for new mining permits or renewal, alteration or cancellation of mining permits by the local bureau of natural resources.

### ***Laws, Regulations and Normative Documents relating to Foreign Investment and Foreign Exchange***

The Measures for the Administration of Overseas Investment of Enterprises (企業境外投資管理辦法) were promulgated by the NDRC on December 26, 2017 and came into effect on March 1, 2018. To make outbound investment, any investor shall go through the formalities to have a proposed overseas investment project approved or filed on the record, report relevant information, and cooperate with supervision and inspection. An investor shall, in overseas investment, neither violate the laws and regulations of China nor threaten or damage the national interests and national security of China.

The Notice of the SAFE on Issues Concerning the Foreign Exchange Administration of Overseas Listing (國家外匯管理局關於境外上市外匯管理有關問題的通知) was promulgated by the SAFE on December 26, 2014 and became effective on the same day. SAFE and its branches with foreign exchange authorities supervise, manage and inspect, among other things, the business registration, account opening and use, cross-border payments and capital exchange involved in the overseas listing of domestic companies. A domestic company shall conduct overseas listing registration with Foreign Exchange Bureaus at the place of its incorporation with the relevant materials within 15 working days after the completion of the offering of its overseas listing shares.

---

## REGULATORY OVERVIEW

---

The Circular of the State Administration of Foreign Exchange on Reforming and Regulating Policies on the Control over Foreign Exchange Settlement of Capital Accounts (國家外匯管理局關於改革和規範資本項目結匯管理政策的通知) was promulgated by the State Administration of Foreign Exchange on June 9, 2016 and came into effect on the same day. The foreign exchange receipts under capital accounts of domestic institutions are subject to discretionary settlement policies. That the foreign exchange receipts under capital accounts (including foreign exchange capital, foreign debts, and repatriated funds raised through overseas listing) subject to discretionary settlement as expressly prescribed in the relevant policies may be settled with banks according to the actual need of domestic institutions for business operations has been clearly implemented in relevant policies. Domestic institutions may, at their discretion, settle up to 100% of foreign exchange receipts under capital accounts for the time being. The SAFE may adjust the above proportion in due time according to balance of payments. While being eligible for discretionary settlement of foreign exchange receipts under capital accounts, domestic institutions may also opt to use their foreign exchange receipts according to the payment-based settlement system. A bank shall, in handling each transaction of foreign exchange settlement for a domestic institution according to the principle of payment-based settlement, review the authenticity and compliance of the use of the fund settled in the previous transaction (including discretionary settlement and payment-based settlement) of such institution. The receipts under the capital account shall not be directly or indirectly used for expenditures beyond the business scope of the enterprise or prohibited by the laws and regulations. Except as otherwise provided by laws and regulations, they shall not be directly or indirectly used for securities investment or other investment and wealth management products except for principal-guaranteed products launched by banks; they shall not be used for granting loans to non-affiliated companies (except explicitly approved within business scope); and they shall not be used for building or purchasing real estate not for their own use (except for real estate enterprises).

The Notice by the State Administration of Foreign Exchange to Facilitating Promoting Cross-border Trade and Investment (國家外匯管理局關於進一步促進跨境貿易投資便利化的通知) was promulgated by the State Administration of Foreign Exchange on October 23, 2019 and came into effect on the same day. Foreign-invested enterprises engaged in non-investment business are permitted to settle foreign exchange capital in RMB and make domestic equity investments with such RMB funds according to the law under the condition that the Negative List is not violated and the relevant domestic investment projects are true and compliant.

The Circular on Optimizing Administration of Foreign Exchange to Support the Development of Foreign-related Business (關於優化外匯管理支持涉外業務發展的通知) was promulgated by the State Administration of Foreign Exchange on April 10, 2020 and became effective on the same day. Eligible enterprises are allowed to make domestic payments by using their capital, foreign credits and the income under capital accounts of overseas listing, with no need to provide the evidentiary materials concerning authenticity of such capital for banks in advance, provided that their capital use shall be authentic and in line with provisions, and conform to the prevailing administrative regulations on the use of income under capital accounts. The concerned bank shall conduct spot checking in accordance with the relevant requirements.

---

## REGULATORY OVERVIEW

---

### ***Laws, Regulations and Normative Documents relating to Labor Relations, Social Insurance and Housing Provident Fund***

The Labor Law of the People's Republic of China (中華人民共和國勞動法) was promulgated by the SCNPC on July 5, 1994 and was latest revised on December 29, 2018. An employer shall establish a sound system of employment rules so as to ensure that its workers enjoy the labor rights and perform the employment obligations. Employers must establish comprehensive labor safety and health policies. They must strictly implement national labor safety and health regulations and standards, provide labor safety and health education to workers, prevent accidents at work, and reduce occupational hazards.

The Labor Contract Law of the People's Republic of China (中華人民共和國勞動合同法) (promulgated by the SCNPC on June 29, 2007 and latest revised on July 1, 2013) and the Regulations on the Implementation of the Labor Contract Law of the People's Republic of China (中華人民共和國勞動合同法實施條例) (promulgated by the State Council on September 18, 2008 and came into effect on the same day) stipulate the rights and obligations of the parties to the labor contract, including the conclusion, performance, modification, rescission and termination of the labor contract, etc. Employers must enter into written labor contracts with workers and pay labor remuneration to workers timely and in full amount in accordance with the provisions of the labor contract and national regulations. Employers may terminate labor contracts with workers under certain circumstances and pay economic compensation to workers according to law.

The Social Insurance Law of the People's Republic of China (中華人民共和國社會保險法) was promulgated by the SCNPC on October 28, 2010 and latest revised on December 29, 2018. Employers shall register for social insurance at a local social insurance agency and pay social insurance premiums for workers, including basic endowment insurance premiums, basic medical insurance premiums, work-related injury insurance premiums, unemployment insurance premiums and maternity insurance premiums, etc.

The Regulations on the Administration of Housing Provident Fund (住房公積金管理條例) was promulgated by the State Council on April 3, 1999 and was latest revised on March 24, 2019. The employer shall undertake housing provident fund payment and deposit registrations at the housing provident fund administration center, and open housing provident fund accounts on behalf of its workers. The employer shall pay and deposit housing provident fund for its employees with a rate of not less than 5% of the average monthly salary of the employees concerned in the previous year.

### ***Laws, Regulations and Normative Documents relating to Enterprise Tax***

The Enterprise Income Tax Law of the People's Republic of China (中華人民共和國企業所得稅法) (promulgated by the SCNPC on March 16, 2007 and latest revised on December 29, 2018) and the Regulations on the Implementation of the Enterprise Income Tax Law of the People's Republic of China (中華人民共和國企業所得稅法實施條例) (promulgated by the State Council on December 6, 2007 and latest revised on April 23, 2019), a resident enterprise

---

## REGULATORY OVERVIEW

---

is subject to enterprise income tax for the income derived from both inside and outside the territory of the PRC. The enterprise income tax rate is 25%. Qualified small low-profit enterprises are given the reduced enterprise income tax rate of 20%. High and new technology enterprises which are supported by the State may enjoy a reduced EIT rate of 15%.

The Notice on Issues Concerning the Foreign Income Tax Credit of Enterprises (關於企業境外所得稅收抵免有關問題的通知) was promulgated by the Ministry of Finance and the State Administration of Taxation of the People's Republic of China on December 25, 2009 and became effective on the same day. A resident enterprise may deduct from the taxable amount of incomes of the current period its taxable incomes derived outside China. Where the income received by a resident enterprise from a country (region) that has entered into a tax treaty (or arrangement) with the Chinese government has enjoyed tax exemption or reduction treatment in accordance with the tax laws of the country (region), and the amount of tax exempted or reduced should be deemed that the tax paid is credited against the tax payable in China in accordance with the provisions of the tax treaty, the amount of tax exempted or reduced may be used as the amount of overseas income tax actually paid by the enterprise for tax credit purpose.

### LAWS AND REGULATIONS IN RELATION TO OUR OPERATIONS IN LAOS

#### Legislation on Foreign Investments

The Investment Promotion Law (amended) No. 62/NA dated June 28, 2024 and published in the Lao Official Gazette on December 16, 2024 (the “**Investment Promotion Law**”) is the main legislation on investment in Laos. It defines the forms of investments and procedure for investors to engage in general investment and concession businesses in Laos. This law provides for the incentives, support, and process for investments in the country.

Under the Investment Promotion Law, business activities are classified as:

1. general investments not in the controlled business list;
2. general investments under the controlled business list, defined as businesses that have an impact to the stability of national security, public order, and social and natural environment; or
3. concession investments, which are investments for which an investor is authorized by the Laotian Government in accordance with relevant laws and regulations to develop and operate a business notably involving mining, concession of land, development of special economic zones, exclusive economic zones, electric energy development, airport services, road construction, and technology and communication services. The term of investment in a concession investment depends on the type, size, investment value, conditions, and feasibility study of the

---

## REGULATORY OVERVIEW

---

business in compliance with relevant laws, but shall not exceed fifty years. This investment term may be extended with the approval of the Laotian Government or the Laotian National Assembly or a provincial level assembly, as set out in the relevant law.

The Investment Promotion Law requires an investor in concession business to submit an application for investment license to the Ministry of Planning and Investment (“**MPI**”). The form of incorporation of the project company and the issuance of investment license will also be considered by the MPI for a project in a concession business. The project owner may request for the change of the form of investment. Such request will be subject to the consideration of the MPI.

The Prime Minister’s Decree on the Approval of Controlled Business List and Concession Activity in Lao PDR No. 03/PM dated 10 January 2019 (“**Decree No. 03**”) enumerates the controlled business list and concession list. Mining activities are included in the list as a concession investment.

Under the Investment Promotion Law, a concession investment with total capital of more than one hundred million to five hundred million U.S. dollars must have a registered capital of not less than 5% of the total capital but not less than 20 million U.S. dollars. Registered capital for concession investment shall be clearly expressed in assets, and throughout the investment operation period the asset value shall not be less than the registered capital.

For a project company incorporated for a concession investment, the following minimum paid up registered capital for concession investment must be made within 90 days from the effective date of the concession agreement:

1. three percent (3%) of registered capital for projects with investment value of less than fifty million U.S. dollars;
2. two percent (2%) of registered capital for projects with investment value from fifty million to one hundred million U.S. dollars;
3. one and a half percent (1.5%) of registered capital for projects with investment value from one hundred million to five hundred million U.S. dollars;
4. one percent (1%) of registered capital for projects with investment value of more than five hundred million U.S. dollars.

The remaining amount shall be imported within two years from the date of the concession agreement.

---

## REGULATORY OVERVIEW

---

### **Mineral Law**

The Law on Minerals No. 31/NA dated November 3, 2017 (the “**Mineral Law**”) is the main legislation governing mining development in Laos PDR. It provides for the principles, rules, and regulations relating to managing, monitoring, and inspecting protection, trading, mineral resource and minerals utilization, and the campaign of minerals to make it transparent, efficient, and in order in detection, survey, excavation, and mineral processing, ensuring the protection of health, life, and safety of affected community, workers, and social and environment protection; aiming to develop mineral area under economical plan, green and sustainability, friendly to environment, create opportunities for economic growth, transform to advanced industrialization gradually, contribute to national socio-economic development, improve the livelihoods of Lao people.

The Ministry of Energy and Mines (“**MEM**”) is the primary ministry responsible for the management and monitoring of mineral business activities in Laos.

### ***Mineral Activities***

Activities concerning minerals are as follows:

#### *a. Prospecting*

Mineral prospecting refers to the study of data and information and field work to determine geological conditions of the area and occurrences of mineralization, including evaluation of mineral data aiming to identify feasible areas for exploration. Mineral prospecting shall use advanced equipment to ensure efficient results. Individuals, entities, and organizations are not allowed to operate mineral prospecting without legal approvals.

Prospecting license is issued to certify the right of investors to conduct prospecting activities under an approved plan of the MEM. The application of the prospecting license shall include following documents:

1. Investment license;
2. The report on results of the field data collection;
3. Location defined map of prospecting application;
4. Prospecting fund sources, minimum expenditure and prospecting plans; and
5. Academic and experience qualifications on minerals of officers.

---

## REGULATORY OVERVIEW

---

Prospecting license is valid up to two years extendable once but not more than one year. Conditions on Prospecting license renewal are as follows:

1. Application shall be submitted ninety days before the expiry date of existing license, otherwise, the application is not taken into consideration;
2. Financial obligations, obligations under local administrative authorities, and other obligations under the law shall be implemented;
3. Submit reports on prospecting results and completing least sixty percent of operations under the prospecting plan have been undertaken;
4. Propose plan to continue the prospecting;
5. Rehabilitate areas that have been excavated, drilled such as unnecessary trenches and pits; and
6. Return at least twenty five percent of implemented area with non-economic benefit minerals along with the reports on prospecting operations which include prospecting information, relevant maps, sample inventory location, and analyzed results.

A legal entity can operate one area of mineral prospection which covers maximum of two hundred square kilometers. The applied area must be consistent with concession area management system of the MEM.

*b. Exploring*

Mineral exploration refers to the study and evaluation of geological structures and mineral sources, within the identified areas, that may include geological work, geophysics, drilling, tunneling, trenching, pitting, sampling, analysis and assay and other activities to learn about quantity and grade of any mineral reserves and to assess the Technical-Economic Feasibility Studies for mining. Individuals, entities, and organizations are not allowed to operate mineral exploration and mineral mining without legal approvals.

After completion of prospecting and determining the feasibilities in exploration, the investor shall apply to the MEM for an exploration license within ninety days prior to expiry date of the prospecting license. The application shall include the following documents:

1. Prospecting license and reports on prospection;
2. Fund sources for exploration, minimum expenditure and exploration plans,

---

## REGULATORY OVERVIEW

---

3. Socio-natural environment monitoring, inspecting, and management plans; and
4. Certificates of implementation of financial obligations and other obligations under the law.

For areas that have been prospected and have geologic information, a legal entity can directly apply for exploration.

The MEM considers the application within thirty workdays from the date of receiving the prospecting reports and exploration application.

*c. Technical-Economic Feasibility Studies*

Technical-Economic Feasibility Studies review and evaluate the results from mineral exploration in order to determine the best option for mineral development by comparison in technics, technologies, marketing, investments, and the impacts on social and natural environment.

After the acceptance of the summary report on mineral exploration, the investors shall apply for certificate of Technical-Economic Feasibility Study implementation with the MEM within fifteen workdays from the date of the application.

The term of a Technical-Economic Feasibility Study is up to two years extendable once but not more than one year. After completion of the Technical-Economic Feasibility Study, the licensed investors are able to implement mining under the negotiations and contracts with the Laotian Government.

*d. Mining*

Mining is the extraction of minerals from the surface and underground by any process of excavating, mining, digging, drilling, pumping, blasting, concentrating, removing, and storing of minerals. Individuals, entities, and organizations are not allowed to operate mining without legal approvals.

The investment in mineral mining shall have a mineral development concession contract, mineral license approvals, and mine closure. After receiving the investment certificate and signing the mineral development concession contract, the investor must apply for mining license before the MEM. Under the current Mineral Law, the term of mining license is not over twenty years extendable for ten years each time. The term of the mining license includes inspecting period after mine closure.

In the previous Mining Law No. 04-97/NA dated April 12, 1997, the period of mineral exploitation concession shall not exceed 30 years from the grant of the concession, which may be extended twice, each time for no more than 10 years, as approved by the Laotian Government on a case-to-case basis.

---

## REGULATORY OVERVIEW

---

Conditions for renewal of the mining license are as follows:

1. The application must be submitted twelve months before the expiry date of the mining license;
2. Completed implementation of financial obligations and other obligations under the laws;
3. Compliance with approved mining plans;
4. Plan for the continuation of the implementation of the mining project;
5. Negotiation on conditions of contract, if necessary.

*e. Mineral processing*

Mineral processing is the procedure of extraction of products with economic value from raw minerals by crushing, grinding, separating, washing, refining, separation by machine, grinding, polishing, leaching, flotation, filtering, electrical separation, smelting, storing, and managing the waste products. The investor with mineral processing license has the right to buy and sell, import and export mineral products.

*f. Selling and buying minerals and mineral products*

Selling and buying minerals and mineral products is an agreement between the mining investors with individuals or legal entities, both domestic and foreign, to trade mined minerals and process into products or commodities to supply to domestic and international markets.

Individuals or legal entities with processing license has the right to buy, sell, and import raw materials and semi-finished products to process into products or commodities to supply to domestic and international markets.

*g. Transporting minerals and mineral products*

Transportation of minerals and mineral products refers to the moving of minerals and mineral products from one location to another location domestically or to overseas or from overseas into the domestic market, which must be done in accordance with the Mineral Law and other relevant laws and regulations.

*h. Mine closure*

Mine closure refers to the process of restoration and rehabilitation of the land after the completion of mining activities to hand over the concession area to the Laotian Government.

---

## REGULATORY OVERVIEW

---

After completion of each mining area, the investor must proceed with mine closure according to the mine closure procedures, timetables and evaluations of the expenditures on area rehabilitation, mine closure, and the inspection after mine closure in accordance with the approved mine closure and mining area rehabilitation plans.

The mining and mine closure plans must be continually implemented from the beginning of mining operation and be reviewed and improved every three years. The investors must periodically report the progress of mining area rehabilitation and mine closure to the MEM.

Two years before end of mine closure, the MEM coordinates with the Ministry of Natural Resources and Environment, relevant local administrative authorities and communities in project areas to consult on the utilisation of land, infrastructure, building and others.

After completion of mining area rehabilitation and mine closure, the investors must return the concession area along with infrastructure and other relevant rights to the State. If investors correctly complete all the conditions, the MEM will issue a certificate for mine closure and return of the concession area.

Investors must guaranty the costs of environment rehabilitation and mine closure including the inspecting activities after mine closure by providing a cash guaranty, bonds or other financial instrument from a bank in Laos according to the value stated in the approved mine closure and mining area rehabilitation plans, which is implemented by providing an initial guaranty and annual installments depending on the term of the project.

*i. Transfer of the mining area*

Transfer the mining area is the handing over of the rights on the licensed mining area to the government.

### ***Measures for Violation***

Under the Mineral Law, individuals, legal entities or organizations violating the Mineral Law shall be subject to measures from re-education, warning, disciplinary measures, fines, civil measures, or penal prosecution, depending on the seriousness of the violation.

The Decree Fines and Other Measures against Violators of Laws and Regulations on Minerals No. 373/GOV dated December 1, 2023 enumerates the fines and application of other measures for administrative violations of the mineral legislation that shall be imposed to individuals, legal entities, and organizations involved in mineral activities.

---

## REGULATORY OVERVIEW

---

### Labor Matters

#### *Labor Standards*

The Labor Law (amended) No. 43/NA dated December 24, 2013 (the “**Labor Law**”) sets the labor standards, labor relations, health, safety and welfare conditions for workers in Laos.

This Law sets the hours of work to six days per week and eight hours per day. The hours of work is reduced to not exceeding six hours per day for hazardous occupations, such as work in pits, underground tunnels, underwater or in high elevations, work directly with constantly vibrating equipment, or direct exposure to dangerous materials or chemicals such as explosives. Normal hours of work may also be reduced in cases where danger cannot be prevented or controlled. The limited hours may apply to workers in the infrastructure markets, depending on the work location and conditions. Overtime is also limited to forty-five hours per month or three hours per day, and in no case be for more than four consecutive days, except in case of emergency work such as to combat natural disasters or accident that would cause great damage to the labor unit.

A company may hire needed foreign workers when granted authorization for importation of foreign labor according to the allowed quota from the Ministry of Labor and Social Welfare (“**MLSW**”). Foreign workers need to secure a work permit, work visa, and stay permit. Foreign workers are allowed to remain for a period of twelve months, which can be extended for the same period for up to five years. Management level workers and specialists may be considered specifically for extensions.

The Labor Law provides for instances where employment contracts may be cancelled by mutual agreement or unilaterally by either the employer or employee (without fault) by giving notice for at least thirty (30) days in advance for unskilled or manual labor and forty-five (45) days for skilled or academic employees. The same thirty or forty-five day notice requirements apply in case of a sale or transfer of business, or a change in employer. Contracts may also be cancelled in case of fault of an employee or employer, and in the latter case, the employee may be reinstated or be paid compensation.

The internal regulations of a labor unit, or Rules of Work, are considered as legislation that the employer must devise to implement the Labor Law. The Rules of Work is registered for approval of the Labor Administration Agency and must be written in the Lao language and in case where the labor unit includes foreign labor, translated into the language of the foreign employee.

---

## REGULATORY OVERVIEW

---

### *Social Security*

The Law on Social Security No. 54/NA dated June 27, 2018 (the “**Social Security Law**”) sets out the benefits provided under the National Social Security Fund for health care, maternity, employment injury, occupational disease, invalidity, sickness, pension, death, survivor’s benefit and unemployment. Under this Law, employers are required to contribute 6% and employees contribute 5.5% of employee’s monthly insurable earnings to the social security fund for the payment of social security benefits. Employers are required to register with the Social Security Organization in order to pay the contributions required under this Law.

### *Labor Health and Safety*

The Decree on Labor Safety and Health No. 22/GOV dated February 5, 2019 defines the regulations and measures related to labor safety and health to prevent labor accidents and occupational diseases. The Decree provides the requirement for appropriate personal protective equipment, installation of danger signs and warnings, and safety culture. Employers are required to report labor accidents and occupational diseases to the Labor Management Department. The employer and Social Security Organization bears the cost of treatment, allowance and compensation of workers who suffered from labor accidents and occupational disease.

Larger labor units with 101 to 1,000 employees are required to have a part-time or full-time specialist such as doctor, nurse, sanitation officer and engineer under the Decree on Labor Safety and Health. Under the Labor Law, for labor units in remote areas with 50 or more employees, a medical practitioner must be assigned to the labor unit.

Employees responsible for labor health and safety must have knowledge and undergone training or have a degree or certification from an institute or organization on labor health and safety that is recognized by the Labor Administration Agency of the MLSW.

### **Environment**

#### *Laws and Policies on Environment*

The Environmental Protection Law (amended) No. 53/NA dated June 28, 2024 (the “**Environmental Law**”) is the main legislation that provides the regulations and measures related to environmental management, aiming to provide balance between social and natural environment, efficient and effective use of natural resources, improve the quality of life and health of people, animals, and plants, reduce global warming, and contribute to the national socio-economic development according to a green a sustainable direction.

---

## REGULATORY OVERVIEW

---

The project owner is responsible for the implementation of measures to prevent, minimize, and correct environmental impacts in the implementation of investment projects and activities as well as for reasonable compensation for relocation, restoration, or damages, as may be applicable for the project, as well as the control, correction, and reporting in the event of environmental emergencies.

### *Environmental Impact Assessment*

The Decree on Environmental Impact Assessment No. 389/PMO dated October 20, 2022 (“**EIA Decree**”) details the process for the submission and approval of the Environmental Impact Assessment (“**EIA**”) and Environmental Social Management and Monitoring Plans (“**ESMMP**”). An EIA is defined in the EIA Decree as “a process of studying, surveying, analyzing and evaluating positive and negative impacts on social and natural environment caused by investment projects and activities both in the short and long terms, including setting appropriate methods and measures to protect, avoid, and mitigate those impacts”.

There are two types of EIAs:

- a. Initial Environmental Assessment (“**IEE**”), which is conducted for projects expected to generate low or insignificant environmental social impacts; and
- b. Environmental and Social Impact Assessment (“**ESIA**”) is for activities that are expected to generate significant or adverse environmental and social impacts.

An ESIA report is the result of the studies on the environmental impacts generated by investment projects and activities which will include direct and indirect impacts on living organisms, ecology, and the environment so that measures to prevent, mitigate and remedy the potential environmental impacts can be determined. The ESIA report has to provide clear information and be easy to understand including the methodology and data collection technique that have been applied in the ESIA process.

While contents may differ depending on the type of project, an ESIA must include project descriptions, alternatives, baseline information on the existing environment such as physical, biological, socio-economic, environmental information in the project area and its proximity, cumulative impacts, compensation, resettlement and occupations and restoration of people’s livelihood, health impacts, gender, ethnicity as well as the appropriate methodology and measures to prevent, reduce, and mitigate properly the potential environmental impacts and disasters.

The ESIA Report must be prepared in Lao language, while for a complex project has to be prepared in both Lao and English. For a health risk associated project, the project owner has to prepare a separate health impact assessment report in parallel with the preparation of the ESIA Report.

All mineral operations involving metallic minerals require an ESIA report.

---

## REGULATORY OVERVIEW

---

### *Environmental Certificate*

The Environmental Certificate (“**EC**”) is the document certifying the environmental acceptance of the ESIA and ESMMP for the investment project and activities. The EC that endorses the ESIA has validity for the lifetime of the project but may be subject to either suspension or withdrawal, while the approval of the ESMMP is valid for two to five years depending on the investment project, and subject to renewal. An EC may be suspended if it is found that the investment project violated environmental laws and regulations but with no serious environmental impact, failed to comply with conditions of the EC, failed to comply with financial, environmental or other obligations under laws and regulations, non-implementation of the ESMMP, hidden or concealed or unreliable and non-existing environmental impact information, non-implementation of mitigation measures after receiving notification from natural resources and environment authorities, or project is with significant impacts on people’s health, livelihood, assets, and environment. If the EC is suspended, the project owner has to stop the operations of the investment project. The owner is provided with a timeframe to improve and mitigate the problem causing the suspension.

An EC is withdrawn if the suspension conditions are not implemented, the project owner has made no action on the project 2 years after obtaining the EC, or if there is violation of environmental laws and regulations that cause significant environmental impacts.

### *Environmental Protection Fund*

The project company is required to contribute to the Environmental Protection Fund (“**EPF**”) and the funding obligations under the ESMMP. The EPF is allocated for use in research for environmental protection and green development, mitigation of climate change impacts, etc., pollution prevention and control, development of environmental laws and regulations, environmental studies, capacity building and awareness, environmental management and problem solving, and for the EPF’s administration and investment.

### *Water Law*

The Law on Water and Water Resources No. 23/NA dated May 11, 2017 (the “**Water Law**”) grants rights to individuals, legal entities and incorporated bodies to use water for any objectives provided that such usage is economical, reasonable, and efficient, and does not have major impact on environment, society or nature. The Law on Water and Water Resources classes the use of water into three categories, namely small, medium, and large water usage, and requires that medium and large usage of water shall be subject to the approval of the natural resource and environment sector. The entity involved in activities that uses medium and large amounts of water shall also pay natural resource royalties for the water usage according to the relevant regulation.

---

## REGULATORY OVERVIEW

---

Under this Law, the use of water is considered medium size usage for use of water in mineral manufacturing at 15 to 1,000 cubic meters per day. Water-related activities that are considered large size water usage activities include the use of water in mineral manufacturing exceeding 1,000 cubic meters per day.

### **Taxation**

#### *Income Tax*

The Law on Income Tax No. 67/NA dated June 18, 2019 (the “**Income Tax Law**”) as amended by the Law on the Amendment of Certain Articles of the Laws on Taxation No. 01 dated August 7, 2021 (the “**Tax Amendments Law**”) enumerates the obligations and measures in relation to income taxation.

#### *(1) Corporate Profit Tax Rate*

Corporate Profit Tax rate is 20%, for general businesses and 35% for mineral mining concessions unless otherwise specified in the concession agreement entered into between the Laotian Government and the concessionaire.

#### *(2) Personal Income Tax Rates*

For personal income tax, the progressive tax rate is from 0% to 25% of salaries, wages, overtime payments, allowances, bonuses, and other benefits, in cash or in kind.

#### *(3) Other Relevant Income Tax Rates*

##### *(1) Income tax at the rate of 2% for:*

- Share purchase and transfer
- Construction and maintenance services

##### *(2) Income tax at the rate of 5% for:*

- Gift either in kind or in cash
- Intellectual property
- Consultancy fee

---

## REGULATORY OVERVIEW

---

- (3) Income tax at the rate of 10% for:
- Dividend or other benefit paid to shareholders
  - Leases, such as lease of land, house constructed items, vehicles, machinery, or other assets

Companies doing business in Laos are generally subject to tax based on the Lao tax legislation as enacted at the time.

### *Value Added Tax*

Value added tax (“VAT”) is imposed on various goods and services under the amended Value Added Tax Law No. 48 dated June 20, 2018 (the “VAT Law”), as amended by the Tax Amendments Law and the Decree on the Revision of the Value Added Tax Rate No. 003/PO dated March 19, 2024. Under these legislation, VAT at the standard rate of 10% shall be collected from the following activities:

1. Importation of goods;
2. Supply of goods and services in Lao PDR that are subject to VAT collection;
3. import of minerals and supply of minerals within the country;
4. use of electricity for general electricity consumers, producers, distributors.

Export of goods is imposed VAT at zero (0%) rate. On the other hand, VAT exemption is granted for mineral export and electric power export to a foreign country or to a special economic zone.

VAT exemption is also granted for certain imported goods such as raw materials used in the production of fertilizers and pesticides; materials and machinery for agricultural purposes; raw materials for production and parts for manufacturing for export; materials for production that may not be procured or manufactured in Laos and machineries for use as fixed assets and use directly in manufacturing activities; aircraft and materials for use in air transportation domestically and internationally; fuel oil and other oil for use in the provision of air transportation services; vehicles for specialized operations that is used in the operations for public interests, fire extinguisher truck, maintenance car, television and radio signal car, and other cars of public sector or social organizations.

Provision of certain goods and services within the country are also exempt, such as raw materials, materials for assembling, and parts for manufacturing for export; international transportation; products sold on aircraft providing air transportation services; deposit interest, loan interest, income from money transfers, profit margin from exchange rate and other financial transactions from the operations of a commercial bank or other financial institution

---

## REGULATORY OVERVIEW

---

as authorized Bank of the Lao PDR; return on investment in securities listed in the stock market, provision of securities market services, securities depository services, intermediary services for securities that provide services in the securities sector, and other services in the securities sector; and health, life, and plantation insurance business.

### *Customs Duties*

The Law on Customs No. 04/NA dated December 20, 2011 and Law on Customs (revised on certain articles) No. 57/NA December 24, 2014 (collectively, the “**Customs Law**”) require all types of exported and imported goods to be subjected to customs declaration according to the code of each type of good as prescribed in the International Harmonized System. The Law nevertheless acknowledges that to promote investment and motivate production, certain goods and articles are eligible for reduction or exemption of customs duty and other obligations as provided in the Investment Promotion Law.

The Presidential Decree on the List of Goods and Export Tax Rates No. 001/PO dated August 28, 2023 lists the goods and applicable export tax rates, including for copper (10%) and gold (5%). Nevertheless, Instruction No. 09899/TD dated October 4, 2023 issued by the Tax Department notified that for large-scale mining projects that have a mineral exploration and production agreement with the Laotian Government, the same will be implemented according to such agreement, subject to the negotiation of amendments to implement the Decree No. 001/PO.

## LAWS AND REGULATIONS IN RELATION TO OUR OPERATIONS IN GHANA

**Regulations relating to Minerals and Mining Activities (Constitution, Minerals and Mining Act 2006 (Act 703), Minerals and Mining (Licensing) Regulations 2012 (L.I 2176) and Minerals and Mining-Health, Safety and Technical Regulations, 2012 (L.I 2182), the Minerals and Mining (Explosives) Regulations 2012 (LI 2177) and Minerals and Mining (Local Content and Local Participation Regulations, 2020 (L.I 2431)**

The Government of Ghana through the Ministry of Lands and Natural Resources in conjunction with the regulatory body; the Minerals Commission act on behalf of the Republic of Ghana in all transactions related to minerals. The current legislative, regulatory and contractual framework for mining in Ghana is contained in provisions relating to mining in the 1992 Constitution of Ghana (the “**1992 Constitution**”) and more specifically in the Minerals and Mining Act 2006 (Act 703) as amended, (the “**Mining Act**”) as well as the mining regulations promulgated as subsidiary legislation under the Mining Act (the “**Mining Regulations**”).

The Constitution and the Mining Act establish a domain system of mineral ownership which vests the State with legal ownership of all minerals occurring in their natural state within Ghana’s land and sea territory, regardless of who owns the land upon which the minerals are situated.

---

## REGULATORY OVERVIEW

---

Minerals are defined in the Mining Act to include “any substance in solid or liquid form which occurs naturally in or on the earth or under the seabed formed by or subject to geological process, including building and industrial minerals and “mineral rights” under the Act include reconnaissance license, prospecting licence and mining lease.

The Mining Act and the Mining Regulations set out in great detail the various types of mineral rights that could be granted at each stage of the mining sequence in the form of reconnaissance, license exploration or exploitation license/mining lease, the eligibility criteria for the grant of a specific license and the rights and obligations attached to each license that is granted under the Mining Act.

In broad terms, no qualify for the grant of a mineral right under the Mining Act and the Mining Regulations an applicant must be a Ghanaian registered body corporate established in Ghana under a law in force. Foreign registered companies are therefore not allowed to hold reconnaissance, exploration or mining licences directly within the mining industry, without first being incorporated locally. Prior to making an application, the prospective applicant must conduct an official search on the Cadastral search on the Mineral Title Register kept by the Minerals Commission to ascertain whether the targeted area is unencumbered. Standard application forms would then be obtained from the Minerals Commission, duly completed by the applicant with the requisite supporting documents and submitted to the Minerals Commission for review and processing. The application is evaluated on the basis of the financial and technical capability of the applicant to carry out the mineral activity applied for and applications are treated on a first come first served basis. Successful applications are then recommended to the Minister for Lands and Natural Resources (the “**Sector Minister**”) who would actually issue a licence on behalf of the Government of Ghana.

All agreements granting mineral rights are required to be stamped under the Stamp Duty Act 2005 (Act 689) and registered at the Land Registry in the Region where the land is situated in accordance with the Land Act 2020 (Act 1036) Additionally, unless specifically exempted by parliament, contracts involving the grant of rights to exploit minerals (i.e. mining leases) must be ratified by parliament. Similarly, an assignment, transfer, mortgage or similar dealings in mineral rights also require the prior approval of the sector Minister.

### **Regulations relating to Production of Gold and other Minerals**

Only duly licensed persons under the Mining Act and the Mining Regulations may engage in the production, export, sale or disposal of a mineral including gold. The Mining Regulations set out in detail the application procedures to obtain a licence for the production, export, sale or disposal of minerals.

The holder of a mining lease may apply to the sector Minister to export, refine and sell its mineral produce. Such application must be accompanied with a refining contract with a credible refinery and a sales and marketing agreement with the company that would sell the refined gold. A lessee who is granted a licence to export and sell its gold produce is also required by the terms and conditions of the gold export licence prior to each shipment to

---

## **REGULATORY OVERVIEW**

---

furnish the Minerals Commission with particulars of the quantity and grade of the minerals to be shipped before making any shipment and provide access for a government approved assay laboratory to assay each consignment of gold shipment.

Bank of Ghana (“**BoG**”) Authorisation is also required for export of unprocessed minerals under the Export and Import Act (Act 503). This authorization is compiled with by the completion of BoG Form A2 that must be endorsed by an authorized bank in Ghana.

### **Regulations relating to Labour Matters pursuant to the Constitution, the Labour Act and the 2012 Health, Safety and Technical Regulations**

The Constitution, Labour Act 2003 (Act 651) and subsidiary regulations made since 2007 under the Act regulate all legal issues pertaining to labour matters in Ghana and must be complied with.

Additionally, mining industry specific regulations are set out in the 2012 Health, Safety and Technical Regulations. The regulations provide for the safety of workmen and conditions of employment, maximum working hours for employees as well as the minimum age for employment in a mine. A person shall not be employed in a mine unless that person is at least eighteen years old, and a person shall not work in an underground mine unless that person is at least 21 years old. The regulations provide detailed requirements on the mine environment such as safety of mine workers, mine- risks and how to eliminate or minimize such risks. The regulations also require every mine must employ a duly qualified and competent mine manager who must be certified by the Chief Inspector of Mines. A mine manager must employ a supervisor who is able to communicate effectively with the employees who work under that supervisor.

The manager of a mine is required to ensure that an employee does not undertake any work in the mine unless the fitness and health of that employee has been assessed as sufficient to enable that employee to carry out that work. The health and fitness of employees must also be assessed regularly to determine that each employee is capable of performing his duties assigned to him at all times.

### **Regulations relating to Protection of the Environment**

The Environmental Protection Agency (“**EPA**”) established by the Environmental Protection Agency Act 1994 (Act 490) is responsible for ensuring conservation and protection of the environment. The EPA performs this function through its subsidiary legislation the Environmental Assessment Regulations, 1999 (LI 1652).

Environmental issues relating to mining are regulated by the EPA in accordance with the EPA Act and the regulations made thereunder.

---

## REGULATORY OVERVIEW

---

As far as environmental issues are concerned, the holder of a mineral right must obtain necessary approvals and permits from the EPA before commencing any mining activity or operation. Holders of mineral rights are also required to comply with other applicable regulations made under the Mining Act or other enactments in force such as obtaining a permit from the Forestry Commission where the proposed mining activity falls within a Forest Reserve. With regard to utilisation of water from natural sources for mining purposes or the disturbance of the natural flow of a water body, the holder of a mineral right is required to obtain a water right in the form of license or permit from the Water Resources Commission. Such water rights would permit the mining company to extract the water for mining operations or divert it in furtherance of the mining or ancillary operations.

Some of the tools employed by EPA for protecting the environment and ensuring environmental compliance by the mining companies include the requirement for the performance of an environmental impact assessment (“EIA”) in respect of mining operations; an environmental management plan in respect of active mining operations; and the posting of an environmental bond to meet the cost of reclamation after the mining operation. The EPA requires a full blown EIA to be undertaken as part of any major mining undertakings. The EIA report is presented in a format specified in the regulations. This is published in the media and subjected to a public hearing also to the local community of the propose mining project. By law, at least a third of the panellists to preside over the public hearing must be appointed from within the community within which the mining activity is to be undertaken.

Under the Forestry Regulations, a permit is required from the Forestry Commission where a mining licence or activity falls within a forest reserve.

### **Regulations relating to Foreign Investment**

New entrants into the mining sector who are foreigners are required to register with the Ghana Investment Centre (“GIPC”) established as a body corporate under the Ghana Investment Promotion Centre Act, 2013 (Act 865) (the “GIPC Act”) and satisfy a minimum capital investment requirement of US\$200,000 in cash or kind. Registration with the GIPC provides certain investment guarantees and incentives under the GIPC Act, such as approved immigration quota to employ foreign nationals, free transferability of foreign currency through an authorized dealer bank for payment of dividends to foreign shareholders, foreign debt servicing and remittance of net proceeds from the sale of the registered enterprise.

### **Regulations relating to Foreign Currency**

Under the Mining Act, a lessee or a licensee who earns foreign currency from its mining operations may be permitted by the Bank of Ghana to retain, in a designated account, a portion of the foreign currency earned from the mining operations for use in acquiring spare parts machinery and other inputs required for the mining operations. The Mining Act provides further that the Minister of Finance may permit the holder of a mining lease, where the net earnings from the holder’s mining operations are in foreign currency, to open and retain in an account not less than 25% of the foreign currency earned from the mining operations for the

---

## REGULATORY OVERVIEW

---

acquisition of spare parts, raw materials, and machinery and equipment, debt servicing and dividend payments, remittance in respect of quotas for expatriate personnel, and the transfer of capital in the event of a sale or liquidation of the mining operations. Such retention account must be opened and held in trust by a trustee bank appointed by the lessee or licensee with approval by the Bank of Ghana. A lessee or licensee is further guaranteed free transferability of convertible currency through the Bank of Ghana or, in the case of a net foreign exchange holder, through the trust account.

### **Regulations relating to Taxation of Mining Companies**

#### *Royalties*

Under the section 25 of the Mining Act as amended a licensee holding mining lease restricted mining lease or small scale mining lease is required to pay royalties to the state at the rate and the manner that may be prescribed by regulations made under the Act. The current applicable rate of royalty is 5% of the total revenue derived in respect of all minerals won from the mining operations. The royalty is payable quarterly to the Ghana Revenue Authority.

#### *Other Taxes*

##### *Corporate income tax*

Under the Income Tax Act 2015, as amended, the current corporate income tax rate for a mining company is 35 per cent of net profits. The net profit is determined after deductions of operating costs, allowable capital expenses and investment allowances.

##### *Thin capitalisation restrictions by limitations on debt-to-equity ratio*

Section 71 of the Internal Revenue Act 2000 (Act 592) provides for a maximum 2:1 debt to equity ratio for the purposes of allowing interest expense on inter-company debt to be deductible from taxable income.

Where the inter-company debt to equity ratio exceeds 2:1 such interest expense is not permitted to be deducted from taxable income of a resident company. This 2:1 debt to equity ratio would be applicable to every producing company, unless a higher ratio is negotiated with the government and included in the Stability Agreement or Development Agreement, both of which must be approved by parliament.

##### *Carry-over of tax losses*

Under the Internal Revenue Act, the period for which losses may be carried forward and set off against future corporate profits is up to a maximum period of five years only in the case of a mining business venture.

---

## REGULATORY OVERVIEW

---

For mining companies that had negotiated longer, or unlimited loss carry forward periods in their project investment agreements, as is the case of the thin capitalization ratio, the government has in recent times taken the position that all mining companies must have a level playing field, hence the five-year period contained in the Internal Revenue Act should apply to all mining companies.

Consequently, the government through bilateral negotiations re-negotiated the relevant provisions with the companies that had been granted longer loss carry forward periods.

### *Withholding taxes*

Under the Internal Revenue Act all mining companies unless exempted by specific agreements with the government are required to withhold tax on payments made to third parties, both resident and non-resident in respect of payments for services rendered by such third parties, including management, contractors, sub-contractors and technical service fees, payable to affiliates and non-residents.

The applicable rate of withholding tax varies depending on the nature of the service and when it is payable. The current applicable withholding tax rates are:

- 15% withholding tax on management consulting, technical service and endorsement fees;
- 8% withholding tax on interest payments on foreign debt, including inter-company loans; and
- 8% withholding tax on dividends paid to shareholders.

*Value added tax (“VAT”), national health insurance levy (“NHIL”), Ghana education trust (GET) fund levy (“GET FUND”) and COVID-19 Levy*

Mining companies and their affiliates, or contractors, and subcontractors are not exempted by law from the payment of VAT, NHIL, GET FUND, COVID-19 Levy on goods and services whether procured locally or imported.

However, the existing legal arrangements permit the mining companies and their contractors or subcontractors to pay the VAT as the normal output tax and claim a refund from the VAT Service as input tax. The rates currently applicable are VAT at 15%, NHIL at 2.5%, Get Fund at 2.5% and COVID-19 Levy at 1%. In practice the refund arrangements may not have not been implemented effectively resulting in a significant back-log of various sums due to certain mining companies.

---

## REGULATORY OVERVIEW

---

Mining companies may have been granted specific exemption from payment of VAT and NHIL in their specific mining project development agreements with the Government which were duly approved/ratified by Parliament in accordance with Articles 174 and 268 of the Constitution.

### *Import duties and excise taxes*

The Mining Act currently permits exemption from payment of customs import duties and excise taxes on mining equipment, plant and machinery which are imported for use exclusively for mining operations.

The list of exempted items is contained in the Official Mining List which is settled between the Government agencies (Ghana Revenue Authority, Minerals Commission) on the one hand and the Ghana Chamber of Mines representing the Mining Companies.

### *Capital gains tax*

Under the Internal Revenue Act the capital gains tax rate is 10% payable by any person on gains accruing from the realization of a chargeable asset. Chargeable assets are defined to include buildings, business assets, land, rights, or interest in shares and stocks.

### *Other charges and fees*

Ground rent is payable annually to the owner of the land in respect of which a mineral right is granted. Annual ground rent payable is GH¢15 per square acre. If the land in question is stool land, this rent is paid to the Office of the Administrator of Stool Lands who acts as a public trustee for incomes and revenues due from stool lands.

The Minerals Commission charges annual mineral right fees based on the size of the land holding and various consideration fees for its services relating to its mandate of regulation and management of Ghana's Mineral Resources. These service and the related consideration fees are set out in the 2012 Licensing Regulations LI 2176. The fee rates applicable differ for Ghanaian and foreign controlled companies.

### **Regulations on Hazardous Chemicals: Minerals and Mining (Explosives) Regulations, 2012) (L.I. 2177)**

These Regulations govern the conveyance, storage, possession, manufacture and use of explosives for mining as well as substances used for the manufacture of explosives. The regulations require a permit/license granted by the inspectorate Division of the Minerals Commission to undertake any of such activities relating to manufacturing, purchase, conveyance, storage and use of explosives. The Regulations put the onus of safety of explosives on the manager of a mine. The mine manager is required to submit detailed plans with proposed activities relating to explosives to the Chief Inspector of Mines for approval. The Regulations also set out monitoring and environmental limits for pollution.

---

## REGULATORY OVERVIEW

---

### Regulations on Land and Immovable Property

There are three main categories of land ownership in Ghana;

- (i) Stool/Skin Land which is land owned by various traditional communities bound by kingship ties and which is held in trust for the communities by the communal leaders such as stools or skins. Such land represents the highest proprietary interest known to customary schemes of interest in land and is therefore often referred to as the allodial or absolute title.
- (ii) Family land which is land owned collectively by various traditional family groupings and held in trust for them by the Head of Family.
- (iii) Private/individual land which is land vested in individuals or private entities. This ownership arises mostly because of dispositions of customary land interests through common-law type conveyances under various statutes.

Much of the land upon which minerals are situated in Ghana is not public land which is owned by the State. However, since the State owns and grants mineral rights, the grant of such rights necessarily raises an issue of how to give legal access to the land upon which the mineral is situated.

The Mining Act deals with the issue by providing that a mineral right granted by the sector Minister under the Mining Act is sufficient authority for the holder over the land and entitles the holder to enter the land in respect of which the mineral right is granted, subject to the payment of compensation to the land owner or any occupier of the land who is impacted by the mineral operations.

Consequently, the Minerals and Mining (Compensation and Resettlement) Regulations 2012 (LI 2175) set out clearly the rules for making claims of assessment of compensation or resettlements of persons impacted by mineral operations where necessary.

Thus, the grantee of a mineral right has an automatic legal access and right of entry into the land over which the mineral right has been granted. This dispenses with the necessity of the grantee obtaining the express permission of the landowner even where it is not public land that is involved.

The current legal regime for mining therefore makes no legal provision for the express permission of the landowner to be sought in order to gain access to the land for purposes of mineral operations.

---

## REGULATORY OVERVIEW

---

However, the procedure for accessing applications for the grant of mineral rights requires that notice of an application for a mineral right must be published in the locality to be affected by the grant for a period of 21 days and also in the National Gazette. This is expected to afford landowners and the local community the opportunity to raise any objections they may have to the application.

The automatic access to land over which a mineral right is granted is expressly made subject to the payment of appropriate compensation to the land owner or occupiers of the land for any disturbance or damage caused to their surface rights by the mining activity.

### **Exploration – Rehabilitation and Restoration of Vegetation**

#### ***Surface mining***

The manager of a mine is tasked with preparing and implementing a mine design that is based on sound geotechnical engineering practices and which takes into account: the geology of the mine, assesses the ground stability of the active and proposed workings of the mine, previous occurrences of ground instability and considers as far as is reasonably practicable, the health and safety of workers, and is prepared under the direction of a qualified person.

Dredging: The holder of a mining lease is prohibited from using a dredge in a mining operation unless approved in writing by the Chief Inspector of Mines. A manager is required to ensure that a dredge used at the mine is equipped with adequate and suitable fire-fighting equipment, adequate guard rails to prevent any worker from falling over the edge into the water, among others.

A manager has a duty to ensure that a dredge is equipped with lifesaving equipment that is necessary to preserve the lives and enable the rescue of persons who may fall overboard the dredge.

#### ***Underground mining***

A manager of a mine is required to ensure that where the natural strata is not safe, each working or pumping shaft, and travelling way, airway or working place is securely supported, filled, walled up or otherwise made secure and kept in a safe condition as long as that shaft is in actual use.

---

## REGULATORY OVERVIEW

---

### *Quality of underground mine air: ventilation and dust prevention*

A mine manager is required to ensure that adequate ventilation is supplied to places where persons are travelling or working underground.

Adequate ventilation means that the amount of oxygen in the general body of air should not be less than 19% by volume and the amount of carbon dioxide, carbon monoxide, nitrous fumes, sulphur dioxide and hydrogen sulphide in the general body does not exceed the required percentages, among others.

### **Rehabilitation and Mine Closure**

During the environmental permit application process, where the EPA determines that a mining project requires a reclamation plan, the mining company will be required to post a reclamation bond based on approved work plan for reclamation.

### **Regulations relating to Local Content Requirements for the Mining Industry**

In 2020, new regulations were promulgated under the Minerals and Mining (Local Content and Local Participation) Regulations. The main purpose of the regulations is to expand and deepen Ghanaian participation in the local mining industry. This is to be achieved legally through the use of local expertise, local purchase of specified mining related products and the complete reservation of certain services to Ghanaian citizens or businesses owned by Ghanaian and a monitoring and reporting system to monitor compliance with the regulations.

Under the regulations a holder of a reconnaissance license or prospecting licensee is required to submit the Minerals Commission for approval a localization programme for recruitment and training of Ghanaians. The regulations require that services such as insurance risks, accounting and legal services shall only be performed by firms licensed to practice in Ghana. Administrative penalties are prescribed by the regulations for breaches committed by persons or entities to which the regulations apply.

---

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

---

### OVERVIEW

We are a fast-growing international gold producer principally engaged in mining, processing and sales of gold. The history of our Group operating our current business dates back to December 2012 upon completion of the major asset restructuring of our Company when Jilong Mining became our first subsidiary carrying out mining and ore processing activities in the Jilong Gold Mine in Chifeng, Inner Mongolia Autonomous Region, the PRC.

Over the years, committing to our management concept of “Mutual Prosperity and Development”, we have grown into the largest non-state owned gold producer in the PRC and developed our global presence through acquisition of quality Mineral Resources in Laos and Ghana. As of the Latest Practicable Date, we owned and operated seven gold and polymetallic mines across the world. Our A Shares are listed on the Shanghai Stock Exchange under stock code 600988.

### OUR BUSINESS MILESTONES

The following table sets forth the business milestones of our Group:

<u>Year</u>	<u>Milestone</u>
2012 . . . . .	Our Company acquired Jilong Mining, which operates the Zhuanshanzi Gold Mine, the first mine of our Company, and renamed as “Chifeng Jilong Gold Mining Co., Ltd.”. This represents the formal listing of our current business on the Shanghai Stock Exchange.
2013 . . . . .	Our Group commenced the first expansion of our gold production business through acquisition of Wulong Mining, which operates the Wulong Gold Mine.
2018 . . . . .	Our Company acquired the entire equity interest in Chijin Laos which held a 90% equity interest in LXML, the owner and operator of the Sepon Gold and Copper Mine in Laos. It marked our first success in overseas expansion.
2019 . . . . .	Our Company acquired the entire equity interest in Hanfeng Mining, which operates the Hanfeng Polymetallic Mine. This represents our further expansion into a diversity of Mineral Resources production.
2021 . . . . .	Our Group achieved an exponential growth in respect of its production capacity, doubling the total tonnage of gold resources for three consecutive years from approximately 1.52 tonnes in 2018 to 2.07 tonnes in 2019, to 4.59 tonnes in 2020, and further to 8.10 tonnes in 2021.

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

Year	Milestone
2022 . . . . .	Our Group acquired a majority stake in Golden Star Resources, which held our operations in the Wassa Gold Mine in Ghana. This marked a scalable overseas expansion into operations in Ghana.
2024 . . . . .	LXML celebrated its 20th anniversary of operations, and its celebratory ceremony was attended by the Prime Minister of the Lao People’s Democratic Republic.

### MAJOR CHANGES IN SHAREHOLDING AND SHARE CAPITAL OF OUR COMPANY

#### 1. Promoting for Establishment and Initial Capital Increases

Our Company was initially established on June 22, 1998 by the Initial Shareholders (see below). Our Company had not commenced substantive operations since its establishment and up to April 1999 upon when it acquired from its then controlling shareholder, Jin’an Automobile (as defined below) the assets and facilities required for production of specialized vehicles. Since then, our Company became principally engaged in the research, development, production and sales of special vehicles and automotive parts, and in particular, armored cash-in-transit vehicles. On July 17, 2000 and August 23, 2000, respectively upon approval from the Guangzhou City Commission for Restructuring the Economic System (廣州市經濟體制改革委員會) and the Guangzhou City Administration for Industry and Commerce (廣州市工商行政管理局), our Company was converted into a joint stock company with a registered share capital of RMB45,860,000, whereby the audited net assets of approximately RMB45,860,000 of our Company were converted at a rate of 1:1 into 45,860,000 Shares of a par value of RMB1.00 each. The shareholding structure of our Company immediately upon completion of the conversion was as follows:

Names of the Initial Shareholders	Committed capital contribution	Percentage of shareholding
	<i>RMB</i>	
Guangdong Jin’an Automobile Industrial Engineering Company Limited (廣東省金安汽車工業製造有限公司) (“ <b>Jin’an Automobile</b> ”) <sup>(1)</sup> . . . . .	27,516,000	60.00%
Huang Yizhen (黃乙珍) <sup>(1)</sup> . . . . .	17,380,940	37.90%
Yang Wenjiang (楊文江) <sup>(1)</sup> . . . . .	458,600	1.00%
Yang Wenying (楊文英) <sup>(1)</sup> . . . . .	458,600	1.00%
Yang Jinpeng (楊金朋) <sup>(1)</sup> . . . . .	45,860	0.10%
<b>Total</b> . . . . .	<b><u>45,860,000</u></b>	<b><u>100.00%</u></b>

---

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

---

*Note:*

- (1) To the best knowledge of our Directors having made all reasonable enquiries, they were all Independent Third Parties as of the Latest Practicable Date. These shareholders are collectively referred to as the “**Initial Shareholders**”.

Upon resolutions at the general meetings of our Company on March 31, 2001 and March 8, 2002, our Company increased its registered share capital to RMB50,446,000 and then to RMB65,579,800 pursuant to bonus issues on the basis of one and three new Shares for every ten existing Shares held by the above Shareholders by way of conversion of capital reserve, respectively. Upon completion of the bonus issues on April 29, 2002 and May 28, 2002 respectively, the shareholding percentage of the above Shareholders remain unchanged.

### 2. A Shares Offering and Listing on Shanghai Stock Exchange in April 2004

As approved by the CSRC, our Company completed the initial public offering of the A Shares, which were issued at an offer price of RMB9.08 per A Share, upon which our A Shares became listed on the Shanghai Stock Exchange under stock code 600988 on April 14, 2004. Upon completion of the A Shares offering, the registered share capital of our Company was increased to RMB90,579,800. Upon listing on the Shanghai Stock Exchange, our Company’s principal business remained the production and sales of armored cash-in-transit vehicles and other specialized vehicles.

The shareholding structure of our Company immediately after the A Shares offering was as follows:

<u>Names of the Shareholders</u>	<u>Number of A Shares Held</u>	<u>Percentage of Shareholding</u>
Jinan Automobile . . . . .	39,347,880	43.44%
Huang Yizhen . . . . .	24,854,744	27.44%
Yang Wenjiang . . . . .	655,798	0.72%
Yang Wenying . . . . .	655,798	0.72%
Yang Jinpeng . . . . .	65,580	0.07%
Public A Shareholders . . . . .	<u>25,000,000</u>	<u>27.60%</u>
<b>Total</b> . . . . .	<b><u>90,579,800</u></b>	<b><u>100.00%</u></b>

*Note:* The shareholding percentage figures above does not add up to 100.00% due to rounding of decimal places.

---

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

---

As of the Latest Practicable Date, our Company had not received any notice from the Shanghai Stock Exchange alleging any material non-compliance incidents on the part of our Company. As advised by our PRC Legal Advisor, our Directors confirm that our Group had been in compliance with the applicable listing rules of the SSE and the applicable securities laws and regulations in all material respects since our A Share restructuring and listing on the SSE to the Latest Practicable Date and to the best knowledge of our Directors after having made all reasonable inquiries, there is no matter that should be brought to the attention of the investors and the Hong Kong Stock Exchange in relation to our compliance record on the Shanghai Stock Exchange. Based on the due diligence conducted by the Sole Sponsor including but not limited to the review of the legal opinion issued by our PRC Legal Advisor and confirmations from our Company, nothing has come to the attention of the Sole Sponsor that would cause the Sole Sponsor to reasonably doubt the aforementioned view of our PRC Legal Advisor.

### 3. Reform of Non-tradeable Shares in April 2007

Pursuant to the Administrative Measures on the Reform of Non-tradeable Shares of Listed Companies Companies (上市公司股權分置改革管理辦法) promulgated by the CSRC on September 4, 2005, companies listed on a domestic stock exchange in the PRC are required to eliminate the trading restrictions on their non-tradeable shares through an arrangement that seeks to balance the interests of holders of non-tradeable shares with those of holders of tradeable shares. In accordance with such measures, holders of more than two-thirds of a listed company's non-tradeable shares shall have the power to propose and then negotiate a conversion scheme with holders of tradeable shares. The conversion scheme is then subject to the approval of two-thirds majority of the tradeable shares participating in the vote and two-thirds majority of all the shares participating in the vote.

On March 30, 2007, our Company resolved at a general meeting to carry out a share reform pursuant to which our Company issued to each shareholder 3.6232 new Shares for every 10 Shares held by the holders of tradeable Shares (meaning the public A Shareholders referred to above), and the shares held by the non-tradeable Shareholders (meaning the Initial Shareholders) became tradeable. Immediately before the reform, the share capital of our Company comprised 65,579,800 non-tradeable Shares held by the Initial Shareholders and 25,000,000 tradeable Shares held by the public A Shareholders.

Immediately after the completion of the reform upon the approval from the Shanghai Stock Exchange on April 18, 2007, the share capital of our Company comprised a total of 99,637,800 A Shares, of which 65,579,800 A Shares held by the Initial Shareholders were subject to certain trading restrictions, namely that the Initial Shareholders agreed not to sell or transfer any of their shares in our Company within 12 months from the completion of the reform (the "**Lock-up Period**"), and each of Jin'an Automobile and Huang Yizhen further agreed that the proportion of A shares sold by them would not exceed 5% and 10% of the total share capital of our Company for the 12 and 24 months from the expiry of the Lock-up Period, respectively. The remaining 34,058,000 A Shares were freely tradeable A Shares.

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

The shareholding structure of our Company immediately after the non-tradeable share reform was as follows:

Names of the Shareholders	Number of A Shares Held	Percentage of Shareholding
Jinan Automobile . . . . .	39,347,880	39.49%
Huang Yizhen . . . . .	24,854,744	24.95%
Yang Wenjiang . . . . .	655,798	0.66%
Yang Wenyong . . . . .	655,798	0.66%
Yang Jinpeng . . . . .	65,580	0.07%
Public A Shareholders . . . . .	34,058,000	34.18%
<b>Total</b> . . . . .	<b>99,637,800</b>	<b>100.00%</b>

*Note:* The shareholding percentage figures above does not add up to 100.00% due to rounding of decimal places.

#### 4. Change of controlling shareholder in April 2010 and Major Assets Restructuring in December 2012

Owing to the default of bank loans owed by the then controlling shareholder of Jin'an Automobile and the related court petitions, judgements were issued by the Intermediate People's Court of Dongguan City of Guangdong Province, pursuant to which, among others, 28,884,100 Shares held by Jin'an Automobile, accounting for approximately 28.99% of the registered share capital of our Company, were directed to be transferred to Mr. Wu Peiqing (吳培青) ("Mr. Wu"), an Independent Third Party. Accordingly, the controlling shareholder of our Company was changed to Mr. Wu by April 2010. Since then and up to the completion of the Major Asset Restructuring (as defined below), our Company was principally engaged in production and sales of special vehicles (including armored cash-in-transit vehicles), property leasing and commodities trading (the "Original Business").

In light of the poor business and financial performance of our Group whereby our Group had been in net loss position throughout the years from 2008 to 2011, in addition to which our Company had defaulted in various judgment debts leading to court enforcement actions against various assets comprising, among others, vehicles and real properties of our Group. Since April 2010 and up to the completion of the Major Asset Restructuring, our Company was then imposed with a delisting risk warning by the SSE in accordance with its listing rules.

In an attempt to rescue our Group from its then difficult operating conditions, resume its going concern capabilities and provide new growth opportunities to enhance the shareholders' return, on February 23, 2012, upon resolutions by the Board, our Company entered into, among others, a restructuring framework agreement with Mr. Wu and the then equity interest holders of Jilong Mining, namely (i) the late Mr. Zhao Meiguang (趙美光, the late husband of Ms. Li, the "late Mr. Zhao", whereby Ms. Li inherited the Shares from the late Mr. Zhao upon his

---

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

---

passing away in December 2021 pursuant to his will, and the aforesaid transfer of Shares was completed by April 30, 2022); (ii) Ms. Zhao Guixiang (趙桂香); (iii) Ms. Zhao Guiyuan (趙桂媛) (both being the sisters of the late Mr. Zhao); and (iv) five Independent Third Party individuals, pursuant to which our Company agreed to dispose of all its assets comprising the Original Business on a debt-free basis to Dongguan Weiyuan Industrial Group Company Limited (東莞市威遠實業集團有限公司, a company controlled by Mr. Wu who was its legal representative), whereas the then equity interest holders of Jilong Mining agreed to sell their entire equity interest in Jilong Mining to our Company in consideration of our Company issuing an aggregate of 183,664,501 Shares to them at the issue price of RMB8.68 per Share, which was determined on the basis of the average price of A Shares of our Company for 20 trading days preceding the announcement date of the Board resolution, calculated by reference to the aggregate transaction amount for the trading of our A Shares divided by the aggregate trading volume of our A Shares during the above period, and accounted for approximately 50.40% of the enlarged share capital of our Company immediately upon completion of the share issuance (the “**Major Asset Restructuring**”).

Following the resolutions at the general meeting of our Company on April 5, 2012 and the approvals from the CSRC issued on November 23, 2012, the Major Asset Restructuring was completed on November 28, 2012. Immediately upon completion of the Major Asset Restructuring, the registered share capital of our Company increased to RMB283,302,301 divided in to 283,302,301 A Shares and the late Mr. Zhao became the then controlling Shareholder with approximately a 37.44% shareholding interest in our Company. Our Company was renamed as “Chifeng Jilong Gold Mining Co., Ltd.” on December 24, 2012.

### **5. Capital increase in April 2014 and acquisition of Chenzhou Xiongfeng by way of non-public issuance of A Shares in January 2015**

Upon approval at the general meeting of our Company on April 28, 2014, our Company increased our registered share capital to RMB566,604,602 divided into 566,604,602 A Shares by way of a bonus issue on the basis of 10 new A Shares for every ten existing A Shares held by the Shareholders whose name appear on the register of members of our Company on December 31, 2013 by way of conversion of capital reserve.

On August 8, 2014, upon resolutions by the Board, our Company entered into, among others, a framework agreement dated August 8, 2014 and an acquisition agreement dated September 29, 2014 with 30 then Independent Third Party shareholders of Chenzhou Xiongfeng, pursuant to which our Company agreed to acquire the entire equity interest in Chenzhou Xiongfeng from those shareholders at a consideration of RMB905.8 million, which was determined with reference to the appraised value by an independent valuer of the entire equity interest of Chenzhou Xiongfeng as of March 31, 2014 by way of the income approach. 90% of the consideration was satisfied by way of issuance of an aggregate of 114,016,786 A Shares to those 30 sellers of the equity interest of Chenzhou Xiongfeng at the issue price of RMB7.15 per Share, which was determined on the basis of the average price of A Shares of our Company for 20 trading days preceding the announcement date of the Board resolution, calculated by reference to the aggregate transaction amount for the trading of our A Shares

---

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

---

divided by the aggregate trading volume of our A Shares during the above period, as adjusted by our Company's capital increase in April 2014 as mentioned above (the "**Adjusted 20 Trading Day Average Price**"), and the remaining 10% of the consideration was satisfied by way of cash payment. Alongside with the above our Company would conduct a non-public issuance to no more than 10 specified investors for fund raising of no more than 25% of the total consideration of the acquisition transaction, representing an issuance of no more than 46,883,500 A Shares at an issue price of RMB6.44 per Share, which was determined at not less than 90% of the Adjusted 20 Trading Day Average Price in compliance with the requirements under the Administrative Measures for the Issuance of Securities by Listed Companies and the Implementation Rules for the Non-public Issuance of Stocks by Listed Companies (collectively the "**Issuance Regulations**").

Upon resolutions at the general meeting of our Company on October 23, 2014 and the approval from the CSRC issued on January 28, 2015, the acquisition was completed on February 5, 2015, upon which the registered share capital of our Company increased to RMB680,621,388 divided into 680,621,388 A Shares. In respect of the non-public issuance, the subscription applications from two institutional investors, being Independent Third Parties, were accepted for an aggregate of 32,569,360 A Shares. Upon completion of the non-public issuance on March 12, 2015, the registered share capital of our Company further increased to RMB713,190,748 divided into 713,190,748 A Shares.

Subsequently, the Board resolved on June 30, 2020 to dispose of the entire equity interest of Chenzhou Xiongfeng by way of public listing-for-sale on the Beijing Stock Exchange at the reserve price of RMB1,598,567,800. Upon expiry of the public listing-for-sale on July 29, 2020, Hanfeng United then held by the late Mr. Zhao, Ms. Li and an Independent Third Party individual as to 71%, 19% and 10% equity interest respectively at the material times, was the sole transferee expressed intention to purchase such equity interest. Our Company, Hanfeng United and the late Mr. Zhao entered into a disposal agreement on July 30, 2020 to effect the above transfer at a consideration of RMB1,598,567,800, which was determined with reference to the appraised value by an independent value of the entire equity interest of Chenzhou Xiongfeng as of April 30, 2020 by way of the income approach. The disposal was completed on December 25, 2020. Based on the publicly available information, 70% and 30% of the equity interest in Chenzhou Xiongfeng was subsequently sold to Dongjiang Environmental Company Limited (a company dually listed on the Main Board of the Hong Kong Stock Exchange (stock code: 895) and the Shenzhen Stock Exchange (stock code: 2672)) and an individual, both being Independent Third Parties, respectively, on September 16, 2021.

### **6. Capital increase in October 2017 and acquisition of Hanfeng Mining by way of non-public issuance of A Shares in January 2020**

Upon approval at the general meeting of our Company on October 11, 2017, our Company increased our registered share capital to RMB1,426,381,496 divided into 1,426,381,496 A Shares by way of a bonus issue on the basis of 10 new A Shares for every ten existing A Shares held by the Shareholders whose name appear on the register of members of our Company on June 30, 2017 by way of conversion of capital reserve.

---

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

---

On April 19, 2019, upon resolutions by the Board, our Company entered into an acquisition agreement with the late Mr. Zhao, Hanfeng Zhongxing and Meng Qingguo (孟慶國), an Independent Third Party individual, which were the then shareholders of Hanfeng Mining, pursuant to which our Company agreed to acquire the entire equity interest in Hanfeng Mining from those shareholders at a consideration of RMB510 million, which was determined with reference to the appraised value by an independent valuer of the entire equity interest of Hanfeng Mining as of December 31, 2018 by way of the asset approach and the income approach. The consideration was satisfied by way of issuance of an aggregate of 128,787,900 A Shares to those sellers of the equity interest in Hanfeng Mining at the issue price of RMB3.96 per Share, which was determined on the basis of not less than 90% of the average price of A Shares for 120 trading days preceding the announcement date of the Board resolution (the “**120 Trading Day Average Price**”), alongside with a non-public issuance of A Shares to no more than 10 specified investors for fund raising of no more than 100% of the total consideration of the acquisition transaction at an issue price of RMB4.69 per Share, which was determined at not less than 90% of the average price of A Shares for 20 trading days preceding the announcement date of the Board resolution in compliance with the requirements under the Issuance Regulations.

Upon resolutions at the general meeting of our Company on May 31, 2019 and the approval from the CSRC issued on October 28, 2019, the acquisition was completed on November 7, 2019, upon which the registered share capital of our Company increased to RMB1,555,169,374 divided into 1,555,169,374 A Shares. In respect of the non-public issuance, the subscription applications from three institutional investors, being Independent Third Parties, were accepted for an aggregate of 108,742,004 A Shares. Upon completion of the non-public issuance on January 19, 2020, the registered share capital of our Company further increased to RMB1,663,911,378 divided into 1,663,911,378 A Shares.

### MAJOR ACQUISITIONS AND DISPOSALS

#### 1. Acquisition of LXML through Chijin Laos

Leveraging on the growing demand for gold as both a financial instrument and strategic commodity resources, the scarcity of quality gold resources in the PRC and national policy support for overseas expansion of domestic companies, on June 21, 2018, upon resolutions by the Board, our Company (as purchaser) entered into a share purchase agreement with Album Investment Private Limited (“**Album Investment**”) (as seller) and MMG Limited (a company listed on the Main Board of the Hong Kong Stock Exchange (stock code: 1208)) (as seller guarantor) (both being Independent Third Parties), pursuant to which our Company agreed to purchase from Album Investment all the issued shares of Chijin Laos (which directly held 90% of the equity interest in LXML, with the remaining 10% equity interest held directly by the Government of Lao PDR (represented by the Ministry of Finance)) at a consideration of US\$275 million, which was determined after arm’s length negotiation among the parties taking into account of, among others, the reserves and resources of the Sepon Gold and Copper Mine, the future extraction and development plan and the appraised value by an independent valuer of the entire equity interest of Chijin Laos as of December 31, 2017 by way of the asset

---

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

---

approach and the income approach. Pursuant to the share purchase agreement, 90% of the consideration shall be paid as of the completion date of the transaction, and the remaining 10% of the consideration shall be paid on the earlier of (i) December 31, 2021; and (ii) 14 days after (x) LXML has ceased producing copper at the Sepon Gold and Copper Mine pursuant to the method of production in place as of the date of the agreement; and (y) LXML has, since the date of the agreement, poured gold from the Sepon Gold and Copper Mine totally in aggregate not less than 1 kg of gold. The transaction was completed on November 30, 2018 with 90% of the consideration paid on the same date, and the remaining 10% of the consideration was settled on July 21, 2022.

Upon completion of the acquisition, LXML became an indirect subsidiary of our Company principally engaged in the operation of our Sepon Gold and Copper Mine. For details, see the section headed “Business — Our Gold Production Business in Laos” in this Prospectus.

### 2. Acquisition of Golden Star Resources by way of a Plan of Arrangement

Pursuant to an arrangement agreement dated October 31, 2021 (the “**Arrangement Agreement**”) entered into between our Company and Golden Star Resources as amended by an amending agreement dated November 24, 2021 and an assignment and assumption agreement dated December 21, 2021 and entered into by the parties below (collectively, the “**Amendment Agreements**”), our Company through Chijin HK and its assignee Kefei Investment (BVI) Limited (the “**Assignee**”), which is wholly owned by China-Africa Fund for Industrial Cooperation Co., Ltd. (中非產能合作基金有限責任公司), agreed to acquire approximately 62% and 38% of the issued and outstanding common shares of Golden Star Resources, a Canadian federally-incorporated company which was then listed on the NYSE American (symbol: GSS), the Toronto Stock Exchange (symbol: GSC) and the Ghana Stock Exchange (symbol: GSR), by way of a statutory plan of arrangement (the “**Plan of Arrangement**”) under section 192 of the Canada Business Corporations Act for US\$3.91 per share in cash, representing a total transaction value of approximately US\$470 million (meaning the total consideration to be paid by our Company and the Assignee collectively) on a fully-diluted, in-the-money basis. In view of the growth potential of the Wassa Gold Mine, the Assignee expressed interest to acquire a minority interest in Golden Star Resources through the Plan of Arrangement after our Company had entered into the Arrangement Agreement for all the issued shares of Golden Star Resources and accordingly, the aforesaid parties entered into the Amendment Agreements pursuant to which our Company assigned to the Assignee the obligation to acquire 38% of such shares under the Plan of Arrangement. The consideration to be paid by our Company (through Chijin HK) under the Plan of Arrangement amounted to US\$291 million, representing the consideration corresponding to the percentage of shareholding interest acquired by our Company.

The consideration was determined after taking into account of, among others, the reserves and resources of the Wassa Gold Mine operated by GSWL, a non-wholly owned subsidiary of Golden Star Resources, the future extraction and development plan, the operating performance of Golden Star Resources and the appraised value by an independent valuer of the entire equity

---

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

---

interest of Golden Star Resources as of June 30, 2021 by way of the income approach. Accordingly, the consideration per share of Golden Star Resources represents a 24.13% premium over the closing price of the shares on the NYSE American as of October 29, 2021.

On November 22, 2021, the Ghanaian Ministry of Lands and Natural Resources issued a no objection letter in relation to our Company becoming the controller of GSWL, via Chijin HK and/or the Assignee. On November 25, 2021, the Ontario Superior Court of Justice (Commercial List) (“**Ontario Court**”) granted an interim order to direct, among others, a special meeting of shareholders of Golden Star Resources to be held on December 30, 2021 to consider the Plan of Arrangement, upon which a special resolution in relation to the Plan of Arrangement was duly passed at the shareholders’ meeting. The Ontario Court issued a final order approving the Plan of Arrangement on January 7, 2022. The acquisition was completed on January 30, 2022 upon receipt of the necessary PRC approvals and alongside with the delisting approvals from the NYSE American, the Toronto Stock Exchange and the Ghana Stock Exchange by January 29, 2022, the shares of Golden Star Resources had been delisted from the NYSE American and the Toronto Stock Exchange on February 7, 2022 and from the Ghana Stock Exchange on February 9, 2022.

The reasons for the delisting of Golden Star Resources include, among others, (i) to permit our Company to make strategic decisions focused on long-term growth and benefits, free from the pressure of market expectations and share price fluctuations of Golden Star Resources as a publicly listed company; and (ii) whilst Golden Star Resources (including its subsidiaries) holds a single mine asset, the administrative burden and costs and management resources associated with maintaining the multiple listing status and compliance with the regulatory requirements does not outweigh the benefits of such. The delisting allows greater flexibility for our Company to manage Golden Star Resources’ business. Our Directors confirm that, to the best of their knowledge having made all reasonable enquiries, during the period when the shares of Golden Star Resources were listed on the NYSE American, the Toronto Stock Exchange and the Ghana Stock Exchange, (i) Golden Star Resources and its directors (a) had been compliant with the applicable laws and regulations in all material respects, and (b) had not been subject to any investigations or disciplinary actions by any regulatory authority nor breached the relevant rules governing the listing of Golden Star Resources in any material respect; and (ii) there is no matter that needs to be brought to the attention of the investors and the Hong Kong Stock Exchange.

Upon completion of the acquisition, GSWL became an indirect subsidiary of our Company principally engaged in the operation of our Wassa Gold Mine. The acquisition is in line with our Company’s strategic positioning for quality overseas Mineral Resources and integration into our Group’s operations. For further details of our Wassa Gold Mine and our Ghana operations, see the section headed “Business — Our Gold Production Business in Ghana” in this Prospectus.

---

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

---

According to Rule 4.05A of the Hong Kong Listing Rules, the acquisition of Golden Star Resources would have been classified at the date of application for our Listing as a major transaction under Chapter 14 of the Hong Kong Listing Rules. For further details of the financial performance of Golden Star Resources, please refer to the history financial information of Golden Star Resources set out in Appendix IB to this Prospectus.

### 3. Acquisitions and disposal of Tietto Minerals

In line with our Company's strategic positioning on investing in quality overseas Mineral Resources operations, on September 9, 2022, Chijin HK entered into a share subscription agreement with Tietto Minerals, a company then listed on the Australian Securities Exchange ("ASX") under the stock code TIE, pursuant to which Chijin HK subscribed for 85,000,000 shares of Tietto Minerals at the issue price of AUD0.58 per share, representing a total consideration of AUD49.3 million. The per share issue price was determined based on the 20-day volume weighted average price of the shares of Tietto Minerals quoted on the ASX. The consideration was settled and the acquisition was completed on September 21, 2022.

Further, on September 13, 2022, Chijin HK obtained a confirmation from the Inner Mongolia Property Rights Exchange Center to purchase 25,190,076 shares of Tietto Minerals through the listing-for sale process for a consideration of RMB50.7 million. The consideration was settled and the acquisition was completed on January 7, 2023. Following the completion of the above acquisitions, together with the 30,665,788 shares already held by Chijin HK, our Group held 140,855,864 shares, accounting for 13.05% of the then shareholding interest in Tietto Minerals.

Tietto Minerals is an Australian-headquartered gold miner operating the Abujar Gold Mine in Côte d'Ivoire which commenced its commercial production on July 6, 2023. The Abujar Gold Mine includes three contiguous exploration tenements, namely Middle, South, and North. In October 2020, the Target received environmental approval and in December 2020 a gold exploitation (mining) licence within the Abujar Middle tenement covering an area of 120.36 km<sup>2</sup>.

The above acquisitions constituted an acquisition of business by our Group pursuant to Rule 4.02A(1) of the Hong Kong Listing Rules as Tietto Minerals was, upon completion of the above acquisitions and prior to being disposed of by our Group, accounted for as an associate of our Group in accordance with the applicable accounting standards. Our Directors have confirmed that none of the applicable percentage ratios as stipulated under the Hong Kong Listing Rules in respect of the above acquisitions, on an aggregated basis, exceeds 25%. Accordingly, the pre-acquisition financial information of Tietto Minerals is not required to be disclosed in the Prospectus under Rule 4.05A of the Hong Kong Listing Rules.

---

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

---

On October 30, 2023 (the “**Offer Announcement Date**”), Zhaojin Capital, which is an indirect wholly owned subsidiary of Zhaojin Mining Industry Company Limited (a company listed on the Main Board of the Hong Kong Stock Exchange (stock code: 1818)) (“**Zhaojin Mining**”, an Independent Third Party), lodged a bidder statement to Tietto Minerals, pursuant to which it made a conditional offer to acquire all the outstanding issued shares of Tietto Minerals at an offer price of AUD0.58 per share (and subsequently increased to AUD0.68 per share on April 15, 2024), representing a premium of approximately 36% and 60% to Tietto Minerals’ last closing price on ASX prior to the Offer Announcement Date respectively, which, based on the public disclosure of Zhaojin Mining, was determined with reference to (i) the operating performance of Tietto Minerals; (ii) Tietto Minerals’ historical trading price and the premia to trading price in recent comparable public takeover transactions; and (iii) Tietto Minerals’ market capitalization of approximately AUD479 million as of October 27, 2023. Our Group accepted Zhaojin Mining’s offer mainly taking into account of the circumstances whereby our Group was holding a minority interest in Tietto Minerals, the offer represented an opportunity for our Group to realize a favorable investment return for cash. This also accords with our Group’s focus on the development and operation of majority-owned Mineral Resources.

Upon resolution by the Board, Chijin HK accepted the above offer and transferred all the 140,855,864 shares of Tietto Minerals to Zhaojin Capital during the offer period at a total consideration of AUD95.782 million by April 29, 2024. Upon completion of the transfer, our Group no longer held any interest in Tietto Minerals. For the year ended December 31, 2022, the investment loss to our Group attributable from Tietto Minerals amounted to RMB3.84 million. For the year ended December 31, 2023 and the nine months ended September 30, 2024, the investment income contributed from Tietto Minerals to our Group amounted to approximately RMB10.13 million and RMB7.35 million, respectively. The gain from disposal of the investment in Tietto Minerals amounted to approximately RMB71.09 million.

The offer was completed on May 14, 2024 upon which Zhaojin Capital obtained 90.72% of the voting rights in Tietto Minerals. Upon the commencement of exercise of the compulsory acquisition rights against the remaining shares of Tietto Minerals on May 24, 2024, the shares of Tietto Minerals ceased trading on the ASX on June 3, 2024 and Tietto Minerals was delisted on June 6, 2024.

#### 4. Acquisition of Xinhenghe Mining

As an expansion of our mineral gold reserves and domestic mining operations, on December 30, 2022, our Company entered into an equity transfer agreement with Liu Xin (劉信), Li Yuanyuan (李媛媛), Wang Zhonghua (王忠華) (an Independent Third Party), Yunnan Yuanhao Mining Co., Ltd. (雲南源浩礦業有限公司) (“**Yuanhao Mining**”, and together with the above sellers, the “**Sellers**”) and Xinhenghe Mining, pursuant to which our Company acquired an aggregate of 51% equity interest in Xinhenghe Mining from the Sellers at a total consideration of RMB61.20 million, which was determined after arm’s length negotiation by the parties taking into account of, among others, the estimate of the resources and the nature and qualities of the minerals in the Jintai Gold Mine held by Jintai Mining, a direct non-wholly

---

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

---

owned subsidiary of Xinhenghe Mining, the future extraction and development plan of the mine and the estimated capital input in relation to the construction project and equipment required for such. For details, please see the paragraph headed “— Our Principal Subsidiaries — Jintai Mining” in this section and the section headed “Business — Our Gold Production Business in China — Overview — Jintai Mining” in this Prospectus.

Immediately upon completion of the acquisition on January 4, 2023, Xinhenghe Mining is held as to 51% equity interest by our Company, with the remaining 30%, 12% and 7% equity interest held Liu Xin, Li Yuanyuan and Yuanhao Mining. Yuanhao Mining disposed of its 7% equity interest in Xinhenghe Mining to Zhu Jiande (朱建德), a director of our subsidiary Jintai Mining, on July 1, 2024.

The financial information of Xinhenghe Mining since the completion of the acquisition has been reflected in our consolidated financial statements for the Track Record Period. Our Directors have confirmed that none of the applicable percentage ratios as stipulated under the Hong Kong Listing Rules in respect of the acquisition of Xinhenghe Mining exceeds 25%. Accordingly, the pre-acquisition financial information of Xinhenghe Mining is not required to be disclosed in this Prospectus under Rule 4.05A of the Hong Kong Listing Rules.

### POST-TRACK RECORD PERIOD ACQUISITION

In light of our overseas expansion and to facilitate our planning of rare earth exploration in Laos, on March 4, 2024, China Investment (Property) Limited (中國投資(置業)有限公司) (“**China Investment**”) (as seller, and an Independent Third Party), China Investment Mining (Laos) Sole Co., Ltd (“**Target Company**”), Chixia Laos (as purchaser) and Chijin Xiawu (as guarantor) entered into an equity transfer agreement, pursuant to which Chixia Laos shall acquire from China Investment 90% of the equity interest in the Target Company, which was wholly owned by China Investment, at a total consideration of US\$18,963,000.

The Target Company holds 86% equity interest in each of its two subsidiaries, namely CIRE Mining and CIREX Mining, and the remaining 14% equity interest in each of CIRE Mining and CIREX Mining is held by DDC Mining Sole Co., Ltd., an Independent Third Party. The Target Company operates the Mengkham Rare Earth Element Project which is still at the construction stage covering the mining area of 50 km<sup>2</sup>, whereby the genetic type of the mineral deposit belongs to the weathering crust ion-adsorbed rare earth deposit. CIRE Mining holds a rare earth mineral processing permit (experimental) and a mineral extraction permit (experimental). CIREX Mining holds a rare earth exploration permit.

Based on the accounts provided by the Target Company, the consolidated total assets of the Target Company amounted to approximately KIP228,001,488,000 as of December 31, 2023 (being the most recent financial year of the Track Record Period of the Target Company). Its consolidated net loss before (or after) tax for the two years ended December 31, 2023 was approximately KIP86,757,701,000 and KIP94,724,614,000, respectively.

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

The consideration for the proposed acquisition was determined after arm's length negotiations among the parties after taking into consideration, among others, the aforementioned status of the rare earth project, the licences obtained by CIRE Mining and CIREX Mining for the project, the future extraction and development plan of the project and the appraised value by an independent valuer of the entire equity interest of the Target Company as of December 31, 2023 by way of asset approach. The consideration shall be satisfied by the internal resources of our Group. The Target Company will be accounted for as a subsidiary of our Company upon completion of the proposed acquisition.

The rare earth project represents an opportunity for our Group to tap into the potential for quality rare earth resources with a relatively higher economic value to be realised through the medium-heavy rare earth ore held by the project. Our Directors are of the view that the proposed acquisition is in our ordinary and usual course of business and on normal commercial terms, and are fair and reasonable and in the interests of our Company and our Shareholders as a whole. As of the Latest Practicable Date, our Company has obtained the approval from the Xiamen Development and Reform Commission, and the parties to the transactions were proceeding with the fulfillment of the other conditions of the transaction including changes of the authorized representative of the Target Group. Accordingly, the proposed acquisition was yet to have been completed.

We have applied to the Hong Kong Stock Exchange, and the Hong Kong Stock Exchange has granted, a waiver from strict compliance with Rules 4.04(2) and 4.04(4)(a) of the Hong Kong Listing Rules in relation to the above proposed acquisition. For more details, see the section headed "Waivers from Strict Compliance with the Hong Kong Listing Rules — The Post-Track Record Period Acquisition" in this Prospectus.

Save as disclosed above in this section, throughout the Track Record Period and as of the Latest Practicable Date, we did not conduct any major acquisitions, disposals or mergers.

### OUR PRINCIPAL SUBSIDIARIES

As of the Latest Practicable Date, we had a total of 10 principal subsidiaries. The following table sets forth the detailed information of these principal subsidiaries as of the Latest Practicable Date:

<u>Names of major subsidiaries</u>	<u>Place of incorporation/ establishment</u>	<u>Date of incorporation/ establishment</u>	<u>Effective equity interest attributable to our Company</u>	<u>Issued share capital/ registered capital/ committed capital</u>	<u>Principal activities</u>
Jilong Mining . . . . .	PRC	October 24, 2005	100%	RMB175,000,000	Gold mining and processing
Huatai Mining . . . . .	PRC	January 8, 2005	100%	RMB20,000,000	Gold mining and processing

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

Names of major subsidiaries	Place of incorporation/ establishment	Date of incorporation/ establishment	Effective equity interest attributable to our Company	Issued share capital/ registered capital/ committed capital	Principal activities
Wulong Mining . . . . .	PRC	April 8, 2008	100%	RMB40,000,000	Gold mining and processing

For further information of our Company’s subsidiaries, please refer to the paragraph headed “— Corporate Structure” in this section below and Note 1 to the Accountants’ Report set out in Appendix IA to this Prospectus.

### **Jilong Mining**

Jilong Mining was established under the laws of the PRC with limited liability on October 24, 2005 with an initial registered capital of RMB20 million, for which the late Mr. Zhao and two Independent Third Party individuals held 51%, 29% and 20% of the equity interest in Jilong Mining, respectively.

Following various rounds of equity interest transfer and capital increase, as of April 25, 2011, the registered capital of Jilong Mining was increased to RMB75 million with (i) the late Mr. Zhao held 57.75% equity interest; (ii) each of Zhao Guixiang and Zhao Guiyuan holding 10.00% equity interest; (iii) each of Liu Yongfeng (劉永峰), Ren Yiguo (任義國), Ma Li (馬力) and Li Xiaohui (李曉輝) holding 5.00% equity interest; and (iv) Meng Qingguo holding 2.25%

---

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

---

equity interest. To the best knowledge of our Directors having been all reasonable enquiries, save for the late Mr. Zhao, Zhao Guixiang and Zhao Guiyuan, all other equity interest holders of Jilong Mining were Independent Third Parties.

On February 23, 2012, our Company entered into a restructuring framework agreement with Mr. Wu and the above equity interest holders of Jilong Mining, pursuant to which, among others, the latter agreed to sell their entire equity interest in Jilong Mining to our Company in consideration of our Company issuing an aggregate of 183,664,500 Shares to them at the issue price of RMB8.68 per Share. See the paragraph headed “— Major Changes in Shareholding and Share Capital of our Company — 4. Change of controlling shareholder in April 2010 and Major Assets Restructuring in November 2012” in this section for details. Jilong Mining became our wholly owned subsidiary upon completion of the Major Assets Restructuring on November 28, 2012.

Upon resolutions at the general meeting of Jilong Mining on August 14, 2017, the registered capital of Jilong Mining was increased to RMB175 million on August 30, 2017. Subsequently, upon resolutions at the general meeting of Jilong Mining on January 29, 2019, our Company entered into an equity transfer agreement with Inner Mongolia Financial Assets Management Company Limited (內蒙古金融資產管理有限公司) (“**IM Financial Asset Management**”) on January 30, 2019, pursuant to which our Company transferred 45% equity interest in Jilong Mining to IM Financial Asset Management at a consideration of RMB300 million, which was determined after arm’s length negotiation between the parties taking into account of the corresponding interest of the net asset value of Jilong Mining. Upon completion of the equity transfer on the same date, Jilong Mining is held as to 55% and 45% of the equity interests by our Company and IM Financial Asset Management, respectively.

Our Company entered into two equity transfer agreements with IM Financial Asset Management on April 23, 2020 and September 21, 2020, pursuant to which our Company repurchased 30% and 15% equity interest from IM Financial Asset Management at a consideration of RMB200 million and RMB100 million, respectively. Upon resolutions at the general meetings of Jilong Mining on April 24, 2020 and September 21, 2020, the equity transfers were completed on April 27, 2020 and September 9, 2020, respectively, and up to the Latest Practicable Date, Jilong Mining was a wholly owned subsidiary of our Company. For details of our operations in Jilong Mining, see the section headed “Business — Our Gold Production Business in China — Jilong Mining” in this Prospectus.

### **Huatai Mining**

Huatai Mining was established under the laws of the PRC with limited liability on January 8, 2005 with an initial registered capital of RMB20 million by way of asset injection with the late Mr. Zhao and Zhao Guixiang holding approximately 90% and 10% of the equity interest in Huatai Mining, respectively.

---

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

---

Upon resolution at the general meeting of Huatai Mining on December 2, 2010, the late Mr. Zhao and Zhao Guixiang entered into an equity transfer agreement with Jilong Mining on December 8, 2010, pursuant to which Jilong Mining acquired from the late Mr. Zhao and Zhao Guixiang 90% and 10% of the equity interest in Huatai Mining at a total consideration of RMB50 million, with reference to, among others, the resources of the Huatai Gold Mine, the historical operating performance and the future extraction and development plan of Huatai Mining. Upon completion of the said transfers on December 10, 2010 and up to the Latest Practicable Date, Huatai Mining was a wholly owned subsidiary of our Company. For details of our operations in Huatai Mining, see the section headed “Business — Our Gold Production Business in China — Huatai Mining” in this Prospectus.

### **Wulong Mining**

Wulong Mining was established under the laws of the PRC with limited liability on April 8, 2008 with a registered capital of RMB40 million. Zhongjin Gold Corp., Ltd. (中金黃金股份有限公司, a company listed on the Shanghai Stock Exchange (stock code: 600489), and an Independent Third Party) (“**Zhongjin Gold**”) was the sole equity interest holder of Wulong Mining upon establishment.

On January 22, 2010, Zhongjin Gold entered into a property right transfer agreement (產權交易合同) with Tangshan Zhonghe Industrial Group Company Limited (唐山中和實業集團有限公司) (“**Tangshan Zhonghe**”), an Independent Third Party, pursuant to which Zhongjin Gold transferred the entire equity interest in Wulong Mining to Tangshan Zhonghe at a consideration of RMB352,691,800. Upon completion of the transfer on March 2, 2010, Tangshan Zhonghe was the sole owner of the equity interest in Wulong Mining.

On April 25, 2013, Jilong Mining entered into an equity transfer agreement with Tangshan Zhonghe, pursuant to which Jilong Mining acquired the entire equity interest in Wulong Mining from Tangshan Zhonghe at a consideration of RMB625,959,200, which was determined after arm’s length negotiation between the parties taking into account of, among others, the historical performance, the resource potential and the future development plan of Wulong Mining and the appraised value by an independent valuer of the entire equity interest of Wulong Mining as of March 31, 2013 by way of asset approach. Upon completion of the transfer on November 11, 2013 and up to the Latest Practicable Date, Wulong Mining was a wholly owned subsidiary of our Company. For details of our operations in Wulong Mining, see the section headed “Business — Our Gold Production Business in China — Wulong Gold Mine” in this Prospectus.

### **Guangyuan Technology**

Guangyuan Technology was established under the laws of the PRC with limited liability on August 6, 2003 with an initial registered capital of RMB1.38 million. Upon establishment, Guangyuan Technology was owned as to 71.00%, 14.50% and 14.50% equity interest by Lu Hong (魯弘), Cheng Xi (程曦) and Zhao Xiaoyan (趙小燕), all being Independent Third Parties.

---

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

---

Upon various equity interest transfers and capital increase, the registered capital of Guangyuan Technology increased to RMB30 million on June 5, 2014 with Liang Xiaoyan (梁曉燕) and Lu Hong holding 95% and 5% equity interest in Guangyuan Technology, respectively.

On July 1, 2015, our Company entered into an equity transfer and capital increase agreement with Liang Xiaoyan and Lu Hong, pursuant to which our Company paid RMB38 million and RMB2 million to Liang Xiaoyan and Lu Hong, respectively, and injected RMB60 million into the registered capital of Guangyuan Technology within which approximately RMB14.776 million was paid as the paid-up capital, and the remaining RMB45.224 million was converted into capital reserve. The consideration was determined upon arm's length negotiations among the parties after taking into account, among others, the historical performance, expected capital needs and future prospect of Guangyuan Technology and the appraised value by an independent valuer of the entire equity interest of Guangyuan Technology as of April 30, 2015 by way of income approach. Upon completion of the said transfer and capital increase on July 23, 2015, the registered capital of Guangyuan Technology was increased to RMB44,776,000 with our Company, Liang Xiaoyan and Lu Hong holding 55.00%, 42.75% and 2.25% equity interest in Guangyuan Technology, respectively. Since then and up to the Latest Practicable Date, Guangyuan Technology was a non-wholly owned subsidiary of our Company. For details of our operations in Guangyuan Technology, see the section headed “Business — Our Other Business — Operations of Resource Recycling Business” in this Prospectus.

### **Jintai Mining**

Jintai Mining was established under the laws of the PRC with limited liability on February 20, 2008 with a registered share capital of RMB5 million. Upon establishment, Jintai Mining was held as to 70% and 30% of the equity interest by Shanghai Fuduo Mining Exploration Technology Company Limited (上海復多礦業勘探科技有限公司, and currently known as Yunnan Fudo Mining Exploration Technology Company Limited (雲南復多礦業勘探科技有限公司)) (“**Fuduo Exploration**”) and Dali Geology and Mining Drawing and Printing Company Limited (大理地礦繪圖印刷有限責任公司) (“**Dali Geology**”), respectively, both being Independent Third Parties.

Upon resolution at the general meeting of Jintai Mining on January 25, 2011, Dali Geology and Yunnan Shengyuan Mining Development Company Limited (雲南生原礦業開發有限公司) (“**Yunnan Shengyuan**”), an Independent Third Party, entered into an equity transfer agreement on March 31, 2011, pursuant to which Dadi Geology transferred 30% equity interest in Jintai Mining to Yunnan Shengyuan at a consideration of RMB1.5 million. Upon completion of the transfer on May 17, 2011, Jintai Mining was held as to 70% and 30% of the equity interest by Foduo Exploration and Yunnan Shengyuan.

---

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

---

Upon resolution at the general meeting of Jintai Mining on September 26, 2018, the registered capital was increased to RMB41.71 million pursuant to which certain debts in the amount of RMB36.71 million owed by Yunnan Shengyuan to Jintai Mining was converted into equity and recognised as the capital contribution by Yunnan Shengyuan into Jintai Gold Mine. Upon completion of the debt-to-equity conversion on the same date, the registered capital of Jintai Mining was increased to RMB41.71 million with Yunnan Shengyuan and Fuduo Exploration holding as to approximately 91.61% and 8.39% equity interest, respectively.

Further, upon resolution at the general meeting of Jintai Mining on February 1, 2021, Xinhenghe Mining entered into an equity transfer agreement with Yunnan Shengyuan on the same date, pursuant to which Xinhenghe Mining acquired 90% of the equity interest in Jintai Mining at a consideration of RMB38.28 million which was determined after arm's length negotiation between the parties taking into account of, among others, the proportion of the registered capital of Jintai Mining. Upon completion of the acquisition on the same date, Jintai Mining was held as to approximately 90%, 8.39% and 1.61% equity interest by Xinhenghe Mining, Fuduo Exploration and Yunnan Shengyuan, respectively. Accordingly, Xinhenghe Mining and Jintai Mining became our Company's subsidiaries. For details of our operations in Jintai Mining, see the section headed "Business — Our Gold Production Business in China — Jintai Gold Mine" in this Prospectus.

### LXML

LXML was established under the laws of Lao PDR as a limited company on September 30, 1993 with an initial registered capital of USD5 million pursuant to the Mineral Exploration and Production Agreement (the "MEPA") entered into between the Government of Lao PDR and CRA Exploration (Laos) Limited, an Independent Third Party, on June 15, 1993. Following various capital increases and equity interests, and upon the exercise its option under MEPA (as amended), the Government of Lao PDR (represented by the Ministry of Finance) held 10% equity interest in LXML, with the remaining 90% equity interest held by Chijin Laos (which was then held by an Independent Third Party), by June 30, 2007. Subsequently, the registered capital of LXML increased to USD169,001,980 as certified by the Ministry of Planning and Investment of Lao PDR and reflected in the amended Investment License (3rd Amendment) No. 025-2021/MPI.IV4 dated 21 July 2021.

LXML became a subsidiary of our Company since completion of the acquisition of Chijin Laos on November 30, 2018 and up to the Latest Practicable Date. For details, see the paragraph headed "Major Acquisitions and Disposals — 1. Acquisition of LXML through Chijin Laos" in this section. For details of our operations in LXML, see the section headed "Business — Our Gold Production Business in Laos" in this Prospectus.

---

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

---

### Hanfeng Mining

Hanfeng Mining was established under the laws of the PRC with limited liability on September 24, 2004 with an initial registered capital of RMB10 million. Upon establishment, Hanfeng Mining was held as to 90%, 5% and 5% of the equity interest by the late Mr. Zhao, Zhao Guixiang and Zhao Guiyuan, respectively.

Upon resolutions at the general meeting of Hanfeng Mining on December 1, 2010, the late Mr. Zhao entered into an equity transfer agreement with Jilong Mining on December 2, 2010, pursuant to which the late Mr. Zhao (for himself and on behalf of the other shareholders) disposed of the entire equity interest to Jilong Mining at a consideration of RMB25 million. Upon completion of the transfer on December 6, 2010, Jilong Mining held the entire equity interest in Hanfeng Mining.

The general meeting of Hanfeng Mining resolved on December 26, 2011 to transfer the entire equity interest in Hanfeng Mining to the equity interest holder of Jilong Mining in proportion to their equity interest in Jilong Mining. On the same date, the late Mr. Zhao (for himself and on behalf of the other shareholders of Jilong Mining) entered into an equity transfer agreement to effect the above transfer at a total consideration of RMB25 million, which was determined with reference to the acquisition price paid by Jilong Mining in December 2010. Upon completion of the aforesaid transfer as of December 30, 2011, Hanfeng Mining was held as to (i) 57.75% equity interest by the late Mr. Zhao; (ii) 10.00% equity interest by each of Zhao Guixiang and Zhao Guiyuan; (iii) 5.00% equity interest by each of Liu Yongfeng, Ren Yiguo, Ma Li and Li Xiaohui; and (iv) 2.25% equity interest by Meng Qingguo.

In preparation for the quotation on the NEEQ, Hanfeng Mining was converted from a company with limited liability to a joint stock company on December 26, 2014. Upon conversion, Hanfeng Mining had a registered capital of RMB10,000,000 comprising 10,000,000 shares with a nominal value of RMB1 each, which were subscribed by all the then shareholders in proportion to their respective equity interests in Hanfeng Mining immediately prior to such conversion. Hanfeng Mining became quoted on the NEEQ on August 4, 2015 under the stock code: 833180.

Upon resolution at the general meeting of Hanfeng Mining on November 17, 2015, Hanfeng Mining increased its registered share capital to RMB100 million pursuant to bonus issue on the basis of nine new shares for every existing share held by the above shareholders by way of conversion of capital reserve, which was completed on December 3, 2015. Further, the general meeting of Hanfeng Mining resolved to issue 39,200,000 shares at an issue price of RMB1.02 per share, amounting to a total consideration of RMB39,984,000 on a *pro rata* basis to existing shareholders. Upon completion of the share issuance on March 8, 2016, the share capital of Hanfeng Mining was increased to RMB139.20 million.

On February 25, 2019, having considered that the trading activity, equity liquidity, the future business strategy and costs of maintaining the listing status on the NEEQ, Hanfeng Mining voluntarily ceased to be quoted on the NEEQ. Upon resolutions at the general meeting

---

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

---

on March 12, 2019, Hanfeng Mining was converted into a private limited liability company. Further, the general meeting of Hanfeng Mining resolved on March 14, 2019 resolved to approve the transfer of the equity interest held by Zhao Guixiang, Zhao Guiyuan, Ren Yiguo, Liu Yongfeng, Ma Li and Li Xiaohui in Hanfeng Mining to Hanfeng Zhongxing at total consideration of RMB204 million, which was determined with reference to the appraised value by an independent valuer of the entire equity interest of Hanfeng Mining as of December 31, 2018 by way of the asset approach and the income approach. Upon completion of the transfer, Hanfeng Mining was held as to 57.75%, 40.00% and 2.25% equity interest by the late Mr. Zhao, Hanfeng Zhongxing and Meng Qingguo, respectively.

Our Directors confirm that during the period when the shares of Hanfeng Mining were quoted on the NEEQ, (i) Hanfeng Mining had been in compliance with all applicable laws and regulations as well as rules and regulations of the NEEQ in all material respects; (ii) Hanfeng Mining had not been subject to any disciplinary action by the relevant regulators or any material litigation in this respect; (iii) the directors and supervisors of Hanfeng Mining had not been subject to any administrative penalty by the NEEQ or the CSRC; and (iv) there are no other issues that need to be brought to the attention of our Shareholders, potential investors or the Hong Kong Stock Exchange.

Our Company entered into an acquisition agreement with the then shareholders of Hanfeng Mining on November 5, 2019, pursuant to which, among others, our Company agreed to acquire the entire equity interest in Hanfeng Mining at a consideration of RMB510 million. See the paragraph headed “— Major Changes in Shareholding and Share Capital of our Company — 6. Capital increase in October 2017 and acquisition of Hanfeng Mining by way of non-public issuance of A Shares in January 2020” in this section for details. Upon the completion of the acquisition on November 7, 2019 and up to the Latest Practicable Date, Hanfeng Mining was a wholly owned subsidiary of our Company.

Pursuant to the resolutions at the general meeting of Hanfeng Mining on February 21, 2020, the registered capital was further increased to RMB429.20 million on the same date. For details of our operations in Hanfeng Mining, see the section headed “Business — Our Other Mineral Resources Production Business — Our Other Mineral Resources Production Business in China” in this Prospectus.

### **Chijin Fengyu**

Chijin Fengyu was established under the laws of the PRC with limited liability on March 25, 2021 with an initial registered capital of RMB100,000,000. Since the date of its establishment and up to the Latest Practicable Date, Chijin Fengyu was wholly owned by our Company. Chijin Fengyu is principally engaged in the procurement of supplies in the PRC for our overseas operations.

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

---

### GSWL

GSWL was established under the laws of Ghana as a private limited liability company with an authorized share capital of 10,000,000 equity shares with a par value of 0.305 pesewas on November 22, 2001. Upon establishment, 90% and 10% of the equity interest in GSWL were held by Satellite Goldfields Limited, an Independent Third Party and the Ghana Government, respectively. In 2002, Satellite Goldfields transferred its entire equity interest in GSWL to Wasford Holdings, which, together with GSWL, became our non-wholly owned subsidiaries upon completion of the acquisition of Golden Star Resources. For details, see the paragraph headed “— Major Acquisitions and Disposals — 2. Acquisition of Golden Star Resources by way of a Plan of Arrangement” in this section.

Upon shareholders’ resolutions passed on December 21, 2023, the issued share capital of GSWL increased from US\$756 to US\$1,000,000 and the authorised shares of GSWL increased from 10,000,000 shares to 500,000,000 shares. For details of our operations in GSWL, see the section headed “Business — Our Gold Production Business in Ghana” in this Prospectus.

### Chijin Xiawu

Chijin Xiawu was established under the laws of PRC with limited liability on October 18, 2022 with a registered capital of RMB60,000,000, of which RMB30,600,000 was contributed by our Company and the remaining RMB29,400,000 was contributed by Xiamen Tungsten. Upon establishment, Chijin Xiawu was held as to 51% and 49% of the equity interest by our Company and Xiamen Tungsten, respectively.

At the general meeting of Chijin Xiawu on January 8, 2024, our Company and Xiamen Tungsten resolved to increase the registered capital of Chijin Xiawu to RMB400 million by way of a *pro rata* capital injection. The percentage of equity interest held by our Company and Xiamen Tungsten remained unchanged.

Since its establishment and up to the Latest Practicable Date, Chijin Xiawu was a non-wholly owned subsidiary of our Company. For details of our operations in Chijin Xiawu, see the section headed “Business — Our Rare Earth Business in Laos” in this Prospectus.

### COMPLIANCE WITH LAWS AND REGULATIONS

All of the above capital increases, equity transfers, acquisitions and disposals of our Company and our subsidiaries are effective, legally completed, duly settled and in compliance with the applicable PRC, Laos and Ghana laws and regulations, and all permits, authorizations, approvals and consents necessary for the above transactions have been obtained from the relevant government and regulatory authorities of the PRC, Laos and Ghana.

---

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

---

### DEREGISTRATION OF A SUBSIDIARY

To optimize our management and other resources and to focus on our core business, we commenced voluntary deregistration of Chijin Geoexploration by way of a resolution at the general meeting. Chijin Geoexploration is principally engaged in the technology consultation for exploration of Mineral Resources in the PRC. The voluntary deregistration was carried out in light of the lower level of business activities taken up and the net loss suffered by Chijin Geoexploration in previous years. The total assets of Chijin Geoexploration amounted to approximately RMB0.65 million, RMB0.34 million, RMB0.30 million and RMB0.30 million as of December 31, 2021, 2022 and 2023 and September 30, 2024, respectively. The revenue of Chijin Geoexploration amounted to approximately RMB0.62 million, RMB0.10 million, nil and nil for the three years ended December 31, 2023 and the nine months ended September 30, 2024, respectively. Chijin Geoexploration recorded net loss before/after tax of approximately RMB0.39 million and RMB0.33 million for the two years ended December 31, 2022 and net profit before/after tax of approximately RMB0.33 million for the year ended December 31, 2023. Nil net profit or loss before/after tax was recorded for the nine months ended September 30, 2024.

On April 1, 2024, Chijin Geoexploration established the liquidation committee to liquidate the remaining assets of Chijin Geoexploration, and such was filed with the PRC (Tianjin) Pilot Free Trade Zone Market Supervision Administration (中國(天津)自由貿易試驗區市場監督管理局). Accordingly, the deregistration was completed on January 3, 2025 and ceased to be a subsidiary of our Company.

As confirmed by our Directors, Chijin Geoexploration had not been involved in any material claims, litigations or non-compliant incidents since its establishment and up to the Latest Practicable Date. Chijin Geoexploration was solvent prior to the commencement of the voluntary deregistration. In addition, in light of the relatively insignificant business operations of Chijin Geoexploration, our Directors consider that its deregistration did not have a material impact on our Group's business and financial performance.

### PREVIOUS LISTING ATTEMPT

On October 29, 2022 and November 14, 2022, resolutions were passed by our Board and the general meeting of our Company, respectively, to prepare for our Company's potential application for listing of global depositary receipts ("**GDR Listing**") representing our A Shares on the SIX Swiss Exchange Ltd. ("**SIX**") (the "**GDR Listing Application**").

During the process of preparing for the GDR Listing Application, taking into account of the changes in the domestic and foreign stock market conditions and the regulatory requirements, as well as a holistic review of the capital needs and long-term development needs of our Group, we determined that an application for listing on the Hong Kong Stock Exchange, considering, among others, its international recognition and reputation and diversified fund-raising channels provided by the Hong Kong capital market, may better suit our needs. Our Board resolved to cease the GDR Listing Application on August 19, 2023.

---

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

---

Our Directors confirm that as of the Latest Practicable Date, no application had been filed with SIX in relation to the GDR Listing. To the best of our Directors' knowledge, our Directors are not aware of (i) any enquiries from the CSRC or SIX in relation to GDR Listing Application; (ii) any other matters relating to the GDR Listing Application which may have implications on our Company's suitability for listing on the Hong Kong Stock Exchange; or (iii) any other matters which need to be brought to the attention of the Hong Kong Stock Exchange and the investors in relation to the GDR Listing Application.

### REASONS FOR LISTING ON THE HONG KONG STOCK EXCHANGE

Our Company is seeking a listing on the Hong Kong Stock Exchange in order to raise further capital for the development and expansion of our Company's business, and to further raise our profile as a business with a global presence and thus, enhance our ability to attract new customers, business partners, strategic investors and key management personnel. See also the section headed "Future Plans and Use of Proceeds" in this Prospectus for further details.

### PUBLIC FLOAT

The aggregate of 241,925,746 A Shares collectively held by Ms. Li and Hanfeng Zhongxing will not be considered as part of our public float as (i) Hanfeng Zhongxing's acquisition of securities has been financed by Ms. Li, the sole limited partner of Hanfeng Zhongxing; and (ii) they comprise the Single Largest Shareholder Group constituting a core connected person of our Company.

Further, as of the Latest Practicable Date, our Directors and senior management members held an aggregate of 74,729,571 A Shares, among which (i) our executive Directors, namely Mr. Wang Jianhua, Ms. Yang Yi-fang, Mr. Lyu Xiaozhao and Mr. Gao Bo held 74,200,071, 113,000, 111,700 and 153,500 A Shares, respectively; and (ii) our senior management members, namely Mr. Zhou Xinbin, who is our Vice President and a director of Chijin HK and LXML, and Mr. Dong Shubao, who is our Board Secretary and a director of Chijin Xiawu, held 112,800 and 38,500 A Shares, respectively. Meanwhile, Mr. Zhao Qiang (趙強), a director of Chijin Xiawu, held 204,000 A Shares. As the aforesaid comprise directors of our Company and our subsidiaries, they constitute core connected persons of our Company. Those A Shares held by the above Directors and senior management members as well as Mr. Zhao will not be considered as part of our public float.

In respect of the A Shares held under the ESOPs, as the Phase I ESOP was managed by the Phase I ESOP management committee (which exercises the shareholder rights with respect to the A Shares held under the Phase I ESOP) comprising Mr. Zhou Xinbin, Mr. Dong Shubao and Mr. Zhao Qiang, who are the directors of various subsidiaries of our Group, the 10,000 A Shares held under the Phase I ESOP were regarded as being controlled by the core connected persons of our Company, and therefore they will not be considered as part of our public float. Nevertheless, as further described in the paragraph headed "C. Further Information about our Directors, Supervisors and Substantial Shareholders — 4. Employee Stock Ownership Plans" in Appendix VII to this Prospectus, the majority members of the Phase III ESOP management

---

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

---

committee (which exercises the shareholder rights with respect to the A Shares to be held under the Phase III ESOP) are not core connected persons of our Company. The 15,182,600 A Shares to be held under the Phase III ESOP are thus not regarded as being held, managed or controlled by our Company's core connected persons. Meanwhile, the significant majority of the participants under the Phase III ESOP are not core connected persons, and the proportion of Shares attributable to the subscription monies of these participants also remains in large majority. Accordingly, those A Shares held under the Phase III ESOP will be regarded as part of the public float of our Company.

Therefore, save for an aggregate of 316,869,317 A Shares held by the Single Largest Shareholder Group, our executive Directors, certain of our senior management members who are also directors of our Group's various subsidiaries, Mr. Zhao and those held under the Phase I ESOP as mentioned above, to the best of our Directors' knowledge having made reasonable enquiries, the remaining 1,347,042,061 A Shares, as well as the H Shares to be issued pursuant to the Global Offering, will be counted towards the public float as such Shareholders are not core connected persons of our Company upon the Listing nor accustomed to take instructions from our Company's core connected persons in relation to the acquisition, disposal, voting or other disposition of their Shares and their acquisition of Shares were not financed directly or indirectly by our Company's core connected persons.

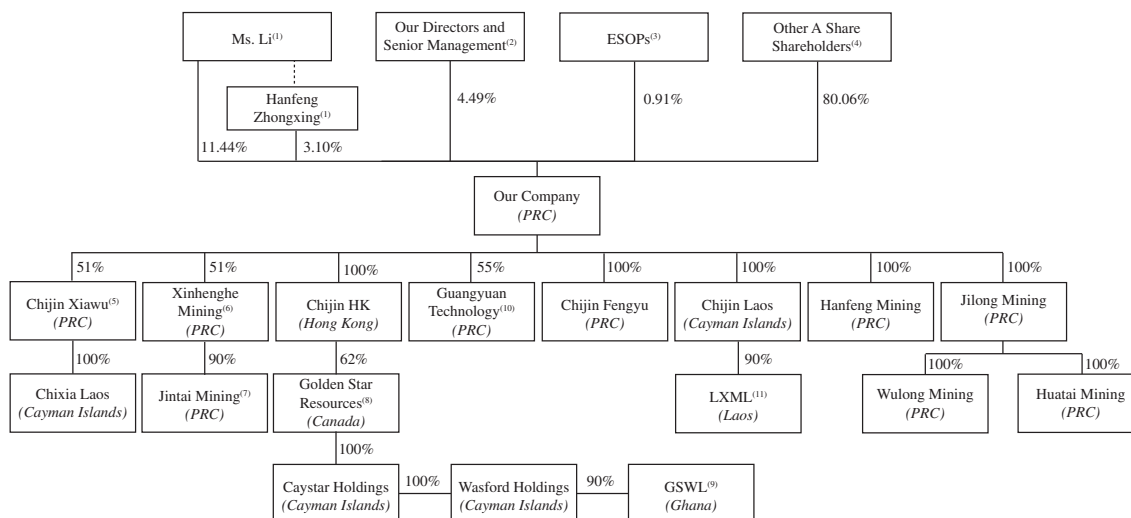

Immediately following completion of the Global Offering, assuming that (i) 205,652,000 H Shares are allotted and issued in the Global Offering; and (ii) the Offer Size Adjustment Option and the Over-allotment Option are not exercised, our Company will have 1,869,563,378 issued Shares upon completion of the Global Offering, and based on the minimum Offer Price of HK\$13.72 per H Share, the total number of Shares held by the public (on all regulated market(s) including the Hong Kong Stock Exchange) represents approximately 72.05% of our total issued Shares upon Listing, whilst the H Shares to be issued upon the Global Offering accounts for 11.00% of our Company's total number of issued Shares, having an expected minimum market capitalization of approximately HK\$2.82 billion.

We have applied to the Hong Kong Stock Exchange for, and the Hong Kong Stock Exchange has granted, a waiver from strict compliance with the requirements under Rule 8.08(1)(b) (as amended by Rule 19A.13A) of the Hong Kong Listing Rules that the minimum percentage of the H Shares of our Company to be held by the public from time to time shall be the higher of (a) 11% (assuming no exercise of the Offer Size Adjustment Option and the Over-allotment Option) and (b) such percentage of H Shares to be held by the public immediately after completion of the Global Offering, as increased by the H Shares to be issued upon any exercise of the Offer Size Adjustment Option and the Over-allotment Option, of the total enlarged issued share capital of the Company. For details of the relevant waiver, please refer to the section headed "Waivers from Strict Compliance with the Hong Kong Listing Rules and Exemption from Strict Compliance with the Companies (Winding Up and Miscellaneous Provisions) Ordinance — Waiver in Respect of Public Float Requirements" in this Prospectus.

# HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

## OUR STRUCTURE IMMEDIATELY PRIOR TO THE GLOBAL OFFERING

The following chart sets forth a simplified corporate structure of our Group immediately prior to the completion of the Global Offering.

### Notes:

- (1) As of the Latest Practicable Date, Ms. Li and Hanfeng Zhongxing directly held 190,410,595 and 51,515,151 A Shares, respectively. Meanwhile, Ms. Li and Mr. Wu Zengxiang are the sole limited partner and general partner of Hanfeng Zhongxing accounting for approximately 99.00% and 1.00% of the committed capital contribution of Hanfeng Zhongxing, respectively. The role of Mr. Wu is to represent Hanfeng Zhongxing in external business and operational matters upon the authorization of Ms. Li in accordance with the limited partnership agreement of Hanfeng Zhongxing. Mr. Wu does not, and cannot exercise control over Hanfeng Zhongxing; and taking in account of the above, the majority interest held by Ms. Li enables her to exercise *de facto* control of Hanfeng Zhongxing. Therefore, Mr. Wu has no control over the voting rights in share capital of our Company held by Hanfeng Zhongxing, nor the control of Hanfeng Zhongxing in the exercise of such voting rights. Those are rested solely with Ms. Li. Accordingly, Ms. Li and Hanfeng Zhongxing are regarded as the Single Largest Shareholder Group of our Company. Please refer to the section headed “Relationship with our Single Largest Shareholder Group — Our Single Largest Shareholder Group” in this Prospectus for details.
- (2) These shares comprised of (i) Mr. Wang Jianhua, our Chairman of the Board and executive Director, holding 74,200,071 A Shares; (ii) Ms. Yang Yi-fang, our executive Director and Chief Executive Officer, holding 113,000 A Shares; (iii) Mr. Lyu Xiaozhao, our executive Director, Vice President and Chief Engineer, holding 111,700 A Shares; (iv) Mr. Gao Bo, our executive Director and Vice President, holding 153,500 A Shares; (v) Mr. Zhou Xinbing, our Vice President, holding 112,800 A Shares; and (vi) Mr. Dong Shubao, our Board Secretary, holding 38,500 A Shares, accounting for an aggregate of 74,729,571 A Shares.
- (3) As of the Latest Practicable Date, (i) 10,000 A Shares were held by the Phase I ESOP; (ii) the Phase II ESOP had disposed of all the A Shares held by it; and (iii) 15,182,600 A Shares had been repurchased by the Company for the purpose of the Phase III ESOP, accounting for an aggregate of 15,192,600 A Shares under the ESOPs. Please refer to the paragraph headed “C. Further Information about our Directors, Supervisors and Substantial Shareholders — 4. Employee Stock Ownership Plans” in Appendix VII to this Prospectus for details. The A Shares held under the Phase I ESOP are not counted towards our public float as the exercise of the shareholder rights pertaining to those A Shares is controlled by its own management committee comprising members who are all core connected persons of our Company. Meanwhile, the A Shares held under the Phase III ESOP are counted towards our public float as the exercise of the shareholder rights pertaining to those A Shares is controlled by its own management committee comprising a majority of members who are not core connected persons of our Company. For further details, see the paragraph headed “Public Float” in this section above.

---

## HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

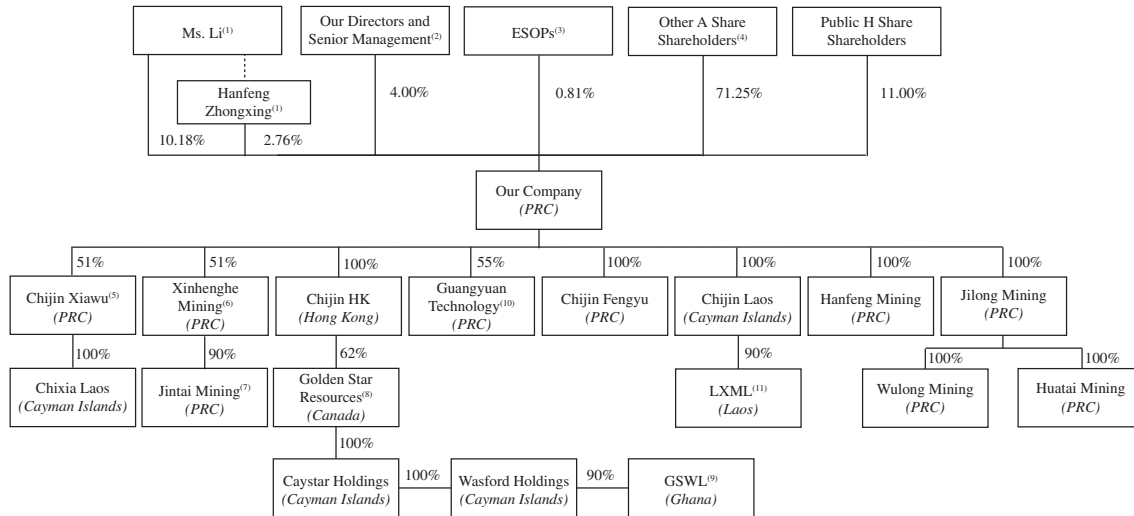

---

- (4) Save for Mr. Zhao Qiang, a director of Chijin Xiawu, who held 204,000 A Shares as of the Latest Practicable Date, to the best of our Directors' knowledge having made reasonable enquiries, these A Share Shareholders were not core connected persons of our Company.
- (5) The remaining 49% of the equity interest in Chijin Xiawu was held by Xiamen Tungsten, a company listed on the Shanghai Stock Exchange (stock code: 600549).
- (6) The remaining 30%, 12% and 7% of the equity interest in Xinhenghe Mining was held by Liu Xin, Li Yuanyuan and Zhu Jiande, respectively. See the paragraph headed “— Major Acquisitions and Disposals — 4. Acquisition of Xinhenghe Mining” in this section for details.
- (7) The remaining 8.39% and 1.61% of the equity interest in Jintai Mining was held by Fuduo Exploration and Yunnan Shengyuan, respectively. Fuduo Exploration was held as to 88%, 7% and 5% equity interest by Chen Hua (陳華), Yang Chunbin (楊春彬) and Bao Youdi (包幼娣), respectively, who are all Independent Third Parties. Yunnan Shengyuan was wholly owned by Chen Hua. See the paragraph headed “— Our Principal Subsidiaries — Jintai Mining” in this section for details.
- (8) The remaining 38% of the equity interest in Golden Star Resources was held by Kefei Investment (BVI) Limited, which was wholly owned by China-Africa Fund for Industrial Cooperation Co., Ltd. (“CAFIC”). CAFIC was held as to (i) 80% of the equity interest by Wutongshu Investment Platform Company Limited (梧桐樹投資平台有限責任公司) (“Wutongshu Investment”), which was wholly owned by the State Administration of Foreign Exchange Central Foreign Exchange Business Center (國家外匯管理局中央外匯業務中心), an Independent Third Party; and (ii) 20% of the equity interest by the Export-Import Bank of China (中國進出口銀行), which in turn was owned as to 89.26% and 10.74% equity interest by Wutongshu Investment and MOF, an Independent Third Party.
- (9) The remaining 10% of the equity interest in GSWL is held by the Ghana Government.
- (10) The remaining 42.75% and 2.25% of the equity interest in Guangyuan Technology were held by Liang Xiaoyan and Lu Hong, respectively. See the paragraph headed “Our Principal Subsidiaries — Guangyuan Technology” in this section for details.
- (11) The remaining 10% of the equity interest in LXML was held by the Government of Lao PDF (represented by the Ministry of Finance). See the paragraph headed “Our Principal Subsidiaries — LXML” in this section for details.

# HISTORY, DEVELOPMENT AND CORPORATE STRUCTURE

## OUR STRUCTURE IMMEDIATELY FOLLOWING THE GLOBAL OFFERING

The following chart sets forth a simplified corporate structure of our Group immediately after the Global Offering (assuming the Offer Size Adjustment Option and the Over-allotment Option are not exercised).

*Notes:*

(1) — (11) Please refer to the corresponding notes to the chart in “— Our Structure Immediately Prior to the Global Offering” in this section.

### OVERVIEW

#### Who We Are

We are principally engaged in the mining, processing and sales of gold. Our operations are centered in gold, and we work towards greater international development and expansion through continuous technological advancements, maintaining cost-effective operations, optimizing resource utilisation, and the acquisition of high-quality overseas resources.

As of the Latest Practicable Date, we owned and operated seven gold and polymetallic mines across the world, including China, Southeast Asia, and West Africa. According to Frost & Sullivan:

- we experienced the fastest growth among major gold producers in China. From 2021 to 2023, our gold production achieved a CAGR of 33.1%, which by far outpaced the 16.4% average growth rate of major gold producers in China;
- we ranked fifth among gold producers in China in terms of gold Resources, with gold Resources of 12.5 million oz as of September 30, 2024, and we ranked fifth among gold producers in China in terms of gold production, with gold production of 461.5 koz in 2023;
- our operational efficiency enhancement surpassed the worldwide industry average by a notable margin and we positioned lower in terms of AISC than that of the global average. For the year ended December 31, 2023, our gold AISC stood at only US\$1,179.1 per ounce, placing us in the first quartile in the worldwide gold mining industry, while the global average for the same period was approximately US\$1,348.5, which is 14.4% higher than ours. In 2023, we beat the global trend of increased costs, as we reduced our gold AISC by 12.0%, whereas the average AISC for international gold producers increased by 7.2% during the same period; and
- among gold producers in China, we had the greatest overseas presence in terms of both total assets and revenue contribution derived from business activities outside of the PRC as of December 31, 2023 and in 2023, respectively. In 2023, approximately 76.9% of our total gold production and 71.9% of our total revenue was generated from our overseas business. As of September 30, 2024, our overseas assets accounted for approximately 65.2% of our total assets.

#### Business Overview

We are principally engaged in the mining, processing, and sales of gold. We operate multiple gold mines across the world and continuously aim to expand production and exploration. Additionally, we are engaged both (i) in the mining, processing, and sales of other Mineral Resources; and (ii) in the business of recycling waste electronic products and electrical appliances, promoting comprehensive resource utilisation and circular economy.

---

## BUSINESS

---

As of the Latest Practicable Date, we conducted our gold production business primarily through six gold mines: (i) four mines in the PRC, namely the Jilong Gold Mine, Wulong Gold Mine, Jintai Gold Mine and Huatai Gold Mine; (ii) one mine in Laos, namely the Sepon Gold and Copper Mine, and (iii) one mine in Ghana, namely the Wassa Gold Mine. Furthermore, we operate one polymetallic mine in Jilin Province, China, namely the Hanfeng Polymetallic Mine, the principal products of which are zinc, lead, copper and molybdenum concentrate powder. Also, we are planning to develop rare earth Resources in Laos. In addition to our mining business, we have a resource recycling business, where we recycle waste electronic products and electrical appliances.

In terms of our development strategies, our focus is on the gold mining business, gradually divesting non-core assets and achieving significant growth. For example, in July 2020, we sold Chenzhou Xiongfeng for approximately RMB1.6 billion. Chenzhou Xiongfeng was a non-core subsidiary which principally engaged in recycling of low-grade complex materials, and rare and precious metals. The proceeds from that sale allowed us to continue implementing our strategic focus on our gold business and improved our capital structure.

We actively seek to and have acquired suitable, high-quality domestic and overseas gold assets to maintain our sustainable growth. Through acquisitions we have continuously strengthened our Resources, Reserves and production capacity and expanded our global presence:

- In November 2018, we acquired a 90% equity interest in LXML in Laos. According to Frost & Sullivan, LXML held the largest copper-gold mine in Laos in terms of gold Reserves by 2023. As of September 30, 2024, the Ore Reserves for Sepon Gold and Copper Mine are about 7,896 thousand tonnes with an average Au grade of 3.11 g/t, of which 268 thousand tonnes are Proved Ore Reserves with an average Au grade of 4.70 g/t, and 7,628 thousand tonnes are Probable Ore Reserves with an average Au grade of 3.05 g/t.
- We have been collaborating with third parties to jointly conduct exploration projects for multiple types of Mineral Resources in Laos. For example, (i) we entered into a cooperative exploration agreement with Lao Mining Development State Enterprise in July 2022. Lao Mining Development State Enterprise is a state-owned company in Laos, affiliated with the Ministry of Energy and Mines. It owns multiple rights to gold, copper, and rare earth mines, and it is primarily responsible for the exploration, reservation, and cooperative development of Mineral Resources in Laos; (ii) we formed a joint venture with Xiamen Tungsten Co., Ltd. (“**Xiamen Tungsten**”) in September 2022 to obtain synergies and strengthen our respective positions in rare earth Resource development in Laos.

---

## BUSINESS

---

- In January 2022, we acquired a 62% equity interest in Golden Star Resources, which holds a 90% equity interest in GSWL. As of September 30, 2024, the Ore Reserves for Wassa Gold Mine are about 8,842 thousand tonnes with an average Au grade of 2.12 g/t, of which 3,521 thousand tonnes are Proved Ore Reserves with an average Au grade of 2.14 g/t, 5,291 thousand tonnes are Probable Ore Reserves with an average Au grade of 2.12 g/t, and 30 thousand tonnes are Stockpile Ore Reserves with an average Au grade of 1.33 g/t.
- In January 2023, we acquired a 51% equity interest in Xinhenghe Mining, which holds a 90% stake in Jintai Mining. As of September 30, 2024, the total gold Resources of Jintai Gold Mine is 444 koz and its total gold Reserves were approximately 33 koz in contained metals. The Mineral Resources for Jintai Gold Mine are estimated to be about 10,666 thousand tonnes with an average Au grade of 1.30 g/t, including approximately 3,363 thousand tonnes of Measured Mineral Resources with an average Au grade of 1.68 g/t, 4,604 thousand tonnes of Indicated Mineral Resources with an average Au grade of 1.02 g/t, 2,699 thousand tonnes of Inferred Mineral Resources with an average Au grade of 1.29 g/t. This acquisition has further enhanced our mining operations and gold production.

### **Cost Control**

We continue to research and develop applications of new technologies and have implemented a series of cost reduction and efficiency enhancement measures such as centralized procurement and optimization of the organizational and staff structures, with the aim to continuously reduce production costs.

Through centralized procurement, we have realized substantial cost reduction benefits for our domestic and overseas mines. We meticulously analyze procurement paths and implement trial orders in increments. By selecting suppliers across the globe, including China, Thailand, Vietnam, and other regions, we collaborate with cost-efficient suppliers, which refer to those suppliers who we believe could achieve a balance between cost and benefit after thoroughly considering factors such as tariffs in the region, delivery speed of the suppliers, quality assurance period of the goods, repair costs, and stability of the supply source. Collaboration with cost-efficient suppliers has introduced healthy competition among our suppliers, which has encouraged other suppliers or potential suppliers to enhance their credentials and service standards, hence have enhanced our bargaining position during procurement negotiations, which has allowed us to mitigate against unfavorable terms in procurement contracts. In addition, we have also broadened our supplier options and increased procurement activities in low-cost regions, where the prices of the industrial products are relatively lower, such as PRC and Vietnam, ultimately contributing to cost savings.

## BUSINESS

We have utilized the specific circumstances of various mines to achieve targeted cost reduction and efficiency enhancement. The Sepon Gold and Copper Mine continuously seeks to improve its ore processing by adopting re-grinding techniques to enhance efficiency, improve gold ore recovery rates, and decrease costs. As a result, its gold recovery rates increased significantly from 54.6% in 2021 to 64.4% in the nine months ended September 30, 2024. The Wassa Gold Mine has improved its efficiency in excavation projects by involving external contractors, leading to substantially lower unit costs and relatively high gold recovery rates of 95.6%, 95.5% and 95.4% in 2022 and 2023 and in the nine months ended September 30, 2024, respectively.

Meanwhile, we have rigorously controlled capital expenditures, yielding significant cost reductions. According to Frost & Sullivan, our operational efficiency enhancement surpassed the worldwide industry average by a notable margin, and we placed significantly lower in terms of gold AISC than that of the global average. As of December 31, 2023, our gold AISC stood at only US\$1,179.1 per ounce, placing us in the first quartile in the worldwide industry, while the global average for the same period was approximately US\$1,348.5, which is 14.4% higher than ours. In 2023, we decreased our gold AISC by 12.0%, whereas the average AISC for international gold producers increased by 7.2% during the same period. Set forth below is our gold AISC and the global average for the periods indicated:

	Year Ended December 31,		Changes from Year Ended December 31, 2022 to Year Ended December 31, 2023	Nine Months Ended September 30, 2024
	2022	2023	2023	2024
	<i>US\$/ounce</i>		<i>%</i>	<i>US\$/ounce</i>
PRC Gold Mines . . . . .	1,205.7	877.4	(27.2)	1,008.5
Sepon Gold and Copper Mine . . . . .	1,476.9	1,330.0	(9.9)	1,408.3
Wassa Gold Mine . . . . .	1,371.2	1,197.1	(12.7)	1,240.8
<b>Our Group . . . . .</b>	<b>1,340.0</b>	<b>1,179.1</b>	<b>(12)</b>	<b>1,249.2</b>
<b>Global Average . . . . .</b>	<b>1,258.1</b>	<b>1,348.5</b>	<b>7.2</b>	<b>1,498.8</b>

*Note:*

1. Company started to make voluntary disclosure of AISC since the year of 2022, in align with the global industrial reporting practice.

The global average AISC has increased from US\$1,348.5/ounce for the year ended December 31, 2023 to US\$1,498.8/ounce for the nine months ended September 30, 2024. This was primarily due to the ongoing rise in labor costs globally. In addition, driven by the rising gold price, gold mining companies started to process lower-grade ores which led to higher mining costs.

The AISC of our Group increased from US\$1,179.1/ounce for the year ended December 31, 2023 to US\$1,249.2/ounce for the nine months ended September 30, 2024. This was mainly because (i) the production volume of LXML for the third quarter of 2024 fell short of our expectations due to the impact of typhoons and floods, resulting in an inability to spread labor and depreciation costs; and (ii) labor costs and raw materials costs increased driven by global inflation.

### Capacity Enhancement

We are committed to upgrading the mining and processing capacity of our existing mines in order to achieve the growth of overall asset.

In terms of our overseas gold assets, we are accelerating the construction of the open-pit and underground mining projects of the Sepon Gold and Copper Mine, which is expected to increase the annual underground mining capacity to 806,000 tonnes by 2025 from the current capacity of 536,000 tonnes. As of September 30, 2024, the Mineral Resources for Khanong are estimated to be about 2,445 thousand tonnes with an average Au grade of 1.90 g/t, including approximately 2,445 kt of Indicated Mineral Resources with an average Au grade of 1.9 g/t, and 595 thousand tonnes of Inferred Mineral Resources with an average Au grade of 1.58 g/t. Meanwhile, we are accelerating modelling and study work of exploration prospects of Discovery West Deeps and Phavat North with open-pit and underground mining potentials, the annual underground mining capacity is expected to be increased further after 2026 and 2027. As of September 30, 2024, the Inferred Mineral Resources for Discovery West Deeps are estimated to be about 1,165 thousand tonnes with an average Au grade of 5.68 g/t. This effort also includes the re-evaluation of historical open pits at higher gold prices.

We expect to build the Wassa Gold Mine of into a large-scale gold mine with (i) an annual processing capacity of approximately 3.3 million tonnes and (ii) an annual production of 200-250 koz gold leading up to 2028. Furthermore, the focus and effort will extend to increase annual gold production in the future of between 250-350 koz. In order to realize this goal, we will adopt various measures, including carrying out more exploration activities at different exploration targets, upgrading our mining and processing infrastructure, driving improvements in operations efficiency and at lower cost whilst maintaining the average gold processing recovery rate at between 95%-96%.

In terms of our domestic gold assets, we have been undergoing several rounds of technological transformation and we are still working on several technological improvement projects, including continuous improvement of technique, upgrade of machinery, enhancement of equipment, at the Wulong Gold Mine. These are expected to enable us to increase the Wulong Gold Mine's annual processing capacity from 578,000 tonnes to approximately 700,000 tonnes by the end of 2024 to maintain the sustainable development of our Company to ensure the competitive edge. We have also initiated an expansion project at the Jilong Gold Mine to increase its annual mining capacity to approximately 300,000 tonnes by the end of 2025.

**ESG Practice and Mining Safety**

Adhering to our core value of benefitting more people through the development of Chifeng Gold, we attach great importance to the environment and corporate governance, honor our social responsibilities, emphasize mining safety, and care for our staff and the people and communities in which we operate. We pursue high-quality and sustainable development with high ESG standards and are committed to following the high standards and sound practices of our industry.

- We continuously enhance our environmental management system, optimize water resources, energy, and logistics management strategies, judiciously use natural resources, practice the principles of the circular economy, strictly control and manage tailings, waste, wastewater and pollutants, and minimize the negative impact on the natural environment. In addition, we actively address climate change and consider potential climate risks and impacts following the framework recommendations of the Task Force on Climate-Related Financial Disclosures (the “TCFD”). As alternative energy and electricity continues to develop, we plan to continuously increase our proportion of renewable energy use to reduce our carbon emission. For example, the Wulong Gold Mine, Sepon Gold and Copper Mine and Wassa Gold Mine are all actively planning to build their own clean energy power generation projects, which will further enhance our capability to source and utilize renewable energy. In particular, the Jilong Gold Mine is planning to build a 10-megawatt solar power plant, with the full capacity expected to be installed and ready for commercial operation by the end of 2025.
- We prioritize the construction of green mines, actively seek a balance between mining development and ecological impacts, and adhere to the development concept of “Mutual Prosperity and Development” with the community. “Green mining” refers to a plan where we intend to achieve scientific and orderly mining through scientific mining methods, efficient resource utilisation, digital information management, and harmonious community collaboration, in order to minimize disruptions to mining areas and surrounding environments. It is a comprehensive plan that includes our detailed management measures and criteria covering the aspects of environmental management systems, natural resource utilisation systems, efficiency improvement, emission reduction, tailings management, waste management, emission gas management, noise management, biodiversity maintenance, and sustainability. In 2023, our total investment in green mine construction reached approximately RMB26.2 million, with a total land restoration of approximately 62.3 hectares. To ensure workplace safety, we also conducted 2,375 workplace safety inspections and provided safety training for 33,495 participants in 2023. As a result, no significant safety or environmental accidents occurred in 2023. Furthermore, in 2023 we invested approximately RMB212.8 million in compliance with the applicable environmental protection rules and regulations in PRC, and we reduced approximately 1,057.4 tonnes of carbon dioxide and its equivalent during the same period.

---

## BUSINESS

---

- We seek to actively aim to explore solutions that bring positive impacts to the local community. Amongst other things, we take actions in promoting employment, rural revitalization, improving people’s livelihoods, and public welfare education. For example, LXML has long supported construction of infrastructure in its surrounding communities; the Golden Star Oil Palm Plantation Project (the “**Golden Star Oil Palm Project**”) initiated by GSWL is a not-for-profit, multi-award winning social enterprise that continues to empower small farmers and workers in Ghana by providing them with support, management and agricultural extension expertise to maintain and develop smallholder palm plantations and obtain steady income streams; Hanfeng Mining assists the local community in resettlement work; and Wulong Mining drives local economic development through high-quality development. We leverage our own resource advantages, take action to shoulder corporate social responsibility, and share our achievements with the society.
- Our ESG practices have been recognized through numerous honors and ratings, reflecting widespread recognition from various sectors of society. For example, Our Company was awarded the 17th Crystal Ball Award as the “2023 Most Socially Responsible (ESG) Listed Company” in January 2024; the mines of Jilong Mining and Hanfeng Mining were designated as National Green Mines in January 2020; LXML received (i) the Certificate of Excellent (A) from the Laos government in recognition of its exceptional implementation of its environmental management and monitoring plan in January 2024, and (ii) the Third-Class Labor Medal from the Lao government in December 2023 in recognition of its exceptional practice in work safety, health care, and social welfare support to Laos employees; and GSWL was honored with the Ghana 2023 Best Safe Mine First Prize from the Ghana Chamber of Mines in November 2023.
- We adopt high safety standards and seek to continuously update and improve our internal control measures to enhance production safety in our operations. Our production management systems and technologies enable us to achieve automation, digitization, and intelligence control in the gold production process. During the Track Record Period, we did not have any material safety incidents involving our workforce.

For more details, please see “— Environmental, Social and Governance”.

### Management

Since 2019, we have transformed ourselves from a diversified mining company covering various sectors into a mature, sophisticated, and specialized mining company with a global outlook that is primarily focused on gold under the leadership of our management team. We established our corporate culture of “Mutual Prosperity and Development” by unifying the interests and goals of our shareholders, management, and employees, and adopted a long-term internal incentive mechanism, which effectively motivates the management team and our key

---

## BUSINESS

---

employees. Furthermore, by incentivizing our international management and key employees, we have enhanced our decision-making processes and response mechanisms for international management, which enables us to efficiently manage our operations across the globe and assess strategic acquisition prospects.

Our management team consists of seasoned professionals with extensive expertise in various fields, including, amongst other things, corporate administration, mining, mineral processing, geology, finance, and law. Chairman Wang Jianhua, renowned for his exceptional leadership skills within major corporate entities, brings a wealth of experience in management and corporate governance which is characterized by an emphasis on employee safety and welfare. The key members of our senior management team have previously been entrusted with significant roles in reputable global mining companies, showcasing remarkable operational and managerial track records. Moreover, our Company has enlisted experts such as scholars professors from renowned universities and institutes, infusing the Board with robust professional knowledge.

We are implementing worldwide talent integration using an open and transparent strategy, engaging in sincere collaboration with both international and local management staff and employees. Each mine is overseen and operated by a management team composed of local specialists. We apply our previous experiences to our mines globally, while local experts implement localized innovation and practices. We aim to maintain the representation of Ghanaian, Laotian, and talents with international experience within our management. Our executives directors boast an average of more than 20 years of pertinent expertise in the mining industry, and we have introduced cutting-edge global management strategies to our mining operations. Additionally, we actively promote talent growth and consistently screen and cultivate high-quality talents through our international mining talent program.

We have established a long-term incentive mechanism for our employees through employee stock ownership plans, aligning the interests of employees and our Company. These incentives have boosted employees' commitment and contributed to our continued high-quality, sustainable growth. Shareholders' interests are prioritized within our Company. The robust support from our controlling shareholders and the proactive shareholding by members of the management team and key employees further exemplify our corporate culture of "Mutual Prosperity and Development".

### **Financial Overview**

During the Track Record Period, our total revenue was approximately RMB3,782.6 million, RMB6,266.8 million, RMB7,221.0 million and RMB6,222.8 million, respectively. The revenue from the gold mining business for the Track Record Period was approximately RMB2,968.7 million, RMB5,304.7 million, RMB6,322.3 million and RMB5,561.3 million, representing 78.5%, 84.7%, 87.6% and 89.4% of the total revenue, respectively.

During the Track Record Period, the gross profit from the gold mining business was RMB868.7 million, RMB1,465.8 million, RMB2,256.7 million and RMB2,508.2 million, respectively.

## BUSINESS

---

### Recent Development

On March 4, 2024, an equity transfer agreement was entered into among China Investment, Chixia Laos and Chijin Xiawu, pursuant to which Chixia Laos shall acquire from China Investment 90% equity interest in China Investment Mining (Laos) Sole Co., Ltd. at a total consideration of US\$18,963,000. As of the Latest Practicable Date, we have obtained the approval from the Xiamen Development and Reform Commission, and the parties to the transactions were proceeding with the fulfillment of the other conditions of the transaction including changes of the authorized representatives of the Target Group. This acquisition is expected to strengthen our position in rare earth Resource development in Laos while upholding our strategic focus on gold. See “History, Development and Corporate Structure — Post-Track Record Period Acquisition.”

The Phase I Construction Project of the lower mining zone of the Hanfeng Polymetallic Mine was completed in December 2024. It has passed production safety assessment and obtained a production safety permit. The project officially commenced operation on December 30, 2024. It is expected to increase our production volume of copper, lead, and zinc by 435,000 tonnes.

Additionally, the expansion of the scope of mining right (deep-zone) for the Aohan County Zhuanshanzi Gold Mine of Jilong Gold Mine was approved in November 2024. The verification report for additional resources in this area has also been filed with the relevant authority in November 2024. This is expected to enhance our production capacity and utilization rate.

Since September 30, 2024 and up to the Latest Practicable Date, we had continued to receive new purchase orders for our products.

### COMPETITIVE STRENGTHS

We believe our leading market position is underpinned by the following competitive strengths:

#### **The largest non-state owned gold producer with leading growth in gold production and revenue in China, possessing robust market prospects**

We achieved rapid growth in gold production from 2021 to 2023. From 2021 to 2023, our total gold production volume was 260.2 koz, 436.2 koz and 461.5 koz, respectively. Our gold production grew at a CAGR of 33.1% from 2021 to 2023, outpacing the major gold producers in China and making us the leading gold producer in China in terms of gold production growth rate during the same period according to Frost & Sullivan.

Our domestic gold mines have relatively high ore grades, making them one of the top-tier deposits in China. According to Frost & Sullivan, as of December 31, 2023, our major domestic gold mines at the Jilong Gold Mine, Wulong Gold Mine and Huatai Gold Mine had the highest gold grades among the top five gold producers in China.

---

## BUSINESS

---

We have high visibility and certainties in our production expansion plans for our gold mines and aim to achieve Resources and Reserves enhancement through exploration activities as set out below:

- in terms of our overseas gold assets, we are accelerating the construction of the open-pit and underground mining projects of the Sepon Gold and Copper Mine, which is expected to increase the annual underground mining capacity to 806,000 tonnes by 2025 from the current capacity of 536,000 tonnes. Meanwhile, we are accelerating modelling and study of exploration prospects of Discovery West Deeps and Phavat North with open-pit and underground mining potentials. The annual underground mining capacity is expected to be further increased after 2026 and 2027. As of September 30, 2024, the Inferred Mineral Resources for Discovery West Deeps are estimated to be about 1,165 thousand tonnes with an average Au grade of 5.68 g/t; and
- in terms of our domestic gold assets, we have been undergoing several rounds of technological transformation and we are still working on several technological improvement projects, including continuous improvement of technique, upgrade of machinery, enhancement of equipment, at the Wulong Gold Mine. These are expected to enable us to increase the Wulong Gold Mine's annual processing capacity from 578,000 tonnes to approximately 700,000 tonnes by the end of 2024 to maintain the sustainable development of our Company to ensure the competitive edge. We have also initiated an expansion project at the Jilong Gold Mine to increase its annual mining capacity to approximately 300,000 tonnes by the end of 2025.

Apart from our core gold business, our planned exploration and development of rare earth resources in Laos also create new growth opportunities. Anomalies in rare earth elements were discovered at the Sepon Gold and Copper Mine during exploration in early 2021. Following further studies, according to SRK report, as of September 30, 2024, the Mineral Resources for rare earth oxides are estimated to be about 26.78 million tonnes of Indicated Mineral Resource with an average grade of 383.75 g/t TREO, equivalent to 10.28 thousand tonnes of total rare earth oxides within the Project area, and 63.79 million tonnes of Inferred Mineral Resource with an average grade of 339.22 g/t TREO, equivalent to 21.64 thousand tonnes of total rare earth oxides within the Project area. In October 2022, together with Xiamen Tungsten we established a joint venture, Chijin Xiawu, where we hold a 51% equity interest. Chijin Xiawu focuses on the development of rare earth resources in Laos. The collaboration with Xiamen Tungsten is expected to improve our competitiveness in the development of rare earth and generate new growth opportunities for our business. We have commenced the general infrastructure construction and commence production.

### **Overseas experience and global recognition with proven track record in identifying synergetic acquisition targets, executing transactions and integrating global operation**

We believe that a core competitiveness metric of gold companies is the ability to continuously obtain high-quality Mineral Resources. Newly discovered gold deposits in China have been limited in recent years and the grade of gold is generally at a relatively low level. As a result, we have strategically focused our expansion plan on identifying and acquiring suitable and high-quality overseas assets to maintain a sustainable growth.

---

## BUSINESS

---

We acquired LXML and GSWL in 2018 and 2022, respectively. As of September 30, 2024, our overseas assets accounted for approximately 65.2% of our total assets, and our overseas revenue accounted for approximately 71.2% of our total revenue. According to Frost & Sullivan, we are the gold company in China with the greatest overseas presence both in terms of overseas assets contribution as of December 31, 2023 and in terms of overseas revenue contribution in 2023.

Our management team has profound experience in overseas acquisitions. We have established well-rounded decision-making and execution procedures in the identification of acquisition targets, transaction execution and post-acquisition operation integration. For example, our technical team accurately identified the Sepon Gold and Copper Mine's development potential once it is transformed from a copper-focused open-pit mine into a gold-focused underground mine and decisively seized the acquisition opportunity. We had extensive communication with local government authorities in the preliminary stage of the acquisition. With regard to the Wassa Gold Mine, we carried out in-depth inspections and research on areas with abundant gold Reserves in West Africa and properly assessed local policies and the economic environment before deciding to acquire the Wassa Gold Mine. Based upon a sensible understanding of the conditions presented and perceived, our management team efficiently seized the opportunity. The speed and effectiveness of our decision-making and execution procedures is evident from the fact that — an investment decision was made and announced within eight months after we identified that opportunity.

The fact that we have a management team which is highly competent in integration and operation of acquired overseas assets makes all the difference. Since the acquisition of LXML in November 2018, we have promoted an inclusive culture during the integration process. We advantageously fuse Chinese and international management models, ignite the passion for work, and encourage creativity among our employees. We enhanced communications with local government authorities and communities and supported them with job opportunities, skill training, pandemic preventative measures and charity donations and enjoyed reciprocal treatments. We transformed the processing plant at the mine and recommenced gold production within 18 months — well ahead of schedule. Previous operators paused gold development at the Sepon Gold and Copper Mine because of challenges in relation to processing refractory ores. With continuous technological upgrades and a series of capital investments and operational improvements, the mine's gold recovery rate has increased significantly. In 2023, the Sepon Gold and Copper Mine recorded a gold AISC of approximately \$1,330.0 per ounce, showing a decrease of 9.9% year-on-year.

Since the completion of our acquisition of the GSWL in January 2022, we have actively promoted localized management and operation concepts, built up a sound relationship with local government authorities, served local communities, and taken initiatives to contribute to regional development. We were one of the first large-scale Chinese mining companies operating in Ghana and have earned accolades for boosting the local economy. Since the acquisition in 2022, we have been investing in improving efficiency and expanding the production of underground mines, developing the 242 Ramp and B-shoot South Ramp to pave the way for underground mining operations in 2024 and the next 5 years. In 2023, the Wassa Gold Mine recorded a gold AISC of approximately US\$1,197.1 per ounce, showing a decrease of 12.7% year-on-year.

We believe our overall overseas capabilities in both acquisition and operational levels are well proved by the track records of our successfully completed and integrated acquisitions. We aim to further leverage our strengths in overseas expansions to achieve sustainable and efficient growth.

## BUSINESS

### Continuously improving on the cost curve to enhance efficiency through technological upgrade and to drive profitability

Under the leadership of our management team, we have implemented a series of cost reduction and efficiency improvement measures. These initiatives have enabled us to achieve a more favorable position on the cost curve relative to our industry peers. According to Frost & Sullivan, our operational efficiency enhancement surpassed the worldwide industry average by a notable margin and we positioned lower in terms of gold AISC than that of the global average. As of December 31, 2023, our gold AISC stood at US\$1,179.1 per ounce, placing us in the first quartile in the worldwide industry, while the global average for the same period was approximately US\$1,348.5, which is 14.4% higher than ours. In 2023, we decreased our gold AISC by 12.0%, whereas the average AISC for international gold producers increased by 7.2% during the same period. Set forth below is our gold AISC and the global average for the periods indicated:

	Year Ended December 31,		Changes from Year Ended December 31, 2022 to Year Ended December 31, 2023	Nine Months Ended September 30, 2024
	2022	2023	2023	2024
	<i>US\$/ounce</i>		<i>%</i>	<i>US\$/ounce</i>
PRC Gold Mines . . . . .	1,205.7	877.4	(27.2)	1,008.5
Sepon Gold and Copper				
Mine . . . . .	1,476.9	1,330.0	(9.9)	1,408.3
Wassa Gold Mine . . . . .	1,371.2	1,197.1	(12.7)	1,240.8
<b>Our Group . . . . .</b>	<b>1,340.0</b>	<b>1,179.1</b>	<b>(12)</b>	<b>1,249.2</b>
<b>Global Average . . . . .</b>	<b>1,258.1</b>	<b>1,348.5</b>	<b>7.2</b>	<b>1,498.8</b>

*Note:*

1. Company started to make voluntary disclosure of AISC since the year of 2022, in align with the global industrial reporting practice.

The global average AISC has increased from US\$1,348.5/ounce for the year ended December 31, 2023 to US\$1,498.8/ounce for the nine months ended September 30, 2024. This was primarily due to the ongoing rise in labor costs globally. In addition, driven by the rising gold price, gold mining companies started to process lower-grade ores which led to higher mining costs.

The AISC of our Group increased from US\$1,179.1/ounce for the year ended December 31, 2023 to US\$1,249.2/ounce for the nine months ended September 30, 2024. This was mainly because (i) the production volume of LXML for the third quarter of 2024 fell short of our expectations due to the impact of typhoons and floods, resulting in an inability to spread labor and depreciation costs; and (ii) labor costs and raw materials costs increased driven by global inflation.

---

## BUSINESS

---

The AISC of our PRC Gold Mines was significantly lower than that of our gold mines in Ghana and Laos during the Track Record Period. This was primarily due to higher cost of our gold mines in Laos and Ghana comparing to the PRC Gold Mines due to the following reasons:

- (i) firstly, our gold mines in Laos and Ghana have relatively higher procurement costs. Located in areas with underdeveloped industries, apart from energy sources like diesel and electricity which are locally available, the acquisition of production-related raw materials such as explosives, chemicals, steel, and spare parts mostly requires importation and transportation to the mines. The long shipping distances lead to higher “procurement costs” in the unit sales costs of our mines in Laos and Ghana compared to the PRC Gold Mines; and
- (ii) moreover, our gold mines in Laos and Ghana request relatively higher service and support investments compared to the PRC Gold Mines. During the production process, our mines in Laos and Ghana often employ contractors and service providers to carry out mining, drilling, and other related work. In addition, we also provide services such as camp accommodation, meals, and charter flights for employees of our gold mines in Laos and Ghana. These services are considered supporting costs for mining production. As a result, the “services and others” component in the unit sales cost of overseas mines is higher than that of the PRC Gold Mines.

LXML has made significant progress in reducing unit costs through improvements in gold recovery rates and the implementation of underground mining projects. Since resuming gold production in 2020, the LXML team has made great strides in overcoming challenges related to refractory ore and has continuously improved its ore processing and recovery processes. We have implemented a series of technical measures to minimize the environmental impact of our carbon-in-leach (CIL) process, including carbon desorption, recycling process improvements, industrial water quality enhancements, and the replacement of certain chemicals to reduce the impact of chloride ions. Moreover, we launched an underground mining project in a selected mining area in the first half of 2022. The project involves mining underground mines with a depth of 450 meters below the surface. This initiative has helped us to increase our gold processing recovery rate. We also adopted a series of capital investments and operational improvements which were completed to debottleneck process constraints and improve plant reliability and efficiency. As a result, the mine’s gold recovery rate increased significantly from 54.6% in 2021 to 64.4% in the nine months ended September 30, 2024. Looking ahead, through the adaption of the replacement from active carbon to resin and one regrinding technique, we expect that the gold processing recovery rate of the Sepon Gold and Copper Mine will further increase to approximately 75% by June 2025. In 2023, the Sepon Gold and Copper Mine recorded a gold AISC of approximately \$1,330.0 per ounce, showing a decrease of 9.9% year-on-year.

We have also achieved significant progress in cost reduction at the Wassa Gold Mine by optimizing procurement channels, enhancing material utilisation, and increasing our production capacity, in addition to other initiatives. In 2023, the Wassa Gold Mine recorded gold AISC of approximately US\$1,197.1 per ounce, showing a decrease of 12.7% year-on-year.

---

## BUSINESS

---

In terms of our domestic operation, we seek to continuously improve our operational efficiency and recovery rate at our mines through incremental changes and investments, and this is evident from, for example, the implementation by both the Jilong Gold Mine and the Huatai Gold Mine of the tailings decyanide pressure filtration processes, which improves our recovery of valuable metals like gold and silver from the tailings solution, leading to, inter alia, improved economic benefits, attaining an internationally advanced standard, and achieves a greater water balance and recycling in the concentration production following cyanide tailings treatment.

The operational effect of these continuous improvements is evident from the fact that in 2023 our PRC Gold Mines recorded gold AISC of approximately US\$877.4 per ounce, showing a decrease of 27.2% year-on-year.

Overall, we remain committed to ongoing efforts in cost reduction and efficiency improvement across our operations, with a view towards achieving greater cost competitiveness and operational excellence in the years ahead.

**Distinctive “Mutual Prosperity and Development” corporate culture and effective incentive programs continuously motivate the management and employees to boost continuous growth**

We established our corporate culture of “Mutual Prosperity and Development” by unifying our shareholders, management and employees, where the interests of stakeholders and our Company are aligned such that our shareholders, managers and workers share the successes and face the challenges together, as they are all invested in the same collective goal. Led by Chairman Wang Jianhua, the teams across our Company are united by shared missions and vision, and our Company has developed a management model and a long-term incentive mechanism that cater to its conditions and has performed effectively in reducing costs and improving efficiency.

In September 2020, we launched the Phase I ESOP and as of April 30, 2021, approximately 41.6 million shares were repurchased for the purpose of equity incentives, involving no more than 98 core employees of both the headquarters and our subsidiaries. In January 2022, we announced the Phase II ESOP. As of April 28, 2023, approximately 16.6 million shares had been repurchased amounting to RMB300.9 million in value, where the repurchased shares would be used for the Phase II ESOP. In June 2023, we launched the Phase III ESOP and as of June 27, 2024, approximately 15.2 million shares were repurchased for purpose of equity incentives or employee stock ownership, amounting to RMB220.0 million in value. The equity incentives align the interests of the key employees with those of our Company, laying a sound foundation for high-quality and sustainable growth. Please refer to the section headed “C. Further Information about our Directors, Supervisors and Substantial Shareholders — 4. Employee Stock Ownership Plans” in Appendix VII of this Prospectus for further details of the ESOPs.

---

## BUSINESS

---

Our corporate culture of “Mutual Prosperity and Development” is strongly supported by our shareholders. Following the successful implementation of various rounds of share incentive arrangements for our key management throughout the years since 2020, the shareholding of the largest shareholder (and its associates) had dropped to 14.54% as of December 31, 2023 from 20.59% as of December 31, 2020. Meanwhile, the management team’s shareholding had increased. In January 2021 and February 2024, our management team increased its shareholding by further purchasing our Company’s shares on the secondary market. As of September 30, 2024, the management team and the key employees of our Company in aggregate held approximately 4.5% of the total shares outstanding. We believe the current shareholding and corporate governance structure reflect a management approach that prioritizes the interests of all shareholders.

With the proper mechanism, the management team is well incentivized, contributing to the ongoing growth and development of our Company. From 2021 to 2023, we achieved an unparalleled CAGR of 33.1% in gold production among all major gold producers in China according to Frost & Sullivan.

### **A strong social responsibility and solid commitment to promoting green and sustainable development with high ESG standards**

We attach great importance to the environment and workplace safety. We care about the people and communities in which we operate and honor our social responsibilities. Upon joining our Group as a director in August 2022, Ms. Lydia Yang introduced a series of reforms to continuously improve our ESG practice. In September 2022, the Strategy and Sustainable Development Committee under the Board of Directors was established, and it has been chaired by Chairman Wang Jianhua. The purpose of this committee is to provide support and guidance for our medium- and long-term development strategies, decision-making on major investments for our sustainable development and to supervise the preparation and implementation of our ESG goals. In March 2023, the ESG reports of LXML and GSWL were issued, and in March 2024 a consolidated ESG report covering all mines of the company was issued.

International industry standards and best international practices are applied in our overseas mines and the same standards are adopted in our domestic mines on a step-by-step basis. The Wassa Gold Mine executes relevant ESG procedures in accordance with the standards required by the World Gold Council (WGC) and the United Nations Global Compact (UNGC), a voluntary initiative based on the management’s commitments to implement universal sustainability principles and to take steps to support UN goals, and publishes ESG reports on a regular basis. Before our acquisition, MMG Limited, the shareholder of LXML at that time, was part of the International Council on Mining and Metals (ICMM). Starting from our acquisition of LXML in November 2018, we have consistently upheld ICMM standards in the mining operations of LXML. We are also making efforts to ensure greater compliance with WGC standards by consolidating the governance of our domestic and overseas mines and continuously seek to improve the ESG governance of our mines.

---

## BUSINESS

---

We have demonstrated a distinctive performance in various ESG matters, leveraging a well-founded framework that adheres to high national and international industrial standards. Our integrated management system and infrastructure aim to decrease pollutant emissions and restore land for agricultural and functional purposes. Our commitment to sustainable development has been acknowledged through various honors and ratings. For example: (i) the Jilong Gold Mine and Hanfeng Polymetallic Mine were designated as National Green Mines in January 2020; (ii) the Wulong Gold Mine and Huatai Gold Mine were rated as Provincial (Autonomous Region) Level Green Mines in December 2020 and May 2020, respectively; and (iii) the Sepon Gold and Copper Mine received the Certificate of Excellent (A) from the Laos Government in recognition of its exceptional implementation of its environmental management and monitoring plan in January 2024.

As of December 31, 2023, we had rehabilitated approximately 514.3 hectares of land, demonstrating our unwavering dedication to sustainable practices. In 2023, we completed the construction of the gravity-fed water supply system project in Vilabouly District, Laos, which significantly enhanced the agricultural production efficiency of the local community. Our commitment to community development is further exemplified by our support for local projects such as the Golden Star Oil Palm Project, for which we were awarded by the Ghanaian Government in June 2022. In the third quarter of 2022, we received five awards in Women in Mining and Energy Award (WIMEA) in Africa, highlighting our focus on promoting diversity and inclusion.

We have also implemented strong governance initiatives in Ghana and continuously strive to reduce our energy consumption and emissions. We prioritize workplace safety and the health and development of our employees and have implemented systematic measures and protocols to achieve these goals.

In addition to our commitment to sustainability and community development, through LXML we have been investing in eliminating unexploded ammunition and local economic development in Laos. Through community development funds, LXML also contributes direct and indirect welfare benefits to the local government. Furthermore, GSWL is also dedicated to local community development funds, further underscoring our commitment to sustainable practices and community development.

### **Seasoned and dedicated management team with deep expertise in the gold industry and proven track record in mine operations locally and globally**

We have assembled a highly skilled and experienced team of industry and capital markets experts, covering a broad range of disciplines, including, among other things, corporate management, mining, processing, geology, finance, and law. Our team boasts comprehensive experience in various aspects of the gold industry such as corporate governance, technology, mergers and acquisitions, overseas mine operations, environmental protection, safety, and social responsibility. Under our existing equity and corporate governance structure, the management team pursues interest consistent goals with all shareholders and employees.

---

## BUSINESS

---

Renowned for his charismatic and exceptional management capabilities, Chairman Wang is a transformative and effective leader who time and again has leveraged his extensive experience and know-how in managing and leading large-scale enterprise groups, global mine mergers and acquisitions, and global mining operations to unlock value and catapult businesses to higher levels under the creed of “Mutual Prosperity and Development”. Before joining Chifeng Gold, he served as chairman of Shandong Gold Group Co., Ltd. (“**Shandong Gold**”), director and president of Zijin Mining Group Co., Ltd. (“**Zijin Mining**”) and chairman of Yunan Baiyao Holdings Co., Ltd. (雲南白藥控股有限公司).

During his tenure at Shandong Gold, Chairman Wang proactively implemented transformative governance, management and operational reforms to, inter alia, improve worker safety, corporate governance, operational resilience, and improve overall performance, streamlined corporate policies and protocols, championed large-scale, green development and production of gold mines, and completed a series of high-grade mine acquisitions in China. While at Shandong Gold, Chairman Wang implemented the principle of “Resources are the Unshakable Fundamental Interests of Shandong Gold” (“資源是山東黃金不可撼動的根本利益”). Under Chairman Wang’s leadership and influenced by his first-mover spirit, Shandong Gold engaged in the first deep drilling for gold exploration in China (“中國岩金勘查第一深鑽”), which included three groundbreaking and precedent-setting hole depths of 3,000 meters, 3,000 meters and 4,000 meters, respectively, in the Xiling mining area of Sanshan Island, Laizhou, which have been deemed of epoch-making significance for the Chinese mining industry. In addition, Chairman Wang supported a major scientific research “Ultra-deep Comprehensive Geological Research and Resource Prediction in Northwest Jiaoxi Gold Ore Concentration Area” (“膠西北金礦集區超深部綜合地質研究與資源預測”). From these initiatives, the Resources, Reserves and production capacity of Shandong Gold increased significantly during his tenure, the number of mines within the group increased, and in 2012 Shandong Gold was among the top gold producers in China.

During his tenure at Zijin Mining, as President and director of Zijin Mining, Chairman Wang placed employee safety as a top priority and overhauled the company’s environmental, social and corporate governance by implementing greater safety standards and new management policies to lay a strong foundation for future growth. In addition, Chairman Wang participated in the successful acquisition of a series of high-profile mining companies and mines, including Norton Gold Fields, Kolwezi Copper Mine, Kamoakakula Copper Mine, Porgera Gold Mine, and other overseas mines, boosting Zijin Mining’s quality of gold and copper Resources and Reserves.

As a pioneering leader, Chairman Wang’s record at our Company includes undertaking a series of value-adding investments to boost our annual gold output from 48.8 koz in 2018 to 461.5 koz in 2023 — an increase of nearly 10 times, improving our foundation for continued and greater success, and successfully leading and managing a drilling program through 2021 to 2022 in Dandong area with a record-breaking depth of 3,003 meters, which introduced a new era of deep drill gold exploration in China’s northeast region. Characteristic of Chairman Wang’s leadership style is his attention to detail, grand bird’s-eye view, and mindfulness of employee safety and welfare. Under Chairman Wang’s leadership, we have formed a team of

---

## BUSINESS

---

international experts to carry out in-depth research on high-quality assets across the globe, further streamlined our business, seized acquisition opportunities for high-quality assets, obtained and developed leading technologies, promoted greater employee safety and welfare, and developed a strong management practice with a global outlook.

We are aligning talent on a global scale through an open and transparent method, promoting collaboration among international and local management and staff. Our mines around the world are overseen and run collectively by a seasoned management team and local specialists. This enables us to leverage our previous experiences our mines across the globe and implement region-specific innovations and practices guided by local experts.

Our Chief Executive Officer, Ms. Yi-fang Yang, has extensive managerial experience in the global mining industry, Hong Kong listed companies and capital markets generally. For example, Ms. Yang served as Head of the Business Development Department (October 2010 to October 2011) and later executive director and CEO (September 2011 to January 2013) of CST Mining Group Limited, a company previously listed on the Main Board of the Hong Kong Stock Exchange until December 2023 (stock code: 0985) (“**CST Mining**”), and between June 2018 to April 2020 she served as an executive director and president at Hengxing Gold Holding Company Limited (恆興黃金控股股份有限公司), a company previously listed on the Main Board of the Hong Kong Stock Exchange (stock code: 2303) until it was acquired by Shandong Gold for around HK\$3 billion.

Illustrative of Ms. Yang’s entrepreneurial nature and prowess in skillful execution, she was a driving force in a series of major deals while at Zijin Mining and CST Mining, including (i) Zijin Mining’s investment of USD200 million in Glencore’s USD2.2 billion convertible bond issue, which formed part of Zijin Mining’s plan to “form a long-term strategic partnership with Glencore through the subscription”; and (ii) CST Mining’s sale of the Mina Justa Copper Project in Peru for USD505 million to a subsidiary of Minsur S.A. — one of the major mining transactions in that year; Minsur was at the time the world’s fourth largest tin producer and Peru’s largest tin miner by tonnage.

Furthermore, she has significant operational experience, including at mines in the PRC, CST Mining’s Lady Annie Copper Mine in Australia, where she stabilized the mine operation and turned around the mine from lossmaking to profitmaking, and Mina Justa Copper Project in Peru. In addition to the abovementioned positions, Ms. Yang’s distinguished managerial record includes serving in positions as chief executive officer of CST Mining, senior management positions in various group companies of Zijin Mining, including as the chairperson of Xiamen Zijin Tongguan Investment Development Company Limited (廈門紫金銅冠投資發展有限公司) and the director and general manager of Gold Mountains (H.K.) International Mining Company Limited (金山(香港)國際礦業有限公司).

---

## BUSINESS

---

Since joining our Group, Ms. Yang has implemented a series of management and operational changes to strengthen our Company's cashflow management, internal control and corporate governance, and championed technological upgrades across our operations throughout the world to minimize costs, improve mine recovery rates, advance operational excellence, and improve employee health and safety. In adherence to our value to "benefit more people through the development of Chifeng Gold", Ms. Yang has also prioritised "best in class" health and safety standards and strengthened safety awareness for our staff across the world, promoted responsible mining, emphasized the need for a responsible and excellent supply chain that strives to deliver a cost-efficiency and sustainable operation, and implemented other ESG measures, such as promoting greater equality and inclusion, across our Group to strengthen the basis for our continued success and take us ever closer to be a prominent gold producer well recognized around the world.

Mr. Lyu Xiaozhao, our Executive Director, Vice President and Chief Engineer, has been a leading force within our Group. After successfully leading our Company's Major Asset Restructuring in 2012, he has successively served as a Director and General Manager of Jilong Mining from December 2012 to August 2018, the General Manager of our Company from December 2012 to February 2016, the Chairman of the Board of our Company from February 2016 to December 2019, the Deputy Chairman of the Board and Chief Executive Officer of our Group from December 2019 to January 2022 and the Co-chairman of the Board of our Company from January 2022 to September 2023, respectively. Mr. Lyu's business acumen, leadership skills and business development have been instrumental to help shape and develop our Group to its current heights.

Mr. Lyu has significant management experience leading listed and non-listed companies, including, in addition to his stellar record at our Company, successively serving as a Deputy Party Secretary, Executive Director, Deputy General Manager, and a member of the Strategic Committee of Lingbao Gold Group Company Limited, a company listed on the Main Board of the Hong Kong Stock Exchange (stock code: 3330), from September 2002 to March 2011.

Mr. Lyu also serves in positions of trust, including as Vice President of the China Gold Association (中國黃金協會) since December 2019, Vice Director of the Mining Geology Professional Committee of the Geological Society of China (中國地質學會礦山地質專業委員會) since December 2011, a member of the National Technical Committee on Gold of Standardization Administration of China (全國黃金標準化技術委員會) since May 2008. Due to his managerial record, expertise and mining insight, Mr. Lyu is a sought-after keynote speaker for mining related conferences, including, for example, as the keynote speaker at the World Gold Technology Conference jointly organized by the China Gold Association, the Society for Mining, Metallurgy, and Exploration (SME) of the United States, the Canadian Institute of Mining, Metallurgy, and Petroleum (CIM), the Australasian Institute of Mining and Metallurgy (AusIMM), and the South African Institute of Mining and Metallurgy (SAIMM).

To stay up to date with the latest research, developments and best practices within the mining industry and related businesses and to improve the quality of the decision-making process of our Company, our Board regularly connects with acknowledged professors, researchers and other scholars from top tier universities and research institutions.

---

## BUSINESS

---

Since 2022, our Board has included four Independent Directors: two of which are well-known scholars from a top educational institution in China, and one of which is a senior professor specializing in geology, mining, and processing.

### **BUSINESS STRATEGIES**

We aim to become a world-class gold mining company and we intend to implement the following business strategies to achieve our goal.

#### **Continue to increase Ore Reserves through exploration activities and expand production volume at existing mines to realize our full growth potential**

Our existing mines at home and abroad are situated in favorable mineralization environments, showcasing significant exploration prospects across the majority of the relevant mining regions. Therefore, we plan to further maximize the potential of our existing mines by continuous production expansion, further exploration and Reserve enhancement as set out below:

For Wulong Gold Mine, we have identified several areas of gold mineralisation in its mining area and its peripheral areas, a precursor of exploration and Reserve enhancement in its deep and peripheral areas. We are advancing multiple underground development projects at the Wulong Gold Mine to increase its annual processing capacity from 578,000 tonnes to approximately 700,000 tonnes by the end of 2024. The mine's average daily processing capacity increased to over 1,800 tonnes in the second half of 2023. We will continue investing in exploration and Reserve enhancement at the mine to tap into the potential of Resources in the deep and peripheral areas. We have also entered into cooperation framework agreement with China Geological Survey Bureau Shenyang Geological Survey Center, which is expected to strengthen the exploration foundation.

For the Jilong Gold Mine, we have undertaken drilling programs in both peripheral and deep areas, yielding promising results such as the discovery of industrial ore bodies in six drill holes. We have completed the 180,000-tonne gold ore processing plant expansion project and commenced trial production by June 2024. We plan to increase annual mining capacity to approximately 300,000 tonnes by the end of 2025. Additionally, we initiated construction of a new tailings storage facility in November 2023, with other construction projects progressing as planned. We have entered into a framework agreement with the Aohanqi Longxing Resources Development Company Limited, and this cooperation is expected to expand our exploration area.

For the Huatai Gold Mine, the expansion project is currently under construction and it will initiate a comprehensive transformation of the mine's infrastructure and the commencement of shaft engineering construction by the end of 2024. Infrastructure development is projected to be substantially finished by the end of 2026, with the Huatai Gold Mine gradually recommencing mining operations in 2026. Upon completion, we expect to increase the Huatai Gold Mine's annual mining capacity by an additional 30,000 tonnes.

---

## BUSINESS

---

For the Sepon Gold and Copper Mine, we will continue our further construction and production expansion plans for underground mines and proceed with the exploration in the peripheral areas of the mine. For example, the Sepon Gold and Copper Mine has commenced development system construction in its mining area since April 2022, which facilitates underground mining at 450 meters below the surface providing access to the deeper Mineral Resources. We are also conducting a series of research projects at the underground copper mine and open-pit copper mine to increase the gold and copper Reserves and further improve ore processing recovery rates.

In addition, we formed a joint venture with Xiamen Tungsten in September 2022 (with our equity interest being 51%) to synergize and strengthen our respective positions in rare earth Resource development in Laos. We believe our planned development of rare earth resources will bring another growth opportunity for our business.

For Wassa Gold Mine, we will further expand our mining and processing capacity, with a goal to develop the Wassa Gold Mine into a large-scale gold mine and expect to achieve (i) an annual processing capacity of approximately 3.3 million tonnes and (ii) an annual production of 350 koz gold by the end of 2028. Apart from that, we will also carry on our continued exploration of the peripheral areas of the Wassa Gold Mine for more Resources and Reserves as well as a longer mine life.

For more details, please see “— Development and Expansion”.

### **Continue to obtain Resources and Reserves and increase production volume through domestic and overseas acquisitions of high-quality gold assets for robust and sustainable growth**

We believe one of the core competitive strengths in the gold industry is the ability to continuously obtain high-quality Resources and Reserves. According to Frost & Sullivan, we ranked fifth among gold producers in the PRC in terms of gold Resources and have gold Resources of 13.6 million oz as of December 31, 2023. Furthermore, we ranked fifth among gold producers in China in terms of gold production, with gold production of 461.5 koz, representing 3.8% market share, in 2023. We will seek to source further high-quality assets and will remain focused on both domestic and overseas quality assets to keep expanding the scale of our Resources and gold production, and further consolidate and strengthen our market position.

The following factors are considered in our assessment of potential acquisitions:

- Asset quality and production volume: Asset quality is the primary factor for consideration in potential merger and acquisition transactions. Close attention will be paid to high-quality assets, i.e., those with large Resources, high grade, high production volume and low production cost;

---

## BUSINESS

---

- Asset location: Preferably countries or regions such as Oceania, West Africa, Eastern and Northern Europe, Central Asia, with stable political and economic landscape and relatively low risks;
- Stages of assets: To proactively manage the risk associated with acquisitions, we focus on open-pit producing assets or brownfield projects nearing production; and
- Equity stake of assets: We seek strategic investment prospects, focusing on opportunities to acquire controlling shareholdings of the target asset.

At the same time, we intend to persist in acquiring further cutting-edge, international technologies and mining management techniques, operational models, and global talent through overseas acquisitions for our long-term growth. We actively implement international strategies and progressively infuse ESG principles into all facets of our mining production and operations across the world. We consistently aim to adhere to relevant global industry standards and optimum practices in our overseas mines and move towards standardized integration in our domestic mines. As a prominent national gold enterprise in China, we joined the Shanghai Gold Exchange as a full-fledged member in 2023. Our efforts have been acknowledged with multiple national accolades and awards for promoting mining safety, environmental conservation and sustainable development.

### **Continue to improve productivity, reduce cost and enhance profitability**

With the current industry trend of increasing overall costs in the gold mining sector and the scarcity of high-grade Mineral Resources, we recognize the critical importance of enhancing operational efficiency, cutting expenses, and boosting profitability for our long-term sustainability. Our strategy involves ongoing exploration of innovative technologies, along with a dedicated focus on cost-cutting measures such as centralized procurement, organizational streamlining, workforce optimization, and detailed assessment of gold production and pricing strategies.

To further drive cost efficiencies, we have adopted global centralized procurement center in Shanghai for our mines both domestically and internationally. Through such centralized procurement and resource optimization, we aim to effectively control and reduce procurement costs securing low prices and favorable contractual terms. In 2023, our global procurement center entered into certain framework agreements facilitated bidding processes for 41 projects, spanning critical price terms construction, equipment, services, and bulk material acquisitions essential for exploration, mining, and processing operations.

In addition, we intend to consistently apply tailored strategies based on the specific circumstances of each mine to enhance efficiency and reduce costs. We plan to continue research on processing technologies to optimize Resource utilisation. For instance, at the Sepon Gold and Copper Mine in Laos, we applied a new regrinding ball mill, tested waste rejection techniques and adopted resin instead of activated carbon, all showing great potential to elevate recovery rates and cut costs.

---

## BUSINESS

---

Beyond cost reduction efforts, we are dedicated to optimizing operational effectiveness. In particular, post-acquisition of new assets we will seek to optimize the corporate framework to lower administrative expenses and identify additional cost-saving methods. For example, detailed budget and capital management strategies have already resulted in significant enhancements. Recent steps, such as stringent cost controls through organizational restructuring and trimming non-essential positions, underscore our dedication to prudent financial stewardship and the enduring success of our business.

### **Adhere to our culture of “Mutual Prosperity and Development” to ensure strong motivation for the management team and employees**

We firmly believe that highly efficient systems and mechanisms are key factors for continuous business growth and success in the global gold mining industry. The corporate culture of “Mutual Prosperity and Development” will be valued and put into action.

In 2023, we implemented the third phase of share repurchases, with the repurchase amount of RMB220 million as of December 31, 2023. The repurchased shares will be used for equity incentive plans or employee share ownership plans. This is anticipated to strengthen our employees’ loyalty and dedication and, foster a more cohesive work environment. In the future, our equity incentives will be more inclusive by offering equity or phantom stock incentives to both domestic and overseas teams and further increase the management team’s shareholding. The implementation of equity incentive schemes is poised to enhance employee engagement and performance, aligning individual goals with organizational objectives.

### **Continue to improve our ESG governance and enhance our standards of environmental protection, safety, social responsibility and corporate governance**

We will constantly consider the environment, the safety and care of our people and communities, and our social responsibilities as key targets in our corporate development activities, including the following:

We are committed to energy saving and emissions reduction. Overall, we are transitioning to cleaner, more efficient energy sources for our mining activities. As part of our commitment to emissions reduction, we are currently evaluating the potential of renewable energy sources for our operations. We are exploring various options for renewable energy projects with an aim to achieve a 30% reduction in greenhouse gas emission intensity by 2030. We have opted for energy-efficient and eco-friendly machinery for all newly constructed ore processing plant areas and are progressively upgrading high-energy-consuming equipment at the existing operational sites. In particular, the Jilong Gold Mine is planning to build a 10-megawatt solar power plant and expects to have the full capacity installed and ready for commercial operation by the end of 2025. Concurrently, the Wulong Gold Mine, Sepon Gold and Copper Mine, and Wassa Gold Mine are also actively strategizing the development of their renewable energy systems, thereby bolstering our renewable energy utilisation capabilities. Moving forward, we

---

## BUSINESS

---

aim to expedite the advancement of new energy infrastructure, actively participate in low-carbon transitions, systematically and gradually phase out fossil fuels through diverse clean energy blends and accomplish our transition to substantial decarbonization.

We aim to promote green mining and land rehabilitation throughout our global operation. For instance, we are committed to our Golden Star Oil Palm Project in Ghana, through which we contribute to post-mining environmental restoration and support the Sustainable Development Goals adopted by the United Nations. By December 31, 2023, we had grown more than 140,000 oil palm trees in ten different communities covering more than 1,000 hectares of land. We will continue to fund the Golden Star Oil Palm Project through our contribution of US\$1 per oz of gold produced. We will also continue to undertake biodiversity conservation activities in Ghana.

- We will further enhance our waste management capability. We are dedicated to minimizing the environmental impact of our operations, including the safe and comprehensive utilisation of tailings. To this end, we utilize decyanide technology for the harmless treatment of tailings, while adopting a dry discharge method for domestic mine tailings slag. We also aim to reduce the amount of tailings in stockpiles, and repurpose them as filling materials for mine geological environment management and road subgrade materials where feasible. In addition, we take proactive measures to minimize the impact of tailings on the environment, including covering tailings discharged into the tailings pond with soil, planting grass for greening, and conducting ongoing monitoring of groundwater, soil, and solid waste either internally or by enlisting the expertise of third-party specialists.
- We will continue to provide economic benefits and supports to local communities. We seek to contribute to host communities through economic upliftment, by contributing to community development funds, paying our fair share of taxes and prioritizing local recruitment, as well as by supporting local vendors through procurement and training.

### BUSINESS MODEL

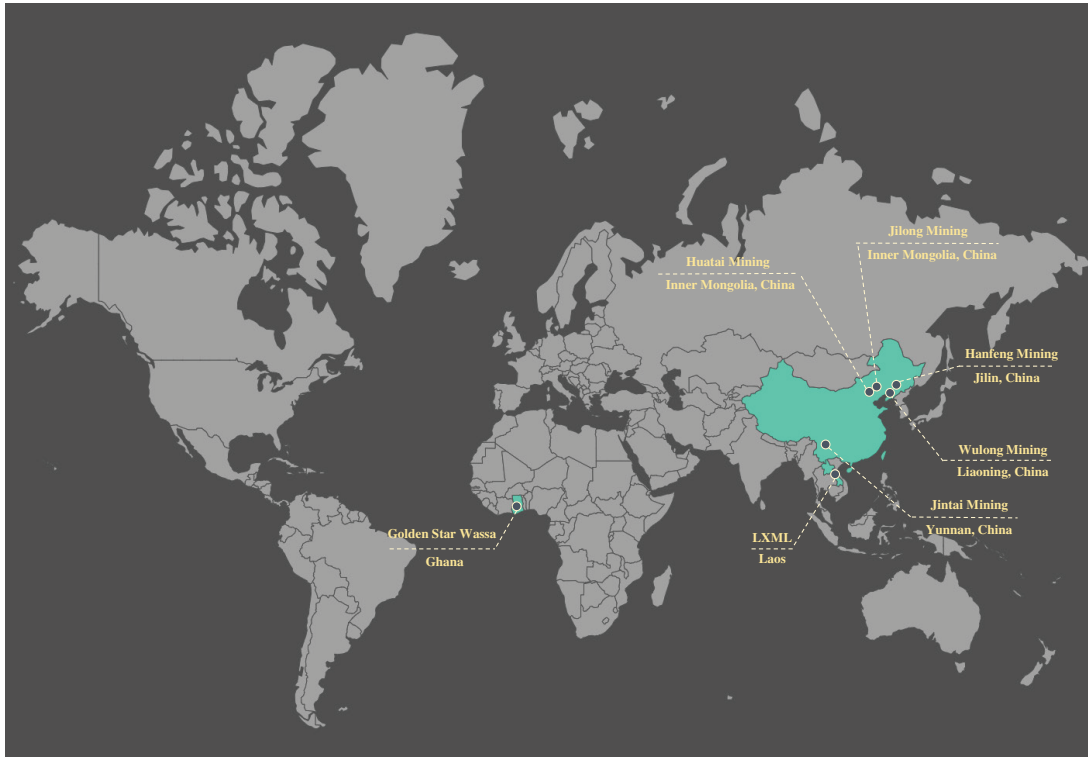

We are a fast-growing, international gold producer mainly engaged in the mining, processing and sales. As of the date this Prospectus, we conducted our gold mining business through: (i) four subsidiaries in the PRC, namely Wulong Mining, Jilong Mining, Huatai Mining and Jintai Mining; (ii) one subsidiary in Laos, namely LXML; and (iii) one subsidiary in Ghana, namely GSWL. In addition, we engaged in exploration, mining, processing and sales of other Mineral Resources, which mainly include (i) non-ferrous metals produced by our PRC subsidiary, Hanfeng Mining, (ii) copper cathodes produced by LXML. Aside from our main business above, we engaged in recycling of waste electronic products and electrical appliances business through our PRC subsidiary, Guangyuan Technology.

---

## BUSINESS

---

Set forth below is an illustration of geographic coverage of our operation, including key subsidiaries and mine locations, as of the Latest Practicable Date.

Our gold production business produces doré, gold concentrate powder and gold-loaded carbon with different gold content. Our gold production experienced rapid growth during the Track Record Period, with total gold production volume of approximately 260.2 koz, 436.2 koz, 461.5 koz and 345.6 koz, respectively. According to Frost & Sullivan, we ranked first among the top five gold producers in China, in terms of gold production growth rate from 2021 to 2023, during which period our gold production grew with a CAGR of 33.1%.

Our doré product

---

## BUSINESS

---

In terms of our other Mineral Resources business, the non-ferrous metals we mine through the Hanfeng Polymetallic Mine are processed into a wide range of products including (i) zinc concentrate powder, (ii) lead concentrate powder (containing silver), (iii) copper concentrate powder, (containing silver) and (iv) molybdenum concentrate powder. We also produce copper cathode in Laos through the Sepon Gold and Copper Mine. In addition, as Laos possesses abundant rare earth Resources, we have leveraged our established infrastructure and technologies to expand rare earth business in Laos.

### Mineral Resources and Reserves

#### *Independent Report*

We engaged SRK Consulting (China) Ltd., an Independent Third Party and an international consulting company that offers advice and solutions to resource industries for mining projects, as the Independent Technical Consultant, to prepare the Competent Person's Report as set out in Appendix IIIA-IIID to this Prospectus, which is an independent assessment and evaluation of our Mineral Resources and Ore Reserves as of September 30, 2024.

The information set forth below relating to our Mineral Resources and Ore Reserves constitutes forward looking information, which is subject to certain risks and uncertainties. Please refer to "Risk Factors" and "Forward-Looking Statements" for details.

According to the Independent Technical Consultant, except for the expected addition of two new areas of mineralisation at the Jintai Gold Mine, there was no material change in the Competent Person's Report or our Mineral Resources and Ore Reserves estimate since September 30, 2024, being the effective date of our Mineral Resources and Ore Reserves estimate, and up to the date of this Prospectus.

### Our Mineral Resources and Ore Reserves in China

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our gold Resources in the PRC as of September 30, 2024:

<u>Mineralized Zone/Block</u>	<u>Category</u>	<u>Tonnage</u>	<u>Au Grade</u>	<u>Au Metal Contained</u>	<u>Au Metal Contained</u>
		(kt)	(g/t)	(koz)	(t)

## BUSINESS

As of September 30, 2024, the Probable Ore Reserves for Wulong Gold Mine are about 984 thousand tonnes with an average Au grade of 7.30 g/t. The Ore Reserves for Jinlong Gold Mine are about 919 thousand tonnes with an average Au grade of 8.73 g/t, of which 510 thousand tonnes are Proved Ore Reserves with an average Au grade of 9.81 g/t, and 409 thousand tonnes are Probable Ore Reserves with an average Au grade of 7.38 g/t. The Ore Reserves for Huatai Gold Mine are about 1,694 thousand tonnes with an average Au grade of 6.20 g/t, of which 226 thousand tonnes are Proved Ore Reserves with an average Au grade of 5.21 g/t, and 1,468 thousand tonnes are Probable Ore Reserves with an average Au grade of 6.35 g/t. The Probable Ore Reserves for Jintai Gold Mine are about 1,370 thousand tonnes with an average Au grade of 0.75 g/t.

As of September 30, 2024, the Ore Reserves for PRC Mines are about 4,967 thousand tonnes with an average Au grade of 5.38 g/t, of which 736 thousand tonnes are Proved Ore Reserves with an average Au grade of 8.40 g/t, and 4,231 thousand tonnes are Probable Ore Reserves with an average Au grade of 4.86 g/t.

### Our Mineral Resources and Ore Reserves in Laos and Ghana

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our gold Resources in Laos and Ghana as of September 30, 2024:

Mineralized Zone/Block	Category	Tonnage	Au Grade	Au Metal Contained	Au Metal Contained
		(kt)	(g/t)	(koz)	(t)

*Notes:*

- As to the Sepon Gold and Copper Mine and Wassa Gold Mine, the Mineral Resources include the resources from open-pit, underground and stockpile.
- Numbers have been subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them.

## BUSINESS

As of September 30, 2024, the Mineral Resources for Sepon Gold and Copper Mine are estimated to be about 13,498 thousand tonnes with an average Au grade of 4.00 g/t, including approximately 276 thousand tonnes of Measured Mineral Resources with an average Au grade of 7.98 g/t, 7,220 thousand tonnes of Indicated Mineral Resources with an average Au grade of 4.13g/t, 6,002 thousand tonnes of Inferred Mineral Resources with an average Au grade of 3.67 g/t. The Mineral Resources for Wassa Gold Mine are estimated to be about 77,631 thousand tonnes with an average Au grade of 3.31 g/t, including approximately 6,754 thousand tonnes of Measured Mineral Resources with an average Au grade of 2.97 g/t, 9,984 thousand tonnes of Indicated Mineral Resources with an average Au grade of 3.13g/t, 60,893 thousand tonnes of Inferred Mineral Resources with an average Au grade of 3.38 g/t.

As of September 30, 2024, the Mineral Resources for our overseas mines are estimated to be about 91,129 thousand tonnes with an average Au grade of 3.41 g/t, including approximately 7,031 thousand tonnes of Measured Mineral Resources with an average Au grade of 3.17 g/t, 17,203 thousand tonnes of Indicated Mineral Resources with an average Au grade of 3.55 g/t, 66,895 thousand tonnes of Inferred Mineral Resources with an average Au grade of 3.40 g/t.

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our gold Reserves in Laos and Ghana as of September 30, 2024:

Mineralized Zone/Block	Category	Tonnage	Au Grade	Au Metal Contained	Au Metal Contained
		(kt)	(g/t)	(koz)	(t)
Sepon Gold and Copper Mine – Gold. . . . .	Proved	268	4.70	41	1.26
	Probable	7,628	3.05	749	23.30
	<b>Total</b>	<b>7,896</b>	<b>3.11</b>	<b>790</b>	<b>24.56</b>
Wassa Gold Mine. . .	Proved	3,521	2.14	242	7.53
	Probable	5,291	2.12	360	11.19
	Stockpile	30	1.33	1.27	0.04
	<b>Total</b>	<b>8,842</b>	<b>2.12</b>	<b>603</b>	<b>18.76</b>
<b>Total consolidated</b>	<b>Proved</b>	<b>3,790</b>	<b>2.32</b>	<b>283</b>	<b>8.79</b>
	<b>Probable</b>	<b>12,918</b>	<b>2.67</b>	<b>1,109</b>	<b>34.49</b>
	<b>Stockpile</b>	<b>30</b>	<b>1.33</b>	<b>1.27</b>	<b>0.04</b>
	<b>Total</b>	<b>16,738</b>	<b>2.59</b>	<b>1,393</b>	<b>43.32</b>

*Notes:*

- As to the Sepon Gold and Copper Mine and Wassa Gold Mine, the Ore Reserves include the ore from open pit, underground and stockpile.
- Numbers have been subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them.

## BUSINESS

As of September 30, 2024, the Ore Reserves for Sepon Gold and Copper Mine are about 7,896 thousand tonnes with an average Au grade of 3.11 g/t, of which 268 thousand tonnes are Proved Ore Reserves with an average Au grade of 4.70 g/t, and 7,628 thousand tonnes are Probable Ore Reserves with an average Au grade of 3.05 g/t. The Ore Reserves for Wassa Gold Mine are about 8,842 thousand tonnes with an average Au grade of 2.12 g/t, of which 3,521 thousand tonnes are Proved Ore Reserves with an average Au grade of 2.14 g/t, 5,291 thousand tonnes are Probable Ore Reserves with an average Au grade of 2.12 g/t, and 30 thousand tonnes are Stockpile with an average Au grade of 1.33 g/t.

As of September 30, 2024, the Ore Reserves for our overseas mines are about 16,738 thousand tonnes with an average Au grade of 2.59 g/t, of which 3,790 thousand tonnes are Proved Ore Reserves with an average Au grade of 2.32 g/t, 12,918 thousand tonnes are Probable Ore Reserves with an average Au grade of 2.67 g/t, and 30 thousand tonnes are Stockpile with an average Au grade of 1.33 g/t.

### Our Other Mineral Resources and Ore Reserves in the PRC

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our non-ferrous metal Resources in the PRC conducted at subsidiary, Hanfeng Mining, which owns two mining areas, namely Lishan Mining Area and Dongfeng Mining Area, as of September 30, 2024:

Category	Lishan Mining Area							Dongfeng Mining Area		
	Tonnage	Zn Grade	Zn Metal Contained	Cu Grade	Cu Metal Contained	Pb Grade	Pb Metal Contained	Tonnage	Mo Grade	Mo Metal Contained
	(kt)	%	(kt)	%	(kt)	%	(kt)	(kt)	%	(kt)
Measured . . . . .	752	2.36	18	–	–	0.12	1	1,819	0.11	2
Indicated . . . . .	8,583	2.66	229	0.07	6	0.12	10	26,495	0.12	32
Inferred . . . . .	10,616	2.90	308	0.09	10	0.13	14	37,053	0.12	45
<b>Total . . . . .</b>	<b>19,951</b>	<b>2.78</b>	<b>554</b>	<b>0.08</b>	<b>16</b>	<b>0.13</b>	<b>25</b>	<b>65,367</b>	<b>0.12</b>	<b>79</b>

Note:

- Numbers have been subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them.

## BUSINESS

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our non-ferrous metal Reserves in the PRC conducted at subsidiary, Hanfeng Mining, which owns two mining areas, namely Lishan Mining Area and Dongfeng Mining Area, as of September 30, 2024:

Category	Lishan Mining Area		
	Tonnage	Zn Grade	Zn Metal Contained
	(kt)	(%)	(kt)
Proved . . . . .	390	2.26	9
Probable . . . . .	2,920	2.47	72
<b>Total . . . . .</b>	<b>3,310</b>	<b>2.45</b>	<b>81</b>

*Notes:*

- Numbers have been subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them.
- It should be noted that only the Lishan Lower Part (Stage 1) is included in the Ore Reserves, as there are insufficient technical studies regarding the Lishan Lower Part (Stage 2) and the Dongfeng Lower Part. In order to classify as Proved or Probable Ore Reserve category, technical studies need to be completed to at least a PFS level with an appraisal of how access would be achieved, mining methodology (including extraction and dilution factors), the geotechnical understanding as well as ventilation. Along with the technical understanding and extraction achievability, the economics of each area needs to be proved, i.e. with the application of Capex and Opex, is it economic to mine, cash flow positive.

### Our Mineral Resources and Ore Reserves in Laos

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our copper Resources in Laos conducted at our subsidiary, LXML, as of September 30, 2024:

Mineralized Zone/Block	Category	Tonnage	Cu Grade	Cu Metal Contained
		(kt)	(%)	(kt)
Sepon Gold and Copper Mine – Copper . . . . .	Measured	—	—	—
	Indicated	4,416	1.45	64
	Inferred	2,078	0.98	20
	<b>Total</b>	<b>6,493</b>	<b>1.30</b>	<b>85</b>

*Note:*

- Numbers have been subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them.

---

## BUSINESS

	<b>Total</b>	<b><u>1,185</u></b>	<b><u>0.93</u></b>	<b><u>11.05</u></b>

*Note:*

- Numbers have been subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them.

### Our Gold Production Volume

The following table sets forth our ore mined volume, ore processed volume and mine production volume in relation to our gold mining businesses for the periods indicated:

	Year Ended December 31,															
	2021				2022				2023				2024			
	Ore Mined	Ore Processed	Gold Production	Processing Capacity	Utilisation <sup>1</sup> Rate	Ore Mined	Ore Processed	Gold Production	Processing Capacity	Utilisation <sup>1</sup> Rate	Ore Mined	Ore Processed	Gold Production	Processing Capacity	Utilisation <sup>1</sup> Rate	
(kt)	(kt)	(koz)	(ktd/a)	(%)	(kt)	(kt)	(koz)	(ktd/a)	(%)	(kt)	(kt)	(koz)	(ktd/a)	(%)		
Wulong Gold Mine <sup>6</sup>	333	383	28.0	400	96%	389	423	43.8	1,000	42%	577	578	59.2	1,000	53%	
Jilong Gold Mine <sup>1, 6</sup>	138	146	34.3	120	122%	153	156	29.5	120	130%	155	155	44.7	120	129%	
Huatai Gold Mine <sup>2, 6</sup>	56	60	4.9	60	100%	18	19	1.3	60	32%	1	2	0.5	60	4%	
Jinmai Gold Mine <sup>3</sup>	-	-	-	-	-	-	-	-	140	88%	-	-	-	140	-	
Sepou Gold and Copper Mine-Gold <sup>4, 6</sup>	4,237	3,407	193.0	3,800	90%	3,794	3,792	199.5	3,800	100%	2,790	3,085	193.2	3,800	81%	
Wassa Gold Mine <sup>5, 6</sup>	-	-	-	-	-	2,024	1,969	162.1	2,700	73%	2,530	2,531	161.5	2,700	94%	
Total	4,814	3,996	260.2	4,380	91%	6,378	6,359	436.2	7,680	83%	6,175	6,493	461.5	7,820	84%	
	==	==	==	==	==	==	==	==	==	==	==	==	==	==	==	
	==	==	==	==	==	==	==	==	==	==	==	==	==	==	==	

Notes:

- Utilization rate is calculated by dividing the amount of ore processed by the processing capacity. For some of the periods, the utilisation rate were over 100%. This was mainly because the relevant processing plants actually operated for more days than the planned schedule as the annual maintenance work took less than the anticipated time.
- The ore mined, ore processed, gold production, processing capacity and utilisation rate of Huatai Gold Mine began to decline since 2021. This is mainly because the technical renovation and expansion project of Huatai Gold Mine commenced in 2021. Since then, the production of Huatai Gold Mine gradually declined due to the impact from the engineering upgrades. For more details regarding the year-to-year comparison of the gold production volume, please refer to “Our Gold Production Business in China — Overview — Operation Performance”.

3. In January 2023, we completed the acquisition of a 51% equity interest in Xinhenghe Mining, which in turn directly holds a 90% equity interest in Jintai Mining, which runs Jintai Gold Mine, and we began consolidating the accounts of Jintai Mining from January 31, 2023. As such, ore mined volume, ore processed volume and mine production volume of the Jintai Gold Mine prior to January 31, 2023 was not included in our Group. For more details, please see “Financial Information — Key Factors Affecting Our Results of Operations — Acquisitions — Acquisition of Xinhenghe Mining.”
4. The volume of the ore mined of Sepon Gold and Copper Mine declined over the Track Record Period, mainly because we were upgrading the mining systems of Sepon Gold and Copper Mine to enhance the capacity, which affected the mining operations, and we have utilised part of the ore inventory which were mined in past periods. The volume of ore processed decreased as Sepon Gold and Copper Mine started underground mining in 2023 and the underground operation provides higher grade ore but with smaller volume. For more details regarding the year-to-year comparison of the gold production volume, please refer to “— Our Gold Production Business in Laos — Overview — Operation Performance”.
5. In January 2022, we acquired a 62% equity interest in Golden Star Resources, which in turn indirectly holds a 90% equity interest in GSWL, and we began consolidating the accounts of Golden Star Resources from February 1, 2022. As such, ore mined volume, ore processed volume and mine production volume of the Wassa Gold Mine prior to February 1, 2022 was not included in our Group. For more details, please see “Financial Information — Key Factors Affecting Our Results of Operations — Acquisitions — Acquisition of Golden Star Resources.”
6. For some of the years, the volume of “ore processed” was higher than the volume of “ore mined.” This was mainly because some of the ore mined during the previous year was kept as inventory and was processed in the following year which added up to the aggregated amount of the “ore processed” for that year.

## BUSINESS

### Our Gold Operating Costs

Our operational efficiency enhancement surpassed the worldwide industry average by a notable margin and we positioned lower in terms of gold AISC than that of the global average. As of December 31, 2023, our gold AISC stood at only US\$1,179.1 per ounce, placing us in the first quartile in the worldwide industry, while the global average for the same period was approximately US\$1,348.5, or 14.4% higher than that of ours. In 2023, we decreased our gold AISC by 12.0%, whereas the average AISC for international gold producers increased by 7.2% during the same period. Set forth below is our gold AISC and the global average for the periods indicated:

	Year Ended December 31,		Changes from Year Ended December 31, 2022 to Year Ended December 31, 2023	Nine Months Ended September 30, 2024
	2022	2023	2023	2024
	<i>US\$/ounce</i>		<i>%</i>	<i>US\$/ounce</i>
PRC Gold Mines . . . . .	1,205.7	877.4	(27.2)	1,008.5
Sepon Gold and Copper Mine . . . . .	1,476.9	1,330.0	(9.9)	1,408.3
Wassa Gold Mine . . . . .	1,371.2	1,197.1	(12.7)	1,240.8
<b>Our Group . . . . .</b>	<b>1,340.0</b>	<b>1,179.1</b>	<b>(12)</b>	<b>1,249.2</b>
<b>Global Average . . . . .</b>	<b>1,258.1</b>	<b>1,348.5</b>	<b>7.2</b>	<b>1,498.8</b>

*Note:*

1. Company started to make voluntary disclosure of AISC since the year of 2022, in align with global industrial reporting practice.

The global average AISC has increased from US\$1,348.5/ounce for the year ended December 31, 2023 to US\$1,498.8/ounce for the nine months ended September 30, 2024. This was primarily due to the ongoing rise in labor costs globally. In addition, driven by the rising gold price, gold mining companies started to process lower-grade ores which led to higher mining costs.

The AISC of our Group increased from US\$1,179.1/ounce for the year ended December 31, 2023 to US\$1,249.2/ounce for the nine months ended September 30, 2024. This was mainly because (i) the production volume of LXML for the third quarter of 2024 fell short of our expectations due to the impact of typhoons and floods, resulting in an inability to spread labor and depreciation costs; and (ii) labor costs and raw materials costs increased driven by global inflation.

---

<i>powder</i> <sup>3</sup> . . . . .	–	0.04	0.21	0.07	0.49
Sepon Gold and Copper Mine – Copper cathodes.	5.02	6.43	6.49	4.94	4.03

## BUSINESS

*Notes:*

1. The ore mined volume for the Sepon Gold and Copper Mine's copper mine dropped to zero in 2022, because the Sepon Gold and Copper Mine resumed gold production in 2020, while only keeping a small portion of processing capacity for its copper business since then. For the reason behind the halt in gold production at the copper mine of the Sepon Gold and Copper Mine, please refer to "Business — Our Gold Production Business in Laos — Overview." As of the Latest Practicable Date, the Sepon Gold and Copper Mine did not have any active copper mining projects while only processed the ore from its stockpile.
2. Utilization rate is calculated by dividing the amount of ore processed by the processing capacity. This was because the relevant processing plants actually operated for more days than the planned schedule as the annual maintenance work took less than the anticipated time.
3. There was no molybdenum production volume for the year of 2021, mainly because the Dongfeng Mine was conducting exploration and had not yet initiated molybdenum mining activities.

### Our Revenue Breakdown

During the Track Record Period, we generated revenue from the PRC, Laos and Ghana. The following table sets forth a breakdown of our revenue by origin of our products for the periods indicated:

	Year Ended December 31,						Nine Months Ended	
	2021		2022		2023		September 30, 2024	
	<i>RMB'000</i>	%	<i>RMB'000</i>	%	<i>RMB'000</i>	%	<i>RMB'000</i>	%
PRC . . . .	1,259,688	33.3	1,477,471	23.5	2,026,833	28.1	1,793,374	28.8
Laos . . . .	2,522,936	66.7	2,998,740	47.9	3,054,614	42.3	2,327,466	37.4
Ghana . . .	—	—	1,790,576	28.6	2,139,505	29.6	2,101,991	33.8
<b>Total . . .</b>	<b><u>3,782,624</u></b>	<b><u>100.0</u></b>	<b><u>6,266,787</u></b>	<b><u>100.0</u></b>	<b><u>7,220,952</u></b>	<b><u>100.0</u></b>	<b><u>6,222,831</u></b>	<b><u>100.0</u></b>

*Notes:*

1. Our revenue in Ghana was generated from Golden Star Resources. In January 2022, we acquired a 62% equity interest in Golden Star Resources, which in turn indirectly holds a 90% equity interest in GSWL, and we began consolidating the accounts of Golden Star Resources from February 1, 2022. As such, the revenue of GSWL prior to February 1, 2022 was not included in our Group. For more details, please see "Financial Information — Key Factors Affecting Our Results of Operations — Acquisitions — Acquisition of Golden Star Resources".
2. Our gold products are sold globally. Our major clients are refineries primarily located in PRC, Thailand, Australia, Singapore, South Africa and Ghana.

## BUSINESS

During the Track Record Period, we generated our revenue primarily from gold mining, other Mineral Resources and other businesses. The following table sets forth the breakdown of our revenue by business segments for the periods indicated:

	Year Ended December 31,						Nine Months Ended September 30, 2024	
	2021		2022		2023		RMB'000	%
	RMB'000	%	RMB'000	%	RMB'000	%		
Gold								
mining.	2,968,694	78.5	5,304,729	84.6	6,322,263	87.6	5,561,259	89.4
Other								
Mineral								
Resources.	551,278	14.6	650,206	10.4	495,752	6.9	454,130	7.3
Others . . .	262,652	6.9	311,852	5.0	402,937	5.5	207,442	3.3
<b>Total . . .</b>	<b><u>3,782,624</u></b>	<b><u>100.0</u></b>	<b><u>6,266,787</u></b>	<b><u>100.0</u></b>	<b><u>7,220,952</u></b>	<b><u>100.0</u></b>	<b><u>6,222,831</u></b>	<b><u>100.0</u></b>

*Note:*

1. "Others" primarily comprised recycling of waste electronic products and electrical appliances business conducted through Guanyuan Technology.

### OUR GOLD PRODUCTION BUSINESS IN CHINA

#### Overview

We have four subsidiaries conducting gold production business in the PRC, namely Wulong Mining, Jilong Mining, Huatai Mining and Jintai Mining.

#### *Wulong Mining*

Wulong Mining was established in April 2008 and was 100% acquired by us in November 2013. The mining areas of the Wulong Gold Mine are located at Zhen An District, Dandong City, Liaoning Province. The Wulong Gold Mine has three active underground mining areas. As of the Latest Practicable Date, Wulong Mining held one valid mining license which covered an area of approximately 6.27 km<sup>2</sup> and two valid exploration permits which covered an area of approximately 4.49 km<sup>2</sup>. The major product of the Wulong Gold Mine is gold concentrate powder with gold content of 50g/t and more.

#### *Development and Expansion*

Wulong Gold Mine has identified several gold mineralised areas in its mining area and its peripheral areas, a precursor of exploration and Reserve enhancement in its deep and peripheral areas. It is advancing multiple underground development projects to increase its annual processing capacity from 578,000 tonnes to approximately 700,000 tonnes by the end of 2024. The mine's average daily processing capacity increased to over 1,800 tonnes in the second half of 2023. It will continue to invest in exploration and Reserve enhancement at the mine to tap into the potential of Resources in the deep and peripheral areas.

In addition, Wulong Mining has participated in certain research projects. Wulong Gold Mine is in the southwest of Liaodong — Jinan polymetallic metallogenic gold belt and is the key research mine for the “Liaodong — Tonghua Ultra-large Gold Metallogenic Belt” (“遼東—通化金超大型成礦帶”) national project. As such, the Wulong Gold Mine was designated as a key target area for exploration as well as a strategic gold production base on a national level by the 21st Century Agenda Management Centre of the Ministry of Science and Technology (科學技術部21世紀議程管理中心) of the PRC.

To better evaluate the Resources of the Wulong Gold Mine, in July 2016, Wulong Mining participated in the national key research and development program of “Three-dimensional Structure and Ore Formation Prediction of Complex Ore Formation System in Liaodong” (遼東複雜成礦系統三維結構與成礦預測) initiated by the Ministry of Science and Technology of the PRC and led by the Institute of Geology and Geophysics of the Chinese Academy of Science (中國科學院地質與地球物理研究所).

In August 2018, Wulong Mining participated in the downstream project of “Demonstration of Prediction and Deep Exploration of Gold Polymetallic Ore in the Important Mineralised Zone of North China Kraton Liaodong/Jiaodong” (華北克拉通遼東/膠東重要成礦區帶金多金屬礦深部預測及勘查示範) led by the Development Research Centre of the China Geological Survey (中國地質調查局發展研究中心) in order to research the relevant mining area of the Wulong Gold Mine. A 3,000 meters in-depth drilling project at the Wulong Gold Mine was undertaken in May 2021, which was the first deep-hole drill for non-coal solid minerals in Northeast China. This project resulted in the discovery of four gold mineralisation areas, three gold mineralization bodies, two zinc mineralisation areas and one zinc mineralized body. In response to these findings, we have increased investments in the Wulong Gold Mine and implemented a technical transformation of the mine engineering in order to carry out a strategic expansion of the scale of the mine. We have also entered into Cooperation framework agreement with China Geological Survey Bureau Shenyang Geological Survey Center, which is expected to strengthen our exploration foundation.

### ***Jilong Mining***

Jilong Mining was established in October 2005, and it acquired 100% interest in the Jilong Gold Mine (also known as Zhuanshanzi Gold Mine (撰山子金礦)) from the state authorities of the PRC. The mining areas of the Jilong Gold Mine are located at Sidaowanzi Town, Aohan County, Chifeng City, Inner Mongolia Autonomous Region. The Jilong Gold Mine has three active underground mining areas. According to Frost & Sullivan, the Zhuanshanzi mining area is located on one of the most important major gold metallogenic belts in China with high grade ores. As of the Latest Practicable Date, Jilong Mining held two valid mining licenses and one valid exploration permit, which covered an aggregate area of approximately 17.7 km<sup>2</sup> and 3.8 km<sup>2</sup>. The major product of the Jilong Gold Mine is doré with gold content of over 80%.

---

## BUSINESS

---

### *Development and Expansion*

The Jilong Gold Mine has undertaken drilling projects in both peripheral and deep areas, yielding promising results such as the discovery of industrial mineralisation areas in 6 drill holes. It has completed the 180,000-tonne gold ore processing plant expansion project, and trial production has commenced since June 2024. We plan to increase annual mining capacity to approximately 300,000 tonnes by the end of 2025. Additionally, it started construction of a new tailings storage facility in November 2023, with other construction projects progressing as planned. We have entered into a framework agreement with Aohanqi Longxing Resources Development Company Limited, and this cooperation is expected to expand our exploration area.

### ***Huatai Mining***

Huatai Mining was established in January 2005, and it acquired 100% interest in the Huatai Gold Mine (also known as Honghuagou Gold Mine (紅花溝金礦)) from the state authorities of the PRC. The mining areas of Huatai Gold Mine are located at Wang Fu Town, Song Shan District, Chifeng City, Inner Mongolia Autonomous Region. As of the Latest Practicable Date, the Huatai Gold Mine held six valid mining licenses which covered an aggregate area of approximately 10.5 km<sup>2</sup>, respectively. The major product of the Huatai Gold Mine is doré with gold content of over 65%.

### *Development and Expansion*

Due to the limited production capacity specified in the mining licenses of the Huatai Gold Mine, it is incapable of executing large-scale mining activities. Therefore, since 2022 we have been strategizing and drafting plans for expanding and enhancing the capacity of various mining zones within the Huatai Mining's mining permits. As of the Latest Practicable Date, preliminary designs for capacity expansion initiatives in certain mining areas had been finalized and approved by the local authority, and the mine is in the process of selecting construction contractors. We expect the Huatai Gold Mine will initiate a comprehensive transformation of the mine's infrastructure and commence shaft engineering construction in 2024. Infrastructure development is projected to be substantially completed by the end of 2025. Upon completion, we expect to resume production in the beginning of 2026, subject to final approvals from relevant governmental authorities, and increase the Huatai Gold Mine's annual mining capacity by an additional 30,000 tonnes. As a result of the construction, mining activities at the Huatai Gold Mine were affected for the years ended December 31, 2022 and 2023 and the nine months ended September 30, 2024.

---

## BUSINESS

---

### *Jintai Mining*

On January 8, 2023, we completed the acquisition of 51% equity interest in Xinhenghe Mining, which in turn directly holds a 90% equity interest in the Jintai Gold Mine. The mining areas of Jintai Mining are located at Xidengping, Eryuan County, Dali City, Yunnan Province, China. As of the Latest Practicable Date, Jintai Mining held one valid mining license and one valid exploration permit, which covered an aggregate area of approximately 1.09 km<sup>2</sup> and 10.28 km<sup>2</sup>, respectively. The major product of the Jintai Gold Mine is gold-loaded carbon.

### *Development and Expansion*

In October 2023, we completed the construction project at the Jintai Gold Mine with its annual mining and processing capacity of approximately 140,000 tonnes. Since 2024, we commenced a further expansion project of the Jintai Gold Mine, pursuant to which the Xidengping mining area is expected to reach an annual mining and processing capacity of approximately 50,000 tonnes, and the Tangzibian mining area is expected to reach an annual mining and processing capacity of approximately 600,000 tonnes.

## BUSINESS

The gold production volume of the Wulong Gold Mine increased by 56.4% from 28.0 koz in 2021 to 43.8 koz in 2022. This was primarily due to (i) the completion of our technological upgrade and (ii) improvement in our mining and processing capacity and ore grade. Its gold production volume further increased by 35.1% from 43.8 koz in 2022 to 59.2 koz in 2023. This was primarily due to the completion of our technological upgrade and improvement in our mining and processing capacity and ore grade. The gold production volume of the Wulong Gold Mine increased by 17.5% from 40 koz as of September 30, 2023 to 47 koz as of September 30, 2024. This was primarily due to gold ore processing volume increased compared with the same period of last year.

The gold production volume of the Jilong Gold Mine decreased by 14.0% from 34.3 koz in 2021 to 29.5 koz in 2022. This was primarily due to deterioration of the ore grade. Its gold production volume increased by 51.5% from 29.5 koz in 2022 to 44.7 koz in 2023. This was primarily attributed to its relatively high-level gold grade and steady expansions. The gold production volume of the Jilong Gold Mine decreased by 9.7% from 31.2 koz as of September 30, 2023 to 27.5 koz as of September 30, 2024. This was primarily due to average Au grade of gold ore processed declines compared with the same period of last year.

The gold production volume of the Huatai Gold Mine decreased by 73.5% from 4.9 koz in 2021 to 1.3 koz in 2022, then decreased by 61.5% to 0.5 koz in 2023, and further decreased to nil in nine months ended September 30, 2024. The gold production volume of the Huatai Gold Mine decreased by 100.0% from 1 koz as of September 30, 2023 to nil as of September 30, 2024. These changes were primarily due to production halted for the first three quarters of the year as the mine is undergoing technology upgrades for expansion of production capacity, which affected the mine's production.

The Jintai Gold Mine was acquired by us in January 2023. The gold production volume of the Jintai Gold Mine was 2.4 koz and 6.6 koz in 2023 and in the nine months ended September 30, 2024, respectively, because its gold production was in the early stage and ramping up.

The following table sets forth the processing recovery rate of the Wulong Gold Mine, Jilong Gold Mine, Huatai Gold Mine and Jintai Gold Mine for the periods indicated.

	Year Ended December 31,			Nine Months Ended September 30,
	2021	2022	2023	2024
Wulong Gold Mine . . . . .	89.7%	89.8%	91.3%	91.0%
Jilong Gold Mine . . . . .	97.1%	96.2%	97.7%	95.5%
Huatai Gold Mine . . . . .	93.8%	93.4%	92.8%	–
Jintai Gold Mine . . . . .	–	–	87.2%	87.4%

---

## BUSINESS

---

We began processing ores from low-grade materials in 2020 based on the result of an internal economic analysis, which took into account factors like the rise of the gold price and the encouraging policies in the PRC. We believe the low-grade materials, such as residues and stockpiles, would start to gain economic value, and the comprehensive utilisation of such materials will help us increase our revenue and achieve economies of scale.

The PRC Legal Advisor is of the view that the utilisation of the low-grade materials would not constitute non-compliance under the applicable PRC laws and regulations, on the following basis:

- (i) in accordance with the Article 30 of the Mineral Resources Law of the People's Republic of China (2009 Revision), the minerals with industrial value that occur in association with or as by-products of the ordinary mineral production should be subject to unified planning, comprehensive mining, and integrated utilization to prevent waste; and
- (ii) our Group's utilisation of the low-grade materials falls within the scope of "unified planning, comprehensive mining, and integrated utilization" of minerals with industrial value that occur in association or as by-products of the ordinary mineral production.

The PRC Legal Advisor is of the view that the actual volume of materials produced being higher than the amount stipulated in the mining licenses would not be deemed as an excess over the relevant production capacity specified in its mining licences as the excessive amount could be attributable to comprehensive utilisation of the low-grade materials, which is encouraged by relevant regulations and does not fall within the scope of mined resources and reserves under the mining license.

The actual volume of materials produced by Jilong Gold Mine, which represents the aggregated amount of the stope production and comprehensive utilisation, was 138kt, 153kt and 155kt for the years ended December 31, 2021, 2022 and 2023, respectively. These volumes were 18kt, 33kt and 35kt higher than the then annual production capacity of 120kt specified in the mining license for the respective periods. For the four months from January 2024 to April 2024, the actual amount of materials produced was 49.53kt, which was 9.53kt higher, on a pro-rata basis, than the then annual production capacity of 120kt specified in the then mining license. We obtained the updated mining license with annual production capacity of 180kt on May 1, 2024. For the five months from May 2024 to September 2024, our actual amount of materials produced was 111.08kt, which was 36.08kt higher, on a pro-rata basis, than the annual production capacity of 180kt specified in the updated mining license. However, none of the stope production amounts exceeded the annual production capacity specified in the mining license.

---

## BUSINESS

---

The actual volume of materials produced by Wulong Gold Mine, which represents the aggregated amount of the stope production and the comprehensive utilisation, was 383kt, 389kt, 577kt and 529kt for the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2024, respectively. These volumes were 283kt, 289kt, 477kt and 429kt higher than the annual production capacity of 100kt in the mining license for the respective periods, but none of the stope production amounts exceeded the annual production capacity specified in the mining license.

The PRC Legal Advisor is of the view that we are not required to obtain any additional mining licences, permits or certificates for its current/planned scale of operation on the following basis:

- (i) the amount stipulated in the mining licenses does not represent the actual permitted mining scale of the mines, and the comprehensive utilization of low-grade materials is encouraged by regulations; and
- (ii) no laws, regulations, or regulatory documents in respect of mining in the PRC have explicitly stated the legal liabilities for tonnage of materials processed of ores being higher than the amount stipulated in the mining licenses.

The volume of ore mined of Jintai Gold Mine was 459kt for the nine months ended September 30, 2024. The volume was 319kt higher than the annual production capacity of 140kt specified in the mining license for the respective period. The actual tonnage processed of the Jintai Gold Mine for the nine months ended September 30, 2024 exceeded its permitted annual processing capacity and designed mining capacity due to the following reasons:

- (a) during the mining of the V1 orebody of the Phase I project of Jintai Gold Mine, we discovered some mineralized waste. As the gold price increased, we conducted economic analysis and believed that such mineralized waste had economic value. Therefore, we processed such mineralized waste for comprehensive utilization, thus increasing the production volume of Jintai Gold Mine; and
- (b) we have been expanding the production site of the Phase II project of Jintai Gold Mine. According to the development and construction plan, the designed scope of land for the expanded production site of the Phase II project overlaps with the land where the V1 ore body of the Phase I project is located. Therefore, it is necessary to accelerate the mining of the V1 orebody of the Phase I project to make space for the expanded production site of the Phase II project, which further contributed to the increased production volume of Jintai Gold Mine.

---

## BUSINESS

---

The PRC Legal Advisor is of the view that the excessive scale of production shortly after our Group's acquisition of Jintai Gold Mine in 2023 over the amount stipulated on the mining licenses and our operation of Jintai Gold Mine does not constitute a material non-compliance under the the laws and regulations in the PRC on the following basis:

- (i) in accordance with the Article 30 of the Mineral Resources Law of the People's Republic of China (2009 Revision), the minerals with industrial value that occur in association with or as by-products of the ordinary mineral production should be subject to unified planning, comprehensive mining, and integrated utilization to prevent waste. Our Group's utilization of the mineralized waste falls within the scope of "unified planning, comprehensive mining, and integrated utilization" of minerals with industrial value that occur in association with or as by-products of the ordinary mineral production;
- (ii) since March 2017, the change of production scale is no longer accepted as an administrative approval item. On February 22, 2022, the Natural Resources Department of the Inner Mongolia Autonomous Region issued the "Notice on the Update of the Production Scale Indicated on the Mining License", which stipulates that amount stipulated in the mining licenses only represents the scale at the time of the initial registration of the mining license or the scale updated during the most recent registration of the mining license. It is no longer used as the basis for reviewing the production scale of the mining license. Therefore, the amount stipulated in the mining licenses does not represent the actual permitted mining scale of the company. Based on the above, the PRC Legal Advisor is of the view that the amount stipulated in the mining licenses does not represent the actual scale that the company can mine;
- (iii) moreover, no laws, regulations, or regulatory documents in respect of mining in PRC have explicit stated the legal liabilities of enterprises with the actual volume of ores produced being higher than the amount stipulated in the mining licenses;
- (iv) Natural Resources Bureau of Eryuan County has issued the certificate of compliance, which confirmed that the exploration and mining activities of Jintai Mining in where it has operation during the Track Record Period were in compliance with the laws, regulations, or other regulatory documents;
- (v) the Eryuan Branch of the Dali Bai Autonomous Region Ecological Environment Bureau issued a compliance certificate, confirming that Jintai Mining's production and operation during the reporting period were in compliance with environmental protection laws, regulations, and other regulatory documents. All currently operating and under-construction projects have undergone environmental impact assessments as required and have adhered to relevant environmental protection regulations and requirements, the environmental protection facilities are complete and are functioning properly, the discharge of major pollutants meets the national standards for pollutant emissions; and

## BUSINESS

- (vi) the Emergency Management Bureau of Eryuan County has issued a compliance certificate, confirming that Jintai Mining has complied with the relevant laws, regulations, and regulatory documents on safety production management during the Track Record Period and meets the conditions for safe production.

Our Directors have used their best endeavors to ensure that our Group's business and operations are conducted in a law-abiding and compliant manner through the following means:

- (a) consulting our legal advisors in the PRC from time to time on various legal related matters during the ordinary course of our business to make sure our business operations are conducted in compliance with applicable laws and regulations;
- (b) attending training on directors' duties and obligations provided by our Hong Kong legal advisor and keeping abreast of the latest developments in laws and regulations relevant to our business and industry;
- (c) attending board meetings to ensure that significant decisions of our Company during the ordinary course of our business comply with laws, regulations, and articles of association of our Company; and
- (d) directing each level of various departments to hold meetings on a regular basis by discussing issues pertaining to business operations and future development, and ensuring that the operations and management of our Group are under the oversight and supervision of the management team.

### Mineral Resources and Ore Reserves

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our Mineral Resources of the Wulong Gold Mine, Jilong Gold Mine, Huatai Gold Mine and Jintai Gold Mine as of September 30, 2024:

<u>Mineralized Zone/Block</u>	<u>Category</u>	<u>Tonnage</u>	<u>Au Grade</u>	<u>Au Metal Contained</u>	<u>Au Metal Contained</u>

*Note:*

- Numbers have been subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them.

As of September 30, 2024, the Mineral Resources for Wulong Gold Mine are estimated to be about 2,999 thousand tonnes with an average Au grade of 7.61 g/t, including approximately 1,261 thousand tonnes of Indicated Mineral Resources with an average Au grade of 8.17 g/t, and 1,738 thousand tonnes of Inferred Mineral Resources with an average Au grade of 7.21 g/t. The Mineral Resources for Jilong Gold Mine are estimated to be about 1,415 thousand tonnes with an average Au grade of 10.25 g/t, including approximately 484 thousand tonnes of Measured Mineral Resources with an average Au grade of 12.19 g/t, 424 thousand tonnes of Indicated Mineral Resources with an average Au grade of 9.25 g/t, 508 thousand tonnes of Inferred Mineral Resources with an average Au grade of 9.24 g/t. The Mineral Resources for Huatai Gold Mine are estimated to be about 3,812 thousand tonnes with an average Au grade of 7.01 g/t, including approximately 385 thousand tonnes of Measured Mineral Resources with an average Au grade of 5.88g/t, 2,146 thousand tonnes of Indicated Mineral Resources with an average Au grade of 7.27 g/t, 1,281 thousand tonnes of Inferred Mineral Resources with an average Au grade of 6.90 g/t. The Mineral Resources for Jintai Gold Mine are estimated to be about 10,666 thousand tonnes with an average Au grade of 1.30 g/t, including approximately 3,363 thousand tonnes of Measured Mineral Resources with an average Au grade of 1.68 g/t, 4,604 thousand tonnes of Indicated Mineral Resources with an average Au grade of 1.02 g/t, 2,699 thousand tonnes of Inferred Mineral Resources with an average Au grade of 1.29 g/t.

## BUSINESS

As of September 30, 2024, the Mineral Resources for our PRC Mines are estimated to be about 18,893 thousand tonnes with an average Au grade of 4.12 g/t, including approximately 4,232 thousand tonnes of Measured Mineral Resources with an average Au grade of 3.26 g/t, 8,435 thousand tonnes of Indicated Mineral Resources with an average Au grade of 4.09 g/t, 6,226 thousand tonnes of Inferred Mineral Resources with an average Au grade of 4.75 g/t.

As of September 30, 2024, the Measured Mineral Resources for our PRC Mines contained 13.80 tonnes of gold, the Indicated Resources contained 34.52 tonnes of gold and the Inferred Resources contained 29.55 tonnes of gold, the total Resources contained 77.87 tonnes of gold.

The following table, which is based on the Competent Person's Report in accordance with JORC Code, sets forth the information of our gold Reserves of Wulong Gold Mine, Jilong Gold Mine, Huatai Gold Mine and Jintai Gold Mine as of September 30, 2024:

<u>Mineralized Zone/Block</u>	<u>Category</u>	<u>Tonnage</u>	<u>Au Grade</u>	<u>Au Metal Contained</u>	<u>Au Metal Contained</u>

thousand tonnes are Probable Ore Reserves with an average Au grade of 7.38 g/t. The Ore Reserves for Huatai Gold Mine are about 1,694 thousand tonnes with an average Au grade of 6.20 g/t, of which 226 thousand tonnes are Proved Ore Reserves with an average Au grade of 5.21 g/t, and 1,468 thousand tonnes are Probable Ore Reserves with an average Au grade of 6.35 g/t. The Probable Ore Reserves for Jintai Gold Mine are about 1,370 thousand tonnes with an average Au grade of 0.75 g/t.

As of September 30, 2024, the Ore Reserves for PRC Mines are about 4,967 thousand tonnes with an average Au grade of 5.38 g/t, of which 736 thousand tonnes are Proved Ore Reserves with an average Au grade of 8.40 g/t, and 4,231 thousand tonnes are Probable Ore Reserves with an average Au grade of 4.86 g/t.

### **Mining Licenses and Exploration Permits**

As of the Latest Practicable Date, our PRC gold production business held a total of 10 valid mining licenses, including (i) two mining licenses for Jilong Mining, (ii) six mining licenses for Huatai Mining, (iii) one mining license for Wulong Mining, and (iv) one mining license for Jintai Mining. These mining licenses covered a total area of approximately 35.6 km<sup>2</sup>.

In addition, as of the Latest Practicable Date, our PRC gold production business held a total of four valid exploration permits, including (i) one exploration permit for Jilong Mining, (ii) two exploration permits for Wulong Mining and (iii) one exploration permit for Jintai Mining. These exploration permits covered a total area of approximately 18.6 km<sup>2</sup>.

Our mining licenses in the PRC are generally valid for several years to 30 years. Our exploration permits are generally valid for five years and renewed accordingly subject to some conditions respectively. We aim to renew our mining licenses or exploration permits before their respective expiry dates. As advised by our PRC Legal Advisor, there are no explicit regulations limiting the number of times a mining license or an exploration permit may be renewed in the PRC. We and our PRC Legal Advisor do not expect any material legal impediment in the renewal process if we submit our application in accordance with the relevant laws and regulations. For details of relevant risks, see “Risk Factors — Risks Relating to Our Business and Industry — We may fail to obtain, maintain or renew the government permits, licenses and approvals required for our mining and exploration activities.”

We firstly undertake exploration activities in the areas covered by our exploration permits. If we deem the return of our exploration activities economically reasonable, we will apply to the relevant competent authorities for mining licenses covering such areas. The PRC mining laws and regulations grant the holder of an exploration permit priority in obtaining a mining license upon successful discovery of Mineral Resources. For details of the PRC mining laws and regulations, see “Regulatory Overview”.

#### **Wulong Mining**

Year	Milestone
1949 . . . . .	Officially commenced production
1958 . . . . .	Processing capacity of processing plant reached 150 t/d
1966 . . . . .	Annual gold production exceeded 1 ton for the first time, reaching 1.1 ton
2013 . . . . .	Wulong Mining merged into our Company
2022 . . . . .	Completed and put into operation a new 3,000 t/d processing plant. Completed the “First Deep Drill Hole of Gold Exploration in the Liaodong Area” at the Wulong project area with a final depth of 3,003.99 meters, achieving a significant breakthrough in gold exploration.
2025-2026 . . . . .	Plan to undertake the renovation of shaft and the expansion of tunnels, including shaft deepening projects and technical renovation projects
2027 . . . . .	Plan to increase our mining capacity by 33.1% compared to 2024

#### **Jilong Mining**

Year	Milestone
1958 . . . . .	Commenced mine construction commenced
2008 . . . . .	Processing capacity of the processing plant reached 400 t/d
2012 . . . . .	Annual gold production exceeded 1 ton for the first time, reaching 1.3 ton Jilong Mining merged into our Company
2024 . . . . .	Expanded mining capacity of No. 1, No. 2, No. 3 mining areas from 400 t/d to 600 t/d, new processing plant with a processing capacity of 600t/d, bringing the total processing capacity of the mine up to 1000 t/d
2025-2026 . . . . .	Plan to undertake the renovation of shaft and ventilation shafts, and the expansion of tunnels
2027 . . . . .	Plan to increase our mining capacity by 33.1% compared to 2024

---

## BUSINESS

---

### Huatai Mining

Year	Milestone
1959 . . . . .	Commenced mine construction
1987 . . . . .	The No. 2 vertical shaft at Honghuagou No. 1 mining area, single shaft gold production exceeded 300 kg
1988 . . . . .	Processing capacity of processing plant reached 200 t/d
2012 . . . . .	Huatai Mining merged into our Company
2022 . . . . .	Started process to obtain permits for production expansion
2025 . . . . .	Plan to continue with the technical renovation projects
2026 . . . . .	Plan to substantially complete the infrastructure development and to increase the annual mining capacity by 30,000 tonnes

### Jintai Mining

Year	Milestone
2008 . . . . .	Established Jintai Mining
2023 . . . . .	Became a subsidiary of our Company
2023 . . . . .	The Phase I mining and processing project with a capacity of 140,000 t/a commenced operation; gold production of 75 kg in 2023
2024 . . . . .	Launched Phase II mining and processing project with an additional capacity of 600,000 t/a
2025 . . . . .	Plan to increase our annual gold production to 1 tonnes

**BUSINESS**

**Planned Production Schedule**

As set forth in the Competent Person's Report, the following chart sets forth the planned mining and production schedule for the operations in our PRC Gold mines for the periods indicated over the life of mine:

Underground Gold Mine in China	Unit	LOM	2024

*Notes:*

1. The planned production schedule of the LOM, was made based on the data collected of our PRC Gold Mines as of September 30, 2024.
2. LOM is calculated by deducting the forecasted production volume from the Ore Reserves each year since September 30, 2024, until all Ore Reserves are extracted in the final year. The forecasted production volume is estimated based on the designed mining capacity, scheduling strategy and expansion timelines.

---

## BUSINESS

---

### **Capital Costs**

With the reference to the Independent Technical Report, our Directors confirmed that the capital costs of the PRC Gold Mines for the three years ended December 31, 2023 were approximately RMB1,101.9 million. The Independent Technical consultant has reviewed the breakdown of the capital forecast and considered appropriate capital has been allocated to support the development of the PRC Gold Mines and the basis of the capital cost estimation is considered reasonable. For detailed capital cost of the PRC Gold Mines, please refer to “Appendix IIIA — Competent Person’s Report for the PRC Mines — Capital Expenditure Forecast”.

### **Operating Costs**

In 2022 and 2023, our PRC Gold Mines recorded gold AISCs of approximately US\$1,205.7 per ounce and US\$877.4 per ounce, respectively, showing a decrease of 27.2% year-on-year.

The table below sets forth a summary of the forecasted operating costs between 2024 and 2053 for our PRC Gold Mines, as stated in the Competent Person’s Report:

**Risks Associated with the PRC Gold Mines**

The mining industry is inherently associated with a high level of risk, which is accumulated due to factors such as the nature of ore body, ore distribution, grade and variations in mining and ore processing, which are not able to be accurately predicted or accounted for. The following table sets forth a selected summary of the risk assessment regarding the material risks undertaken by the Independent Technical Consultant, including the assessment result and the ratings of the relevant risks. For more details of the risks associated with of the PRC Gold Mines, please refer to “Appendix IIIA — Competent Person’s Report for the PRC Mines — Risk Assessment.”

<b>Material Risk Assessment of the PRC Gold Mines</b>			
<b>Risk Source/Issue</b>	<b>Likelihood</b>	<b>Consequence</b>	<b>Risk</b>

**Operating Process of Gold Production Business in the PRC**

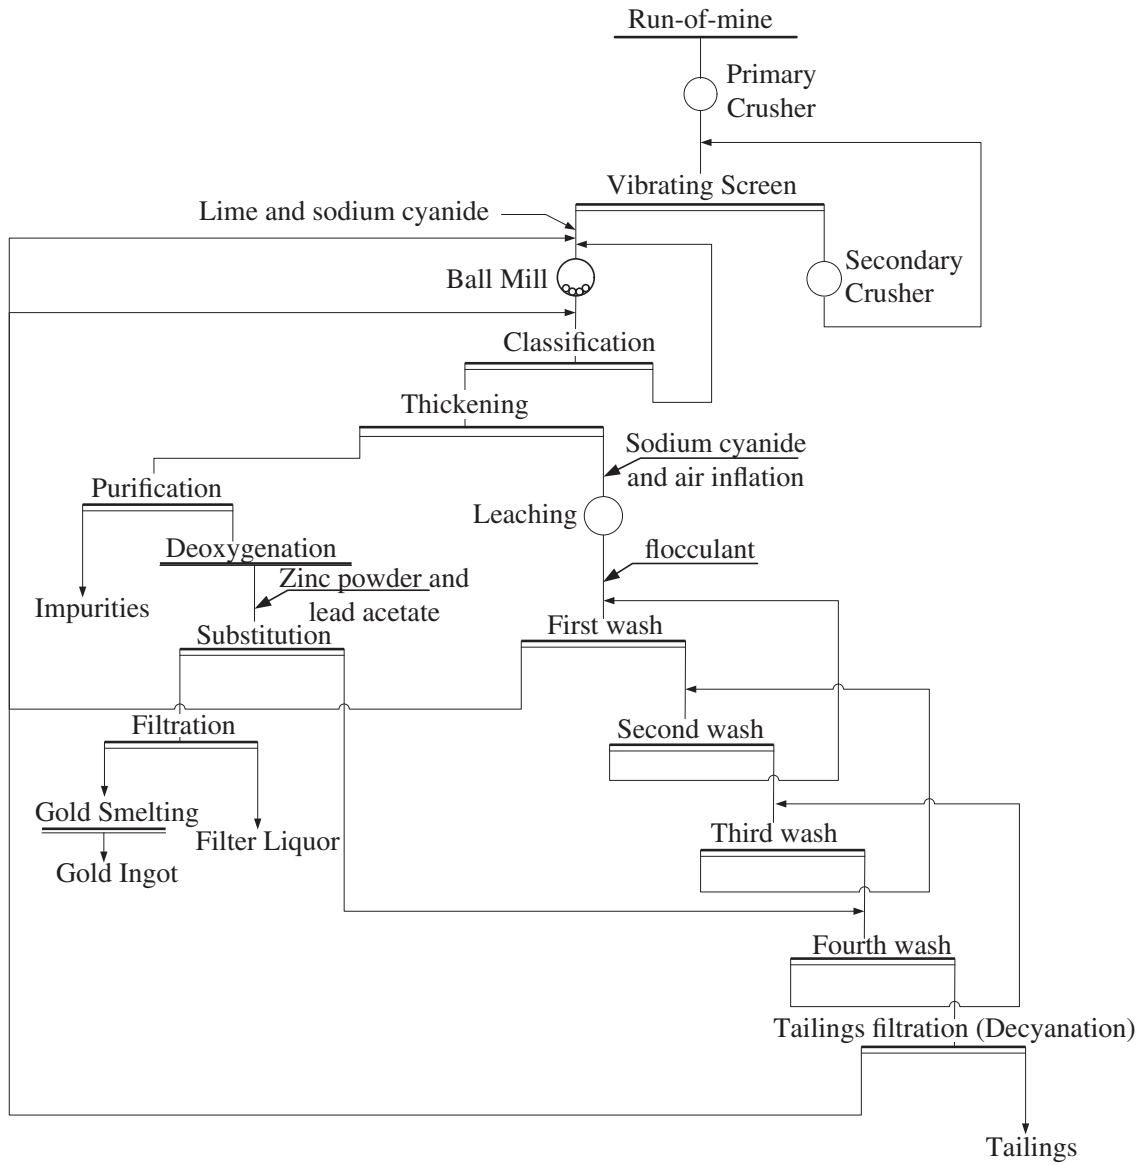

*(a) Overview*

Our gold production operations in the PRC can generally be divided into two steps, namely, (i) mining and (ii) processing. Our mines in the PRC are also equipped with processing plants to process the ores that we mine into doré, gold concentrate powder or gold-loaded carbon. The following diagrams sets forth the general workflow of the gold production process in our PRC Gold Mines:

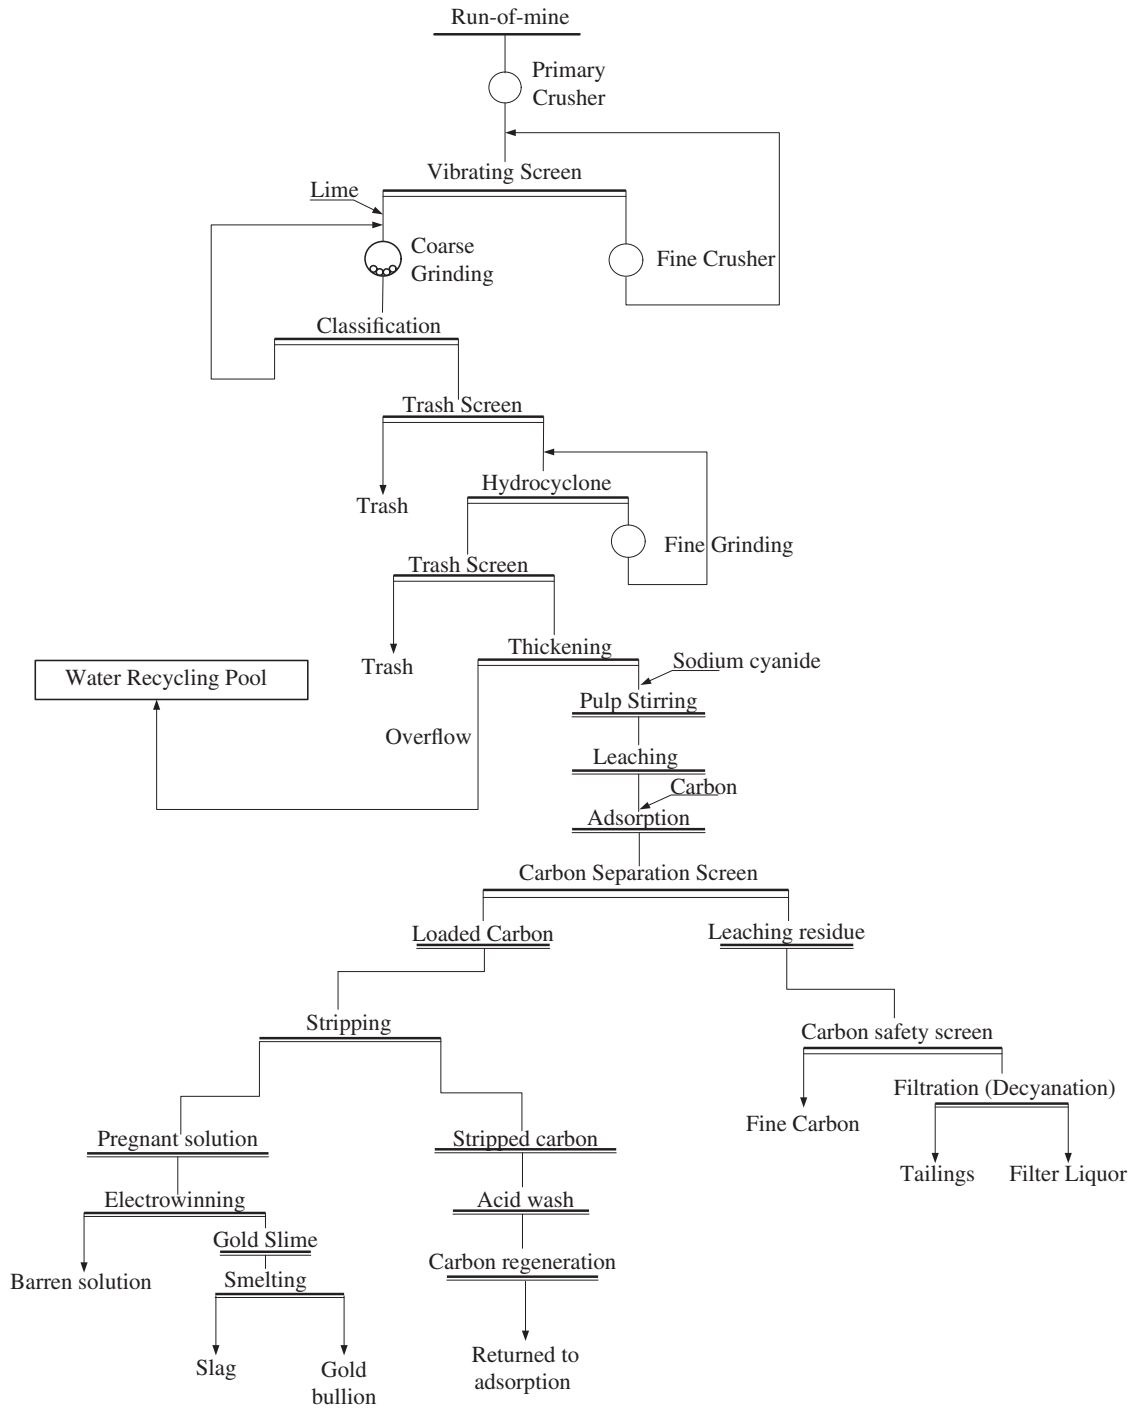

**Production Process Flowsheet of Wulong Processing Plant**

**BUSINESS**

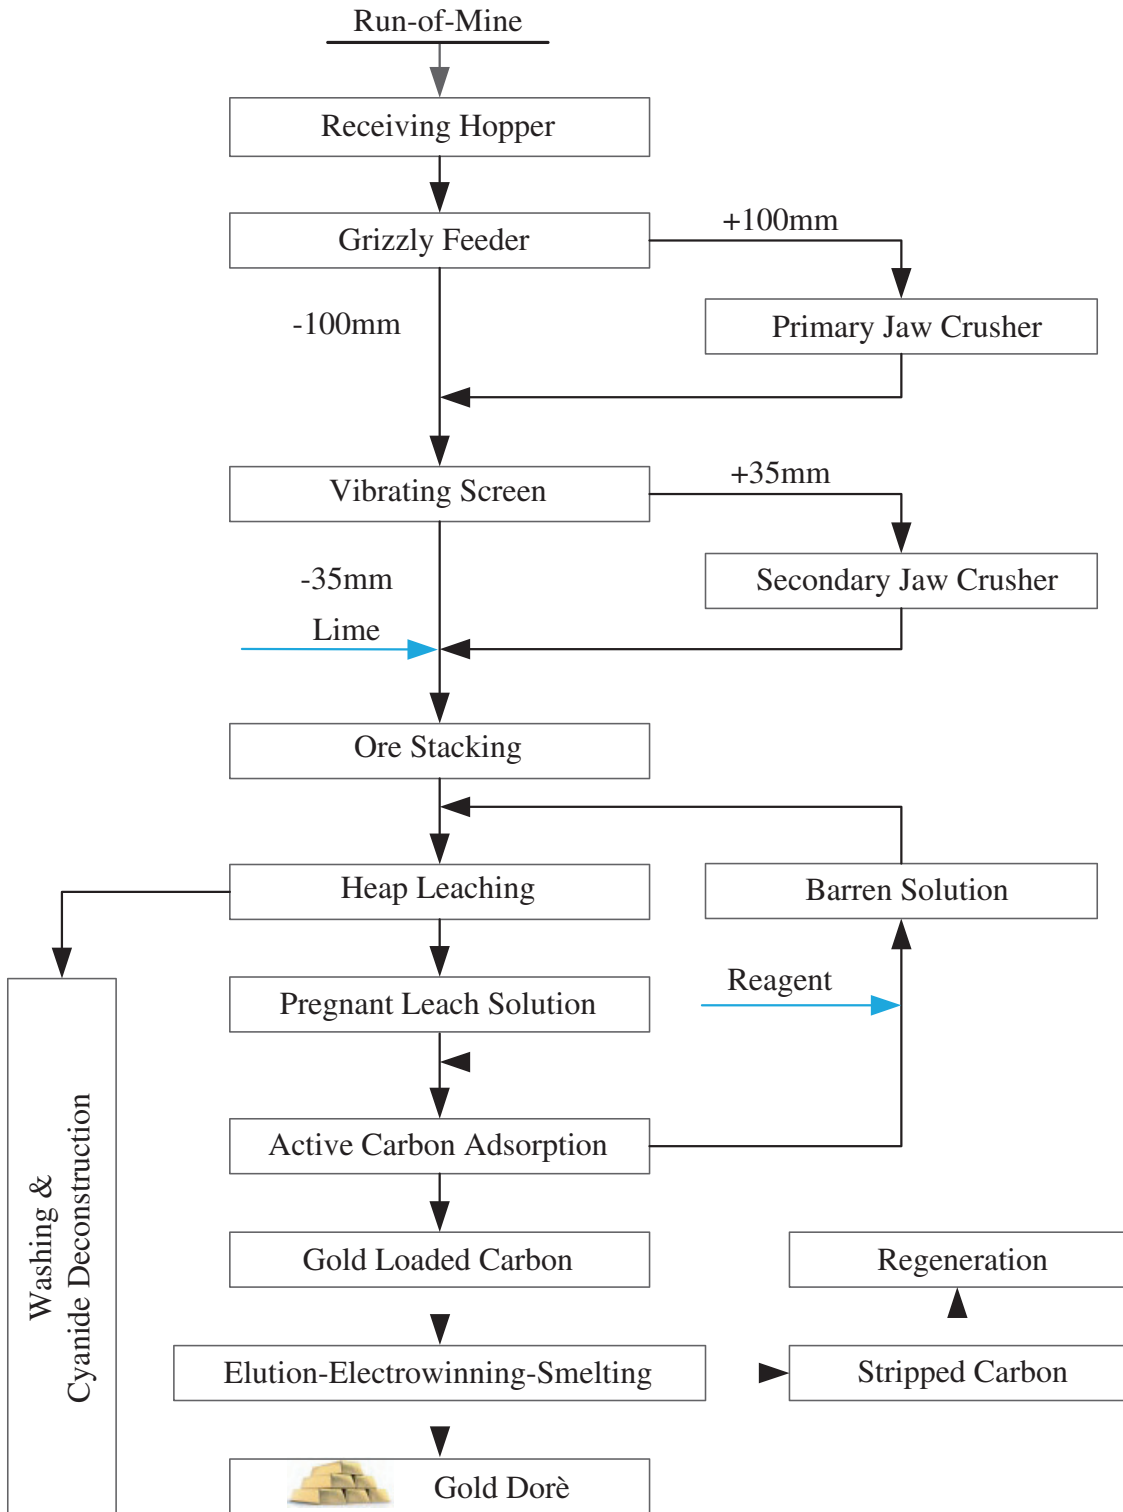

**Production Flowsheet of Jilong Processing Plant**

**BUSINESS**

**Processing Flowsheet of Huatai Processing Plant**

**BUSINESS**

**Heap Leaching Process Flowsheet of Jintai Gold Mine**

**(b) Mining**

We primarily utilize the resuing method for our underground mining at the Wulong Gold Mine, Jilong Gold Mine and Huatai Gold Mine in the PRC. Our mining equipment mainly includes rock drilling machines, jacklegs, and scrappers. Details of the mining workflow are set forth below:

- **Planning.** We undertake detailed planning prior to actual production, which covers chambers, pillars, ventilation shaft, ore passes and filling raises. We generally divide the mine area into different subsections, and use each subsection as a stoping unit.
- **Preparation and cutting.** We conduct extensive planning and cut for the ventilation raises, ore passes and filling raises. Then we drill holes in the rock wall, charge such holes with explosives and blast the rock wall.
- **Stoping.** We extract ore from the surrounding rock wall and it creates a void. Stopping is conducted in a hierarchical manner.
- **Extraction.** We transport the ore to the surface via ore passes by minecarts or mining trucks.
- **Filling.** We backfill the void with different kinds of filling materials, such as the waste rock from our blasting and/or development cutting, in order to reinforce the ground.

To a lesser extent, we also the utilize open-pit mining method at the Jintai Gold Mine. Details of the mining workflow are set forth below:

- **Planning.** Before actual production, we carry out detailed planning, which includes the layout of the mine benches, stripping of overburden, and the mining of the ore.
- **Stripping.** We undertake extensive preparatory work. Initially, a small amount of the overburden on top of the ore body is stripped away, followed by the commencement of mining. The entire stripping process is carried out entirely by excavators for digging, without the need for blasting.
- **Transportation:** We use trucks to transport the stripped soil and ore through transportation benches, separately to the waste dump and workshop.

*(c) Processing*

The Wulong Gold Mine primarily utilizes the flotation process method. Our plant mainly includes crushing circuits, grinding circuits, flotation circuits, filter machines and conveyers. Details of the processing workflow are set forth below:

- **Crushing circuit.** Typically, ores from underground are crushed in multi-stages of closed-circuit crushing.
- **Grinding circuit.** The final crushed ore is ground in a grinding circuit operated in a closed circuit.
- **Flotation circuit.** The ground product is processed in a flotation circuit, which typically consists of rougher flotation, multi-stage clean flotation and scavenger flotation.
- **Concentrate dewatering.** The concentrate is dewatered by filter machine and separated from tailings.

The Jilong Gold Mine and Huatai Gold Mine primarily utilize the all-slime cyanidation absorption gold extraction method. Our plants mainly include crushing circuits, grinding circuits, pressure filters and conveyers. Details of the processing workflow are set forth below:

- **Crushing circuit.** Typically, ores from underground are crushed in multi-stages of closed-circuit crushing.
- **Grinding circuit.** The final crushed ore is ground in a grinding circuit operated in a closed circuit.
- **Cyanidation leaching.** Ore pulp is absorbed through multi-cyanidation leaching.
- **Replacement.** Replaced gold concentrate is obtained through purification, deoxidation and replacement by zinc powder or carbon.
- **Tailings dewatering.** Gold concentrate is dewatered by pressure filter and decyanated by chemicals and then separated from tailings.

The Jintai Gold Mine primarily utilize the carbon-in-pulp gold extraction process method. The plants mainly include the crushing process, stacking process, leaching process, adsorption equipment, and stripping equipment. Details of the processing workflow are set forth below:

- **Crushing.** Typically, the mined ore is crushed through the crushing process. The crushed ore is then transported by truck to the heap leaching site for stacking.

---

## BUSINESS

---

- **Stacking.** In accordance with the design plan, the crushed ore is stacked using a self-leaching site entry with a mining inlet, where the ore is poured into the heap by truck and gradually pushed to the outer boundary of the leaching site.
- **Leaching.** For the heaps that have been stacked and turned over, a drip irrigation system is installed on top of the heap for heap leaching, and an environmentally friendly mineral processing reagent is sprayed evenly onto the surface of the ore heap after being mixed in proportion. The pregnant leach solution generated by the ore heap is collected centrally and transported to the pregnant leach solution pond.
- **Adsorption.** The adsorption tank in the adsorption workshop is filled with ground and cleaned activated carbon, and the precious liquid is transported from the pregnant leach solution pond to the adsorption tank for adsorption. The activated carbon is stirred by pressurized air equipment to ensure even adsorption.
- **Stripping.** The loaded gold-loaded carbon is extracted by the stripping equipment and serves as the final sale product.

### **Exploration Activities for Gold Production Business in China**

Our exploration activities for gold production business in the PRC are mainly carried out by our in-house exploration team. For relevant risks relating to our exploration activities, see “Risk Factors — Risks Relating to Our Business and Industry — We may not be able to expand or replenish our Mineral Resources and Reserves through exploration.”

#### ***Exploration Process***

In the field of mining geology, we primarily rely on our in-house exploration team, which collect relevant geological data each year. After the initial study by the exploration team, we conduct comprehensive studies repeatedly and finalize the exploration plans and mining plans for the following year. These plans are submitted for internal approval, followed by expert reviews organized by our headquarters. After necessary revisions and approvals, the plans are executed quarterly and monthly. Throughout this process, external experts and research teams may participate in specific research projects intermittently.

For surface exploration, we typically consider various factors, including experience and qualifications, for third-party collaborations. Upon completion of exploration, reputable mining consultancy firms prepare the relevant exploration reports. All exploration activities strictly adhere to China’s national safety production standards, environmental protection regulations, and mining laws. Local governments may request us to submit technical reports for reference before commencing mining projects.

***Third-party Exploration Teams***

To a lesser extent, we engage third-party exploration service providers to conduct exploration activities for gold production business in the PRC. When selecting the third-party exploration teams, we generally take into account a number of factors, including experience, reputation, qualification and technical conditions. Our technical staff from relevant production departments are responsible for supervising and managing the work of third-party exploration teams, such as the progress of the project and stage acceptance check. Our third-party exploration teams are required to work in strict accordance with all the applicable PRC laws and regulations in relation to occupation safety and environmental protection. For more information on third-party exploration teams, see “— Contractors.”

The following table sets forth a selected summary of the key recommendations made by the Independent Technical Consultant towards our PRC Gold Mines and the relevant measures that have been taken or will be taken and the expected time frame.

<u>Key Recommendations</u>	<u>Measures and time frame</u>
For Huatai, Wulong and Jilong Mine — To conduct the reconciliation study in the future to improve the estimation of the resources and the mining operation . . . . .	We will commission professional geological survey companies to conduct geological studies on our mines, and based on their research and assessment results, we will carry out subsequent production work. It is expected that geological research findings will be submitted every five years.
For Jintai Mine — to ensure the particle size of the stacked ore be 100% less than 25mm, and to establish a smelting workshop to produce gold bullion . . . . .	We anticipate that by the time the second phase of construction is completed, the size of the particle will be controlled within 25 mm and the smelting workshop will be established after the completion of the second phase of the construction.

**OUR GOLD PRODUCTION BUSINESS IN LAOS**

**Overview**

LXML is the operator of the Sepon Gold and Copper Mine, the mining area of which is located in Vilabouly District, Savannakhet Province, south-central Laos. It is located on the Chuankuang-Changshan polymetallic metallogenic belt, which is an important endogenous metal ore belt in Laos, with various Mineral Resources, especially copper, gold and tin. We acquired a 90% equity interest in LXML in November 2018 through the acquisition of 100% equity interest in MMG Laos Holdings Limited (“**MMG Laos**”), i.e., Chijin Laos, for a

---

## BUSINESS

---

consideration of US\$275 million. The remaining 10% equity interest in LXML is held by the Government of Laos. LXML is a large local mining enterprise in Laos focusing on gold and copper mining and processing business.

The mining area of the Sepon Gold and Copper Mine was discovered by Rio Tinto in 1992, and LXML was established in September 1993. In 1999, Oxiana acquired 80% stake in LXML, which later increased to 100% in 2004. LXML commenced gold production in 2003 and copper production in 2005. In 2008, LXML was acquired by OZ Minerals, a mining company listed on the Australian Securities Exchange. In 2010, MMG Laos acquired LXML from OZ Minerals and from 2011 started to focus on copper production. In 2013 MMG Laos decided to halt gold production as the gold Reserves, grade and recovery rates by that time were not in line with the expectation coupled with the technical constraints on gold processing. Following our acquisition of LXML in 2018, we shifted the business focus from copper back to gold and made significant investments in improving the infrastructure, equipment and technologies for gold production. LXML resumed gold production in 2020, and since then we have maintained relatively stable annual production volume. For further details, see “— Development and Expansion”.

The mining operations of the Sepon Gold and Copper Mine are generally carried out through open pit mining, with an underground mining project under construction which is commenced mining ore in the third quarter of 2023. It has one production line of gold and one production line of copper. In the future, the Sepon Gold and Copper Mine will adopt a combination of open pit mining and underground mining. For details of our copper cathodes business, see “— Our Other Metal Production Business — Our Copper Cathodes Business in Laos”. The Sepon Gold and Copper Mine has three separate gold pits that are actively mined. The main products are doré with 30%-80% gold content and 10%-70% silver content. It has a designed annual mining capacity of approximately 3.5 million tonnes and designed annual processing capacity of approximately 3.5 million tonnes.

The Sepon Gold and Copper Mine has been accredited as a Grade A+ Mine, which is the highest grade awarded to mines in the country, by the Laos Ministry of Energy and Mines for six successive years since 2016, which is the highest grade awarded to mines in the country. Meanwhile, LXML was awarded the “Laos Business Leader Award” by the Lao National Chamber of Commerce and Industry in January 2023 due to the distinguished and significant contributions it has made to the development of Laos.

**Operation Performance**

In 2021, 2022 and 2023 and the nine months ended September 30, 2024, our gold production business in Laos produced 193.0 koz, 199.5 koz, 193.2 koz and 126 koz of gold, respectively. The following table sets forth the ore mined volume, ore processed volume and mine production volume in relation to gold by the Sepon Gold and Copper Mine for the periods indicated.

	Year Ended December 31,																				
	2021				2022				2023				2024								
	Ore Mined	Ore Processed	Processing Utilisation Rate	Ore Mined	Ore Processed	Processing Utilisation Rate	Ore Mined	Ore Processed	Processing Utilisation Rate	Ore Mined	Ore Processed	Processing Utilisation Rate	Gold Production	Gold Processing Capacity							
	(kt)	(kt)	(kta)	(kt)	(kt)	(kta)	(kt)	(kt)	(kta)	(kt)	(kt)	(kta)	(koz)	(kta)							
Sepon Gold and Copper Mine -																					
Gold . . . . .	4,237	3,407	90%	3,794	3,792	199.5	3,800	3,085	2,790	3,085	81%	1,787	2,457	140.9	2,850	86%	1,890	2,355	125.9	2,850	83%

**Notes:**

- In 2023, the volume of ore processed was higher than the volume of ore mined, primarily because some of the ore mined in 2022 was kept as inventory and processed in 2023, thus increasing the aggregated amount of the ore processed in 2023.
- Utilisation rate is calculated by dividing the amount of ore processed by the processing capacity.

---

## BUSINESS

---

The gold production volume of the Sepon Gold and Copper Mine increased by 3.3% from 193.0 koz in 2021 to 199.5 koz in 2022. This was primarily due to the increase of gold recovery rate following a series of capital investments and operational improvements. Its gold production volume slightly decreased by 3.1% from 199.5 koz in 2022 to 193.2 koz in 2023. The gold production volume of the Sepon Gold and Copper Mine decreased by 10.6% from 140.9 koz as of September 30, 2023 to 125.9 koz as of September 30, 2024, mainly due to the upgrading of our mining systems to enhance the capacity, which affected gold production.

In 2021, 2022 and 2023 and the nine months ended September 30, 2024, the gold processing recovery rate of the Sepon Gold and Copper Mine was approximately 54.6%, 63.8%, 64.1% and 64.4%, respectively. In 2021, we recorded relatively low gold processing recovery rate mainly due to the nature and quality of the ore mined by the Sepon Gold and Copper Mine. In particular, the primary gold ore is a “double refractory” ore, whereby the gold is bound up in fine sulphides (pyrite) and has preg-robbing materials that impact recovery.

We have made constant efforts to improve the average gold processing recovery rate of the Sepon Gold and Copper Mine. We focus on addressing the key challenges related to its gold processing by improving ore blending, high pressure oxidation, flotation and leaching. In particular, we increased the gold processing recovery rate through measures such as carbon desorption optimization, elution circuit optimization, improvement in industrial water quality, and leaching chemicals in the carbon-in-leach process. This resulted in a significant increase in the mine’s gold recovery rate increased significantly from 54.6% in 2021 to 64.4% in the nine months ended September 30, 2024. We are also undertaking optimization of flash flotation and resin in leach project with the aim to further improve the gold processing recovery rate. Looking ahead, we expect that the gold processing recovery rate will increase further to approximately 75% by June 2025.

### *Development and Expansion*

The Sepon Gold and Copper Mine adopted the “One Focus with Two Steps” development strategy. “One Focus” refers to the target that the volume of copper production will keep stable while the volume of gold production will increase. “Two Steps” refer to: (i) increasing the intensity of exploration in our mining area, with the goal of discovering significant Resources within the next three years; and (ii) increasing investment in both experimental research on low-grade complex ores and research on the processing technology, together with further work on enhancing our gold processing recovery rate.

In 2019, LXML invited several geological experts from the United States, United Kingdom, Australia and other countries to conduct a detailed study on the exploration area of the Sepon Gold and Copper Mine, which resulted in the determination of 42 gold and 24 copper target areas in January 2020. In 2021, we formed the “Sepon 2.5 Project” team to increase the processing capacity of our plant through the addition of a second pressure oxidation station to double the processing capacity.

## BUSINESS

In terms of our overseas gold assets, we are accelerating the construction of the open-pit and underground mining projects of the Sepon Gold and Copper Mine, which is expected to increase the annual underground mining capacity to 806,000 tonnes by 2025 from the current capacity of 536,000 tonnes. Meanwhile, we are accelerating modelling and study work of exploration prospects of Discovery West Deeps and Phavat North with open-pit and underground mining potentials, the annual underground mining capacity will be increased further after 2026 and 2027. As of September 30, 2024, the Inferred Mineral Resources for Discovery West Deeps are estimated to be about 1,165 thousand tonnes with an average Au grade of 5.68 g/t.

### Mineral Resources and Ore Reserves

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our gold Resources in Laos as of September 30, 2024:

<u>Mineralized Zone/Block</u>	<u>Category</u>	<u>Tonnage</u>	<u>Au Grade</u>	<u>Au Metal Contained</u>	<u>Au Metal Contained</u>
		<i>(kt)</i>	<i>(g/t)</i>	<i>(koz)</i>	<i>(t)</i>

### **Mining Licenses and Exploration Permits**

As of the Latest Practicable Date, LXML held one valid mining license covering a total area of approximately 130.88 km<sup>2</sup>. The operation period under the permit started on March 1, 2003, with a maximum operation period of 50 years. The latest mining license was granted with a term of 10 years from September 30, 2023, which can be renewed for subsequent 10 year periods.

In addition, as of the Latest Practicable Date, LXML held one valid exploration permit covering a total area of approximately 1,010.40 km<sup>2</sup>. The exploration permit has a total exploration period (including two extensions) of nine years.

We aim to renew our mining licenses or exploration permits before their respective expiry dates. Our Laos Legal Advisor does not anticipate any legal impediment in the renewal process, subject to compliance with relevant laws and regulations. We do not expect any material legal impediment in the renewal process. For details of Laos mining laws and regulations, see “Regulatory Overview.”

---

## BUSINESS

---

The following table sets forth information regarding LXML's relevant mining licenses and exploration permits as of the Latest Practicable Date:

Type	Serial Number	Geographical Area (km <sup>2</sup> )	Effective Period	Status
Mining License . . . . .	No. 45-24/MEM.MMD	130.88	September 30, 2023 to September 29, 2033	Valid
Exploration Permit. . .	No. 1466/MEM. DGM.3	1,010.40	June 14, 2023 to June 14, 2026	Valid

### Development Plan and Planned Production Schedule

#### *Development Plan*

The following timeline illustrates key historical and planned milestones in the development of the Sepon Gold and Copper Mine:

Year	Milestone
2003 . . . . .	Commenced gold production.
2005 . . . . .	Completed the construction of copper processing plant and started copper production.
2013 . . . . .	Gold production suspended.
2017 . . . . .	Peak production of copper cathode reached 90,000 tonnes per year.
2018 . . . . .	Chifeng Gold acquired LXML which owns the Sepon Gold and Copper Mine.
2020 . . . . .	The Sepon project commenced gold production from mining primary gold Mineral Resources.
2025 . . . . .	Plan to make follow-up investments in the Far West Mine, including the construction of a tailings storage facility; expect to establish a copper ore processing plant with an annual capacity of 1 million tonnes
2027 . . . . .	Plan to increase our annual gold production to 7 tonnes and our copper annual production to 30,000 tonnes

## BUSINESS

### *Planned Production Schedule*

As set forth in the Competent Person’s Report, the following chart sets forth the planned mining and production schedule for the operations at the Sepon Gold and Copper Mine for the periods indicated over the life of mine:

Type	Unit	LOM	2024 Q4	2025	2026	2027	2028	2029	2030
<b><i>LXML</i></b>

Copper Produced . . . . .	kt	5	2	3	–	–	–	–	–

*Notes:*

1. The planned production schedule of the LOM of 7 years was made based on the data collected of Sepon Gold and Copper Mine since September 30, 2024.
2. LOM is calculated by deducting the forecasted production volume from the Ore Reserves each year since September 30, 2024, until all Ore Reserves are extracted in the final year. The forecasted production volume is estimated based on the designed mining capacity, scheduling strategy and expansion timelines.

### **Capital Costs**

With the reference to the Independent Technical Report, our Directors confirmed that the capital costs of the Sepon Gold and Copper Mine for the three years ended December 31, 2023 were approximately RMB1,684.0 million. The Independent Technical consultant has reviewed the breakdown of the capital forecast and considered appropriate capital has been allocated to support the development of the Sepon Gold and Copper Mines and the basis of the capital cost estimation is considered reasonable. For detailed capital cost of the Sepon Gold and Copper Mines, please refer to “Appendix IIIB — Competent Person’s Report for the Sepon Gold and Copper Mine — Capital Expenditures”.

### **Operating Costs**

In 2022 and 2023, the Sepon Gold and Copper Mine recorded a gold AISC of approximately US\$1,476.9 per ounce and US\$1,330.0 per ounce, respectively, showing a decrease of 9.9% year-on-year.

**BUSINESS**

The table below sets forth a summary of the forecasted operating costs between 2024 and 2030 for the Sepon Gold and Copper Mine, as stated in the Competent Person's Report:

Sepon Gold and Copper Mine	Unit	2021	2022	2023	2024Q1-Q3	LOM	2024Q4	2025	2026	2027	2028	2029	2030
<b>Gold Operation</b>													
Labor	USD million	28.44	22.69	23.10	18.23	71.06	12.91	25.23	17.18	6.93	4.92	3.61	0.28

*Notes:*

- The calculation of the operating costs of the Life of Mine was made based on the data collected of the Sepon Gold and Copper Mine since September 30, 2024.
- LOM is calculated by deducting the forecasted production volume from the Ore Reserves each year since September 30, 2024, until all Ore Reserves are extracted in the final year. The forecasted production volume is estimated based on the designed mining capacity, scheduling strategy and expansion timelines. For details, please refer to the mine schedule set forth in "Business — Development Plan and Planned Production Schedule — Planned Production Schedule".

**Risks Associated with the Sepon Gold and Copper Mine**

The mining industry is inherently associated with a high level of risk, which is accumulated due to factors such as the nature of ore body, ore distribution, grade and variations in mining and ore processing which are not able to be accurately predicted or accounted for. The following table sets forth a selected summary of the risk assessment regarding the material risks undertaken by the Independent Technical Consultant, including the assessment result and the ratings of the relevant risks. For more details and recommendations for actions to mitigate technical risks associated with the Sepon Gold and Copper Mine, please refer to “Appendix IIIB — Competent Person’s Report for the Sepon Gold and Copper Mine — Risk Assessment.”

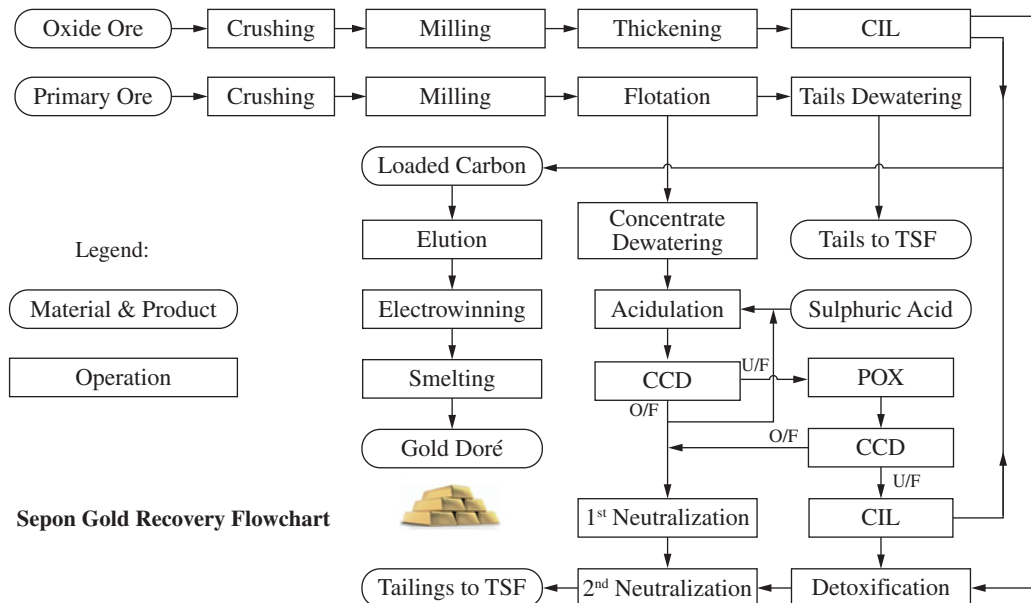

**Material Risk Assessment of the Sepon Gold and Copper Mine**

Risk Source/Issue	Likelihood	Consequence	Overall
<b>Geology and Resource</b>			
Lack of Significant Ore Reserves . . . . .	Possible	Major	High
Unexpected Groundwater Ingress . . . . .	Unlikely	Minor	Low
<b>Ore Processing</b>			
High Production Cost . . . . .	Possible	Minor	Low
<b>Capital and Operating Costs</b>			
Project Timing Delays . . . . .	Possible	Minor	Low
Operating Cost Underestimated . . . . .	Likely	Minor	Medium

**Operating Process of Gold Production Business in Laos**

*(a) Overview*

During the Track Record Period, our gold production operations in Laos can generally be divided into two steps, namely, (i) mining and (ii) processing. The following diagram sets forth the general workflow of the production process:

*(b) Mining*

In relation to mining, we generally follow the open-pit mining method, and details of that workflow are set forth below:

- **Planning.** We undertake detailed planning prior to actual production, which covers mine bench, rock stripping and rock extraction.
- **Preparation and cutting.** We conduct extensive preparation. Then we drill holes in the rock wall, charge such holes with explosives and blast the rock wall.
- **Extraction.** We transport the ore by trucks through mine benches and discharge earth.

To a lesser extent, we also adopt the underground mining method and details of that workflow are set forth below:

- **Planning.** We carry out detailed planning prior to production, which involves economic analysis to mine the ore, including access design, stope design, drilling plans, and sequencing of the stopes.
- **Development.** We develop access to the ore body through the construction of ramps, levels, and ore drives. This includes the excavation of tunnels to reach the ore zones.
- **Drilling and Blasting.** Once development is complete, we drill long, parallel holes into the ore body using longhole drills. These holes are charged with explosives and blasted to break the ore.
- **Loading and Hauling.** The broken ore is collected using remote-controlled loaders and transported to stockpiles or directly to haulage trucks. The ore is then transported from the underground workings to the surface.
- **Ventilation and Dewatering.** We maintain proper ventilation systems to ensure air quality and manage water ingress through dewatering systems.
- **Support and Stability.** We ensure ground stability by installing ground support systems such as rock bolts and shotcrete as needed.

### *(c) Processing*

In relation to processing, we utilize the flotation-pressure oxidation method to process both primary ores and oxide ores. Our plants mainly include crushing circuits, milling circuit, flotation circuit, pre-heated vessel, pressure oxidation facility, autoclave vessel and stripping facility. Details of the processing workflow for primary ores are set forth below:

- **Primary crushing and grinding.** Typically, mined ores are crushed through crushing circuit. Crushed ores will be stockpiled and fed into the milling circuit.
- **Flotation.** The milled ores are pumped into flotation circuit, including scavenger flotation. The flotation tails will be dewatered and discharged to tailings storage pit.
- **Acidulation and pressure oxidation.** The final flotation concentrate is used for acidulation where acid source is used for carbonate removal. The concentrate will then be pumped into the pre-heater vessel, the pressure oxidation facility and then the autoclave vessel, where the sulphides and pyrites are oxidized. The products will undergo the basic ferric sulphate dissolution process and then washed.

In addition, details of the processing workflow for oxide ores are set forth below:

- **Oxide grinding.** Typically, mined ores are processed through milling circuit and then pumped for cyanidation with air and lime addition.
- **Carbon in leach, elution and gold room.** The ores are leached by using sodium cyanide with air injection. Loaded carbon is transferred into the stripping facility for elution and the final gold will be poured within the gold room.
- **Cyanide destruction and neutralization.** The residues of carbon in leach will go through detoxification where chemicals are added for cyanide destruction. The final tails will go through neutralization before tailing disposal.

### **Exploration Activities for Gold Production Business in Laos**

Our exploration activities for the gold production business in Laos are primarily conducted by our in-house exploration team, which has a well-defined strategy aimed at extending the mine life through the discovery of substantial ore deposits.

#### *Exploration Process*

In the realm of mining geology in Laos, our exploration process is systematic, encompassing preliminary research, data analysis, detailed drilling, sampling, interpretation of mineralization controls, and geological modeling. We dynamically allocate exploration resources based on real-time analysis of risks and uncertainties.

---

## BUSINESS

---

For surface exploration in Laos, we consider various factors, including experience and qualifications, when collaborating with third parties. After exploration is completed, reputable mining consultancy firms prepare the relevant exploration reports. All exploration activities strictly adhere to Laos's national safety production standards, environmental protection regulations, and mining laws. Local authorities may request us to submit technical reports for reference before commencing mining projects.

### *In-house Exploration Teams*

Our in-house exploration teams at the Sepon Gold and Copper Mine focus on accelerating the exploration of quality greenfields opportunities in remote areas that were previously inaccessible. The teams are responsible for conducting exploration drilling at near-mine prospects and regional greenfields targets. The exploration process involves airborne geophysical surveys, stream sediment surveys, soil and ground geophysical surveys, geological mapping, trenching, and pattern drilling.

### *Third-party Exploration Teams*

In addition to our in-house capabilities, we also engage third-party exploration service providers for specific tasks. When selecting these teams, we consider their experience, reputation, qualifications, and technical conditions. Our technical staff supervises and manages the work of these third-party teams, ensuring compliance with all applicable laws and regulations in Laos related to occupational safety and environmental protection. These third-party teams contribute to our stratigraphic studies, structural interpretations, and refining of gold and copper targeting models, leveraging their expertise to enhance our exploration strategy.

The following table sets forth a selected summary of the key recommendations made by the Independent Technical Consultant towards our Sepon Gold and Copper Mine and the relevant measures that have been taken or will be taken and the expected time frame.

<b>Key Recommendations</b>	<b>Measures and time frame</b>
To further conduct feasibility studies to develop currently available Mineral Resources in order to extend the mine life of the project . . . . .	We continue to conduct feasibility studies to progress Mineral Resources into production to extend the life of the mine. For example, in order to better understand the resources available and attempt to turn known resources into profitable mining operations, we have committed to exploration drilling and resource drilling for the next three years in the development of the Khanong primary copper deposit and the Far West Prospects gold deposit.

---

## BUSINESS

---

### Key Recommendations

---

To proactively manage the environmental and mine closure issues during the production, in order to reduce the high mine closure cost at the end of the mine . . . . .

### Measures and time frame

---

We have been using mining waste during our production process to backfill depleted pits and create waste dumps that align with our final closure plans. Our environmental department also implements a progressive rehabilitation program, initiating rehabilitation activities in areas that are no longer in use and conform to the final profiles. Furthermore, we review the closure fund annually to identify areas where rehabilitation has been completed, allowing for a reduction in the fund, and to set targets for further progressive rehabilitation efforts.

## OUR GOLD PRODUCTION BUSINESS IN GHANA

### Overview

In January 2022, we acquired a 62% equity interest in Golden Star Resources, which in turn indirectly holds a 90% equity interest in GSWL, for a consideration of US\$291 million. The remaining 38% equity interest in Golden Star Resources is held by the China-Africa Fund for Industrial Cooperation Co., Ltd. (中非產能合作基金有限責任公司), and the remaining 10% equity interest in GSWL is held by the Government of Ghana. The mining areas are located around Akyempim Village in the Wassa East District in the Western Region of Ghana, approximately 150 kilometers west of Accra, the capital of Ghana. It is on the renowned Ashanti gold belt, which is the largest gold metallogenic belt in Ghana. Before our acquisition, Golden Star Resources was listed on the NYSE American (NYSE American: GSS), the Toronto Stock Exchange (TSX: GSC) and the Ghana Stock Exchange (GSE: GSR). Following our acquisition, Golden Star Resources was delisted from each of these stock exchanges and now operates as a privately-held company.

Ghana is a former British colony with a relatively sound legal system and attaches great importance to the development of its mining industry. Since 2021, Ghana's national gold output has surpassed that of South Africa to become the largest gold producer in Africa in terms of annual production. According to Frost & Sullivan, the political environment in Ghana is stable, and the jurisdiction is suitable for long-term investment with low political risk. Ghana, commonly known as the Gold Coast, is home to several large mines and major international mining companies, such as Newmont Corporation, Gold Field Limited and AngloGold Ashanti Limited. For details, please see "Regulatory Overview."

---

## BUSINESS

---

The mining areas held by the Wassa Gold Mine generally include (i) the Wassa mining area, (ii) the Hwini Butre mining area, and (iii) the Benso mining area. These mining areas have experienced local small-scale and colonial mining activities since the beginning of the 20th century. Golden Star Resources acquired the mining rights to its Wassa mining area from a syndicate of banks led by Standard Bank London Limited in September 2003. This was followed by the acquisitions of the mining rights in Hwini Butre and Benso mining areas in late 2006.

The Wassa Gold Mine commenced open pit production in 2005 and started commercial underground production in 2017. It currently adopts a combination of underground mining and open pit mining, with a focus on underground mining. The mining areas are equipped with well-developed production systems, complete underground equipment and facilities, a processing plant and necessary production equipment. It has a designed annual mining capacity of approximately 3 million tonnes and a designed annual processing capacity of approximately 4 million tonnes. During the Track Record Period, it had produced approximately 461.5 koz of gold. The main products of the Wassa Gold Mine are doré with more than 80% gold content.

Father Brown Mine is one of the open-pit mines within GSWL's portfolio of mines. The Father Brown Mine is independent of the Wassa Mine, as it is within the Hwini-Butre mining lease (a concession south of Wassa) with the validity until August 2031. The mining activities were suspended in 2013. After the completion of feasibility study in June 2024, we believe it is economically feasible to resume the operation of the Father Brown Mine. We intend to conduct partial trial mining and, following additional verification work, aim to resume production.

### *Operation Performance*

In January 2022, we acquired a 62% equity interest in Golden Star Resources, which in turn holds a 90% equity interest in GSWL, and we began consolidating the accounts of Golden Star Resources from February 1, 2022. As such, ore mined volume, ore processed volume and mine production volume of GSWL prior to February 1, 2022 was not included in our Group. For more details, please see "Financial Information — Key Factors Affecting Our Results of Operations — Acquisitions — Acquisition of Golden Star Resources."

In 2022 and 2023 and the nine months ended September 30, 2024, our gold production business in Ghana produced 162.1 koz, 161.5 koz and 138 koz of gold, respectively. The following table sets forth the ore mined volume, ore processed volume and mine production volume in relation to gold by Wassa Gold Mine for the periods indicated.

	Year Ended December 31,															
	2021				2022				2023				Nine Months Ended September 30, 2024			
	Ore Mined	Ore Processed	Gold Production	Processing Capacity	Utilisation Rate	Ore Mined	Ore Processed	Gold Production	Processing Capacity	Utilisation Rate	Ore Mined	Ore Processed	Gold Production	Processing Capacity	Utilisation Rate	
Wassa Gold Mine . . .	(kt)	(kt)	(koz)	(kta)		(kt)	(kt)	(koz)	(kta)		(kt)	(kt)	(koz)	(kta)		
	-	-	-	-	-	2,024	1,969	162.1	2,700	73%	2,530	2,351	161.5	2,700	94%	
											1,920	1,830	116	2,025	91%	
											(kt)	(kt)	(koz)	(kta)		
											2,211	2,300	138	2,025	114%	

*Notes:*

- In 2023, the volume of ore processed was higher than the volume of ore mined, primarily because some of the ore mined in 2022 was kept as inventory and processed in 2023, thus increasing the aggregated amount of the ore processed in 2023.
- Utilization rate is calculated by dividing the amount of ore processed by the processing capacity. For the nine months ended September 30, 2024, the utilization rate was over 100%. This was mainly because the process plant actually operated for more days than the planned schedule as the annual maintenance work took less than the anticipated time.

## BUSINESS

The gold production volume of the Wassa Gold Mine remained relatively stable at 162.1 koz and 161.5 koz in 2022 and 2023, respectively. The gold production volume was increased by 18.9% to 138.1 koz as of September 30, 2024 from 116.1 koz as of September 30, 2023 mainly due to the contribution of production volume from the construction of two new declines since in July 2023.

In 2022 and 2023 and in the nine months ended September 30, 2024, the processing recovery rate of Wassa Gold Mine was 95.6%, 95.5% and 95.4%, respectively.

### *Development and Expansion*

We are accelerating the production expansion project at the Wassa Gold Mine, especially focusing on developing deep orebodies and other mineralised area to the largest extent permitted by the mining license. According to a preliminary economic assessment, we expect to build the Wassa Gold Mine into a large-scale gold mine with (i) an annual processing capacity of approximately 3.3 million tonnes and (ii) an annual production of 353 koz gold by 2028. In order to realize this goal, we will adopt various measures, including carrying out more exploration activities at different exploration targets, upgrading our mining and processing infrastructure and maintaining the average gold processing recovery rate.

In addition, the Forestry Commission of Ghana has granted us an entry permit for exploration at the forest region of the mining area.

### **Mineral Resources and Ore Reserves**

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our gold Resources in Ghana as of September 30, 2024:

<u>Mineralized Zone/Block</u>	<u>Category</u>	<u>Tonnage</u>	<u>Au Grade</u>	<u>Au Metal Contained</u>	<u>Au Metal Contained</u>
		<i>(kt)</i>	<i>(g/t)</i>	<i>(koz)</i>	<i>(t)</i>
Wassa Gold Mine.	Measured	<u>6,754</u>	<u>2.97</u>	<u>645</u>	<u>20.08</u>
	Indicated	<u>9,984</u>	<u>3.13</u>	<u>1,004</u>	<u>31.24</u>
	Inferred	<u>60,893</u>	<u>3.38</u>	<u>6,609</u>	<u>205.53</u>
	<b>Total</b>	<b><u>77,631</u></b>	<b><u>3.31</u></b>	<b><u>8,258</u></b>	<b><u>256.85</u></b>

*Note:*

- Numbers have been subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them.

## BUSINESS

The following table, which is based on the Competent Person’s Report in accordance with the JORC Code, sets forth the information of our gold Reserves in Ghana as of September 30, 2024:

<u>Mineralized Zone/Block</u>	<u>Category</u>	<u>Tonnage</u>	<u>Au Grade</u>	<u>Au Metal Contained</u>	<u>Au Metal Contained</u>
		<i>(kt)</i>	<i>(g/t)</i>	<i>(koz)</i>	<i>(t)</i>

Mine . . . . .	Proved	<u>3,521</u>	<u>2.14</u>	<u>242</u>	<u>7.53</u>
	Probable	<u>5,291</u>	<u>2.12</u>	<u>360</u>	<u>11.19</u>
	<b>Stockpile</b>	<b><u>30</u></b>	<b><u>1.33</u></b>	<b><u>1.27</u></b>	<b><u>0.04</u></b>
	<b>Total</b>	<b><u>8,842</u></b>	<b><u>2.12</u></b>	<b><u>603</u></b>	<b><u>18.76</u></b>

*Note:*

- Numbers have been subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them.

### Mining Licenses and Exploration Permits

As of the Latest Practicable Date, GSWL held two valid mining licenses and three valid exploration permits which covered an aggregate area of approximately 62.45 km<sup>2</sup> and 148.15 km<sup>2</sup>, respectively.

The mining licenses in Ghana are generally granted with a term of up to 30 years. The exploration permits are generally renewed every three years. We aim to renew our mining licenses or exploration permits before their respective expiry dates. As advised by our Ghana Legal Advisor, there are no explicit regulations limiting the number of times a mining license or exploration permit may be renewed in Ghana. Our Ghana Legal Advisor does not anticipate any legal impediment in the renewal process. We do not expect any material legal impediment in the renewal process.

For details of Ghana mining laws and regulations, see “Regulatory Overview.”

The following table sets forth information regarding the Wassa Gold Mine’s relevant mining licenses and exploration permits as of the Latest Practicable Date:

<u>Type</u>	<u>Serial Number</u>	<u>Geographical Area (km<sup>2</sup>)</u>	<u>Effective Period</u>	<u>Status</u>
Mining Lease . . .	LVDGAST35364682022	63.00	January 26, 2022 to January 25, 2047	Lease renewed and in the process of ratification.
Mining Lease . . .	LVDGAST37993462020	19.45	August 25, 2020 to August 24, 2031	Valid

---

## BUSINESS

---

Type	Serial Number	Geographical Area (km <sup>2</sup> )	Effective Period	Status
Mining Lease . . .	LVDGAST38000372020	43.00	August 25, 2020 to August 24, 2031	Valid
Exploration Permit . . . . .	LVB9113/1994 & PL 2/155	24.81	December 13, 2024 to December 12, 2027	Valid
Exploration Permit . . . . .	LVB5528/2005 & PL 2/378	96.44	March 4, 2022 to March 3, 2025 <sup>1</sup>	Valid
Exploration (prospecting) Permit . . . . .	LVB1624/2006 & RL2/117	26.9	September 4, 2024 to September 3, 2027	Valid

---

*Note:*

1. We will submit our renewal application prior to the expiry date in accordance with the relevant laws and regulations, and we and our Ghana Legal Advisor do not expect any legal impediment in the renewal process for this permit.

As of the Latest Practicable Date, one mining lease (LVDGAST35364682022) of GSWL had been renewed by the Ghanaian Government, pending Ghana parliamentary ratification as required by the Ghana constitution. According to our Ghana Legal Advisor, the process of obtaining the ratification involves multiple governmental institutions of Ghana, including the Minister for Lands and Resources, Minerals Commission, Cabinet of Ministers and the Parliament of Ghana, thus the time frame could not be precisely predicted and it usually takes two to six years. It is stipulated in the subsection 44(4) of the Mining Act of Ghana that if a holder of a mining lease has made an application for extension of the term, the lease shall continue in force in respect of the subject of the application before the outcome of the application is determined. As advised by our Ghana Legal Advisor, our mining operations at the Wassa Gold Mine would continue uninterrupted under the original mining lease in accordance with the subsection 44(4) of the Mining Act of Ghana while the renewed mining lease is under ratification by the Ghana Parliament. Based on the foregoing, we and the Ghana Legal Advisor do not anticipate any legal impediment to the completion of the ratification process. With respect to exploration (reconnaissance) permit (LVB1624/2006 & RL2/117), we submitted an application to convert this exploration (reconnaissance) permit to an exploration (prospecting) permit on November 27, 2020 to the Minerals Commission of Ghana. The Minister of the Ministry of Lands and Natural Resources of Ghana by a letter dated January 1, 2023 approved the recommendation of the Minerals Commission to convert this exploration (reconnaissance) licenses to an exploration (prospecting license). On July 19, 2024, the Minerals Commission of Ghana brought the approval of the prospecting licenses agreement before the Ministry of Lands and Natural Resources for signing. A new 3-year prospecting license dated September 4, 2024 has since been issued to GSWL over an area of 26.92km<sup>2</sup> within the Wassa East District of the Western Region of Ghana. For more details, please see “Risk Factors — We may fail to obtain, maintain or renew the government permits, licenses and approvals required for our mining and exploration activities.”

## BUSINESS

### Development Plan and Planned Production Schedule

#### *Development Plan*

The following timeline illustrates key historical and planned milestones in the development of the Wassa Gold Mine:

Year	Milestone
2005 . . . . .	CIL (Carbon in Leach) plant commissioned.
2007 . . . . .	Commenced open pit mining at South Akyempim. Construction of haul road to Hwini Butre.
2012 . . . . .	Commenced drilling to test underground potential below Wassa.
2013 . . . . .	Upgraded plant to 2.7 Mtpa capacity with fresh ore, consolidated mining at Wassa main pit.
2017 . . . . .	Declared commercial production at Wassa Underground. Defined a deep definition drilling program, which later became the Southern Extension zone. Averaged 1,865 ore t/d in underground operations.
2018 . . . . .	Completed open pit mining of the main pit. Increased underground ore mining rate to 2,945 t/d. Grew Wassa Underground Inferred Mineral Resource to 5.2 Moz with the addition of the Southern Extension zone.
2020 . . . . .	Completed construction of paste backfill plant and on-site gas-fired power generation. Underground ore mining rate increased to 4,480 t/d (1.6 Mtpa).
2023 . . . . .	Commenced construction of B-shoot South and 242 decline.
2025 . . . . .	Plan to conduct partial trial mining in Father Brown Mine and obtain relevant environmental assessment and production permit.
2025-2027 . .	Plan to carry out deep and peripheral exploration, as well as intensified drilling operations, and initiate the construction of the transition from surface to underground mining of the Father Brown Mine.

#### *Planned Production Schedule*

As set forth in the Competent Person's Report, the following chart sets forth the planned mining and production schedule for the operations at the Wassa Gold Mine for the periods indicated over the life of mine:

Wassa Gold Mine in Ghana	Unit	LOM	2024Q4	2025	2026	2027	2028
<b>Wassa_Basic Plan</b>							
Mined_Tonnes . . . . .	kt	<b>8,812</b>	979	3,209	2,517	1,614	493
Milled Tonnes . . . . .	kt	<b>8,812</b>	979	3,209	2,517	1,614	493
Gold Produced . . . . .	kg	<b>17,955</b>	1,981	6,000	5,533	3,474	967
Gold Produced . . . . .	koz	<b>577</b>	64	193	178	112	31
<b>Wassa_Upside Plan</b>							
Mined_Tonnes . . . . .	kt	<b>9,986</b>	979	3,209	2,517	1,614	1,667
Milled Tonnes . . . . .	kt	<b>9,986</b>	979	3,209	2,517	1,614	1,667
Gold Produced . . . . .	kg	<b>19,897</b>	1,981	6,000	5,533	3,474	2,908
Gold Produced . . . . .	koz	<b>640</b>	64	193	178	112	94

## BUSINESS

### Notes:

1. The planned production schedule for the LOM includes two scenarios: the basic plan and the upside plan. The upside plan includes residual material in the upper area and material in the lower area, which SRK views as a potential economic opportunity but does not classify as Ore Reserves due to insufficient technical studies. Both LOM scenarios span 5 years and were developed based on data collected from the Wassa Gold Mine as of September 30, 2024.
2. LOM is calculated by deducting the forecasted production volume from the Ore Reserves each year since September 30, 2024, until all Ore Reserves are extracted in the final year. The forecasted production volume is estimated based on the designed mining capacity, scheduling strategy and expansion timelines.

### Capital Costs

With the reference to the Independent Technical Report, our Directors confirmed that the capital costs of the Wassa Gold Mine for the three years ended December 31, 2023 were approximately RMB1,588.7 million. The Independent Technical consultant has reviewed the breakdown of the capital forecast and considered appropriate capital has been allocated to support the development of the Wassa Gold Mine and the basis of the capital cost estimation is considered reasonable. For detailed capital cost of the Wassa Gold Mine, please refer to “Appendix IIC — Competent Person’s Report for the Wassa Gold Mine — Capital Cost”.

### Operating Costs

In 2022 and 2023, GSWL recorded the gold AISC of approximately US\$1,371.2 per ounce and US\$1,197.1 per ounce, respectively, showing a decrease of 12.7% year-on-year.

The table below sets forth a summary of the forecasted operating costs between 2024 and 2028 for GSWL, as stated in the Competent Person’s Report:

Wassa Gold Mine	Unit	2022	2023	2024Q1-Q3	LOM	2024Q4	2025	2026	2027	2028
Labor	USD million	31.75	35.80	29.96	184.97	20.56	67.36	52.83	33.88	10.34
Material	USD million	58.50	51.72	65.47	333.25	37.03	121.35	95.18	61.05	18.64
Electricity	USD million	8.03	18.72	9.02	67.85	7.54	24.71	19.38	12.43	3.79
Contractors	USD million	1.78	10.71	3.43	30.20	3.36	11.00	8.63	5.53	1.69
Engineering	USD million	4.25	9.29	4.02	33.30	3.70	12.13	9.51	6.10	1.86
Service	USD million	1.46	1.74	2.56	10.93	1.22	3.98	3.12	2.00	0.61
Safety	USD million	-	-	-	-	-	-	-	-	-
Repairment	USD million	-	-	-	-	-	-	-	-	-
Others	USD million	6.99	-	0.33	13.88	1.54	5.05	3.96	2.54	0.78
Taxes and surcharges	USD million	13.23	17.96	19.22	63.75	7.08	23.21	18.21	11.68	3.57

## BUSINESS

---

*Notes:*

1. The calculation of the operating costs of the Life of Mine was made based on the data collected of Wassa Gold Mine since September 30, 2024.
2. LOM is calculated by deducting the forecasted production volume from the Ore Reserves each year since September 30, 2024, until all Ore Reserves are extracted in the final year. The forecasted production volume is estimated based on the designed mining capacity, scheduling strategy and expansion timelines. For details, please refer to the mine schedule set forth in “Business — Development Plan and Planned Production Schedule — Planned Production Schedule”.

### **Risks Associated with the Wassa Gold Mine**

The mining industry is inherently associated with a high level of risk, which is accumulated due to factors such as the nature of ore body, ore distribution, grade and variations in mining and ore processing which are not able to be accurately predicted or accounted for. The following table sets forth a selected summary of the risk assessment regarding the material risks undertaken by the Independent Technical Consultant, including the assessment result and the ratings of the relevant risks as well as recommendations for actions to mitigate technical risks. Please refer to “Appendix IIIC — Competent Person’s Report for the Wassa Gold Mine — Risk Assessment” for more details and recommendations for actions to mitigate technical risks.

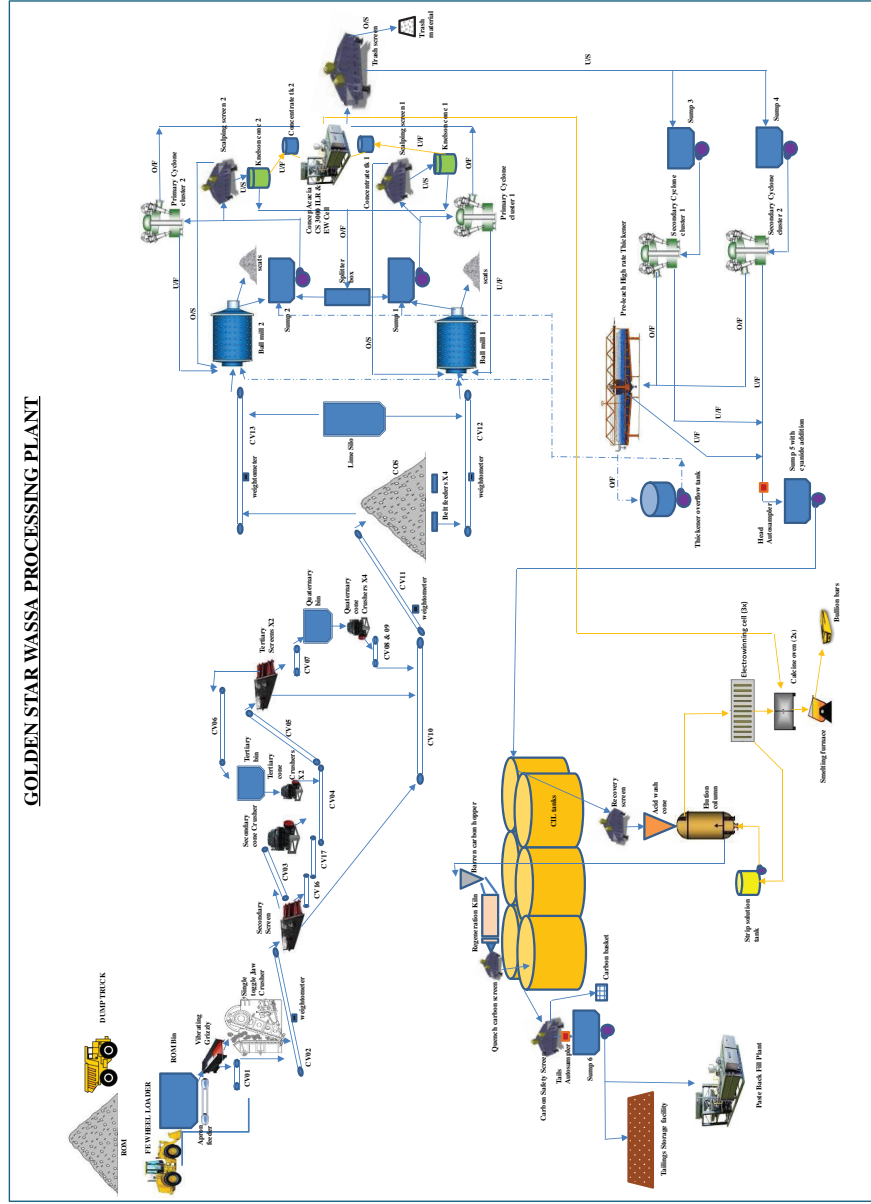

### **Material Risk Assessment of the Wassa Gold Mine**

<u>Risk Source/Issue</u>	<u>Likelihood</u>	<u>Consequence</u>	<u>Overall</u>
<b>Geology and Resource</b>			
Overestimate of Resource Grade . . . . .	Possible	Moderate	Medium
Unexpected Groundwater Ingress . . . . .	Possible	Moderate	Medium
<b>Ore Processing</b>			
Higher Processing Cost . . . . .	Possible	Moderate	Medium
Project Timing Delays . . . . .	Unlikely	Moderate	Low
Capital Cost and Operating Cost Increases . .	Possible	Moderate	Medium

### Operating Process of Gold Production Business in Ghana

#### (a) Overview

Our gold production operations in Ghana can generally be divided into two steps, namely, (i) mining and (ii) processing. Our mines in Ghana are also equipped with processing plants to process the ores that we mine into doré. The following diagram sets forth the general workflow of the production process:

*(b) Mining*

In relation to mining, the Wassa mining area primarily utilizes the open-pit mining method and the sub level open stoping method.

Details of the open-pit mining workflow are set forth below:

- **Planning.** We undertake detailed planning prior to actual production, which covers mine bench, rock stripping and rock extraction.
- **Preparation and cutting.** We conduct extensive preparation. Then we drill holes in the rock wall, charge such holes with explosives and blast the rock wall.
- **Extraction.** We transport the ore by trucks through mine benches and discharge earth.

In relation to the long-hole mining workflow, it generally follows the similar processes and methods as we adopt for mining process for gold production business in the PRC. For details, see “— Our Gold Production Business in China — Operating Process of Gold Production Business in the PRC.”

*(c) Processing*

We primarily utilize the gravity-flow all-slime cyanidation absorption gold extraction method. Our plants mainly include crushing circuits, grinding circuits, gravity-flow concentrator, pressure filters and conveyers. Details of the processing workflow are set forth below:

- **Crushing circuit.** Typically, ores from the underground are crushed in multi-stages of closed-circuit crushing.
- **Grinding circuit.** The final crushed ore is ground in a grinding circuit operated in a closed circuit.
- **Gravity flow.** The ore is transferred into centrifugal separator and separated into concentrate and tailings. The concentrate will be used for leaching and the tailings will be transferred back to grinding circuit.
- **Cyanidation leaching.** Ore pulp is absorbed through multi-cyanidation leaching.
- **Replacement.** Replaced gold concentrate is obtained through purification, deoxidation and replacement by zinc powder or carbon.
- **Tailings dewatering.** Gold concentrate is dewatered by pressure filter and decyanated by chemicals and then separated from tailings.

### **Exploration Activities for Gold Production Business in Ghana**

Our exploration activities for gold production business in Ghana are mainly carried out by third-party exploration service providers and to a lesser extent our in-house exploration team.

#### ***Exploration Process***

Before commencing any exploration activities the Wassa Gold Mine geology group will gather relevant information related to the exploration target. Our group then drafts an exploration plan for the area, considering the Wassa Gold Mine's objectives for the year. This plan may include diamond drilling, reverse circulation drilling, mapping, soil sampling, grab sampling, or any other suitable exploration technique for the target.

The exploration plan is then presented to our management for review and approval. Upon approval, third-party exploration teams will conduct more in-depth research, which may include topographic surveying, geological mapping, trench exploration, drilling exploration, pit exploration, geological sample collection and analysis, as well as identifying and determining the position, size, grade and other key information of the relevant minerals. They may also need to conduct relevant hydrogeology and engineering geology work to ascertain the mining technical conditions.

Once approved, the plan is implemented, with the geology group managing the work program. If the exploration program requires drilling, third-party drilling service providers are engaged. These service providers supply the drill rigs, manpower, and tooling required to complete the planned drilling program.

After the field work is completed, the third-party exploration teams prepare the exploration report for our review. The exploration report might then be submitted to relevant governmental authorities for evaluation and filing. Upon completion of the program, the exploration results are reviewed and communicated to management and any applicable government authority.

#### ***Third-party Drilling Service Providers***

When selecting third-party exploration teams and drilling service providers, the Wassa Gold Mine generally considers factors such as experience, reputation, qualification, and technical ability. Our technical staff from relevant production departments and geology staff are responsible for supervising and managing the work of third-party exploration teams and drilling service providers. Our third-party exploration team drilling service providers are required to work in strict accordance with all applicable Ghanaian laws and regulations related to occupational safety and environmental protection.

***In-house Exploration Teams***

The Wassa Gold Mine also utilizes its in-house exploration team and geology group to a lesser extent. This group conducts preliminary geological studies, such as collecting relevant materials and geological mapping, to understand the geological features of the relevant areas. Our Company also employs dedicated geomechanics, geotechnical engineers, and hydrogeologists to conduct on-site hydrology, hydrogeology, and geotechnical geology studies.

The exploration design plan is then submitted to the technology management department for review and approval, and this process may involve the expertise of external geology experts. Third-party exploration teams will then carry out the relevant physical explorations, chemical explorations, and drilling explorations according to the design plan. When selecting third-party exploration teams, we generally consider factors such as experience and qualifications. After the exploration is completed, a reputable mining consulting firm prepares the relevant exploration report. All exploration activities are carried out in strict compliance with the JORC Code as well as relevant laws related to work safety, environmental protection, and mining. The local government may request us to submit technical reports for reference before commencing mining projects. For relevant risks relating to our exploration activities, see “Risk Factors — Risks Relating to Our Business and Industry — We may not be able to expand or replenish our Mineral Resources and Reserves through exploration.”

The following table sets forth a selected summary of the key recommendations made by the Independent Technical Consultant towards our Wassa Gold Mine and the relevant measures that have been taken or will be taken and the expected time frame.

<b>Key Recommendations</b>	<b>Measures and time frame</b>
To maintain and enhance the geological exploration, such as mapping the underground tunnels, especially for faults and fractures, and monitoring the underground water discharges	We have been continuously mapping subsurface ore drift developments geologically.
To carry out continuous exploration for the upgrade the underground Mineral Resources. As the geological risks also related to the grade estimation of underground Mineral Resources, it is noted there are abundant Inferred Mineral Resources for the underground mine and further exploration potential, and the current Inferred Mineral Resources in deeper zones have been estimated on primarily drill core interceptions with sparse distance so there is possibility of underestimate or overestimate	We have an in-depth analysis completed by a professional consulting firm. A professional mine planning software is in place and in use for all mine planning activities, for both short and medium-to-long term, at Wassa Gold Mine, with formal training completed on all mining engineers working within the planning department.

---

## BUSINESS

---

### Key Recommendations

### Measures and time frame

To improve the quality of grade control model and incorporate it into the Mineral Resource/Ore Reserve model

A quarterly model update schedule has been established to ensure that the updated grade control models are incorporated into the Mineral Resource model.

To carry out in-depth engineering studies associate to LoM planning and the use of professional mine planning software and to source and retain professional services, if needed

The subsurface production rates attained at Wassa over the last two years have been thoroughly examined, and the results, along with advice from a reputable consulting firm, have been translated into a set of approved input parameters.

To properly manage the grade control and plan in order to reduce operating costs

Detailed geo-metallurgical tests will be performed on drill samples to integrate into the grade control and planning process, ensuring that processing and metallurgy are adequately informed before ores from the stopes are processed. Additionally, reevaluating known surface mineralization at higher gold prices, along with further exploration activities, will help secure additional future ore supplies.

To carry further test works on the deep underground veins to assure the processing procedures and laboratory protocols being used are appropriate and suitable, which could be dependent on future exploration programs and technical studies

We plan to continue drilling at Wassa Deeps, with several holes expected to be completed in the near future. Met test work is planned on core obtained from Wassa Deep drilling campaigns to firm up processing parameters.

## OUR OTHER MINERAL RESOURCES PRODUCTION BUSINESS

### Our Other Mineral Resources Production Business in China

#### *Overview*

Hanfeng Mining in the PRC primarily engages in mining of polymetallic ore including zinc, lead, copper and molybdenum. The main products include zinc concentrate powder, lead concentrate powder (containing silver), copper concentrate powder (containing silver) and molybdenum concentrate powder.

Hanfeng Mining was established in September 2004 and became part of our Group upon completion of the acquisition of its entire equity interest in November 2019. The Hanfeng Polymetallic Mine has two main underground mining areas: (i) the Lishan Mining Area (立山

## BUSINESS

礦區), which mainly produces zinc, with lead and copper as co-product minerals, as well as lead, copper and silver as by-product minerals; and (ii) the Dongfeng Mining Area (東風礦區), which mainly produces zinc, with copper and molybdenum as co-product minerals, as well as lead as by-product minerals. The Hanfeng Polymetallic Mine has a designed annual mining capacity of approximately 699,000 tonnes and a designed annual processing capacity of approximately 825,000 tonnes.

The mining areas of the Hanfeng Polymetallic Mine are located at Laotougou Town, Longjing City, Yanbian Korean Autonomous Prefecture, Jilin Province, which is designated as the key exploration area for important Mineral Resources (lead and zinc ore) according to the National Mineral Resources Planning (2016-2020) (全國礦產資源規劃(2016-2020年)). Due to the superior metallogenic geological conditions, this area has an important concentration area of polymetallic mineralization.

### *Operation Performance*

The following table sets forth the ore mined volume, ore processed volume and mine production volume of the Hanfeng Polymetallic Mine for the periods indicated:

	Year Ended December 31,			Nine Months Ended September 30, 2023	Nine Months Ended September 30, 2024
	2021	2022	2023	2023	2024
	<i>(kt)</i>	<i>(kt)</i>	<i>(kt)</i>	<i>(kt)</i>	<i>(kt)</i>
<b>Ore Mined</b> . . . . .	510	502	457	247	549

## BUSINESS

The following table sets forth the processing recovery rate of the Hanfeng Polymetallic Mine by its principal products for the periods indicated:

	Year Ended December 31,			Nine Months Ended September 30, 2024
	2021	2022	2023	
<i>Zinc concentrate powder . . .</i>	87.5%	88.3%	89.2%	87.7%
<i>Lead concentrate powder . . .</i>	64.5%	59.6%	71.7%	66.4%
<i>Copper concentrate powder .</i>	61.2%	49.8%	54.4%	49.0%
<i>Molybdenum concentrate powder . . . . .</i>	–	–	78.5%	79.7%

### *Development and Expansion*

As reported in December 2020, we discovered additional Reserves of 542,600 tonnes of zinc, 30,900 tonnes of copper (including co-product and by-product), 28,600 tonnes of lead and 131 tonnes of silver in the deep ore bodies of the Lishan Mining Area. As a result, we undertook a project to building over 1,000 meters of shafts in 2022 in order to exploit the newly discovered Resources. Upon completion, this project will assist us to enter the next stage of development and construction and to further improve output. We also plan to undertake work on a ventilation shaft and a mining development system.

The Dongfeng Molybdenum Mine is expected to begin construction in 2025. Currently, the mine is preparing the feasibility study report. The projected annual mining capacity is 1.65 million tonnes per year, using underground mining methods, with an annual production of 3,990 tonnes of molybdenum concentrate at 47% Mo content. The estimated life of mine is 33 years.

### *Mineral Resources*

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our non-ferrous metal Resources and Reserves in the PRC conducted through our subsidiary, Hanfeng Polymetallic Mine, which includes two mining areas, namely Lishan Mining Area and Dongfeng Mining Area, as of September 30, 2024:

Category	Lishan Mining Area							Dongfeng Mining Area		
	Tonnage	Zn Grade	Zn Metal Contained	Cu Grade	Cu Metal Contained	Pb Grade	Pb Metal Contained	Tonnage	Mo Grade	Mo Metal Contained
	(kt)	(%)	(kt)	(%)	(kt)	(%)	(kt)	(kt)	(%)	(kt)
Measured . . . . .	752	2.36	18	–	–	0.12	1	1,819	0.11	2
Indicated . . . . .	8,583	2.66	229	0.07	6	0.12	10	26,495	0.12	32

## BUSINESS

---

*Note:*

1. Numbers have been subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them.

### ***Mining Licenses and Exploration Permits***

As of the Latest Practicable Date, Hanfeng Mining held a total of two valid mining licenses, including (i) one for the Lishan Mining Area, and (ii) one for the Dongfeng Mining Area. Its mining licenses covered a total area of approximately 4.65 km<sup>2</sup>. In addition, as of the Latest Practicable Date, Hanfeng Mining held one valid exploration permit, which covered a total area of approximately 2.3 km<sup>2</sup>.

The mining licenses are generally valid for several years to 30 years. The exploration permits are generally valid for five years and renewed accordingly subject to some conditions. We aim to renew our mining licenses or exploration permits before their respective expiry dates. As advised by our PRC Legal Advisor, there are no explicit regulations limiting the number of times a mining license or exploration permit may be renewed in the PRC. We and our PRC Legal Advisor do not expect any material legal impediment in the renewal process if we submit our application in accordance with the relevant laws and regulations. For details of the PRC mining laws and regulations, see “Regulatory Overview.”

The following table sets forth information regarding the relevant mining licenses and exploration permits for Hanfeng Mining as of the Latest Practicable Date:

<u>Type</u>	<u>Serial Number</u>	<u>Geographical Area (km<sup>2</sup>)</u>	<u>Effective Period</u>	<u>Status</u>
Mining license . .	C2224002021083210152512	2.2250	August 27, 2021 to August 27, 2050	Valid
Mining license . .	C2200002010123120093830	2.4207	February 25, 2025 to February 24, 2030	Valid
Exploration Permit . . . . .	T100000202103302800361	2.3191	December 20, 2020 to December 20, 2025	Valid

## BUSINESS

### *Development Plan*

The following timeline illustrates key historical and planned milestones in the development of the Hanfeng Polymetallic Mine:

Hanfeng Polymetallic Mine	
Year	Milestone
1951 . . . . .	Began large-scale mining
2004 . . . . .	The combined mining and processing capacity of Dongfeng and Lishan reached 1,000 t/d
2019 . . . . .	Hanfeng Mining merged into our Company
2022 . . . . .	Began construction of the lower part of the Lishan Mining Area (Phase I project), with a designed capacity of 2,000 t/d
2024 . . . . .	Began designing the deep development project of the Dongfeng Molybdenum Mine (below 250 meters above sea level), with a designed capacity of 5,000 t/d
2026 . . . . .	Plan to establish a 5,000-tonne ore processing plant for the Dongfeng Molybdenum Mine

### *Planned Production Schedule*

As set forth in the Competent Person’s Report, the following chart sets forth the planned mining and production schedule for the operations in the Hanfeng Polymetallic Mine for the periods indicated over the life of mine:

Underground	Unit	LOM	2024 Q4	2025	2026	2027	2028	2029	2030	2031	2032
<b>Hanfeng</b>											
<b>Polymetallic</b>											
<b>Mine</b>											
Mined Tonnes											
(Lishan											
Lower) . . . . .	kt	3,310	–	435	435	426	362	451	434	398	367
Milled Tonnes . . . . .	kt	3,310	–	435	435	426	362	451	434	398	367
Zinc											
Production . . . . .	kt	152	–	19	18	19	14	24	25	18	15

*Notes:*

1. The planned production schedule of the LOM of 9 years was made based on the data collected of the Hanfeng Polymetallic Mine since September 30, 2024.
2. LOM is calculated by deducting the forecasted production volume from the Ore Reserves each year since September 30, 2024, until all Ore Reserves are extracted in the final year. The forecasted production volume is estimated based on the designed mining capacity, scheduling strategy and expansion timelines. For details, please refer to the mine schedule set forth in “Business — Development Plan and Planned Production Schedule — Planned Production Schedule”.

### *Risks Associated with the Mineral Area*

The mining industry is inherently associated with a high level of risk, which is accumulated due to factors such as the nature of ore body, ore distribution, grade and variations in mining and ore processing which are not able to be accurately predicted or accounted for. The following table sets forth a summary of the risk assessment undertaken by the Independent Technical Consultant, including its assessment result and the ratings of the relevant risks as well as recommendations for actions to mitigate technical risks associated with the Hanfeng Polymetallic Mine, please refer to “Appendix IIIA — Competent Person’s Report for the PRC Mines — Risk Assessments”.

<u>Risk Source/Issue</u>	<u>Likelihood</u>	<u>Consequence</u>	<u>Risk</u>
<b>Hanfeng Project</b>			
<b>Mining</b>			
Significantly lacking Ore Reserves .	Unlikely	Major	Medium
<b>Ore Processing</b>			
Poor Plant Reliability . . . . .	Possible	Moderate	Medium
Lower Processing Recovery . . . . .	Possible	Moderate	Medium
<b>Capital and Operating Costs</b>			
Project Timing Delay . . . . .	Unlikely	Minor	Low
Capital Cost Increases . . . . .	Possible	Moderate	Medium

### *Exploration Activities for Other Mineral Resources Business in China*

During the Track Record Period, our exploration activities for non-ferrous metal production business in the PRC were carried out by in-house exploration team as well as third-party exploration service providers.

Before commencement of exploration activities, the third-party exploration teams will gather relevant materials for preliminary study of the relevant mine’s geology features to, assist them to understand the mineral distribution and facilitate search for potential Resources. After the preliminary study, they will formulate an implementation plan, which sets out detailed steps for exploration, for our review and approval. Upon approval, the third-party exploration teams will carry out more in-depth research, including topographic survey, geological mapping, trench exploration, drilling exploration, pit exploration, geological sample collection and analysis, identifying and determining the position, size, grade and other key information of the relevant minerals. They may also need to undertake the relevant hydrogeology and engineering geology work in order to ascertain the mining technical conditions. After completion of field work, the third-party exploration teams will prepare the exploration report for our review. Such exploration report might be submitted to the relevant governmental authorities for evaluation and filing.

When selecting the third-party exploration teams, we generally take into account a number of factors, including experience, reputation, qualification and technical conditions. Our technical staff from relevant production departments are responsible for supervising and managing the work of third-party exploration teams, such as the progress of the project and stage acceptance check. Our third-party exploration teams are required to work in strict accordance with all the applicable PRC laws and regulations in relation to occupation safety and environmental protection. For more information on third-party exploration teams, see “—Contractors.”

When the mine is put into production, the exploration design will be carried out by our in-house exploration team, where it undertakes preliminary geology study, such as collection of relevant materials and geology mapping, in order to understand the geology features of the relevant areas. As we have dedicated geomechanics who undertake on-site hydrology and geology studies, the design plan will also reflect the relevant engineering and geology conditions. The exploration design plan will then be submitted to the technology management department for review and approval, during which external geology experts may be involved from time to time. Then third-party exploration teams will carry out the relevant physical explorations, chemical explorations and drilling explorations pursuant to the design plan. When selecting the third-party exploration team, we generally take into account a number of factors, including experience and qualification. After completion of the exploration, the relevant exploration report will be then prepared by reputable mining consulting firms. All exploration activities are carried out in strict compliance with Chinese national safety production standards as well as the relevant laws in relation to work safety, environmental protection and mining. The relevant local government may request us to submit technical reports for reference before commencement of mining projects.

For relevant risks relating to our exploration activities, see “Risk Factors — Risks Relating to Our Business and Industry — We may not be able to expand or replenish our Mineral Resources and Reserves through exploration.”

### *Operating Process of Other Mineral Resources Business*

During the Track Record Period, our other Mineral Resources operations in the PRC can generally be divided into two steps, namely, (i) mining, and (ii) processing.

Hanfeng Polymetallic Mine primarily utilizes the selective mining method for mining in China. Its mining equipment mainly includes rock drills and loaders. The details of the mining process are listed as follows:

- **Design.** Detailed planning is carried out before actual production begins, including the layout of stopes, pillars, ventilation shafts, ore passes, and backfill entry points. We generally divide the mining area into different sections, and each section is treated as a mining unit.

---

## BUSINESS

---

- **Preparatory cutting.** A detailed plan is made to drill ventilation shafts, ore passes, and backfill entry points. After that, we drill holes in the ore body, fill the holes with explosive materials, and then blast the ore body.
- **Mining.** Extracting the ore from the rock mass to form a mined-out area. Our mining method is by stratified mining.
- **Ore transportation.** We transport the ore to the surface using mine carts through mine roads and vertical shafts.
- **Backfilling.** We backfill the mined-out area with various backfilling materials (including rocks produced by blasting and/or preparatory cutting) to prevent surface subsidence.

Hanfeng Polymetallic Mine mainly uses the flotation process for processing, which mainly includes the crushing circuit, grinding and classification circuit, flotation circuit, concentrate dewatering, and tailings transportation. The details of the processing are listed as follows:

- **Crushing circuit.** Generally, we carry out multi-stage closed circuit crushing for the ore mined underground.
- **Grinding and classification circuit.** The crushed ore that meets the standards is processed in a closed circuit.
- **Flotation circuit.** The ground and classified ore is subjected to flotation, which includes roughing, multiple scavenging, and cleaning processes.
- **Concentrate dewatering.** The concentrate is dewatered through a filter press to separate the concentrate.
- **Tailings transportation.** The tailings after flotation are transported to the tailings storage facility.

---

## BUSINESS

---

The following table sets forth a selected summary of the key recommendation made by the Independent Technical Consultant towards our Hanfeng Polymetallic Mine and the relevant measures that have been taken or will be taken and the expected time frame.

<b>Key Recommendation</b>	<b>Measures and time frame</b>
Hanfeng Project — to carry out in-fill drilling exploration and/or underground exploration for resource category upgrade to meet life of mine plan of the lower parts of Lishan Mine and Dongfeng Mine . . . . .	We are in the process of carrying out shaft sinking and tunneling works to access the ore deposits. Assuming all necessary preconditions are satisfied, the construction of Lishan Mine is anticipated to be finalized in the near future. We also expect to upgrade the reserves and expose the ore bodies within the next two years. Meanwhile, Dongfeng Mine is expected to initiate shaft sinking and tunneling works within the next two years.

### **Our Copper Cathodes Business in Laos**

#### *Overview*

Our copper cathodes business is carried out by our subsidiary LXML in Laos, which has one production line of copper. It has seven separate copper pits that are actively mined and produces copper cathode. During the Track Record Period, due to a general decrease of copper oxide Reserves as well as our refocusing our business strategy from other Mineral Resources to the expansion of our gold mining business, the copper production volume of the Sepon Gold and Copper Mine increased from 5,020 tonnes in 2021 to 6,485 tonnes in 2023. However, we have continued our production of copper through the remaining copper Reserves, and since 2022 we have been studying and testing the feasibility of heap leaching treatment to extract copper. The Sepon Gold and Copper Mine has a designated annual processing capacity of approximately 1.4 million tonnes.

Our Copper Cathodes product

## BUSINESS

### *Operation Performance*

In 2021, 2022 and 2023 and the nine months ended September 30, 2024, our copper cathodes business in Laos produced 5,020 tonnes, 6,433 tonnes, 6,485 tonnes and 4,025 tonnes of copper cathodes, respectively. During the Track Record Period, the copper processing recovery rate of the Sepon Gold and Copper Mine was 86.4%, 64.5%, 55.7% and 45.0%, respectively. The following table sets forth the ore mined volume, ore processed volume and mine production volume in relation to copper cathodes by the Sepon Gold and Copper Mine for the periods indicated.

	Year Ended December 31,			Nine Months Ended September 30, 2024
	2021	2022	2023	2024
	<i>(kt)</i>	<i>(kt)</i>	<i>(kt)</i>	<i>(kt)</i>
Ore mined . . . . .	149	–	–	–
Ore processed . . . . .	255	772	1,105	843.31
Production volume. . . . .	5	6	6	4.03

*Note:*

- The ore mined volume for the Sepon Gold and Copper Mine’s copper mine dropped to zero in 2022, because the Sepon Gold and Copper Mine resumed gold production in 2020, while only keeping a small portion of processing capacity for its copper business since then. For the reason behind the halt in gold production at the copper mine of the Sepon Gold and Copper Mine, see “Business — Our Gold Production Business in Laos — Overview.” As of the Latest Practicable Date, the Sepon Gold and Copper Mine did not have any active copper mining projects while only processed the ore from its stockpile.

### *Mineral Resources and Ore Reserves*

The following table, which is based on the Competent Person’s Report in accordance with the JORC Code, sets forth the information of our copper Resources in Laos conducted at subsidiary, LXML, as of September 30, 2024:

Mineralized Zone/Block	Category	Tonnage	Cu Grade	Cu Metal Contained
		<i>(kt)</i>	<i>(%)</i>	<i>(kt)</i>
Sepon Gold and Copper				
Mine – Copper . . . . .	Measured	–	–	–
	Indicated	4,416	1.45	64
	Inferred	2,078	0.98	20
	<b>Total</b>	<b>6,493</b>	<b>1.30</b>	<b>85</b>

*Note:*

- Numbers have been subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them.

## BUSINESS

The following table, which is based on the Competent Person’s Report in accordance with the JORC Code, sets forth the information of our copper Reserves in Laos conducted at subsidiary, LXML, as of September 30, 2024:

<u>Mineralized Zone/Block</u>	<u>Category</u>	<u>Tonnage</u> <i>(kt)</i>	<u>Cu Grade</u> <i>(%)</i>	<u>Cu Metal Contained</u> <i>(kt)</i>
Sepon Gold and Copper				
Mine – Copper . . . . .	Proved	—	—	—
	Probable	1,185	0.93	11.05
	<b>Total</b>	<b>1,185</b>	<b>0.93</b>	<b>11.05</b>

*Note:*

- Numbers have been subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them.

### ***Mining Licenses and Exploration Permits***

As advised by our Laos Legal Advisor, our copper cathodes business and our gold production business in Laos are subject to the same mining licenses and exploration permits of LXML. For details of relevant mining licenses and exploration permits, see “— Our Gold Production Business in Laos — Mining licenses and Exploration Permits.”

### ***Development Plan and Planned Production Schedule***

The development plan and planned production schedule of our copper cathodes business in Laos is subject to the same development plan of the Sepon Gold and Copper Mine. For details, see “— Our Gold Production Business in Laos — Development Plan and Planned Production Schedule.”

As set forth in the Competent Person’s Report, the following chart sets forth the planned mining and production schedule for the copper operation at the Sepon Gold and Copper Mine for the periods indicated from 2024 Q4 to 2025:

<u>Type</u>	<u>Unit</u>	<u>LOM</u>	<u>2024 Q4</u>	<u>2025</u>
<b>Copper Production</b>				
Mined Tonnes Copper . . . . .	kt	1,185	447	738
Milled Tonnes Copper . . . . .	kt	1,185	447	738
Copper Produced . . . . .	kt	5	2	3

*Note:* LOM is calculated by deducting the forecasted production volume from the Ore Reserves each year since September 30, 2024, until all Ore Reserves are extracted in the final year. The forecasted production volume is estimated based on the designed mining capacity, scheduling strategy and expansion timelines.

---

## BUSINESS

---

### *Capital Costs*

The capital costs of our copper cathodes business in Laos are subject to the same capital costs of the Sepon Gold and Copper Mine. For details, see “— Our Gold Production Business in Laos — Capital Costs.”

### *Operating Costs*

The operating costs of our copper cathodes business in Laos are subject to the same operating costs of the Sepon Gold and Copper Mine. For details, see “— Our Gold Production Business in Laos — Operating Costs.”

The table below sets forth a summary of the forecasted copper production operating costs between 2024 Q4 and 2025 for Sepon Gold and Copper Mine, as stated in the Competent Person’s Report:

Item	Unit	LOM	2024 Q4	2025
<b>Copper Operation</b>				
Labor . . . . .	USD million	10.67	4.02	6.65
Material . . . . .	USD million	35.56	13.41	22.15
Electricity . . . . .	USD million	4.74	1.79	2.95
Contactors . . . . .	USD million	0.01	0.01	0.01
Engineering . . . . .	USD million	0.002	0.00	0.00
Service . . . . .	USD million	0.0004	0.00	0.00
Safety . . . . .	USD million	–	–	–
Repairment . . . . .	USD million	–	–	–
Others . . . . .	USD million	0.001	0.00	0.00

*Notes:*

1. The calculation of the operating costs of the Life of Mine was made based on the data collected of Sepon Gold and Copper Mine since September 30, 2024.
2. LOM is calculated by deducting the forecasted production volume from the Ore Reserves each year since September 30, 2024, until all Ore Reserves are extracted in the final year. The forecasted production volume is estimated based on the designed mining capacity, scheduling strategy and expansion timelines. For details, please refer to the mine schedule set forth in “Business — Development Plan and Planned Production Schedule — Planned Production Schedule”.

***Risks Associated with the Sepon Gold and Copper Mine***

The risks associated with our copper cathodes business in Laos are subject to the same risks of the Sepon Gold and Copper Mine. For details, see “— Our Gold Production Business in Laos — Risks Associated with the Sepon Gold and Copper Mine.”

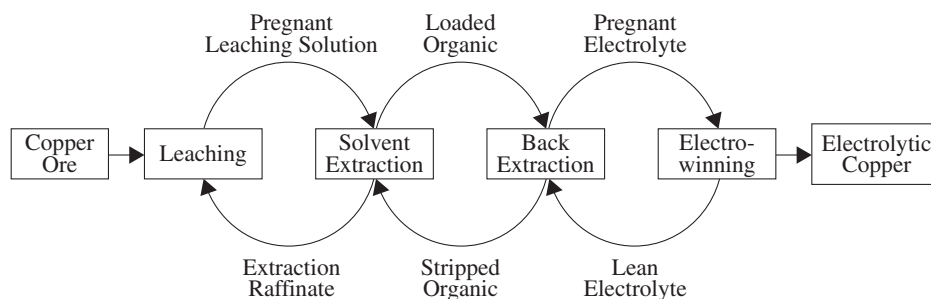

***Exploration Activities for Copper Cathodes Business in Laos***

During the Track Record Period, we had been conducting the exploration activities for copper cathodes business through LXML. Our exploration activities for copper cathodes business in Laos follow similar processes and methods as we adopt for exploration activities for gold production business in the PRC. For details, see “— Our Gold Production Business in China — Exploration Activities for Gold Production Business in China.”

***Operating Process of Copper Cathodes Business in Laos***

During the Track Record Period, our copper cathodes production operations in Laos can generally be divided into three steps, namely, (i) mining, (ii) processing and smelting. In relation to mining, we generally follow the open-pit mining method. For details, see “— Our Gold Production Business in Laos — Operating Process of Gold Production Business in Laos.”

In relation to processing and smelting, we utilize the flotation-pressure oxidation method to process both mined ores. Our plants mainly include scrubber circuit, leaching tanks, counter current decantation circuit, atmospheric leach thickener, mixer-settler, wash dip tank, stripping machine and neutralization tank. Details of the processing workflow for primary ores are set forth below and following diagram sets forth the general workflow of the production process:

- **Run of mine and scrubber.** Typically, mined ores are crushed and washed by scrubber circuit in order to screen out the larger particles. The products will then be sent to leaching tanks.
- **Cold acid leach and counter current decantation.** Chemical is added into leaching tank to dissolve copper into solution. Atmospheric leach thickener is used to create solid underflow stream and clear overflow stream in counter current in order to wash copper, acid and iron from the solid underflow stream. Additional chemicals will be added to improve the settling rate.

---

## BUSINESS

---

- **Solvent extraction.** The solution (with copper in solution) is pumped into mixer-settlers with different functions for extraction and the impurities will be washed out and diluted.
- **Electrowinning.** Copper is recovered from the solution by connecting direct electric current. High purity copper cathode metal so generated will grow for certain days and then pulled and transferred to a cathode wash dip tank. The copper cathode is later stripped in stripping machine and put into stacks.
- **Neutralization.** Tailings are pumped into neutralization tanks and then pumped into tailings storage facility.

### Our Rare Earth Business in Laos

#### *Overview*

We intend to engage in rare earth business principally through our subsidiary under Chijin Xiawu, Chixia Laos, in Laos. Rare earth minerals are a scarce resource on a global scale. Due to the technical difficulties involved in mining these minerals, as well as volume control and strategic reserves policies implemented by rare earth exporting countries, rare earth minerals have been in short supply globally for an extended period.

At the beginning of 2021, during the gold and copper exploration activities in the southern mining area, we discovered ionic medium and heavy rare earth minerals anomalies in the granite distribution area. We subsequently conducted a general survey on the area and, in August 2022, we issued a report identifying two areas of mineralisation within the western scope of the southern mining area that belong to the relatively scarce medium and heavy rare earth group. The total rare earth oxides in the area are estimated at 32,000 tonnes with average grade of 0.045%.

In relation to the latest development of our rare earth business, as of the Latest Practicable Date:

- LXML had submitted an application to the Minister of Planning and Investment of Laos in relation to rare earth mining right in an area of 2.96 km<sup>2</sup> located within its mining area. The relevant border verification under this application had been completed. This application is currently on hold due to Prime Minister Decision No. 43/PM dated June 24, 2022 regarding selection criteria for rare earth companies in Lao PDR, and Notification from the Prime Minister's Office No. 642 dated April 20, 2023.

---

## BUSINESS

---

- Chijin Laos had submitted an application to the Ministry of Planning and Investment of Laos in relation to rare earth exploration right in an area of 50 km<sup>2</sup> in the Kham District of Xiangkhouang Province. This application had been accepted by the aforementioned governmental authority. Chijin Laos had also submitted two applications to the Ministry of Planning and Investment of Laos in relation to prospecting, exploration, and a technical feasibility study on (i) rare earth minerals within a 19.88 km<sup>2</sup> area in Phouvineg and Phouluang Villages, Hiem District, Huaphan Province and (ii) gold and associated minerals within a 180 km<sup>2</sup> area in Giem District, Huaphan Province, respectively. These applications had been accepted by the aforementioned governmental authority. Currently Chijin Laos' applications are on hold due to the Cabinet Office of the Prime Minister's notification on April 20, 2023 regarding the suspension of all new and pending applications of all applicants.
- The Ministry of Energy and Mine of Laos had granted Chijin Laos permit in relation to reconnaissance (investigation) at: (i) the Meang Hiem District in Houaphanh Province with an area of 198 km<sup>2</sup>; and (ii) Huameang District in Houaphanh Province with an area of 139 km<sup>2</sup>. A reconnaissance team consisting of representatives from Chijin Laos, Lao Mining Development State Enterprise, the Ministry of Energy and Mines of Houaphance Province and Muang Hiam District had conducted geological mapping in Muang Hiam City.

As all the applications for the approvals, permits and/or licenses required for the intended exploration activities of Sepon Rare Earth Element Project are pending review by the relevant Laos government authorities, LXML had not commenced any exploration activities on rare earth minerals as of the Latest Practicable Date. The Laos Legal Advisor is of the view that the status of the pending approvals, licenses and/or permits required for the intended exploration activities of Sepon Rare Earth Element Project will not have any material impact upon the planning of the rare earth exploration activities by LXML on the basis that LXML had not commenced any rare earth exploration activities as of the Latest Practicable Date. Our Directors are of the view that the relevant applications being put on hold are not expected to have any material adverse impact on our business, financial condition or results of operations.

In light of the new business opportunity brought by this discovery, we entered into a strategic cooperation framework agreement with Xiamen Tungsten, a company listed on Shanghai Stock Exchange, in September 2022, pursuant to which we and Xiamen Tungsten established a joint venture company to seize the business opportunity brought by rare earth. Xiamen Tungsten has comprehensive capabilities covering the whole rare earth industry chain, from mining and processing to product development and research. We believe that this joint venture will bring together the resources and relevant industry experience to sustainably and profitably develop these rare earth Resources.

---

## BUSINESS

---

On March 4, 2024, an equity transfer agreement was entered into among China Investment, Chixia Laos and Chijin Xiawu, pursuant to which Chixia Laos shall acquire from China Investment 90% equity interest in China Investment Mining (Laos) Sole Co., Ltd., which in turn holds an 86% equity interest in CIRE Mining. To the best of the our knowledge, the suspension of relevant applications for approvals, permits and/or licenses required for the intended exploration activities of the Sepon Rare Earth Element Project by the relevant local regulatory authorities is not expected to have a material adverse impact on the Mengkham Rare Earth Element Project or the acquisition.

The Target Company operates the Mengkham Rare Earth Element Project and has two subsidiaries which held a rare earth mineral processing permit (experimental), a mineral extraction permit (experimental) and a rare earth exploration permit. The project is still at the construction stage covering the mining area of 50 km<sup>2</sup>, whereby the genetic type of the mineral deposit belongs to the weathering curst ion-adsorbed rare earth deposit. To the best of our knowledge, we confirmed that, as of the Latest Practicable Date, (a) there were no outstanding permit or license which were pending approval from the Laos regulatory authorities in connection with this project; and (b) based on the disclosure from the Target Company to us and the due diligence conducted by us during the acquisition process, the Target Company held necessary licenses and/or permits to conduct rare earth exploration and operation in all material aspects.

### *Operation Performance*

During the Track Record Period, we did not produce any rare earth products in Laos.

## OUR OTHER BUSINESS

### **Overview**

Our other business primarily comprised recycling of waste electronic products and electrical appliances through Guangyuan Technology, which was established on August 6, 2003 under the laws of the PRC and acquired by us in July 2015. Guangyuan Technology specializes in comprehensive utilization of waste resources. It primarily recycles waste electronic products and electrical appliances. It also recycles and utilizes defective products from manufacturing enterprises, and scrap materials from governmental institutions, and recycles and disposes of power batteries. It also collects, stores, and transports hazardous waste. The major customers of Guangyuan Technology are enterprises in the metal products manufacturing and resource recycling sectors. We charge our customers by weight at predetermined prices based on the type of disassembled materials after the processing and recycling, and record revenue on a gross basis.

---

## BUSINESS

---

Although Guangyuan Technology operates as a non-core business within our Group, it contributes to our financial metrics including operating income and net profit. The resource recycling business is a strategically important sector supported on a national level and further enhances our ESG efforts. Besides, the resource recycling business is a beneficial complement to our mining business as it diversifies our revenue sources. According to Frost & Sullivan, local and national government bodies in the PRC have introduced a series of policies to encourage and support the development of the industry. As such, the PRC has gradually established a multi-level recycling system led by enterprises with qualification to recycle waste electronic products and electrical appliances.

Guangyuan Technology's primary market is located in Hefei City, Anhui Province, where it procures waste electronic products and electrical appliances, including computers, monitor screens, televisions, washing machines, refrigerators and air conditioners. It also has a presence in more than 30 counties and cities around Hefei City. The main channels for raw material procurement include:

- Municipal recycling point. We have established various recycling points in five cities and are gradually expanding with an aim to cover the whole Anhui Province.
- Home appliance sales. We have established strategic cooperation relationships with leading home appliance companies in Hefei City and assist them recycle trade-in old home appliance.
- Home appliance manufacturing. We have also established partnership with leading home appliance manufacturing companies in China and assist them recycle defective or scraped products.
- Governmental and public institutions. We have been appointed as Provincial Designated Enterprise for Recycling Scraped Electronic Products and Electrical Appliances in Anhui (安徽省省級電器電子產品報廢定點處置企業) and assist various governmental and public institutions, such as schools and hospitals, recycle waste electronic products and electrical appliances.
- Social welfare organizations. We also cooperate with various social welfare organizations to recycle waste electronic products and electrical appliances from the local communities.

Guangyuan Technology has an annual processing capacity of 2.65 million units. Guangyuan Technology adopts a comprehensive recycling and disposal process integrating manual disassembling and mechanical disposal followed by comprehensive treatment such as in-depth mechanical sorting and separation of the disassembled materials. It then delivers the materials produced in its recycling process to enterprises with hazardous waste management licenses for utilisation or treatment.

---

## BUSINESS

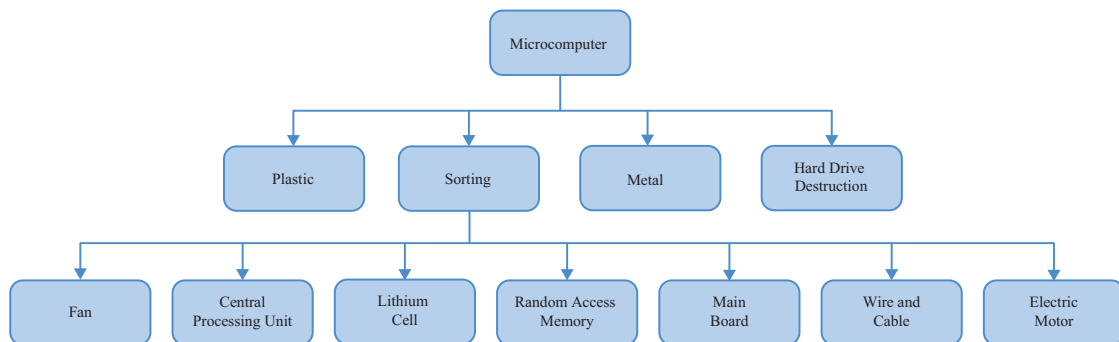

---

Guangyuan Technology possesses a Waste Electronic Products and Electrical Appliances Disposal Certificate (廢棄電器及電子產品處理證書) and is the only company in Hefei City that qualifies for waste electric and electronic products disposal. Guangyuan Technology conducts its business process in accordance with the “Guidelines for the Standardized Disassembling and Disposal Operations and Production Management of Waste Electrical and Electronic Equipment 2015” (廢棄電器電子產品規範拆解處理作業及生產管理指南(2015年版)). Guangyuan Technology has been nominated as a New Energy Vehicle Power Battery Recycling Trail Unit in Anhui Province (安徽省新能源汽車動力蓄電池回收利用試點單位) in December 2008 and was included in the National Waste Electrical and Electronic Equipment Treatment Fund Subsidy List (國家廢棄電器電子產品處理基金補貼名單) in September 2013.

### Operations of Resource Recycling Business

Guangyuan Technology adopts a comprehensive recycling and disposal technology that combines manual dismantling and mechanical disposal and carries out in-depth mechanical sorting and separation of the dismantled materials. The materials generated in the recycling process are then delivered to enterprises holding hazardous waste operation licenses for recycling or disposal.

Our standard operation process can be exemplified by our workflow for computer disassembling. As shown in the flowchart below, we first transport the waste computers into the disassembling storage place. Then the waste computers are put onto a conveyor belt and delivered to different sectors for manual disassembling. The computer plastic cases are directly delivered to the plastic weighing area. We deliver the remaining parts to the sorting area for further dismantling into different materials, such as fan, battery, central processing unit, main board etc. In relation to hard drives, these will go through mechanical destruction. The various materials produced from disassembly will then be placed into recycling bags to be collected by enterprises with hazardous waste management licenses for utilisation or treatment.

---

## BUSINESS

---

### Revenue Model of Resource Recycling Business

For the recycling of waste electronic products and electrical appliances, we charge our customers by weight at predetermined prices based on the type of disassembled materials after the processing and recycling, and record revenue on a gross basis.

### SALES AND CUSTOMERS

#### Overview

During the Track Record Period, our primary products were gold, copper cathodes and other Mineral Resources products. Details of our major products as of the Latest Practicable Date are set out as below:

<u>Business</u>	<u>Products</u>
<b>Gold production in the PRC</b> . . . . .	Doré with more than 80% gold content, gold concentrate powder with gold content of 50g/t and more, or gold-loaded carbon
<b>Gold production in Laos</b> . . . . .	Doré with 30%-80% gold content and 10%-70% silver content
<b>Gold production in Ghana</b> . . . . .	Doré with more than 80% gold content
<b>Other Mineral Resources in the PRC</b> . .	(i) zinc concentrate powder, (ii) lead concentrate powder (containing silver), (iii) copper concentrate powder (containing silver), and (iv) molybdenum concentrate powder
<b>Copper cathodes in Laos</b> . . . . .	Copper cathodes with Grade A quality
<b>Others (resource recycling)</b> . . . . .	Dismantled materials

Our average selling price of gold mining business is determined based on the gold metal contained in the gold products despite the variant grades of the products. For details of the average selling price, please refer to “Financial Information — Sales volume and Average Selling Price”.

---

## BUSINESS

---

### Sales in the PRC

Our products are sold to a wide range of customers in China and we adopt different arrangements to determine the price and facilitate our sales. In relation to our sales of products in the PRC, we generally enter into sales agreements with our customers on an annual basis without entering into any long-term agreement. The following table sets forth the major customers and our pricing and sale arrangement for our sales in the PRC.

<b>Business</b>	<b>Major Customers</b>	<b>Customer Location</b>	<b>Pricing and Sales Arrangements</b>
Gold production in the PRC . . .	Members of the Shanghai Gold Exchange, i.e. precious metal refiners	PRC	<p>We determine the selling price based on the spot trading price of the Shanghai Gold Exchange and the relevant customer's agreement.</p> <p>The settlement price is determined at the market price of the spot pricing less smelting/refining fees and handling charges. The payment may be either settled on the day of the spot pricing or the immediately following day or partly settled in advance.</p> <p>As confirmed by Frost &amp; Sullivan, the sale of gold in PRC is not subject to any governmental regulatory pricing guidelines.</p>

---

## BUSINESS

---

Business	Major Customers	Customer Location	Pricing and Sales Arrangements
Other Mineral Resources in the PRC . . . . .	Large downstream smelters with long-term cooperation	PRC	<p>As a general practice, we determine sales prices based on the market prices of the relevant metals contained in the concentrates, including zinc, lead, copper, silver and molybdenum. The prices of 1# zinc ingot and 1# spot lead available on the Shanghai Metals Network and the settlement price of the spot copper contract on the Shanghai Futures Exchange are largely used as benchmarks. Settlement prices are determined based on the actual metal contents in the refined powder products, with transportation costs, weighing check fees and other factors taken into account.</p>
Others . . . . .	Downstream enterprises with hazardous waste management licenses for utilisation or treatment of disassembled waste electronic products and electrical appliances	PRC	<p>Sales prices are determined by reference to the quantity of disassembled products and the market conditions and at a price set by a bidding process.</p> <p>The goods are available to be picked up by clients at our relevant premises on condition of full payment.</p>

---

## BUSINESS

---

### Sales in Laos

In relation to our sales of products in Laos, we generally enter into sales agreements our customers for generally one to three years. Given the high quality of our products, various potential customers have approached us. Accordingly, we believe that it would not be difficult for us to find alternative customers for sales of products on terms comparable to those we have with our existing. The following table sets forth the major customers and our pricing and sale arrangement for our sales in Laos.

<u>Business</u>	<u>Major Customers</u>	<u>Customer Location</u>	<u>Pricing and Sales Arrangements</u>
Gold production in Laos . . . . .	Mainly include large, international gold refiners selected across the globe	Australia, Singapore, Thailand	<p>Based on the current agreement we may sell up to 90% of the products as per our laboratory's assay results at spot price once gold doré is handed over to our contracted transportation service provider at the mine site's gold room and sell all the remaining products once the refinery's results are available at spot price. The payment may be either settled on the day of the spot pricing or the immediately following business day.</p> <p>We generally arrange the products to be transported to the factory of the customer.</p> <p>As confirmed by Frost &amp; Sullivan, the sale of gold in Laos is not subject to any governmental regulatory pricing guidelines.</p>

---

## BUSINESS

---

<u>Business</u>	<u>Major Customers</u>	<u>Customer Location</u>	<u>Pricing and Sales Arrangements</u>
Copper cathodes in Laos . . . . .	Mainly include international commodity traders		<p>The details and terms of the sales are determined by the agreement reached by the parties in accordance with international trade rules. Generally, we are paid at a provisional provision, which is set at the average price of the London Metal Exchange in the previous month. Within three days after the original bill of lading is received by the customer, we receive payment at the average price of the London Metal Exchange in the coming month. We generally arrange for the products to be transported to the factory of the customer.</p>

---

## BUSINESS

---

### Sales in Ghana

In relation to our sales of products in Ghana, we generally enter into sales agreements with our customers for two years or longer terms. The following table sets forth the major customers and our pricing and sale arrangement for our sales in Ghana.

Business	Major Customers	Customer Location	Pricing and Sales Arrangements
Gold production in Ghana . . . .	The products are consigned to large gold refineries selected through a bidding process. During the Track Record Period, our major customers include large international refineries	South Africa, Ghana	<p>The pricing is mainly based on the gold spot price set by the London Bullion Market Association as benchmark after deducting certain relevant fees, and payments are generally settled within three business days of shipment.</p> <p>We are also subject to obligations in relation to sales of doré under a streaming agreement. For details, see subsection of “Metal Streaming” below.</p> <p>We generally arrange for the products to be transported to the relevant factory of the customer.</p> <p>As confirmed by Frost &amp; Sullivan, the sale of gold in Ghana is not subject to any governmental regulatory pricing guidelines.</p>

### Customers

During the Track Record Period, the brand and quality of our products were widely recognized by the market. In addition, we have established long-term and stable relationships with precious metals refiners and trading companies. We have maintained business relationships of over three years with our top five customers during the Track Record Period. In line with industry practice, we generally do not engage in marketing activities. This is mainly due to the scarcity of gold resources and strong demand for gold. According to Frost & Sullivan, gold mining has long been considered a sellers’ market, where gold mining

## BUSINESS

companies hold a bargaining advantage over their downstream customers. For our overseas operation, we mainly identify and procure customers by inviting bids from potential customers. Domestically, we primarily identify and establishes cooperative relationships with customers through the Shanghai Gold Exchange. We believe our customers typically would not directly export our products to other countries, as the majority of our customers are metal refineries, which would process our products in order to produce gold/copper products for higher purity.

During the Track Record Period, our top five customers in the respective year/period were refiners of precious metals and other non-ferrous metals as well as trading companies. For each year/period of the Track Record Period, revenue contributed by our top five customers amounted to RMB2,946.2 million, RMB5,345.8 million, RMB5,565.6 million and RMB4,904.6 million, respectively, accounting for 77.9%, 85.4%, 77.1% and 78.8% of our total revenue for the same periods, respectively. Revenue contributed by our largest customer for each year/period of the Track Record Period amounted to RMB2,126.6 million, RMB2,602.2 million, RMB2,672.1 million and RMB2,140.1 million, respectively, accounting for 56.2%, 41.5%, 37.0% and 34.4% of our total revenue for the same periods, respectively. The following tables set out details of our five largest customers in each year/period of the Track Record Period:

Rank	Customer	Type of Product(s) Sold	Country/Region	Nature of Business	Year(s) of Business Relationship as of the Latest Practicable Date	Credit terms	Revenue	% of our Total Revenue
<i>(RMB'000)</i>								
<i>For the nine months ended September 30, 2024</i>								
1.	ABC Refinery (Australia) Pty Ltd	Gold	Australia	Refinery	4	Up to 90% prepayment	2,140,263	34.4
2.	Rand Refinery (PTY) Ltd	Gold	South Africa	Metal Production	3	15 business days from invoice date	1,758,881	28.3

To the best of our knowledge, during the Track Record Period and up to the Latest Practicable Date, our customers were Independent Third Parties. As of the Latest Practicable Date, none of our Directors, their associates or any of our shareholders (who or which to the knowledge of the Directors owned more than 5% of our issued share capital) had any interest in any of our five largest customers in each year/period of the Track record Period.

### PROCUREMENT AND SUPPLIERS

We conduct our business in China, Laos and Ghana, where we face different social and natural environment and have different business needs. We consider that procurement management excellency is one of our key focuses. We have adopted headquarter-supported global centralized procurement system to enhance our procurement management efficiency. The Global Procurement System is primarily implemented through the Global Supply Chain Center (the “GSCC”). Acting as a bridge between domestic suppliers and overseas mines, it delivers products that are reasonably priced and of high quality to overseas mines via international freight forwarding. Upon receiving the demand from overseas mines, the GSCC begins to price inquiry. Based on the amount of the inquiry, it collects quotations from potential suppliers in different tiers to help mines establish contracts with suitable suppliers and assists with subsequent transportation and after-sales matters.

---

## BUSINESS

---

In addition, the GSCC also serves as an information-sharing platform for overseas mines. For similar or analogous demands, the GSCC offers information and previous experience related to supplier sourcing, development and certification, price inquiries, and procurement services. Other mines can use this as a reference to carry out their procurement activities, thereby avoiding potential duplication of work.

The system helps our Company from three aspects, namely the centralization, standardization and digitization, to enhance our procurement management efficiency:

*Centralization* – the purchase prices were set by entering into annual framework agreements with the suppliers. By centralizing data on the use of supplies and raw materials from our mines, we achieved economies of scale. In order to cut down on unnecessary duplication and enhance procurement efficiency, the mines designate consolidated procurement items, instead of contact by each mine separately, the GSCC handles the quotation and procurement process directly.

*Standardization* – by making the procurement procedure and particular regulations explicit, our mines may carry out procurement operations according to a unified standard, which eliminates the needless work that due to ambiguous regulations.

*Digitization* – with the aid of sophisticated data tools, each mine’s procurement-related data is updated in real time every two weeks, enabling the procurement team to make precise procurement decisions.

As a supplement to our procurement methods, we also procure individually in each country. In addition, to manage ESG risks in the supply chain, we have established a mechanism to evaluate suppliers’ performance in various aspects such as fair competition, occupational safety, human rights protection, and environmental protection. We will select three to five qualified suppliers for further screening and regularly conduct on-site inspections to learn more about their scale, production capacity, production technology, employee quality, innovation, and management systems and specifications. We will cease cooperation with suppliers whose ESG risks do not meet our requirements.

### **Our PRC Operations**

In terms of our business development strategies, we focus on our gold mining business through acquisitions, expansions and gradual divestment of non-core assets, thereby achieving significant growth. This has allowed us to transform ourselves into a specialized gold production company and we will continue to enhance our capabilities in this regard. As such, all disclosure of our practice in the subsections titled “Our PRC Operations” here and below mainly covers our gold production business in China.

---

## BUSINESS

---

We have developed a dedicated procurement platform to manage our procurement activities. This platform covers the whole procurement process, such as ascertaining procurement needs, on-site visits to suppliers, obtaining fee quotes, arranging public bidding, signing of agreements, order placement and fee payments. Through this platform, we undertake centralized management in relation to our procurement in the PRC.

### *(a) Raw Materials*

We procure a wide range of raw materials used in our mining operations, such as explosive materials, diesel, sodium cyanide and cement, primarily from local suppliers in the PRC.

The quality of our raw materials meets the relevant standards set by the industry and the state. For certain hazardous and explosive materials, we only procure these from suppliers approved by the competent authorities, and we require such suppliers to provide us with copies of the special permits issued by the relevant governmental authorities. Our suppliers generally are responsible for delivering raw materials to locations designated by us pursuant to the relevant procurement agreements. We undertake inspection of the raw materials before we accept delivery. We also require our suppliers to provide warranties on the raw materials with varying terms depending on the specific type of raw materials.

### *(b) Machinery and Equipment*

We procure various machinery and equipment for our production activities, including mining and processing equipment which mainly comprises rock drilling machines, drilling jumbos, scrapers, crushing circuits, grinding circuits, flotation circuits, pressure filters, conveyers, and other ancillary equipment. Our equipment and machinery include both leading international and domestic brands, which we purchase mainly from local suppliers.

We own the majority of the machinery and equipment used in our operations. The lifespan of our machinery and equipment generally ranges from two years to 20 years with depreciation calculated using the straight-line method. We have on-site personnel who undertake routine checks and maintenance on our machinery and equipment. We also conduct regular equipment inspections and upgrades.

## **Our Operations in Laos and Ghana**

We procure various materials, such as diesel fuel, processing chemicals and reagents, explosives, and related consumables, as well as machinery and equipment for our production operations mainly from (i) different local suppliers in Laos and Ghana and/or (ii) the original equipment manufacturers. We also procure various services, such as security services, civil work services, engineering services and loading and hauling services, from various local suppliers in Laos and Ghana. We usually source qualified suppliers through (i) public bidding and tendering, or (ii) market research and request of fee quotes. We require candidates to

---

## BUSINESS

---

provide the relevant licenses and permits for reference. We may undertake further due diligence, such as background checks and risk assessments, as and when necessary. The selected suppliers are put on our approved supplier list, which is reviewed and updated on a periodical basis.

### Suppliers

We generally select suppliers of raw materials and machinery and equipment, through a public bidding and tendering process. In selecting suppliers, we consider a wide range of factors, such as the supplier's qualifications, experience, pricing, service or product quality, reputation and delivery time, and any past business relationship we may have.

To secure competitive prices, we may enter into long-term agreements with certain suppliers for purchasing materials and/or services from time to time.

The salient terms of standard suppliers' agreements are set out as below:

- *Term.* Our long-term agreements with suppliers typically last for one to two years.
- *Pricing.* For the general goods and equipment, prices are determined through competitive bidding processes to ensure transparency and cost efficiency. For bulk materials, such as steel and sulfuric acid, prices are determined via tender-based procurement with annual framework agreements.
- *Payment.* Our suppliers usually grant us a credit term of 30 to 60 days from our receipt of the invoice for payment settlement. Alternatively, payments may be made in installments, combining advance payment with final payment upon acceptance. For machinery or equipment, we typically retain a 10% quality guarantee deposit, which is settled within 12 to 18 months, provided that no quality issues arise during this period.
- *Qualification.* We require our suppliers to possess a business license and other necessary permits. For certain types of supplies, we require our suppliers to possess specialized certifications or qualifications for the materials or goods they provide.
- *Quality control.* Our agreements with suppliers typically include warranty and return clauses to address any potential defects or non-conformities of the supplies.
- *Transportation.* Our suppliers are generally responsible for transporting and delivering purchased materials or goods to our facilities.

## BUSINESS

To secure competitive prices, we may enter into long-term agreements with certain suppliers for the provision of materials and/or service from time to time. Our suppliers usually grant us a credit term of around 30 days from our receipt of the invoice for payment settlement. Our suppliers generally transport the purchased materials or supplies to our facilities.

We consider it important to maintain good and long-term business relationships with our suppliers. We also employ a performance management program to evaluate our suppliers in order to confirm that each supplier remains capable to provide products and/or services that satisfy our production needs, as well as future development needs and future development needs. We may set out key performance indicators in our agreements with suppliers. In addition, we seek to diversify our supplier base to avoid disruptions in the provision of key supplies. We believe that most of the supplies we procure can be readily obtained from a wide range of suppliers at reasonable prices and we do not rely on any particular supplier. During the Track Record Period, we did not encounter any material disruption to our business as a result of shortage or delay in the supply of raw materials and machinery and equipment.

During the Track Record Period, all of our top five suppliers in the respective year/period were service or commodity providers such as suppliers of electricity, fuel, and transportation. For each year/period of the Track Record Period, purchases from our top five suppliers amounted to RMB647.3 million, RMB855.2 million and RMB666.5 million and RMB633.9 million, respectively, accounting for 25.6%, 19.1%, 13.7% and 17.6% of our cost of sales for the same periods, respectively. Purchases from our largest supplier for each year/period of the Track Record Period amounted to RMB159.5 million, RMB210.6 million, RMB149.5 million and RMB235.5 million, respectively, accounting for 6.3%, 4.7%, 3.1% and 6.5% of our cost of sales for the same periods, respectively. The following table sets forth our top five suppliers for each year/period during the Track Record Period:

Rank	Supplier	Type of products/ services provided	Country/ Region	Nature of Business	Year(s) of business relationship as of the Latest Practicable Date	Credit terms	Purchase amount	% of our total cost of sales
<i>(RMB'000)</i>								
<i>For the nine months ended September 30, 2024</i>								
1.	Setters Investment Co., Ltd	Project drilling	Ghana	Underground drilling	1	30 days upon receipt of invoice	235,507	6.5

The table below sets forth the price range of the top five raw materials by volume of usage of our Group during the Track Record Period:

No.	Raw Material	Price Range	Unit
		<i>USD/Unit</i>	
1 . . .	Diesel	0.79-1.47	Litre
2 . . .	Sulphuric Acid	40.00-206.00	Ton
3 . . .	Diesel	0.95-1.69	Litre
4 . . .	Lime (Hydrated)	71.36-165.10	Bag/1.3 ton
5 . . .	Sodium Cyanide	1,829.96-2,775.30	Box/1,000kg

The table below sets forth the five most expensive machinery/equipment procured by our Group during the Track Record Period:

No.	Machinery and Equipment	Price/Price Range	Application
		<i>(USD/Unit)</i>	
1 . . .	LH621i LOADER	1.5-1.8 million	An underground loader designed for ore loading and hauling in mining operations.
2 . . .	SANDVIK DL432i TH LONG HOLE DRILL	1.7 million	An advanced underground long hole drill for drilling operations in underground mining and tunneling projects.
3 . . .	Sandvik DD421 Development Drill	1.3 million	A dual-boom electro-hydraulic jumbo drill for underground mine development and small-scale tunneling operations.
4 . . .	ALC Regrinding Mill, Model ALC-3900L	1.1 million	A regrinding mill primarily used for gold ore and tailings regrinding processes.
5 . . .	VCASFT210242-2 – Volvo Articulated Hauler A45G	0.5 million	An articulated hauler for quarrying, mining, tunneling, and material handling in harsh terrains and demanding environments.

---

## BUSINESS

---

To mitigate impact of raw materials price fluctuations, we have adopted the following measures:

- (a) entering into framework agreements with key suppliers, securing fixed pricing terms without volume commitments, to lock in costs against market volatility, while maintaining flexibility for spot purchases;
- (b) determining purchase prices based on the publicly tracked market indices and pre-agreed formulas to prevent price manipulation by suppliers;
- (c) developing alternative low-cost suppliers across multiple regions through our Global Procurement System; and
- (d) monitoring real-time price trends of bulk materials, such as steel, copper and chemicals. In the event of abnormal fluctuations, our operational units will be notified and we will coordinate feasible mitigation measures.

During the Track Record Period and as of the Latest Practicable Date, we did not experience any material impact to our operation or financial condition due to any significant fluctuation in prices set by our suppliers or any material breach of contract on the part of our suppliers. During the Track Record Period and as of the Latest Practicable Date, none of our Directors, their associates or any of our shareholders (who or which to the knowledge of the Directors owned more than 5% of our issued share capital) had any interest in any of our five largest suppliers in each year/period of the Track record Period and the top five suppliers are all independent third parties.

## CONTRACTORS

### Our PRC Operations

In line with industry practice, we outsource a portion of our exploration and shaft construction/engineering work in the PRC to qualified contractors. We enter into contracts with contractors of different categories, covering a certain number of years or the duration of various projects. After confirming that the services/products provided by the contractors meet the acceptance standards stipulated in the relevant contracts, we will make payments according to the contract schedule or the agreed payment terms. Under these contracts, we are usually responsible for providing the contractors with relevant maps and plans to assist them in accessing our mining areas to carry out their work. Contractors are liable for the safety of their construction personnel and the quality of their construction work, and in certain projects, they are bound by confidentiality obligations. In the event of safety production or quality issues, these contracts can be terminated upon the mutual consent. As we expand our production scale, we believe that these outsourcing arrangements will enable us to meet our operational needs, reduce our operational costs, and lower operating risks. We believe that the services provided by our contractors are common in the market, and it would not be difficult for us to find alternative contractors to provide similar services on terms comparable with those between our existing contractors and us.

## BUSINESS

Given that the majority of our contractors provide services relating to exploration, excavation and mining, our ESG risk control management for contractors places a greater emphasis on production safety. We carefully examine the production safety permits and other related construction qualifications of contractors. We also enter into production safety management agreements with relevant contractors to clarify their safety production management obligations and allocate risks. In order to quickly identify and address potential ESG risks, each mine simultaneously manages contractors in accordance with our ESG standards. This is done through inspections by team leaders, reporting by special operation personnel, and regular investigations on production safety.

The table below sets forth the breakdown of the category, number and fees incurred during the Track Record Period:

	As of December 31,						As of September 30,	
	2021		2022		2023		2024	
	Number	Fee incurred (RMB'000)	Number	Fee incurred (RMB'000)	Number	Fee incurred (RMB'000)	Number	Fee incurred (RMB'000)
Exploration . . .	6	19,448.7	8	27,966.5	11	23,045.0	7	13,844.8
Construction . .	8	111,076.3	13	75,135.6	27	68,381.7	21	87,539.6
Excavation and								
Mining . . . .	6	141,690.3	7	151,798.2	3	61,019.0	0	0
Other . . . . .	3	23,292.9	4	10,163.7	4	1,483.7	1	3,220.6
<b>Total . . . . .</b>	<b>23</b>	<b>295,508.2</b>	<b>32</b>	<b>265,064.0</b>	<b>45</b>	<b>153,929.4</b>	<b>29</b>	<b>104,605.0</b>

Due to the intensive competition in the relevant contracting service market, we do not believe that it would be difficult for us to find alternative contractors to provide similar services on terms comparable to those with our existing contractors. During the Track Record Period and up to the Latest Practicable Date, we did not have any material disputes with our contractors that would have material adverse impact on our operations or cause our contractors' work in the PRC to be suspended. For relevant risks, see "Risk Factors — Risks Relating to Our Business and Industry — We may suffer material adverse consequences as a result of our reliance on contractors to conduct a portion of our business activities."

To the best of our knowledge, during the Track Record Period and up to the Latest Practicable Date, our contractors were Independent Third Parties. As of the Latest Practicable Date, none of our Directors, their associates or any of our shareholders (who or which to the knowledge of the Directors owned more than 5% of our issued share capital) had any interest in any of our contractors.

We select contractors mainly through public bidding or by invitations to tender. Before engaging a contractor, we will assess their qualification, competence and experience. In particular, we require candidates to provide copies of their qualifications, licenses, certificates and permits for review and verification. We then form an evaluation committee and supervision

---

## BUSINESS

---

committee and follow the prescribed selection procedure to shortlist candidates for business negotiations, after which we will make the final decision. During the Track Record Period, all of our contractors were independent third parties.

We require our contractors to comply with all applicable laws and regulations in respect of safety and environmental protection. We also require our contractors to abide by our safety management system and our internal control requirements. The relevant departments in our Company undertake regular check of our contractors to confirm that they are operating in accordance with the technical specifications of our project and industry standards. We also engage third-party personnel to supervise our contractors' work, to ensure objective management over project status and quality. If the products or services provided by our contractors fail to meet the standards or requirements as specified in the relevant contracts, we would promptly notify the relevant contractors to adjust or rectify. In the event we discover significant non-compliance or other issues in the implementation of our project, we are entitled to suspend such contractor's work and require them to take correctional actions. In addition, we require our contractors to purchase insurance for their employees and properties.

**(a) Exploration**

As of September 30, 2024, we had seven third-party contractors engaged in exploration activities. We require contractors to hold the requisite qualifications for geological exploration. We generally enter into contracting agreements for a term of one year with such contractors.

**(b) Construction**

As of September 30, 2024, we had 21 third-party contractors for construction. These contractors are construction work professionals holding the requisite qualifications and licenses and majority engaged in our shaft construction projects, which includes mine construction, tunneling, hoisting and transportation, and for shaft engineering this includes pitshaft equipment installation and removal and derrick installation. We generally enter into contracting agreements based on the total project duration.

**(c) Other Services**

As of September 30, 2024, we had one third-party contractor for crushing services.

### **Our Operations in Laos**

As of September 30, 2024, we engaged (i) 25 third-party contractors to undertake various construction work, including permanent river alignment project, (ii) 60 third-party contractors for mining and processing work in our projects in Laos, and (iii) 27 third-party contractors for other services. From time to time, we may engage other third-party contractors to support our mining activities, such as construction or improvement of tailing dams and roads in mining sites. During the Track Record Period and up to the Latest Practicable Date, we did not have

## BUSINESS

any material disputes with our contractors that would have material adverse impact on our operation or suspended any contractors' work in Laos. The table below sets forth the breakdown of the category, number and fees incurred during the Track Record Period:

	As of December 31,						As of September 30,

### Our Operations in Ghana

As of September 30, 2024, we engaged five third-party contractors to provide excavation, mining, exploration, processing, construction and drilling services to our operations in Ghana. These contractors hold drilling and exploration service operating permits from the Minerals Commission of Ghana. We require our contractors in Ghana to strictly comply with all applicable laws and regulations in respect of safety and environmental protection. Furthermore, we also hold them to specific technology and quality standards as well as detailed work schedules. We evaluate the progress of exploration on frequent basis and monitor the service providers to ensure compliance. During the Track Record Period and up to the Latest Practicable Date, we did not have any material disputes with our contractors that would have material adverse impact on our operation or suspended any contractors' work in Ghana. The table below sets forth the breakdown of the category, number and fees incurred during the Track Record Period:

	As of December 31,				As of September 30,	
	2022		2023		2024

<b>Total . . . . .</b>	<b>7</b>	<b>3,635.2</b>	<b>7</b>	<b>14,448.4</b>	<b>5</b>	<b>21,504.7</b>

**GOLD LEASING, HEDGING AND STREAMING****Gold Leasing**

We obtain short-term financing by gold leasing arrangements, through which we mainly lease gold from the various PRC commercial banks which is sold in the market through the system of the Shanghai Gold Exchange in order to supplement our working capital. Upon maturity of the lease, we return such leased gold back to the relevant commercial banks with payment of leasing fees. Meanwhile, we usually enter into forward purchase contracts in the form of futures standard agreements at the Shanghai Futures Exchange, pursuant to which we agree to purchase the same amount of gold, at the same price and on the maturity date of the lease in order to repay the leased gold. Through this framework, our gold leasing arrangements are generally not subject to material risks caused by fluctuation of gold market prices. The term of our gold leasing arrangement is generally within one year. During the Track Record Period, the interest rates of our gold leasing arrangement ranged from 1.5% to 2.7% and were lower than that of bank borrowings or other financing means.

**Hedging**

We have different measures to hedge against the risk of fluctuations in gold price. To mitigate the risks of future increases in the prices of the gold we intend to lease, we engage in hedging through forward transactions or by purchasing futures products in the futures market for the leased gold. As a gold production enterprise, we take risk management strategy to prevent the risk of gold price declines by selling our gold products in major futures markets, such as the Shanghai Gold Exchange or the COMEX gold exchange in the U.S., to lock in prices. The volume of such transactions each year depends on the trend of gold price fluctuation for that year, but the total volume will not exceed 10% of the annual gold production according to our internal policy.

We have entered into, and expect to continue to enter into, futures hedging transactions to forward sell gold and other metals produced by our mines in order to secure desired prices and hedge against volatility in market prices. Our hedging transactions are mainly conducted through gold futures contracts on the Shanghai Futures Exchange and other international exchanges. Pursuant to standard gold futures contracts, we will provide an agreed amount of gold on a specific date at an agreed sale price. Based on the outlook of the gold prices and our expected gold production amount, we negotiate the price, settlement date and other contract terms accordingly.

Pursuant to our policy, a hedging management group composed of certain members of our senior management, including the Chairman, the CEO, the CFO and other colleagues from financial, trading, accounting and risk management departments with professional financial expertise, is responsible for managing our hedging activities. For our hedging transactions, we may not hold positions that in aggregate exceed 10% of our annual gold production volume, and the size of each hedging position should be in line with our production volume and capital strength at the time pursuant to our Board authorization. Under the hedging management

---

## BUSINESS

---

group, we have a designated hedging trading group responsible for planning and proposing hedging transactions based on our production plan as well as market analysis, including analysis of the expected gold prices. Such proposals are submitted to our the hedging management group for review and approval, after which we execute the transactions. We record our hedging transactions in our accounts and keep documentation relating to these transactions. In the event of any significant fluctuations in gold prices, our hedging trading group will promptly provide our senior management with an analysis of the risk of losses and a proposal of the measures that should be taken. We also have under our hedging management group, a hedging settlement group mainly responsible for fund settlement, and a hedging risk control group mainly responsible for risk assessment and monitoring during such hedging transactions. We have applied hedge accounting under IFRS 9 for our gold leasing transactions and futures hedging transactions.

### **Metal Streaming**

Golden Star Resources, through a wholly owned subsidiary Caystar Finance Co. (“**Caystar Finance**”), entered into a Gold Purchase and Sale Agreement with RGLD GOLD AG (“**RGLD**”), dated May 6, 2015, which was subsequently amended and restated on June 29, 2018 and September 30, 2020 (the “**Streaming Agreement**”). RGLD is a royalty and streaming company that engages in the acquisition and management of precious metal streams, royalties, and similar production-based interests. It is publicly traded on the Nasdaq Global Select Market under the symbol “RGLD”. Metal streaming as a financing option offers several benefits for mining companies like us compared to traditional debt or equity deals. Compared to debt, streaming deals typically have longer payment terms, no fixed cash obligations (reducing risk during price downturns), fewer restrictions on cash use, minimal or no debt covenants, and shared production and operational risks. Compared to equity, streaming deals are less dilutive since they focus on a single asset, are more favorable when share prices are low, avoid ownership or management changes, and usually do not involve extra costs like brokerage fees. Overall, streaming provides a flexible, lower-risk financing alternative for mining companies like us.

Pursuant to the Streaming Agreement, RGLD paid an advance payment in the amount of US\$145,000,000 in exchange for a gold stream of the Wassa Mine, entitling RGLD to purchase a stream of our gold production at a reduced gold price. Specifically, RGLD is entitled to purchase (1) 10.5% of the gold production of the Wassa Mine at a cash purchase price of 20% of the spot price until 240,000 ounces (“**Delivery Threshold**”) have been delivered; and (2) thereafter, 5.5% of gold production (“**Tail Stream Percentage**”) at a cash purchase price of 30% of spot price (the “**Streaming Transaction**”).

The term of the Streaming Transaction continues until the date that is 40 years after 6 May 2015, and may be extended by either RGLD or us for successive 10 year periods, subject to certain conditions. According to Frost & Sullivan, the discount rate and duration of the agreement are in line with industry norms.

---

## BUSINESS

---

We are subject to certain covenants in, and RGLD enjoys certain rights under, the Streaming Agreement, principally:

- **Information rights.** We shall deliver to RGLD, among other information, reports related to Wassa Mine's mineral reserves and resources, forecast of annual production and project economics, life of mine plan and updates thereof, feasibility studies and engineering and metallurgical and related data and evaluations, notice of material events, financing agreements, etc. RGLD is also entitled to inspect the Wassa Mine, subject to certain conditions.
- **Ranking.** Our obligation to sell and deliver gold production under the Streaming Agreement will rank as an operating expense in any cash waterfall agreed with any provider of financing. All proceeds received by us for any sale of gold will be used in satisfaction of its obligations to RGLD prior to any payment of such proceeds to any other person.
- **Negative pledge.** We will not grant any encumbrance on the Wassa Mine other than encumbrances in connection with senior financing, in which case, RGLD will enter into a subordination agreement with the relevant senior financing parties.
- **Leverage Ratio.** GSWL's leverage ratio shall be less than or equal to 3.50:1.
- **Right of First Refusal.** RGLD enjoys a right of first refusal with respect to any additional stream of gold production or royalty arrangement proposed to be sold by GSWL.
- **Election to increase or decrease the Tail Stream Percentage.** at any time after the Delivery Threshold, we have a one time election to offer to reduce the Tail Stream Percentage by a specified amount (the "**Specified Percentage**") or, at RGLD's option following our's exercise of the Tail Stream Election to increase the Tail Stream Percentage by the Specified Percentage, in each case for the same cash price.
- **Other negative covenants.** We are also subject to certain negative covenants with respect to sale, disposal and encumbrances of GSWL's assets and our operations of the Wassa Mine.

During Track Record Period, our revenue generated under the Gold Purchase and Streaming Agreement (as part of the sale of products of our gold production business in Ghana) was nil, RMB47.2 million, RMB52.3 million and RMB44.7 million, respectively, representing nil, 0.8%, 0.7% and 0.7% of our total revenue for the same periods, respectively.

**UTILITIES****Electricity*****(a) Our PRC Operations***

We mainly obtain electricity from the state electrical power grid. We generally enter into agreements with the state electrical power grid authority on an annual basis. The price of electricity is determined pursuant to the relevant electricity market rate by following related guidance thereon published by the governmental authorities in the PRC. We may enjoy a discounted price for electricity under clean energy policies promulgated in the PRC. During the Track Record Period and up to the Latest Practicable Date, we did not experience any significant interruptions in our operations in the PRC as result of power shortage or outages.

***(b) Our Operations in Laos***

We obtain electricity from the state electricity company of Laos. The price of the electricity is mainly determined in accordance with the purchase agreement we signed and subject to the local pricing policies published by Laotian Government. During the Track Record Period and up to the Latest Practicable Date, we did not experience any significant interruption in our operations as result of power shortage.

***(c) Our Operations in Ghana***

We mainly obtain electricity from a local gas-fired power plant. We also engaged the local state electricity power grid as back-up power supplier. The price of electricity is primarily determined through arm's length negotiations by reference to the relevant electricity market rate. In addition, we have diesel generators in place for power supply in case of emergency. During the Track Record Period and up to the Latest Practicable Date, we did not experience any significant interruptions in our operations in Ghana as a result of power shortage or outages.

**Water*****(a) Our PRC Operations***

The majority of our mines in the PRC are underground mines and we mainly use underground water, and to a lesser extent surface water, for industrial use. Water for domestic use is sourced from both local water companies underground water. During the Track Record Period and up to the Latest Practicable Date, we did not experience any significant interruption in our operation as result of water shortage.

---

## BUSINESS

---

### *(b) Our Operations in Laos*

The water supply for both industrial use and domestic use in Laos are secured from local water companies. During the Track Record Period and up to the Latest Practicable Date, we did not experience any significant interruption in our operations in Laos as result of water shortage.

### *(c) Our Operations in Ghana*

The water supply for both industrial and domestic use in Ghana is mainly secured from underground water. During the Track Record Period and up to the Latest Practicable Date, we did not experience any significant interruption in our operations in Ghana as result of water shortage.

For details of the relevant risks, see “Risk Factors — Risks Relating to Our Business and Industry — We may not be able to maintain adequate, uninterrupted, timely and specification-compliant supplies of utilities, materials, equipment and service at commercially acceptable prices, or at all” and “Risk Factors — Risks Relating to Our Business and Industry — Power outages and usage constraints may force us to halt or curtail operations, or subject us to penalties.”

## LOGISTICS

### **Our PRC Operations**

We engage professional third-party logistics service providers for transporting mined ore to the processing facilities, our products to the relevant customers as well as various materials we procured from suppliers from time to time. We use positioning systems to track the specific location of fleet vehicles and video-links allow for real-time monitoring of the transport security personnel. Generally, such logistics service providers are responsible for maintaining insurance associated with the transportation and bear the relevant risks. During the Track Record Period and up to the Latest Practicable Date, we did not experience any material shortage of transportation capacity.

### **Our Operations in Laos and Ghana**

For our operations in Laos and Ghana, we engage professional third-party logistics service providers for the cross-border transportation of our products to customers by air and/or land transport and, to a lesser extent, transportation of certain materials we procured from suppliers. Generally, such logistics service providers are responsible for maintaining insurance associated with the transportation and bear the relevant risks. During the Track Record Period and up to the Latest Practicable Date, we did not experience any material shortage of transportation capacity.

### INVENTORY

#### Our PRC Operations

Our inventories mainly include raw materials, work-in-progress, inventory commodities, turnover materials, consignment goods and inventory consumables. We have established inventory management policies to manage inventory levels pursuant to our production plan and the prevailing market conditions.

Following our standard inspection procedures, our inventory personnel examine each shipment pursuant to our agreements or purchase orders to ensure conformity of the shipment with the relevant specifications, quality and quantity requirements. Where the documents are incomplete, the relevant supplies are stored pending acceptance check at later stage. If the specifications, quality or quantity of the supplies do not match the agreement or purchase orders, we will reject the supplies and liaise with suppliers to follow up. All movements of our inventories are subject to inventory controls at the warehouse, are recorded in our inventory management system and are subject to review and confirmation by our finance department.

We undertake routine inventory reviews and arrange inventory checks on a more detailed and in-depth basis for at least once a year. All personnel entering our inventory warehouses are subject to strict security check, and we have real-time video camera, alarm system, and security guards in place to prevent security issues. Furthermore, we have insurance coverage on our inventories.

Raw materials such as spare parts and components are subject to risk of obsolescence. The obsolescence of raw materials is primarily due to the obsolescence of some spare parts and components for production machinery and maintenance equipment of LXML, which were purchased for the open-pit mining for LXML. They have long turnover days as they will only be used to replace the original parts and components when the original parts and components are damaged. Since the commencement of the transferring open-pit mining to underground mining in 2022, these spare parts and components for the production machinery and maintenance equipment have been held in storage. In contrast, consumables in other raw materials, such as explosive materials and diesel, generally have shorter turnover days. To effectively monitor the risk of inventory obsolescence, we implement a comprehensive set of measures. First, we conduct regular inventory reviews and aging analyses to identify slow-moving or obsolete items. We actively manage our inventory turnover days to more effectively plan our production and monitor our inventory level. Second, we maintain close collaboration with our sales, procurement, and production teams to align inventory levels with demand forecasts and market trends. Third, we utilize inventory management software to track stock levels, usage patterns, and shelf life in real time. Finally, we establish clear policies for writing off or disposing of obsolete inventory to minimize financial impact.

**Our Operations in Laos and Ghana**

Similar to our operations in the PRC, our inventories in Laos and Ghana mainly include raw materials, work-in-progress, turnover materials and inventory consumables. Our inventory personnel in Laos and Ghana are generally responsible for implementation of our inventory policies. Our inventory personnel are separated into: (i) a warehousing team, which is responsible for physical management, such as receiving, storing and issuing supplies; and (ii) an inventory team, which is responsible for managing our inventory system and data, such as the actual levels for individual items. Our inventory levels are managed pursuant to our consumption record and lead time for supplies. All inventory information is recorded in our inventory system and categorized for ease of data analysis. We set the minimum and maximum inventory levels in our inventory system, which assists us arrange timely procurement. We undertake routine inventory review every three months for small-sized items and annually for large-sized items. We generally increase our inventory of raw materials prior to certain predictable events, such as monsoon seasons.

For details of relevant risks, see “Risk Factors — Risks Relating to Our Business and Industry — We are exposed to the risk of obsolescence and impairment of our inventory.”

**QUALITY CONTROL**

Quality control is crucial to our operations. We have a dedicated product quality department, which comprises laboratories, a measurement team and a sampling team to ensure quality control. We have also established a stringent quality control system to ensure the quality of our products throughout our different production stages. If a quality issue is raised by a customer, we will undertake comprehensive investigations and consult with the relevant customers, and, to the extent needed, may submit any dispute to qualified third-party organization for arbitration. During the Track Record Period, we did not receive any material complaints due to quality issues of our products.

With respect to mining and processing, we have implemented a comprehensive quality control system to monitor the quality at each key stage of our mining and processing procedures. We have established specific guidelines for procedures to manage the quality of the ores mined. Ores mined from our mines are sample-tested at our laboratories on a regular basis to monitor the grade of the ore.

We provide quality and technical specifications to our suppliers and generally require suppliers to provide warranties for the supplies they provide. We inspect shipments of raw materials before accepting delivery. We require our third-party contractors to meet our qualification requirements and conduct their operations in accordance with our internal standards, industry standards and relevant laws and regulations. We regularly inspect the work of our suppliers, and we conduct full quality inspections upon project completion.

**COMPETITION**

Industry concentration has continued to increase in light of the continuous mergers and integration of gold enterprises. The top ten global gold producers in 2023 accounted for around 25.6% of the global gold mining production, according to Frost & Sullivan. Most of the top gold producers are headquartered in the United States, Australia, Canada, South Africa, Russia, Uzbekistan and China. We compete with international players in acquiring attractive gold mining properties.

The gold mining industry in China is relatively fragmented with the market dominated by small- and medium-sized gold mining companies accounting for majority of the market share. In 2023, (i) we ranked fifth among gold producers in China in terms of gold Resources, with gold Resources of 13.6 million oz; and (ii) we ranked fifth among gold producers in China in terms of gold production, with production of 461.5 koz of gold, according to Frost & Sullivan. Moreover, we also had the highest number of overseas assets as of December 31, 2023 and overseas revenue contribution in 2023 compared with any major gold producers in China, according to Frost & Sullivan.

Our major competitors are large international and PRC mining companies. We primarily compete based on our ability to obtain gold Reserves and Resources, which is dependent on our financial conditions, technical ability, equipment and machinery and human capital. The mining industry is a capital-intensive industry that requires significant technical, exploration and management experience. Moreover, mining is subject to extensive regulations and requires a number of licenses and permits to operate. These factors constitute significant barriers to enter the gold mining industry. For further details of the competition landscape and our market position, see “Industry Overview.”

**RESEARCH AND DEVELOPMENT**

We are committed to continuous research and development, which we believe will ensure our competitiveness in the industry and enable us to sustainably grow our business in the future. As of September 30, 2024, our dedicated R&D team comprised 595 employees. Our R&D team focuses on exploration to improving our mining and processing technologies, including, in particular increasing our processing recovery rate. Our research achievements are reflected in our academic publications, such as (i) “The Research and Setting of Energy Consumption Limitation of Product Unit for Gold Mining, Processing and Refining” (黃金開採、選冶、精煉單位產品能源消耗限額的研究與制定), which was awarded the 2016 China Gold Association Technology First Prize (2016年中國黃金協會科學技術獎一等獎), and (ii) The Research and Application of Key Technologies of Decyanidation Treatment of Cyanide Tailings (氰化尾渣脫氰處理關鍵技術研究與應用) co-authored by Jilong Mining and Changchun Gold Research Institute (長春黃金研究院), which was awarded the “2018 China Gold Associate Technology Second Prize” (2018年中國黃金協會科學技術獎二等獎).

---

## BUSINESS

---

Our continuous efforts in research and development have also paid off in terms of the various intellectual property rights, including patents and copyrights, we have obtained. As of the Latest Practicable Date, we had 27 registered patents in the PRC. For further details, please refer to the paragraph headed “— Intellectual Property Rights” below. In addition, our subsidiaries Wulong Mining and Jilong Mining have been recognized as high and new technology enterprises. Therefore, each of these enjoys a preferential enterprise income tax rate of only 15%, as opposed to 25% for general enterprises in China. For details of the relevant risks, see “Risk Factors — Risks Relating to Our Business and Industry — We received government grants and enjoyed preferential tax treatment during the Track Record Period, and any significant reduction in such grants or tax treatment offered to us may materially and adversely affect our financial condition and results of operations.” In 2021, 2022 and 2023 and the nine months ended September 30, 2024, our research and development expenses amounted to RMB24.8 million, RMB27.7 million, RMB51.8 million and RMB47.9 million, respectively.

### INTELLECTUAL PROPERTY

Intellectual property rights play an important role in our business operations. We conduct our business under the trade names of “赤峰黄金” and “Chifeng Gold.” As of the Latest Practicable Date, the intellectual property rights owned by us included: (i) 9 trademarks registered in China; (ii) 27 patents in China; (iii) seven domain names in China; (iv) eight software copyrights in China; (v) one copyright of works in China; (vi) two trademarks registered in Laos; and (vii) two trademarks in Hong Kong. See “Appendix VII — Statutory and General Information — Further Information about Our Business — Intellectual Property Rights” for details of our material intellectual property rights.

To protect our intellectual property rights, we monitor whether there is any infringement of our brand by conducting internet searches, including searches on the website of the National Intellectual Property Administration of the PRC. During the Track Record Period and up to the Latest Practicable Date, we were not involved in any material dispute or litigation relating to infringement of trademarks and patents nor, to the best of our knowledge, did we infringe any trademarks and patents belonging to other parties.

### EMPLOYEES

We believe that our employees are critical to our success. Our human resources department is responsible for recruiting, managing and training our employees. As of September 30, 2024, we had 6,447 full-time employees in total, among which 2,240 employees were in Laos and 892 employees were in Ghana.

## BUSINESS

The following table sets forth the number of our employees by function as of the dates indicated:

Function	As of December 31,			As of
	2021	2022	2023	September 30, 2024
Production . . . . .	3,071	3,689	3,515	4,996
Sales . . . . .	3	7	7	8

---

## BUSINESS

---

We are required by PRC social insurance and housing provident fund laws and regulations to make contributions to mandatory social insurance and housing provident funds for our employees. During the Track Record Period, we did not make adequate contributions to the social insurance and housing provident funds with respect to certain of our employees as required by the relevant PRC laws and regulations. See “Risk Factors — Risks Relating to Our Business — Implementation and enforcement of the labor laws and regulations in China may adversely affect our business and results of operations. Failure to fully comply with PRC labor-related laws may expose us to potential liabilities and penalties.”

We have maintained a good relationship and expect to maintain an amicable relationship in the future with our employees. During the Track Record Period and up to the Latest Practicable Date, there were no material strikes which had an adverse impact on our operation and no material disputes between our Group and our employees.

### **Our PRC Operations**

We view our employees as critical to our success, and we are committed to recruiting, training and retaining skilled and experienced employees throughout our operations. We intend to achieve this by offering competitive remuneration packages, which is above the market average, as well as focusing on training and career development. Our remuneration packages, including salary, bonus, commercial insurance and other benefits, are designed to reward our employees based on their work performance as measured against specified work objectives. We undertake yearly research on prevailing market remuneration conditions and adjust our remuneration packages accordingly to ensure that our offer remains attractive compared with our competitors. In addition, we provide induction training and a wide range of on-job trainings to our employees on regular basis to enhance their professional knowledge, improve their working skills and strengthen teamwork within our Company.

In line with customary industry practice in China, our employees are represented by labor unions. We engage external legal counsel to provide professional legal support in relations to various labor issues involving our employees. In addition, our human resource staff also attend regular trainings on labor law and other related laws and regulations held by the relevant governmental authorities. During the Track Record Period and up to the Latest Practicable Date, we did not experience any strikes, work stoppages or significant labor disputes, nor did we experience any significant difficulties in recruiting or retaining qualified personnel. Our PRC Legal Advisor is of the view that, during the Track Record Period and up to the Latest Practicable Date, we had complied with all applicable labor laws and regulations in the PRC in all material respects. We believe that we have also maintained a stable and motivated workforce and high level of employee loyalty.

We dedicate significant resources to employee recruitment and promotion. We recruit employees through internal channels, such as function hiring and internal referrals by our employees, and external channels such as online platforms, job fairs and head-hunters. We place significant importance on internal promotion as a means to offer long-term career paths and performance incentives for our employees. In particular, we formulate the talent cultivation plans for mid-level and higher management employees. Leveraging our strong

---

## BUSINESS

---

connections with various leading colleges, we have also fostered our talent development system by conducting mentorship training programs for college students from various leading universities in China. We believe such arrangements have enabled us to secure a stable pipeline of high-quality employees which strongly support our continued business development and success.

### **Our Operations in Laos and Ghana**

We have established comprehensive human resources systems to manage recruitment, employee development, salary and compensation, among other things. We design our remuneration packages by reference to the local mining industry benchmark and are competitive compared with our competitors. We also make contributions to mandatory social security funds for our employees as required by the relevant laws and regulations of Laos and Ghana, respectively, and provides employee benefits such as commercial insurance. Our Laos Legal Advisor and our Ghana Legal Advisor are of view that, during the Track Record Period and up to the Latest Practicable Date, we had complied with the applicable labor laws and regulations in Laos and Ghana in all material respects, respectively. The majority of our employees in Laos and Ghana are represented by labor unions.

### **TRANSFER PRICING**

#### **Transfer Pricing Arrangements**

#### ***Intra-group transactions within Golden Star Resources prior to our acquisition of Golden Star Resources***

All the intra-group transactions between GSWL and the then group companies within Golden Star Resources occurred outside of Ghana within the period from 2017 to 2020, prior to our acquisition of Golden Star Resources in 2022.

GSWL and its related parties had intra-group loans and other operational support and services arrangements during the period from 2017 to 2020. The parent company of GSWL provided financial supporting to GSWL for its daily operational use with their own working capital via intra-group loans, and GSWL was charged interest based on the principal outstanding and interest rates varied ranging from 3.25% to LIBOR plus 11% during the period. In the same period, GSWL's parent company provided intra-group sales, management and administration services to GSWL and charged GSWL a service fee of US\$155,000 per month.

Transfer pricing audit was conducted regularly by the Domestic Tax Revenue Division of the Ghana Revenue Authority on GSWL in accordance with the relevant tax regulations in Ghana to decide if the transactions between GSWL and related parties were conducted at arm's length and if GSWL complied with applicable transfer pricing laws. The latest audit performed on GSWL in 2024 was related to the intra-group transactions during the period from 2017 to 2020.

---

## BUSINESS

---

Ghana Revenue Authority considered the interest rate charged by related parties was higher than market and concluded interest rate to be lowered by 2% on the outstanding principal amount. They also considered some of the services provided by related companies were without appropriate supporting as GSWL was not able to provide the relevant timesheet and work done by the then Canada head office. GSWL lost some of its records when Golden Star Resources was acquired by our Group and the Golden Star Resources's head office was closed in 2022 when head office tasks and duties were taken up by our Group.

GSWL received a tax demand notice of US\$7,082,002.81 in May 2024 and GSWL has charged the whole amount to income statement and increased tax provision at the same time. GSWL has filed an application to Ghana Revenue Authority to waive US\$3,700,000 under Ghana Revenue Administration Act 2016 (Act 915) on the basis that GSWL voluntarily disclose its liabilities. The waiver was granted on October 31, 2024 and the amount of US\$3,700,000 was reversed in the income statement and decrease tax provision in October 2024. As of the Latest Practicable Date, GSWL had fully paid the additional tax amount. No penalty had resulted from this transfer pricing audit as of the Latest Practicable Date.

During the Track Record Period and up to the Latest Practicable Date, we had operations in the PRC, Laos and Ghana. In order to ensure the efficient operation of our Group, during the Track Record Period and up to the Latest Practicable Date: (a) our Company, as the headquarter of our Group, provided integrated operational support and consulting services to LXML and GSWL, including but not limited to downstream customer development services, exploration services, mining and mineral processing technology services, IT system services and other project-related business development, project delivery and other support services, (b) our Company provided intra-group loans as one of the internal financing methods to our subsidiaries, (c) our Company rented a property for our headquarters and received property management services from a related party, and (d) one of our subsidiaries in PRC sold the products it procured from domestic or overseas suppliers and provided the outsourced procurement services of the hazardous chemicals to LXML and GSWL under our global centralized procurement arrangement. In addition, post our acquisition of Golden Star Resources in 2022, GSWL kept similar intercompany loan arrangement with our Group's subsidiaries. These transactions are regarded as transfer pricing arrangements. As such, we have adopted transfer pricing arrangements to ensure compliance with relevant transfer pricing regulations, including (i) monitoring implementation of internal control policy on tax-related matters; (ii) monitoring updates on transfer pricing laws and regulations and assessment of related risks to our Group; (iii) engaging benchmarking review on transfer pricing policy and exposure; and (iv) designating our finance manager to regularly monitor our pricing policy of transfer pricing arrangements to ensure such transactions follow the arm's length principle in accordance with relevant transfer pricing guidelines.

### **Transfer Pricing Assessment**

The Organization for Economic Co-operation and Development (the "OECD"), an international organization of international cooperation, promulgated the transfer pricing guidelines for multinational enterprises and tax administrations (the "OECD Transfer Pricing Guidelines"), which is generally followed by all tax jurisdictions involved in our transfer

---

## BUSINESS

---

pricing arrangements including the PRC, Laos and Ghana. According to the OECD Transfer Pricing Guidelines, our transfer pricing arrangements should be at arm's length basis to avoid distorted taxable income in different jurisdictions.

We engaged relevant transfer pricing consultants to conduct benchmarking studies on the intra-group transaction of GSWL and the preparation of transfer pricing local file for the years from 2021 to 2023. Based on the benchmarking analysis, the transfer pricing consultants traced the market rates for similar transactions and compared to the rate charged by our Group to GSWL and did not identify any transfer pricing arrangements of GSWL that did not align with the arm's length principle according to the OECD Transfer Pricing Guidelines.

Other than the above, in order to ensure compliance with the relevant transfer pricing regulations, we have engaged independent transfer pricing consultants to conduct benchmarking studies on the transfer pricing arrangements, for the year of 2021, the year of 2022 and the year of 2023, respectively, in accordance with the OECD Transfer Pricing Guidelines, which primarily identified the arm's length principles and/or profit range for the transfer pricing arrangements. Transfer pricing consultants first selected the most appropriate transfer pricing analysis methodology in its benchmarking studies based on the nature and characteristics of the transactions. For the provision of procurement support services, the transfer pricing consultants selected comparable uncontrolled price method ("CUP"), which compares the arrangements for the services in the transfer pricing arrangements to the arrangements of transactions between independent parties under similar and comparable circumstances.

Based on the transfer pricing reviews mentioned above, our transfer pricing arrangements in 2021, 2022 and 2023 were generally within the profit range that was considered an appropriate range for arm's length transactions in 2021, 2022 and 2023. In addition, our Group has prepared transfer pricing master file for each of 2021, 2022 and 2023 and relevant group entities have prepared transfer pricing local files to fulfil the applicable transfer pricing documentation compliance requirements. Our transfer pricing consultants, based on the benchmarking analysis, did not identify any transfer pricing arrangements that did not align with the arm's length principle according to the OECD Transfer Pricing Guidelines. On this basis, our Company is of the view that the above-mentioned transfer pricing arrangements of our Group align with the arm's length principle according to the OECD Transfer Pricing Guidelines.

Our PRC Legal Advisor is of the view that during the Track Record Period and up to the Latest Practicable Date our transfer pricing arrangements had complied with all applicable PRC laws and regulations in all material respects, on the basis that the transfer pricing of our transfer pricing arrangements during the Track Record Period and up to the Latest Practicable Date was fair.

---

## BUSINESS

---

Our management had been and will continue to closely monitor our Group's transfer pricing arrangements including reviewing the reasonableness of the pricing policy of our transfer pricing arrangements from time to time. However, we cannot assure that our transfer pricing arrangements will not be subject to review and possible challenge by any relevant tax authorities in future, even though we believe we have reasonable grounds to defend ourselves against such possible challenge. Please refer to the section headed "Risk Factors — Risks Relating to Our Business and Industry — We are subject to regulatory risks with respect to our tax compliance" in this Prospectus for further details.

### ENVIRONMENTAL, SOCIAL AND GOVERNANCE

We believe that our efforts in environmental, social and governance matters are the key factors for our long-term sustainable development and continued business success. Accordingly, we attach great importance to the implementation of environmental, social and governance policies at the highest level of our Company.

International industry standards and best international practices have been applied in our overseas mines and the same standards are adopted in our domestic mines on a step-by-step basis. For instance, we have been in compliance with various gold and/or mining industry standards, such as the World Gold Council Conflict-Free Gold Standard and World Gold Council Responsible Gold Mining Principles. Although we are not a member of the World Gold Council and are not obligated to follow its standards, we align our policies with these guidelines to ensure gold is responsibly produced under strict ESG governance. We prioritize human rights for employees and communities, avoid involvement in conflicts, and conduct rigorous risk assessments across the supply chain. Suppliers are required to uphold ethical practices, prioritize safety and occupational health, and minimize potential harm. We continuously evaluate and improve our ESG performance and enforce systems to ensure legal and sustainable mining practices.

Furthermore, we have also been in compliance with the International Council on Mining and Metals' Tailings Governance Position Statement and Global Industry Standard on Tailings Management. Although we are not members of the International Council on Mining and Metals (ICMM), we establish institutional standards and management practices by adhering to relevant guidelines, local regulations, and site-specific laws at each mine. This enhances the safety and environmental performance of tailings management, aligning with higher standards to mitigate risks of tailings dam failures and environmental leakage incidents.

In addition, GSWL executes ESG procedures in accordance with the standards required by the World Gold Council (WGC) and the United Nations Global Compact (UNGC) and publishes ESG reports on a regular basis. LXML have observed and continues to observe the standards of International Council on Mining and Metals (ICMM). We are making efforts to make our domestic mines in better compliance with WGC standards by consolidating the governance of our domestic and overseas mines as well as finetuning our ESG-related management policies and continue to improve the ESG governance of our mines including disclosure of relevant ESG information.

---

## BUSINESS

---

Our Board has extensive ESG experience and expertise. For instance, our Chairman achieved significant success in building green tailings-free mines during his tenure at Shandong Gold, with three mines being listed by the Ministry of Land and Resources as the first batch of national-level green mines in 2011. During his tenure at Zijin Mining, nine mines were awarded as national and provincial pilot units for green mining.

In addition, we have established a sound ESG-governance structure under which the Board formulates our overall ESG strategies and goals. The Strategy and Sustainable Development Committee under the Board is mainly responsible for undertaking research on mid- and long-term development strategies, major investment decisions and sustainable development policies and providing detailed recommendations. It also assists in identifying ESG risks, evaluating the material ESG issues, coordinating internal and external resources for managing ESG matters and implementing our ESG strategies. The members of the Strategy and Sustainable Development Committee include Chairman Wang, Ms. Yang Yi-fang, Mr. Lyu Xiaozhao, Mr. Zhang Xudong and Dr. Wong Yet Ping Ambrose. In addition, our senior management, in particular our Environment Department, is responsible for the daily execution of our various ESG policies, analyzing the various ESG matters and opportunities and preparing the materials and annual reports on our ESG performance. In accordance with the ESG work plan set by the Board, the ESG core team and various departments, along with the ESG responsible staff at each mine, will implement specific ESG tasks. They will also supervise and support each department in carrying out the plan, report to management on a regular basis, gather statistics, and analyze ESG data and information on a daily bases, and assist in the preparation of the annual ESG report. The Board participates in the analysis and evaluation of the materiality of the Company's ESG issues and the identification of ESG risks, and approves substantive issues that have a significant impact on the Company. The Board also determines the Company's priorities for sustainable development, and guides affiliated enterprises to establish an ESG targets management system that covers metrics such as pollutant emissions, energy consumption and water resource management. Besides, the Board keeps an eye on the execution of goals and reviews its progress. Key performance indicators in relation to environmental protection are also incorporated into our performance evaluation system for our employees. The comprehensive ESG-governance structure we have developed has laid a solid foundation for our ESG performance.

We set up metrics and targets to assess and manage ESG related risks. For instance, we consistently keep a close eye on two key indicators that have substantial impacts: carbon emissions and tailings management. In 2023, our total greenhouse gas emissions amounted to 634,850.38 tonnes of CO<sub>2</sub> equivalent. We are tackling climate pressures stemming from production activities through combined efforts in energy-saving technologies and the adoption of clean electricity/energy. We give top priority to the most energy-efficient and environmentally friendly equipment for all newly-built mineral processing plants and are gradually phasing out high-energy-consuming machinery at existing facilities. In line with national policies, we actively boost the use of renewable energy and engage in green power trading. Our long-term goal has been set to achieve net-zero carbon emissions. In 2023, we generated and discharged 12,178,458.00 cubic meters of tailings. In addition, 25,095,662.00 tonnes of non-hazardous tailings or waste rock were recycled through donations, sales, or other

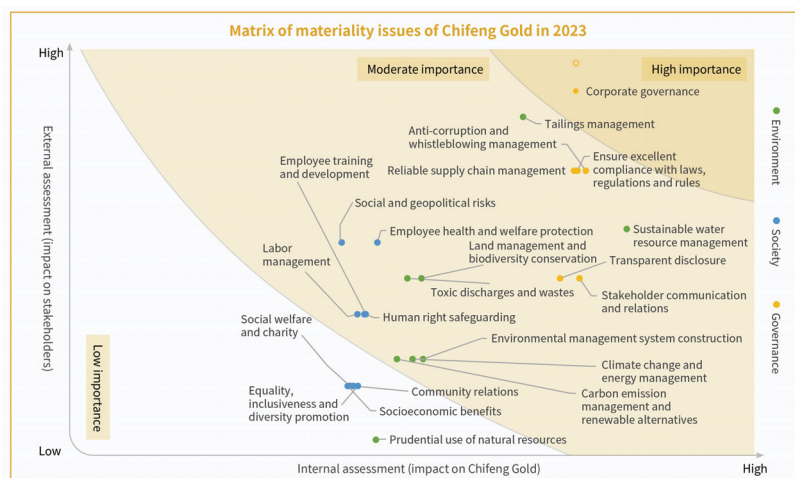

## BUSINESS

methods. Going forward, we plan to implement cleaner technologies in mineral processing and ore treatment (e.g., tailings cement backfill) to increase the proportion of recyclable tailings, further enhancing reuse rates through underground backfilling or community-beneficial applications.

We may not be able to fully comply with these international industry standards at all times, which may impact our business, reputation, our results of operations and our ability to raise funds or obtain financing if we are perceived to have deficiencies in our ESG practice. For details, see “Risk Factors — The failure of a tailings storage facility could negatively impact our business, reputation and results of operations” and “Risk Factors — Maintaining and increasing compliance of industry standards and keeping sufficient ESG disclosure to maintain our reputation and care for local communities could increase our operation costs”.

The ESG core group collaborates with various company departments and ESG leaders of the mining areas to implement specific ESG tasks based on the ESG work plan established by the Board of Directors and Management. It also oversees and supports each department in achieving their planned ESG objectives. Furthermore, the ESG core group regularly reports to Management, handling the daily collection, statistics, and analysis of ESG data and information. Management, in turn, reports to the Board and the Shareholders’ Meeting, which then make decisions on significant ESG matters.

We determine the most important issues in ESG management and information disclosure by assessing their significance to our growth and to internal and external stakeholders. The chart below illustrates the elements we use to assess the materiality of ESG risks. We carry out ESG review annually through a three-level progress and risk reporting mechanism:

We aim to continuously enhance our systematic environmental management system, optimize water resources, energy, and logistics management strategies, judiciously use natural resources, practice the principles of a circular economy, strictly control tailings, waste, wastewater, and pollutant management, and minimize the negative impact on the natural environment. Simultaneously, we actively address climate change, consider potential climate

---

## BUSINESS

---

risks and opportunities impacts following the framework recommendations of TCFD, continuously increase the proportion of renewable energy use through self-built photovoltaics and participation in green energy trading, as well as contribute to reduction of low-carbon emission.

We always prioritize the construction of green mines, actively seek a balance between mining development and ecological protection and strive to adhere to the development concept of “Mutual Prosperity and Development” with the community. In 2023, (i) our total investment in green mine construction was RMB26.2 million; (ii) we restored approximately 62.3 hectares of land; (iii) we conducted workplace safety inspections 2,375 times in 2023; (iv) provided safety training for 33,495 participants; (v) no significant safety or environmental accidents occurred; (vi) we reduced approximately 1,057.4 tonnes of carbon dioxide and its equivalent; and (vii) we invested RMB51.8 million in research and development.

For more details, please see “— Competitive strengths — A strong social responsibility and solid commitment to promoting green and sustainable development with high ESG standards” and “— Business strategies — Continue to improve our ESG governance and enhance our standards of environmental protection, safety, social responsibility and corporate governance.”

It is our policy to adhere to international conventions and the labor laws and regulations of the countries where we operate, as well as the relevant labor management standards. Under the guidance of the Responsible Gold Mining Principles regarding “wages and benefits,” “child and forced labor,” “freedom of association and collective bargaining,” we legally and compliantly carry out labor management work. We have established a comprehensive talent management system and clear recruitment and dismissal policies. Our policies strictly prohibit use of child labor and forced labor and protect human rights of our employees. In order to ensure compliance with our policies of prohibiting child and forced labor, we have formulated a series of employment management related measures which are incorporated in the Employee Handbook and Recruitment Norms and Procedures. These documents set out detailed measures and requirements for our staff recruitment process such as pre-employment age and identity verification, working hours, rest periods, equal opportunities and other benefits and welfare. During the recruitment of employees, we strictly check the ages and backgrounds of the candidates to prohibit the use of child labor and forced labor complaint. In addition, employees are encouraged to report to our management team or submit labor complaint, anonymously through designated reporting channels or by sending email to a special complaint mailbox, to the labor union or the human resource department of the relevant subsidiary, if they identify any child or forced labor issues. Furthermore, to prevent human trafficking, we mandate that all suppliers and contractors adhere to anti-human trafficking standards as part of contractual agreements with us and provide mandatory training for all employees on recognizing and preventing human trafficking, including indicators of forced labor and exploitation. We maintain a holiday and welfare system, and a transparent employee communication mechanism.

---

## BUSINESS

---

We prohibit all forms of corruption and bribery and require our employees to comply with the anti-bribery laws and regulations applicable in the countries where they work and the countries where they conduct business. We have established a set of policies and regulations, including the “Company Anti-Corruption and Bribery Policy,” “Company Integrity and Self-Discipline Management System,” “Company Code of Business Conduct,” and for each subsidiary, the “Practical System for Integrity and Anti-Corruption” and “Employee Disciplinary Action Regulations,” demonstrating our zero-tolerance and stringent investigation stance towards bribery and corruption. We hold anti-corruption training for our Directors, senior management and employees on a regular basis. In 2023, we held a total of 61 anti-corruption training sessions.

Our PRC Legal Advisor has confirmed that, during the Track Record Period and up to the Latest Practicable Date, we were not subject to any material claim or penalty in relation to health, work safety, social and environmental protection.

### **Environmental Protection**

We are fully committed to environmental protection and to adhering to the highest standards for sustainable development. Our business operations are subject to various legal requirements in relation to environmental protection, such as air pollution, water discharge, waste disposal and noise control, under the relevant PRC, Lao and Ghanaian laws and regulations. For more details, see “Regulatory Overview.”

#### ***Our Environmental Protection Policy***

In order to systematically address the various environmental protection matters arising from our operations, we have formulated environmental protection policies and measures by following the relevant principles of the International Council of Mining and Metals, which set out the detailed procedures for undertaking various environmental protection work.

In China, we have established a complete environmental protection system to comply with regulations on environmental protection and control pollutant emissions. Our mining and processing are carried out in accordance with relevant standards and management. In particular, our decyanidation process complies with the requirements of the Technical Specification for Cyanide Residue Pollution Control in the Gold Industry (黃金行業氰渣污染控制技術規範).

At LXML in Laos, we have formulated an environmental and social management and monitoring plan by following the Environmental and Social Impact Assessment Guidelines, which sets out a policy framework, management system and environmental monitoring plans in order to achieve full compliance with the relevant regulatory requirements and industrial standards. Such plans are subject to review and update at least every three years.

---

## BUSINESS

---

At GSWL in Ghana, we have established a general policy on environment together with comprehensive environmental management plans for both surface operations and underground operations after considering the specific environmental factors in Ghana. Such plans are subject to review and update at least every three years.

Our environmental protection policies and measures generally cover the major aspects of our operations, such as:

- **Hazardous materials.** We reinforce the groundwork at our industrial sites and store raw materials in our facilities in a way which prevents leakage of hazardous materials into the soil. Hazardous waste is segregated into specific color-coded waste receptacles. Generally, explosives packaging and cyanide packaging are removed for disposal by the relevant suppliers.
- **Prevention of air pollution.** In relation to processing plants, dust suppression sprays are utilized and dry dust collection systems have been installed on ore crushing circuits/conveyor belt transfer points. In relation to underground mining, we install major ventilation systems (including ventilation exhausts) and use water for dust suppression.
- **Wastewater treatment.** We have constructed water recycling systems to ensure that wastewater will be recycled for use as far as practicable. For wastewater which will be released to the external environment, we ensure that the wastewater must go through sediment retention systems before being discharged. We carry out relevant treatment at tailings dams to prevent groundwater pollution. We also maintain comprehensive database of processed water data.
- **Solid waste.** Scrap steel and other clean underground wastes are collected for beneficial re-use where appropriate. Lead batteries are recycled by accredited vendors. We also employ a waste compactor to reduce landfill volumes and associated emissions. In addition, we divert wooden materials, plastics, and other recyclables away from landfill for recycling by approved vendors, thereby reducing landfill volumes and associated emissions.
- **Noise control.** We take various measures to reduce the noise generated in our operations, such as selecting low-noise equipment and machinery, installing silencers, and adsorption materials, as well as noise isolation and elimination equipment.
- **Tailing Storage.** Extensive monitoring systems are included in the design of tailings dams as early warning mechanisms. These systems also enable ongoing assessment of the stability and integrity of the structures. Qualified engineers conduct quarterly inspections as per international standards. In addition, independent auditors conduct regular third-party audits.

## BUSINESS

- Biodiversity.** Flora and fauna assessments and updates are undertaken to ensure appropriate planning and impact management. In the context of agreed post-mining land use, sequential re-vegetation is conducted for the establishment of self-sustaining ecosystems. We transplant various exotic and indigenous species to enhance biodiversity. There is also waste receptacle management to reduce risk of vermin infestation.

We started publishing scope 1, 2 greenhouse gas emissions, generation of hazardous waste and use of resources in our ESG report since 2023. The following tables illustrates the scope 1, 2 greenhouse gas emissions, generation of hazardous waste and use of resources in 2023:

- Greenhouse Gas Emission

Indicator	2023
Scope 1 Greenhouse Gas Emissions (tonnes of carbon dioxide equivalent) . . . . .	550,970.04
Scope 2 Greenhouse Gas Emissions (tonnes of carbon dioxide equivalent) . . . . .	83,880.34
Total Greenhouse Gas Emissions (tonnes of carbon dioxide equivalent) . . . . .	634,850.38

*Note:* We have not yet disclosed our Scope 3 greenhouse gas emissions, but we are in the process of improving our Scope 3 emissions accounting system and will gradually cover our business's upstream and downstream activities. We expect to disclose our Scope 3 greenhouse gas emissions around the year of 2028.

- Generation of Hazardous Waste

Indicator	2023
Hazardous Waste Amount (excluding sludge) (t) . . . . .	3,292.39
Sludge Output (L) . . . . .	43,580,000.00

- Use of Resources

Indicator	2023
Petrol Consumption (kWh) . . . . .	131,578.89
Diesel Consumption (kWh) . . . . .	5,158,766.22
Natural Gas Consumption (kWh) . . . . .	115,210.71
Total Energy Consumption (kWh) . . . . .	155,738,408.03
Total Energy Consumption Intensity (kWh/sales amount RMB10k) . . . . .	215.813

In addition, due the rapid advancement of environmental protection laws, regulations and industry standards, we closely monitor the latest developments in regulations and standards and regularly update our environmental protection policies and measures with the aim to ensure and uphold the highest standards possible.

### *Our ESG Practice in the PRC*

We are committed to environmental protection by strict adherence to all the relevant laws and regulations in the PRC. We have adopted the relevant environmental protection measures required by such authorities, including carrying out environmental self-monitoring programs in relation to dust, noise, water, soil and discharges. These subsidiaries follow the relevant self-monitoring technical guidelines, have prepared the relevant special emergency plans in case of an accident and employ qualified third-party test units to conduct routine monitoring. At our other subsidiaries, we employ various environmental protections to monitor the emissions and discharges to ensure we operate within the relevant standards. We are also dedicated to the construction of green mines and applying tailing dewatering technology with the aim of achieving zero discharge of sewage from our gold mines.

During the Track Record Period and up to the Latest Practicable Date, our cost of compliance with the applicable environmental protection rules and regulations in the PRC amounted to RMB98.8 million, RMB95.1 million, RMB187.8 million, RMB49.4 million and RMB35.9 million, respectively. Moving forward, we expect our environmental protection rules and regulations will maintain at a similar level.

Our efforts and investments in environmental protection has led us to various achievements. For example, (i) Jilong Mining has planted more than 3,000 trees and grown grass covering an area of more than 2.4 hectares in the first half of 2022; (ii) Huatai Mining has achieved 100% recycling of all its wastewater; (iii) as of the Latest Practicable Date, Hanfeng Mining had undertaken afforestation of an area spanning more than 2,400 m<sup>2</sup> and green conservation of an area spanning more than 8,300 m<sup>2</sup>; and (iv) GSWL mainly obtains electricity from a local gas-fired power plant and also engages with a hydro-power energy provider. In addition, we are exploring various options for renewable energy projects with an aim to achieve a 30% reduction in greenhouse gas emission intensity by 2030. In particular, Jilong Mining is planning to build a 10-megawatt solar power plant, and it is expected that its full capacity will be installed and ready for commercial operation by the end of 2025. Meanwhile, Wulong Mining and LXML are also actively planning to build their own clean energy power generation projects, which will further enhance our capability in renewable energy utilisation.

We have undertaken a number of environmental protection technology research projects. This has allowed us to develop numerous environmentally friendly technologies and processes, which enable us to limit the environmental impact of our production activities. For instance, we have carried out special research on the discharging process at the Jilong Gold Mine and Huatai Gold Mine and, as a result, have adopted the “tailings decyanation filter pressing process” to replace the original tailings filter discharge process, and the content of total

---

## BUSINESS

---

cyanide tailings and other harmful elements conforms to requirements of the PRC's Technical Specification for Pollution Control of Cyanide Leaching Residue in Gold Industry (黃金行業氰渣利用與處置污染控制技術規範). This change represented a new approach to cyanide residue tailings processing of ore in the PRC. Since commencing in October 2018, the project has been running stably. Sampling and testing of the treated cyanide tailings by third parties have shown that the total cyanide concentration in the toxic leaching solution is all less than 4mg/L, which is significantly under the limit of 5mg/L for tailings dam disposal in the technical specification of cyanide residue, and other indicators are all in line with the specification requirements.

For our continuous and significant efforts over the years, we have successively won and been awarded various honorary titles, such as “Advanced Unit of Energy Conservation and Emission Reduction during the 12th Five-Year Plan Period” (十二五節能減排先進單位), “National Outstanding Enterprise Practicing Ecological Civilization” (全國踐行生態文明優秀企業) and “Advanced Collective of Energy Conservation and Emission Reduction of National Machinery, Metallurgy and Building Materials Union System” (全國機械冶金建材工會系統節能減排先進集體). In January 2024, our Company was awarded the 17th Crystal Ball Award as the “2023 Most Socially Responsible (ESG) Listed Company”. In addition, (i) the Jilong Gold Mine and Hanfeng Polymetallic Mine were rated as National Green Mines (全國綠色礦山) in January 2020, and (ii) the Wulong Gold Mine and Huatai Gold Mine were rated as Provincial (Autonomous Region) Level Green Mines (省(自治區)級綠色礦山) in December 2020 and May 2020, respectively. All these achievements and honors is a testament to our relentless efforts in environmental protection and dedication for long-term sustainable development.

Our PRC Legal Advisor is of view that, during the Track Record Period and up to the Latest Practicable Date, we did not have any material incidents of non-compliance with the PRC environmental laws and regulations at our mines in the PRC that resulted in material penalties. In addition, we are not aware of any environmental proceedings or investigations to which we were or might become a party that could have a material adverse effect on our business, financial conditions and results of operations.

We are in compliance with laws and regulations governing land restoration and environmental rehabilitation in PRC, such as Environmental Protection Law of the People's Republic of China, Law of the People's Republic of China on Prevention and Control of Soil Pollution, Law of the People's Republic of China on Soil and Water Conservation, Grassland Law of the People's Republic of China, Land Administration Law of the People's Republic of China, Implementation Measures for the Land Reclamation Regulations. Pursuant to the relevant PRC laws and regulations, we are responsible for the rehabilitation of the land in relation to our mining activities and are required to submit a land rehabilitation plan to the relevant governmental authorities for examination when applying for or renewing our mining licenses. Before commencing mining activities, we are also required to deposit funds into an environment control fund set up with banks in amounts agreed with the relevant governmental authorities. The land rehabilitation fund is owned by us while the use of these funds is under the supervision of the relevant governmental authorities. During the Track Record Period and up to the Latest Practicable Date, we had fully paid the aforementioned funds in a timely

---

## BUSINESS

---

manner and are committed to strictly performing the approved rehabilitation plan. As our mines in the PRC are still in production, we have not taken any further actions in relation to mine closure and rehabilitation. For details of relevant risks, see “Risk Factors — Risks Relating to Our Business and Industry — Our operations are exposed to risks in relation to environmental protection and rehabilitation” and “Risk Factors — Risks Relating to Our Business and Industry — Our existing mining operations have a finite life and eventual closure of our operations will entail costs and risks regarding on-going monitoring, rehabilitation and compliance with environmental standards, which may exceed the provisions we have made.”

### *Our ESG Practice in Laos*

Our environmental protection practices in Laos are guided by the “10 Sustainable Development Principles” of the International Council of Mining and Metals. We seek to continuously improve our environmental protection performance by carrying out environmental sampling and monitoring, setting suitable environmental protection targets, implementing and maintaining procedures to identify environmental risks, undertaking thorough investigations of the root causes of environmental risks and proactively implementing corrective measures. In particular, we actively undertake water/sediment management and treatment, drainage on mine infrastructure, waste dump control and tailing management.

During the Track Record Period and up to the Latest Practicable Date, our cost of compliance with the applicable environmental protection rules and regulations in Laos amounted to approximately US\$1.0 million, US\$1.4 million, US\$1.2 million, US\$0.9 million and US\$0.3 million, respectively. Moving forward, we expect the local environmental protection rules and regulations will be maintained at a similar level.

In relation to rehabilitation, LXML will enter the closure phase when no more development and ore extraction take place. Once ore has been removed, pit voids are either retained in a “care and maintenance” phase or closed and rehabilitated. Open pits are placed in care and maintenance if they have the potential to yield economic amounts of ore in the future. During the care and maintenance phase, pits walls are stabilized to minimize erosion and any exposed and potentially acid forming material is removed or covered with non-acid forming material and/or water is treated and released. We are in compliance with laws and regulations governing land restoration and environmental rehabilitation in Laos, such as Environmental Protection Law, Mineral Law, Decree on Environmental Impact Assessment, Decision on Environmental Technical Monitoring in Investment Projects and Various Activities of the Natural Resources and Environment Sector.

We have filed a mine closure plan with the relevant governmental authorities, and we continue to refine such plan to incorporate new understanding and contemporary best practice. Mine closure planning is undertaken in close consultation with stakeholders; primarily through the mine closure committee. We have also prepared progressive rehabilitation and reclamation plans, including erosion control, vegetation establishment, and planting and plant maintenance, which seeks to yield significant results in the establishment and regeneration of the natural environment.

---

## BUSINESS

---

We have established a mine closure fund in Laos. We have made a deposit in an aggregate amount of approximately US\$9.0 million into the mine closure fund as of September 30, 2024, which is held in two Lao commercial banks. We expect to continue to contribute to the fund based on the volume of mineral sales for the entire term of the project. Pursuant to an agreement with the Lao Government, in respect of the future rehabilitation expenses to be incurred in order to fulfill our Group's environmental responsibilities, we have made a financial provision in the amount of US\$236 million for the rehabilitation works to be carried out in the future covering the entire undiscounted projected mine closure amount of US\$247 million based on the latest approved mine closure plan and the latest disturbance area and rehabilitation work unit price.

The Laos law provides three modes for the mine closure fund guarantee, including cash guaranty, bonds, and other financial instruments, which is provided in annual installments throughout the term of the project. Nevertheless, according to the Laos Legal Advisor, considering the prevailing circumstances in Laos, the approach of cash deposit, coupled with financial provision, with fund contribution according to the agreement with the Lao Government, is commonly encountered. The Laos Legal advisor is of the view that, the enforcement risk for LXML's approach to its mine closure fund is minimal, and the likelihood of LXML being subject to penalty in this respect remains remote, on the following bases:

- (i) LXML bank statements for the mine closure fund with a total bank balance of approximately US\$9.0 million, which we understand will be used for mine site rehabilitation exclusively, and that LXML will continue to contribute into the fund on installment basis corresponding to the gold and copper sales per oz, in accordance with the MEPA with the Lao Government;
- (ii) since the acquisition of LXML, there has been proactive and ongoing communication with relevant Lao government authorities regarding the mine closure fund; and
- (iii) LXML has not received any instruction on the detailed implementation of the mine closure fund contributions from the Lao government authorities or notice of deficiency regarding its current mine closure fund.

Our Laos Legal Advisor is of view that, during the Track Record Period and up to the Latest Practicable Date, we did not have any material incidents of non-compliance with the Laotian environmental laws and regulations at our mines in the Laos that resulted in material penalties. In addition, we are not aware of any environmental proceedings or investigations to which we were or might become a party that could have a material adverse effect on our business, financial conditions and results of operations.

### *Our ESG Practice in Ghana*

Our environmental protection practices in Ghana are guided by principles similar to those adopted in our Laos operations, which assists us in maintaining our environmental protection practices at international standards. As such, our operations in Ghana apply measures to mitigate pollution and environmental impact and improve our overall environmental protection system and performance.

During the Track Record Period and up to the Latest Practicable Date, our cost of compliance with the applicable environmental protection rules and regulations in Ghana amounted to approximately US\$3.3 million, US\$2.3 million, US\$1.6 million and US\$0.8 million, respectively. Moving forward, we expect the local environmental protection rules and regulations will be maintained at a similar level.

GSWL also undertakes an annual comprehensive corporate responsibility review in relation to our performance and compliance with the UN Global Compact framework and targets aligned with the Sustainable Development Goals indicators.

In recognition of its focus on safety, GSWL was honored with the Ghana 2023 Best Safe Mine First Prize from the Ghana Chamber of Mines in November 2023. Furthermore, GSWL undertakes ongoing rehabilitation activities, which include re-profiling waste dumps, topsoil spreading, and planting for both slope stabilization and long-term rehabilitation. We intend to strictly follow the requirements as stipulated by Ghanaian Mining Law 2012 (LI 2182) regarding rehabilitation activities. As we acquired the Ghanaian operations in January 2022, we are in the process of preparing environment impact assessment report, which will include plans for mine closure and rehabilitation, and we will submit this report to the relevant governmental authorities for approval in due course. We will then enter into rehabilitation guarantee agreement with the government and pay a rehabilitation deposit, which can only be returned to us after inspection and acceptance of the rehabilitation project by the Ghana government.

We are in compliance with laws and regulations governing land restoration and environmental rehabilitation in Ghana, such as Environmental Protection Agency Act 1994 (Act 490) and Environmental Assessment Regulations, 1999 (LI 1652). Our Ghana Legal Advisor is of view that, during the Track Record Period and up to the Latest Practicable Date, our operations in Ghana complied with applicable Ghanaian environmental laws and regulations in all material respects.

### **Corporate Social Responsibility**

We place great emphasis on fulfilling our corporate social responsibilities and are committed to ensuring that the communities and regions in which we operate can genuinely benefit from our development. We actively explore solutions that can bring a positive impact to the local community. We take practical actions in promoting employment, rural revitalization, improving people's livelihoods, public welfare education, increasing tax revenue, and other areas.

---

## BUSINESS

---

We have established a well-built set of policies to guide our activities, including: (i) a stakeholder and community relations policy for LXML; and (ii) a policy on community relations and policy on community development and support for GSWL. We are also subject to community audits undertaken by relevant governmental authorities on a regular basis. In particular, in Ghana, we have strived to promote our philosophy of localized management and operations, built up a sound relationship with local governmental authorities, served local communities and took initiatives to contribute to regional development. We were one of the first batch large-scale Chinese mining company operating in Ghana and, in recognition of our work, earned accolades for boosting the local economy.

We actively participate in a wide range of community services in China, Laos and Ghana, which we believe have been well regarded by both local communities and governments. For more information regarding our corporate social responsibility efforts, please see “—Competitive strengths — A strong social responsibility and solid commitment to promoting green and sustainable development with high ESG standards.”

We leverage our own resource advantages, take action to shoulder corporate social responsibility, and share our achievements with the societies within which we operate. For example:

- Jilong Mining has donated more than RMB15 million to local primary schools in need of financial support.
- To address the temporary housing requirements of the residents in the area during the demolition phase, Hanfeng Mining formed an emergency task force to establish temporary relocation facilities for the Tianbaoshan community residents, actively supporting the local community in facilitating the resettlement process for the displaced individuals.
- During the COVID-19 pandemic, Wulong Mining donated RMB600,000 in cash and RMB200,000 in medical and protective equipment to the epidemic prevention and control department.
- During the COVID-19 pandemic, Jilong Mining donated more than RMB300,000 in cash and medical and protective equipment to the epidemic prevention and control department.
- LXML established a partnership with the Laos Ministry of Health, the Lao Women’s Union and UNICEF and provided US\$2.9 million to the 1,000 Day Project in order to improve maternal health and child nutritional outcomes.
- LXML also made donations of US\$3.1 million to Vilabouly, Savannakhet and Mittaphab hospitals for purchase of various medical equipment.

---

## BUSINESS

---

- LXML donated US\$11 million to the Community Trust Fund and US\$3.26 million to the Village Development Fund in order to improve access to basic services to the underprivileged local residents.
- LXML actively assisted the Laos Government and local community with COVID-19 prevention with an aggregated donation of more than US\$370,000.
- GSWL established the Golden Star Development Fund to make contributions of US\$1 per oz of gold produced at GSWL together with 0.1% of pre-tax profit for the development of the local community near its mine. GSWL contributes approximately US\$200,000 each year into this fund.
- As of December 31, 2023, GSWL had rehabilitated approximately 416.9 hectares of land, demonstrating our unwavering dedication to sustainable practices.
- In April 2006, GSWL established the Golden Star Oil Palm Project to make contributions of US\$1 per oz of gold produced at GSWL to assist to develop post-mining land uses and productive assets to achieve sustainable local economic development. Such oil palm trees also have a very positive impact on reduction of greenhouse gases as forestry and agroforestry systems which incorporate tree crops render a significantly larger sequestration potential for longer periods. By the end of 2021, GSWL had directed over US\$9.6 million to this initiative, which assists around 400 local farmers and creates approximately 400 temporary job positions. In 2021, GSWL received the inaugural ESG Award for Products at the Mines and Money Outstanding Achievement Awards. In 2022, with the support of the United Nations Industrial Development Organization, the Golden Star Oil Palm Project was awarded as an international certificate from the Round Table on Sustainable Palm Oil. By December 31, 2023, we have grown more than 140,000 oil palm trees in ten different communities covering more than 1,000 hectares of land.
- We also set up the Community Mine Consultative Committee to select community projects for assistance in order to support community-driven and community-owned development.

### **Occupational health and safety**

We adopt high safety standards, continuously update and enhance our internal control measures to enhance production safety in our operations. Our production management systems and technologies enable us to achieve automation, digitization, and intelligence control in the gold production process. During the Track Record Period and up to the Latest Practicable Date, we did not have any material safety incidents involving our workforce.

---

## BUSINESS

---

We have implemented safety guidelines on employees' proper use and maintenance of equipment. Our employees are required to wear protective gear such as safety helmets, work clothes, gloves, waterproof boots, dust masks and self-rescue devices, to ensure their safety at work, taking into account the level of risk of the particular task or production site. We conduct inspections on the condition of our employees' protective gear before they enter production sites. We offer regular training on health, safety and accident prevention to our employees from time to time.

In addition, we have established and implemented comprehensive safety protocols and periodically evaluate the sufficiency of our protocols. Regular evaluations are conducted to identify and address potential health and safety risks in alignment with our internal work safety policies, ensuring that all production activities are carried out in a safe manner. For safety facilities within our mines, we conduct regular checks and maintenance to ensure they provide reliable protection for work safety. A dedicated safety responsibility team is in place to regularly inspect the implementation of work safety measures, identify potential issues, and address them promptly.

At the subsidiary level, we organize cross-functional teams from various operational units to hold monthly meetings. These meetings focus on reviewing each step of the production process and identifying major potential work safety risks, enabling proactive measures to mitigate them. This structured approach underscores our commitment to maintaining a safe and secure working environment for all employees.

### *Our PRC Operations*

Our business in the PRC is subject to extensive work safety laws and regulations governing our operations. We have also put in place stringent internal policies and procedures with respect to safe use of equipment and consumables, handling of hazardous materials and/or waste, detection and management of work safety issues and regular work safety inspection. In particular, we have formulated detailed guidelines on treatment of hazardous waste. During the Track Record Period and up to the Latest Practicable Date, we believe we had adopted all the occupational safety measures as required under the PRC laws.

In addition, we have adopted relevant systems for recording and handling accidents during operations and provided work safety trainings to our employees on an annual basis in order to strengthen their knowledge and awareness. To maintain a safe work environment, our employees are required to report accidents to a designated person for further actions. We are required to promptly report on the occurrence of any loss, leakage or diffusion of hazardous waste to the relevant health authorities and to keep proper records of such accidents. Our operations are subject to regulations and periodic examinations by local work safety authorities. We have obtained all the material work safety permits, approvals and registrations necessary to conduct our business.

---

## BUSINESS

---

As advised by our PRC Legal Advisor, during the Track Record Period and up to the Latest Practicable Date: (i) we believe we were in compliance with all applicable work safety laws and regulations in the PRC in all material respects; (ii) save as disclosed in the prospectus, we did not have any material incidents of work-related injuries or casualties; (iii) we had not been subject to any claims for personal or property damages and compensation to our employees which were material to our business operations; and (iv) no material administrative sanctions or penalties had been imposed upon us for any violation of work safety laws and regulations. We have not incurred, and do not expect to incur material costs in connection with the compliance with work safety laws and regulations.

### *Our Operations in Laos and Ghana*

Similarly, for our operations in Laos and Ghana, we are subject to the relevant occupational health and safety laws and regulations in Laos and Ghana. We have put in place comprehensive safety and health management systems to maintain compliance with the relevant laws and regulations and monitor the safety of our operations. As advised by our Laos Legal Advisor and our Ghana Legal Advisor, we believe we were in compliance with applicable laws and regulations in Laos and Ghana, respectively, in relation to occupational health and safety in all material respects and there were no significant or recurrent health or safety accidents during the Track Record Period and up to the Latest Practicable Date.

### *Safety Accidents*

#### *Fatal accidents*

On March 16, 2022, an employee of Huatai Mining violated underground internal operation protocols by entering into a prohibited mining area, which led to a collapse of one drift of the mine and the fatal accident. Huatai Mining was fined RMB650,000 by the Chifeng Song Shan District Emergency Management Bureau on May 30, 2022. Huatai Mining paid the fine on May 31, 2022, compensated the relatives of this employee and completed rectification as required. On June 4, 2023, an employee of Dongfeng Mine of Hanfeng Mining fell from height and died. The accident investigation team identified issues including failure to promptly discover and eliminate potential accident hazards and to supervise employees in strict implementation of production safety protocols. Longjing City Emergency Management Bureau imposed a fine of RMB350,000 on Hanfeng Mining. Hanfeng Mining paid the fine, compensated the relatives of this employee, and completed rectification as required.

Subsequent to these incidents, we have enhanced relevant internal control measures, including strengthening a series of internal policies regarding production and operational safety and conducting systematic training on production safety and safety emergency drills. Our internal control consultant examined our internal controls over production safety in May 2024, and assisted us in further strengthening internal control procedures on production safety. During the follow-up review by our internal control consultant in May 2024, no material deficiency in our internal control procedures on production safety was identified.

---

## BUSINESS

---

Based on the due diligence conducted by the Sole Sponsor including but not limited to engaging in discussion with the Internal Control Consultant to understand its findings and obtaining and review of the underlying policy and procedures together with the sample internal reports, the Sole Sponsor concurs with the aforementioned views of the Internal Control Consultant.

Our PRC Legal Advisor is of the view that neither of these accidents constitutes a material safety production accident nor has any material adverse impact on our Group's business operations or financial condition due to the following reasons:

- (i) the document of approval issued by the People's Government of Chifeng Songshan District on May 18, 2022, which agreed with the conclusion of the investigation report prepared by the accident investigation team, identified this accident as a general production safety responsibility accident. In addition, according to Article 3 of the *Regulations on the Reporting and Investigation of Production Safety Accidents*, a general accident refers to an accident that results in the death of less than three people, or serious injuries to less than ten people, or direct economic losses of less than RMB ten million;
- (ii) Hanfeng Mining has obtained a special explanation from the Longjing City Emergency Management Bureau, stating that the accident for which we received the administrative penalty according to the Article 114 of the Work Safety Law of the People's Republic of China, was a general production safety accident, not a major violation of laws and regulations;
- (iii) according to the provisions of *the Work Safety Law of the People's Republic of China*, Huatai Mining was fined RMB650,000 and Hanfeng Mining was fined RMB350,000, both falling within the penalty range for a general accident;
- (iv) the Certificate of Compliance issued by the Chifeng Songshan District Emergency Management Bureau on October 24, 2024 stated that Huatai Mining had not violated relevant laws, regulations, regulatory documents, or other relevant provisions of the production safety management that would result in major administrative penalties; and
- (v) the Certificate of Compliance issued by the Longjing City Emergency Management Bureau on October 15, 2024 stated that Hanfeng Mining had not violated relevant laws, regulations, regulatory documents, or other relevant provisions of the production safety management that would result in major administrative penalties.

---

## BUSINESS

---

### *Work-related Injuries*

During the Track Record Period and up to the Latest Practicable Date, LXML had several work-related injuries: (a) a cleaner suffered a swelling ankle injury due to her health issues, (b) a mechanic suffered a minor fracture and small cut to his left index finger due to his team's operational error, (c) a driver of a dump truck suffered an open fracture to his left wrist and left knee when his vehicle collided with an oncoming bus operated by a contractor's driver who was found intoxicated, (d) a technician suffered fracture injury to his right foot when removing a cover plate as the plate was improperly supported and fell on his foot due to his operational error, and (e) a drill assistant suffered a fractured thumb bone after losing his balance and falling to the ground while moving a base log due to his operational error.

All the aforementioned injured workers received timely treatment arranged by LXML and returned to their posts upon recovery. The compensation resulting from the work-related injuries was either fully covered by our insurance or paid by us after insurance payout. The injured workers did not file any claims or lawsuits against LXML in connection with their injuries. LXML did not receive any administrative penalty in this regard. Although these injuries resulted in loss of the working hours of the injured workers, they did not cause any suspension of production or have any material adverse impact on our operations. We conducted thorough investigations on the aforementioned instances, and prepared accident reports. We have established a strict monitoring system based on five major indicators of work safety, namely occupational health, environmental protection incidents, fire accidents, and major infrastructure accidents. We then modified our work equipment to meet greater safety standards, improved safety training for employees at all levels participating in various work streams, and rectified internal control deficiencies identified in the accident reports. Additionally, we tightened contractor management and reassessed our collaboration with certain contractors. We have updated our contractor policy, developed and reviewed related Standard Operating Procedures to distribute to relevant employees and contractors, and conducted regular training to enhance safety management of contractors. As per the internal control request of the PRC headquarters, both LXML and its contractors are managed through the unified responsibility system. If a contractor fails to meet our safety production standards during our evaluation of its qualification, we shall request the contractor to rectify or we may consider terminating our cooperation with the contractor. The enhanced internal control measures were reviewed by our internal control consultant and no material deficiency was identified.

As LXML has not received any enquiry or administrative complaint or penalty from relevant authorities regarding these work-related injuries, our Laos Legal Advisor is of the view that such injuries were not serious injuries and would not have any material adverse impact on LXML's business operation or financial performance.

---

## BUSINESS

---

### *Project Management Deficiency*

On June 14 and 16, 2022, during the supervisory inspection of Hanfeng Mining by the Jilin Bureau of the National Mine Safety Inspection, the third enforcement team of the Jilin Bureau and the administrative law enforcement personnel of the Longjing City Emergency Management Bureau identified certain deficiencies in the Group's mining monitoring and reporting system, including, among others, lack of records of project leaders taking shifts underground for shift changes. On July 1, 2022, the Longjing City Emergency Management Bureau imposed an administrative fine of RMB70,000 on Hanfeng Mining. Hanfeng Mining paid the fine on July 6, 2022, and completed rectification. On October 24, 2022, the Longjing City Emergency Management Bureau issued a certificate, determining that the aforementioned deficiencies are immaterial non-compliance and do not constitute material one.

Hanfeng Mining enhanced its internal control measures on project management including adopting an internal control policy formalizing work shifts and handover arrangements among leaders for underground work. The enhanced internal control measures were reviewed by our internal control consultant and no material deficiency was identified.

Our PRC Legal Advisor is of the view that this incident does not constitute a material non-compliance under relevant laws and regulations.

Having considered the following factors, nothing has come to our Directors' attention that would cause them to believe that they are not suitable to act as Directors under Rule 3.08 and 3.09 of the Listing Rules:

- as advised by our PRC Legal Advisor, neither of the fatal accidents above constitutes a material safety production accident nor has any material adverse impact on the Group's business operations or financial condition;
- as advised by our PRC Legal Advisor, the deficiencies in project management system does not constitute a material non-compliance under relevant laws and regulations;
- as advised by our Laos Legal Advisor, the work-related injuries which occurred in Laos do not constitute material safety production issues as LXML has not received any enquiry or administrative complaint or penalty from relevant authorities regarding these work-related injuries, and such injuries were not serious injuries;
- no monetary fine or other penalty was imposed directly from any competent authorities in PRC or Laos to any of our Directors;
- there has not been any occurrence of other similar events in our Group; and

---

## BUSINESS

---

- our Directors received directors' training from our Hong Kong legal advisor and they have confirmed that they fully understand their obligations as directors of a company listed on the Hong Kong Stock Exchange, in particular the directors' fiduciary duties and the relevant disclosure requirements under the Listing Rules.

Based on the due diligence conducted by the Sole Sponsor including but not limited to (i) review of results of litigation searches and background searches, (ii) attending physical site visits in Laos to understand, among others, the operations and reserves of mines and retrieved documents onsite as supporting documents for interviews, and (iii) conducting interviews with our Directors to understand the qualification and independence of our Directors, the Sole Sponsor concurs with the aforementioned views of our Directors.

For relevant risks relating to our occupational health and safety practice, see "Risk Factors — Risks Relating to Our Business and Industry — Our business is subject to a number of operational risks and hazards specific to mining industry, which may result in increased costs or losses, personal injuries or casualties, damage to reputation, suspension of operation and other penalties."

### **Potential ESG-Related Risks and Our Strategies**

Our mining activities and production processes pose potential ESG-related risks such as gas emission, wastewater, noise, solid waste, tailings management, and land remediation and biodiversity risks. To mitigate the adverse impact of these risks, we have taken the following measures:

- *Gas emission* — strengthen the supervision of gas emissions at all stages of production and take various measures on-site to reduce emissions, such as greening, water sprinkling, and installing dust removal devices;
- *Wastewater* — enhance wastewater management measures. Wastewater emission will only be allowed if it meets the environmental protection standards. Moreover, we improve the wastewater utilisation system to achieve internal water resource recycling within the mine;
- *Noise* — purchase and use equipment and noise reduction technologies that could reduce the overall noise levels, equip relevant technical personnel with necessary noise reduction gear and conduct regular inspections of noise generation;
- *Solid waste* — implement waste sorting management, requiring all departments and individuals to discard different types of solid waste at designated locations, which are then cleaned up and sealed for transportation by third-party professionals. At the same time, to reduce the pollution and danger of solid waste, we strive to recycle treated waste again in the production process;

---

## BUSINESS

---

- *Tailing management* — strictly adhere to international standards for tailings management and take various measures to properly handle tailings residues, such as striving for dry tailings disposal, using impermeable membranes, and improving ore dressing reagents, to avoid potential hazards to the surrounding ecological environment and communities. We also regularly conduct strict inspections and supervision of the safety, environmental protection, and anti-seepage aspects of tailings dams to ensure that tailings do not collapse, leak liquids, or cause other major disasters. At the same time, we have established strict disposal processes and measures for closed tailings, and carried out greening and mountain restoration work on closed tailings to ensure that the restored tailings do not pose any harm or negative impact on the environment and surrounding communities;
- *Land remediation and biodiversity* — rely on the existing site conditions to plan land use reasonably, striving to preserve the original appearance of the surrounding mountains during the process of mineral resource extraction. In the construction of open-pit mines, we will try to avoid soil erosion caused by the construction process and minimize land occupation. We will strictly design the construction machinery, operation modes, and construction seasons to reduce soil erosion caused by construction from entering water bodies. In addition, we strictly require our employees to prohibit hunting and capturing birds and other wild animals; and
- *Local community's concerns* — engage in regular communication with local residents in an open and honest manner, listening to the real needs of community members, and allocate resources to address actual issues. We also focus on the goals of community co-construction and sustainable development, such as supporting community projects, and improving road and water and electricity facilities, to provide a safe and convenient living environment for community residents. For instance, Wulong Mining collaborates with local governments to plan the construction of drinking water wells for surrounding communities to address water scarcity issues.

At the same time, we commit to supporting education, healthcare, and poverty alleviation projects, as well as public welfare and charitable causes, striving to create positive social impacts and cultural benefits. It is our policy to follow local legal regulations and industry standards in carrying out community work under the framework of the “Creating Value for Locals” principle. Our goal is to benefit communities in the long term by improving infrastructure and promoting education and employment, so as to create decent jobs for the communities where we operate, stimulate local economic development, and benefit society and the communities surrounding our operations.

As we carry out our mining activities and production processes in Ghana and Laos, we face specific ESG-related risks such as the risks of resources shortage, illegal mining, corruption, forest degradation, economic crisis and instability of government, human trafficking, child labour and labour strikes. To monitor and mitigate relevant risks in these areas, we have taken the following measures.

### GHANA

#### Resources shortage risks (electricity, water resources)

- *Electricity* — to mitigate the potential risks of the electricity shortage, GSWL has improved the power infrastructure of the Wassa Gold Mine by equipping the mine with two sources of electricity, one is a natural gas power plant (GP Wassa Plant) which only supplies the production of the mine, and the other is the Ghana National Grid, which is taken as a backup power supply. At the same time, GSWL has upgraded the existing supplier's power supply system in 2024.
- *Water resource* — to mitigate the potential risks of the water resources shortage, GSWL has already increased the capacity of water resource storage facilities and strengthened water resource management.

#### Illegal Mining risks

During the Track Record Period and up to the Latest Practicable Date, though there were some illegal surface mining incidents in the exploration rights area, the illegal miners caused minor damages to office facilities and disruptions to operations for one to two days. There was no armed confrontation against the illegal miners, and none of GSWL's mining areas in Ghana has experienced any material disruption to its operations and production due to illegal mining. To monitor and mitigate the potential risks of the illegal mining, GSWL has implemented a series of measures to address illegal mining risk, including working closely with local police and engaging third-party security companies to closely monitor illegal mining activities and drive away offenders. For instance, GSWL has established patrol system to conduct regular inspection and installed surveillance cameras to monitor surroundings in real-time.

#### Corruption risks

According to Frost & Sullivan, Ghana's rankings in the corruption perceptions index were 70th, among all 180 tracked countries in 2023 based on Transparency International Corruption Index. Currently, there are no international sanctions in force against Ghana. GSWL has strict internal systems and regulations, and both GSWL and its suppliers and contractors have signed anti- corruption commitments.

#### Forest degradation risk

GSWL only has the southern extension of the Wassa Gold Mine in the forest area, where the resources are located more than 500 meters below the ground. The underground mining method is adopted to ensure lower forest degradation risks towards the surface. In addition, any operation of GSWL in the forest area requires approval from the Forestry Commission of Ghana, which issues operation permits after assessing the impact. GSWL has obtained the operation permits for the southern extension of Wassa Gold Mine.

**LAOS****Corruption risks**

According to Frost & Sullivan, Laos' rankings in the corruption perceptions index were 136th among all 180 tracked countries in 2023 based on Transparency International Corruption Index. Currently, there are no international sanctions in force against Laos, and therefore Laos is not considered to be at high risk for sanctions. LXML has established an internal "*Anti-Corruption and Bribery Policy*" ("**Policy**") to stipulate the rules and regulations that employees must follow in the practice of anti-corruption. In addition, for key high-risk core positions, LXML has implemented a multi-dimensional conflict of interest disclosure mechanism to ensure the comprehensive and accurate disclosure and understanding of potential conflicts of interest, thereby reducing the risk of corruption. LXML has designated detailed anti-corruption training sessions for different positions to enhance employees' awareness of interests of conflicts and compliance practices. Any violations discovered will be dealt with according to the Policy, with severe cases potentially facing local criminal penalties.

**Economic crisis and instability of the government risks**

Historically, Laos experienced economic crisis and government instability. To monitor and mitigate the potential economic crisis and instability of the government risks, LXML mainly operates in Laos according to its investment strategies focusing on the Belt and Road Initiative countries. By entering into the MEPA agreement with the Lao government, LXML has secured certain level of protection for its operation in Laos.

Our internal control consultant conducted due diligence review of our internal control measures and policies, risk management systems and reporting procedures in addressing the aforementioned ESG risks in Laos and Ghana, and did not identify any material deficiency.

**SEASONALITY**

Our Directors considered that, and as confirmed by Frost & Sullivan, our gold mining and other mineral businesses are generally subject to any seasonal fluctuations. Based on our past practice, it is possible that our operation would be impacted by the rainy season. During the rainy season, which generally occurs in the third quarter of the year, the continuous rainfall would block our heavy machinery and equipment from accessing our orebodies. Moreover, our regular maintenance sessions are usually scheduled around the holidays, which might lead slight fluctuation in our production volume.

**EFFECTS OF THE COVID-19 OUTBREAK**

In 2020, outbreak of the COVID-19 in the PRC and around the globe led to an international public health crisis and, as a result, the global economy in general were materially and adversely affected. Due to the imposition of strict travel restrictions and controls in major cities to combat the transmission of the COVID-19, there was a significant decrease in international commercial activities and business transactions.

---

## BUSINESS

---

Given this unprecedented global health crisis, our Group's business operations were briefly impacted by the outbreak in early 2020 due to social and work gatherings, mandatory quarantine requirements and suspended public transportation in certain areas in China, Laos and Ghana. As some of our Group's employees had to work from home, the operations that required onsite service were be interrupted to a limited extent. However, we resumed normal business operations after the initial disruptions in early 2020. In addition, China experienced widespread COVID-19 resurgence in late 2022 and early 2023, but the emergency measures taken by the Chinese government quickly brought the situation under control. Despite the significance of the pandemic, COVID-19 did not have any material adverse impact on our business operation or key operating performance during the Track Record Period and up to the Latest Practicable Date.

### INSURANCE

We carry insurance covering risks in relation to safety production obligations. We also carry insurance for loss of and damages to our various machinery, equipment and inventories. In addition, we maintain social insurance for our PRC employees, which includes work accident insurance. We also maintain additional accident insurance for our employees engaged in mining activities. In line with industry practice, we generally do not carry any business interruptions or litigation insurance. We consider our insurance coverage to be adequate for the needs of our business operations and in line with the industry norm and the relevant laws and regulations in the PRC. In Laos and Ghana, we maintain insurance in accordance with the laws and regulations of Laos and Ghana, respectively. For instance, the tailings facility of the Wassa Gold Mine is insured as part of our property all risk, machinery breakdown and business interruption insurance. Save for the compensation in an aggregate amount of RMB1.3 million relating to the fatal accidents in the PRC during the Track Record Period, which were beyond the coverage of our insurance, we believe our insurance coverage is sufficient for the monetary expenditures arising from the incidents mentioned in the sub-sections headed "Occupational health and safety" and "Licenses and Permits" of this section. We believe these incidents are isolated cases and we have sufficient working capital to cover any potential compensation arising from such type of incidents.

During the Track Record Period and up to the Latest Practicable Date, we did not make any material insurance claims in relation to our business. However, should any significant uninsured damages to any of our properties, inventories or other assets or liabilities claims against us occur, our business, financial condition and results of operations may be adversely affected. For details, see "Risk Factors — Risks relating to Our Business and Industry — Our insurance coverage may be inadequate to satisfy potential claims and fluctuations in insurance cost and availability could adversely affect our business, financial condition and results of operations."

**PROPERTIES**

Our headquarters is located at No. 7, Xiaojingjia, Wanfeng Road, Fengtai District, Beijing (北京市豐台區萬豐路小井甲七號). As of the Latest Practicable Date, our various businesses in the PRC were located in Inner Mongolia Autonomous Region, Liaoning Province, Jilin Province, Yunnan Province, Anhui Province, Shanghai and Hong Kong. As of the same date, we also held properties located in Laos and in Ghana.

As of September 30, 2024, none of the properties held or leased by us had a carrying amount of 15% or more of our consolidated total assets. Therefore, according to Chapter 5 of the Listing Rules and section 6(2) of the Companies (Exemption of Companies and Prospectuses from Compliance with Provisions) Notice (Cap. 32L of the Laws of Hong Kong), this document is exempted from compliance with the requirements of section 342(1)(b) of the Companies (Winding Up and Miscellaneous Provisions) Ordinance in relation to paragraph 34(2) of the Third Schedule to the Companies (Winding Up and Miscellaneous Provisions) Ordinance which requires a valuation report with respect to all our interests in land or buildings.

As of the Latest Practicable Date, we did not have title certificates for certain of our owned properties and have not completed registration of leases for certain of our leased properties. For details of the relevant risks, see “Risk Factors — Risks Relating to Our Business and Industry — We have not obtained title certificates for some of our properties and have not completed registration procedures for some of our leased properties, which could materially and adversely affect our right to use such properties.”

**PRC Properties**

We own and lease properties in the PRC for mining, industrial, business and office purposes. As of the Latest Practicable Date, (i) we owned 52 parcels of land with an aggregate site area of approximately 1,561,439.4 m<sup>2</sup>; (ii) we leased 10 parcels of land with an aggregate site area of approximately 803,665.5 m<sup>2</sup>; (iii) we owned 252 buildings with an aggregate gross floor area of 161,080.7 m<sup>2</sup>; (iv) we leased two buildings with an aggregate gross floor area of 2,416.3 m<sup>2</sup>; and (v) we leased 26 working seats.

**Properties Located in Laos**

We lease properties in Laos for mining, processing and support purposes. We have entered into commercial leasing agreements for our offices. Moreover, we lease other buildings, primary transportation equipment, machineries and other assets for our mining operations in Laos. We did not hold any land use right certificate over land in Laos as of the Latest Practicable Date.

---

## BUSINESS

---

### Properties Located in Ghana

We own and lease properties in Ghana for mining, business and office purposes. As of the Latest Practicable Date, (i) we owned 75 parcels of land, with an aggregate gross floor area of approximately 1,169.22 m<sup>2</sup>; and (ii) we leased one parcel of land, with an aggregate gross floor area of approximately 1,708 m<sup>2</sup>.

### LICENSES AND PERMITS

The following table sets forth information regarding our relevant mining licenses and exploration permits as of the Latest Practicable Date:

#### *Wulong Mining*

Exploration Permit . .	LVB5528/2005 & PL 2/378	–	96.44	March 4, 2022 to March 3, 2025 <sup>1</sup>	Valid
Exploration (prospecting) Permit . . . . .	LVB1624/2006 & RL2/117	–	26.9	September 4, 2024 to September 3, 2027	Valid

*Note:*

1. We will submit our renewal application prior to the expiry date in accordance with the relevant laws and regulations, and we and our Ghana Legal Advisor do not expect any legal impediment in the renewal process for this permit.

---

## BUSINESS

---

In addition to mining and exploration permits, we are required to obtain various licenses, permits and certifications for our operations in the PRC, Laos and Ghana. For example, our PRC operations require, among others, work safety permit, pollution discharge permit, explosives operation license, hazardous waste operation license and forest land use permit. Our Laos operations require, among others, gold-copper ore processing plant business license and special radio equipment use license. Our Ghana operations require, among others, forest entry permit, fire certificates, water use permit, explosives permit and environmental certificate.

### *Failure to obtain approvals for environmental impact assessment filings*

Wulong Mining was fined RMB72,137 in 2021 and commanded to halt the construction of one of the production facilities immediately by the Zhen'an Branch of the Dandong Municipal Ecology and Environmental Bureau for the failure to obtain approval for environmental impact assessment filing in accordance with the law and the commencement of the construction without authorization. Wulong Mining paid the fine on September 18, 2021 and completed rectification as required. The Zhen'an Branch of the Dandong Municipal Ecology and Environment Bureau issued a special explanation on February 21, 2023, stating that this incident is deemed as an immaterial non-compliance of the relevant regulation, rather than a material non-compliance. Therefore, the PRC Legal Advisor is of the view that the aforementioned non-compliance incident does not constitute a material non-compliance. Subsequent to this incident, we have halted and gradually phased out the production from this facility.

We are in the process of obtaining one environmental impact assessment approval for another project under construction of Wulong Mining from the relevant environmental protection department. As advised by our PRC Legal Advisor, the risk of our Group being subject to material administrative penalty for this incident is remote on the following bases: (i) the Certificate of Compliance (“**Zhen’an Certificate**”) issued by the Zhen’an Branch of the Dandong Municipal Ecology and Environment Bureau (the “**Zhen’an Bureau**”) on October 10, 2024 states that Wulong Mining’s various ecological environment protection and prevention measures complied with the relevant standards, and no safety production accidents or emergency environmental incidents occurred thereof during the period from January 1, 2021 to the date of the Zhen’an Certificate; (ii) the PRC Legal Advisor conducted an interview with the staff in charge of the Zhen’an Bureau. The Zhen’an Bureau confirmed that except for the aforementioned administrative penalty in 2021, there has been no major environmental pollution accidents or violation of the relevant regulations of the environmental protection, nor any governmental investigation or administrative penalties upon Wulong Mining; and (iii) the Zhen’an District People’s Government of Dandong City issued a special explanatory note on July 8, 2024, which states that there are no substantial obstacles for Wulong Mining to obtain environmental assessment approval.

---

## BUSINESS

---

We have also enhanced relevant internal control measures, including strengthening management over environmental assessment process, and formulating an internal policy for construction and infrastructure management, which requires that all construction projects to obtain all necessary permits and approvals before commencement. We have halted and gradually phased out the production of the former project and have been actively communicating with the relevant environmental protection department to obtain the environmental impact assessment approval for the latter project.

Based on the foregoing, nothing has come to our Directors' attention that would cause them to believe that they are not suitable to act as Directors under Rule 3.08 and 3.09 of the Listing Rules.

*Pending applications for certain safety production permits and explosives operation license that have expired*

Two of Huatai Gold Mine's production safety permits expired on September 23, 2024 and November 11, 2024, respectively, and one explosives operation license of Huatai Gold Mine expired on November 12, 2024. Huatai Mining is currently undergoing technical renovation and will go through safety acceptance procedures after completion of the technical renovation. We will renew the relevant production safety permits and/or explosives operation license after completing safety acceptance procedures.

The PRC Legal Advisor is of the view that the outstanding/pending permits or license will not have any material adverse impact on our Group's operations or financial condition on the following:

- (i) Huatai Gold Mine has not carried out any operation or production since the commencement of its technical respective renovation or upon the expiry of its permits or license;
- (ii) in accordance with the relevant regulations, for projects involving new construction, renovation, or expansion, a company is required to conduct production safety assessment in compliance with the regulations. The production safety permits will only be issued once the safety facilities have passed the production safety assessment; and
- (iii) a company can only obtain the explosives operation license after completing the production safety acceptance procedures and obtaining the production safety permit. Huatai Gold Mine has been undergoing technical renovation, will go through safety acceptance procedures after the completion of the technical renovation and has not yet obtained production safety permit, thus not being able to obtain explosives operation license at this stage.

---

## BUSINESS

---

### *Pending approval for updated environmental and social assessment and environmental and social management and monitoring plan in Laos*

As LXML plans to carry out exploration of the Far West mine of the Sepon Gold and Copper mine, in accordance with Laos environmental laws, we have submitted an updated environmental and social impact assessment and an environmental and social management and monitoring plan to the Laotian Government for the expanded project scope at our mines in Laos, which is pending review by the Laotian Government. The Laos Legal Advisor is of the view that we are not subject to any legal impediment in obtaining the approval for the updated environmental and social impact assessment and environmental and social management and monitoring plan, and the consultation and comments from the Laotian Government regarding the updated plan are in line with the approval procedure under Lao regulations. According to the Laos Legal Advisor, the approval thereof is mainly subject to LXML satisfactorily addressing such consultation and comments from the Laotian Government. LXML has not encountered any material issue in addressing the Laotian Government's comments. LXML received enquiries from ESIA (Environment and Social Impact Assessment) on September 25, 2024 and all enquiries raised have been addressed by November 5, 2024. Based on the above, the Directors concur with the Laos Legal Advisor's view that we are not subject to any legal impediment in obtaining the approval for the updated environmental and social impact assessment and environmental and social management and monitoring plan. Based on the due diligence conducted by the Sole Sponsor including but not limited to the legal opinion of our Laos Legal Advisor and discussion with the legal advisors and management of our Company, nothing has come to the Sole Sponsor's attention that would cause the Sole Sponsor to reasonably doubt the views of our Laos Legal Advisor that there is no anticipation that there will be any legal impediment for our Group to obtain approval from the Laotian Government for the updated environmental and social impact assessment and environmental and social management and monitoring plan.

In addition, the pending environmental and social impact assessment relates only to the Far West mine whilst the rest of the Sepon Gold and Copper Mine remains valid. LXML received Laotian Government's approval to expand its existing mining license to include Far West region on March 13, 2024, allowing it to proceed with the application of environmental and social impact assessment in parallel. According to the Laos Legal Advisor, this process can take up to 18 months, but the operation of the mine would not be materially affected, as the Laotian authorities have issued the Environmental Certificate No. 0072/MONRE.ED dated January 8, 2024 for the Sepon gold-copper project.

As advised by our legal advisors in the relevant jurisdictions, during the Track Record Period and as of the Latest Practicable Date, we believe that we have obtained the requisite licenses, permits and certificates required by the relevant laws and regulations for our current operations in all material aspects.

For more details, please see “— Our Gold Production Business in China — Mining Licenses and Exploration Permits”, “— Our Gold Production Business in Laos — Mining Licenses and Exploration Permits”, “— Our Gold Production Business in Ghana — Mining Licenses and Exploration Permits”, “— Our Other Metal Production Business — Our Other Mineral Resources Business in China — Mining Licenses and Exploration Permits”, and “— Our Other Mineral Resources Business — Our Copper Cathodes Business in Laos — Mining Licenses and Exploration Permits.”

### LEGAL PROCEEDINGS AND NON-COMPLIANCES

#### Legal Proceedings

During the Track Record Period and up to the Latest Practicable Date, we had not been a party to, and were not aware of any threat of, any material legal, arbitral or administrative proceeding which, in our opinion, would likely have a material and adverse effect on our business, financial condition or results of operations. We may from time to time become a party to various legal, arbitral or administrative proceedings arising in the ordinary course of our business.

#### Legal Compliance

We primarily operate in China, Laos and Ghana and our business is regulated and supervised under different regulatory environments. We are subject to various regulatory requirements and guidelines issued by the regulatory authorities in the jurisdictions in which we operate. We aim to monitor regulatory environments and adopt adequate internal procedures and guidelines to manage our operations in order to avoid potential non-compliance or misconduct.

During the Track Record Period and up to the Latest Practicable Date, we had not been and were not involved in any material non-compliance incidents that have led to fines, enforcement actions or other penalties that could, individually or in the aggregate, have a material adverse effect on our business, financial condition and results of operations. Our PRC Legal Advisor advised that we have complied with the relevant PRC laws and regulations in all material respects. Our Laos Legal Advisor advised us that we have complied with the relevant Laos laws and regulations in all material respects. Our Ghana Legal Advisor has advised us that we have complied with the relevant Ghana laws and regulations in all material respects.

### RISK MANAGEMENT AND INTERNAL CONTROL MEASURES

We are subject to various risks relating to our operations, please see “Risk Factors — Risks Relating to Our Business and Industry — Our risk management and internal control systems may not fully protect us against various risks inherent in our business” for details.

---

## BUSINESS

---

As a joint stock company incorporated in the PRC with our A shares listed on the Shanghai Stock Exchange and regulated by the CSRC, which is a full signatory to the IOSCO MMOU. We maintain a centralized management and control in the PRC. The decision-making processes, and the coordination and management of the implementation of the corporate matters are conducted by our Directors and management team from its PRC headquarters. The business activities of our Group's subsidiaries in the PRC, Laos and Ghana are managed, monitored, and approved/disapproved by our Company from its PRC headquarters. Through our Group's centralized management system, and through the Pronto platform, our Directors and senior management have, and are expected to continue to have, full and timely access to books and records regarding our Group's operations outside of the PRC. The principal books and records of our Company are also located and maintained in the PRC. The audit department of the PRC headquarters regularly carry out internal audits work for all of our overseas operations.

As we operate in the PRC, Laos and Ghana, it is of high importance that we maintain oversight of the management of our overseas mines. We achieve effective management of our overseas mine through the following means:

- senior management and key financial personnel are assigned to each of the overseas mines based on the decisions of the PRC headquarters;
- prior to implementation, the overseas mines must report the important issues, such as significant personnel appointments and terminations as well as material purchase and sale contracts, to the PRC headquarters for review and approval before taking any action of implementation;
- the finance department of PRC headquarters works closely with local finance teams of the overseas mines to ensure the consistency and propriety in financial reporting, control, and management. In Laos, the key personnel and the key members of the finance department are directly assigned by the PRC headquarters;
- each overseas mine reports to the PRC headquarters on various operational, financial, HR, and ESG matters from time to time. Through the Pronto platform, the PRC headquarters can also obtain real-time information on the overseas mines; and
- senior management of the PRC headquarters conducts the on-site visit one or two times per year to the overseas mines to have a comprehensive understanding of the actual and latest conditions.

Even though Laos has been proactively applied to become an associate member of the IOSCO, currently it is still not a member of IOSCO or a signatory to the IOSCO MMOU, which may present certain difficulties for the Hong Kong regulators to seek regulatory assistance and information from the statutory securities regulator in Laos on a readily available base. We

---

## BUSINESS

---

would spare no effort in taking actions in order to mitigate such enforcement risk so that the Hong Kong regulators can obtain information as to our operations in Laos as and when necessary and in a timely manner.

Please see “Risk Factors — Risks Relating to Our Business and Industry — It may be difficult for the Hong Kong regulators to obtain information or call for regulatory assistance in Laos where circumstances necessitate in the course of overseeing us as a listed company by the regulations in Hong Kong” and “Directors, Supervisors and Senior Management — Corporate Governance” for details.

Our management has designed and implemented risk management policies to address various potential risks we have identified in relation to our operations, including financial risks and corporate governance risks. Our risk management policy sets forth procedures to identify, analyze, mitigate and monitor the relevant risks. We are dedicated to establishing a comprehensive risk management system which operates effectively and is suitable for our long-term business development.

In addition, we have adopted internal control policies and procedures and we plan to continuously monitor and improve our management procedures to ensure the effective operation of those internal controls are in line with the growth of our business and good corporate governance practice. In order to continuously improve the standards of our internal control, we have adopted the following measures:

- (i) we have engaged external legal advisors to provide timely legal advice to our Board and other relevant personnel on the applicable laws, rules and regulations concerning our operations;
- (ii) we have appointed four independent Directors to provide independent view, monitoring and advice to our Group;
- (iii) our independent Directors continuously provide an independent review of the effectiveness of the financial reporting process, internal control and risk management system of our Group and oversee the audit process and performs other duties and responsibilities as assigned by the Board; and
- (iv) our Directors have attended, and will continue to undertake, relevant training conducted by our legal advisors on the ongoing obligations, duties and responsibilities of directors of publicly listed companies under applicable laws and regulations.

Our Directors are of the view that we have taken all reasonable steps to establish a proper internal control system. As such, our Directors are of the view, that our internal control measures are adequate and effective.

---

## RELATIONSHIP WITH OUR SINGLE LARGEST SHAREHOLDER GROUP

---

### OUR SINGLE LARGEST SHAREHOLDER GROUP

As of the Latest Practicable Date, Ms. Li and Hanfeng Zhongxing directly held 190,410,595 and 51,515,151 A Shares, accounting for approximately 11.44% and 3.10% of the issued share capital of our Company, respectively. Meanwhile, Ms. Li is the sole limited partner of Hanfeng Zhongxing accounting for approximately 99.00% of the committed capital contribution of Hanfeng Zhongxing and Mr. Wu Zengxiang, the general partner, accounting for the remaining 1.00% of the committed capital contribution. Mr. Wu has approximately 30 years of experience in the securities and investment management industry and became the general partner of Hanfeng Zhongxing in August 2023. Pursuant to the Hong Kong Listing Rules and Chapter 1.1C of the Guide, Ms. Li and Hanfeng Zhongxing are regarded as the Single Largest Shareholder Group of our Company.

Mr. Wu is not considered to be part of the Single Largest Shareholder Group because despite his role as a general partner, in accordance with the partnership agreement of Hanfeng Zhongxing, the partners meeting comprising all the partners is regarded as the highest authority within the limited partnership. Essentially all the operational matters and internal management of Hanfeng Zhongxing, including change of the name and term of the partnership, composition of general and limited partners, transfer and/or pledge of committed capital contribution, provision of external guarantee, borrowing and financing matters, acquisition and disposal of assets and investments, amendment of the partnership agreement and dissolution of partnership, shall be resolved at the partners meeting, and the general partner is bound by the resolutions at the partners meeting to carry out such activities. Given that Ms. Li holds approximately 99.00% of the committed capital contribution (that is, interest) of Hanfeng Zhongxing, Ms. Li's proportion of interest in Hanfeng Zhongxing is in vast contrast with the remaining approximately 1.00% of the interest held by Mr. Wu. Meanwhile, essentially all of the material operations and management of Hanfeng Zhongxing rest with the partners meeting. The limited partnership agreement of Hanfeng Zhongxing expressly mandated that the role of the general partner is to execute the operational matters of Hanfeng Zhongxing in accordance with the limited partnership agreement or upon authorization of the partner(s), and to report to the limited partner(s) on the execution status and the operational and financial conditions of the partnership. As such, the role of Mr. Wu is to represent Hanfeng Zhongxing in external business and operational matters upon the authorization of Ms. Li. Mr. Wu does not, and cannot exercise control over Hanfeng Zhongxing; and taking in account of the above, the majority interest held by Ms. Li enables her to exercise *de facto* control of Hanfeng Zhongxing. Therefore, Mr. Wu has no control over the voting rights in the share capital of our Company held by Hanfeng Zhongxing, nor the control of Hanfeng Zhongxing in the exercise of such voting rights. Those are rested solely with Ms. Li.

---

## **RELATIONSHIP WITH OUR SINGLE LARGEST SHAREHOLDER GROUP**

---

Accordingly, the Single Largest Shareholder Group was entitled to exercise voting rights attached to the 241,925,746 A Shares, representing approximately 14.54% of the total issued share capital of our Company as of the Latest Practicable Date. Immediately following the completion of the Global Offering, the Single Largest Shareholder Group will be interested in approximately 12.94% of our total share capital (assuming the Offer Size Adjustment Option and the Over-allotment Option are not exercised) or approximately 12.50% of our total share capital (assuming the Offer Size Adjustment Option and the Over-allotment Option are exercised in full).

### **NO COMPETITION AND CLEAR DELINEATION OF BUSINESS**

Each member of the Single Largest Shareholder Group confirmed that, as of the Latest Practicable Date, she/it did not have any interest in any business, other than our business, which compete, or is likely to compete, either directly or indirectly, with our business and would require disclosure under Rule 8.10 of the Hong Kong Listing Rules.

### **INDEPENDENCE FROM OUR SINGLE LARGEST SHAREHOLDER GROUP**

Having considered the following factors, our Directors are satisfied that we are capable of carrying on our business independent from our Single Largest Shareholder Group after Listing.

#### **Management Independence**

Our daily operational and management decisions are made collectively by our executive Directors and our senior management, with our Board having an overall supervision of our management. Our Board consists of four executive Directors, one non-executive Director and four independent non-executive Directors. We believe that our Directors and senior management can independently perform their duties in our Company and we can operate independently from our Single Largest Shareholder Group for the following reasons:

- each of our Directors is aware of his/her fiduciary duties as a director of our Company which requires, among other things, that he/she acts for the benefit and in the best interests of our Company and does not allow any conflict between his/her duties as a Director and his/her personal interest;
- in the event that there is a potential conflict of interest arising out of any transaction to be entered into between our Group and our Single Largest Shareholder Group or its associates, the interested Director(s), if any, shall abstain from voting at the relevant Board meetings of our Company in respect of such transactions and shall not be counted in the quorum;

---

## RELATIONSHIP WITH OUR SINGLE LARGEST SHAREHOLDER GROUP

---

- our Board has a balanced composition of executive Directors and independent non-executive Directors which ensures the independence of our Board in making decisions affecting our Company. Specifically, (a) our independent non-executive Directors are not associated with our Single Largest Shareholder Group or its associates; (b) our independent non-executive Directors account for over one-third of the Board; and (c) our independent non-executive Directors individually and collectively possess the requisite knowledge and experience as independent directors of listed companies and will be able to provide professional and experienced advice to our Company. Accordingly, our Directors believe that our independent non-executive Directors are able to bring impartial and sound judgment to the decision-making process of our Board and protect the interest of our Company and the Shareholders as a whole;
- we will establish corporate governance measures and adopt sufficient and effective control mechanisms to manage conflicts of interest, if any, between our Group and our Single Largest Shareholder Group, which would support our independent management. See the paragraph headed “— Corporate Governance Measures” in this section below; and
- Ms. Li has undertaken and confirmed to the Board that she would not participate in the Board’s affairs or attend to the day-to-day operations of the Group; instead, the operations of the Group shall continue to be maintained by the management team of the Company led by Chairman Wang.

Having considered the above factors, our Directors are satisfied that our executive Directors and senior management are able to perform their managerial roles in our Company independently, and our Directors are of the view that we are capable of managing our business independently from our Single Largest Shareholder Group after Listing.

### **Operational Independence**

Our Group holds all the relevant material intellectual property rights, licenses, qualifications and permits required for conducting our Group’s business. Our Group has sufficient capital, facilities and employees to operate our business independently from our Single Largest Shareholder Group and its close associates. We have our own accounting and financial departments, human resources and administration departments, and procurement, production and sales departments. We have also established a set of internal control procedures and adopted corporate governance practices to facilitate the effective operation of our business.

---

## RELATIONSHIP WITH OUR SINGLE LARGEST SHAREHOLDER GROUP

---

Our Group currently leases a 2,226 square metre office premises for use as our headquarters to maintain our daily business operations. The relevant lease and the property management services pertaining to our use of the headquarters are governed by the Property Lease Agreements and the Property Management Services Agreement, respectively, entered into between our Company and Beijing Eagleleap, which is held as to 99% equity interest by Hanfeng United, and which, in turn, is wholly owned by Ms. Li and thus an associate of Ms. Li, and constitute connected transactions of our Company. For details of the connected transactions, see the section headed “Connected Transactions” in this Prospectus.

Our Directors believe that such connected transactions between Beijing Eagleleap and our Group will not give rise to any business independence or reliance issues due to the following reasons:

- (a) the roles of our Company (as the lessee and the procurer of the Property Management Services under the Property Lease Agreements and the Property Management Services Agreement, respectively) and those of Beijing Eagleleap (as the lessor and the provider of the Property Management Services under the Property Lease Agreements and the Property Management Services Agreement, respectively) are complementary and beneficial to each other;
- (b) the connected transactions are entered into in the ordinary and usual course of business of our Group and on an arm’s length basis and on normal commercial terms. The connected transactions are based on pre-agreed pricing policies which ensure that the pricing is fair and reasonable, particularly the pricing terms are determined with reference to, among others, the prevailing market rates;
- (c) given Beijing Eagleleap is the landlord of the office premises of our headquarters, it generally maintains better and more efficient communication and thorough understanding of the conditions of the Leased Premises and commercial needs of our Group, as compared to other services providers. Furthermore, any relocation of our headquarters office premises or change of the current arrangements under the connected transactions may cause unnecessary disruption to our administration and incur additional costs. Accordingly, our Directors consider that it would not be commercial sensible to discontinue the lease and procurement of the Property Management Services from Beijing Eagleleap; and
- (d) the risk of Beijing Eagleleap terminating the connected transactions is remote as the parties under the Property Lease Agreements and the Property Management Services Agreement have limited termination rights and the termination would not be in the commercial interest of Beijing Eagleleap. In the unlikely event that Beijing Eagleleap ceases to lease the premises and/or provide the Property Management Services to us, our Directors believe that we will have sufficient time and resources to locate other comparable premises and/or service providers available in the market. Therefore, our Directors do not consider that such termination, if any, will cause a material adverse effect on our business.

---

## **RELATIONSHIP WITH OUR SINGLE LARGEST SHAREHOLDER GROUP**

---

Accordingly, we believe that we are capable of carrying on our business independently of our Single Largest Shareholder Group and its close associates. Our Directors are of the view that our Group will be able to operate independently from our Single Largest Shareholder Group and its close associates after Listing.

### **Financial Independence**

Our Group has an independent financial system. We make financial decisions according to our own business needs and neither our Single Largest Shareholder Group nor its close associates may intervene with our use of funds. We have opened accounts with banks independently and do not share any bank accounts with our Single Largest Shareholder Group or its close associates. We have established an independent finance department as well as implemented sound and independent audit, accounting and financial management systems. We have adequate internal resources and a credit profile to support our daily operations.

As of the Latest Practicable Date, there were no outstanding loans or guarantees provided by, or granted to, our Single Largest Shareholder Group or its close associates.

Based on the above, we are of the view that there is no financial dependence on our Single Largest Shareholder Group and its close associates.

### **CORPORATE GOVERNANCE MEASURES**

Our Directors recognize the importance of good corporate governance to protect the interest of our Shareholders. We would adopt the following corporate governance measures to manage potential conflict of interests between our Group and our Single Largest Shareholder Group:

- (a) where a general meeting is held for considering proposed transactions in which any member of our Single Largest Shareholder Group has a material interest, she/it shall abstain from voting on the relevant resolutions and shall not be counted in the quorum for the voting;
- (b) where a Board meeting is held for the matters in which a Director has a material interest, such Director shall abstain from voting on the relevant resolutions and shall not be counted in the quorum for the voting;
- (c) in the event that our independent non-executive Directors are requested to review any conflict of interest between our Group and any member of our Single Largest Shareholder Group, she/it shall provide the independent non-executive Directors with all necessary information and our Company shall disclose the decisions of the independent non-executive Directors either in its annual reports or by way of announcements;

---

## RELATIONSHIP WITH OUR SINGLE LARGEST SHAREHOLDER GROUP

---

- (d) our Directors (including our independent non-executive Directors) will seek independent and professional opinions from external advisors at our Company's cost as and when appropriate in accordance with the Corporate Governance Code and Corporate Governance Report set out in Appendix C1 of the Hong Kong Listing Rules;
- (e) any transactions between our Company and its connected persons shall be in compliance with the relevant requirements of Chapter 14A of the Hong Kong Listing Rules, including the announcement, annual reporting and independent Shareholders' approval requirements (if applicable) under the Hong Kong Listing Rules; and
- (f) We have appointed Goldlink Capital (Corporate Finance) Limited as our compliance advisor, which will provide advice and guidance to us in respect of compliance with the applicable laws and the Hong Kong Listing Rules, including various requirements relating to directors' duties and corporate governance.

Based on above, our Directors are satisfied that sufficient corporate governance measures have been put in place to manage conflicts of interest between our Group and our Single Largest Shareholder Group and/or other Directors to protect minority Shareholders' rights after the Listing.

---

## CONNECTED TRANSACTIONS

---

### OVERVIEW

Prior to the Listing, our Group has entered into certain transactions with the following party which will, upon the Listing, become a connected person of our Company. Details of such one-off connected transactions and continuing connected transaction of our Company following the Listing are set out below.

### RELEVANT CONNECTED PERSON

Beijing Eagleleap is owned as to 99% equity interest by Hanfeng United, which in turn is wholly owned by Ms. Li, a member of our Single Largest Shareholder Group. Therefore, Beijing Eagleleap will become a connected person of our Company upon the Listing pursuant to Chapter 14A of the Hong Kong Listing Rules.

### ONE-OFF CONNECTED TRANSACTIONS

#### Property Lease Agreements

##### *Description of the Transaction*

##### *Principal terms*

Our Company entered into the 2022-2024 Property Lease Agreement with Beijing Eagleleap on January 1, 2022, pursuant to which Beijing Eagleleap agreed to lease to us the Leased Premises with a total gross floor area of approximately 2,226 square metres located at A7 Xiaojing, Wanfeng Road, Fengtai District, Beijing, the PRC (中國北京市豐台區萬豐路小井甲7號院) as the office premises of our headquarters in the PRC for a term of three years from January 1, 2022 to December 31, 2024. On August 20, 2024, our Company entered into the 2025-2026 Property Lease Agreement with Beijing Eagleleap for the lease of the Leased Premises for a term of two years from January 1, 2025 to December 31, 2026. Under the 2025-2026 Property Lease Agreement, our Company has the priority right to renew the lease upon notification of such request to Beijing Eagleleap 60 days prior to the expiry of the lease.

The Property Lease Agreements were entered into (i) in the ordinary and usual course of business of our Group; (ii) on arm's length basis; and (iii) on normal commercial terms with the rent being determined with reference to, among others, the leased area, geographical location and condition of the Leased Premises and the prevailing market rates for similar properties in the surrounding area.

---

## CONNECTED TRANSACTIONS

---

Under the 2022-2024 Property Lease Agreement, the balance of the lease liabilities, being the present value of the lease payments recognized by our Group in relation to the Leased Premises according to IFRS 16 as of September 30, 2024 amounted to approximately RMB2.3 million. For the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2024, the value of the right-of-use assets acquired by us from Beijing Eagleleap were approximately nil, RMB14.0 million, nil and nil, respectively.

Under the 2025-2026 Property Lease Agreement, the balance of the lease liabilities and the value of the right-of-use assets acquired by us from Beijing Eagleleap according to IFRS 16 as of the date of the agreement amounted to approximately RMB8.0 million, respectively.

### *Reasons for and benefits of the transaction*

We have been using the Leased Premises during the Track Record Period. Any relocation of our headquarters may cause unnecessary disruption of our administration and incur additional costs. The continuation of such lease is cost efficient and is beneficial to our operations.

In light of the above, our Directors are of the view that the transactions under the Property Lease Agreements are fair and reasonable and in the best interest of our Group and the Shareholders as a whole.

### *Hong Kong Listing Rules Implication*

In accordance with IFRS 16 “Leases”, our Company recognized a right-of-use asset on its balance sheet in connection with the lease of the properties from Beijing Eagleleap. Therefore, the leases of the Leased Premises from Beijing Eagleleap under the Property Lease Agreements are regarded as acquisitions of capital asset and one-off connected transactions of our Company for the purposes of the Hong Kong Listing Rules. Accordingly, the reporting, announcement, annual review and independent Shareholders’ approval requirements in Chapter 14A of the Hong Kong Listing Rules will not be applicable.

### **FULLY EXEMPT CONTINUING CONNECTED TRANSACTION**

We have entered into the following continuing connected transaction which will be exempt from the annual review, reporting, announcement and independent Shareholders’ approval requirements under Chapter 14A of the Hong Kong Listing Rules.

---

## CONNECTED TRANSACTIONS

---

### Property Management Services Agreement

#### *Description of the Transaction*

##### *Principal terms*

Our Company entered into the Property Management Services Agreement with Beijing Eagleleap on August 20, 2024, pursuant to which Beijing Eagleleap agreed to provide the Property Management Services to our Company for our use of the Leased Premises and to address the daily needs of our employees at the headquarters. The scope of services provided by Beijing Eagleleap comprise the following:

- (i) Property-related services, including provision of utility (electricity), fire safety, cleaning and security services for the Leased Premises;
- (ii) Conference services, including maintaining the conference rooms, reception and catering services at the conferences of our Company;
- (iii) Car leasing, including provision of vehicles available for rental for business use by our employees; and
- (iv) Other supporting services, including provision of staff dormitory, maintaining the staff canteen and conference meals preparation.

The term of the Property Management Services Agreement is two years from January 1, 2024 to December 31, 2025.

##### *Pricing policy*

The pricing of the Property Management Services under the Property Management Services Agreement shall be determined in accordance with the following principles:

- (i) the prescribed price imposed by the national or local price administrative departments of the PRC (and in relation to the utility (electricity), that is charged in accordance with the pricing standard for Beijing electricity sales issued by the Beijing Municipal Commission of Development and Reform (北京市發展和改革委員會) from time to time on its website); or in the absence of which,
- (ii) the market price upon negotiation between the parties. In determining the market price, both parties shall take into consideration, among others, the following key factors:
  - (a) the prevailing market price charged by any third party providing a similar service, after making reference to at least two quotations from Independent Third Party service providers for similar services; and

---

## CONNECTED TRANSACTIONS

---

- (b) in case where the same or similar services have been provided by Beijing Eagleleap to a third party, the minimum quotation offered by Beijing Eagleleap.

### *Reasons for and benefits of the transaction*

Beijing Eagleleap has been providing the Property Management Services to us as ancillary services for the office use of the headquarters during the Track Record Period. Any change of the current arrangement may cause unnecessary disruption of our administration and incur additional costs. The continuation of such arrangement is cost efficient and is beneficial to our operations. See also the paragraph headed “— One-off Connected Transaction — Property Lease Agreements — Reasons for and benefits of the transaction” in this section for details.

### *Historical transaction amounts*

The following table sets forth the historical transaction amounts incurred by our Company for the provision of the Property Management Services by Beijing Eagleleap during the Track Record Period:

	Year ended December 31,			Nine months ended September 30,
2021	2022	2023	2024	
<i>(RMB)</i>				
376,000	908,000	2,147,000	833,000	

The increase of transaction amount from approximately RMB0.38 million for the year ended December 31, 2021 to approximately RMB0.91 million for the year ended December 31, 2022 was mainly attributable to the commencement of procuring the car leasing service from Beijing Eagleleap during 2022 for our Group’s business travelling purposes. The further increase of the transaction amount to approximately RMB2.15 million for the year ended December 31, 2023 was mainly attributable to the procurement of conference and catering services at our Company’s guest house from Beijing Eagleleap for business development purposes, as well as the increase in procurement of staff dormitory services in light of our staff’s needs. The slightly lower transaction amount of approximately RMB0.83 million for the nine months ended September 30, 2024 when compared to that for the year ended December 31, 2023 was mainly attributable to the decrease in the procurement of staff dormitory and catering services as certain employees had arranged for their own accommodation and meals during the period. Further, our Group would usually incur more expenses for utilities procurement (for instance, heat supply) in the winter season, as well as guest reception services towards the end of the year.

---

## CONNECTED TRANSACTIONS

---

### *Annual Caps*

The following table sets forth the proposed annual caps for the provision of the Property Management Services:

Year ending December 31,	
2024	2025
(RMB)	
3,000,000	3,000,000

The proposed annual caps were determined based on, among others, (i) the comparable market prices charged by providers of similar property management services including the provision for cars for leasing and dormitory; and (ii) the estimated utility (electricity) costs with reference to the historical volume consumed by us. Our Directors consider that the aforesaid proposed annual caps are not excessive in light of the expected needs for the Property Management Services taking into account, among others, the potential expansion of staff force leading to the corresponding needs of the dormitory and catering services, and the increased business development and marketing effort to be incurred by our Group necessitating the increased need for car leasing, conferencing and related guest reception services in the coming years; meanwhile, over RMB2 million had been incurred for the procurement of the Property Management Services in 2023.

### *Directors' confirmation*

Our Directors (including our independent non-executive Directors) are of the view that (i) the Property Management Services Agreement was entered into in the ordinary and usual course of business of our Group, on arm's length basis and on normal commercial terms or better to us and are fair and reasonable and are in the interest of our Company and the Shareholders as a whole; and (ii) the proposed annual caps under the Property Management Services Agreement are fair and reasonable and in the interest of our Company and the Shareholders as a whole.

### *Hong Kong Listing Rules Implications*

As each of the applicable percentage ratios (other than the profits ratio) is expected to be, on an annual basis, less than 0.1%, the transaction under the Property Management Services Agreement is exempt from the annual review, reporting, announcement and independent Shareholders' approval requirements under Chapter 14A of the Hong Kong Listing Rules.

## DIRECTORS, SUPERVISORS AND SENIOR MANAGEMENT

### BOARD OF DIRECTORS

Our Board currently consists of nine Directors, including four Executive Directors, one Non-executive Director and four Independent Non-executive Directors. The Directors are appointed for a term of three years and are eligible for re-election upon expiry of their term in office.

The following table sets out information in respect of the Directors of our Company.

Name	Age	Position for the Current Tenure	Date of Appointment as a Director	Date of Joining Our Group	Roles and Responsibility
<b>Executive Directors</b>					
Mr. Wang Jianhua (王建华) . . . . .	69	Chairman of the Board and Executive Director	September 17, 2018	September 17, 2018	Overall strategic planning, business direction and operational management of our Group
Ms. Yang Yi-fang (楊宜方) (also known as Lydia Yang) . . . . .	48	Executive Director and Chief Executive Officer	July 26, 2022	April 25, 2019	Overall execution of our development strategy, daily operation, business development and financial management of our Group
Mr. Lyu Xiaozhao (呂曉兆) (former name: Lu Xiaozhao) . . . . .	61	Executive Director, Vice President and Chief Engineer	December 14, 2012	December 14, 2012	Overseeing the engineering and technical management and business development of our Group
Mr. Gao Bo (高波) . . . . .	56	Executive Director and Vice President	December 14, 2012	December 14, 2012	Overseeing the operations and management of the Sepon Gold and Copper Mine
<b>Non-executive Director</b>					
Mr. Zhang Xudong (張旭東) . . . . .	59	Non-executive Director	January 4, 2022	February 27, 2020	Providing guidance and advice to the Board on the corporate and business strategies and strategic investments

Dr. Wong Yet Ping, Ambrose (黃一平) . . . . .	45	Independent Non-executive Director	August 23, 2024	August 23, 2024	Responsible for supervising and providing independent advice to the Board

### DIRECTORS

#### Executive Directors

**Mr. Wang Jianhua (王建华)**, aged 69, is the Chairman of the Board and Executive Director of our Company. Chairman Wang is primarily responsible for the overall strategic planning, business direction, and operational management of our Company. Chairman Wang joined our Group in September 2018.

Chairman Wang has extensive experience in the mining industry and is one of the first generation of industry leaders advocating for eco-mining and large-scale mining in the PRC. Having proactively participated in various roles in the industry throughout his tenure, Chairman Wang has accumulated the wealth of experience and skills for the overall operational management and strategic planning to promote the growth of our Company. Upon joining our Group, Chairman Wang successively held leadership roles as the Director of our Company from September 2018 to December 2019, Chairman of the Board of our Company since December 2019, and Chief Executive Officer of our Company from January 2022 to December 2022, respectively. Prior to joining our Group, Chairman Wang served in key roles at numerous renowned mineral companies. Chairman Wang was the Chairman of the board of directors of Shandong Gold Group Company Limited (山東黃金集團有限公司) from February 2006 to March 2013. Chairman Wang has also been an Executive Director and President of Zijin Mining Group Company Limited (紫金礦業集團股份有限公司) (“**Zijin Mining**”), a company

---

dually listed on the Main Board of the Hong Kong Stock Exchange (stock code: 2899) and Shanghai Stock Exchange (stock code: 601899) from October 2013 to December 2016 and from June 2013 to December 2016, respectively. Chairman Wang also held the position of the Chairman of Yunan Baiyao Holdings Company Limited (雲南白藥控股有限公司) from April 2017 to May 2018.

Chairman Wang has been a forerunner for his technical achievements within the industry. In 2010, he brought Shandong Gold Group Company Limited to new heights of achieving an unprecedented drilling depth of over 4,000 metres within the nation. Further, Chairman Wang's vision for overseas expansion is exemplified by Zijin Mining's successful investment in the Kamo-Kakula Copper Mine, a world-class and large-scale stratiform copper deposit in the Central African Copperbelt region, during his tenure.

Chairman Wang received a Master of Business Administration Degree from Nankai University in the PRC in December 2005. Chairman Wang also received a Master of Business Administration Degree from the China Europe International Business School in the PRC in October 2013. Chairman Wang obtained the qualification of a senior economist in 2001.

**Ms. Yang Yi-fang (楊宜方)** (also known as Lydia Yang), aged 48, is an Executive Director and the Chief Executive Officer of our Company. Ms. Yang is mainly responsible for overall execution of our development strategy, daily operation, business development and financial management of our Group. Ms. Yang joined our Group in April 2019.

Ms. Yang is an entrepreneur who embraces challenges and has nearly 20 years of experience in the global mining industry. Ms. Yang's attention to detail, prowess in skillful execution and wealth of expertise in strategic planning, corporate development, global mergers and acquisitions, management of overseas listed corporations and mine projects showcase an acute ability to generate value-generating solutions. Upon joining our Group, Ms. Yang has been serving as a Director of Chijin HK since April 2019. Ms. Yang also served as the Director and Chief Executive Officer of our Group from July 2022 and December 2022, respectively. Prior to joining our Group, Ms. Yang served as a Deputy General Manager of Gold Mountains (H.K.) International Mining Company Limited (金山(香港)國際礦業有限公司) and a Deputy General Manager of the International Department of Zijin Mining from July 2007 to September 2010. Ms. Yang first served as the Head of Business Development Department of CST Mining ("CST Mining"), a company previously listed on the Main Board of the Hong Kong Stock Exchange until December 2023 (stock code: 0985) from October 2010 to October 2011. She served as the Chief Executive Officer of CST Mining since September 2011 and concurrently served as an Executive Director of the company from October 2011 until her departure in January 2013. From May 2013 to April 2016, Ms. Yang served in the management positions in various companies of Zijin Mining, including as the Chairperson of Xiamen Zijin Tongguan Investment Development Company Limited (廈門紫金銅冠投資發展有限公司), the Director and General Manager of Gold Mountains International Mining Company Limited, and the assistant to the Chairman of Zijin Mining. During June 2018 to April 2020, Ms. Yang served as an Executive Director and President at Hengxing Gold Holding Company Limited (恆興黃金控股股份有限公司), a company previously listed on the Main Board of the Hong Kong Stock Exchange until February 2020 (stock code: 2303) until it was acquired by Shandong Gold for around HK\$3 billion.

---

## DIRECTORS, SUPERVISORS AND SENIOR MANAGEMENT

---

Furthermore, Ms. Yang has significant operational experience from managing mines, including, for example, mines in the PRC, and CST Mining's Lady Annie Copper Mine in Australia and Mina Justa Copper Project in Peru. Aside from her wealth of managerial and operational experience, Ms. Yang's significant international, transactional and capital markets experience include, for example, being a driving force in a series of major deals while at CST Mining and Zijin Mining, including CST Mining's sale of the Mina Justa Copper Project in Peru for USD505 million to a subsidiary of Minsur S.A. — one of the largest transactions in that year; Minsur was at the time the world's fourth largest tin producer and Peru's largest tin miner by tonnage.

Ms. Yang received a Bachelor of Arts degree from Tamkang University in Taiwan in June 2000.

**Mr. Lyu Xiaozhao** (呂曉兆) (former name: Lu Xiaozhao), aged 61, is an Executive Director, Vice President, and Chief Engineer of our Group. Mr. Lyu is responsible for overseeing the engineering and technical management and business development of our Group. Mr. Lyu joined our Group in December 2012.

After successfully leading our Company's Major Asset Restructuring in 2012, Mr. Lyu successively served as a Director and General Manager of Jilong Mining from December 2012 to August 2013, the General Manager of our Company from December 2012 to February 2016, the Chairman of the Board of our Company from February 2016 to December 2019, the Deputy Chairman of the Board and Chief Executive Officer of our Group from December 2019 to January 2022 and the Co-chairman of the Board of our Company from January 2022 to September 2023, respectively. Prior to joining our group, Mr. Lyu successively served as a Deputy Party Secretary, Executive Director, Deputy General Manager, and a member of the strategic committee of Lingbao Gold Group Company Limited, a company listed on the Main Board of the Hong Kong Stock Exchange (stock code: 3330), from September 2002 to March 2011.

Mr. Lyu has since December 2019 served as a Vice President of the China Gold Association (中國黃金協會) Vice Director of the Mining Geology Professional Committee of the Geological Society of China (中國地質學會礦山地質專業委員會) since December 2011 and as member of the National Technical Committee on Gold of Standardization Administration of China (全國黃金標準化技術委員會) since May 2008.

Mr. Lyu completed the postgraduate course in political economics (政治經濟學專業研究生) from Shaanxi Normal University (陝西師範大學) in the PRC in July 2004 and the course on Business Management for Executives (工商管理總裁研修班) from the Tsinghua University Corporation Cooperation Committee (清華大學與企業合作委員會) in the PRC in September 2003, and a Master of Business Administration Degree from the University of Northern Virginia in the United States of America in December 2007. Mr. Lyu obtained qualification of a Senior Mining Engineer from the Sinosteel Corporation in August 2006, a Certified Senior Consultant from the Association for Science and Technology Consulting of Henan Province (河南省科技諮詢業協會) in June 2005, and a Certified CPM China Professional Manager from the Human Resources Development Association of China (中國人力資源開發研究會) in October 2010.

---

## DIRECTORS, SUPERVISORS AND SENIOR MANAGEMENT

---

**Mr. Gao Bo (高波)**, aged 56, is an Executive Director and Vice President of our Company. Mr. Gao is responsible for overseeing the operations and management of the Sepon Gold and Copper Mine. Mr. Gao joined our Group in December 2012.

Mr. Gao worked as a Director and Deputy General Manager of Jilong Mining from December 2010 to August 2013. Mr. Gao was a Director and Deputy General Manager of our Company from December 2012 to February 2016 and served as a Director and General Manager of our Company from February 2016 to January 2020. Mr. Gao then was a Director and Executive President of our Company from January 2020 to January 2023, and a Director and Vice President of our Company from January 2023 onwards.

Mr. Gao received a Bachelor of Business Administration degree in the Northeastern University (東北大學) in the PRC by way of online learning in January 2019, and a Master of Business Administration Degree from the Jilin University (吉林大學) in the PRC in December 2011. Mr. Gao obtained the qualification of a senior economist from the Bureau of Human Resources and Social Security of Jilin Province (吉林省人力資源和社會保障廳) in January 2013.

### Non-executive Directors

**Mr. Zhang Xudong (張旭東)**, aged 59, is currently a Non-executive Director of our Company. Mr. Zhang joined the Board in February 2020 as an Independent Director until January 2022. Mr. Zhang is mainly responsible for providing guidance and advice to the Board on the corporate and business strategies and strategic investments.

Mr. Zhang, a distinguished leader with nearly 40 years of experience in the financial services industry, has served in a series of senior management roles at renowned global investment firms and listed companies in Hong Kong and other jurisdictions. Illustratively, Mr. Zhang was Global Partner and Head of Greater China Securities and was a member of the China Management Committee at Goldman Sachs from September 2009 to December 2012.

Earlier in Mr. Zhang's illustrious career he was a Private Placement Service Analyst in New England Mutual Life Insurance Company from October 1990 to June 1994. Subsequently, from July 1994 to September 1996, Mr. Zhang worked as Vice President of the Corporate Finance Department of BankBoston N.A. From September 1996 to July 1998, Mr. Zhang served as Managing Director of the Corporate Finance Department and Chief Financial Officer of Asia Pacific Region in Koch Industries, Inc. — one of the largest and most prominent private companies in the United States — where he helped the company expand its operations in Asia Pacific. From 1999 to 2007, Mr. Zhang was Chairman and CEO of Anjia Group/Shanghai Anjia Investment Management Co., Ltd, an investment advisory and asset management services firm. From March 2007 to August 2009, Mr. Zhang served as Managing Director and Head of the Institutional Client Group, Debt and Equity for China and Head of Global Markets Equity for China at Deutsche Bank AG, a German multi-national investment bank and financial services company which is dual-listed on the Frankfurt Stock Exchange (symbol: DBK) and the New York Stock Exchange (symbol: DB), in Hong Kong. From January 2017 to November 2022,

---

## DIRECTORS, SUPERVISORS AND SENIOR MANAGEMENT

---

Mr. Zhang served as an Independent Director of Ping An Securities Company Limited (平安證券股份有限公司), which is a part of the Ping An Group, a large integrated financial group in China. Furthermore, since September 2018 Mr. Zhang has been serving as Chairman and Chief Executive Officer of Hua Kong Tsing Jiao Information Science (Beijing) Company Limited (華控清交信息科技(北京)有限公司), a data science company established by Tsinghua University that focuses on the research, development and implementation of data joint computation security technologies, products and infrastructures based on modern cryptography.

In addition, Mr. Zhang has served in various positions of trust, including serving on the Advisory Board of Shanghai Jiao Tong University, Antai College of Economics and Management, was appointed an Advisor for the China Securities Regulation Committee in 2003, was engaged by China Development Bank as advisor of securitization in the year 2004.

From February 2018 to November 2024, Mr. Zhang served as an Independent Non-executive Director of Lufax Holding Limited (陸金所控股公司), which is dual-listed on the New York Stock Exchange (symbol: LU) and on the Main Board of the Hong Kong Stock Exchange (stock code: 6623). Lufax Holding Limited is a leading financial service empowering institution for small and micro businesses in China and is an associate firm of the Ping An Group.

Mr. Zhang served as an independent non-executive director of Up Energy Development Group Limited (“**Up Energy**”) from September 2015 to June 2016. Up Energy is a limited company incorporated in Bermuda and formerly listed on the Stock Exchange (former stock code: 307) until January 2022. Up Energy together with its subsidiaries was principally engaged in the mining of coking coal, production and sales of raw coking coal, clean coking coal, and coking and chemicals products in the PRC. A winding up petition was filed against Up Energy in Hong Kong and Bermuda in March 2016 and May 2016 for the repayment of debt. Up Energy was subsequently delisted from the Stock Exchange in January 2022. The Hong Kong court issued a winding up order against Up Energy in May 2022. Mr. Zhang has confirmed that (i) he was not involved in the day-to-day management of Up Energy; (ii) there was no wrongful act on his part leading to the winding up proceedings of Up Energy; and (iii) he is not aware of any actual or potential claim that has been or would be made against him as a result of such winding up proceedings.

Mr. Zhang received his Master’s Degree in Community Economic Development from Southern New Hampshire University (formerly known as New Hampshire College) in September 1990.

### Independent Non-executive Directors

**Dr. Mao Jingwen (毛景文)**, aged 68, has since January 2022 been an Independent Non-executive Director of our Company responsible for supervising and providing independent advice to the Board. Since November 2017, Dr. Mao has been an academician at the Chinese Academy of Engineering (中國工程院).

Dr. Mao has dedicated his life to the study on mineral deposit model and metallogeny as well as mineral prospecting. Dr. Mao has made significant contributions to the breakthroughs in prospecting for concealed orebody in the PRC. Prior to joining our Group, Dr. Mao was the lecturer at the Department of Geological Exploration of Shanxi Mining Institute from 1978 to 1979. Dr. Mao then served successively as an Assistant Researcher, an Engineer and an Associate Researcher at the Institute of Mineral Resources under the Chinese Academy of Geological Sciences (中國地質科學院礦產資源研究所) from 1983 to 1992.

Dr. Mao has been serving as a researcher at the Institute of Mineral Resources under the Chinese Academy of Geological Sciences (中國地質科學院礦產資源研究所) since December 1992. Dr. Mao is also serving as the Independent Non-executive Director of Shenghe Resources Holding (盛和資源控股股份有限公司), a company listed on the Shanghai Stock Exchange (stock code: 600392) from April 2019 to December 2023, the Independent Non-executive Director of CITIC Metal Company Limited (中信金屬股份有限公司), a company listed on the Shanghai Stock Exchange (stock code: 601061) since July 2021, and the Independent Non-executive Director of Zijin Mining Group Company Limited.

Dr. Mao received a Bachelor's Degree in Mineral Deposits from Hebei GEO University (河北地質學院) in the PRC in 1978. Dr. Mao then received a Master's Degree in Mineral Deposits from the Chinese Academy of Geological Sciences (中國地質科學院研究生院) in 1982 in the PRC. Dr. Mao received a Doctorate Degree from the Graduate School of the Chinese Academy of Geological Sciences (中國地質科學院研究生院) in the PRC in 1988. Dr. Mao was awarded the Second Class Award of State Science and Technology Progress (國家科學技術進步二等獎) in 2008, Second Class Award of State Science and Technology Progress (國家科學技術進步二等獎) in 2012, Second Class Award of State Natural Science (國家自然科學二等獎) in 2016, and Second Class Award of State Natural Science (國家自然科學二等獎) in 2020.

**Dr. Shen Zhengchang (沈政昌)**, aged 64, is an Independent Non-executive Director of our Company and is responsible for supervising and providing independent advice to the Board. Dr. Shen joined our Group in January 2022 and has since served as an academician at the Chinese Academy of Engineering (中國工程院).

Dr. Shen has over 40 years of experience engaging in technical research, design, and engineering of selection and metallurgical process technology. From August 1982 to July 2019, Dr. Shen held positions as an Assistant Engineer, Engineer, Senior Engineer, Director of the Flotation Division, and Deputy Chief Engineer of BGRIMM Technology Group Company Limited (北京礦冶研究總院). Dr. Shen has successively served as the Chief Expert and Chief Scientist of BGRIMM Technology Group Company Limited (礦冶科技集團有限公司) since August 2019.

---

## DIRECTORS, SUPERVISORS AND SENIOR MANAGEMENT

---

Dr. Shen received a Bachelor's Degree in mining machinery from the Beijing Institute of Iron and Steel Engineering (北京鋼鐵學院) (currently known as the University of Science and Technology Beijing (北京科技大學)) in 1982 in the PRC. Dr. Shen then received a Master's Degree in mineral processing from Central South University of Technology (中南工業大學) in 1995 in the PRC. Dr. Shen received a Doctorate Degree from the University of Science and Technology Beijing (北京科技大學) in 2008 in the PRC. Dr. Shen was awarded the Third Class Award of State Technological Invention (國家技術發明獎三等獎) in 1995, Second Class Award of State Scientific and Technological Progress (國家科學技術進步獎二等獎) in 2000, Second Class Award of State Scientific and Technological Progress (國家科學技術進步獎二等獎) in 2001, and Second Class Award of State Scientific and Technological Progress (國家科學技術進步獎二等獎) in 2012.

**Mr. Hu Nailian (胡乃連)** (former name: 胡乃聯), aged 69, is an Independent Non-executive Director of our Group and is responsible for supervising and providing independent advice to the Board. Mr. Hu joined our Group in January 2022.

Mr. Hu is primarily engaged in teaching and researching within the realm of mining systems engineering, mine informationization and intelligent mines, mining technology and economics and others. Mr. Hu held academic positions as a Director of the Research Institute, head of the Department of Resource Engineering, and Deputy Dean of the School of Civil and Resource Engineering of the University of Science and Technology Beijing (北京科技大學) from 1996 to 2017, respectively.

Mr. Hu received a Bachelor's Degree in Mining Engineering and a Master's Degree in Engineering from the Beijing Institute of Iron and Steel Engineering in January 1982 and December 1985 in the PRC.

**Dr. Wong Yet Ping, Ambrose (黃一平)**, aged 45, is an Independent Non-executive Director of our Group and is responsible for supervising and providing independent advice to the Board. Dr. Wong joined our Group in August 2024.

Dr. Wong has a strong expertise and experience in finance, audit and risk management. Dr. Wong was part of the Audit department at KPMG China from August 2002 to October 2007, before taking on the role of the Vice President of Risk Analysis, Commercial Business Division of the Hong Kong and Shanghai Banking Corporation Limited from November 2007 to May 2009. Subsequently, he served at the Standard Setting Department of the Hong Kong Institute of Certified Public Accountants from May 2009 to February 2015, holding the position of Associate Director at the time of his departure. He served at KPMG China from March 2015 to January 2020 and was the Director of its Quality and Risk Management Department when he left the firm. He then assumed the position of departmental director at a regulatory authority in Hong Kong from January 2020 until August 2023. Since October 2023, he has also been serving as the Principal of Linkpath CPA Limited.

---

## DIRECTORS, SUPERVISORS AND SENIOR MANAGEMENT

---

At present, Dr. Wong is a certified public accountant and a Fellow Member of the Hong Kong Institute of Certified Public Accountants since July 2009 and March 2017 respectively, and a certified public accountant of CPA Australia since December 2005.

Dr. Wong received a Bachelor's Degree in commerce from the University of Melbourne in Australia in December 2001, a Doctorate Degree in Business Administration in the Hong Kong Polytechnic University in October 2023.

### SUPERVISORY COMMITTEE

The PRC Company Law requires a joint stock limited company to establish a board of supervisors. Our Supervisory Committee currently consists of three supervisors, one of whom is the chairman of our Supervisory Committee. Each of the supervisors is appointed for a term of three years which is renewable upon re-election and re-appointment.

Pursuant to the Articles of Association, the functions and powers of the board of supervisors include, among other things, reviewing the financial management of our Company, supervising the performance of our Directors and senior management members, and monitoring as to whether they comply with the law, administrative stipulations and Articles of Association when performing their duties, requesting Directors and senior management members to rectify actions detrimental to our Company's interests. In addition, our board of supervisors is responsible for exercising other powers, functions, and duties in accordance with the Articles of Association, and all applicable laws and regulations.

The following table sets out information in respect of the Supervisors.

<u>Name</u>	<u>Age</u>	<u>Position for the Current Tenure</u>	<u>Date of Appointment as a Supervisor</u>	<u>Date of Joining Our Group</u>	<u>Roles and Responsibility</u>
Mr. Cheng Zhenlong (成振龍) . . . . .	58	Chairman of the Supervisory Committee	January 4, 2022	December 14, 2012	Supervising the Board and daily operation of our Group
Mr. Ji Hongyong (季紅勇) . . . . .	50	Supervisor	January 4, 2022	March 30, 2017	Supervising the Board and daily operation of our Group
Mr. Liu Fengwu (劉鳳伍) . . . . .	50	Employee Representative Supervisor	January 2, 2024	February 7, 2017	Supervising the Board and daily operation of our Group

---

## DIRECTORS, SUPERVISORS AND SENIOR MANAGEMENT

---

**Mr. Cheng Zhenlong (成振龍)**, aged 58, has been a Supervisor of our Company since January 2022 and the Chairman of the Supervisory Committee of our Company since December 2022, respectively. Mr. Cheng is primarily responsible for supervising the Board and daily operation of our Group.

Mr. Cheng joined our Group in December 2012. Mr. Cheng served as Deputy General Manager and subsequently of General Manager of Jilong Mining from September 2013 to December 2022.

Mr. Cheng received a Bachelor's Degree in Mining Engineering from Shangdong Mining Institute (山東礦業學院) in July 1993. Mr. Cheng obtained qualification of Intermediate Mining Engineer from the Bureau of Human Resources and Social Security of Chifeng (赤峰市人力資源社會保障局) in December 2022.

**Mr. Ji Hongyong (季紅勇)**, aged 50, has been a Supervisor of our Company since January 2022 and is responsible for supervising the Board and daily operation of our Group. In addition to a supervisorship held with our Company, he was the General Manager of Hanfeng Mining from January 2023 to January 2024 and became the General Manager of Huatai Mining.

Mr. Ji joined our Group in March 2017. Upon joining our Group, Mr. Ji served as General Manager of Wulong Mining from April 2017 to December 2021. Mr. Ji also served as a Deputy Manager of the domestic mining department of our Company from July 2019 to January 2022. Mr. Ji served as General Manager of Hangfeng Mining from January 2023 to December 2023. Prior to joining our Group, Mr. Ji served as General Manager in Huinan Huibao Gold Mining Company Limited (輝南縣匯寶黃金礦業有限公司) from April 2013 to March 2017.

Mr. Ji received a Bachelor of Business Administration Degree from Beihua University (北華大學) in the PRC by way of online learning in July 2010. Mr. Ji obtained qualification of an Economist from the Ministry of Human Resources and Social Security of the PRC (中華人民共和國人力資源和社會保障部) in November 2013 and a Senior Mining Technician from the Ministry of Human Resources and Social Security of the PRC in September 2013.

**Mr. Liu Fengwu (劉鳳伍)**, aged 50, has been an Employee Representative Supervisor of our Company since January 2024. In addition to a supervisorship held with our Company, Mr. Liu has been serving as the Deputy Head of the Environmental Protection Safety Department and the Ventilation Engineer of Jilong Mining since February 2017 upon joining our Group.

Mr. Liu completed a course in mining machinery (礦山機電) in Inner Mongolia University of Science & Technology Mining College (內蒙古科技大學煤炭學院 (formerly known as 內蒙古煤炭工業學校) in the PRC in 1993. Mr. Liu obtained qualification of an Intermediate Mining Engineer from the Personnel Department of the Inner Mongolia Autonomous Region in September 2004 and an Intermediate Electromechanical Engineer from Bureau of Human Resources and Social Security of Chifeng in November 2012.

## DIRECTORS, SUPERVISORS AND SENIOR MANAGEMENT

### SENIOR MANAGEMENT

Our senior management is responsible for your day-to-day management and business operation.

The following table sets forth the key information in respect of the senior management.

## DIRECTORS, SUPERVISORS AND SENIOR MANAGEMENT

---

For biographical details of Ms. Yang Yi-fang (楊宜方), Mr. Lyu Xiaozhao (呂曉兆) and Mr. Gao Bo (高波), see “— Board of Directors — Executive Directors” in this section. The details of each of the other senior management members are set out below:

**Mr. Chen Zhiyong (陳志勇)**, aged 51, joined our Group in August 2018 and was appointed as the Vice President of our Company since September 2023. Mr. Chen is responsible for overseeing the governance and corporate affairs of Golden Star Resources and stakeholder relations and centralised procurement of GSWL.

Upon joining our Group, Mr. Chen has been serving as a Deputy General Manager of the international mining division of our Group and Director and Deputy General Manager of LXML from August 2018 to January 2021. Mr. Chen served as the Vice President of our Group from January 2021 to January 2022 and from January 2023 onwards. From January 2022 to September 2023, he served as our Director, and during the period from January 2022 to January 2023, he also served as our Executive President. Mr. Chen served as a Deputy General Manager of Soremi Investment Company Limited (索瑞米投資有限公司), a subsidiary company of Zhongjin Gold Corp Limited (中金黃金股份有限公司) (a company listed on the Shanghai Stock Exchange (stock code: 600489)), from February 2014 to August 2018.

Mr. Chen received a Bachelor’s Degree in Engineering from Hunan University (湖南大學) in 1996, and dual Master of Business Administration Degrees from Peking University in the PRC and National University of Singapore in Singapore in 2003.

**Mr. Wong Hok Bun Mario (黃學斌)**, aged 45, joined our Group in July 2023 and was appointed as the Chief Financial Officer in July 2023 and the Vice President of our Company in September 2023. Upon the Listing, Mr. Wong will also be the Company Secretary of our Company. Mr. Wong is primarily responsible for overseeing the finance and accounting matters and financial reporting of our Group.

Mr. Wong has 23 years of experience in auditing, accounting, financial management, and corporate finance. Prior to joining our Group, he worked at KPMG from August 2001 to August 2005 and from January 2006 to May 2008 with his last position being a Manager of the Audit Department. He then worked at Zijin Mining as a Deputy Manager of the Finance Department from September 2008 to December 2010 and served as the Financial Controller and the Company Secretary of its associated company Monterrico Metals Plc. He then served as the Group Financial Controller of CST Mining from December 2010 to July 2014. He also served consecutively as the Vice President from March 2015 to December 2015, the Company Secretary from July 2015 to August 2018, the Executive Director and the Chief Financial Officer from December 2015 to August 2018 of Theme International Holdings Limited (榮暉國際集團有限公司), a company listed on the Main Board of the Hong Kong Stock Exchange (stock code: 0990). Mr. Wong then served as the Chief Financial Officer and Company Secretary of Jinchuan Group International Resources Company Limited (金川集團國際資源有限公司), a company listed on the Main Board of the Hong Kong Stock Exchange (stock code: 2362), from November 2018 to July 2023 and September 2018 to July 2023, respectively. Concurrently, Mr. Wong served as an Independent Non-executive Director of Good Resources

## DIRECTORS, SUPERVISORS AND SENIOR MANAGEMENT

---

Holdings Limited, a company previously listed on the Main Board of the Hong Kong Stock Exchange until May 2022 (stock code: 0109) from May 2017 to June 2022. Since December 6, 2024, Mr. Wong has been appointed as an independent non-executive director of Theme International Holdings Limited.

Mr. Wong received a Bachelor's Degree in Economics and Finance from the University of Hong Kong in November 2001. He has been a Fellow Member of the Hong Kong Institute of Certified Public Accountants since July 2005, a Chartered Financial Analyst since December 2008 and a Member of The Australasian Institute of Mining and Metallurgy since May 2015.

**Mr. Zhou Xinbing (周新兵)**, aged 48, joined our Group in December 2012 and was appointed as the Vice President of our Company in January 2023. Mr. Zhou currently serves as Vice President of LXML, where he is responsible for overseeing the procurement, finance and human resources of, and supporting the mine clinic of, LXML at the PRC headquarters.

Mr. Zhou successively served as a Manager of the Securities and Legal Department of Jilong Mining, Manager of Legal Department and Representative of Securities Affairs of our Group from October 2010 to April 2013. Mr. Zhou then served as a Board Secretary of our Group from April 2013 to January 2022. Mr. Zhou then worked as an Executive President of our Group from January 2022 to January 2023.

Mr. Zhou received a Bachelor of Law Degree from Renmin University in the PRC in June 2011. Mr. Zhou obtained the qualifications to practice law from the Ministry of Justice in February 2008.

**Mr. Dong Shubao (董淑寶)**, aged 42, joined our Group in December 2012 and was appointed as the Board Secretary of our Group in January 2022. Mr. Dong is responsible for overall information disclosure and PRC investor relations of our Group.

Mr. Dong worked in the Marketing Department and Securities and Legal Department of Jilong Mining from March 2012 to December 2012. Mr. Dong successively served as a staff member, Deputy Manager, and Manager of the Securities and Legal Department of our Group from December 2012 to September 2018. Mr. Dong then held the positions as a Manager of Securities and Legal Department and Representative of Securities Affairs of our Group from September 2018 to January 2022.

Mr. Dong received a Bachelor's Degree in Political Science and Public Administration Studies from Shandong University of Technology (山東理工大學) in the PRC in July 2005, and a Master's Degree in International Politics from Central China Normal University (華中師範大學) in the PRC in June 2009. Mr. Dong obtained the Board Secretary Qualification granted by the Shanghai Stock Exchange in September 2013 and the qualification of Mining Rights Valuer from the Mineral Resources/Reserves and Property Assessment Professional in the PRC from the Mining Rights Valuer Association in the PRC in March 2023.

---

## DIRECTORS, SUPERVISORS AND SENIOR MANAGEMENT

---

### INTERESTS OF DIRECTORS, SUPERVISORS AND SENIOR MANAGEMENT

Save as disclosed above, (i) none of our Directors, Supervisors and members of senior management has been a director of any public company the securities of which are listed on any securities market in Hong Kong or overseas in the three years immediately preceding the date of this Prospectus; (ii) none of our Directors has any interests in any business, which competes or is likely to compete, either directly or indirectly, with our business which would require disclosure under Rule 8.10 of the Hong Kong Listing Rules; and (iii) none of our Directors, Supervisors and members of the senior management has any family or other relationships among any of them or with other Directors, Supervisors and members of the senior management.

Save as disclosed herein, to the best knowledge, information and belief of our Directors and Supervisors having made all reasonable enquiries, there was no other matter with respect to the appointment of our Directors and Supervisors that needs to be brought to the attention of the Shareholders and there was no information relating to our Directors and Supervisors that is required to be disclosed pursuant to Rule 13.51(2)(a) to (v) of the Hong Kong Listing Rules as of the Latest Practicable Date.

### COMPANY SECRETARY

**Mr. Wong Hok Bun Mario (黃學斌)** will become the Company Secretary of our Company upon Listing. For his biographical details, see “Senior Management” in this section.

### BOARD COMMITTEES

Our Board delegates certain responsibilities to various committees. In accordance with the relevant PRC laws and regulations and the Corporate Governance Code, Appendix C1 to the Hong Kong Listing Rules, our Company has formed four Board committees, namely the Strategy and Sustainability Committee, the Audit Committee, the Remuneration and Appraisal Committee and the Nomination Committee.

#### Strategy and Sustainability Committee

We have established a Strategy and Sustainability Committee which consists of Chairman Wang Jianhua, Ms. Yang Yi-fang, Mr. Lyu Xiaozhao, Mr. Zhang Xudong and Dr. Wong Yet Ping Ambrose, with Chairman Wang Jianhua being the Chairman of the Strategy and Sustainability Committee. The primary duties of the Strategy and Sustainability Committee include, but are not limited to, the following:

- conducting extensive research and making recommendations on the long-term strategic development plans of our Company, in particular, to enhance the Company’s sustainability in areas of ESG;

---

## DIRECTORS, SUPERVISORS AND SENIOR MANAGEMENT

---

- conducting research and providing recommendations on major investment activities and financing proposals that are subject to the approval by the Board in accordance with the Articles of Association of our Company;
- conducting extensive research and furnishing recommendations on major capital financing and asset management projects that are required to be approved by the Board as stipulated in the Articles of Association of our Company;
- conducting extensive research, evaluating and supplementing recommendations to pivotal ESG trends and associated risks and opportunities that our Company faces;
- overseeing the formulation and implementation of our Company's ESG objectives, among others, setting performance goals in respect of our Company's ESG management, tracking the progress towards the achievement of the goals and advising on the forthcoming measures to meet the goals; and
- dealing with other matters that are crucial to the development of our Company.

### **Audit Committee**

We have established an Audit Committee with written terms of reference in compliance with Rule 3.21 of the Hong Kong Listing Rules and paragraph C.4 and paragraph D.3 of Part 2 of the Corporate Governance Code, Appendix C1 to the Hong Kong Listing Rules. The Audit Committee consists of three Directors, namely Mr. Zhang Xudong, Mr. Hu Nailian and Dr. Wong Yet Ping Ambrose, who holds the appropriate professional qualifications as required under Rules 3.10(2) and 3.21 of the Hong Kong Listing Rules. Dr. Wong Yet Ping Ambrose serves as the chairman of the Audit Committee. The primary duties of the Audit Committee include, but are not limited to, the following:

- proposing the appointment or change of external auditors to our Board, and reviewing the qualification, independence and performance of the external auditors;
- guiding and assessing internal audit work;
- evaluating the performance of the audit function and personnel;
- examining the authenticity of financial information of our Company, reviewing financial reports and statements of our Company and giving comments on relevant matters;
- guiding, reviewing and evaluating the effectiveness of risk management and internal control system;
- evaluating whether our Company has any major internal control defaults or deficiencies;

---

## DIRECTORS, SUPERVISORS AND SENIOR MANAGEMENT

---

- reviewing results of internal investigations and responses from management in relation to any suspected dishonesty, non-compliances, or suspected violations of laws, rules and regulations;
- coordinating the communication among management, internal audit department, related departments and external audit agency; and
- dealing with other matters as required by laws, regulations, rules, Articles of our Company, terms of reference and applicable securities regulatory authorities, and other matters that are authorized by the Board.

### **Remuneration and Appraisal Committee**

We have established a Remuneration and Appraisal Committee with written terms of reference in compliance with paragraph E.1 of Part 2 of the Corporate Governance Code, Appendix C1 to the Hong Kong Listing Rules. The Remuneration and Appraisal Committee consists of four Directors, namely Mr. Hu Nailian, Ms. Yang Yi-fang, Dr. Mao Jingwen and Dr. Shen Zhengchang. Mr. Hu Nailian serves as the chairman of the Remuneration and Appraisal Committee. The primary duties of the Remuneration and Appraisal Committee include, but are not limited to, the following:

- formulating the overall remuneration policy and structure of our Company's Directors, Supervisors and members of the senior management, formulating proper and transparent remuneration procedures, and making suggestions to our Board;
- formulating individual remuneration plans for Directors, Supervisors and members of the senior management in accordance with the terms of reference of the job responsibilities, the importance of their positions as well as the remuneration benchmarks for the relevant positions in other comparable companies;
- reviewing and approving remuneration proposals of members of our senior management in accordance with our Company's policies and objectives as approved by our Board from time to time;
- making recommendations to our Board on remuneration of our non-executive Directors (including independent non-executive Directors), Supervisors, advisors to the Board (if any) and committees of our Board;
- reviewing and approving compensation payable to our executive Directors, Supervisors and members of senior management for loss or termination of office or appointment, so as to ensure that such compensation is consistent with the terms of relevant contracts, and if such compensation is not determined in accordance with the relevant contract terms, compensation should be fair, reasonable and not excessive;

---

## **DIRECTORS, SUPERVISORS AND SENIOR MANAGEMENT**

---

- examining the criteria of performance evaluation of Directors and the senior management of our Company, and conducting annual performance evaluation;
- supervising the implementation of the remuneration plan of the Company;
- reviewing and/or approving matters relating to share schemes under Chapter 17 of the Hong Kong Listing Rules; and
- dealing with other matters as required by laws, regulations, rules, Articles of our Company, terms of reference and applicable securities regulatory authorities, and other matters that are authorized by the Board.

### **Nomination Committee**

We have established a Nomination Committee with written terms of reference in compliance with paragraph B.3 of Part 2 of the Corporate Governance Code, Appendix C1 to the Hong Kong Listing Rules. The Nomination Committee consists of four Directors, namely Mr. Hu Nailian, Mr. Lyu Xiaozhao, Dr. Shen Zhengchang and Dr. Wong Yet Ping Ambrose. Mr. Hu Nailian serves as the chairman of the Nomination Committee. The primary duties of the Nomination Committee include, but are not limited to, the following:

- reviewing the structure, composition and diversity of our Board at least once a year with reference to our Company's business activities, scale of assets and shareholding structure, and making recommendations to our Board on any change in Board composition in accordance with our Company's strategies;
- making recommendations on the appointment and re-appointment of our Directors (in particular, the chairperson of our Board, and including our non-executive Directors and independent non-executive Directors) and our general manager;
- conducting extensive search and providing to our Board suitable candidates for Directors, general managers and other members of the senior management;
- evaluating the independence of our independent non-executive Directors, the performance of our Directors (including both executive and non-executive Directors) and whether our Directors have devoted sufficient time in performing their duties;
- developing corporate governance standards and procedures and monitoring the implementation of such standards and procedures, and making recommendations to our Board;

---

## **DIRECTORS, SUPERVISORS AND SENIOR MANAGEMENT**

---

- formulating and evaluating our Board diversity policy, and making disclosures in the corporate governance report (which shall be included as part of our annual report) the relevant policies, including the nomination procedures adopted by the nomination committee and standards for the election of our Board members; and
- dealing with other matters as required by laws, regulations, rules, Articles of our Company, terms of reference and applicable securities regulatory authorities, and other matters that are authorized by the Board.

### **BOARD DIVERSITY POLICY**

We are committed to promoting the culture of diversity in the Company. We have strived to promote diversity to the extent practicable by taking into consideration a number of factors in our corporate governance structure.

We have adopted the Board Diversity Policy which sets out the objective and approach to achieve and maintain diversity of our Board in order to enhance the effectiveness of our Board. Pursuant to the Board Diversity Policy, we seek to achieve Board diversity through the consideration of a number of factors, including but not limited to gender, age, race, cultural background, educational background, industry experience and professional experience. Our Directors have a balanced mix of knowledge and skills, including knowledge and experience in the areas of business management, mining and smelting, legal, economics, investment and accounting. Our independent non-executive Directors have solid experiences in the fields of mining, smelting and resources engineering, representing more than one-third of the members of our Board. Our Board Diversity Policy is well implemented as evidenced by the fact that there are Directors ranging from 45 years old to 69 years old and comprises one female Director and eight male Directors.

We will implement policies to ensure gender diversity when recruiting staff to develop a pipeline of female senior management and potential successors to the Board. We will strive to enhance our female representation and achieve appropriate balance of gender diversity with reference to the stakeholders' expectation and international and local recommended best practices. Furthermore, we will implement comprehensive programs aimed at identifying and training our female staff who display leadership and potential, with the goal of promoting them to the senior management or the Board.

Our Nomination Committee is responsible for ensuring the diversity of our Board members. After the Listing, our Nomination Committee will review the Board Diversity Policy from time to time, develop and review measurable objectives for implementing the policy, and monitor the progress on achieving these measurable objectives to ensure its continued effectiveness. We will disclose in our corporate governance report about the implementation of the board diversity policy on an annual basis.

---

## **DIRECTORS, SUPERVISORS AND SENIOR MANAGEMENT**

---

### **CONFIRMATION UNDER THE HONG KONG LISTING RULES**

Each of our Directors has obtained the legal advice in accordance with Rule 3.09D of the Hong Kong Listing Rules from DLA Piper Hong Kong by August 2024 and that each of our Directors has confirmed he/she understood his/her obligations as a director of a listed issuer.

Further, each of our independent non-executive Directors has confirmed:

- (a) his independence as regards each of the factors referred to in Rule 3.13(1) to (8) of the Hong Kong Listing Rules;
- (b) he has no past or present financial or other interest in the business of our Group or any connection with any core connected person of our Company, if any; and
- (c) that there are no other factors that may affect the independent non-executive Director's independence at the time of his appointment.

### **COMPENSATION OF DIRECTORS, SUPERVISORS AND SENIOR MANAGEMENT**

The Directors, Supervisors and senior management receive their remuneration in the form of Directors' or Supervisors' salary and allowances, contributions to our retirement benefit scheme, discretionary bonuses and other benefits in kind (if applicable).

For the three years ended December 31, 2023 and the nine months ended September 30, 2024, the total remuneration paid to our then Directors amounted to approximately RMB26.89 million, RMB20.34 million, RMB20.95 million, and RMB10.49 million, respectively.

For the three years ended December 31, 2023 and the nine months ended September 30, 2024, the total remuneration paid to our then Supervisors amounted to approximately RMB3.99 million, RMB2.24 million, RMB1.56 million, and RMB0.77 million, respectively.

Under the arrangement currently in force, we estimate the total compensation before taxation to be accrued to our Directors and our Supervisors in kind for their service for the year ending December 31, 2024 to be approximately RMB17.07 million. The actual remuneration of Directors and Supervisors in 2024 may be different from the expected remuneration.

For the three years ended December 31, 2023 and the nine months ended September 30, 2024, the total emoluments paid to the five highest paid individuals (including Directors and Supervisors) by our Group amounted to approximately RMB19.58 million, RMB15.90 million, RMB17.40 million, and RMB9.76 million, respectively.

For the three years ended December 31, 2023 and the nine months ended September 30, 2024, no fees were paid by our Group to any of the Directors, Supervisors or the five highest paid individuals as an inducement to join us or as compensation for loss of office.

---

## **DIRECTORS, SUPERVISORS AND SENIOR MANAGEMENT**

---

During the Track Record Period, no remuneration was paid by the Company to the Directors, Supervisors or the five highest-paid individuals as an inducement to join or upon joining the Company. No compensation was paid to by the Company, or receivable by, the Directors or former Directors of our Company, Supervisors or former Supervisors or the five highest paid individuals for the loss of office as director or supervisor of any member of our Group or for loss of any other office in connection with the management of the affairs of any member of our Group.

Save as disclosed above, none of the Directors or Supervisors waived their remuneration during the relevant period. The remuneration of Directors, Supervisors and senior management is determined with reference to factors including operating results of our Company, market comparables and the achievement of major operating indicators of our Company.

### **EMPLOYEE STOCK OWNERSHIP PLANS**

Our Company adopted the ESOPs to incentivize, among others, our Directors and senior management for their contribution to our Group and to attract, motivate, retain and reward suitable personnel in our Group. See paragraph headed “C. Further Information about our Directors, Supervisors and Substantial Shareholders — 4. Employee Stock Ownership Plans” in Appendix VII to this Prospectus for details.

### **CORPORATE GOVERNANCE**

Our Company aims to achieve high standards of corporate governance which are crucial to our development and safeguard the interests of our Shareholders. To accomplish this, we expect to comply with the Corporate Governance Code set out in Appendix C1 to the Hong Kong Listing Rules after the Listing.

As a joint stock company incorporated in the PRC with our A shares listed on the Shanghai Stock Exchange, we maintain a centralized management and control in the PRC. The decision-making processes, and the coordination and management of the implementation of the corporate matters are conducted by our Directors and management team from its PRC headquarters. The business activities of our Group’s subsidiaries in the PRC, Laos and Ghana are managed, monitored, and approved/disapproved by the Company from its PRC headquarters. Through our Group’s centralized management system, our Directors and senior management have full and timely access to books and records regarding our Group’s operations outside of the PRC. The principal books and records of our Company are also located and maintained in the PRC.

## DIRECTORS, SUPERVISORS AND SENIOR MANAGEMENT

---

### COMPLIANCE ADVISOR

We have appointed Goldlink Capital (Corporate Finance) Limited as our compliance advisor (the “**Compliance Advisor**”) pursuant to Rule 3A.19 of the Hong Kong Listing Rules. The Compliance Advisor will provide us with guidance and advice as to compliance with the Hong Kong Listing Rules and other applicable laws, rules, codes and guidelines. Pursuant to Rule 3A.23 of the Hong Kong Listing Rules, the Compliance Advisor will advise our Company in certain circumstances including:

- (a) before the publication of any regulatory announcement, circular or financial report;
- (b) where a transaction, which might be a notifiable or connected transaction, is contemplated, including share issues and share repurchases;
- (c) where we propose to use the proceeds of the Global Offering in a manner different from that detailed in this Prospectus or where our business activities, developments or results deviate from any forecast, estimate or other information in this Prospectus; and
- (d) where the Hong Kong Stock Exchange makes an inquiry to our Company regarding unusual movements in the price or trading volume of its listed securities or any other matters in accordance with Rule 13.10 of the Hong Kong Listing Rules.

Pursuant to Rule 3A.24 of the Hong Kong Listing Rules, the Compliance Advisor will, on a timely basis, inform our Company of any amendment or supplement to the Hong Kong Listing Rules that are announced by the Hong Kong Stock Exchange. The Compliance Advisor will also inform our Company of any new or amended law, regulation or code in Hong Kong applicable to us, and advise us on the continuing requirements under the Hong Kong Listing Rules and applicable laws and regulations.

The term of the appointment will commence on the Listing Date and is expected to end on the date on which our Company complies with Rule 13.46 of the Hong Kong Listing Rules in respect of our financial results for the first full financial year commencing after the Listing Date.

---

## SHARE CAPITAL

---

### BEFORE THE GLOBAL OFFERING

As of the Latest Practicable Date, the registered capital of our Company was RMB1,663,911,378, comprising 1,663,911,378 A Shares of nominal value RMB1.00 each, all of which are listed on the Shanghai Stock Exchange.

<u>Description of Shares</u>	<u>Number of Shares</u>	<u>Percentage of issued share capital</u>
A Shares . . . . .	1,663,911,378	100.00%
<b>Total</b> . . . . .	<u>1,663,911,378</u>	<u>100.00%</u>

### UPON COMPLETION OF THE GLOBAL OFFERING

Immediately following the completion of the Global Offering, assuming that the Offer Size Adjustment Option and the Over-allotment Option are not exercised, the entire share capital of our Company would be as follows:

<u>Description of Shares</u>	<u>Number of Shares</u>	<u>Approximate percentage of the enlarged issued share capital</u>
A Shares . . . . .	1,663,911,378	89.00%

<u>Description of Shares</u>	<u>Number of Shares</u>	<u>Approximate percentage of the enlarged issued share capital</u>
A Shares . . . . .	1,663,911,378	85.95%
H Shares issued pursuant to the Global Offering . .	<u>271,974,600</u>	<u>14.05%</u>
<b>Total</b> . . . . .	<u><u>1,935,885,978</u></u>	<u><u>100.00%</u></u>

### OUR SHARES

The H Shares in issue upon completion of the Global Offering and A Shares, are ordinary shares in the registered share capital of our Company. Apart from certain qualified domestic institutional investors in the PRC, the qualified PRC investors under the Shanghai-Hong Kong Stock Connect and the Shenzhen-Hong Kong Stock Connect and other persons who are entitled to hold our H Shares pursuant to relevant PRC laws and regulations or upon approvals of any competent authorities, H Shares generally cannot be subscribed for by or traded between legal or natural PRC persons. A Shares can only be subscribed for by and traded between legal or natural persons of the PRC, qualified foreign institutional investors or qualified foreign strategic investors or the Hong Kong and overseas investors under the Shanghai-Hong Kong Stock Connect and the Shenzhen-Hong Kong Stock Connect. H Shares may only be subscribed for and traded in Hong Kong dollars. A Shares, on the other hand, may only be subscribed for and traded in Renminbi. A Shares and H Shares are regarded as one class of Shares under our Articles of Association.

---

## SHARE CAPITAL

---

### RANKING

The differences between A Shares and H Shares, the provisions on class rights, the dispatch of notices and financial reports to Shareholders, dispute resolution, registration of Shares on different registers of shareholders, the method of Share transfer, appointment of dividend receiving agents and other matters are set out in our Articles of Association and summarized in the section headed “Summary of Articles of Association” in Appendix VI to this Prospectus.

Except for the differences above, A Shares and H Shares will rank *pari passu* with each other in all other respects and, in particular, will rank equally for all dividends or distributions declared, paid or made after the date of this Prospectus. All dividends in respect of the H Shares are to be calculated in Renminbi and paid by us in Hong Kong dollars whereas all dividends in respect of A Shares are to be paid by us in Renminbi. In addition to cash, dividends may be distributed in the form of Shares.

### CONVERSION OF OUR A SHARES INTO H SHARES FOR LISTING AND TRADING ON THE HONG KONG STOCK EXCHANGE

A Shares and H Shares are generally neither interchangeable nor fungible, and the market prices of our A Shares and H Shares may be different after the Global Offering. In accordance with the Guidelines on Application for “Full Circulation” of Domestic Unlisted Shares of H-share Companies (H股公司境內未上市股份申請“全流通”業務指引) (the “**Full Circulation Guidelines**”) published and implemented by the CSRC on November 14, 2019 and latest amended on August 10, 2023, domestic unlisted shares of H-share companies (including domestic unlisted shares held by domestic shareholders prior to the overseas listing, domestic unlisted shares further issued in the PRC after the overseas listing and unlisted shares held by foreign shareholders) could be listed and traded on the Hong Kong Stock Exchange after filing with the CSRC. The Full Circulation Guidelines are only applicable to domestic companies listed on the Hong Kong Stock Exchange and are not applicable to companies dual listed in the PRC and on the Hong Kong Stock Exchange. As of the Latest Practicable Date, there are no relevant rules or guidelines from the CSRC providing that A shares holders may convert A shares held by them into H shares for listing and trading on the Hong Kong Stock Exchange.

---

## SHARE CAPITAL

---

### APPROVAL FROM HOLDERS OF A SHARES REGARDING THE GLOBAL OFFERING

We have obtained approval from our holders of A Shares to issue H Shares and seek the listing of H Shares on the Hong Kong Stock Exchange. Such approval was obtained at the general meeting of our Company held on August 23, 2024 upon, among other things, the following major terms:

**(i) Size of the offer**

The proposed number of H Shares to be offered initially shall not exceed 15% of the total issued number of shares as enlarged by the H Shares to be issued pursuant to the Global Offering. The number of H Shares to be issued pursuant to the exercise of the Over-allotment Option shall not exceed 15% of the total number of H Shares to be offered initially pursuant to the Global Offering.

**(ii) Method of offering**

The method of offering shall be by way of a public offer for subscription in Hong Kong and an international offering to institutional and professional investors.

**(iii) Target investors**

The H Shares shall be issued to overseas professional organizations, institutions individual investors and other eligible investors.

**(iv) Price determination basis**

The issue price of the H Shares will be determined after due consideration of the interests of existing Shareholders, the acceptance of investors and issuance risks and in accordance with international practices through the demands for orders and book building process, subject to the domestic and overseas capital market conditions and by reference to the valuation level of comparable companies in domestic and overseas markets.

**(v) Validity period**

The issue of H Shares and listing of H Shares on the Hong Kong Stock Exchange shall be completed within 18 months from the date when the Shareholders' meeting was held on August 23, 2024.

There is no other approved offering plans for any other shares except for the Global Offering.

### SHAREHOLDERS' GENERAL MEETINGS

For details of circumstance under which our Shareholders' general meeting is required, see the section headed "Summary of Articles of Association" in Appendix VI to this Prospectus.

## SUBSTANTIAL SHAREHOLDERS

As of the Latest Practicable Date, our share capital was RMB1,663,911,378 comprising 1,663,911,378 A Shares. The following persons directly or indirectly control, or are entitled to exercise, or control the exercise of, 5% or more of our A Shares as of the Latest Practicable Date:

### LONG POSITIONS IN THE SHARES OF OUR COMPANY

Name of Shareholders	Nature of interest	Description of Shares	Number of Shares	Approximate percentage of interest in the total issued Share capital as of the Latest Practicable Date
Ms. Li <sup>(1),(2)</sup> . . . . .	Beneficial owner	A Shares	190,410,595	11.44%
	Interest in controlled corporation	A Shares	51,515,151	3.10%

*Notes:*

- (1) As of the Latest Practicable Date, Ms. Li pledged 34,000,000 A Shares, representing approximately 2.04% of our Company's total issued share capital, to a PRC licensed financial institution for her personal financing purpose.
- (2) Ms. Li the sole limited partner of Hanfeng Zhongxing accounting for approximately 99.00% of the committed capital contribution of Hanfeng Zhongxing. Accordingly, Ms. Li is deemed to be interested in the 51,515,151 A Shares held by Hanfeng Zhongxing. Meanwhile, as of the Latest Practicable Date, Hanfeng Zhongxing pledged 27,533,040 A Shares, accounting for approximately 1.65% of our Company's total issued share capital, to a PRC licensed financial institution for Ms. Li's personal financing purposes.

Immediately following the completion of the Global Offering:

- assuming the Offer Size Adjustment Option and the Over-allotment Option are not exercised, our share capital will comprise 1,663,911,378 A Shares and 205,652,000 H Shares representing 89.00% and 11.00% of the total share capital of our Company, respectively; and
- assuming the Offer Size Adjustment Option and the Over-allotment Option are fully exercised, our share capital will comprise 1,663,911,378 A Shares and 271,974,600 H Shares, representing 85.95% and 14.05% of the total share capital of our Company, respectively.

## SUBSTANTIAL SHAREHOLDERS

So far as our Directors are aware, immediately following the completion of the Global Offering (and the offering of any additional H Shares pursuant to the exercise of Offer Size Adjustment Option and/or the Over-allotment Option), the following persons will have an interest or short position in our Shares or underlying Shares of our Company which would be required to be disclosed to our Company and the Hong Kong Stock Exchange under the provisions of Divisions 2 and 3 of Part XV of the SFO or will, directly or indirectly, be interested in 10% or more of the nominal value of any class of share capital carrying rights to vote in all circumstances at general meetings of our Company:

### LONG POSITIONS IN THE SHARES OF OUR COMPANY

Shareholders	Nature of Interest	Description of Shares	Number of Shares	Assuming that the Offer Size Adjustment Option and the Over-allotment Option are not exercised		Assuming that the Offer Size Adjustment Option and the Over-allotment Option are fully exercised	
				Approximate percentage of interest in the A Shares	Approximate percentage of interest in the total issued Share capital	Approximate percentage of interest in the A Shares	Approximate percentage of interest in the total issued Share capital
Ms. Li <sup>(1)</sup>	Beneficial owner	A Shares	190,410,595	11.44%	10.18%	11.44%	9.84%
	Interest in controlled corporation	A Shares	51,515,151	3.10%	2.76%	3.10%	2.66%

*Note:*

- (1) Ms. Li and Mr. Wu Zengxiang are the sole limited partner and general partner of Hanfeng Zhongxing accounting for approximately 99.00% and 1.00% of the committed capital contribution of Hanfeng Zhongxing, respectively. The role of Mr. Wu is to represent Hanfeng Zhongxing in external business and operational matters upon the authorization of Ms. Li in accordance with the limited partnership agreement of Hanfeng Zhongxing. Mr. Wu does not, and cannot exercise control over Hanfeng Zhongxing; and taking in account of the above, the majority interest held by Ms. Li enables her to exercise *de facto* control of Hanfeng Zhongxing. Therefore, Mr. Wu has no control over the voting rights in share capital of our Company held by Hanfeng Zhongxing, nor the control of Hanfeng Zhongxing in the exercise of such voting rights. Those are rested solely with Ms. Li. Please refer to the section headed “Relationship with our Single Largest Shareholder Group — Our Single Largest Shareholder Group” in this Prospectus for details. Accordingly, Ms. Li is deemed to be interested in the 51,515,151 A Shares held by Hanfeng Zhongxing.

Save as disclosed herein, our Directors are not aware of any person who will, immediately following the Global Offering (and the offering of any additional H Shares pursuant to the exercise of the Offer Size Adjustment Option and/or the Over-allotment Option), have an interest or short position in our Shares or underlying Shares of our Company which would be required to be disclosed to our Company and the Hong Kong Stock Exchange under the provisions of Divisions 2 and 3 of Part XV of the SFO or will, directly or indirectly, be interested in 10% or more of the nominal value of any class of share capital carrying rights to vote in all circumstances at general meetings of our Company.

---

## FINANCIAL INFORMATION

---

*You should read the following discussion and analysis with our audited consolidated financial information as of and for the Track Record Period and Golden Star Resources' audited consolidated financial information from January 1, 2021 to January 31, 2022 (date of the acquisition), including the notes thereto, included in the Accountant's Report in Appendix IB to this Prospectus ("Historical Financial Information"). The consolidated financial information has been prepared in accordance with IFRS.*

*Potential investors should read the whole Historical Financial Information and not rely merely on the information contained in this section. The following discussion and analysis contain forward-looking statements that reflect our current views with respect to future events and financial performance. These statements are based on our assumptions and analysis in light of our experience and perception of historical events, current conditions, expected future developments, and other factors we believe are appropriate under the circumstances. However, whether actual outcomes and developments will meet our expectations and predictions depends on a number of risks and uncertainties. Past performance is no guarantee of future results. In evaluating our business, you should carefully consider the information provided in this Prospectus, including, but not limited to, the sections headed "Risk Factors" and "Business."*

### OVERVIEW

We are principally engaged in the mining, processing and sale of gold. As of the Latest Practicable Date, we owned and operated seven gold and polymetallic mines across the world, including China, Southeast Asia, and West Africa.

Leveraging our corporate culture and management concept of "Mutual Prosperity and Development", we experienced the fastest growth among major gold producers in China from 2021 to 2023, according to Frost & Sullivan, with a CAGR of 33.1% in gold production over that period. According to Frost & Sullivan, among gold producers in China, we had the greatest overseas presence both in terms of overseas assets contribution as of December 31, 2023 and in terms of overseas revenue contribution for the year ended December 31, 2023.

---

## FINANCIAL INFORMATION

---

### KEY FACTORS AFFECTING OUR RESULTS OF OPERATIONS

Set forth below are certain key factors which have historically affected our results of operations and may continue to impact our results in the future:

#### **Gold and Non-Ferrous Metal Prices and Demand in End Markets**

During the Track Record Period, a substantial portion of our revenue was derived from the sale of gold. Our revenue derived from sales of gold was 78.5%, 84.6%, 87.6%, 88.3% and 89.4% in 2021, 2022 and 2023 and the nine months ended September 30, 2023 and 2024. We also generated revenue from sales of non-ferrous metals for the same period. As such, fluctuations in gold and non-ferrous metal prices directly affect our results of operations. Please also see “Risk Factors — Changes in the market price for gold mining and other Mineral Resources, which in the past have experienced significant volatility, affect the profitability of our operations and the cash flows generated by those operations.”

We sell gold produced in and outside of China to Chinese domestic and international gold refineries, the prices of which is referenced to the market prices quoted by the Shanghai Gold Exchange and the London Bullion Market Association, respectively. The spot price of gold on the Shanghai Gold Exchange closely follows international gold prices. The international price of gold is affected by numerous factors over which we have no control, such as, for example, general supply of and demand for gold, gold sales and purchases by central banks, macroeconomic factors such as inflation and interest rates, geopolitical conflicts (for instance, the Russo-Ukrainian War and Israeli-Palestinian conflict), and speculative trading activity. Historically, international gold prices have experienced significant volatility. For example, according to Frost & Sullivan, in 2021, as the global economy started to recover from the COVID-19 pandemic and interest in gold investments decreased, the growth of the global gold spot price slowed down. However, in 2022, the Russia-Ukraine conflict led to a significant increase in the global gold price. Since November 2022, the gold price has climbed again due to market turbulence, rising recession expectations, slower interest rate hike prospects, and more gold purchases from central banks which underpinned the gold demand. Moreover, the price of gold in China is affected by Renminbi to U.S. dollar exchange rate. Historically, the gold price generally increases when inflation increases.

The market price of non-ferrous metals, such as copper, is largely subject to market forces, in particular, the supply and demand for such products. Price volatility of non-ferrous metals is also affected by the global and PRC economic cycles and fluctuations in the global currency markets. Any significant decrease in non-ferrous metal prices may materially and adversely affect our business, financial condition and results of operations.

## FINANCIAL INFORMATION

Our revenue also tends to fluctuate with the demand for our products from the end markets. Our gold products are used for, amongst other things, central bank gold reserves, including the PBOC gold reserves, investment, jewelries, and other industrial purposes, and our non-ferrous metals are widely applied in fields such as infrastructure, architecture, and device management. Accordingly, demand for our gold and non-ferrous metals is indirectly affected by the growth and fluctuations of these end markets.

During the Track Record Period, we obtained short-term financing via gold leasing contracts. Meanwhile, we entered into futures contracts to hedge the risk of gold price fluctuations. Furthermore, during the Track Record Period, we entered into hedging transactions, such as gold forward sales contracts and forward exchange contracts, to secure our revenue in view of the volatility in gold prices.

### Production Volume

Our results of operations are dependent on our production volume of gold and non-ferrous metals. In 2021, 2022 and 2023 and the nine months ended September 30, 2023 and 2024, in our gold production business in China we produced 67.2 koz, 74.6 koz, 106.8 koz, 73.0 koz, and 81.6 koz of gold, respectively. For the same period, in our gold production business in Laos we produced 193.0 koz, 199.5 koz, 193.2 koz, 140.9 koz, and 125.9 koz of gold, respectively. Also, in our gold production business in Ghana, which we acquired in January 2022, we produced 162.1 koz, 161.5 koz, 116.0 koz, and 138.0 koz of gold in 2022 and 2023 and the nine months ended September 30, 2023 and 2024, respectively. For more operating data of our mines, please see “Business — Our Gold Production Business in China,” “Business — Our Gold Production Business in Laos,” and “Business — Our Gold Production Business in Ghana”. The following table sets forth our gold production volume in relation to our gold mining businesses for the periods indicated:

	Year Ended December 31,			Nine Months Ended September 30,	
	2021	2022	2023	2023	2024
	<i>(koz)</i>				
Wulong Gold Mine (China) .	28.0	43.8	59.2	40	47
Jilong Gold Mine (China) . .	34.3	29.5	44.7	31	28
Huatai Gold Mine (China) . .	4.9	1.3	0.5	1	–
Jintai Gold Mine (China) . . .	–	–	2.4	–	7
Sepon Gold and Copper					
Mine (Laos) . . . . .	193.0	199.5	193.2	141	126
Wassa Gold Mine (Ghana) .	–	162.1	161.5	116	138
<b>Total</b> . . . . .	<b><u>260.2</u></b>	<b><u>436.2</u></b>	<b><u>461.5</u></b>	<b><u>329</u></b>	<b><u>346</u></b>

---

## FINANCIAL INFORMATION

---

Our production volume is affected by various factors, including, for example, the capacity and efficiency of our processing operations and labor and third-party contractors. Actual production volume may vary from our production plan, which may cause our actual results of operations to vary from our projected results. This is due to a variety of reasons, including, among others, actual gold and non-ferrous metal ores mined varying from estimates in grade, tonnage, metallurgical and other characteristics, decreases in metal prices which may cause Reserves that are currently economical to become uneconomical, and natural phenomena such as weather conditions, floods, droughts and rock falls, many of which are beyond our control. Please also see “Risk Factors — Risks Relating to Our Business and Industry — We may not be able to meet our estimated gold and other minerals production volume”.

### **Cost of Sales and Recovery Rate**

Our cost of sales primarily comprises materials expense, labor expense, electricity fees, depreciation and amortization, and others. Materials expense primarily consists of explosive materials, diesel and other materials used in our operations. Labor expense refers to the salaries and benefits paid to personnel involved in our production activities. Depreciation and amortization costs are related to the depreciation of fixed assets and amortization of intangible assets. Certain major components of our operating cash costs, such as mining and processing related costs, directly relate to our mining and production volume, and increases in our mining and production volume will lead to increases in such costs. Additional capital expenditure will increase our depreciation and amortization costs, which will in turn increase our cost of sales. See “— Description of Key Statement of Profit or Loss Items — Cost of sales” and “Risk Factors — Risks Relating to Our Business and Industry — We may not be able to maintain adequate, uninterrupted, timely and specification-compliant supplies of utilities, materials, equipment and service at commercially acceptable prices, or at all.”

Materials expense is the largest component of our cost of sales, which represented 39.5%, 47.5%, 41.2%, 42.5% and 40.6% of our total cost of sales for the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2023 and 2024, respectively. The increase of materials expense in 2022 was affected by: (i) our acquisition of Golden Star Resources in January 2022; and (ii) the increase in raw materials prices, affected by inflation and the COVID-19 pandemic. The decrease of materials expense in 2023 was affected by our cost reduction and cost control measures at our gold mines. For our operations in China, we procured most of the principal materials used in our production from local suppliers, including explosive materials, diesel, sodium cyanide, and cement. For our operations in Laos, we procured diesel fuel, electricity, and certain low-value consumables from local suppliers, while we procured industrial chemicals and reagents, explosive materials, equipment maintenance spare parts, and other consumables from overseas suppliers. For our operations in Ghana, we procured various materials, such as diesel oil, electricity, certain low-value consumables, bulk industrial chemicals and reagents, explosive materials, equipment maintenance spare parts, and other major consumables from domestic and overseas suppliers.

---

## FINANCIAL INFORMATION

---

Our mining efficiency is also measured by recovery rate, in particular, the gold processing recovery rate in the PRC, Laos and Ghana. In 2023, the gold processing recovery rate of Wulong Gold Mine, Jilong Gold Mine, Huatai Gold Mine and Jintai Gold Mine reached 91.3%, 97.7%, 92.8% and 87.2%, respectively, and the gold processing recovery rate of the Wassa Gold Mine reached 95.5% for the same period. In the nine months ended September 30, 2024, Sepon Gold and Copper Mine's gold recovery rate reached 64.4%. Our processing recovery rate is affected by both the grade and mineralization characteristic ores and the processing process. A lower recovery rate would result in increased cost of sales. For more on the recovery rates of our mines, please see "Business — Our Gold Production Business in China — Operation Performance", "Business — Our Gold Production Business in Laos — Operation Performance", and "Business — Our Gold Production Business in Ghana — Operation Performance". We aim to continuously improve our recovery rate, especially the gold recovery rate of the Sepon Gold and Copper Mine, through technological improvements.

### **Acquisitions**

We acquired Golden Star Resources and Xinhenghe Mining during the Track Record Period, which significantly improved our financial performances and results of operations in gold mining. For more details, please see "Business — Our Gold Production Business in China" and "Business — Our Gold Production Business in Ghana". We will continue to expand our footprints in the PRC and the global mining market. Please see "Business — Our Strategies" and "Future Plans and Use of Proceeds" for more details about our expansion plans.

Our overall growth is driven by both ongoing growth and strategic acquisitions. We believe that our ability to successfully execute our acquisition strategies and integrate the acquired operations with our existing operations have contributed to our business and results of operations. Going forward, we will continue to consider strategic acquisitions. Our ability to identify quality acquisition targets, negotiate favorable terms, and integrate and optimize acquired operations will continue to impact our business, financial condition and results of operations.

### ***Acquisition of Xinhenghe Mining***

On December 30, 2022, we entered into an equity transfer agreement with Yunnan Yuanhao Mining Co., Ltd. (雲南源浩礦業有限公司), certain individual shareholders of Xinhenghe Mining and Xinhenghe Mining, pursuant to which we acquired a 51% equity interest in Xinhenghe Mining. The cash consideration was approximately RMB61.2 million in aggregate and determined by reference to the valuation of the assets of the acquired entity. Xinhenghe Mining holds a 90% equity interest in Jintai Mining, the core assets of which is the Xidengping Mine, a gold mine in Yunnan.

---

## FINANCIAL INFORMATION

---

The acquisition was completed on January 9, 2023, upon which Xinhenghe Mining became our non-wholly owned subsidiary. All necessary approvals from the relevant authorities have been obtained. We began consolidating the profit and loss accounts of Xinhenghe Mining from January 9, 2023, and our results of operations for the Track Record Period reflected the consolidation of Xinhenghe Mining' results from January 9, 2023 to September 30, 2024.

### *Acquisition of Golden Star Resources*

In January 2022, we acquired a 62% equity interest in Golden Star Resources, which in turn indirectly holds a 90% equity interest in GSWL, for a consideration of in aggregate approximately US\$291.0 million, which was fully settled in 2022. To finance the acquisition of Golden Star Resources, we incurred long-term borrowings of in aggregate RMB1,104.0 million at an interest rate of 4.95% per annum. The acquisition was completed on January 31, 2022, upon which Golden Star Resources became our non-wholly owned subsidiary. The acquisition had a significant impact on our results of operations in the financial year ended December 31, 2022.

We consolidated the accounts of Golden Star Resources from February 1, 2022, and our results of operations for the Track Record Period reflected the consolidation of Golden Star Resources' results from February 1, 2022 to September 30, 2024. Partially due to such acquisition and consolidation, the revenue of our gold mining business increased by 78.7% from RMB2,968.7 million for the year ended December 31, 2021 to RMB5,304.7 million for the year ended December 31, 2022. For the same reason, the cost of sales increased by 77.1% from RMB2,525.1 million for the year ended December 31, 2021 to RMB4,471.9 million for the year ended December 31, 2022. As a result of the foregoing, the gross profit of our gold mining business increased by 68.7% from RMB868.7 million for the year ended December 31, 2021 to RMB1,465.8 million for the year ended December 31, 2022. We recorded financial income of RMB20.4 million in 2021, but partially due to the acquisition we recorded finance costs of RMB176.5 million in 2022, among which our interest expenses increased from RMB14.2 million in 2021 to RMB176.5 million in 2022. Our income tax expense increased from RMB157.0 million for the year ended December 31, 2021 to RMB328.1 million for the year ended December 31, 2022. This was partially due to a higher effective income tax rate in Ghana and the losses incurred in the Ghana gold streaming business that was not tax deductible. For detailed analysis of the relevant year-on-year financials comparisons, see “— Year Ended December 31, 2022 Compared to Year Ended December 31, 2021” below.

Partially due to the acquisition: (i) our other intangible assets increased from RMB856.5 million as of December 31, 2021 to RMB6,562.7 million as of December 31, 2022 which mainly reflects the exploration and mining rights of Golden Star Resources; (ii) our property, plant and equipment increased from RMB3,159.7 million as of December 31, 2021 to RMB5,994.3 million as of December 31, 2022; and (iii) our total liabilities increased from RMB3,052.6 million as of December 31, 2021 to RMB10,136.0 million as of December 31, 2022.

---

## FINANCIAL INFORMATION

---

The consolidated financial statements and the accompanying notes of Golden Star Resources from January 1, 2021 to January 31, 2022 (date of the acquisition) are set forth in Accountants' Report included in Appendix IB to this Prospectus. For more details of Golden Star Resources' financial information, see “— Financial Information of Golden Star Resources”.

### **Exchange Rates**

The presentation currency of our consolidated financial statements presentation is Renminbi, which is also our Company's functional currency. However, procurement and sales activities of our two overseas subsidiaries, LXML and GSWL, are in U.S. dollars.

Major events and occurrences, domestic, international or economic in nature, can affect foreign exchange rates, and, consequently, our operations. These events include changes in inflation rates, interest rates, government debt, political stability, health crises, or economic events such as trade wars or recessions. Exchange rate fluctuations have affected our profitability and resulted in foreign currency exchange losses of our foreign currency-denominated assets and liabilities in the past. For the years ended December 31, 2021, 2022, and 2023 and the nine months ended September 30, 2023 and 2024, we recognized foreign exchange gains of RMB86.2 million, RMB27.2 million, RMB20.2 million, exchange gains of RMB18.9 million and exchange gains of RMB27.8 million, respectively.

As a company with global operations, our future results of operations will continue to be affected by fluctuations in exchange rates. We monitor the scale of our foreign currency transactions and foreign currency assets and liabilities. We generally hold a minimal amount of cash in local currencies to avoid exposure to local currency fluctuation and only purchase local currencies when local payment is necessary. We are able to utilize all Ghanaian Cedis received from Bank of Ghana or Lao Kips and Ghanaian Cedis converted from U.S. dollars revenue for our operating and capital expenses within a short period of time, in order to maintain our cash in local currencies at minimal level. Please also see “Risk Factors — Risks Relating to Our Business and Industry — We are subject to risks related to exchange rate fluctuations, because our gold product from overseas operation is priced in U.S. dollars and our operating costs and expenses are incurred in different currencies, including, but not limited to, Lao Kip and Ghanaian Cedi.”

### **Expansion and Capital Expenditures**

According to Frost & Sullivan, the gold industry is a capital-intensive sector that demands substantial investment in numerous equipment, land resources, and adherence to strict safety production and environmental protection standards. It necessitates the implementation of resource exploration, recycling processes, merger and acquisition endeavors to secure sustainable and abundant mine Reserves. Additionally, investing in advanced technology is crucial to address the challenges and intricacies associated with gold mining, stemming from declining gold grades and mining at greater depths. Our existing mines in the PRC and overseas are situated in favorable mineralization environments, showcasing significant exploration

---

## FINANCIAL INFORMATION

---

prospects across the majority of the mining regions, and we aim to further maximize the potential of our existing mines by continuously expanding production and continuously investing in new technologies to improve recovery rates. Besides, we may incur costs from potential acquisitions of high-quality gold assets for a robust and sustainable growth. For details, see “Business — Business strategies”.

Our increasing capital expenditures during the Track Record Period reflected our expansion investments to fuel and support our expected future growth. Our capital expenditures amounted to approximately RMB1,559.9 million, RMB1,903.1 million, RMB1,487.4 million, RMB1,102.2 million and RMB1,125.4 million for the years ended 31 December 2021, 2022, and 2023 and the nine months ended September 30, 2023 and 2024, respectively, representing approximately 41.2%, 30.4%, 20.6%, 21.8% and 18.1% of our revenue, respectively, for the same period. See “— Capital Expenditure” for a breakdown of our total capital expenditure during the Track Record Period.

The costs associated with our capital expenditure plans could have a significant impact on our financial condition and results of operations, particularly if we are unable to generate sufficient gold production and sales to recover our investment or generate a profit. Therefore, our management must consistently assess the necessary capital investments to achieve our sustainable production objectives and boost revenue growth, while taking into account competing cash needs and the subsequent increase in cost of sales due to higher depreciation costs. Furthermore, acquisitions and strategic investments bring about various risks, such as operational integration hurdles, challenges in assimilating cultures and personnel, diversion of management focus, risks associated with entering new markets, and the potential loss of key personnel from the acquired businesses. These factors could have a significant and adverse impact on our business, financial standing, and operational outcomes.

### **Government Control and Policies on the Gold Mining Industry**

The local, provincial, and central authorities of the PRC, Laos, and Ghana each exercise a substantial degree of control over the gold and mining industry within their respective territories. Our operations in these countries are subject to a range of national laws, regulations, policies, standards, and requirements, particularly concerning exploration, mining, production, taxation, labor standards, occupational health and safety, waste treatment, environmental protection, and operational management.

In each of these jurisdictions, the respective governments hold full authority to grant, renew, and terminate the permits and licenses for exploration, mining, and production activities. While we anticipate being able to renew our licenses and permits in the PRC, Laos, and Ghana, any inability to do so for any reason could materially and adversely affect our business and results of operations.

## FINANCIAL INFORMATION

### SENSITIVITY ANALYSIS

Our results of operations is principally affected by gold price and sales volume. The tables below set forth the impact of fluctuation of gold price on our results of operations for the period indicated.

#### For the year ended December 31, 2021

*(Renminbi in millions, except for percentages)*

Hypothetical fluctuation of gold price/ sales volume . . . . .	-20%	-15%	-10%	-5%	5%	10%	15%	20%
Change in gross profit . . . . .	-594	-445	-297	-148	148	297	445	594
Change in gross profit margin . . . . .	-12.4%	-8.9%	-5.7%	-2.7%	2.5%	4.9%	7.0%	9.1%
Change in profit from operation . . . . .	-594	-445	-297	-148	148	297	445	594
Change in operating margin . . . . .	-14.8%	-10.6%	-6.8%	-3.3%	3.0%	5.8%	8.4%	10.8%

#### For the year ended December 31, 2022

*(Renminbi in millions, except for percentages)*

### BASIS OF PREPARATION

Our historical financial information has been prepared in accordance with IFRS, which comprise all standards and interpretations approved by the International Accounting Standards Board. All reporting standards under IFRS effective for the accounting period commencing from January 1, 2024, together with the relevant transitional provisions, have been adopted early by our Group in the preparation of the historical financial information throughout the relevant periods. The historical financial information has been prepared under the historical cost convention. All intra-group transactions and balances have been eliminated on consolidation.

### Possible impact of amendments, new standards and interpretations issued but not yet effective for the Track Record Period

Our Group has not applied the following new and revised IFRS reporting standards (which have been issued but are not yet effective) in our audited consolidated financial statements:

Amendments to IAS 21 . . . . .	<i>Lack of Exchangeability</i> <sup>1</sup>
Amendments to IFRS 10 and IAS 28 . .	<i>Sale or Contribution of Assets between an Investor and its Associate or Joint Venture</i> <sup>2</sup>
IFRS 18 . . . . .	<i>Presentation and Disclosure in Financial Statements</i> <sup>4</sup>
IFRS 19 . . . . .	<i>Subsidiaries without Public Accountability: Disclosures</i> <sup>4</sup>
Amendments to IFRS 9 and IFRS 7 . . .	<i>Amendments to the Classification and Measurement of Financial Instruments</i> <sup>3</sup>

---

## FINANCIAL INFORMATION

---

*Notes:*

1. Effective for annual periods beginning on or after January 1, 2025.
2. No mandatory effective date yet determined but available for adoption.
3. Effective for annual periods beginning on or after January 1, 2026.
4. Effective for annual periods beginning on or after January 1, 2027.

We do not anticipate the application of the new and revised IFRS reporting standards to have a material impact on our Group's financial position and financial performance in the foreseeable future.

### **MATERIAL ACCOUNTING POLICIES, SIGNIFICANT ACCOUNTING JUDGMENTS AND ESTIMATES**

Some of our accounting policies require us to apply estimates and assumptions and complex judgments relating to accounting items. The estimates and assumptions we use and the judgments we make in applying our accounting policies have a significant impact on our financial position and operating results. Our management continually evaluates such estimates, assumptions and judgments based on past experience and other factors, including industry practices and expectations of future events that are believed to be reasonable under the circumstances. There has not been any material deviation between our management's estimates or assumptions and actual results, and we have not made any material changes to these estimates or assumptions during the Track Record Period. We do not expect any material changes in these estimates and assumptions in the foreseeable future.

When reviewing our consolidated financial statements, you should consider, amongst other things: (i) information about our material accounting policy; (ii) the judgments and other uncertainties affecting the application of such policies; and (iii) the sensitivity of reported results to changes in conditions and assumptions. Information about our material accounting policy, estimates and judgments, which are important for an understanding of our financial condition and results of operations, including any changes in accounting policy and disclosures, are set forth in detail in Notes 4 and 5 to the Accountants' Report in Appendix IA to this Prospectus.

#### **Revenue recognition**

##### ***Revenue from contracts with customers***

Revenue from contracts with customers is recognized when control of goods or services is transferred to the customers at an amount that reflects the consideration to which our Group expects to be entitled in exchange for those goods or services.

---

## FINANCIAL INFORMATION

---

When the contract contains a financing component which provides the customer with a significant benefit of financing the transfer of goods or services to the customer for more than one year, revenue is measured at the present value of the amount receivable, discounted using the discount rate that would be reflected in a separate financing transaction between our Group and the customer at contract inception. When the contract contains a financing component which provides our Group with a significant financial benefit for more than one year, revenue recognized under the contract includes the interest expense accreted on the contract liability under the effective interest method. For a contract where the period between the payment by the customer and the transfer of the promised goods or services is one year or less, the transaction price is not adjusted for the effects of a significant financing component, using the practical expedient in IFRS 15.

### *Sale of products*

Revenue from the sale of products is recognized at the point in time when control of the asset is transferred to the customer, generally on delivery of the products.

### *Metal streaming arrangement*

There is a Metal Streaming Arrangement in GSR acquired by our Group in 2022. Under the business arrangement, GSR receives a payment in advance and the counterparty obtains a certain proportion of deliverable gold within the entire life of the designated mine. The counterparty is also required to make an additional payment based on a certain proportion of the market price when GSR delivers the goods within an agreed period in the future. The payment GSR receives in advance is considered to be part of the counterparty's prepayment for the future goods with uncertain but predictable quantity and is recognized as a contract liability upon receipt. Each unit of the delivered goods represents a separate performance obligation, and revenue is recognized at the point in time when control of the goods is transferred. Considering the timing of satisfaction of delivery obligations throughout the entire life of the mines, the contract liability above is considered to have a financing component. In addition, because the quantity of all delivered goods available to the counterparty depends on the mining reserves of the metals throughout the entire life of the mines, the management will estimate the change of total metal reserves and change of planned exploitation reserves on a regular basis and adjustments shall be made to the revenue and finance costs accordingly.

### *Variable consideration*

In our Group's Metal Streaming Arrangement, because the quantity of all delivered goods available to the counterparty depends on the mining reserves of the metals throughout the entire life of the mine, the price allocated to goods delivered per unit is considered as variable consideration. When the estimated total metal reserves and planned exploitation reserves of the mine change, it is necessary to recalculate the price of goods delivered per unit, and in the period of changes occurred, adjust the revenue and finance costs recognized in the same period according to the updated price. Our Group determines the best estimate of variable consideration by the expected value. The transaction price including variable consideration is only to the extent that it is highly probable that a significant reversal in the amount of cumulative revenue recognized will not occur when the uncertainty associated with the variable consideration is subsequently resolved.

---

## FINANCIAL INFORMATION

---

### *Contracts for the rendering of services*

A contract for the rendering of services between our Group and the customer usually includes performance obligations of dismantling waste electronic products and electrical appliances. Our Group recognized the fund subsidy income, which was related to the dismantling volume, by multiplying the dismantling type and quantity of the scrapped electronic products and electrical appliances by the corresponding fund subsidy price.

### *Revenue from other sources*

Rental income is recognized on a time proportion basis over the lease terms. Variable lease payments that do not depend on an index or a rate are recognised as income in the accounting period in which they are incurred.

### **Property, plant and equipment and depreciation**

Property, plant and equipment are stated at cost less accumulated depreciation and any impairment losses. The cost of an item of property, plant and equipment comprises its purchase price and any directly attributable costs of bringing the asset to its working condition and location for its intended use.

Expenditure incurred after items of property, plant and equipment have been put into operation, such as repairs and maintenance, is normally charged to profit or loss in the period in which it is incurred. In situations where the recognition criteria are satisfied, the expenditure for a major inspection is capitalized in the carrying amount of the asset as a replacement. Where significant parts of property, plant and equipment are required to be replaced at intervals, our Group recognizes such parts as individual assets with specific useful lives and depreciates them accordingly.

Depending on the nature of the item of property, plant and equipment, depreciation is calculated on the straight-line basis to write off the cost of each asset to its residual value over its estimated useful life or it is calculated on the Units of Production (“UOP”) basis to write off the cost of the asset proportionately to the extraction of the proven and probable ore reserves. The estimated useful lives and annual depreciation rates for the assets depreciated on the straight-line basis are as follows:

	<u>Estimated useful lives</u>	<u>Annual depreciation rates</u>
Buildings . . . . .	20 years	4.75%
Machinery . . . . .	5 to 10 years	9.50% to 19.00%
Mobile equipment . . . . .	5 to 10 years	9.50% to 19.00%
Electronic equipment and others . . . . .	3 to 5 years	19.00% to 31.67%

---

## FINANCIAL INFORMATION

---

Where parts of an item of property, plant and equipment have different useful lives, the cost of that item is allocated on a reasonable basis among the parts and each part is depreciated separately. Residual values, useful lives and the depreciation method are reviewed, and adjusted if appropriate, at least at the end of each of the Relevant Periods.

An item of property, plant and equipment including any significant part initially recognized is derecognized upon disposal or when no future economic benefits are expected from its use or disposal. Any gain or loss on disposal or retirement recognized in the statement of profit or loss in the years/periods the asset is derecognized is the difference between the net sales proceeds and the carrying amount of the relevant asset.

Construction in progress is stated at cost less any impairment losses and is not depreciated. Cost comprises the direct costs of construction and capitalized borrowing costs on related borrowed funds during the period of construction. Construction in progress is reclassified to the appropriate category of property, plant and equipment when completed and ready for use.

### **Exploration and mining rights**

Exploration and evaluation assets are stated at cost less impairment losses. Exploration and evaluation includes costs of geological prospecting for technical consultancy and costs of feasibility study for commercial development which incurred in the surroundings, outer ring and deep areas of the existing or externally acquired mineral properties, and costs of drilling, trench sampling and other associated activities. Such expenditures may be capitalized when the mineral properties are reasonably determined to be commercially available and recognized as intangible assets after obtaining mining rights or permits, which will be amortized under the units-of-production method. If any construction was abandoned in the development phase or belongs to the productive exploration, all costs shall be written off and recognized in profit or loss for the current period.

Impairment reviews of exploration and evaluation assets are undertaken if events or changes in circumstances indicate a potential impairment. The carrying value of exploration and evaluation assets is compared to the recoverable amount, which is the higher of value-in-use and the fair value less costs of disposal. For the purposes of assessing impairment, assets are grouped at the lowest levels for which there are separately identifiable cash-generating units. Exploration and evaluation assets that suffered impairment are reviewed for possible reversal of the impairment at each reporting date.

Exploration rights are stated at cost less impairment losses. Exploration rights include the cost of acquiring exploration rights.

Mining rights are stated at cost less accumulated amortisation and any impairment losses. Mining rights include the cost of acquiring mining licences, exploration rights and exploration and evaluation assets upon determination that an exploration property is capable of commercial production, and the cost of acquiring interests in the mining reserves of existing mining properties. The mining rights are amortised in accordance with the production plans of the entities concerned and the proven and probable mineral reserves of the mines using the UOP method. Mining rights are written off to profit or loss if the mining property is abandoned.

---

## FINANCIAL INFORMATION

---

### **Inventories**

Inventories are stated at the lower of cost and net realizable value. Cost is determined on the weighted average basis and, in the case of work in progress and finished goods, comprises direct materials, direct labor and an appropriate proportion of overheads. Net realizable value is based on estimated selling prices less any estimated costs to be incurred to completion and disposal.

### **Provisions**

A provision is recognized when a present obligation (legal or constructive) has arisen as a result of a past event and it is probable that a future outflow of resources will be required to settle the obligation, provided that a reliable estimate can be made of the amount of the obligation.

When the effect of discounting is material, the amount recognized for a provision is the present value at the end of each of the Relevant Periods of the future expenditures expected to be required to settle the obligation. The increase in the discounted present value amount arising from the passage of time is included in finance costs in profit or loss.

Provisions for our Group's obligations for environmental rehabilitation and restoration of mines are based on estimates of required expenditure at the mines in accordance with the local rules and regulations where the mines are located. Our Group estimates its liabilities for final reclamation and mine closure based upon detailed calculations of the amount and timing of the future cash expenditure for the required work. Spending estimates are escalated for inflation, then discounted at a discount rate that reflects current market assessments of the time value of money and the risks specific to the liability such that the amount of provision reflects the present value of the expenditures expected to be required to settle the obligation. Our Group records a corresponding asset in the period in which the liability is incurred. The liability is accreted to the projected expenditure date. As changes in estimates occur (such as mine plan revisions, changes in estimated costs, or changes in the timing of the performance of reclamation activities), the revisions to the obligation and the asset are recognised at the appropriate discount rate.

### **Impairment of financial assets**

Our Group recognized an allowance for expected credit losses ("ECLs") for all debt instruments not held at fair value through profit or loss. ECLs are based on the difference between the contractual cash flows due in accordance with the contract and all the cash flows that our Group expects to receive, discounted at an approximation of the original effective interest rate. The expected cash flows will include cash flows from the sale of collateral held or other credit enhancements that are integral to the contractual terms.

---

## FINANCIAL INFORMATION

---

### *General approach*

ECLs are recognized in two stages. For credit exposures for which there has not been a significant increase in credit risk since initial recognition, ECLs are provided for credit losses that result from default events that are possible within the next 12 months (a 12-month ECL). For those credit exposures for which there has been a significant increase in credit risk since initial recognition, a loss allowance is required for credit losses expected over the remaining life of the exposure, irrespective of the timing of the default (a lifetime ECL).

At each reporting date, our Group assesses whether the credit risk on a financial instrument has increased significantly since initial recognition. When making the assessment, our Group compares the risk of a default occurring on the financial instrument as at the reporting date with the risk of a default occurring on the financial instrument as at the date of initial recognition and considers reasonable and supportable information that is available without undue cost or effort, including historical and forward-looking information.

Our Group considers a financial asset in default when contractual payments are 90 days past due. However, in certain cases, our Group may also consider a financial asset to be in default when internal or external information indicates that our Group is unlikely to receive the outstanding contractual amounts in full before taking into account any credit enhancements held by our Group.

A financial asset is written off when there is no reasonable expectation of recovering the contractual cash flows.

Financial assets at amortized cost are subject to impairment under the general approach and they are classified within the following stages for measurement of ECLs except for trade receivables which apply the simplified approach as detailed below.

Stage 1 – Financial instruments for which credit risk has not increased significantly since initial recognition and for which the loss allowance is measured at an amount equal to 12-month ECLs;

Stage 2 – Financial instruments for which credit risk has increased significantly since initial recognition but that are not credit-impaired financial assets and for which the loss allowance is measured at an amount equal to lifetime ECLs;

Stage 3 – Financial assets that are credit-impaired at the reporting date (but that are not purchased or originated credit-impaired) and for which the loss allowance is measured at an amount equal to lifetime ECLs.

## FINANCIAL INFORMATION

### *Simplified approach*

For trade receivables that do not contain a significant financing component or when our Group applies the practical expedient of not adjusting the effect of a significant financing component, our Group applies the simplified approach in calculating ECLs. Under the simplified approach, our Group does not track changes in credit risk, but instead recognises a loss allowance based on lifetime ECLs at each reporting date. Our Group has established a provision matrix that is based on its historical credit loss experience, adjusted for forward-looking factors specific to the debtors and the economic environment.

### DESCRIPTION OF KEY STATEMENT OF PROFIT OR LOSS ITEMS

The following table sets forth a summary of our consolidated statements of profit or loss and other comprehensive income for the period indicated. Our historical results presented below are not necessarily indicative of the results that may be expected for any future period.

	Year Ended December 31,			Nine months Ended September 30,

## FINANCIAL INFORMATION

### Revenue

During the Track Record Period, we generated our revenue from gold mining, other Mineral Resources and other businesses. Please see “Business — Business Overview” for more details.

### Revenue by Business Nature

The following table sets forth our revenue by business nature for the periods indicated:

	Year Ended December 31,						Nine Months Ended September 30,			
	2021		2022		2023		2023		2024	
	RMB'000	%	RMB'000	%	RMB'000	%	RMB'000	%	RMB'000	%
	<i>(unaudited)</i>									
Gold mining . . . . .	2,968,694	78.5	5,304,729	84.6	6,322,263	87.6	4,470,575	88.3	5,561,259	89.4

### Revenue by Origin of Our Products

The following table sets forth a breakdown of our revenue by origin of our products for the periods indicated:

	Year Ended December 31,						Nine Months Ended September 30,			
	2021		2022		2023		2023		2024	
	RMB'000	%	RMB'000	%	RMB'000	%	RMB'000	%	RMB'000	%
	<i>(unaudited)</i>									
PRC . . . . .	1,259,688	33.3	1,477,471	23.5	2,026,833	28.1	1,301,395	25.7	1,793,374	28.8
Laos . . . . .	2,522,936	66.7	2,998,740	47.9	3,054,614	42.3	2,239,406	44.2	2,327,466	37.4
Ghana <sup>1</sup> . . . . .	—	—	1,790,576	28.6	2,139,505	29.6	1,521,492	30.1	2,101,991	33.8
<b>Total . . . . .</b>	<b>3,782,624</b>	<b>100.0</b>	<b>6,266,787</b>	<b>100.0</b>	<b>7,220,952</b>	<b>100.0</b>	<b>5,062,293</b>	<b>100.0</b>	<b>6,222,831</b>	<b>100.0</b>

*Notes:*

- Our revenue in Ghana was generated from Golden Star Resources. In January 2022, we acquired a 62% equity interest in Golden Star Resources, which in turn indirectly holds a 90% equity interest in GSWL, and we began consolidating the accounts of Golden Star Resources from February 1, 2022. As such, the revenue of GSWL prior to February 1, 2022 was not included in our Group. For more details, please see “— Key Factors Affecting Our Results of Operations — Acquisitions — Acquisition of Golden Star Resources.”
- Our gold products are sold globally. Our major clients are refineries located in PRC, Thailand, Australia, Singapore, South Africa and Ghana.

## FINANCIAL INFORMATION

In 2021, 2022 and 2023 and the nine months ended September 30, 2023 and 2024, our sales volume of gold amounted to 251 koz, 445 koz, 466 koz, 336 koz and 352 koz. The increase was mainly attributable to the acquisition of Golden Star Resources in 2022 and the continued increase of gold production volume at both Sepon Gold and Copper Mine and Wulong Gold Mine. For the same periods, average selling prices for our gold product was approximately RMB381 per gram, RMB383 per gram, RMB436 per gram, RMB427 per gram, and RMB502 per gram, respectively. We sell gold produced in- and outside of China at prices that move in line with the spot prices set by the Shanghai Gold Exchange and the London Bullion Market Association, respectively. The spot price of gold on the Shanghai Gold Exchange closely follows international gold prices. Historically, international gold prices have experienced significant fluctuations. See “— Key Factors Affecting Our Results of Operations — Gold and Non-Ferrous Metal Prices and Demand in End Markets.”

### Sales Volume and Average Selling Price

The following table sets forth our sales volume and average selling price of gold mining business for the periods indicated.

	Year Ended December 31,						Nine Months Ended September 30,			
	2021		2022		2023		2023		2024

*Note:* The average selling price was determined based on the gold metal contained in the gold products despite the variant grades of the products.

### Cost of Sales

Our cost of sales primarily comprises materials expense, labor expense, electricity fees, depreciation and amortization, and others. Our cost of sales generally goes down and up in line with the decrease and increase in our revenue during the Track Record Period.

## FINANCIAL INFORMATION

For the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2023 and 2024, our cost of sales amounted to RMB2,525.1 million, RMB4,471.9 million, RMB4,868.1 million, RMB3,521.9 million and RMB3,600.8 million respectively.

The following table sets forth a breakdown of our cost of sales by nature for the periods indicated:

	Year Ended December 31,						Nine Months Ended September 30,			
	2021		2022		2023		2023		2024

*Note:*

- Our cost of sales in Ghana was generated from Golden Star Resources. In January 2022, we acquired a 62% equity interest in Golden Star Resources, which in turn indirectly holds a 90% equity interest in GSWL, and we began consolidating the accounts of Golden Star Resources from February 1, 2022. As such, the cost of sales of GSWL prior to February 1, 2022 was not included in our Group. For more details, please see “— Key Factors Affecting Our Results of Operations — Acquisitions — Acquisition of Golden Star Resources”.

### Gross Profit and Gross Profit Margin

Our gross profit consists of revenue less cost of sales. Gross profit margin represents gross profit divided by total revenue, expressed as a percentage. For the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2023 and 2024, our gross profit amounted to RMB1,257.5 million, RMB1,794.9 million, RMB2,352.9 million, RMB1,540.4 million and RMB2,622.0 million, respectively. The following table sets forth a breakdown of our gross profit and gross profit margin by business nature for the periods indicated:

	Year Ended December 31,						Nine Months Ended September 30,			
	2021		2022		2023		2023		2024	
	<i>RMB'000</i>	%	<i>RMB'000</i>	%	<i>RMB'000</i>	%	<i>RMB'000</i>	%	<i>RMB'000</i>	%

## FINANCIAL INFORMATION

Gross margins for different types of products are significantly different during the Track Record Period, primarily because (i) different products have different selling prices attributable to their intrinsic market values, driven by their respective supply and demand; (ii) different products incur different cost of sales. For example, despite higher cost of sales, gold mining achieved higher gross profit margin during the Track Record Period due to its inherent pricing advantage and the benefit from economies of scale at a high production volume.

The following table sets forth a breakdown of our gross profit and gross profit margin by origin of our products for the periods indicated:

	Year Ended December 31,						Nine Months Ended September 30,			
	2021		2022		2023		2023		2024	
	Gross Profit	Gross Profit Margin	Gross Profit	Gross Profit Margin	Gross Profit	Gross Profit Margin	Gross Profit	Gross Profit Margin	Gross Profit	Gross Profit Margin
	<i>RMB'000</i>	%	<i>RMB'000</i>	%	<i>RMB'000</i>	%	<i>RMB'000</i>	%	<i>RMB'000</i>	%
	<i>(unaudited)</i>									
PRC . . . . .	591,738	47.0	668,660	45.3	1,031,907	50.9	711,633	54.7	1,042,153	58.1
Laos . . . . .	665,765	26.4	552,686	18.4	670,960	22.0	404,807	18.1	741,141	31.8
Ghana <sup>1</sup> . . . . .	—	—	573,573	32.0	650,007	30.4	423,990	27.9	838,722	39.9
<b>Total . . . . .</b>	<b><u>1,257,503</u></b>	<b><u>33.2</u></b>	<b><u>1,794,919</u></b>	<b><u>28.6</u></b>	<b><u>2,352,874</u></b>	<b><u>32.6</u></b>	<b><u>1,540,430</u></b>	<b><u>30.4</u></b>	<b><u>2,622,016</u></b>	<b><u>42.1</u></b>

*Note:*

- Our gross profit in Ghana was generated from Golden Star Resources. In January 2022, we acquired a 62% equity interest in Golden Star Resources, which in turn indirectly holds a 90% equity interest in GSWL, and we began consolidating the accounts of Golden Star Resources from February 1, 2022. As such, the gross profit of GSWL prior to February 1, 2022 was not included in our Group. For more details, please see “— *Key Factors Affecting Our Results of Operations — Acquisitions — Acquisition of Golden Star Resources*”.

Gross margins for different origins of our products are significantly different during the Track Record Period, primarily because: (i) cost of sales of overseas gold mining business is higher than that of the PRC gold mining business, attributable to (a) higher procurement cost of our overseas gold mining business compared to our PRC gold mining business; (b) amortization of mining rights associated with revaluation of overseas mines acquired in recent years, leading to an increase in unit cost of sales; and (c) higher “other” expenses including contractor expenses, construction expenses, service expenses, safety measure expenses, and the repair expenses of overseas mines compared to the PRC mines; and (ii) the average selling price of overseas gold mining business is lower than that of the PRC gold mining business. To further drive cost efficiency, we have adopted global centralized procurement system, which primarily benefits our overseas gold mines.

## FINANCIAL INFORMATION

Gains on changes on disposal of derivative financial instruments primarily represents investment income from the disposal of gold lease hedging instruments.

### Selling and distribution expenses

Our selling and distribution expenses primarily consist of labor expenses, traveling expenses, consumption of materials, warrants and licenses, depreciation, operating expenses, and others. For the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2023 and 2024, our selling and distribution expenses amounted to RMB0.8 million, RMB0.7 million, RMB0.7 million, RMB0.5 million and RMB0.3 million respectively.

### Administrative Expenses

Our administrative expenses primarily consist of taxes and levies on operations, labor expenses, professional service expenses, office and traveling expenses, depreciation and amortization, lease expenses, insurance premium, entertainment expenses, environmental protection expenses, consumption of materials, and others.

Taxes and levies on operations mainly represent resources tax. For the details of the taxes and royalties that we are subject to, see the section headed “Regulatory Overview” in this Prospectus.

The following table sets forth a breakdown of our administrative expenses for the periods indicated:

## FINANCIAL INFORMATION

### Impairment losses on financial assets, net

Our net impairment losses on financial assets mainly include impairment losses on account receivable and impairment losses on other receivable. For the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2023 and 2024, our net impairment losses on financial assets amounted to RMB2.0 million, RMB0.6 million, RMB2.4 million, RMB1.1 million and gain of RMB1.6 million respectively. The table below sets forth a breakdown of our net impairment losses on financial assets for the years indicated:

	Year Ended December 31,			Nine Months Ended September 30,	
	2021	2022	2023	2023	2024
			<i>(RMB'000)</i>		
				<i>(unaudited)</i>	
(Impairment losses)/reversal of impairment on account receivable . . . . .	(778)	158	442	460	18
Impairment losses on other receivable . . . . .	<u>(1,206)</u>	<u>(802)</u>	<u>(2,882)</u>	<u>(1,579)</u>	<u>1,606</u>
<b>Total . . . . .</b>	<b><u>(1,984)</u></b>	<b><u>(644)</u></b>	<b><u>(2,440)</u></b>	<b><u>(1,119)</u></b>	<b><u>1,624</u></b>

### Other expenses and losses

Our other expenses and losses mainly include donations, loss on disposal of non-current assets, loss on derecognition of financial liabilities, loss on changes in fair value of financial liabilities at fair value through profit or loss, loss on changes in fair value of financial assets at fair value through profit or loss, impairment losses/(reversal of impairment losses) on inventories, foreign exchanges and others. For the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2023 and 2024, our other expenses and losses amounted to RMB142.8 million, RMB119.0 million, RMB173.5 million, RMB86.8 million and RMB189.9 million respectively. The loss on derecognition of financial liabilities increased from RMB10.9 million in 2021 to RMB17.2 million in 2022, and further to RMB76.0 million in 2023, and from RMB55.9 million in the nine months ended September 30, 2023 to RMB107.4 million in the nine months ended September 30, 2024. These changes were primarily due to the year-on-year increases in the scale of gold leasing conducted by us, coupled with the overall upward trend in gold prices. The loss on changes in fair value of financial liabilities at fair value through profit or loss increased from RMB3.1 million in 2021 to RMB30.4 million in 2022, and further to RMB63.4 million in 2023, and from RMB23.3 million in the nine months ended September 30, 2023 to RMB83.3 million in the nine months ended September 30, 2024. The changes were also primarily due to the year-on-year increases in the scale of gold leasing conducted by us, coupled with the overall upward trend in gold prices.

## FINANCIAL INFORMATION

We did not record any loss on changes in fair value of financial assets at fair value through profit or loss in 2021 and 2022, as we recognized rises in the share prices of our equity investments under “gains on changes in fair value of financial assets at fair value through profit or loss” recorded under “other income and gains.” We recognized RMB21.4 million, RMB19.7 million and RMB3.2 million of loss on changes in fair value of financial assets at fair value through profit or loss in 2023, the nine months ended September 30, 2023 and 2024, respectively, primarily due to the declines in the fair value of our equity investments attributable to decreases in share prices.

The impairment losses on inventories was RMB191.6 million in 2021 and RMB41.7 million in 2022, primarily because LXML experienced a high stripping ratio and low recovery rate, which collectively led to elevated mining costs. At the end of 2021 and 2022, the carrying values of semi-finished goods and finished goods of gold products exceeded their recoverable amounts, resulting in impairment losses being recognised on certain semi-finished goods and finished goods of gold products. The impairment losses on inventories decreased to RMB3.5 million in 2023, primarily due to the rapid and significant increases in gold prices, which reduced the impairments on inventories of gold products. We recorded reversal of impairment on inventories of RMB18.0 million in the nine months ended September 30, 2023, compared to impairment losses on inventories of RMB7.2 million in the nine months ended September 30, 2024, primarily due to the inventory impairments relating to the molybdenum products of Hanfeng Mining, driven by low molybdenum prices as well as aging or obsolete raw materials.

The table below sets forth a breakdown of our other expenses and losses for the years indicated:

	Year Ended December 31,			Nine Months Ended September 30,	
	2021	2022	2023	2023	2024
			<i>(RMB'000)</i>

*Notes:*

- (1) Loss on derecognition of financial liabilities refers to the investment loss incurred when we engage in gold leasing business and repay gold at maturity due to the increase in gold prices.
- (2) Loss on changes in fair value of financial liabilities at fair value through profit or loss refers to the fair value change loss arising from the increase in gold prices at each balance sheet date when we engage in gold leasing business.
- (3) Loss on changes in fair value of financial assets at fair value through profit or loss refers to the fair value change loss of our equity investments.
- (4) The impairment losses/(reversal of impairment) on inventories during the Track Record Period was primarily attributable to: (i) impairment provisions for semi-finished products or finished goods due to fluctuations in market prices; and (ii) impairment provisions for spare parts due to extended storage periods or obsolescence.

## FINANCIAL INFORMATION

### Finance costs

Our finance costs primarily consist of interest on loans, interest on gold lease arrangements, interest on metal streaming arrangement, amortization of unrecognized financing expenses of mining rights, accretion of interest of provisions and interest on lease liabilities. For the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2023 and 2024, our finance costs amounted to RMB14.2 million, RMB176.5 million, RMB215.0 million, RMB143.3 million and RMB164.8 million respectively. The table below sets forth a breakdown of our financial costs by nature for the years indicated:

	Year Ended December 31,			Nine Months Ended September 30,	
	2021	2022	2023	2023	2024
			<i>(RMB'000)</i>

<b>Total . . . . .</b>	<b><u>14,226</u></b>	<b><u>176,485</u></b>	<b><u>215,026</u></b>	<b><u>143,290</u></b>	<b><u>164,773</u></b>

### Income tax expenses

For the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2023 and 2024, our income tax expenses amounted to RMB157.0 million, RMB328.1 million, RMB335.2 million, RMB196.2 million and RMB583.3 million respectively.

Our income tax expense consists of current income tax and deferred income tax. Current income tax comprises PRC enterprise income tax (“EIT”), Hong Kong profit tax, Laos corporate income tax and Ghana corporate income tax. Our effective income tax rate, calculated as income tax expense divided by profit before taxation, was 20.4%, 39.9%, 27.8%, 25.9% and 31.6% for the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2023 and 2024, respectively.

## FINANCIAL INFORMATION

For the year ended December 31, 2021, the effective income tax rate was 20.4%, mainly due to the decrease in the income tax expense in 2021 by RMB29.5 million as a result of the preferential tax treatment received by Jilong Mining in 2021.

For the year ended December 31, 2022, the effective income tax rate was 39.9%, mainly due to (i) new acquisition of Golden Star Resources in 2022; (ii) increase in the income tax expense in 2022 by RMB9.8 million as a result of adjustments in respect of current tax of previous periods; and (iii) unrecognized deductible temporary differences and losses of RMB32.1 million.

For the year ended December 31, 2023, the effective income tax rate was 27.8%, mainly due to the significant increase in the profit before tax of our PRC mining business as a percentage of our total profit before tax and lower corporate income tax rate in the PRC compared to overseas jurisdictions where we operate.

For the nine months ended September 30, 2023, the effective income tax rate was 25.9%, mainly due to a decrease in the income tax expense by RMB10.3 million in the nine months ended September 30, 2023, attributable to the impact from tax losses utilized from previous periods.

For the nine months ended September 30, 2024, the effective tax rate was 31.6%, mainly due to an increase in the income tax expense by RMB54.1 million, attributable to the impact from transfer pricing audit for the years ended December 31, 2017 through December 31, 2020. Please refer to “Business — Transfer Pricing” for more details.

The following table sets forth a breakdown of our income tax expense for the periods indicated:

	Year Ended December 31,			Nine Months Ended September 30,	
	2021	2022	2023	2023	2024
	<i>(RMB'000)</i>			<i>(unaudited)</i>	
Current income tax					
expenses . . . . .	118,260	279,252	480,868	299,342	663,861
Deferred income tax

## FINANCIAL INFORMATION

---

During the Track Record Period, our Company and subsidiaries in the PRC were subject to the statutory EIT rate of 25%, in accordance with the relevant tax rules and regulations. Pursuant to the PRC Corporate Income Tax Law, certain subsidiaries of our Group, namely Jilong Mining and Wulong Mining, were certified as “High and New Technology Enterprises” by the relevant tax authorities in the PRC. Also, EIT Policies for Large-scale Development in the Western Region are applicable to Jintai Mining and Hanfeng Mining, both of which have enjoyed a preferential income tax rate of 15% during the Track Record Period.

We were not subject to any income, estate, corporation, capital gains or other tax in the Cayman Islands pursuant to the local tax rules and regulations during the Track Record Period.

Our subsidiary incorporated in Hong Kong was subject to the Hong Kong profit tax rate of 16.5% during the Track Record Period.

Our subsidiary incorporated in Laos was subject to the Laos corporate income tax rate of 33.3% during the Track Record Period.

Our subsidiary incorporated in Ghana was subject to the Ghana corporate income tax rate of 35.0% for mining and upstream petroleum companies during the Track Record Period.

During the Track Record Period, we paid all relevant taxes that were due and applicable to us and had no disputes or, to the best of our knowledge, unresolved material tax issues with relevant tax authorities.

### PERIOD TO PERIOD COMPARISON OF RESULTS OF OPERATIONS

#### **Nine Months Ended September 30, 2024 Compared to the Nine Months Ended September 30, 2023**

##### *Revenue*

Our revenue increased by 22.9% from RMB5,062.3 million for the nine months ended September 30, 2023 to RMB6,222.8 million for the nine months ended September 30, 2024. This increase was mainly due to an overall increase in revenue of our gold mining business.

##### *By business nature*

The revenue of our gold mining business increased by 24.4% from RMB4,470.6 million for the nine months ended September 30, 2023 to RMB5,561.3 million for the nine months ended September 30, 2024. This was mainly due to the increase in average selling prices of our gold products. We experienced an increase in average selling prices for our gold product increased by 18.5% from approximately RMB427.0 per gram for the nine months ended September 30, 2023 to RMB506.2 per gram for the nine months ended September 30, 2024. The increase was generally in line with the increase in the gold price globally during the same period.

---

## FINANCIAL INFORMATION

---

The revenue of our other Mineral Resources business increased by 35.4% from RMB335.3 million for the nine months ended September 30, 2023 to RMB454.1 million for the nine months ended September 30, 2024. This was mainly due to the resumption of production at Hanfeng Mining.

The revenue of other businesses decreased by 19.1% from RMB256.4 million for the nine months ended September 30, 2023 to RMB207.4 million for the nine months ended September 30, 2024. This was mainly due to the (i) the decreased market price of Guangyuan Technology's main disassembly products, such as plastic and scrap metal alloys, and (ii) decreased amount of main disassembly products we sold through Guangyuan Technology.

### *By origin of our products*

Revenue generated from our PRC operations increased by 37.8% from RMB1,301.4 million for the nine months ended September 30, 2023 to RMB1,793.4 million for the nine months ended September 30, 2024.

This was primarily due to: (i) the increased gold sales volume of our PRC Mines from 72.0 koz for the nine months ended September 30, 2023 to 81.8 koz for the nine months ended September 30, 2024; and (ii) the increase in average gold selling prices of our PRC Mines sold their gold products for, which was in line with the overall increase in gold price during this period in China. The average selling price for our gold product in the PRC increased from approximately RMB448.0 per gram for the nine months ended September 30, 2023 to RMB540.9 per gram for the nine months ended September 30, 2024.

Revenue generated from our overseas operations increased by 17.8% from RMB3,760.9 million for the nine months ended September 30, 2023 to RMB4,429.5 million for the nine months ended September 30, 2024. This was mainly due to the increase in average selling prices for our gold product. The average selling prices for our overseas gold product increased from approximately RMB421.3 per gram for the nine months ended September 30, 2023 to RMB495.7 per gram for the nine months ended September 30, 2024.

### *Cost of sales*

Our cost of sales increased by 2.2% from RMB3,521.9 million for the nine months ended September 30, 2023 to RMB3,600.8 million for the nine months ended September 30, 2024. This was mainly due to increases in the cost of sales of our gold mining business as a result of our increase in sales volume of gold.

### *By business nature*

The cost of sales of our gold mining business increased by 2.2% from RMB2,988.4 million for the nine months ended September 30, 2023 to RMB3,053.1 million for the nine months ended September 30, 2024. This was mainly due to: (i) increased gold sales volume from 336 koz for the nine months ended September 30, 2023 to 352 koz for the nine months ended September 30, 2024; and (ii) rising raw material expenses.

---

## FINANCIAL INFORMATION

---

Our cost of sales of our other Mineral Resources business increased by 17.6% from RMB308.1 million for the nine months ended September 30, 2023 to RMB362.4 million for the nine months ended September 30, 2024. This was mainly due to (i) the increased sales volume of Hanfeng Mining's non-ferrous metal products, including copper, lead, zinc, and molybdenum; and (ii) the increased processed volume of LXML's copper and the decreased grade.

The cost of sales of other business decreased by 17.8% from RMB225.4 million for the nine months ended September 30, 2023 to RMB185.3 million for the nine months ended September 30, 2024. This was mainly due to our adjustment of the volume of disassembled waste household appliances that qualify for government subsidy given the uncertainty in the evolving government policy on subsidies.

### *By origin of our products*

The cost of sales of our PRC operations increased by 27.4% from RMB589.8 million for the nine months ended September 30, 2023 to RMB751.2 million for the nine months ended September 30, 2024. This was primarily due to: (i) increased material expenses in line with increase in sales volume of gold from 72.0 koz for the nine months ended September 30, 2023 to 81.8 koz for the nine months ended September 30, 2024; (ii) an increased cost of raw materials in line with the increased sales volume of zinc concentrate powder and lead concentrate powder of Hanfeng Mining due to increase in sales volume and material price; and (iii) low ore grade, the gold which led to increased cost during processing.

The cost of sales of our overseas operations decreased by 2.8% from RMB2,932.1 million for the nine months ended September 30, 2023 to RMB2,849.6 million for the nine months ended September 30, 2024, primarily attributable to our cost-cutting measures in 2024.

### ***Gross Profit and Gross Profit Margin***

Our gross profit increased by 70.2% from RMB1,540.4 million for the nine months ended September 30, 2023 to RMB2,622.0 million for the nine months ended September 30, 2024. Our gross profit margin increased from 30.4% for the nine months ended September 30, 2023 to 42.1% for the nine months ended September 30, 2024. This was mainly due to the increase of revenue of gold mining business arising from the increase in the average selling prices for our gold product from approximately RMB427.0 per gram for the nine months ended September 30, 2023 to RMB506.2 per gram for the nine months ended September 30, 2024.

### *By business nature*

The gross profit of our gold mining business increased by 69.2% from RMB1,482.1 million for the nine months ended September 30, 2023 to RMB2,508.2 million for the nine months ended September 30, 2024. The gross profit margin of our gold mining business increased from 33.2% for the nine months ended September 30, 2023 to 45.1% for the nine months ended September 30, 2024. This was mainly due to the increase in the gold selling price increased from RMB427.0 per gram for the nine months ended September 30, 2023 to RMB506.2 per gram for the nine months ended September 30, 2024.

---

## FINANCIAL INFORMATION

---

The gross profit of our other Mineral Resources business increased by 236.5% from RMB27.3 million for the nine months ended September 30, 2023 to RMB91.7 million for the nine months ended September 30, 2024. The gross profit margin of our other Mineral Resources business increased from 8.1% for the nine months ended September 30, 2023 to 20.2% for the nine months ended September 30, 2024. This was mainly due to (i) the increase in the production capacity of non-ferrous metals and (ii) the decrease in unit sales costs attributable to the increased scale of production and sales of copper, lead, zinc, and molybdenum.

The gross profit of our other business decreased from RMB31.0 million for the nine months ended September 30, 2023 to RMB22.1 million for the nine months ended September 30, 2024. The gross profit margin of our resource recycling business decreased from 12.1% for the nine months ended September 30, 2023 to 10.7% for the nine months ended September 30, 2024. This was mainly due to the decreased disassembly volume.

### *By origin of our products*

The gross profit margin of our PRC operations increased slightly from 54.7% for the nine months ended September 30, 2023 to 58.1% for the nine months ended September 30, 2024. This was mainly due to the gold selling price increased from approximately RMB448.0 per gram for the nine months ended September 30, 2023 to RMB540.9 per gram for the nine months ended September 30, 2024. This was partially offset by the increase in the cost of sales from RMB589.8 million for the nine months ended September 30, 2023 to RMB751.2 million for the nine months ended September 30, 2024.

The gross profit margin of our overseas operations increased from 22.0% for the nine months ended September 30, 2023 to 35.7% for the nine months ended September 30, 2024. This was mainly due to (i) an increase in the gold selling price from approximately RMB421.3 per gram for the nine months ended September 30, 2023 to RMB495.7 per gram for the nine months ended September 30, 2024 and (ii) a decrease in the cost of sales of our overseas operations by 2.8% from RMB2,932.1 million for the nine months ended September 30, 2023 to RMB2,849.6 million for the nine months ended September 30, 2024.

### *Other income and gains*

Our other income and gains increased significantly by 200.2% from RMB90.6 million for the nine months ended September 30, 2023 to RMB272.0 million for the nine months ended September 30, 2024. This was primarily due to: (i) an increase in gains on disposal of derivative financial instruments of RMB108.5 million; and (ii) an increase in gains on disposal of investment in an associate of RMB71.1 million.

---

## FINANCIAL INFORMATION

---

Our gains on disposal of derivative financial instruments increased significantly by 310.6% from RMB34.9 million for the nine months ended September 30, 2023 to RMB143.4 million for the nine months ended September 30, 2024. This was primarily because Jilong Mining conducted hedging business for gold leasing, purchased gold futures contracts, and recorded an investment income of RMB143.4 million from disposal of hedging instruments in 2024.

Our finance income increased significantly by 33.4% from RMB19.6 million for the nine months ended September 30, 2023 to RMB26.2 million for the nine months ended September 30, 2024. This was primarily due to an increase in Chijin Xiawu's bank deposits in the nine months ended September 30, 2024 compared to the same period in 2023, resulting in an increase in bank deposit interest income.

### *Selling and distribution expenses*

Our selling expenses and distribution expenses decreased by 40.0% from RMB0.53 million for the nine months ended September 30, 2023 to RMB0.32 million the nine months ended September 30, 2024. This was primarily due to a decrease in salary and travel expenses of the sales department.

### *Administrative expenses*

Our administrative expenses increased by 5.0% from RMB622.8 million for the nine months ended September 30, 2023 to RMB651.9 million for the nine months ended September 30, 2024. This was primarily due to inflation and the increase in labor costs, including wages and salaries, welfare expenses, social insurance, and other human resource expenses, as well as the increase in intermediary agency fees.

### *Research and development expenses*

Our research and development expenses increased by 91.9% from RMB25.0 million for the nine months ended September 30, 2023, to RMB47.9 million for the nine months ended September 30, 2024. This was primarily due to the increase in the number of research and development projects on Jilong Mining's new geothermal mitigation technologies, underground mining-induced ground pressure disasters, and control methodologies, leading to a corresponding increase in research and development expenses.

### *Impairment losses on financial assets, net*

We recorded net impairment losses on financial assets of RMB1.1 million for the nine months ended September 30, 2023, while we recorded net reversal of impairment on financial assets of RMB1.6 million for the nine months ended September 30, 2024. This was primarily due to the reversal of credit losses that had been provided for in 2023.

---

## FINANCIAL INFORMATION

---

### *Other expenses and losses*

Our other expenses and losses increased by 118.9% from RMB86.8 million for the nine months ended September 30, 2023 to RMB189.9 million for the nine months ended September 30, 2024. This was primarily due to (i) an increase in loss on derecognition of financial liabilities of RMB51.5 million arising from our gold leasing transactions, and (ii) an increase in the loss on changes in fair value of financial liabilities at fair value through profit or loss of RMB59.9 million. This was partially offset by the decrease in the loss on changes in fair value of financial assets at fair value through profit or loss of RMB16.5 million.

### *Financial costs*

Our financial costs increased by 15.0% from RMB143.3 million for the nine months ended September 30, 2023 to RMB164.8 million for the nine months ended September 30, 2024. This was primarily due to (i) an increase in interests on gold lease arrangements of RMB6.8 million arising from the new gold lease transactions for the nine months ended September 30, 2024; (ii) an increase in interest on loans of RMB4.5 million; and (iii) an increase of the interest on metal streaming arrangement of RMB8.6 million.

### *Share of (losses)/gain of associates*

We recorded share of losses of associates of RMB6.7 million for the nine months ended September 30, 2023, while we recorded share of profits of associates of RMB7.2 million for the nine months ended September 30, 2024. This was primarily due to changes in our investment in an associate, namely, Tietto Minerals Limited, as a result of the changes in its net profit generated from our disposal of Tietto Minerals Limited.

### *Profit before tax*

Our profit before tax increased by 143.7% from RMB758.3 million for the nine months ended September 30, 2023 to RMB1,848.0 million for the nine months ended September 30, 2024. This was primarily due to (i) the increase in the sales volume of our gold mines; and (ii) the increase in selling prices of our gold products.

### *Income tax expenses*

Our income tax expenses increased by 197.2% from RMB196.2 million for the nine months ended September 30, 2023 to RMB583.3 million for the nine months ended September 30, 2024. This was in line with the increase of profit before tax.

---

## FINANCIAL INFORMATION

---

### Year Ended December 31, 2023 Compared to Year Ended December 31, 2022

#### *Revenue*

Our revenue increased by 15.2% from RMB6,266.8 million for the year ended December 31, 2022 to RMB7,221.0 million for the year ended December 31, 2023. This increase was mainly due to an overall increase in revenue of our gold mining business.

#### *By business nature*

The revenue of our gold mining business increased by 19.2% from RMB5,304.7 million for the year ended December 31, 2022 to RMB6,322.3 million for the year ended December 31, 2023. This was mainly due to (i) the increase in average selling prices; and (ii) The increase in our gold sales volume from 445 koz in 2022 to 466 koz in 2023. This was primarily due to the increase in gold production of Wulong Gold Mine and Jilong Gold Mine attributable to the mine high feed grade in the period and on-schedule steady expansions. We recorded an increase in average selling prices for our gold product from approximately RMB382.9 per gram in 2022 to RMB435.7 per gram in 2023. The increase was generally in line with the increase in gold price globally during the same period.

The revenue of other Mineral Resources business decreased by 23.8% from RMB650.2 million for the year ended December 31, 2022 to RMB495.8 million for the year ended December 31, 2023. This was mainly due to Hanfeng Polymetallic Mine's suspension of operations in the first half of 2023 as a result of its safety improvement measures, which affected its production capacity.

The revenue of other businesses increased by 29.2% from RMB311.9 million for the year ended December 31, 2022 to RMB402.9 million for the year ended December 31, 2023. This was mainly due to the increased amount of waste electronic products and electrical appliances we sold through Guangyuan Technology.

#### *By origin of our products*

Revenue generated from our PRC operations increased by 37.2% from RMB1,477.5 million for the year ended December 31, 2022 to RMB2,026.8 million for the year ended December 31, 2023. This was primarily due to: (i) the increased gold production of Wulong Gold Mine and Jilong Gold Mine, which was attributed to their respective relatively high-level gold grades and on-schedule steady expansions; and (ii) higher average selling prices of gold, which was in line with the overall increase in gold price during this period in China. The average selling prices for our gold product in the PRC increased from approximately RMB396.4 per gram in 2022 to RMB455.9 per gram in 2023.

---

## FINANCIAL INFORMATION

---

Revenue generated from our overseas operations increased by 8.5% from RMB4,789.3 million for the year ended December 31, 2022 to RMB5,194.1 million for the year ended December 31, 2023. This reflected: (i) an increase in the average exchange rate of U.S. dollar against Renminbi in 2023; (ii) the Wassa Gold Mine's increased sales volume of gold from 157 koz to 166 koz; and (iii) the higher average selling prices for our gold product in 2023. The average selling prices for our overseas gold product increased from approximately RMB380.2 per gram in 2022 to RMB429.7 per gram in 2023.

### *Cost of sales*

Our cost of sales increased by 8.9% from RMB4,471.9 million for the year ended December 31, 2022 to RMB4,868.1 million for the year ended December 31, 2023. This was mainly due to increases in the cost of sales of our gold mining business, as a result of: (i) our increase in sales volume of gold; and (ii) an increase in materials expenses, which was mainly due to rising raw material prices and our increased consumption of materials in line with the increased production volume.

### *By business nature*

The cost of sales of our gold mining business increased by 5.9% from RMB3,838.9 million for the year ended December 31, 2022 to RMB4,065.6 million for the year ended December 31, 2023. This was mainly due to: (i) increased gold sales volume from 445 koz in 2022 to 467 koz in 2023; and (ii) the rising raw material prices.

The cost of sales of our other Mineral Resources business increased by 16.2% from RMB370.8 million for the year ended December 31, 2022 to RMB430.8 million for the year ended December 31, 2023. This was mainly due to: (i) the increased cost of producing copper cathodes resulting from the growing volume of copper ore processed; and (ii) a decline in average copper ore grade at Sepon Gold and Copper Mine.

The cost of sales of other business increased by 41.8% from RMB262.1 million for the year ended December 31, 2022 to RMB371.6 million for the year ended December 31, 2023. This was mainly due to the increased amount of waste home appliances we dismantled through Guangyuan Technology.

### *By origin of our products*

The cost of sales of our PRC operations increased from RMB808.8 million for the year ended December 31, 2022 to RMB994.9 million for the year ended December 31, 2023. This was primarily due to: (i) increased expenses in line with increase in sales volume of gold as the gold sales volume was up from 75 koz in 2022 to 107 koz in 2023; (ii) increased costs in line with the increased sales volume of zinc concentrate powder and lead concentrate powder of Hanfeng Mining; and (iii) low ore grade of Jilong Mining, which led to increased processing cost.

---

## FINANCIAL INFORMATION

---

The cost of sales of our overseas operations increased from RMB3,663.1 million for the year ended December 31, 2022 to RMB3,873.2 million for the year ended December 31, 2023. This reflected the increased raw materials prices globally.

### ***Gross Profit and Gross Profit Margin***

Our gross profit increased by 31.1% from RMB1,794.9 million for the year ended December 31, 2022 to RMB2,352.9 million for the year ended December 31, 2023. Our gross profit margin increased from 28.6% for the year ended December 31, 2022 to 32.6% for the year ended December 31, 2023. This was mainly due to the increase of revenue of gold mining business arising from the increase in the average selling prices for our gold product and the cost of sales was effectively controlled in 2023.

### ***By business nature***

The gross profit of our gold mining business increased by 54.0% from RMB1,465.8 million for the year ended December 31, 2022 to RMB2,256.7 million for the year ended December 31, 2023. The gross profit margin of our gold mining business increased from 27.6% for the year ended December 31, 2022 to 35.7% for the year ended December 31, 2023. This was mainly due to the increase of revenue of gold mining business arising from the increase in the average selling prices for our gold product and the cost of sales was effectively controlled in 2023.

The gross profit of our other Mineral Resources business decreased by 76.8% from RMB279.4 million for the year ended December 31, 2022 to RMB64.9 million for the year ended December 31, 2023. The gross profit margin of our non-ferrous metal mining business decreased from 43.0% for the year ended December 31, 2022 to 13.1% for the year ended December 31, 2023.

This was mainly due to Hanfeng Mining's suspension of operations and a decline in average copper ore grade at Sepon Gold and Copper Mine.

The gross profit of our other business decreased from RMB49.7 million for the year ended December 31, 2022 to RMB31.3 million for the year ended December 31, 2023. The gross profit margin of our resource recycling business decreased from 15.9% for the year ended December 31, 2022 to 7.8% for the year ended December 31, 2023. This was mainly due to the changes in national government subsidy standards and the decrease of the number of disassembled substandard products.

---

## FINANCIAL INFORMATION

---

### *By origin of our products*

The gross profit margin of our PRC operations increased slightly from 45.3% for the year ended December 31, 2022 to 50.9% for the year ended December 31, 2023. This was mainly due to the increase in the average selling prices of our PRC gold product from approximately RMB396.4 per gram in 2022 to RMB455.9 per gram in 2023, offset by an increase in the gold sales volume from 75 koz in 2022 to 107 koz in 2023.

The gross profit margin of our overseas operations increased from 23.5% for the year ended December 31, 2022 to 25.4% for the year ended December 31, 2023. This was mainly due to the increase in the average selling prices of our overseas gold product from approximately RMB380.2 per gram in 2022 to RMB429.7 per gram in 2023 and the increase in overseas raw materials expenses.

### *Other income and gains*

Our other income and gains decreased by 3.0% from RMB142.1 million for the year ended December 31, 2022 to RMB137.8 million for the year ended December 31, 2023. This was primarily due to a decrease in gains on changes in fair value of financial assets at fair value through profit or loss of RMB17.9 million, partially offset by the increase in government subsidies of RMB12.9 million.

### *Selling and distribution expenses*

Our selling expenses for the years ended December 31, 2022 and 2023 remained stable at RMB0.7 million.

### *Administrative expenses*

Our administrative expenses increased by 8.1% from RMB786.4 million for the year ended December 31, 2022 to RMB850.4 million for the year ended December 31, 2023. This was primarily due to an increase in resources tax levied on our mining business of RMB105.0 million in line with the increase in sales volume of our gold and other Mineral Resources products, partially offset by the decrease in professional service expenses of RMB 47.1 million.

### *Research and development expenses*

Our research and development expenses increased by 87.2% from RMB27.7 million for the year ended December 31, 2022 to RMB51.8 million for the year ended December 31, 2023. This was primarily due to: (i) an increase in the number of research and development personnel; and (ii) increased investments in technology improvement projects to enhance efficiency and strengthen security measures at Wulong Gold Mine and Jilong Gold Mine in 2023.

---

## FINANCIAL INFORMATION

---

### *Impairment losses on financial assets, net*

Our net impairment losses on financial assets increased by 278.9% from RMB0.6 million for the year ended December 31, 2022 to RMB2.4 million for the year ended December 31, 2023. This was primarily due to the provision of credit losses of other receivables.

### *Other expenses and losses*

Our other expenses and losses increased by 45.8% from RMB119.0 million for the year ended December 31, 2022 to RMB173.5 million for the year ended December 31, 2023. This was primarily due to an increase in loss on derecognition of financial liabilities at fair value through profit or loss of RMB58.8 million attributable to our gold leasing transactions.

### *Finance costs*

Our finance costs increased by 21.8% from RMB176.5 million for the year ended December 31, 2022 to RMB215.0 million for the year ended December 31, 2023. This was primarily due to: (i) an increase in interest on loans of RMB31.8 million as GSWL has taken on new long-term borrowing of USD90.0 million from May 2022; (ii) an increase of interest on gold lease arrangements and interest on lease liabilities of RMB4.4 million attributable to the gold leasing contracts with the bank; and (iii) an increase of interest on lease liabilities of RMB2.1 million. This was partially offset by (i) the decrease of the interest on mineral assets of RMB0.03 million; and (ii) the decrease of the interest on metal streaming arrangements of RMB0.3 million.

### *Share of (losses)/profits of associates*

We recorded share of losses of associates of RMB4.1 million for the year ended December 31, 2022, while we recorded share of profits of associates of RMB10.0 million for the year ended December 31, 2023. This was primarily due to the previous investment of Tietto Minerals Limited which made a profit for the year ended December 31, 2023. As of the Latest Practicable Date, we sold all equity interests in Tietto Minerals Limited to an independent third party.

### *Profit before tax*

Our profit before tax increased by 46.8% from RMB822.0 million for the year ended December 31, 2022 to RMB1,206.8 million for the year ended December 31, 2023. This was primarily due to: (i) the increase in gold selling price from approximately RMB382.9 per gram in 2022 to RMB435.7 per gram in 2023; (ii) the effective cost reduction and control measures; (iii) the stable ore grade of the mines; and (iv) the increase of gross profit margin of the gold mining business.

---

## FINANCIAL INFORMATION

---

### *Income tax expenses*

Our income tax expenses increased by 2.2% from RMB328.1 million for the year ended December 31, 2022 to RMB335.2 million for the year ended December 31, 2023. This was primarily due to an increase in current income tax expenses of RMB201.6 million as a result of the increase in the profit before tax. This was partially offset by a decrease in our deferred tax expenses of RMB194.5 million as a result of a decrease in deferred tax assets under Golden Star Resources.

### **Year Ended December 31, 2022 Compared to Year Ended December 31, 2021**

#### *Revenue*

Our revenue increased by 65.7% from RMB3,782.6 million for the year ended December 31, 2021 to RMB6,266.8 million for the year ended December 31, 2022. The increase was mainly due to increases in the revenue of our gold mining business as a result of our acquisition of Golden Star Resources in January 2022.

#### *By business nature*

The revenue of our gold mining business increased by 78.7% from RMB2,968.7 million for the year ended December 31, 2021 to RMB5,304.7 million for the year ended December 31, 2022. This was mainly due to: (i) the increase in production and sales volume of our gold mines; and (ii) the increase in the average selling prices of our gold products. Our acquisition of Golden Star Resources contributed a gold production of 162 koz in 2022. The gold production volume of Sepon Gold and Copper Mine increased from 193.0 koz in 2021 to 199.5 koz in 2022. This was primarily due to the increase of gold recovery rate as a result of a series of capital investments and operational improvements. Our gold production volume in China increased from 67.2 koz in 2021 to 74.6 koz of gold in 2022. This was primarily due to the completion of our technological upgrade and improvement in our mining and processing capacity and ore grade of Wulong Gold Mine. In line with the increased production volume, our total sales volume of gold increased from 251 koz in 2021 to 445 koz in 2022. We also experienced an increase in average selling prices for our gold product from approximately RMB380.8 per gram in 2021 to RMB382.9 per gram in 2022. This increase was generally in line with the increase in gold price globally during the same period.

The revenue of our other Mineral Resources business increased by 17.9% from RMB551.3 million for the year ended December 31, 2021 to RMB650.2 million for the year ended December 31, 2022. This was mainly due to the increased production volume of copper cathodes of the Sepon Gold and Copper Mine. In 2021 and 2022, our copper business in Laos produced 5,019.7 tonnes and 6,433.2 tonnes of copper cathodes, respectively, and the sales volume increased from 5,492.4 tonnes in 2021 to 6,592.6 tonnes of copper cathodes in 2022.

---

## FINANCIAL INFORMATION

---

The revenue of other business increased by 18.7% from RMB262.7 million for the year ended December 31, 2021 to RMB311.9 million for the year ended December 31, 2022. This was mainly due to the increased amount of waste electronic products and electrical appliances we sold through Guangyuan Technology.

### *By origin of our products*

Revenue generated from our PRC operations increased by 17.3% from RMB1,259.7 million for the year ended December 31, 2021 to RMB1,477.5 million for the year ended December 31, 2022. This was primarily due to (i) an increase in sales volume of gold (mainly due to increase in gold sales volume of Wulong Mining from 28 koz in 2021 to 44 koz of gold in 2022 and partially offset by the decrease of gold sales volumes of Huatai Mining and Jilong Mining); (ii) an increase in average selling prices of gold, which was in line with the overall increase in gold price during this period in China. The average selling prices for our gold product in the PRC increased from approximately RMB376.0 per gram in 2021 to RMB396.4 per gram in 2022; and (iii) an increase in revenue from our domestic non-ferrous metal mining business, mainly attributable to increased sales volume of zinc concentrate powder from 19,932.9 tonnes in 2021 to 21,881.3 tonnes in 2022 and an increase in the average selling prices of zinc from RMB6,821 per tonne to RMB7,966 per tonne during the same period.

Revenue generated from our overseas operations increased by 89.8% from RMB2,522.9 million for the year ended December 31, 2021 to RMB4,789.3 million for the year ended December 31, 2022. First, this was primarily due to revenue generated from the gold mining business at GSWL, which we acquired in 2022. In 2022, the revenue generated from Golden Star Resources was RMB1,790.6 million, representing 28.6% of our total revenue for the same year. The sales volume of gold at the Wassa Gold Mine was 157 koz in 2022. For details of the acquisition, see “Business — Our Gold Production Business in Ghana”. Second, this was also attributable to the increase of gold production in Sepon Gold and Copper Mine in Laos. The gold production volume of the Sepon Gold and Copper Mine increased from 183 koz in 2021 to 214 koz in 2022. This was primarily due to the increase of gold recovery rate as a result of a series of capital investments and operational improvements.

### *Cost of sales*

Our cost of sales increased by 77.1% from RMB2,525.1 million for the year ended December 31, 2021 to RMB4,471.9 million for the year ended December 31, 2022. This was mainly due to increases in the cost of sales of our gold mining business, as a result of: (i) our increase in sales volume of gold; (ii) our consolidation of the accounts of Golden Star Resources from February 1, 2022; and (iii) increase in materials expenses, which was mainly attributable to the rising raw material prices.

---

## FINANCIAL INFORMATION

---

### *By business nature*

The cost of sales of our gold mining business increased by 82.8% from RMB2,100.0 million for the year ended December 31, 2021 to RMB3,838.9 million for the year ended December 31, 2022. This was mainly due to: (i) increased gold production volume from 260.2 koz in 2021 to 436.2 koz in 2022, mainly attributable to our acquisition of Golden Star Resources in 2022. In line with the increase in production volume, our sales volume of gold increased from 251 koz in 2021 to 445 koz in 2022; and (ii) the rising raw material prices.

The cost of sales of our other Mineral Resources business increased by 72.1% from RMB215.5 million for the year ended December 31, 2021 to RMB370.8 million for the year ended December 31, 2022. This was mainly due to: (i) an increase in raw material prices and electricity fees; and (ii) the increased amount of copper cathodes and other non-ferrous metals we processed and produced in 2022 through Sepon Gold and Copper Mine and Hanfeng Polymetallic Mine.

The cost of sales of other business increased by 25.4% from RMB209.7 million for the year ended December 31, 2021 to RMB262.1 million for the year ended December 31, 2022. This was mainly due to the increased amount of waste home appliances we dismantled through Guangyuan Technology.

### *By origin of our products*

The cost of sales of our PRC operations increased from RMB668.0 million for the year ended December 31, 2021 to RMB808.8 million for the year ended December 31, 2022. This was primarily due to (i) increased material expenses in line with increase in sales volume of gold. The gold sales volume of Wulong Mining was up from 28 koz in 2021 to 44 koz in 2022; (ii) an increase in the cost of raw materials in line with increased sales volume of zinc concentrate powder and lead concentrate powder of Hanfeng Mining; and (iii) low ore grade of Jilong Gold Mine, which led to increased cost.

The cost of sales of our overseas operations increased from RMB1,857.2 million for the year ended December 31, 2021 to RMB3,663.1 million for the year ended December 31, 2022. This was primarily due to (i) the cost of sales of Golden Star Resources, which we acquired in 2022; (ii) increased materials expenses in line with the increased sales volume of gold and copper cathodes; and (iii) increased raw material prices globally.

### ***Gross profit and Gross profit margin***

Our gross profit increased by 42.7% from RMB1,257.5 million for the year ended December 31, 2021 to RMB1,794.9 million for the year ended December 31, 2022. Our gross profit margin decreased from 33.2% for the year ended December 31, 2021 to 28.6% for the year ended December 31, 2022. This was mainly due to the increase of the raw material price and the acquisition of Golden Star Resources in 2022.

---

## FINANCIAL INFORMATION

---

### *By business nature*

The gross profit of our gold mining business increased by 69.2% from RMB868.7 million for the year ended December 31, 2021 to RMB1,465.8 million for the year ended December 31, 2022. The gross profit margin of our gold mining business decreased from 29.3% for the year ended December 31, 2021 to 27.6% for the year ended December 31, 2022. This was mainly due to the increase of the cost of sales attributable to the increase of the raw materials and the acquisition of Golden Star Resources in 2022.

The gross profit of our other Mineral Resources decreased by 15.8% from RMB335.8 million for the year ended December 31, 2021 to RMB279.4 million for the year ended December 31, 2022. The gross profit margin of our non-ferrous metal mining business decreased from 60.9% for the year ended December 31, 2021 to 43.0% for the year ended December 31, 2022. This was mainly due to the decrease in the average grade of the copper cathodes in LXML.

The gross profit of other business decreased by 7.7% from RMB53.0 million for the year ended December 31, 2021 to RMB49.7 million for the year ended December 31, 2022. The gross profit margin of our resource recycling business decreased from 33.2% for the year ended December 31, 2021 to 28.6% for the year ended December 31, 2022. This was mainly due to the decrease of dismantling volume of resources recycling business in 2022 and the change of the government subsidy standards due to the change in subsidy policies in 2022.

### *By origin of our products*

The gross profit margin of our PRC operations decreased slightly from 47.0% for the year ended December 31, 2021 to 45.3% for the year ended December 31, 2022. This was mainly due to the increase in material prices and the decline in the grade of ore mined by Jilong Mining in 2022.

The gross profit margin of our overseas operations decreased slightly from 26.4% for the year ended December 31, 2021 to 23.5% for the year ended December 31, 2022. This was mainly due to (i) the increase in costs of sales attributable to the increase in the prices of raw materials of LXML, including the price of diesel oil driven by the rising international crude oil prices; and (ii) an increase in the amount of sulfuric acid used in 2022 by 60,000 tons compared to 2021.

### *Other income and gains*

Our other income and gains increased by 57.0% from RMB90.5 million for the year ended December 31, 2021 to RMB142.1 million for the year ended December 31, 2022. This was primarily due to: (i) an increase in gains on disposal of derivative financial instruments of RMB57.8 million; and (ii) an increase in gains on changes in fair value of financial assets at fair value through profit or loss of RMB16.5 million.

---

## FINANCIAL INFORMATION

---

Our gains on disposal of derivative financial instruments increased by 231.5% from RMB25.0 million for the year ended December 31, 2021 to RMB82.9 million for the year ended December 31, 2022. This was primarily due to an investment income of RMB41.1 million derived from the disposal of gold lease hedging instruments and an investment income of RMB54.8 million arising from the disposal of gold forward sales contracts.

Our finance income increased by 37.5% from RMB20.4 million for the year ended December 31, 2021 to RMB28.1 million for the year ended December 31, 2022. This was primarily due to the increase in the interests income of RMB9.5 million arising from the acquisition of Golden Star Resources in 2022.

### *Selling and distribution expenses*

Our selling expenses for the years ended December 31, 2021 and 2022 remained relatively stable at RMB0.8 million and RMB0.7 million, respectively.

### *Administrative expenses*

Our administrative expenses increased by 100.1% from RMB393.0 million for the year ended December 31, 2021 to RMB786.4 million for the year ended December 31, 2022. This was primarily due to: (i) an increase in labor expenses due to our acquisition of Golden Star Resources in 2022; (ii) an increase in professional service expenses relating to our acquisition of Golden Star Resources in 2022; and (iii) an increase in taxes and levies on operation of RMB126.2 million due to an increase in resources tax levied on our mining business of RMB126.2 million associated with the increase in sales volume of our gold and other Mineral Resources products and acquisition of Golden Star Resources.

### *Research and development expenses*

Our research and development expenses increased by 11.3% from RMB24.8 million for the year ended December 31, 2021 to RMB27.7 million for the year ended December 31, 2022. This was primarily due to increased investments in technology improvement projects to enhance efficiency in mining and beneficiation, mainly in relation to Wulong Mining in 2022.

### *Impairment losses on financial assets, net*

Our net impairment losses on financial assets decreased by 67.5% from RMB2.0 million for the year ended December 31, 2021 to RMB0.6 million for the year ended December 31, 2022. This was primarily due to the reversal of credit losses that had been provided for in 2022.

### *Other expenses and losses*

Our other expenses and losses decreased by 16.6% from RMB142.8 million for the year ended December 31, 2021 to RMB119.0 million for the year ended December 31, 2022. This was primarily due to (i) the decrease in the reversal of impairment losses on inventories of RMB149.9 million; and (ii) the decrease in the foreign exchange of RMB59.0 million. The decrease was partially offset by the increase in loss on changes in fair value of financial liabilities at fair value through profit or loss of RMB27.3 million.

---

## FINANCIAL INFORMATION

---

### *Finance costs*

Our finance costs increased significantly by 1,140.6% from RMB14.2 million for the year ended December 31, 2021 to RMB176.5 million for the year ended December 31, 2022. This was primarily due to: (i) an increase in interest on loans of RMB123.9 million in 2022; (ii) an increase in amortization of unrecognized financing expenses of mining right of RMB3.8 million and the interest on metal streaming arrangement of RMB15.4 million; (iii) an increase in interest on lease liabilities of RMB10.0 million; and (iv) an increase of interest on gold lease business of RMB8.6 million arising from our gold lease transaction.

### *Share of (losses)/profits of associates*

We recorded share of losses of associates of RMB0.01 million for the year ended December 31, 2021, while we recorded share of losses of associates of RMB4.1 million for the year ended December 31, 2022. This was primarily due to the then investment in Tietto Minerals Limited by our subsidiary Chijin HK, which resulted in a loss in 2022. As of Latest Practicable Date, we sold all equity interests in Tietto Minerals Limited to an independent third party.

### *Profit before tax*

Our profit before tax increased by 6.7% from RMB770.4 million for the year ended December 31, 2021 to RMB822.0 million for the year ended December 31, 2022. This was primarily due to (i) the increase in gold selling price from approximately RMB381 per gram in 2021 to RMB383 per gram in 2022; (ii) the effective cost reduction and control measures; (iii) the stable ore grade of the mines; and (iv) the increase of gross profit margin of the gold mining business.

### *Income tax expenses*

Our income tax expenses increased by 109.0% from RMB157.0 million for the year ended December 31, 2021 to RMB328.1 million for the year ended December 31, 2022. This was primarily due to an increase of our current income tax expenses of RMB161.0 million arising from: (i) high statutory income tax rates in Ghana (35.0%) and Laos (33.3%) in 2022, which had significant impacts on our profits from Ghana and Laos in 2022.

## LIQUIDITY AND CAPITAL RESOURCES

Our principal source of liquidity has been, and is expected to continue to be, cash generated from operating activities together with available credit facilities and bank borrowings. Our liquidity requirements primarily relate to funding our working capital requirements and our capital expenditures. We had cash and cash equivalents of RMB1,707.9 million, RMB1,052.5 million, RMB1,274.6 million and RMB2,094.1 million as of December 31, 2021, 2022, and 2023 and September 30, 2024, respectively. As of December 31, 2024, the latest practicable date for determining our indebtedness, we had cash and cash equivalents of RMB2,516.9 million.

## FINANCIAL INFORMATION

### Sufficiency of Working Capital

Taking into account the financial resources available to us, including our cash and cash equivalents, available borrowings, and the estimated net proceeds from the Global Offering, our Directors are of the opinion, and the Sole Sponsor concurs, that we have sufficient working capital required for 125% of our present requirements, that is for at least the next 12 months from the date of this Prospectus. Going forward, we believe our liquidity requirements will be satisfied by using funds from a combination of our cash and cash equivalents, bank and other borrowings and net proceeds from the Global Offering. Other than the bank and other borrowings that we may obtain, we do not have any plans for material external debt financing. The majority of our projects under development are extension projects of our current mines. We believe that we are able to finance such projects using net operating cash flow from our existing operations. For the nine months ended September 30, 2024, the net cash flows from operating activities were RMB2,044.0 million and the capital expenditures were RMB1,125.4 million.

### Net Current Assets

As of December 31, 2021, 2022 and 2023, September 30, 2024, and December 31, 2024, we recorded net current assets of RMB2,416.6 million, RMB829.6 million, RMB1,173.0 million, RMB1,727.4 million and RMB2,335.0 million, respectively.

The table below sets forth our current assets and current liabilities as of the dates indicated.

Current portion of provisions . . . . .	–	9,567	75,747	71,806	72,505
<b>Total current liabilities</b> . . . . .	<b><u>1,341,612</u></b>	<b><u>3,279,882</u></b>	<b><u>3,722,409</u></b>	<b><u>4,597,554</u></b>	<b><u>4,051,014</u></b>
<b>Net current assets</b> . . . . .	<b><u>2,416,555</u></b>	<b><u>829,583</u></b>	<b><u>1,172,971</u></b>	<b><u>1,727,426</u></b>	<b><u>2,353,168</u></b>

Our net current assets increased from RMB1,727.4 million as of September 30, 2024 to RMB2,353.2 million as of December 31, 2024. This was primarily due to (i) an increase in cash and cash equivalents by RMB422.8 million, attributable to higher gold prices and our operating cash inflow; and (ii) a decrease in the current portion of long-term loans by RMB359.4 million, as a result of loan repayments from GSWL and our Company.

Our net current assets increased from RMB1,173.0 million as of December 31, 2023 to RMB1,727.4 million as of September 30, 2024. This was primarily due to (i) the increase in the prepayments, receivables and other assets of RMB531.6 million attributable to prepayments made for rear earth purchases, and (ii) the increase in the increase in trade receivables from other business attributable to prepayments from government subsidy.

Our net current assets increased from RMB829.6 million as of December 31, 2022 to RMB1,173.0 million as of December 31, 2023. This was primarily due to: (i) an increase in inventories of RMB242.3 million, mainly due to an increase in work in progress at Sepon Gold and Copper Mine; (ii) an increase in in cash and cash equivalents of RMB222.1 million resulting from an increase in free cash flow from operations; (iii) a decrease in trade and notes

## FINANCIAL INFORMATION

payables of RMB298.9 million. The increase was partially offset by: (i) an increase in financial liabilities at fair value through profit or loss of RMB319.7 million resulting from the increase of gold leasing; and (ii) an increase in short-term loans of RMB361.6 million.

Our net current assets decreased significantly from RMB2,416.6 million as of December 31, 2021 to RMB829.6 million as of December 31, 2022. This was primarily due to: (i) a decrease in cash and cash equivalents of RMB655.3 million resulting from the acquisition of Golden Star Resources in 2022; (ii) an increase in other payables and accruals of RMB504.2 million mainly for construction projects and equipment; and (iii) an increase in short-term loans of RMB488.4 million associated with the acquisition of Golden Star Resources and a capacity expansion of Jilong Gold Mine. The decrease was partially offset by an increase in inventories resulting from our acquisition of Golden Star Resources and raw materials for Sepon Gold and Copper Mine's expanded production.

## FINANCIAL INFORMATION

---

### **Net cash flows from operating activities**

For the nine months ended September 30, 2024, we recorded net cash inflow from operating activities of RMB2,044.0 million. This was primarily due to our profit before tax of RMB1,848.0 million, adjusted by non-cash and non-operating items, mainly comprising: (i) depreciation of property, plant and equipment of RMB687.5 million; (ii) amortization of other intangible assets of RMB226.0 million; and (iii) investment losses received from disposal of financial liabilities held for trading of RMB107.4 million. This was partially offset by: (i) an increase in inventories of RMB73.7 million; and (ii) a decrease in other payables and accruals of RMB148.0 million.

In 2023, we recorded inflow from operating activities of RMB2,203.1 million. This was primarily due to our profit before tax of RMB1,206.8 million, adjusted by non-cash and non-operating items, mainly comprising: (i) depreciation of property, plant and equipment of RMB910.8 million; (ii) amortization of other intangible assets of RMB552.4 million; and (iii) increase in other payables and accruals of RMB160.9 million. This was partially offset by: (i) decrease in trade and notes payables of RMB262.1 million; and (ii) an increase in inventories of RMB143.8 million.

In 2022, we recorded inflow from operating activities of RMB1,090.1 million. This was primarily due to our profit before tax of RMB822.0 million, adjusted by non-cash and non-operating items, which primarily included (i) depreciation of property, plant and equipment of RMB761.2 million; (ii) amortization of other intangible assets of RMB582.2 million; and (iii) decrease in trade and notes payables of RMB218.0 million. This was partially offset by: (i) an increase in inventories of RMB329.0 million; and (ii) a decrease in other payables and accruals of RMB300.2 million.

In 2021, we recorded net cash inflow from operating activities of RMB755.1 million. This was primarily due to our profit before tax of RMB770.4 million, adjusted by non-cash and non-operating items, mainly comprising: (i) depreciation of property, plant and equipment of RMB455.7 million; (ii) amortization of other intangible assets of RMB315.9 million; and (iii) increase in trade and notes payables of RMB143.4 million. This was partially offset by: (i) an increase in inventories of RMB815.7 million; and (ii) an increase in prepayments, other receivables and other assets of RMB66.0 million.

### **Net cash flows from investing activities**

For the nine months ended September 30, 2024, we recorded net cash outflow used in investing activities of RMB677.1 million. This was primarily due to: (i) purchases of property, plant and equipment, intangible assets and other non-current assets of RMB1,113.4 million; and (ii) cash paid for futures contract of RMB254.8 million, which was partially offset by cash received from futures contract of RMB300.9 million.

---

## FINANCIAL INFORMATION

---

In 2023, we recorded net cash outflow used in investing activities of RMB1,771.1 million. This was primarily due to: (i) purchases of property, plant and equipment, intangible assets and other non-current assets of RMB1,742.0 million; (ii) net cash paid for acquisition of a subsidiary of RMB18.1 million; and (iii) cash paid for futures contract of RMB279.8 million. This was partially offset by: (i) cash received from futures contract of RMB235.4 million; and (ii) proceeds from disposal of property, plant and equipment, intangible assets, and other non-current assets RMB19.9 million.

In 2022, we recorded net cash outflow used in investing activities of RMB3,984.0 million. This was mainly due to: (i) purchases of property, plant and equipment, intangible assets and other non-current assets of RMB1,917.6 million; (ii) net cash paid for acquisition of a subsidiary of RMB1,958.4 million; and (iii) cash paid for futures contract of RMB369.3 million. This was partially offset by: (i) cash received from futures contract of RMB592.8 million; and (ii) cash received from bank deposits and interest of RMB100.1 million.

In 2021, we recorded net cash outflow used in investing activities of RMB277.9 million. This was primarily due to: (i) purchases of property, plant and equipment, intangible assets and other non-current assets of RMB1,342.4 million; (ii) cash paid for large certificates of RMB1,740.1 million; and (iii) cash paid for equity investments of RMB14.6 million. This was partially offset by: (i) cash received from bank deposits and interest of RMB2,477.6 million; and (ii) net cash received from the disposal of a subsidiary of RMB288.8 million.

### **Net cash flows from financing activities**

For the nine months ended September 30, 2024, we recorded net cash outflow used in financing activities of RMB554.5 million. This was mainly due to: (i) repayment of bank borrowings of RMB1,381.9 million; (ii) repayment of gold lease business of RMB706.4 million; (iii) repayment of loans from related parties RMB128.5 million; and (iv) cash paid for margin of gold lease business of RMB281.4 million. This was partially offset by: (i) new bank borrowings of RMB1,044.3 million; and (ii) new gold lease business of RMB599.3 million.

In 2023, we recorded net cash outflow used in financing activities of RMB228.1 million. This was mainly due to: (i) repayment bank borrowings of RMB1,013.7 million; (ii) repayment of gold lease business of RMB560.7 million; and (iii) cash paid for margin of gold lease business of RMB384.3 million. This was partially offset by (i) new bank borrowings of RMB1,151.1 million, and (ii) new gold lease business of RMB740.0 million.

In 2022, we recorded net cash inflow from financing activities of RMB2,225.1 million. This was primarily due to (i) new bank borrowings of RMB2,443.3 million, (ii) new loans from related parties of RMB1,537.2 million, and (iii) new gold lease business of RMB496.9 million. This was partially offset by: (i) repayment of gold lease business of RMB312.0 million; and (ii) repayment of loans from related parties of RMB1,126.3 million.

## FINANCIAL INFORMATION

In 2021, we recorded net cash inflow from financing activities of RMB55.9 million. This was primarily due to: (i) cash received from transfer of repurchased shares of RMB663.2 million; (ii) new loans from related parties of RMB620.0 million; and (iii) new gold lease business of RMB384.6 million. This was partially offset by: (i) cash paid for repurchasing shares of RMB663.2 million; and (ii) repayment of loans from related parties of RMB620.0 million.

### CAPITAL EXPENDITURES

A key component of cash flows used in investing activities is capital expenditures. We calculate capital expenditures as purchases of fixed assets, construction in progress (“CIP”), purchase of intangible assets and others.

Our increasing capital expenditures during the Track Record Period reflected our expansion investments to fuel and support our expected future growth. The following table sets forth our capital expenditures for the periods indicated:

	Year Ended December 31,			Nine Months Ended September 30,	
	2021	2022	2023	2023	2024
			<i>(RMB'000)</i>		
				<i>(unaudited)</i>	
Purchase of fixed assets . . .	89,978	194,363	33,870	26,801	24,621
Purchase of CIP . . . . .	779,987	1,118,629	1,354,306	1,067,910	1,085,705
Purchase of intangible assets . . . . .	689,830	533,491	34,279	6,816	3,804
Others . . . . .	72	56,613	64,917	650	11,283
<b>Capital expenditures . . . .</b>	<b><u>1,559,867</u></b>	<b><u>1,903,096</u></b>	<b><u>1,487,372</u></b>	<b><u>1,102,177</u></b>	<b><u>1,125,413</u></b>
Capital expenditures as % of revenue . . . . .	41.2%	30.4%	20.6%	21.8%	18.1%

We may incur additional capital expenditures from time to time as we pursue new opportunities to expand our business.

### CAPITAL COMMITMENTS

Our capital commitments during the Track Record Period primarily related to property, plant and equipment and investment commitment. As of December 31, 2021, 2022 and 2023 and September 30, 2024, the total amount of our outstanding capital commitments was RMB351 million, RMB552 million RMB487 million, and RMB557 million, respectively. The following table sets forth a summary of our capital commitments as of the dates indicated:

	Year Ended December 31,			Nine Month Ended September 30,
	2021	2022	2023	2024

# FINANCIAL INFORMATION

## FORECASTED OPERATING COSTS

According to the Independent Technical Report, our total operating cash cost is estimated at RMB3,141 million, with an estimated unit cash operating cost of RMB510 per milled ore tonnes in 2024. Our total operating cash cost is estimated at RMB15,949 million, with an estimated unit cash operating cost of RMB535 per milled ore tonnes. SRK has developed a unit sustaining capital forecast based on the average expenditures for 2022 and 2023.

The table below sets forth a summary of the forecasted operating costs between 2024 and 2053 as stated in the Independent Technical Report:

	Unit	2024

Construction in progress . . . . .	435,625	676,833	592,313	1,216,727
<b>Total . . . . .</b>	<b>3,159,699</b>	<b>5,994,266</b>	<b>6,521,646</b>	<b>6,894,292</b>

## FINANCIAL INFORMATION

Our property, plant and equipment increased by 89.7% from RMB3,159.7 million as of December 31, 2021 to RMB5,994.3 million as of December 31, 2022. This was primarily due to: (i) an increase in mineral assets of RMB1,902.4 million, resulting from the acquisition of Golden Star Resources and our constructions in progress at Wulong Gold Mine and Wassa Gold Mine; and (ii) an increase in machinery of RMB455.8 million, resulting from constructions in progress at Wulong Gold Mine and Sepon Gold and Copper Mine.

Our property, plant and equipment increased by 8.8% from RMB5,994.3 million as of December 31, 2022 to RMB6,521.6 million as of December 31, 2023. This was primarily due to: (i) an increase in mineral assets of RMB494.8 million resulting from capital expenses in relation to the construction and auxiliary facilities at the Sepon Gold and Copper Mine and Wassa Gold Mine; and (ii) an increase in buildings of RMB204.0 million, mainly resulting from the increased value of real estate and buildings at the Sepon Gold and Copper Mine.

Our property, plant and equipment slightly increased by 5.7% from RMB6,521.6 million as of December 31, 2023 to RMB6,894.3 million as of September 30, 2024. This was primarily due to an increase in construction in progress of RMB624.4 million, resulting from construction of mining projects at the Wassa Gold Mine and the Sepon Gold and Copper Mine. This was partially offset by the decrease in mineral assets of RMB258.9 million.

### Right-of-use assets

Our right-of-use assets represent our entitlement to use buildings, machinery and vehicles and leasehold land. The following table sets forth a breakdown of right-of-use assets as of the dates indicated:

	As of December 31,			As of September 30,
	2021	2022	2023	2024
	<i>(RMB'000)</i>			
Buildings . . . . .	298	10,789	4,571	3,246
Machinery and vehicles . . . . .	–	185,835	167,836	147,316
Leasehold land . . . . .	43,589	81,947	160,349	162,635
<b>Total . . . . .</b>	<b>43,887</b>	<b>278,571</b>	<b>332,756</b>	<b>313,197</b>

Our right-of-use assets increased significantly by 534.7% from RMB43.9 million as of December 31, 2021 to RMB278.6 million as of December 31, 2022. This was primarily due to an increase in machinery and vehicles of RMB185.8 million arising from our acquisition of Golden Star Resources in 2022.

Our right-of-use assets increased by 19.5% from RMB278.6 million as of December 31, 2022 to RMB332.8 million as of December 31, 2023. This was primarily due to an increase in leasehold land of RMB78.4 million, which was mainly due to: (i) our acquisition of Xinhenghe Mining; (ii) the addition of the land use right of Wulong Mining for a lease term of 50 years; and (iii) the addition of the land use right of Jilong Mining for a lease term of 50 years.

## FINANCIAL INFORMATION

Our right-of-use assets decreased by 5.9% from RMB332.8 million as of December 31, 2023 to RMB313.2 million as of September 30, 2024. This was primarily due to a decrease in machinery and vehicles of RMB20.5 million, resulting from a decrease in book value and the depreciation of right-of-use assets.

### Other intangible assets

Our other intangible assets comprised exploration and mining rights, patent and others. The following table sets forth a breakdown of the net book value of our other intangible assets as of the dates indicated:

	As of December 31,			As of September 30,
	2021	2022	2023	2024
	<i>(RMB'000)</i>			
Exploration and mining rights . . . . .	752,396	6,475,487	6,208,148	5,926,714
Patent . . . . .	3,973	3,422	2,749	2,317
Exploration and evaluation assets . . . . .	97,118	64,844	97,326	100,104
Others . . . . .	2,963	18,965	14,786	13,307
<b>Total . . . . .</b>	<b>856,450</b>	<b>6,562,718</b>	<b>6,323,009</b>	<b>6,042,442</b>

Our other intangible assets increased significantly by 666.3% from RMB856.5 million as of December 31, 2021 to RMB6,562.7 million as of December 31, 2022. This was primarily due to an increase in exploration and mining rights of RMB5,723.1 million resulting from our acquisition of Golden Star Resources in 2022.

Our other intangible assets decreased by 3.7% from RMB6,562.7 million as of December 31, 2022 to RMB6,323.0 million as of December 31, 2023. This was primarily due to a decrease in exploration and mining rights of RMB267.3 million mainly associated with the Sepon Gold and Copper Mine and Wassa Gold Mine, resulting from our normal amortization.

Our other intangible assets decreased by 4.4% from RMB6,323.0 million as of December 31, 2023 to RMB6,042.4 million as of September 30, 2024. This was primarily due to a decrease in exploration and mining rights of RMB281.4 million mainly associated with Sepon Gold and Copper Mine and Wassa Gold Mine, resulting from our normal amortization. The exploration expenditure was RMB38.3 million, RMB40.2 million, RMB32.5 million, and RMB2.8 million for 2021, 2022, 2023 and the nine months ended September 30, 2024, respectively. These amounts have all been capitalized and were recorded under exploration and evaluation assets.

## FINANCIAL INFORMATION

---

### Goodwill

As of December 31, 2021, 2022 and 2023 and September 30, 2024, our book value of goodwill remained stable at RMB42.0 million, RMB42.0 million, RMB42.0 million and RMB42.0 million, respectively, which was contributed by our acquisition of Guangyuan Technology in 2015.

Goodwill acquired through business combinations is allocated to the recycling and utilisation CGU for impairment testing. The recoverable amount of the recycling and utilisation CGU has been determined based on a value in use calculation using cash flow projections based on financial budgets covering a five-year period approved by senior management. As of 31 December 2021, 2022 and 2023 and 30 September 2024, the pre-tax discount rates applied to the cash flow projections are 13.46%, 11.89%, 9.21% and 8.79%, respectively. The growth rate used to extrapolate the cash flows of the recycling and utilisation CGU beyond the five-year period is 0%.

Assumptions were used in the value in use calculation of the recycling and utilisation cash-generating CGU. The following describes each key assumption on which management has based its cash flow projections to undertake impairment testing of goodwill:

1. **The expected future sales volume** – The management forecasted disassembly volume based on the disassembly volume capacity and the expected five years' production schedule of the CGU.
2. **The price of the dismantled product** – The management forecasted the price of the dismantled product based on the actual sales unit price of the previous year with its expectations on market development.
3. **The collection period of the fund subsidy income** – The management forecasted the collection period of the fund subsidy income based on the historical collection period with its expectations on market development.
4. **Discount rate** – The discount rates used are before tax and reflect specific risks relating to the relevant CGU.

Management determined these assumptions based on past performance and its expectations on market development. The discount rates used reflect specific risks relating to the individual CGU. The recoverable amount is determined based on the present value of the estimated future cash flows of the asset group portfolio. According to the five-year financial forecast approved by the management, the growth rates of the dismantling volume of waste electronic products and electrical appliances from 2024 to 2028 during the forecast period are projected to be 3%, 6%, 10%, 5%, and 3%, respectively, and the dismantling volume of waste electronic products and electrical appliances will remain stable from 2029 onwards. Based on the impairment assessments, there was no impairment of goodwill as of December 31, 2021, 2022 and 2023 and September 30, 2024. For the goodwill allocated to the CGU, future sales

---

## FINANCIAL INFORMATION

---

volume and price of the dismantled product are two of the most sensitive key assumptions: (i) as of 31 December 2021, 2022 and 2023 and September 30, 2024, if future sales volume had decreased by 1% from management's estimates, while other variables were held constant with the expectations, we would have to recognize impairment losses against goodwill by approximately nil, nil, nil and nil, respectively; if future sales volume had decreased by 5% from the management's estimates, while other variables were held constant with the expectations, we would have to recognize impairment losses against goodwill by approximately nil, nil, nil and RMB42 million, respectively; and (ii) if the price of the dismantled product had decreased by 1% from the estimates, while other variables were held constant with the expectations, we would have to recognize impairment losses against goodwill by approximately nil, nil, RMB25 million and RMB22 million, respectively; if the price of the dismantled product had decreased by 5% from management's estimates, while other variables were held constant with the management's expectations, we would have to recognize impairment losses against goodwill by approximately nil, nil, RMB42 million and RMB42 million, respectively.

As of December 31, 2021, 2022 and 2023 and September 30, 2024, when the aforementioned key assumption parameters were applied in the impairment testing, the headroom (i.e., the excess of the recoverable amount over the carrying amount of the CGU) was RMB82 million, RMB88 million, RMB17 million, and RMB19 million, respectively.

### **Investments in associates**

Our investments in associates comprised share of the associates' profit for the period, investment costs and share of the associates' total comprehensive income. The following table sets forth a breakdown of our investments in associates as of the dates indicated:

Our investments in associates increased significantly by 17,889.9% from RMB2.0 million as of December 31, 2021 to RMB357.8 million as of December 31, 2022, and increased by 4.4% to RMB373.5 million as of December 31, 2023, and further decreased by 99.5% to RMB2.1 million as of September 30, 2024, as a result of our previous investments in Tietto Minerals Limited. As of the Latest Practicable Date, we had disposed of all our equity interests in Tietto Minerals Limited during the ordinary course of business. For more details, See "History, Development and Corporate Structure — Post-Track Record Period Acquisition".

## FINANCIAL INFORMATION

### Deferred tax assets

Our deferred tax assets comprised impairment of assets, provision for bad debts on receivables, provision for inventory impairment, provision for contingent liabilities, deferred income, deductible losses, changes in fair value, lease liabilities, equity interest with taking into consideration the offsetting of balance within the same tax jurisdiction. The following table sets forth a breakdown of our deferred tax assets as of the dates indicated:

	As of December 31,			As of September 30,
	2021	2022	2023	2024
	<i>(RMB'000)</i>			
Impairment of assets . . . . .	721	–	–	–
Provision for bad debts on receivables . . . . .	688	829	1,124	821
Provision for inventory impairment . . . . .	893	982	2,696	981
Provision for contingent liabilities . . . . .	1,143	55,100	54,906	53,472
Deferred income . . . . .	219	297	251	1,028
Deductible losses . . . . .	1,084	2,448	2,659	–
Changes in fair value . . . . .	467	5,029	14,543	29,539
Lease liabilities . . . . .	–	70,052	63,732	58,033
Depreciation and amortization differences with tax . . . . .	–	–	–	33,919
Others . . . . .	–	12,492	11,505	9,925
Total deferred income tax assets before offset . . . . .	5,215	147,229	151,416	187,718
Amount of offset between deferred income tax assets and liabilities . . . . .	–	93,251	133,934	132,163
<b>Deferred income tax assets presented net of offset . .</b>	<b>5,215</b>	<b>53,978</b>	<b>17,482</b>	<b>55,555</b>

Our deferred tax assets increased significantly by 935.1% from RMB5.2 million as of December 31, 2021 to RMB54.0 million as of December 31, 2022. This was primarily due to an increase in lease liabilities of RMB70.1 million resulting from our acquisition of Golden Star Resources.

Our deferred tax assets decreased by 67.6% from RMB54.0 million as of December 31, 2022 to RMB17.5 million as of December 31, 2023. This was primarily due to the increase in fair value of Jilong Mining being offset by deferred tax liabilities.

## FINANCIAL INFORMATION

Our deferred tax assets increased by 217.8% from RMB17.5 million as of December 31, 2023 to RMB55.6 million as of September 30, 2024. This was primarily due to an increase in depreciation and amortization differences with tax of RMB33.9 million mainly resulting from different depreciation methods used for tax and accounting basis in LXML.

### Other non-current assets

Our other non-current assets comprised advance payment for engineering construction and equipment, mine geological environment treatment and restoration fund, large certificate of bank deposits and interest and others. The following table sets forth a breakdown of our other non-current assets as of the dates indicated:

	As of December 31,			As of September 30,
	2021	2022	2023	2024
	<i>(RMB'000)</i>			
Advance payment for engineering construction and equipment . . . . .	26,819	56,402	105,810	41,674
Funds for land restoration and environmental rehabilitation after mine closure . . . . .	98,384	83,130	102,974	110,208
Large certificate of bank deposits and interest. . . . .	42,118	42,118	–	–
Prepayment for equity acquisition . . . . .	–	–	–	66,844
Others . . . . .	18,909	5,976	3,286	1,957
<b>Subtotal . . . . .</b>	<b><u>186,230</u></b>	<b><u>187,626</u></b>	<b><u>212,070</u></b>	<b><u>220,683</u></b>
Less: amount due within one year . . . . .	–	42,118	–	–
<b>Total . . . . .</b>	<b><u>186,230</u></b>	<b><u>145,508</u></b>	<b><u>212,070</u></b>	<b><u>220,683</u></b>

Our other non-current assets decreased by 21.9% from RMB186.2 million as of December 31, 2021 to RMB145.5 million as of December 31, 2022. This was primarily due to a decrease in large certificate of bank deposits and interest of RMB42.1 million, as the large certificates of bank deposit maturing in 2023 were reclassified as other non-current assets maturing within one year.

Our other non-current assets increased by 45.7% from RMB145.5 million as of December 31, 2022 to RMB212.1 million as of December 31, 2023. This was primarily due to an increase in advance payment for engineering construction and equipment of RMB49.4 million, resulting from the prepayment for the expansion of the selection plant of Shandong Changlong Sanhui Construction Engineering Co., Ltd.

## FINANCIAL INFORMATION

Our other non-current assets increased by 4.1% from RMB212.1 million as of December 31, 2023 to RMB220.7 million as of September 30, 2024. This was primarily due to an increase in prepayment for equity acquisition of RMB66.8 million, resulting from the advance payment for the investment in China Investment Mining (Laos) Sole Co., Ltd.

### Inventories

Our inventories primarily consist of raw materials, consumable materials, work in progress and finished goods with taking into consideration the impairment provision. The following table sets forth a breakdown of our inventories as of the dates indicated:

	As of December 31,			As of
	2021	2022	2023	September 30,
				2024
	<i>(RMB'000)</i>			
Raw materials . . . . .	516,090	951,720	971,389	971,689
Consumable materials . . . . .	1,486	680	610	545
Work in progress . . . . .	1,112,679	1,288,300	1,457,052	1,567,218
Finished goods . . . . .	80,577	174,052	168,779	106,280
Subtotal . . . . .	<u>1,710,832</u>	<u>2,414,752</u>	<u>2,597,830</u>	<u>2,645,732</u>
Impairment provision				
Raw materials . . . . .	(127,331)	(143,175)	(178,411)	(194,212)
Work in progress . . . . .	(170,777)	(90,588)	(906)	–
Finished goods . . . . .	(630)	(16,361)	(11,604)	(1,850)
Subtotal . . . . .	<u>(298,738)</u>	<u>(250,124)</u>	<u>(190,921)</u>	<u>(196,062)</u>
<b>Total . . . . .</b>	<b><u>1,412,094</u></b>	<b><u>2,164,628</u></b>	<b><u>2,406,909</u></b>	<b><u>2,449,670</u></b>

Our inventories increased by 53.3% from RMB1,412.1 million as of December 31, 2021 to RMB2,164.6 million as of December 31, 2022. This was primarily due to an increase in raw materials of RMB435.6 million arising from (i) our acquisition of Golden Star Resources, and (ii) an increase in raw materials at the Sepon Gold and Copper Mine for its expanded ore processing and production volume.

Our inventories increased by 11.2% from RMB2,164.6 million as of December 31, 2022 to RMB2,406.9 million as of December 31, 2023. This was primarily due to an increase in work in progress of RMB168.8 million, mainly due to an increase in work in progress at the Sepon Gold and Copper Mine for its expanded mined and processing volume of gold ore.

Our inventories increased by 1.8% from RMB2,406.9 million as of December 31, 2023 to RMB2,449.7 million as of September 30, 2024. This was primarily due to an increase in work in progress of RMB110.2 million, attributable to the increase in the balance of semi-finished gold ore inventory in Laos by RMB78.7 million as of September 30, 2024.

## FINANCIAL INFORMATION

Our impairment provision decreased by 16.3% from RMB298.7 million as of December 31, 2021 to RMB250.1 million as of December 31, 2022. This was primarily due to the decreased impairment losses related to the semi-finished products of certain gold mines, as a result of the rising gold price, offset by the increased impairment losses due to the obsolescence of raw materials.

Our impairment provision decreased by 23.7% from RMB250.1 million as of December 31, 2022 to RMB190.9 million as of December 31, 2023. This was primarily due to the decreased impairment losses related to the products and semi-finished products of certain gold mines, as a result of the rising gold price, offset by (i) the increased impairment losses due to the obsolescence of raw materials and (ii) the increased impairment of molybdenum-related finished goods as a result of the decreased molybdenum price.

Our impairment provision increased by 2.7% from RMB190.9 million as of December 31, 2023 to RMB196.1 million as of September 30, 2024, primarily due to the obsolescence of raw materials.

The obsolescence of raw materials is primarily due to the obsolescence of some spare parts and components for production machinery and maintenance equipment of LXML, which were purchased for the open-pit mining for LXML. They have long turnover days as they will only be used to replace the original parts and components when the original parts and components are damaged. Since the commencement of the transferring open-pit mining to underground mining in 2022, these spare parts and components for the production machinery and maintenance equipment have been held in storage. In contrast, consumables in other raw materials, such as explosive materials and diesel, generally have shorter turnover days.

The following table sets forth an aging analysis of inventories as of the dates indicated:

	As of December 31,			As of
	2021	2022	2023	September 30, 2024
	<i>(RMB'000)</i>			
Less than 1 year . . . . .	1,063,523	2,009,231	1,889,009	1,481,260
1 to 2 years . . . . .	237,658	60,963	392,590	642,312
2 to 3 years . . . . .	77,709	37,474	30,758	222,855
Over 3 years . . . . .	33,204	56,960	94,552	103,243
<b>Total . . . . .</b>	<b><u>1,412,094</u></b>	<b><u>2,164,628</u></b>	<b><u>2,406,909</u></b>	<b><u>2,449,670</u></b>

## FINANCIAL INFORMATION

The following table sets forth the turnover days of our inventories for the years/periods indicated:

	Year Ended December 31,			Nine Months Ended September 30,
	2021	2022	2023	2024
	Inventory turnover days . . . .	<u>158</u>	<u>146</u>	<u>171</u>
<b>Total</b> . . . . .	<b><u>158</u></b>	<b><u>146</u></b>	<b><u>171</u></b>	<b><u>185</u></b>

*Note:*

1. Inventory turnover days are equal to the average balance of inventory at the beginning and the end of the relevant period divided by cost of sales for such period and multiplied by 365 days for the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2024.

Our inventory turnover days were 158 days, 146 days, 171 days, and 185 days in 2021, 2022, 2023 and for the nine months ended September 30, 2024, respectively. The decrease in our inventory turnover days in 2022 was primarily attributable to (i) the acquisition of Golden Star Resources, which led to an increase in the inventory in 2022; (ii) the increase of the operation costs arising from the increase of gold selling volume; and (iii) the increase in demand in the gold market and the improvement in our production efficiency, which led to a reduction in the inventory turnover days. The increase in our inventory turnover days in 2023 was primarily due to the new underground mining at the Sepon Gold and Copper Mine, contributing to the increase of the unit cost of mining. The increase in our inventory turnover days for the nine months ended September 30, 2024 was mainly due to the increase in the volume of ore at Sepon Gold and Copper Mine.

As of January 31, 2025, RMB1,258.9 million or 51.4% of the inventories as of September 30, 2024 had been subsequently utilized. The majority of our inventory comprises work-in-progress products sourced from LXML, primarily because (i) post our acquisition of LXML in 2018, we consolidated the accounts of LXML which accumulated a substantial amount of gold ore, coupled with the ongoing processing of such gold ores; and (ii) we managed our inventory driven by commercial considerations, which involves blending based on grade variations. Therefore, we believe there are no major concerns in the recoverability of our inventories.

### **Trade receivables from gold and commodities sales**

Our trade receivables from gold and commodities sales refer to our trade receivables other than the comprehensive recycling of resources business conducted through Guangyuan Technology. Impairment losses in respect of trade debtors are recorded using an allowance account unless we are satisfied that recovery of the amount is remote, in which case the impairment loss is written off against trade debtors directly.

## FINANCIAL INFORMATION

Our trade receivables from gold and commodities sales increased by 17.3% from RMB25.3 million as of December 31, 2021 to RMB29.6 million as of December 31, 2022, and further increased by 290.5% to RMB115.7 million as of December 31, 2023. Trade receivables from gold and commodities sales increased by 41.3% from RMB115.7 million as of December 31, 2023 to RMB163.5 million as of September 30, 2024. This was primarily due to the receivables from customers at the end of the period, generated by our sales of gold products, copper concentrate powder, zinc concentrate powder, and copper cathodes.

We maintain strict control over our outstanding receivables. Overdue balances are reviewed regularly by senior management.

Our trade receivables from gold and commodities sales are typically due within 60 days. No interests are charged on the trade receivables from other sales. The following table sets forth an aging analysis of trade receivables from other sales, based on invoice dates as of the dates indicated:

	As of December 31,			As of September 30,
	2021	2022	2023	2024
	<i>(RMB'000)</i>			
Less than 1 year . . . . .	25,210	29,637	115,732	163,455
1 to 2 years . . . . .	–	–	–	–
2 to 3 years . . . . .	50	–	–	–
Over 3 years . . . . .	–	–	–	–
<b>Total</b> . . . . .	<b>25,260</b>	<b>29,637</b>	<b>115,732</b>	<b>163,455</b>

The following table sets forth the turnover days of our trade receivables from gold and commodities sales for the years/periods indicated:

	Year ended December 31,			Nine Months ended September 30,
	2021	2022	2023	2024
Trade receivables turnover				
days . . . . .	2	2	4	5
<b>Total</b> . . . . .	<b>2</b>	<b>2</b>	<b>4</b>	<b>5</b>

*Note:*

1. Trade receivables turnover days are equal to the average balance of trade receivables at the beginning and the end of the relevant period divided by revenue for such period and multiplied by 365 days for the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2024.

## FINANCIAL INFORMATION

### Trade receivables from comprehensive recycling of resources business

Our trade receivables from our comprehensive recycling of resources business conducted through Guanyuan Technology refers to our receivable government subsidies, which is generally associated with low recovery risks.

Trade receivables from our comprehensive recycling of resources business increased by 8.9% from RMB311.4 million as of December 31, 2021 to RMB339.2 million as of December 31, 2022 and further increased by 17.2% from RMB339.2 million as of December 31, 2022 to RMB397.5 million as of December 31, 2023, resulting from the delayed subsidy disbursements from PRC Government.

Trade receivables from our comprehensive recycling of resources business increased by 11.5% from RMB397.5 million as of December 31, 2023 to RMB443.3 million as of September 30, 2024, primarily due to additional government subsidies.

The following table sets forth an aging analysis of trade receivables from comprehensive recycling of resources business, based on invoice dates as of the dates indicated:

	As of December 31,			As of September 30,
	2021	2022	2023	2024
	<i>(RMB'000)</i>			
Less than 1 year . . . . .	69,680	74,704	92,642	69,890
1 to 2 years . . . . .	83,630	69,680	74,704	88,476
2 to 3 years . . . . .	158,121	83,630	69,680	73,895
Over 3 years . . . . .	16	111,223	160,455	211,025
<b>Total . . . . .</b>	<b>311,447</b>	<b>339,237</b>	<b>397,481</b>	<b>443,286</b>

The following table sets forth the turnover days of our trade receivables for the years/periods indicated:

	Year ended December 31,			Nine Months ended September 30,
	2021	2022	2023	2024
Trade receivables turnover days . . . . .	31	21	22	25
<b>Total . . . . .</b>	<b>31</b>	<b>21</b>	<b>22</b>	<b>25</b>

*Note:*

- Trade receivables turnover days are equal to the average balance of trade receivables at the beginning and the end of the relevant period divided by revenue for such period and multiplied by 365 days for the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2024.

## FINANCIAL INFORMATION

Our trade receivables turnover days were 2 days, 11 days, 22 days and 25 days in 2021, 2022 and 2023 and for the nine months ended September 30, 2024, respectively. The increase in our trade receivables turnover days during Track Record Period was primarily due to the government subsidies of Guangyuan Technology which needs certain time to process.

As of January 31, 2025, RMB260.3 million or 42.9% of the trade receivables as of September 30, 2024 had been subsequently settled. In the case of trade receivables from the comprehensive resource recycling and utilization, the predominant portion consists of the allowances specified in the government policies from Guangyuan Technology. The extended approval timeline mandated by the authorities contributes to a lower settlement rate. We believe that the expected credit losses are limited because the trade receivable balances are due from the Ministry of Ecology and Environment of the PRC, which has high credibility and historically we did not incur any actual loss with this organization. Additionally, there was a minor component of accounts receivable from gold and commodities sales. Trade receivables can be collected within one week after the delivery of the products. Therefore, we believe there are no major concerns in the recoverability of our trade receivables.

### Prepayments, other receivables, and other assets

Our prepayments, other receivables, and other assets consist of prepayments, deposits and other receivables, large certificates of bank deposits and interest and others. The following table sets forth a breakdown of our prepayments, other receivables and other assets as of the dates indicated:

	As of December 31,			As of
	2021	2022	2023	September 30,
	(RMB'000)			2024
Prepayments . . . . .	50,037	99,560	83,944	240,266
Deposits and other receivables . . . . .	120,194	58,134	180,497	202,593
Receivable from disposal of the shares of Phase II ESOP . . . . .	–	–	–	323,647
Large certificates of bank deposits and interest. . . . .	–	42,118	–	—
Others . . . . .	51	46,471	25,177	53,080
Less: Impairment of other receivables . . . . .	(3,338)	(4,140)	(7,022)	(5,416)
<b>Total . . . . .</b>	<b><u>166,944</u></b>	<b><u>242,143</u></b>	<b><u>282,596</u></b>	<b><u>814,170</u></b>

---

## FINANCIAL INFORMATION

---

Our prepayments, other receivables and other assets increased by 45.0% from RMB166.9 million as of December 31, 2021 to RMB242.1 million as of December 31, 2022. This was primarily due to an increase in prepayments of RMB49.5 million, which is attributed to our acquisition of Golden Star Resources.

Our prepayments, other receivables and other assets increased by 16.7% from RMB242.1 million as of December 31, 2022 to RMB282.6 million as of December 31, 2023. This was primarily due to an increase in deposits and other receivables of RMB122.4 million, resulting from (i) a decrease in prepayments of RMB15.6 million; (ii) an increase of other receivables of RMB45.0 million attributable to the increase in gold selling price in 2023 and increase of funds in gold futures account at GSWL and LXML; (iii) the utilisation of the futures margin; and (iv) decrease in deductible input tax of RMB21.3 million.

Our prepayments, other receivables and other assets increased by 188.1% from RMB282.6 million as of December 31, 2023 to RMB814.2 million as of September 30, 2024. This was primarily due to (i) an increase in prepayments of RMB156.3 million attributable to the prepayments for rare earth products by Chijin Xiawu; and (ii) an increase in deposits and other receivables of RMB345.7 million attributable to the receivables from securities companies upon the sale of stocks in the Phase II ESOP. As the stocks under the Phase II ESOP was sold on September 30, 2024, the payment related to the equity interests had not yet been transferred back to our Company's accounts from the securities companies' accounts as of September 30, 2024. See paragraph headed "C. Further Information about our Directors, Supervisors and Substantial Shareholders — 4. Employee Stock Ownership Plans" in Appendix VII to this Prospectus for details.

As of January 31, 2025, RMB514.4 million or 63.2% of the prepayments, deposits and other assets as of September 30, 2024 had been subsequently settled.

### **Financial assets at fair value through profit or loss**

Financial assets at fair value through profit or loss refer to listed equity investments at fair value.

Our financial assets at fair value through profit or loss increased by 328.3% from RMB11.2 million as of December 31, 2021 to RMB48.1 million as of December 31, 2022. This was mainly due to an increase in equity investment in 2022, as a result of the increase in stock price of our investees.

Our financial assets at fair value through profit or loss decreased by 64.9% from RMB48.1 million as of December 31, 2022 to RMB16.9 million as of December 31, 2023, associated with our disposal of equity investments in 2023.

Our financial assets at fair value through profit or loss further decreased by 21.9% from RMB16.9 million as of December 31, 2023 to RMB13.2 million as of September 30, 2024. This was primarily due to a decrease in the stock price of our investee.

---

## FINANCIAL INFORMATION

---

We have formulated a set of investment management measures which states the investment management organizational structure, responsibilities and authorities, investment decision-making management, investment process management, investment outcome evaluation, and investment assessment, rewards and penalties.

Our management has extensive experience in financial investment. Our vice president, Mr. Chen Zhiyong, served as a Deputy General Manager of Soremi Investment Company Limited (索瑞米投資有限公司) from February 2014 to August 2018. Our non-executive director, Mr. Zhang Xudong, was Chairman and CEO of Anjia Group/Shanghai Anjia Investment Management Co., Ltd, an investment advisory and asset management services firm, from March 2007 to August 2009. He also served as Managing Director, Head of the Institutional Client Group, Debt and Equity for China and Head of Global Markets Equity for China at Deutsche Bank AG.

Investments exceeding RMB30 million shall be approved by the Board. With the Board's authorization, those not exceeding RMB30 million can be reviewed and approved by the Executive Committee chaired by the Chairman.

### **Derivative financial assets**

Our derivative financial assets refer to hedging instruments for cash flow hedge and fair value hedge.

Our derivative financial assets decreased by 90.9% from RMB6.4 million as of December 31, 2021 to RMB0.6 million as of December 31, 2022. This was primarily due to a decrease in the fair value of futures contracts arising from the closing of zinc futures positions in Hanfeng Mining.

Our derivative financial assets increased by 2,206.5% from RMB0.6 million as of December 31, 2022 to RMB13.5 million as of December 31, 2023. This was primarily due to increase in fair value of futures contracts arising from fair value of gold futures contracts in Jilong Mining.

Our derivative financial assets increased by 222.5% from RMB13.5 million as of December 31, 2023 to RMB43.4 million as of September 30, 2024. This was primarily due to an increase in fair value of gold futures contracts in Jilong Mining due to the increase of the gold price.

## FINANCIAL INFORMATION

### Restricted cash

Our restricted cash consist of bank deposits for loans, special fund deposits for environmental rehabilitation and restoration, bank deposits for gold lease business, certificates of deposit due within one year and deposits for investment funds. The following table sets forth a breakdown of our restricted cash as of the dates indicated:

	As of December 31,			As of September 30,
	2021	2022	2023	2024
	<i>(RMB'000)</i>			
Bank deposits for loans . . .	–	13,965	13,965	–
Deposits for notes payable .	–	20,400	–	–
Special fund deposits for environmental rehabilitation and restoration . . . . .	6,050	18,194	9,825	6,619
Bank deposits for the gold lease business . . . . .	8,003	100,001	263,858	296,997
Certificates of deposit due within one year . . . . .	100,095	80,000	100,000	–
Deposits for investment funds . . . . .	2,733	–	–	–
<b>Total . . . . .</b>	<b><u>116,881</u></b>	<b><u>232,560</u></b>	<b><u>387,648</u></b>	<b><u>303,616</u></b>

Our restricted cash increased by 99.0% from RMB116.9 million as of December 31, 2021 to RMB232.6 million as of December 31, 2022. This was primarily due to an increase in bank deposits for gold lease business of RMB92.0 million, which is attributed to in the scale of our gold leasing requiring a corresponding increase in deposits.

Our restricted cash increased by 66.7% from RMB232.6 million as of December 31, 2022 to RMB387.6 million as of December 31, 2023. This was primarily due to an increase in bank deposits for gold lease business of RMB163.9 million, which is attributed to in the scale of our gold leasing requiring a corresponding increase in deposits.

Our restricted cash decreased by 21.7% from RMB387.6 million as of December 31, 2023 to RMB303.6 million as of September 30, 2024. This was primarily due to an increase in bank deposits for gold lease business of RMB33.1 million, which is attributed to in the scale of our gold leasing requiring a corresponding increase in deposits.

## FINANCIAL INFORMATION

### Trade and notes payables

Our trade and notes payables consist of trade payables and notes payables. The following table sets forth a breakdown of our trade and notes payables as of the dates indicated:

	As of December 31,			As of
	2021	2022	2023	September 30, 2024
	<i>(RMB'000)</i>			
Trade payables . . . . .	440,401	693,390	552,457	636,817
Notes payables . . . . .	—	158,000	—	—
<b>Total . . . . .</b>	<b><u>440,401</u></b>	<b><u>851,390</u></b>	<b><u>552,457</u></b>	<b><u>636,817</u></b>

Our trade and notes payables increased by 93.3% from RMB440.4 million as of December 31, 2021 to RMB851.4 million as of December 31, 2022. This was primarily due to an increase in trade payables of RMB253.0 million and an increase in notes payables of RMB158.0 million, resulting from: (i) our acquisition of Golden Star Resources; and (ii) a note payable issued by Wulong Mining to an independent third party to pay for certain mining and excavation project costs.

Our trade and notes payables decreased by 35.1% from RMB851.4 million as of December 31, 2022 to RMB552.5 million as of December 31, 2023 due to a decrease in trade payables of RMB140.9 million. This was primarily because: (i) Golden Star Resources entered into a revised materials procurement agreements with a lower purchase price for materials; and (ii) the Sepon Gold and Copper Mine completed certain expansion projects, resulting in a substantial decrease in payables.

Our trade and notes payables increased by 15.0% from RMB552.5 million as of December 31, 2023 to RMB636.8 million as of September 30, 2024. This was primarily due to the increase in payables in connection with purchases from suppliers and payments to contractors of engineering services.

All of our trade and notes payables are aged less than one year. The following table sets forth an aging analysis of our trade and notes payables as of the dates indicated:

	As of December 31,			As of
	2021	2022	2023	September 30, 2024
	<i>(RMB'000)</i>			
Less than 1 year . . . . .	440,401	851,390	552,457	636,817
<b>Total . . . . .</b>	<b><u>440,401</u></b>	<b><u>851,390</u></b>	<b><u>552,457</u></b>	<b><u>636,817</u></b>

## FINANCIAL INFORMATION

The following table sets forth the turnover days of our trade and notes payables for the years/periods indicated:

	Year Ended December 31,			Nine Months Ended September 30,
	2021	2022	2023	2024
Trade and notes payables				
turnover days . . . . .	<u>50</u>	<u>53</u>	<u>53</u>	<u>36</u>
<b>Total . . . . .</b>	<b><u>50</u></b>	<b><u>53</u></b>	<b><u>53</u></b>	<b><u>36</u></b>

*Note:*

1. Trade and notes payables turnover days are equal to the average balance of trade and notes payables at the beginning and the end of the relevant period divided by cost of sales for such period and multiplied by 365 days for the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2024.

Our trade and notes payables turnover days increased from 50 days as of December 31, 2021 to 53 days as of December 31, 2022, primarily due to our acquisition of Golden Star Resources in 2022 which substantially increased our trade payable. Our trade and notes payables turnover days decreased from 53 days as of December 31, 2023 to 36 days as of September 30, 2024. This was primarily because we shortened payment period for our suppliers to fully utilize the Ghana Cedis we have on hand to manage foreign exchange risk, as Ghana Cedis depreciated.

As of January 31, 2025, RMB420.5 million or 66.0% of the trade and notes payables as of September 30, 2024 had been subsequently settled.

### Contract liabilities

The contract liabilities mainly consist of metal streaming and the advance payments received for the sale of metals. We require certain customers to pay in advance of delivery. The receipts in advance are recognized as a contract liability until the products are delivered to the customer. In 2021, 2022 and 2023 and for the nine months ended September 30, 2024, RMB4.5 million, RMB1.2 million, RMB9.2 million and RMB17.3 million or 100%, 100%, 100%, 100%, of the advance payments for metal sales, respectively, were subsequently settled and recognized as revenue.

As of January 31, 2025, RMB31.4 million or 5.0% of contract liabilities as of September 30, 2024 had been were subsequently settled and recognized as revenue.

## FINANCIAL INFORMATION

The following table sets forth a breakdown of our contract liabilities as of the dates indicated:

	As of December 31,			As of September 30,
	2021	2022	2023	2024
	<i>(RMB'000)</i>			
<b>Short-term advances</b>				
<b>received from customers</b>				
Sale of goods . . . . .	4,547	1,227	9,162	17,323
Metal Streaming				
Arrangement . . . . .	–	60,825	64,015	71,849
Sub-total . . . . .	4,547	62,052	73,177	89,172
<b>Long-term advances</b>				
<b>received from</b>				
<b>customers</b>				
Metal Streaming				
Arrangement . . . . .	–	606,298	576,999	538,996
<b>Total . . . . .</b>	<b><u>4,547</u></b>	<b><u>668,350</u></b>	<b><u>650,176</u></b>	<b><u>628,168</u></b>

*Note:* We acquired Golden Star Resources in January 2022. In May 2015, Golden Star Resources, through its subsidiary Caystar Finance, engaged in a gold purchase and sale agreement with RGLD Gold AG. Under this arrangement, Golden Star Resources received US\$145,000,000 from RGLD Gold AG as the purchase price. Golden Star Resources is obligated to supply future gold production from its subsidiaries at a cash purchase price equivalent to 20% of the spot gold price until delivering 240,000 ounces. Subsequently, 5.5% of the gold production will be supplied at a cash purchase price of 30% of the spot gold price. As of September 30, 2024, Golden Star Resources had delivered approximately 185 koz accumulated amount of gold to RGLD Gold AG.

Our contract liabilities increased by 14,598.7% from RMB4.5 million as of December 31, 2021 to RMB668.4 million as of December 31, 2022. This was primarily due to an increase in short-term and long-term advances received from customers arising from gold streaming transactions of GSWL since our acquisition of Golden Star Resources.

Our contract liabilities decreased by 2.7% from RMB668.4 million as of December 31, 2022 to RMB650.2 million as of December 31, 2023. This was primarily due to a decrease in long-term advances received from customers arising from gold streaming transactions of GSWL. The decrease was partially offset by an increase in short-term advances received from customers arising from sales of goods at Hanfeng Mining.

Our contract liabilities decreased by 3.4% from RMB650.2 million as of December 31, 2023 to RMB628.2 million as of September 30, 2024, primarily due to the decrease in advance receipts from the metal stream transaction of GSWL.

## FINANCIAL INFORMATION

### Derivative financial liabilities

Our derivative financial liabilities are related to hedging instruments for cash flow hedge arising from commodity future contracts.

Our derivative financial liabilities were RMB1.8 million, nil, nil and RMB17 million as of December 31, 2021, 2022 and 2023 and September 30, 2024, respectively.

### Other payables and accruals

Our other payables and accruals consist of amounts due to related parties, payables to contractors, consideration payables for acquiring a subsidiary, engineering quality guarantee deposit, safety deposit, salaries, wages and benefits payables, taxes other than income tax payables and others. The following table sets forth a breakdown of our other payables and accruals as of the dates indicated:

	As of December 31,			As of September 30,
	2021	2022	2023	2024
	<i>(RMB'000)</i>			
Amounts due to related parties				
– trade . . . . .	–	41	22	2
– non-trade . . . . .	–	410,940	128,525	–
Payables to contractors . . . . .	2,926	6,319	85,195	116,158
Consideration payables for acquiring a subsidiary . . . . .	–	–	40,800	40,800
Engineering Quality Guarantee Deposit . . . . .	27,803	33,507	40,984	39,885
Salaries, wages and benefits payables . . . . .	104,693	114,454	174,859	111,078
Taxes other than income tax payables . . . . .	53,999	93,558	205,293	142,504
Payables for Phase II ESOP . . .	–	–	–	323,647
Others . . . . .	1,748	36,517	21,769	18,229
<b>Total . . . . .</b>	<b><u>191,169</u></b>	<b><u>695,336</u></b>	<b><u>697,447</u></b>	<b><u>792,303</u></b>

Our other payables and accruals increased by 263.7% from RMB191.2 million as of December 31, 2021 to RMB695.3 million as of December 31, 2022. This was primarily due to an increase in amounts due to related parties of RMB411.0 million, resulting from the financial support provided by the member of the Single Largest Shareholder Group, Ms. Li Jinyang, which led to an increase in the amount payable to the related party.

## FINANCIAL INFORMATION

Our other payables and accruals increased by 0.3% from RMB695.3 million as of December 31, 2022 to RMB697.4 million as of December 31, 2023. This was primarily due to: (i) an increase in taxes other than income tax payables of RMB111.7 million, which is attributed the increase in sales revenue of gold, leading to an increase in the resource tax payable; and (ii) an increase in payable to contractors of RMB78.9 million. The increase was partially offset by a decrease in amounts due to related parties of RMB282.4 million because of the repayment of the financial support provided by the member of the Single Largest Shareholder Group, Ms. Li Jinyang.

Our other payables and accruals increased by 13.6% from RMB697.4 million as of December 31, 2023 to RMB792.3 million as of September 30, 2024. This was primarily due to (i) a decrease in amounts due to related parties of RMB128.6 million for repayment of the funds provided by the member of the Single Largest Shareholder Group, Ms. Li Jinyang; and (ii) an increase in payables for Phase II ESOP of RMB323.6 million.

As of January 31, 2025, RMB713.9 million or 93.5% of other payables and accruals as of September 30, 2024 had been subsequently settled.

### Income tax payables

Our income tax payables increased by 72.9% from RMB102.4 million as of December 31, 2021 to RMB177.1 million as of December 31, 2022, mainly due to our acquisition of Golden Star Resources in January 2022.

Our income tax payables increased by 51.2% from RMB177.1 million as of December 31, 2022 to RMB267.7 million as of December 31, 2023, mainly due to the increase in profit before tax for the increase in gold sales volumes and unit selling prices.

Our income tax payables increased by 70.3% from RMB267.7 million as of December 31, 2023 to RMB455.8 million as of September 30, 2024, which is attributed to the income tax not yet paid.

### Lease liabilities

Our lease liabilities consist of current lease liabilities and non-current liabilities. The following table sets forth a breakdown of our lease liabilities as of the dates indicated:

	As of December 31,			As of September 30,
	2021	2022	2023	2024
	<i>(RMB'000)</i>			
Current . . . . .	1,424	31,177	38,083	38,204
Non-current . . . . .	2,975	230,805	207,219	185,340
<b>Total . . . . .</b>	<b><u>4,399</u></b>	<b><u>261,982</u></b>	<b><u>245,302</u></b>	<b><u>223,544</u></b>

## FINANCIAL INFORMATION

Our current portion of lease liabilities increased by 2,089.4% from RMB1.4 million as of December 31, 2021 to RMB31.2 million as of December 31, 2022. This was mainly due to the increased lease liabilities due to the acquisition of Golden Star Resources in 2022.

Our current portion of lease liabilities increased by 22.2% from RMB31.2 million as of December 31, 2022 to RMB38.1 million as of December 31, 2023. This was mainly due to the increased lease liabilities within one year arising from the acquisition of Jintai Mining and difference of rental payment arrangements.

Our current portion of lease liabilities increased by 0.3% from RMB38.1 million as of December 31, 2023 to RMB38.2 million as of September 30, 2024. This was attributable to the rent paid by Chijin HK and GSWL in 2024 and the reclassification of non-current lease liabilities to current lease liabilities.

Our non-current portion of lease liabilities increased by 7,658.2% from RMB3.0 million as of December 31, 2021 to RMB230.8 million as of December 31, 2022. This was mainly due to our acquisition of Golden Star Resources in 2022.

Our non-current portion of lease liabilities decreased by 10.2% from RMB230.8 million as of December 31, 2022 to RMB207.2 million as of December 31, 2023. This was mainly due to the increase in lease liabilities of RMB26.0 million arising from our acquisition of Xinhenghe Mining in 2023, offset by rent payment of RMB58.1 million for the period.

Our non-current portion of lease liabilities decreased by 10.6% from RMB207.2 million as of December 31, 2023 to RMB185.3 million as of September 30, 2024. This was attributable to the reclassification of non-current lease liabilities to current lease liabilities.

### Deferred tax liabilities

Our deferred tax liabilities consist of fair value adjustments on financial assets at fair value through profit or loss, Accelerated depreciation of property, plant and equipment, environmental rehabilitation, fair value adjustment arising from acquisition of subsidiaries, right-of-use assets and others. The following table sets forth a breakdown of our deferred tax liabilities as of the dates indicated:

	As of December 31,			As of September 30,
	2021	2022	2023	2024
	<i>(RMB'000)</i>			
Fair value adjustments on financial assets at fair value through profit or loss . . . . .	966	88	2,108	6,516

## FINANCIAL INFORMATION

	As of December 31,			As of
	2021	2022	2023	September 30, 2024
	<i>(RMB'000)</i>			
Accelerated depreciation of property, plant and equipment . . . . .	950	378,810	357,796	371,795
Environmental rehabilitation . . . . .	–	11,045	11,869	11,435
Fair value adjustment arising from acquisition of subsidiaries . . . . .	–	2,080,068	2,004,421	1,925,417
Right-of-use assets . . . . .	–	65,554	58,817	51,561
Others . . . . .	–	13,667	13,577	10,491
<b>Total deferred tax liabilities before offset . . . . .</b>	<b>1,916</b>	<b>2,549,232</b>	<b>2,448,588</b>	<b>2,377,215</b>
Amount of offset between deferred tax assets and liabilities . . . . .	–	93,251	133,934	132,163
Deferred tax liabilities presented net of offset . . . . .	1,916	2,455,981	2,314,654	2,245,052

Our deferred tax liabilities increased by 128,082.7% from RMB1.9 million as of December 31, 2021 to RMB2,456.0 million as of December 31, 2022. This was mainly due to an increase of RMB2,080.1 million, from assets appreciation resulting from the acquisition of Golden Star Resources in 2022.

Our deferred tax liabilities decreased by 5.8% from RMB2,456.0 million as of December 31, 2022 to RMB2,314.7 million as of December 31, 2023. This was mainly due to a decrease of RMB75.6 million, which is attributed to: (i) amortization of the assessed appreciation of GSWL's mining rights; and (ii) depreciation and amortization of fixed and intangible assets of RMB19.6 million.

Our deferred tax liabilities decreased by 3.0% from RMB2,314.7 million as of September 30, 2023 to RMB2,245.1 million as of September 30, 2024. This was primarily due to amortization of the assessed appreciation of Golden Star Resources resulting from business combinations not under common control.

## FINANCIAL INFORMATION

### Provisions

Our provisions consist of environmental rehabilitation and restoration. The following table sets forth a breakdown of our provisions as of the dates indicated:

	As of December 31,			As of September 30,
	2021	2022	2023	2024
	<i>(RMB'000)</i>			
Current . . . . .	–	9,567	75,747	71,806
Non-current . . . . .	1,631,259	1,984,834	1,868,099	1,781,346
<b>Total . . . . .</b>	<b><u>1,631,259</u></b>	<b><u>1,994,401</u></b>	<b><u>1,943,846</u></b>	<b><u>1,853,152</u></b>

Our current provisions increased from nil as of December 31, 2021 to RMB9.6 million as of December 31, 2022, mainly due to the acquisition of GSWL. Our current provisions increased by 691.8% from RMB9.6 million as of December 31, 2022 to RMB75.7 million as of December 31, 2023. This was mainly due to the amendment of environmental rehabilitation and restoration plan by Sepon Gold and Copper Mine in 2023.

Our current provisions slightly decreased by 5.2% from RMB75.7 million as of December 31, 2023 to RMB71.8 million as of September 30, 2024. This was mainly due to the normal environmental rehabilitation and restoration expenditure.

Our non-current provisions increased by 21.7% from RMB1,631.3 million as of December 31, 2021 to RMB1,984.8 million as of December 31, 2022. This was mainly due to (i) an increase in exchange differences of RMB155.9 million, and (ii) the acquisition of GSWL. Our non-current provisions decreased by 5.9% from RMB1,984.8 million as of December 31, 2022 to RMB1,868.1 million as of December 31, 2023. This was mainly due to the expenditure on reclamation obligations. Our non-current provisions decreased by 4.6% from RMB1,868.1 million as of December 31, 2023 to RMB1,781.3 million as of September 30, 2024. This was mainly due to the normal reclamation expenditure.

## FINANCIAL INFORMATION

### Other non-current liabilities

Our other non-current liabilities of payables for mining rights, payables for equity transfer and deferred government grants. The following table sets forth a breakdown of our other non-current liabilities as of the dates indicated:

	As of December 31,			As of
	2021	2022	2023	September 30, 2024
	<i>(RMB'000)</i>			
Payables for mining rights . . . . .	85,716	73,186	71,960	64,167
Payables for equity transfer . . . . .	173,566	–	–	–
Deferred government grants . . . . .	2,120	2,073	1,756	6,918
<b>Total . . . . .</b>	<b>261,402</b>	<b>75,259</b>	<b>73,716</b>	<b>71,085</b>
Current portion . . . . .	186,589	10,849	9,485	5,717
Non-current portion . . . . .	74,813	64,410	64,231	65,368

Our other non-current liabilities decreased by 13.9% from RMB74.8 million as of December 31, 2021 to RMB64.4 million as of December 31, 2022. This was mainly due to a decrease in payables for equity transfer of RMB173.6 million, resulting from the acquisition of LXML in 2018, for which payments were due to the original shareholder MMG Limited (“MMG”). The equity transfer payment due to MMG had been fully made in 2022.

Our other non-current liabilities decreased by 0.3% from RMB64.4 million as of December 31, 2022 to RMB64.2 million as of December 31, 2023. This was mainly due to a decrease in payables for mining rights of RMB1.2 million and a decrease in deferred government grants of RMB0.3 million, mainly resulting from: (i) the payment of mining rights transfer fees and interest expenses in 2023; and (ii) a reduction in government subsidies received in 2023.

Our other non-current liabilities increased by 1.8% from RMB64.2 million as of December 31, 2023 to RMB65.4 million as of September 30, 2024. This was primarily attributable to (i) the payment of mining rights transfer fees and interest expenses in 2024; and (ii) deferred grant received from the government.

### INDEBTEDNESS

During the Track Record Period, our indebtedness consisted of short-term loans, financial liabilities at fair value through profit or loss, other payables and accruals. The significant increase in our Company’s indebtedness compared to 2021 is primarily attributed to the acquisition of Golden Star Resources at the beginning of 2022.

## FINANCIAL INFORMATION

The following table sets forth a breakdown of our indebtedness as of the dates indicated:

	As of December 31,			As of September 30,	As of December 31,
	2021	2022	2023	2024	2024
	<i>(RMB'000)</i>				<i>(unaudited)</i>

<b>Long-term</b>					
Long-term loans . . . . .	–	1,513,781	1,421,974	681,614	599,503
Lease liabilities . . . . .	2,975	230,805	207,219	185,340	179,596
Other non-current liabilities – Payables for mining rights . . . . .	<u>72,693</u>	<u>62,337</u>	<u>62,475</u>	<u>58,450</u>	<u>59,168</u>
<b>Total . . . . .</b>	<u><b>676,894</b></u>	<u><b>3,702,318</b></u>	<u><b>3,886,787</b></u>	<u><b>3,795,110</b></u>	<u><b>2,990,990</b></u>

The agreements under our bank loans and other borrowings do not contain any material covenants that will have a material adverse effect on our ability to make additional borrowings or issue debt or equity securities in the future. Our Directors confirm that we did not have any default in payment of trade payables, bank loans and other borrowings, and did not breach any of the covenants in relation to the bank loans and other borrowings mentioned above, during the Track Record Period and up to the Latest Practicable Date. We did not experience any difficulty in obtaining bank loans and other borrowings during the Track Record Period and up to the Latest Practicable Date, and there has not been any material change in our indebtedness since December 31, 2024 and up to the date of this Prospectus.

## FINANCIAL INFORMATION

### Short-term loans

Our short-term loans consist of unsecured and secured and short-term loans, and based on their maturity dates, they are classified as current. The following table sets forth a breakdown of our short-term loans as of the dates indicated:

	As of December 31,			As of September 30,	As of December 31,
	2021	2022	2023	2024	2024
			<i>(RMB'000)</i>		<i>(unaudited)</i>
Short-term loans –					
unsecured . . . . .	–	236,636	850,009	822,730	1,108,199
Short-term loans –					
secured . . . . .	–	<u>251,773</u>	<u>–</u>	<u>–</u>	<u>–</u>
<b>Total . . . . .</b>	<u>–</u>	<u><b>488,409</b></u>	<u><b>850,009</b></u>	<u><b>822,730</b></u>	<u><b>1,108,199</b></u>

Secured short-term loans accounted for nil, 51.6%, nil, nil, and nil of our total short-term loans as of December 31, 2021, 2022 and 2023, and September 30, 2024 and December 31, 2024, respectively. All of our secured short-term loans during the Track Record Period were at fixed interest rates of 3.7% per annum.

Unsecured short-term loans accounted for nil, 48.5%, 100.0%, 100.0%, and 100% of our total short-term loans as of December 31, 2021, 2022 and 2023, September 30, 2024 and December 31, 2024, respectively, at interest rates of nil, 2.6%-3.9%, 2.5%-7.5%, 2.5%-4.5% and 2.4%-5.7% per annum, respectively.

Our short-term loans increased by 74.0% from RMB488.4 million as of December 31, 2022 to RMB850.0 million as of December 31, 2023. This was mainly due to the increase in profit before tax arising from our acquisition of Golden Star Resources and the expansion project of Jilong Gold Mine.

Our short-term loans decreased by 3.2% from RMB850.0 million as of December 31, 2023 to RMB822.7 million as of September 30, 2024, attributable to a combined effect of (i) the repayment of short-term borrowings upon maturity and (ii) our new short-term borrowings.

Our short-term loans increased by 34.7% from RMB822.7 million as of September 30, 2024 to RMB1,108.2 million as of December 31, 2024, primarily due to our optimization of the borrowing model of the gold leasing, which resulted in an increase in short-term borrowings by RMB285.5 million, and a decrease in financial liabilities at fair value through profit or loss by RMB319.2 million. The overall short-term debt level remained stable as a netting effect of these adjustments.

As of December 31, 2024, we had unutilized short-term credit facilities of RMB4,002 million.

## FINANCIAL INFORMATION

### Long-term loans

Our long-term loans consist of unsecured and secured and long-term loans, and based on their maturity dates, they are classified as current or non-current. The following table sets forth a breakdown of our long-term loans as of the dates indicated:

	As of December 31,			As of September 30,	As of December 31,
	2021	2022	2023	2024	2024
	<i>(RMB'000)</i>				<i>(unaudited)</i>
<b>Current</b>					
Current portion of long-term bank loans –					
secured . . . . .	–	245,850	129,456	531,580	170,325
Current portion of long-term bank loans –					
unsecured . . . . .	<u>25,530</u>	<u>87,920</u>	<u>88,859</u>	<u>110,198</u>	<u>112,008</u>
Subtotal . . . . .	<u>25,530</u>	<u>333,770</u>	<u>218,315</u>	<u>641,778</u>	<u>282,333</u>
<b>Non-current</b>					
Long-term loans –					
secured . . . . .	–	1,386,724	1,381,994	485,047	433,882
Long-term loans –					
unsecured . . . . .	<u>–</u>	<u>127,057</u>	<u>39,980</u>	<u>196,567</u>	<u>165,621</u>
Subtotal . . . . .	<u>–</u>	<u>1,513,781</u>	<u>1,421,974</u>	<u>681,614</u>	<u>599,503</u>
<b>Total . . . . .</b>	<b><u>25,530</u></b>	<b><u>1,847,551</u></b>	<b><u>1,640,289</u></b>	<b><u>1,323,392</u></b>	<b><u>881,836</u></b>

Secured long-term loans accounted for nil, 88.4%, 92.1%, 76.8% and 68.5% of our total long-term loans as of December 31, 2021, 2022 and 2023, September 30, 2024 and December 31, 2024, respectively, at fixed interest rates of nil, 4.1%-5.0%, 4.0%-9.2%, 4.0%-9.1% and 3.7%-4.3% per annum, respectively.

On the other hand, unsecured long-term loans accounted for 100%, 11.6%, 7.9%, 23.2% and 31.5% of our total long-term loans as of December 31, 2021, 2022 and 2023, September 30, 2024 and December 31, 2024, respectively, at fixed interest rates of 3.5%, 3.5%-4.0%, 3.5%-4.1%, 3.5%-6.3% and 3.5%-5.7% per annum, respectively.

Our long-term loans increased by 7,136.8% from RMB25.5 million as of December 31, 2021 to RMB1,847.6 million as of December 31, 2022 mainly due to the loan for the acquisition of Golden Star Resources in 2022. The principal amount of the loan is RMB1.2 billion for a term of 5 years, with an interest rate of 4.95% in 2022, which was adjusted to 4.35% since June 2023. The repayment plan involves repaying the principal every six months, with interest accrued and paid quarterly.

---

## FINANCIAL INFORMATION

---

Our long-term loans decreased by 11.2% from RMB1,847.6 million as of December 31, 2022 to RMB1,640.3 million as of December 31, 2023, resulting from the partial repayment of long-term loans.

Our long-term loans decreased by 19.3% from RMB1,640.3 million as of December 31, 2023 to RMB1,323.4 million as of September 30, 2024, primarily due to (i) the repayment of long-term loans by GSWL and our Company, and (ii) LXML's new long-term loans.

Our long-term loans decreased by 33.4% from RMB1,323.4 million as of September 30, 2024 to RMB881.8 million as of December 31, 2024, primarily due to further repayment of the long-term loans by GSWL and our Company.

As of September 30, 2024, we had no unutilized long-term credit facilities.

### **Financial liabilities at fair value through profit or loss**

Financial liabilities at fair value through profit or loss comprise of gold leasing.

Our financial liabilities at fair value through profit or loss increased by 60.0% from RMB387.7 million as of December 31, 2021 to RMB620.3 million as of December 31, 2022, further increased by 51.6% to RMB940.0 million as of December 31, 2023, resulting from an increase in gold leasing.

Our financial liabilities at fair value through profit or loss increased by 9.2% from RMB940.0 million as of December 31, 2023 to RMB1,026.2 million as of September 30, 2024, resulting from a decrease in gold leasing outstanding balance.

Most of our outstanding bank borrowings are denominated in RMB and U.S. dollars. During the Track Record Period, certain of our outstanding bank loans were secured by the pledge of fixed assets and mining rights.

Except for our indebtedness as disclosed above, we did not have outstanding indebtedness or any loan capital issued and outstanding or agreed to be issued, bank overdrafts, loans or similar indebtedness, liabilities under acceptance (other than normal trade bills), acceptance credits, debentures, mortgages, charges, finance leases or hire purchase commitments, guarantees or other material contingent liabilities as of September 30, 2024, being the latest practicable date for our indebtedness statement.

## FINANCIAL INFORMATION

### RELATED PARTY TRANSACTIONS

During the Track Record Period, we had transactions with certain related parties. For details, please refer to Note 46 to the Accountants' Report included in Appendix I to this Prospectus. Our Directors confirm that these transactions were conducted on arm's length basis and entered into in the ordinary course of business and would not distort our track record results or make our historical results not reflective of our future performance. The amounts due to related parties and outstanding balances with related parties include lease fees and property fees payable to Beijing Eagleleap and interest-bearing fund loans payable to the member of the Single Largest Shareholder Group, Ms. Li Jinyang, which is to maintain our daily operation. The non-trade outstanding balances with related parties, which was the loan of RMB1,074.2 million from the Single Largest Shareholder Group, was fully repaid in January 2024. Certain related party transactions entered into by our Group during the Track Record Period are set out below.

#### Loans received from the related parties (non-trade)

	Year Ended December 31,			Nine Months Ended/As of September 30

### KEY FINANCIAL RATIOS

The following table sets forth our key financial ratios for the periods indicated:

	Year Ended December 31,			Nine Months Ended/As of September 30,
	2021	2022	2023	2024
<b>Rates of return</b>				
Return on assets . . . . .	7.6%	2.8%	4.7%	6.4%
Return on equity . . . . .	12.3%	6.7%	10.2%	12.9%
<b>Liquidity ratios</b>				
Current ratio . . . . .	2.8	1.3	1.3	1.4
Quick ratio . . . . .	1.7	0.6	0.7	0.8
Gearing ratio . . . . .	0.6%	35.1%	32.0%	24.2%

*Notes:*

1. Return on assets ratio is calculated using net profit divided by total assets at the end of the year, multiplied by 100%.
2. Return on equity ratio is calculated using net profit divided by total equity at the end of the year, multiplied by 100%.
3. Current ratio is calculated using total current assets divided by total current liabilities.
4. Quick ratio is calculated using total current assets less inventories divided by total current liabilities.
5. Gearing ratio is calculated by dividing total debt (which includes current and non-current bank loans, lease liabilities and other borrowings) by total equity.

### OFF-BALANCE SHEET ARRANGEMENTS

As of the Latest Practicable Date, we did not enter into any outstanding off-balance sheet commitments or arrangements.

### FINANCIAL RISK MANAGEMENT

We are exposed to a variety of financial risks, including market risk, credit risk and liquidity risk. These risks and the manner in which we seek to mitigate them are summarized below and described in more details in Note 49 to the Accountants' Report included in Appendix I to this Prospectus for more details. Thereto, please also see section headed "Risk Factors".

#### Market Risk

#### Interest rate risk

Our exposure to the risk of changes in market interest rates relates primarily to our debt obligations with a floating interest rate.

---

## FINANCIAL INFORMATION

---

### **Exchange rate risk**

We have transactional exchange rate risk exposures mainly arising from sales or purchases by operating units in currencies other than the units' functional currencies. We have subsidiaries using U.S. dollars and Renminbi as their recording currency. These subsidiaries have transactions in currencies other than their recording currency. In addition, we have exchange rate exposures arising from foreign currency borrowings. We adopt an overall management on their foreign exchange businesses and reduce their exchange rate exposures using forward foreign exchange contracts based on the market trend as necessary.

### **Commodity price risk**

We are mainly exposed to the risk of changes in major metals' prices in the future, including gold, copper, zinc, silver and copper cathodes. The fluctuations in these products' prices may affect our operating performance.

We use commodity futures contracts to manage risk in the sale of gold, copper, zinc, silver and copper cathodes. The management keeps an eye on the changes in prices of commodity futures contracts.

### **Price risk of equity instrument investments**

Price risk of equity instrument investments refers to the risk that the fair value of equity securities is reduced due to changes in the level of the stock index and the value of individual securities. As of September 30, 2024, we were exposed to the price risk of individual equity instrument investments due to the classification as equity instrument investments at fair value through profit or loss.

### **Credit Risk**

We only deal with approved and reputable third parties. According to our policy, all customers who require credit transactions are subject to a credit review. In addition, we continuously monitor the balance of trade receivable to ensure that the Group is not exposed to significant bad debt risks.

Since counterparties of cash and cash equivalents and derivatives are banks with good reputation and high credit ratings, credit risk arising from these financial instruments is insignificant.

Other financial assets of our Company include equity instrument investments, trade receivable and some derivatives. The credit risk on these financial assets arises from the default of counterparties, with a maximum exposure equal to carrying amounts of these instruments.

Our maximum exposure to credit risk at each balance sheet date is the total amount charged to the customers less the amount of the provision for impairment.

---

## FINANCIAL INFORMATION

---

### **Liquidity Risk**

We use a revolving liquidity planning tool to manage the risk of funding shortfalls. This tool considers both the maturity of its financial instruments and the expected cash flows generated from our operations.

Our objective is to maintain a balance between continuity and flexibility of funding through the use of financing including long-term loans and short-term loans.

### **Financial Risk**

We implement a combination of short-term financing through gold leasing contracts and we engage in hedging transactions in the futures market to transfer and mitigate price risks. Also, fluctuations in the market prices of gold and other Mineral Resources, which have historically exhibited considerable volatility, impact our profitability and cash flow from operations. Due to the international pricing of gold in U.S. dollars, and the fact that our operating costs of overseas mining and expenditures are denominated in various currencies, we are exposed to risks associated with exchange rate fluctuations.

### **UNAUDITED PRO FORMA STATEMENT OF ADJUSTED CONSOLIDATED NET TANGIBLE ASSETS**

For details of our unaudited *pro forma* adjusted consolidated net tangible assets, see Appendix IIA to this Prospectus.

## FINANCIAL INFORMATION

### Cash Operating and Production Costs

Cash operating costs for our PRC Gold Mines primarily consist of labor cost, material cost, electricity cost and some other costs. The table below is based on the SRK Report and sets forth a summary of historical and forecast of the cash operating costs and cash operating costs per gram of gold produced of our PRC Gold Mines for the years indicated.

The anticipated fluctuations in future cash operating costs are primarily driven by several factors, which vary across the gold mines. For some mines, the expansion of mining capacity is expected to increase gold production, thereby reducing unit costs. In others, higher gold grades in the deeper zones contribute to greater gold output and further reductions in unit costs. Specifically, the production schedule of each of Wulong Gold Mine and Jilong Gold Mine in the SRK Report solely focuses on slope production and excludes ore from comprehensive utilization as recorded in historical data. As a result, it is anticipated that gold production of these two mines will be lower compared to previous figures, thus leading to an increase in unit costs.

Wulong Gold Mine	Unit	2021	2022	2023	2024Q1-Q3	LOM <sup>1</sup>	2024Q4	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035

#### Notes:

- LOM is calculated by deducting the forecasted production volume from the Ore Reserves each year since September 30, 2024, until all Ore Reserves are extracted in the final year. The forecasted production volume is estimated based on the designed mining capacity, scheduling strategy and expansion timelines. For details, please refer to the mine schedule set forth in “Business — Development Plan and Planned Production Schedule — Planned Production Schedule”.
- “Gold Produced” is the total gold production over the LOM, as the aggregated volume of all the annual production volume.

## FINANCIAL INFORMATION

3. Each of the cost in this column is the average cost over the LOM, which is calculated as the total cost over the LOM divided by the total gold production.
4. “Total” is derived by applying the adjusted historical per-ton cost to the forecasted ore ton each year and then summing over the LOM.

*Notes:*

- LOM is calculated by deducting the forecasted production volume from the Ore Reserves each year since September 30, 2024, until all Ore Reserves are extracted in the final year. The forecasted production volume is estimated based on the designed mining capacity, scheduling strategy and expansion timelines. For details, please refer to the mine schedule set forth in “Business — Development Plan and Planned Production Schedule — Planned Production Schedule”.
- “Gold Produced” is the total gold production over the LOM, as the aggregated volume of all the annual production volume.
- Each of the cost in this column is the average cost over the LOM, which is calculated as the total cost over the LOM divided by the total gold production.
- “Total” is derived by applying the adjusted historical per-ton cost to the forecasted ore ton each year and then summing over the LOM.

- LOM is calculated by deducting the forecasted production volume from the Ore Reserves each year since September 30, 2024, until all Ore Reserves are extracted in the final year. The forecasted production volume is estimated based on the designed mining capacity, scheduling strategy and expansion timelines. For details, please refer to the mine schedule set forth in “Business — Development Plan and Planned Production Schedule — Planned Production Schedule”.
- “Gold Produced” is the total gold production over the LOM, as the aggregated volume of all the annual production volume.
- Each of the cost in this column is the average cost over the LOM, which is calculated as the total cost over the LOM divided by the total gold production.
- “Total” is derived by applying the adjusted historical per-ton cost to the forecasted ore ton each year and then summing over the LOM.

Cash operating costs for our Hanfeng Polymetallic Mine primarily consist of labor cost, material cost, electricity cost and some other costs. The table below is based on the SRK Report and sets forth a summary of historical and forecast of the cash operating costs and cash operating costs per tonnes of comprehensive metal produced of our Hanfeng Polymetallic Mine for the years indicated.

## FINANCIAL INFORMATION

At the Hanfeng Polymetallic Mine, historical costs have been calculated based on operations conducted in the upper zone of the mine. In contrast, the design presented in the SRK Report focuses on the lower zone. This difference in the production zones is expected to result in variations in metal output, which, in turn, is anticipated to lead to discrepancies in unit cash costs.

Hanfeng Polymetallic Mine <sup>1</sup>	Unit	2021	2022	2023	2024Q1-Q3	LOM <sup>2</sup>	2024Q4	2025	2026	2027	2028	2029	2030	2031	2032

<b>Total</b>	<b>RMB/t</b>	<b>8,296</b>	<b>9,370</b>	<b>10,674</b>	<b>22,875</b>	<b>3,864<sup>5</sup></b>	<b>-</b>	<b>4,079</b>	<b>4,203</b>	<b>4,071</b>	<b>4,446</b>	<b>3,380</b>	<b>3,120</b>	<b>3,939</b>	<b>4,247</b>

*Notes:*

- Hanfeng Mining operates two mines: the Lishan Mine and the Dongfeng Mine. Only the Lower Part (Stage 1) of the Lishan Mine was considered in Ore Reserves estimation. Currently, this Lower Part is under construction and has no production. The data of the Upper Part of the Lishan Mine and the Dongfeng Mine is referenced for the economic analysis of the Lower Part of the Lishan Mine. Comprehensive Metal includes Copper, Lead and Zinc.
- LOM is calculated by deducting the forecasted production volume from the Ore Reserves each year since September 30, 2024, until all Ore Reserves are extracted in the final year. The forecasted production volume is estimated based on the designed mining capacity, scheduling strategy and expansion timelines. For details, please refer to the mine schedule set forth in “Business — Development Plan and Planned Production Schedule — Planned Production Schedule”.
- “Comprehensive Metal Produced” is the total comprehensive metal production over the LOM, as the aggregated volume of all the annual production volume.
- Each of the cost in this column is the average cost over the LOM, which is calculated as the total cost over the LOM divided by the total comprehensive metal production.
- “Total” is derived by applying the adjusted historical per-ton cost to the forecasted ore ton each year and then summing over the LOM.

## FINANCIAL INFORMATION

Cash operating costs for our Sepon Gold and Copper Mine primarily consist of labor cost, material cost, electricity cost and some other costs. The table below is based on the SRK Report and sets forth a summary of historical and forecast of the cash operating costs and cash operating costs per tonnes of gold and copper produced of our Sepon Gold and Copper Mine for the years indicated.

At the Sepon Gold and Copper Mine, future cost differences are anticipated to primarily arise from a shift in mining methods. In contrast to historical operations, which have combined both open-pit and underground mining, future production is expected to rely solely on underground mining. This transition is anticipated to lead to significant changes in operating costs.

*Notes:*

1. All costs at the company level of LXML are borne by the gold mine of the Sepon Gold and Copper Mine.
2. LOM is calculated by deducting the forecasted production volume from the Ore Reserves each year since September 30, 2024, until all Ore Reserves are extracted in the final year. The forecasted production volume is estimated based on the designed mining capacity, scheduling strategy and expansion timelines. For details, please refer to the mine schedule set forth in “Business — Development Plan and Planned Production Schedule — Planned Production Schedule”.
3. “Gold Produced” is the total gold production over the LOM, as the aggregated volume of all the annual production volume.
4. “Copper Produced” is the total copper production over the LOM, as the aggregated volume of all the annual production volume.
5. Each of the cost in this column is the average cost over the LOM, which is calculated as the total cost over the LOM divided by the total gold and copper production.
6. “Total” is derived by applying the adjusted historical per-ton cost to the forecasted ore ton each year and then summing over the LOM.

## FINANCIAL INFORMATION

Cash operating costs for our Wassa Gold Mine primarily consist of labor cost, material cost, electricity cost and some other costs. The table below is based on the SRK Report and sets forth a summary of historical and forecast of the cash operating costs and cash operating costs per gram of gold produced of our Wassa Gold Mine for the years indicated.

At the Wassa Gold Mine, anticipated future cost differences are expected to primarily result from a transition in mining methods. Specifically, whereas historical operations have integrated both open-pit and underground mining, future production is projected to be conducted exclusively through underground mining. This shift is expected to give rise to significant changes in operating costs.

### DIVIDEND

We declared and dividends to our Shareholders of nil, nil, RMB82.4 million and nil respectively, for the years ended December 31, 2021, 2022 and 2023 and the nine months ended September 30, 2024.

According to a Board resolution dated March 29, 2024 and a Shareholder resolution dated April 19, 2024, with a total share capital of 1,663,911,378 shares at the end of 2023, after deducting the 15,182,600 shares held in our dedicated securities account for repurchases, the base for profit distribution was 1,648,728,778 shares. A cash dividend of RMB0.50 per 10 shares (including tax) was paid to all shareholders, totalling RMB82,436,438.90.

Subject to our constitutional documents and the Company Law, we have adopted a general annual dividend policy, according to which we may declare dividend by way of cash dividends, stock dividends, or a combination of cash and stock dividends. We prioritize cash dividends. Other than under certain special circumstances, the accumulated profit distributed in cash in any three consecutive years shall not be less than 30% of the annual distributable profit realized in the same three years. The abovementioned special circumstances include: (i) our Company's net cash flow from operating activities in the year of the consolidated statement of accounts is negative; (ii) the single amount of investment projects such as proposed internal investment, external investment or assets acquisition in the current year or within the next twelve months reaches or exceeds 10% of our Company's latest audited net assets.

There is no guarantee, representation or indication that our Directors must or will recommend and that we must or will declare and pay dividends at all. The dividend distribution record in the past may not be used as a reference or basis to determine the level of dividends that may be declared or paid by us in the future.

### LISTING EXPENSES

Listing expenses represent professional fees, underwriting commissions and other fees incurred in connection with the Global Offering. We expect to incur listing expenses of approximately HK\$189.2 million, representing approximately 4.4% of the gross proceeds from the Global Offering (based on the mid-point of the indicative Offer Price range and assuming the Over-allotment Option is not exercised). The listing expenses we incurred in the Track Record Period and expect to incur would consist of approximately HK\$128.4 million underwriting-related fees and approximately HK\$60.8 million non-underwriting-related fees (including fees and expenses of legal advisors and the reporting accountant of approximately HK\$28.5 million and other fees and expenses of approximately HK\$32.3 million). Among the total listing expenses which we expect to incur, approximately HK\$172.1 million will be directly attributable to the issue of our Shares and deducted from equity, and the remaining HK\$17.1 million will be expensed upon Listing. Our Directors do not expect such expenses to materially impact our results of operations in 2024.

---

## FINANCIAL INFORMATION

---

### NO MATERIAL ADVERSE CHANGE

After due and careful consideration, our Directors confirm that, up to the date of this document, there has been no material adverse change in our financial and trading position or prospects since September 30, 2024.

### PROFIT ESTIMATE FOR THE YEAR ENDED DECEMBER 31, 2024

On the basis set out in Appendix IIB to this prospectus, and in the absence of unforeseen circumstances, we estimate our consolidated profit attributable to owners of our Company for the year ended December 31, 2024 to be not less than RMB1,730.0 million (equivalent to approximately HK\$1,879.4 million). For details about our consolidated profit attributable to owners of our Company for the year ended December 31, 2024, see “Appendix IIB — Profit Estimate.”

### DISCLOSURE REQUIRED UNDER THE HONG KONG LISTING RULES

We confirm that, as at the Latest Practicable Date, there were no circumstances that would give rise to a disclosure requirement under Rules 13.13 to 13.19 of the Hong Kong Listing Rules.

### FINANCIAL INFORMATION OF GOLDEN STAR RESOURCES

### *Income tax expenses*

Income tax expenses primarily consist of: (i) current tax expenses; and (ii) deferred tax expense. The following table sets forth the components of income tax expenses for the period indicated.

Income tax expenses of Golden Star Resources was approximately RMB224.3 million, RMB18.5 million and RMB57.2 million for the years ended December 31, 2021, one month ended January 31, 2021 and one month ended January 31, 2022.

	Year ended December 31,	One month Ended January 31,	One month Ended January 31,
	2021	2021	2022
		<i>(RMB'000)</i>	
		<i>(unaudited)</i>	
Current .....	185,597	14,753	6,910
Deferred .....	38,660	3,722	(64,064)
<b>Total</b> .....	<b>224,257</b>	<b>18,475</b>	<b>(57,154)</b>

### PERIOD TO PERIOD COMPARISON OF RESULTS OF OPERATIONS

#### One Months Ended January 31, 2022 Compared to One Months Ended January 31, 2021

##### *Revenue*

Revenue decreased by 7.7% from RMB120.7 million for the one month ended January 31, 2021 to RMB111.5 million for the one month ended January 31, 2022, primarily due to the decrease of 4% in average gold price recorded in January 2022.

##### *Cost of Sales*

Cost of sales increased by 8.0% from RMB65.9 million for the one month ended January 31, 2021 to RMB71.2 million for the one month ended January 31, 2022, primarily due to the increase in staff cost and change in inventory.

##### *Gross Profit and Gross Profit Margin*

Gross profit decreased by 26.5% from RMB54.8 million for the one month ended January 31, 2021 to RMB40.3 million for the one month ended January 31, 2022 due to the higher staff cost incurred in 2022.

---

## FINANCIAL INFORMATION

---

### *Other income and gains*

Other income and gains decreased significantly by 99.0% from RMB9.5 million for the one month ended January 31, 2021 to RMB0.1 million for the one month ended January 31, 2022, primarily due to the unrealized gain on gold hedge and the gain on fair value of derivative financial instruments of RMB9.2 million in 2021, while the gold hedge agreements was terminated in January 2022.

### *Administrative expenses*

Administrative expenses increased significantly by 2,130.5% from RMB19.3 million for the one month ended January 31, 2021 to RMB430.1 million for the one month ended January 31, 2022, primarily due to severance and acquisition of control cost due to the acquisition of Golden Star Resources in January 2022.

### *Other expenses*

Other expenses increased significantly by 1,752.0% from RMB0.8 million for the one month ended January 31, 2021 to RMB15.4 million for the one month ended January 31, 2022. The other expenses for the one month ended January 31, 2022 mainly represented exchange loss and the bank charge for the period.

### *Finance costs*

Finance costs decreased by 30.6% from RMB8.0 million for the one month ended January 31, 2021 to RMB5.5 million for the one month ended January 31, 2022, primarily due to the settlement of a convertible debenture and a loan from a financial institution in August 2021 and January 2022, respectively. These settlements were partially offset by receiving a revolving loan from Chijin HK in January 2022.

### *Profit/(loss) before tax*

Profit before tax decreased significantly by 1,232.1% from RMB36.3 million for the one month ended January 31, 2021 to loss before tax approximately RMB410.6 million for the one month ended January 31, 2022, primarily due to the severance and acquisition of control cost due to the acquisition of GSR in January 2022.

### *Income tax expenses*

Golden Star Resources recorded income tax expenses of RMB18.5 million for the one month ended January 31, 2021 and we record income tax credit of RMB57.2 million for the one month ended January 31, 2022, primarily due to the increase of deferred tax assets related to the tax losses recognized during the acquisition of Golden Star Resources.

## FINANCIAL INFORMATION

### *Profit for the year/period*

Golden Star Resources recorded profit for the year/period of RMB17.8 million for the one month ended January 31, 2021 and Golden Star Resources recorded loss for the one month ended January 31, 2022 of RMB353.4 million, primarily due to severance and acquisition of control cost arising from the acquisition of Golden Star Resources in January 2022.

---

## FINANCIAL INFORMATION

---

### *Net cash flows from/(used in) operating activities*

Net cash flows from operating activities from January 1, 2021 to January 31, 2022 was RMB184.3 million reflecting net cash inflows generated from sales of gold during the period.

### *Net cash flows used in investing activities*

Net cash flows used in investing activities from January 1, 2021 to January 31, 2022 was RMB464.6 million reflecting exploration and acquisition of mining equipment during the period. This is primarily attributable to increased underground/surface mine development and acquisition of additional property, plant and equipment.

### *Net cash flows from/(used in) financing activities*

Net cash flows used in financing activities from January 1, 2021 to January 31, 2022 was RMB98.6 million. This is primarily due to the settlement of a convertible debenture and a loan from a financial institution in August 2021 and January 2022, respectively. These settlements were partially offset by receiving a revolving loan from Chijin HK in January 2022.

## CORNERSTONE INVESTMENT

### THE CORNERSTONE PLACING

We have entered into cornerstone investment agreements (each a “**Cornerstone Investment Agreement**”, and together the “**Cornerstone Investment Agreements**”) with the cornerstone investors set out below (each a “**Cornerstone Investor**”, and together the “**Cornerstone Investors**”), pursuant to which the Cornerstone Investors have agreed to, subject to certain conditions, subscribe, or cause their designated entities to subscribe, at the Offer Price for such number of Offer Shares (rounded down to the nearest whole board lot of 200 H Shares) that may be purchased for an aggregate amount of HK\$744.87 million, calculated based on an exchange rate of RMB0.9221 : HK\$1.0000 and USD1.0000 : HK\$7.7770) and exclusive of brokerage fee, the SFC transaction levy, the AFRC transaction levy and the Hong Kong Stock Exchange trading fee) (the “**Cornerstone Placing**”).

Based on the Offer Price of HK\$15.83 per Offer Share, being the high-end of the indicative Offer Price range set out in this Prospectus, the total number of Offer Shares to be subscribed for by the Cornerstone Investors would be 47,054,200. The table below reflects the shareholding percentage immediately after the completion of the Global Offering:

Assuming the Offer Size Adjustment Option is not exercised				Assuming the Offer Size Adjustment Option is exercised in full			
Assuming the Over-allotment Option is not exercised		Assuming the Over-allotment Option is exercised in full		Assuming the Over-allotment Option is not exercised		Assuming the Over-allotment Option is exercised in full

## CORNERSTONE INVESTMENT

---

We believe that the Cornerstone Placing signifies our Cornerstone Investors' confidence in our Company and its business prospect, and that the Cornerstone Placing will help to raise the profile of our Company. Our Company became acquainted with each of the Cornerstone Investors in its ordinary course of operation through the Group's business network, or through introduction by the Company's business partners or the Joint Global Coordinators of the Global Offering.

The Cornerstone Placing will form part of the International Offering, and save as otherwise obtained consent from the Hong Kong Stock Exchange, the Cornerstone Investors and their respective close associates will not subscribe for any Offer Shares under the Global Offering (other than pursuant to the Cornerstone Investment Agreements). The Offer Shares to be subscribed by the Cornerstone Investors will rank *pari passu* in all respects with the fully paid H Shares in issue following the Global Offering of the Company and will be counted towards the public float of our Company under Rule 8.08 of the Listing Rules. Immediately following the completion of the Global Offering, the Cornerstone Investors or their close associates will not, by virtue of their cornerstone investments, have any Board representation in our Company; and none of the Cornerstone Investors and their close associates will become a substantial Shareholder of our Company. Other than a guaranteed allocation of the relevant Offer Shares at the final Offer Price, the Cornerstone Investors do not have any preferential rights under each of their respective Cornerstone Investment Agreements, as compared with other public Shareholders. There are no side arrangements or agreements between our Company and the Cornerstone Investors or any benefit, direct or indirect, conferred on the Cornerstone Investors by virtue of or in relation to the Listing, other than a guaranteed allocation of the relevant Offer Shares at the final Offer Price, following the principles as set out in Chapter 4.15 of the Guide.

To the best knowledge of our Company, each of the Cornerstone Investors is (i) not accustomed to take instructions from our Company or any of our Directors, Supervisors, chief executive, the Single Largest Shareholder Group, substantial Shareholders or existing Shareholders or any of its subsidiaries or their respective close associates in relation to the acquisition, disposal, voting or other disposition of the Shares registered in their name or otherwise held by them; (ii) not financed by our Company or any of our Directors, Supervisors, chief executive of our Company, the Single Largest Shareholder Group, substantial Shareholders, existing Shareholders or any of its subsidiaries or their respective close associates; and (iii) save that Zijin Mining Group Co., Ltd. ("**Zijin Mining**"), the holding company of Gold Mountains (H.K.) International Mining Company Limited ("**Gold Mountains**"), held approximately 19% equity interest in Zhaojin Mining Industry Company Limited ("**Zhaojin Mining**"), the holding company of Sparky International Company Limited ("**Sparky**") as of the Latest Practicable Date, independent of the other Cornerstone Investors, our Group, our connected persons and their respective associates, and is not an existing Shareholder or a close associate of our Group. In addition, to the best knowledge of our Company, (i) each of the Cornerstone Investors is independent from each other and makes independent investment decisions; and (ii) no specific approval from any stock exchange (if relevant) or its shareholders is required for the investment by each Cornerstone Investor in our Company as described in this section. Furthermore, we confirm that (i) none of the Cornerstone Investors has the right to nominate any Director nor has any representative on our Board; and (ii) none of the Cornerstone Investors is expected to be involved in the management of the business of our Company.

---

## CORNERSTONE INVESTMENT

---

Although Zijin Mining Group Co., Ltd. (“**Zijin Mining**”) holds approximately 19% of the equity interest in Zhaojin Mining Industry Co., Ltd. (“**Zhaojin Mining**”), the Cornerstone Investors are independent from each other taking into account the following reasons:

**(i) Distinct Ownership Structures**

Shandong Zhaojin Group Company Limited (山東招金集團有限公司) is the largest shareholder of Zhaojin Mining, holding approximately 35.63% of the equity interest in Zhaojin Mining. Meanwhile, the largest shareholder of Zijin Mining is Minxi Xinghang State-owned Assets Investment Co. Ltd. (閩西興杭國有資產投資經營有限公司) holding 22.89% of its equity interest. Accordingly, there is no overlap in terms of the control of the two companies.

**(ii) Operational and Managerial Independence**

Based on the public disclosure of Zijin Mining, a company listed on the Hong Kong Stock Exchange (stock code: 2899) and the Shanghai Stock Exchange (stock code: 601899), and Zhaojin Mining, a company listed on the Hong Kong Stock Exchange (stock code: 1818), to the best of the Company’s knowledge, there is nothing to indicate that the two listed companies, or Gold Mountains *vis-à-vis* Sparky, are not independent of each other in terms of their operations and management.

**(iii) Separate Negotiations for Cornerstone Investments**

The cornerstone investment agreements with Gold Mountains and Sparky were negotiated and concluded independently. Specifically:

- **Independent Decision-Making:** The negotiations of the Cornerstone Investment Agreement with each of the Cornerstone Investors were conducted separately with their respective management members, and to the best knowledge of the Company having made reasonable enquiries, each of the Cornerstone Investors had undergone their respective internal approval procedures to approve the transaction under the respective Cornerstone Investment Agreement; and
- **Self-Funded Commitments:** To the best knowledge of the Company having made reasonable enquiries, the subscription obligations under the respective Cornerstone Investment Agreement is to be fulfilled using each investor’s internal financial resources, with no shared funding arrangements.

Accordingly, despite the shareholding relationship as mentioned above, the Company considers that the Cornerstone Investors are independent of each other.

---

## CORNERSTONE INVESTMENT

---

To the best knowledge of our Company and as confirmed by each of the Cornerstone Investors, each of the Cornerstone Investors make independent investment decisions. The subscription under the Cornerstone Placing by each of the Cornerstone Investors would be financed by its own internal financial resources and it has sufficient funds to settle its investment under the Cornerstone Placing. Each of the Cornerstone Investors has confirmed that all necessary approvals have been obtained with respect to the Cornerstone Placing.

The Cornerstone Investors have agreed to pay for the relevant Offer Shares that they have subscribed before dealings in the Company's H Shares commence on the Hong Kong Stock Exchange. Each of the Cornerstone Investors has agreed that our Company and the Overall Coordinators or the Joint Global Coordinators (as the case maybe) in their sole discretion may defer the delivery of all or part of the Offer Shares it will subscribe to a date later than the Listing Date. Where delayed delivery takes place, such Cornerstone Investor that may be affected by such delayed delivery has agreed that it shall nevertheless fully pay for the relevant Offer Shares before the Listing. Such delayed delivery arrangement is in place to facilitate the over-allocation in the International Offering. If there is over-allocation in the International Offering, the settlement of such over-allocation may be effected through delayed delivery of the Offer Shares to be subscribed by all Cornerstone Investors under the Cornerstone Placing. There will be no delayed delivery if there is no over-allocation in the International Offering. The delayed delivery arrangements relate only to the delay in the delivery of the Offer Shares to such Cornerstone Investor on the condition that the Offer Price for the Offer Shares allocated to such Cornerstone Investor will be fully paid before the Listing, and thus there will be no delayed settlement of payment no matter whether there is delayed delivery or not. For details of the Over-allotment Option and the stabilization action by the Stabilizing Manager, please refer to the paragraphs headed “— Over-allotment Option” and “— Stabilization” in the section headed “Structure of the Global Offering” in this Prospectus, respectively.

To the best knowledge of the Company and the Joint Global Coordinators, and based on the indicative interest of investment of the Cornerstone Investors and/or their close associates as of the date of this Prospectus, certain Cornerstone Investors and/or their close associates may participate in the International Offering as placees and subscribe for further Offer Shares in the Global Offering. The Company will seek the Hong Kong Stock Exchange's consent and/or waiver to allow the Cornerstone Investors and/or their close associates to participate in the International Offering as placees pursuant to Chapter 4.15 of the Guide. Whether such Cornerstone Investors and/or the Single Largest Shareholder Group close associates will place orders in the International Offering are uncertain and will be subject to the final investment decisions of such investors and the terms and conditions of the Global Offering.

The total number of Offer Shares to be subscribed by the Cornerstone Investors may be affected by reallocation of the Offer Shares between the International Offering and the Hong Kong Public Offering. If the total demand for H shares in the Hong Kong Public Offering falls within the circumstance as set out in the section headed “Structure of the Global Offering — The Hong Kong Public Offering — Reallocation” in this Prospectus. Details of the actual number of Offer Shares to be allocated to the Cornerstone Investors will be disclosed in the allotment results announcement of our Company to be published on or around Friday, March 7, 2025.

*Notes:*

- (1) Calculated based on the exchange rate set out in the section headed “Information about this Prospectus and the Global Offering — Exchange Rate Conversion” in this Prospectus.
- (2) Subject to rounding down to the nearest whole board lot of 200 Offer Shares.

The information about our Cornerstone Investors set forth below has been provided by the Cornerstone Investors in connection with the Cornerstone Placing.

### Gold Mountains (H.K.) International Mining Company Limited

Gold Mountains (H.K.) International Mining Company Limited (“**Gold Mountains**”) was incorporated in Hong Kong in 2004. Gold Mountains is a wholly-owned subsidiary of Zijin Mining, a joint stock company listed on the Hong Kong Stock Exchange (stock code: 2899) and the Shanghai Stock Exchange (stock code: 601899). Zijin Mining is a sizeable multinational mining group dedicated to exploration and development of copper, gold, zinc, lithium, silver, molybdenum and other metallic mineral resources globally, research, design and application of mining engineering, etc.

---

## CORNERSTONE INVESTMENT

---

### Sparky International Company Limited

Sparky International Company Limited (“**Sparky**”) is a company incorporated in Hong Kong and is ultimately controlled by Zhaojin Mining Industry Company Limited, a company listed on the Hong Kong Stock exchange (stock code: 1818) (“**Zhaojin Mining**”). Zhaojin Mining is a joint stock limited company incorporated in the PRC and is primarily engaged in the exploration, mining, ore processing, smelting and sale of gold products and other metallic products.

### CLOSING CONDITIONS

The obligation of each Cornerstone Investor to subscribe for the Offer Shares under the respective Cornerstone Investment Agreement is subject to, among other things, the following closing conditions:

- (i) the underwriting agreements for the Hong Kong Public Offering and the International Offering being entered into and having become effective and unconditional (in accordance with their respective original terms or as subsequently waived or varied by agreement of the parties thereto) by no later than the time and date as specified in these underwriting agreements, and neither of the aforesaid underwriting agreements having been terminated;
- (ii) the Offer Price having been agreed upon between the Company and the Overall Coordinators (for themselves and on behalf of the underwriters of the Global Offering);
- (iii) the Listing Committee of the Hong Kong Stock Exchange having granted the approval for the listing of, and permission to deal in, the H Shares (including the H Shares subscribed for by the Cornerstone Investors as well as other applicable waivers and approvals) and such approval, permission or waiver having not been revoked prior to the commencement of dealings in the H Shares on the Hong Kong Stock Exchange;
- (iv) the CSRC having accepted the CSRC filings and published the filing results in respect of the CSRC filings on its website, and such notice of acceptance and/or filing results published not having otherwise been rejected, withdrawn, revoked or invalidated prior to the commencement of dealings in the H Shares on the Hong Kong Stock Exchange;
- (v) no laws shall have been enacted or promulgated by any governmental authority which prohibits the consummation of the transactions contemplated in the Global Offering or herein and there shall be no orders or injunctions from a court of competent jurisdiction in effect precluding or prohibiting consummation of such transactions; and

---

## CORNERSTONE INVESTMENT

---

- (vi) the respective agreements, representations, warranties, undertakings, acknowledgements and confirmations of the relevant Cornerstone Investor under the respective Cornerstone Investment Agreement are accurate, true and complete in all respects and not misleading or deceptive and that there is no breach of this Agreement on the part of the Cornerstone Investor.

### RESTRICTIONS ON THE CORNERSTONE INVESTORS

Each Cornerstone Investor has agreed that it will not, and will cause its affiliates not to, whether directly or indirectly, at any time during the period of six months from (and inclusive of) the Listing Date (the “**Lock-up Period**”), dispose of, in any way, any of the Offer Shares or any interest in any company or entity holding such Offer Shares that they have purchased pursuant to the relevant Cornerstone Investment Agreement (the “**Lock-up Undertaking**”), save for certain limited circumstances, such as, (i) in respect of Gold Mountains, transfers to any of its wholly-owned subsidiaries which will be bound by the same obligations of such Cornerstone Investor, including the Lock-up Period restriction; and (ii) in respect of Sparky, transfers to any of its wholly-owned subsidiaries, and/or Zhaojin Mining, and/or subsidiaries of Zhaojin Mining which will be bound by the same obligations of such Cornerstone Investor, including the Lock-up Period restriction.

---

## FUTURE PLANS AND USE OF PROCEEDS

---

### FUTURE PLANS

See “Business — Business Strategies” in this Prospectus for a detailed description of our future plans.

### USE OF PROCEEDS

Assuming that the Over-allotment Option is not exercised, after deducting the underwriting commissions and other estimated offering expenses payable by us in connection with the Global Offering, and assuming an Offer Price of HK\$14.78 per Share (being the mid-point of the indicative Offer Price range of HK\$13.72 and HK\$15.83), we estimate that we will receive net proceeds of approximately HK\$2,886.8 million from the Global Offering.

We intend to use the proceeds from the Global Offering for the purposes and in the amounts set forth below, subject to adjustments based on our evolving business needs and changing market conditions:

- (i) Approximately 50% of the net proceeds, or HK\$1,443.4 million, is expected to be used over the next five years for the upgrade and exploration of existing mines to fully realize our growth potential. We will continue enhancing geological exploration efforts and expanding exploration activities within existing mines while exploring new mines on the outskirts of our mineralization areas. See “Business — Development and Expansion” for details of our development and expansion plan.
- Approximately 30% or HK\$866.0 million is expected to be allocated to our operations in the PRC for exploration and mine development, including, but not limited to, exploration projects in the deep and peripheral areas, construction of shafts and access, purchase of equipment and machinery, technical upgrades, construction of processing plants, expansion of open-pit production, and other further expansion of mines for the years from 2025 to 2027. Specifically, this would include our expansion project of Jilong Gold Mine for various types of exploration projects, the expansion projects of Huatai Gold Mine, the phase II construction of Jintai Gold Mine, construction of the new mining areas of the Wulong Gold Mine, and the expansion and renovation projects of Hanfeng Polymetallic Mine. Such undertakings are expected to increase our Reserves and extend LOMs, expand ore processing capacity and production volume, further optimize our operating and capital costs, and improve our operating efficiency and productivity.
- Approximately 20% or HK\$577.4 million is expected to be allocated to our operations in Laos and Ghana, including, but not limited to, construction of the new power generation plants, exploration projects in the deep and peripheral areas, construction of shafts, declines and access, purchase of equipment and machinery, upgrades and expansion of existing processing plants, extending open-pit mining to underground mining and other further expansions of mines

---

## FUTURE PLANS AND USE OF PROCEEDS

---

for the years from 2025 to 2027. For Sepon Gold and Copper Mine, we aim to extend the LOM of the underground mine, purchase equipment and exploration, renovate of the copper series and construct new energy power generation. For Wassa Gold Mine, we target to use for the engineering costs and other construction projects. Such undertakings are expected to expand ore processing capacity and production volume, provide stable power sources to our mining facilities, increase our Reserves and extend LOMs, to reduce our carbon footprint and environmental impact, solidify our competitive edge, enhance our operational efficiency, achieve economies of scale, and improve overall profitability.

- (ii) Approximately 40% of the net proceeds, or HK\$1,154.7 million, is expected to be used over the next three years to acquire sizable, high-quality mining assets preferably with open-pit mines in countries with mature mining industries and stable policies on mining industries. Our preferred potential mining acquisition targets are expected to generate an annual production over 128 koz of gold. For more details of our strategies of potential acquisition and criteria of identifying potential acquisition targets, see “Business — Business Strategies — Continue to obtain resources and reserves and increase production volume through domestic and overseas acquisitions of high-quality gold assets for robust and sustainable growth.” According to Frost & Sullivan, it is estimated that less than 60 potential acquisition targets available in the global market meet our selection criteria. These potential acquisition targets are located in regions such as Oceania, West Africa, Eastern and Northern Europe, Central Asia, etc. We expect such acquisition would secure valuable resources, increase our revenue and enhance financial performance, diversify and reduce customer concentration risk and improve our competitive edge in the market. Currently, we are still in the process of searching for potential targets and have not identified any specific target, or participated in any commercial negotiation or entered into any memorandum of understanding or letter of intent with respect to any potential target. For future acquisition activities, we will comply with relevant regulatory requirements.
  
- (iii) Approximately 10% of the net proceeds, or HK\$288.7 million, is expected to be used for general corporate purposes.

In the event that the Offer Price is set at the maximum Offer Price or the minimum Offer Price of the indicative Offer Price range, the net proceeds of the Global Offering will increase by approximately HK\$210.4 million or decrease by approximately HK\$210.5 million.

The additional net proceeds that we would receive if the Over-allotment Option was to be exercised in full would be: (i) HK\$410.5 million (assuming an Offer Price of HK\$15.83 per Share, being the maximum Offer Price of the indicative Offer Price range); (ii) HK\$442.0 million (assuming an Offer Price of HK\$14.78 per Share, being the mid-point of the indicative Offer Price range); and (iii) HK\$473.6 million (assuming an Offer Price of HK\$13.72 per Share, being the minimum Offer Price of the indicative Offer Price range).

---

## **FUTURE PLANS AND USE OF PROCEEDS**

---

To the extent that the net proceeds from the Global Offering are either more or less than expected, we will adjust our allocation of the net proceeds for the above purposes on a pro rata basis.

To the extent that the net proceeds of the Global Offering are not immediately used for the aforementioned purposes, we will only deposit such funds into short-term interest-bearing accounts at licensed commercial banks and/or other authorized financial institutions (as defined under the Securities and Futures Ordinance, or applicable laws and regulations in other jurisdictions). In such event, we will comply with the appropriate disclosure requirements under the Hong Kong Listing Rules.

As of the Latest Practicable Date, we believe that the future plans and use of proceeds are still within the estimated range of our operational and financial needs and would not incur any material adverse impact on the future business operation and financial performance. If any part of our development plan does not proceed as planned for any reasons, such as changes in government policies that would hinder the development of any of our projects or the occurrence of force majeure events, the Directors will carefully evaluate the situation and may reallocate the net proceeds from the Global Offering accordingly. We will issue an appropriate announcement if there is any material change to the proposed use of proceeds in accordance with the Hong Kong Listing Rules.

---

## UNDERWRITING

### UNDERWRITING

This Prospectus is published solely in connection with the Hong Kong Public Offering. The Hong Kong Public Offering is fully underwritten by the Hong Kong Underwriters on a conditional basis. The International Offering is expected to be fully underwritten by the International Underwriters. If, for any reason, the Offer Price is not agreed between the Overall Coordinators and our Company, the Global Offering will not proceed and will lapse.

The Global Offering comprises the Hong Kong Public Offering of initially 20,565,200 Hong Kong Offer Shares and the International Offering of initially 185,086,800 International Offer Shares, subject, in each case, to reallocation on the basis as described in the section headed “Structure of the Global Offering” in this Prospectus as well as to the Offer Size Adjustment Option and the Over-allotment Option (in the case of the International Offering).

### UNDERWRITING ARRANGEMENTS AND EXPENSES

#### Hong Kong Public Offering

##### *Hong Kong Underwriting Agreement*

Pursuant to the Hong Kong Underwriting Agreement, our Company is offering the Hong Kong Offer Shares for subscription on the terms and conditions set out in this Prospectus and the Hong Kong Underwriting Agreement at the Offer Price.

Subject to (a) the Stock Exchange granting approval for the listing of, and permission to deal in, the H Shares to be issued pursuant to the Global Offering (including the H Shares which may be issued pursuant to the exercise of the Offer Size Adjustment Option and the Over-allotment Option), on the Main Board of the Stock Exchange and such approval not

---

## UNDERWRITING

---

having been withdrawn; and (b) certain other conditions set out in the Hong Kong Underwriting Agreement, the Hong Kong Underwriters have agreed severally but not jointly to procure subscribers for, or themselves to subscribe for, their respective applicable proportions of the Hong Kong Offer Shares being offered which are not taken up under the Hong Kong Public Offering on the terms and conditions set out in this Prospectus and the Hong Kong Underwriting Agreement.

The Hong Kong Underwriting Agreement is conditional on, among other things, the International Underwriting Agreement having been executed and becoming unconditional and not having been terminated in accordance with its terms.

### *Grounds for Termination*

The Overall Coordinators (for itself and on behalf of the Hong Kong Underwriters), in their sole and absolute discretion, shall have the right by giving a notice to our Company to terminate the Hong Kong Underwriting Agreement with immediate effect if prior to 8:00 a.m. on the Listing Date:

- (a) there develops, occurs, exists or comes into effect:
  - (i) any new Law or any change or development involving a prospective change (whether or not permanent) or any event or series of events or circumstance likely to result in any change or development involving a prospective change (whether or not permanent) in existing Law, or any change or development involving a prospective change in the interpretation or application thereof by any court or other competent Authority in or affecting Hong Kong, the PRC, the United States, the United Kingdom, the European Union (or any of its members), Japan, Singapore, Australia or any other jurisdiction where any member of the Group is incorporated or established or operates or any other jurisdiction relevant to any member of the Group or the Global Offering (each a “**Relevant Jurisdiction**”); or
  - (ii) any change or development involving a prospective change (whether or not permanent) or development, or any event or series of events likely to result in or representing a change or development, or prospective change (whether or not permanent) or development, in local, national, regional or international financial, legal, political, military, industrial, economic, trading, currency market, fiscal or regulatory market conditions, securities, exchange control or any monetary or trading settlement system or other financial markets (including, without limitation, conditions in stock and bond markets, money and foreign exchange markets, inter-bank markets and credit markets) in or affecting any Relevant Jurisdiction; or

---

## UNDERWRITING

---

- (iii) any event or circumstance or a series of events or circumstances, in the nature of force majeure (including, without limitation, any act of government or order of any courts, strike, calamity, crisis, lock-out, fire, explosion, flooding, earthquake, civil commotion, act of war, outbreak or escalation of hostilities (whether or not war is declared), act of God, act of terrorism (whether or not responsibility has been claimed), declaration of a national or international emergency, riot, public disorder, outbreak of diseases, pandemics or epidemics, outbreak or escalation of disease (including infectious disease, including without limitation COVID-19, SARS, MERS, H5N1, H1N1, swine or avian influenza or such related/mutated forms) in each case beyond the control of the Hong Kong Underwriters; or
- (iv) the imposition or declaration of any moratorium, suspension or limitation (including, without limitation, any imposition of or requirement for any minimum or maximum price limit or price range) on trading in shares or securities generally on the Stock Exchange, the New York Stock Exchange, the NASDAQ Global Market, the London Stock Exchange, the Shanghai Stock Exchange, the Shenzhen Stock Exchange, the Singapore Stock Exchange or the Tokyo Stock Exchange; or
- (v) (a) any change or prospective change in or affecting taxation, foreign exchange controls, currency exchange rates or foreign investment regulations (including, without limitation, a devaluation of the Hong Kong dollar or RMB against any foreign currencies, a change in the system under which the value of the Hong Kong dollar is linked to that of the United States dollars or RMB is linked to any foreign currency or currencies) or the implementation of any exchange control, or (b) any change or prospective change in Taxation in any Relevant Jurisdiction adversely affecting an investment in the H Shares; or
- (vi) any general moratorium on commercial banking activities in or affecting any of any Relevant Jurisdiction or any disruption in commercial banking or foreign exchange trading or securities trading or securities settlement or clearance services, procedures or matters in any Relevant Jurisdictions; or
- (vii) the imposition of economic sanctions, or the withdrawal of trading privileges which existed on the date of the Hong Kong Underwriting Agreement, in whatever form, directly or indirectly, by, or for, any jurisdiction relevant to the business operations of any member of the Group; or
- (viii) any demand by creditors for repayment of indebtedness or an order or petition being presented for the winding-up or liquidation of any Group Company or any Group Company making any composition or arrangement with its creditors or entering into a scheme of arrangement or any resolution being passed for the

---

## UNDERWRITING

---

winding-up of any Group Company or a provisional liquidator, receiver or manager being appointed over all or part of the assets or undertaking of any Group Company or anything analogous thereto occurs in respect of any Group Company; or

- (ix) any change, development or event involving a prospective change in, or a materialisation of, any of the risks set out in the section headed “Risk Factors” in the Prospectus; or
- (x) that any certificate given by the Company or any of its respective officers under or in connection with the Hong Kong Underwriting Agreement or the Global Offering is false or misleading; or
- (xi) the commencement by any Authority or other regulatory or political body or organization of any action or investigation against any Group company, any of the Single Largest Shareholder Group or any Director or Supervisor or the chief executive officer or the chief financial officer of the Company or an announcement by any authority or regulatory or political body or organization that it intends to take any such action or investigation; or
- (xii) any non-compliance of the Prospectus, the CSRC filings (or any other documents used in connection with the contemplated subscription and sale of the Offer Shares) or any aspect of the Global Offering with the Companies (WUMP) Ordinance, the Listing Rules, the CSRC Rules or any other applicable Laws; or
- (xiii) that any statement contained in any notice, announcement, advertisement, communication issued or used (by or on behalf of the Company) in connection with the Hong Kong Public Offering (including any supplement or amendment thereto) was or has become untrue, incomplete, inaccurate, incorrect or misleading or deceptive, or any forecast, estimate, expression of opinion, intention or expectation expressed in any notice, announcement, advertisement, communication so issued or used is not fair and honest and made on reasonable grounds or, where appropriate, based on reasonable assumptions, when taken as a whole; or
- (xiv) any matter has arisen or has been discovered which would, had it arisen or been discovered immediately before the date of the Prospectus, constitute a material omission from any notices, announcements, advertisements, communications or other documents arising out of, relating to or connected with the Company, the Group or the Global Offering (whether or not approved by any Hong Kong Underwriter), or any amendment or supplement thereto; or

---

## UNDERWRITING

---

- (xv) any contravention by any Group Company, any member of the Single Largest Shareholder Group, or any Director or any Supervisor or the chief executive officer or the chief financial officer of the Company of the Companies Ordinance, the PRC Company Law or other applicable Laws; or
- (xvi) any litigation, dispute, legal action, claim, investigation or other action (including arrest or detainment) or proceedings being commenced, threatened or instigated against any of the Company, its Subsidiaries, any member of the Single Largest Shareholder Group or any Director or Supervisor or any member of the Group's senior management,

which, in any such case individually or in the aggregate, in the sole and absolute opinion of the Overall Coordinators (for themselves and on behalf of the Hong Kong Underwriters):

- (1) is, will be or may be materially adverse to, or materially and prejudicially affects, the assets, liabilities, business, general affairs, management, prospects, shareholder's equity, profitability, results of operations, position or condition (financial, operational, trading or otherwise), or performance or prospects of the Group as a whole; or
  - (2) has, will have or may have a material adverse effect on the success or marketability of the Global Offering or the level of Offer Shares being applied for, under the Hong Kong Public Offering or the level of interest under the International Offering or anticipated dealings in the H Shares in the secondary market; or
  - (3) makes, will make it or may make it impracticable or inadvisable or incapable or inexpedient to proceed with the Hong Kong Public Offering and/or the International Offering or the delivery of the Offer Shares on the terms and in the manner contemplated by the Prospectus, the formal notice, the preliminary offering circular or the final offering circular; or
  - (4) would have or may have the effect of making any part of the Hong Kong Underwriting Agreement (including underwriting) incapable of performance in accordance with its terms or which prevents the processing of applications and/or payments pursuant to the Global Offering or pursuant to the underwriting thereof; or
- (b) there comes to the notice of the Overall Coordinators as at or after the date of the Hong Kong Underwriting Agreement:
- (i) a governmental, regulatory or other prohibition on the Company for whatever reason from issuing, selling the H Shares (including the Option Shares) pursuant to the terms of the Global Offering; or

---

## UNDERWRITING

---

- (ii) that any statement contained in any of the Hong Kong public offering documents, the Application Proof Prospectus, the Post Hearing Information Pack (“**PHIP**”) and the Formal Notice was or has become untrue, incomplete, inaccurate, incorrect or misleading or deceptive, or any forecast, estimate, expression of opinion, intention or expectation expressed in any of the Hong Kong public offering documents, the application proof of the Prospectus (“**Application Proof Prospectus**”), the PHIP and the Formal Notice is not fair and honest and made on reasonable grounds or, where appropriate, based on reasonable assumptions, when taken as a whole; or
- (iii) any matter has arisen or has been discovered which would, had it arisen or been discovered immediately before the date of the Prospectus, constitute a material omission from any of the Offering Documents, the Application Proof Prospectus, the PHIP, the Formal Notice, or any amendment or supplement thereto; or
- (iv) any contravention by any Group Company, any member of the Single Largest Shareholder Group, or any Director or any Supervisor or the chief executive officer or the chief financial officer of the Company of the Companies (WUMP) Ordinance, the PRC Company Law, the CSRC Rules or the Listing Rules; or
- (v) any non-compliance of the Prospectus (or any other documents used in connection with the contemplated subscription of the Offer Shares) or any aspect of the Global Offering with the Companies (WUMP) Ordinance or the Listing Rules; or
- (vi) either (a) there has been a breach of any of the representations, warranties, undertakings or provisions of either the Hong Kong Underwriting Agreement or the International Underwriting Agreement by the Company or (b) any of the representations, warranties and undertakings given by the Company in the Hong Kong Underwriting Agreement or the International Underwriting Agreement, as applicable, is (or would when repeated be) untrue, inaccurate or misleading; or
- (vii) any of the experts named in the Prospectus (except the Sole Sponsor) has withdrawn its consent to the issue of the Prospectus with the inclusion of its reports, letters, summaries or legal opinions (as the case may be) and references to its name included in the form and context in which it respectively appears; or

---

## UNDERWRITING

---

- (viii) any event, act or omission which gives or is likely to give rise to any liability of the Company pursuant to the indemnities given by the Company under the Hong Kong Underwriting Agreement or the International Underwriting Agreement; or
- (ix) any breach of any of the obligations of the Company under the Hong Kong Underwriting Agreement or the International Underwriting Agreement; or
- (x) a significant portion of the orders in the book-building process at the time the International Underwriting Agreement is entered into, or the investment commitments by any cornerstone investors after signing of the Cornerstone Investor Agreements, has been withdrawn, terminated or cancelled; or
- (xi) the Company has withdrawn the Prospectus (and/or any other documents issued or used in connection with the Global Offering) or the Global Offering; or
- (xii) any member of the Single Largest Shareholder Group, any Director or any Supervisor or any member of the Group's senior management being charged with an indictable offence or prohibited by Laws or otherwise disqualified from taking part in the management of a company; or
- (xiii) any of the Director, chairman, the president, the chief executive officer or the chief financial officer or member of senior management of the Group vacating his office; or
- (xiv) any material adverse change or any development involving a prospective adverse change in or affecting the assets, liabilities, business, general affairs, management, prospects, shareholders' equity, profitability, results of operations, position or condition (financial or otherwise) or performance, of any Group Company or the Group as a whole; or
- (xv) the issue or requirement to issue by the Company of a supplemental or amendment to the Prospectus, preliminary offering circular or Offering Circular or other documents in connection with the offer and sale of the H Shares pursuant to the Companies (WUMP) Ordinance or the Listing Rules or upon any requirement or request of the Stock Exchange or the SFC, in circumstances where the matter to be disclosed could, in the sole and absolute opinion of the Overall Coordinators, materially and adversely affect the marketing for or implementation of the Global Offering; or

---

## UNDERWRITING

---

- (xvi) any material adverse change, or any development or any prospective adverse change or development, in the condition (financial or otherwise) or in the assets, liabilities, business, general affairs, management, prospects, shareholders' equity, profits, losses, results of operations, position or condition, financial or otherwise, or performance of the Group as a whole; or
- (xvii) the Admission is refused or not granted, other than subject to customary conditions, on or before the Listing Date, or if granted, the Admission is subsequently withdrawn, cancelled, qualified (other than by customary conditions), revoked or withheld.

### **Offer Size Adjustment Option**

As part of the Global Offering, the Company has the Offer Size Adjustment Option under the Hong Kong Underwriting Agreement, pursuant to which, the Company may issue and allot any number of up to an aggregate of 30,847,800 H Shares, representing approximately 15% of the Offer Shares initially offered under the Global Offering, at the Offer Price, to cover additional market demand, if any. The Offer Size Adjustment Option may be exercised jointly by the Company and the Overall Coordinators prior to the execution of the International Underwriting Agreement and will expire upon execution of the International Underwriting Agreement. These additional Offer Shares (the “**Offer Size Adjustment Option Shares**”), if any, will be allocated in such manner as closely as practicable to maintain the proportionality between the Hong Kong Public Offering and the International Offering following the application of the reallocation arrangement described in “Structure of the Global Offering — The Hong Kong Public Offering — Reallocation” below and the Sponsor-Overall Coordinator shall allocate additional new H Shares to be offered by the Company pursuant to the International Offering to the Hong Kong Public Offering in order to maintain such proportionality and the relevant number of Offer Size Adjustment Option Shares shall be allocated to the International Offering to maintain such proportionality.

### **Undertakings to the Hong Kong Stock Exchange pursuant to the Hong Kong Listing Rules**

#### *Undertakings by our Company*

Pursuant to Rule 10.08 of the Listing Rules, our Company has undertaken to the Stock Exchange that it will not issue any further Shares or securities convertible into equity securities of our Company (whether or not of a class already listed) or enter into any agreement to such an issue within six months from the Listing Date (whether or not such issue of Shares or securities will be completed within six months from the Listing Date), except for (a) pursuant to the Global Offering (including the Over-allotment Option); or (b) under any of the circumstances provided under Rule 10.08 of the Listing Rules.

---

## UNDERWRITING

---

### Undertakings by our Single Largest Shareholder Group

Each member of our Single Largest Shareholder Group has voluntarily undertaken to us and that except pursuant to the Global Offering (including the Offer Size Adjustment Option and the Over-allotment Option), he/she/it will not, and will procure that the relevant registered holder(s) will not, without the prior written consent of the Overall Coordinators and unless otherwise in compliance with the applicable requirements of the Listing Rules:

- (a) in the period commencing on the date by reference to which disclosure of its shareholdings in our Company is made in this Prospectus and ending on the date which is six months from the Listing Date, either directly or indirectly, dispose of, nor enter into any agreement to dispose of or otherwise create any options, rights, interests or encumbrances in respect of, any of our securities that he/she/it is shown to beneficially own in this Prospectus (the “**Relevant Shares**”); or
- (b) in the period of a further six months commencing on the date on which the period referred to in paragraph (a) above expires, either directly or indirectly, dispose of, nor enter into any agreement to dispose of or otherwise create any options, rights, interests or encumbrances in respect of, any of the Relevant Shares if, immediately following such disposal or upon the exercise or enforcement of such options, rights, interests or encumbrances, they would together with other members of our Single Largest Shareholder Group cease to be the Single Largest Shareholder Group of our Company.

Each member of our Single Largest Shareholder Group has further undertaken to us that, within the period commencing on the date by reference to which disclosure of his/her/its shareholdings in our Company is made in this Prospectus and ending on the date which is 12 months from the Listing Date, he/she/it will and will procure that the relevant registered holder(s) will:

- (a) when he/she/it pledges or charges any securities in our Company beneficially owned by him/her/it in favor of an authorized institution, immediately inform us in writing of such pledge or charge together with the number of our securities so pledged or charged; and
- (b) when he/she/it receives indications, either verbal or written, from the pledgee or chargee that any of our pledged or charged securities beneficially owned by him/her/it will be disposed of, immediately inform us in writing of such indications.

Our Company will, as soon as we have been informed of the matters referred to in paragraphs (a) and (b) above (if any) by any member of our Single Largest Shareholder Group and subject to the then requirements of the Listing Rules, disclose such matters by way of an announcement which is published in accordance with Rule 2.07C of the Listing Rules as soon as possible.

---

## UNDERWRITING

---

### Undertakings pursuant to the Hong Kong Underwriting Agreement

#### *Undertakings by our Company*

Pursuant to the Hong Kong Underwriting Agreement, save for the issue, offer or sale of the Offer Shares by our Company pursuant to the Global Offering (including pursuant to the exercise of the Offer Size Adjustment Option and/or the Over-allotment Option), during the period commencing on the date of the Hong Kong Underwriting Agreement and ending on, and including, the date falling six months after the Listing Date (the “**First Six-Month Period**”), our Company has undertaken to each of the Sole Sponsor, the Overall Coordinators, the Joint Bookrunner, the Joint Lead Manager, the Hong Kong Underwriters and the Capital Market Intermediaries not to, without the prior written consent of the Sole Sponsor and Overall Coordinators (for themselves and on behalf of the Hong Kong Underwriters) and unless in compliance with the Listing Rules:

- (a) allot, issue, sell, accept subscription for, offer to allot, issue or sell, contract or agree to allot, issue or sell, assign, mortgage, charge, pledge, assign, hypothecate, lend, grant or sell any option, warrant, contract or right to subscribe for or purchase, grant or purchase any option, warrant, contract or right to allot, issue or sell, or otherwise transfer or dispose of or create an Encumbrance (as defined in the Hong Kong Underwriting Agreement) over, or agree to transfer or dispose of or create an Encumbrance (as defined in the Hong Kong Underwriting Agreement) over, either directly or indirectly, conditionally or unconditionally, or repurchase, any legal or beneficial interest in the share capital or any other equity securities of our Company or any shares or other equity securities of members of our Group, as applicable, or any interest in any of the foregoing (including, without limitation, any securities convertible into or exchangeable or exercisable for or that represents the right to receive, or any warrants or other rights to purchase any Shares or any other share capital or other equity securities of our Company or members of our Group, as applicable), or deposit any share capital or other equity securities of our Company or any member of our Group, as applicable, with a depositary in connection with the issue of depositary receipts; or
- (b) enter into any swap or other arrangement that transfers to another, in whole or in part, any of the economic consequences of ownership (legal or beneficial) of our H Shares or any other equity securities of our Company or any shares or other equity securities of any members of our Group, as applicable, or any interest in any of the foregoing (including, without limitation, any securities convertible into or exchangeable or exercisable for or that represent the right to receive, or any warrants or other rights to purchase, any Shares or any other equity securities of our Company or any shares or any other equity securities of any members of our Group, as applicable); or
- (c) enter into any transaction with the same economic effect as any transaction described in paragraph (a) or (b) above; or

---

## UNDERWRITING

---

- (d) offer to or agree to do any of the foregoing or announce any intention to do so, in each case, whether any of the foregoing transactions is to be settled by delivery of share capital or such other equity securities, in cash or otherwise (whether or not the issue of such share capital or other equity securities will be completed within the First Six Month Period). Our Company further agrees that, in the event our Company is allowed to enter into any of the transactions described in paragraph (a), (b) or (c) above or offers to or agrees to or announces any intention to effect any such transaction during the period of six months commencing on the date on which the First Six Month Period expires (the “**Second Six Month Period**”), it will take all reasonable steps to ensure that such an issue or disposal will not, and no other act of our Company will, create a disorderly or false market for any Shares or other securities of our Company.

### **Hong Kong Underwriters’ Interests in our Company**

Save for their respective obligations under the Hong Kong Underwriting Agreement, as of the Latest Practicable Date, none of the Hong Kong Underwriters was interested, legally or beneficially, directly or indirectly, in any H Shares or any securities of any member of our Group or had any right or option (whether legally enforceable or not) to subscribe for or to nominate persons to subscribe for securities in our Company.

Following the completion of the Global Offering, the Hong Kong Underwriters and their affiliated companies may hold a certain portion of our H Shares as a result of fulfilling their respective obligations under the Hong Kong Underwriting Agreement.

### **International Offering**

#### ***International Underwriting Agreement***

In connection with the International Offering, our Company and our Single Largest Shareholder Group expect to enter into the International Underwriting Agreement with the Overall Coordinators and the International Underwriters on or around the Price Determination Date. Under the International Underwriting Agreement and subject to the Offer Size Adjustment Option and the Over-allotment Option, the International Underwriters would, subject to certain conditions set out therein, agree severally but not jointly to procure subscribers for, or themselves to subscribe for, their respective applicable proportions of the International Offer Shares initially being offered pursuant to the International Offering. It is expected that the International Underwriting Agreement may be terminated on similar grounds as the Hong Kong Underwriting Agreement. Potential investors should note that in the event that the International Underwriting Agreement is not entered into or is terminated, the Global Offering will not proceed. See “Structure of the Global Offering — The International Offering”.

---

## UNDERWRITING

---

### *Over-allotment Option*

Our Company is expected to grant to the International Underwriters the Over-allotment Option, exercisable by the Overall Coordinators on behalf of the International Underwriters at any time from the Listing Date until 30 days after the last day for lodging applications under the Hong Kong Public Offering, pursuant to which our Company may be required to issue up to an aggregate of 30,847,800 H Shares, representing not more than 15% of the number of Offer Shares initially available under the Global Offering assuming the Offer Size Adjustment Option is not exercised at all) or up to an aggregate of 35,474,800 additional H Shares (representing approximately 15% of the total number of Offer Shares being offered under the Global Offering assuming the Offer Size Adjustment Option is exercised in full), at the Offer Price, to cover over-allocations in the International Offering, if any. See “Structure of the Global Offering — Over-allotment Option.”

### **Commissions and Expenses**

The Underwriters and the Capital Market Intermediaries will receive an underwriting commission of 1.8% of the aggregate Offer Price of all the Offer Shares (the “**Fixed Fee**”), including any Offer Shares to be issued pursuant to the exercise of the Offer Size Adjustment Option and the Over-allotment Option, out of which they will pay any sub-underwriting commissions and other fees.

The Underwriters and the Capital Market Intermediaries may receive a discretionary incentive fee of up to 1.2% of the aggregate Offer Price of all the Offer Shares (including any Offer Shares to be issued pursuant to the exercise of the Offer Size Adjustment Option and the Over-allotment Option) (the “**Discretionary Fee**”). The ratio of the Fixed Fee and the Discretionary Fee (if fully paid) payable to all Underwriters is therefore 46.5:53.5. The incentive fee is discretionary in nature and the payment of such is subject to the sole discretion of our Company.

For any unsubscribed Hong Kong Offer Shares reallocated to the International Offering, the underwriting commission will not be paid to the Hong Kong Underwriters but will instead be paid, at the rate applicable to the International Offering, to the relevant International Underwriters.

The aggregate underwriting commissions payable to the Underwriters in relation to the Global Offering (based on the Offer Price of HK\$14.78 per Offer Share, which is a mid-point of the Offer Price Range, and assuming the full payment of the Discretionary Fee and the exercise of the Offer Size Adjustment Option and the Over-allotment Option in full) will be approximately HK\$120.6 million.

The aggregate underwriting commissions and fees together with the Stock Exchange listing fees, the AFRC transaction levy, the SFC transaction levy and the Stock Exchange trading fee, legal and other professional fees and printing and all other expenses relating to the Global Offering are estimated to be approximately HK\$181.1 million (based on the Offer Price

---

## UNDERWRITING

---

of HK\$14.78 per Offer Share, which is the mid-point of the Offer Price Range, and assuming the full payment of the Discretionary Fee and assuming the Offer Size Adjustment Option and the Over-allotment Option is exercised in full), which will be made by our Company.

### **Sole Sponsor's Fee**

An amount of US\$500,000 is payable by our Company as sponsor fee to the Sole Sponsor.

### **Indemnity**

Each member of our Company and our Single Largest Shareholder Group has agreed to indemnify the Hong Kong Underwriters for certain losses which they may suffer or incur, including losses arising from the performance of their obligations under the Hong Kong Underwriting Agreement and any breach by any of our Company and any member of our Single Largest Shareholder Group of the Hong Kong Underwriting Agreement.

### **ACTIVITIES BY SYNDICATE MEMBERS**

The underwriters of the Hong Kong Public Offering and the International Offering (together, the “**Syndicate Members**”) and their affiliates may each individually undertake a variety of activities (as further described below) which do not form part of the underwriting or stabilizing process.

The Syndicate Members and their affiliates are diversified financial institutions with relationships in countries around the world. These entities engage in a wide range of commercial and investment banking, loan financing, brokerage, funds management, trading, hedging, investing and other activities for their own account and for the account of others. In the ordinary course of their various business activities, the Syndicate Members and their respective affiliates may purchase, sell or hold a broad array of investments and actively trade securities, derivatives, loans, commodities, currencies, credit default swaps and other financial instruments for their own account and for the accounts of their customers. Such investment and trading activities may involve or relate to assets, securities and/or instruments of our Company and/or persons and entities with relationships with our Company and may also include swaps and other financial instruments entered into for hedging purposes in connection with our Group's loans and other debt.

In relation to our H Shares, those activities of the Syndicate Members and their affiliates could include acting as agent for buyers and sellers of our H Shares, entering into transactions with those buyers and sellers in a principal capacity, including as a lender to initial purchasers of the H Shares (which financing may be secured by the H Shares) in the Global Offering, proprietary trading in our H Shares and entering into over the counter or listed derivative transactions or listed or unlisted securities transactions (including issuing securities such as derivative warrants listed on a stock exchange) which have our H Shares as their underlying assets or part of their underlying assets. Such transactions may be carried out as bilateral agreements or trades with selected counterparties. Those activities may require hedging activity by those entities involving, directly or indirectly, the buying and selling of our H Shares, which may have a negative impact on the trading price of our H Shares. All such

---

## UNDERWRITING

---

activities could occur in Hong Kong and elsewhere in the world and may result in the Syndicate Members and their affiliates holding long and/or short positions in our H Shares, in baskets of securities or indices including our H Shares, in units of funds that may purchase our H Shares, or in derivatives related to any of the foregoing.

In relation to issues by Syndicate Members or their affiliates of any listed securities having our H Shares as their or part of their underlying securities, whether on the Stock Exchange or on any other stock exchange, the rules of the stock exchange may require the issuer of those securities (or one of its affiliates or agents) to act as a market maker or liquidity provider in the security, and this will also result in hedging activity in our H Shares in most cases.

All such activities may occur both during and after the end of the stabilizing period described in the section headed “Structure of the Global Offering.” Such activities may affect the market price or value of our H Shares, the liquidity or trading volume in our H Shares and the volatility of the price of our H Shares, and the extent to which this occurs from day to day cannot be estimated.

It should be noted that when engaging in any of these activities, the Syndicate Members will be subject to certain restrictions, including the following:

- (a) the Syndicate Members (other than the Stabilizing Manager or any person acting for it) must not, in connection with the distribution of the Offer Shares, effect any transactions (including issuing or entering into any option or other derivative transactions relating to the Offer Shares), whether in the open market or otherwise, with a view to stabilizing or maintaining the market price of any of the Offer Shares at levels other than those which might otherwise prevail in the open market; and
- (b) the Syndicate Members must comply with all applicable laws and regulations, including the market misconduct provisions of the SFO, including the provisions prohibiting insider dealing, false trading, price rigging and stock market manipulation.

Certain of the Syndicate Members or their respective affiliates have provided from time to time, and expect to provide in the future, investment banking, loan financing and other services to our Company and its affiliates for which such Syndicate Members or their respective affiliates have received or will receive customary fees and commissions.

In addition, the Syndicate Members or their respective affiliates may provide financing to investors to finance their subscriptions of the Offer Shares in the Global Offering.

### **INDEPENDENCE AND INTERESTS OF THE SOLE SPONSOR**

As of the Latest Practicable Date, the Sole Sponsor satisfied the independence criteria applicable to sponsors set out in Rule 3A.07 of the Listing Rules. As of the Latest Practicable Date, the Sole Sponsor and its affiliates had no interest in our Group.

---

## STRUCTURE OF THE GLOBAL OFFERING

---

### THE GLOBAL OFFERING

This Prospectus is published in connection with the Hong Kong Public Offering as part of the Global Offering. CITIC Securities (Hong Kong) Limited is the Sole Sponsor and CLSA Limited is the Sponsor-Overall Coordinator of the Global Offering, and Macquarie Capital Limited as one of the Overall Coordinators of the Global Offering.

The Listing of our H Shares on the Stock Exchange is sponsored by the Sole Sponsor. The Sole Sponsor has made an application on behalf of our Company to the Stock Exchange for the listing of, and permission to deal in, our H Shares in issue and to be issued as mentioned in this Prospectus.

205,652,000 Offer Shares will initially be made available under the Global Offering comprising:

- (a) the Hong Kong Public Offering of initially 20,565,200 H Shares (subject to reallocation, the Offer Size Adjustment Option and the Over-allotment Option) in Hong Kong as described in the sub-section “— The Hong Kong Public Offering” in this section below; and
- (b) the International Offering of initially 185,086,800 H Shares (subject to reallocation, the Offer Size Adjustment Option and the Over-allotment Option) outside the United States (including to professional and institutional investors within Hong Kong) in offshore transactions in reliance on Regulation S, as described in the sub-section headed “— The International Offering” in this section below.

Investors may either:

- (i) apply for Hong Kong Offer Shares under the Hong Kong Public Offering; or
- (ii) apply for or indicate an interest for International Offer Shares under the International Offering, but may not do both.

The Offer Shares will represent approximately 11.0% of the enlarged issued share capital of our Company immediately following the completion of the Global Offering, assuming the Offer Size Adjustment Option and the Over-allotment Option are not exercised. If the Offer Size Adjustment Option and the Over-allotment Option are exercised in full, the Offer Shares will represent approximately 14.3% of the enlarged issued share capital of our Company immediately following the completion of the Global Offering.

References in this Prospectus to applications, application monies or the procedure for applications relate solely to the Hong Kong Public Offering.

---

## STRUCTURE OF THE GLOBAL OFFERING

---

### THE HONG KONG PUBLIC OFFERING

#### Number of Offer Shares initially offered

Our Company is initially offering 20,565,200 H Shares for subscription by the public in Hong Kong at the Offer Price, representing approximately 10.0% of the total number of Offer Shares initially available under the Global Offering. The number of Offer Shares initially offered under the Hong Kong Public Offering, subject to any reallocation of Offer Shares between the International Offering and the Hong Kong Public Offering, will represent approximately 1.1% of the enlarged issued share capital of our Company immediately following the completion of the Global Offering (assuming the Offer Size Adjustment Option and the Over-allotment Option are not exercised).

The Hong Kong Public Offering is open to members of the public in Hong Kong as well as to institutional and professional investors. Professional investors generally include brokers, dealers, companies (including fund managers) whose ordinary business involves dealing in shares and other securities and corporate entities that regularly invest in shares and other securities.

Completion of the Hong Kong Public Offering is subject to the conditions set out in the sub-section headed “— Conditions of the Global Offering” in this section.

#### Allocation

Allocation of Offer Shares to investors under the Hong Kong Public Offering will be based solely on the level of valid applications received under the Hong Kong Public Offering. The basis of allocation may vary, depending on the number of Hong Kong Offer Shares validly applied for by applicants. Such allocation could, where appropriate, consist of balloting, which could mean that some applicants may receive a higher allocation than others who have applied for the same number of Hong Kong Offer Shares, and those applicants who are not successful in the ballot may not receive any Hong Kong Offer Shares.

For allocation purposes only, the total number of Hong Kong Offer Shares available under the Hong Kong Public Offering (after taking into account any reallocation referred to below) will be divided equally (to the nearest board lot) into two pools: pool A and pool B (with any odd lot being allocated to pool A). The Hong Kong Offer Shares in pool A will be allocated on an equitable basis to applicants who have applied for Hong Kong Offer Shares with an aggregate price of HK\$5 million (excluding the brokerage, the AFRC transaction levy, the SFC transaction levy and the Stock Exchange trading fee payable) or less. The Hong Kong Offer Shares in pool B will be allocated on an equitable basis to applicants who have applied for Hong Kong Offer Shares with an aggregate price of more than HK\$5 million (excluding the brokerage, the AFRC transaction levy, the SFC transaction levy and the Stock Exchange trading fee payable) and up to the total value in pool B.

---

## STRUCTURE OF THE GLOBAL OFFERING

---

Investors should be aware that applications in pool A and applications in pool B may receive different allocation ratios. If any Hong Kong Offer Shares in one (but not both) of the pools are unsubscribed, such unsubscribed Hong Kong Offer Shares will be transferred to the other pool to satisfy demand in that other pool and be allocated accordingly. For the purpose of the immediately preceding paragraph only, the “price” for Hong Kong Offer Shares means the price payable on application therefor (without regard to the Offer Price as finally determined). Applicants can only receive an allocation of Hong Kong Offer Shares from either pool A or pool B and not from both pools. Multiple or suspected multiple applications under the Hong Kong Public Offering and any application for more than 10,282,600 Hong Kong Offer Shares (being approximately 50% of the Hong Kong Offer Shares initially available under the Hong Kong Public Offering) is liable to be rejected.

### **Reallocation**

The allocation of Offer Shares between the Hong Kong Public Offering and the International Offering is at the discretion of the Overall Coordinators, subject to reallocation. According to Chapter 4.14 (Offering-related Mechanisms) of the Guide and paragraph 4.2 of Practice Note 18 of the Listing Rules, a clawback mechanism shall be put in place which would have the effect of increasing the number of Offer Shares under the Hong Kong Public Offering to a certain percentage of the total number of Offer Shares offered under the Global Offering if certain prescribed total demand levels are reached as further described below.

20,565,200 Offer Shares are initially available in the Hong Kong Public Offering, representing approximately 10.0% of the Offer Shares initially available for subscription under the Global Offering. If the number of Offer Shares validly applied for under the Hong Kong Public Offering represents (a) 15 times or more but less than 50 times, (b) 50 times or more but less than 100 times and (c) 100 times or more of the total number of Offer Shares initially available under the Hong Kong Public Offering, then Offer Shares will be reallocated to the Hong Kong Public Offering from the International Offering. As a result of such reallocation and assuming the Offer Size Adjustment Option is not exercised, the total number of Offer Shares available under the Hong Kong Public Offering will be increased to 61,695,600 Offer Shares (in the case of (a)), 82,260,800 Offer Shares (in the case of (b)) and 102,826,000 Offer Shares (in the case of (c)), representing approximately 30%, 40% and 50% of the total number of Offer Shares initially available under the Global Offering, respectively (before the exercise of the Over-allotment Option) (the “**PN18 Clawback**”). In each case, the additional Offer Shares reallocated to the Hong Kong Public Offering will be allocated between pool A and pool B and the number of Offer Shares allocated to the International Offering will be correspondingly reduced in such manner as the Overall Coordinators deems appropriate.

In addition, the Overall Coordinators may allocate Offer Shares from the International Offering to the Hong Kong Public Offering to satisfy valid applications under the Hong Kong Public Offering.

---

## STRUCTURE OF THE GLOBAL OFFERING

---

If the Hong Kong Public Offering is not fully subscribed, the Overall Coordinators may reallocate all or any unsubscribed Hong Kong Offer Shares to the International Offering, in such proportions as they deem appropriate.

The Overall Coordinators may, at its discretion, reallocate Offer Shares initially allocated for the International Offering to the Hong Kong Public Offering to satisfy valid applications in pool A and pool B under the Hong Kong Public Offering in accordance with Chapter 4.14 of the Guide for New Listing Applicants. In the event that (i) the International Offer Shares are undersubscribed and the Hong Kong Offer Shares are fully subscribed or oversubscribed irrespective of the number of times; or (ii) the International Offer Shares are fully subscribed or oversubscribed and the Hong Kong Offer Shares are fully subscribed or oversubscribed as to less than 15 times of the number of Hong Kong Offer Shares initially available under the Hong Kong Public Offering, and provided that the Offer Price would be set at HK\$13.72 (low-end of the Offer Price range), up to 20,565,200 Offer Shares (assuming the Offer Size Adjustment Option is not exercised) may be reallocated to the Hong Kong Public Offering from the International Offering, so that the total number of the Offer Shares available under the Hong Kong Public Offering will be the lesser of: (i) double of initial allocation under the Hong Kong Public Offering; and (ii) 30% of the total offering (assuming the Offer Size Adjustment Option is not exercised) (the “**Allocation Cap**”).

The Offer Shares to be offered in the Hong Kong Public Offering and the Offer Shares to be offered in the International Offering may, in certain circumstances, be reallocated between these offerings at the discretion of the Overall Coordinators, subject to the PN18 Clawback and the Allocation Cap (as applicable).

### **Applications**

Each applicant under the Hong Kong Public Offering will be required to give an undertaking and confirmation in the application submitted by him/her/it that he/she/it and any person(s) for whose benefit he/she/it is making the application has not applied for or taken up, or indicated an interest for, and will not apply for or take up, or indicate an interest for, any International Offer Shares under the International Offering. Such applicant’s application is liable to be rejected if such undertaking and/or confirmation is/are breached and/or untrue (as the case may be) or if he/she/it has been or will be placed or allocated International Offer Shares under the International Offering.

Applicants under the Hong Kong Public Offering are required to pay, on application (subject to application channel), the maximum Offer Price in addition to the brokerage, the AFRC transaction levy, the SFC transaction levy and the Stock Exchange trading fee payable on each Offer Share, amounting to a total of HK\$3,197.93 for one board lot of 200 H Shares. If the Offer Price, as finally determined in the manner described in “— Pricing and Allocation” below, is less than the maximum Offer Price, appropriate refund payments (including the brokerage, the AFRC transaction levy, the SFC transaction levy and the Stock Exchange trading fee attributable to the surplus application monies) will be made to successful applicants, without interest. Further details are set out in the section headed “How to Apply for Hong Kong Offer Shares” in this Prospectus.

---

## STRUCTURE OF THE GLOBAL OFFERING

---

### THE INTERNATIONAL OFFERING

#### Number of Offer Shares initially offered

The International Offering will consist of an offering of initially 185,086,800 H Shares, representing approximately 90.0% of the total number of Offer Shares initially available under the Global Offering (subject to reallocation, the Offer Size Adjustment Option and the Over-allotment Option). The number of Offer Shares initially offered under the International Offering, subject to any reallocation of Offer Shares between the International Offering and the Hong Kong Public Offering, will represent approximately 9.9% of the enlarged share capital of our Company immediately following the completion of the Global Offering (assuming the Offer Size Adjustment Option and the Over-allotment Option are not exercise).

#### Allocation

The International Offering will include selective marketing of Offer Shares to institutional and professional investors and other investors anticipated to have a sizeable demand for such Offer Shares in Hong Kong and other jurisdictions outside the United States in reliance on Regulation S. Professional investors generally include brokers, dealers, companies (including fund managers) whose ordinary business involves dealing in shares and other securities and corporate entities that regularly invest in shares and other securities. Allocation of Offer Shares pursuant to the International Offering will be effected in accordance with the “book-building” process described in the sub-section headed “Pricing and Allocation” below in this section and based on a number of factors, including the level and timing of demand, the total size of the relevant investor’s invested assets or equity assets in the relevant sector and whether or not it is expected that the relevant investor is likely to buy further Offer Shares and/or hold or sell its Offer Shares after the Listing. Such allocation is intended to result in a distribution of the Offer Shares on a basis which would lead to the establishment of a solid professional and institutional shareholder base to the benefit of our Group and the Shareholders as a whole.

The Overall Coordinators (for itself and on behalf of the Underwriters) may require any investor who has been offered Offer Shares under the International Offering and who has made an application under the Hong Kong Public Offering to provide sufficient information to the Overall Coordinators so as to allow it to identify the relevant applications under the Hong Kong Public Offering and to ensure that it is excluded from any allocation of Offer Shares under the Hong Kong Public Offering.

#### Reallocation

The total number of Offer Shares to be issued or sold pursuant to the International Offering may change as a result of the clawback arrangement described in the subsection “— The Hong Kong Public Offering — Reallocation” in this section above, the exercise of the Offer Size Adjustment Option in whole or in part as described in the subsection headed “— Offer Size Adjustment Option” and the exercise of the Over-allotment Option in whole or in part as described in the subsection headed “— Over-allotment Option” and/or any reallocation of unsubscribed Offer Shares originally included in the Hong Kong Public Offering.

---

## STRUCTURE OF THE GLOBAL OFFERING

---

### OFFER SIZE ADJUSTMENT OPTION

As part of the Global Offering, the Company has the Offer Size Adjustment Option under the Hong Kong Underwriting Agreement. The Offer Size Adjustment Option provides flexibility to increase the number of Offer Shares available for purchase under the Global Offering to cover additional market demand, if any. The Offer Size Adjustment Option may be exercised jointly by the Company and the Overall Coordinators prior to the execution of the International Underwriting Agreement and will expire upon execution of the International Underwriting Agreement.

Under the Offer Size Adjustment Option, the Company may issue any number of H Shares up to an aggregate of 30,847,800 additional Offer Shares at the Offer Price. These Offer Size Adjustment Option Shares, if any, will be allocated in such manner as closely as practicable to maintain the proportionality between the Hong Kong Public Offering and the International Offering following the application of the reallocation arrangement described in the subsection headed “— The Hong Kong Public Offering — Reallocation” and the Sponsor-Overall Coordinator shall allocate additional new H Shares to be offered by the Company pursuant to the International Offering to the Hong Kong Public Offering in order to maintain such proportionality and the relevant number of Offer Size Adjustment Option Shares shall be allocated to the International Offering to maintain such proportionality.

If the Offer Size Adjustment Option is exercised in full, the Offer Size Adjustment Option Shares to be issued pursuant thereto will represent approximately 1.6% of our issued share capital immediately following the completion of the Global Offering (assuming the Over-allotment Option is not exercised) and the exercise of the Offer Size Adjustment Option.

The dilution effect of the Offer Size Adjustment Option (assuming the Over-allotment Option is not exercised) is set out below:

<b>Number of H Shares issued under the Global Offering before the exercise of the Offer Size Adjustment Option</b>	<b>Approximate percentage of total issued share capital of the Offer Shares initially offered before the exercise of the Offer Size Adjustment Option</b>	<b>Number of H Shares issued under the Global Offering after the full exercise of the Offer Size Adjustment Option</b>	<b>Approximate percentage of total issued share capital of the Offer Shares initially offered after the full exercise of the Offer Size Adjustment Option</b>
205,652,000	11.0%	236,499,800	12.4

The Offer Size Adjustment Option will not be used for price stabilisation purposes and will not be subject to the provisions of the Securities and Futures (Price Stabilisation) Rules (Chapter 571W of the Laws of Hong Kong). The Offer Size Adjustment Option will be in addition to the Over-allotment Option.

---

## STRUCTURE OF THE GLOBAL OFFERING

---

The Company will disclose in its allotment results announcement if and to what extent the Offer Size Adjustment Option has been exercised, or confirm that if the Offer Size Adjustment Option has not been exercised prior to the execution of the International Underwriting Agreement which is expected to be on or before Thursday, March 6, 2025, it will lapse and cannot be exercised at any future date.

### **OVER-ALLOTMENT OPTION**

In connection with the Global Offering, our Company is expected to grant the Over-allotment Option to the International Underwriters, exercisable by the Overall Coordinators (on behalf of the International Underwriters).

Pursuant to the Over-allotment Option, the International Underwriters will have the right, exercisable by the Overall Coordinators (on behalf of the International Underwriters) at any time from the Listing Date until 30 days after the last day for lodging applications under the Hong Kong Public Offering, to require our Company to issue up to an aggregate of 30,847,800 additional H Shares, representing 15% of the total number of Offer Shares available under the Global Offering assuming the Offer Size Adjustment Option is not exercised at all) or up to an aggregate of 35,474,800 additional H Shares (representing approximately 15% of the total number of Offer Shares being offered under the Global Offering assuming the Offer Size Adjustment Option is exercised in full), at the Offer Price under the International Offering to cover over-allocations in the International Offering, if any.

If the Offer Size Adjustment Option is not exercised and Over-allotment Option is exercised in full, the additional Offer Shares to be issued pursuant to the Over-allotment Option will represent approximately 1.6% of the enlarged issued share capital of our Company immediately following the completion of the Global Offering. If the Offer Size Adjustment Option and the Over-allotment Option are exercised in full, the additional Offer Shares will represent approximately 1.8% of the total number of shares in issue immediately following completion of the Global Offering and the exercise of the Over-allotment Option. We will make an announcement if the Over-allotment Option is exercised.

### **OFFER SIZE**

The allocation and the total number of Offer Shares under the Global Offering will be determined in the following manner:

The allocation of Offer Shares between the International Offering and the Hong Kong Public Offering will be subject to a reallocation adjustment depending on the number of Offer Shares validly applied for under the Hong Kong Public Offering. See “— The Hong Kong Public Offering — Reallocation” above for details.

## STRUCTURE OF THE GLOBAL OFFERING

If the Offer Size Adjustment Option is exercised in full, the additional Offer Shares made available as a result, representing approximately 15% of the number of Offer Shares initially being offered under the Global Offering, will be allocated so as to maintain the proportionality between the Hong Kong Public Offering and the International Offering on a post-reallocation basis. The Offer Size Adjustment Option will lapse if it is not exercised prior to the execution of the International Underwriting Agreement. See “— Offer Size Adjustment Option” above for details.

The number of Offer Shares to be made available under the International Offering may be further increased if the Over-allotment Option is exercised. The maximum number of additional International Offer Shares to be offered pursuant to the exercise of the Over-allotment Option will represent approximately 15% of the number of Offer Shares being offered under the Global Offering (including the Offer Shares offered pursuant to the exercise of the Offer Size Adjustment Option, if any). See “— Over-allotment Option” above for details.

The table below sets out a summary of the total number of Hong Kong Offer Shares and International Offer Shares being offered in the Global Offering under different scenarios, depending on (a) whether a reallocation pursuant to the clawback arrangement described in “— The Hong Kong Public Offering — Reallocation” above occurs and (b) whether any of the Offer Size Adjustment Option and the Over-allotment Option is exercised at all and/or in full.

	<u>No clawback reallocation</u>	<u>30% clawback reallocation</u>	<u>40% clawback reallocation</u>	<u>50% clawback reallocation</u>

### STABILIZATION

Stabilization is a practice used by underwriters in some markets to facilitate the distribution of securities. To stabilize, the underwriters may bid for, or purchase, the securities in the secondary market during a specified period of time, to retard and, if possible, prevent a decline in the initial public market price of the securities below the offer price. Such transactions may be effected in all jurisdictions where it is permissible to do so, in each case in compliance with all applicable laws and regulatory requirements, including those of Hong Kong. In Hong Kong, the price at which stabilization is effected is not permitted to exceed the offer price.

In connection with the Global Offering, the Stabilizing Manager (or any person acting for it), on behalf of the Underwriters, may over-allocate or effect transactions with a view to stabilizing or supporting the market price of the H Shares at a level higher than that which might otherwise prevail for a limited period after the Listing Date. However, there is no obligation on the Stabilizing Manager (or any person acting for it) to conduct any such stabilizing action. Such stabilizing action, if taken, (a) will be conducted at the absolute discretion of the Stabilizing Manager (or any person acting for it) and in what the Stabilizing Manager (or any person acting for it) reasonably regards as the best interest of our Company, (b) may be discontinued at any time, and (c) is required to be brought to an end within 30 days after the last day for lodging applications under the Hong Kong Public Offering.

---

## STRUCTURE OF THE GLOBAL OFFERING

---

Stabilization action permitted in Hong Kong pursuant to the Securities and Futures (Price Stabilizing) Rules of the SFO includes (a) over-allocating for the purpose of preventing or minimizing any reduction in the market price of the H Shares, (b) selling or agreeing to sell the H Shares so as to establish a short position in them for the purpose of preventing or minimizing any reduction in the market price of the H Shares, (c) purchasing, or agreeing to purchase, the H Shares pursuant to the Offer Size Adjustment Option and the Over-allotment Option in order to close out any position established under paragraph (a) or (b) above, (d) purchasing, or agreeing to purchase, any of the H Shares for the sole purpose of preventing or minimizing any reduction in the market price of the H Shares, (e) selling or agreeing to sell any H Shares in order to liquidate any position established as a result of those purchases and (f) offering or attempting to do anything as described in clauses (b), (c), (d) or (e) above.

Specifically, prospective applicants for and investors in the Offer Shares should note that:

- the Stabilizing Manager (or any person acting for it) may, in connection with the stabilizing action, maintain a long position in the H Shares;
- there is no certainty as to the extent to which and the time or period for which the Stabilizing Manager (or any person acting for it) will maintain such a long position;
- liquidation of any such long position by the Stabilizing Manager (or any person acting for it) and selling in the open market may have an adverse impact on the market price of the H Shares;
- no stabilizing action can be taken to support the price of the H Shares for longer than the stabilization period, which will begin on the Listing Date, and is expected to expire on Friday, April 4, 2025, being the 30th day after the last day for lodging applications under the Hong Kong Public Offering. After this date, when no further stabilizing action may be taken, demand for the H Shares, and therefore the price of the H Shares, could fall;
- the price of the H Shares cannot be assured to stay at or above the Offer Price by the taking of any stabilizing action; and
- stabilizing bids or transactions effected in the course of the stabilizing action may be made at any price at or below the Offer Price and can, therefore, be done at a price below the price paid by applicants for, or investors in, the Offer Shares.

In order to effect stabilization actions, the Stabilizing Manager may arrange cover of up to an aggregate of 30,847,800 H Shares (representing up to 15% of the total number of Offer Shares initially available under the Global Offering assuming the Offer Size Adjustment Option is not exercised at all) or up to an aggregate of 35,474,800 H Shares (representing approximately 15% of the total number of Offer Shares being offered under the Global Offering assuming the Offer Size Adjustment Option is exercised in full), through delayed delivery arrangements with investors who have been allocated Offer Shares in the International

---

## STRUCTURE OF THE GLOBAL OFFERING

---

Offering. The delayed delivery arrangements (if specifically agreed by an investor) relate only to the delay in the delivery of the Offer Shares to such investor and the Offer Price for the Offer Shares allocated to such investor will be fully paid before the Listing Date. Both the size of such cover and the extent to which the Over-allotment Option can be exercised will depend on whether arrangements can be made with investors such that a sufficient number of H Shares can be delivered on a delayed basis. If no investor in the International Offering agrees to the delayed delivery arrangements, no stabilizing actions will be undertaken by the Stabilizing Manager and the Over-allotment Option will not be exercised.

Our Company will ensure that an announcement in compliance with the Securities and Futures (Price Stabilizing) Rules of the SFO will be made within seven days of the expiration of the stabilization period.

### **Over-allocation**

Following any over-allocation of H Shares in connection with the Global Offering, the Stabilizing Manager (or any person acting for it) may cover such over-allocations by, among others, exercising the Offer Size Adjustment Option and the Over-allotment Option in full or in part, using H Shares purchased by the Stabilizing Manager (or any person acting for it) in the secondary market at prices that do not exceed the Offer Price or a combination of these means.

## **PRICING AND ALLOCATION**

### **Determining the Pricing of the Offer Price**

Pricing for the Offer Shares for the purpose of the various offerings under the Global Offering will be determined on the Price Determination Date, which is expected to be on or before Thursday, March 6, 2025 and, in any event, no later than 12:00 noon on Thursday, March 6, 2025, by agreement between the Overall Coordinators (for themselves and on behalf of the Underwriters) and our Company, and the number of Offer Shares to be allocated under the various offerings will be determined shortly thereafter.

The Offer Price will not be more than HK\$15.83 per Offer Share and is expected to be not less than HK\$13.72 per Offer Share, unless otherwise announced, as further explained below. Applicants under the Hong Kong Public Offering are required to pay, on application (subject to application channel), the maximum Offer Price plus brokerage of 1.0%, SFC transaction levy of 0.0027%, Stock Exchange trading fee of 0.00565% and AFRC transaction levy of 0.00015%, amounting to a total of HK\$3,197.93 for one board lot of 200 Offer Shares. **Prospective investors should be aware that the Offer Price to be determined on the Price Determination Date may be, but is not expected to be, lower than the minimum Offer Price stated in this document.**

---

## STRUCTURE OF THE GLOBAL OFFERING

---

The International Underwriters will be soliciting from prospective investors' indications of interest in acquiring Offer Shares in the International Offering. Prospective professional and institutional investors will be required to specify the number of Offer Shares under the International Offering they would be prepared to acquire either at different prices or at a particular price. This process, known as "book-building," is expected to continue up to, and to cease on or about, the last day for lodging applications under the Hong Kong Public Offering.

The Overall Coordinators (for itself and on behalf of the Underwriters) may, where they deem appropriate, based on the level of interest expressed by prospective investors during the book-building process in respect of the International Offering, and with the prior consent of our Company, reduce the number of Offer Shares offered and/or the Offer Price range as stated in this document at any time on or prior to the morning of the last day for lodging applications under the Hong Kong Public Offering. In such a case, our Company will, as soon as practicable following the decision to make such reduction, and in any event not later than the morning of the last day for lodging applications under the Hong Kong Public Offering, cause to be published on the websites of our Company and the Stock Exchange at [cfgold.com](http://cfgold.com) and [www.hkexnews.hk](http://www.hkexnews.hk), respectively, notices of the reduction. Our Company will also, as soon as practicable following the decision to make such change, issue a supplemental prospectus updating investors of the change in the number of Offer Shares being offered under the Global Offering and/or the Offer Price. The Global Offering must first be canceled and subsequently relaunched on FINI pursuant to the supplemental prospectus. Upon the issue of such a notice and supplemental prospectus, the revised number of Offer Shares and/or the Offer Price range will be final and conclusive and the Offer Price, if agreed upon by the Overall Coordinators (for itself and on behalf of the Underwriters) and our Company, will be fixed within such revised Offer Price range.

Before submitting applications for the Hong Kong Offer Shares, applicants should have regard to the possibility that any announcement of a reduction in the number of Offer Shares and/or Offer Price range may not be made until the last day for lodging applications under the Hong Kong Public Offering. Such notice will also include confirmation or revision, as appropriate, of the working capital statement and the Global Offering statistics as currently set out in this document, and any other financial information which may change as a result of any such reduction. In the absence of any such notice so published, the number of Offer Shares will not be reduced and/or the Offer Price, if agreed upon by the Overall Coordinators (for itself and on behalf of the Underwriters) and our Company, will under no circumstances be set outside the Offer Price range as stated in this document.

### **Announcement of Offer Price**

The final Offer Price, the level of indications of interest in the International Offering, the level of applications in the Hong Kong Public Offering, the basis of allocations of the Hong Kong Offer Shares and the results of allocations in the Hong Kong Public Offering are expected to be made available through a variety of channels in the manner described in the section headed "How to Apply for Hong Kong Offer Shares — B. Publication of Results."

---

## STRUCTURE OF THE GLOBAL OFFERING

---

### UNDERWRITING

The Hong Kong Public Offering is fully underwritten by the Hong Kong Underwriters under the terms and conditions of the Hong Kong Underwriting Agreement and is subject to the Overall Coordinators (for itself and on behalf of the Underwriters) and our Company agreeing on the Offer Price.

Our Company expects to enter into the International Underwriting Agreement relating to the International Offering on or around the Price Determination Date.

These underwriting arrangements, including the Underwriting Agreements, are summarized in the section headed “Underwriting” in this Prospectus.

### CONDITIONS OF THE GLOBAL OFFERING

Acceptance of all applications for Offer Shares will be conditional on:

- (a) the Stock Exchange granting approval for the listing of, and permission to deal in, the H Shares to be issued pursuant to the Global Offering on the Main Board of the Stock Exchange (including any H Shares that may be issued pursuant to the exercise of the Offer Size Adjustment Option and the Over-allotment Option) and such approval and permission not subsequently having been withdrawn or revoked prior to the Listing Date;
- (b) the Offering;
- (c) the execution and delivery of the International Underwriting Agreement on or around the Price Determination Date; and
- (d) the obligations of the Hong Kong Underwriters under the Hong Kong Underwriting Agreement and the obligations of the International Underwriters under the International Underwriting Agreement becoming and remaining unconditional and not having been terminated in accordance with the terms of the respective agreements,

in each case on or before the dates and times specified in the respective Underwriting Agreements (unless and to the extent such conditions are validly waived on or before such dates and times) and, in any event, not later than the date which is 30 days after the date of this Prospectus.

The consummation of each of the Hong Kong Public Offering and the International Offering is conditional upon, among other things, the other offering becoming unconditional and not having been terminated in accordance with its terms.

---

## STRUCTURE OF THE GLOBAL OFFERING

---

If the above conditions are not fulfilled or waived prior to the dates and times specified, the Global Offering will lapse and the Stock Exchange will be notified immediately. Notice of the lapse of the Hong Kong Public Offering will be published by our Company on the websites of our Company and the Stock Exchange at [cfgold.com](http://cfgold.com) and [www.hkexnews.hk](http://www.hkexnews.hk), respectively, on the next day following such lapse. In such a situation, all application monies will be returned, without interest, on the terms set out in the section headed “How to Apply for Hong Kong Offer Shares — (F) Refund of Application Monies” in this Prospectus. In the meantime, all application monies will be held in separate bank account(s) with the receiving banks or other bank(s) in Hong Kong licensed under the Banking Ordinance (Chapter 155 of the Laws of Hong Kong).

H Share certificates for the Offer Shares will only become valid evidence of title at 8:00 a.m. on Monday, March 10, 2025, provided that the Global Offering has become unconditional in all respects at or before that time.

### DEALINGS IN THE H SHARES

Assuming that the Hong Kong Public Offering becomes unconditional at or before 8:00 a.m. in Hong Kong on Monday, March 10, 2025, it is expected that dealings in the H Shares on the Stock Exchange will commence at 9:00 a.m. on Monday, March 10, 2025.

The H Shares will be traded in board lots of 200 H Shares each and the stock code of the H Shares will be 6693.

---

## HOW TO APPLY FOR HONG KONG OFFER SHARES

---

### IMPORTANT NOTICE TO INVESTORS OF HONG KONG OFFER SHARES

#### FULLY ELECTRONIC APPLICATION PROCESS

We have adopted a fully electronic application process for the Hong Kong Public Offering and below are the procedures for application.

This Prospectus is available at the website of the Stock Exchange at [www.hkexnews.hk](http://www.hkexnews.hk) under the “HKEXnews > New Listings > New Listing Information” section, and our website at [cfgold.com](http://cfgold.com).

The contents of this Prospectus are identical to the prospectus as registered with the Registrar of Companies in Hong Kong pursuant to Section 342C of the Companies (Winding Up and Miscellaneous Provisions) Ordinance.

#### A. APPLICATION FOR HONG KONG OFFER SHARES

##### 1. Who Can Apply

You can apply for Hong Kong Offer Shares if you or the person(s) for whose benefit you are applying for:

- are 18 years of age or older;
- have a Hong Kong address (*for the White Form eIPO service only*); and
- are outside the United States (within the meaning of Regulation S) or are a person described in paragraph (h)(3) of Rule 902 of Regulation S.

Unless permitted by the Listing Rules or a waiver and/or consent has been granted by the Stock Exchange to us, you cannot apply for any Hong Kong Offer Shares if you or the person(s) for whose benefit you are applying for:

- are an existing Shareholder of our Company;
- are a Director, Supervisor or chief executive of our Company and/or a director, supervisor or chief executive of any of its subsidiaries;
- are a close associate (as defined in the Listing Rules) of any of the above persons;
- are a connected person (as defined in the Listing Rules) of our Company or will become a connected person of our Company immediately upon the completion of the Global Offering; or
- have been allocated or have applied for or indicated an interest in any International Offer Shares or otherwise participate in the International Offering.

---

## HOW TO APPLY FOR HONG KONG OFFER SHARES

---

### 2. Application Channels

The latest time for completing full payment of application monies will be 12:00 noon on Wednesday, March 5, 2025, Hong Kong time.
HKSCC EIPO channel . . . . .	Your broker or custodian who is a HKSCC Participant will submit <b>electronic application instructions</b> on your behalf through HKSCC's FINI system in accordance with your instruction	Investors who would <u>not</u> like to receive a physical H Share certificate. Hong Kong Offer Shares successfully applied for will be allotted and issued in the name of HKSCC Nominees, deposited directly into CCASS and credited to your designated HKSCC Participant's stock account.	Contact your broker or custodian for the earliest and latest time for giving such instructions, as this may vary by broker or custodian.

---

## HOW TO APPLY FOR HONG KONG OFFER SHARES

---

The **White Form eIPO** service and the HKSCC EIPO channel are facilities subject to capacity limitations and potential service interruptions, and you are advised not to wait until the last day of the application period to apply for Hong Kong Offer Shares.

For those applying through the **White Form eIPO** service, once you complete payment in respect of any application instructions given by you or for your benefit through the **White Form eIPO** service to make an application for Hong Kong Offer Shares, an actual application shall be deemed to have been made. If you are a person for whose benefit the **electronic application instructions** are given, you shall be deemed to have declared that only one set of **electronic application instructions** has been given for your benefit. If you are an agent for another person, you shall be deemed to have declared that you have only given one set of **electronic application instructions** for the benefit of the person for whom you are an agent and that you are duly authorized to give those instructions as an agent.

For the avoidance of doubt, giving an application instruction under the **White Form eIPO** service more than once and obtaining different payment reference numbers without effecting full payment in respect of a particular reference number will not constitute an actual application.

If you apply through the **White Form eIPO** service, you are deemed to have authorized the **White Form eIPO** service provider to apply on the terms and conditions in this prospectus, as supplemented and amended by the terms and conditions of the **White Form eIPO** service.

By instructing your broker or custodian to apply for the Hong Kong Offer Shares on your behalf through the HKSCC EIPO Channel, you (and, if you are joint applicants, each of you jointly and severally) are deemed to have instructed and authorized HKSCC to cause HKSCC Nominees (acting as nominee for the relevant HKSCC Participants) to apply for Hong Kong Offer Shares on your behalf and to do on your behalf all the things stated in this Prospectus and any supplement to it.

For those applying through HKSCC EIPO channel, an actual application will be deemed to have been made for any application instructions given by you or for your benefit to HKSCC (in which case an application will be made by HKSCC Nominees on your behalf) provided such application instruction has not been withdrawn or otherwise invalidated before the closing time of the Hong Kong Public Offering.

HKSCC Nominees will only be acting as a nominee for you and neither HKSCC nor HKSCC Nominees shall be liable to you or any other person in respect of any actions taken by HKSCC or HKSCC Nominees on your behalf to apply for Hong Kong Offer Shares or for any breach of the terms and conditions of this Prospectus.

---

## HOW TO APPLY FOR HONG KONG OFFER SHARES

---

### 3. Information Required to Apply

You must provide the following information with your application:

For Individual or Joint Applicants	For Corporate Applicants
<ul style="list-style-type: none"><li>• Full name(s)<sup>(2)</sup> as shown on your identity document</li><li>• Identity document's issuing country or jurisdiction</li><li>• Identity document type, with order of priority:<ul style="list-style-type: none"><li>i. HKID card; or</li><li>ii. National identification document; or</li><li>iii. Passport; and</li></ul></li><li>• Identity document number</li></ul>	<ul style="list-style-type: none"><li>• Full name(s)<sup>(2)</sup> as shown on your identity document</li><li>• Identity document's issuing country or jurisdiction</li><li>• Identity document type, with order of priority:<ul style="list-style-type: none"><li>i. LEI registration document; or</li><li>ii. Certificate of incorporation; or</li><li>iii. Business registration certificate; or</li><li>iv. Other equivalent document; and</li></ul></li><li>• Identity document number</li></ul>

---

*Notes:*

- (1) If you are applying through the **White Form eIPO** service, you are required to provide a valid e-mail address, a contact telephone number and a Hong Kong address. You are also required to declare that the identity information provided by you follows the requirements as described in Note 2 below. In particular, where you cannot provide a HKID number, you must confirm that you do not hold a HKID card.
- (2) The applicant's full name as shown on their identity document must be used. If an applicant's identity document contains both an English and Chinese name, both English and Chinese names must be used. Otherwise, either English or Chinese names will be accepted. The order of priority of the applicant's identity document type must be strictly followed and where an individual applicant has a valid HKID card, the HKID number must be used when making an application to subscribe for Hong Kong Offer Shares. Similarly for corporate applicants, a LEI number must be used if an entity has a LEI certificate.
- (3) If the applicant is a trustee, the client identification data ("CID") of the trustee, as set out above, will be required. If the applicant is an investment fund (i.e. a collective investment scheme, or CIS), the CID of the asset management company or the individual fund, as appropriate, which has opened a trading account with the broker will be required, as above.
- (4) The maximum number of joint applicants on FINI is capped at 4 in accordance with market practice. The maximum number is subject to change, if our Company's Articles of Incorporation and applicable company law prescribe a lower cap.

---

## HOW TO APPLY FOR HONG KONG OFFER SHARES

---

- (5) If you are applying as a nominee, you must provide: (i) the full name (as shown on the identity document), the identity document's issuing country or jurisdiction, the identity document type; and (ii), the identity document number, for each of the beneficial owners or, in the case(s) of joint beneficial owners, for each joint beneficial owner. If you do not include this information, the application will be treated as being made for your benefit.

If you are applying as an unlisted company and (i) the principal business of that company is dealing in securities; and (ii) you exercise statutory control over that company, then the application will be treated as being for your benefit and you should provide the required information in your application as stated above.

"Unlisted company" means a company with no equity securities listed on the Stock Exchange or any other stock exchange.

"Statutory control" means you:

- control the composition of the board of directors of the company;
- control more than half of the voting power of the company; or
- hold more than half of the issued share capital of the company (not counting any part of it which carries no right to participate beyond a specified amount in a distribution of either profits or capital).

For those applying through HKSCC EIPO channel, and making an application under a power of attorney, we and the Overall Coordinators, as our agent, have discretion to consider whether to accept it on any conditions we think fit, including evidence of the attorney's authority.

Failing to provide any required information may result in your application being rejected.

#### 4. Permitted Number of Hong Kong Offer Shares for Application

**Board lot size** . . . . . : 200 H Shares

**Permitted number of Hong Kong Offer Shares for application and amount payable on application/successful allotment** . . . . . : Hong Kong Offer Shares are available for application in specified board lot sizes only. Please refer to the amount payable associated with each specified board lot size in the table below.

The maximum Offer Price is HK\$15.83 per H Share.

If you are applying through the HKSCC EIPO channel, you are required to pre-fund your application based on the amount specified by your broker or custodian, as determined based on the applicable laws and regulations in Hong Kong.

## HOW TO APPLY FOR HONG KONG OFFER SHARES

By instructing your broker or custodian to apply for the Hong Kong Offer Shares on your behalf through the HKSCC EIPO channel, you (and, if you are joint applicants, each of you jointly and severally) are deemed to have instructed and authorized HKSCC to cause HKSCC Nominees (acting as nominee for the relevant HKSCC Participants) to arrange payment of the Offer Price, brokerage, SFC transaction levy, the Stock Exchange trading fee and the AFRC transaction levy by debiting the relevant nominee bank account at the Designated Bank for your broker or custodian.

If you are applying through the **White Form eIPO** service, you may refer to the table below for the amount payable for the number of H Shares you have selected. You must pay the respective maximum amount payable on application in full upon application for Hong Kong Offer Shares.

No. of Hong Kong Offer Shares applied for	Amount payable <sup>(2)</sup> on application	No. of Hong Kong Offer Shares applied for	Amount payable <sup>(2)</sup> on application	No. of Hong Kong Offer Shares applied for	Amount payable <sup>(2)</sup> on application	No. of Hong Kong Offer Shares applied for	Amount payable <sup>(2)</sup> on application

(1) Maximum number of Hong Kong Offer Share you may apply for.

(2) The amount payable is inclusive of brokerage, SFC transaction levy, the Stock Exchange trading fee and AFRC transaction levy. If your application is successful, brokerage will be paid to the Exchange Participants (as defined in the Listing Rules) and the SFC transaction levy, the Stock Exchange trading fee and AFRC transaction levy are paid to the Stock Exchange (in the case of the SFC transaction levy, collected by the Stock Exchange on behalf of the SFC; and in the case of the AFRC transaction levy, collected by the Stock Exchange on behalf of the AFRC).

---

## HOW TO APPLY FOR HONG KONG OFFER SHARES

---

### 5. Multiple Applications Prohibited

You or your joint applicant(s) shall not make more than one application for your own benefit, except where you are a nominee and provide the information of the underlying investor in your application as required under the paragraph headed “— A. Applications for Hong Kong Offer Shares — 3. Information Required to Apply” in this section. If you are suspected of submitting or cause to submit more than one application, all of your applications will be rejected.

Multiple applications made either through (i) the **White Form eIPO** service, (ii) HKSCC EIPO channel, or (iii) both channels concurrently are prohibited and will be rejected. If you have made an application through the **White Form eIPO** service or HKSCC EIPO channel, you or the person(s) for whose benefit you have made the application shall not apply for any International Offer Shares.

### 6. Terms and Conditions of An Application

By applying for Hong Kong Offer Shares through the **White Form eIPO** service or HKSCC EIPO channel, you (or as the case may be, HKSCC Nominees will do the following things on your behalf):

- (i) undertake to execute all relevant documents and instruct and authorise us and/or the Overall Coordinators, as our agents, to execute any documents for you and to do on your behalf all things necessary to register any Hong Kong Offer Shares allocated to you in your name or in the name of HKSCC Nominees as required by the Articles of Association, and (if you are applying through the HKSCC EIPO channel) to deposit the allotted Hong Kong Offer Shares directly into CCASS for the credit of your designated HKSCC Participant’s stock account on your behalf;
- (ii) confirm that you have read and understand the terms and conditions and application procedures set out in this Prospectus and the designated website of the **White Form eIPO** service (or as the case may be, the agreement you entered into with your broker or custodian), and agree to be bound by them;
- (iii) (if you are applying through the HKSCC EIPO channel) agree to the arrangements, undertakings and warranties under the participant agreement between your broker or custodian and HKSCC and observe the General Rules of HKSCC and the HKSCC Operational Procedures for giving application instructions to apply for Hong Kong Offer Shares;
- (iv) confirm that you are aware of the restrictions on offers and sales of shares set out in this Prospectus and they do not apply to you, or the person(s) for whose benefit you have made the application;

---

## HOW TO APPLY FOR HONG KONG OFFER SHARES

---

- (v) confirm that you have read this Prospectus and any supplement to it and have relied only on the information and representations contained therein in making your application (or as the case may be, causing your application to be made) and will not rely on any other information or representations;
- (vi) agree that the Relevant Persons, the H Share Registrar and HKSCC will not be liable for any information and representations not in this Prospectus and any supplement to it;
- (vii) agree to disclose the details of your application and your personal data and any other personal data which may be required about you and the person(s) for whose benefit you have made the application to us, the Relevant Persons, the H Share Registrar, HKSCC, HKSCC Nominees, the Stock Exchange, the SFC and any other statutory regulatory or governmental bodies or otherwise as required by laws, rules or regulations, for the purposes under the paragraph headed “— G. Personal Data — 3. Purposes and 4. Transfer of personal data” in this section;
- (viii) agree (without prejudice to any other rights which you may have once your application (or as the case may be, HKSCC Nominees’ application) has been accepted) that you will not rescind it because of an innocent misrepresentation;
- (ix) agree that subject to Section 44A(6) of the Companies (Winding Up and Miscellaneous Provisions) Ordinance, any application made by you or HKSCC Nominees on your behalf cannot be revoked once it is accepted, which will be evidenced by the notification of the result of the ballot by the H Share Registrar by way of publication of the results at the time and in the manner as specified in the paragraph headed “— B. Publication of Results” in this section;
- (x) confirm that you are aware of the situations specified in the paragraph headed “— C. Circumstances In Which You Will Not Be Allocated Hong Kong Offer Shares” in this section;
- (xi) agree that your application or HKSCC Nominees’ application, any acceptance of it and the resulting contract will be governed by and construed in accordance with the laws of Hong Kong;
- (xii) agree to comply with the Companies Ordinance, the Companies (Winding Up and Miscellaneous Provisions) Ordinance, the Articles of Association and laws of any place outside Hong Kong that apply to your application and that neither we nor the Relevant Persons will breach any law inside and/or outside Hong Kong as a result of the acceptance of your offer to purchase, or any action arising from your rights and obligations under the terms and conditions contained in this Prospectus;

---

## HOW TO APPLY FOR HONG KONG OFFER SHARES

---

- (xiii) confirm that (a) your application or HKSCC Nominees' application on your behalf is not financed directly or indirectly by our Company, any of the directors, chief executives, substantial shareholder(s) or existing Shareholder(s) of our Company or any of its subsidiaries or any of their respective close associates; and (b) you are not accustomed or will not be accustomed to taking instructions from our Company, any of the Directors, chief executives, substantial shareholder(s) or existing Shareholder(s) of our Company or any of its subsidiaries or any of their respective close associates in relation to the acquisition, disposal, voting or other disposition of the H Shares registered in your name or otherwise held by you;
- (xiv) warrant that the information you have provided is true and accurate;
- (xv) confirm that you understand that we and the Overall Coordinators will rely on your declarations and representations in deciding whether or not to allocate any Hong Kong Offer Shares to you and that you may be prosecuted for making a false declaration;
- (xvi) agree to accept Hong Kong Offer Shares applied for or any lesser number allocated to you under the application;
- (xvii) declare and represent that this is the only application made and the only application intended by you to be made to benefit you or the person for whose benefit you are applying;
- (xviii) (if the application is made for your own benefit) warrant that no other application has been or will be made for your benefit by giving **electronic application instructions** to HKSCC directly or indirectly or through the **White Form eIPO** service or by any one as your agent or by any other person; and
- (xix) (if you are making the application as an agent for the benefit of another person) warrant that; (a) no other application has been or will be made by you as agent for or for the benefit of that person or by that person or by any other person as agent for that person by giving **electronic application instructions** to HKSCC; and (b) you have due authority to give **electronic application instructions** on behalf of that other person as its agent.

---

## HOW TO APPLY FOR HONG KONG OFFER SHARES

---

### B. PUBLICATION OF RESULTS

#### 1. Results of Allocation

You can check whether you are successfully allocated any Hong Kong Offer Shares through:

<u>Platform</u>	<u>Date/Time</u>
-----------------	------------------

Applying through **White Form eIPO** service or HKSCC EIPO channel:

Website . . . . .	The designated results of allocation at <a href="http://www.iporesults.com.hk">www.iporesults.com.hk</a> (alternatively: <a href="http://www.eipo.com.hk/eIPOAllotment">www.eipo.com.hk/eIPOAllotment</a> ) with a “search by ID Number” function.	24 hours, from 11:00 p.m. on Friday, March 7, 2025 to 12:00 midnight on Thursday, March 13, 2025.
-------------------	--	---

The full list of (i) wholly or partially successful applicants using the **White Form eIPO** service and HKSCC EIPO channel, and (ii) the number of Hong Kong Offer Shares conditionally allotted to them, among other things, will be displayed on the “Allotment Results” page of the **White Form eIPO** service at [www.iporesults.com.hk](http://www.iporesults.com.hk) (alternatively: [www.eipo.com.hk/eIPOAllotment](http://www.eipo.com.hk/eIPOAllotment)).

The Stock Exchange’s website at <a href="http://www.hkexnews.hk">www.hkexnews.hk</a> and our website at <a href="http://cfgold.com">cfgold.com</a> which will provide links to the above mentioned websites of the H Share Registrar.	No later than 11:00 p.m. on Friday, March 7, 2025 (Hong Kong time).
---	---

Telephone . . .	+852 2862 8555 – the allocation results telephone enquiry line provided by the H Share Registrar.	between 9:00 a.m. and 6:00 p.m., from Monday, March 10, 2025 to Thursday, March 13, 2025 (Hong Kong time) on a business day.
-----------------	---	--

---

## HOW TO APPLY FOR HONG KONG OFFER SHARES

---

For those applying through HKSCC EIPO channel, you may also check with your broker or custodian from 6:00 p.m. on Thursday, March 6, 2025 (Hong Kong time).

HKSCC Participants can log into FINI and review the allotment result from 6:00 p.m. on Thursday, March 6, 2025 (Hong Kong time) on a 24-hour basis and should report any discrepancies on allotments to HKSCC as soon as practicable.

### **2. Allocation Announcement**

We expect to announce the results of the final Offer Price, the level of indications of interest in the International Offering, the level of applications in the Hong Kong Public Offering and the basis of allocations of Hong Kong Offer Shares on the Stock Exchange's website at [www.hkexnews.hk](http://www.hkexnews.hk) and our website at [cfgold.com](http://cfgold.com) by no later than 11:00 p.m. on Friday, March 7, 2025 (Hong Kong time).

### **C. CIRCUMSTANCES IN WHICH YOU WILL NOT BE ALLOCATED HONG KONG OFFER SHARES**

You should note the following situations in which Hong Kong Offer Shares will not be allocated to you or the person(s) for whose benefit you are applying for:

#### **1. If your application is revoked:**

Your application or the application made by HKSCC Nominees on your behalf may be revoked pursuant to Section 44A(6) of the Companies (Winding Up and Miscellaneous Provisions) Ordinance.

#### **2. If we or our agents exercise our discretion to reject your application:**

We, the Overall Coordinators, the H Share Registrar and their respective agents and nominees have full discretion to reject or accept any application, or to accept only part of any application, without giving any reasons.

#### **3. If the allocation of Hong Kong Offer Shares is void:**

The allocation of Hong Kong Offer Shares will be void if the Stock Exchange does not grant permission to list our H Shares either:

- within three weeks from the closing date of the applications lists; or
- within a longer period of up to six weeks if the Stock Exchange notifies us of that longer period within three weeks of the closing date of the application lists.

---

## HOW TO APPLY FOR HONG KONG OFFER SHARES

---

### 4. If:

- you make multiple applications or suspected multiple applications. You may refer to the paragraph headed “— A. Applications for Hong Kong Offer Shares — 5. Multiple Applications Prohibited” in this section on what constitutes multiple applications;
- your application instruction is incomplete;
- your payment (or confirmation of funds, as the case may be) is not made correctly;
- the Underwriting Agreements do not become unconditional or are terminated; or
- we or the Overall Coordinators believe that by accepting your application, it or we would violate applicable securities or other laws, rules or regulations.

### 5. If there is money settlement failure for allotted H Shares:

Based on the arrangements between HKSCC Participants and HKSCC, HKSCC Participants will be required to hold sufficient application funds on deposit with their Designated Bank before balloting. After balloting of Hong Kong Offer Shares, the Receiving Bank will collect the portion of these funds required to settle each HKSCC Participant’s actual Hong Kong Offer Share allotment from their Designated Bank.

**There is a risk of money settlement failure.** In the extreme event of money settlement failure by a HKSCC Participant (or its Designated Bank), who is acting on your behalf in settling payment for your allotted shares, HKSCC will contact the defaulting HKSCC Participant and its Designated Bank to determine the cause of failure and request such defaulting HKSCC Participant to rectify or procure to rectify the failure.

However, if it is determined that such settlement obligation cannot be met, the affected Hong Kong Offer Shares will be reallocated to the International Offering. Hong Kong Offer Shares applied for by you through the broker or custodian may be affected to the extent of the settlement failure. In the extreme case, you will not be allocated any Hong Kong Offer Shares due to the money settlement failure by such HKSCC Participant. None of us, the Relevant Persons, the H Share Registrar and HKSCC is or will be liable if Hong Kong Offer Shares are not allocated to you due to the money settlement failure.

### D. DESPATCH/COLLECTION OF H SHARE CERTIFICATES AND REFUND OF APPLICATION MONIES

You will receive one H Share certificate for all Hong Kong Offer Shares allotted to you under the Hong Kong Public Offering (except pursuant to applications made through the HKSCC EIPO channel where the H Share certificates will be deposited into CCASS as described below).

---

## HOW TO APPLY FOR HONG KONG OFFER SHARES

---

No temporary document of title will be issued in respect of the H Shares. No receipt will be issued for sums paid on application.

H Share certificates will only become valid evidence of title at 8:00 a.m. on Monday, March 10, 2025 (Hong Kong time), provided that the Global Offer has become unconditional and the right of termination described in the section headed “Underwriting” has not been exercised. Investors who trade H Shares prior to the receipt of H Share certificates or the H Share certificates becoming valid do so entirely at their own risk.

The right is reserved to retain any H Share certificate(s) and (if applicable) any surplus application monies pending clearance of application monies.

The following sets out the relevant procedures and time:

	<u>White Form eIPO service</u>	<u>HKSCC EIPO channel</u>
<b>Despatch/collection of H Share certificate<sup>1</sup></b>		
<b>For physical share certificates of 1,000,000 or more Hong Kong Offer Shares issued under your own name . .</b>	<p>Collection in person from H Share Registrar, Computershare Hong Kong Investor Services Limited at Shops 1712-1716, 17th Floor, Hopewell Centre, 183 Queen’s Road East, Wan Chai, Hong Kong.</p> <p>Time: from 9:00 a.m. to 1:00 p.m. on Monday, March 10, 2025.</p> <p>If you are an individual, you must not authorise any other person to collect for you. If you are a corporate applicant, your authorised representative must bear a letter of authorization from your corporation stamped with your corporation’s chop.</p>	<p>H Share certificate(s) will be issued in the name of HKSCC Nominees, deposited into CCASS and credited to your designated HKSCC Participant’s stock account.</p> <p>No action by you is required.</p>

---

<sup>1</sup> Except in the event of a tropical cyclone warning signal number 8 or above, a black rainstorm warning and/or an Extreme Conditions announcement in force in Hong Kong in the morning on Friday, 7 March 2025, rendering it impossible for the relevant share certificates to be dispatched to HKSCC in a timely manner, the Company shall procure the H Share Registrar to arrange for delivery of the supporting documents and H Share certificates in accordance with the contingency arrangements as agreed between them. Please refer to “ – E. Severe Weather Arrangements” in this section.

### E. SEVERE WEATHER ARRANGEMENTS

#### 1. The Opening and Closing of the Application Lists

The application lists will not open or close on Wednesday, March 5, 2025 if, there is/are:

- a tropical cyclone warning signal number 8 or above;
- a black rainstorm warning; and/or
- Extreme Conditions,

(collectively, “**Severe Weather Signals**”),

in force in Hong Kong at any time between 9:00 a.m. and 12:00 noon on Wednesday, March 5, 2025.

Instead they will open between 11:45 a.m. and 12:00 noon and/or close at 12:00 noon on the next business day which does not have Severe Weather Signals in force at any time between 9:00 a.m. and 12:00 noon.

Prospective investors should be aware that a postponement of the opening/closing of the application lists may result in a delay in the Listing Date. Should there be any changes to the dates mentioned in the section headed “Expected Timetable” in this Prospectus, an announcement will be made and published on the Stock Exchange’s website at [www.hkexnews.hk](http://www.hkexnews.hk) and our website at [cfgold.com](http://cfgold.com) of the revised timetable.

If a Severe Weather Signal is hoisted on Friday, March 7, 2025 the H Share Registrar will make appropriate arrangements for the delivery of the H Share certificates to the CCASS Depository’s service counter so that they would be available for trading on Monday, March 10, 2025.

---

## HOW TO APPLY FOR HONG KONG OFFER SHARES

---

If a Severe Weather Signal is hoisted on Friday, March 7, 2025:

- for physical H share certificates of 1,000,000 or more Offer Shares issued under your own name, you may pick them up from the H Share Registrar's office after the Severe Weather Signal is lowered or cancelled (e.g. in the afternoon of Friday, March 7, 2025 or on Monday, March 10, 2025).

If a Severe Weather Signal is hoisted on Monday, March 10, 2025:

- for physical H share certificates of less than 1,000,000 Offer Shares issued under your own name, despatch will be made by ordinary post when the post office re-opens after the Severe Weather Signal is lowered or cancelled (e.g. in the afternoon of Monday, March 10, 2025 or on Tuesday, March 11, 2025).

**Prospective investors should be aware that if they choose to receive physical H Share certificates issued in their own name, there may be a delay in receiving the H Share certificates.**

### **F. ADMISSION OF THE H SHARES INTO CCASS**

If the Stock Exchange grants the listing of, and permission to deal in, the H Shares on the Stock Exchange and we comply with the stock admission requirements of HKSCC, the H Shares will be accepted as eligible securities by HKSCC for deposit, clearance and settlement in CCASS with effect from the date of commencement of dealings in the H Shares or any other date HKSCC chooses. Settlement of transactions between Exchange Participants is required to take place in CCASS on the second settlement day after any trading day.

All activities under CCASS are subject to the General Rules of HKSCC and HKSCC Operational Procedures in effect from time to time.

All necessary arrangements have been made enabling the H Shares to be admitted into CCASS.

You should seek the advice of your broker or other professional advisor for details of the settlement arrangement as such arrangements may affect your rights and interests.

### **G. PERSONAL DATA**

The following Personal Information Collection Statement applies to any personal data collected and held by our Company, the H Share Registrar, the receiving bank and the Relevant Persons about you in the same way as it applies to personal data about applicants other than HKSCC Nominees. This personal data may include client identifier(s) and your identification information. By giving application instructions to HKSCC, you acknowledge that you have read, understood and agree to all of the terms of the Personal Information Collection Statement below.

---

## HOW TO APPLY FOR HONG KONG OFFER SHARES

---

### 1. Personal Information Collection Statement

This Personal Information Collection Statement informs the applicant for, and holder of, Hong Kong Offer Shares, of the policies and practices of our Company and the H Share Registrar in relation to personal data and the Personal Data (Privacy) Ordinance (Chapter 486 of the Laws of Hong Kong).

### 2. Reasons for the collection of your personal data

It is necessary for applicants and registered holders of Hong Kong Offer Shares to ensure that personal data supplied to our Company or its agents and the H Share Registrar is accurate and up-to-date when applying for Hong Kong Offer Shares or transferring Hong Kong Offer Shares into or out of their names or in procuring the services of the H Share Registrar.

Failure to supply the requested data or supplying inaccurate data may result in your application for Hong Kong Offer Shares being rejected, or in the delay or the inability of our Company or the H Share Registrar to effect transfers or otherwise render their services. It may also prevent or delay registration or transfers of Hong Kong Offer Shares which you have successfully applied for and/or the despatch of H Share certificate(s) to which you are entitled.

It is important that applicants for and holders of Hong Kong Offer Shares inform our Company and the H Share Registrar immediately of any inaccuracies in the personal data supplied.

### 3. Purposes

Your personal data may be used, held, processed, and/or stored (by whatever means) for the following purposes:

- processing your application and refund cheque and **White Form** e-Refund payment instructions payment instruction(s), where applicable, verification of compliance with the terms and application procedures set out in this Prospectus and announcing results of allocation of Hong Kong Offer Shares;
- compliance with applicable laws and regulations in Hong Kong and elsewhere;
- registering new issues or transfers into or out of the names of the holders of the H Shares including, where applicable, HKSCC Nominees;
- maintaining or updating the register of members of our Company;
- verifying identities of applicants for and holders of the H Shares and identifying any duplicate applications for the H Shares;
- facilitating Hong Kong Offer Shares balloting;

---

## HOW TO APPLY FOR HONG KONG OFFER SHARES

---

- establishing benefit entitlements of holders of the H Shares, such as dividends, rights issues, bonus issues, etc.;
- distributing communications from our Company and its subsidiaries;
- compiling statistical information and profiles of the holder of the H Shares;
- disclosing relevant information to facilitate claims on entitlements; and
- any other incidental or associated purposes relating to the above and/or to enable our Company and the H Share Registrar to discharge their obligations to applicants and holders of the H Shares and/or regulators and/or any other purposes to which applicants and holders of the H Shares may from time to time agree.

#### **4. Transfer of personal data**

Personal data held by our Company and the H Share Registrar relating to the applicants for and holders of Hong Kong Offer Shares will be kept confidential, but our Company and the H Share Registrar may, to the extent necessary for achieving any of the above purposes, disclose, obtain or transfer (whether within or outside Hong Kong) the personal data to, from or with any of the following:

- our Company's appointed agents such as financial advisors, receiving bank and overseas principal share registrar;
- HKSCC or HKSCC Nominees, who will use the personal data and may transfer the personal data to the H Share Registrar for the purposes of providing its services or facilities or performing its functions in accordance with its rules or procedures and operating FINI and CCASS (including where applicants for the Hong Kong Offer Shares request a deposit into CCASS);
- any agents, contractors or third-party service providers who offer administrative, telecommunications, computer, payment or other services to our Company or the H Share Registrar in connection with their respective business operation;
- the Stock Exchange, the SFC and any other statutory regulatory or governmental bodies or otherwise as required by laws, rules or regulations, including for the purpose of the Stock Exchange's administration of the Listing Rules and the SFC's performance of its statutory functions; and
- any persons or institutions with which the holders of Hong Kong Offer Shares have or propose to have dealings, such as their bankers, solicitors, accountants or brokers, etc.

---

## HOW TO APPLY FOR HONG KONG OFFER SHARES

---

### **5. Retention of personal data**

Our Company and the H Share Registrar will keep the personal data of the applicants and holders of Hong Kong Offer Shares for as long as necessary to fulfil the purposes for which the personal data were collected. Personal data which is no longer required will be destroyed or dealt with in accordance with the Personal Data (Privacy) Ordinance (Chapter 486 of the Laws of Hong Kong).

### **6. Access to and correction of personal data**

Applicants for and holders of Hong Kong Offer Shares have the right to ascertain whether our Company or the H Share Registrar hold their personal data, to obtain a copy of that data, and to correct any data that is inaccurate. Our Company and the H Share Registrar have the right to charge a reasonable fee for the processing of such requests. All requests for access to data or correction of data should be addressed to our Company and the H Share Registrar, at their registered address disclosed in the section headed “Corporate information” in this Prospectus or as notified from time to time, for the attention of our company secretary, or the H Share Registrar for the attention of the privacy compliance officer.

## **ACCOUNTANTS' REPORT ON HISTORICAL FINANCIAL INFORMATION TO THE DIRECTORS OF CHIFENG JILONG GOLD MINING CO., LTD. AND CITIC SECURITIES (HONG KONG) LTD.**

### **Introduction**

We report on the historical financial information of Chifeng Jilong Gold Mining Co., Ltd. (the “Company”) and its subsidiaries (together, the “Group”) set out on pages IA-4 to IA-109, which comprises the consolidated statements of profit or loss, the consolidated statements of comprehensive income, the consolidated statements of changes in equity and the consolidated statements of cash flows of the Group for each of the years ended 31 December 2021, 2022 and 2023, and the nine months ended 30 September 2024 (the “Relevant Periods”), and the consolidated statements of financial position of the Group and the statements of financial position of the Company as at 31 December 2021, 2022 and 2023 and 30 September 2024 and material accounting policy information and other explanatory information (together, the “Historical Financial Information”). The Historical Financial Information set out on pages IA-4 to IA-109 forms an integral part of this report, which has been prepared for inclusion in the prospectus of the Company dated 28 February 2025 (the “Prospectus”) in connection with the initial listing of the shares of the Company on the Main Board of The Stock Exchange of Hong Kong Limited (the “Stock Exchange”).

### **Directors' responsibility for the Historical Financial Information**

The directors of the Company are responsible for the preparation of the Historical Financial Information that gives a true and fair view in accordance with the basis of preparation set out in Note 2 to the Historical Financial Information, and for such internal control as the directors determine is necessary to enable the preparation of the Historical Financial Information that is free from material misstatement, whether due to fraud or error.

**Reporting accountants' responsibility**

Our responsibility is to express an opinion on the Historical Financial Information and to report our opinion to you. We conducted our work in accordance with Hong Kong Standard on Investment Circular Reporting Engagements 200 *Accountants' Reports on Historical Financial Information in Investment Circulars* issued by the Hong Kong Institute of Certified Public Accountants ("HKICPA"). This standard requires that we comply with ethical standards and plan and perform our work to obtain reasonable assurance about whether the Historical Financial Information is free from material misstatement.

Our work involved performing procedures to obtain evidence about the amounts and disclosures in the Historical Financial Information. The procedures selected depend on the reporting accountants' judgement, including the assessment of risks of material misstatement of the Historical Financial Information, whether due to fraud or error. In making those risk assessments, the reporting accountants consider internal control relevant to the entity's preparation of the Historical Financial Information that gives a true and fair view in accordance with the basis of preparation set out in Note 2 to the Historical Financial Information, in order to design procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Our work also included evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by the directors, as well as evaluating the overall presentation of the Historical Financial Information.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

**Opinion**

In our opinion, the Historical Financial Information gives, for the purposes of the accountants' report, a true and fair view of the financial position of the Group and the Company as at 31 December 2021, 2022 and 2023 and 30 September 2024 and of the financial performance and cash flows of the Group for each of the Relevant Periods in accordance with the basis of preparation set out in Note 2 to the Historical Financial Information.

**Review of interim comparative financial information**

We have reviewed the interim comparative financial information of the Group which comprises the consolidated statement of profit or loss, the consolidated statement of comprehensive income, the consolidated statement of changes in equity and the consolidated statement of cash flows for the nine months ended 30 September 2023 and other explanatory information (the "Interim Comparative Financial Information"). The directors of the Company are responsible for the preparation and presentation of the Interim Comparative Financial Information in accordance with the basis of preparation set out in Note 2 to the Historical Financial Information. Our responsibility is to express a conclusion on the Interim Comparative Financial Information based on our review. We conducted our review in

accordance with International Standard on Review Engagements 2410 Review of Interim Financial Information Performed by the Independent Auditor of the Entity issued by the International Auditing and Assurance Standards Board (“IAASB”). A review consists of making inquiries, primarily of persons responsible for financial and accounting matters, and applying analytical and other review procedures. A review is substantially less in scope than an audit conducted in accordance with International Standards on Auditing and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion. Based on our review, nothing has come to our attention that causes us to believe that the Interim Comparative Financial Information, for the purposes of the accountants’ report, is not prepared, in all material respects, in accordance with the basis of preparation set out in Note 2 to the Historical Financial Information.

**Report on matters under the Rules Governing the Listing of Securities on the Stock Exchange and the Companies (Winding Up and Miscellaneous Provisions) Ordinance**

*Adjustments*

In preparing the Historical Financial Information, no adjustments to the Underlying Financial Statements as defined on page IA-4 have been made.

*Dividends*

We refer to Note 16 to the Historical Financial Information which contains information about the dividends paid by the Company in respect of the Relevant Periods.

**Ernst & Young**

*Certified Public Accountants*

Hong Kong

28 February 2025

**I. HISTORICAL FINANCIAL INFORMATION****Preparation of Historical Financial Information**

Set out below is the Historical Financial Information which forms an integral part of this accountants' report.

The financial statements of the Group for the Relevant Periods, on which the Historical Financial Information is based, were audited by Ernst & Young in accordance with International Standards on Auditing issued by the IAASB (the "Underlying Financial Statements").

The Historical Financial Information is presented in Renminbi ("RMB") and all values are rounded to the nearest thousand (RMB'000) except when otherwise indicated.

## II. NOTES TO THE HISTORICAL FINANCIAL INFORMATION

## 1. CORPORATE INFORMATION

The Company is a joint stock company with limited liability incorporated in the People's Republic of China (the "PRC"). The registered address of the Company is Fu Min Village, Si Dao Wan Zi Town, Ao Han County, Chifeng City, Inner Mongolia Autonomous Region, PRC and the office is located at A7-Xiaojing, Wanfeng Road, Fengtai District, Beijing. Ms. Li Jinyang and Yantai Hanfeng Zhongxing Management Consulting Center (Limited Partnership) ("Hanfeng Zhongxin") directly held 190,410,595 and 51,515,151 A Shares, accounting for approximately 11.44% and 3.10% of the issued share capital of the Company, respectively. Meanwhile, Ms. Li Jinyang is the sole limited partner of Hanfeng Zhongxin accounting for approximately 99% of the committed capital Contribution of Hanfeng Zhongxin. Ms. Li Jinyang and Hanfeng are collectively regarded as the Single Largest Shareholder Group of the Company.

During the Relevant Periods, the Company and its subsidiaries were involved in the mining of gold and non-ferrous metal and the comprehensive recycling of resources. The main products are gold, silver, electrolytic copper and other precious metals and non-ferrous metals.

As at the date of this report, the Company had direct and indirect interests in its subsidiaries, all of which are private limited liability companies, the particulars of which are set out below:

Name*	Place and date of incorporation/ registration and place of operations	Registered capital	Percentage of equity attributable to the Company		Principal activities
			Direct	Indirect	
Chifeng Jilong Mining Co., Ltd. ("Jilong Mining") 赤峰吉隆礦業有限責任公司 (note (a))* . . . . .	PRC 2005-10-24	RMB175,000,000	100%	–	Mining

## Notes:

- (a) The statutory financial statements for the year ended 31 December 2021 prepared under PRC Generally Accepted Accounting Principles ("PRC GAAP") were audited by ZhongShen ZhongHuan Certified Public Accountants LLP, certified public accountants registered in the PRC, and the statutory financial statements for the years ended 31 December 2022 and 2023 prepared under PRC GAAP were audited by Ernst & Young Hua Ming LLP.

- (b) No audited financial statements have been prepared for these entities for the years ended 31 December 2021, 2022 and 2023 (or since the date of incorporation, where later than the beginning of the Relevant Periods), as the entities were not subject to any statutory audit requirements under the relevant rules and regulations in their jurisdictions of incorporation.
  - (c) The statutory financial statements for the year ended 31 December 2022 prepared under PRC GAAP were audited by Yunnan Xizheng Accounting Firm Co., Ltd., certified public accountants registered in the PRC, and for the year ended 31 December 2023 prepared under PRC GAAP were audited by Ernst & Young Hua Ming LLP.
  - (d) The statutory financial statements for the year ended 31 December 2021 prepared under PRC GAAP were audited by ZhongShen ZhongHuan Certified Public Accountants LLP, certified public accountants registered in the PRC, and the statutory financial statements for the year ended 31 December 2022 prepared under PRC GAAP were audited by Ernst & Young Hua Ming LLP. No statutory financial statements has been issued for the year ended 31 December 2023.
  - (e) The statutory financial statements of this entity for the year ended 31 December 2021 prepared under International Financial Reporting Standards (“IFRSs”) were audited by KPMG Lao Co., Ltd., certified public accountants registered in Laos, and the statutory financial statements for the years ended 31 December 2022 and 2023 prepared under IFRSs were audited by Ernst & Young Lao Co., Ltd.
  - (f) The statutory financial statements of this entity for the year ended 31 December 2021 prepared under Hong Kong Financial Reporting Standards (“HKFRSs”) were audited by Reanda Lau & Au Yeung (HK) CPA Limited, certified public accountants registered in Hong Kong, and the statutory financial statements for the year ended 31 December 2022 prepared under HKFRSs were audited by Ernst & Young, Hong Kong, and the statutory financial statements for the year ended 31 December 2023 prepared under HKFRSs were audited by Zhonghui Anda CPA Limited, certified public accountants registered in Hong Kong.
  - (g) The statutory financial statements of this entity for the years ended 31 December 2021 prepared under IFRSs were audited by PricewaterhouseCoopers LLP, certified public accountants registered in Canada. No statutory financial statements has been issued for the years ended 31 December 2022 and 2023.
  - (h) The statutory financial statements of this entity for the year ended 31 December 2021 prepared under IFRSs were audited by PricewaterhouseCoopers LLP, certified public accountants registered in Ghana, and the statutory financial statements for the years ended 31 December 2022 and 2023 prepared under IFRSs were audited by Ernst & Young Ghana.
  - (i) The statutory financial statements for the years ended 31 December 2022 and 2023 prepared under PRC GAAP were audited by Ernst & Young Hua Ming LLP.
  - (j) The Company directly holds 51% shares of Xinhenghe Mining and has control on Xinhenghe Mining. Xinhenghe Mining directly holds 90% shares of Jintai Mining and has control on Jintai Mining. In summary, the Company indirectly holds 46% shares of Jintai Mining and has control on Jintai Mining, so Jintai Mining is classified as a subsidiary of the Company.
- \* The English names of these entities registered in the PRC represent the best efforts made by the management of the Company to directly translate their Chinese names as they did not register any official English names.

## 2. BASIS OF PREPARATION

The Historical Financial Information has been prepared in accordance with International Financial Reporting Standards (“IFRSs”), which comprise all standards and interpretations approved by the International Accounting Standards Board (the “IASB”). All IFRSs effective for the accounting period commencing from 1 January 2024, together with the relevant transitional provisions, have been early adopted by the Group in the preparation of the Historical Financial Information throughout the Relevant Periods and in the period covered by the Interim Comparative Financial Information.

The Historical Financial Information has been prepared on a going concern basis.

The Historical Financial Information has been prepared under the historical cost convention, except for derivative financial instruments, financial assets and financial liabilities at fair value through profit or loss which have been measured at fair value.

#### **Basis of consolidation**

The Historical Financial Information includes the financial statements of the Company and its subsidiaries (collectively referred to as the "Group") for the Relevant Periods. A subsidiary is an entity (including a structured entity), directly or indirectly, controlled by the Company. Control is achieved when the Group is exposed, or has rights, to variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee (i.e., existing rights that give the Group the current ability to direct the relevant activities of the investee).

Generally, there is a presumption that a majority of voting rights results in control. When the Company has less than a majority of the voting or similar rights of an investee, the Group considers all relevant facts and circumstances in assessing whether it has power over an investee, including:

- (a) the contractual arrangement with the other vote holders of the investee;
- (b) rights arising from other contractual arrangements; and
- (c) the Group's voting rights and potential voting rights.

The financial statements of the subsidiaries are prepared for the same reporting period as the Company, using consistent accounting policies. The results of subsidiaries are consolidated from the date on which the Group obtains control, and continue to be consolidated until the date that such control ceases.

Profit or loss and each component of other comprehensive income are attributed to the owners of the parent of the Group and to the non-controlling interests, even if this results in the non-controlling interests having a deficit balance. All intra-group assets and liabilities, equity, income, expenses and cash flows relating to transactions between members of the Group are eliminated in full on consolidation.

The Group reassesses whether or not it controls an investee if facts and circumstances indicate that there are changes to one or more of the three elements of control described above. A change in the ownership interest of a subsidiary, without a loss of control, is accounted for as an equity transaction.

If the Group loses control over a subsidiary, it derecognises the related assets (including goodwill), liabilities, any non-controlling interest and the exchange fluctuation reserve; and recognises the fair value of any investment retained and any resulting surplus or deficit in profit or loss. The Group's share of components previously recognised in other comprehensive income is reclassified to profit or loss or retained profits, as appropriate, on the same basis as would be required if the Group had directly disposed of the related assets or liabilities.

### **3. ISSUED BUT NOT YET EFFECTIVE INTERNATIONAL FINANCIAL REPORTING STANDARDS**

The standards and interpretations that have been issued but not yet effective up to the date of this report are disclosed below.

Amendments to IAS 21 . . . . .	<i>Lack of Exchangeability</i> <sup>1</sup>
Amendments to IFRS 10 and IAS 28. . . . .	<i>Sale or Contribution of Assets between an Investor and its Associate or Joint Venture</i> <sup>2</sup>
IFRS 18 . . . . .	<i>Presentation and Disclosure in Financial Statements</i> <sup>4</sup>
IFRS 19 . . . . .	<i>Subsidiaries without Public Accountability: Disclosures</i> <sup>4</sup>
Amendments to IFRS 9 and IFRS 7 . . . . .	<i>Amendments to the Classification and Measurement of Financial Instruments</i> <sup>3</sup>

- 1 Effective for annual periods beginning on or after 1 January 2025
- 2 No mandatory effective date yet determined but available for adoption
- 3 Effective for annual periods beginning on or after 1 January 2026
- 4 Effective for annual periods beginning on or after 1 January 2027

The Group is currently working to identify all impacts the amendments will have on the primary financial statements and notes to the financial statements. So far, the Group considers that these new and revised IFRSs may result in changes in accounting policies but are unlikely to have a significant impact on the Group's result of operation and financial position.

#### 4. MATERIAL ACCOUNTING POLICIES

##### Investments in associates

An associate is an entity in which the Group has a long term interest of generally not less than 20% of the equity voting rights and over which it has significant influence. Significant influence is the power to participate in the financial and operating policy decisions of the investee, but is not control or joint control over those policies.

The Group's investments in associates are stated in the consolidated statement of financial position at the Group's share of net assets under the equity method of accounting, less any impairment losses.

The Group's share of the post-acquisition results and other comprehensive income of associates is included in the consolidated statement of profit or loss and consolidated other comprehensive income, respectively. In addition, when there has been a change recognised directly in the equity of the associate, the Group recognises its share of any changes, when applicable, in the consolidated statement of changes in equity. Unrealised gains and losses resulting from transactions between the Group and its associates are eliminated to the extent of the Group's investments in the associates, except where unrealised losses provide evidence of an impairment of the assets transferred. Goodwill arising from the acquisition of associates is included as part of the Group's investments in associates.

If an investment in an associate becomes an investment in a joint venture or vice versa, the retained interest is not remeasured. Instead, the investment continues to be accounted for under the equity method. In all other cases, upon loss of significant influence over the associate, the Group measures and recognises any retained investment at its fair value. Any difference between the carrying amount of the associate upon loss of significant influence and the fair value of the retained investment and proceeds from disposal is recognised in profit or loss.

##### Business combinations and goodwill

###### (i) *Business combinations not under common control*

Business combinations are accounted for using the acquisition method. The consideration transferred is measured at the acquisition date fair value which is the sum of the acquisition date fair values of assets transferred by the Group, liabilities assumed by the Group to the former owners of the acquiree and the equity interests issued by the Group in exchange for control of the acquiree. For each business combination, the Group elects whether to measure the non-controlling interests in the acquiree at fair value or at the proportionate share of the acquiree's identifiable net assets. All other components of non-controlling interests are measured at fair value. Acquisition-related costs are expensed as incurred.

The Group determines that it has acquired a business when the acquired set of activities and assets includes an input and a substantive process that together significantly contribute to the ability to create outputs.

When the Group acquires a business, it assesses the financial assets and liabilities assumed for appropriate classification and designation in accordance with the contractual terms, economic circumstances and pertinent conditions as at the acquisition date. This includes the separation of embedded derivatives in host contracts of the acquiree.

Any contingent consideration to be transferred by the acquirer is recognised at fair value at the acquisition date. Contingent consideration classified as an asset or liability is measured at fair value with changes in fair value recognised in profit or loss. Contingent consideration that is classified as equity is not remeasured and subsequent settlement is accounted for within equity.

Goodwill is initially measured at cost, being the excess of the aggregate of the consideration transferred, the amount recognised for non-controlling interests and any fair value of the Group's previously held equity interests in the acquiree over the identifiable assets acquired and liabilities assumed. If the sum of this consideration and other items is lower than the fair value of the net assets acquired, the difference is, after reassessment, recognised in profit or loss as a gain on bargain purchase.

After initial recognition, goodwill is measured at cost less any accumulated impairment losses. Goodwill is tested for impairment annually or more frequently if events or changes in circumstances indicate that the carrying value may be impaired. The Group performs its annual impairment test of goodwill as at 31 December. For the purpose of impairment testing, goodwill acquired in a business combination is, from the acquisition date, allocated to each of the Group's cash-generating units, or groups of cash-generating units, that are expected to benefit from the synergies of the combination, irrespective of whether other assets or liabilities of the Group are assigned to those units or groups of units.

Impairment is determined by assessing the recoverable amount of the cash-generating unit (group of cash-generating units) to which the goodwill relates. Where the recoverable amount of the cash-generating unit (group of cash-generating units) is less than the carrying amount, an impairment loss is recognised. An impairment loss recognised for goodwill is not reversed in a subsequent period.

Where goodwill has been allocated to a cash-generating unit (or group of cash-generating units) and part of the operation within that unit is disposed of, the goodwill associated with the operation disposed of is included in the carrying amount of the operation when determining the gain or loss on the disposal. Goodwill disposed of in these circumstances is measured based on the relative value of the operation disposed of and the portion of the cash-generating unit retained.

#### **Fair value measurement**

The Group measures certain of its financial assets and financial liabilities at fair value at the end of each of the Relevant Periods. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The fair value measurement is based on the presumption that the transaction to sell the asset or transfer the liability takes place either in the principal market for the asset or liability, or in the absence of a principal market, in the most advantageous market for the asset or liability. The principal or the most advantageous market must be accessible by the Group. The fair value of an asset or a liability is measured using the assumptions that market participants would use when pricing the asset or liability, assuming that market participants act in their economic best interest.

A fair value measurement of a non-financial asset takes into account a market participant's ability to generate economic benefits by using the asset in its highest and best use or by selling it to another market participant that would use the asset in its highest and best use.

The Group uses valuation techniques that are appropriate in the circumstances and for which sufficient data are available to measure fair value, maximising the use of relevant observable inputs and minimising the use of unobservable inputs.

All assets and liabilities for which fair value is measured or disclosed in the Historical Financial Information are categorised within the fair value hierarchy, described as follows, based on the lowest level input that is significant to the fair value measurement as a whole:

- Level 1 – based on quoted prices (unadjusted) in active markets for identical assets or liabilities
- Level 2 – based on valuation techniques for which the lowest level input that is significant to the fair value measurement is observable, either directly or indirectly
- Level 3 – based on valuation techniques for which the lowest level input that is significant to the fair value measurement is unobservable

For assets and liabilities that are recognised in the Historical Financial Information on a recurring basis, the Group determines whether transfers have occurred between levels in the hierarchy by reassessing categorisation (based on the lowest level input that is significant to the fair value measurement as a whole) at the end of each of the Relevant Periods.

#### **Impairment of non-financial assets**

Where an indication of impairment exists, or when annual impairment testing for an asset is required (other than inventories, deferred tax assets and financial assets), the asset's recoverable amount is estimated. An asset's recoverable amount is the higher of the asset's or cash-generating unit's value in use and its fair value less costs of disposal, and is determined for an individual asset, unless the asset does not generate cash inflows that are largely independent of those from other assets or groups of assets, in which case the recoverable amount is determined for the cash-generating unit to which the asset belongs. In testing a cash-generating unit for impairment, a portion of the carrying amount of a corporate asset (e.g., a headquarters building) is allocated to an individual cash-generating unit if it can be allocated on a reasonable and consistent basis or, otherwise, to the smallest group of cash-generating units.

An impairment loss is recognised only if the carrying amount of an asset exceeds its recoverable amount. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. An impairment loss is charged to the statement of profit or loss in the period in which it arises in those expense categories consistent with the function of the impaired asset.

An assessment is made at the end of each of the Relevant Periods as to whether there is an indication that previously recognised impairment losses may no longer exist or may have decreased. If such an indication exists, the recoverable amount is estimated. A previously recognised impairment loss of an asset other than goodwill is reversed only if there has been a change in the estimates used to determine the recoverable amount of that asset, but not to an amount higher than the carrying amount that would have been determined (net of any depreciation/amortisation) had no impairment loss been recognised for the asset in prior years. A reversal of such an impairment loss is credited to the statement of profit or loss in the period in which it arises.

#### **Related parties**

A party is considered to be related to the Group if:

- (a) the party is a person or a close member of that person's family and that person:
  - (i) has control or joint control over the Group;
  - (ii) has significant influence over the Group; or
  - (iii) is a member of the key management personnel of the Group or of a parent of the Group;

or

- (b) the party is an entity where any of the following conditions applies:
  - (i) the entity and the Group are members of the same group;
  - (ii) one entity is an associate or joint venture of the other entity (or of a parent, subsidiary or fellow subsidiary of the other entity);
  - (iii) the entity and the Group are joint ventures of the same third party;
  - (iv) one entity is a joint venture of a third entity and the other entity is an associate of the third entity;
  - (v) the entity is a post-employment benefit plan for the benefit of employees of either the Group or an entity related to the Group;
  - (vi) the entity is controlled or jointly controlled by a person identified in (a);
  - (vii) a person identified in (a)(i) has significant influence over the entity or is a member of the key management personnel of the entity (or of a parent of the entity); and
  - (viii) the entity, or any member of a group of which it is a part, provides key management personnel services to the Group or to the parent of the Group.

**Property, plant and equipment and depreciation**

Property, plant and equipment, other than construction in progress, are stated at cost less accumulated depreciation and any impairment losses. The cost of an item of property, plant and equipment comprises its purchase price and any directly attributable costs of bringing the asset to its working condition and location for its intended use.

Expenditure incurred after items of property, plant and equipment have been put into operation, such as repairs and maintenance, is normally charged to profit or loss in the period in which it is incurred. In situations where the recognition criteria are satisfied, the expenditure for a major inspection is capitalised in the carrying amount of the asset as a replacement. Where significant parts of property, plant and equipment are required to be replaced at intervals, the Group recognises such parts as individual assets with specific useful lives and depreciates them accordingly.

Depending on the nature of the item of property, plant and equipment, depreciation is calculated on the straight-line basis to write off the cost of each asset to its residual value over its estimated useful life or it is calculated on the Units of Production ("UOP") basis to write off the cost of the asset proportionately to the extraction of the proven and probable mineral reserves. The estimated useful lives and annual depreciation rates for the assets depreciated on the straight-line basis are as follows:

	<u>Estimated useful lives</u>	<u>Annual depreciation rates</u>
Buildings . . . . .	20 years	4.75%
Machinery. . . . .	5 to 10 years	9.50% to 19.00%
Mobile equipment . . . . .	5 to 10 years	9.50% to 19.00%
Electronic equipment and others . . . . .	3 to 5 years	19.00% to 31.67%

Where parts of an item of property, plant and equipment have different useful lives, the cost of that item is allocated on a reasonable basis among the parts and each part is depreciated separately. Residual values, useful lives and the depreciation method are reviewed, and adjusted if appropriate, at least at the end of each of the Relevant Periods.

An item of property, plant and equipment including any significant part initially recognised is derecognised upon disposal or when no future economic benefits are expected from its use or disposal. Any gain or loss on disposal or retirement recognised in the statement of profit or loss in the years/periods the asset is derecognised is the difference between the net sales proceeds and the carrying amount of the relevant asset.

Construction in progress is stated at cost less any impairment losses, and is not depreciated. Cost comprises the direct costs of construction and capitalised borrowing costs on related borrowed funds during the period of construction. Construction in progress is reclassified to the appropriate category of property, plant and equipment when completed and ready for use.

**Other intangible assets**

Other intangible assets acquired separately are measured on initial recognition at cost. The cost of intangible assets acquired in a business combination is the fair value at the date of acquisition. The useful lives of intangible assets are assessed to be either finite or indefinite. Intangible assets with finite lives are subsequently amortised over the useful economic life and assessed for impairment whenever there is an indication that the intangible asset may be impaired. The amortisation period and the amortisation method for an intangible asset with a finite useful life are reviewed at least at each financial year end.

**Patents and licences**

Purchased patents and licences are stated at cost less any impairment losses and are amortised on the straight-line basis over their estimated useful lives of 10 years.

**Exploration and mining rights**

Exploration and evaluation assets are stated at cost less impairment losses. Exploration and evaluation includes costs of geological prospecting for technical consultancy and costs of feasibility study for commercial development which incurred in the surroundings, outer ring and deep areas of the existing or externally acquired mineral properties, and costs of drilling, trench sampling and other associated activities. Such expenditures may be

capitalized when the mineral properties are reasonably determined to be commercially available and recognized as intangible assets after obtaining mining rights or permits, which will be amortized under the units-of-production method. If any construction was abandoned in the development phase, all costs shall be written off and recognized in profit or loss for the current period.

Impairment reviews of exploration and evaluation assets are undertaken if events or changes in circumstances indicate a potential impairment. The carrying value of exploration and evaluation assets is compared to the recoverable amount, which is the higher of value-in-use and the fair value less costs of disposal. For the purposes of assessing impairment, assets are grouped at the lowest levels for which there are separately identifiable cash-generating units. Exploration and evaluation assets that suffered impairment are reviewed for possible reversal of the impairment at each reporting date.

Exploration rights are stated at cost less impairment losses. Exploration rights include the cost of acquiring exploration rights.

Mining rights are stated at cost less accumulated amortisation and any impairment losses. Mining rights include the cost of acquiring mining licences, exploration rights and exploration and evaluation assets upon determination that an exploration property is capable of commercial production, and the cost of acquiring interests in the mining reserves of existing mining properties. The mining rights are amortised in accordance with the production plans of the entities concerned and the proven and probable mineral reserves of the mines using the UOP method. Mining rights are written off to profit or loss if the mining property is abandoned.

#### **Research and development expenses**

All research expenses are charged to the statement of profit or loss as incurred.

Expenditure incurred on projects to develop new products is capitalised and deferred only when the Group can demonstrate the technical feasibility of completing the intangible asset so that it will be available for use or sale, its intention to complete and its ability to use or sell the asset, how the asset will generate future economic benefits, the availability of resources to complete the project and the ability to measure reliably the expenditure during the development. Product development expenditure which does not meet these criteria is expensed when incurred.

Deferred development costs are stated at cost less any impairment losses and are amortised using the straight-line basis over the commercial lives of the underlying products not exceeding five to seven years, commencing from the date when the products are put into commercial production.

#### **Leases**

The Group assesses at contract inception whether a contract is, or contains, a lease. A contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration.

#### ***Group as a lessee***

The Group applies a single recognition and measurement approach for all leases, except for short-term leases and leases of low-value assets. The Group recognises lease liabilities to make lease payments and right-of-use assets representing the right to use the underlying assets.

#### ***(a) Right-of-use assets***

Right-of-use assets are recognised at the commencement date of the lease (that is the date the underlying asset is available for use). Right-of-use assets are measured at cost, less accumulated depreciation and any impairment losses, and adjusted for any remeasurement of lease liabilities. The cost of right-of-use assets includes the amount of lease liabilities recognised, initial direct costs incurred, and lease payments made at or before the commencement date less any lease incentives received. Right-of-use assets are depreciated on a straight-line basis over the shorter of the lease terms and the estimated useful lives of the assets as follows:

Leasehold land . . . . .	50 years
Buildings . . . . .	3 to 5 years
Machinery and vehicles . . . . .	2 to 5 years

If ownership of the leased asset transfers to the Group by the end of the lease term or the cost reflects the exercise of a purchase option, depreciation is calculated using the estimated useful life of the asset.

*(b) Lease liabilities*

Lease liabilities are recognised at the commencement date of the lease at the present value of lease payments to be made over the lease term. The lease payments include fixed payments (including in-substance fixed payments) less any lease incentives receivable, variable lease payments that depend on an index or a rate, and amounts expected to be paid under residual value guarantees. The lease payments also include the exercise price of a purchase option reasonably certain to be exercised by the Group and payments of penalties for termination of a lease, if the lease term reflects the Group exercising the option to terminate the lease. The variable lease payments that do not depend on an index or a rate are recognised as an expense in the period in which the event or condition that triggers the payment occurs.

In calculating the present value of lease payments, the Group uses its incremental borrowing rate at the lease commencement date because the interest rate implicit in the lease is not readily determinable. After the commencement date, the amount of lease liabilities is increased to reflect the accretion of interest and reduced for the lease payments made. In addition, the carrying amount of lease liabilities is remeasured if there is a modification, a change in the lease term, a change in lease payments (e.g., a change to future lease payments resulting from a change in an index or rate) or a change in assessment of an option to purchase the underlying asset.

*(c) Short-term leases and leases of low-value assets*

The Group applies the short-term lease recognition exemption to its short-term leases of office premises (that is those leases that have a lease term of 12 months or less from the commencement date and do not contain a purchase option). It also applies the recognition exemption for leases of low-value assets to leases of office equipment and laptop computers that are considered to be of low value. Lease payments on short-term leases and leases of low-value assets are recognised as an expense on a straight-line basis over the lease term.

***Group as a lessor***

When the Group acts as a lessor, it classifies at lease inception (or when there is a lease modification) each of its leases as either an operating lease or a finance lease.

Leases in which the Group does not transfer substantially all the risks and rewards incidental to ownership of an asset are classified as operating leases. When a contract contains lease and non-lease components, the Group allocates the consideration in the contract to each component on a relative stand-alone selling price basis. Rental income is accounted for on a straight-line basis over the lease terms and is included in revenue in the statement of profit or loss due to its operating nature. Initial direct costs incurred in negotiating and arranging an operating lease are added to the carrying amount of the leased asset and recognised over the lease term on the same basis as rental income. Contingent rents are recognised as revenue in the period in which they are earned.

Leases that transfer substantially all the risks and rewards incidental to ownership of an underlying asset to the lessee are accounted for as finance leases.

**Investments and other financial assets**

***Initial recognition and measurement***

Financial assets are classified, at initial recognition, as subsequently measured at amortised cost, fair value through other comprehensive income, and fair value through profit or loss.

The classification of financial assets at initial recognition depends on the financial asset's contractual cash flow characteristics and the Group's business model for managing them. With the exception of trade receivables that do not contain a significant financing component or for which the Group has applied the practical expedient of not adjusting the effect of a significant financing component, the Group initially measures a financial asset at its fair value, plus in the case of a financial asset not at fair value through profit or loss, transaction costs. Trade receivables that do not contain a significant financing component or for which the Group has applied the practical expedient are measured at the transaction price determined under IFRS 15 in accordance with the policies set out for "Revenue recognition" below.

In order for a financial asset to be classified and measured at amortised cost or fair value through other comprehensive income, it needs to give rise to cash flows that are solely payments of principal and interest (“SPPI”) on the principal amount outstanding. Financial assets with cash flows that are not SPPI are classified and measured at fair value through profit or loss, irrespective of the business model.

The Group’s business model for managing financial assets refers to how it manages its financial assets in order to generate cash flows. The business model determines whether cash flows will result from collecting contractual cash flows, selling the financial assets, or both. Financial assets classified and measured at amortised cost are held within a business model with the objective to hold financial assets in order to collect contractual cash flows, while financial assets classified and measured at fair value through other comprehensive income are held within a business model with the objective of both holding to collect contractual cash flows and selling. Financial assets which are not held within the aforementioned business models are classified and measured at fair value through profit or loss.

Purchases or sales of financial assets that require delivery of assets within the period generally established by regulation or convention in the marketplace are recognised on the trade date, that is, the date that the Group commits to purchase or sell the asset.

#### ***Subsequent measurement***

The subsequent measurement of financial assets depends on their classification as follows:

##### *Financial assets at amortised cost (debt instruments)*

Financial assets at amortised cost are subsequently measured using the effective interest method and are subject to impairment. Gains and losses are recognised in profit or loss when the asset is derecognised, modified or impaired.

##### *Financial assets at fair value through profit or loss*

Financial assets at fair value through profit or loss are carried in the statement of financial position at fair value with net changes in fair value recognised in the statement of profit or loss.

This category includes derivative instruments and equity investments which the Group had not irrevocably elected to classify at fair value through other comprehensive income. Dividends on the equity investments are also recognised as other income in the statement of profit or loss when the right of payment has been established.

A derivative embedded in a hybrid contract, with a financial liability or non-financial host, is separated from the host and accounted for as a separate derivative if the economic characteristics and risks are not closely related to the host; a separate instrument with the same terms as the embedded derivative would meet the definition of a derivative; and the hybrid contract is not measured at fair value through profit or loss. Embedded derivatives are measured at fair value with changes in fair value recognised in the statement of profit or loss. Reassessment only occurs if there is either a change in the terms of the contract that significantly modifies the cash flows that would otherwise be required or a reclassification of a financial asset out of the fair value through profit or loss category.

A derivative embedded within a hybrid contract containing a financial asset host is not accounted for separately. The financial asset host together with the embedded derivative is required to be classified in its entirety as a financial asset at fair value through profit or loss.

#### **Derecognition of financial assets**

A financial asset (or, where applicable, a part of a financial asset or part of a group of similar financial assets) is primarily derecognised (i.e., removed from the Group’s consolidated statements of financial position) when:

- the rights to receive cash flows from the asset have expired; or
- the Group has transferred its rights to receive cash flows from the asset or has assumed an obligation to pay the received cash flows in full without material delay to a third party under a “pass-through” arrangement; and either (a) the Group has transferred substantially all the risks and rewards of the asset, or (b) the Group has neither transferred nor retained substantially all the risks and rewards of the asset, but has transferred control of the asset.

When the Group has transferred its rights to receive cash flows from an asset or has entered into a pass-through arrangement, it evaluates if, and to what extent, it has retained the risk and rewards of ownership of the asset. When it has neither transferred nor retained substantially all the risks and rewards of the asset nor transferred control of the asset, the Group continues to recognise the transferred asset to the extent of the Group's continuing involvement. In that case, the Group also recognises an associated liability. The transferred asset and the associated liability are measured on a basis that reflects the rights and obligations that the Group has retained.

Continuing involvement that takes the form of a guarantee over the transferred asset is measured at the lower of the original carrying amount of the asset and the maximum amount of consideration that the Group could be required to repay.

#### **Impairment of financial assets**

The Group recognises an allowance for expected credit losses ("ECLs") for all debt instruments not held at fair value through profit or loss. ECLs are based on the difference between the contractual cash flows due in accordance with the contract and all the cash flows that the Group expects to receive, discounted at an approximation of the original effective interest rate. The expected cash flows will include cash flows from the sale of collateral held or other credit enhancements that are integral to the contractual terms.

#### ***General approach***

ECLs are recognised in two stages. For credit exposures for which there has not been a significant increase in credit risk since initial recognition, ECLs are provided for credit losses that result from default events that are possible within the next 12 months (a 12-month ECL). For those credit exposures for which there has been a significant increase in credit risk since initial recognition, a loss allowance is required for credit losses expected over the remaining life of the exposure, irrespective of the timing of the default (a lifetime ECL).

At each reporting date, the Group assesses whether the credit risk on a financial instrument has increased significantly since initial recognition. When making the assessment, the Group compares the risk of a default occurring on the financial instrument as at the reporting date with the risk of a default occurring on the financial instrument as at the date of initial recognition and considers reasonable and supportable information that is available without undue cost or effort, including historical and forward-looking information.

The Group considers a financial asset in default when contractual payments are 90 days past due. However, in certain cases, the Group may also consider a financial asset to be in default when internal or external information indicates that the Group is unlikely to receive the outstanding contractual amounts in full before taking into account any credit enhancements held by the Group.

A financial asset is written off when there is no reasonable expectation of recovering the contractual cash flows.

Financial assets at amortised cost are subject to impairment under the general approach and they are classified within the following stages for measurement of ECLs except for trade receivables which apply the simplified approach as detailed below.

- |         |   |   |
|---------|---|---|
| Stage 1 | – | Financial instruments for which credit risk has not increased significantly since initial recognition and for which the loss allowance is measured at an amount equal to 12-month ECLs;   |
| Stage 2 | – | Financial instruments for which credit risk has increased significantly since initial recognition but that are not credit-impaired financial assets and for which the loss allowance is measured at an amount equal to lifetime ECLs; |
| Stage 3 | – | Financial assets that are credit-impaired at the reporting date (but that are not purchased or originated credit-impaired) and for which the loss allowance is measured at an amount equal to lifetime ECLs.                          |

***Simplified approach***

For trade receivables that do not contain a significant financing component or when the Group applies the practical expedient of not adjusting the effect of a significant financing component, the Group applies the simplified approach in calculating ECLs. Under the simplified approach, the Group does not track changes in credit risk, but instead recognises a loss allowance based on lifetime ECLs at each reporting date. The Group has established a provision matrix that is based on its historical credit loss experience, adjusted for forward-looking factors specific to the debtors and the economic environment.

**Financial liabilities*****Initial recognition and measurement***

Financial liabilities are classified, at initial recognition, as financial liabilities at fair value through profit or loss, loans and borrowings, or payables, as appropriate.

All financial liabilities are recognised initially at fair value and, in the case of loans and borrowings and payables, net of directly attributable transaction costs.

The Group's financial liabilities include trade and notes payables, financial liabilities at fair value through profit or loss, other payables and accruals, other non-current liabilities and loans.

***Subsequent measurement***

The subsequent measurement of financial liabilities depends on their classification as follows:

***Financial liabilities at fair value through profit or loss***

Financial liabilities at fair value through profit or loss include financial liabilities held for trading and financial liabilities designated upon initial recognition as at fair value through profit or loss.

Financial liabilities are classified as held for trading if they are incurred for the purpose of repurchasing in the near term. This category also includes derivative financial instruments entered into by the Group that are not designated as hedging instruments in hedge relationships as defined by IFRS 9. Separated embedded derivatives are also classified as held for trading unless they are designated as effective hedging instruments. Gains or losses on liabilities held for trading are recognised in the statement of profit or loss.

Financial liabilities designated upon initial recognition as at fair value through profit or loss are designated at the initial date of recognition, and only if the criteria in IFRS 9 are satisfied. Gains or losses on liabilities designated at fair value through profit or loss are recognised in the statement of profit or loss, except for the gains or losses arising from the Group's own credit risk which are presented in other comprehensive income with no subsequent reclassification to the statement of profit or loss. The net fair value gain or loss recognised in the statement of profit or loss does not include any interest charged on these financial liabilities.

***Financial liabilities at amortised cost (trade and notes payables, other payables and accruals and loans)***

After initial recognition, payables and loans are subsequently measured at amortised cost, using the effective interest rate method unless the effect of discounting would be immaterial, in which case they are stated at cost. Gains and losses are recognised in profit or loss when the liabilities are derecognised as well as through the effective interest rate amortisation process.

Amortised cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the effective interest rate. The effective interest rate amortisation is included in finance costs in profit or loss.

**Derecognition of financial liabilities**

A financial liability is derecognised when the obligation under the liability is discharged or cancelled, or expires.

When an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability are substantially modified, such an exchange or modification is treated as a derecognition of the original liability and a recognition of a new liability, and the difference between the respective carrying amounts is recognised in profit or loss.

#### **Offsetting of financial instruments**

Financial assets and financial liabilities are offset and the net amount is reported in the statement of financial position if there is a currently enforceable legal right to offset the recognised amounts and there is an intention to settle on a net basis, or to realise the assets and settle the liabilities simultaneously.

#### **Derivative financial instruments and hedge accounting**

##### *Initial recognition and subsequent measurement*

The Group uses derivative financial instruments, such as commodity futures, to hedge its price fluctuation risk. Such derivative financial instruments are initially recognised at fair value on the date on which a derivative contract is entered into and are subsequently remeasured at fair value. Derivatives are carried as assets when the fair value is positive and as liabilities when the fair value is negative.

Any gains or losses arising from changes in fair value of derivatives are taken directly to the statement of profit or loss, except for the effective portion of cash flow hedges, which is recognised in other comprehensive income and later reclassified to profit or loss when the hedged item affects profit or loss.

For the purpose of hedge accounting, hedges are classified as:

- fair value hedges when hedging the exposure to changes in the fair value of a recognised asset or liability or an unrecognised firm commitment; or
- cash flow hedges when hedging the exposure to variability in cash flows that is either attributable to a particular risk associated with a recognised asset or liability or a highly probable forecast transaction, or a foreign currency risk in an unrecognised firm commitment.

At the inception of a hedge relationship, the Group formally designates and documents the hedge relationship to which the Group wishes to apply hedge accounting, the risk management objective and its strategy for undertaking the hedge.

The documentation includes identification of the hedging instrument, the hedged item, the nature of the risk being hedged and how the Group will assess whether the hedging relationship meets the hedge effectiveness requirements (including the analysis of sources of hedge ineffectiveness and how the hedge ratio is determined). A hedging relationship qualifies for hedge accounting if it meets all of the following effectiveness requirements:

- There is “an economic relationship” between the hedged item and the hedging instrument.
- The effect of credit risk does not “dominate the value changes” that result from that economic relationship.
- The hedge ratio of the hedging relationship is the same as that resulting from the quantity of the hedged item that the Group actually hedges and the quantity of the hedging instrument that the Group actually uses to hedge that quantity of hedged item.

*Hedges which meet all the qualifying criteria for hedge accounting are accounted for as follows:*

##### *Cash flow hedges*

The effective portion of the gain or loss on the hedging instrument is recognised directly in other comprehensive income in the cash flow hedge reserve, while any ineffective portion is recognised immediately in the statement of profit or loss. The cash flow hedge reserve is adjusted to the lower of the cumulative gain or loss on the hedging instrument and the cumulative change in fair value of the hedged item.

The amounts accumulated in other comprehensive income are accounted for, depending on the nature of the underlying hedged transaction. If the hedged transaction subsequently results in the recognition of a non-financial item, the amount accumulated in equity is removed from the separate component of equity and included in the initial cost or other carrying amount of the hedged asset or liability. This is not a reclassification adjustment and will not be recognised in other comprehensive income for the period. This also applies where the hedged forecast transaction of a non-financial asset or non-financial liability subsequently becomes a firm commitment to which fair value hedge accounting is applied.

For any other cash flow hedges, the amount accumulated in other comprehensive income is reclassified to the statement of profit or loss as a reclassification adjustment in the same period or periods during which the hedged cash flows affect the statement of profit or loss.

If cash flow hedge accounting is discontinued, the amount that has been accumulated in other comprehensive income must remain in accumulated other comprehensive income if the hedged future cash flows are still expected to occur. Otherwise, the amount will be immediately reclassified to the statement of profit or loss as a reclassification adjustment. After the discontinuation, once the hedged cash flow occurs, any amount remaining in accumulated other comprehensive income is accounted for depending on the nature of the underlying transaction as described above.

**Treasury shares**

Own equity instruments which are reacquired and held by the Company or the Group (treasury shares) are recognised directly in equity at cost. No gain or loss is recognised in the statement of profit or loss on the purchase, sale, issue or cancellation of the Group's own equity instruments.

**Inventories**

Inventories are stated at the lower of cost and net realisable value. Cost is determined on the weighted average basis and, in the case of work in progress and finished goods, comprises direct materials, direct labour and an appropriate proportion of overheads. Net realisable value is based on estimated selling prices less any estimated costs to be incurred to completion and disposal.

**Cash and cash equivalents**

Cash and cash equivalents in the statement of financial position comprise cash on hand and at banks, and short-term highly liquid deposits with a maturity of generally within three months that are readily convertible into known amounts of cash, subject to an insignificant risk of changes in value and held for the purpose of meeting short-term cash commitments.

For the purpose of the consolidated statement of cash flows, cash and cash equivalents comprise cash on hand and at banks, including term deposits, and assets similar in nature to cash, which are not restricted as to use.

**Provisions**

A provision is recognised when a present obligation (legal or constructive) has arisen as a result of a past event and it is probable that a future outflow of resources will be required to settle the obligation, provided that a reliable estimate can be made of the amount of the obligation.

When the effect of discounting is material, the amount recognised for a provision is the present value at the end of each of the Relevant Periods of the future expenditures expected to be required to settle the obligation. The increase in the discounted present value amount arising from the passage of time is included in finance costs in profit or loss.

Provisions for the Group's obligations for environmental rehabilitation and restoration of mines are based on estimates of required expenditure at the mines in accordance with the local rules and regulations where the mines are located. The Group estimates its liabilities for final reclamation and mine closure based upon detailed calculations of the amount and timing of the future cash expenditure for the required work. Spending estimates are escalated for inflation, then discounted at a discount rate that reflects current market assessments of the time value of money and the risks specific to the liability such that the amount of provision reflects the present value of the expenditures expected to be required to settle the obligation. The Group records a corresponding asset in the period in which the liability is incurred. The liability is accreted to the projected expenditure date. As changes in estimates occur (such as mine plan revisions, changes in estimated costs, or changes in the timing of the performance of reclamation activities), the revisions to the obligation and the asset are recognised at the appropriate discount rate.

**Income tax**

Income tax comprises current and deferred tax. Income tax relating to items recognised outside profit or loss is recognised outside profit or loss, either in other comprehensive income or directly in equity.

Current tax assets and liabilities are measured at the amount expected to be recovered from or paid to the taxation authorities, based on tax rates (and tax laws) that have been enacted or substantively enacted by the end of each of the Relevant Periods, taking into consideration interpretations and practices prevailing in the countries in which the Group operates.

Deferred tax is provided, using the liability method, on all temporary differences at the end of each of the Relevant Periods between the tax bases of assets and liabilities and their carrying amounts for financial reporting purposes.

Deferred tax liabilities are recognised for all taxable temporary differences, except:

- when the deferred tax liability arises from the initial recognition of goodwill or an asset or liability in a transaction that is not a business combination and, at the time of the transaction, affects neither the accounting profit nor taxable profit or loss and does not give rise to equal taxable and deductible temporary differences; and
- in respect of taxable temporary differences associated with investments in subsidiaries and associates, when the timing of the reversal of the temporary differences can be controlled and it is probable that the temporary differences will not reverse in the foreseeable future.

Deferred tax assets are recognised for all deductible temporary differences, and the carryforward of unused tax credits and any unused tax losses. Deferred tax assets are recognised to the extent that it is probable that taxable profit will be available against which the deductible temporary differences, and the carryforward of unused tax credits and unused tax losses can be utilised, except:

- when the deferred tax asset relating to the deductible temporary differences arises from the initial recognition of an asset or liability in a transaction that is not a business combination and, at the time of the transaction, affects neither the accounting profit nor taxable profit or loss and does not give rise to equal taxable and deductible temporary differences; and
- in respect of deductible temporary differences associated with investments in subsidiaries and associates, deferred tax assets are only recognised to the extent that it is probable that the temporary differences will reverse in the foreseeable future and taxable profit will be available against which the temporary differences can be utilised.

The carrying amount of deferred tax assets is reviewed at the end of each of the Relevant Periods and reduced to the extent that it is no longer probable that sufficient taxable profit will be available to allow all or part of the deferred tax asset to be utilised. Unrecognised deferred tax assets are reassessed at the end of each of the Relevant Periods and are recognised to the extent that it has become probable that sufficient taxable profit will be available to allow all or part of the deferred tax asset to be recovered.

Deferred tax assets and liabilities are measured at the tax rates that are expected to apply to the period when the asset is realised or the liability is settled, based on tax rates (and tax laws) that have been enacted or substantively enacted by the end of each of the Relevant Periods.

Deferred tax assets and deferred tax liabilities are offset if and only if the Group has a legally enforceable right to set off current tax assets and current tax liabilities and the deferred tax assets and deferred tax liabilities relate to income taxes levied by the same taxation authority on either the same taxable entity or different taxable entities which intend either to settle current tax liabilities and assets on a net basis, or to realise the assets and settle the liabilities simultaneously, in each future period in which significant amounts of deferred tax liabilities or assets are expected to be settled or recovered.

**Government grants**

Government grants are recognised at their fair value where there is reasonable assurance that the grant will be received and all attaching conditions will be complied with. When the grant relates to an expense item, it is recognised as income on a systematic basis over the periods that the costs, for which it is intended to compensate, are expensed.

Where the grant relates to an asset, the fair value is credited to a deferred income account and is released to profit or loss over the expected useful life of the relevant asset by equal annual instalments.

**Revenue recognition*****Revenue from contracts with customers***

Revenue from contracts with customers is recognised when control of goods or services is transferred to the customers at an amount that reflects the consideration to which the Group expects to be entitled in exchange for those goods or services.

When the contract contains a financing component which provides the customer with a significant benefit of financing the transfer of goods or services to the customer for more than one year, revenue is measured at the present value of the amount receivable, discounted using the discount rate that would be reflected in a separate financing transaction between the Group and the customer at contract inception. When the contract contains a financing component which provides the Group with a significant financial benefit for more than one year, revenue recognised under the contract includes the interest expense accreted on the contract liability under the effective interest method. For a contract where the period between the payment by the customer and the transfer of the promised goods or services is one year or less, the transaction price is not adjusted for the effects of a significant financing component, using the practical expedient in IFRS 15.

***Sale of products***

Revenue from the sale of products is recognised at the point in time when control of the asset is transferred to the customer, generally on delivery of the products.

***Metal streaming arrangement***

There is a Metal Streaming Arrangement in GSR acquired by the Group in 2022. Under the business arrangement, GSR receives a payment in advance and the counterparty obtains a certain proportion of deliverable gold within the entire life of the designated mine. The counterparty is also required to make an additional payment based on a certain proportion of the market price when GSR delivers the goods within an agreed period in the future. The payment GSR receives in advance is considered to be part of the counterparty's prepayment for the future goods with uncertain but predictable quantity, and is recognised as a contract liability upon receipt. Each unit of the delivered goods represents a separate performance obligation, and revenue is recognised at the point in time when control of the goods is transferred. Considering the timing of satisfaction of delivery obligations throughout the entire life of the mines, the contract liability above is considered to have significant financing components. In addition, because the quantity of all delivered goods available to the counterparty depends on the mining reserves of the metals throughout the entire life of the mines, the management will estimate the change of total metal reserves and change of planned mining reserves on a regular basis and adjustments shall be made to the revenue and finance costs accordingly.

***Variable consideration***

In the Group's Metal Streaming Arrangement, because the quantity of all delivered goods available to the counterparty depends on the mining reserves of the metals throughout the entire life of the mines, the price allocated to goods delivered per unit is considered as variable consideration. When the estimated total metal reserves and planned exploitation reserves of the mine change, it is necessary to recalculate the price of goods delivered per unit, and in the period of changes occurred, adjust the revenue and finance costs recognised in the same period according to the updated price. The Group determines the best estimate of variable consideration by the expected value. The transaction price including variable consideration is only to the extent that it is highly probable that a significant reversal in the amount of cumulative revenue recognised will not occur when the uncertainty associated with the variable consideration is subsequently resolved.

***Contracts for the rendering of services***

A contract for the rendering of services between the Group and the customer usually includes performance obligations of dismantling waste electronic products and electrical appliances. The Group recognises the fund subsidy income, which was related to the dismantling volume, as a part of revenue by multiplying the dismantling type and quantity of the scrapped electrical and electronic products by the corresponding fund subsidy price.

***Revenue from other sources***

Rental income is recognised on a time proportion basis over the lease terms. Variable lease payments that do not depend on an index or a rate are recognised as income in the accounting period in which they are incurred.

***Other income***

Interest income is recognised on an accrual basis using the effective interest method by applying the rate that exactly discounts the estimated future cash receipts over the expected life of the financial instrument or a shorter period, when appropriate, to the net carrying amount of the financial asset.

**Contract liabilities**

A contract liability is recognised when a payment is received or a payment is due (whichever is earlier) from a customer before the Group transfers the related goods or services. Contract liabilities are recognised as revenue when the Group performs under the contract (i.e., transfers control of the related goods or services to the customer).

**Share incentive plan**

The Company operates employee stock ownership plans. Employees (including directors) of the Group receive remuneration in the form of share-based payments, whereby employees render services in exchange for equity instruments ("equity-settled transactions"). The cost of equity-settled transactions with employees is measured by reference to the fair value at the date at which they are granted. The fair value is determined by the market price of the granted shares, further details of which are given in note 40 to the Historical Financial Information.

The cost of equity-settled transactions is recognised in employee benefit expense, together with a corresponding increase in equity, over the period in which the performance and/or service conditions are fulfilled. The cumulative expense recognised for equity-settled transactions at the end of each reporting period until the vesting date reflects the extent to which the vesting period has expired and the Group's best estimate of the number of equity instruments that will ultimately vest. The charge or credit to the statement of profit or loss for a period represents the movement in the cumulative expense recognised as at the beginning and end of that period.

Service and non-market performance conditions are not taken into account when determining the grant date fair value of awards, but the likelihood of the conditions being met is assessed as part of the Group's best estimate of the number of equity instruments that will ultimately vest. Market performance conditions are reflected within the grant date fair value. Any other conditions attached to an award, but without an associated service requirement, are considered to be non-vesting conditions. Non-vesting conditions are reflected in the fair value of an award and lead to an immediate expensing of an award unless there are also service and/or performance conditions.

For awards that do not ultimately vest because non-market performance and/or service conditions have not been met, no expense is recognised. Where awards include a market or non-vesting condition, the transactions are treated as vesting irrespective of whether the market or non-vesting condition is satisfied, provided that all other performance and/or service conditions are satisfied.

Where the terms of an equity-settled award are modified, as a minimum an expense is recognised as if the terms had not been modified, if the original terms of the award are met. In addition, an expense is recognised for any modification that increases the total fair value of the share-based payments, or is otherwise beneficial to the employee as measured at the date of modification. Where an equity-settled award is cancelled, it is treated as if it had vested on the date of cancellation, and any expense not yet recognised for the award is recognised immediately.

**Other employee benefits***Pension schemes*

In accordance with applicable PRC regulations, the Company and its subsidiaries operating in Chinese Mainland have currently enrolled in a series of pension schemes regulated by various provincial and municipal governments, under which each of the entities operating in Chinese Mainland is required to contribute a percentage of its employees' salaries to the pension fund. The contributions are charged to profit or loss as they become payable in accordance with the rules of the pension schemes.

Subsidiaries of the Group in Wassa and Laos operates defined contribution plans on behalf of its employees. The contributions are recognised as employee benefit expense (staff costs) when they are due.

*Termination benefits*

The employees of the Group participate in a pension scheme and unemployment insurance managed by the local government, and the corresponding expenses shall be included in the cost of related assets or profit or loss.

The Group recognises a liability for termination benefits and charges to profit or loss for the current period at the earlier of the following dates: when the Group can no longer withdraw the offer of those benefits resulting from the termination plan or the redundancy offer unilaterally; or when the Group recognises costs or expense for a restructuring plan which involves the payment of termination benefits.

The internal retirement plan of employees shall be treated in the same principle as the above termination benefits. The Group will include the salaries and social insurance premiums to be paid for early retirees during the period from the date when employees stop providing services to the normal retirement date into the current profit or loss (termination benefits) when the conditions for recognition of provisions are met.

**Borrowing costs**

Borrowing costs directly attributable to the acquisition, construction or production of qualifying assets, i.e., assets that necessarily take a substantial period of time to get ready for their intended use or sale, are capitalised as part of the cost of those assets. The capitalisation of such borrowing costs ceases when the assets are substantially ready for their intended use or sale. All other borrowing costs are expensed in the period in which they are incurred. Borrowing costs consist of interest and other costs that an entity incurs in connection with the borrowing of funds.

**Dividends**

Final dividends are recognised as a liability when they are approved by the shareholders in a general meeting. The proposed final dividends are disclosed in the note 16 to the Historical Financial Information.

**Foreign currencies**

The Historical Financial Information is presented in Renminbi, which is the Company's functional currency. Each entity in the Group determines its own functional currency and items included in the financial statements of each entity are measured using that functional currency. Foreign currency transactions recorded by the entities in the Group are initially recorded using their respective functional currency rates prevailing at the dates of the transactions. Monetary assets and liabilities denominated in foreign currencies are translated at the functional currency rates of exchange ruling at the end of each of the Relevant Periods. Differences arising on settlement or translation of monetary items are recognised in profit or loss.

Non-monetary items that are measured in terms of historical cost in a foreign currency are translated using the exchange rates at the dates of the initial transactions. Non-monetary items measured at fair value in a foreign currency are translated using the exchange rates at the date when the fair value was measured. The gain or loss arising on translation of a non-monetary item measured at fair value is treated in line with the recognition of the gain or loss on change in fair value of the item (i.e., translation difference on the item whose fair value gain or loss is recognised in other comprehensive income or profit or loss is also recognised in other comprehensive income or profit or loss, respectively).

In determining the exchange rate on initial recognition of the related asset, expense or income on the derecognition of a non-monetary asset or non-monetary liability relating to an advance consideration, the date of initial transaction is the date on which the Group initially recognises the non-monetary asset or non-monetary liability arising from the advance consideration. If there are multiple payments or receipts in advance, the Group determines the transaction date for each payment or receipt of the advance consideration.

The functional currencies of certain overseas subsidiaries and associates are currencies other than the RMB. As at the end of the reporting period, the assets and liabilities of these entities are translated into RMB at the exchange rates prevailing at the end of the reporting period and their statements of profit or loss are translated into RMB at the exchange rates that approximate to those prevailing at the dates of the transactions.

The resulting exchange differences are recognised in other comprehensive income and accumulated in the exchange fluctuation reserve, except to the extent that the differences are attributable to non-controlling interests. On disposal of a foreign operation, the cumulative amount in the reserve relating to that particular foreign operation is recognised in the statement of profit or loss.

For the purpose of the consolidated statement of cash flows, the cash flows of overseas subsidiaries are translated into RMB at the exchange rates ruling at the dates of the cash flows. Frequently recurring cash flows of overseas subsidiaries which arise throughout the year are translated into RMB at the weighted average exchange rates for the year.

## 5. SIGNIFICANT ACCOUNTING JUDGEMENTS AND ESTIMATES

The preparation of the Group's Historical Financial Information requires management to make judgements, estimates and assumptions that affect the reported amounts of revenues, expenses, assets and liabilities, and the disclosure of contingent liabilities at the end of each of the Relevant Periods. Uncertainty about these estimates and assumptions could result in outcomes that could require a material adjustment to the carrying amount of the asset or liability affected in the future.

### Judgements

In the process of applying the Group's accounting policies, management has made the following judgements which have the most significant effects on the amounts recognised in the financial statements:

#### *Corporate income tax*

As a result of the fact that certain matters relating to the corporate income taxes have not been confirmed by the local tax bureau as at the end of the Relevant Periods, objective estimates based on currently enacted tax laws, regulations and other related policies are required in determining the provision for corporate income tax expenses to be made for the reporting period. Where the final tax outcome of these matters is different from the amounts originally recorded, the differences will be accounted for in the income tax expenses in the period in which the differences are realised.

#### *Exploration expenditures*

After determining the capitalisation amount of exploration expenditures, the Group will regularly evaluate the exploration results. If the reviewed geological exploration report shows that there are no prospecting results or no economically recoverable reserves, or that the economic benefits of mining cannot be achieved and further exploration is unnecessary due to low grade and hard-to-mining, the exploration and development costs previously collected will be expensed and included in profit or loss for the current period in a lump sum.

#### *Estimation uncertainty*

The key assumptions concerning the future and other key sources of estimation uncertainty at the balance sheet date, that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the future accounting periods, are described below.

#### *Impairment of financial assets*

The Group has adopted the expected credit loss model to evaluate the impairment of financial assets. The application of the expected credit loss model requires significant judgements and estimates and the consideration of all reasonable and soundly based information, including forward-looking information. In making such judgements and estimates, the Group estimates the projected movements of the debtor's credit risk according to past repayment records, economic policies, macro-economic indicators and industry risks, etc. Different estimates may affect the impairment provision, and the amount of impairment provision may not equal to the actual amount of impairment loss in the future.

***Impairment of non-current assets other than financial assets (excluding goodwill)***

The Group assesses whether there are any indicators of impairment for non-current assets other than financial assets at the end of the reporting period. Intangible assets with indefinite useful lives are tested for impairment annually and at other times when such an indicator exists. Other non-current assets other than financial assets are tested for impairment when there are indicators that the carrying amounts may not be recoverable. An impairment exists when the carrying value of an asset or asset group exceeds its recoverable amount, which is the higher of its fair value less costs of disposal and its value in use. The calculation of the fair value less costs of disposal based on available data from binding sales transactions in an arm's length transaction of similar assets or observable market prices less incremental costs for disposing of the asset. When value in use calculations are undertaken, management must estimate the expected future cash flows from the asset or asset group and choose a suitable discount rate in order to calculate the present value of those cash flows. These estimates and judgements may be significantly affected by changes in future market or economic conditions.

***Impairment of goodwill***

The Group determines whether goodwill is impaired at least on an annual basis. This requires an estimation of the value in use of the cash-generating units to which the goodwill is allocated. Estimating the value in use requires the Group to make an estimate of the expected future cash flows from the cash-generating units and also to choose a suitable discount rate in order to calculate the present value of those cash flows. Further details are included in note 20 to the Historical Financial Information.

***Proved mineral reserves***

Proved mineral reserves are estimated based on professional knowledge, experience and industry practice. Generally, the mineral reserve volume estimated based on probing and estimation may not be very accurate. The estimation is updated in accordance with new technologies and new information. Any changes in estimation will have impacts on the amounts of mining assets' depreciation and mining rights' amortisation using the units-of-production method, on the stripping ratio which was used in the capitalisation of stripping costs, and on each of the transaction prices of the metal streaming arrangement, etc. This may result in changes of or impacts on the Group's development and operation plan, and hence the Group's operations and operating results.

***Deferred tax assets***

To the extent that it is probable that there are sufficient taxable profits to offset the deductible losses, deferred tax assets shall be recognised for all unused deductible losses. Substantial management's judgements regarding the timing, amount of future taxable profit as well as tax planning strategies are needed when estimating the amount of deferred tax assets. Further details are included in note 22 to the Historical Financial Information.

***Provision for environmental rehabilitation and restoration of mines***

Pursuant to the regulations of the governmental authorities in the places where the mines are located, the Group recognises provision for environmental rehabilitation and restoration of mines. The amount of provision is an estimate based upon the life of mining rights, timing of mine closure and cost of such rehabilitation. When this estimate changes, it may affect the Group's operations and performance. Further details are included in note 37 to the Historical Financial Information.

**6. SEGMENT INFORMATION**

The directors and certain senior managers of the Company (hereinafter referred to as "senior management") perform the functions of principal operating decision makers. Senior management reviews the internal reports of the Group to evaluate the performance of operating segments and allocate resources. The Company determines its operating segments based on such internal reporting.

The Company's operating segments include the PRC mining segment, the overseas mining segment and the other segment. The PRC mining segment conducts the mining and processing of gold and non-ferrous metals in Mainland China. The overseas mining segment conducts the mining and processing of gold and non-ferrous metals in Laos, Ghana and other countries/regions. The other segment is mainly engaged in comprehensive resource recycling and rental income in Mainland China.

The senior management monitors the results of its operating segments separately for the purpose of making decisions about resource allocation and performance assessment. Segment performance is evaluated based on reportable segment profit, which is a measure of adjusted operating profit before tax. The adjusted operating profit before tax is measured consistently with the Group's operating profit before tax except that head office and corporate expenses are excluded from such measurement.

Segment assets exclude cash and cash equivalents, deferred tax assets, financial assets at fair value through profit or loss, derivative financial instruments and other unallocated head office and corporate assets as these assets are managed on a group basis.

Segment liabilities exclude financial liabilities at fair value through profit or loss, derivative financial instruments, loans, deferred tax liabilities, tax payable and other unallocated head office and corporate liabilities as these liabilities are managed on a group basis.

Set out below is the disaggregation of the segment information:

The following table shows the amounts of revenue recognised in the Relevant Periods and the nine months ended 30 September 2023 that were included in the contract liabilities at the beginning of the reporting period:

	Year ended 31 December 2021	Year ended 31 December 2022	Year ended 31 December 2023	Nine months ended 30 September 2023	Nine months ended 30 September 2024
	RMB'000	RMB'000	RMB'000	RMB'000 (unaudited)	RMB'000
Revenue recognised that was included in contract liabilities at the beginning of the reporting period:					
Sale of goods . . . . .	1,422	4,547	1,227	1,227	9,162
Sale of gold from Metal Streaming Arrangement (note 33)* . . . . .	–	47,201	52,324	36,284	44,749
	<u>1,422</u>	<u>51,748</u>	<u>53,551</u>	<u>37,511</u>	<u>53,911</u>

\* This amount was related to the acquisition of GSR in January 2022.

(b) Information about the Group's performance obligations is summarised below:

#### *Sale of goods*

The Group recognises revenue when customers gain the control of goods. Prepayments received from customers before delivery of goods are recognised as contract liabilities in the consolidated financial statements. Among them, the sales arrangement related to the Metal Streaming Arrangement is detailed in note 33.

#### *Rendering of services*

The Group recognizes the fund subsidy income based on type and quantity of standardized dismantling of waste electronic products and electrical appliances and the corresponding subsidy price.

The transaction prices allocated to remaining performance obligations (contracted but unsatisfied or partially unsatisfied) related to sales of gold are as follows:

	Year ended 31 December 2021	Year ended 31 December 2022	Year ended 31 December 2023	Nine months ended 30 September 2023	Nine months ended 30 September 2024
	RMB'000	RMB'000	RMB'000	RMB'000 (unaudited)	RMB'000
Within 1 year . . . . .	4,547	62,052	73,177	97,221	89,172
Over 1 year . . . . .	–	606,298	576,999	596,615	538,996
Total . . . . .	<u>4,547</u>	<u>668,350</u>	<u>650,176</u>	<u>693,836</u>	<u>628,168</u>

## 8. DIRECTORS' REMUNERATION

Directors' remuneration is as follows:

	Year ended 31 December 2021	Year ended 31 December 2022	Year ended 31 December 2023	Nine months ended 30 September 2023	Nine months ended 30 September 2024

#### 14. INCOME TAX EXPENSES

Under the Corporate Income Tax Law of the PRC (the “CIT”), the statutory tax rate of the Company, subsidiaries and its key associates in Chinese Mainland is 25%.

Pillar Two legislation has been enacted or substantively enacted in certain jurisdictions in which the Company and its subsidiaries operate, the Company is still in the process of assessing the potential exposure to Pillar Two income taxes. Based on the current assessment, the Pillar Two effective tax rates in most of the jurisdictions in which the Company and its subsidiaries operate are above 15%.

List of other corporate income tax rates applicable to the Group's subsidiaries:

Name	Countries and regions	Rates
Golden Star (Wassa) Limited . . . . .	Ghana	35.0%
LXML . . . . .	Laos	33.3%
GSR . . . . .	Canada	26.5%
Chijin (Tianjin) Geological Exploration Technology Co., Ltd. (a) . . . . .	PRC	20.0%
Chijin HK. . . . .	Hong Kong	16.5%
Jilin Han Feng Mining Technologies Co., Ltd. (b) . . . . .	PRC	15.0%
Eryuan Jintai Mining Development Co., Ltd. (b) . . . . .	PRC	15.0%
Liaoning Wulong Gold Mining Co., Ltd. (c) . . . . .	PRC	15.0%
Chifeng Jilong Mining Co., Ltd. (d) . . . . .	PRC	15.0%
Hefei Guangyuan Environmental Protection Technology Co., Ltd. (e) . . . . .	PRC	2021-2022: N/A 2023-2024: 0%
Hefei Huanchuang Advanced Material Co., Ltd. (e) . . . . .	PRC	2021-2023: 12.5% 2024: 25.0%

- (a) According to the *Announcement of the State Administration of Taxation on Issues Relating to the Implementation of Inclusive Income Tax Relief Policy for Small Thin-profit Enterprises* (State Administration of Taxation Announcement [2019] No. 2), during the period from 1 January 2019 to 31 December 2021, the portion of the annual taxable profit of a small thin-profit enterprise which does not exceed RMB1 million, the taxable profit can be reduced to 25%, and corporate income tax shall be levied at a reduced tax rate of 20%; the portion of the annual taxable profit which exceeds RMB1 million but does not exceed RMB3 million, the taxable profit can be reduced to 50%, and corporate income tax shall be levied at a reduced tax rate of 20%. From 1 January 2022 to 31 December 2024, according to the *Announcement on Further Implementing Preferential Policies for Income Tax of Small and Micro Enterprises* (Announcement [2022] No. 13 of the Ministry of Finance and the State Administration of Taxation), for the portion of the annual taxable profit which exceeds RMB1 million but does not exceed RMB3 million, the taxable profit can be reduced to 25%, and corporate income tax shall be levied at a reduced tax rate of 20%. The subsidiary, Chijin (Tianjin) Geological Exploration Technology Co., Ltd., which is a small thin-profit enterprise, adopted this policy for the period from 1 January 2021 to 30 September 2024.
- (b) According to the *Announcement on Continuation of CIT Policies for Large-scale Development in the Western Region* (Announcement [2020] No. 23 of the Ministry of Finance, State Administration of Taxation and National Development and Reform Commission), during the period from 1 January 2021 to 31 December 2030, CIT shall be levied at a reduced tax rate of 15% on enterprises established in the western region in encouraged industries. This policy is applicable to the subsidiaries Jilin Han Feng Mining Technologies Co., Ltd. and Eryuan Jintai Mining Development Co., Ltd.
- (c) According to the High-New Technical Enterprise (“HNTE”) certificate renewed in December 2020, the CIT rate of the subsidiary Liaoning Wulong Gold Mining Co., Ltd. was 15% for the years from 2020 to 2022. According to the HNTE certificate renewed in December 2023, the CIT rate of Liaoning Wulong Gold Mining Co., Ltd. was 15% for the years from 2023 to 2025.
- (d) According to the High-New Technical Enterprise (“HNTE”) certificate renewed in November 2020, the CIT rate of the subsidiary Chifeng Jilong Mining Co., Ltd. was 15% for the years from 2020 to 2022. According to the HNTE certificate renewed in November 2023, the CIT rate of Chifeng Jilong Mining Co., Ltd. was 15% for the years from 2023 to 2025.
- (e) According to Article 27 of the *Enterprise Income Tax Law*, Article 88 of the *Implementation Regulations of the Enterprise Income Tax Law*, and Caishui (2009) No. 166, eligible environmental protection, energy conservation, and water-saving household waste treatment service projects shall enjoy the preferential policy of “three years of tax exemption followed by three years of tax reduction” of income tax. The subsidiary Hefei Huanchuang Advanced Material Co., Ltd. has been enjoying this policy since 2018, specifically: “Tax exemption in 2018, 2019 and 2020, reduced by half in 2021, 2022 and 2023.” The subsidiary Hefei Guangyuan Environmental Protection Technology Co., Ltd. has been enjoying this policy since 2023, specifically: “Tax exemption in 2023, 2024 and 2025, reduced by half in 2026, 2027 and 2028.”

An analysis of the Group's provision for tax is as follows:

	Note	Year ended	Year ended	Year ended	Nine months	Nine months

**15. EARNINGS PER SHARE ATTRIBUTABLE TO ORDINARY EQUITY HOLDERS OF THE PARENT**

The calculation of the basic earnings per share amounts is based on the profit for the Relevant Periods and the nine months ended 30 September 2023 attributable to ordinary equity holders of the parent, and the weighted average number of ordinary shares of 1,643,193,590, 1,662,334,305 and 1,641,398,872 during the years ended 31 December 2021, 2022 and 2023, 1,644,441,750 and 1,648,728,778 for the nine months ended 30 September 2023 and 2024, respectively, as adjusted to reflect the rights issue during the year.

The calculation of the basic earnings per share amounts is based on the profit for the year attributable to ordinary equity holders of the parent.

The calculation of the diluted earnings per share amounts is based on the profit for the year attributable to ordinary equity holders of the parent. The weighted average number of ordinary shares used in the calculation is the number of ordinary shares in issue during the year, as used in the basic earnings per share calculation, and the weighted average number of ordinary shares assumed to have been issued at no consideration on the deemed exercise or conversion of all dilutive potential ordinary shares into ordinary shares.

The calculations of basic and diluted earnings per share are based on:

	Year ended 31 December 2021	Year ended 31 December 2022	Year ended 31 December 2023	Nine months ended 30 September 2023	Nine months ended 30 September 2024

<u>Shares</u>					
Weighted average number of ordinary shares in issue during the Relevant Periods used in the basic earnings per share calculation . . . . .	1,643,193,590	1,662,334,305	1,641,398,872	1,644,441,750	1,648,728,778

\* The Group had no potentially dilutive ordinary shares outstanding during the years ended 31 December 2021, 2022, 2023 and the nine months ended 30 September 2023 and 2024.

**16. DIVIDENDS**

Based on the resolution passed by the Board of Directors on 29 March 2024, the proposed profit distribution plan for the year 2023 is as follows: With a total share capital of 1,663,911,378 shares at the end of 2023, after deducting the 15,182,600 shares held in the Company's dedicated securities account for repurchases, the base for profit distribution will be 1,648,728,778 shares. A cash dividend of RMB0.50 per 10 shares (including tax) will be paid to all shareholders, totaling RMB82,436,000. The aforementioned proposed final dividend was approved by the shareholders on 19 April 2024. As at 30 September 2024, all the final dividend has been paid.

## 18. LEASES

## The Group

*The Group as a lessee*

The Group has lease contracts for various items of leasehold land, buildings, motor vehicles, and office and other equipment. Lump sum payments were made upfront to acquire the land use right in Chinese Mainland with periods of 50 years, and no ongoing payments will be made.

(a) *Right-of-use assets*

The carrying amounts of the Group's right-of-use assets and the movements are as follows:

	Buildings	Machinery and vehicles	Leasehold land	Total
	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>

## 20. GOODWILL

	31 December 2021	31 December 2022	31 December 2023	30 September 2024
	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>
Beginning and closing balances . . .	41,969	41,969	41,969	41,969

Goodwill acquired through business combinations is allocated to the recycling and utilisation CGU for impairment testing.

The recoverable amount of the recycling and utilisation CGU has been determined based on a value in use calculation using cash flow projections based on financial budgets covering a five-year period approved by senior management. As at 31 December 2021, 2022 and 2023 and 30 September 2024, the pre-tax discount rates applied to the cash flow projections are 13.46%, 11.89%, 9.21% and 8.79%, respectively. The growth rate used to extrapolate the cash flows of the recycling and utilisation CGU beyond the five-year period is 0%.

Assumptions were used in the value in use calculation of the recycling and utilisation cash-generating CGU. The following describes each key assumption on which management has based its cash flow projections to undertake impairment testing of goodwill:

*The expected future sales volume* — The management forecasted disassembly volume based on the disassembly volume capacity and the expected five years' production schedule of the CGU.

*The price of the dismantled product* — The management forecasted the price of the dismantled product based on the actual sales unit price of the previous year with its expectations on market development.

*The collection period of the fund subsidy income* — The management forecasted the collection period of the fund subsidy income based on the historical collection period with its expectations on market development.

*Discount rate* — The discount rates used are before tax and reflect specific risks relating to the relevant CGU.

Management determined these assumptions based on past performance and its expectations on market development. The discount rates used reflect specific risks relating to the individual CGU. The recoverable amount is determined based on the present value of the estimated future cash flows of the CGU. According to the 5-year financial forecast approved by the management, the growth rates of the dismantling volume of waste electronic products and electrical appliances from 2024 to 2028 during the forecast period are projected to be 3%, 6%, 10%, 5%, and 3% respectively, and the dismantling volume of waste electronic products and electrical appliances will remain stable from 2029 onwards. Based on the impairment assessments, there was no impairment of goodwill as at 31 December 2021, 2022 and 2023 and 30 September 2024, and the headroom (i.e., the excess of the recoverable amount over the carrying amount of the CGU) was RMB82 million, RMB88 million, RMB17 million, and RMB19 million, respectively.

For the goodwill allocated to the CGU, management has assessed that two of the most sensitive key assumptions are future sales volume and price of the dismantled product. As at 31 December 2021, 2022 and 2023 and 30 September 2024, if future sales volume had decreased by 1% from management's estimates, while other variables were held constant with the expectations, the Group would have to recognise impairment losses against goodwill by approximately nil, nil, nil and nil, respectively; if future sales volume had decreased by 5% from management's estimates, while other variables were held constant with the expectations, the Group would have to recognise impairment losses against goodwill by approximately nil, nil, nil and RMB42 million, respectively; if the price of the dismantled product had decreased by 1% from management's estimates, while other variables were held constant with the expectations, the Group would have to recognise impairment losses against goodwill by approximately nil, nil, RMB25 million and RMB22 million, respectively; if the price of the dismantled product had decreased by 5% from management's estimates, while other variables were held constant with the expectations, the Group would have to recognise impairment losses against goodwill by approximately nil, nil, RMB42 million and RMB42 million, respectively.

According to the "Announcement on Suspending the Collection of the Fund for the Dismantling of Waste Electronic Products and Electrical Appliances and Related Matters" jointly issued by the Ministry of Finance, the Ministry of Ecology and Environment, the National Development and Reform Commission, and the Ministry of Industry and Information Technology on 17 January 2024, the fund for dismantling of waste electronic products and electrical appliances ("subsidy fund") will be suspended from 1 January 2024. For waste electronic products and electrical appliances dismantled before 31 December 2023, and which have not yet been subsidized in accordance with the "Measures for the Collection and Use of the Fund for the Dismantling of Waste Electronic Products and Electrical Appliances" (Cai Zong [2012] No. 34) and other regulations, the government will allocate funds to pay.

On 29 March 2024, the Ministry of Finance announced "Draft Measures for the Administration of Special Funds for the Disposal of Waste Electronic Products and Electrical Appliances". According to the announcement, the management is in the view of that the government would allocate special funds and continue to promote the comprehensive utilisation and circular development of resources.

On 13 September 2024, the latest "Measures for the Administration of Special Funds for the Disposal of Waste Electronic Products and Electrical Appliances" (Cai Zihuan [2024] No. 119) was officially released. Waste electronic products and electrical appliances dismantled since 1 January 2024, will adopt a reward-based approach to replace the previous subsidy policy. As of the end of the Relevant Periods, the management made the best estimation on the forecasted fund subsidy income based on current information and will review and update this key assumption periodically.

## 21. INVESTMENTS IN ASSOCIATES AND SUBSIDIARIES

## (a) Investments in associates

## The Group

**25. TRADE RECEIVABLES FROM THE COMPREHENSIVE RESOURCES RECYCLING AND UTILISATION**

	<u>31 December 2021</u>	<u>31 December 2022</u>	<u>31 December 2023</u>	<u>30 September 2024</u>
	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>
Trade receivables from the Ministry of Ecology and Environment of the People's Republic of China . .	311,447	339,237	397,481	443,286

The trade receivables from Guangyuan Technology, which renders comprehensive resource recycling and utilisation services to the government, are non-interest-bearing and have no fixed credit periods.

An ageing analysis of the trade receivables as at the end of each of the Relevant Periods, based on the invoice date, is as follows:

	<u>31 December 2021</u>	<u>31 December 2022</u>	<u>31 December 2023</u>	<u>30 September 2024</u>
	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>
Less than 1 year . . . . .	69,680	74,704	92,642	69,890
1 to 2 years . . . . .	83,630	69,680	74,704	88,476
2 to 3 years . . . . .	158,121	83,630	69,680	73,895
Over 3 years . . . . .	16	111,223	160,455	211,025
	<u>311,447</u>	<u>339,237</u>	<u>397,481</u>	<u>443,286</u>

In the opinion of the directors of the Company, the expected credit losses are limited because the trade receivable balances are due from the Ministry of Ecology and Environment of the PRC, which is with a high reputation and no actual loss incurred in history.

**26. TRADE RECEIVABLES FROM GOLD AND COMMODITIES SALES**

	<u>31 December 2021</u>	<u>31 December 2022</u>	<u>31 December 2023</u>	<u>30 September 2024</u>
	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>
Trade receivables . . . . .	26,334	30,097	115,750	163,455
Impairment . . . . .	<u>(1,074)</u>	<u>(460)</u>	<u>(18)</u>	<u>–</u>
	<u>25,260</u>	<u>29,637</u>	<u>115,732</u>	<u>163,455</u>

The credit period for receivables of other companies selling major metals such as gold, copper, zinc and electrolytic copper is generally within 60 days. Trade receivables are non-interest-bearing.

An ageing analysis of the trade receivables as at the end of each of the Relevant Periods, based on the invoice date, is as follows:

	31 December 2021	31 December 2022	31 December 2023	30 September 2024
	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>
Less than 1 year . . . . .	25,210	29,637	115,732	163,455
2 to 3 years . . . . .	50	–	–	–
	<u>25,260</u>	<u>29,637</u>	<u>115,732</u>	<u>163,455</u>

The movements in the loss allowance for impairment of trade receivables are as follows:

	31 December 2021	31 December 2022	31 December 2023	30 September 2024
	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>
At beginning of year/period . . . . .	296	1,074	460	18
Impairment provided . . . . .	778	–	18	–
Impairment reversed . . . . .	–	(158)	(460)	(18)
Amount written off as uncollectible . . . . .	–	(456)	–	–
At end of year/period . . . . .	<u>1,074</u>	<u>460</u>	<u>18</u>	<u>–</u>

The Group applies the simplified approach in calculating ECLs for trade receivables. Trade receivables relating to customers with known financial difficulties or significant doubt on collection are assessed individually for impairment allowance. The remaining trade receivables are grouped and collectively assessed for impairment allowance. Under the collective approach, an impairment analysis is performed at each reporting date using a provision matrix to measure expected credit losses. The provision rates are based on ageing of bills for groupings of various customer segments with similar loss patterns. The calculation reflects the probability-weighted outcome, the time value of money and reasonable and supportable information that is available at the reporting date about past events, current conditions and forecasts of future economic conditions.

In the opinion of the directors of the Company, the expected credit losses are limited because the trade receivable balances are mainly due from customers with high reputation, and the trade receivables were settled within a short subsequent period in history.

Set out below is the information about the credit risk exposure on the Group's trade receivables using a provision matrix:

**As at 31 December 2021**

	Expected credit loss rate	Gross carrying amount	Expected credit losses	Net carrying amount
		<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>
Provision on collective basis				
Aged less than 1 year . . . . .	2.59%	25,879	669	25,210
Aged 2 to 3 years . . . . .	50.00%	100	50	50
Aged over 3 years . . . . .	100.00%	355	355	–
At end of year . . . . .	<u>4.08%</u>	<u>26,334</u>	<u>1,074</u>	<u>25,260</u>

Special fund deposits for environmental rehabilitation and restoration . . . . .	6,050	18,194	9,825	6,619
Bank deposits for the gold lease business . . . . .	8,003	100,001	263,858	296,997
Certificates of deposit due within one year . . . . .	100,095	80,000	100,000	–
Deposits for investment funds . . . . .	2,733	–	–	–
	<u>116,881</u>	<u>232,560</u>	<u>387,648</u>	<u>303,616</u>

#### The Company

	31 December 2021	31 December 2022	31 December 2023	30 September 2024
	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>
Cash and bank balances . . . . .	1,029,019	401,708	244,170	359,803
Less: Restricted cash . . . . .	–	–	(13,965)	–
Cash and cash equivalents . . . . .	<u>1,029,019</u>	<u>401,708</u>	<u>230,205</u>	<u>359,803</u>
Denominated in:				
RMB . . . . .	1,029,019	401,706	243,377	308,540
USD . . . . .	–	2	793	51,263
Total . . . . .	<u>1,029,019</u>	<u>401,708</u>	<u>244,170</u>	<u>359,803</u>

As at 31 December 2021, 2022, 2023 and 30 September 2024, the Group's bank balances of approximately nil, nil, RMB13,965,000, nil were deposited for loans and were restricted for use, respectively:

	31 December 2021	31 December 2022	31 December 2023	30 September 2024
	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>
Bank deposits for loans . . . . .	–	–	<u>13,965</u>	–

The RMB is not freely convertible into other currencies, however, under Chinese Mainland's Foreign Exchange Control Regulations and Administration of Settlement, and Sale and Payment of Foreign Exchange Regulations, the Group is permitted to exchange RMB for other currencies through banks authorised to conduct foreign exchange business.

Cash at banks earns interest at floating rates based on daily bank deposit rates. The bank balances and restricted cash are deposited with creditworthy banks with no recent history of default.

## 31. FINANCIAL LIABILITIES AT FAIR VALUE THROUGH PROFIT OR LOSS

	31 December 2021	31 December 2022	31 December 2023	30 September 2024
	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>
Gold lease . . . . .	387,683	620,250	939,996	1,026,210
	<u>387,683</u>	<u>620,250</u>	<u>939,996</u>	<u>1,026,210</u>

The Group entered into gold lease contracts with certain banks for financing purposes, the Group leased gold from the banks and sold it through the trading system of the Shanghai Gold Exchange, the Group then purchased the same quantity and specification of gold through the aforesaid system to repay the banks before the maturity date of the gold lease contracts, and paid the agreed lease fee in accordance with the gold lease contracts (generally paid on the same date of the bank's quarterly interest payment date). The gold lease term is generally within 1 year inclusive. The liabilities to purchase and pay back the gold physically are measured at the price of the specified gold on the Shanghai Gold Exchange, the balance of the gold lease at the year/period end represents the fair value of the gold leased from banks at each of the balance sheet date.

## 32. TRADE AND NOTES PAYABLES

Trade payables do not bear interest and are usually settled within 60 days.

	31 December 2021	31 December 2022	31 December 2023	30 September 2024
	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>
Trade payables . . . . .	440,401	693,390	552,457	636,817
Notes payable . . . . .	–	158,000	–	–
	<u>440,401</u>	<u>851,390</u>	<u>552,457</u>	<u>636,817</u>

The trade payables are non-interest-bearing and are normally settled on 60-day terms.

An ageing analysis of trade and notes payables as at the end of each of the Relevant Periods is as follows:

	31 December 2021	31 December 2022	31 December 2023	30 September 2024
	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>
Less than 1 year . . . . .	<u>440,401</u>	<u>851,390</u>	<u>552,457</u>	<u>636,817</u>

## 33. CONTRACT LIABILITIES

	31 December 2021	31 December 2022	31 December 2023	30 September 2024
	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>	<i>RMB'000</i>
Short-term advances received from customers				
Sale of goods . . . . .	4,547	1,227	9,162	17,323
Metal Streaming Arrangement (note). . . . .	–	60,825	64,015	71,849
Sub-total . . . . .	<u>4,547</u>	<u>62,052</u>	<u>73,177</u>	<u>89,172</u>
Long-term advances received from customers				
Metal Streaming Arrangement (note). . . . .	–	606,298	576,999	538,996
	<u>4,547</u>	<u>668,350</u>	<u>650,176</u>	<u>628,168</u>

*Note:* GSR which was acquired by the Group in 2022 has following transaction: In May 2015, one subsidiary of GSR, Caystar Finance Co. entered into a gold purchase and sale agreement (the “Metal Streaming Arrangement”) with RGLD Gold AG, in which GSR obtained USD145,000,000 from RGLD Gold AG, in exchange, GSR is required to deliver 10.5% of future gold production of its two subsidiaries at a cash purchase price of 20% of the spot gold price until 240,000 ounces of gold have been delivered (“Tier One”). Thereafter, 5.5% of the gold production will be delivered at a cash purchase price of 30% of the spot gold price (“Tier Two”). As at 31 December 2022 and 2023 and 30 September 2024, GSR has delivered accumulative total 153,399 ounces, 170,096 ounces, and 184,792 ounces of gold to RGLD Gold AG, respectively.

The Group expects that the delivery obligation of the Metal Streaming Arrangement will be satisfied in 2037.

The changes of contract liabilities — Metal Streaming Arrangement from 31 January 2022 (the acquisition date of GSR) to 31 December 2022, 2023 and 30 September 2024 are as follows:

	<u>Gold delivery obligation</u>
Balance as at 31 January 2022 ( <i>note 50</i> ) . . . . .	640,754
Revenue recognised from delivery of goods . . . . .	(47,201)

## 37. PROVISIONS

Pursuant to the regulations of the governmental authorities in the places where the mines are located, the Group recognises provision for environmental rehabilitation and restoration of mines. The amount of provision is an estimate based upon the life of mining tenements, timing of mine closure and cost of such rehabilitation. The management will update the estimation basis annually.

The movement in the present value of the provision for rehabilitation are as follows:

	31 December 2021	31 December 2022	31 December 2023	30 September 2024

Non-current portion . . . . .	<u>74,813</u>	<u>64,410</u>	<u>64,231</u>	<u>65,368</u>

*Note i:* Payables for mining rights were comprise of the long-term payables to local regulators of Liaoning Wulong Gold Mining Co., Ltd., Eryuan Jintai Mining Development Co., Ltd. and Chifeng Huatai Mining Co., Ltd., the subsidiaries of the Company, to obtain certain mining rights.

*Note ii:* The payables for equity transfer referred to the payments that the Company should made to the former shareholder, MMG Finance Limited (“MMG”), for the acquisition of the subsidiary, Lane Xang Minerals Limited Company (“LXML”) in 2018. According to the acquisition agreement, the final payment should be made in 2021. In 2021, the two parties agreed to extend the final payment to 2022 after negotiation. Therefore, as at 31 December 2021, the equity transfer payable to MMG amounting to RMB173,566,000 was presented as the current portion of non-current liabilities. The payment was made in full in 2022.

## 40. SHARE INCENTIVE PLAN

## Employee Stock Ownership Plan

## i. Phase I Employee Stock Ownership Plan

The Company operates a share incentive plan (the "SIP I"), namely "Phase I Employee Stock Ownership Plan", for the purpose of providing incentives and rewards to eligible participants who contribute to the success of the Group's operations. Eligible participants of the SIP I include the directors, supervisors, senior management and other key employees of the Group. The SIP I became effective on 17 August 2021 and, unless otherwise cancelled or amended, will remain in force for three years from that date.

In order to implement the SIP I, Beijing Pan Geng Capital Management Co., Ltd. ("Pan Geng Capital") was established and designated as the share incentive platform to hold the shares specially awarded to the eligible participants as the ultimate beneficial owners.

Up to 30 April 2021, the Company repurchased a total of 41,597,732 shares, amounting to RMB663,387,000, with an average price of RMB15.96 per share to implement the SIP I.

On 17 August 2021, all the 41,597,732 shares were transferred to the share incentive platform with the price of RMB15.96 per share. As a result, a consideration of RMB663,387,000 has been received by the Company. At the same day, 117 participants were granted 41,597,732 shares at a subscribed price of RMB15.96 per share. Due to the Group can not control the share incentive platform, the share incentive platform was not consolidated in the consolidated financial statements.

The SIP I became effective on 17 August 2021 and, unless otherwise cancelled or amended, will remain in force for 36 months from the Grant date.

All of the shares granted to the participants shall be subject to a performance-based condition (the "Performance Condition"). The Performance Condition would be satisfied that the cumulative production of the Group from 2022 to 2024 is not less than 43 tons.

On 17 August 2021, as the market price of shares was RMB15.18 per share, lower than the exercise price of RMB15.96 per share, the fair value of the shares granted under the SIP I during the Relevant Periods was nil, and the Group recognised no expenses during the Relevant Periods.

The movements of shares under the SIP I during the year are as follows:

	2021		2022		2023		For the nine months ended 30 September 2024	
	Weighted average exercise price	Number of shares	Weighted average exercise price	Number of shares	Weighted average exercise price	Number of shares	Weighted average exercise price	Number of shares

Granted during the year/period . . . . .	15.96	41,598	–	–	–	–	–	–
At 31 December/30 September . . . . .	15.96	41,598	15.96	41,598	15.96	41,598	15.96	41,598

**ii. Phase II Employee Stock Ownership Plan**

The Company operates a share incentive plan (the “SIP II”), namely “Phase II Employee Stock Ownership Plan”, for the purpose of providing incentives and rewards to eligible participants who contribute to the success of the Group’s operations. Eligible participants of the SIP II include the directors, supervisors, senior management and other key employees of the Group. The SIP II became effective on 28 April 2023 and, unless otherwise cancelled or amended, will remain in force for two years from that date.

Up to 16 January 2023, the Company repurchased a total of 16,575,406 shares, amounting to RMB300,910,000, with an average price of RMB18.15 per share to implement the SIP II.

On 28 April 2023, 101 participants were granted 16,575,406 shares at a subscribed price of RMB18.15 per share. On 28 April 2023, the Company received the whole repurchase fee of RMB300,910,000 from all the participants.

The SIP II became effective on 28 April 2023 and, unless otherwise cancelled or amended, will remain in force for 24 months from that date.

All of the shares granted to the participants shall be subject to a performance-based condition (the “Performance Condition”). The Performance Condition would be satisfied that the net profit attributable to shareholders of Company in 2023 increases by more than 30% (inclusive) over the same period of last year.

As of 31 December 2023, all shares of the SIP II were vested as the Performance Condition was satisfied. As of 30 September 2024, the Company sold out all shares of the SIP II on behalf of the eligible participants, and receivables from the securities company and payables to the eligible participants were recorded accordingly. Up to 31 October 2024, all the receivables and payables were settled.

On 28 April 2023, as the market price of shares was RMB16.57 per share, lower than the exercise price of RMB18.15 per share, the fair value of the shares granted under the SIP II during the Relevant Periods was nil, and the Group recognised no expenses during the Relevant Periods.

The movements of shares under the SIP II during the year are as follows:

**48. FAIR VALUE AND FAIR VALUE HIERARCHY OF FINANCIAL INSTRUMENTS**

Management has assessed that the fair values of cash and cash equivalents, trade receivables from comprehensive recycling of resources business, trade receivables from gold and commodities sales, financial assets included in prepayments, other receivables and other assets, trade and notes payables, financial liabilities included in other payables and accruals, and other non-current liabilities due within one year approximate to their carrying amounts largely due to the short-term maturities of these instruments.

The fair values of financial assets included in other non-current assets, short-term and long-term loans, lease liabilities and financial liabilities included in other non-current liabilities were determined by discounting the expected future cash flows using market rates of return currently available for other financial instruments with similar terms, credit risk and remaining maturities or incremental borrowing rate. The Group's own non-performance risk for short-term and long-term loans was assessed to be insignificant. The futures contracts and listed equity investments is determined based on the settlement price of the gold futures contracts held in the Shanghai Futures Exchange on the balance sheet date and quoted market prices. The outstanding gold lease financing market value is determined based on the closing price of the gold lease products on the Shanghai Gold Exchange on the balance sheet date.

The Group's finance department headed by the finance manager is responsible for determining the policies and procedures for the fair value measurement of financial instruments. The finance manager reports directly to the chief financial officer and the audit committee. At the end of each of the Relevant Periods, the finance department analyses the movements in the values of financial instruments and determines the major inputs applied in the valuation. The valuation is reviewed and approved by the chief financial officer. The valuation process and results are discussed with the audit committee twice a year for interim and annual financial reporting.

**Fair value hierarchy**

The following tables illustrate the fair value measurement hierarchy of the Group's financial instruments:

**Assets measured at fair value:**

As at 31 December 2021

	<u>1,043,212</u>	<u>–</u>	<u>–</u>	<u>1,043,212</u>

During the Relevant Periods, there were no transfers between Level 1 and Level 2, or transfers into or out of Level 3 for both financial assets and financial liabilities. The Group's policy is to recognise transfers between levels of the fair value hierarchy as at the end of each of the Relevant Periods in which they occur.

#### 49. FINANCIAL RISK MANAGEMENT OBJECTIVES AND POLICIES

The Group is exposed to various risks in relation to financial instruments in its daily operations, mainly credit risk, liquidity risk and market risk (including interest rate risk, exchange rate risk, and commodity price risk). The Group's major financial instruments include cash and cash equivalents, financial assets at fair value through profit or loss, derivative financial assets, trade receivables, other non-current assets, short-term and long-term loans, financial liabilities at fair value through profit or loss, trade and notes payables, other payables and accruals, etc. The Group also enters into certain derivative transactions, including interest rate swaps, commodity future contracts and forward exchange contracts. The purpose is to manage the interest rate risk, commodity price risk and currency risks arising from the Group's operations and its sources of finance. The Group manages the market risks of derivatives based on the difference between the metal price in the market and the target metal price pre-determined by management. Risks in connection with such financial instruments, and the risk management strategies adopted by the Group to mitigate such risks are summarised as follows.

##### Interest rate risk

The Group's exposure to the risk of changes in market interest rates relates primarily to the Group's long-term debt obligations with a floating interest rate.

The following table demonstrates the sensitivity to a reasonably possible change in interest rates, with all other variables held constant, of the Group's profit after tax (through the impact on floating rate borrowings) and the Group's equity.

	Increase/(decrease) in basis points	Increase/(decrease) in profit after tax	Increase/(decrease) in total shareholders' equity

### Foreign currency risk

The Group has transactional exchange rate risk exposures mainly arising from sales or purchases by subsidiaries in currencies other than the subsidiaries' functional currencies. The Group has subsidiaries using USD and RMB as their functional currencies. These subsidiaries have transactions in currencies other than their functional currencies. In addition, the Group has exchange rate exposures arising from foreign currency borrowings. The Group adopts an overall management on its foreign exchange business, and reduces its exchange rate exposures using forward foreign exchange contracts based on the market trend as necessary.

The following tables present a sensitivity analysis of exchange rate risk, reflecting the impact that a reasonable and probable change in the exchange rates of USD, GHC, GBP, CAD, AUD, LAK, THB, EUR and ZAR, with all other variables remain constant, would have on net profit or loss and other comprehensive income, net of tax.

	Increase/(decrease) in exchange rate	Increase/(decrease) in profit after tax	Increase/(decrease) in total shareholders' equity

#### Price risk of equity instrument investments

Price risk of equity instrument investments refers to the risk that the fair value of equity securities was reduced due to changes in the level of the stock index and the value of individual securities. As at 31 December 2021, 2022, and 2023 and as at 30 September 2024, the Group was exposed to the price risk of individual equity instrument investments due to the classification as equity instrument investments at fair value through profit or loss.

The listed equity instrument investment was listed on the Australian Stock Exchange and the Canadian Securities Exchange, and was measured at quoted market price at balance sheet date.

The following tables demonstrate the sensitivity of the Group's net profit and loss and other comprehensive income net of tax to every 5% change in the fair value of equity instrument investments, under the assumption that all other variables are held constant. Management considered that the percentage of 5% reasonably reflects the reasonable range of possible change in fair value in the following year.

	Equity instrument investments	Net gains and losses	Total shareholders' equity
	<i>Book value</i>	<i>Increase/ (decrease)</i>	<i>Increase/ (decrease)</i>

**Credit risk**

The Group only deals with approved and reputable third parties. According to the Group's policy, all customers who require credit transactions are subject to credit review. In addition, the Group continuously monitors the balance of trade receivables to ensure that the Group is not exposed to significant bad debt risks.

Since counterparties of cash and bank balances are banks with good reputation and high credit ratings, credit risk arising from these financial instruments is insignificant.

Other financial assets of the Group include receivables and some derivatives. The credit risk on these financial assets arises from the default of counterparties, with a maximum exposure equal to the carrying amounts of these instruments.

The Group only deals with approved and reputable third parties, so no need for collateral. Credit risk is managed centrally based on customers/counterparties, geographic regions and industries. As at 31 December 2021, 2022 and 2023 and 30 September 2024, the Group had a specific concentration of credit risk. 41.70%, 46.27%, 63.41%, and 52.30% of the Group's trade receivables from gold and commodities sales were from the largest customers in terms of trade receivable balances. 92.74%, 85.11%, 98.38% and 99.98% of the Group's trade receivables from gold and commodities sales were from the top five customers in terms of trade receivable balances. The balance of trade receivables of the Group did not hold any collateral or other credit enhancements.

As at 31 December 2021, 2022 and 2023 and 30 September 2024, trade receivables from the comprehensive recycling of resources business balances were government dismantling tariffs provided by the PRC government for the treatment of certain waste electric and electronic products. In the opinion of the directors of the Company, the expected credit losses are low because the trade receivable balances are due from the Ministry of Ecology and Environment of the PRC which is with high reputation and no actual loss was incurred in history.

***Determination of significant increase in credit risk***

At each balance sheet date, the Group assesses whether the credit risk on the relevant financial instruments has increased significantly since initial recognition. When determining whether the credit risk has increased significantly since initial recognition, the Group considers reasonable and supportable information that is relevant and available without undue cost or effort, including qualitative and quantitative analysis based on historical data of the Group, external credit risk ratings and forward-looking information. The Group, based on individual financial instruments or financial instrument groupings with similar credit risk characteristics, determines changes in the risk of default in the estimated lifetime of financial instruments by comparing the risk of default of financial instruments at the balance sheet date with that at the initial recognition.

The credit quality of the financial assets is considered to be "normal" when they are not past due and there is no information indicating that the financial assets had a significant increase in credit risk since initial recognition. Otherwise, the credit quality of the financial assets is considered to be "doubtful".

***Definition of credit-impaired financial assets***

In order to determine whether credit impairment occurs, the defined criteria adopted by the Group are consistent with the internal credit risk management objectives for relevant financial instruments, both of which incorporate quantitative and qualitative indicators. When assessing whether a debtor has suffered a credit impairment, the Group usually considers the following factors:

- (1) significant financial difficulty of the issuer or the debtor;
- (2) breach of contract by the debtor, such as default or overdue payment in interest or principal repayment;
- (3) a concession granted by the creditor to the debtor due to economic or contractual considerations related to the debtor's financial difficulty, which will not be granted under any other circumstances;
- (4) possible bankruptcy or other financial reorganization of the debtor;
- (5) disappearance of an active market for the financial asset due to financial difficulty of the issuer or the debtor;
- (6) financial assets purchased or sourced at large discounts indicating credit losses have occurred.

Financial assets may be credit-impaired due to the joint effects of multiple events rather than separately identifiable events.

### Liquidity risk

The Group monitors its risk to a shortage of funds using a recurring liquidity planning tool. This tool considers both the maturity of its financial instruments and financial assets (e.g., trade receivables) and projected cash flows from operations.

The Group's objective is to maintain a balance between continuity of funding and flexibility through the use of loans and bank borrowings.

The maturity profile of the Group's financial liabilities as at the end of each of the Relevant Periods, based on the contractual undiscounted payments, is as follows:

As at 31 December 2021

### Capital management

The primary objective of the Group's capital management is to ensure that it maintains strong credit rating and healthy capital ratios in order to support its business and maximise shareholders' value.

The Group regards total equity as its capital and manages its capital structure and makes adjustments to it, in light of changes in economic conditions. To maintain or adjust the capital structure, the Group may adjust the dividend payment to shareholders, return capital to shareholders or issue new shares. No changes were made in the objectives, policies and processes during the Relevant Periods.

During the Relevant Periods, the Group's strategy was to maintain the gearing ratio at a healthy level in order to monitor capital. The principal strategies adopted by the Group include, but are not limited to, reviewing future cash flow requirements and the ability to meet debt repayment schedules when they fall due, maintaining a reasonable level of available banking facilities and adjusting investment plans and financing plans, if necessary, to ensure that the Group has a reasonable level of capital to support its business. Gearing ratio is total liabilities divided by total assets.

The gearing ratios at the end of each of the Relevant Periods were as follows:

	31 December 2021	31 December 2022	31 December 2023	30 September 2024
	RMB'000	RMB'000	RMB'000	RMB'000
Total assets . . . . .	<u>8,053,606</u>	<u>17,544,294</u>	<u>18,717,793</u>	<u>19,895,168</u>

Gearing ratio . . . . .	<u>38%</u>	<u>58%</u>	<u>54%</u>	<u>51%</u>

## 50. ACQUISITIONS

### (a) Acquisitions of Golden Star Resources

On 31 October 2021, Chijin HK entered into an agreement to acquire 62% of all issued and outstanding common shares of GSR at a price of US\$3.91 per share, for a total consideration of approximately USD291 million. On 28 January 2022, the acquisition was completed.

The fair values of the identifiable assets and liabilities of GSR as at the date of acquisition were as follows:

	<i>Notes</i>	<b>Fair value recognised on acquisition</b>
		<i>RMB'000</i>
Property, plant and equipment . . . . .	17	1,904,982
Right-of-use assets . . . . .	18	197,200
Other intangible assets . . . . .	19	5,248,534
Deferred tax assets . . . . .	22	66,828
Other non-current assets . . . . .		14,759
Cash and cash equivalents . . . . .		70,007
Financial assets at fair value through profit or loss . . . . .		158
Trade receivables . . . . .		6,500
Prepayments, deposits and other receivables . . . . .		92,390
Inventories . . . . .		195,913
Provisions . . . . .	37	(108,800)
Contract liabilities . . . . .	33	(640,754)
Lease liabilities . . . . .	18	(207,137)
Deferred tax liabilities . . . . .	22	(2,226,163)
Trade and notes payables . . . . .		(172,763)
Other payables and accrued charges . . . . .		(903,498)
Tax payable . . . . .		(10,588)
Total identifiable net assets at fair value . . . . .		3,527,568
Non-controlling interests . . . . .		(1,666,393)
Net assets acquired . . . . .		1,861,175
Gain on recognition of negative goodwill . . . . .		(6,371)
Satisfied by cash . . . . .		1,854,804

An analysis of the cash flows in respect of the acquisition of a subsidiary is as follows:

	<b>2022</b>
	<i>RMB'000</i>
Cash consideration . . . . .	(1,854,804)
Cash and bank balances acquired . . . . .	70,007
Total net cash outflow . . . . .	(1,784,797)

Since the acquisition, GSR contributed RMB1,790,576,000 to the Group's revenue and a loss of RMB5,471,000 to the Group's consolidated profit for the year ended 31 December 2022.

Had the combination taken place at the beginning of the year, the revenue from continuing operations of the Group and the profit of the Group for the year would have been RMB6,378,263,000 and RMB140,457,000, respectively.

**(b) Acquisition of Xinhenghe Mining**

On 30 December 2022, the Group entered into an Equity Transfer Agreement with Liu Xin, Li Yuanyuan, Wang Zhonghua, Yunnan Yuanhao Mining Co., Ltd. and Kunming Xinhenghe Mining Co., Ltd. ("Xinhenghe Mining") to subscribe for a 51% equity interest in Xinhenghe Mining by way of cash at a subscription price of RMB61,200,000. The transaction was completed on 9 January 2023 and the Group holds a 51% equity interest in Xinhenghe Mining upon the completion of the transaction. The management of the Company believes that Xinhenghe Mining and its subsidiaries do not constitute a business, and the acquisition is treated as an asset acquisition for accounting purposes. As of 30 September 2024, there was an outstanding amount of RMB40,800,000 for the acquisition that has not been paid, which will be paid after an exploration right be transferred into mining right.

**52. EVENTS AFTER THE RELEVANT PERIODS**

- (1) On March 4, 2024, China Investment (Property) Limited (“China Investment”) (as seller, and an Independent Third Party), Chixia Laos (as purchaser) and Chijin Xiawu (as guarantor) entered into an equity transfer agreement, pursuant to which Chixia Laos shall acquire from China Investment 90% equity interest in China Investment Mining (Laos) Sole Co., Ltd (“the target company”), which was wholly owned by China Investment, at a total consideration of approximately USD19.0 million, including an equity acquisition amount of USD6.3 million and a repayment to the debt of the target company amounting to USD12.7 million. As at 30 September 2024, the Group’s prepayment for equity acquisition is RMB66,844,000. Up to the date of this report, the Group has obtained the approval from the National Development and Reform Commission of the PRC, and the parties to the transactions were proceeding with the fulfilment of the other conditions of the transaction including changes of the authorized representative of the target company.
- (2) Upon resolutions at the general meeting of the Company on 15 January 2025, a share incentive plan (the “SIP III”), namely “Phase III Employee Stock Ownership Plan”, for the purpose of providing incentives and rewards to eligible participants who contribute to the success of the Group’s operations was approved. The SIP III has been effective in February 2025 and, unless otherwise cancelled or amended, will remain in force for 24 months from that date.

All of the shares that will be granted to the participants shall be subject to a performance-based condition, which would be satisfied that the gold production volume of Company in 2025 increases by more than 5% (inclusive) over the same period of last year. Up to the date of this report, 15,182,600 shares of SIP III have been granted to the participants.

**53. SUBSEQUENT FINANCIAL STATEMENTS**

No audited financial statements have been prepared by the Company, the Group or any of its subsidiaries in respect of any period subsequent to 30 September 2024.

## ACCOUNTANTS' REPORT ON HISTORICAL FINANCIAL INFORMATION OF GOLDEN STAR RESOURCES LTD. TO THE DIRECTORS OF CHIFENG JILONG GOLD MINING CO., LTD AND CITIC SECURITIES (HONG KONG) LTD.

### Introduction

We report on the historical financial information of Golden Star Resources Ltd. (the “Company”) and its subsidiaries (together, the “Group”) set out on pages IB-4 to IB-53, which comprises the consolidated statements of profit or loss, the consolidated statements of comprehensive income, the consolidated statements of changes in equity and the consolidated statements of cash flows of the Group for the year ended 31 December 2021 and the one month ended 31 January 2022 (the “Relevant Periods”), and the consolidated statements of financial position of the Group and the statements of financial position of the Company as at 31 December 2021 and 31 January 2022 and material accounting policy information and other explanatory information (together, the “Historical Financial Information”). The Historical Financial Information set out on pages IB-4 to IB-53 forms an integral part of this report, which has been prepared for inclusion in the prospectus of Chifeng Jilong Gold Mining Co., Ltd. dated 28 February 2025 (the “Prospectus”) in connection with the initial listing of the shares of Chifeng Jilong Gold Mining Co., Ltd. on the Main Board of The Stock Exchange of Hong Kong Limited (the “Stock Exchange”).

### Directors' responsibility for the Historical Financial Information

The directors of the Company are responsible for the preparation of the Historical Financial Information that gives a true and fair view in accordance with the basis of preparation set out in Note 2 to the Historical Financial Information, and for such internal control as the directors determine is necessary to enable the preparation of the Historical Financial Information that is free from material misstatement, whether due to fraud or error.

**Reporting accountants' responsibility**

Our responsibility is to express an opinion on the Historical Financial Information and to report our opinion to you. We conducted our work in accordance with Hong Kong Standard on Investment Circular Reporting Engagements 200 *Accountants' Reports on Historical Financial Information in Investment Circulars* issued by the Hong Kong Institute of Certified Public Accountants ("HKICPA"). This standard requires that we comply with ethical standards and plan and perform our work to obtain reasonable assurance about whether the Historical Financial Information is free from material misstatement.

Our work involved performing procedures to obtain evidence about the amounts and disclosures in the Historical Financial Information. The procedures selected depend on the reporting accountants' judgement, including the assessment of risks of material misstatement of the Historical Financial Information, whether due to fraud or error. In making those risk assessments, the reporting accountants consider internal control relevant to the entity's preparation of the Historical Financial Information that gives a true and fair view in accordance with the basis of preparation set out in Note 2 to the Historical Financial Information, in order to design procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Our work also included evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by the directors, as well as evaluating the overall presentation of the Historical Financial Information.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

**Opinion**

In our opinion, the Historical Financial Information gives, for the purposes of the accountants' report, a true and fair view of the financial position of the Group and the Company as at 31 December 2021 and 31 January 2022 and of the financial performance and cash flows of the Group for each of the Relevant Periods in accordance with the basis of preparation set out in Note 2 to the Historical Financial Information.

**Review of interim comparative financial information**

We have reviewed the interim comparative financial information of the Group which comprises the consolidated statement of profit or loss, the consolidated statement of comprehensive income, the consolidated statement of changes in equity and the consolidated statement of cash flows for the one month ended 31 January 2021 and other explanatory information (the "Interim Comparative Financial Information"). The directors of the Company are responsible for the preparation and presentation of the Interim Comparative Financial Information in accordance with the basis of preparation set out in Note 2 to the Historical Financial Information. Our responsibility is to express a conclusion on the Interim

Comparative Financial Information based on our review. We conducted our review in accordance with International Standard on Review Engagements 2410 *Review of Interim Financial Information Performed by the Independent Auditor of the Entity* issued by the International Auditing and Assurance Standards Board (“IAASB”). A review consists of making inquiries, primarily of persons responsible for financial and accounting matters, and applying analytical and other review procedures. A review is substantially less in scope than an audit conducted in accordance with International Standards on Auditing and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion. Based on our review, nothing has come to our attention that causes us to believe that the Interim Comparative Financial Information, for the purposes of the accountants’ report, is not prepared, in all material respects, in accordance with the basis of preparation set out in Note 2 to the Historical Financial Information.

**Report on matters under the Rules Governing the Listing of Securities on the Stock Exchange and the Companies (Winding Up and Miscellaneous Provisions) Ordinance**

***Adjustments***

In preparing the Historical Financial Information, no adjustments to the Underlying Financial Statements as defined on page IB-4 have been made.

***Dividends***

We refer to Note 15 to the Historical Financial Information which states that no dividends have been paid by the Company in respect of the Relevant Periods.

**Ernst & Young**

*Certified Public Accountants*

Hong Kong

28 February 2025

**I. HISTORICAL FINANCIAL INFORMATION****Preparation of Historical Financial Information**

Set out below is the Historical Financial Information which forms an integral part of this accountants' report.

The financial statements of the Group for the Relevant Periods, on which the Historical Financial Information is based, were audited by Ernst & Young in accordance with International Standards on Auditing issued by the IAASB (the "Underlying Financial Statements").

The Historical Financial Information is presented in Renminbi ("RMB") and all values are rounded to the nearest thousand (RMB'000) except when otherwise indicated.

## II. NOTES TO THE HISTORICAL FINANCIAL INFORMATION

## 1. CORPORATE INFORMATION

Golden Star Resources Ltd. (“Golden Star” or “the Company”) is an international gold mining and exploration company incorporated under the Canada Business Corporations Act. The Company’s registered office is located at 333 Bay Street, Suite 2400, Toronto, Ontario, M5H 2T6 Canada, and the Company has corporate offices in London, United Kingdom and Accra, Ghana.

Through our 90% owned subsidiary, Golden Star (Wassa) Limited, the Company own and operate the Wassa underground mine and a carbon-in-leach processing plant (collectively “Wassa”), located northeast of the town of Tarkwa, Ghana.

As at the date of this report, the Company had direct and indirect interests in its subsidiaries, all of which are private limited liability companies, the particulars of which are set out below:

Name*	Place and date of incorporation/ registration and place of operations	Percentage of equity attributable to the Company		Principal activities
		% Direct	% Indirect	
Caystar Holdings . . . . .	Cayman 7 May, 1997	100%	–	Management
Caystar Finance Co. . . . .	Cayman 28 April, 2015	–	100%	Finance
Caystar Management Holdings . . .	Cayman 1 September, 2003	–	100%	Management
Wasford Holdings . . . . .	Cayman 2 April, 2002	–	100%	Management
Golden Star (Wassa) Limited . . . .	Ghana 22 November, 2001	–	90%	Mining
St. Jude Resources Ltd. . . . .	Canada 31 May, 1985	100%	–	Investment holding
Golden Star Resources (UK) Ltd. .	The United Kingdom 10 May, 2019	100%	–	Management

## 2. BASIS OF PREPARATION

The Historical Financial Information has been prepared in accordance with International Financial Reporting Standards (“IFRSs”), which comprise all standards and interpretations approved by the International Accounting Standards Board (the “IASB”). All IFRSs effective for the accounting period commencing from 1 January 2022, together with the relevant transitional provisions, have been early adopted by the Group in the preparation of the Historical Financial Information throughout the Relevant Periods and in the period covered by the Interim Comparative Financial Information.

The Historical Financial Information has been prepared under the historical cost convention, except for derivative financial instruments and financial assets at fair value through profit or loss which have been measured at fair value.

**Going concern basis**

As at 31 January 2022, the Group had net current liabilities of RMB799,960,000. The directors of the Group have given consideration to the future liquidity and performance of the Group and its available sources of finance in assessing whether the Group will have sufficient financial resources to continue as a going concern. In order to improve the Group’s liquidity and cash flows to sustain the Group’s operation for the next twelve months from 31 January 2022, the shareholders of the Company has undertaken to provide adequate financial support to enable the Group to meet its liabilities as and when they fall due. Accordingly, the Historical Financial Information of the Group has been prepared on a going concern basis.

**Basis of consolidation**

The Historical Financial Information include the financial statements of the Company and its subsidiaries (collectively referred to as the “Group”) for the Relevant Periods. A subsidiary is an entity (including a structured entity), directly or indirectly, controlled by the Company. Control is achieved when the Group is exposed, or has rights, to variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee (i.e., existing rights that give the Group the current ability to direct the relevant activities of the investee).

Generally, there is a presumption that a majority of voting rights results in control. When the Company has less than a majority of the voting or similar rights of an investee, the Group considers all relevant facts and circumstances in assessing whether it has power over an investee, including:

- (a) the contractual arrangement with the other vote holders of the investee;
- (b) rights arising from other contractual arrangements; and
- (c) the Group’s voting rights and potential voting rights.

The financial statements of the subsidiaries are prepared for the same reporting period as the Company, using consistent accounting policies. The results of subsidiaries are consolidated from the date on which the Group obtains control, and continue to be consolidated until the date that such control ceases.

Profit or loss and each component of other comprehensive income are attributed to the owners of the parent of the Group and to the non-controlling interests, even if this results in the non-controlling interests having a deficit balance. All intra-group assets and liabilities, equity, income, expenses and cash flows relating to transactions between members of the Group are eliminated in full on consolidation.

The Group reassesses whether or not it controls an investee if facts and circumstances indicate that there are changes to one or more of the three elements of control described above. A change in the ownership interest of a subsidiary, without a loss of control, is accounted for as an equity transaction.

If the Group loses control over a subsidiary, it derecognises the related assets (including goodwill), liabilities, any non-controlling interest and the exchange fluctuation reserve; and recognises the fair value of any investment retained and any resulting surplus or deficit in profit or loss. The Group’s share of components previously recognised in other comprehensive income is reclassified to profit or loss or retained profits, as appropriate, on the same basis as would be required if the Group had directly disposed of the related assets or liabilities.

**3. ISSUED BUT NOT YET EFFECTIVE INTERNATIONAL FINANCIAL REPORTING STANDARDS**

The Group has not applied the following new and revised IFRSs that have been issued but are not yet effective, in the Historical Financial Information.

Amendments to IFRS 10 and IAS 28 . . . . .	<i>Sale or Contribution of Assets between an Investor and its Associate or Joint Venture</i> <sup>3</sup>
Amendments to IFRS 16 . . . . .	<i>Lease Liability in a Sale and Leaseback</i> <sup>2</sup>
Amendment to IFRS 17 . . . . .	<i>Initial Application of IFRS 17 and IFRS 9 — Comparative Information</i> <sup>5</sup>
Amendments to IAS 1 . . . . .	<i>Classification of Liabilities as Current or Non-current (the “2020 Amendments”)</i> <sup>2, 4</sup>
Amendments to IAS 1 . . . . .	<i>Non-current Liabilities with Covenants (the “2022 Amendments”)</i> <sup>2</sup>
Amendments to IAS 1 and IFRS Practice Statement 2 . . . . .	<i>Disclosure of Accounting Policies</i> <sup>1</sup>
Amendments to IAS 8 . . . . .	<i>Definition of Accounting Estimates</i> <sup>1</sup>
Amendments to IAS 12 . . . . .	<i>Deferred Tax related to Assets and Liabilities arising from a Single Transaction</i> <sup>1</sup>
Amendments to IAS 21 . . . . .	<i>Lack of Exchangeability</i> <sup>6</sup>
IFRS 18 . . . . .	<i>Presentation and Disclosure in Financial Statements</i> <sup>7</sup>
IFRS 19 . . . . .	<i>Subsidiaries without Public Accountability: Disclosures</i> <sup>7</sup>
Amendments to IFRS 9 and IFRS 7 . . . . .	<i>Amendments to the Classification and Measurement of Financial Instruments</i> <sup>8</sup>

- 1 Effective for annual periods beginning on or after 1 January 2023
- 2 Effective for annual periods beginning on or after 1 January 2024
- 3 No mandatory effective date yet determined but available for adoption
- 4 As a consequence of the 2022 Amendments, the effective date of the 2020 Amendments was deferred to annual periods beginning on or after 1 January 2024. In addition, as a consequence of the 2020 Amendments and 2022 Amendments, Hong Kong Interpretation 5 *Presentation of Financial Statements – Classification by the Borrower of a Term Loan that Contains a Repayment on Demand Clause* was revised to align the corresponding wording with no change in conclusion
- 5 An entity that chooses to apply the transition option relating to the classification overlay set out in this amendment shall apply it on initial application of HKFRS 17
- 6 Effective for annual periods beginning on or after 1 January 2025
- 7 Effective for annual periods beginning on or after 1 January 2027
- 8 Effective for annual periods beginning on or after 1 January 2026

The Group is in the process of making an assessment of the impact of these new and revised IFRSs upon initial application. So far, the Group considers that these new and revised IFRSs may result in changes in accounting policies but are unlikely to have a significant impact on the Group's result of operation and financial position.

#### 4. MATERIAL ACCOUNTING POLICY INFORMATION

##### Fair value measurement

The Group measures certain of its financial assets and financial liabilities at fair value at the end of each of the Relevant Periods. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The fair value measurement is based on the presumption that the transaction to sell the asset or transfer the liability takes place either in the principal market for the asset or liability, or in the absence of a principal market, in the most advantageous market for the asset or liability. The principal or the most advantageous market must be accessible by the Group. The fair value of an asset or a liability is measured using the assumptions that market participants would use when pricing the asset or liability, assuming that market participants act in their economic best interest.

A fair value measurement of a non-financial asset takes into account a market participant's ability to generate economic benefits by using the asset in its highest and best use or by selling it to another market participant that would use the asset in its highest and best use.

The Group uses valuation techniques that are appropriate in the circumstances and for which sufficient data are available to measure fair value, maximising the use of relevant observable inputs and minimising the use of unobservable inputs.

All assets and liabilities for which fair value is measured or disclosed in the Historical Financial Information are categorised within the fair value hierarchy, described as follows, based on the lowest level input that is significant to the fair value measurement as a whole:

- |         |   |   |
|---------|---|---|
| Level 1 | – | based on quoted prices (unadjusted) in active markets for identical assets or liabilities   |
| Level 2 | – | based on valuation techniques for which the lowest level input that is significant to the fair value measurement is observable, either directly or indirectly |
| Level 3 | – | based on valuation techniques for which the lowest level input that is significant to the fair value measurement is unobservable                              |

For assets and liabilities that are recognised in the Historical Financial Information on a recurring basis, the Group determines whether transfers have occurred between levels in the hierarchy by reassessing categorisation (based on the lowest level input that is significant to the fair value measurement as a whole) at the end of each of the Relevant Periods.

**Impairment of non-financial assets**

Where an indication of impairment exists, or when annual impairment testing for an asset is required (other than inventories, deferred tax assets and financial assets), the asset's recoverable amount is estimated. An asset's recoverable amount is the higher of the asset's or cash-generating unit's value in use and its fair value less costs of disposal, and is determined for an individual asset, unless the asset does not generate cash inflows that are largely independent of those from other assets or groups of assets, in which case the recoverable amount is determined for the cash-generating unit to which the asset belongs. In testing a cash-generating unit for impairment, a portion of the carrying amount of a corporate asset (e.g., a headquarters building) is allocated to an individual cash-generating unit if it can be allocated on a reasonable and consistent basis or, otherwise, to the smallest group of cash-generating units.

An impairment loss is recognised only if the carrying amount of an asset exceeds its recoverable amount. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. An impairment loss is charged to the statement of profit or loss in the period in which it arises in those expense categories consistent with the function of the impaired asset.

An assessment is made at the end of each of the Relevant Periods as to whether there is an indication that previously recognised impairment losses may no longer exist or may have decreased. If such an indication exists, the recoverable amount is estimated. A previously recognised impairment loss of an asset other than goodwill is reversed only if there has been a change in the estimates used to determine the recoverable amount of that asset, but not to an amount higher than the carrying amount that would have been determined (net of any depreciation/amortisation) had no impairment loss been recognised for the asset in prior years. A reversal of such an impairment loss is credited to the statement of profit or loss in the period in which it arises.

**Related parties**

A party is considered to be related to the Group if:

- (a) the party is a person or a close member of that person's family and that person:
  - (i) has control or joint control over the Group;
  - (ii) has significant influence over the Group; or
  - (iii) is a member of the key management personnel of the Group or of a parent of the Group;

or

- (b) the party is an entity where any of the following conditions applies:
  - (i) the entity and the Group are members of the same group;
  - (ii) one entity is an associate or joint venture of the other entity (or of a parent, subsidiary or fellow subsidiary of the other entity);
  - (iii) the entity and the Group are joint ventures of the same third party;
  - (iv) one entity is a joint venture of a third entity and the other entity is an associate of the third entity;
  - (v) the entity is a post-employment benefit plan for the benefit of employees of either the Group or an entity related to the Group;
  - (vi) the entity is controlled or jointly controlled by a person identified in (a);

- (vii) a person identified in (a)(i) has significant influence over the entity or is a member of the key management personnel of the entity (or of a parent of the entity); and
- (viii) the entity, or any member of a group of which it is a part, provides key management personnel services to the Group or to the parent of the Group.

#### Property, plant and equipment and depreciation

Property, plant and equipment, other than construction in progress, are stated at cost less accumulated depreciation and any impairment losses. The cost of an item of property, plant and equipment comprises its purchase price and any directly attributable costs of bringing the asset to its working condition and location for its intended use.

Expenditure incurred after items of property, plant and equipment have been put into operation, such as repairs and maintenance, is normally charged to profit or loss in the period in which it is incurred. In situations where the recognition criteria are satisfied, the expenditure for a major inspection is capitalised in the carrying amount of the asset as a replacement. Where significant parts of property, plant and equipment are required to be replaced at intervals, the Group recognises such parts as individual assets with specific useful lives and depreciates them accordingly.

Depreciation for mobile equipment and other assets having estimated lives shorter than the estimated life of the ore reserves is calculated using the straight-line method at rates which depreciate the cost of the assets, less their anticipated residual values, if any, over their estimated useful lives as follows:

	Estimated useful lives	Annual depreciation rates
Mobile equipment . . . . .	2 to 5 years	20% to 50%
Electronic equipment and others . . . . .	2 to 5 years	20% to 50%

Where parts of an item of property, plant and equipment have different useful lives, the cost of that item is allocated on a reasonable basis among the parts and each part is depreciated separately. Residual values, useful lives and the depreciation method are reviewed, and adjusted if appropriate, at least at the end of each of the Relevant Periods.

An item of property, plant and equipment including any significant part initially recognised is derecognised upon disposal or when no future economic benefits are expected from its use or disposal. Any gain or loss on disposal or retirement recognised in the statement of profit or loss in the years/periods the asset is derecognised is the difference between the net sales proceeds and the carrying amount of the relevant asset.

Construction in progress is stated at cost less any impairment losses, and is not depreciated. Cost comprises the direct costs of construction and capitalised borrowing costs on related borrowed funds during the period of construction. Construction in progress is reclassified to the appropriate category of property, plant and equipment when completed and ready for use.

#### Other Intangible assets

Other intangible assets acquired separately are measured on initial recognition at cost. The cost of intangible assets acquired in a business combination is the fair value at the date of acquisition. The useful lives of intangible assets are assessed to be either finite or indefinite. Intangible assets with finite lives are subsequently amortised over the useful economic life and assessed for impairment whenever there is an indication that the intangible asset may be impaired. Other intangible assets are amortized over the life of the proven and probable reserves to which they relate, using a units-of production amortization method. At open pit mines the costs of removing overburden from an ore body in order to expose ore during its initial development period are capitalized.

**Exploration rights and assets**

Exploration and evaluation assets are stated at cost less impairment losses. Exploration and evaluation includes costs of geological prospecting for technical consultancy and costs of feasibility study for commercial development which incurred in the surroundings, outer ring and deep areas of the existing or externally acquired mineral properties, and costs of drilling, trench sampling and other associated activities. Such expenditures may be capitalized when the mineral properties are reasonably determined to be commercially available and recognized as intangible assets after obtaining mining rights or permits, which will be amortized under the units-of-production method. If any construction was abandoned in the development phase or belongs to the productive exploration, all costs shall be written off and recognized in profit or loss for the current period.

Impairment reviews of exploration and evaluation assets are undertaken if events or changes in circumstances indicate a potential impairment. The carrying value of exploration and evaluation assets is compared to the recoverable amount, which is the higher of value-in-use and the fair value less costs of disposal. For the purposes of assessing impairment, assets are grouped at the lowest levels for which there are separately identifiable cash-generating units. Exploration and evaluation assets that suffered impairment are reviewed for possible reversal of the impairment at each reporting date.

Exploration rights are stated at cost less impairment losses. Exploration rights include the cost of acquiring exploration rights.

Mining rights are stated at cost less accumulated amortisation and any impairment losses. Mining rights include the cost of acquiring mining licences, exploration rights and exploration and evaluation assets upon determination that an exploration property is capable of commercial production, and the cost of acquiring interests in the mining reserves of existing mining properties. The mining rights are amortised in accordance with the production plans of the entities concerned and the proven and probable mineral reserves of the mines using the UOP method. Mining rights are written off to profit or loss if the mining property is abandoned.

**Leases**

The Group assesses at contract inception whether a contract is, or contains, a lease. A contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration.

***Group as a lessee***

The Group applies a single recognition and measurement approach for all leases, except for short-term leases and leases of low-value assets. The Group recognises lease liabilities to make lease payments and right-of-use assets representing the right to use the underlying assets.

***(a) Right-of-use assets***

Right-of-use assets are recognised at the commencement date of the lease (that is the date the underlying asset is available for use). Right-of-use assets are measured at cost, less accumulated depreciation and any impairment losses, and adjusted for any remeasurement of lease liabilities. The cost of right-of-use assets includes the amount of lease liabilities recognised, initial direct costs incurred, and lease payments made at or before the commencement date less any lease incentives received. Right-of-use assets are depreciated on a straight-line basis over the shorter of the lease terms and the estimated useful lives of the assets as follows:

Leasehold land . . . . .	50 years
Buildings . . . . .	3 to 5 years
Machinery and vehicles . . . . .	2 to 5 years

If ownership of the leased asset transfers to the Group by the end of the lease term or the cost reflects the exercise of a purchase option, depreciation is calculated using the estimated useful life of the asset.

*(b) Lease liabilities*

Lease liabilities are recognised at the commencement date of the lease at the present value of lease payments to be made over the lease term. The lease payments include fixed payments (including in-substance fixed payments) less any lease incentives receivable, variable lease payments that depend on an index or a rate, and amounts expected to be paid under residual value guarantees. The lease payments also include the exercise price of a purchase option reasonably certain to be exercised by the Group and payments of penalties for termination of a lease, if the lease term reflects the Group exercising the option to terminate the lease. The variable lease payments that do not depend on an index or a rate are recognised as an expense in the period in which the event or condition that triggers the payment occurs.

In calculating the present value of lease payments, the Group uses its incremental borrowing rate at the lease commencement date because the interest rate implicit in the lease is not readily determinable. After the commencement date, the amount of lease liabilities is increased to reflect the accretion of interest and reduced for the lease payments made. In addition, the carrying amount of lease liabilities is remeasured if there is a modification, a change in the lease term, a change in lease payments (e.g., a change to future lease payments resulting from a change in an index or rate) or a change in assessment of an option to purchase the underlying asset.

*(c) Short-term leases and leases of low-value assets*

The Group applies the short-term lease recognition exemption to its short-term leases of office premises (that is those leases that have a lease term of 12 months or less from the commencement date and do not contain a purchase option). It also applies the recognition exemption for leases of low-value assets to leases of office equipment and laptop computers that are considered to be of low value. Lease payments on short-term leases and leases of low-value assets are recognised as an expense on a straight-line basis over the lease term.

**Investments and other financial assets***Initial recognition and measurement*

Financial assets are classified, at initial recognition, as subsequently measured at amortised cost, fair value through other comprehensive income, and fair value through profit or loss.

The classification of financial assets at initial recognition depends on the financial asset's contractual cash flow characteristics and the Group's business model for managing them. With the exception of trade receivables that do not contain a significant financing component or for which the Group has applied the practical expedient of not adjusting the effect of a significant financing component, the Group initially measures a financial asset at its fair value, plus in the case of a financial asset not at fair value through profit or loss, transaction costs. Trade receivables that do not contain a significant financing component or for which the Group has applied the practical expedient are measured at the transaction price determined under IFRS 15 in accordance with the policies set out for "Revenue recognition" below.

In order for a financial asset to be classified and measured at amortised cost or fair value through other comprehensive income, it needs to give rise to cash flows that are solely payments of principal and interest ("SPPI") on the principal amount outstanding. Financial assets with cash flows that are not SPPI are classified and measured at fair value through profit or loss, irrespective of the business model.

The Group's business model for managing financial assets refers to how it manages its financial assets in order to generate cash flows. The business model determines whether cash flows will result from collecting contractual cash flows, selling the financial assets, or both. Financial assets classified and measured at amortised cost are held within a business model with the objective to hold financial assets in order to collect contractual cash flows, while financial assets classified and measured at fair value through other comprehensive income are held within a business model with the objective of both holding to collect contractual cash flows and selling. Financial assets which are not held within the aforementioned business models are classified and measured at fair value through profit or loss.

Purchases or sales of financial assets that require delivery of assets within the period generally established by regulation or convention in the marketplace are recognised on the trade date, that is, the date that the Group commits to purchase or sell the asset.

***Subsequent measurement***

The subsequent measurement of financial assets depends on their classification as follows:

***Financial assets at amortised cost (debt instruments)***

Financial assets at amortised cost are subsequently measured using the effective interest method and are subject to impairment. Gains and losses are recognised in profit or loss when the asset is derecognised, modified or impaired.

***Financial assets at fair value through profit or loss***

Financial assets at fair value through profit or loss are carried in the statement of financial position at fair value with net changes in fair value recognised in the statement of profit or loss.

This category includes derivative instruments and equity investments which the Group had not irrevocably elected to classify at fair value through other comprehensive income. Dividends on the equity investments are also recognised as other income in the statement of profit or loss when the right of payment has been established.

A derivative embedded in a hybrid contract, with a financial liability or non-financial host, is separated from the host and accounted for as a separate derivative if the economic characteristics and risks are not closely related to the host; a separate instrument with the same terms as the embedded derivative would meet the definition of a derivative; and the hybrid contract is not measured at fair value through profit or loss. Embedded derivatives are measured at fair value with changes in fair value recognised in the statement of profit or loss. Reassessment only occurs if there is either a change in the terms of the contract that significantly modifies the cash flows that would otherwise be required or a reclassification of a financial asset out of the fair value through profit or loss category.

A derivative embedded within a hybrid contract containing a financial asset host is not accounted for separately. The financial asset host together with the embedded derivative is required to be classified in its entirety as a financial asset at fair value through profit or loss.

**Derecognition of financial assets**

A financial asset (or, where applicable, a part of a financial asset or part of a group of similar financial assets) is primarily derecognised (i.e., removed from the Group's consolidated statements of financial position) when:

- the rights to receive cash flows from the asset have expired; or
- the Group has transferred its rights to receive cash flows from the asset or has assumed an obligation to pay the received cash flows in full without material delay to a third party under a "pass-through" arrangement; and either (a) the Group has transferred substantially all the risks and rewards of the asset, or (b) the Group has neither transferred nor retained substantially all the risks and rewards of the asset, but has transferred control of the asset.

When the Group has transferred its rights to receive cash flows from an asset or has entered into a pass-through arrangement, it evaluates if, and to what extent, it has retained the risk and rewards of ownership of the asset. When it has neither transferred nor retained substantially all the risks and rewards of the asset nor transferred control of the asset, the Group continues to recognise the transferred asset to the extent of the Group's continuing involvement. In that case, the Group also recognises an associated liability. The transferred asset and the associated liability are measured on a basis that reflects the rights and obligations that the Group has retained.

Continuing involvement that takes the form of a guarantee over the transferred asset is measured at the lower of the original carrying amount of the asset and the maximum amount of consideration that the Group could be required to repay.

**Impairment of financial assets**

The Group recognises an allowance for expected credit losses (“ECLs”) for all debt instruments not held at fair value through profit or loss. ECLs are based on the difference between the contractual cash flows due in accordance with the contract and all the cash flows that the Group expects to receive, discounted at an approximation of the original effective interest rate. The expected cash flows will include cash flows from the sale of collateral held or other credit enhancements that are integral to the contractual terms.

**General approach**

ECLs are recognised in two stages. For credit exposures for which there has not been a significant increase in credit risk since initial recognition, ECLs are provided for credit losses that result from default events that are possible within the next 12 months (a 12-month ECL). For those credit exposures for which there has been a significant increase in credit risk since initial recognition, a loss allowance is required for credit losses expected over the remaining life of the exposure, irrespective of the timing of the default (a lifetime ECL).

At each reporting date, the Group assesses whether the credit risk on a financial instrument has increased significantly since initial recognition. When making the assessment, the Group compares the risk of a default occurring on the financial instrument as at the reporting date with the risk of a default occurring on the financial instrument as at the date of initial recognition and considers reasonable and supportable information that is available without undue cost or effort, including historical and forward-looking information.

The Group considers a financial asset in default when contractual payments are 90 days past due. However, in certain cases, the Group may also consider a financial asset to be in default when internal or external information indicates that the Group is unlikely to receive the outstanding contractual amounts in full before taking into account any credit enhancements held by the Group.

A financial asset is written off when there is no reasonable expectation of recovering the contractual cash flows.

Financial assets at amortised cost are subject to impairment under the general approach and they are classified within the following stages for measurement of ECLs except for trade receivables which apply the simplified approach as detailed below.

- Stage 1 – Financial instruments for which credit risk has not increased significantly since initial recognition and for which the loss allowance is measured at an amount equal to 12-month ECLs;
- Stage 2 – Financial instruments for which credit risk has increased significantly since initial recognition but that are not credit-impaired financial assets and for which the loss allowance is measured at an amount equal to lifetime ECLs;
- Stage 3 – Financial assets that are credit-impaired at the reporting date (but that are not purchased or originated credit-impaired) and for which the loss allowance is measured at an amount equal to lifetime ECLs.

**Simplified approach**

For trade receivables that do not contain a significant financing component or when the Group applies the practical expedient of not adjusting the effect of a significant financing component, the Group applies the simplified approach in calculating ECLs. Under the simplified approach, the Group does not track changes in credit risk, but instead recognises a loss allowance based on lifetime ECLs at each reporting date. The Group has established a provision matrix that is based on its historical credit loss experience, adjusted for forward-looking factors specific to the debtors and the economic environment.

**Financial liabilities*****Initial recognition and measurement***

Financial liabilities are classified, at initial recognition, as financial liabilities at fair value through profit or loss, loans and borrowings, or payables, as appropriate.

All financial liabilities are recognised initially at fair value and, in the case of loans and borrowings and payables, net of directly attributable transaction costs.

The Group's financial liabilities include trade and notes payables, financial liabilities at fair value through profit or loss, other payables and accruals, other non-current liabilities and loans.

***Subsequent measurement***

The subsequent measurement of financial liabilities depends on their classification as follows:

***Financial liabilities at fair value through profit or loss***

Financial liabilities at fair value through profit or loss include financial liabilities held for trading and financial liabilities designated upon initial recognition as at fair value through profit or loss.

Financial liabilities are classified as held for trading if they are incurred for the purpose of repurchasing in the near term. This category also includes derivative financial instruments entered into by the Group that are not designated as hedging instruments in hedge relationships as defined by IFRS 9. Separated embedded derivatives are also classified as held for trading unless they are designated as effective hedging instruments.

Financial liabilities designated upon initial recognition as at fair value through profit or loss are designated at the initial date of recognition, and only if the criteria in IFRS 9 are satisfied. Gains or losses on liabilities designated at fair value through profit or loss are recognised in the statement of profit or loss, except for the gains or losses arising from the Group's own credit risk which are presented in other comprehensive income with no subsequent reclassification to the statement of profit or loss. The net fair value gain or loss recognised in the statement of profit or loss does not include any interest charged on these financial liabilities.

***Financial liabilities at amortised cost (trade and notes payables, other payables and accruals and loans)***

After initial recognition, payables and loans are subsequently measured at amortised cost, using the effective interest rate method unless the effect of discounting would be immaterial, in which case they are stated at cost. Gains and losses are recognised in profit or loss when the liabilities are derecognised as well as through the effective interest rate amortisation process.

Amortised cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the effective interest rate. The effective interest rate amortisation is included in finance costs in profit or loss.

**Derecognition of financial liabilities**

A financial liability is derecognised when the obligation under the liability is discharged or cancelled, or expires.

When an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability are substantially modified, such an exchange or modification is treated as a derecognition of the original liability and a recognition of a new liability, and the difference between the respective carrying amounts is recognised in profit or loss.

**Offsetting of financial instruments**

Financial assets and financial liabilities are offset and the net amount is reported in the statement of financial position if there is a currently enforceable legal right to offset the recognised amounts and there is an intention to settle on a net basis, or to realise the assets and settle the liabilities simultaneously.

**Derivative financial instruments*****Initial recognition and subsequent measurement***

The Group uses derivative financial instruments, such as non-hedge derivative contracts, to hedge its price fluctuation risk, respectively. Such derivative financial instruments are initially recognised at fair value on the date on which a derivative contract is entered into and are subsequently remeasured at fair value. Derivatives are carried as assets when the fair value is positive and as liabilities when the fair value is negative.

Any gains or losses arising from changes in fair value of derivatives are taken directly to the statement of profit or loss, except for the effective portion of cash flow hedges, which is recognised in other comprehensive income and later reclassified to profit or loss when the hedged item affects profit or loss.

For the purpose of hedge accounting, hedges are classified as:

- fair value hedges when hedging the exposure to changes in the fair value of a recognised asset or liability or an unrecognised firm commitment; or
- cash flow hedges when hedging the exposure to variability in cash flows that is either attributable to a particular risk associated with a recognised asset or liability or a highly probable forecast transaction, or a foreign currency risk in an unrecognised firm commitment.

At the inception of a hedge relationship, the Group formally designates and documents the hedge relationship to which the Group wishes to apply hedge accounting, the risk management objective and its strategy for undertaking the hedge.

The documentation includes identification of the hedging instrument, the hedged item, the nature of the risk being hedged and how the Group will assess whether the hedging relationship meets the hedge effectiveness requirements (including the analysis of sources of hedge ineffectiveness and how the hedge ratio is determined). A hedging relationship qualifies for hedge accounting if it meets all of the following effectiveness requirements:

- There is “an economic relationship” between the hedged item and the hedging instrument.
- The effect of credit risk does not “dominate the value changes” that result from that economic relationship.
- The hedge ratio of the hedging relationship is the same as that resulting from the quantity of the hedged item that the Group actually hedges and the quantity of the hedging instrument that the Group actually uses to hedge that quantity of hedged item.

**Inventories**

Inventories are stated at the lower of cost and net realisable value. Cost is determined on the weighted average basis and, in the case of work in progress and finished goods, comprises direct materials, direct labour and an appropriate proportion of overheads. Net realisable value is based on estimated selling prices less any estimated costs to be incurred to completion and disposal.

**Cash and cash equivalents**

Cash and cash equivalents in the statement of financial position comprise cash on hand and at banks, and short-term highly liquid deposits with a maturity of generally within three months that are readily convertible into known amounts of cash, subject to an insignificant risk of changes in value and held for the purpose of meeting short-term cash commitments.

For the purpose of the consolidated statements of financial position, cash and cash equivalents comprise cash on hand and at banks, including term deposits, and assets similar in nature to cash, which are not restricted as to use.

**Provisions**

A provision is recognised when a present obligation (legal or constructive) has arisen as a result of a past event and it is probable that a future outflow of resources will be required to settle the obligation, provided that a reliable estimate can be made of the amount of the obligation.

When the effect of discounting is material, the amount recognised for a provision is the present value at the end of each of the Relevant Periods of the future expenditures expected to be required to settle the obligation. The increase in the discounted present value amount arising from the passage of time is included in finance costs in profit or loss.

Provisions for the Group's obligations for environmental rehabilitation and restoration of mines are based on estimates of required expenditure at the mines in accordance with the local rules and regulations where the mines are located. The Group estimates its liabilities for final reclamation and mine closure based upon detailed calculations of the amount and timing of the future cash expenditure for the required work. Spending estimates are escalated for inflation, then discounted at a discount rate that reflects current market assessments of the time value of money and the risks specific to the liability such that the amount of provision reflects the present value of the expenditures expected to be required to settle the obligation. The Group records a corresponding asset in the period in which the liability is incurred. The liability is accreted to the projected expenditure date. As changes in estimates occur (such as mine plan revisions, changes in estimated costs, or changes in the timing of the performance of reclamation activities), the revisions to the obligation and the asset are recognised at the appropriate discount rate.

**Income tax**

Income tax comprises current and deferred tax. Income tax relating to items recognised outside profit or loss is recognised outside profit or loss, either in other comprehensive income or directly in equity.

Current tax assets and liabilities are measured at the amount expected to be recovered from or paid to the taxation authorities, based on tax rates (and tax laws) that have been enacted or substantively enacted by the end of each of the Relevant Periods, taking into consideration interpretations and practices prevailing in the countries in which the Group operates.

Deferred tax is provided, using the liability method, on all temporary differences at the end of each of the Relevant Periods between the tax bases of assets and liabilities and their carrying amounts for financial reporting purposes.

Deferred tax liabilities are recognised for all taxable temporary differences, except:

- when the deferred tax liability arises from the initial recognition of goodwill or an asset or liability in a transaction that is not a business combination and, at the time of the transaction, affects neither the accounting profit nor taxable profit or loss and does not give rise to equal taxable; and
- in respect of taxable temporary differences associated with investments in subsidiaries and associates, when the timing of the reversal of the temporary differences can be controlled and it is probable that the temporary differences will not reverse in the foreseeable future.

Deferred tax assets are recognised for all deductible temporary differences, and the carry forward of unused tax credits and any unused tax losses. Deferred tax assets are recognised to the extent that it is probable that taxable profit will be available against which the deductible temporary differences, and the carry forward of unused tax credits and unused tax losses can be utilised, except:

- when the deferred tax asset relating to the deductible temporary differences arises from the initial recognition of an asset or liability in a transaction that is not a business combination and, at the time of the transaction, affects neither the accounting profit nor taxable profit or loss and deductible temporary differences; and
- in respect of deductible temporary differences associated with investments in subsidiaries and associates, deferred tax assets are only recognised to the extent that it is probable that the temporary differences will reverse in the foreseeable future and taxable profit will be available against which the temporary differences can be utilised.

The carrying amount of deferred tax assets is reviewed at the end of each of the Relevant Periods and reduced to the extent that it is no longer probable that sufficient taxable profit will be available to allow all or part of the deferred tax asset to be utilised. Unrecognised deferred tax assets are reassessed at the end of each of the Relevant Periods and are recognised to the extent that it has become probable that sufficient taxable profit will be available to allow all or part of the deferred tax asset to be recovered.

Deferred tax assets and liabilities are measured at the tax rates that are expected to apply to the period when the asset is realised or the liability is settled, based on tax rates (and tax laws) that have been enacted or substantively enacted by the end of each of the Relevant Periods.

Deferred tax assets and deferred tax liabilities are offset if and only if the Group has a legally enforceable right to set off current tax assets and current tax liabilities and the deferred tax assets and deferred tax liabilities relate to income taxes levied by the same taxation authority on either the same taxable entity or different taxable entities which intend either to settle current tax liabilities and assets on a net basis, or to realise the assets and settle the liabilities simultaneously, in each future period in which significant amounts of deferred tax liabilities or assets are expected to be settled or recovered.

### **Revenue recognition**

#### ***Revenue from contracts with customers***

Revenue from contracts with customers is recognised when control of goods or services is transferred to the customers at an amount that reflects the consideration to which the Group expects to be entitled in exchange for those goods or services.

When the contract contains a financing component which provides the customer with a significant benefit of financing the transfer of goods or services to the customer for more than one year, revenue is measured at the present value of the amount receivable, discounted using the discount rate that would be reflected in a separate financing transaction between the Group and the customer at contract inception. When the contract contains a financing component which provides the Group with a significant financial benefit for more than one year, revenue recognised under the contract includes the interest expense accreted on the contract liability under the effective interest method. For a contract where the period between the payment by the customer and the transfer of the promised goods or services is one year or less, the transaction price is not adjusted for the effects of a significant financing component, using the practical expedient in IFRS 15.

#### ***Sale of products***

Revenue from the sale of products is recognised at the point in time when control of the asset is transferred to the customer, generally on delivery of the products.

#### ***Gold streaming arrangement***

Under the Metal Streaming Arrangement, the Group receives a payment in advance and the counterparty obtains a certain proportion of deliverable gold within the entire life of the designated mine. The counterparty is also required to pay an additional payment based on a certain proportion of the market price when the Group delivers the goods within an agreed period in the future. The payment the Group receives in advance is considered to be part of the counterparty's prepayment for the future goods with uncertain but predictable quantity, and is recognized as a contract liability upon receipt. Each unit of the delivered goods represents a separate performance obligation, and revenue is recognized at the point in time when control of the goods is transferred. Considering the timing of satisfaction of delivery obligations throughout the entire life of the mines, the contract liability above is considered to have significant financing components. In addition, because the quantity of all delivered goods available to the counterparty depends on the mining reserves of the metals throughout the entire life of the mines, the management will estimate the change of total metal reserves and change of planned mining reserves on a regular basis and adjustments shall be made to the revenue and finance costs accordingly.

***Variable consideration***

In the Group's Metal Streaming Arrangement, because the quantity of all delivered goods available to the counterparty depends on the mining reserves of the metals throughout the entire life of the mines, the price allocated to goods delivered per unit is considered as variable consideration. When the estimated total metal reserves and planned exploration reserves of the mine change, it is necessary to recalculate the price of goods delivered per unit, and in the period of changes occurred, adjust the revenue and finance costs recognised in the period according to the updated price. The Group determines the best estimate of variable consideration by the expected value. The transaction price including variable consideration is only to the extent that it is highly probable that a significant reversal in the amount of cumulative revenue recognised will not occur when the uncertainty associated with the variable consideration is subsequently resolved.

**Contract liabilities**

A contract liability is recognised when a payment is received or a payment is due (whichever is earlier) from a customer before the Group transfers the related goods or services. Contract liabilities are recognised as revenue when the Group performs under the contract (i.e., transfers control of the related goods or services to the customer).

**Share Incentive Plan**

The Company operates employee stock ownership plans. Employees (including directors) of the Group receive remuneration in the form of share-based payments, whereby employees render services in exchange for equity instruments ("equity-settled transactions"). The cost of equity-settled transactions with employees is measured by reference to the fair value at the date at which they are granted. The fair value is determined by the market price of the granted shares, further details of which are given in note 40 to the Historical Financial Information.

The cost of equity-settled transactions is recognised in employee benefit expense, together with a corresponding increase in equity, over the period in which the performance and/or service conditions are fulfilled. The cumulative expense recognised for equity-settled transactions at the end of each reporting period until the vesting date reflects the extent to which the vesting period has expired and the Group's best estimate of the number of equity instruments that will ultimately vest. The charge or credit to the statement of profit or loss for a period represents the movement in the cumulative expense recognised as at the beginning and end of that period.

Service and non-market performance conditions are not taken into account when determining the grant date fair value of awards, but the likelihood of the conditions being met is assessed as part of the Group's best estimate of the number of equity instruments that will ultimately vest. Market performance conditions are reflected within the grant date fair value. Any other conditions attached to an award, but without an associated service requirement, are considered to be non-vesting conditions. Non-vesting conditions are reflected in the fair value of an award and lead to an immediate expensing of an award unless there are also service and/or performance conditions.

For awards that do not ultimately vest because non-market performance and/or service conditions have not been met, no expense is recognised. Where awards include a market or non-vesting condition, the transactions are treated as vesting irrespective of whether the market or non-vesting condition is satisfied, provided that all other performance and/or service conditions are satisfied.

Where the terms of an equity-settled award are modified, as a minimum an expense is recognised as if the terms had not been modified, if the original terms of the award are met. In addition, an expense is recognised for any modification that increases the total fair value of the share-based payments, or is otherwise beneficial to the employee as measured at the date of modification. Where an equity-settled award is cancelled, it is treated as if it had vested on the date of cancellation, and any expense not yet recognised for the award is recognised immediately.

**Borrowing costs**

Borrowing costs directly attributable to the acquisition, construction or production of qualifying assets, i.e., assets that necessarily take a substantial period of time to get ready for their intended use or sale, are capitalised as part of the cost of those assets. The capitalisation of such borrowing costs ceases when the assets are substantially ready for their intended use or sale. All other borrowing costs are expensed in the period in which they are incurred. Borrowing costs consist of interest and other costs that an entity incurs in connection with the borrowing of funds.

**Dividends**

Final dividends are recognised as a liability when they are approved by the shareholders in a general meeting.

**Foreign currencies**

The Historical Financial Information is presented in Renminbi, which is the functional currency of Chifeng Jilong Gold Mining Co., Ltd., the indirect parent company of the Company. Each entity in the Group determines its own functional currency and items included in the financial statements of each entity are measured using that functional currency. Foreign currency transactions recorded by the entities in the Group are initially recorded using their respective functional currency rates prevailing at the dates of the transactions. Monetary assets and liabilities denominated in foreign currencies are translated at the functional currency rates of exchange ruling at the end of each of the Relevant Periods. Differences arising on settlement or translation of monetary items are recognised in profit or loss.

Non-monetary items that are measured in terms of historical cost in a foreign currency are translated using the exchange rates at the dates of the initial transactions. Non-monetary items measured at fair value in a foreign currency are translated using the exchange rates at the date when the fair value was measured. The gain or loss arising on translation of a non-monetary item measured at fair value is treated in line with the recognition of the gain or loss on change in fair value of the item (i.e., translation difference on the item whose fair value gain or loss is recognised in other comprehensive income or profit or loss is also recognised in other comprehensive income or profit or loss, respectively).

In determining the exchange rate on initial recognition of the related asset, expense or income on the derecognition of a non-monetary asset or non-monetary liability relating to an advance consideration, the date of initial transaction is the date on which the Group initially recognises the non-monetary asset or non-monetary liability arising from the advance consideration. If there are multiple payments or receipts in advance, the Group determines the transaction date for each payment or receipt of the advance consideration.

The functional currencies of the Company and its subsidiaries are US Dollar. As at the end of the reporting period, the assets and liabilities of these entities are translated into RMB at the exchange rates prevailing at the end of the reporting period and their statements of profit or loss are translated into RMB at the exchange rates that approximate to those prevailing at the dates of the transactions.

The resulting exchange differences are recognised in other comprehensive income and accumulated in the exchange fluctuation reserve, except to the extent that the differences are attributable to non-controlling interests. On disposal of a foreign operation, the cumulative amount in the reserve relating to that particular foreign operation is recognised in the statement of profit or loss.

For the purpose of the consolidated statement of cash flows, the cash flows of overseas subsidiaries are translated into RMB at the exchange rates ruling at the dates of the cash flows. Frequently recurring cash flows of overseas subsidiaries which arise throughout the year are translated into RMB at the weighted average exchange rates or the year.

**5. SIGNIFICANT ACCOUNTING JUDGEMENTS AND ESTIMATES**

The preparation of the Group's Historical Financial Information requires management to make judgements, estimates and assumptions that affect the reported amounts of revenues, expenses, assets and liabilities, and the disclosure of contingent liabilities at the end of each of the Relevant Periods. Uncertainty about these estimates and assumptions could result in outcomes that could require a material adjustment to the carrying amount of the asset or liability affected in the future.

**Judgements**

In the process of applying the Group's accounting policies, management has made the following judgements which have the most significant effects on the amounts recognized in the financial statements:

***Corporate income tax***

As a result of the fact that certain matters relating to the corporate income taxes have not been confirmed by the local tax bureau as at the end of the reporting period, objective estimates based on currently enacted tax laws, regulations and other related policies are required in determining the provision for corporate income tax expenses to be made for the reporting period. Where the final tax outcome of these matters is different from the amounts originally recorded, the differences will be accounted for in the income tax expenses in the period in which the differences are realized.

***Exploration expenditures***

After determining the capitalization amount of exploration expenditures, the Group will regularly evaluate the exploration results. If the reviewed geological exploration report shows that there are no prospecting results or no economically recoverable reserves, or that the economic benefits of mining cannot be achieved and further exploration is unnecessary due to low grade and hard-to-mining, the exploration and development costs previously collected will be expensed and included in the profit and loss for the current period in a lump sum.

***Estimation uncertainty***

The key assumptions concerning the future and other key sources of estimation uncertainty at the balance sheet date, that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the future accounting periods, are described below.

***Impairment of non-current assets other than financial assets (excluding goodwill)***

The Group assesses whether there are any indicators of impairment for non-current assets other than financial assets at the end of the reporting period. Intangible assets with indefinite useful lives are tested for impairment annually and at other times when such an indicator exists. Other non-current assets other than financial assets are tested for impairment when there are indicators that the carrying amounts may not be recoverable. An impairment exists when the carrying value of an asset or asset group exceeds its recoverable amount, which is the higher of its fair value less costs of disposal and its value in use. The calculation of the fair value less costs of disposal based on available data from binding sales transactions in an arm's length transaction of similar assets or observable market prices less incremental costs for disposing of the asset. When value in use calculations are undertaken, management must estimate the expected future cash flows from the asset or asset group and choose a suitable discount rate in order to calculate the present value of those cash flows.

***Proved mineral reserves***

Proved mineral reserves are estimated based on professional knowledge, experience and industry practice. Generally, the mineral reserve volume estimated based on probing and estimation may not be very accurate. The estimation is updated in accordance with new technologies and new information. Any changes in estimation will have impacts on amounts of mining assets' depreciation and mining rights' amortization using the units-of-production method, on the stripping ratio which was used in the capitalization of stripping costs, and on each of transaction prices of the gold streaming arrangement, etc. This may result in changes of or impacts on the Group's development and operation plan, and hence the Group's operation and operating results.

***Deferred tax assets***

To the extent that it is probable that there are sufficient taxable profits to offset the deductible losses, deferred tax assets shall be recognized for all unused deductible losses. Substantial management's judgements regarding the timing, amount of future taxable profit as well as tax planning strategies are needed when estimating the amount of deferred tax assets.

***Provision for environmental rehabilitation and restoration of mines***

Pursuant to the regulations of the governmental authorities in the places where the mines are located, the Group recognizes provision for environmental rehabilitation and restoration of mines. The amount of provision is an estimate based upon the life of mining tenements, timing of mine closure and cost of such rehabilitation. When this estimate changes, it may affect the Group's operations and performance.

**6. SEGMENT INFORMATION**

The Group is principally engaged in gold mining and exploration. Information reported to the Group's chief operating decision maker, for the purpose of resource allocation and performance assessment, focuses on the operating results of the Group as a whole as the Group's resources are integrated and no discrete operating segment information is available. Accordingly, no further operating segment information is presented.

**Geographical information**

During the Relevant Periods and the one month ended 31 January 2021, the Group operated in the same geographical location, as all its revenue was generated in Ghana, and all its long-term assets and capital expenditures were also located and incurred in Ghana. Therefore, no information on other regions is presented.

As at 31 December 2021, 31 January 2021, and 31 January 2022, revenue from contracts with a single customer amounted to approximately RMB1,593,512,000, RMB114,649,000, and RMB106,001,000 respectively, which were derived from sales of good by the group and contributing more than 10% of the Group's total revenue.

**7. REVENUE**

An analysis of revenue is as follows:

	Year ended 31 December 2021	One month ended 31 January 2021	One month ended 31 January 2022
	<i>RMB'000</i>	<i>RMB'000</i> <i>(unaudited)</i>	<i>RMB'000</i>
Revenue from contracts with customers. . . . .	1,671,379	120,733	111,476
	<u>1,671,379</u>	<u>120,733</u>	<u>111,476</u>

**Revenue from contracts with customers****(a) Disaggregated revenue information**

	Year ended 31 December 2021	One month ended 31 January 2021	One month ended 31 January 2022
	<i>RMB'000</i>	<i>RMB'000</i> <i>(unaudited)</i>	<i>RMB'000</i>
Type of goods			
Gold. . . . .	1,671,379	120,733	111,476
	<u>1,671,379</u>	<u>120,733</u>	<u>111,476</u>
Geographical markets			
Ghana. . . . .	1,671,379	120,733	111,476
	<u>1,671,379</u>	<u>120,733</u>	<u>111,476</u>
Timing of revenue recognition			
Goods transferred at a point in time . . . . .	1,671,379	120,733	111,476
	<u>1,671,379</u>	<u>120,733</u>	<u>111,476</u>

The following table shows the amounts of revenue recognised in the Relevant Periods and the one month ended 31 January 2021 that were included in the contract liabilities at the beginning of the reporting period:

	Year ended 31 December 2021	One month ended 31 January 2021	One month ended 31 January 2022
	<i>RMB'000</i>	<i>RMB'000</i> <i>(unaudited)</i>	<i>RMB'000</i>
Revenue recognised that was included in contract liabilities at the beginning of the reporting period:			
Sale of gold from Metal Streaming from arrangement (note 29) . . . . .	44,236	3,230	2,934
	<u>44,236</u>	<u>3,230</u>	<u>2,934</u>

(b) Information about the Group's performance obligations is summarised below:

*Sale of goods*

The Group recognizes revenue when customers gain the control of goods. Prepayments received from customers before delivery of goods are recognized as contract liabilities in the consolidated financial statements. Among them, the sales arrangement related to Metal Streaming Arrangement is detailed in note 29.

The transaction prices allocated to remaining performance obligations (unsatisfied or partially unsatisfied) related to sales of gold are as follows:

	Year ended 31 December 2021	One month ended 31 January 2021	One month ended 31 January 2022
	<i>RMB'000</i>	<i>RMB'000</i> <i>(unaudited)</i>	<i>RMB'000</i>
Within 1 year . . . . .	50,619	57,149	50,610
Over 1 year . . . . .	591,866	617,640	590,143
Total . . . . .	<u>642,485</u>	<u>674,789</u>	<u>640,753</u>

## 8. DIRECTORS' REMUNERATION

Directors' remuneration is as follows:

	Year ended 31 December 2021	One month ended 31 January 2021	One month ended 31 January 2022
	<i>RMB'000</i>	<i>RMB'000</i> <i>(unaudited)</i>	<i>RMB'000</i>
Fees . . . . .	6,135	(212)	830
Other emoluments:			
Salaries, allowances and benefits in kind . . . . .	3,543	299	470
Social insurance and housing fund . . . . .	486	41	360
Share based compensation . . . . .	7,578	1,033	36,301
	<u>17,742</u>	<u>1,161</u>	<u>37,961</u>

Directors' remuneration for each year/period is as follows:

Year ended 31 December 2021

	Position	Fees	Salaries, allowances and benefits in kind	Share based compensation	Social insurance and housing fund	Total
		RMB'000	RMB'000	RMB'000	RMB'000	RMB'000
