This Prospectus is printed in three parts that together form the Prospectus. You should read each part of the Prospectus in conjunction with the other parts in order to understand the matters to which the Prospectus relates, including, without limitation, the Hong Kong Public Offering and the International Offering. Prospective investors should read each part of the Prospectus before making any application in response to the Hong Kong Public Offering. We have adopted a fully electronic application process for the Hong Kong Public Offering. We will not provide printed copies of this Prospectus in relation to the Hong Kong Public Offering. This Prospectus is available at the website of the Stock Exchange at www.hkexnews.hk under the "HKEXnews > New Listings > New Listing Information" section, and our website at www.zijingoldintl.com. You may download and print from these website addresses if you want a printed copy of this Prospectus.

IMPORTANT: If you are in any doubt about any of the contents of this prospectus, you should obtain independent professional advice.

Hong Kong Exchanges and Clearing Limited, The Stock Exchange of Hong Kong Limited and Hong Kong Securities Clearing Company Limited take no responsibility for the contents of this prospectus, make no representation as to its accuracy or completeness and expressly disclaim any liability whatsoever for any loss howsoever arising from or in reliance upon the whole or any part of the contents of this prospectus.

A copy of this prospectus, having attached thereto the documents specified in "Documents Delivered to the Registrar of Companies and Available on Display" in Appendix VI to this Prospectus, has been registered by the Registrar of Companies in Hong Kong as required by Section 38D of the Companies (Winding Up and Miscellaneous Provisions) Ordinance. The Securities and Futures Commission and the Registrar of Companies in Hong Kong take no responsibility for the contents of this prospectus or any other document referred to above.

The Offer Price per Offer Share unless otherwise announced will be HK$71.59. Applicants under the Hong Kong Public Offering are required to pay, on application (subject to application channels), the Offer Price of HK$71.59 per Hong Kong Offer Share, plus brokerage of 1%, SFC transaction levy of 0.0027%, Stock Exchange trading fee of 0.00565% and AFRC transaction levy of 0.00015%.

The Overall Coordinators (for themselves and on behalf of the Underwriters) may, where considered appropriate, based on the level of interest expressed by prospective professional and institutional investors during the book-building process, and with the consent of our Company, reduce the number of Offer Shares and/or the Offer Price below that stated in this prospectus at any time on or prior to the morning of the last day for lodging applications under the Hong Kong Public Offering. In such case, notices of the reduction in the number of Offer Shares and/or the Offer Price will be published on the website of the Stock Exchange at **www.hkexnews.hk** and our Company's website at **www.zijingoldintl.com** as soon as practicable following the decision to make such reduction, and in any event not later than the morning of the day which is the last day for lodging applications under the Hong Kong Public Offering. Further details are set forth in "Structure of the Global Offering" and "How to Apply for Hong Kong Offer Shares".

Prior to making an investment decision, prospective investors should consider carefully all of the information set out in this prospectus, including the risk factors set out in "Risk Factors" in this prospectus.

The obligations of the Hong Kong Underwriters under the Hong Kong Underwriting Agreement are subject to termination by the Hong Kong Underwriters if certain grounds arise prior to 8:00 a.m. on the Listing Date. Such grounds are set out in "Underwriting — Underwriting Arrangements and Expenses — Hong Kong Public Offering — Grounds for Termination". It is important that you refer to that section for further details.

The Offer Shares have not been and will not be registered under the U.S. Securities Act or any state securities law in the United States and may not be offered, sold, pledged or transferred within the United States, except that Offer Shares may be offered, sold or delivered (a) in the United States solely to QIBs in reliance on Rule 144A or another exemption from, or in a transaction not subject to, the registration requirements of the U.S. Securities Act or (b) outside the United States in offshore transactions in reliance on Regulation S.

ATTENTION

We have adopted a fully electronic application process for the Hong Kong Public Offering. We will not provide printed copies of this document or printed copies of this prospectus to the public in relation to the Hong Kong Public Offering.

This prospectus is available at the websites of the Stock Exchange at **www.hkexnews.hk** and our website at **www.zijingoldintl.com**. If you require a printed copy of this prospectus, you may download and print from the website addresses above.

September 19, 2025

IMPORTANT NOTICE TO INVESTORS: FULLY ELECTRONIC APPLICATION PROCESS

We have adopted a fully electronic application process for the Hong Kong Public Offering. We will not provide printed copies of this prospectus to the public in relation to the Hong Kong Public Offering.

This prospectus is available at the website of the Stock Exchange at **www.hkexnews.hk** under the "*HKEXnews > New Listings > New Listing Information*" section, and our website at **www.zijingoldintl.com**. If you require a printed copy of this prospectus, you may download and print from the website addresses above.

To apply for the Hong Kong Offer Shares, you may:

(a) apply online through the **White Form eIPO** service at **www.eipo.com.hk**; or

(b) apply through the **HKSCC EIPO** channel to electronically cause HKSCC Nominees to apply on your behalf, by instructing your broker or custodian who is a HKSCC Participant to give electronic application instructions via HKSCC's FINI system to apply for the Hong Kong Offer Shares on your behalf.

We will not provide any physical channels to accept any application for the Hong Kong Offer Shares by the public. The contents of the electronic version of this prospectus are identical to the printed prospectus as registered with the Registrar of Companies in Hong Kong pursuant to Section 38D of the Companies (Winding Up and Miscellaneous Provisions) Ordinance.

If you are an **intermediary**, **broker** or **agent**, please remind your customers, clients or principals, as applicable, that this prospectus is available online at the website addresses above.

Please refer to "How to Apply for Hong Kong Offer Shares and Reserved Shares" in this prospectus for further details on the procedures through which you can apply for the Hong Kong Offer Shares electronically.

Minimum Application Amount and Permitted Numbers

Your application through the **White Form eIPO** service or the HKSCC **EIPO** channel must be for a minimum of 100 Hong Kong Offer Shares and in one of the numbers set out in the table below. You are required to pay the amount next to the number you select.

If you are applying through the **White Form eIPO** service, you may refer to the table below for the amount payable for the number of Shares you have selected. You must pay the respective amount payable on application in full upon application for Hong Kong Offer Shares.

If you are applying through the HKSCC **EIPO** channel, you are required to pre-fund your application based on the amount specified by your broker or custodian, as determined based on the applicable laws and regulations in Hong Kong.

Dealings in the Shares on the Stock Exchange to commence at. . . . . 9:00 a.m. on Monday, September 29, 2025

Notes:

(1) All times and dates refer to Hong Kong local time and date, except as otherwise stated.

(2) You will not be permitted to submit your application through the designated website at **www.eipo.com.hk** after 11:30 a.m. on the last day for submitting applications. If you have already submitted your application and obtained an application reference number from the designated website at or before 11:30 a.m., you will be permitted to continue the application process (by completing payment of application monies) until 12:00 noon on the last day for submitting applications, when the application lists close.

(3) If there is a tropical cyclone warning signal number 8 or above, Extreme Conditions and/or a black rainstorm warning at any time between 9:00 a.m. and 12:00 noon on Wednesday, September 24, 2025, the application lists will not open on that day. See "How to Apply for Hong Kong Offer Shares and Reserved Shares — F. Severe Weather Arrangements" of this prospectus.

(4) Applicants who apply for Hong Kong Offer Shares by giving electronic application instructions to HKSCC via HKSCC's FINI system should refer to "How to Apply for Hong Kong Offer Shares and Reserved Shares — A. Application for Hong Kong Offer Shares" of this prospectus.

(5) None of the websites or any of the information contained on the website forms part of this prospectus.

(6) Share certificates are expected to be issued on or before Friday, September 26, 2025 but will only become valid evidence of title provided that the Global Offering has become unconditional in all respects prior to 8:00 a.m. on Monday, September 29, 2025 and the right of termination described in "Underwriting" has not been exercised. Investors who trade Shares on the basis of publicly available allocation details before the receipt of Share certificates or before they become valid evidence of title do so entirely at their own risk.

(7) **White Form** e-Refund payment instructions/**Blue Form** e-Refund payment instructions /refund checks will be issued in respect of wholly or partially unsuccessful applications pursuant to the Hong Kong Public Offering and the Preferential Offering.

Applicants who have applied through the **White Form eIPO** service/**Blue Form eIPO** service and paid their applications monies through single bank account may have refund monies (if any) dispatched to the bank account in the form of **White Form** e-Refund payment instructions/**Blue Form** e-Refund payment instructions respectively. Applicants who have applied through the **White Form eIPO** service/**Blue Form eIPO** service and paid their application monies through multiple bank accounts may have refund monies (if any) dispatched to the address as specified in their application instructions in the form of refund checks in favor of the applicant (or, in the case of joint applications, the first-named applicant) by ordinary post at their own risk. Further information is set out in the sections headed "How to Apply for Hong Kong Offer Shares and Reserved Shares — E. Dispatch/Collection of Share Certificates and Refund of Application Monies" of this prospectus.

(8) Applicants who have applied for Hong Kong Offer Shares through the **HKSCC EIPO** channel should refer to "How to Apply for Hong Kong Offer Shares and Reserved Shares — E. Dispatch/Collection of Share Certificates and Refund of Application Monies" for details.

The above expected timetable is a summary only. You should read carefully the sections headed "Underwriting", "Structure of the Global Offering" and "How to Apply for Hong Kong Offer Shares and Reserved Shares" of this prospectus for details relating to the structure of the Global Offering, procedures on the applications for Hong Kong Offer Shares and Reserved Shares and the expected timetable, including conditions, effect of severe weather and the dispatch of refund checks and Share certificates.

If the Global Offering does not become unconditional or is terminated in accordance with its terms, the Global Offering will not proceed. In such a case, our Company will make an announcement as soon as practicable thereafter.

IMPORTANT NOTICE TO INVESTORS

This prospectus is issued by us solely in connection with the Hong Kong Public Offering and the Preferential Offering and does not constitute an offer to sell or a solicitation of an offer to sell or a solicitation of an offer to buy any security other than the Hong Kong Offer Shares and the Reserved Shares offered by this prospectus pursuant to the Hong Kong Public Offering and the Preferential Offering. This prospectus may not be used for the purpose of making, and does not constitute, an offer or invitation in any other jurisdiction or in any other circumstances. No action has been taken to permit a public offering of the Offer Shares in any jurisdiction other than Hong Kong and no action has been taken to permit the distribution of this prospectus in any jurisdiction other than Hong Kong. The distribution of this prospectus and the offering of the Offer Shares in other jurisdictions are subject to restrictions and may not be made except as permitted under the applicable securities laws of such jurisdictions pursuant to registration with or authorization by the relevant securities regulatory authorities or an exemption therefrom.

You should rely only on the information contained in this prospectus to make your investment decision. We have not authorized anyone to provide you with information that is different from what is contained in this prospectus. Any information or representation not contained in this prospectus must not be relied on by you as having been authorized by us, the Joint Sponsors, the Overall Coordinators, the Joint Global Coordinators, the Joint Bookrunners, the Joint Lead Managers, any of the Underwriters, any of our or their respective directors, officers, employees, agents or representatives of any of them or any other person or party involved in the Global Offering.

Some of the particular risks in investing in the Offer Shares are set out in "Risk Factors" in this Prospectus. You should read that section carefully before you decide to invest in the Offer Shares. Various expressions used in this section are defined in the sections headed "Definitions" and "Glossary of Technical Terms" in this Prospectus.

OVERVIEW

Who We Are

We are one of the global leading gold mining companies formed by combining all of the gold mines of Zijin Mining located outside of China. Leveraging Zijin Mining's competitive advantage in the management of exploration, development and operation of low-grade and refractory resources, we have emerged as a global leading gold mining company principally engaged in exploration, mining, processing, smelting, refining and sale of gold. We integrate high-quality gold mine resources through global mergers and acquisitions, and by leveraging our geological exploration, research and development ("**R&D**"), engineering, construction, and mine operation capabilities, along with international ESG systems. This enables us to achieve continuous reserve expansion, production growth and efficient operations.

As of the Latest Practicable Date, we held interests in eight gold mines located in gold-rich regions across Central Asia, South America, Oceania and Africa, namely the Tajikistan Jilau/Taror Gold Mines, Kyrgyzstan Taldybulak Levoberezhny Gold Mine, Australia Norton Gold Mine, Guyana Aurora Gold Mine, Colombia Buriticá Gold Mine (through Colombia Entrustment Arrangement), Suriname Rosebel Gold Mine, Ghana Akyem Gold Mine and PNG Porgera Gold Mine. Among these gold mines, we control and operate seven gold mines and hold a minority interest in the PNG Porgera Gold Mine. By tailoring our operation models to the unique characteristics of each mine, we produce gold in the forms of gold concentrates, gold doré and gold ingots from our mines. Through continuous resource development and operational efficiency improvement, we have successfully established a leading position in the global gold mining industry and achieved proven track record of robust growth, as illustrated in the chart below:

Notes:

1) Calculated based on 100% of the equity interest for each mine held by the Company as of the Latest Practicable Date, except for PNG Porgera Gold Mine, which is presented based on 24.5% of the equity interest held by the Company
2) According to Frost & Sullivan, global ranking based on the gold reserves as of December 31, 2024, calculated based on 100% equity interest of each mine controlled by the Company as of the Latest Practicable Date
3) Calculated based on 100% of the equity interest for each mine held by the Company in the given years
4) Represented the accumulative gold reserve expansion in the mines the Company operated from the completion of the acquisitions to December 31, 2024
5) Calculated using profit for the year of 2024 divided by total equity as of December 31, 2024, multiplied by 100%
6) As of December 31, 2024, the total consolidated Proved and Probable Ore Reserves for our mines including the minority interests in PNG Porgera Gold Mine, were estimated to be about 608.6 Mt, with total Proved and Probable Au grade Ore Reserves of 1.4 g/t

Starting from the acquisition of the Tajikistan Jilau/Taror Gold Mines in 2007, we have expanded our business through global acquisitions, operational enhancement and production expansion of several large gold mines. According to Frost & Sullivan, our gold Reserves and gold production volume on a consolidated basis ranked ninth and eleventh globally, respectively, as of December 31, 2024 and in 2024. From 2022 to 2024, the CAGR of our gold production reached 21.4%, achieving a faster growth rate than other sizable companies, according to Frost & Sullivan, and the CAGR of net profit attributable to owners of the parent was 61.9%.

We are a leading mining company in terms of growth, operational efficiency and profitability in the global gold mining industry. Due to scarcity of high quality gold mines as acquisition targets in recent years, most of the mines we acquired were underperforming at the time of acquisition with poor operational management or resource endowments not fully identified. Through technological innovations, production expansion, and enhanced operational efficiency, each of the Guyana Aurora Gold Mine and the Suriname Rosebel Gold Mine turned profitable within one year after our acquisitions in 2020 and 2023, respectively. We maintained high capital return in 2024, with ROE of 21.4%. In 2024, our all-in sustaining cost (AISC) was US$1,458 per ounce, ranking sixth lowest among the top fifteen gold mining companies globally, according to Frost & Sullivan. During the Track Record Period, among the seven mines we operated, the mining cost per tonne of ore mined was US$38.7, US$31.3, US$34.3, US$36.5 and US$32.7 in 2022, 2023 and 2024 and the six months ended June 30, 2024 and 2025, respectively, while the processing cost per tonne of ore milled was US$20.6, US$18.2, US$19.4, US$20.6 and US$17.2, respectively, of the same periods.

The following map illustrates the geographic coverage and locations of the eight gold mines:

Among the countries where we generated revenue during the Track Record Period, Tajikistan, Kyrgyzstan, Guyana and Suriname are Non-IOSCO MMOU Countries and have not signed any regulatory cooperation agreement or memorandum of understanding with the SFC or the Stock Exchange.

Our Controlling Shareholder

Our controlling shareholder, Zijin Mining, is a global leading mining company primarily focused on mineral exploration and development. Zijin Mining operates over 30 large mining projects across 17 countries worldwide as of December 31, 2024, covering metals including gold, copper, lithium, and zinc, among others. Zijin Mining ranks among the top five mining companies globally in terms of resources and reserves, production, revenue, profit, total asset and market capitalization. Zijin Mining is distinguished by its robust research and development team, which excels in technologies that facilitate the full process of the value chain. Zijin Mining has extensive experience in the exploration, construction and operation of large-scale metal mines, complemented by professional and efficient resource acquisition and in-house exploration expertise. Zijin Mining maintains a competitive advantage through its cost-efficient operations and upholds high standards in ESG practices and sustainable development capabilities.

Upon completion of the Spin-off, the businesses of the Group and Zijin Mining Group will be clearly delineated. We also have administrative independence, management independence, financial independence and operational independence from Zijin Mining Group. For details, please see "Relationship With Zijin Mining".

We have a very close relationship with Zijin Mining. During the Track Record Period, Zijin Mining was our largest customer and primary supplier. As of June 30, 2025, the Group's net amount due to Zijin Mining is US$643.4 million. In addition, as of June 30, 2025, the Group has recorded lease liabilities amounting to US$38.0 million in relation to certain financial lease arrangements of motor vehicles between the Group and Zijin Mining. We have fully inherited Zijin Mining's advantages in the area of resource and reserve expansion. We also benefit from the advanced geological exploration technology and self-developed equipment from Zijin Mining. Zijin Mining's technologies provide us with comprehensive technical solutions. See "Risk Factors — Deterioration of our relationship with Zijin Mining could adversely affect our business, financial condition, and results of operations."

Our Market Opportunities

Gold, recognized as a strategic resource due to its combination of monetary, commodity and financial attributes, has increasingly taken on the role of a safe haven asset in recent years and experienced substantial shifts in its pricing dynamics, largely due to heightened geopolitical uncertainties and more frequent monetary easing cycles globally. Due to these factors, gold has become an increasingly important asset allocation for global central banks and investors. Emerging countries worldwide have been consistently purchasing gold in recent years. Despite this trend, according to Frost & Sullivan, the proportion of gold held by central banks constitutes only 8.9% of asset reserves in emerging countries (non-OECD countries), which is significantly lower than the average of 25.2% in developed countries (OECD member countries) as of December 31, 2024. This disparity highlights significant potential for increasing strategic reserves of gold among emerging countries. Furthermore, by incorporating gold into their asset portfolios, financial institutions can enhance their risk-return profile, which further increases investor interest in gold allocation. Driven by these factors, gold has officially surpassed the Euros to become the second-largest reserve asset for global central banks, accounting for 20% of global official reserves as of December 31, 2024, surpassing the Euro's 16% for the first time, and second only to the US dollar's 46%.

According to Frost & Sullivan, in recent years, due to decreasing global gold mine exploration budgets, discovering high-quality gold mines has become increasingly difficult, resulting in a noticeable decline in the pace and scale of newly discovered large gold mines worldwide. The annual average gold price rose by approximately 35% from 2020 to 2024, according to London Bullion Market Association (LBMA) Gold Price. In the future, gold prices are anticipated to gain further long-term support as the grade of gold mines continues to decline and extraction costs continue to increase.

Our Global Acquisitions

We have extensive experience in global mergers and acquisitions, demonstrating a strong track record in acquiring global resources. Over nearly two decades of development, we have acquired high-potential mine assets across various regions, including South America, Oceania, Central Asia and Africa through various acquisition transactions.

We actively pursue acquisitions of high-potential gold mines and under-valued low-grade and refractory gold mines. Our comprehensive experience in complex cross-border acquisitions, combined with our operational and technical expertise in the gold mining industry, enable us to accurately identify and acquire potential high-value assets globally and to conduct geological exploration and development in a cost-effective way proactively leveraging our strong capabilities following the acquisitions.

We have a track record of identifying and seizing low-cost acquisition opportunities. From 2019 to 2024, the average acquisition cost of the mines we acquired was approximately US$61.3 per ounce in terms of gold resources, while the average acquisition cost in the industry during the same period was approximately US$92.9 per ounce, according to Frost & Sullivan, which was 52% higher than ours.

Our Mine Development and Operation Capabilities

We possess advanced technology, advanced project operation and management systems, and optimized supply chain, which form the core of our mine development and operation capabilities. We focus on cost control and efficiency enhancement by combining the procurement of large-scale, intelligent equipment globally with localized employment and production materials to effectively reduce supply chain costs. We employ the Five-Stage-Integrated Life-of-Mine Project Management Procedure, which holistically considers and manages the five key processes — exploration, mining, processing, smelting, and environmental protection, based on the flow of ores. By doing so, we effectively reduce construction and production costs, maximizing economic and social benefits for the projects.

We have strong cost management capability, with several of our mines turning profitable shortly after our acquisitions. During the Track Record Period, our operating cost growth rate was below the average level of global gold mining companies. The Suriname Rosebel Gold Mine, the Tajikistan Jilau/Taror Gold Mines and the Guyana Aurora Gold Mine were all loss-making before our acquisitions and became profitable within one to two years after our acquisitions.

ESG

Our ESG practice is integral in upholding our core value of empowering green production operations through technological innovation to create sustainable value for shareholders and society. We place significant emphasis on ESG by prioritizing mine safety and green mining initiative, fully integrating into local communities, adhering to the principle of "sharing project development benefits with local stakeholders" to drive the economic development for communities and complying with international standards such as United Nations Sustainable Development Goals, etc.

Our Financial Performance

Our revenue was US$1,818.0 million, US$2,262.4 million and US$2,989.9 million, respectively, in 2022, 2023 and 2024, with a CAGR of 28.2%. Our profit attributable to owners of the parent was US$183.7 million, US$230.4 million and US$481.4 million, respectively, in 2022, 2023 and 2024, with a CAGR of 61.9%. For the six months ended June 30, 2024 and 2025, our revenue was US$1,403.0 million and US$1,996.9 million, respectively, and our profit attributable to owners of the parent was US$214.4 million and US$520.2 million, respectively.

COMPETITIVE STRENGTHS

We believe that the following key strengths provide us with a competitive advantage and position us well to pursue current and future growth opportunities.

- One of the global leading gold mining companies with high growth and highly certain prospects for reserve and production expansion.
- Excellent track record of continuous expansion through acquisitions, with proven capabilities in target identification, transaction execution and resource integration to achieve value enhancement.
- Leading capabilities of geological exploration, and cost-effective expansion and construction contribute to the sustainable organic growth.
- Realizing cost efficiency and value enhancement through our proprietary and advanced technologies, industry-leading expertise in low-grade and refractory ore utilization and strong mine operational capabilities.
- Commitment to responsible mining practices, achieving green and sustainable development through high ESG standards.
- Visionary management team with extensive expertise and global insights, and the "Perseverance, Entrepreneurship and Innovation" spirit of Zijin Mining.

See "Business — Competitive Strengths" for further details.

GROWTH STRATEGIES

We plan to implement the following business strategies:

- Achieving continuous growth in gold resources and reserves through geological exploration and acquisitions, implementing a resource-first strategy.
- Enhancing production capacity and mineral resource recovery through technological upgrades and operational improvements.
- Continuously advancing technological innovation.
- Unwavering commitment to high-standard ESG practices.

See "Business — Growth Strategies" for further details.

The following table sets out a summary of the details of our major operating mining assets as of the Latest Practicable Date:

Mineralized Zone/Block	Highlights
Tajikistan Jilau/Taror Gold Mines	• Acquired in 2007 • Tajikistan's largest gold producer and largest gold mine in terms of gold Resources • Open-pit mining • LOM: Until 2037 • Resumed production and achieved profitability through technological upgrades after acquisition within two years • As of June 30, 2025, total Mineral Resources amounted to 68.1 Mt, with average Au grade of 1.3 g/t, and Au metal Mineral Resources of 2,924 koz (90.9 tonnes) • In 2024, 174 koz (5.4 tonnes) of gold was produced • Our equity interest in the mine: 70%
Kyrgyzstan Taldybulak Levoberezhny Gold Mine	• Acquired in 2011 • Kyrgyzstan's third-largest gold mine in terms of gold Resources • Underground mining • LOM: Until 2033 • Commenced operation in 2016 and achieved profitability within two years • As of June 30, 2025, total Mineral Resources amounted to 13.4 Mt, with average Au grade of 3.6 g/t, and Au metal Mineral Resources of 1,569 koz (48.8 tonnes) • In 2024, 120 koz (3.7 tonnes) of gold was produced • Our equity interest in the mine: 60%

Mineralized Zone/Block	Highlights
Australia Norton Gold Mine	• Acquired approximately 89% during 2012, and further increased its interest to 100% in 2015 • One of Australia's largest gold producers and the only large heap leach project with an annual processing capacity exceeding 5 million tonnes • Open-pit mining and underground mining • LOM: Until 2039 • Was profitable before and after the acquisition • As of June 30, 2025, total Mineral Resources amounted to 304.5 Mt, with average Au grade of 0.9 g/t, and Au metal Mineral Resources of 9,108 koz (283.4 tonnes) • In 2024, 266 koz (8.3 tonnes) of gold was produced • Our equity interest in the mine: 100%
Guyana Aurora Gold Mine .	• Acquired in 2020 • The only large-scale gold mine project in Guyana with production volume of over 100 koz in 2024 • Open-pit mining and underground mining • LOM: Until 2037 • Originally a loss-making enterprise with suspended operations; resumed production and became profitable in the year of the acquisition • As of June 30, 2025, total Mineral Resources amounted to 78.1 Mt, with average Au grade of 2.4 g/t, and Au metal Mineral Resources of 5,970 koz (185.8 tonnes) • In 2024, 130 koz (4.1 tonnes) of gold was produced • Our equity interest in the mine: 100%
Colombia Buriticá Gold Mine	• Acquired in 2020 • One of Colombia's largest producing gold mines, a globally ultra-high-grade large gold mine, and Colombia's first large modern underground mine • Underground mining • LOM: Until 2039 • Achieved profitability in the year of the acquisition • Recognized by the Colombian government as a "National Strategic Interest Project" • As of June 30, 2025, total Mineral Resources amounted to 50.1 Mt, with average Au grade of 7.2 g/t, and Au metal Mineral Resources of 11,500 koz (359.4 tonnes) • In 2024, 322 koz (10.0 tonnes) of gold was produced • Our economic interest in the mine: 68.8%

Mineralized Zone/Block	Highlights
Suriname Rosebel Gold Mine	• Acquired in 2023 • A world-class gold mine and one of South America's largest producing open-pit gold mines • Open-pit mining • LOM: Until 2049 • Originally a loss-making project; turned profitable in the year of the acquisition • As of June 30, 2025, total Mineral Resources amounted to 451.2 Mt, with average Au grade of 0.8 g/t, and Au metal Mineral Resources of 11,876 koz (369.4 tonnes) • In 2024, 240 koz (7.5 tonnes) of gold was produced • Our equity interest in the mine: 95.0%
Ghana Akyem Gold Mine . .	• Acquired in 2025 • One of Ghana's largest gold mines • Open-pit mining and underground mining • LOM: Until 2038 • Was profitable before and after the acquisition • As of June 30, 2025, total Mineral Resources amounted to 159.5 Mt, with average Au grade of 1.8 g/t, and Au metal Mineral Resources of 9,436 koz (293.5 tonnes) • In 2024, 203 koz (6.3 tonnes) of gold was produced • Our equity interest in the mine: 100%
PNG Porgera Gold Mine. . .	• Acquired 47.5% interest in 2015; currently indirectly holding 24.5% interest • Papua New Guinea's second-largest gold mine • Resumed production in 2024 and has been profitable since 2024 • Open-pit mining and underground Mining • LOM: Until 2043 • As of December 31, 2024, total Mineral Resources attributable to us on equity basis amounted to 51.5 Mt, with average Au grade of 2.7 g/t, and Au metal Mineral Resources of 4,414 koz (137.3 tonnes) • In 2024 and first half of 2025, the gold production volume attributable to us on equity basis was 46 koz (1.4 tonnes) and 44 koz (1.4 tonnes), respectively • Our equity interest in the mine: 24.5%

Our Mineral Resources and Ore Reserves

Mineral Resources

As of June 30, 2025, the total Mineral Resources for our mines, including our minority interests in PNG Porgera Gold Mine, are estimated to be about 1,176.2 Mt, with an average Au grade of 1.5 g/t and Au metal Mineral Resources of 56,797 koz (1,768.4 tonnes).

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our Mineral Resources as of June 30, 2025:

Mineralized Zone/Block	Category	Tonnage[(1)] (Mt)	Au Grade[(1)] (g/t)	Au Metal Contained[(1)] (koz)	(t)
Tajikistan Jilau/Taror Gold Mines.	Measured	46.6	1.2	1,861	57.9

Notes:

(1) Figures and economic interests are subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them. Except for PNG Porgera Gold Mine, the Mineral Resources Information of which is calculated based on 24.5% of the equity interest held by the Company, the Mineral Resources information is calculated based on 100% of the equity interest for each asset held by the Company.

(2) The information is presented based on the 24.5% equity interest we held as of December 31, 2024. A separate Competent Person's Report for the PNG Porgera Gold Mine is not included in this prospectus, as we only hold a minority interest in such asset while Barrick Mining Corporation is the operator and our Directors are of the view that given such background of ownership and operatorship, it is reasonable to cite Resources & Reserves information from public filings of Barrick Mining Corporation and SRK has conducted independent review and verified such information.

(3) The "Total consolidated" information is calculated based on 100% of the equity interest for each asset held by the Company, except for PNG Porgera Gold Mine, which is presented based on 24.5% of the equity interest held by the Company.

(4) The "Total attributable" information is calculated based on the percentage of the equity interest for each asset held by the Company.

Ore Reserves

As of June 30, 2025, the total Proved and Probable Ore Reserves for our mines including Ghana Akyem Gold Mine we acquired in 2025 and our minority interests in PNG Porgera Mine were estimated to be about 602.5 Mt, with total Proved and Probable Au grade Ore Reserves of 1.4 g/t. Our total Proved and Probable Ore Reserves contained 27,156 koz (845.2 tonnes) of Au contained metal.

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our Ore Reserves (including gold Resource information) as of June 30, 2025:

Mineralized Zone/Block	Category	Tonnage[1] (Mt)	Au Grade[1] (g/t)	Au Metal Contained[1] (koz)	(t)
Tajikistan Jilau/Taror Gold Mines.	Proved	41.6	1.2	1,644	51.1

Total[6]	**13,567**	**849**	**26.4**	**25,003**	**1,151**	**35.8**	**29,207**	**1,298**	**40.4**	**19,610**	**656**	**20.4**

Notes:

(1) Figures are subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them, and figures of tonnes/koz may not be an arithmetic conversion based on the rounding figures as shown in the table.

(2) The "Subtotal consolidated" information is calculated based on 100% of equity interest for each asset held by the Company.

(3) The "Subtotal attributable" information is calculated based on the percentage of equity interest for each asset held by the Company.

(4) The acquisition of the Ghana Akyem Gold Mine was completed in April 2025.

(5) PNG Porgera Gold Mine's operations were suspended in April 2020 due to the non-extension of the previous Special Mining Lease, and it resumed mining in January 2024. Figures shown in the table for the PNG Porgera Gold Mine is calculated based on 24.5% of the equity interest held by the Company.

(6) The "Total" information is calculated by adding the "Subtotal consolidated" information and the information of Ghana Akyem Gold Mine (assuming its production volume during the Track Record Period before acquisition can be consolidated) and PNG Porgera Gold Mine (based on 24.5% of the equity interest held by the Company).

Planned Production Schedule

As set forth in the Competent Person's Report, the following chart sets forth the planning production schedule for the operations of each of the mines up to 2030. For the full production schedule over the life of mine, see "Business" for further details.

Type	Unit	LOM Total	2H2025	2026	2027	2028	2029	2030
Tajikistan Jilau/Taror Gold Mines								
Gold Produced	koz	1,816	83	200	201	211	227	189
Kyrgyzstan Taldybulak Levoberezhny Gold Mine								
Gold Produced	koz	734	51	96	86	85	90	95
Australian Norton Gold Mine								
Gold Produced	koz	2,737	107	245	224	218	182	199
Guyana Aurora Gold Mine								
Gold Produced	koz	2,111	80	153	188	175	153	205
Colombia Buriticá Gold Mine

Licenses and Permits

During the Track Record Period and as of the Latest Practicable Date, we have obtained the requisite licenses, permits and certificates required by the relevant laws and regulations for our current operations in all material aspects, other than the mining and exploration permits and/or licenses being renewed. The licenses and permits are usually granted for a certain period of time and for a designated mining area, with the option of renewal. We are required to adhere to a range of regulatory requirements, including environmental protection, health and safety standards, and community engagement. For more details, please see the respective list of licenses and permits in tabular form set out in the description of the production business of each of our mines in "Business".

Our Gold Operating Costs

For the year ended December 31, 2024, our gold AISC was US$1,458 per ounce. According to Frost & Sullivan, our AISC was ranked sixth lowest among the top fifteen gold mining companies globally by gold production in 2024.

Set forth below is our gold AISC for the periods indicated as stated in the Competent Person's Report:

	Year Ended December 31,			Six Months Ended June 30,
	2022	2023	2024	2025
	(US$/oz)			
Tajikistan Jilau/Taror Gold Mines	759	1,475	1,581	1,166
Kyrgyzstan Taldybulak Levoberezhny Gold Mine	1,007	1,119	1,318	1,532
Australia Norton Gold Mine	1,604	2,112	2,047	2,332
Guyana Aurora Gold Mine	1,764	1,712	1,572	1,617
Colombia Buriticá Gold Mine	856	962	802	1,013
Suriname Rosebel Gold Mine	—	1,463	1,547	1,756
Ghana Akyem Gold Mine[(1)]	—	—	—	1,779
Our Group	**1,046**	**1,449**	**1,458**	**1,568**

Note:
(1) May 2025 to June 2025 after acquisition.

Our Revenue, Sales Volume and Average Selling Price

We generate substantially all of our revenue from the sales of gold. Our other revenue mainly includes the sales of other non-ferrous metals such as silver and copper, as well as rental income from rentals of machinery equipment. Our revenue amounted to US$1,818.0 million, US$2,262.4 million, US$2,989.9 million, US$1,403.0 million and US$1,996.9 million in 2022, 2023 and 2024 and the six months ended June 30, 2024 and 2025, respectively.

The table below sets forth our revenue of each mine and percentage of our total revenue for the periods indicated:

	Year ended December 31,						Six months ended June 30,			
	2022		2023		2024		2024		2025	
	US$	%	US$	%	US$	%	US$	%	US$	%
	(in thousands, except for percentages)									
Tajikistan Jilau/ Taror Gold Mines	691,122	38.0	440,604	19.5	515,849	17.3	228,024	16.3	328,936	16.5
Kyrgyzstan Taldybulak Levoberezhny Gold Mine	223,933	12.3	258,015	11.4	286,161	9.6	138,018	9.8	172,991	8.7
Australia Norton Gold Mine	303,798	16.7	373,044	16.5	562,882	18.8	260,079	18.5	381,529	19.1

Suriname Rosebel Gold Mine	—	—	468,822	20.7	577,401	19.3	270,032	19.2	327,486	16.4
Ghana Akyem Gold Mine	—	—	—	—	—	—	—	—	123,350	6.1
Total	1,817,981	100.0	2,262,365	100.0	2,989,935	100.0	1,402,983	100.0	1,996,869	100.0

Our revenue from gold sales was US$1,724.2 million, US$2,167.2 million, US$2,838.7 million, US$1,349.2 million and US$1,954.1 million in 2022, 2023 and 2024 and the six months ended June 30, 2024 and 2025, respectively, accounting for 94.8%, 95.8%, 94.9%, 96.2% and 97.9%, respectively, of our total revenue.

The following table sets forth our disaggregated revenue information and percentage of our total revenue for the periods indicated:

	Year ended December 31,						Six months ended June 30,			
	2022		2023		2024		2024		2025	
							(unaudited)			
	US$	%	US$	%	US$	%	US$	%	US$	%
	(in thousands, except for percentages)									
Gold	1,724,229	94.8	2,167,179	95.8	2,838,696	94.9	1,349,230	96.2	1,954,061	97.9
Others[(1)]	93,752	5.2	95,186	4.2	151,239	5.1	53,753	3.8	42,808	2.1
Total	1,817,981	100.0	2,262,365	100.0	2,989,935	100.0	1,402,983	100.0	1,996,869	100.0

Note:

(1) Including copper and silver sales and rental income from rentals of machinery equipment.

The following table sets forth the key statistics of our gold sales for the periods indicated:

	Year ended December 31,			For the six months ended June 30,	
	2022	2023	2024	2024	2025
Revenue from gold sales (US$ in millions)	1,724.2	2,167.2	2,838.7	1,349.2	1,954.1
Sales volume (koz)	1,020	1,163	1,229	619	633
Sales volume (t)	31.7	36.2	38.2	19.3	19.8
Average selling price (US$/oz)[1]	1,690	1,863	2,310	2,180	3,085
Market price of gold (US$/oz)[2]	1,801	1,942	2,386	2,205	3,071

Note:
(1) Calculated as revenue from gold sales divided by sales volume.
(2) The average gold price in the global market for the periods indicated, according to London Bullion Market Association (LBMA) Gold Price.

Our average selling prices of gold, calculated as our revenue from gold sales divided by sales volume, were generally in line with the gold prices in the global market because most of our gold were sold to the end customers including international gold refineries, precious metal traders or financial institutions, at prices which were referenced to the spot prices. Our average selling prices were generally slightly lower than the gold market prices in 2022, 2023 and 2024.

The following table sets forth our sales volume and average selling price for each mine for the periods indicated:

	Year ended December 31,						Six months ended June 30,			
	2022		2023		2024		2024		2025	
	Sales volume (koz)	Average selling price[1] (US$/oz)	Sales volume (koz)	Average selling price[1] (US$/oz)	Sales volume (koz)	Average selling price[1] (US$/oz)	Sales volume (koz)	Average selling price[1] (US$/oz)	Sales volume (koz)	Average selling price[1] (US$/oz)
Tajikistan Jilau/Taror Gold Mines[2]	387	1,602	213	1,815	171	2,469	85	2,271	96	3,173
Kyrgyzstan Taldybulak Levoberezhny Gold Mine	123	1,758	131	1,910	119	2,347	62	2,177	56	3,048
Australia Norton Gold Mine	177	1,718	212	1,762	265	2,120	125	2,084	124	3,079
Guyana Aurora Gold Mine	89	1,797	97	1,944	131	2,407	63	2,239	66	3,141
Colombia Buriticá Gold Mine	244	1,731	269	1,854	300	2,280	161	2,177	149	2,986
Suriname Rosebel Gold Mine	—	—	241	1,948	243	2,380	123	2,208	106	3,110
Ghana Akyem Gold Mine	—	—	—	—	—	—	—	—	38	3,266
Total	**1,020**	**1,690**	**1,163**	**1,863**	**1,229**	**2,310**	**619**	**2,180**	**633**	**3,085**

Note:
(1) Calculated as revenue from gold sales divided by sales volume on an actual basis.
(2) In 2022, the average selling price of gold at the Tajikistan Jilau/Taror Gold Mines was relatively low, primarily because sales composed of gold concentrate, selling price of which had a higher discount.

In 2022, 2023, 2024 and the six months ended June 30, 2025, our cash operating costs amounted to US$1,315.9 million, US$1,442.1 million, US$1,697.9 million and US$917.1 million, respectively. See "Financial Information — Cash Operating Costs" for more details.

OUR CUSTOMERS, SUPPLIERS AND CONTRACTORS

Our Customers

During the Track Record Period, our primary products were gold. We also sold other mineral products such as silver and copper. Our products are mainly sold to market customers including financial institutions directly or through the Zijin Mining Group. Certain subsidiaries of Zijin Mining, acting as traders of various mineral resources, are responsible for, among other things, arranging for the external sale of mineral resources produced by the Group to external refineries, end-customers or traders. By leveraging the centralized and experienced sales capabilities of these subsidiaries of Zijin Mining, the sales coordination within the Group has been enhanced, thereby optimizing operational efficiencies and economies of scale, and securing favorable commercial terms. Therefore, during the Track Record Period, Zijin Mining Group was our largest customer, and we expect to continue this business relationship with the Zijin Mining Group upon completion of the Global Offering.

Pursuant to the Zijin Mining Sales Framework Agreement, upon Listing, we will sell gold and other by-products (such as copper and silver) to Zijin Mining Group, and Zijin Mining Group shall pay the purchase price for the products sold in return. The initial term of the Zijin Mining Sales Framework Agreement will commence on the Listing Date and end on December 31, 2027. See "Connected Transactions — Zijin Mining Sales Framework Agreement" for further details.

The prices payable by Zijin Mining Group to our Group under the Zijin Mining Sales Framework Agreement will be determined on arm's length basis with reference to (i) the prevailing market price of the mineral resources in international market such as the London Bullion Market Association, the Shanghai Huatong Silver Exchange and the Shanghai Future Exchange and (ii) trading margins on the price of gold doré, gold ingot and gold concentrate in the range of 0% to 1.3% based on arm's length discussion with reference to similar arrangements in the open market.

The following table sets forth the proposed annual caps for the volume (tonnage) of mining products sold by our Group to the Zijin Mining Group pursuant to the Sale Framework Agreement:

	Year ending December 31,		
	2025	2026	2027
	(tonnes)	(tonnes)	(tonnes)
Maximum annual transaction volume (tonnage) sold by our Group under the Sale Framework Agreement			
Gold	28.0	29.0	30.0
Silver	31.0	31.0	32.0
Copper	4,800	5,200	5,900

As the highest applicable percentage ratio for the transactions arising from the Zijin Mining Sales Arrangement calculated for the purposes of Chapter 14A of the Listing Rules is expected to exceed 5%, the Zijin Mining Sales Arrangement will, upon Listing, constitute continuing connected transactions under the Listing Rules subject to reporting, annual review, announcement and independent shareholders' approval requirements. In addition, we have applied for, and the Stock Exchange has granted, a waiver to us from strict compliance with Rule 14A.53(1) in respect of the annual caps of the transactions under the Zijin Mining Sales Framework Agreement to be expressed as the transaction volume of gold, silver and copper respectively to be sold under the Zijin Mining Sales Framework Agreement.

During the Track Record Period, our top five customers in the respective year were Zijin Mining Group, refiners of precious metals and other non-ferrous metals as well as trading companies. For each of the years ended December 31, 2022, 2023 and 2024, revenue contributed by our top five customers amounted to US$1,275.4 million, US$1,769.4 million and US$2,517.0 million, respectively, accounting for 70.2%, 78.2% and 84.2% of our total revenue for the same periods, respectively. Revenue contributed by our largest customer for each of years ended December 31, 2022, 2023 and 2024 amounted to US$597.7 million, US$635.8 million and US$1,272.9 million, respectively, accounting for 32.9%, 28.1% and 42.6% of our total revenue for the same periods, respectively. For the six months ended June 30, 2025, revenue contributed by our top five customers and our largest customer amounted to US$1,964.8 million and US$989.0 million, respectively, accounting for 98.4% and 49.6% of our total revenue for the same period, respectively.

Our Suppliers

We procure various materials, such as diesel fuel, processing chemicals, explosives, and related consumables, as well as machinery and equipment for our production operations mainly from (i) Zijin Mining Group, (ii) different local suppliers where we operate and/or (iii) the original equipment manufacturers. We also procure various services, such as security services, transporting services, engineering services and loading and hauling services, from various local suppliers. We usually source qualified suppliers through market research and request of fee quotes and bidding process. During the Track Record Period, we purchased equipment and raw materials mainly from certain subsidiaries of Zijin Mining, as part of the centralized procurement arrangement implemented by us so that we could procure equipment and raw materials in accordance with the procurement policy of Zijin Mining and enjoy the economies of scale. During the Track Record Period, Zijin Mining Group was our largest supplier, and we expect to continue this business relationship with the Zijin Mining Group upon completion of the Global Offering. See "Connected Transactions — Zijin Mining Centralized Procurement Framework Agreement" for further details.

During the Track Record Period, all of our top five suppliers in the respective year were service or commodity providers such as suppliers of electricity, fuel, and transportation. For each year of the Track Record Period, purchases from our top five suppliers amounted to US$348.0 million, US$423.3 million and US$454.3 million, respectively, accounting for 30.7%, 30.4% and 31.2% of our cost of sales for the same periods, respectively. Purchases from our largest supplier for each year of the Track Record Period amounted to US$154.1 million, US$195.6 million and US$175.7 million, respectively, accounting for 13.6%, 14.0% and 12.1% of our cost of sales for the same periods, respectively. For the six months ended June 30, 2025, purchases from our top five suppliers and our largest supplier amounted to US$225.2 million and US$115.2 million, respectively, accounting for 29.1% and 14.9% of our cost of sales for the same period, respectively.

Our Contractors

As of December 31, 2024, we also engaged 46 third party contractors to undertake construction and engineering work, 15 third-party contractors for exploration work and 52 third-party contractors for mining and processing work. From time to time, we may engage other third-party contractors to support our mining activities, such as construction or improvement of tailing dams and roads in mining sites. See "Business — Contractors" for further details.

COMPETITION

According to Frost & Sullivan, the gold mining industry has become increasingly concentrated in recent years. This trend is largely driven by mergers and resource integration among leading gold producers. Major gold mining companies, with their efficient operations, global presence, financial strength, and other competitive advantages, are now at the forefront of the industry. These large gold mining companies have been able to achieve economies of scale through consolidation, which has allowed them to optimize production processes and reduce unit costs. The top 15 global gold producers contributed approximately 30.5% of the global gold production in 2024. Among these leading companies, our gold Reserves and gold production volume on a consolidated basis ranked ninth and eleventh globally, respectively, in 2024, according to Frost & Sullivan.

Our major competitors are large international companies. We primarily compete based on our ability to obtain gold Reserves and Resources, which is dependent on our financial conditions, technical ability, equipment and machinery and human capital. We also compete with international players in acquiring attractive gold mining properties. The mining industry is a capital-intensive industry that requires significant technical, exploration and management experience. Moreover, mining is subject to extensive regulations and requires a number of licenses and permits to operate. These factors constitute significant barriers to enter the gold mining industry.

See "Industry Overview" for details of the competitive landscape and our market position.

KEY RISK FACTORS

Our business faces risks including those set out in "Risk Factors." As different investors may have different interpretations and criteria when determining the significance of a risk, you should read the section headed "Risk Factors" in its entirety before you decide to participate in our Global Offering. Some of the major risks that we face include:

- Volatility in gold price could materially and adversely affect the profitability of our business, financial condition, results of operations and the cash flows.
- We operate in a number of countries and may also face geopolitical and country risks arising from our operations.
- We are subject to risks and uncertainties relating to our historical and future acquisitions and investments and establishing joint ventures, and we may fail to successfully implement our expansion strategies and integrate them with our existing business.
- Our business is subject to a number of operational risks and hazards specific to the mining industry, which may result in increased costs or losses, personal injuries or casualties, damage to reputation, suspension of operations and other penalties.
- We are subject to uncertainty in the results of exploration, and we may not be able to expand or replenish our mineral resources and reserves through further exploration. Failure to discover new reserves, maintain or enhance existing reserves, develop new operations or expand our current operations could adversely affect our business and results of operations.
- As of December 31, 2022, 2023 and 2024 and June 30, 2025, we had intangible assets of US$1,527.8 million, US$1,530.9 million, US$1,439.5 million and US$2,304.1 million, respectively, mainly representing the net carrying amount of our exploration and mining rights. The net carrying amount of our exploration and mining rights may incur impairment losses due to material decreases in the amount of our Reserves, which may adversely affect our results of operations.

SUMMARY OF HISTORICAL FINANCIAL INFORMATION

The following is a summary of our historical financial information as of and for the years ended December 31, 2022, 2023 and 2024 and the six months ended June 30, 2024 and 2025 extracted from the Accountants' Report set out in Appendix I to this Prospectus. The summary below should be read in conjunction with the consolidated financial information in Appendix I, including the accompanying notes and the information set forth "Financial Information."

Consolidated Statements of Profit and Loss and Comprehensive Income

	Year ended December 31,						Six months ended June 30,			
	2022		2023		2024		2024		2025	
	US$	%	US$	%	US$	%	US$	%	US$	%
	(in thousands, except for percentages)									
Revenue	1,817,981	100.0	2,262,365	100.0	2,989,935	100.0	1,402,983	100.0%	1,996,869	100.0%

Attributable to:										
Owners of the parent	183,680	10.1	230,383	10.2	481,371	16.1	214,363	15.3%	520,227	26.1%
Non-controlling interests	106,636	5.9	91,778	4.1	139,184	4.7	63,066	4.5%	104,343	5.2%

NON-IFRS FINANCIAL MEASURE

In evaluating our business, we consider and use EBITDA (Non-IFRS measure), adjusted EBITDA (Non-IFRS measure) and adjusted EBITDA margin (Non-IFRS measure), which are non-IFRS measures, as supplemental measures to review and assess our operating performance. We believe that these non-IFRS measures facilitate comparison of operating performance from period to period.

We provide a reconciliation of EBITDA (Non-IFRS measure), adjusted EBITDA (Non-IFRS measure) and adjusted EBITDA margin (Non-IFRS measure) to profit for the year, calculated and presented in accordance with IFRS. EBITDA (Non-IFRS measure) refers to profit for the year adjusted by income tax, finance costs, interest income from bank deposits, and depreciation and amortization. Adjusted EBITDA (non-IFRS measure) refers to EBITDA (non-IFRS measure) adjusted by equity-settled share award schemes expenses which are non-cash. Adjusted EBITDA margin (Non-IFRS measure) is calculated based on the Adjusted EBITDA (Non-IFRS measure) for the year divided by the total revenue for such year and multiplied by 100%. The terms EBITDA (Non-IFRS measure), adjusted EBITDA (Non-IFRS measure) and adjusted EBITDA margin (Non-IFRS measure) are not defined under IFRS and should not be considered in isolation or construed as alternatives to profit from operations or any other measure of performance or as an indicator of our operating performance or profitability. The use of EBITDA (Non-IFRS measure), adjusted EBITDA (Non-IFRS measure) and adjusted EBITDA margin (Non-IFRS measure) have limitations as an analytical tool, and you should not consider them in isolation from, or as a substitute for analysis of, our results of operations or financial condition as reported under IFRS Accounting Standards.

The following table presents a reconciliation of EBITDA (Non-IFRS measure), adjusted EBITDA (Non-IFRS measure) and adjusted EBITDA margin (Non-IFRS measure) to profit for each of the years indicated:

	For the year ended December 31,			For the six months ended June 30,	
	2022	2023	2024	2024	2025
	(US$ in millions, except for percentages)				
Profit for the year/period	290.3	322.2	620.6	277.4	624.6
Adjustments for:					
Income tax	137.1	92.6	316.4	147.5	239.7
Finance costs	57.0	50.9	43.2	21.7	18.7
Interest income from bank deposits	(1.6)	(2.8)	(9.1)	(3.2)	(5.9)
Depreciation and amortization	344.8	402.3	412.2	214.9	269.1
EBITDA (Non-IFRS measure)[(1)]	**827.6**	**865.2**	**1,383.3**	**658.3**	**1,146.1**
Adjustment for:					
Equity-settled share award schemes expenses	1.1	0.7	1.3	0.6	0.3
Adjusted EBITDA (Non-IFRS measure)[(2)]	**828.7**	**865.8**	**1,384.5**	**658.9**	**1,146.4**
Adjusted EBITDA margin (Non-IFRS measure)[(3)] (%)	45.6%	38.3%	46.3%	47.0%	57.4%

Notes:

(1) EBITDA (Non-IFRS measure), as we present it, represents profit for the year before income tax, finance costs, interest income from bank deposits, and depreciation and amortization.

(2) Adjusted EBITDA (Non-IFRS measure), as we present it, represents EBITDA adjusted by equity-settled share award schemes expenses which are non-cash.

(3) Adjusted EBITDA margin (Non-IFRS measure) is calculated based on the Adjusted EBITDA for the year (Non-IFRS measure) divided by the total revenue for such year and multiplied by 100%.

We generate substantially all of our revenue from the sales of gold. Our other revenue mainly includes the sales of other non-ferrous metals such as silver and copper, as well as rental income from rentals of machinery equipment. Our revenue amounted to US$1,818.0 million, US$2,262.4 million, US$2,989.9 million, US$1,403.0 million and US$1,996.9 million in 2022, 2023 and 2024 and the six months ended June 30, 2024 and 2025, respectively.

Our cost of sales primarily comprises raw material costs, depreciation and amortization, labor expenses, royalty expenses, labor cost, energy consumption costs and others. Our cost of sales increased during the Track Record Period. For the years ended December 31, 2022, 2023 and 2024 and the six months ended June 30, 2024 and 2025, our cost of sales amounted to US$1,197.5 million, US$1,669.7 million, US$1,855.6 million, US$885.2 million and US$1,069.1 million, respectively.

Our profit for the year/period amounted to US$290.3 million, US$322.2 million, US$620.6 million, US$277.4 million and US$624.6 million, in 2022, 2023 and 2024 and the six months ended June 30, 2024 and 2025, respectively, primarily due to the increase in revenue resulting from increases in gold sales volume and average selling price.

Summary Consolidated Statements of Financial Position

	As of December 31,			As of June 30,
	2022	2023	2024	2025
	(US$ in thousands)			
Total Non-Current Assets	3,455,590	4,090,116	4,201,863	6,022,672
Total Current Assets	736,533	1,064,775	1,200,874	1,452,969
Total Current Liabilities	550,398	1,077,906	955,000	946,151
Net Current Assets/(Liabilities)	186,135	(13,131)	245,874	506,818
Total Assets Less Current Liabilities	3,641,725	4,076,985	4,447,737	6,529,490
Total Non-Current Liabilities	1,277,646	1,485,655	1,545,646	2,293,173
Net Assets	2,364,079	2,591,330	2,902,091	4,236,317

We recorded net current assets of US$186.1 million as of December 31, 2022 and net current liabilities of US$13.1 million as of December 31, 2023, primarily attributable to an increase in other payables and accruals and an increase in trade payables, partially offset by an increase in prepayments, other receivables and other assets and an increase in cash and cash equivalents.

We recorded net current liabilities of US$13.1 million as of December 31, 2023 and net current assets of US$245.9 million as of December 31, 2024, primarily attributable to a decrease in other payables and accruals, a decrease in trade payables, an increase in cash and cash equivalents, an increase in prepayments, other receivables and other assets and an increase in inventories.

Our net current assets increased from US$245.9 million as of December 31, 2024 to US$506.8 million as of June 30, 2025, primarily attributable to an increase in trade receivables, an increase in cash and cash equivalents, an increase in inventories, a decrease in other payables and accruals, partially offset by a decrease in prepayments, other receivables and other assets, an increase in trade payables and an increase in income tax payables.

Our net assets increased from US$2,364.1 million as of December 31, 2022 to US$2,591.3 million as of December 31, 2023, primarily due to the increase in the profit for the year from US$290.3 million in 2022 to US$322.2 million in 2023, partially offset by the increased dividends paid from US$93.3 million in 2022 to US$122.3 million in 2023. Our net assets further increased to US$2,902.1 million as of December 31, 2024, primarily due to the increase in the profit for the year from US$322.2 million in 2023 to US$620.6 million in 2024, partially offset by the share capital reduction of a subsidiary of US$147.8 million in 2024. Our net assets further increased to US$4,236.3 million as of June 30, 2025, primarily due to the proceeds of US$3,040.0 million from the issuance of 1,729,000,000 shares to Gold Mountains (H.K.), partially offset by the deemed distribution upon group reorganization for the six months ended June 30, 2025.

Consolidated Statements of Cash Flow

The following table sets forth a summary of our cash flows for the periods indicated:

	For the year ended December 31,			For the six months ended June 30,	
	2022	2023	2024	2024	2025
				(unaudited)	
			(US$ in thousands)		
Net cash flows from operating activities	714,749	924,874	876,455	316,803	417,443
Net cash flows used in investing activities	(453,412)	(720,992)	(399,633)	(282,233)	(3,066,639)
Net cash flows (used in)/from financing activities	(346,560)	(135,633)	(396,959)	(16,502)	2,777,121
Net (decrease)/increase in cash and cash equivalents	(85,223)	68,249	79,863	18,068	127,925
Cash and cash equivalents at beginning of year	171,228	86,458	154,754	154,754	234,585
Effect of foreign exchange rate changes, net	453	47	(32)	(299)	1,608
Cash and cash equivalents at end of year	86,458	154,754	234,585	172,523	364,118

Our net cash flows used in investing activities were significantly higher in 2023 during the Track Record Period, primarily due to the acquisition of Suriname Rosebel Gold Mine of US$269.6 million. Our net cash flows used in financing activities decreased from US$346.6 million in 2022 to US$135.6 million in 2023, primarily due to a reduction in loan repayments from US$402.2 million in 2022 to US$115.2 million in 2023. Our net cash flows used in financing activities increased from US$135.6 million in 2023 to US$397.0 million in 2024, primarily due to a substantial capital reduction of a subsidiary in 2024, resulting in a return of US$215.0 million to shareholders. Our net cash flows used in investing activities increased from US$282.2 million in the six months ended June 30, 2024 to US$3,066.6 million in the six months ended June 30, 2025 was primarily due to the payment of consideration for acquisitions of subsidiaries to Zijin Mining. Our net cash flows from financing activities was US$2,777.1 million in the six months ended June 30, 2025, primarily due to the proceeds of US$3,040.0 million from the issuance of 1,729,000,000 shares to Gold Mountains (H.K.).

KEY FINANCIAL RATIOS

	As of and for the year ended December 31,			As of and for the six months ended June 30,
	2022	2023	2024	2025
	(US$ in thousands)			
Rates of return				
Return on assets[(1)] (%)	6.9	6.2	11.5	8.4
Return on equity[(2)] (%)	12.3	12.4	21.4	14.7
Liquidity ratios				
Current ratio[(3)] (times)	1.34	0.99	1.26	1.54
Quick ratio[(4)] (times)	0.77	0.62	0.80	1.01
Gearing ratio[(5)] (times)	0.29	0.28	0.25	0.17
Profit margin				
Gross profit margin[(6)] (%)	34.1	26.2	37.9	46.5
Net profit margin[(7)] (%)	16.0	14.2	20.8	31.3

Notes:

(1) Return on assets ratio is calculated using the profit for the year divided by total assets at the end of the year, multiplied by 100%.

(2) Return on equity ratio is calculated using the profit for the year divided by total equity at the end of the year, multiplied by 100%.

(3) Current ratio is calculated using total current assets divided by total current liabilities.

(4) Quick ratio is calculated using total current assets less inventories divided by total current liabilities.

(5) Gearing ratio is calculated by dividing total debt (which includes current and non-current portions of convertible debentures, interest-bearing bank and other borrowings, and lease liabilities) by total equity.

(6) Gross profit margin is calculated based on the gross profit for the year divided by the total revenue for the respective year and multiplied by 100%. See the paragraphs headed "Period to period comparison of results of operations" above in this section for more details on our gross profit margins.

(7) Net profit margin is calculated based on the profit for the year divided by the total revenue for the respective year and multiplied by 100%. See the paragraphs headed "Period to period comparison of results of operations" above in this section for more details on our net profit margins.

ACQUISITIONS DURING AND AFTER THE TRACK RECORD PERIOD

On October 18, 2022, Zijin Mining entered into the Rosebel Acquisition and acquired 95% ownership interest in the Suriname Rosebel Gold Mine. The percentage ratio of the acquisition is under 25% pursuant to Rule 4.05A of the Listing Rules.

In February 2023, Zijin Mining acquired 95% of the outstanding class A Shares and 100% of the outstanding class B Shares of Rosebel GM (which held Suriname Rosebel Gold Mine). In April 2025, Zijin Mining acquired Newmont Golden Ridge (which held Ghana Akyem Gold Mine). The percentage ratios of these acquisitions are under 25% pursuant to Rule 4.05A of the Listing Rules.

On June 28, 2025, we entered into an agreement with Cantech in relation to the acquisition of all issued share capital in each of RGG and RGP, which together held the Kazakhstan Raygorodok Gold Mine with a cash consideration of US$1.2 billion, subject to customary adjustments with reference to the financial information of RGG and RGP as of September 30, 2025. We intend to obtain a loan from financial institutions to finance the payment of the consideration.

See "History, Reorganization and Corporate Structure — Acquisitions during and after the Track Record Period" for further details. Pursuant to Rule 4.02(2) and (4), Rule 4.28, Rule 4.29, Rule 18.05 and Rule 18.09 of the Listing Rules, (a) the audited financial information of each of RGG and RGP for the financial years ended December 31, 2022, 2023 and 2024, and the audited financial information for the six months ended June 30, 2025 prepared in accordance with the International Financial Reporting Standards are set out in Appendix IC and Appendix IB to this Prospectus, respectively; (b) pro forma financial information of the enlarged Group in accordance with Rule 4.28 and Rule 4.29 of the Listing Rules is set out in Appendix IIB to this Prospectus, (c) a competent person's report (including a valuation report in accordance with Chapter 18 of the Listing Rules) on the Kazakhstan Raygorodok Gold Mine is included in the Competent Person's Report set out in Appendix III to this Prospectus.

RELATIONSHIP WITH ZIJIN MINING

As at the Latest Practicable Date, Zijin Mining, through its wholly owned subsidiaries, Zijin Northwest and Gold Mountains (H.K.), was indirectly interested in 100% of the issued share capital of our Company. Immediately upon completion of the Preferential Offering and the Global Offering (without taking into account any Shares which may be issued pursuant to the exercise of the Over-allotment Option), Zijin Mining will control approximately 86.70% of the issued share capital of our Company through Zijin Northwest and Gold Mountains (H.K.). Hence, upon Listing, Zijin Mining, Zijin Northwest and Gold Mountains (H.K.) constitute our Controlling Shareholders under the Listing Rules.

Upon completion of the Spin-off, the businesses of our Group and the Zijin Mining Group will be clearly delineated. Zijin Mining Group principally assumes the roles of owner, investor and/or operator in respect of its business in the exploration and mining of copper, zinc, lithium, and other metal resources, as well as gold mining within the PRC; whereas our Group will exclusively own and operate overseas gold mines.

Save for the Colombia Buriticá Gold Mine, the equity interests of all the overseas gold mines will be transferred to our Group prior to completion of the Spin-off, and the Zijin Mining Group will not, following completion of the Spin-off, engage in the exploration and mining of gold outside the PRC.

Please see "Relationship with Zijin Mining" for further details.

OUR OPERATIONS IN NON-IOSCO COUNTRIES

Among the countries where we generated revenue during the Track Record Period, Tajikistan, Kyrgyzstan, Guyana and Suriname are Non-IOSCO MMOU Countries and have not signed any regulatory cooperation agreement or memorandum of understanding with the SFC or the Stock Exchange. This may present certain difficulties for the Hong Kong regulators to seek regulatory assistance and information from the statutory securities regulators in such Non-IOSCO MMOU Countries in a readily available manner.

Our business in the Non-IOSCO MMOU Countries, on an aggregate basis, is significant to our operations. In 2022, 2023 and 2024 and the six months ended June 30, 2024 and 2025, our revenue generated from our operations in the Non-IOSCO MMOU Countries in aggregate contributed to 59.1%, 60.0%, 56.7%, 55.3% and 51.8% of our total revenue, respectively, and the net profit attributable to the Group from our operations in the Non-IOSCO MMOU Countries in aggregate contributed to 108.7%, 92.5%, 76.5%, 69.0% and 53.5% of our total net profit, respectively. As of June 30, 2025, we had substantial mining assets in Non-IOSCO MMOU Countries. The Mineral Resources and Ore Reserves of the mines operated in the Non-IOSCO MMOU Countries accounted for 51.9% and 51.8% of our total Mineral Resources and Ore Reserves as of June 30, 2025, respectively.

We produce 424 koz (approximately 13.2 tonnes), 667 koz (approximately 20.8 tonnes), 664 koz (approximately 20.7 tonnes) and 324 koz (approximately 10.1 tonnes) in 2022, 2023, 2024 and the six months ended June 30, 2025 from our operations in the Non-IOSCO MMOU Countries on a consolidated basis, respectively, representing 50.0%, 57.9%, 53.0% and 52.9% of our total gold production on a consolidated basis for the same periods, respectively.

For details, see "Business — Our Operations in Non-IOSCO Countries".

HEDGING STRATEGIES AND INTERNAL POLICIES

We have established comprehensive internal policies and procedures to manage foreign exchange and commodity price risks arising from our international operations and trading activities, particularly for precious metals such as gold and silver. Our hedging activities, which include the use of forwards, are conducted strictly for risk management purposes and not for speculation, with all transactions subject to a rigorous multi-level approval process and annual review by our Board. We maintain robust internal controls, including independent risk management personnel and regular reviews, to monitor and mitigate trading, market, funding, regulatory, and technical risks. An efficient emergency response mechanism is in place to address significant market events, with clearly defined stop-loss protocols and profit and loss limits. We are committed to compliance with applicable laws and regulations, safeguarding our assets, and maintaining financial stability, and we continue to enhance our risk management framework in line with industry best practices. During the Track Record Period, we engaged in gold forward contracts and a metal streaming agreement, but currently have no plans to enter into new

such contracts. We will continue to conduct hedging activities to be responsive to gold price fluctuations upon Listing. For details, see "Business — Hedging Strategies and Internal Policies".

RECENT DEVELOPMENTS AND NO MATERIAL ADVERSE CHANGE

Since June 30, 2025, the gold spot price has been fluctuating from US$3,343.2 per ounce on July 1, 2025 to US$3,344.4 per ounce on August 15, 2025, according to London Bullion Market Association (LBMA) Gold Price. Fluctuations in gold prices may affect our results of operations and financial performance in 2025 and going forward.

Our Directors confirm that there has been no material adverse change in our financial, operational or trading positions or prospects since June 30, 2025, being the date of our consolidated financial statements as set out in Appendix I to this Prospectus, and up to the date of this Prospectus.

THE SPIN-OFF AND THE PREFERENTIAL OFFERING

Regulatory requirements of the Spin-off

Zijin Mining, our Controlling Shareholder, is a company listed in Hong Kong and the PRC. The Listing of our Company constitutes a Spin-off from an A-Share listed company as defined under the Spin-off Rules. The Spin-off has been approved by the shareholders of Zijin Mining at an extraordinary general meeting held on June 26, 2025.

In addition, our Listing will constitute a spin-off from Zijin Mining, our Controlling Shareholder, pursuant to the Listing Rules. The proposal in relation to the Spin-off was submitted by Zijin Mining to the Stock Exchange for approval pursuant to Practice Note 15, and the Stock Exchange has confirmed that Zijin Mining may proceed with the Spin-off. The Spin-off, if it proceeds, will not constitute a notifiable transaction for Zijin Mining under the Listing Rules.

Reasons for and benefits of the Spin-off

The Spin-off will be commercially beneficial to Zijin Mining and the Company, as the Spin-off will, among other things, (a) enable the Group to enhance its profiles amongst its customers, suppliers and other business partners, as well as its financial profile; (b) enable Zijin Mining to direct its financial resources to itself, (c) enable Zijin Mining to continue to benefit from any potential upside in our business through consolidation of the Group's financial performance and receipt of dividend income from the Group; and (d) enable investors to better value Zijin Mining with its focus on its retained business. See "History, Reorganization and Corporate Structure — The Spin-off of our Group from Zijin Mining" for further details.

The Preferential Offering

Qualifying Zijin Mining H Shareholders will be entitled to participate in the Global Offering on a preferential basis as to allocation only by way of the Preferential Offering. See "History, Reorganization and Corporate Structure — The Spin-off of Our Group from Zijin Mining" and "Structure of the Global Offering — The Preferential Offering" for further details.

GLOBAL OFFERING STATISTICS

All statistics in the following table are based on the assumptions that (i) the Global Offering has been completed and 348,990,700 Shares are issued pursuant to the Global Offering, (ii) the Over-allotment Option is not exercised, and (iii) 2,623,990,700 Shares are issued and outstanding following the completion of the Global Offering:

	Based on an Offer Price of HK$71.59 per Offer Share
Market capitalization of our Shares[(1)]	HK$187.9 billion
Unaudited pro forma adjusted consolidated net tangible assets per Share[(2)]	HK$13.25

Notes:

(1) The calculation of market capitalization of our Shares is based on 2,623,990,700 Shares expected to be in issue immediately upon completion of the Global Offering.

(2) The unaudited pro forma adjusted net tangible asset per Share as of June 30, 2025 is calculated after making the adjustments referred to in "Appendix II — Unaudited Pro Forma Financial Information" in this prospectus. The number of shares used in deriving unaudited pro forma adjusted net tangible asset per Share are 2,623,990,700 Shares, which is presented for illustrative purposes and assumes that (i) Global Offering of 348,990,700 shares had been completed on June 30, 2025, but does not take into account of any Shares which may be allotted and issued by our Company pursuant to the exercise of the Over-allotment Option.

For the calculation of the unaudited pro forma adjusted net tangible asset per Share attributed to our Shareholders, see the section headed "Unaudited Pro Forma Financial Information" in Appendix II to this Prospectus.

USE OF PROCEEDS

Assuming that the Over-allotment Option is not exercised, after deducting the underwriting commissions and other estimated offering expenses payable by us in connection with the Global Offering, we estimate that we will receive net proceeds of approximately HK$24,469.9 million from the Global Offering.

We intend to use the proceeds from the Global Offering for the purposes and in the amounts set forth below, subject to adjustments based on our evolving business needs and changing market conditions:

(i) Approximately 33.4% of the net proceeds, or HK$8,182.3 million, is expected to be used to settle the consideration for the acquisition of the Kazakhstan Raygorodok Gold Mine.

(ii) Approximately 50.1% of the net proceeds, or HK$12,250.0 million, is expected to be used over the next five years for the upgrade and construction project of existing mines to fully enhance our production capabilities.

(iii) Approximately 6.5% of the net proceeds, or HK$1,590.5 million, is expected to be used over the next five years for the exploration activities to fully realize our growth potential.

(iv) Approximately 10% of the net proceeds, or HK$2,447.0 million, is expected to be used for general corporate purposes.

For further information relating to our future plans and use of proceeds from the Global Offering, see "Future Plans and Use of Proceeds" in this prospectus.

LISTING EXPENSES

Our listing expenses mainly include (i) underwriting-related expenses, such as underwriting fees and commissions, and (ii) non-underwriting-related expenses, comprising professional fees paid to our legal advisors and Reporting Accountants for their services rendered in relation to the Spin-off and the Global Offering, and other fees and expenses. Assuming full payment of the discretionary incentive fee, the estimated total listing expenses (assuming that the Over-allotment Option is not exercised) for the Global Offering are approximately HK$514.3 million (approximately US$66.0 million), accounting for approximately of 2.1% of our gross proceeds.

Among such estimated total listing expenses, we expect to pay underwriting-related expenses of HK$299.8 million, professional fees for our legal advisors and Reporting Accountants of HK$48.5 million and other fees and expenses of HK$166.0 million. An estimated amount of HK$77.1 million for our listing expenses, accounting for approximately 15.0% of the total listing expenses, is expected to be expensed through the statement profit or loss and other comprehensive income and the remaining amount of HK$437.2 million is expected to be recognized directly as a deduction from equity upon the Listing.

DIVIDEND POLICY

We do not currently have a dividend policy. We did not declare or pay any dividend during the Track Record Period. We may only pay dividends out of the profits of the Company available for distribution and we may only pay dividends after recovery of accumulated losses. The Company may by ordinary resolution declare dividends but no dividend shall exceed the amount recommended by the Board. The declaration, payment and amount of any future dividends will depend on our earnings and financial condition, operating requirements, capital requirements and any other conditions that our Directors may deem relevant.

Our Board may declare dividends by considering our results of operations, cash flows and financial conditions, operating and capital requirements and other relevant factors. The payment of any dividends will also depend on the availability of dividends, if any, received from the entities, which is the immediate subsidiary of the Company and the holding vehicle of our operating subsidiaries in each region. In addition to capital injection, such entities may also provide our operating subsidiaries with shareholder loans, which will be repaid to those entities.

In this prospectus, unless the context otherwise requires, the following expressions shall have the following meanings.

"AFRC"	Accounting and Financial Reporting Council
"AGM Inc."	AGM Inc., a company incorporated in Guyana with limited liability on November 16, 2011, and an indirect wholly-owned subsidiary of our Company upon completion of the Reorganization
"Altynken LLC"	Altynken Limited Liability Company, a company incorporated in Kyrgyzstan with limited liability on April 5, 2006, and an indirect non-wholly owned subsidiary of our Company upon completion of the Reorganization
"Articles" or "Articles of Association"	the articles of association of our Company conditionally adopted on September 17, 2025 with effect from the Listing Date, and as amended from time to time, a summary of which is set out in Appendix IV to this prospectus
"associate(s)"	has the meaning ascribed to it under the Listing Rules
"Assured Entitlement"	the entitlement of the Qualifying Zijin Mining H Shareholders to apply for the Reserved Shares on an assured basis under the Preferential Offering to be determined on the basis of their respective shareholdings in Zijin Mining on the Record Date
"Australia Norton Gold Mine"	Paddington and Binduli operation centres, involving five gold projects, which are located in Kalgoorlie Region, Western Australia
"Available Reserved Shares"	has the meaning ascribed to it in "Structure of the Global Offering — The Preferential Offering — Basis of Allocation for Applications for Reserved Shares"
"Beneficial Zijin Mining H Shareholders"	any beneficial owner of Zijin Mining H Shares whose Zijin Mining H Shares are registered, as shown in the register of members of Zijin Mining, in the name of a registered shareholder of Zijin Mining on the Record Date
"Binduli Project"	the 5.0 Mtpa Binduli Heap Leach Plant in the Australia Norton Gold Mine

"Blue Form eIPO"	the application for Reserved Shares to be issued in the applicant's own name by submitting applications online through the designated website of the Blue Form eIPO Service Provider, at **www.eipo.com.hk**
"Blue Form eIPO Service Provider"	Computershare Hong Kong Investor Services Limited
"Board" or "Board of Directors"	the board of Directors of our Company
"Business Day" or "business day"	any day on which banks in Hong Kong are generally open for normal banking business (other than a Saturday, Sunday or public holiday in Hong Kong)
"CAGR"	the compound annual growth rate, annualized average growth rate between given years, assuming growth takes place at an exponentially compounded rate
"Cantech"	Cantech S.à.r.l
"Capital Market Intermediary(ies)"	the capital market intermediaries participating in the Global Offering as listed in "Directors and Parties Involved in the Global Offering" and has the meaning ascribed to it under the Listing Rules
"CCASS"	the Central Clearing and Settlement System established and operated by HKSCC
"CGI"	Continental Gold Inc., a company established in Ontario, Canada with limited liability on July 7, 2021. CGI is directly wholly-owned by Zijin America, which in turn is owned as to 68.77% by Gold Mountains (H.K.)
"China" or "PRC"	the People's Republic of China, but for the purpose of this prospectus and for geographical reference only and except where the context requires, references in this prospectus to "China" and the "PRC" do not include Hong Kong, Macau and Taiwan
"close associate(s)"	has the meaning ascribed to it under the Listing Rules
"Colombia Buriticá Gold Mine"	Buriticá gold mine project in Colombia
"Colombia Entrustment Arrangement"	has the meaning ascribed to it in "Relationship with Zijin Mining"

"Companies Ordinance" or "Hong Kong Companies Ordinance"	the Companies Ordinance (Chapter 622 of the Laws of Hong Kong), as amended or supplemented from time to time
"Companies (Winding Up and Miscellaneous Provisions) Ordinance"	the Companies (Winding Up and Miscellaneous Provisions) Ordinance (Chapter 32 of the Laws of Hong Kong), as amended and supplemented from time to time
"Company", "our Company", "we" or "us"	Zijin Gold International Company Limited (紫金黃金國際有限公司) (formerly known as Jinfeng (HK) International Mining Company Limited (金峰(香港)國際礦業有限公司)), a company incorporated in Hong Kong with limited liability on October 22, 2007
"Competent Person" or "SRK"	has the same meaning ascribed to it under Rule 18.01 of the Hong Kong Listing Rules and, in the context of this prospectus, means SRK Consulting China Ltd., an independent mining and geological consultant, which is an Independent Third Party
"Competent Person's Reports" or "SRK Reports"	the Competent Person's reports prepared by SRK on the Tajikistan Jilau/Taror Gold Mines, Kyrgyzstan Taldybulak Levoberezhny Gold Mine, Australia Norton Gold Mine, Guyana Aurora Gold Mine, Colombia Buriticá Gold Mine, Suriname Rosebel Gold Mine and Ghana Akyem Gold Mine, the effective date of which is June 30, 2025 and details of which are set out in Appendices III to this Prospectus
"connected person"	has the meaning ascribed to it under the Listing Rules
"connected transaction"	has the meaning ascribed to it under the Listing Rules
"Continental Gold"	Continental Gold Limited, a company registered and redomiciled in Bermuda with limited liability on December 21, 2015. Continental Gold is indirectly wholly-owned by Zijin America, which is in turn owned as to 68.77% by Gold Mountains (H.K.)
"Continental Gold Colombia Branch"	Continental Gold Limited Sucursal Colombia, the Colombia branch of Continental Gold, established on July 5, 2007
"Controlling Shareholders"	has the meaning ascribed to it under the Listing Rules and, unless the context otherwise requires, means Zijin Northwest, Gold Mountains (H.K.), and Zijin Mining

"core connected person"	has the meaning ascribed to it under the Listing Rules
"Deed of Non-Competition"	the deed of non-competition dated June 30, 2025 signed by Zijin Mining in favor of our Company, as further described in "Relationship with Zijin Mining — Independence of our Group from our Controlling Shareholders — Deed of Non-Competition"
"Director(s)"	the director(s) of our Company
"EIT Law"	the Enterprise Income Tax Law of the PRC (中華人民共和國企業所得税法), as amended, supplemented or otherwise modified from time to time
"ESG"	environmental, social, and governance
"ETF"	exchange traded fund
"Entrusted Operations Agreement"	the business trusteeship agreement dated June 24, 2025 entered into between Gold Excellence Holdings Company Limited and Continental Gold Limited Sucursal Colombia, pursuant to which our Group is entrusted with the exclusive management and operation of the Colombia Buriticá Gold Mine during the term of the agreement
"Excluded Jurisdiction(s)"	jurisdiction(s) outside Hong Kong where, taking into account the legal restrictions under the applicable laws or requirements of the relevant regulatory body or stock exchange of such jurisdiction(s), Zijin Mining and our Company consider the exclusion of the Zijin Mining H Shareholders with registered addresses in, or who are otherwise known by Zijin Mining to be residents of, such jurisdiction(s) from the Preferential Offering to be necessary or expedient
"Extreme Conditions"	the occurrence of "extreme conditions" as announced by any government authority of Hong Kong due to serious disruption of public transportation services, extensive flooding, major landslides, large-scale power outage or any other adverse conditions caused by a super typhoon

"FINI" or "Fast Interface for New Issuance"	an online platform operated by HKSCC that is mandatory for admission to trading and, where applicable, the collection and processing of specified information on subscription in and settlement for all new listing of equity securities or interests issued by a new applicant, irrespective of whether there is an offering of equity securities or interests
"Frost & Sullivan"	Frost & Sullivan Limited, our independent industry consultant
"Ghana Akyem Gold Mine"	Akyem gold mine project in Ghana
"Global Offering"	the Hong Kong Public Offering and the International Offering
"Gold Excellence"	Gold Excellence Holdings Company Limited, a company incorporated in Hong Kong with limited liability on July 5, 2024, and a direct wholly-owned subsidiary of our Company
"Gold Mountains (H.K.)"	Gold Mountains (H.K.) International Mining Company Limited, a company incorporated in Hong Kong with limited liability on November 3, 2004 which holds 76% equity interest in our Company as at the Latest Practicable Date. It is one of our Company's Controlling Shareholders and a direct wholly-owned subsidiary of Zijin Mining
"Gold Source"	Gold Source International Holdings Company Limited, a company incorporated in Hong Kong with limited liability on September 11, 2024, and a direct wholly-owned subsidiary of our Company
"Group", "our Group" or "the Group"	our Company and its subsidiaries or, where the context requires, in respect of the period before our Company became the holding company of its current subsidiaries, the businesses operated by such subsidiaries as if they were subsidiaries of our Company at that time or their predecessors, as the case may be
"Guyana Aurora Gold Mine"	Aurora gold mine project in Guyana
"Guyana Goldfields"	Guyana Goldfields Inc., a company incorporated in Canada on March 2, 2005, and a direct wholly-owned subsidiary of our Company upon completion of the Reorganization
"Higabra"	a part of the Colombia Buriticá Gold Mine

"HK$" or "Hong Kong dollars" or "HK dollars" or "cents"	Hong Kong dollars and cents respectively, the lawful currency of Hong Kong
"HKSCC"	Hong Kong Securities Clearing Company Limited, a wholly-owned subsidiary of Hong Kong Exchanges and Clearing Limited
"HKSCC EIPO"	the application for the Hong Kong Offer Shares to be issued in the name of HKSCC Nominees and deposited directly into CCASS to be credited to the applicant's or a designated HKSCC Participant's stock account through causing HKSCC Nominees to apply on the applicant's behalf, including by instructing the applicant's broker or custodian who is a HKSCC Participant to give electronic application instructions via HKSCC's FINI system to apply for the Hong Kong Offer Shares on the applicant's behalf
"HKSCC Nominees"	HKSCC Nominees Limited, a wholly-owned subsidiary of HKSCC
"HKSCC Operational Procedures"	the operational procedures of HKSCC in relation to CCASS, containing the practices, procedures and administrative requirements relating to the operation and functions of CCASS, as from time to time in force
"HKSCC Participant"	a participant admitted to participate in CCASS as a direct clearing participant, a general clearing participant or a custodian participant
"Hong Kong" or "HK"	the Hong Kong Special Administrative Region of the PRC
"Hong Kong Offer Shares"	the 34,899,100 new Shares being initially offered by our Company for subscription at the Offer Price pursuant to the Hong Kong Public Offering (subject to reallocation) as further described in "Structure of the Global Offering"
"Hong Kong Public Offering"	the offer by our Company of the Hong Kong Offer Shares for subscription by the public in Hong Kong (subject to reallocation) for cash at the Offer Price (plus brokerage of 1%, SFC transaction levy of 0.0027%, Stock Exchange trading fee of 0.00565% and AFRC transaction levy of 0.00015%), on the terms and subject to conditions set out in this Prospectus

"Hong Kong Share Registrar"	Computershare Hong Kong Investor Services Limited
"Hong Kong Stock Exchange" or "Stock Exchange"	The Stock Exchange of Hong Kong Limited
"Hong Kong Underwriters"	the underwriters of the Hong Kong Public Offering whose names are set out in "Underwriting — Hong Kong Underwriters"
"Hong Kong Underwriting Agreement"	the underwriting agreement dated Thursday, September 18, 2025 relating to the Hong Kong Public Offering and entered into among, the Joint Sponsors, the Overall Coordinators, the Hong Kong Underwriters, our Company and Zijin Mining, as further described in "Underwriting"
"Independent Third Party(ies)"	any entity or person who is not a connected person of our Company or an associate of such person within the meaning ascribed to it under the Listing Rules
"International Offer Shares"	the 314,091,600 new Shares (including 17,449,600 Reserved Shares under the Preferential Offering) (subject to reallocation and the Over-allotment Option) initially being offered by our Company for subscription at the Offer Price pursuant to the International Offering
"International Offering"	the offer of the International Offer Shares at the Offer Price (plus brokerage of 1%, SFC transaction levy of 0.0027%, Stock Exchange trading fee of 0.00565% and AFRC transaction levy of 0.00015%) outside the United States in offshore transactions in accordance with Regulation S and in the United States to QIBs in reliance on Rule 144A or any other available exemptions from the registration requirements under the U.S. Securities Act, in each case on and subject to the terms and conditions of the International Underwriting Agreement, as further described in "Structure of the Global Offering"
"International Underwriters"	the group of international underwriters expected to enter into the International Underwriting Agreement relating to the International Offering

"International Underwriting Agreement"	the underwriting agreement expected to be entered into on or around Thursday, September 25, 2025 by, among others, our Company and the International Underwriters in respect of the International Offering, as further described in "Underwriting"
"IOSCO MMOU"	the International Organization of Securities Commissions Multilateral Memorandum of Understanding Concerning Consultation and Cooperation and the Exchange of Information
"IOSCO MMOU Countries"	countries or regions whose statutory securities regulator is a full signatory to the IOSCO MMOU
"Jilau Gold Mine"	a gold mine operated by Zarafshon JV in Jilav, Tajikistan
"Jinyu (H.K.)"	Jinyu (H.K.) International Mining Company Limited, a company incorporated in Hong Kong with limited liability on January 28, 2010, an indirect wholly-owned subsidiary of Zijin Mining
"Joint Bookrunners"	the joint bookrunners as named in "Directors and Parties involved in the Global Offering"
"Joint Global Coordinators"	the joint global coordinators as named in "Directors and Parties involved in the Global Offering"
"Joint Lead Managers"	the joint lead managers as named in "Directors and Parties involved in the Global Offering"
"Joint Sponsors"	Morgan Stanley Asia Limited and CITIC Securities (Hong Kong) Limited
"JORC Code"	the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves
"Kazakhstan Raygorodok Gold Mine"	the Raygorodok Gold Mine in Kazakhstan
"Kyrgyzaltyn JSC"	Kyrgyzaltyn Joint Stock Company (also known as Kyrgyzaltyn Open Joint Stock Company), a 40% shareholder of Altynken LLC, a connected person of our Company at subsidiary level
"Kyrgyzstan Taldybulak Levoberezhny Gold Mine"	Taldybulak Levoberezhny gold mine project in Kyrgyzstan

"Latest Practicable Date"	September 9, 2025, being the latest practicable date for ascertaining certain information contained in this Prospectus before its publication
"Listing"	the listing of our Shares on the Main Board of the Stock Exchange
"Listing Committee"	the Listing Committee of the Stock Exchange
"Listing Date"	the date, expected to be on or around September 29, 2025, on which the Shares are to be listed and dealings in the Shares are first permitted to take place on the Stock Exchange
"Listing Rules"	the Rules Governing the Listing of Securities on The Stock Exchange of Hong Kong Limited (as amended, supplemented or otherwise modified from time to time)
"LSEG"	London Stock Exchange Group
"Main Board"	the stock market (excluding the option market) operated by the Stock Exchange which is independent from and operates in parallel with the Growth Enterprise Market of the Stock Exchange
"New Porgera"	New Porgera Limited, a company incorporated in Papua New Guinea on September 22, 2022, and is owned as to 49% by Porgera Jersey and 51% by (i) Kumul Minerals (Porgera) Limited as to 36%; (ii) MRDC Porgera (Escrow) Limited as to 10%; and (iii) Mineral Resources Enga Limited as to 5%
"Non-IOSCO MMOU Countries"	countries or regions whose statutory securities regulator is not a full signatory to the IOSCO MMOU
"Non-Qualifying Zijin Mining H Shareholder(s)"	Zijin Mining H Shareholders whose names appeared in the register of members of Zijin Mining on the Record Date and whose addresses as shown in such register are in any of the Excluded Jurisdictions and any Zijin Mining H Shareholders or Beneficial Zijin Mining H Shareholders at that time who are otherwise known by Zijin Mining to be residents in any of the Excluded Jurisdictions
"Norton Gold Fields"	Norton Gold Fields Pty Ltd, a company limited by shares incorporated in Australia on December 21, 2004, an indirect wholly-owned subsidiary of our Company upon completion of the Reorganization

"Offer Price"	the offer price per Offer Share (exclusive of brokerage of 1%, the SFC transaction levy of 0.0027%, the Stock Exchange trading fee of 0.00565% and AFRC transaction levy of 0.00015%) of HK$71.59, at which the Hong Kong Offer Shares are to be subscribed under the Hong Kong Public Offering and the International Offer Shares are to be offered under the International Offering, to be determined in the manner further described in "Structure of the Global Offering — Pricing and Allocation"
"Offer Share(s)"	the Hong Kong Offer Shares and the International Offer Shares, together with, where relevant, any additional Shares which may be issued by our Company pursuant to the exercise of the Over-allotment Option
"Over-allotment Option"	the option we expect to grant to the International Underwriters, exercisable by the Overall Coordinators (for themselves and on behalf of the International Underwriters) under the International Underwriting Agreement at any time from the Listing Date until the 30th day from the last day for lodging applications under the Hong Kong Public Offering, which may require us to allot and issue up to an aggregate of not more than 15% of the total number of Offer Shares available under the Global Offering (which will be equal to 52,348,600 Offer Shares) at the Offer Price to cover over-allocations in the International Offering, if any. See "Structure of the Global Offering — Over-allotment Option" for more details
"Overall Coordinators"	the overall coordinators as named in "Directors and Parties involved in the Global Offering"
"Paddington Gold"	Paddington Gold Pty Ltd., a company limited by shares incorporated in Australia on June 20, 1983, an indirect wholly-owned subsidiary of our Company upon completion of the Reorganization
"Paddington Mill"	the 4.0 Mtpa Paddington Mill in the Australia Norton Gold Mine
"Perth Mint"	Australia's official bullion mint, wholly-owned by the Government of Western Australia
"PNG Porgera Gold Mine"	Porgera gold mine project in Papua New Guinea

"Porgera Jersey"	Porgera (Jersey) Limited, a joint venture company incorporated in Jersey with limited liability on September 13, 2021, which is owned as to 50% by our Company and 50% by Barrick Mining Corporation upon completion of the Reorganization
"PRC Company Law"	Company Law of the PRC (中華人民共和國公司法), as amended
"PRC government" or "State"	the central government of the PRC, including all governmental subdivisions (including provincial, municipal and other regional or local government entities) and their organs or, as the context requires, any of them
"Preferential Offering"	the preferential offering to the Qualifying Zijin Mining H Shareholders of 17,449,600 Reserved Shares (representing approximately 5.0% of the Offer Shares initially being offered under the Global Offering, assuming that the Over-allotment Option is not exercised) in the form of the Assured Entitlement out of the Offer Shares offered under the International Offering at the Offer Price, as further described in "Structure of the Global Offering — The Preferential Offering" in this Prospectus and subject to the terms and conditions stated in this Prospectus and on the designated website of the **Blue From eIPO** Service Provider (**www.eipo.com.hk**)
"Prospectus"	this prospectus being issued in connection with the Hong Kong Public Offering
"QIBs" or "Qualified Institutional Buyers"	qualified institutional buyers within the meaning of Rule 144A under the U.S. Securities Act
"Qualifying Zijin Mining H Shareholder(s)"	Zijin Mining H Shareholder(s) whose names appeared in the register of members of Zijin Mining on the Record Date, other than Non-Qualifying Zijin Mining H Shareholders
"Record Date"	18 September 2025, being the record date for determining the Assured Entitlement
"Regulation S"	Regulation S under the U.S. Securities Act

"Relevant Persons"	the Joint Sponsors, the Overall Coordinators, the Joint Global Coordinators, the Joint Bookrunners, the Joint Lead Managers, the Underwriters, any of their or our Company's respective directors, officers, employees, partners, agents, advisors and any other parties involved in the Global Offering
"Reorganization"	the reorganization arrangements undertaken by our Group in preparation for the Listing, which are described in "History, Reorganization and Corporate Structure — Our Company, Our Shareholding Changes and the Reorganization"
"Reserved Shares"	the 17,449,600 Offer Shares being offered by our Company to the Qualifying Zijin Mining H Shareholders as the Assured Entitlement at the Offer Price pursuant to the Preferential Offering, representing approximately 5.0% of the Offer Shares initially being offered under the Global Offering (without taking into account any Shares which may be issued and allotted pursuant to the exercise of the Over-allotment Option) which are to be allocated out of the Offer Shares being offered under the International Offering
"RGG"	RG Gold LLP
"RGMPs"	the World Gold Council's Responsible Gold Mining Principles
"RGP"	RG Processing LLP
"RMB" or "Renminbi"	Renminbi, the lawful currency of the PRC
"Rosebel GM"	Rosebel Gold Mines N.V., a company incorporated in Suriname with limited liability on May 8, 2002, and an indirect non-wholly owned subsidiary of our Company upon completion of the Reorganization
"Rosebel ore"	ore in the Rosebel mining area in Suriname Rosebel Gold Mine
"Rule 144A"	Rule 144A under the U.S. Securities Act
"Saramacca ore"	ore in the Saramacca mining area in Suriname Rosebel Gold Mine
"SFC"	the Securities and Futures Commission of Hong Kong

"SFO" or "Securities and Futures Ordinance"	the Securities and Futures Ordinance (Chapter 571 of the Laws of Hong Kong), as amended or supplemented from time to time
"Share(s)"	ordinary share(s) of our Company
"Shareholder(s)"	holder(s) of our Shares
"Silver Source"	Silver Source Group Limited, a company incorporated in the British Virgin Islands with limited liability on July 27, 2022, and a direct wholly-owned subsidiary of our Company upon completion of the Reorganization
"Spin-off"	the separate listing of our Shares on the Main Board by way of the Global Offering
"Spin-off Rules"	the Listed Companies Spin-off Rules (for Trial Implementation) (《上市公司分拆規則(試行)》) promulgated by the CSRC on January 5, 2022
"Sponsor-Overall Coordinators"	the sponsor-overall coordinators as named in "Directors and Parties involved in the Global Offering"
"sq.m."	square meter(s)
"Stabilizing Manager"	Morgan Stanley Asia Limited
"Stock Borrowing Agreement"	the stock borrowing agreement expected to be entered into on or around Thursday, September 25, 2025 between Gold Mountains (H.K.) and the Stabilizing Manager (or its affiliates) pursuant to which the Stabilizing Manager may, on its own or through its affiliates, borrow up to 52,348,600 Shares from Gold Mountains (H.K.) to facilitate the settlement of over-allocations in the International Offering
"subsidiary" or "subsidiaries"	has the meaning ascribed to it under the Listing Rules
"substantial shareholder(s)"	has the meaning ascribed to it under the Listing Rules
"Superb Pacific"	Superb Pacific Limited, a company incorporated in the British Virgin Islands with limited liability on July 5, 2011, a direct wholly-owned subsidiary of our Company upon completion of the Reorganization

"Suriname Rosebel Gold Mine"	Rosebel gold mine project in Suriname, which includes the Rosebel ore and Saramacca ore, which Rosebel GM holds 100% and 70% equity interests, respectively. The processed ore volume and gold production volume information of the Suriname Rosebel Gold Mine in this Prospectus is presented based on the respective equity interest we hold in two ores
"Tajikistan Jilau/Taror Gold Mines"	Jilau and Taror gold mines in Tajikistan
"Takeovers Code"	the Codes on Takeovers and Mergers and Share Buy-backs issued by the SFC, as amended, supplemented or otherwise modified from time to time
"Taror Gold Mine"	a gold mine operated by Zarafshon JV in Taror, Tajikistan
"Track Record Period"	the period comprising the three financial years ended December 31, 2022, 2023 and 2024 and the six months ended June 30, 2025
"Triple Flag"	Triple Flag Mining Finance Bermuda Ltd.
"U.S. Securities Act"	the United States Securities Act of 1933, as amended, supplemented or otherwise modified from time to time, and the rules and regulations promulgated under it
"Underwriters"	the Hong Kong Underwriters and the International Underwriters
"Underwriting Agreements"	the Hong Kong Underwriting Agreement and the International Underwriting Agreement
"United States" or "U.S."	the United States of America, its territories, possessions and all areas subject to its jurisdiction
"UOP"	Units of Production
"US$", "USD" or "U.S. dollars"	United States dollars, the lawful currency of the United States
"White Form eIPO"	the application for the Hong Kong Offer Shares to be issued in the applicant's own name by submitting applications online through the designated website of the White Form eIPO Service Provider, at **www.eipo.com.hk**
"White Form eIPO Service Provider"	Computershare Hong Kong Investor Services Limited

"Zeravshan", "Zarafshon JV" or "Joint Venture Zeravshan Limited Liability Company"	Joint Venture Zarafshon Limited Liability Company, a company incorporated with limited liability in Tajikistan on December 23, 2008, a direct non-wholly owned subsidiary of our Company
"Zijin America"	Zijin (America) Gold Mining Company Limited, a company incorporated in Hong Kong with limited liability on September 27, 2019. Zijin America is owned as to 68.77% by Gold Mountains (H.K.)
"Zijin Golden Ridge"	Zijin Golden Ridge Limited (formerly known as Golden Ridge Resources Limited and Newmont Golden Ridge Limited), a company incorporated in Ghana with limited liability on October 17, 1997, and an indirect wholly-owned subsidiary of our Company
"Zijin International"	Zijin International Mining Co., Limited (紫金國際礦業有限公司), a company incorporated in the PRC with limited liability in January 2005, a direct wholly-owned subsidiary of Zijin Mining
"Zijin Mining"	Zijin Mining Group Co., Ltd (紫金礦業集團股份有限公司) (formerly known as 福建紫金礦業股份有限公司), a company incorporated in the PRC on September 6, 2000 with limited liability, the shares of which are listed on the Main Board of the Stock Exchange (stock code: 02899) and the Shanghai Stock Exchange (stock code: 601899). Zijin Mining is one of our Controlling Shareholders
"Zijin Mining A Share(s)"	the Zijin Mining Shares which are listed on Shanghai Stock Exchange
"Zijin Mining A Shareholder(s)"	the holders of Zijin Mining A Share(s)
"Zijin Mining Group"	Zijin Mining and its subsidiaries which for the purpose of this Prospectus and unless the context otherwise requires, excludes our Group
"Zijin Mining H Share(s)"	the overseas-listed foreign shares in the share capital of ordinary shares of Zijin Mining which are listed on the Stock Exchange and traded in Hong Kong dollars
"Zijin Mining H Shareholder(s)"	the holders of Zijin Mining H Share(s)

"Zijin Mining Share(s)"	the issued share(s) of Zijin Mining
"Zijin Northwest"	Zijin Mining Group Northwest Co., Ltd. (紫金礦業集團西北有限公司), a company incorporated in the PRC on August 9, 2004, which holds 24% equity interest in our Company as at the Latest Practicable Date. It is one of our Controlling Shareholders and a wholly-owned subsidiary of Zijin Mining
"%"	percent

The English translation of the PRC entities, enterprises, nationals, facilities, regulations in Chinese or another language included in this Prospectus is for identification purposes only. In the event of any inconsistency, the Chinese names shall prevail.

This glossary contains explanations of certain technical terms used in this Prospectus in connection with our Company and our business. Such terminology and meanings may not correspond to standard industry meanings or usages of those terms.

"Acacia Reactor"	a specialized piece of equipment used in hydrometallurgical gold processing, specifically in the carbon-in-pulp (CIP) or carbon-in-leach (CIL) processes. Its main function is to enhance the contact between activated carbon and gold-bearing cyanide solution to improve gold adsorption efficiency
"Ag"	the chemical symbol of silver
"all-in sustaining cost" or "AISC"	a metric which means operating costs excluding amortisation and depreciation, plus all costs not included therein relating to sustaining current production including sustaining capital expenditure. It generally comprises of cash costs (including by-product credits), sustaining capital, exploration expenses, reclamation cost, inventory movement, royalties, selling expenses and general and administrative expenses
"annual mining capacity"	the quantity of ore that a mining operation can be extracted within a year
"annual processing capacity"	the quantity of ore that a processing plant can handle and process each year
"Au"	the chemical symbol for of gold
"CIC"	carbon-in-column process, a gold extraction process which is a gold-bearing cyanide solution through columns filled with activated carbon, where the gold is adsorbed onto the carbon's surface
"CIL"	carbon-in-leach process, a gold extraction process that combines leaching and adsorption. In CIL, activated carbon is added directly to the leaching tanks, allowing gold to be dissolved from the ore and adsorbed onto the carbon simultaneously
"CIP"	carbon-in-pulp process, a gold extraction process where activated carbon is added to a slurry of ground ore to adsorb dissolved gold from a cyanide solution

"concentrate" or "gold concentrate"	a powdery or wet product containing an upgraded mineral content resulting from initial processing of mined ore to remove some waste materials. A concentrate is an intermediary product, which would still be subject to further processing, such as smelting, to effect recovery of metal
"crusher"	a machine for crushing rocks to smaller grain size
"Cu"	the chemical symbol of copper
"cut-off grade"	the grade threshold above which a mineral material is considered potentially economic and is selectively mined and processed as ore
"decline access"	a method of creating an underground tunnel (called a decline or ramp) that slopes downward from the surface to access ore bodies at various depths
"deposit"	natural occurrence of a useful mineral, or an ore, sufficient in extent and degree of concentration to invite exploitation
"designed mining capacity"	the mining capacity planned based on the mine's design, equipment, and technical parameters
"dilution"	the reduction of grade for mined ore due to the inclusion of waste material in the mined ore
"doré"	unrefined gold bar produced at the mine site or other gold sources before sending to a refinery where the gold is further refined or processed to meet specific requirements
"drilling"	use of a machine to create holes for exploration or for loading with explosives
"drip irrigation"	a technique that uses a network of pipes and emitters to deliver a leaching solution directly to the ore, which is a water-efficient irrigation method that delivers small amounts of water directly to the leaching pad, typically through a network of tubing, pipes, and emitters
"electrowinning"	an electrolytic process where metals are extracted from a solution and deposited onto a cathode
"elution"	a process used in hydrometallurgy, especially in gold extraction, to remove adsorbed metal ions (like gold) from a solid material — usually activated carbon — by washing it with a desorbing solution

"exploration"	activity to prove the location, volume and quality of an orebody
"Exploitation Concession"	the permits for mining in Suriname Rosebel Gold Mine under Suriname law
"Exploration Concession"	the permits for exploring in Suriname Rosebel Gold Mine under Suriname law
"feed grade"	in respect of mineral processing, with reference to the mass of gold in the total mass of the ore fed into the processing mill, and expressed in g/t Au
"Five-Stage-Integrated Life-of-Mine Project Management Procedure"	a project management procedure developed by Zijin Mining that integrates and manages the five processes of the flow of ores — exploration, mining, processing, smelting, and environmental protection, to effectively reduce construction and production costs and maximize economic and social benefits for the projects
"flotation"	a process by which some mineral particles are induced to become attached to bubbles of froth and float, and others to sink, so that the valuable minerals are concentrated and separated from the remaining rock or mineral material
"g"	gram(s)
"g/t"	gram(s) per metric tonne — metal concentration
"geological secondary ore delineation"	the detailed mapping and definition of secondary ore bodies which are ore deposits formed through the alteration, weathering, or redeposition of primary (original) mineralization
"gold bullion"	refined gold in the form of bars
"gold production" or "gold production volume"	refers to the total amount of gold extracted and processed from mining operations over a specific period, serving as a key indicator of a mining project's performance
"gold recovery"	the percentage of gold recovered compared to the amount of gold contained in the feed ore in the context of a processing plant, or the percentage of gold produced compared to the amount of gold contained in the feed concentrates in the context of a smelting plant

"grade"	ratio of the content of a useful element or its compounds in an ore, for which the greater the content, the higher the grade. For gold, grade is commonly expressed in grams per tonne of ore (g/t Au)
"heap leach" or "heap leaching"	a low-cost, large-scale mining method used to extract metals from low-grade ores by stacking the ore in heaps and applying a chemical solution that leaches (dissolves) the valuable metal
"HPGR"	high pressure grinding rolls, or a type of industrial equipment used to reduce the size of materials, particularly in mining and cement production. They work by compressing materials between two counter-rotating rolls, creating a high-pressure environment that fractures the material
"Indicated Mineral Resource"	is that part of a Mineral Resource for which quantity, grade (or quality), densities, shape and physical characteristics are estimated with sufficient confidence to allow the application of Modifying Factors in sufficient detail to support mine planning and evaluation of the economic viability of the deposit. Geological evidence is derived from adequately detailed and reliable exploration, sampling and testing gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes, and is sufficient to assume geological and grade (or quality) continuity between points of observation where data and samples are gathered
"Inferred Mineral Resource"	is that part of a Mineral Resource for which quantity and grade (or quality) are estimated on the basis of limited geological evidence and sampling. Geological evidence is sufficient to imply but not verify geological and grade (or quality) continuity. It is based on exploration, sampling and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes
"ingot"	a solid block of metal that has been cast into a specific shape for ease of handling, storage, and further processing
"kg"	kilogram(s), the basic unit of mass in the international system of units
"km"	kilometer(s), a metric unit measure of distance equal to 1,000 meters

"Knelson concentrator"	a type of gravity concentration equipment used to recover fine and coarse heavy minerals (like gold, platinum, tin) from ore or placer deposits
"Knelson gravity separation"	a method used to recover valuable minerals, particularly gold, from ore using centrifugal force and fluidization where the denser particles are concentrated by the interplay of centrifugal force, fluidization water, and the shape of the concentrator
"koz"	thousand ounces, a unit of weight
"kt"	thousand metric tonnes, a metric unit of weight, being equivalent to 1.0 million kg
"kWh"	kilowatt hours
"LBMA"	London Bullion Market Association, a wholesale over-the-counter market for the trading of gold and silver, which sets gold prices twice daily at 10:30 am and 3:00 pm London BST with the price set in U.S. dollars
"leach"	dissolve minerals or metals out of ore with chemicals
"LOM" or "Life of Mine"	life of mine. It refers to the shortest timeframe that the Ore Reserves of a mine are estimated to be fully utilized after considering the actual situation of the mine and strategic plan of the mining operation. Should the mine owner decide to reduce the mining and processing volume per annum and/or discover additional Ore Reserves, it would take longer time to utilize the Ore Reserves of the mine and the life of mine would be lengthened
"Measured Mineral Resource"	is that part of a Mineral Resource for which quantity, grade (or quality), densities, shape, and physical characteristics are estimated with confidence sufficient to allow the application of Modifying Factors to support detailed mine planning and final evaluation of the economic viability of the deposit. Geological evidence is derived from detailed and reliable exploration, sampling and testing gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes, and is sufficient to confirm geological and grade (or quality) continuity between points of observation where data and samples are gathered

"Merrill-Crowe zinc precipitation process"	a widely used hydrometallurgical method to recover gold and silver from a pregnant cyanide leach solution in gold and silver processing plants. It involves precipitating these precious metals using zinc dust, after clarifying and de-aerating the solution
"mill feed grade"	the metal content or concentration of valuable minerals in the ore as it is delivered from the mine to the processing mill
"mined resources and reserves"	resources and reserves that have been extracted
"mineralization"	area with continuous distribution belts of mineralization, including the occurrence of deposits, mine sites and alteration of waste rock, as exploration indicators and under control of same geology conditions. It is a key zone for estimation and further planning of exploration of minerals
"mining concession"	the licenses for mining in Colombia Buriticá Gold Mine under Colombia law
"mining lease" or "Mining Lease"	the licenses for mining in Australia Norton Gold Mine under Australia law and Ghana Akyem Gold Mine under Ghana law
"mining license"	the licenses for mining in Tajikistan Jilau/Taror Gold Mines under Tajikistan law, Kyrgyzstan Taldybulak Levoberezhny Gold Mine under Kyrgyzstan law and Guyana Aurora Gold Mine under Guyana law
"mining rights"	the rights to mine Mineral Resources and obtain mineral products in areas where mining activities are licensed
"Modifying Factors"	see the definition under the JORC Code as set out in "Summary of the JORC Code"
"Mtpa"	million tonnes per year
"open pit mine"	a deposit that is having mined or extracted using open-pit mining
"open-pit mining"	a surface mining technique that extracts minerals from an open pit in the ground. Open-pit mining is the most common method used throughout the world for mineral mining and does not require extractive methods or tunnels. This surface mining technique is used when mineral or ore deposits are found relatively close to the surface of the earth

"ore"	mineral bearing rock which can be mined and treated profitably under current or immediately foreseeable economic conditions
"orebody"	natural mineral accumulations which can be extracted for use under existing economic conditions and using existing extraction techniques
"ore processed"	the volume of ore that is processed
"ore processing" or "processing"	the process which in general refers to the extraction of usable portions of ores by using physical and chemical methods
"ounce(s)" or "oz"	unit of weight for precious metals, and one troy ounce equals 31.1035 grams
"overburden materials"	consists of non-valuable materials such as soil, rock, and vegetation that must be removed to access the underlying mineral deposit during mining operations
"POX"	a method combined approach that concentrates ore through flotation and then subjects it to pressure oxidation, enhancing the breakdown of sulfide minerals and improving metal recovery
"pregnant leach solution"	the liquid solution that contains dissolved valuable metals extracted from ore during the leaching process in hydrometallurgy
"pressurized pre-oxidized"	a process step in metallurgical or chemical treatment where a material (usually an ore or concentrate) is subjected to oxidation under elevated pressure before the main processing stage
"Probable Ore Reserve"	is the economically mineable part of an Indicated Mineral Resource and in some circumstances, a Measured Mineral Resource. The confidence in the Modifying Factors applying to a Probable Ore Reserve is lower than that applying to a Proved Ore Reserve. A Probable Ore Reserve has a lower level of confidence than a Proved Ore Reserve but is sufficiently reliable to demonstrate that, at the time of reporting, extraction could reasonably be justified

"processing recovery"	percentage of metal produced compared to the amount of metal contained in the feed ore in the context of a processing plant, or the percentage of metal produced compared to the amount of metal contained in the feed concentrates in the context of a smelting plant
"prospecting licence"	the permits for exploring in Australia Norton Gold Mine under Australia law, Guyana Aurora Gold Mine under Guyana law and Ghana Akyem Gold Mine under Ghana law
"Proved Ore Reserve"	is the economically mineable part of a Measured Mineral Resource. A Proved Ore Reserve implies a high degree of confidence in the Modifying Factors. A Proved Ore Reserve represents the highest confidence category of Ore Reserve estimate and implies a high degree of confidence in geological and grade continuity, and in the Modifying Factors
"refining"	final stage of the metallurgical process of refining crude metal products to a pure or very pure end-product
"rehabilitation"	in the context of mining, the process of returning the land to another productive use or the restoration of land and environmental values to a mine site after the mining has been completed
"R&D"	research and development
"Reserves" or "Ore Reserves"	portion of the measured and/or indicated resources that can be economically mined, which is an estimate after a pre-feasibility study, feasibility study or equivalent technical and economic evaluation, with possible ore losses and depletion, and the reasonable use of conversion factors fully taken into account to make mining technically feasible and economically viable. This contains both probable and proved reserves
"Resources" or "Mineral Resources"	solid Mineral Resources identified by mineral resource exploration, generally reviewed, and expected to be economically minable, which quantity, grade or quality is estimated with reference to geological information, geological understanding and relevant technical requirements including Inferred Resources, Indicated Resources and Measured Mineral Resources
"ROM"	run-of-mine, of or relating to ore that is in its natural and unprocessed state produced from a mine

"SABC"	semi-autogenous ball mill crusher process, a mineral grinding circuit that combines semi-autogenous and ball milling. Ore is initially fed into a semi-autogenous mill, where it is ground using the ore itself and a small amount of steel balls. The partially ground ore is then transferred to a ball mill for pebble crushing with steel balls
"smelting"	pyro metallurgical process of separating metal by fusion from those impurities with which it is chemically combined or physically mixed
"Special Mining Lease"	the license for mining in PNG Porgera Gold Mine under the law of Papua New Guinea
"spray leaching"	a type of hydrometallurgical extraction process where a leaching solution is sprayed over a material (usually ore) to dissolve valuable metals. It is commonly used in heap leaching or dump leaching setups
"stacking"	it typically involves stacking mined ore or processed material (e.g., concentrates) before further processing or transportation
"stockpile"	a temporary storage area where mined ore are accumulated before processing, allowing for operational flexibility and continuous workflow
"stope"	an underground excavation from which ore is being extracted
"stoping"	removal of the ore from an underground mine leaving behind an open space known as a stope
"stripping ratio"	the amount of waste that needs to be removed to extract a certain amount of ore, divided by the amount of ore extracted
"Sublevel open stoping method"	a mining method which ore is recovered in open stopes normally backfilled after being mined. Stopes are often large, particularly in the vertical direction. The ore body is divided into separate stopes. Between stopes, ore sections are set aside for pillars to support the hanging wall. Pillars are normally shaped as vertical beams across the ore body. Horizontal sections of ore, known as crown pillars, are also left to support mine workings above the producing stopes
"tailings"	the waste materials (residue) produced by the processing plant after extraction of valuable minerals

"tailings dam", "tailing storage facility" or "TSF"	a storage facility for tailings
"tonne" or "t"	metric tonne, a metric unit of weight, being equivalent to 1,000 kg
"t/d"	tonne per day
"underground mine"	a mine with openings in the earth accessed via shafts and adits below the land surface to extract minerals
"upward drift horizontal slicing fill mining method"	an underground mining technique typically used to extract ore bodies that are steeply dipping and relatively narrow to medium in width. It involves horizontal slicing from bottom to top, with backfilling after each slice to maintain ground stability
"vein"	sheet-like body of minerals formed by fracture filling or replacement of host rock
"weighted average capital expenditure intensity"	the amount of capital investment required to develop, expand, or sustain a gold mining operation relative to the expected or actual gold production capacity

SUMMARY OF THE JORC CODE

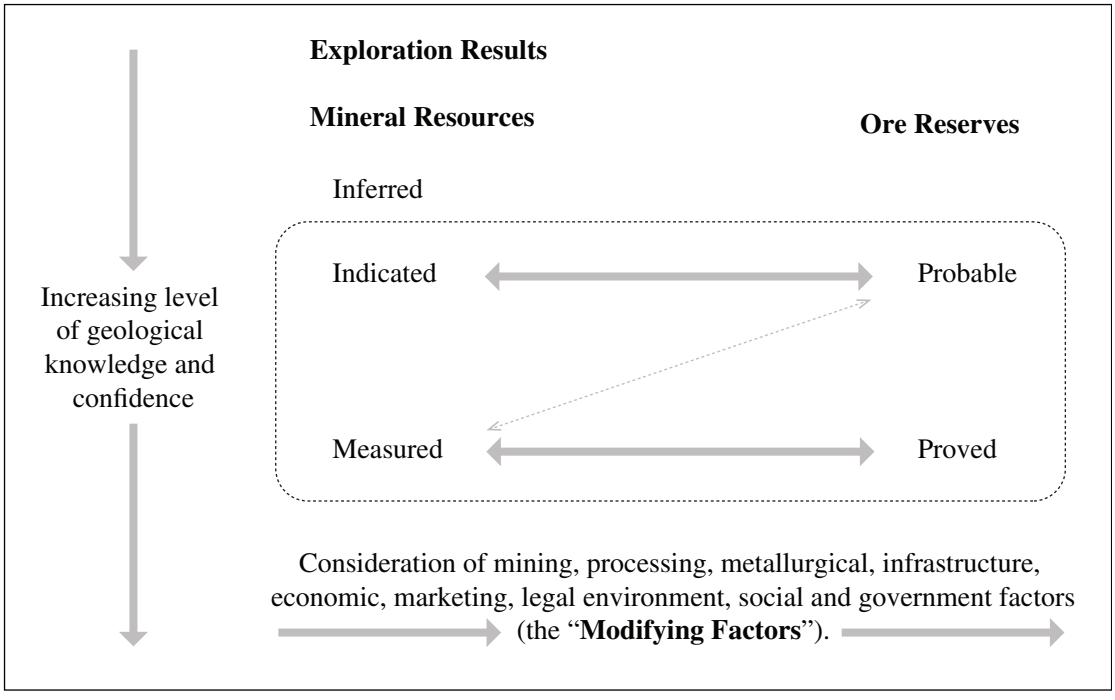
The Mineral Resources and Ore Reserves statements in this Prospectus have been prepared in accordance with the JORC Code. The JORC Code is an internationally accepted Mineral Resources and Ore Reserves classification system established in Australia, which was first published in February 1989 and last revised in December 2012. The JORC Code is commonly used in competent person's report for reporting resources and reserves for public companies reporting to the Hong Kong Stock Exchange. The JORC Code is used by the Competent Person to report the Mineral Resources and Ore Reserves of our mines in this Prospectus.

The JORC Code defines "Mineral Resource" as a concentration or occurrence of solid material of economic interest in or on the Earth's crust in such form, grade (or quality) and quantity that there are reasonable prospects for eventual economic extraction. The location, quantity, grade (or quality), continuity and other geological characteristics of a Mineral Resource are known, estimated or interpreted from specific geological evidence and knowledge, including sampling. Mineral Resources are subdivided in order of increasing geological confidence into the following categories:

- **Inferred Mineral Resource** — is that part of a Mineral Resource for which quantity and grade (or quality) are estimated on the basis of limited geological evidence and sampling. Geological evidence is sufficient to imply but not verify geological and grade (or quality) continuity. It is based on exploration, sampling and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes;

- **Indicated Mineral Resource** — is that part of a Mineral Resource for which quantity, grade (or quality), densities, shape and physical characteristics are estimated with sufficient confidence to allow the application of Modifying Factors in sufficient detail to support mine planning and evaluation of the economic viability of the deposit. Geological evidence is derived from adequately detailed and reliable exploration, sampling and testing gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes, and is sufficient to assume geological and grade (or quality) continuity between points of observation where data and samples are gathered; and

- **Measured Mineral Resource** — is that part of a Mineral Resource for which quantity, grade (or quality), densities, shape, and physical characteristics are estimated with confidence sufficient to allow the application of Modifying Factors to support detailed mine planning and final evaluation of the economic viability of the deposit. Geological evidence is derived from detailed and reliable exploration, sampling and testing gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes, and is sufficient to confirm geological and grade (or quality) continuity between points of observation where data and samples are gathered.



The JORC Code defines "Ore Reserve" as the economically mineable part of a Measured and/or Indicated Mineral Resource. It includes diluting materials and allowances for losses, which may occur when the material is mined or extracted and is defined by studies at Pre-Feasibility or Feasibility level as appropriate that include application of Modifying Factors. Such studies demonstrate that, at the time of reporting, extraction could reasonably be justified.

Ore Reserves are sub-divided into the following categories:

- **Probable Ore Reserve** — is the economically mineable part of an Indicated, and in some circumstances, a Measured Mineral Resource. The confidence in the Modifying Factors applying to a Probable Ore Reserve is lower than that applying to a Proved Ore Reserve; and

- **Proved Ore Reserve** — is the economically mineable part of a Measured Mineral Resource. A Proved Ore Reserve implies a high degree of confidence in the Modifying Factors.

The following diagram summarizes the general relationship between Exploration Results, Mineral Resources and Ore Reserves under the JORC Code:

Source: the JORC Code, 2012

Ore Reserves are generally quoted as comprising a portion of the total Mineral Resource rather than the Mineral Resources being additional to the Ore Reserves quoted. Under the JORC Code either procedure is acceptable, provided the method adopted is clearly identified. The Competent Person's Reports in this Prospectus report all of the Ore Reserves as part of the Mineral Resources, which are estimated and reported by Competent Person.

This Prospectus includes forward-looking statements. All statements other than statements of historical facts contained in this Prospectus, including, without limitation, those regarding our future financial position, our strategies, plans, objectives, goals, targets and future developments in the markets where we participate or are seeking to participate, and any statements preceded by, followed by or that include the words "believe," "expect," "estimate," "predict," "aim," "intend," "will," "may," "plan," "consider," "anticipate," "seek," "should," "could," "would," "continue," or similar expressions or the negative thereof, are forward-looking statements. These forward-looking statements involve known and unknown risks, uncertainties and other factors, some of which are beyond our control, which may cause our actual results, performance or achievements, or industry results, to be materially different from any future results, performance or achievements expressed or implied by the forward-looking statements. These forward-looking statements are based on numerous assumptions regarding our present and future business strategies and the environment in which we will operate in the future. Important factors that could cause our actual performance or achievements to differ materially from those in the forward-looking statements include, among other things, the following:

- our ability to successfully implement our business plan and strategies;
- our business strategies, operating plans and objectives;
- the amount and nature of, and potential for, future development of our business;
- our dividend policy;
- our expectations with respect to our ability to acquire and maintain regulatory licenses or permits;
- our financial condition and performance;
- various business opportunities that we may pursue;
- our ability to identify and successfully take advantage of new business development opportunities;
- our ability to identify and integrate suitable acquisition targets;
- our ability to control or reduce costs;
- our ability to identify, measure, monitor and control risks in our business, including our ability to improve our overall risk profile and risk management practice;
- the actions and developments of our suppliers, customers and competitors;

- future developments, trends and conditions in the industry and markets in which we operate;
- general economic, market and business conditions in Hong Kong, the PRC and overseas;
- changes in the regulatory and operating conditions in the industry and markets in which we operate;
- exchange rate fluctuations and restrictions;
- capital market(s) developments; and
- the other risk factors discussed in this Prospectus as well as other factors beyond our control.

Additional factors that could cause actual performance or achievements to differ materially include, but are not limited to, those discussed in "Risk Factors" and elsewhere in this Prospectus. We caution you not to place undue reliance on these forward-looking statements, which reflect our view only as of the date of this Prospectus. You should read this Prospectus in its entirety and with the understanding that the actual future results may be materially different from what we expect. Subject to the requirements of applicable laws, rules and regulations, we undertake no obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise. In light of these risks, uncertainties and assumptions, the forward-looking events discussed in this Prospectus might not occur in the way we expect, or at all. All forward-looking statements contained in this Prospectus are qualified by reference to the cautionary statements set out in this section as well as the risks and uncertainties discussed in "Risk Factors".

Prospective investors should carefully read and consider all the information set out in this Prospectus. In particular, you should evaluate the risks and uncertainties described below before making any investment in the Offer Shares. This includes (without limitation) the fact that we conduct our operations outside of Hong Kong, and the legal and regulatory environment which, in some respects, may differ from that in Hong Kong. Any of the risks and uncertainties listed below could have a material adverse effect on our business, results of operations, financial condition, or on the trading price of the Offer Shares (causing them to decline significantly) and could cause you to lose all or part of your investment. Additional risks and uncertainties not presently known to us or that we currently deem immaterial could also harm our business, results of operations, financial condition, or on the trading price of the Shares. Past performance is no guarantee of future results.

RISKS RELATED TO OUR BUSINESS AND INDUSTRY

Volatility in gold price could materially and adversely affect the profitability of our business, financial condition, results of operations and the cash flows.

Gold is our primary source of revenue. There are many factors influencing the price of gold, including, among others, major central banks' monetary policies, geopolitical conflicts, general global economic conditions, inflationary expectations, fluctuations in the exchange rate of the US dollar, fluctuations in the stock and other financial markets and other political, military, social and economic contingencies. These factors are beyond our control. In particular, the persistent gold-buying behavior of major central banks, especially the substantial purchases by emerging market central banks, has provided strong support for gold prices. Meanwhile, the uncertainty of the global economy, including the anticipated changes in interest rate policies and fiscal dynamics, particularly the uncertainty surrounding the US budget process, has further enhanced the appeal of gold as a safe-haven asset. Between 2010 and 2024, the global annual average gold prices demonstrated an upward trend with fluctuations and reached US$2,386.4 per ounce in 2024, according to London Bullion Market Association (LBMA) Gold Price.

Although the price of gold remained high in 2024 and the first half of 2025, there can be no assurance of the risk of volatility in gold prices in the future. The gold prices in recent years have been gradually increasing and have generally had a positive impact on our financial performance. However, there is no assurance that the prices will remain at such levels and any decrease in the price of gold may materially and adversely affect our business, financial condition and results of operations. Decline in gold prices may also result in greater pressure on our production and operations.

We operate in a number of countries and may also face geopolitical and country risks arising from our operations.

We own or operate gold mines in different regions, namely Colombia, Tajikistan, Australia, Kyrgyzstan, Guyana, Suriname and Ghana, and we hold minority equity interest in a gold mine in Papua New Guinea. Gold mining operations across these diverse geopolitical landscapes expose us to a range of country-specific risks that could materially and adversely affect our business, financial condition and results of operations. These risks include, without limitation, (a) political and social dynamics on the mining sector (including any community opposition), which may often lead to regulatory changes and shifts in government policies balancing different causes and initiatives such as economic and infrastructure development and environmental protection. These dynamics would have an impact on environmental regulations, labor laws and indigenous rights, and would in turn affect compliance costs and our profitability; (b) security concerns in certain regions, which may in turn pose risks to personnel and assets; (c) complex legal and regulatory environment, which may become difficult to navigate due to a lack of transparency; (d) infrastructure limitations, such as inadequate transportation and energy supply, which may in turn hinder operational efficiency and increase costs; (e) civil unrests, which could disrupt mining operations and supply chains; and (f) illegal mining activities and land disputes, which can further pose operational risks to our operations.

Other potential risks that may add to the complexity of operating in these regions include but are not limited to: mining royalty and various tax increases or claims by governmental bodies, expropriation or nationalization, foreign exchange controls, trade disputes, high rates of inflation, extreme fluctuations in currency exchange rates and commodity prices, credit risks, import and export regulations which may impose trade restrictions, cancelation or renegotiation of contracts, environmental and permitting regulations, illegal mining operations by third parties on our properties, labor unrest, surface access issues and change in taxation. We only have political risk insurance coverage against these risks in certain jurisdictions where we operate, and there is no assurance that the coverage of such insurance is sufficient to guard us against the risks exposed to us. See "— We may not be adequately insured against losses and liabilities arising from our operations."

In general, current and future operations may also expose us, and may further expose us, to various risks associated with conducting business in foreign countries and territories, such as, among other risks, (a) an increase in competition from local or international competitors or failure to anticipate changes to the competitive landscape in global markets; (b) material disputes between local government authorities, the employees or contractors and us in connection with the performance of a party's obligation or the scope of a party's responsibilities under relevant agreements; (c) difficulties and costs associated with complying with, and enforcing remedies under, a wide variety of complex domestic and international laws, treaties, regulations, and rules, including but not limited to local environmental and labor laws and regulations; (d) inability to obtain or maintain the requisite licenses, permits, approvals and certificates in foreign jurisdictions; (e) economic sanctions, trade restrictions, trade barriers such as imposition of tariffs,

discrimination, protectionism or unfavorable policies against Chinese companies; (f) potential loss of key employees, and difficulties with staffing and managing operations after localization, including with respect to compliance with local labor laws; (g) exposure to litigation or third-party claims outside of the PRC or Hong Kong, including labor disputes; (h) uncertainties in the interpretation and application of tax laws and regulations, more onerous tax obligations and unfavorable tax conditions; (i) potential disputes with, and loss of, international customers or other parties we work with; (j) cultural differences and language barriers; (k) infringement of our intellectual property rights in foreign jurisdictions; and (l) lack of a well-developed legal system in certain foreign jurisdictions in which we conduct our business, which may create difficulties in the enforcement of our legal rights or enforcement conflicts which may cause our non-compliance.

Our inability in determining the potential impact of these risks on our future financial position or results of operations, and any changes, if any, in mining or investment policies or shifts in political attitude in these regions, may affect our exploration, mining, processing and sales activities, which may materially and adversely affect our financial condition, results of operations and prospects.

We are subject to risks and uncertainties relating to our historical and future acquisitions and investments and establishing joint ventures, and we may fail to successfully implement our expansion strategies and integrate them with our existing business.

Our gold assets and investments were acquired historically. We have entered and may from time to time enter into strategic acquisitions and investments with third parties in the mining industry if suitable opportunities arise. We have established joint ventures and may establish more joint ventures with third parties if we believe that the joint venture will complement our expansion strategies.

The success of our existing and future joint ventures depends on a number of factors, including the financial resources of the other shareholders and joint venture partners, their willingness and ability to honor their commitments under the joint venture agreements, the manner in which they exercise control, veto or other governance rights in respect of the joint venture, and the extent to which they cooperate in operational and strategic decisions with respect to the relevant mine. If we become engaged in material disagreements with our joint venture partners, the operational and financial results of the underlying mines may be adversely affected. In addition, we may face difficulties in assimilating or failure to integrate operations, technologies, production procedures and management of employees of these projects.

Any strategic acquisition, investment and joint ventures with third parties could subject us to a number of risks, including risks associated with sharing proprietary information and a reduction or loss of control of operations that are material to the business. We may also make strategic divestitures of our assets or restructure our business operations. We may raise additional financing through the divestiture of our stakes in any business. Moreover, strategic acquisitions, investments and joint ventures may be expensive to implement and subject us to the risk of non-performance by a counterparty, which may in turn lead to monetary losses that may materially and adversely affect our business. If we cannot successfully integrate acquisitions, investments, joint ventures and other partnerships on a timely basis, we may be unable to generate sufficient revenue to offset acquisition costs, may incur costs in excess of what we anticipate, and the expectations of our future results of operations and synergies may not be achieved. In addition, the results of operations may be materially and adversely affected if we are unable to improve the efficiency of our operations.

Acquisitions may also involve substantial risks, including, but not limited to: mineral ore bodies that may not meet expectations; higher costs of integration than we anticipated; unforeseen difficulties in integrating operations, accounting systems and personnel of any acquired companies, realizing anticipated synergies and maximizing the financial and strategic position of the combined enterprise, and maintaining uniform standards, policies and controls; provision and implementation of financial undertakings to local authorities; mandatory requirements of share issuance and dividends distribution to local authorities; uncertainty of timeline as to the update of ownership of mining titles after completion of acquisition; inability to manage the newly acquired entities due to new operating and regulatory requirements; diversion of financial and management resources from existing operations; uncertainty as to whether investment opportunities or initiatives are identified and assessed accurately in terms of the likely benefits, commercial viability and technical feasibility of such initiatives; insufficiency of experience in managing or operating such investments, which may increase the need to recruit additional personnel with suitable experience and/or cause the investments to fail to achieve the intended commercial benefits or the level of economic returns or at all; failure to attract and retain management and key employees; unforeseen difficulties related to entering geographic regions or markets where we do not have prior experience; failure to obtain sufficient equity or debt financing; potential undisclosed liabilities, litigation or other proceedings; the loss of key customers or suppliers; disputes or breaches by our joint venture partners or strategic business partners, or the inability of our joint venture partners or strategic business partners to fulfill contractual obligations due to their businesses or financial condition; uncertainty of financial condition of the joint venture partners; and difficulties in obtaining various governmental approvals.

See "— We are subject to license period of mining rights and may fail to obtain, retain or renew the government permits, licenses and approvals required for our mining and exploration activities."

Any of the above factors could lead to, among other things, business disruptions, increased costs and losses, which could have a material and adverse effect on our business, financial condition, results of operations and overall growth. In particular, current and future geopolitical tensions globally and political tensions in the jurisdictions we operate could materially and adversely affect our existing business and future strategies. We cannot assure you that we can effectively manage or acquire the projects to expand or sustain our business development. In the event that we are unable to successfully acquire or manage projects, it may materially and adversely affect our business, financial condition and results of operations.

Our business is subject to a number of operational risks and hazards specific to the mining industry, which may result in increased costs or losses, personal injuries or casualties, damage to reputation, suspension of operations and other penalties.

Our operations are subject to a number of operational risks and hazards specific to mining industry, some of which are beyond our control and cannot be completely eliminated through prevention efforts. Mining, processing and exploration activities are typically exposed to elements of significant risks and hazards, including, but not limited to, (i) mining risks; (ii) occupational risks; (iii) legal and regulatory risks; (iv) infrastructure and equipment risks; and (v) environmental, social, health and safety risks.

Mining Risks. Risks and hazards commonly associated with mining operations include: unexpected maintenance or technical problems; interruptions to our mining operations due to hazardous weather conditions and natural disasters, such as floods, including, but not limited to, surface and underground flooding, landslides and earthquakes; electricity or fuel supply interruptions; critical equipment failures in our mining, processing and production operations; the handling and storage of certain dangerous substances and the use of heavy machinery; unusual or unexpected variation in the mine and geological or mining conditions, such as instability of the slopes and subsidence of the working areas; seismic events; exposure to health-related hazards, such as inhalable dust, silicosis and noise; surface or underground fires and explosions, including those caused by flammable gas or in connection with blasting; cave-ins, blockages, wall collapses or gravity induced falls of ground; discharges of gases and toxic substances; releases of radioactivity; electrocution; falling from height; accidents related to the presence of mobile machinery, including underground trains and shaft conveyances; industrial accidents, including, but not limited to, accidents and conditions resulting from drilling, blasting and removing and processing material which would also include, but is not limited to, the inhalation of dust and noise induced hearing loss; human errors and conduct; environmental degradation, including pollution of ground and surface water, air or soil; environmental issues, including production disruption due to weather conditions; and other accidents or conditions resulting from mining activities, such as blasting and the transport, storage and handling of hazardous materials.

Occupational risks. Our operations involve the handling and storage of explosives and other dangerous articles. There is no assurance that accidents will not occur and our operations would not be disrupted or suspended in relation to occupational hazards and production safety. Should we be liable for such accidents, we may be fined and criminal liabilities may be imposed on our employees. In addition, due to the geographic setting and relatively high elevation difference, there is a possibility of localized mud-rock flow which may occur during the rainy season, and a risk of instability of the slopes and subsidence of the working areas. As certain of our mining process requires the use of explosives, any improper storage or use of these materials could result in personal injury or death and other damages.

The above risks and hazards may result in personal injury, damage to, or destruction of, properties or production facilities, environmental damages, business interruptions and damage to our business reputation. Further, dust emission from our production process may adversely affect the health of our on-site employees and in extreme cases, it may cause pneumoconiosis or other occupational diseases.

Legal and regulatory risks. As an integrated gold mining company engaged in mining, processing and exploration, we are subject to extensive laws, rules and regulations imposed by the governments in the respective jurisdictions in which we operate. For more details, see "— We are subject to government regulations on the mining industry."

Infrastructure and equipment risks. Our infrastructure and facilities may contain design defects, and the success of commissioning and trial production may not guarantee smooth formal production in the future. The breakdown or modification of the facilities may delay the production and incur significant costs. In addition, we may experience in the future increased costs of production arising from compliance with production safety laws and regulations. See "— Our operations may face risks in relation to production delays and increased production costs resulting from design defects, production safety and occurrence of accidents."

Environmental, social, health and safety risks. The mining industry is inherently susceptible to work-related injuries and industrial and mining accidents. Such incidents may also result in breaches of the conditions for our mining and exploration licenses or any other approvals, permits or authorizations, which may result in fines and penalties or even potential revocation of such licenses, approvals, permits and authorizations. There can be no assurance that accidents will not occur at our operations in the future. If we fail to comply with any relevant laws, regulations or policies or if any accident occurs, our reputation, business, financial condition and results of operations may be adversely affected, and we may be subject to penalties, civil liabilities, and/or criminal liabilities. Moreover, our operations may be affected by accidents of third parties. In addition to adversely affecting our business and results of operations, safety accidents in the region may also adversely affect our reputation.

Finally, our operations are subject to health and safety and production safety legislation which imposes duties and obligations on the employer to ensure, amongst other things, a working environment which is healthy and safe, as far as is reasonably practicable. In terms of the health and safety legislation, an employer may be subject to significant penalties and/or administrative fines for non-compliance. Depending on the particular circumstances, litigation (criminal and/or civil) may be instituted against the employer in respect of an accident, dangerous occurrence or health threatening occurrence which has resulted in the death of an employee (or contractor staff). In terms of production safety laws or regulations, in case of failure to comply with these regulations, we would be required to suspend our operations, rectify the non-compliance within a limited period and/or pay fines. Failure to rectify any problem could lead to suspension of our operations and fines as well. In addition, accidents may arise due to various reasons, such as the mishandling of dangerous articles in our operations. Any changes to the health and safety laws which increase the burden of compliance on the employer and impose higher penalties for non-compliance may result in further significant costs for us.

We are subject to uncertainty in the results of exploration, and we may not be able to expand or replenish our mineral resources and reserves through further exploration. Failure to discover new reserves, maintain or enhance existing reserves, develop new operations or expand our current operations could adversely affect our business and results of operations.

Resources and reserves are non-renewable, and the exploration of new and potential resources is crucial to a mining enterprise. Exploration of mineral resources bears uncertainties, and therefore substantial expenses may be incurred from initial drilling to production. The success of any mining exploration program depends on various factors including, among other things, (i) whether ore bodies can be located; (ii) whether the location of ore bodies are economically viable to mine; (iii) whether appropriate metallurgical processes can be developed and appropriate mining and processing facilities can be economically constructed; and (iv) whether necessary governmental permits, licenses and consents can be obtained.

In order to maintain gold and other non-ferrous metal production beyond the life of the current proved and probable reserves, we must identify further reserves capable of economical exploitation. However, due to the unpredictable and speculative nature of our industry, there is also no assurance that any exploration can lead to the discovery of economically feasible reserves. If we fail to replenish our mineral resource levels in existing or new mining areas, we may not be able to maintain the current production levels after the remaining usable life of the existing mining areas lapses. As we primarily engage in the exploration, mining, processing, refining and sales of gold globally, our sustainable development relies on our ability to expand upstream resources by acquiring exploration and mining rights worldwide and our ability to replenish resources and reserves with quality ores. Further, other mining enterprises may compete with us in terms of acquiring mining resources. Such competition may make it more difficult for us to acquire new resources. There is no assurance that we will be able to continue acquiring mining resources in the future.

To access additional reserves in explored areas, we will need to successfully complete development projects, including extending existing mines and developing new mines. We typically conduct feasibility studies to determine whether to undertake significant construction projects. Actual results may differ significantly from those anticipated by our feasibility studies. In addition, there are a number of uncertainties inherent in the development and construction of any new mine or an extension to an existing mine, including: (i) the availability and timing of necessary governmental approvals; (ii) the timing and cost necessary to construct mining and processing facilities, and the availability and cost of smelting and refining arrangements; (iii) the availability and cost of labor, utilities, auxiliary materials and other supplies and the accessibility of transportation and other infrastructure; and (iv) the availability of funds to finance construction and production activities.

Furthermore, the future mining and development in the areas currently covered by exploration licenses is subject to further government approvals. There can be no assurance that our future plan to expand our mineral resources and reserves will succeed. Such plans may be delayed or adversely affected by various factors, including, but not limited to, failure to obtain relevant regulatory approvals, failure to secure sufficient financing to fund our expansion and production, the occurrence of geotechnical difficulties, constraints on managerial, operational, technical and/or other resources, and the incurrence of higher-than-expected operational costs.

In addition, to the extent we participate in the development or operation of a project through a joint venture or any other multi-party commercial structure, there could be technical, legal or other disagreements, or divergent interests or goals among the parties, which could jeopardize the success of the project. In addition, if a viable deposit is discovered, it could take us several years and a large amount of capital expenditure from the initial phases of exploration to production commencement, during which time the presumed market price of gold may change, and the capital cost and economic feasibility of such deposit may change. There is also no assurance that we will have, or be able to raise, the required funds to engage in these activities or to meet our obligations with respect to any exploration properties in which we have or may acquire an interest. Furthermore, there can be no assurance that reported resources will be converted into reserves, and actual results upon production may materially differ from those anticipated at the time of discovery. In the event we fail to replace our depleted resources and reserves, to expand our resources or reserves base or our future expansion plans are delayed or fail to deliver the expected economic benefits, our business, financial condition, results of operations and future growth may be materially and adversely affected.

Illegal mining, gold theft and robbery may occur on some of our properties. These activities are difficult to control and can disrupt our business and expose us to liability.

Illegal mining activities, theft and robbery of gold bearing materials and production inputs are common in the industry and may occur on our properties. Illegal mining is mining activity that is carried out without land rights, mining license, exploration or transportation permit, or any document that can legitimate the ongoing operations. It is generally associated with a number of negative impacts, including poor working practices, corruption, child labor and human trafficking. Effective local government administration is often lacking in the locations where illegal miners operate because of rapid population growth and the lack of functioning structures which can create a complex and unstable social environment. Activities of the illegal miners may cause pollution or other damage to our properties, including, for example, underground fires, or personal injury or death, for which we may potentially be held liable. Illegal miners are often assisted by a syndicate of employees of legal mining operations. Consequently, in the event that our employees are found to be assisting illegal miners, we will be required to dismiss all implicated employees and this may result in labor unrest. Illegal mining activities could also result in depletion of mineral deposits, potentially making the future mining of such deposits uneconomical. The presence of illegal miners could lead to project delays and disputes regarding the development or operation of commercial gold deposits.

There are illegal mining activities in and around our Colombia Buriticá Gold Mine. Since the second half of 2022 and up to the Latest Practicable Date, due to insufficient on-site enforcement and police presence by the local government, illegal mining activities have persisted despite efforts to curb them. The incidents of illegal mining and violent attacks have posing challenges to Continental Gold's operation activities. In our view, the Colombian government has failed to provide our Colombia Buriticá Gold Mine with full protection and security and fair and equitable treatment in accordance with its obligations under the Canada-Colombia Free Trade Agreement. Any theft or robbery of gold may reduce the amount of gold that we are able to recover from our operations. Rising gold prices may increase the likelihood of such thefts or robbery occurring. There can be no assurance that our security measures will effectively prevent illegal activities — which may be committed by third parties, employees or former employees — from happening in the future, or, in such case, that our insurance will be adequate to recover part or all of our loss (if any). Illegal mining, gold theft and robbery could result in the loss of reserves, mine stoppages, and have a material and adverse effect on our business, results of operations and financial position.

We are subject to license period of mining rights and may fail to obtain, retain or renew the government permits, licenses and approvals required for our mining and exploration activities.

Our right to exploit mineral deposits is governed by the laws and regulations of the jurisdictions in which our mining properties are located. In the countries in which we operate, the formulation or implementation of governmental policies and the exercise of legislative discretion by governmental authorities on certain issues may be unpredictable. This may include changes in laws relating to mineral rights and ownership of mining assets and the right to prospect and mine, and, in extreme cases, nationalization, expropriation, nullification or orders to dispose of existing rights, concessions, licenses, permits, agreements and/or contracts. In addition, in relation to mining operations in the regions where we operate, we may be required to obtain or renew mining rights for conducting mining activities in a specific mining area and other necessary regulatory approvals during the relevant license period. Our ability to carry out our business operations is subject to our ability to obtain and retain necessary approvals, licenses and permits from relevant governmental authorities and to renew them when they expire.

We generally cannot exploit the entire mineral resources of any of our mines during the initial license period. We apply to the appropriate authorities for a renewal when such licenses or permits are about to expire. For example, we are in the process of seeking the necessary regulatory approvals for the renewal of one of our mining leases of the Australia Norton Gold Mine which will expire in October 2025. As of the Latest Practicable Date, we are in ongoing discussion with certain Australian authorities to seek to complete the renewal process prior to the relevant expiry date. If we fail to renew our mining rights upon expiry or we cannot effectively utilize the resources within the license period specified in the relevant mining rights, our business, financial condition and results of operations may be adversely affected.

Even if we meet the substantive and procedural conditions and legal requirements stipulated in the relevant laws and regulations, we may not be able to obtain or renew such approvals, licenses or permits; comply with all conditions requested or imposed by governmental authorities to maintain those permits from time to time; or obtain, retain or renew other approvals, licenses and permits necessary for our business operations in the future, either in respect of our existing mines or at any mines we may operate in the future. In addition, when we obtain or renew such approvals, licenses or permits, despite meeting all substantive and procedural conditions and legal requirements, the review process may be prolonged or delayed. In addition, the granting of such approvals, licenses or permits may also be subject to ratifications or approvals by governmental authorities, political bodies or local parliaments or legislative institutions, the process of which may also be prolonged and delayed.

As of the Latest Practicable Date, certain applications of extension or renewal filed by us in relation to licenses remained pending. We have received legal advices from our relevant legal advisors that (i) licenses subject to extension or renewal will remain in effect pending the government's decision; and (ii) the risk of being unable to continue our ongoing mining operations under the existing licenses is considered low, as our relevant legal advisors do not anticipate any legal impediments to the extension or renewal applications. We held one valid material mining license in relation to Kyrgyzstan Taldybulak Levoberezhny Gold Mine which has an expiry date of January 5, 2026. We have initiated the application process for extending this license in March 2025. Our legal advisor as to Kyrgyzstan law does not expect any legal impediments to such renewal applications on the basis that (i) the extension application has been submitted on a timely manner, (ii) there are remaining reserves, and (iii) pursuant to the Kyrgyz Subsoil Law, a mining license holder has the right to extend the term of the mining license until full depletion of the reserves. In addition, one of our material mining leases in relation to Australia Norton Gold Mine has a current expiry date in October 2025. We have started the process of seeking the necessary regulatory approvals for this renewal. Subject to our future compliance with relevant laws and regulations and the exercise of administrative discretions by the relevant Australian government authorities in respect of those extensions or renewals, our Australia legal advisor does not anticipate any legal impediment to the grant of those renewals on the basis that: (i) there are currently no known material non-compliances or material regulatory proceedings relating to those leases; and (ii) Norton Gold Fields and its subsidiaries have not received correspondence indicating that a relevant Australian authority intends to exercise their discretion to refuse or prohibit such extensions or renewals relating to those leases. For more details, please see "Business — Our Gold Production Business of Kyrgyzstan Taldybulak Levoberezhny Gold Mine — Mining Licenses and Exploration Permits" and "Business — Our Gold Production Business of Australia Norton Gold Mine — Mining Leases". Nonetheless, it remains uncertain as to whether such licenses would be extended or renewed in time or at all (and if extended or renewed, whether such approvals will be subject to onerous conditions), which might have a material adverse effect on our operations or result in the loss of the relevant tenure.

In some of the countries in which we operate, in addition to the applicable licenses or leases being renewed, there are other necessary regulatory approvals which must be obtained, for instance, under foreign investment laws, to permit us to continue to hold these licenses or leases and conduct our ongoing operations. To the extent that any such regulatory approvals are outstanding, it remains uncertain as to whether they will be obtained in time or at all (and if obtained, whether such approvals may be subject to onerous conditions), which might have a material adverse effect on our operations or result in the loss of the relevant tenure.

There can be no assurance that we will at all times maintain or act in compliance with our existing permits by the relevant governmental authorities. In addition, we may require new permits, licenses and/or approvals from time to time. Changes in local laws, regulations and policies, including those with respect to environmental protection and mining and exploration activities, are outside of our control may affect our ability to obtain timely renewals for such permits, licenses and/or approvals, and during such time we may be compelled by law or regulators to cease mining and exploration activities in accordance with the relevant laws and regulations. Any failure to obtain, retain or renew, or any delay in obtaining or renewing, such approvals, licenses or permits could subject us to a variety of administrative penalties or other government actions and adversely impact our business, financial condition and results of operations.

Our reserve estimates and gold production estimates are based on a number of assumptions, which, if changed, may require us to lower our estimates. We may not be able to achieve our production estimates.

Our Mineral Resources and Ore Reserves estimates are based on a number of assumptions. Neither Mineral Resource estimates, nor Ore Reserve estimates, are precise calculations. Ore Reserve estimates are based on available assumptions and considerations on extraction of Measured and Indicated Mineral Resources; and the Mineral Resources estimates are dependent on the interpretation of limited information on the location, shape and continuity of the occurrence and on the available sampling results. The accuracy of the estimates depends on the quantity and quality of available data, the assumptions made, and the judgments used in engineering and geological interpretation, which in each case may prove to be unreliable.

The Ore Reserves estimates contained in this Prospectus represent the tonnage and grade of gold and other Mineral Resources that we believe can be economically mined and processed and are estimated based on a number of economic and technical assumptions, including, among other things, currency exchange rates, dilutions, metallurgical and mining recovery assumptions, many of which are beyond our control. Ore Reserves estimation is a time-related behavior and activity, and the Ore Reserves presented in this Prospectus has reflected the considerations and assumptions made being valid on the date of the Competent Person's Report. There is no assurance that our estimates will prove accurate or that the Ore Reserves can be mined or processed profitably. For details, see "Appendix III — Competent Person's Reports."

In addition, compared to Measured or Indicated Mineral Resources, Inferred Mineral Resources have a greater amount of uncertainty as to their existence and as to whether they can be mined economically as such Mineral Resources are inferred from geological evidence and assumed but not verified. We cannot assure you that all or part of the Inferred Mineral Resources will ever be upgraded to a higher category. No Inferred Mineral Resources have been included in LOM plan presented in this Prospectus.

The inclusion of Mineral Resources estimates should not be regarded as a representation that all these amounts can be economically mined or processed, and nothing contained in this Prospectus should be interpreted as assurances of the economic viability of the mines that we hold mining licenses or exploration permits to or the profitability of our future operations. A reduction of our Mineral Resources or Reserves, including due to any of the above could have a material adverse effect on our business, financial condition and results of operations.

In addition, our ability to achieve the estimated gold production volume is subject to a variety of risks and uncertainties that could materially affect our operations. These include, but are not limited to, operational challenges such as equipment failures, labor disputes and adverse weather conditions, as well as risks and hazards of the types discussed elsewhere in this Prospectus, which may disrupt our mining activities. Additionally, geological uncertainties, including unexpected variations in ore grade and mineral reserves, could lead to discrepancies between projected and actual production levels. Compliance with environmental regulations and obtaining necessary permits may also impact our production capabilities, as delays or changes in regulatory requirements could hinder our operations. Furthermore, fluctuations in gold prices and demand may necessitate adjustments to our production plans, potentially resulting in lower output than anticipated. Supply chain disruptions, technical and engineering risks, and financial constraints are additional factors that could adversely affect our ability to meet production targets. As a result, there can be no assurance that we will achieve our estimated gold production volume, which could have a material adverse effect on our future cash flow, business, financial condition and results of operations.

Our operations may face risks in relation to production delays and increased production costs resulting from design defects, production safety and occurrence of accidents.

Our infrastructure and facilities may contain design defects which may not guarantee the success of commissioning and trial production for smooth operation in the future. By the same token, our operations may be faced by aging infrastructure, unplanned breakdowns and stoppages that may result in production delays, increased costs and industrial accents. Once shafts reach the end of their planned lifespan and begin operating under extended LOM conditions, additional maintenance, condition monitoring and care is required. Incidents resulting in production delays, increased costs or industrial accidents may occur and such incidents may have a material adverse effect on our business, financial condition and results of operations.

Similarly, the breakdown of facilities or machinery (and the downtime required to fix or modify such facilities or machinery) may delay the production and incur significant costs. We and our third-party contractors may encounter accidents, technical difficulties, mechanical failure or breakdown in mining, processing and exploration activities, as well as possible flooding, mudslides, instability of the slopes, and subsidence of the working areas and the like due to severe weather conditions and natural disasters.

In addition, as we increasingly conduct mining at greater depths, we may face higher operational risks associated with deep underground mining, including, but not limited to, increased stress on our mining structures, increased temperatures and ventilation difficulties, higher risk of rock bursts and seismic activities that may affect the operation and safety of our mines. Deeper mining will require us to enhance our mining infrastructure, methods and techniques, and devote more manpower and utilities to our mining activities, which will increase our costs. For example, from time to time our mines may be adversely affected by severe weather conditions as the climate, terrain and vegetation may be conducive to naturally occurring fires.

Furthermore, our operations rely on the existence and maintenance of appropriate and adequate infrastructure, including, but not limited to, the continuous and stable supply of power, at our mining concessions and surrounding areas. As a result, our operations may be adversely affected where such infrastructure ceases to exist or fails to be properly maintained by the local authorities and/or third parties. This may be beyond our control, and such risks cannot be completely eliminated through prevention efforts.

Our employees and our contractors may encounter accidents, technical difficulties, mechanical failure or breakdown during the mining and production processes, as well as manmade and natural disasters beyond our control. There can be no assurance that accidents will not occur in the future. The occurrence of accidents may disrupt or suspend our operations, increase production costs, result in liability to us and harm our reputation. Such incidents may also result in breaches of the conditions for our mining licenses or any other approvals, licenses or authorizations, which may result in fines and penalties or even possible revocation of such permits, approvals, licenses and authorizations.

We cannot assure you that safety accidents will not occur at our gold mines in the future. See "— Our business is subject to a number of operational risks and hazards specific to the mining industry, which may result in increased costs or losses, personal injuries or casualties, damage to reputation, suspension of operations and other penalties" for further details.

The failure of tailings storage facilities could adversely impact our business, reputation and results of operations.

Mining companies face inherent risks in their operation of tailings storage facilities. Tailings storage facilities are structures designed and managed to contain fine mining waste, known as "tailings." Tailings are a by-product of mining, consisting of the processed rock or soil left over from separating the commodities of value from the rock or soil within which they occur. However, the use of tailings storage facilities expose us to certain risks that could be detrimental to operations, the environment, and/or public health and safety that may arise from some present process or future event. Tailings storage facilities designed as upstream raised facilities may present greater risk, particularly where the facility is located in a high seasonal rainfall area or an area of high seismic activity. When tailings storage facilities fail, the consequences can be

catastrophic for communities, local economies and the surrounding environment. The occurrence of dam failures and environmental leakage incidents at one of our tailings storage facilities could also lead to the loss of human life and/or extensive property and permanent environmental damage, leading to the need for a large expenditure on contingencies and on recovering the regions and people affected, and the payment of penalties, fines or other monetary damages.

Tailings facilities are in a near-constant state of change, from initial construction, during operations and until closure. This presents a significant challenge in reviewing and assessing their safety, requiring a multi-faceted program with multiple levels of safety assessment in order to be effective. While we have tailings facilities in place in each of the gold mines we own or operate, there can be no assurance of the effectiveness of our designs or the construction quality of the tailings storage facilities, or that any monitoring throughout the operations of the tailings storage facilities will identify any safety concerns. Nor can there be any assurance that any of the measures that have been put in place to safeguard our tailings storage facilities will prevent the failure of one or more of them, or that such potential failure will be detected in advance. We also cannot assure you that our operating partners maintain similar safety precautions or monitoring systems on their tailings storage facilities.

The failure of a dam at a tailings storage facility could lead to multiple legal proceedings and investigations, which could include class action lawsuits, criminal proceedings and public civil actions (against us, any of our subsidiaries and/or individuals) for significant amounts of damages.

As a result of any dam failures, additional environmental, health and safety laws and regulations may be forthcoming globally, including in the regions where we operate, which may ban or curtail any storage of wet tailings or the construction or use of upstream tailings storage facilities. In addition, changes in industry standards, laws and regulations may impose more stringent conditions in connection with the licensing process of projects and operations and increased criminal and civil liability for companies, officers and contractors. For example, on August 5, 2020, the International Council on Mining and Metals, the United Nations Environment Programme (UNEP) and the Principles for Responsible Investment (PRI) established an international tailings standard, the Global Industry Standard on Tailing Management (GISTM), which has resulted in increased operational costs and adjustments of our tailing management operations to ensure compliance with these heightened standards. We cannot assure you more stringent regulations or standards will not be published.

The occurrence of any of the above mentioned such risks could have a material and adverse effect on our business, financial condition and results of operations.

Our operations are exposed to risks relating to environmental protection and rehabilitation.

Operations of gold mines are subject to environmental risks and hazards. We are subject to environmental laws and regulations, such as the treatment and discharge of hazardous wastes and materials. These laws and regulations set a series of standards for waste substances that may be discharged into the environment, and impose fees for the discharge of such waste substances. We are required to conduct our mining operations in a manner that minimizes the impact on the environment.

Environmental hazards may occur in connection with our operations as a result of human negligence, force majeure or otherwise. We have received legal advice confirming that we did not have any material incidents of non-compliance with the environmental laws and regulations at our mines that resulted in material penalties during the Track Record Period. We cannot assure you that our operations will not have environmental risks or hazards in the future. The occurrence of any environmental hazards may delay production, increase production costs, cause personal injuries or property damage, result in liability to us and damage our reputation. Such incidents may also result in breaches of the conditions for our mining and exploration licenses or other approvals, licenses or authorizations, which may result in fines or penalties, impact the renewal of our existing permits, approvals, licenses and authorizations, or even lead to possible revocation of such permits, approvals, licenses and authorizations.

We may experience increased production costs arising from compliance with environmental laws and regulations. Moreover, there is a heightened awareness of environmental protection. As a result, it is possible that more stringent environmental laws and regulations may be implemented in the future, or the existing environmental laws and regulations may be more strictly enforced. We may not always be able to comply with future laws and regulations in relation to environmental protection and rehabilitation economically, or at all. Should we fail to comply with any such laws and regulations, we may be subject to penalties and liabilities under the relevant local laws and regulations, including but not limited to warnings, fines, suspension of production and closure of the facility that fails to comply with the relevant environmental standards.

Maintaining and increasing compliance with ESG standards and implementing initiatives to sustain our care for local communities and building our reputation could increase our operational costs.

Mining is essentially geotechnical engineering. Mining development can be highly synergistic with environmental protection and ecological development. Facing new challenges such as global sustainable development and climate change, we adhere to international standards and have adopted international standards, such as GRI, SASB and TCFD, to guide the development of our ESG system, deeply integrates ESG concepts into the entire corporate development process. We enhance the foundation for green and sustainable development, established ecological restoration and environmental protection plans which are highly adaptable to our projects, and strive to promote the implementation of effective measures for "carbon neutrality and carbon reduction" to

help achieve global green sustainable development and "net zero" targets. Maintaining and increasing compliance with ESG standards and building our reputation could increase our operational costs.

In addition, the continued success of our existing operations and future projects are in part dependent upon broad support of and a healthy relationship with the local communities in which our operations are located, in addition to conducting operations in a manner that is not detrimental to the environment. While formal permission to operate is ultimately controlled by host governments, many mining activities require social permission from host communities and influential shareholders to carry out operations effectively, sustainably and profitably.

The consequences of negative community reaction could therefore give rise to material reputational damage which can pose obstacles to our ability to develop our projects and maintain our operations, and have a material adverse impact on the cost, profitability, ability to finance or even the viability of an operation. If our operations are delayed or shut down as a result of political and community instability, our earnings may be constrained and the long-term value of our business could be adversely impacted. Even in cases where no action adverse to us is actually taken, the uncertainty associated with such political or community instability could adversely impact the perceived value of our assets and mining investments and, consequently, have a material adverse effect on our financial condition. In order to maintain our social license to operate, we may need to design or redesign parts of our affected mining operations to minimize their impact on the relevant communities and the environment, either by changing mining plans to avoid such impact, by modifying operations, by changing planned capital expenditures, or by relocating the affected people to an agreed location, thereby increasing our operating costs.

Also, action is increasingly taken by members of the general financial and investment communities, such as asset managers, sovereign wealth funds, public pension funds, universities and other groups, to promote improvements in ESG performance by mining companies, which may impact our ability to raise funds if we are perceived to have ESG deficiencies. Voluntary compliance with gold mining industry standards and reporting against multiple sustainability and ESG indices could result in significant costs. Stringent standards relating to responsible gold, including but not limited to the World Gold Council Conflict-Free Gold Standard and the World Gold Council Responsible Gold Mining Principles, have been introduced. Additionally, the increasing demand for disclosure on performance with regard to ESG and the plethora of disclosure formats and indices being demanded may result in significant costs to ensure and demonstrate compliance (particularly where standards change rapidly or duplication in reporting is required).

The cost of measures and other issues relating to the sustainable development of mining operations has placed significant demands on our resources and could increase capital and operating costs and have a material and adverse impact on our reputation, business, financial condition and results of operations.

Our business and operations may be adversely affected by union activities, as well as new and existing labor laws. Work stoppage, labor shortage and other labor related matters may have an adverse effect on our businesses.

Our business depends on good relations with our employees. We support trade unions in negotiating and signing the employee wage collective agreements with us to protect the lawful rights and interests of our employees. Among other things, Continental Gold passed an union agreement through collective negotiation, which balanced our sustainable development with the steady improvement of employee benefits.

Because our employees are highly unionized, trade unions hence have a significant impact on the general labor relations environment. Trade unions advocate for improved conditions of employment and change to labor regulations, and to promote various political and social goals by using their collective power and ability to withhold labor. Therefore, union involvement in wage negotiations and collective bargaining increases the risk of strike action and rising labor expenses. Wage negotiations in other industries and other mining sectors may influence the stance unions take toward the industry in which we operate. Our employees might exercise their right to strike within the ambit of the legislations and relevant local laws and regulations, which could have a material and adverse effect on both our business and reputation, and disruptions in the operation of our mines. During the Track Record Period and up to the Latest Practicable Date, we have not experienced any significant labor disputes within our Group or labor disputes on the operation of our Group, nor have we experienced any difficulty in recruiting and retaining the experienced employees.

There can be no assurance that a work slowdown, a work stoppage or strike will not occur at any of our facilities or development projects or exploration prospects. Work slowdowns, stoppages, disputes with employee unions or other labor-related developments or disputes could result in a decrease in our production levels and adverse publicity, which could have a material adverse effect on our business, results of operations and financial condition.

Failure to settle issues successfully with local communities may materially and adversely affect our business.

In our international operations, interactions with different cultures are inevitable. We approach local communities with an attitude of equality and inclusiveness, especially when we come to the traditional culture of indigenous groups. However, our production and operational activities may create conflicts with local communities, including disputes relating to land use rights and settlement relocation, as our business activities are often located at or near existing towns and villages, natural water courses and other infrastructure of the local community. These issues may result in community protests, road blockades and third-party claims, including claims for financial compensation in respect of land use rights. There is no assurance that we, our affiliates or our business partners can successfully manage community relationships or settle local community issues. Opposition from the local community, political or environmental groups as well as

regulatory authorities with respect to development or construction of mining projects or mineral refineries could increase our development costs and cause delays, interruptions or even cancelations to our development plans and harm our reputation. Failure to successfully settle the local community issues may have a material and adverse effect upon our business, prospects, financial condition and results of operations.

We are subject to costs and risks related to mine closures.

Our existing mining operations have a limited life. Eventual closure of our operations will entail costs and risks regarding on-going monitoring, rehabilitation and compliance with environmental standards, which may exceed the provisions we have made. We have rehabilitation obligations in respect of areas we have cleared for mining and production purposes. We are required to rehabilitate and re-vegetate mined land. The key costs and risks for mine closures are: (i) long-term management of permanent engineered structures (such as tailings dams) and acid drainage; (ii) achievement of environmental remediation, rehabilitation and closure standards (including the assessment, funding and implementation of post-closure polluted and extraneous water pumping treatment); (iii) orderly retrenchment of employees and third-party contractors; and (iv) relinquishment of the sites with associated permanent structures and community development infrastructure and programs to new owners. The successful completion of these tasks is dependent on our ability to successfully implement the closure plan agreed with the relevant government authorities, community and employees. The consequences of a difficult closure range from increased closure costs and handover delays to on-going monitoring and environmental rehabilitation costs and damages to our reputation, as well as giving rise to potential liabilities, if the desired outcomes cannot be achieved, if the relevant mines fail to meet the relevant closure standard or if a post-closure accident or environmental incident occurs. In the event of a difficult closure, our business, financial condition and results of operations could be materially and adversely affected.

In an effort to address mine closure and other geological environment issues, a mining company is required to accrue rehabilitation funds subject to the applicable laws and regulations in certain jurisdictions. For example, as part of the transition of ownership of Ghana Akyem Gold Mine, we have been actively working with the local authorities and financial institutions in relation to the posting of reclamation bond based on an approved work plan for reclamation as required under the Environmental Assessment Regulations of Ghana. As of the Latest Practicable Date, we completed the cash payment obligation on our part in relation to such statutory obligation, and are working with the local authorities to resolve the provision of financial guarantee to be provided by local financial institutions. In the event of a default in accruing required rehabilitation funds in the future, we could be subject to a variety of penalties and other administrative actions, resulting in our inability to proceed with certain administrative procedures relating to mining permits (including annual inspection, renewal, alteration and mortgage registration), suspension of mining permits or ceasing of operations which may materially and adversely affect our business, financial condition and results of operation.

We face intense industry competition.

We compete with a number of large gold mining companies. For further details of our competitors, see "Industry Overview — Competitive Landscape of the Gold Mining Industry" and "Business — Competition." Our competitors may have certain advantages over us, including, for example, diversified sources of fundings, better financial performance, greater technical and Mineral Resources, greater economies of scale, broader name recognition and more established relationships in certain markets. As a result, these competitors may be able to devote more resources to the discovery of new Mineral Resources and reserves and acquire new Mineral Resources or other gold mining companies. Competition could also have an adverse impact on the demand for, and pricing of, our gold products, which in turn affects our business growth and financial condition. There can be no assurance that we will be able to continue to compete effectively or maintain or improve our market position. If we fail to compete effectively, it will have a material adverse effect on our businesses, results of operations and financial condition.

We also face intense competition for the acquisition of attractive gold mining assets. Industry competition may lessen our opportunities to acquire new Mineral Resources or other gold mining companies and, ultimately, may have a material adverse impact on our business, financial condition, results of operations and growth prospects.

We may not be able to maintain the provision of adequate and uninterrupted supplies of electricity, water, materials and equipment at commercially acceptable prices, or at all.

Electricity and water are the main utilities used in our operations. Our mining and ore processing processes require adequate and stable supply of electricity. Our electricity supplies are mainly from the local electricity companies. In addition, our water supply are mainly from surface water, pit water or underground wells near the mine areas. In some countries and regions, a permit is required for water use. The local laws and regulations may also require the installation of calibrated water meters and payment of resource fees. If we fail to meet these requirements, water supply may be suspended and our production will be inevitably disrupted.

Major raw materials and consumables used in our production include pipes, rubber pipe fittings, crusher and ball mill accessories. During the Track Record Period, all of our top five suppliers in the respective year were service or commodity providers such as suppliers of raw materials, mining development contractors, fuel suppliers. During the Track Record Period, we did not experience any material interruptions in our operations due to power shortages or outages. However, we cannot assure you that we would not be subject to any power outages in the future. If we are to be subject to power outages or there is prolonged power shortage in the future or there are any possible changes in the power consumption policies adopted by the governments in the regions where our mines are located, our production will be inevitably disrupted. Our business, financial conditions and results of operations will therefore be adversely and materially affected.

We procure various materials, such as diesel fuel, processing chemicals, and related consumables, as well as machinery and equipment for our production operations from (i) different local suppliers where we operate and/or (ii) the original equipment manufacturers. We also procure various services, such as security services, transporting services, engineering services and loading and hauling services, from various local suppliers. We usually source qualified suppliers through market research and request of fee quotes and bidding process. We require candidates to provide the relevant licenses and permits for reference. We may undertake further due diligence, such as background checks and risk assessments, as and when necessary. The selected suppliers are put on our approved supplier list, which is reviewed and updated on a periodical basis. To secure competitive prices, we may enter into long-term agreements with certain suppliers for the provision of materials and/or service from time to time. There can be no assurance that supplies of electricity, water or raw materials will not be interrupted or that their prices will not increase in the future. In the event that our existing suppliers cease to supply us with electricity, water or raw materials at commercially acceptable prices or at all, our operations will be interrupted, and our financial condition and results of operations will be materially and adversely affected.

We rely on third-party contractors to conduct certain portion of our business.

During the Track Record Period, we outsourced a portion of our exploration, mining and processing activities to contractors in the regions where our mining properties are located. As of December 31, 2024, we engaged 46 third party contractors to undertake construction and engineering work, 15 third-party contractors for exploration work and 52 third-party contractors for mining and processing work. For more details, see "Business — Contractors." As a result, our operations have been affected by the performance of these contractors. Our operations at sites utilizing contractors or contract mining are subject to a number of risks, some that are outside of our control, including, but not limited to, contract risk, execution risk, dispute and litigation risk, regulatory risk and labor risk, which could result in additional costs and liabilities.

We may not be able to control the quality, safety and environmental standards of the works conducted by contractors to the same extent as the works conducted by our own employees. There can be no assurance that the contractors are in full compliance with all relevant laws and regulations, which may subject them to suspension of relevant licenses, approvals, permits and/or authorizations that would adversely and materially impact our operations. Should this happen, we may not be able to engage replacement contractors on similar terms, or at all, in a timely manner. We may become engaged in disputes with our contractors, which could lead to additional expenses, business interruptions, distractions and potential loss of production time and additional costs, any of which could materially and adversely affect our business, financial condition and results of operations. In addition, we may be legally obligated, as an owner of the exploration permit or mining license, to ensure operational safety. In the event of any safety-related accident involving a contractor, we may be held directly liable or liable for compensation to the extent of our faults regardless of any contractual provisions to the contrary. Any failure by contractors

to meet any of our quality, safety and environmental standards may result in liabilities to us and could also affect our compliance with government rules and regulations relating to exploration, mining and workers' safety.

The occurrence of one or more of these risks could have a material and adverse effect on our business, financial condition and results of operations.

We may not be able to detect and prevent fraud or other misconduct committed by our employees, representatives, agents, customers, external contractors or other third parties.

We may be exposed to fraud or other misconduct committed by our employees, representatives, agents, customers, or other third parties that could subject us to litigation, financial losses and sanctions imposed by governmental authorities, which may affect our reputation. While our internal control procedures are designed to monitor our operations and ensure overall compliance, such procedures may not be able to identify all incidents of non-compliance or suspicious transactions in a timely manner, or at all.

Furthermore, it is not always possible to detect and prevent fraud and other misconduct. The precautions we take to prevent and detect such activities may not be effective. If such fraud or other misconduct does occur, it may cause negative publicity and could adversely affect our business, financial condition and results of operations. As of the Latest Practicable Date, we are not aware of any ongoing enquiries or investigations by any relevant regulators, agencies or authorities in relation to fraud or other misconduct allegations against us. Any adverse media coverage against us may have a material adverse effect on our reputation, thereby affecting our business, financial condition and results of operations.

Deterioration of our relationship with Zijin Mining could adversely affect our business, financial condition, and results of operations.

We have a very close relationship with Zijin Mining. During the Track Record Period, Zijin Mining was our largest customer and primary supplier. As our largest customer, revenue generated from Zijin Mining accounted for a substantial portion of our revenue. As our primary supplier, any material disruptions in Zijin Mining's supply of materials or services to us could hinder our production capabilities and operational efficiency. As of June 30, 2025, the Group's net amount due to Zijin Mining is US$643.4 million. In addition, as of June 30, 2025, the Group has recorded lease liabilities amounting to US$38.0 million in relation to certain financial lease arrangements of motor vehicles between the Group and Zijin Mining. We have fully inherited Zijin Mining's advantages in the area of resource and reserve expansion. We also benefit from the advanced geological exploration technology and self-developed equipment from Zijin Mining. Any limitations or changes in access to these technologies could impede our ability to innovate and maintain competitive advantage in the industry. Our strategic decisions and operational plans are closely aligned with Zijin Mining's objectives, and any divergence in strategic priorities or operational goals between us and Zijin Mining could

lead to conflicts that may affect our business operations and growth prospects. Deterioration of our relationship with Zijin Mining could adversely affect our business, financial condition, and results of operations.

We have a high concentration of customers and the loss of one or more of these customers could adversely affect our business, financial condition, and results of operations.

Due to the nature of our business and industry norm, we have a limited customer base and face high concentration of a small number of customers for a significant portion of revenues. In 2022, 2023 and 2024, revenue contributed by our top five customers amounted to US$1,275.4 million, US$1,769.4 million and US$2,517.0 million, respectively, accounting for 70.2%, 78.2% and 84.2% of our total revenue for the same periods, respectively. In 2022, 2023 and 2024, revenue contributed by our largest customer amounted to US$597.7 million, US$635.8 million and US$1,272.9 million, respectively, accounting for 32.9%, 28.1% and 42.6% of our total revenue for the same periods, respectively. For the six months ended June 30, 2025, revenue contributed by our top five customers and our largest customer amounted to US$1,964.8 million and US$989.0 million, respectively, accounting for 98.4% and 49.6% of our total revenue for the same period, respectively. During the Track Record Period, our largest customer is Zijin Mining Group, mainly because we have been selling mining products to our customers through certain subsidiaries of the Zijin Mining Group. These subsidiaries, acting as traders of various mineral resources, are responsible for, among other things, arranging for the external sale of mineral resources produced by the Zijin Mining Group to external refineries, end-customers or traders. For more details, see "Connected Transactions — Sale Arrangement with Zijin Mining". We cannot assure you that our business will be unaffected by changes in our customer composition. Shifts in our customer base may significantly impact our revenue and profitability, particularly in the event of a reduction or termination of business with key customers. In several of our mines, a substantial portion of our revenue is derived from a limited number of customers. In 2022, the top two customers of the Tajikistan Jilau/Taror Gold Mines contributed 44.2% of its revenue and the largest customer of Kyrgyzstan Taldybulak Levoberezhny Gold Mine contributed 94.9% of its revenue. In 2023, the largest customer of the Tajikistan Jilau/Taror Gold Mines contributed 59.7% of its revenue and the largest customer of Kyrgyzstan Taldybulak Levoberezhny Gold Mine contributed 97.3% of its revenue. In 2024, the largest customer of the Tajikistan Jilau/Taror Gold Mines contributed 79.6% of its revenue, the largest customer of Kyrgyzstan Taldybulak Levoberezhny Gold Mine contributed 97.8% of its revenue and the largest customer of Australia Norton Gold Mine contributed 56.4% of its revenue. In the six months ended June 30, 2025, the largest customer of the Tajikistan Jilau/Taror Gold Mines contributed 91.9% of its revenue, the largest customer of Kyrgyzstan Taldybulak Levoberezhny Gold Mine contributed 96.2% of its revenue and the largest customer of Australia Norton Gold Mine contributed 99.6% of its revenue. This concentration heightens the risk of fluctuations in the operating results of these mines and increases our vulnerability to any significant adverse developments affecting our major customers.

Our internal control and risk management systems may not fully protect us against various risks inherent in our business.

We have established internal control and risk management systems to manage our risk exposures, primarily our operational risk, legal risk and liquidity risk. For further details, see "Business — Risk Management and Internal Control Measures." In addition, as part of the Global Offering, we have implemented internal control measures to ensure independence between our Group and the Zijin Mining Group. For details, see "Relationship with Zijin Mining". However, we may not be successful in implementing our internal control and risk management systems. While we seek to continue to enhance such systems from time to time, we cannot assure you that our internal control and risk management systems are adequate or effective notwithstanding our efforts, or material deficiencies in our internal control system will not be discovered in the future. Any failure to address any potential risks and internal control deficiencies could materially and adversely affect our business, financial condition and results of operations. Since our internal control and risk management systems depend on their implementation by our employees, we cannot assure you that all of our employees will adhere to such policies and procedures, and the implementation of such policies and procedures may involve human errors or mistakes. Moreover, our growth and expansion may affect our ability to implement stringent internal control and risk management policies and procedures as our business evolves. Our efforts to maintain our internal controls have required, and in the future may require, increased costs and significant management time and commitment. If we fail to maintain effective internal controls in the future, or timely adopt, implement and modify, as applicable, our internal control and risk management policies and procedures, our business, financial condition, results of operations and reputation, as well as the accuracy of our financial reports, could be materially and adversely affected.

We may not be adequately insured against losses and liabilities arising from our operations.

We carry insurance covering risks in relation to safety production obligations. We also carry insurance for loss of and damages to our various machinery, equipment and inventories. We also maintain additional accident insurance for our employees engaged in mining activities. In line with industry practice, we generally do not carry any business interruptions or litigation insurance. We engage professional third-party logistics service providers for the cross-border transporting of our products to customers and transporting of certain materials we procured from suppliers. Generally, such logistics service providers are responsible for maintaining insurance associated with transportation. We consider our insurance coverage to be adequate for the needs of our business operations and in line with the industry norm and the relevant laws and regulations in different jurisdictions we operate.

However, due to the nature of our business, our employees may handle explosive materials. We may experience accidents in the course of our operations which may cause significant property damage, personal injuries or other liabilities. There may also be significant uninsured damages to our properties, inventories or other assets or liabilities claims against us. Losses and liabilities incurred or payments that we may be required to make, if not adequately insured against, could materially and adversely affect our business, financial condition and results of operations or otherwise materially disrupt our operations.

Our gold Resources may not ultimately be extracted at a profit.

Despite identifying substantial gold resources, the economic feasibility of extracting our gold Resources is uncertain due to several factors. Fluctuating gold prices can impact revenue projections, while high extraction costs and technical challenges in mining operations may hinder profitability.

Additionally, unforeseen environmental or regulatory changes could increase operational expenses or restrict access to resources, further complicating extraction efforts. The complexity of developing appropriate metallurgical processes and constructing economically viable mining facilities adds to the uncertainty. If the costs associated with extraction exceed the market value of the gold, or if operational challenges prevent efficient mining, we may face financial losses, adversely affecting our business, financial condition, and future growth prospects.

The failure to maintain or protect intellectual property rights used by us and our trade secrets could have an adverse effect on our business, financial condition and results of operations.

During the Track Record Period, we did not possess intellectual property rights which are material to our business operations. We may engage Zijin Mining Group for technical services under a technical services framework agreement with Zijin Mining Group upon Listing, pursuant to which the Group may utilize certain patented technologies in relation to exploration work from time to time on an as-needed basis. To compete in these markets, companies rely or may rely on a combination of trade secret protection, nondisclosure and licensing agreements, patents and trademarks to establish and protect proprietary intellectual property rights. Intellectual property rights used by us may be challenged or infringed upon by third parties or we may be unable to maintain, renew or enter into new license agreements with owners of intellectual property on reasonable terms. In addition, intellectual property used by us may be subject to infringement or other unauthorized use. Unauthorized use of intellectual property rights by us or the Zijin Mining Group's inability to preserve existing intellectual property rights could adversely impact our competitive position and results of operations.

Proprietary trade secrets and unpatented know-how are also very important to our business. We rely on trade secrets to protect certain aspects of our technology, which may not be effective and suffice to prevent any infringement. Our employees, consultants, contractors, outside scientific collaborators and other advisors may unintentionally or willfully disclose our confidential information to competitors, and confidentiality agreements may not provide an adequate remedy in the event of unauthorized disclosure of confidential or proprietary information. Enforcing a claim that a third party illegally obtained and is using our trade secrets is expensive and time-consuming, and the outcome is unpredictable. Moreover, our competitors may independently develop equivalent knowledge, methods and know-how. Failure to obtain or maintain trade secret protection could adversely affect our competitive business position.

We may not be able to retain or secure key senior management members or key qualified personnel for our operations.

Our sustainable success depends heavily on our current senior management team. We depend on the continued service of our executive officers and other skilled managerial and technical personnel. Competition for qualified personnel in the industries in which we operate is intense. Our businesses and financial condition may suffer if we lose the services of a number of key personnel and are not able to recruit quality replacements. Furthermore, as our businesses continue to grow, we will need to improve our managerial, technical and operational knowledge and allocation of resources, to implement an effective management system and strengthen management control across our businesses. In order to fund our on-going operations and future growth, we will need to have sufficient internal sources of liquidity or access to additional financing from external sources. Further, we will be required to manage relationships with a greater number of customers, suppliers, contractors, service providers, lenders and other third parties. We may develop or invest in new businesses ancillary to or related to our existing businesses and such diversification may place significant demands on our management and resources as we may not have the experience or expertise necessary for the successful development of such new businesses. In particular, qualified personnel may be scarce in certain regions where our mines are located. If we fail to attract qualified personnel or retain appropriate management and technically skilled personnel, or if there are not sufficient succession plans in place, our businesses and financial condition may be materially and adversely affected.

Any negative publicity regarding our Directors, employees or products and us, regardless of its nature or veracity, could adversely affect our business.

Our brand and our image are sensitive to the public's perception of us, which includes not only the quality of our products, but also our corporate management and culture. We cannot assure that no one will, intentionally or incidentally, disseminate information about us, including the quality of our products, our internal management matters and negative information for management, that may result in negative perception of us by the public. In addition, as a listed company, we and member of our management or employees are under the supervision of securities regulatory bodies and subject to

certain regulatory inquiries and penalties. Any negative publicity about our Directors, employees, spokespersons or products and us, regardless of nature or veracity, could lead to potential loss of customers or investors' confidence or difficulty in retaining or recruiting talents that are essential to our business operations. As a result, our business, financial condition, results of operations, reputation and prospects may be materially and adversely affected.

We face certain risks and uncertainties beyond our control from man-made and natural disasters, diseases or public health emergencies that may adversely impact our business and operations.

Our business operations are subject to certain risks and uncertainties, some of which are beyond our control. These risks and uncertainties mainly include: major catastrophic events and natural disasters, including earthquakes, fires, floods, landslides, snowstorms, sandstorm, drought, mudslides and other hazardous weather conditions which may cause the instability of slopes and subsidence of working areas in our mines, power, water or fuel shortages, critical equipment failures, malfunction and breakdown of information management systems, unexpected maintenance or technical problems, or are susceptible to potential wars or terrorist attacks; geological or mining conditions such as instability of the slopes and subsidence of the working areas; unexpected or periodic interruptions due to inclement or hazardous weather conditions; disruptions or shortages of water, power or fuel supply; industrial or manmade accidents occurring in connection with our mining or ore processing operations; and critical equipment failures, malfunction and breakdowns of information management systems, unexpected maintenance or technical problems; acts of war; terrorism; and threats from epidemics. Serious natural disasters may result in loss of lives, injury, destruction of assets. Epidemics threaten human lives and may materially and adversely affect their livelihood as well as their living and consumption patterns. Natural disasters, acts of war, terrorism or other factors beyond our control may adversely affect the economy, infrastructure and livelihood of the people in the regions where we conduct our business. Any of these risks and uncertainties could materially and adversely affect our business, financial condition and results of operations.

We rely on information technology and communications systems, the failure of which may significantly and adversely impact our operations and business.

We rely on our information technology and communications systems to support our business operations. Our information technology and communications systems could be exposed to, among other things, damage or interruption from telecommunications failure, unauthorized entry, malicious computer code and other sorts of breach in cybersecurity, fire, natural disaster, power loss, industrial action and human error. While we have offsite backup systems in place, the occurrence of any of the above may also disrupt our information technology and communications systems and may lead to important data (including geophysical and geological data) being irretrievably lost or damaged. Such damage or interruption may adversely affect our business, results of operations and financial position.

FINANCIAL CONDITIONS

We incur amortization expenses related to our mining rights. The carrying value of our exploration and mining rights may incur impairment losses due to material decreases in the amount of our Reserves, which may adversely affect our results of operations.

As of December 31, 2022, 2023 and 2024 and June 30, 2025, we had intangible assets of US$1,527.8 million, US$1,530.9 million, US$1,439.5 million and US$2,304.1 million, respectively, mainly representing the net carrying amount of our exploration and mining rights. Mining rights are stated at cost less accumulated amortization and any impairment losses. Mining rights cover the costs of getting mining licenses and exploration rights. They also include expenses for exploration and evaluation assets when a property is ready for commercial production, as well as the costs of acquiring interests in the reserves of existing mining sites. The mining rights are amortized in accordance with the production plans of the entities concerned and the proven and probable mineral reserves of the mines using the units-of-production method. Mining rights are written off to profit or loss if the mining property is abandoned.

Proved mineral reserves are estimated based on professional knowledge, experience and industry practice. Generally, the mineral reserve volume estimated based on probing and estimation may not be very accurate. The estimation is updated in accordance with new technologies and new information. Any changes in estimation will have impacts on the amounts of mining assets' depreciation and mining rights' amortization using the units-of-production method, on the stripping ratio which was used in the capitalization of stripping costs, and on each of the transaction prices of the metal streaming arrangement. Any material decrease in the amount of our Mineral Reserves for our mine or changes to our production plans may result in impairment of the carrying value of our mining rights and related assets or results in a recognition of impairment losses related to our intangible assets, which may have a material adverse effect on our business, financial condition and results of operations.

Our businesses and operations require significant capital resources on an ongoing basis. If we do not obtain additional financing, our business may be at risk, or execution of our development plan may be delayed.

The exploration, mining and production of gold requires substantial capital investments. Our capital expenditure primarily includes (i) purchase of items of property, plant and equipment; and (ii) purchase of intangible assets. Total cash outflow of purchase of property, plant and equipment and intangible assets amounted to US$518.4 million, US$436.9 million, US$487.0 million, US$268.6 million and US$258.2 million in 2022, 2023 and 2024 and the six months ended June 30, 2024 and 2025, respectively. We funded the capital expenditures mainly with our operating cashflows and the interest-bearing bank and other borrowings. Our capital expenditures in recent years and in the future are expected to remain at a high level, which may impact our financing arrangements in the future.

Our principal source of liquidity has been, and is expected to continue to be, cash generated from operating activities together with available credit facilities and bank borrowings. Our liquidity requirements primarily relate to funding our working capital requirements and our capital expenditures. To fund our ongoing operations, existing and future capital expenditure requirements, investment plans and other financing requirements, we may, in the future, need access to additional financing from external sources in addition to internal sources of liquidity. Obtaining additional funding will be subject to various factors, including general market conditions, investor acceptance of our business plans, lenders' perception of our creditworthiness, the global and local economies, regulations that affect the availability and costs of financing, and ongoing results from our construction and commissioning efforts. Any disruptions, uncertainty or volatility in the capital and credit market resulting from any global financial crisis may also limit our ability to obtain financing to meet our funding requirements. These financings could require contractual or other restrictions on our operations or on alternatives that may be available to us. If we raise additional funds by issuing debt securities, these debt securities could impose significant restrictions on our operations. Any such required financing may not be available in amount or on terms acceptable to us, and the failure to procure such required financing could have a material and adverse effect on our development plan and continuous growth.

We may also not be able to obtain financing on favorable terms, or at all, to fund our on-going operations, existing and future capital expenditure requirements, acquisitions and investment plans and other funding requirements. Our ability to raise additional funds could be materially affected by the fluctuations in the capital market. If we are unable to raise adequate funds, we may be required to delay some of our development projects or expansion plans, or commercialization of our Mineral Resources, therefore affecting our profitability in the short and long term.

Our net current liabilities may expose us to certain liquidity risks.

As of December 31, 2023, we recorded net current liabilities of US$13.1 million. Net current liabilities may expose us to certain liquidity risks and may constrain our operational flexibility, as well as adversely affect our ability to expand our business. Our future liquidity, the payment of trade and other payables when they become due, will primarily depend on our ability to generate adequate cash inflows from our operating activities and adequate external financing, which will be affected by our future operating and financial performance, the performance of the industry in which we operate and prevailing economic and capital market conditions, among other factors, many of which are beyond our control.

If we do not maintain sufficient working capital to meet future financial needs by ourselves, we may need to resort to external funding. Our inability to obtain additional external financing on a timely basis and on acceptable terms, or at all, may force us to abandon or delay our development and expansion plans, and our businesses, financial positions, and results of operations may be materially and adversely affected.

We have an increased level of indebtedness and may incur additional indebtedness in the future. Any restrictive covenants imposed on us by our financing agreements could materially and adversely affect our business, financial condition and results of operations.

We have financed a portion of our capital requirements through bank and other borrowings and expect to continue to do so in the foreseeable future. The increased level of indebtedness could adversely affect our operations, including, but not limited to, reducing our cash flow available for working capital, capital expenditures and other general corporate purposes as a result of our debt servicing obligations, limiting our flexibility in planning for or reacting to the changes in our businesses and the industry; and limiting our ability to obtain additional financing and potentially increasing our financing costs. Our ability to meet our payment and other obligations under our outstanding debt depends on our ability to generate cash flows in the future or to obtain external financing. There is no assurance that our business will generate sufficient cash flows from operations to satisfy our obligations under our outstanding debt and to fund other liquidity needs. If we are not able to generate sufficient cash flows to meet such obligations, we may need to refinance or restructure our debt, reduce or delay capital investments, or seek additional equity or debt financing. Our ability to obtain future external financing involves a number of uncertainties including our future operational results, financial condition, cash flow, general economic conditions, interest rates, credit availability from banks and other creditors, and the liquidity of capital markets in the jurisdictions in which we operate. There can be no assurance that additional external financing, either on a short-term or on a long-term basis, will be made available or, if available, that such financing will be obtained on terms favorable to us. If we fail to obtain adequate funds to serve our debt obligations and to satisfy our operations or development plans, our business, financial condition and results of operations could be materially and adversely affected.

Furthermore, our bank loan agreements may include various conditions and covenants that require us to obtain the lending bank's prior consent for certain transactions. We may be required to comply with similar restrictive covenants or other terms under any new loan and other financing arrangements in the future. In addition, we are required to comply with various financial covenants, and new financial covenants may be imposed under any new loan and other financing arrangements. If market conditions deteriorate, or if our operating results were to be depressed, we may need to request amendments or waivers to the covenants and restrictions under our debt agreements. There can be no assurance that we will be able to obtain such relief should it be needed. A breach of any of these covenants or restrictions could result in a default that would permit our lenders to declare all amounts outstanding thereunder to be due and payable, together with accrued and unpaid interest, trigger cross-default provisions under other debt agreements and, as applicable, cause the termination of commitments of relevant lenders to make further extensions of credit under our financing agreements or credit facilities. If we were unable to repay our indebtedness to our lenders in such an event, the lenders could, among other things, proceed against collateral, which could include substantially all of our assets. Our future ability to comply with financial covenants and other conditions, to make scheduled payments of principal and interest, or to refinance existing

borrowings depends on our business performance, which is subject to economic, financial, competitive and other factors, including, but not limited to, the other risks described in this Prospectus. Any failure to comply with the covenants of our financing agreements or to obtain financing for our business could have a material and adverse effect on our business, financial condition, results of operations and prospects. Any failure to make required debt payments could, among other things, adversely affect our ability to conduct operations or raise capital, which could have a material adverse effect on our business, financial condition and results of operations.

We are subject to risks relating to inventory, including the risk of obsolescence and impairment, as well as the transport and storage of inventory.

Having an appropriate level of raw materials inventory is pivotal in minimizing the effect of the volatility of raw materials prices and minimizing the risk of obsolescence of our inventory. Any sudden decrease in the market demand and the corresponding unanticipated drop in the sales and the prices of the relevant goods or any failure of us in successfully maintaining the flexibility in our raw materials and spare parts supply arrangements could cause our inventory to accumulate or depreciate in value, which may adversely affect our businesses, financial condition and results of operations. While our work-in-progress and finished goods are not exposed to the risk of obsolescence since they do not deteriorate easily, we review our inventory from time to time and make provisions for write-down of inventories when it deems necessary. Assumptions regarding gold price and recovery rate will have impact on the assessment of the value of our inventories.

Furthermore, our transportation subcontractors are responsible for (i) delivery of the gold concentrate to their smelters; and (ii) transporting gold bullion to the local gold exchanges. Our gold concentrate is valuable item, and we are subject to risk of delay, damage or loss of such items, which may occur for reasons beyond our control, including labor disputes or strikes, acts of war or terrorism and natural disasters. While we seek to ensure the safety of our deliveries through engaging security personnel to guard our shipments, we cannot assure you that there will not be any safety accidents or loss of such deliveries. Moreover, we have less control over these subcontractors. Any delay, damage or loss of our work-in-progress and products during the transportation process may have a material and adverse effect on our business, financial condition and results of operations.

We are subject to risks relating to raw materials, energy consumption and increasing labor expenses.

Raw material costs, energy consumption costs and labor costs are important components of our operating costs. We regularly monitor the fluctuation in the market price of raw materials and energy and assesses its impact on our operations. If there is a shortage of raw materials or energy for any reason or the cost of raw materials and energy increases significantly, our production costs are likely to increase and our profit margin may decrease. In addition, labor costs in the regions where we operate may rise substantially as a result of the enactment of new labor laws and social development.

Worldwide inflation may also increase our costs of labor. Rising labor costs may increase our operating costs and therefore materially and adversely affect our business, financial condition and results of operations. For more details, see "— Our business and operations may be adversely affected by union activities, as well as new and existing labor laws. Work stoppage, labor shortage and other labor related matters may have an adverse effect on our businesses." and "— We may not be able to maintain the provision of adequate and uninterrupted supplies of electricity, water, materials and equipment at commercially acceptable prices, or at all."

There can be no assurance that the use of hedging instruments will always benefit us.

From time to time, we enter into hedging activities to mitigate the impact of commodity market price fluctuations on our products and raw materials, and to guard against interest rate and exchange rate risks. During the Track Record Period, to hedge against gold price fluctuations for a portion of its anticipated gold sales, Norton Gold Fields entered into master gold forward contracts with financial institutions and agreed to deliver a specified amount of gold products at a predetermined price on a set future date. These contracts have expired. However, gold price has been fluctuating in the global market, and we will continue to assess whether to enter into further hedging activities.

There can be no assurance that the use of hedging instruments will always benefit us. Gold hedging instruments may prevent us from realizing the full benefit of potential subsequent increases in the gold price, which would affect our results of operation. In addition, our business, financial condition and results of operations could be materially and adversely affected if for any reason our gold production is unexpectedly interrupted and, as a result, we are unable to produce sufficient gold to cover any hedging instruments that we have acquired. The counterparty to any hedging transaction could also default on its obligations. Without hedging transactions, we may not be able to lock in our selling price when the gold price decreases, which may reduce the revenue that we may receive.

We are exposed to credit risk in relation to defaults from customers or counterparties.

We trade only with third parties who we believe to be reputable. It is our policy that all customers who wish to trade on credit terms are subject to credit verification procedures. In addition, trade receivable balances are monitored on an ongoing basis to ensure that our exposure to bad debts is not significant. As such, we do not obtain collateral in our ordinary course of dealings. However, there can be no assurance that all of our counterparties are creditworthy and reputable and will not default on us in the future. Credit risk is managed centrally based on customers or counterparties, geographic regions and industries. As of December 31, 2022, 2023 and 2024 and June 30, 2025, we had a specific concentration of credit risk. 25.9%, 63.2%, 67.4% and 70.1% of our trade receivables were from the largest customers in terms of trade receivable balances, and approximately 87.8%, 97.3%, 96.7% and 99.4% of our trade receivables were from the top five customers in terms of trade receivable balances during the same periods. The balance of our trade receivables did not hold any collateral or other credit enhancements.

The credit risk associated with our certain financial assets and contract assets, such as commercial acceptance bills receivable, trade receivables, other receivables and certain derivative instruments, arises from default of the counterparties, with a maximum exposure equal to the carrying amounts of these instruments. Our maximum exposure to credit risk at each end of the reporting period is the total amount charged to the customers less the amount of the impairment provision. We are also exposed to credit risk through the granting of financial guarantees. Since we trade only with recognized and creditworthy third parties, there is no requirement for collateral, nor do we hold any collateral or other credit enhancements over our trade receivable balances. Failure of our counterparties to fulfill their obligations to us under our contracts may materially adversely affect our financial condition and results of operations.

Rising inflation may increase our operational costs and materially adversely affect our business, financial conditions, results of operations and prospects.

Our business has been, and may continue to be, directly affected by volatile commodity costs and other inflationary pressures. Inflation can lead to increased costs across various aspects of our mining operations, including labor, energy, equipment and raw materials, which are critical components of our mining operations and are essential for maintaining efficient and profitable operations.

In general, inflationary pressures can exacerbate existing economic challenges, leading to higher operational costs and reduced profitability. The cost of labor and energy, as well as imported goods and services, may rise, impacting our ability to maintain competitive production costs. Additionally, inflation can lead to (a) increased interest rates, affecting our financing costs and capital expenditure plans; (b) increased compliance costs and wage pressures, due to stringent labor laws, (c) higher costs for equipment and materials, impacting our capital expenditure and operational budgets, (d) currency fluctuations, affecting the value of our revenues and financial stability. There can be no assurance that we can successfully monitor inflation and implement cost-control measures against inflation, or that any such strategies will be fully effective, and unforeseen inflationary events could adversely affect our operations.

Geopolitical risks and conflicts around the world could further disrupt supply chains and create additional inflationary pressures. Specifically, the Russia-Ukraine conflict in 2022 has led to sanctions, travel bans, and asset or financial freezes being levied by the United States, European Union and other countries against Russian entities and individuals, with additional sanctions being proposed. These sanctions and other measures have had a significant impact on commodity prices, including increased oil, gas, ammonia nitrate, copper, steel and gold prices. The oil price is a driver of a number of our input costs, including fuel and transport costs, while gas prices have an impact on power costs, and other commodity prices drive direct mining and processing costs. These inflationary pressures could also cause interest rates and the cost of borrowing to increase and could have a material adverse effect on global financial markets and economic conditions. The extent and duration of the war, sanctions and resulting market disruptions are impossible to predict. Any inflationary impacts or disruptions caused by

the war or resulting sanctions may have a material adverse effect on our business, financial condition and results of operations, and may magnify the impact of other risks described in this Prospectus.

We may face risks from changes in tax policies, adjustments in resource tax rates and potential changes in corporate income tax and value-added tax exemptions could impact our profitability.

Gold mining operators may encounter significant risks stemming from changes in tax policies, adjustments in resource tax rates, as well as potential modifications to corporate income tax and value-added tax exemptions, could adversely affect our profitability. These changes may lead to increased operational costs and reduced margins, impacting our financial performance and strategic planning. As tax policies are subject to governmental review and alteration, we must remain vigilant and adaptable to ensure compliance and mitigate potential financial repercussions. It is crucial for us to continuously monitor legislative developments and engage with policymakers to advocate for favorable tax conditions that support sustainable mining operations.

We are subject to regulatory risks with respect to our tax compliance.

In the ordinary course of business we may be subject to inquiries, reviews, claims, assessments or other regulatory actions conducted by relevant tax or revenue authorities in the jurisdictions in which we operate. We may be subject to additional tax or duty liabilities, or increased statutory royalties in relation to our mining and mineral production operations, as a result of any unfavorable decisions made by such relevant tax or revenue authorities, which may materially and adversely affect our business, financial position and results of operations. Such regulatory actions may also divert our management's attention and other resources, especially if they are not resolved in a timely manner. For example, we carried out certain intra-group transactions during the Track Record Period, and our profit allocation and income tax positions in connection with such transactions are subject to the interpretations by relevant tax authorities of applicable tax law as well as applicable rules and regulations in relevant jurisdictions. There is no assurance that the respective tax authorities would not challenge the appropriateness of our historical intra-group transactions or that the relevant regulations or standards governing such arrangements will not be subject to future changes. If a competent tax authority later determines that the transfer prices and the transaction terms that we have adopted as well as our historical income tax provisions and accruals are not appropriate, such authority may require the relevant subsidiaries to re-assess the transfer prices and re-allocate the income or adjust the taxable income. If we are considered not to be in compliance with the applicable intra-group transactions rules and regulations, the relevant tax authority may also have the power to order us to pay all outstanding tax and statutory interest and/or fines. This may materially adversely affect our financial condition and results of operations.

LEGAL

There is an ongoing international arbitration with the Colombian government. We are also subject to risks relating to litigation and regulatory proceedings in jurisdictions where we operate.

Our Columbia Buriticá Gold Mine is located in Buriticá, Colombia, and is a globally recognized large-scale gold mine with exceptionally high grades. There are illegal mining activities in and around the Colombia Buriticá Gold Mine. In our view, the Colombian government has failed to provide our Colombia Buriticá Gold Mine with full protection and security and fair and equitable treatment in accordance with its obligations under the Canada-Colombia Free Trade Agreement. In light of the foregoing, Continental Gold Inc. has filed an arbitration request with the International Centre for Settlement of Investment Disputes (ICSID) of the World Bank against the Republic of Colombia, asserting Continental Gold Inc.'s rights and interests and seeking compensation for the damages caused by the Colombian government's actions. As of the Latest Practicable Date, the international arbitration procedure was still in progress. We cannot predict the outcome of the international arbitration. Preparing for this international arbitration or any related matters has caused us to incur costs, and we expect these costs to continue until the international arbitration concludes.

From time to time, the mining operators may be involved in litigation, arbitration, or disputes with the Colombian government. We may also be subject to inquiries, investigations and proceedings by regulatory and other governmental agencies in the ordinary course of our business in Colombia or other jurisdictions where we operate.

As of the Latest Practicable Date, we were not involved in any litigations and legal proceedings that may materially affect our business and results of operations. There is no assurance that we could successfully defend such claims and investigations, and there is no assurance that such incidents will not occur in the future. Such legal challenges can arise from disagreements over mining rights, environmental regulations, or tax obligations, and may lead to cancelation of the exploration and mining rights, abandonment of existing mining concession contracts and pending proposals for new mining concession contracts, and a ban from doing business with the relevant government for a period of time. In addition, prolonged legal proceedings may divert resources and attention from the core business activities. The uncertainty associated with these disputes can impact investor confidence and market perception, potentially affecting the share prices and the access to the capital market for financing. Even if we are successful in defending ourselves against these actions, the costs of defense may be significant. In market downturns, the number of legal claims and the amount of damages sought in litigation and regulatory proceedings may increase. In addition, unfavorable outcomes could result in substantial financial liabilities, including fines, penalties, or the revocation of mining licenses, which would severely disrupt operations and future growth prospects.

Meanwhile, adverse publicity about concerns relating to our brand, whether or not legitimate, may decrease customers' confidence in us and result in losses which we may not be able to recover. Actions brought against us or any of our subsidiaries may result in settlements, injunctions, fines, penalties, stock delisting or other results adverse to us that could harm our reputation. A significant judgment or regulatory action against us or any of our subsidiaries, or a disruption in our business arising from adverse adjudications in proceedings against our directors, officers or employees would have a material adverse effect on our liquidity, business, financial condition, results of operations and prospects.

We may face risks associated with the Colombia Entrustment Arrangement.

We operate the Columbia Buriticá Mine through the Colombia Entrustment Arrangement, pursuant to the Entrusted Operations Agreement and the Return Swap Agreement. Zijin Mining has also undertaken to the Company that, (a) at the appropriate time when conditions for a transfer are considered favorable (i.e. when the international arbitration with the Colombian government is resolved), Zijin Mining will transfer its interests in Zijin America to the Company. In addition, as a result of the Colombia Entrustment Arrangement, the Return Swap Agreement, and the undertaking of Zijin Mining Group, from an accounting perspective, the Company would consolidate the assets, liabilities and operation results of Zijin America (which includes Continental Gold Inc. and the Colombia Buriticá Gold Mine) into the consolidated financial information of the Group. See "Relationship with Zijin Mining — Clear Delineation of Business — Colombia Entrustment Arrangement" for the detail of the Colombia Entrustment Arrangement and unwinding mechanism of such arrangement. There is no assurance on the timing of Zijin Mining's transfer of its interests in Zijin America to us and we cannot assure you that the transfer remains commercially favorable to us.

As advised by our legal advisor as to the Colombia law, (a) the entry into of the Entrusted Operations Agreement and/or the Return Swap Agreement would not require any notification, filings, authorizations or approvals from the Colombian governmental or regulatory authorities in Colombia, and would not affect the mining rights held by the Colombia Buriticá Gold Mine for its operations, provided that the ownership of the related assets of the Colombia Buriticá Gold Mine will not be transferred, and (b) the Entrusted Operations Agreement and the Return Swap Agreement, as a whole, are not in contravention to any legal and regulatory restrictions under Colombian laws and regulations, if the Colombian government deems. Nonetheless, there are substantial uncertainties regarding the interpretation and application of current and future Colombian laws, regulations and rules.

In addition, Colombia's political and economic environment can influence the stability and enforcement of the Colombia Entrustment Arrangement. Political changes, economic instability, or shifts in government policy could impact our ability to maintain favorable terms or continue operations under the Colombia Entrustment Arrangement.

There can be no assurance that unforeseen changes or challenges will not arise, potentially affecting our business operations and financial results.

We are subject to government regulations on the mining industry.

Our mining production is subject to extensive laws, rules and regulations imposed by the governments in the respective jurisdictions in which we operate, including those relating to exploration, development, production, taxation, labor standards, vocational health and safety, waste treatment, environmental monitoring, protection and control, operation management and other issues.

For example, these governments continue to strengthen the enforcement of safety regulations in relation to the mining industry. There can be no assurance that more stringent laws and regulations regarding production safety will not be implemented or that existing laws and regulations will not be more stringently enforced. We may not be able to comply with all existing or future laws and regulations in relation to production safety economically, or at all. Should we fail to comply with any production safety laws or regulations, we may be required to suspend our operations, rectify the production safety problems within a limited period and pay fines, or otherwise subject to the revocation or cancelation of the permits, licenses and approvals required for our mining and exploration activities. Any changes to these policies and regulations may increase our operating costs and may adversely affect our business, financial condition and results of operations.

We may also have disagreements with local government from time to time. For example, in February 2025, we made a one-time payment of US$48.4 million to resolve a disagreement in connection with the Kyrgyzstan Taldybulak Levoberezhny Gold Mine between the Kyrgyz state authorities and us. Although this issue has been completely settled, we cannot assure you similar issues will not happen, or we can always successfully settle the issues, in the future. The disagreements with local government may have material negative impact on our operations and financial performance.

We are subject to regulatory or legislative impositions of various costs, and any legislative changes may have an adverse effect on our business, operations and profits.

In recent years, governments (local and national), communities, non-governmental organizations and trade unions in several jurisdictions, have sought and, in some cases, have implemented greater costs on the mining industry, including, for example, the imposition of additional taxes and royalties, and relevant policies. For more details of the taxes and royalties that we are subject to, see "Regulations." The policies adopted may impose additional restrictions, obligations, operational costs, taxes or royalty payments on gold mining companies, including us, any of which could have a material adverse effect on our business, financial condition and results of operations.

We are subject to anti-corruption, anti-bribery, anti-money laundering, financial, export control regulations and similar laws and regulations. Any non-compliance with such laws can subject us to administrative, civil and criminal fines and penalties, collateral consequences, remedial measures and legal expenses, all of which could adversely affect our business, results of operations, financial condition and reputation.

We are subject to anti-corruption, anti-bribery, anti-money laundering, financial, export control regulations and similar laws and regulations in various jurisdictions in which we conduct activities, including the U.S. Foreign Corrupt Practices Act, or FCPA, the U.K. Bribery Act 2010, and other anti-corruption laws and regulations. If we fail to comply with anti-corruption, anti-bribery, anti-money laundering, financial and export control regulations and similar laws and regulations, we could be subject to whistleblower complaints, adverse media coverage, investigations, and severe administrative, civil and criminal sanctions, collateral consequences, remedial measures and legal expenses, all of which could materially and adversely affect our business, results of operations, financial condition and reputation. Any violation or even an alleged or suspected violation could harm our reputation and cause our suppliers, customers, financial institutions or other counterparties to refuse to do business with us, which may adversely affect our business, our results of operations, or the trading price of our Shares.

Our businesses are susceptible to downturns in the general economy and industries in which we operate or which we serve.

Our business is susceptible to economic and market conditions in the general economy and industries in which we operate or which we serve. A reduction in demand or supply could materially and adversely affect our business, financial condition and results of operations. Demand for our gold mining resources depends on the general economy, level of activity and growth in the industries which we serve. Development of the relevant industries is subject to various factors, including but not limited to market fluctuations of the prices of commodities, macroeconomic policies, general political or economic conditions, technological development, government investment plans, fluctuations in global production capacity and consumer spending, many of which are beyond our control. Unfavorable global financial or economic conditions could materially and adversely affect our sales volume. Since 2025, the U.S. government has announced certain tariffs and relevant new policies affecting various countries or regions as well as industries, thereby creating uncertainties to the economic development of various countries and global trade. Intensified geopolitical tension has brought uncertainties to the global economy as well as significant volatilities in the global financial market. Uncertainties about future economic conditions make it challenging for us to forecast our results of operations, make business decisions and identify risks that may affect our business, which may in turn materially and adversely affect our business, financial condition and results of operations. Any severe or prolonged slowdown in the global economy may materially and adversely affect the market conditions in the jurisdictions in which we operate, which may in turn materially and adversely affect our business, financial condition and results of operations.

RISKS RELATED TO DOING BUSINESS IN JURISDICTIONS IN WHICH WE OPERATE

Economic, political or social instability and security risks as well as shifts in political and social attitudes affecting the regions where we operate may have a material adverse effect on our operations and profits.

Operating in regions characterized by economic, political or social instability presents a significant risk for gold mining operators, including us, potentially impacting both operational continuity and profitability. Economic fluctuations can lead to volatile commodity prices, affecting revenue streams and financial planning. Political instability, including changes in government, regulatory frameworks or mining policies, can introduce uncertainty and disrupt operations, potentially leading to increased compliance costs or restrictions on mining activities. Social instability, including civil unrest, physical violence, contested election, military coups or shifts in public sentiment towards mining activities, can further exacerbate these challenges, potentially resulting in operational delays or increased security risks. An increase in the frequency, severity or geographic reach of violent crimes, political turmoil and similar events could also have a material adverse effect on investment and confidence in, and the performance of the economy of those countries in which we operate or may operate. Additionally, shifts in political and social attitudes may lead to heightened scrutiny and demands for more stringent environmental and social governance practices, necessitating additional investments and adjustments to operational strategies. These factors collectively pose a threat to the stability and predictability of operations, potentially leading to reduced profitability and challenges in maintaining investor confidence. See also "We operate in a number of countries and may also face geopolitical and country risks arising from our overseas operations."

The current tensions in international trade and rising global and cross-regional political tensions.

Our operations may be adversely affected by the regional and global economic markets. Rising political tensions could reduce levels of trades, investments, technological exchanges and other economic activities. Such tensions, and any escalation thereof, may have a negative impact on the general, economic, political and social conditions in the regions where we operate. In case of a tightening of credit in financial markets globally, this could also impact the markets in which we operate and our ability to arrange for financing for our capital requirements. In addition, any adverse impact on our customers or business partners arising from such tensions, sanctions or other events beyond their control may disrupt our business relationships with them. Any difficulties we face in accessing financing on acceptable terms and conditions could have a material adverse effect on our business, financial condition, results of operations and prospects. Additionally, Russian actions with respect to Ukraine have resulted in certain sanctions and export controls being imposed by the United States, the European Union, the United Kingdom and other jurisdictions. Sanctions laws and regulations are constantly evolving, and new persons and entities are regularly added to the lists of sanctioned persons. We

cannot assure you that (i) our business operations will not be impacted by sanctions or export controls, and (ii) areas and regions in which we operate will not become a sanctioned area in the future. The conflict between Russia and Ukraine and the recent tension in the Middle East, including related economic sanctions, could lead to disruption, instability and volatility in global markets and industries that could adversely impact our business. We cannot predict the impact of the Russia-Ukraine conflict and the recent tension in the Middle East, and any heightened military conflict or geopolitical instability that may follow. Any such disruptions or resulting sanctions may adversely affect our business.

There may be changes from time to time with respect to the legal systems of the jurisdictions in which we have operations, and any failure to comply with laws and regulations could adversely affect us.

The legal systems of the jurisdiction in which we have operations vary significantly from jurisdiction to jurisdiction. Some jurisdictions have a civil law system based on written statutes and others are based on common law. Unlike the common law system, prior court decisions under the civil law system may be cited for reference but are not legally binding on other courts. Some of the markets in which we operate have not developed a fully integrated legal system. Laws and regulations that are recently enacted may not sufficiently cover all aspects of economic activities in such markets. In particular, the interpretation and enforcement of these laws and regulations are subject to changes and evolving, and the application of some of these laws and regulations to our businesses is not settled. Since local administrative and court authorities have discretion in interpreting and implementing statutory provisions and contractual terms, the outcome of administrative and court proceedings and the level of legal protection we have in many of the localities in which we operate are unpredictable. Local courts may have discretion to reject enforcement of foreign awards or arbitration awards. These uncertainties may affect our judgment on the relevance of legal requirements and our ability to enforce our contractual rights or claims. In addition, the regulatory changes may be exploited through unmerited or frivolous legal actions, claims concerning the conduct of third parties, or threats in attempt to extract payments or benefits from us. Furthermore, many of the legal systems in our markets are based in part on government policies and internal rules, some of which are not published on a timely basis, or at all, and may have retroactive effect. There are other circumstances where key regulatory definitions are unclear, imprecise or missing, or where interpretations that are adopted by regulators are inconsistent with interpretations adopted by a court in analogous cases. As a result, we may not be aware of our violation of certain policies and rules until some time after the violation. In addition, any administrative and court proceedings in our markets may be protracted, resulting in substantial costs and diversion of resources and management attention. It is possible that a number of laws and regulations may be adopted or construed to apply to us in our geographic markets and elsewhere that could affect our industries. Scrutiny and regulation of the industries in which we operate may further increase, and we may be required to devote additional legal and other resources to addressing this regulation.

Changes in current laws or regulations or the imposition of new laws and regulations regarding our industries in our geographic markets may slow the growth of our industries and adversely affect our financial condition and results of operations.

Laws and regulations in the countries where we have operations may affect our pursuit of growth strategies in part through acquisitions.

The legal and regulatory environments in the countries in which we operate can significantly impact our ability to pursue growth strategies, particularly those involving acquisitions. Each jurisdiction has its own set of laws and regulations governing mergers and acquisitions, including antitrust laws, foreign investment restrictions, and industry-specific regulations, which can introduce complexities and uncertainties into the acquisition process. Compliance with these regulations may require extensive due diligence, legal consultations, and potentially lengthy approval processes, which can delay or even derail planned acquisitions. In addition, changes in these laws or their interpretation by regulatory authorities can further complicate acquisition strategies, potentially leading to increased costs or necessitating strategic pivots. These factors can affect our ability to seamlessly integrate acquired entities, realize anticipated synergies, and achieve growth objectives. If we fail to fully comply with the requirements of the regulations and other relevant rules and any required approval processes in the regions where we operate in a timely manner, it may delay the process or affect our ability to complete such transactions, which could affect our ability to expand our business or maintain our market share.

It may be difficult for the Hong Kong regulators to obtain information or call for regulatory assistance in the jurisdictions in which we operate where circumstances necessitate in the course of overseeing us as a listed company by the regulations in Hong Kong.

We will be regulated by the SFO and other applicable laws and regulations in Hong Kong upon the Listing. Our Directors and we will be required to provide the SFC with all information relating to our business that is necessary for its investigation of our affairs as may be required under Hong Kong laws or regulations. Among the countries where we generated revenue during the Track Record Period, Tajikistan, Kyrgyzstan, Guyana and Suriname are Non-IOSCO MMOU Countries and have not signed any regulatory cooperation agreement or memorandum of understanding with the SFC or the Stock Exchange, it may be difficult for the Hong Kong regulators to obtain information or call for regulatory assistance in these countries where circumstances necessitate in the course of overseeing us as a listed company by the regulations in Hong Kong. Our management will report periodic information of the revenue generated by our operating entities to our Board. We will take necessary steps with respect to access to the books and records of our operating entities and fully cooperate with regulatory requests in order to facilitate the Hong Kong Stock Exchange and the SFC's access to information of these operating entities based abroad.

You may experience difficulties in effecting service of legal process, enforcing Shareholders' rights and foreign judgments or bringing actions against our management named in the Prospectus based on foreign laws.

We are a company incorporated under the laws of Hong Kong. The rights of the Shareholders and the fiduciary duties of our Directors under the Hong Kong laws may differ in some respects from what they would be under statutes or judicial precedents of other jurisdictions where investors may be located.

Substantially all of our assets are located outside of Hong Kong and the PRC, some of our Directors and executive officers reside within the PRC and some of the assets of those persons are located within the PRC. It may be difficult, complicated and time-consuming for investors to effect service of process upon those persons inside the PRC or to enforce against us or them in the PRC any judgments obtained from non-PRC courts. A judgment of a court of another jurisdiction may only be reciprocally recognized or enforced if the jurisdiction has a treaty with the PRC or if the judgment complies with the principle of reciprocity and do not violate the basic principles of the PRC laws, national sovereignty, security, social interests and public interests, subject to the satisfaction of other requirements. On January 25, 2024, the Supreme People's Court issued the Arrangement on Mutual Recognition and Enforcement of Judgments in Civil and Commercial Matters by Courts of the Mainland and of the Hong Kong Special Administrative Region (關於內地與香港特別行政區法院相互認可和執行民商事案件判決的安排) (the "**Arrangement**"), which was implemented on January 29, 2024. Under the Arrangement, any relevant party may apply to the relevant PRC court or Hong Kong court for recognition and enforcement of a final court judgment in civil and commercial cases subject to the conditions set forth in the Arrangement. Although the Arrangement has come into effect, uncertainties remain as to the outcome and effectiveness of any action brought under the Arrangement. The recognition and enforcement of foreign judgments are provided for under the PRC Civil Procedures Law. Courts in China may recognize and enforce foreign judgments in accordance with the requirements of the PRC Civil Procedures Law on basis of either on (i) the treaties between China and the country where the judgment is made or (ii) on principles of reciprocity between jurisdictions. In addition, according to the PRC Civil Procedures Law, the courts in China will not enforce a foreign judgment against us or our Directors and officers if they decide that the judgment violates the basic principles of PRC law or national sovereignty, security or public interest. As a result, in case of violation of the above principles, there is no assurance that a judgment rendered by a court outside the PRC would be recognized and enforced in a court in mainland China.

We may rely to a significant extent on dividends and other distributions on equity paid by our principal operating subsidiaries to fund cash and financing requirements. Any limitation on the ability of our operating subsidiaries to make payments to us could have a material adverse effect on our ability to conduct our business.

We are a holding company and rely on dividends and other distributions on equity paid by our principal operating entities for our cash and financing requirements, including the funds necessary to pay dividends and other cash distributions to our Shareholders, fund inter-company loans, service any debt we may incur and pay our expenses. When our principal operating entities incur additional debt, the instruments governing the debt may restrict their ability to pay dividends or make other distributions or remittances to us. Furthermore, the laws, rules and regulations applicable to our principal operating subsidiaries and certain other subsidiaries permit payments of dividends only out of their retained earnings, if any, determined in accordance with applicable accounting standards and regulations. The distribution of dividends to us from the subsidiaries in the other geographic markets in which we operate is subject to restrictions imposed by the applicable laws and regulations in these markets. Any limitation on the ability of our subsidiaries to make payments to us could have a material and adverse effect on our ability to conduct our business.

Governmental control of currency conversion may limit our ability to utilize our revenues effectively and affect the value of your investment.

We expect to receive a portion of any future revenues we earn in local currencies. Under our current corporate structure, our Hong Kong holding company may rely on dividend payments from our subsidiaries incorporated in other countries to fund any cash and financing requirements we may have. The distribution of dividends to us from the subsidiaries in these markets as well as other markets in which we operate may be subject to restrictions imposed by the applicable laws and regulations in these markets. See "— We may rely to a significant extent on dividends and other distributions on equity paid by our principal operating subsidiaries to fund cash and financing requirements. Any limitation on the ability of our operating subsidiaries to make payments to us could have a material adverse effect on our ability to conduct our business." The local government may exercise discretion in accordance with applicable laws and regulations and restrict access in the future to foreign currencies and/or US dollars. Our failure to obtain sufficient foreign currencies or US dollars to satisfy our demands may have a material adverse impact on our ability to fund our operations in other jurisdictions and our ability to pay dividends in foreign currencies to our Shareholders.

RISKS RELATING TO THE SPIN-OFF AND THE GLOBAL OFFERING

If the Offer Price of our Shares is higher than our consolidated net tangible book value per Share, purchasers of our Shares in the Global Offering may experience immediate dilution upon such purchases, and may experience further dilution if we issue additional Shares in the future.

The Offer Price of our Shares is expected to be higher than the net tangible assets per Share immediately prior to the Global Offering. Therefore, purchasers of our Shares in the Global Offering will experience an immediate dilution in net tangible asset value per Share. In addition, in order to expand our business, we may consider offering and issuing additional securities in the future. Purchasers of our Shares may experience dilution in the net tangible asset value per Share of their investments in Shares if we issue additional securities in the future at a price which is lower than the net tangible asset value per Share prior to the issuance of such additional securities.

In addition, there is no assurance that the Controlling Shareholders will not dispose of their Shares following the expiration of their respective lock-up periods after the Global Offering. We cannot predict the effect, if any, of any future sales of the Shares by any of our Controlling Shareholders, or that the availability of the Shares offered by any of the Controlling Shareholders for purchase may have on the market price of the Shares. Sales of a substantial number of Shares by any of our Controlling Shareholders or the market perception that such sales may occur could materially and adversely affect the prevailing market price of the Shares.

There is no prior public market for our Shares and an active trading market for our Shares may not develop.

Prior to the Global Offering, there was no public market for our Shares. An active public market may not develop or be sustained after the Global Offering. The Offer Price was the result of, negotiations among us and the Overall Coordinators on behalf of the Underwriters and may not be indicative of prices that will prevail in the trading market after the Global Offering. We have applied for the listing of, and permission to deal in, our Shares on the Stock Exchange. However, even if approved, being listed on the Stock Exchange does not guarantee that an active trading market for our Shares will develop or be sustained. If an active market for our Shares does not develop after the Global Offering, the market price and liquidity of our Shares may be adversely affected. As a result, you may not be able to resell your Shares at prices equal to or greater than the price paid for the Shares in the Global Offering.

The liquidity and market price of our Shares may be volatile, which may result in substantial losses for investors purchasing our Shares pursuant to the Global Offering.

The price and trading volume of our Shares may be volatile as a result of the following factors, as well as others, which are discussed in this "Risk Factors" section or elsewhere in this Prospectus, some of which are beyond our control:

- actual or anticipated fluctuations in our results of operations (including variations arising from foreign exchange rate fluctuations);
- news regarding loss of key personnel by us or recruitment of key personnel by our competitors;
- announcements of competitive developments, acquisitions or strategic alliances in our industry;
- changes in earnings estimates or recommendations by financial analysts;
- potential litigation or regulatory investigations;
- changes in general economic conditions or other developments affecting us or our industry;
- price movements on international stock markets, the operating and stock price performance of other companies, other industries and other events or factors beyond our control; and
- release of any lock-up or other transfer restrictions on the outstanding Shares or sales or perceived sales of additional Shares by our Company or other Shareholders.

In addition, the securities markets have from time to time experienced significant price and volume fluctuations that are not related or disproportionate to the operating performance of particular companies. This may include a general global economic downturn, substantial volatility in equity securities markets, and volatility and tightening of liquidity in credit markets. While it is difficult to predict how long these conditions will last, they could continue to present risks for an extended period of time. If we experience such fluctuations, results of operations and financial position could be materially and adversely affected. Moreover, market fluctuations may also materially and adversely affect the market price of our Shares.

The market price of our Shares when trading begins could be lower than the Offer Price as a result of, among other things, adverse market conditions or other adverse developments that could occur between the time of sale and the time trading begins.

The Offer Shares will not commence trading on the Stock Exchange until they are delivered, which is expected to be on the Listing Date. As a result, investors may not be able to sell or otherwise deal in the Offer Shares during that period. Accordingly, holders of the Offer Shares are subject to the risk that the price of the Offer Shares when trading begins could be lower than the Offer Price as a result of adverse market conditions or other adverse developments that may occur between the time of sale and the time trading begins.

Future or perceived sales of substantial amounts of our Shares could affect their market price.

The market price of our Shares could decline as a result of future sales of substantial amounts of our Shares or other related securities, the issuance of new shares or other securities, or the perception that such sales may occur. Our ability to raise future capital at favorable times and prices may also be materially and adversely affected. Our Shares held by the relevant Controlling Shareholders are currently subject to certain lock-up undertakings. For more details, see "Underwriting — Underwriting Arrangements and Expenses." However, there is no assurance that following the expiration of the lock-up periods, these Shareholders will not dispose of any Shares. We cannot predict the effect of any future sales of the Shares by any of our Shareholders on the market price of our Shares.

Our Controlling Shareholders have substantial control over our Company and their interests may not be aligned with the interests of the other Shareholders.

Prior to and immediately following the completion of the Global Offering, our Controlling Shareholders will remain having substantial control over their interests in the issued share capital of our Company. Subject to, among others, the Articles of Association and the Listing Rules, the Controlling Shareholders by virtue of their controlling beneficial ownership of the share capital of the Company, will be able to exercise significant control and exert significant influence over our business or otherwise on matters of significance to us and other Shareholders by voting at the general meeting of the Shareholders and at Board meetings. The interests of the Controlling Shareholders may differ from the interests of other Shareholders and the Shareholders are free to exercise their votes according to their interests. Our Controlling Shareholder may cause us to undertake certain corporate transactions or not enter into certain corporate transactions, which may not be in the best interests of our other Shareholders. We cannot assure you that our Controlling Shareholder will vote on Shareholders' resolutions in a way that will benefit all of our Shareholders. To the extent that the interests of the Controlling Shareholders conflict with the interests of other Shareholders, the interests of other Shareholders can be disadvantaged and harmed.

Our dividend policy is subject to the discretion of our Directors and we may not declare dividends on our Shares in the future.

We do not currently have a dividend policy. We did not declare or pay any dividend during the Track Record Period. We may only pay dividends out of the profits of the Company available for distribution, and we may only pay dividends after recovery of accumulated losses. The amount of dividends actually distributed to our Shareholders will depend upon our earnings and financial position, operating requirements, capital requirements and any other conditions that our Directors may deem relevant and will be subject to the approval of our Shareholders. There is no assurance that dividends of any amount will be declared or distributed in any year in the future. For further details, see "Financial Information — Dividends."

Certain facts, forecast and other statistics in this prospectus obtained from publicly available sources have not been independently verified and may not be reliable.

Certain facts, forecasts and other statistics in this Prospectus are derived from various government, official sources and public information. However, our Directors cannot guarantee the reliability of such source materials. We believe that the sources of the said information are appropriate sources for such information and have taken reasonable care in extracting and presenting such information. We have no reason to believe that such information is false or misleading or that any fact has been omitted that would render such information false or misleading. Nevertheless, information from government and official sources has not been independently verified by us, the Joint Sponsors, the Sponsor-Overall Coordinators, the Overall Coordinators, the Joint Global Coordinators, the Joint Bookrunners, the Joint Lead Managers, the Underwriters or any of their respective affiliates or advisors and, therefore, we make no representation as to the accuracy of such facts and statistics. Further, we cannot assure our investors that they are stated or compiled on the same basis or with the same degree of accuracy as similar statistics presented elsewhere. In all cases, our investors should consider carefully how much weight or importance should be attached to or placed on such facts or statistics.

If securities or industry analysts do not publish research reports about our business, or if they adversely change their recommendations regarding our Shares, the market price and trading volume of our Shares may decline.

The trading market for the Offer Shares will depend in part on the research and reports that securities or industry analysts publish about us or our business. If research analysts do not establish and maintain adequate research coverage or if one or more of the analysts who covers us downgrades the Offer Shares or publishes inaccurate or unfavorable research about our business, the market price for the Offer Shares would likely decline. If one or more of these analysts cease coverage of our Company or fail to publish reports on us regularly, we could lose visibility in the financial markets, which, in turn, could cause the market price or trading volume for the Offer Shares to decline.

You should read the entire Prospectus carefully and should not rely on any information contained in press articles or other media relating to us, the Spin-off or the Global Offering.

We strongly caution you not to rely on any information contained in press articles or other media regarding us and the Global Offering. Prior to the publication of this Prospectus, there has been press and media coverage regarding us, our business, our industry and the Global Offering. Such press and media coverage may include references to certain information that does not appear in this Prospectus, including certain operating and financial information and projections, valuations and other information. None of us or any other person involved in the Global Offering has authorized the disclosure of any such information in the press or media and none of us accepts any responsibility for any such press or media coverage or the accuracy or completeness of any such information or publication. Our Company, the Joint Sponsors, the Sponsor-Overall Coordinators, the Overall Coordinators, the Joint Global Coordinators, the Joint Bookrunners, the Joint Lead Managers, the Underwriters, any of our and their respective directors, supervisors, officers, representatives, employees, advisors or any other persons or parties involved in the Global Offering make no representation as to the appropriateness, accuracy, completeness or reliability of any such information or publication. To the extent that any such information is inconsistent or conflicts with the information contained in this prospectus, our Company, the Joint Sponsors, the Sponsor-Overall Coordinators, the Overall Coordinators, the Joint Global Coordinators, the Joint Bookrunners, the Joint Lead Managers, the Underwriters, any of our and their respective directors, supervisors, officers, representatives, employees, advisors or any other persons or parties involved in the Global Offering disclaim responsibility for it, and you should not rely on such information.

Forward-looking statements contained in this Prospectus are subject to risks and uncertainties.

This prospectus contains certain statements and information that are forward-looking and uses forward-looking terminology such as "believe," "expect," "estimate," "predict," "aim," "intend," "will," "may," "plan," "consider," "anticipate," "seek," "should," "could," "would," "continue," and other similar expressions. You are cautioned that reliance on any forward-looking statement involves risks and uncertainties and that any or all of those assumptions could prove to be inaccurate and as a result, the forward-looking statements based on those assumptions could also be incorrect. In light of these and other risks and uncertainties, the inclusion of forward-looking statements in this Prospectus should not be regarded as representations or warranties by us that our plans and objectives will be achieved, and these forward-looking statements should be considered in light of various important factors, including those set forth in this section. Subject to the requirements of the Listing Rules, we do not intend publicly to update or otherwise revise the forward-looking statements in this prospectus, whether as a result of new information, future events or otherwise. Accordingly, you should not place undue reliance on any forward-looking information. All forward-looking statements in this Prospectus are qualified by reference to this cautionary statement.

DIRECTORS' RESPONSIBILITY FOR THE CONTENTS OF THIS PROSPECTUS

This prospectus, for which our Directors collectively and individually accept full responsibility, includes particulars given in compliance with the Companies (Winding Up and Miscellaneous Provisions) Ordinance, the Securities and Futures (Stock Market Listing) Rules (Chapter 571V of the Laws of Hong Kong) and the Listing Rules for the purpose of giving information with regard to our Group. Our Directors, having made all reasonable enquiries, confirm that to the best of their knowledge and belief the information contained in this Prospectus is accurate and complete in all material aspects and not misleading or deceptive, and there are no other matters the omission of which would make any statement herein or this Prospectus misleading.

UNDERWRITING AND INFORMATION ON THE GLOBAL OFFERING

This Prospectus is published solely in connection with the Hong Kong Public Offering and the Preferential Offering which forms part of the Global Offering. For applicants under the Hong Kong Public Offering and the Qualifying Zijin Mining H Shareholders under the Preferential Offering, this Prospectus contains the terms and conditions of the Hong Kong Public Offering and the Preferential Offering. The Global Offering comprises the Hong Kong Public Offering of initially 34,899,100 Shares and the International Offering of initially 314,091,600 Shares, including 17,449,600 Reserved Shares under the Preferential Offering (subject, in each case, to reallocation on the basis described in "Structure of the Global Offering" in this Prospectus and, in case of the International Offering, to any exercise of the Over-allotment Option).

The Hong Kong Offer Shares and Reserved Shares are offered solely on the basis of the information contained and representations made in this Prospectus and on the terms and subject to the conditions set out herein. No person is authorized to give any information in connection with the Global Offering or to make any representation not contained in this Prospectus, and any information or representation not contained herein must not be relied upon as having been authorized by the Company, the Joint Sponsors, the Overall Coordinators, the Joint Global Coordinators, the Joint Lead Managers, the Joint Bookrunners, the Underwriters, any of our or their affiliates or any of their respective directors, officers, employees, advisors, agents or representatives, or any other persons or parties involved in the Global Offering. Neither the delivery of this Prospectus nor any subscription or acquisition made under it shall, under any circumstances, constitute a representation that there has been no change or development reasonably likely to involve a change in our affairs since the date of this Prospectus or imply that the information contained in this Prospectus is correct as of any date subsequent to the date of this Prospectus.

The Listing is sponsored by the Joint Sponsors. Pursuant to the Hong Kong Underwriting Agreement, the Hong Kong Public Offering is underwritten by the Hong Kong Underwriters on a conditional basis. The International Offering is managed by the Overall Coordinators and is underwritten by the International Underwriters. The International Underwriting Agreement is expected to be entered into on or about Thursday, September 25, 2025. Further details about the Underwriters and the underwriting arrangements are contained in "Underwriting" in this Prospectus.

PROCEDURES FOR APPLICATION FOR HONG KONG OFFER SHARES AND RESERVED SHARES

The procedures for applying for Hong Kong Offer Shares and Reserved Shares are set out in "How to Apply for Hong Kong Offer Shares and Reserved Shares" in this Prospectus.

RESTRICTIONS ON OFFER OF THE OFFER SHARES AND SALE OF SHARES

Each person acquiring the Hong Kong Offer Shares under the Hong Kong Public Offering will be required to, or be deemed by his acquisition of the Hong Kong Offer Shares to, confirm that he is aware of the restrictions on offers of the Hong Kong Offer Shares described in this Prospectus and that he is not acquiring, and has not been offered, any Hong Kong Offer Shares in circumstances that contravene any such restrictions.

Persons applying to acquire Offer Shares under the Global Offering are deemed to have warranted and represented in favor of the Company, the Joint Sponsors and the Underwriters that their subscription for and acceptance of the delivery of the Offer Shares under the Global Offering will not contravene or result in a contravention by them of any applicable laws or regulations (including but not limited to the Australian Foreign Acquisitions and Takeovers Act 1975 (Cth) and the Foreign Acquisitions and Takeovers Regulations 2015 (Cth) (together, the "**FIRB Laws**")). Each of such applicants agrees and acknowledges they are solely responsible for compliance with such laws and regulations (including the obtaining of any governmental, regulatory or other consents or approvals which may be required). For more information on the FIRB Laws, please refer to "Regulations — Laws and Regulations Related to our Australian Operations" in this Prospectus.

No action has been taken to permit a public offering of the Offer Shares in any jurisdiction other than in Hong Kong, or the distribution of this Prospectus in any jurisdiction other than Hong Kong. Accordingly, and without limitation to the following, this Prospectus may not be used for the purpose of, and does not constitute, an offer or invitation in any jurisdiction or in any circumstances in which such an offer or invitation is not authorized or to any person to whom it is unlawful to make such an offer or invitation. The distribution of this Prospectus and the offering of the Offer Shares in other jurisdictions are subject to restrictions and may not be made except as permitted under the applicable securities laws of such jurisdictions pursuant to registration with or authorization by the relevant securities regulatory authorities or an exemption therefrom. In particular, the Offer Shares have not been publicly offered and sold, and will not be publicly offered and sold, directly or indirectly, in the PRC or the United States.

APPLICATION FOR LISTING ON THE STOCK EXCHANGE

We have applied to the Stock Exchange for the granting of the listing of, and permission to deal in, the Shares in issue and to be issued pursuant to the Global Offering (including the additional Shares which may be issued pursuant to the exercise of the Over-allotment Option).

Save as disclosed in this Prospectus, no part of our Shares or loan capital is listed on or dealt in on any other stock exchange and no such listing or permission to list is being or proposed to be sought in the near future.

Under section 44B(1) of the Companies (Winding Up and Miscellaneous Provisions) Ordinance, any allotment made in respect of any application will be invalid if the listing of, and permission to deal in, the Shares on the Stock Exchange is refused before the expiration of three weeks from the date of the closing of the application lists, or such longer period (not exceeding six weeks) as may, within the said three weeks, be notified to our Company by the Stock Exchange.

COMMENCEMENT OF DEALINGS IN THE SHARES

Dealings in the Shares on the Stock Exchange are expected to commence at 9:00 a.m. on Monday, September 29, 2025. The Shares will be traded in board lots of 100 Shares each. The stock code of the Shares will be 2259.

ADMISSION OF THE SHARES INTO CCASS

Subject to the granting of the listing of, and permission to deal in, our Shares on the Stock Exchange and our compliance with the stock admission requirements of HKSCC, our Shares will be accepted as eligible securities by HKSCC for deposit, clearance and settlement in CCASS with effect from the Listing Date or any other date as determined by HKSCC. Settlement of transactions between Exchange Participants (as defined in the Listing Rules) is required to take place in CCASS on the second settlement day after any trading day. All activities under CCASS are subject to the General Rules of HKSCC and HKSCC Operational Procedures in effect from time to time. Investors should seek the advice of their stockbroker or other professional advisors for details of the settlement arrangements as such arrangements may affect their rights and interests.

All necessary arrangements have been made for enabling the Shares to be admitted into CCASS.

REGISTER OF MEMBERS AND STAMP DUTY

Our Company's register of members will be maintained by our registrar, Computershare Hong Kong Investor Services Limited, in Hong Kong.

All Offer Shares issued pursuant to applications made under the Global Offering will be registered on the register of members of our Company in Hong Kong in order to enable them to be traded on the Stock Exchange. Dealings in the Shares registered on our register of members will be subject to Hong Kong stamp duty.

PROFESSIONAL TAX ADVICE RECOMMENDED

Potential investors in the Global Offering are recommended to consult their professional advisors if they are in any doubt as to the taxation implications of subscribing for, purchasing, holding or disposal of, and/or dealing in our Shares (or exercising rights attached to them). None of us, the Joint Sponsors, the Overall Coordinators, Joint Global Coordinators, the Joint Bookrunners, the Joint Lead Managers, the Underwriters, any of their respective affiliates, directors, employees, agents or advisors or any other person or party involved in the Global Offering accepts responsibility for any tax effects on, or liabilities of, any person resulting from the subscription, purchase, holding or disposal of, dealing in, or the exercise of any rights in relation to, our Shares.

OVER-ALLOTMENT AND STABILIZATION

Details of the arrangement relating to the Over-allotment Option and stabilization are set out under "Structure of the Global Offering" in this Prospectus. Assuming that the Over-allotment Option is exercised in full, our Company may be required to issue up to an additional 52,348,600 new Shares.

EXCHANGE RATE CONVERSION

Unless otherwise specified, this Prospectus contains certain translations solely for your convenience at the following rates:

US$1.00 : HK$7.7927

RMB1.00 : HK$1.0974

US$1.00 : RMB7.1008

No estimation or representation is made that any amounts in HK$, RMB and US$ can be or could have been converted at the relevant dates at the above rates or any other rates at all.

LANGUAGE

If there is any inconsistency between the English version of this Prospectus and the Chinese translation of this Prospectus, the English version of this Prospectus shall prevail. However, translated English names of Chinese laws and regulations, governmental authorities, departments, entities (including certain of our subsidiaries), institutions, natural persons, facilities, certificates, titles and the like included in this Prospectus and for which no official English translation exists are unofficial translations for identification purposes only; and in the event of any inconsistency, the Chinese names (as appropriate) prevail.

ROUNDING

Certain amounts and percentage figures included in this Prospectus have been subject to rounding adjustments, or have been rounded to a set number of decimal places.

Any discrepancies in any table, chart or elsewhere between totals and sums of amounts listed therein are due to rounding.

In preparation for the Listing, our Company has applied for the following waivers from strict compliance with the relevant provisions of the Listing Rules:

WAIVER IN RELATION TO CONNECTED TRANSACTIONS

Our Group has entered into, and expects to continue after the Listing, certain transactions which will constitute partially-exempt or non-exempt continuing connected transactions under the Listing Rules upon the Listing. Our Company has applied to the Stock Exchange for, and the Stock Exchange has granted us, certain waivers from strict compliance with Chapter 14A of the Listing Rules in respect of the continuing connected transactions as disclosed in "Connected Transactions". For further details, see "Connected Transactions".

WAIVER IN RELATION TO MANAGEMENT PRESENCE

Rule 8.12 of the Listing Rules requires our Company to have a sufficient management presence in Hong Kong. This normally means that at least two of our Company's executive Directors must be ordinarily resident in Hong Kong. Since our Company's core business operations are based, managed and conducted outside of Hong Kong, our Company does not have, and for the foreseeable future will not have, sufficient management presence in Hong Kong for the purpose of satisfying the requirements of the Listing Rules.

Accordingly, we have applied to the Stock Exchange for, and the Stock Exchange has granted us, a waiver from strict compliance with Rule 8.12 of the Listing Rules on the condition that the following arrangements be made for maintaining regular communication with the Stock Exchange:

(a) our Company has appointed Mr. Yiu Kai, an executive Director of our Company, and Mr. Ho Kin Wai, a joint company secretary of our Company, as our Company's authorized representatives for the purpose of Rule 3.05 of the Listing Rules to serve as our Company's principal channel of communication with the Stock Exchange. Mr. Yiu Kai and Mr. Ho Kin Wai ordinarily reside in Hong Kong. Each of our authorized representatives will be available to meet with the Stock Exchange to discuss any matters in relation to our Company within a reasonable period of time and will be readily contactable by phone and email to deal with enquiries from the Stock Exchange. As and when the Stock Exchange wishes to contact the Directors on any matter, each of our Company's authorized representatives will have the means to contact all of the Directors promptly at all times. Our Company will promptly inform the Stock Exchange of any change in our authorized representatives;

(b) our Company has provided our Company's authorized representatives with our Directors' respective office phone numbers, mobile phone numbers, fax numbers and e-mail addresses to the extent possible; and our Directors will provide our Company's authorized representatives with the phone numbers of their places of accommodation if they expect to travel or otherwise be out of office. Therefore, our Company's authorized representatives would have the means for contacting all Directors promptly at all times as and when the Stock Exchange wishes to contact our Directors on any matters;

(c) our Company has provided the Stock Exchange with the contact details of our Directors (including their respective office phone numbers, mobile phone numbers, fax numbers and e-mail addresses, to the extent possible) to facilitate the communication with the Stock Exchange. Furthermore, each Director who does not ordinarily reside in Hong Kong has confirmed that he possesses or is able to apply for valid travel documents to visit Hong Kong and is able to meet with the Stock Exchange within a reasonable period after requested by the Stock Exchange;

(d) in accordance with Rule 3A.19 of the Listing Rules, our Company has appointed Somerley Capital Limited as our Company's compliance advisor, to act as an additional channel of communication with the Stock Exchange at least for the period commencing on the Listing Date and ending on the date on which our Company complies with Rule 13.46 of the Listing Rules in respect of the financial results for the first full financial year commencing immediately after the Listing Date. Our Company's compliance advisor will be available to respond to any inquiries from the Stock Exchange concerning our Company and will act as the principal channel of communication with the Stock Exchange when the Authorized Representatives are not available. In addition, our Company's compliance advisor will also advise on the on-going compliance requirements and other issues arising under the Listing Rules after the Listing Date; and

(e) our Company will retain a Hong Kong legal advisor to advise our Company on on-going compliance requirements and other issues arising under the Listing Rules and other applicable laws and regulations in Hong Kong (as amended and supplemented from time to time) after the Listing.

WAIVER IN RELATION TO THE DISCLOSURE REQUIREMENTS WITH RESPECT TO CHANGES IN SHARE CAPITAL

We have applied for, and the Stock Exchange has granted, a waiver from strict compliance with the requirements of paragraph 26 of Appendix D1A to the Listing Rules in respect of disclosing the particulars of any alterations in the capital of any member of the Group within two years immediately preceding the issue of this Prospectus.

We have identified eight entities that we consider are the major subsidiaries primarily responsible for the track record results of our Group (the "**Selected Entities**", and each a "**Selected Entity**"). Our Group has 38 subsidiaries in total, across 13 different jurisdictions upon the completion of our Reorganization. It would be unduly burdensome for our Company to disclose this information, which would not be material or meaningful to investors. By way of illustration, prior to the Reorganization and taking into account intercompany elimination, for the years ended December 31, 2022, 2023 and 2024 and for the six months ended June 30, 2025, (i) the aggregate revenue of the Selected Entities represented 100%, 100%, 100% and 100% of our Group's total revenue, respectively, (ii) the aggregate total assets of the Selected Entities represented 97%, 99%, 96% and 96% of our Group's total assets, respectively, and (iii) the aggregate net profit of the Selected Entities represented more than 100%, more than 100%, more than 100% and more than 100% of our Group's net profit in each of 2022, 2023 and 2024 and in the six months ended June 30, 2025, respectively. The remaining subsidiaries had no contribution to the Group's total revenue for each year/period of the Track Record Period. In addition, during the Track Record Period and up to the Latest Practicable Date, none of the remaining subsidiaries possessed any major asset and intellectual property right used in the daily operations of our Group. Accordingly the remaining subsidiaries in our Group are insignificant to the overall results of our Group and none of which contributes to more than 5% our Group's total assets for each period of our Track Record Period. Similarly, subsequent to our Reorganization, we expect the remaining subsidiaries to continue to be insignificant to the overall results of our Group. On such basis, non-disclosure of relevant information of the remaining subsidiaries will not affect investors' ability to make an informed assessment of our Group.

Particulars of the changes in the share capital of our Company and the Selected Entities have been disclosed in "Statutory and General Information — 1. Further Information about our Group — (b) Changes in the Share Capital of our Company" and "Statutory and General Information — 1. Further Information about our Group — (e) Changes in the Share Capital of Our Major Subsidiaries" in Appendix VI to this Prospectus.

WAIVER IN RELATION TO JOINT COMPANY SECRETARIES

Pursuant to Rules 3.28 and 8.17 of the Listing Rules, the company secretary must be an individual who, by virtue of his/her academic or professional qualifications or relevant experience, is, in the opinion of the Stock Exchange, capable of discharging the functions of the company secretary. The Stock Exchange considers the following academic or professional qualifications to be acceptable:

(a) a member of The Hong Kong Chartered Governance Institute;

(b) a solicitor or barrister (as defined in the Legal Practitioners Ordinance); and

(c) a certified public accountant (as defined in the Professional Accountants Ordinance).

Pursuant to Note 2 to Rule 3.28 of the Listing Rules, in assessing "relevant experience", the Stock Exchange will consider the individual's:

(a) length of employment with the issuer and other issuers and the roles he/she played;

(b) familiarity with the Listing Rules and other relevant law and regulations including the Securities and Futures Ordinance, the Companies Ordinance, the Companies (Winding Up and Miscellaneous Provisions) Ordinance and the Takeovers Code;

(c) relevant training taken and/or to be taken in addition to the minimum requirement of taking not less than 15 hours of relevant professional training in each financial year under Rule 3.29 of the Listing Rules; and

(d) professional qualifications in other jurisdiction.

Pursuant to paragraph 11 of Chapter 3.10 of the Listing Guide, the Stock Exchange will consider a waiver application by an issuer in relation to Rules 3.28 and 8.17 of the Listing Rules based on the specific facts and circumstances. Factors that will be considered by the Stock Exchange include:

(a) whether the issuer has principal business activities primarily outside Hong Kong;

(b) whether the issuer was able to demonstrate the need to appoint a person who does not have the Acceptable Qualification (as defined under paragraph 11 of Chapter 3.10 of the Listing Guide) nor Relevant Experience (as defined under paragraph 11 of Chapter 3.10 of the Listing Guide) as a company secretary; and

(c) why the directors consider the individual to be suitable to act as the issuer's company secretary.

Further, pursuant to paragraph 11 of Chapter 3.10 of the Listing Guide, such waiver, if granted, will be for a fixed period of time (the "**Waiver Period**") and on the following conditions:

(a) the proposed company secretary must be assisted by a person who possesses the qualifications or experience as required under Rule 3.28 of the Listing Rules and is appointed as a joint company secretary throughout the Waiver Period; and

(b) the waiver will be revoked if there are material breaches of the Listing Rules by the issuer.

Our Company considers that while it is important for the company secretary to be familiar with the relevant securities regulation in Hong Kong, he/she also needs to have experience relevant to our Company's operations, nexus to the Board and close working relationship with the management of our Company in order to perform the function of a company secretary and to take the necessary actions in the most effective and efficient manner. At the same time, given we will continue to be a subsidiary of Zijin Mining, it is also for the benefit of our Company to appoint a person who is familiar with the compliance obligations of Zijin Mining and with the appropriate qualification as company secretary.

We have appointed Ms. Huang Xiaohong ("**Ms. Huang**") and Mr. Ho as our joint company secretaries. Ms. Huang is our vice president. Since Ms. Huang does not possess a qualification stipulated in Rule 3.28 of the Listing Rules, she is not able to solely fulfill the requirements as a company secretary of a listed issuer stipulated under Rules 3.28 and 8.17 of the Listing Rules. In order to provide support to Ms. Huang, we have appointed Mr. Ho, a fellow member of the Hong Kong Institute of Certified Public Accountants, a member of the Hong Kong Chartered Governance Institute and the Chartered Governance Institute, and holder of the qualification of Chartered Secretary, Chartered Governance Professional and Certified Public Accountant of Hong Kong, who meets the requirements under Rules 3.28 and 8.17 of the Listing Rules, as a joint company secretary to provide assistance to Ms. Huang, for a three-year period from the Listing Date so as to enable her to acquire the relevant experience (as required under Rule 3.28(2) of the Listing Rules) to duly discharge her duties. Mr. Ho is also a joint company secretary of Zijin Mining.

Accordingly, we have applied to the Stock Exchange for, and the Stock Exchange has granted, a waiver from strict compliance with the requirements under Rules 3.28 and 8.17 of the Listing Rules in relation to the appointment of Ms. Huang as our joint company secretary. Pursuant to the Chapter 3.10 of the Listing Guide, such waiver has been granted on the conditions that:

(a) Mr. Ho is appointed as a joint company secretary to assist Ms. Huang in discharging her functions as a company secretary and in gaining the relevant experience under Rule 3.28 of the Listing Rules;

(b) our Company will further ensure that Ms. Huang has access to the relevant training and support to enable her to familiarize herself with the Listing Rules and the duties required of a company secretary of an issuer listed on the Stock Exchange. Our Hong Kong legal advisors have provided training to Ms. Huang on the principal requirements of the Listing Rules and the Hong Kong laws and regulations applicable to our Company after the Listing. In addition, Ms. Huang will endeavor to familiarize herself with the Listing Rules, including any updates to it, during the three-year period from the Listing;

(c) Ms. Huang has confirmed that she will attend no less than 15 hours of training courses on the Listing Rules, corporate governance, information disclosure, investor relations as well as the functions and duties of a company secretary of a Hong Kong listed issuer during each financial year as required under Rule 3.29 of the Listing Rules;

(d) before the expiry of Ms. Huang's initial term of appointment as the company secretary of our Company, our Company will evaluate her experience in order to determine if she has acquired the qualifications required under Rule 3.28 of the Listing Rules; and

(e) this waiver will be revoked immediately if and when Mr. Ho ceases to provide such assistance during the three-year period, and we undertake to re-apply to the Stock Exchange for a waiver in the event that Mr. Ho ceases to meet the requirements under Rule 3.28 of the Listing Rules or otherwise ceases to serve as a joint company secretary of our Company. In addition, this waiver is subject to revocation in the event of any material breaches of the Listing Rules by our Company.

Prior to the end of the three-year period, we will demonstrate and seek the confirmation from the Stock Exchange that Ms. Huang, having had the benefit of Mr. Ho during the three years, has attained the relevant experience and is capable of discharging the functions of our company secretary.

See "Directors and Senior Management" in this Prospectus for further information regarding the qualifications of Ms. Huang and Mr. Ho.

CONSENT IN RESPECT OF THE PROPOSED SUBSCRIPTION OF SHARES BY CERTAIN CORNERSTONE INVESTORS WHO ARE CONNECTED CLIENTS

Paragraph 1C(1) of Appendix F1 to the Listing Rules provides that no allocations will be permitted to "connected clients" of the overall coordinator(s), any syndicate member(s) (other than the overall coordinator(s)) or any distributor(s) (other than syndicate member(s)), without the prior written consent of the Stock Exchange.

Paragraph 1B(7) of the Appendix F1 to the Listing Rules states that "connected client" in relation to an exchange participant means any client which is a member of the same group of companies as such exchange participant.

Chapter 4.15 of the Guide for New Listing Applicants provides that the Stock Exchange will ordinarily give its consent for allocation to connected clients if it is satisfied that: (i) the allocation to a connected client represents genuine demand for securities of an applicant; and (ii) the connected client has not taken and will not take advantage of its position to receive an allocation for its own benefit at the expense of other placees or the public (i.e., no actual or perceived preferential treatment has been given to such connected client).

CITIC Securities International Capital Management Limited ("**CSICM**") has entered into cornerstone investment agreements with the Company, the Joint Sponsors and the Overall Coordinators. CSICM and CITIC Securities Company Limited ("**CITIC Securities**") will enter into a series of OTC swap transactions (the "**Gaoyi OTC Swaps**" and "**Greenwoods OTC Swaps**") with each other and the ultimate clients (the "**CSICM Ultimate Clients (Gaoyi)**" and "**CSICM Ultimate Clients (Greenwoods)**"), respectively, pursuant to which CSICM will hold the Offer Shares on a non-discretionary basis to hedge the Gaoyi OTC Swaps and Greenwoods OTC Swaps, respectively, while the economic risks and returns of the underlying Offer Shares are passed to the CSICM Ultimate Clients (Gaoyi) and CSICM Ultimate Clients (Greenwoods), respectively. CSICM and CLSA Limited, one of the Overall Coordinators and Joint Bookrunners of the Global Offering, are members of the same group of companies. Accordingly, CSICM is a connected client of CLSA Limited.

GF International Investment Management Limited ("**GF International**") has entered into a cornerstone investment agreement with the Company to subscribe for Offer Shares and will hold the Offer Shares on a discretionary basis for and on behalf of its underlying clients and accounts under the International Offering. GF Securities (Hong Kong) Brokerage Limited ("**GF Securities**") has been appointed, amongst others, as one of the Underwriters of the Global Offering. GF International and GF Securities are members of the same group of companies. As a result, GF International is a connected client of GF Securities.

We have applied for, and the Stock Exchange has granted, consent under paragraph 1C(1) of Appendix F1 to the Listing Rules to permit each of (i) CSICM (in connection with Gaoyi OTC Swaps and Greenwoods OTC Swaps) and (ii) GF International (collectively, the "**Connected Client Cornerstone Investors**") to participate in the Global Offering as a cornerstone investor on the following basis and conditions as set out in Paragraph 6 of Chapter 4.15 of the Guide for New Listing Applicants:

(a) any Offer Shares to be allocated to each of the Connected Client Cornerstone Investors will be held on behalf of independent third parties;

(b) the cornerstone investment agreement of each of the Connected Client Cornerstone Investors does not contain any material terms which are more favorable to them (as the case may be) than those in other cornerstone investment agreements;

(c) GF Securities has not participated, and will not participate, in the decision-making process or relevant discussions among the Company, the Underwriters and the Overall Coordinators as to whether Offer Shares will be allocated to GF International;

(d) other than the preferential treatment of assured entitlement under the relevant cornerstone investment agreements, no preferential treatment has been, nor will be, given to CSICM or GF International by virtue of their relationship with CLSA Limited or GF Securities, respectively, in any allocation of Offer Shares in the International Offering;

(e) each of CSICM and GF International confirms that to the best of its knowledge and belief, other than the preferential treatment of assured entitlement under the relevant cornerstone investment agreements, it has not received and will not receive preferential treatment in the allocation of Offer Shares in the Global Offering as a cornerstone investor by virtue of its relationship with CLSA Limited and GF Securities, respectively;

(f) each of the Company, the Overall Coordinators, the Connected Client Cornerstone Investors and GF Securities has provided the Stock Exchange with written confirmations in accordance with Chapter 4.15 of the Guide for New Listing Applicants; and

(g) details of the cornerstone investments and details of the allocations will be disclosed in this prospectus and the allotment results announcement.

For further information about the proposed cornerstone investments by CSICM and GF Securities, please refer to the section headed "Cornerstone Investors" in this Prospectus.

The information and statistics set out in this section and other sections of this Prospectus were extracted from the Frost & Sullivan Report prepared by Frost & Sullivan, which was commissioned by us, and from various official government publications and other publicly available publications. We engaged Frost & Sullivan to prepare the Frost & Sullivan Report, an independent industry report, in connection with the Global Offering. The information from official government sources has not been independently verified by us, the Joint Sponsors, the Overall Coordinators, the underwriters, or any other parties involved in the Global Offering, or any of our or their respective directors, officers, or representatives, and no representation is given as to its accuracy.

SOURCE AND RELIABILITY OF INFORMATION

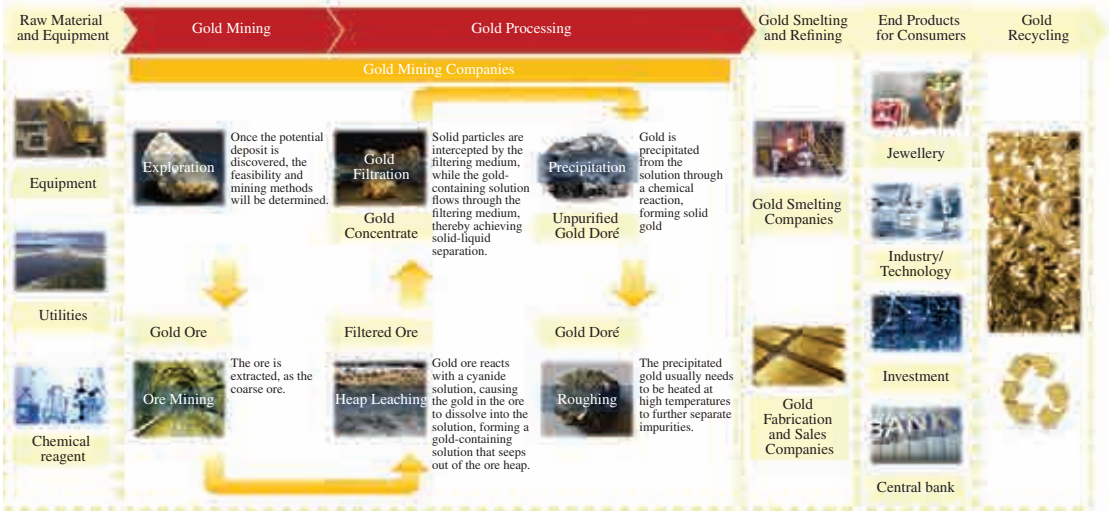
We have commissioned Frost & Sullivan, an Independent Third Party, to conduct a study of Global gold and gold mining industry. We agreed to pay Frost & Sullivan a fee of US$58,750 for the preparation of Frost & Sullivan Report, and our directors consider that such fee reflects market rates and are of the view that the payment of the fee does not affect the fairness of conclusions drawn in Frost & Sullivan Report. Founded in 1961, Frost & Sullivan has over 45 global offices with more than 3,000 industry consultants, market research analysts, technology analysts and economists.

RESEARCH METHODOLOGY

During the preparation of the Frost & Sullivan Report, Frost & Sullivan conducted primary research that involved discussing the status of the industry with industry participants and industry experts, as well as secondary research that involved reviewing company reports, independent research reports and Frost & Sullivan's own database. Our Directors have confirmed that there has been no adverse change in the market situation since the date of Frost & Sullivan Report which may qualify, contradict, or have impact on the information of this section.

BASIS AND ASSUMPTION

Frost & Sullivan Report was compiled based on the following assumptions: (i) government policies on gold and gold mining industries globally and in the major countries discussed will remain consistent during the forecast period; (ii) the global gold and gold mining industries will be driven by the factors which are stated in Frost & Sullivan Report.



OVERVIEW OF THE GOLD MINING INDUSTRY

Introduction of Gold

Gold is a precious metal used for coinage, jewellery, and high-tech manufacturing. Gold products include gold concentrate, doré, ingot, bullion, coins, and derivatives. The upstream of gold mining industry includes raw material and equipment supply. The midstream includes processes of gold mining, gold processing, gold smelting and refining. Downstream includes gold products for different uses such as jewellery, industry/technology, investment and central bank reserve, as well as gold recycling. Global gold supply mainly comes from gold mine and recycled gold, with gold mine being the most important source of gold supply. Gold mining refers to the process of extracting ore from the earth's crust. Modern gold mining usually takes place in areas where significant concentration of gold-bearing ores exists.

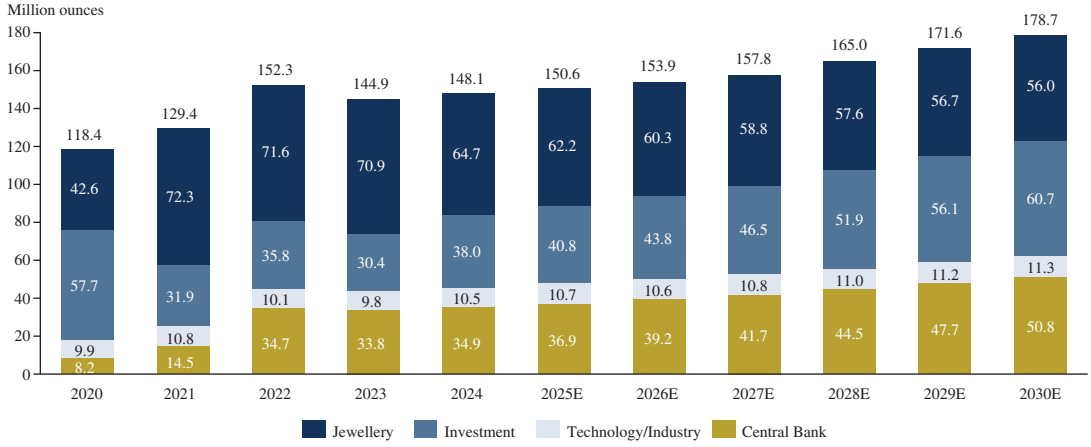
Exploration rights grant the legal ability to search for new resources or information within a specified area, while exploitation rights grant the legal right to extract, use, and profit from discovered resources. The key difference lies in the stage and purpose: exploration focuses on discovery and learning about potential resources, whereas exploitation focuses on capitalizing on what has already been found through mining.

Value Chain of Global Gold Mining Industry

Source: Frost & Sullivan

Global Gold Demand

Global demand for gold is generally divided into the following categories: (i) jewellery, (ii) investment (including gold ingots, bars, coins and ETFs), (iii) central bank reserves, and (iv) technological or industrial use. Historically, gold was mainly consumed for jewellery fabrication, gold ingots, bars and coins for value preservation purposes and central bank reserves. Nowadays, besides abovementioned uses, gold is also increasingly used for technology and industry purposes such as high-end and precise manufacturing, as well as dentistry. Moreover, gold is also frequently traded in financial market as gold-linked ETF products develop. Central banks are putting emphasize on having gold reserves for hedging financial risks.



Global gold demand increased at a CAGR of 5.8% from 2020 to 2024, reaching 148.1 million ounces (4,606.1 tonnes) in 2024. Compared to 2023, global gold demand rose in 2024, mainly due to higher gold reserve demand from central banks and increased investment demand fuelled by the need for risk diversification.

Investments include purchase of gold ingots, bars and coins as well as ETFs. In 2021, investments in gold decreased by more than 40% compared with the 2020 level. This was mainly caused by a decrease in gold investments through ETFs. In 2022, investments in gold increased, especially for investments in gold ingots, coins and bars, which was largely due to geopolitical concerns and hedging against inflation. In 2023, investments in gold decreased by 15% compared with the 2022 level, which caused the declined global gold demand. This was mainly caused by the rising gold price and a waning interest among investors in gold as an asset class. In 2024, global investments in gold demonstrated an increasing trend, with total global gold investment increasing to 38.0 million ounces (1,181.7 tonnes).

From 2024 to 2030, global gold demand is expected to grow steadily at a CAGR of 3.2% mainly due to (i) increase in gold demand by central banks for value preservation and risk diversification, in the context of current geopolitical uncertainties; and (ii) increase in gold demand for investment.

Gold Demand (by end use), Global, 2020–2030E

	Jewellery	Investment	Technology/ Industry	Central Bank	Total
CAGR 20–24	11.0%	-9.9%	1.4%	43.7%	5.8%
CAGR 24–30E	-2.4%	8.1%	1.2%	6.4%	3.2%

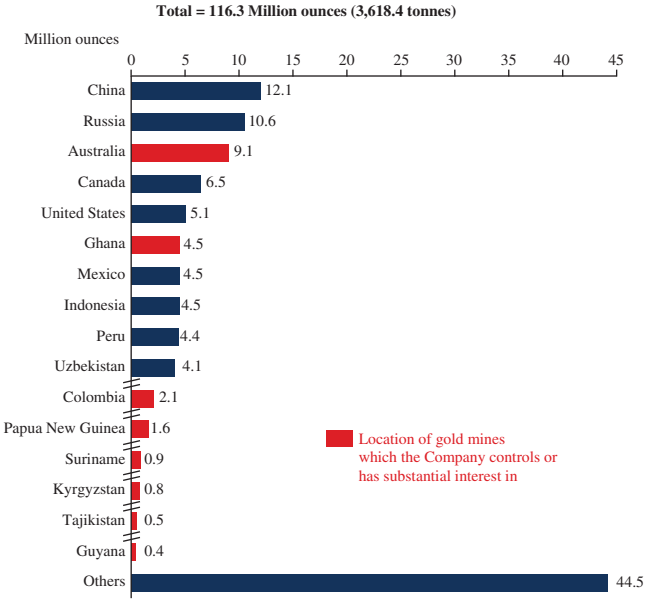
Global Gold Mine Production

From 2020 to 2024, global gold mine production experienced a period of moderate growth and slight fluctuations. The global gold mine production increased from 111.8 million ounces (3,475.9 tonnes) to 116.3 million ounces (3,618.4 tonnes), with a modest CAGR of 1.0% during the period. During the forecast period, the global gold mine production is expected to experience continued growth over the next few years. This trend is primarily driven by the increasing importance of gold's safe-haven attributes in the face of geopolitical conflicts and economic uncertainties, which has led to a significant rise in investment demand and drove the increase in gold mine production. Additionally, potential advancements in mining technologies and improvements in operational efficiencies are also expected to contribute to the increase in gold mine production. From 2024 to 2030, the forecasted gold mine production is projected to follow an upward trajectory, increasing from 116.3 million ounces (3,618.4 tonnes) to 124.1 million ounces (3,860.8 tonnes), with a CAGR of 1.1% during the period.

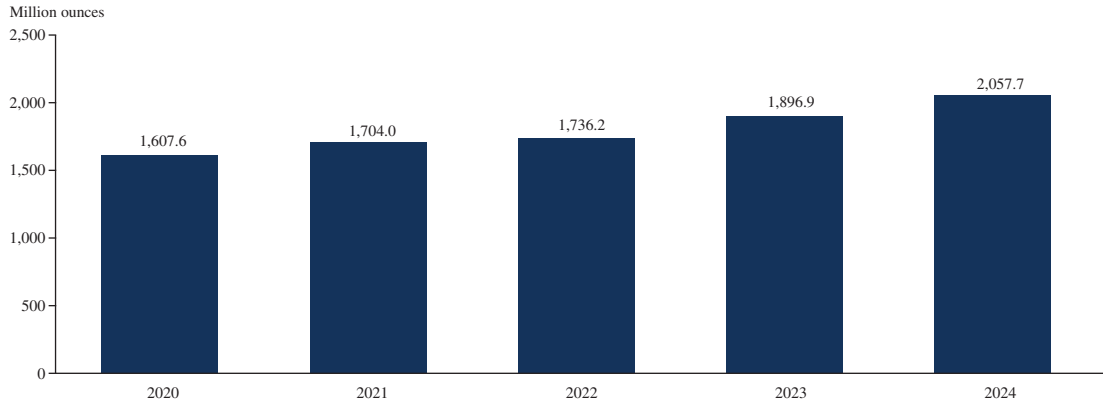


Gold Mine Production, Global, 2020–2030E

Source: World Gold Council, Frost & Sullivan

In 2024, the top ten gold-producing countries accounted for 65.5 million ounces (2,038.2 tonnes) of gold mine production, representing 56.3% of the world's total gold mine output.

Gold Mine Production (by countries), Global, 2024

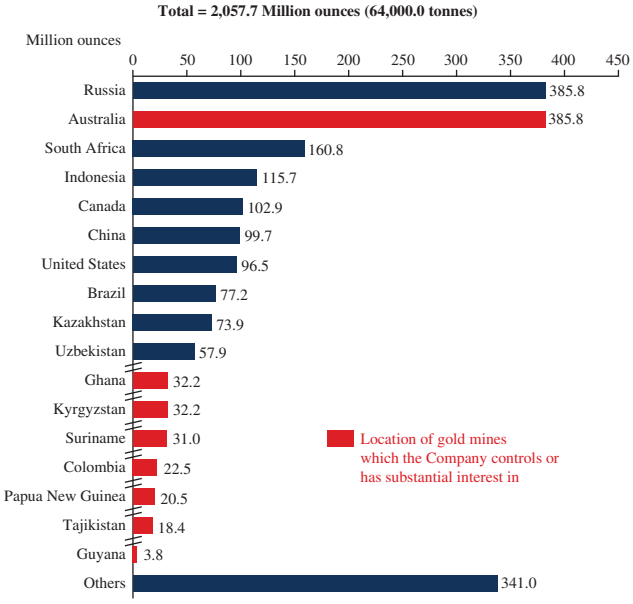


Source: World Gold Council, Frost & Sullivan
Note: Countries after Uzbekistan are not in ranked order.

Global Gold Reserves

From 2020 to 2024, the global gold reserves have shown a continuous upward trend. This trend is driven by several key factors. Technological advancements in exploration have increased the efficiency and accuracy of resource detection, leading to the discovery of more potential reserves. Governments' supportive policies have also encouraged enterprises to invest more in exploration and development. In addition, with the recovery and growth of the global economy, the demand for various resources has also been steadily increasing, prompting industries to boost their investment in resource development. From 2020 to 2024, the global gold reserves grew from 1,607.6 million ounces (50,000.0 tonnes) to 2,057.7 million ounces (64,000.0 tonnes).

Gold Reserves, Global, 2020–2024



Source: The U.S. Geological Survey, Frost & Sullivan

Note: Gold reserves refer to part of the reserve base that could be economically extracted or produced at the time of determination and include only recoverable materials.

In 2024, the top ten countries in terms of gold reserves held a total of 1,556.1 million ounces (48,400.0 tonnes) of gold, accounting for 75.6% of the world's total gold reserves.

Gold Reserves by Countries, Global, 2024

Note: Countries after Uzbekistan are not in ranked order.

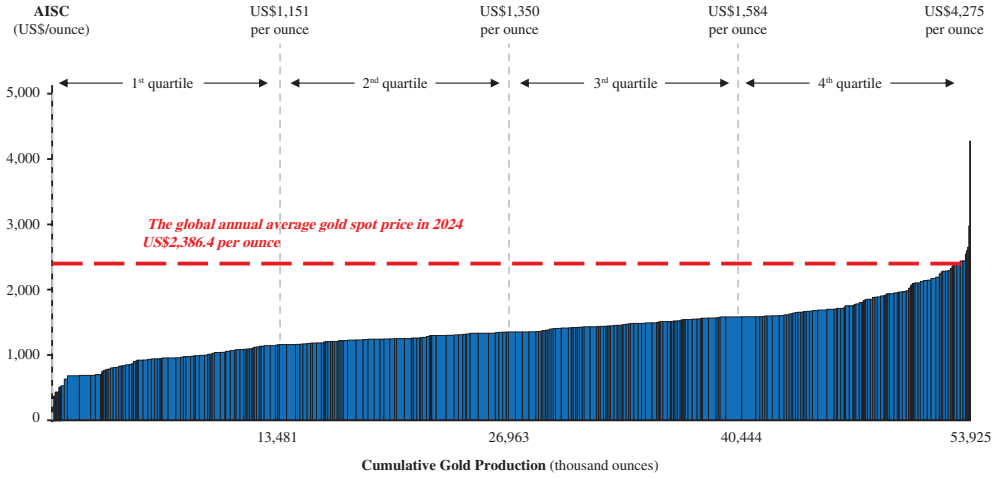
Global All-in Sustaining Cost

AISC is an important indicator for measuring the cost of gold production. Gold producers usually adopt various measures such as refined management and production process optimization to achieve a large-scale, intensive, and mechanized production model, in order to control and reduce AISC, thereby improving the company's production efficiency and profitability, and increasing gold production. From Q1 2022 to Q4 2024, the global average AISC increased moderately, rising from US$1,229.9 per ounce to US$1,450.2 per ounce. When the gap between the gold price and AISC widens, gold producers tend to increase production to maximize profits.

Average AISC and Average Gold Spot Price (quarterly), Global, 2022–2024

Source: London Bullion Market Association, Frost & Sullivan

Ranking of AISC, Global Top 15 Gold Producers in 2024



Rank	Company	AISC, 2024 (USD/Oz)
1	Company E	767.0
2	Company D	979.0
3	Company L	1,218.0
4	Company C	1,276.0
5	Company G	1,388.0
6	**The Group**	**1,458.0**
7	Company M	1,465.0
8	Company B	1,484.0
9	Company A	1,516.0
10	Company F	1,611.0
11	Company H	1,629.0
12	Company J	1,686.0
13	Company I	1,961.8
14	Company N	2,126.0
15	Company K	N/A*

Note: Company K has not disclosed AISC during 2024.

Global Cost Curve

The gold cost curve illustrates the distribution of gold mine production across various cost levels as a proportion of total global output. In 2024, the annual average gold spot price remained above the AISC for the majority of gold mines. This indicates that the gold mining industry has been broadly profitable, with most companies able to generate earnings at prevailing price levels. Such favorable market conditions not only strengthen the financial stability and investment appeal of gold mining companies, but also incentivize increased capital expenditure in production and exploration. As a result, the industry's overall supply capacity is expected to improve.

Global Gold Price

The persistent gold-buying behavior of global central banks, especially the substantial purchases by emerging market central banks, has provided strong support for gold prices. Meanwhile, the uncertainty of the global economy, including the anticipated changes in interest rate policies and fiscal dynamics, particularly the uncertainty surrounding the US budget process, has further enhanced the appeal of gold as a safe-haven asset. Between 2010 and 2024, global annual average gold prices demonstrated an upward trend with fluctuations and reached US$2,386.4 per ounce in 2024, according to London Bullion Market Association (LBMA) Gold Price. In the context of de-dollarization, emerging market central banks may further increase their gold reserves and investors hold a bullish view on gold's role as a safe-haven asset amid global uncertainty. In addition, continued geopolitical tensions and persistent inflationary pressures in major economies are expected to further support gold demand, driving the annual average gold price to continue rising during the forecast period and reach US$3,195.1 per ounce by 2025 and US$3,387.7 per ounce by 2026, according to London Bullion Market Association (LBMA) Gold Price.

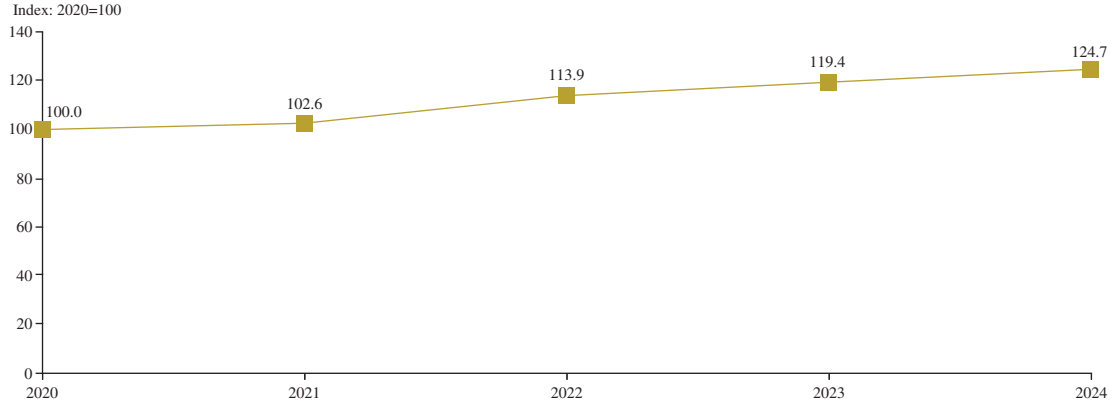
Price Analysis of Raw Materials

Diesel, as a crucial raw material for gold mining, is primarily utilized in the operation of heavy machinery and transportation vehicles within mining sites. The global diesel price has experienced significant fluctuations over the past few years. It increased from US$0.8 per liter in 2020 to US$1.3 per liter in 2022, and then slightly decreased to US$1.2 per liter in 2024.



Average Price of Diesel, Global, 2020–2024

Source: Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ), Frost & Sullivan

Explosives are used in gold mining primarily for rock blasting to break up ore-bearing rock, enabling efficient extraction and processing of gold. The price of explosives has experienced a continuous upward trend in recent years. For example, the producer price index for explosives manufacturing in the US reached 124.7 in 2024, compared to 100 in 2020.

Producer Price Index of Explosives Manufacturing, US, 2020–2024

Market Drivers of Global Gold Mining Industry

- ***Global Demand Resurgence.*** The worldwide demand for gold is experiencing a notable upsurge, driven by multiple factors. From 2024 to 2030, global gold demand is expected to grow steadily at a CAGR of 3.2% mainly due to (i) increase in gold demand by central banks for value preservation and risk diversification, in the context of current geopolitical uncertainties; and (ii) increase in gold demand for investment globally. As a traditional store of value, gold's appeal is intensifying amid economic uncertainties. Inflationary pressures and fluctuating currency values are prompting investors to seek the stability that gold offers. This trend aligns perfectly with the strategic focus of leading gold producers on expanding their global asset base. Companies with robust resource and reserves and production capabilities are well-positioned to meet the rising market demand, leveraging their extensive experience in gold mining and exploration to ensure a steady supply.

- ***Technological Advancements in Mining.*** Advancements in mining technology are revolutionizing the gold mining industry. Innovative techniques and equipment are enhancing extraction efficiencies, reducing costs, and making previously uneconomical deposits viable. Leading companies in the sector have been at the forefront of adopting and developing cutting-edge technologies. For example, the application of sensor-based ore sorting enables the early rejection of uneconomic material prior to comminution, resulting in lower energy and reagent consumption, reduced processing time, and an increase in recovery rates by 10% to 30%. The application of autonomous mining trucks has improved operational efficiency and safety in mining operations, potentially increasing efficiency by up to 20% and reducing costs by around 15%. The cyanide-free gold extraction and metallurgy technology has enhanced the environmental sustainability of gold mining. The commitment to technological innovation not only boosts operational efficiency but also strengthens their competitive edge in the global market. By integrating advanced technologies into their mining processes, these companies are able to optimize resource utilization and production, ensuring sustainable growth in the evolving gold mining industry landscape.

Development Trend of Global Gold Mining Industry

- ***Digital Transformation in Gold Mining.*** The gold mining industry is on the cusp of a digital revolution. Companies are increasingly integrating advanced technologies such as artificial intelligence, machine learning, and automation into their operations. These digital tools enhance efficiency, reduce operational risks, and improve decision-making processes. By leveraging data analytics and predictive modelling, gold producers can optimize mining and processing activities, leading to higher productivity and cost savings. This digital transformation is set to reshape the industry, making it more resilient and responsive to market changes.

- ***ESG Focus and Sustainable Practices.*** Environmental, social, and governance (ESG) factors are increasingly influencing the gold mining industry. Consumers and investors are demanding higher ESG standards, driving companies to adopt sustainable practices. Leading gold producers have proactively embraced ESG principles, implementing responsible mining practices across their operations. The dedication to environmental protection, community engagement, and ethical business conduct enhances their reputation and market appeal. By adhering to high ESG standards, these companies not only meet the expectations of stakeholders but also contribute to the long-term sustainability of the gold mining industry.

- ***Exploration and New Discoveries***. The search for new gold deposits is a crucial trend in the industry. With existing mines facing depletion challenges, companies are investing heavily in exploration technologies and geological research. Advanced geophysical and geochemical techniques, along with satellite imagery and data analytics, are helping to identify potential new gold deposits in remote and previously unexplored areas. This focus on exploration is essential to ensure a steady supply of gold for the future.

- ***Rising Industry Concentration***. As market competition intensifies and resources become more concentrated, leading mining companies are leveraging their strengths in technology, funding, management, and resource acquisition to continuously expand their market share and gradually take a dominant position in the industry. Meanwhile, some less competitive companies are facing operational pressures, with some even choosing to exit the market. These changes in the industry landscape not only enhance the market influence of leading companies but also make the allocation of resources in the entire gold mining industry more concentrated and efficient, driving the industry's development towards greater scale and intensive operation.

Key Success Factors of Global Gold Mining Industry

- ***Operational Efficiency and Cost Management*.** Operational efficiency and cost control are critical to the long-term success of gold mining companies. Maintaining competitive AISC through optimized production processes, effective resource utilization, and technology adoption enhances profitability and resilience across commodity cycles. Efficient operations also support regulatory compliance, sustainability goals, and capital reinvestment for growth.

- ***Advanced Gold Exploration Technologies*.** In the competitive landscape of the gold mining industry, companies with superior gold exploration technologies will gain a significant edge in the future. As existing mines face depletion, the continuous and stable supply of gold increasingly relies on the discovery of new deposits. Advanced exploration technologies can more efficiently identify potential gold deposits, reduce exploration costs, and increase success rates, enabling gold mining companies to meet environmental regulatory challenges and ensuring the sustainability of exploration activities, thereby positioning them competitive in the market.

- ***Strategic Mergers and Acquisitions*.** Mergers and acquisitions (M&A) play a vital role in the growth and success of gold mining companies. A disciplined approach to acquisitions, focusing on high-quality assets in stable jurisdictions, has led to substantial reserve growth and stock price appreciation for some firms. Strategic M&A activities allow companies to expand their resource base, gain access to new markets, and achieve economies of scale, which are essential for long-term success.

- ***ESG Performance.*** ESG factors have become increasingly important in the gold mining industry. Companies with strong ESG performance are more likely to secure financing, maintain social licenses, and attract investors. For instance, 78% of institutional investors now mandate ESG pre-screening for mining investments, emphasizing the need for companies to invest in sustainable practices such as carbon reduction and water management. Adhering to high ESG standards not only mitigates risks but also enhances a company's reputation and long-term viability.

- ***Market Adaptability and Risk Management.*** The ability to adapt to changing market conditions and manage risks effectively is essential for gold mining companies. Fluctuations in gold prices, influenced by supply and demand dynamics, macroeconomic trends, and investor sentiment, present both challenges and opportunities. Companies must employ strategic planning and risk management strategies to navigate price volatility and ensure sustained profitability. Additionally, proactive risk management can safeguard assets and ensure stability in uncertain environments.

COMPETITIVE LANDSCAPE OF THE GOLD MINING INDUSTRY

The gold mining industry has become increasingly concentrated in recent years. This trend is largely driven by mergers and resource integration among leading gold producers. Major gold mining companies, with their efficient operations, global presence, financial strength, and other competitive advantages, are now at the forefront of the industry. These large gold mining companies have been able to achieve economies of scale through consolidation, which has allowed them to optimize production processes and reduce unit costs.

Simultaneously, regulatory controls, particularly those related to safety and environmental protection, have been further intensified. Gold production companies that are less competitive, with aging facilities and insufficient resources, have been compelled to either shut down or undergo substantial transformations. Moreover, the total production cost of gold mining has escalated. This is due to a combination of factors, including the decline in ore grade, the increased mining of refractory resources, and the heightened investment in safety and environmental protection. As a result, smaller gold mining companies have gradually been exiting the market.

Ranking of Global Gold Mining Industry

The top 15 global gold producers contributed approximately 30.5% of the global gold mine production in 2024. Among these leading companies, the Group ranked eleventh globally in 2024, with total gold production of 1.5 million ounces (45.3 tonnes) from its seven mines. Also, among these producers, the Group ranked first in production growth with a CAGR of 21.4% from 2022 to 2024.

Ranking of Gold Producers (by gold mine production on a consolidated basis), Global, 2024

Rank	Company	Gold Mine Production (Million oz)	Market Share (%)	Production CAGR 2022–2024 (%)
1	Company A	6.5	5.6%	4.8%
2	Company B	3.9	3.4%	–2.8%
3	Company C	3.5	3.0%	5.4%
4	Company D	3.1	2.7%	4.7%
5	Company E	3.0	2.6%	8.7%
6	Company F	2.7	2.3%	–1.5%
7	Company G	2.2	1.9%	5.3%
8	Company H	2.1	1.8%	–7.1%
9	Company I	1.6	1.4%	2.4%
10	Company J	1.6	1.3%	2.5%
11	**The Group**	**1.5**	**1.2%**	**21.4%**
12	Company K	1.2	1.1%	9.3%
13	Company L	1.1	0.9%	–2.5%
14	Company M	0.8	0.7%	–11.5%
15	Company N	0.7	0.6%	6.5%
	Others	80.9	69.5%	—
	Total	**116.3**	**100%**	—

Note: The production of the PNG Porgera Gold Mine is not included in the calculation of the Group's production in the ranking.

The production of Company K's listed subsidiary is excluded from the calculation of Company K's production in the ranking to avoid double counting, as the listed subsidiary is usually ranked independently in the gold industry rankings.

Company A was established in 1921, is headquartered in Denver, United States, and is listed on the New York Stock Exchange.

Company B was established in 1983, is headquartered in Toronto, Canada, and is listed on the New York Stock Exchange and Toronto Stock Exchange.

Company C was established in 1957, is headquartered in Toronto, Canada, and is listed on the New York Stock Exchange and Toronto Stock Exchange.

Company D was established in 1958, is headquartered in Navoi, Uzbekistan, and is not publicly listed.

Company E was established in 2006, is headquartered in Moscow, Russia, and is listed on London Stock Exchange and Moscow Exchange.

Company F was established in 2004, is headquartered in Johannesburg, South Africa, and is listed on Johannesburg Stock Exchange, New York Stock Exchange and Australian Securities Exchange.

Company G was established in 1993, is headquartered in Toronto, Canada, and is listed on Toronto Stock Exchange and New York Stock Exchange.

Company H was established in 1998, is headquartered in Johannesburg, South Africa, and is listed on Johannesburg Stock Exchange, New York Stock Exchange and Toronto Stock Exchange.

Company I was established in 2003, is headquartered in Perth, Western Australia, Australia, and is listed on Australian Securities Exchange.

Company J was established in 1950, is headquartered in Randfontein, South Africa, and is listed on Johannesburg Stock Exchange.

Company K was established in 2000, is headquartered in Jinan, China, and is listed on Shanghai Stock Exchange and Hong Kong Stock Exchange.

Company L was established in 2017, is headquartered in London, United Kingdom, and is listed on London Stock Exchange and Toronto Stock Exchange.

Company M was established in 2007, is headquartered in Vancouver, Canada, and is listed on Toronto Stock Exchange and New York Stock Exchange.

Company N was established in 2013, is headquartered in Johannesburg, South Africa, and is listed on Johannesburg Stock Exchange and New York Stock Exchange.

As of December 31, 2024, the Group ranked ninth globally with 26.1 million ounces (809.9 tonnes) of gold reserves.

Ranking of Gold Producers (by reserves on a consolidated basis), Global, 2024

Rank	Company	Reserves (Million oz)
1	Company A	134.1
2	Company E	116.7
3	Company B	89.0
4	Company C	54.3
5	Company D	51.0
6	Company H	44.3
7	Company F	31.2
8	Company J	28.5
9	**The Group**	**26.1**
10	Company G	21.9
11	Company I	20.9
12	Company L	18.4
13	Company K	18.2
14	Company M	8.8
15	Company N	7.2

Source: Annual Reports, Frost & Sullivan

Note: Reserves include proven and probable gold reserves. The reserves of the PNG Porgera Gold Mine is not included in the calculation of the Group's reserves in the ranking.

Entry Barriers of Global Gold Mining Industry

- ***Policy Barrier.*** Policy barriers present significant challenges for new entrants in the global gold mining industry. Governments in key gold-producing countries impose strict regulatory frameworks, including complex permitting processes, environmental compliance requirements, and land-use restrictions, which can delay projects for years. Many jurisdictions also enforce resource nationalism, such as higher royalties, export restrictions, or mandatory local ownership, reducing profitability for foreign investors. Additionally, political instability in some gold-rich regions creates uncertainty over contract enforcement and property rights, deterring long-term investment. These policy hurdles favor established mining firms with the expertise and financial resources to navigate regulatory landscapes, while raising the risk and cost for newcomers, further consolidating industry dominance among a few major players.

- ***Resource Barrier.*** The global gold mining industry faces significant resource barriers to entry, primarily due to the limited availability of high-quality gold deposits and the high capital intensity required for exploration and development. First, economically viable gold reserves are geographically concentrated in a few regions (e.g., China, Russia, Australia, and Africa), and most easily accessible deposits have already been exploited, forcing new entrants to explore in remote or politically unstable areas. Second, the industry requires massive upfront investments in exploration, mine development, and infrastructure with long payback periods, deterring smaller players. Additionally, declining ore grades and stricter environmental regulations further increase operational costs, making it difficult for newcomers to compete with established miners who benefit from economies of scale, existing reserves, and advanced extraction technologies.

- ***Capital Barrier***. Capital barriers pose a formidable challenge for new entrants in the global gold mining industry. Developing a gold mine requires enormous upfront investments, often exceeding billions of dollars, to cover exploration, feasibility studies, infrastructure, and production setup — with no guaranteed returns. The industry's long payback periods (often 10+ years) and exposure to volatile gold prices further deter risk-averse investors. Established players benefit from economies of scale, existing cash flows, and access to cheaper financing, while newcomers face high borrowing costs or equity dilution to secure funding. Additionally, stringent environmental and ESG (Environmental, Social, and Governance) standards now demand even greater capital for sustainable operations, widening the gap between incumbents and potential competitors. These financial hurdles reinforce the dominance of well-capitalized majors and limit market entry for smaller firms.

- ***Technology Barrier***. Technology barriers significantly restrict new entrants in the global gold mining industry. Modern gold extraction and processing rely on advanced technologies, such as automated drilling, sensor-based ore sorting, and bioleaching, which require specialized expertise and high R&D investments. Established firms leverage proprietary technologies and decades of operational data to optimize recovery rates and reduce costs, while newcomers face steep learning curves and inefficiencies. Additionally, deeper and lower-grade deposits demand cutting-edge exploration tech and sustainable solutions, raising entry costs further. Without access to these innovations, smaller players struggle to compete, reinforcing the dominance of tech-equipped industry leaders.

The following sets out a summary of the significant laws and regulations that affect our businesses in Colombia, Kyrgyzstan, Guyana, Suriname, Ghana, Tajikistan and Australia, as well as our future operations in Kazakhstan. Information contained below shall not be construed as a comprehensive summary of all the laws and regulations applicable to us.

LAWS AND REGULATIONS RELATED TO OUR COLOMBIA OPERATIONS

Mining Matters

In Colombia, mineral rights — with limited exceptions — are owned by the State, as established in the Political Constitution, regardless of who owns the land where the minerals are located. Currently, the only mechanism through which private parties may obtain the right to explore and exploit State-owned mineral resources is the mining concession contract (the "**Mining Title**"). A Mining Title does not transfer ownership of the minerals but grants a temporary and exclusive right to explore and/or extract them in exchange for royalty payments, provided the Mining Title remains in good standing. Importantly, under Colombian mining law, foreign individuals and entities have the same rights as Colombian nationals and cannot be subject to additional or different requirements.

To be valid, these Mining Titles must be formally granted by the competent authority, the National Mining Agency ("**ANM**", for its acronym in Spanish), and registered with the National Mining Registry. The applicable legal framework is primarily set out in Law 685 of 2001, the Colombian Mining Code. However, before the enactment of the current Mining Code, other types of mining titles existed. Some of these mining titles are still in force and continue to be governed by the previous legal framework due to acquired rights.

Regarding institutional responsibilities, the ANM is the entity responsible for administering mining law regarding Mining Titles. Moreover, until January 1, 2024, the Government of the Department of Antioquia also exercised authority over certain aspects of Mining Title administration.

Under Colombian mining law, the first applicant for a given area is granted priority to obtain a mining title. To be awarded the Mining Title, the applicant must pass a legal, technical, economic, and environmental evaluation. The legal evaluation confirms that the applicant has no restrictions on contracting with the State. The technical and economic evaluations assess the proposed exploration activities and the applicant's financial capacity to carry them out. The environmental evaluation verifies whether the requested area overlaps with zones of environmental interest.

As part of the environmental evaluation, ANM requires submitting an environmental certification issued by the competent environmental authority. For applications submitted after January 24, 2023, ANM has further requested that this certification be dated before or on the same date as the filing of the Mining Title application. This requirement has significantly complicated the process of obtaining new Mining Titles due to administrative delays and how the application process functions.

Concerning the timeline of mining activities, Mining Titles in Colombia consist of three stages: (i) an exploration stage lasting three years, extendable for eight additional years; (ii) a construction and assembly stage lasting three years, extendable for an additional year; and (iii) an exploitation stage covering the remaining term of the Mining Title. The total duration of the Mining Title may not exceed thirty years.

Additionally, holders of Mining Titles have different obligations at each stage, including the payment of surface fees, the submission of the annual Basic Mining Format ("**FBM**", for its acronym in Spanish), the acquisition of an environmental mining policy, the preparation of a Work Plan ("**PTO**", for its acronym in Spanish), obtaining an environmental license, paying royalties, implementing a social management plan, and adopting a production control methodology.

Finally, an important aspect to consider regarding mining in Colombia is the extremely high level of informality, particularly in gold production. This involves not only subsistence mining but also the presence of illicit groups engaged in illegal mining activities. While subsistence mining is being addressed through public policies that promote formalization, the involvement of criminal organizations presents more complex challenges for the State. In this context, some of the formalization efforts have been designed to operate within the framework of existing mining titles.

Among the formalization mechanisms available in Colombia, several involve direct participation by existing mining titleholders. These include formalization subcontracts, whereby an informal miner is authorized to operate legally within the boundaries of a registered title through an agreement with the concession holder. Additionally, titleholders may facilitate formalization by assigning part of their area or rights to a third party. These collaborative tools aim to promote legal access to mineral resources. Nevertheless, interference or unauthorized occupation of mining titles remains a common issue.

Environmental and Community Participation Matters

From an environmental perspective, the mining sector is subject to comprehensive regulatory oversight. The regulatory framework includes both national and regional regulations that govern, among others, licenses aimed at managing the projects' potential environmental impacts, permits for the use of renewable natural resources, a broad system of environmentally protected areas, social participation mechanisms and other requirements such as waste management. Further details are presented below.

The Ministry of Environment and Sustainable Development ("**MADS**") is the head of the environmental sector, and is responsible for issuing relevant regulations, whilst the National Licensing Agency ("**ANLA**") and the regional environmental corporations (*Corporaciones Autonomas Regionales*, in Spanish) authorize and surveil projects and activities. Moreover, according to recent regulations issued by the MADS, indigenous communities may appoint bodies that act also as environmental authorities within their territories.

Licenses and permits

As a general rule, exploration activities are not subject to an environmental license, but the titleholder shall request and obtain the environmental permits for the use of the renewable natural resources (e.g., water collections, wastewater discharge, tree cutting) required for such activities. Also, the titleholder shall abide by the mining-environmental guidelines for exploration, which are considered a tool of mandatory consultation and orientation.

In turn, for conducting mining construction, exploitation and closure activities, the titleholder must obtain an environmental license before ANLA or the regional environmental corporations, depending on the size of the exploitation. The request for environmental licensing must be supported by an environmental and social impact study, and must include measures for preventing, mitigating, correcting or compensating such impacts.

The environmental license comprises all activities and permits required for the mining project and may be modified or transferred with the previous authorization of the environmental authority. The environmental authority periodically — usually on an annual basis — surveys the titleholder's compliance with the terms and conditions of the environmental license and may make additional requirements or even initiate investigations in case of identifying breaches of the obligations under the environmental license.

Environmentally protected areas and areas of environmental significance

Under current regulations, mining activities are prohibited within national and regional natural parks (44 and 60, respectively), protective forest reserves (57), moorlands (*paramos*), RAMSAR wetlands (11), coral reefs and mangroves.

Moreover, mining activities may be restricted by the environmental authority within areas declared as national and regional integrated management districts (5 and 130, respectively), soil conservation districts (22), recreation areas (12), among others. In such a case, as well as in case of overlap with forest reserves declared by Law 2 of 1959, the titleholder must request the extraction of the area of interest from the respective protection category, prior to undertaking exploration and exploitation activities.

In 2022, the Council of State ordered the MADS, among others, to clearly identify the environmentally protected areas and other areas of environmental significance in which mining activities are prohibited or restricted, as well as those in which the environmental authority has not established whether mining can be undertaken or not. MADS has not complied with such orders yet.

Community's participation in environmental matters

Prior consultation for ethnic communities

Under the Colombian Political Constitution, Convention 169 of the International Labour Organization and the rulings of the Constitutional Court, indigenous, black and rom communities are entitled to decide on the future of their lives and territories through prior, free and informed consultation, whenever a project or activity may directly affect them. As a general rule, ethnic communities may not hold veto power over the project, conducting the prior consultation process, with or without reaching an agreement with the community, is a requisite for requesting the environmental license.

Other participation mechanisms

Without prejudice of the need for prior consultation, current regulations establish a few mechanisms for guaranteeing citizen participation in environmental proceedings.

On one hand, the Attorney General of the Nation or the Delegate for Environmental Affairs, the Ombudsman, the Minister of the Environment, other environmental authorities, governors, mayors, or at least one hundred (100) persons or three (3) non-profit entities, may request a public hearing to be held before the environmental authority decides on the granting or modification of an environmental permit or license. Although during the hearing no decisions will be made, the interventions of the participants must be considered by the environmental authority when deciding on the granting or modification of the license or permit.

On the other hand, any citizen may request the environmental authority to intervene in the procedures for the granting, modification or termination of environmental licenses or permits, or in environmental investigations. Recently, ANLA has indicated that interventions may also be requested during the surveillance and control of projects subject to environmental license.

Escazu Agreement

On August 28, 2024, the Constitutional Court issued its decision regarding the constitutionality of Law 2273 of 2022, which approved the Regional Agreement on Access to Information, Public Participation, and Access to Justice in Environmental Matters in Latin America and the Caribbean, commonly known as the Escazú Agreement. This agreement aims at ensuring access to environmental information, promoting public participation in environmental decision-making processes and guaranteeing access to justice in environmental matters, among others.

As a result, it is likely that the requests for information related to specific projects and for intervening in environmental procedures may increase. Also, environmental authorities such as ANLA have been prone to broaden the spaces for participation in the different stages of the environmental license based on the Agreement.

Environmental liabilities

Environmental offenses may give rise to administrative, civil and/or criminal liabilities, as described below.

(a) Administrative liability

Laws 1333 of 2009 and 2387 of 2024 govern the administrative liability for environmental offenses in Colombia. Under such laws, the breach of environmental regulations and/or causing environmental damage may give rise to an administrative investigation, which can result in:

(i) preventive measures, including the preventive seizure of products used to commit the offense; the suspension of the project, work or activity; or the order to conduct assessments for establishing the nature of the damage or impacts, and the required measures to mitigate or compensate them; and/or

(ii) penalties, which consist of fines of up to 100,000 monthly minimum wages (i.e., approximately USD$33,000,000)[1], temporary or definitive closure of the project or activity; termination of the license or permit; and demolition of the works, among others. The environmental authority shall consider the severity of the offense when determining the penalty(ies) to be imposed.

The statute of limitations of environmental liability is 20 years.

(b) Criminal liability

Under current regulations, companies are not subject to criminal liability. Accordingly, only individuals may be prosecuted for the commission of environmental crimes such as pollution, damage to the or illegal use of renewable natural resources, among others. Although uncommon, there are precedents of criminal investigations against company officials involved in the commission of an environmental crime in the performance of their jobs.

[1] For offenses committed before July 25, 2024, the maximum daily fine is of up to 5,000 monthly minimum wage (i.e., approximately USD$1,700,000).

(c) Civil liability

Environmental offenses may also give rise to civil liabilities for environmental damage, either individually or collectively (class action), as well as constitutional actions seeking the protection of collective rights (e.g., the environmental) (*acción popular*).

Labour Matters

Key labour laws and regulations

The labour regulatory framework in Colombia comprises (a) the Political Constitution, (b) the Colombian Labor Code, (c) the Social Security Regime, (d) Regulations and decisions issued by the Ministry of Labor, the Labor Courts, and the Constitutional Court, and (e) safe and occupational safety at work regulations.

The foregoing regulations govern employment contracts, working hours, wages, terminations, social security contributions, and occupational safety. As an employer in the mining sector, Continental Gold Limited Sucursal Colombia must comply with strict obligations related to working conditions, benefits, and termination procedures; failure to comply with such regulations may result in fines or judicial proceedings.

Collective bargaining rights

The right to unionize and engage in collective bargaining is a fundamental constitutional guarantee in Colombia, enshrined in Article 39 of the Colombian Constitution and further regulated by the Colombian Labour Code. These rights are reinforced by international treaties ratified by Colombia, including ILO Conventions 87 and 98, which protect freedom of association and the right to organize.

Under this legal framework, employees are entitled to form or join trade unions and to negotiate collectively with their employers over employment conditions, including wages, working hours, occupational safety, and other terms of employment. Employers are obligated to engage in good-faith negotiations and to respect any resulting collective bargaining agreements ("**CBA**").

CBA are material to the company's operations for several reasons:

(a) The CBA may introduce structured wage increases and other financial benefits that may impact labour costs and shall be further analysed.

(b) Non-compliance with the agreement or breakdowns in negotiations could lead to legal claims as well as reputational harm.

(c) Colombian labour law permits strikes under regulated conditions. As such, the existence of a CBA heightens the need for continuous union engagement to avoid disruptions such as strikes or work stoppages.

Occupational Health and Safety (OHS) regulations

Colombian law imposes comprehensive obligations on employers to safeguard the health, safety, and wellbeing of employees, particularly in high-risk sectors such as mining. The regulatory framework is primarily established under Resolution 0312 of 2019 and Decree 1072 of 2015, which mandate the implementation of an Occupational Health and Safety Management System (*Sistema de Gestión de la Seguridad y Salud en el Trabajo — SG-SST*).

(a) This system must be risk-based, preventive in nature, and integrated into the company's overall management practices. It requires employers to:

(b) Conduct formal risk assessments across all operational areas.

(c) Establish policies and procedures to mitigate occupational hazards.

(d) Provide ongoing training, protective equipment, and health monitoring for workers.

(e) Maintain accident and incident records and report them to authorities.

Given the inherently hazardous nature of underground mining, the Buriticá mine is subject to enhanced scrutiny from the Colombian Ministry of Labour. Non-compliance may lead to administrative sanctions, temporary suspension of operations, labour liability for workplace injuries.

Faults and sanctions

Faults and sanctions are listed in the Colombian Labor Code and in the employer's Internal Work Regulation. The severity of sanctions will vary depending on the nature of the employee's fault. Under Colombian labor laws, the following sanctions may be imposed on employees:

(a) Suspension of the employment contract without payment, in certain situations specified by law.

(b) Imposition of fines of up to one-fifth of the employee's daily salary. The money shall be used for awards and recognition of employees' good performance.

(c) Termination of the employment contract with legal cause. The causes must be invoked in writing at the time of termination.

(d) Disciplinary memorandums to be kept in the employees' permanent records.

According to Article 105 of the Colombian Labor Code, before imposing a sanction to an employee, it is mandatory to have an audience in which the employee is guaranteed to use his/her right of defense.

Termination with legal cause

In every employment relationship, any of the parties may terminate the labour contract unilaterally, without cause and without prior notice. However, the terminating party will be responsible for indemnifying damages.

In general, under Colombian law, employment contracts may be terminated without notice by either of the parties. However, if the employer terminates the contract, the effects of the termination will vary depending on whether the contract is terminated with legal cause or not, and on the type of contract.

A contract may be terminated by the employer with legal cause in the event of an employee's violation of legal and/or contractual obligations or internal regulations. In any other event, the agreement will be considered as terminated without legal cause, and the employer will be liable to pay a legal compensation and/or severance payment.

When the employee terminates unilaterally the employment contract, without any breach by the employer, their resignation must be freely and voluntarily made, and it does not require prior notice.

Non-compliance could result in reinstatement orders and retroactive payments.

Restrictions on terminations, including authority approval for collective dismissal

Employers have limits regarding the termination of employment contracts. Current employment regulations have established a limit on the number of employees that may be dismissed without being considered as a Collective Dismissal.

When an employer needs to exceed the limit on employment contracts termination, it is necessary to request a special authorization before the Ministry of Labor. If the employer exceeds such limit without due authorization, the termination will not have any legal effects, and the employees shall be reinstated.

A massive dismissal will be considered as a Collective Dismissal for legal purposes when it surpasses the prescribed percentages depending on the number of the employees of the entity within a period of six (6) months.

Notwithstanding the foregoing, it is important to mention that the employment contracts that are terminated unilaterally by the employer arguing a legal cause attributable to the employee, by mutual agreement or by resignation of employees, are not considered in the percentage to assess if a Collective Dismissal took place.

Labour liabilities

Continental Gold Limited Sucursal Colombia may be subject to a range of potential labour-related liabilities that may arise from breaches of statutory duties, collective bargaining obligations, or failures in labour management practices.

These liabilities may materialize through administrative sanctions, or judicial claims.

Courts may impose monetary compensation, interest, and penalties, and enforce injunctive measures, such as reinstating dismissed employees or halting specific employment practices.

Compliance obligations

Foreign mining branches operating in Colombia may be subject to compliance obligations set forth by the Superintendence of Companies, particularly those related to the prevention of money laundering, terrorist financing, and transnational bribery.

Two key programs are the System for Self-Control and Risk Management of Money Laundering, Terrorist Financing, and Financing of the Proliferation of Weapons of Mass Destruction (SAGRILAFT) and the Business Transparency and Ethics Program (PTEE). The applicability of these programs depends on the financial thresholds and business activities of the company.

Sagrilaft

Under Chapter X of the Basic Legal Circular issued by the Superintendence of Companies, companies are required to implement SAGRILAFT if, as of December 31 of the preceding year, they meet the following criteria:

- Are subject to the surveillance or control of the Superintendence of Companies; and

- Have obtained total income or held total assets equal to or greater than 40,000 Monthly Legal Minimum Wages (MLMW).

Companies meeting these conditions are obligated to adopt the full scope of the SAGRILAFT, including risk identification, assessment, control mechanisms, internal procedures, and reporting duties.

PTEE

Supervised companies must implement a PTEE where, as of December 31 of the immediately preceding year, they meet one or more of the following conditions:

(a) Transnational transactions requirement

- Have carried out international transactions of any nature, either directly, through intermediaries, contractors, subsidiaries, or branches, with foreign public or private legal or natural persons;
- The value of such transactions (individually or jointly) is equal to or exceeds 100 MLMW; and
- Have obtained total income or held total assets equal to or greater than 30,000 MLMW.

Companies meeting this threshold must adopt a PTEE and are required to identify and assess the risks of transnational bribery.

(b) Public sector contracting requirement

- Have entered, directly or indirectly (including via consortiums, temporary unions, or similar structures), into contracts with State entities for an amount equal to or greater than 500 MLMW (individually or in aggregate); and
- Have obtained total income or held total assets equal to or greater than 30,000 MLMW.

Companies under this scenario must also implement the PTEE and are required to identify and assess the risks of corruption.

While the current regulatory regime is well-defined, Colombian authorities have demonstrated a continued commitment to strengthening compliance requirements, particularly in line with international best practices recommendations. Consequently, it is anticipated that further updates to these regulations may be introduced in the near future. Continental Gold should closely monitor developments in this area to ensure ongoing compliance and to mitigate any potential material impacts on its operations in Colombia.

Customs Matters and Foreign Exchange Regime

Importation of Goods

According to Decree 1165 of 2019, the entry of foreign goods into the National Customs Territory ("**TAN**", by its acronym in Spanish) requires the submission of an import declaration and the payment of applicable customs duties (tariff and VAT).

For tariff purposes, Colombia uses the Harmonized Commodity Description and Coding System approved by the World Customs Organization (Decree 1881 of 2021). Tariffs in Colombia generally range from 0% to 5% and 10% to 15%.

It is worth noting that a 0% tariff applies in Colombia to import machinery and equipment not produced in the country, according to the tariff subheadings approved by the Ministry of Commerce, Industry, and Tourism under Decree 272 of 2018. This benefit aims to support the productivity and competitiveness of various sectors, including mining.

The general value-added tax ("**VAT**") rate in Colombia is 19%.

Regarding import procedures, Colombia offers different import modalities, which importers may use depending on the type of transaction with their supplier, the duration of goods' stay in the country, and, in general, the importer's needs in each case.

As a general rule, goods are freely importable into Colombia, meaning they do not require prior authorization unless they are expressly prohibited, restricted, or subject to prior requirements for reasons related to health, safety, the environment, or national defense. These include, for example, narcotics, controlled chemical substances, waste or hazardous materials, used or refurbished equipment, among others. Such goods require an import license or registration, which the importer must obtain through the "Single Window for Foreign Trade" ("**VUCE**" by its acronym in Spanish), managed by the Ministry of Commerce, Industry, and Tourism.

Under current regulations, goods imported into Colombia may be stored in authorized warehouses for one month, extendable by an additional month, counted from the unloading date. If the goods are not cleared up or re-exported within that time, they will be considered legally abandoned in favor of the Nation. However, there are cases in which the submission of an advance import declaration is mandatory.

Exportation of goods

The export process begins with submitting and accepting a shipping authorization request and ends with submitting an Export Declaration through the Customs Authority's electronic systems.

Generally, exports from Colombia are not subject to customs duties.

Foreign exchange regime

Colombia has a clear and reasonably stable foreign exchange regime.

Although the foreign exchange market operates freely, exchange regulations establish certain operations that must be channeled and reported to the Central Bank of Colombia (Banco de la República), along with the procedures to be followed and the penalties applicable in case of non-compliance.

The following operations are subject to mandatory channeling through the foreign exchange market, (a) import and export of goods, (b) foreign debt operations by residents, including associated financial costs, (c) foreign capital investments in Colombia and their returns, (d) Colombian capital investments abroad and their returns, (e) financial investments in securities issued and assets located abroad, including related returns, (f) guarantees and sureties in foreign currency, and (g) derivatives transactions.

The declarant of the foreign exchange transaction may fulfill the obligation to channel foreign currency through the exchange market using one of the following mechanisms: a) buying/selling foreign currency through authorized Foreign Exchange Market Intermediaries; or b) using a foreign bank account registered under the compensation mechanism with the Central Bank of Colombia.

Foreign investment

Registering a foreign investment with the Central Bank of Colombia requires the submission of an exchange declaration and grants the investor "foreign exchange rights," such as the ability to receive dividend payments abroad and to transfer the registry of foreign investment to another foreign investor in the event of the sale of the shares.

Taxation on Mining Companies

From a tax perspective, the obligations of mining branches of foreign companies operating in Colombia are governed by a broad set of national and local regulations. The following section outlines the key tax obligations that are materially relevant to their business operations.

Income tax

Branches of foreign companies operating in Colombia are subject to the general corporate income tax regime. To comply with this requirement, branches must maintain separate accounting records that clearly distinguish the income, costs, and expenses attributable to their operations in Colombia.

The tax is levied on the net profit generated by the branch's economic activity, based on the income earned and the costs and expenses incurred to generate that income.

As of 2025, the standard corporate income tax rate is 35%. The taxable period for income tax purposes is the calendar year, which begins on January 1 and ends on December 31. However, the tax return must be filed in the following year, in accordance with the deadlines set by the applicable tax calendar issued by the Colombian tax authority.

Capital gains

Capital gains tax applies to specific types of income arising from transactions deemed extraordinary by the Colombian legislation, as they do not originate from regular business operations, including (a) gains from the disposal of fixed assets held for two years or more; (b) the excess of capital returned upon the liquidation of a company over the amount originally contributed or invested; (c) income from donations; and (iv) income from lotteries, prizes, raffles, bets, and similar extraordinary winnings.

Capital gains are subject to separate taxation from ordinary income and are not eligible for deductions related to the taxpayer's ordinary costs and expenses.

As a general rule, capital gains in Colombia are subject to a tax rate of 15%. However, an exceptional rate of 20% applies to capital gains derived from lotteries, raffles, bets, prizes, and similar types of windfall income, as specifically provided by law.

Capital gains tax is calculated and filed simultaneously with the corporate income tax return.

Value-added tax (VAT)

Value-Added Tax (VAT) in Colombia is a national-level indirect tax applicable to the transactions mentioned in Article 420 of the Tax Code, unless expressly excluded by law. The general VAT rate is 19%, though certain goods and services are subject to a 5% rate or except (0% rate).

As a general rule, VAT paid by the company on the acquisition of goods and services may be offset against the VAT collected from clients, to determine the net VAT payable to the Colombian Tax Authority in the corresponding tax return.

Dividends

From a tax perspective, the transfer of profits attributed to a foreign entity's branch in Colombia to its related companies abroad is permitted and will be subject to the tax rules applicable to dividend distributions.

Pursuant to Article 245 of the Colombian Tax Code, distributions of dividends to foreign entities will be taxed as follows:

- If the profits have already been taxed at the standard 35% corporate income tax rate, the dividend distributed will be subject to an additional 20% withholding tax.

- If all or part the profits were not taxed at the corporate level, they will be subject to the 35% corporate income tax, and on the remaining 65% of such profits, a 20% income tax withholding shall also be applicable.

Stamp tax

The National Stamp Tax was reintroduced by Decree 0175 of 2025, as a result of the modification of the applicable rate from 0% to 1%, and applies to the execution, acceptance, or issuance of public instruments and private documents, provided that all the requirements established in Article 519 of the Tax Code are met and the document is not exempt pursuant to Article 530 of the same code. Transactions that do not qualify for an exemption may be subject to a 1% tax on their gross value. The economic burden of the tax may be contractually allocated between the parties as they deem appropriate. However, if both parties to the agreement are legal entities, the party making the payment is legally responsible for collecting and paying the tax to the Colombian tax administration.

Property tax

The Unified Property Tax is a local, annual tax levied on the ownership or possession of real estate located within the jurisdiction of a particular municipality.

The administration, collection, and oversight of this tax are the responsibility of each individual municipal or district government. The tax base is generally the cadastral appraisal value of the property, or the self-assessed value.

The applicable tax rate is determined by the respective local regulations and may range from 5 to 16 per 1,000.

Local industry and commerce tax

The Industry and Commerce Tax (ICA for its acronym in Spanish) is a local tax imposed by municipalities on all commercial, industrial, or service activities carried out directly or indirectly within their jurisdiction. This tax applies to legal entities, including branches, regardless of whether their operations are permanent or occasional, and whether or not conducted from a physical commercial establishment.

The tax is generally assessed on gross income generated within each municipality, with rates ranging from 4 to 14 per 1,000, depending on the type of activity and local regulations.

Financial transaction tax

The Financial Transactions Tax (GMF for its acronym in Spanish) applies financial transactions in which funds are withdrawn or transferred from checking or savings accounts, deposit accounts at Banco de la República, or when cashier's checks are issued.

The applicable rate is 4 per 1,000 of the value of each taxable transaction. This tax is withheld by the financial institutions, which are responsible for collecting and paying the tax to the Colombian Tax Authority.

LAWS AND REGULATIONS RELATED TO OUR KYRGYZSTAN OPERATIONS

Main laws and regulations on mining

Legal framework

The legislation of the Kyrgyz Republic in the field of subsoil use is based on the provisions of the Constitution of the Kyrgyz Republic and consists of the Law "On Subsoil" No. 49 dated 19 May 2018 (the "**Subsoil Law**"), and other normative legal acts of the Kyrgyz Republic adopted in accordance with it.

Subsoil is defined as the part of the earth's crust located beneath the soil layer, or in its absence, beneath the earth's surface and the beds of water bodies and watercourses. It extends to depths accessible for geological exploration and development, and includes placer occurrences of mineral resources.

Granting of subsoil use rights

Subsoil use rights may be granted for geological mapping and research, exploration, and extraction of minerals/groundwater, as well as for construction and operation of underground facilities not related to mineral extraction, and for establishing protected sites of scientific, cultural, environmental or other importance.

The right to use subsoil may be provided on the basis of (i) a license, (ii) state registration, (iii) a concession agreement, (iv) a production sharing agreement.

The right to use subsoil on the basis of a license may be granted through (i) tender, (ii) auction, (iii) application of the "first-come, first-served" principle, (iv) decision of the Cabinet of Ministers of the Kyrgyz Republic.

Licenses for the development of mineral deposits are issued up to 20 years, with the possibility of extension until the depletion of mineral reserves.

Licenses for the extraction and use of groundwater are issued up to 10 years with the possibility of further extension. This type of licenses may be extended upon the licensee's application if submitted before expiry, accompanied by a positive hydrogeological assessment, a report on work performed during the current year, and the well owner's consent if the well is privately owned.

Holders of the subsoil use rights

The right to use subsoil may be provided only to legal entities established in accordance with the Kyrgyz Law, as well as individuals (including foreign citizens) registered as individual entrepreneurs under the Kyrgyz Law.

Since 22 June 2022, a legal entity or individual recognized as the winner of an auction or tender for the right to use large or medium-sized gold and silver deposits is required to establish a legal entity in the Kyrgyz Republic, with a mandatory state participation share of not less than 30%, for the purpose of obtaining a subsoil use license. The Kyrgyzstan Taldybulak Levoberezhny Gold Mine is medium-sized. This norm has no retrospective force, though our Company already has a 40% state participation share.

Suspension and termination of the subsoil use rights

Suspension of the subsoil use rights

The right to use subsoil may be suspended by the authorized state body for subsoil use for a period of up to three months, with an indication of the reasons for the suspension and an order to remedy the identified violations. Such license suspension may be in the following cases:

(a) violation of subsoil protection, environmental, or industrial safety requirements established by the legislation of the Kyrgyz Republic, creating an immediate threat to the life or health of individuals working or residing within the area affected by subsoil use activities;

(b) failure to submit reports on geological and mining operations or reports on the movement of mineral reserves within the deadlines established by the legislation of the Kyrgyz Republic;

(c) submission of reports on geological and mining operations or reports on the movement of mineral reserves containing inaccurate information;

(d) failure to comply with requirements on the accumulation of funds for land reclamation;

(e) violation of the deadlines for payment of the bonus and/or license fees;

(f) failure to notify the authorized state body for subsoil use within the prescribed period about a change in the participants (shareholders) of the licensee legal entity, if such a change results in a bonus payment under the tax legislation of the Kyrgyz Republic.

If the subsoil areas are included in the Register of subsoil plots of national importance then, in the event of failure or improper fulfillment by the licensee of the obligations set out in the terms of the social package, the right to use subsoil may be suspended by the authorized state body for subsoil use for a period of three months. The Kyrgyzstan Taldybulak Levoberezhny Gold Mine included in the Register of subsoil plots of national importance; therefore, this norm is applicable to our Company. The deadline for the elimination of violations maybe extended by the authorized state body for subsoil use, upon a reasoned request from the subsoil user which shall be submitted no later than five days prior to the expiration of the license suspension period.

Termination of the subsoil use rights

The right to use subsoil may be terminated on the following grounds:

(a) voluntary waiver of subsoil use rights by the subsoil user;

(b) expiration of the license term without a timely application by the licensee for its renewal or transformation;

(c) conducting operations without an approved technical project that has passed all required expert reviews and/or without a license agreement for the planned works;

(d) failure to eliminate, within the established timeframe, the causes that led to the suspension of subsoil use rights;

(e) carrying out subsoil use activities during a period in which such rights were suspended;

(f) failure to disclose, or the discovery of false information regarding, the company's beneficial owners;

(g) failure to fulfill the design obligations under the license agreement for more than two years, except for licenses issued through tenders for subsoil areas of national significance.

Laws and regulations on export of gold

The regulation governing the export and import of ores, concentrates, and waste containing precious and associated extractable metals in the Kyrgyz Republic establishes a mandatory accounting control system. This system applies to all foreign economic activities involving such raw materials. Exporters must undergo a classification and accounting process, which includes laboratory sampling and testing. These tests determine the composition and quantity of valuable metals, and the results are used for calculating taxes and issuing export licenses. The applicant must provide a comprehensive set of documents, including proof of subsoil use rights, ownership documents, and foreign trade contracts. Based on the results, the authorized body issues an expert opinion confirming the quantity of metals and the feasibility of processing the materials domestically. This opinion is used both for licensing and taxation purposes.

State laboratory assessments

On 15 July 2022, the Cabinet of Ministers of the Kyrgyz Republic adopted Resolution No. 384, introducing amendments to the Regulation on Export and Import of Precious Metal-Containing Materials (as defined in footnote 23). The amendments transferred the full responsibility for sampling inspections and laboratory analysis to the state enterprise "Central Laboratory under the Ministry of Natural Resources, Ecology and Technical Supervision of the Kyrgyz Republic" (the "**Central Laboratory**") to strengthen government oversight of precious metal content. Previously, the Central Laboratory functioned primarily in a supervisory capacity, conducting sample analyses on selected batches of concentrates and ores. It had the authority to carry out either selective or continuous monitoring of sample inspections. Following the amendments, the Central Laboratory became the exclusive entity authorized to perform the entire process of sample inspection and testing, thereby enhancing the regulatory framework and state control over the export and import of precious metal-containing materials.

State's Priority Right to Purchase Gold

The Cabinet of Ministers and the National Bank of the Kyrgyz Republic hold a priority right to purchase refined precious metals and precious stones derived from domestically mined ores and intermediate refining products, whether refined in Kyrgyzstan or abroad. These purchases are made at world market prices, minus transportation and sales-related costs.

The Cabinet of Ministers' priority rights are exercised through an authorized state body. Sales to the Cabinet of Ministers and the National Bank are carried out in accordance with procedures established by each respective authority.

If the Cabinet of Ministers or the National Bank decline to exercise their priority right, the refined precious metals and precious stones may be sold to third parties.

Laws and regulations on financial obligations

Tax payments

Taxation in the Kyrgyz Republic is regulated by the Tax Code of the Kyrgyz Republic No. 3 dated 18 January 2022 (the "**Tax Code**") and other legal acts. For tax purposes, Kyrgyz law classifies legal entities as domestic or foreign. Domestic entities are established under Kyrgyz law, while foreign entities are those formed under foreign laws or as international organizations.

General tax regime

To date, in the Kyrgyz Republic, the following taxes are chargeable from relevant taxpayers under the general tax regime.

National taxes	**Local taxes**
Profit tax	Property taxes (e.g. for a land, buildings, vehicles, etc.)
Income tax	
Value added tax (VAT)	
Excise tax	
Mining taxes (bonuses and royalties)	
Sales tax	

As a rule, the mining industry in the Kyrgyz Republic is subject to a general tax regime.

Mining taxes

(a) Bonuses

Bonus is a one-time payment for the subsoil use right for prospecting, exploration and development of mineral deposits. The tax base for the calculation of the bonus is the amount of geological reserves and expected resources registered by State cadaster of deposits and occurrences of minerals of the Kyrgyz Republic, size of the license area, and the drilling depth of water wells. The bonus shall be paid within 30 days from the date of licence issuance.

(b) Royalty

Royalty is the recurrent payments for the use of subsoil for development purposes and/or selection (extraction from the subsoil) of groundwater. The royalty tax base is determined by revenue from mineral sales (excluding certain costs and taxes), the volume of subsoil water withdrawn, or the value of pure metals in ores or concentrates — whichever is higher in the case of metal sales. The royalty rate is 5 percent for gold, silver

and platinum, as well as metal-containing ores and concentrates of gold, silver and platinum. For metals, metal-containing ores and metal concentrates, except for gold, silver and platinum — 3 percent.

Non-tax payments

Land rent fee

The land plots for mining use are provided only for temporary use. Upon leasing a land plot, a mining company shall pay a land rent fee, which generally amounts to double the land tax. The tax base is the area of the land plot in square meters.

License retention fee

The fee is paid by holders of licenses for prospecting, exploration, or development of mineral deposits (extraction of minerals) in the Kyrgyz Republic, with the taxable object being the licensed use of mineral resources within a designated area. The tax base is the size of the licensed area. When subsoil is used for development purposes, the fee is not charged after reaching the design capacity, provided that 90% of the annual mineral extraction volume set by the licensing agreement is achieved.

Surface water usage fee

Mining companies pay 100 soms or 60 soms per cubic meter for using surface water, depending on whether the water source is above or below 2,700 meters in elevation.

Ecological fees (waste disposal fees)

Mining companies in the Kyrgyz Republic are also mandated to pay ecological fees for environmental pollution and waste disposal. These payments encompass charges for emissions into the atmosphere, discharges into water bodies, and the placement of industrial and hazardous waste. Environmental pollution fees are charged at 3.24 soms per standardized ton for air emissions and for the disposal of waste and mining dumps, and at a higher rate of 10.5 soms per standardized ton for the discharge of pollutants into the environment through wastewater.

Other mandatory payments

Among other mandatory deductions are social security contributions to the Social Fund of the Kyrgyz Republic regulated by the Law "On State Social Security", the Law "On Tariffs of Social Security Contributions for State Social Security", and other acts.

Laws and regulations on social obligations

Social package

According to the Kyrgyz Law, a social package is a voluntary agreement between a subsoil user and a local government body to promote the socio-economic development of a region in which a subsoil use facility of national importance is located, which is prepared on the basis of a program for the socio-economic development of the local community. However, in practice, subsoil users are rather obligated to enter into such agreements, as tender conditions typically include mandatory commitments to a minimum level of investment in the socio-economic development of the local community where the subsoil operations are conducted.

Local infrastructure development obligations

Separate from social package, mining companies also incur payments for the development and maintenance of local infrastructure and the implementation of targeted activities. Payments are calculated at 2 percent of the revenue generated from the sale of minerals or, if the minerals have not been sold, based on their value prior to processing, with the amount excluding indirect taxes such as VAT and sales tax, but including the costs associated with shipping and transportation of the minerals.

Laws and regulations on labour matters

General requirements

The Labor Code of the Kyrgyz Republic No. 24 dated 23 January 2025 (the "**Labor Code**") establishes a standard workweek of 40 hours, with a daily limit of 8 working hours, and requires employers to provide overtime compensation in accordance with the law. Specific provisions also apply to shift-based work, which is common in the mining sector, to ensure compliance with rest periods and occupational safety standards. Employers must grant employees annual paid leave, sick leave, and other statutory benefits, including extended annual leave for mining workers due to the hazardous nature of their work. In terms of occupational health and safety, mining companies are obligated to conduct regular risk assessments, maintain safe working conditions, and provide employees with appropriate personal protective equipment. They must also ensure that all workers assigned to physically demanding or dangerous tasks undergo mandatory pre-employment and periodic medical examinations to confirm fitness for duty.

Employee financial benefits

(a) Highland work benefits

Mining companies developing mining deposits must consider regional wage coefficients for employees when paying salaries. For the Gold Deposit the coefficient is 1.2.

(b) Temporary disability benefits

On 18 September 2018, the Government of the Kyrgyz Republic adopted Resolution No. 434, approving a new Regulation on the provision of temporary disability benefits, maternity benefits, and funeral allowances. Under the updated rules, individuals working in high-altitude and remote hard-to-reach areas are entitled to receive temporary disability benefits equal to 100% of their average daily earnings for each working day, including all additional payments. Unlike the previous 2011 regulation, which differentiated benefit rates based on work tenure and provided for mandatory medical examination by the Medical-Social Expert Commission (MSEC) for long-term illnesses, the new regulation applies a uniform 100% benefit rate regardless of tenure and omits the requirement for medical examination by MSEC.

Mandatory insurance

Mining companies are required to obtain mandatory employer civil liability insurance to protect employees against occupational injuries, illnesses, or fatalities incurred during the performance of their job duties. The insured amount under the mandatory employer liability insurance agreement is determined by the contract, but it must not be less than the annual wage fund for all employees, categorized by personnel type (production, administrative-management, and support staff).

National and foreign workers ratio

Subsoil users are required to ensure that at least 90 percent of their workforce involved in operations within the territory of the Kyrgyz Republic consists of Kyrgyz citizens.

Other regulations on foreign workers

Foreign nationals working in the Kyrgyz Republic are subject to local labour laws unless otherwise stipulated by national laws or treaties. They have equal rights to employment, provided they meet qualification and documentation requirements. Employers must apply for foreign worker quotas, and most foreign nationals (excluding those from the EAEU countries: Russia, Kazakhstan, Belarus, Armenia) must obtain work permits, issued by the Migration Department under the Ministry of Labour. Work permits are fee-based, and annual quotas are approved by the Cabinet of Ministers, taking into account economic contributions and priority employment rights of Kyrgyz citizens.

Laws and regulations on land provision and use

Land relations in the Kyrgyz Republic are governed by the Land Code, which classifies land into categories such as agricultural, residential, industrial, protected areas, forest, water infrastructure, and reserve land. If a land user intends to use a land plot for purposes beyond those permitted for its current category, the land may be converted to a different category to enable the intended use in accordance with Kyrgyz Law. Land rights may be acquired either through transfer by a current owner/user or by grant from public authorities. Public or municipal land can be obtained via auction, tender, or direct sale under certain conditions (e.g. pre-existing structures or adjacent ownership). Rights are formalized through agreements that must be registered but do not require notarization.

Restrictions on Foreign Ownership of Land Plots

The Kyrgyz Law permits foreign persons/entities to acquire non-residential buildings and structures, but restricts ownership of land and certain types of immovable property. Foreign ownership of agricultural land is banned, while residential land may only be acquired through mortgage enforcement, subject to disposal within two years. Non-residential land (excluding for agricultural or mining use) may be granted for temporary use, typically by government decision. Land in border areas is generally off-limits to foreigners. Foreign-owned immovable property that cannot be legally held must be disposed of within legally defined periods — typically one to three years — or it may be forcibly sold or transferred to state ownership with compensation.

Rights to lands for mining use

The Constitution and the Subsoil Law establish an ownership system according to which the subsoil is the exclusive property of the state and is under its special protection. Subsoil users shall receive the land use rights alongside the licence issuance. The land use rights typically stay effective as long as the licence is in force. Still, the mining companies shall ensure access to land plots to state officials and representatives of the local government.

Transformation of land plots and payment of the compensation amounts

If land plots are classified under a land category that prohibits mining or related activities, they must be formally reclassified into a category that permits subsoil use before any such operations can legally commence. This reclassification process is always accompanied by the payment of compensation for agricultural/forestry losses and lost profits resulting from the change in land use. Depending on the initial category of the land plot, either the Cabinet of Ministers, local government administration or the Mayor's office of the city of republican or regional significance shall reclassify the land plot subject to approval of local self-government.

Laws and regulations on environmental protection and preservation

Kyrgyzstan's environmental protection and natural resource management are governed by a comprehensive legal framework, including key laws such as the Environmental Protection Law, Environmental Review Law, and others addressing waste management, radiation safety, and protected natural areas. Specific regulations set safety standards for air, water, soil, biodiversity, and waste disposal. The country is also engaged in international environmental initiatives, having acceded to 11 conventions and 3 protocols since 2007. The Ministry of Natural Resources, Environment and Technical Supervision is the competent authority overseeing environmental policy and regulation (including regulation of mining activities).

Environmental impact assessment

In Kyrgyzstan, all projects that may impact the environment — whether through construction, reconstruction, or expansion — are subject to mandatory environmental impact assessment (EIA) and environmental review. EIAs must be conducted by the project initiator during the feasibility stage. A positive state environmental review is a prerequisite for project approval and financing. Projects cannot be commissioned without proper pollution control systems in place. Environmental reviews assess compliance with environmental legislation, with the Ministry of Natural Resources, Environment and Technical Supervision serving as the competent authority. The state review period may take up to three months.

Protected natural areas

It is prohibited or limited to conduct works on prospecting, exploration and development of mineral deposits in specially protected natural areas (reserves, natural parks, wildlife sanctuaries, natural monuments, botanical gardens, dendrological and zoological parks, biosphere territories and/or reserves, transboundary specially protected natural territories). There are also restrictions on conducting works in the border areas.

Closure of mines and reclamation of lands

Mining companies are obligated to plan and finance mine closure and land reclamation in accordance with the Subsoil Law. The Law mandates that subsoil users develop and submit a Mine Closure and Reclamation Plan (MCRP) as part of their licensing process.

Subsoil users are obligated to carry out land reclamation to preserve ecological balance, restore and improve soil fertility, and repurpose lands for agricultural, forestry, water management, recreational, environmental, and sanitary uses. In line with the Subsoil Law and the Land Reclamation Regulation, subsoil users must finance reclamation activities through monthly contributions to special reclamation funds held in bank accounts. Since 17 August 2021, all such accounts have been transferred to

state-owned banks. The legislation does not specify the conditions for the release of funds from these accounts. Also, despite the legal obligation to carry out reclamation, the Kyrgyz Law lacks enforcement mechanisms to ensure compliance with this requirement.

Dust Prevention

Mining companies are obligated to implement comprehensive dust prevention and control measures as part of their environmental protection duties. These obligations arise under the Law on Environmental Protection and various technical and sanitary regulations. Required measures particularly include regular sprinkling of roads, which lead to greater payments of surface water usage fee upon amendments in October 2021.

Laws and regulations on foreign investment

Regulation of foreign investments

The Kyrgyz Republic regulates investment activities through the Law on Investments. The Kyrgyz Law grants broad rights and guarantees to foreign investors, as described below.

The National Investment Agency under the President, which oversees investment policy, foreign investment mobilization, export promotion, and investor protection, is the key authority in this area and reports directly to the President.

Government Guarantees to Foreign Investors

Under Kyrgyz Law, foreign investors are guaranteed national treatment, equal rights with domestic investors, and protection against unlawful interference, including expropriation (except in cases of public interest with adequate compensation). Investors are entitled to freely repatriate capital and profits, conduct unrestricted monetary transactions, access public information, and invest in any lawful activity, including licensed ones. They may establish legal entities, hire local or foreign staff (subject to restrictions described above), and acquire most property types (excluding land plots). Intellectual property rights are fully recognized. Additionally, qualifying investors may access a 10-year stabilization regime, choosing the most favorable tax and nontax conditions in case of legislative changes, as regulated by the Kyrgyz Law.

Foreign Currency Exchange Policy and Control

The National Bank of the Kyrgyz Republic oversees monetary policy and foreign exchange regulation, including the import/export and trade of foreign currency and precious metals. The national currency (som) is the sole legal tender for domestic transactions, with foreign currency use restricted to exceptions provided by law.

Foreign exchange operations are generally liberal: residents and non-residents may freely buy, sell, and transfer foreign currency, and import/export it if properly declared. However, residents must register foreign bank accounts and external loans with the National Bank and submit quarterly reports. The Kyrgyz Republic, as an IMF member under Article VIII, maintains open current account transactions, with the National Bank reserving the right to impose controls to protect national economic security.

Settlement of Investment Disputes

Under Kyrgyz Law, investment disputes may be resolved using any mutually agreed procedure. If no agreement is reached, disputes between investors and public authorities should first be addressed through consultations. If unresolved within three months, the dispute defaults to resolution in Kyrgyz courts unless both parties agree in writing to refer it to international arbitration, either through ICSID or an ad hoc tribunal formed under UNCITRAL rules.

LAWS AND REGULATIONS RELATED TO OUR GUYANA OPERATIONS

Laws and Regulations on Mining Activities

Mining in Guyana is provided for under the Mining Act, Cap 65:01 (the "**Mining Act**"), the Mining Regulations thereunder, and enforced by the Guyana Geology and Mines Commission ("**GGMC**". Under the Mining Act the State is the owner of all subsurface mineral rights in Guyana and authorises the GGMC to manage these resources. The GGMC is a semi-autonomous state agency which reports to a board of directors and a Minister of Mines (Minister of Natural Resources and the Environment). Mining in Guyana is administered via the six established mining districts.

Exploration

Individuals or companies interested in mining must first obtain permission from the GGMC in the particular category they wish to mine. The application process to be undertaken is determined by the scale of mining to be undertaken.

The Mining Act identifies large scale prospecting licences, large scale reconnaissance (Geological, Geophysical and other surveys) permission, medium scale prospecting licences, Quarry licence, small scale prospecting claim and river location licences. The applicant for a prospecting licence must demonstrate that they have the adequate financial resources, technical competence and experience, and must also submit an adequate programme of operations. Small and medium-scale mining and prospecting are prohibited in designated buffer zones near rivers, roads, residences, nature parks, and protected areas.

Large scale prospecting licence holders are required to submit annual work plans and budgets for explorations for approval by the GGMC and are required to submit quarterly and annual progress reports as well as audited financial statements. They are also required to lodge a performance bond of 20% of the annual budget and the GGMC monitors the work through site visits and the submitted reports. Large scale prospecting is restricted in certain areas near villages, public works, agricultural land, and areas of lawful fishing or navigation, requiring consent or notification for exceptions.

Small and medium scale licences can only be issued to Guyanese (citizens, partnerships/associations, companies or cooperatives) (§57 of the Mining Act). Large scale licences, Quarry licences and reconnaissance permission can be issued to Guyanese citizens and Guyanese and foreign companies (§17 of the Mining Act).

All of the permits, except the small scale prospecting permit, is tied to and can only be used over a specified area/property. The GGMC requires that all mining activity be preceded by an exploration period, even if it is small scale.

After getting permission from the GGMC, the next step is to prospect, which will lead to further exploration activity, sampling etc.

Types of Mining Permits

If the area shows promise for minerals the licence holder will apply for a claim (in the small scale) or for a mining permit (medium scale) or mining licence (large scale).

(a) Small Scale (Claims Licence)

Once a prospecting permit holder identifies a viable claim or river location, they must apply for a claim or river location licence within sixty (60) days. This licence confers the right to remove minerals within the boundaries set out in the application. A claim or river location licence is valid for one calendar year, commencing on January 1st and expiring on December 31st, and is renewable annually upon application (Mining Act, §63(2)).

A holder of a mining permit is entitled to exclusive possession of the licensed area and may conduct mining operations therein. In the case of gold mining, the permit also authorizes the removal and disposal of gold, subject to compliance with the Gold Board Act (Mining Act, §64(1)).

To activate a claim or river location licence, the holder must: (i) pay the applicable annual rental fee per acre, as prescribed by the Guyana Geology and Mines Commission (GGMC); (ii) submit an Environmental Management Agreement; and (iii) satisfy all prescribed environmental conditions. The licence does not take effect until these obligations are fulfilled and the GGMC has completed on-site verification of the claim. Although mining operations may not lawfully begin until the claim is duly filed and verified, filing an application and notice of location is sufficient to initiate the process. Notably, small-scale operators are not required to prepare Environmental Impact Assessments (EIAs) during the prospecting phase.

(b) Medium Scale (Mining Permit)

Medium-scale operators may apply for a mining permit or special mining permit upon successful completion of prospecting activities. While an Environmental Impact Assessment (EIA) is not required for medium-scale operations, applicants must submit an Environmental Management Agreement addressing fourteen (14) specified areas, including the installation of an approved mercury retort. Additionally, they are required to prepare and submit a mine closure plan and a contingency and emergency response plan to the Guyana Geology and Mines Commission (GGMC).

Once a suitable site is identified, the holder of a medium-scale prospecting permit must apply for a mining permit within sixty (60) days. The permit authorizes mineral extraction within the boundaries defined in the application and remains valid for a term of five (5) years, or for the life of the mine if shorter. Permits may be renewed upon expiration for additional terms not exceeding five years each, so long as mining operations continue (Mining Act, §63(1)).

The holder of a mining permit is granted exclusive rights to enter, mine, and remove minerals from the permitted area. In the case of gold, the operator is also authorized to remove and dispose of gold subject to compliance with the Gold Board Act (Mining Act, §64(1)).

Mining permit holders must also pay an annual rental fee for each acre under licence, with rates prescribed and periodically updated by the GGMC.

(c) Large Scale (Mining Licence)

Where exploration activities indicate the presence of viable mineral deposits, an operator may apply for a large-scale mining licence under §43 of the Mining Act. The application must be supported by:

- a technical and economic feasibility study,
- a mine development plan, and
- an environmental management plan.

An EIA is also required for most large-scale mining operations. This must be reviewed and approved by the Environmental Protection Agency (EPA) of Guyana, and no mining licence can be issued unless the requisite Environmental Permit is first granted by the EPA (see §B(v) below).

A mining licence is typically granted for a term of twenty (20) years, or for the life of the mine, whichever is shorter. The licence may be renewed upon application at the end of its term, subject to the conditions set out in the Mining Act. The licence holder must pay an annual rental fee for each acre covered by the licence, with the rates prescribed and periodically revised by the Guyana Geology and Mines Commission (GGMC). In some cases, a performance bond may also be required as a condition of approval.

The holder of a mining licence is entitled to conduct mining and development operations, and commence production in accordance with an approved programme of operations, subject to the terms of the licence, applicable mineral agreements, and compliance with the Mining Act, Mining Regulations, and any applicable environmental permits (Mining Act, §44(3)(a)).

With respect to renewal, §50(1) of the Mining Act provides that the Commission may, with the Minister's approval, grant a renewal on such conditions as it deems fit or refuse to renew the licence. However, §50(2) mandates that the Commission must refuse renewal if the licensee is in default, unless there are special circumstances justifying an exception. The duration of any renewal shall not exceed seven (7) years (§50(3)).

While the renewal process is generally discretionary, the parties may agree by contract to create more specific rights or conditions regarding renewal, thereby contracting out of the purely discretionary regime in certain respects.

Change of Control

Pursuant to §18 of the Mining Act, a body corporate that is the holder of a mining licence must not, without the prior written consent of the Minister: (a) register the transfer of any equity shares to a particular person or nominee; or (b) enter into any agreement, arrangement, or understanding (whether or not legally enforceable) with any particular person, where the effect would be to confer control of the body corporate on that person or another. This provision is designed to ensure that the Government maintains oversight over changes in control of licensed mining operations in Guyana.

§18(3) of the Mining Act defines "control" as including any of the following:

- Holding twenty percent (20%) or more of the issued equity shares of the body corporate;
- The power to appoint or prevent the appointment of fifty percent (50%) or more of the directors; or

- The entitlement to exercise, or to control (whether directly or indirectly, including through trusts) the exercise of, not less than forty percent (40%) of the total voting rights attached to the issued equity shares.

The term "holder" of a mining licence is also expressly defined in the Act to mean the person to whom the licence is granted, or in the case of joint grantees, each such person, and includes any person to whom the licence or an interest therein is lawfully transferred. Accordingly, the statutory requirement for ministerial consent applies only to changes involving the registered licence holder. Indirect changes in shareholding or ultimate ownership may fall outside the scope of §18 unless they result in a qualifying change of control of the licence-holding entity itself.

This interpretation is supported by a plain reading of the Act and by judicial and academic authorities that have construed the term "holder" in comparable statutory contexts to mean the formal, registered holder of the relevant interest. For instance, it is well established that beneficial ownership or economic interests do not constitute "holding" in the statutory sense unless accompanied by legal title or registrable interest.

Nevertheless, it is recognized that regulatory authorities may take a cautious or expansive view of significant corporate reorganisations involving the mining sector, particularly where the scale of operations or perceived strategic importance warrants greater scrutiny. To mitigate any risk of regulatory objection or delay, it is prudent practice to notify the relevant authorities of any transaction that may be perceived as effecting a change of control, even if such a transaction does not, in strict legal terms, trigger the thresholds set out under §18(3).

Where ministerial consent is in fact required, the process involves administrative review by the Guyana Geology and Mines Commission (GGMC) and final approval by the Minister, typically requiring Cabinet-level consideration. While no statutory time frame is prescribed, experience suggests that approval may take several weeks or longer depending on the complexity of the transaction and prevailing administrative priorities. However, provided that the licence terms remain unchanged and the operator remains in good standing, approvals are generally not withheld.

Trust and Nominee Structures

As stated above, small and medium-scale mining permits may only be issued to Guyanese citizens/entities pursuant to §57 of the Mining Act. A common practice has developed whereby foreign entities appoint Guyanese nominees to hold legal title, backed by trust/nominee agreements and powers of attorney. See Section B(x)(b) and (c) below.

The Mining Act contains no prohibition against this structure, and courts have upheld this structure.

Water Rights

Water use for mining operations in Guyana is governed by Part VIII of the Mining Regulations, which outlines the rights of claim holders with respect to natural watercourses. §58 provides that where any watercourse passes through or adjacent to a claim, the use of such water is subject to any applicable regulations in force. Every holder of a claim is entitled to the free use of water naturally flowing through or past the claim, provided it has not already been lawfully appropriated. This use must be consistent with what is, in the opinion of the Commissioner or an authorized mines officer (with the Commissioner's approval), necessary for the proper working of the claim.

§60 further provides that a licence is only required where a dam is to be constructed for the purpose of diverting or altering the natural flow of a waterway. Accordingly, no formal licence is required for the general use of naturally flowing water within or adjacent to a claim. However, if the developer intends to construct a dam or otherwise redirect a watercourse, a specific licence must be obtained for that purpose.

Other Applicable Laws

Mining in Guyana is also affected by the Amerindian Act of 2006 and the Environmental Protection Act of 1996. Other relevant legislation include the Geology and Mines Commission Act 1979, the Explosives Act and Regulations and the River Navigation Act and Regulations.

Under the Amerindian Act, any mining on Amerindian titled lands or waterways requires necessary permissions and compliance with applicable laws. It also requires miners to provide the Village Council with requested information, including a written summary of proposed activities, details of involved parties, a non-technical summary, the site and duration of activities, potential impacts on the village, and any other relevant information.

Laws and Regulations on Corporate Matters

The Companies Act 1991 (the Companies Act) governs corporate matters in Guyana, crucial for our Company's operations through its local subsidiaries. This Act outlines requirements for incorporation, governance, disclosure, and reporting, ensuring entities maintain good standing and avoid regulatory issues. It provides legal protections for shareholders and directors, addressing minority oppression.

The Act, modeled on Canada's Business Corporations Act, recognizes only one corporate form, with no differentiation like partnerships or limited liability companies. Companies can be private, public, external, or government-owned, with specific requirements for each, such as public companies needing at least two directors and a corporate secretary. Conversion from private to public status is allowed, subject to procedural requirements.

Local Incorporation

Incorporation in Guyana requires filing several documents, including Articles of Incorporation and director consents, with the Commercial Registry. *There are no restrictions on foreign ownership of shares, and foreign individuals* can serve as directors. The incorporation process is swift, typically taking three (3) working days, and there is no minimum capital requirement beyond GY$1. Companies must maintain a registered office in Guyana and file annual returns and financial statements to remain in good standing. A Certificate of Good Standing confirms compliance with statutory obligations.

Capacity of a Company

Under Guyanese law, a company possesses full legal capacity to act in its own name, akin to a natural person.

The Companies Act outlines that companies have the rights, powers, and privileges of an individual, allowing them to engage in various business activities. These include entering into contracts, issuing shares, appointing agents, and raising capital through borrowing. Directors are empowered to exercise these functions without needing shareholder approval unless restricted by the company's articles or by-laws. This framework provides companies with significant operational flexibility, enabling them to manage their business effectively and make strategic decisions to support growth and development.

The Companies Act also grants directors the authority to manage financial operations, such as borrowing funds, issuing debentures, and creating security interests over company property. These powers can be delegated to officers or other directors, ensuring efficient financial management. Additionally, companies have the capacity to sue and be sued in their corporate name, reinforcing their status as independent legal entities. This legal framework, influenced by Canadian corporate law principles, ensures that companies in Guyana can fully engage in commercial activities, subject to statutory and constitutional limitations, while maintaining the ability to define and enforce internal limits on their powers.

Oppression Remedies

To prevent abuse by controlling interests, the Companies Act provides remedies for oppression and unfair prejudice, allowing complainants to seek court intervention. The court can grant relief, including governance changes or company winding up. These remedies apply to both domestic and external companies. Courts assess reasonable expectations and whether conduct breaches them, using a two-step approach.

Laws and Regulations on Labour and Employment Matters

Employment Contract

Pursuant to the Interpretation Section of the Termination of Employment and Severance Pay Act, Cap 96:01 ("**TESPA**"), an employee is defined to mean a person who offers his service to an employer under a contract of employment or a dependent contractor and includes, where appropriate, a former employee. Once there is an intention to establish an employer/employee relationship, a contract of services will be required; for an independent contractor, it will be a contract for services.

There is no statutory definition of a contract of employment in Guyana, and as such, the relationship between the employer and the employee is based on the English common law principles of contract.

Notably, there is no requirement for a written employment contract. Oral contracts may be binding on the parties. Employment contracts should include (but are not required to include) the duties to be carried out by the employee, the length of the contract, and quantum of remuneration, obligations and benefits to be had (provided there is no statutory restrictions or public policy violation), job title, rate of pay, leave entitlement and allowances (if any), etc., which may be subject to the terms of any collective bargaining agreement.

Additionally, the implied terms of a contract of services may reference the "custom and practice" of the workplace. There are or may be other documents which may affect the contract of services, such as prior written and oral communications, employee handbooks, disciplinary codes, rules and regulations, and notice boards. Where these additional documents have not been incorporated into the contract of services, whether there was an intention for the parties to be bound by them will depend on the parties' intention, which is a question of fact to be determined by the court. A unilateral verbal variation of a written contract of services is likely to be deemed a breach, and therefore, variations should be reduced into writing, and signed by both parties.

Minimum Working Hours/Wages and Overtime

The statutory minimum wage for the private sector is established by the Labour (National Minimum Wage) Order, with a standard work week of 40 hours over five days, typically including a lunch break. Any work beyond this constitutes overtime, which must be compensated at a rate of one and a half times the normal hourly rate, as prescribed by the Factories (Hours and Holidays) Act (the FHH Act) and the Labour (Conditions of Employment of Certain Workers) Act (the LCE Act). Employers must comply with these provisions to avoid penalties, including fines and imprisonment for repeated offences.

Employees are entitled to designated rest periods, including a minimum one-hour interval for meals and additional breaks for overtime work. They must also receive at least one weekday holiday each week and a half-holiday every alternate Sunday.

Employers are required to maintain records of wages and employment details to demonstrate compliance with statutory wage rates. The Wages Councils Act empowers the Minister to establish councils for specific industries to set enforceable minimum wage rates and working conditions. Contracts offering wages below these statutory levels are automatically adjusted to meet legal requirements, with employers facing penalties for non-compliance. In cases of alleged underpayment, the employer must prove adherence to the relevant wage regulation order.

Employee Insurance

Employee insurance is solely governed by the National Insurance and Social Security Act, Cap. 36:01 (the "**NIS Act**"), with contributions made to the National Insurance Scheme ("**NIS**").

The NIS extends social insurance coverage on a compulsory basis to all persons between the ages of sixteen (16) and sixty (60) years who are engaged in insurable employment (§11 of the NIS Act). Coverage is also extended on a voluntary basis to persons who cease such employment before reaching age sixty (60) years, until the attainment thereof (§15 of the NIS Act; the National Insurance and Social Security (Persons Abroad and Voluntary Contributors) Regulations).

Generally, the benefits are stipulated under §19 of the NIS Act as follows: (i) old age benefits, (ii) invalidity benefits, (iii) survivor's benefits, (iv) sickness benefit (further detailed below), (v) maternity benefits (further detailed below), (vi) funeral benefits, (vii) child care benefits, (viii) constant attendance benefits, (ix) injury benefits, (x) disablement benefits, and (xi) death benefits.

§13(1) of the NIS Act stipulates that contributions shall be payable by insured persons and by employers. Therefore, prior to paying wages to the employee, the employer must deduct the NIS contribution and income tax (the latter of which is detailed further below in Section B(iv)) from the wage or salary.

Probationary Periods

Pursuant to the §2 of TESPA, probationary period means the period of three months following the date on which the employment of an employee by an employer commences, or such other period of time following that date as may be agreed upon between employer and an employee.

Notably, §9 of TESPA stipulates that a new employee may be required to serve a probationary period of employment, but the employer or employee may terminate the employment at any time during the probationary period for any reason and without notice.

Termination

Termination of employment in Guyana is governed by TESPA, which prescribes the lawful bases and procedures for ending the employment relationship. Pursuant to §7, employment may be terminated in one of three ways: (i) by mutual agreement of the parties; (ii) on the ground of redundancy, as set out under §12; or (iii) by either party, whether for good or sufficient cause, or by notice served on the other. Where serious misconduct arises, an employer is entitled under §10 to summarily dismiss an employee without notice or payment of severance, redundancy allowance, or terminal benefits. For such dismissal to be valid, the misconduct must be directly related to the employment relationship and must have a detrimental impact on the employer's business.

Further, §11 of TESPA addresses termination for misconduct, breach of contract, or unsatisfactory performance. It provides that an employer may first issue a written warning. If, within six months of such warning, the employee commits the same or a similar offence, the employer may terminate the contract without notice. An employer is, however, deemed to have waived the right to terminate on the basis of misconduct if no action is taken after acquiring knowledge of the misconduct or following the conclusion of any investigation into it. In relation to unsatisfactory performance, termination is only permitted where the employer has given the employee instructions regarding how the duties should be performed, issued a written warning to comply with those instructions, and the employee nevertheless continues to perform unsatisfactorily.

Where employment is terminated by notice under §7(3)(ii) or for redundancy under §12, §15 of TESPA prescribes the applicable minimum notice periods for contracts of unspecified duration, except during any probationary period. Specifically, the employer must provide not less than two weeks' written notice for employees with less than one year of service, and not less than one month's notice for those employed for one year or more. These notice periods do not apply where the employee is summarily dismissed pursuant to §10. Moreover, an employer is prohibited from issuing a notice of termination while the employee is on any period of authorized leave granted under applicable employment law or contract.

Finally, TESPA permits payment in lieu of notice. Under §16, where an employer elects not to provide written notice in accordance with §15(1), they must pay the employee a sum equal to the remuneration and benefits that would have accrued up to the expiry of the applicable notice period.

Disciplinary Action and Severance

Employers in Guyana are entitled to take disciplinary action against employees where it is reasonable to do so, as set out under §18 of TESPA. Disciplinary measures, short of dismissal, must follow a defined order of severity: (a) a written warning; followed, if necessary, by (b) suspension without pay. Importantly, employers are prohibited from imposing fines or other monetary penalties on employees. In assessing the reasonableness of disciplinary action, the employer must consider the nature of the violation, the employee's duties, the extent of any damage caused, and the employee's previous conduct and personal circumstances. Where a disciplinary procedure is outlined in a company handbook or set of rules that has been incorporated into the contract of employment, such procedures must be strictly followed; deviation from them, such as issuing payment in lieu of notice where summary dismissal is not appropriate, may amount to wrongful dismissal and a breach of contract.

Employment is deemed continuous from the first day of work to the date of termination. Periods of sick leave, maternity leave, annual leave, suspension (with or without pay), reinstatement following dismissal, temporary lay-offs not exceeding six weeks, and lawful lockouts or other employment interruptions arising under contract or statute do not break continuity of service. However, while participation in industrial action in accordance with law or a collective agreement does not interrupt employment continuity, the time spent off the job during such action is not counted toward the length of service. Continuity of employment is also preserved where a business is sold, leased, or otherwise transferred, provided the successor employer expressly agrees to retain the employee's service history.

In cases of redundancy, §21 of TESPA mandates severance or redundancy payments for employees who have completed one or more years of continuous employment. The minimum statutory entitlement is as follows: (a) one week's wages for each completed year of service for the first five years (inclusive of the entitlement year); (b) two weeks' wages for each completed year between the sixth and tenth year; and (c) three weeks' wages for each completed year beyond ten years, subject to a maximum of fifty-two weeks' wages. Pursuant to §21(3), the right to severance is independent of any entitlement to payment in lieu of notice under §16. However, §21(4) excludes employees who are lawfully summarily dismissed under §10 or whose termination occurs under §9 or §11 from receiving severance or redundancy pay. Notably, collective bargaining agreements may confer more favourable severance benefits, and such terms are enforceable.

Failure by an employer to pay severance or redundancy allowances when due constitutes a criminal offence. Upon summary conviction, the employer may be liable to fines and imprisonment, and the court may also order the payment of the outstanding sums. Prosecutions under TESPA are typically instituted by the Chief Labour Officer. More broadly, any breach of TESPA's provisions is considered an offence under law.

Safety and Health Rules

Guyana's legal framework imposes comprehensive obligations on employers to ensure occupational safety and health, principally under the Occupational Safety and Health Act, Cap 99:06 ("**OSHA**"), the LCE Act, and the Accidental Deaths and Personal Injuries (Damages) Act, Cap. 99:05 (the "**ADPI Act**"). These statutes collectively require employers to maintain a safe and healthy work environment, with specific duties and restrictions applicable to a wide range of industrial establishments, including offices, factories, shops, logging operations, banks, hotels, and private homes employing domestic workers.

Under OSHA, employers are required to take reasonable care for the safety of workers by ensuring: (i) a safe place of work, (ii) a safe system of work, (iii) adequate and properly guarded equipment, (iv) the engagement of competent staff, and (v) the provision of adequate training and information on workplace hazards. Employers must also report workplace accidents to the Ministry of Labour. §58(1) of OSHA expressly prohibits retaliation, including dismissal, suspension, or intimidation against employees who report unsafe conditions or act in compliance with the act.

Where twenty or more persons are employed, §23 of OSHA requires the establishment of a joint workplace safety and health committee. The committee must comprise at least four members, or at least six where the workforce exceeds fifty. The names and locations of committee members must be clearly posted in a conspicuous area accessible to workers. The committee's functions include hazard identification, workplace inspection, and promoting compliance with occupational safety requirements. These provisions are reinforced by §11 of the LCE Act, which mandates that employers provide and maintain accessible first-aid supplies as specified in the Second Schedule therein.

The ADPI Act further reinforces employer liability in the context of workplace safety. It governs civil liability in cases of personal injury or death arising out of employment, and §8 of the ADPI Act prohibits any contractual term or disclaimer that attempts to exclude or limit an employer's liability for such incidents. This ensures that injured employees or the families of deceased workers retain full recourse to damages in the event of a breach of the employer's statutory or common law duties. In addition, Part V of OSHA and the employer-specific obligations therein (such as the requirement to provide trained personnel, adequate equipment, and a safe system of work) are directly relevant to the assessment of such liability.

Unionization and Collective Labour Agreements

The right of employees to form or join trade unions and engage in collective bargaining is constitutionally protected in Guyana. Article 147(1) of the Constitution of Guyana, Cap. 1:01 (the "**Constitution**") guarantees every person the freedom of assembly and association, including the right to form or belong to trade unions or other associations for the protection of their interests. Article 147(3) of the Constitution further affirms that neither an employer nor a trade union shall be deprived of the right to enter into collective agreements.

Recognition of a trade union for collective bargaining purposes is governed by the Trade Union Recognition Act, Cap. 98:07 ("**TURA**"). Under §18 of TURA, a union seeking recognition as the majority union for a defined bargaining unit must apply to the Trade Union Recognition and Certification Board. The application must be served on the employer. Upon being granted a certificate of recognition under §23(1) of TURA, the union must be recognized by the employer for the purpose of negotiating terms and conditions of employment. An employer who refuses to recognize a duly certified union commits an offence and is liable, on summary conviction, to a fine and further daily penalties for the duration of the non-compliance.

While Article 147(2) of the Constitution also protects the freedom to strike, employees who engage in industrial action (such as walkouts, sick-outs, picketing, or sit-ins) may nonetheless be in breach of their employment contracts and subject to legal action. However, TESPA specifically addresses the effect of industrial action on employment continuity. Under §4(4) of TESPA, any period of lawful industrial action does not break the continuity of employment, although such time will not be counted in calculating the length of continuous service. This distinction is relevant to entitlements tied to length of service, such as redundancy and severance pay.

Collective agreements themselves are regulated by the Labour Act. Pursuant to §28A(4) of the Labour Act, a copy of every collective agreement must be submitted to the Chief Labour Officer within three months of its execution, although non-submission does not affect the agreement's validity or enforceability. §28A(6) of the Labour Act provides that a collective agreement to which a trade union is a party is legally binding and enforceable. §28B(1) of the Labour Act defines a collective agreement as any agreement or arrangement, regardless of form, between an employer (or employers' organization) and one or more organizations of employees that prescribes terms and conditions of employment or addresses procedural matters such as grievance handling, dismissal procedures, disciplinary procedures, negotiating rights, or union facilities.

In practice, the terms of any collective agreement will be determined through negotiation between the employer and the recognized union, and such agreements may address a wide range of employment matters, including dispute resolution mechanisms and employee representation rights.

Retirement Funds

There is no statutory or mandatory framework governing retirement funds, with the only old age benefits covered by the NIS as mentioned earlier. It is up to the discretion of private employers to establish retirement funds for employees, although there are no tax-free accounts available for this purpose. Employers are free to establish a local pension plan, which must be registered pursuant to §101(1) of the Insurance Act Cap. 91:02, or foreign pension plans, which do not require local registration.

As a general rule, pensions, gratuities in lieu of pensions and annuities are deductible, pursuant to §13(z) of the Income Tax Act Cap 81.01 (the "**ITA**"), there being no distinction between local and foreign pension plans.

In relation to retroactive payments, §2 of the Income Tax (Prescribed Deduction) Order. O. 2/1948 48/1968 86/1970 states that a lump sum payment by a company of a pension plan for past employer services will not be charged as a single expense within one fiscal year.

After one-tenth of the lump sum payment is deducted each year, the remainder would be represented on the financial statements of our Company as a tax credit, which would consequently increase the reflection of non-taxable assets on the company tax return, which will be effected in the next fiscal year. This presumes the continuation of business over a term of ten (10) years.

Vacation and Holiday Pay

§3 of the Leave with Pay Act, Cap. 99:02 ("**LWPA**") entitles all employees to paid leave as follows; at least one day of paid leave for each completed month of employment; for half-day workers, each half day counts as a full day in calculating leave; and for daily or hourly workers, one day of paid leave is earned for every 20 days or 160 hours worked.

Under §4(1) of the LWPA, an employer is obliged to mandate an employee to take leave with pay for periods shorter than six consecutive days, excluding Sundays and Public Holidays from the computation.

According to §4(2) of the LWPA, the employer is obligated to provide leave with pay to the worker, to be taken within three months or any other agreed-upon period after the right to such leave accrues. §4(3) of the LWPA further stipulates that the employer has the authority to determine the commencement date of the leave, considering any specific requests made by the worker.

Regarding remuneration for leave with pay, as per §5(1) of the LWPA, the employer is required to compensate the worker with their current daily wage for each day of the leave period. Note that upon termination of employment, §6 of the LWPA mandates the employer to pay the worker, in lieu of any accrued but unused leave with pay, a sum equal to the wages which would have been paid for a like period of leave with pay if taken at that date.

Note that separately, under §5 of the Public Holidays Act (Cap. 19:07) except for obligations under the Bills of Exchange Act, payments or actions related to negotiable instruments are deferred to the next business day if they fall on a public holiday.

Illness Pay

Sick leave is not mandated by the laws of Guyana. Note that the public service follows a customary practice stipulating the requirement of a medical certificate after three (3) days, with an annual quota of twenty-eight (28) days (see §§H42 and H45 of the Public Service Rules 2004). However, this practice is neither applicable to nor binding on private companies.

In any event, the employee is entitled to a daily rate of sickness benefit, as outlined in §§20–23 of the NIS Act, paid by the NIS. The employee qualifies for sickness benefit from NIS on the 4th day of incapacity, as the initial 3 days of sickness are unpaid. In calculating sickness benefit, payment is made for each day, excluding Sundays or holidays, within a period of 26 weeks of continuous incapacity for work. Notably, any two periods of incapacity for work occurring within 8 weeks of each other are considered as one continuous period, starting from the first day of the initial incapacity. Additionally, insured employees over the age of 60 are ineligible for sickness benefit.

The NIS Memorandum on Benefits Payable (2017) outlines the criteria for sickness benefit eligibility, specifying that it is payable to an insured person temporarily unable to work, not due to an employment injury. To qualify, the insured person must: a) have been engaged in insurable employment immediately prior to the onset of incapacity; b) have made at least fifty (50) Contributions since joining the insurance scheme; and c) have been employed and made Contributions for at least eight (8) Contribution Weeks within the thirteen (13) weeks preceding the week in which the incapacity started. The claim for sickness benefit must be accompanied by a medical certificate or any other evidence as determined by the NIS.

Payroll Taxes and/or Unique Country-Specific Taxes

In addition to NIS deductions as outlined in above, income tax is imposed on a person's chargeable income derived from within or outside Guyana, whether or not it is received in Guyana. §5 of the ITA provides that income tax is payable on income from: (a) any trade, business, profession, or vocation, regardless of duration; and (b) any office or employment, including termination payments, housing or living allowances (net of any rent or contributions), and other non-cash employment benefits, except medical, dental, or travel allowances.

Resident individuals (i.e. present in Guyana for at least 183 days in the calendar year) will be entitled to a personal allowance of 1/3 of their income (per annum), whichever is greater. Effective January 1, 2025, pursuant to §36 and §36A of the ITA, personal income tax is levied at a rate of twenty-five percent (25%) per annum on chargeable income up to G$3,120,000. Chargeable income exceeding G $3,120,000 per annum is subject to a higher rate of thirty-five percent (35%).

Tax is payable on the following categories of income: (i) business income, (ii) Employment income, (iii) certain classes of dividends, interest or discounts, (iv) charges for annuities other than an annuity paid out of a superannuation fund and (v) property income.

Tax returns are to be completed annually and submitted to the Guyana Revenue Authority not later than April 30 following the year of income. The tax year in Guyana is the calendar year.

Non-Discrimination Rules

Guyana's legal framework prohibits discrimination in employment and ensures equality of treatment in the workplace. The Prevention of Discrimination Act, Cap. 99:09 (the "**Discrimination Act**"), applies to both the public and private sectors, including employers, employees, employment agencies, vocational training bodies, qualifying bodies, professional and trade organizations, and professional partnerships. The Discrimination Act seeks to eliminate discrimination in employment, recruitment, training, and membership in professional bodies, and to promote equal remuneration for men and women performing work of equal value.

Under the Discrimination Act, it is unlawful for an employer to discriminate, whether directly or indirectly, intentionally or unintentionally, against a person on the basis of race, sex, religion, colour, ethnic origin, indigenous population, national extraction, social origin, economic status, political opinion, disability, family responsibilities, pregnancy, marital status, or age (except in relation to retirement or legal restrictions on minor employment). Discriminatory conduct is prohibited throughout all stages of employment, including job advertisements, selection procedures, offers of employment, and the creation or abolition of job roles.

Once employed, workers are further protected against discrimination in terms of employment conditions, occupational safety and health, access to training, promotion, or advancement, provision of facilities or benefits, and in relation to dismissal, retrenchment, or any other disadvantage imposed in the workplace. However, the Discrimination Act recognizes exceptions where a "genuine occupational qualification" justifies the requirement for a specific characteristic. Such exceptions include jobs requiring a particular religious affiliation, the preservation of decency or privacy (e.g. same-sex caregivers), residential requirements in sex-segregated accommodations, roles suited to married couples, positions within specialized institutions such as prisons or hospitals, or instances where the nature of the service (e.g. personal health or education) is best provided by a person of a particular sex. In the case of disability, an employer may justify non-employment if the essential duties of the job cannot reasonably be performed due to the disability and it would be unduly burdensome to provide the necessary accommodations.

Enforcement of the Discrimination Act may be initiated by the Chief Labour Officer (or a delegated officer) based on a victim's complaint. In addition, victims of discrimination may pursue private criminal proceedings.

The Equal Rights Act, Cap 38:01 (the "**ERA**") complements these protections with specific prohibitions against sex-based discrimination. §2(4) of the ERA provides that no person shall be deemed ineligible for, or discriminated against in, any employment, appointment, or promotion solely on the ground of sex. §2(6) of the ERA deems it discriminatory where men are given preference or more favourable opportunities than women in recruitment, terms of employment, access to advancement or training, or any

employment-related benefits or services. Notably, §2(7) of the ERA clarifies that employers may still implement special labour and health protections for women, including maternity-related provisions, paid leave, and support for mothers and children.

Part V of the Persons With Disabilities Act, Cap. 36:05 specifically addresses employment as it relates to preventing workplace discrimination. This act ensures that individuals with disabilities have equal employment opportunities, as mandated by §9 thereof, and requires employers to avoid discriminatory practices in hiring and workplace policies. Additionally, §13 obligates the employer to maintain accurate records related to the employment of persons with disabilities.

Note that the Employment Of Young Persons And Children Act, Cap.99:01 prohibits the employment of children (defined under §2 as individuals under 15 years of age).

Immigration

Any employer intending to hire Expatriates must obtain a work permit for that individual's employment in Guyana. The application is supported by corporate documents of the employer company, including the employer's certificate of incorporation or business registration, NIS and GRA compliance certificates, TIN certificate, and the employer's national identification.

To enter Guyana for employment, the Expatriates must either (i) obtain an Employment Visa on arrival or (ii) secure a Landing Permit in advance, depending on their nationality. Both are processed by the Department of Citizenship, Ministry of the Presidency.

Upon arrival in Guyana with a valid employment visa or landing permit, the applicant will receive an entry stamp authorizing stay for the purpose of employment for an initial discretionary period not exceeding three (3) months, pursuant to §12(1)(a) and §12(1A)(d) of the Immigration Act, Cap. 14:02 (the "Immigration Act"). This period must be extended by way of an Extension of Stay/Work Permit application, which may be granted for up to a maximum of three (3) years under §12(3).

Holders of multiple-entry employment visas or landing permits are permitted to enter and leave Guyana freely for a period of up to three (3) years, or until the visa expires.

Special provisions apply to nationals of CARICOM Member States. Guyana is a member of the Caribbean Community (CARICOM), and under the CARICOM Single Market and Economy (CSME) regime, nationals holding a CSME Skilled National Certificate (together with their spouses) are exempt from obtaining work permits for employment in Guyana. The application for the CSME Certificate must be submitted online.

Although the entry process is generally the same regardless of nationality, the Ministry of Foreign Affairs provides a list of 75 countries whose nationals are exempt from obtaining a visa to enter Guyana, including certain CARICOM and Commonwealth nations.

Failure to leave Guyana upon the expiration of the authorized stay renders the person a "prohibited immigrant" under §13 of the Immigration Act. Pursuant to §15, a prohibited immigrant is not permitted to enter or remain in Guyana, and §26 empowers an immigration officer to remove such individuals from the country.

Laws and Regulations on Environmental Protection

Guyana's environmental legal framework is principally governed by the Environmental Protection Act, Cap. 20:05 (the "**EPA Act**"), which imposes statutory obligations on all entities undertaking activities that may significantly impact the environment.

Under §13 of the EPA Act, environmental permits are issued subject to specific conditions. These include the use of best available technology to minimize adverse effects, adherence to prescribed environmental standards, and the obligation to restore the environment upon project completion. Non-compliance with the terms of a permit may result in suspension or revocation, and may expose the operator to civil or criminal penalties.

Pollution control is addressed under §19 of the Act, which prohibits the discharge or release of any contaminant into the environment unless all reasonable and practicable measures are taken to prevent or minimize harm. Where such release occurs, the permit holder must immediately notify the EPA and take remedial action, including neutralising contaminants, cleaning affected areas, and compensating affected third parties where necessary.

Further, §21 and §22 require specific process licences or discharge permits for facilities that release pollutants into the environment. These licences are subject to ongoing monitoring, and the EPA is empowered to conduct inspections to ensure compliance. Operators must also maintain adequate records of emissions and disposal practices and submit these to the EPA upon request.

§31 of the EPA Act provides for financial assurances as a condition of permitting. The EPA may require an operator to furnish performance bonds or other financial security to ensure funds are available to remediate any environmental harm caused. This is particularly relevant to high-risk activities, including those involving hazardous substances, marine discharge, or sensitive ecosystems.

Environmental Impact Assessments (EIA)

Environmental Impact Assessments ("EIA"s) are a central feature of Guyana's environmental regulatory framework, particularly in the context of projects involving natural resource extraction. These assessments serve to evaluate and mitigate potentially significant environmental impacts prior to project approval.

Pursuant to §11(1) of the Environmental Protection Act, any project that is likely to have a significant effect on the environment or is listed in the Fourth Schedule of the Act must be the subject of an application for an environmental permit. The application must include a summary containing: (i) the site, design, and size of the project; (ii) its possible environmental effects; (iii) the project's duration; and (iv) a non-technical description. Upon receipt, the EPA must consider whether the issuance of a permit is appropriate under §13.

In cases where the potential for environmental impact is not clear to the developer, §11(2) obliges the developer to submit a project summary to the EPA, which must then assess whether an EIA is required. If the EPA determines that a significant impact may result, it must publish a reasoned decision in at least one daily newspaper stating that an EIA is required, in accordance with §11(2)(b).

Where an EIA is required, the developer must conduct a comprehensive study identifying and evaluating the direct and indirect effects of the project on the environment. The EPA's decision to approve or reject the project must consider: (a) submissions made by the public; (b) recommendations of the Environmental Assessment Board; and (c) the contents of the EIA and related environmental impact statement (§12(1)). The EPA is then required to publish its final decision and the reasons underpinning it (§12(2)).

Conversely, where the EPA determines that the project will not significantly affect the environment, it must publish its decision and the rationale for exempting the project from the EIA process under §11(2)(b). This determination is subject to appeal by any affected person to the Environmental Assessment Board under §11(3)(a), which may confirm or reverse the EPA's decision.

Where the potential impact remains uncertain even to the EPA, the Act mandates that an EIA be required to properly determine the environmental risks. In such cases, the EPA proceeds as outlined above, including the requirement for public disclosure and consultation, as well as formal assessment by the Environmental Assessment Board.

Accordingly, any developer undertaking resource-based or large-scale industrial projects in Guyana must anticipate the possibility of undergoing the EIA process, with compliance obligations extending from the application stage through post-project rehabilitation. The EPA retains broad discretion and enforcement authority, and all permit conditions are legally binding and enforceable under the Environmental Protection Act.

Laws and Regulations on Foreign Investment and Currency

Foreign investment, currency regulation, and foreign exchange control in Guyana are governed by a combination of statutes that directly affect the ability of companies to repatriate profits, engage in cross-border transactions, and employ foreign personnel. These laws are of particular relevance to our Company's operations in Guyana, given its status as an international mining group with foreign ownership and financial flows. The framework governs the movement of capital, access to foreign currency, and protection of investment interests. At present, there are no proposed or anticipated changes to this framework that would have a material impact on our Company's business.

Pursuant to §22(1) of the Bank of Guyana Act, Cap. 85:02 (the "**BOG Act**"), all monetary obligations within Guyana must be expressed, recorded, and settled in Guyana dollars, unless the Bank of Guyana grants specific approval to the contrary in consultation with the Minister of Finance. Such approval is obtained by submitting a formal request to the Governor of the Central Bank. The Act also grants the Bank of Guyana statutory authority over currency stability and exchange rate management (§23), as well as oversight of foreign exchange and international transactions (§30). These provisions enable the Bank to align foreign exchange policy with international obligations and to ensure orderly financial conduct across borders (§31).

The Foreign Exchange (Miscellaneous Provisions) Act, Cap. 86:01 regulates the use, transfer, and declaration of foreign currency in Guyana. Under §3, only licensed authorized dealers may engage in transactions involving foreign currency or gold. Any person or entity not so licensed requires permission from the Minister to engage in lending or borrowing in foreign currency. §6 imposes reporting requirements on the physical cross-border movement of currency. Individuals are required to declare sums exceeding US$10,000 (or its equivalent in another currency) to the Commissioner of Customs, using a prescribed form under the Second Schedule. Failure to declare, or making a false declaration, may result in forfeiture of the undeclared sum and criminal penalties, including fines and imprisonment. Violations of §§3 or 4 are subject to enforcement under §5, and breaches may also trigger proceedings under the Customs Act.

The Investment Act, Cap. 73:03 sets out the primary legislative framework for the facilitation and protection of both domestic and foreign investment in Guyana. Under §4, foreign investors are guaranteed treatment no less favourable than that accorded to domestic investors. §5 permits investment across all lawful economic sectors, including natural resource extraction. §§17–18 ensure that investors may import and export products and repatriate profits freely, subject only to satisfaction of tax obligations. §24 affirms the right of investors to transfer funds abroad, including dividends, loan repayments, and capital returns.

§§19–21 provide for the employment of foreign personnel, allowing companies to recruit foreign skilled workers subject to compliance with immigration laws. Work and stay permits for such personnel are facilitated under these provisions. §29 imposes obligations on investors to comply with environmental, health, and safety laws, while §30 mandates that imported goods and equipment conform to national standards. §39 formally establishes the Guyana Office for Investment as the agency responsible for investor facilitation, including the provision of guidance and processing of investment incentives.

Laws and Regulations on Taxation

(a) Corporation Tax — General Imposition: Imposed under the provisions of the Income Tax Act, Cap. 81:01, which charges tax on income accruing in or derived from Guyana or elsewhere. Residents are taxed on worldwide income and non-residents are taxed on Guyana-source income. The rates are determined by reading the relevant sections of the Income Tax Act together. Generally, these rates can range from approximately 25% to 45%, depending on the type of company.

(b) Minimum Corporate Tax (MCT): Charged at 2% of turnover for commercial companies (excluding insurance companies and exempt entities). May be recoverable in future years.

(c) Withholding Tax (WHT): Imposed under §10B of the Corporate Tax Act on specified payments to non-resident companies, at the rate of 10%.

(d) Capital Gains Tax: Imposed at a rate of 20% on net chargeable gains from the disposal of capital assets.

(e) Loss Relief: Ordinary losses carried forward indefinitely, offsetting same-source profits; capital losses carried forward up to 24 years.

(f) Foreign Tax Credit: Relief of 50% for British Commonwealth countries and 25% for others.

(g) Value-Added Tax (VAT): Imposed at 14% on taxable supplies and imports under §9(1) of the VAT Act, Cap. 81:05.

(h) Property Tax: Annual wealth tax imposed under the Property Tax Act, Cap. 81:21, charged at ¾% on net property exceeding G$60 million.

(i) Customs Duty: Imposed under §7 of the Customs Act. Duties are set by resolution of the National Assembly. For specific rates, refer to Item 8703.2, First Schedule, Part I of the Customs (Amendment of Schedules) Act 2019.

(j) Excise Tax: imposed on importation, manufacture, or removal of taxable goods under §3 of the Excise Tax Act, Cap. 82:03.

(k) Capital Duty and Company Registration Fees: Fees vary based on filing type and capital structure, as outlined in the Companies Act and associated fee schedules.

(l) Stamp Duty: Imposed on various instruments under the Stamp Duties (Management) Act, Cap. 80:03, with some exemptions.

(m) Environmental Tax: G$10 per non-returnable unit (metal, plastic, or glass) of alcoholic or non-alcoholic beverage, whether manufactured locally or imported (§7A of the Customs Act).

(n) Transfer Pricing: The Commissioner-General is empowered to assess related-party transactions to ensure they reflect arm's length pricing.

(o) Tax Year and Filing: charged on Calendar year basis, with corporate tax returns due by April 30, and quarterly installments required.

(p) Penalties for Non-Compliance: Include a 10% penalty for late payment, 2% monthly interest, and G$50,000 for late returns.

(q) Audits and Rulings: Random audits within 1–3 years by the Guyana Revenue Authority, with binding tax rulings available.

Tax Concessions

Below are a few of the available exemptions or concessions specific to taxation in Guyana:

- Exemption from income tax under §13(b) of the Income Tax Act for the income of any person exempt from corporation tax under §7 of the Corporation Tax Act.

- Exemption from income tax under §13(y) of the Income Tax Act for emoluments payable under any incentive scheme approved by the Minister.

- Exemption from corporation tax under §7(a) of the Corporation Tax Act for distributions received by a company from a resident company.

- Exemption from corporation tax under §7(b) of the Corporation Tax Act for the profits of an investment company.

- Corporation tax holiday under §2(1)(b) of the Income Tax (In Aid of Industry) Act for income from new economic activity that creates new employment in designated fields, including petroleum exploration, infrastructural development (e.g., renewable energy), or other fields specified by Ministerial Order.

- Extended corporation tax holiday under §2(1A) of the Income Tax (In Aid of Industry) Act for up to 10 years (or longer for renewable energy projects under §2(1)(b)(x)).

- Exemption from withholding tax under §39(12) of the Income Tax Act where a person is exempt from corporation tax under §7 of the Corporation Tax Act.

- Exemption from property tax under §6(x) of the Property Tax Act for property employed in a business during a tax holiday period granted under §2 of the Income Tax (In Aid of Industry) Act.

- Zero-rating of VAT under §17(1) of the VAT Act and Schedule I, paragraph 2(aa), for the first import of certain capital equipment, provided specified conditions are met.

- Zero-rating of VAT under §17(1) of the VAT Act and Schedule I, paragraph 2A(ll), for the supply of certain vehicles for use in the mining industry, subject to the satisfaction of the Commissioner-General.

- Exemption from customs duty under Item 11 of the First Schedule, Part III B(1) of the Customs Schedule for machinery, equipment, motor vehicles, tools, spares, and supplies imported pursuant to an agreement with the Government or published guidelines/regulations.

- Temporary exemption from excise tax under §8 of the Excise Tax Act for goods imported for temporary use, provided they are exported within three months (or an extended period) and subject to a refundable deposit or security.

None of the outlined concessions have a published application form but are based on individual negotiations with the Revenue Authority and the Government of Guyana.

Laws and Regulations on Land and Property

The primary statutes now governing immovable property in Guyana include the Civil Law Act, Cap. 6:01 (the "**Civil Law Act**") the Land Registry Act, Cap. 5:02 (the "**Land Registry Act**"), and the Deeds Registry Act, Cap. 5:01 (the "**Deeds Registry Act**").

Ownership of Property

In Guyana, immovable property may be held under one of two systems: Transport under the Deeds Registry Act, and Certificate of Title under the Land Registry Act. Both forms confer full and absolute ownership, subject to limited statutory exceptions.

Under the Deeds Registry Act, a properly executed transport conveys absolute title to the transferee, subject to statutory claims, registered encumbrances, and fraud. Similarly, under the Land Registry Act, registered land titles are absolute and indefeasible, subject to exceptions like fraud and boundary misdescription.

Nature of Mining Permits

Mining permits in Guyana are recognized as a form of property interest once issued and registered in accordance with the Mining Act. They confer enforceable proprietary rights, allowing holders to enter and extract minerals. The legal character of such permits has been affirmed by the High Court of Guyana, granting holders a legal interest in land.

Trusts in Property

Trusts are recognized under Guyanese law by virtue of §10 of the Civil Law Act, Cap. 6:01, which incorporates the UK Trustee Act, 1893. Express trusts in both movable and immovable property are generally enforceable. However, equitable interests in immovable property are not recognized, leaving the enforceability of resulting or constructive trusts unsettled. This is significant in the mining sector, where trust arrangements are used to allow Guyanese nationals to hold mining permits on behalf of foreign entities.

Leases

Leases in Guyana are governed by English common law principles pursuant to the Civil Law Act. A valid lease requires a fixed term, rent, and exclusive possession. Leases over three years must be executed by deed, while shorter leases require written agreements. Long leases (over 21 years) must comply with the Deeds Registry Act for enforceability against third parties.

Licences

A licence grants a personal privilege to use land without conferring legal or equitable interests. It is revocable unless supported by consideration and intended to be irrevocable for a fixed duration. Courts may enforce a contractual licence according to its terms, preventing premature revocation.

State Land Grants, Leases and Licences

State lands in Guyana are governed primarily by the State Lands Act Cap 62:01 and the regulations made thereunder. The President is empowered to make absolute or provisional grants or leases of State land and to authorize the issuance of licences for specific purposes, such as agriculture, forestry, or quarrying. These delegated powers extend to the Commissioner of Lands and Surveys, the Conservator of Forests, and the Commissioner of Geological Surveys and Mines. However, all rights to extract minerals from State lands must be granted under the Mining Act. Grants and licences are conditional, subject to revocation for non-compliance, and require land surveys before issuance. The President retains significant powers, including the ability to resume land for public purposes with compensation.

Other Compliance Obligations

The Anti-Money Laundering and Countering the Financing of Terrorism Act (the "**AML/CFT Act**") is essential for our Company and our affiliates, particularly in regulated financial or commercial activities.

The Act creates the Financial Intelligence Unit (FIU) and tasked it with analyzing and disseminating information on suspicious transactions, supporting cross-border investigations.

Reporting entities, which include financial institutions and other designated businesses, are required to implement internal compliance programs, including due diligence, record-keeping, and suspicious activity reporting, under oversight by a designated compliance officer.

Recent amendments have strengthened Guyana's compliance with international AML/CFT standards, obligations, requiring enhanced due diligence and verification of beneficial ownership for corporate clients. The National Coordination Committee (NCC) ensures consistent enforcement across agencies. Reporting entities must implement enhanced due diligence and screen transactions to prevent dealings with designated entities.

The FIU is also empowered to impose asset freezing measures pursuant to UN resolutions, allowing for the immediate immobilization of property associated with designated entities or individuals.

LAWS AND REGULATIONS RELATED TO OUR SURINAME OPERATIONS

Mining Legislation

The Decree E-58 of May 8, 1986 (the "**Mining Decree**") sets out the legal framework for the exploration and exploitation of minerals in Suriname. The Mining Decree provides the Republic of Suriname with the ability to coordinate mining development and implement mining policy in a manner that is consistent with national economic policy. The Mining Decree governs, among other things:

- the granting, registration and termination of mining rights;
- the integration of mining activities into national development, through training opportunities, employment and preference for national goods and services;
- the protection of people and the environment; and
- the fiscal facilities to promote mining.

All minerals within the territory of Suriname are owned by the Republic of Suriname. A person is not permitted to carry out mining activities in Suriname unless authorization has been granted under the Mining Decree. Mining rights under the Mining Decree confer on the holder thereof the right to carry out mining operations and are divided into five types:

(a) the right of reconnaissance;

(b) the right to exploration;

(c) the right of exploitation;

(d) the right to small mining; and

(e) the right to exploit building materials.

Rosebel Gold Mines N.V. ("**RGM**") holds certain rights of exploration and rights of exploitation in Suriname. The nature of such rights under the Mining Decree is discussed below.

Rights of Exploration

Pursuant to Article 28 of the Mining Decree, a right of exploration confers on the holder thereof the exclusive right to explore an area for minerals. A holder of a right of exploration is further entitled to:

- enter the exploration area to conduct exploration activities, being all activities to determine as accurately as possible the nature, quantity, mode of occurrence and economic value of the mineral deposit, as well as all other activities to determine the economical and technical feasibility of its exploitation;
- drill holes for sample collection, make excavations and carry out subsurface work which in his judgment is necessary;
- erect camps and temporary buildings necessary for his personnel and equipment;
- build necessary infrastructure;
- use geological samples collected in the exploration area for tests and analysis; and
- transport samples abroad after obtaining permission from the minister responsible for mining affairs (the "**Minister**").

As such, under applicable law, the holder of a right of exploration legally enjoys land use rights with respect to the exploration area, including the right to build necessary buildings and infrastructure.

The Mining Decree imposes obligations on holders of rights of exploration. Pursuant to Article 29, the holder of a right of exploration is required to:

- begin exploration activities within three months after being granted the right of exploration and continue such activities without interruption (except that interruptions of less than four months are permitted);
- carry out exploration work in accordance with an agreed upon work program;
- submit each year a detailed work program for the following year;
- notify the Minister of any mineral deposit discovery within 30 days of discovery;
- satisfy the minimum spending amounts set out in the order granting the right of exploration;
- keep accurate and complete records of activity and geological results and conduct quarterly and annual reports on progress and results; and
- pay all required duties.

In addition, Article 63 of the Mining Decree provides that the holder of a right of exploration shall pay to the Republic of Suriname at the beginning of each one-year period an amount equal to 50 cents multiplied by the number of hectares to which the right of exploration relates.

Rights of exploration are granted for an initial period of no greater than three years. This initial period may be extended up to two times for a period of two years each if, during the initial period, the holder of the exploration right (i) has carried out its activities in accordance with the agreed program to the satisfaction of the Minister, (ii) has spent the minimum commitment amount for the initial period and (iii) commits to a new minimum commitment amount for the extension period. Thus, rights of exploration may be held for a maximum total of seven years (an initial term of three years, a first extension of two years and a second extension of two years). Pursuant to the Mining Decree, after the initial three year period, the surface to which the right of exploration relates is reduced by 25%. A further 25% surface area reduction is applicable upon each subsequent extension of the right of exploration and, at the end of the seventh year, the right of exploration is relinquished.

Rights of Exploitation

A right of exploitation confers on the holder thereof the exclusive right to extract the minerals to which such right relates at the exploitation area to which such right relates. A holder of a right of exploitation is further entitled to, among other things:

- beneficiate, process, transport and market the minerals to which the right relates in accordance with conditions agreed upon at the timing of the granting of the right;
- erect all works and buildings in or on the exploitation area to mine and process the minerals; and
- to continue reconnaissance and exploration activities on the exploitation area.
- Pursuant to Article 35 of the Mining Decree, the holder of a right of exploitation is required to, among other things:
- commence exploitation activities in a timely manner and continue such activities without interruption, unless such interruption is approved by the Minister;
- maintain accurate and complete records of technical and financial data;
- submit quarterly and annual reports to the Minister; and
- pay such fees and charges as are required by the Mining Decree.

Rights of exploitation are granted for a period of no greater than 25 years, subject to the right of the holder thereof to apply for an extension. Any application for extension must be submitted no later than two years prior to the expiration of the initial term. The area subject to a right of exploitation may not exceed 10,000 hectares. Further, pursuant to Article 32 of the Mining Decree, the Republic of Suriname has a right of option to participate in any exploitation, provided that such option is exercised by the Republic of Suriname within two months of the application for the right of exploitation being submitted.

Mineral Agreement

The relationship between RGM and the Republic of Suriname is governed by the mineral agreement dated April 7, 1994, as amended by an amending and supplemental agreement dated March 13, 2003 and a second amendment and supplemental agreement dated June 6, 2013 (the "**Second Amendment**" and, collectively, the "**Mineral Agreement**"). The Mineral Agreement has been approved by the Suriname National Assembly — the legislative authority of Suriname — and therefore has the force of law.

The Mineral Agreement outlines various business conditions and arrangements with respect to the operations of RGM, including an entitlement of the Republic of Suriname to a 5% carried participation interest in the share capital of RGM. The Mineral Agreement overrides statutory law where deviations are expressly provided for therein and includes the following key terms:

- a stable tax regime, including fixed royalties, income tax, and withholding tax rates;
- obligations to employ and train local personnel;
- provisions dealing with changes in control or share transfers;
- contractual environmental obligations, including with respect to environmental impact assessments and mine closure plans; and
- exemptions from general currency controls.

The Second Amendment of the Mineral Agreement contains the terms and conditions for the establishment of an unincorporated Joint Venture ("**UJV**") through which the Republic of Suriname indirectly holds a 30% participating interest and RGM holds a 70% participating interest in the assets of the UJV, which comprise: (i) mineral rights, licences and other assets in the area surrounding Gross Rosebel; and (ii) certain rights to gold production from the Gross Rosebel exploitation concession in the event that the Republic of Suriname participates in a significant capacity expansion at Gross Rosebel.

Tax Legislation

Corporate Income Tax

Pursuant to tax legislation in Suriname, corporate income tax is levied on entities established in Suriname. Such corporate income tax is levied on the aggregate amount of net income earned from all sources during the entity's accounting period. The annual taxable net income earned by resident entities is subject to the headline corporate income tax rate in Suriname of 36%. The Mineral Agreement provides for an income tax rate being the lesser of the statutory rate in effect (currently 36%) and 45%.

Value Added Tax (VAT) Act

The Value Added Tax Act, which entered into force on January 1, 2023, replaced the former Turnover Tax (Omzetbelasting, OB). This legislation governs the imposition of a general consumption tax on the supply of goods and services within Suriname. The introduction of VAT aims to establish a modern and transparent tax system aligned with international standards, increase government revenue in a sustainable manner and reduce tax avoidance and promote fair competition among businesses.

VAT is levied on (i) the supply of goods and services by entrepreneurs within Suriname and (ii) on the importation of goods into Suriname. The Act applies to: (i) entrepreneurs engaged in economic activities, including production, trade, and services; (ii) both natural persons and legal entities; (iii) certain professional groups are exempt, such as medical practitioners and educational institutions. The VAT Act provides for multiple rates: a standard rate of 10%, applicable to most supplies of goods and services; a reduced rate of 0% or 5% for essential goods and services (e.g., medicines and staple foods); exemptions apply to specific sectors, including financial services, healthcare, and education.

Entrepreneurs are entitled to deduct input VAT paid on purchases and expenses, provided these relate to taxable transactions. This mechanism ensures that VAT is ultimately levied only on the value added.

The Mineral Agreement provides that the implementation of tax changes shall not impact the tax liability of RGM and, as the VAT Act was implemented after the Mineral Agreement was concluded, RGM is exempt from such tax.

Dividend Withhold Tax

Under the Suriname Dividend Withholding Tax Ordinance, a 25% withholding tax is ordinarily imposed on dividend payments by resident companies. However, the Mineral Agreement contains a broad tax exemption with respect to, among other things, the distribution of dividends to shareholders and the repatriation of dividend payments by non-Suriname shareholders.

Environmental Protection Legislation

Pursuant to the Mining Decree, holders of mining rights are generally obligated to take measures for the protection of ecological systems and, upon the termination of mining rights, to take all necessary steps in the interest of public safety, conservation of the sedimentary deposits, making the terrain concerned usable again, and protection of the environment. Until 2020, there was no specific framework law mandating environmental management in Suriname.

The Mineral Agreement required that a Feasibility Study and Environmental and Socio-economic Impact Assessment be submitted to the Republic of Suriname, which was completed in 1997. After further exploration, a final Feasibility Study and ESIA was completed and submitted to the Ministry of Natural Resources in August 2002. RGM received a right of exploitation with respect to the Gross Rosebel concession from the Republic of Suriname after the approval of the final Feasibility Study and the accompanying EIA in December 2002.

The *Environmental Framework Act* S.B. 2020 no. 97 came into effect on May 15, 2020 and sets the perimeters and scope of environmental management in Suriname. The *Environmental Framework Act* forms the legislative basis for the establishment of the National Environment Authority (Nationale Milieu Autoriteit, NMA), which is responsible for coordinating environmental policies, conducting environmental impact assessments, and ensuring compliance with environmental regulations.

Labour and Employment Legislation

Labour Act

The *Labour Act* is the main framework legislation governing employment relationships in Suriname. The maximum working hours for employees is generally 8.5 hours per day or 48 hours per week, provided that the Minister of Labour may grant exemptions for specific industries to have extended working hours. On August 5, 2010, RGM obtained approval from the Minister of Labour for (i) extended working hours of 12 hours per day and (ii) working rotations of 14 consecutive working days followed by 7 days of rest. Pursuant to the *Labour Act*, workers are entitled to a 30 minute break after 5 hours of work. Overtime is permitted under conditions and must be compensated at a minimum of 150% of normal wages, increasing to 200% on rest days. Night work is only permitted in designated sectors or with permission.

Dismissal Protection Act

The *Dismissal Protection Act* regulates termination of employment in Suriname. An employer must obtain prior approval from the Director of Labour for unilateral dismissal unless the termination is by mutual consent or due to urgent cause. Urgent dismissals for serious misconduct may be carried out without such approval provided notice is given to the Labour Inspectorate. The Labor Inspectorate may object to the dismissal. The *Dismissal Protection Act* does not provide for statutory severance obligations but compensation may be awarded by the courts depending on the circumstances of the dismissal.

Minimum Wage Act

The Minimum Wage Act sets the legal minimum hourly wage in Suriname. The minimum hourly wage is subject to annual review and adjustment by the Suriname government.

General Pension Act

The *General Pension Act*, adopted in 2014, introduced a mandatory basic pension scheme — the Algemeen Pensioenfonds ("**APF**") — for all employees in the private and semi-public sectors in Suriname, aiming to provide supplementary income in old age alongside the state pension. The *General Pension Act* applies to all employees in the private sector and semi-public entities between the ages of 18 and 60 who are not already

covered by a qualifying pension scheme. Employers are legally obligated to register their employees with APF and deduct and transfer pension contributions. Penalties may apply for non-compliance or late payments.

Contributions are shared between employer and employee, whereby the employee contributes a fixed percentage of their gross wage and the employer contributes a higher percentage. The contribution rates are determined by law and can be adjusted by decree. Upon reaching the pensionable age (currently 60), employees receive a monthly pension based on their contributions and accrued entitlements. Pension rights are personal and portable — employees retain their entitlements even if they change jobs. Early or deferred retirement may be possible under certain conditions.

The *General Pension Act* does not replace existing pension schemes, such as those under collective labour agreements or company pension plans. However, employers with an existing pension plan may apply for exemption if the scheme provides equal or better benefits than the *General Pension Act*.

The APF operates under public law and is supervised by the Ministry of Finance and Planning and the Central Bank of Suriname. Annual reporting and independent audits are required to ensure transparency and accountability.

National Basic Health Insurance Act

The *National Basic Health Insurance Act* aims to provide all residents of Suriname with access to essential medical care in an affordable and equitable manner through a legally mandated basic health insurance system. The law came into effect on October 9, 2014. Employers are obligated to insure their employees, and the government provides coverage for non-earning and vulnerable groups such as children, the elderly, and the socially disadvantaged.

Vacation Law

The *Holiday Act* guarantees paid annual leave to employees. Employees are entitled to at least 12 working days of vacation per year after one full year of service, and to receive vacation pay generally calculated at 1.25 times the normal wage.

Sickness and Maternity Leave

Sickness and maternity leave are largely covered in the *Labour Act* and under collective labour agreements. For sickness leave, employees must notify the employer and may be entitled to continued wage payment, usually for up to 6 weeks, following which sickness benefits may be payable under the *Social Insurance Act*. Employees are entitled to 12 weeks of maternity leave, typically 4 to 6 weeks before the expected due date and 6 to 8 weeks after. Maternity pay is provided through social insurance.

Collective Labour Agreements

The *Collective Labour Agreement Act* governs collective labour agreements in Suriname. Collective labour agreements are binding agreements between employers and unions that may offer more favourable terms than the minimum provided by law.

Occupational Health and Safety

The primary goal of the *Safety Act* is to ensure safe and healthy working conditions through preventive measures, inspections and enforcement, and education and awareness. It serves as a general legal framework for occupational health and safety in Suriname, aimed at preventing workplace accidents, occupational diseases and other risks. The general *Safety Act* is supplemented by specific regulations for various sectors, including mining and energy.

Employers are legally obligated to: (i) provide a safe workplace that does not endanger the life or health of employees; (ii) supply appropriate protective equipment (e.g. helmets, gloves, hearing protection); (iii) ensure proper ventilation, lighting, and workplace layout; (iv) regularly maintain and secure machines and installations; and (v) offer training and instruction on safe working practices.

Employees are required to: (i) follow safety instructions and internal regulations; (ii) properly use protective gear; and (iii) avoid actions that may create danger to themselves or others.

The Labour Inspectorate, under the Ministry of Labour, is tasked with monitoring compliance with the *Safety Act*. Inspectors may enter workplaces unannounced and issue warnings or fines. In cases of serious or repeated violations, authorities may suspend operations. Violations may result in criminal penalties, such as fines or imprisonment (e.g. in cases of gross negligence). In the event of a workplace accident, the employer may also face civil liability for damages.

Additional provisions on health and safety are also found in the *Labour Act 2017*, which confirms the employer's duty of care regarding safe working environments.

Foreign Currency Control

Under currency exchange legislation in Suriname, large currency transactions between residents and non-residents are generally subject to the approval of the Foreign Exchange Commission. However, exceptions to currency control restrictions have been agreed upon in the Mineral Agreement, including that: (i) RGM is entitled to export and sell from Suriname any minerals produced from Gross Rosebel without restriction (subject to inspection by customs personnel) and to maintain all sales proceeds in bank accounts outside Suriname; (ii) RGM is permitted to hold and operate foreign currency bank accounts; and (iii) RGM may remit all capital invested and profits earned in Suriname to persons outside of Suriname without restriction.

LAWS AND REGULATIONS RELATED TO OUR GHANA OPERATIONS

Mining Legislation

Ownership of Minerals

Pursuant to Article 257 of the 1992 constitution of Ghana, all minerals in their natural state in or upon any land or water are, the property of the Republic of Ghana and vested in the President on behalf of and in trust for the people of Ghana. In that regard, pursuant to section 5(4) of the Minerals and Mining Act, 2006 (Act 703) ("**Mining Act**") and Article 268(1) of the 1992 Constitution of Ghana, any transaction which involves the granting of rights (extensions) for the exploitation of minerals, including a mining lease, requires Parliamentary ratification to be valid.

Under section 7 of the Mining Act, the Minister responsible for Minerals and Mining (the "**Minister**") has the right of pre-emption to all minerals obtained in Ghana and products derived from the refining or treatment of these minerals. The Gold Board Act, 2025 (Act 1140) also grants the Gold Board the authority to buy a portion or all of the gold produced by large scale mining companies in line with the provisions of the Mining Act.

Types of Mineral Rights

A reconnaissance licence, prospecting licence or a mining lease are the three main categories of mineral rights which may be granted under Ghanaian law. A reconnaissance licence grants the holder the right to search for specified minerals using non-intrusive methods such as geological surveys, but does not permit drilling or excavation unless expressly allowed. It is valid for up to twelve (12) months and may be extended for additional twelve (12) month periods if deemed to be in the public interest.

A prospecting licence allows the holder to explore for specified minerals for up to three (3) years over an area not exceeding seven hundred and fifty (750) contiguous blocks. If a holder of a reconnaissance licence applies for a prospecting licence over the same area and mineral, and has complied with the relevant legal obligations, the Minister is mandated to grant the prospecting licence, subject to other legal requirements. The licence grants exclusive rights to prospect for the licenced mineral within the specified area. The prospecting licence may be renewed for additional terms of up to three (3) years and the licence holder is required to surrender not less than half of the area covered by the licence at each renewal upon certain conditions being met.

A mining lease permits the holder to extract minerals and may be issued for a maximum period of thirty (30) years over an area of 1 to 300 contiguous blocks. The leaseholder may apply for an renewal of the lease for a further period of up to thirty (30) years, at least three months prior to the expiry of the initial term, or within such other period as may be agreed with the Minister. A mining lease is subject to ratification by Parliament.

The Minister, on the Minerals Commission's recommendation, may suspend or cancel a mineral right if the holder fails to make required payments, becomes insolvent, provides false information, or becomes ineligible to hold the mineral right under the Mining Act. A mining lease may also be suspended or cancelled if the holder fails to carry out significant operations for over two years without good cause.

Development Agreement and Stability Agreement

The Minister, with advice from the Minerals Commission and subject to parliamentary ratification, may enter into a development agreement with the holder of a mining lease where the proposed investment will exceed five hundred million United States Dollars (US$500,000,000). A development agreement typically covers operational, environmental matters, dispute resolution and tax stability terms.

Additionally, the Minister may enter into a stability agreement, also subject to parliamentary ratification, with the holder of the mining lease, to ensure that the holder of the mining lease will not, for a period not exceeding fifteen (15) years from the date of the agreement, be adversely affected by fiscal or regulatory changes, including taxes, duties, royalties and laws relating to exchange control, transfer of capital and dividend remittance.

Free-Carried Interest and Special Share

Pursuant to section 43 of the Mining Act, 2006 (Act 703) where a mineral right is for mining or exploitation, the Ghanaian government is entitled to acquire a ten percent (10%) free-carried interest in the company without any financial contribution to the company or its mining operations.

This is typically exercised through equity ownership or, as seen in the Revised Investment Agreement with Newmont Golden Ridge (now Zijin Golden Ridge) ("**RIA**"), by receiving 1/9th of declared dividends.

Additionally, pursuant to section 60 of the Mining Act, the Minister may require a mining company to issue a special share to the government at no cost. This share grants limited rights such as attendance at meetings and but does not carry voting rights, dividends, or liquidation rights, and may be redeemed by the government at nominal or no cost.

Dealing with Mineral Rights

In Ghana, mineral rights are transferable subject to the prior written approval from the Minister in accordance with section 14 of the Mining Act. Additionally, under Section 52 of the Mining Act, a person may become a controller of a mining company only after notifying the Minister and either receiving a no objection in writing within two months or the period elapsing without being served with an objection from the Minister.

Operating Permits

Under Regulation 6(1) and 8(1) of Minerals And Mining (Health, Safety And Technical Regulations, 2012) (L.I. 2182), holders of reconnaissance or prospecting licences must obtain an exploration operating permit, and holders of mining leases must obtain a mining operating permit from the Inspectorate Division of the Minerals Commission before commencing operations. These permits are valid for one calendar year and must be renewed annually.

Export Licences

Sections 6 and 104 of the Mining Act provides that the Minister, in consultation with the Minerals Commission, may in writing, licence persons the Minister considers fit, to sell and export or otherwise deal in the specified types and forms of minerals and under terms and conditions specified in the licence.

Other Approvals and Permits

A mining lease holder must submit and obtain approval for a Mining Operating Plan and an Emergency Response Plan from the Minerals Commission's Inspectorate Division under the Minerals and Mining (Health, Safety and Technical Regulations, 2012 L.I. 2182).

A permit from the Water Resources Commission is also required to use divert, dam, store, abstract or use water resources (as defined in the act) or construct or maintain any works for the use of water resources.

Under Minerals and Mining (Mineral Operations — Tracking of Earth Moving and Mining Equipment) Regulations 2020 (L.I. 2404), mineral right holders; mine support service providers; dealers in earth moving and mining equipment; and any other person who intends to use earth moving and mining equipment in mineral operations must register the equipment with the Minerals Commission and obtain a permit from the Minerals Commission.

Other required permits include permits to purchase, use and store explosives.

Annual Mineral Rights Fees

Section 24 of the Mining Act requires holders of mineral rights to pay an annual mineral right fee to the Minerals Commission, calculated per cadastral unit. The fee varies by the type and duration of the mineral right: for a Prospecting Licence, it ranges from thirty-two United States Dollars (USD32) to seventy United States Dollars (USD70) per cadastral unit over a nine (9) year period, while for a Mining Lease, it is one thousand United States Dollars (USD1,000) per cadastral unit for the first two (2) years and one thousand five hundred United States Dollars (USD1,500) per cadastral unit from Year three (3) to Year thirty (30) years.

Annual Ground Rent

Section 23 of the Mining Act requires holders of mineral rights to pay annual ground rent. The rent is payable to the landowner or their successors and assigns; however, in the case of stool lands, it must be paid directly to the Office of the Administrator of Stool Lands. The annual ground rent is charged per cadastral unit.

Compensation and Resettlement

Section 74 of the Minerals and Mining Act provides that the owner or lawful occupier of any land subject to a mineral right is entitled to and may claim from the holder of the mineral right compensation for the disturbance of the rights of the owner or occupier. The amount of compensation payable is to be determined by agreement between the parties; however, if the parties are unable to reach an agreement as to the amount of compensation, the matter shall be referred by either party to the Minister who, in consultation with the Government agency responsible for land valuation shall, determine the compensation payable by the holder of the mineral right. The compensation to which an owner or lawful occupier may be entitled, may include compensation for deprivation of the use or in particular, use of the natural surface of the land or part of the land, loss of or damage to immovable properties, in the case of land under cultivation, loss of earnings or sustenance suffered by the owner or lawful occupier, having regard to the nature of their interest in the land, and loss of expected income depending on the nature of the crops on the land and their life expectancy.

Local Content Requirements

Under the Minerals and Mining (Local Content and Local Participation) Regulations, 2020 (L.I. 2431), holders of mineral rights are required to procure goods and services with Ghanaian content to the maximum extent possible. They must also submit a procurement plan to the Minerals Commission for approval, covering an initial five-year period and updated every five years thereafter.

Holders of mineral rights are also required to procure locally, the items that are specified on the procurement list by the Minerals Commission which is reviewed annually.

A mining lease holder must also submit a recruitment and training programme for Ghanaians to the Minerals Commission for approval. This programme should detail efforts to replace expatriates with Ghanaians over time and specify the proportion of expatriate senior staff allowed: not more than 10% in the first three years, 5% after the third year, and a gradual reduction after the sixth year toward full Ghanaian participation.

Regulation 13 of L.I 2431 also provides that the Minister, based on recommendations from the Minerals Commission and in consultation with the Securities and Exchange Commission, will set capital expenditure thresholds for listing on the Ghana Stock Exchange. If a mineral rights holder's planned capital expenditure exceeds this threshold, they must list at least 20% of their equity on the Ghana Stock Exchange within five years of starting mining operations. The thresholds are yet to be set.

Environmental Protection Legislation

Environmental Requirements

Mining companies are required under Ghana's environmental laws to obtain environmental permit(s) prior to undertaking mining operations. An environmental permit is valid for eighteen (18) months, effective from the date of the issue of the permit.

Where an undertaking in respect of which a preliminary environmental report or an environmental impact statement is approved and the company commences activities after obtaining an environmental permit, it is required to obtain within twenty-four (24) months of the date of the commencement of operations, an environmental certificate from the EPA.

The Environmental Assessment Regulations, 1999 (L.I. 1652) requires that an environmental management plan in respect of an undertaking's operations is submitted within eighteen (18) months of commencement of operations and thereafter every three (3) years. If the environmental management plan satisfies the requirements of the EPA, the environmental certificate may be renewed for another three (3) years. Furthermore, a company granted an environmental permit under these Regulations must submit an annual environmental report after twelve (12) months from the date of commencement of operation and every twelve (12) months thereafter to the EPA.

Reclamation Bond

An undertaking involved in mining operations is required to include reclamation plans with its environmental impact statement and to provide security for any default on reclamation or rehabilitation of disturbed land. Regulation 23 of the L.I 1652 provides that those undertakings for which a reclamation plan is required, including mining, shall be required to post a reclamation bond based on the approved work plan.

The terms of such security are agreed upon between the EPA and the undertaking under the terms of a reclamation security agreement. The reclamation security usually takes the form of cash deposit and a bank guarantee.

Forest Entry Permit

Under section 18 of the Mining Act, before undertaking an activity or operation under a mineral right, an applicant is required to obtain the necessary approvals and permits from the Forestry Commission. Any mining activity that affects a forest reserve must be supported by a forest entry permit granted by the Forestry Commission.

Foreign Investment and Currency Legislation

Regulations relating to Foreign Investment

The Ghana Investment Promotion Centre (GIPC) Act, 2013 (Act 865), provides that companies with foreign shareholding are required to register with the GIPC and satisfy the minimum capital requirement stipulated under the GIPC Act before commencing operations in Ghana.

Companies that are jointly owned by Ghanaians and foreign persons are required to have a minimum foreign capital contribution of two hundred thousand United States Dollars (USD200,000.00) or five hundred thousand United States Dollars (USD500,000.00) for wholly foreign owned companies. The foreign capital contribution is for the operations of the company and is payable in cash or goods.

Registration with the GIPC provides certain investment guarantees and incentives under the GIPC Act, such as approved immigration quota to employ foreign nationals, free transferability of foreign currency through an authorized dealer bank for payment of dividends to foreign shareholders, foreign debt servicing and remittance of net proceeds from the sale of the registered enterprise.

Regulations relating to Foreign Currency

Section 15(1) of the Foreign Exchange Act, 2006 (Act 723) (the "**FEA**"), also provides that each payment in foreign currency to or from Ghana between a resident and a non-resident or between non-residents, shall be made through a bank. A holder of a mining lease is guaranteed the free transfer of convertible currency either through the Bank of Ghana or, if classified as a net foreign exchange earner, through a designated foreign exchange account.

Under section 30 of the Mining Act, a holder of a mining lease who earns foreign exchange from mining operations may be allowed by the Bank of Ghana to retain part of the earnings in a designated account for the purchase of spare parts and other necessary inputs.

The RIA permits our Group to obtain and hold funds in the currency that it chooses save that it is required to return to Ghana a minimum of thirty (30%) of its gross proceeds from the sale of gold.

Tax Legislation

Royalties

The Mining Act provides that the holder of a mining lease shall in respect of minerals obtained from its mining operations, pay royalty to the Republic at the rate and in the manner that may be prescribed.

Under the RIA, during the Stability Period, the royalties payable on total mineral sales revenue is based on the gold price: 3.6% if below one thousand three hundred United States Dollars (USD1,300) per ounce, 4.1% for prices between one thousand three hundred United States Dollars (USD1,300) and one thousand four hundred and forty-nine United States Dollars and ninety-nine Cents (USD1,449.99) per ounce, 4.6% between one hundred thousand four hundred and fifty United States Dollars (USD1,450) and two thousand two hundred and ninety-nine United States Dollars and ninety-nine Cents (US$2,299.99) per ounce, and 5.6% if the price of gold is two thousand three hundred United States Dollars (US$2,300) per ounce or above.

Additionally, as stated in the Environmental Guidelines for Mining in Production Forest Reserves (May 2001), mining companies operating within forest reserves are subject to an additional 0.6% royalty payment and this is also captured in the Revised Investment Agreement.

Import duties and excise taxes

The Mining Act currently permits exemption from payment of customs import duties and excise taxes on mining equipment, plant and machinery which are imported for use exclusively for mining operations. The list of exempted items is contained in the Official Mining List which is settled between the Government agencies (Ghana Revenue Authority, Minerals Commission) on the one hand and the Ghana Chamber of Mines, representing the Mining Companies.

The RIA also provides that our Group will be exempt from the payment of taxes and duties on plant, machinery, equipment, parts, fuels and petroleum products, supplies and accessories which are imported necessarily, specifically and exclusively for operations.

Income Tax

Under section 1 of the Income Tax Act, 2015 (Act 896) (as amended), income tax is payable each year by any person with chargeable income or who receives a final withholding payment during the year. While the standard corporate tax rate for mining companies is currently 35%, the Revised Investment Agreement entered into by our Group provides for a reduced corporate tax rate of 32.5%.

Growth and Sustainability Levy

The Growth and Sustainability Levy Act, 2023 (Act 1095) was recently amended by the Growth and Sustainability Levy (Amendment) Act, 2025 (Act 1131). The amendment provides that mining companies are to pay three percent (3%) of their gross production as tax to the Government.

We note that this may not be applicable to our Group currently, since under the RIA, our Group enjoys stability from new taxes during the Stability Period (as defined therein).

LAWS AND REGULATIONS RELATED TO OUR TAJIKISTAN OPERATIONS

Laws and Regulations on Mining Activities

Regulation in the Mining Sector

The Law of the Republic of Tajikistan "On Subsoil" establishes the legal framework for the exploration, protection, and use of subsoil resources, and regulates relations in this sphere.

State Ownership: Subsoil resources, including deposits of precious metals, are exclusively state property. Private ownership of subsoil is prohibited. All rights to use these resources are granted only on the basis of licenses and permits.

Regulation of Placer Mineral Extraction (including Precious Metals): According to **Article 16**, the extraction of placer minerals, including precious metals, is permitted only under licenses issued to individual entrepreneurs and legal entities. Artisanal and free gold panning methods are also allowed, but strictly with official authorization. Unauthorized extraction is prohibited and punishable by law.

Environmental and Technical Requirements: The law mandates compliance with subsoil and environmental protection standards (Articles 23, 24, and 42), and requires a state expert evaluation of reserves before mining can begin (Article 30). Excessive loss, pollution, or unjustified exploitation of deposits is prohibited.

Regulation through Licensing

The Law of the Republic of Tajikistan "On the Permitting System" (as amended on December 27, 2023, No. 2015 and June 20, 2024, No. 2056, adopted on June 22, 2023, No. 1968) establishes the legal and organizational framework for the permitting system in Tajikistan. It regulates the procedures for issuing, reissuing, suspending, and revoking licenses and other permits for activities considered high-risk — including subsoil use, geological exploration, and the employment of foreign labor.

In Tajikistan, the following types of activities related to subsoil use are subject to mandatory licensing, alongside other high-risk sectors:

- Extraction of mineral resources, including precious metals and hydrocarbons;
- Geological exploration, including prospecting, exploration, and evaluation of deposits;
- Exploration and extraction of underground water.

Licenses are issued by the Government of the Republic of Tajikistan or other authorized permitting bodies. The process requires submission of an application, registration, payment of a fee, and compliance with qualification requirements and licensing conditions.

The term of validity of a subsoil use license is determined by the Government.

Information is recorded in the Unified State Register of Licenses.

Engagement of Foreign Labor: to engage foreign specialists in the context of subsoil use, a separate permit is required, including authorization for employment activities.

The procedure is carried out through the permitting authorities and migration control bodies, and involves obtaining a visa, signing an employment contract, and securing insurance.

Violation of the established procedure for employing foreign labor is subject to liability.

Consequences of Non-Compliance with Licensing Requirements: If violations are identified — such as failure to meet licensing conditions, submission of false information, or non-payment of fees — the license may be:

- Suspended for up to 3 months to allow for the correction of violations;
- Revoked by a decision of the court or the permitting authority;

In exceptional cases — such as threats to the environment, human life, or safety — a license may be immediately suspended.

Carrying out activities without a license or permit is considered illegal, and responsible individuals are subject to liability in accordance with the legislation of the Republic of Tajikistan. Losses caused by the unjustified revocation of a license are subject to compensation by the permitting authorities, based on a court decision.

The Law on the Permitting System establishes a strict but transparent regulatory framework for subsoil use and geological exploration, including the involvement of foreign specialists.

Failure to comply with the law may lead to the suspension or revocation of licenses, prohibition of activities, and the imposition of legal liability.

Land Rights

The Land Code of the Republic of Tajikistan, adopted on December 13, 1996 (as amended on June 22, 2023), regulates relations concerning the ownership, use, and protection of land, as well as its designated use.

Land in Tajikistan is the exclusive property of the state and cannot be privately owned.

However, the right to use land may be granted on various grounds, including lease, perpetual, fixed-term, and inheritable lifelong use.

Land allocated for subsoil development (including mineral extraction) is classified as industrial land and may be provided to legal entities and individuals based on licenses and in accordance with the requirements of the legislation:

- Establishes that allocating land for construction on areas containing mineral deposits is only allowed with the approval of mining oversight authorities.
- Provides that land may be withdrawn if mineral deposits are discovered, with mandatory compensation to the land user.
- All losses incurred by land users and costs for land restoration must be reimbursed by the parties in whose interest the land is being used.

Geological Exploration and Temporary Use

- Land may be temporarily allocatee for geological, prospecting, geodetic, and other surveying activities without withdrawal of the land from the current user.
- Compensation for damages and mandatory restoration of the land's original condition are required upon completion of such works.

Liability and Oversight

- State authorities have the right to suspend mineral extraction activities in case of violations and land legislation.
- All projects affecting land are subject to official approval and may be appealed.

The Land Code of Tajikistan establishes strict state control over land use in the field of mineral extraction. To obtain a land plot for extraction, approval from the mining oversight authority, a valid license, and compliance with designated land use and environmental standards are required. Violations may lead to the revocation of the land plot, and any damage caused must be compensated.

Laws and Regulations on Environmental Protection and Ecology

The Law of the Republic of Tajikistan "On Environmental Protection" (as amended as of November 13, 2024) establishes the legal foundations of state policy in the field of environmental protection, sustainable use of natural resources, and ecological safety.

Mineral extraction activities are directly regulated by this law, as they:

- Has a direct impact on components of the natural environment — including land, subsoil, water, air, flora, and fauna;
- Requires a mandatory Environmental Impact Assessment (EIA) and a positive conclusion from the State Environmental Review (Articles 35–36);
- Must comply with limits on emissions, discharges, waste disposal, and natural resource use set by the authorized body (Articles 19–20);
- May be suspended or terminated in case of violations of environmental requirements (Articles 39, 44);
- Is subject to environmental control and monitoring (Articles 9,26).

In addition, natural resource users are required to:

- Ensure environmental safety;
- Restore disturbed natural resources;
- Pay for the use of subsoil and for negative environmental impacts;
- Compensate for any damage caused.

The law establishes a strict regulatory framework under which mineral extraction activities are only permitted if environmental protection requirements are met. These include licensing, impact assessment, environmental review, compliance with standards, monitoring, and mandatory compensation for environmental damage.

The Law of the Republic of Tajikistan "On Environmental Monitoring" (as amended on November 13, 2024, No. 2097) regulates the organizational, legal, and technical aspects of the environmental monitoring system in Tajikistan. Its purpose is to ensure timely detection, assessment, and forecasting of environmental impacts, including those from anthropogenic sources (i.e., human economic activities such as mineral extraction).

Focus on the mineral extraction sector:

- Natural resource users, including subsoil users, are required to carry out local environmental monitoring of impact sources (Article 12), i.e., to monitor emissions, pollution, and impacts on air, water, soil, subsoil, and living organisms.

- Such enterprises must:

  - Organize environmental monitoring activities;

  - Maintain the necessary technical and material infrastructure for monitoring;

  - Use approved measurements methods;

  - Appoint responsible personnel for monitoring and reporting;

  - Submit environmental data to state authorities.

- Environmental monitoring is mandatory during the development and implementation of natural resource use projects and is included as part of the State Environmental Review (Article 18). This is particularly important when launching or expanding mineral extraction operations. Failure to fulfill monitoring obligations may result in legal liability.

- Monitoring data are taken into account when making decisions on construction permits, including in the mining sector, as well as in urban planning, public health assessments, and sustainable development initiatives (Article 8).

The law plays a key role in controlling environmental risks associated with resource extraction and ensures both state and public oversight of the environmental impact of mining operations.

The Law of the Republic of Tajikistan "On Environmental Expertise" (as amended on November 13, 2024, No. 2101) regulates the procedure and principles for conducting environmental reviews to assess the potential impact of proposed activities on the environment. Its primary goal is to prevent environmental, social, and economic consequences resulting from economic and other forms of activity.

- Mineral extraction is classified as a type of planned economic activity subject to mandatory Environmental Impact Assessment (EIA) and subsequent State Environmental Expertise.

- Such activities are considered potentially hazardous to the environment and are subject to the presumption of environmental risk, meaning they require a thorough preliminary assessment before project approval.

- Project documentation related to geological exploration, construction, and operation of extraction facilities must undergo environmental review to verify compliance with environmental standards, permissible pollution levels, and the inclusion of environmental protection measures.

- Without a positive conclusion from the environmental expertise, project financing or implementation is prohibited, including for resource development projects.

- If negative impacts or non-compliance with standards are identified, the project must be revised and resubmitted for review.

- The law also requires the consideration of public opinion, including holding public consultations and allowing for public environmental expertise initiated by citizens.

Thus, for companies engaged in subsoil use in Tajikistan, environmental expertise is a mandatory and legally significant procedure. Failure to comply may result in a ban on project implementation and the imposition of legal liability.

Laws and Regulations on Industrial Safety

The Law of the Republic of Tajikistan "On Industrial Safety of Hazardous Production Facilities" (as amended as of 2020) regulates the legal and organizational framework for ensuring industrial safety at hazardous production facilities (HPFs).

This law is a key regulatory act for enterprises operating in the mining sector, especially those that use hazardous reagents such as cyanides, acids, or operate with waste dumps and tailings storage facilities. Its purpose is to prevent accidents, minimize their consequences, and protect human life and health, the environment, and property.

- Mining and mineral processing enterprises are classified as hazardous production facilities, especially those operating underground or involving hydraulic structures.

- The law also applies to facilities where toxic or highly toxic substances are used or generated, as well as substances harmful to the environment, such as those involved in ore processing.

- Tailings storage facilities fall under the scope of the law as part of such facilities, recognized as potentially hazardous structures.

- Such facilities are required to
  - Develop and industrial safety declaration;
  - Conduct safety assessments and expert reviews;
  - Ensure continuous industrial safety monitoring and control;
  - Maintain emergency response units and ensure readiness to eliminate the consequences of accidents.

All such facilities are subject to mandatory registration in the State Register of Hazardous Production Facilities (HPFs). Violations of the law's requirements may lead to administrative or criminal liability.

Laws and Regulations on Taxation

Activities related to the extraction of mineral resources, including non-ferrous and precious metals, in the Republic of Tajikistan are regulated by both the general provisions of the Tax Code (as amended on April 15, 2025) and by special tax regimes applicable to subsoil users. The overall tax burden for these activities includes several components:

- Corporate Income Tax
- Royalties for the extraction of mineral resources
- Commercial Discovery Bonus
- Export Rent (applicable when raw materials are exported abroad)
- Value-Added Tax (VAT)
- Social Tax
- Property Tax

Tax Base: The tax base for corporate income tax is defined as the difference between the taxpayer's total income and documented expenses incurred in the course of operations. Income and expenses must be recorded in accordance with the provisions of the Tax Code. Losses from previous years may be carried forward and deducted in accordance with applicable legislation.

Tax Rates: Tax rates are set in Article 183 of the Tax Code and vary by type of activity. Generally, these rates can range from approximately 13% to 20% for different sectors, including manufacturing, credit institutions, mobile network operators, and extraction and processing of natural resources. Specifically, companies engaged in the extraction of non-ferrous and precious metals are subject to an 18% tax rate.

Investment Deductions: Under Article 201 of the Tax Code, taxpayers are entitled to investment deductions for certain expenditures. These deductions can range from about 5% to 10% of the value of investments in new technological equipment, modernization of production facilities, and technological upgrades. These are applied in the tax period when the assets are operational.

Royalties for Mineral Extraction

Tax Base: For precious metals, the tax base is the volume of extracted ore, recalculated into pure metal content (in grams or ounces).

For non-ferrous metals, the base is the volume of extraction, valued at the average market price during the reporting period on international exchanges (e.g., LME).

If no sale occurs, the production cost plus a 20% markup is applied.

Royalties are targeted payments for the use of subsoil resources and are calculated based on the volume of extraction for each resource type.

Royalty Rates: Royalty rates vary depending on the type of resource extracted, typically ranging from 6% to 10%. This range varies based on the types of materials, such as non-ferrous and rare metals, precious metals like gold, silver, and platinum, precious stones, and placer mineral resources.

Commercial Discovery Bonus

Tax Base: The bonus is calculated based on economically viable mineral reserves, as confirmed under the terms of the license and/or investment agreement.

It is a one-time payment due upon obtaining a mining license, provided the identified reserves are recognized as economically viable. The amount and payment procedure for the bonus are specified in the license terms and/or investment agreement.

Export Rent

Tax Base: The contract value of exported products, but not less than the average market price on international exchanges (e.g., LME, LBMA, etc.).

Mining companies are required to pay export rent on extracted mineral resources at rates of 2% starting in 2023, 4% — from 2025, and 6% — from 2027.

Withholding Taxes

Tax Base: The gross amount of income paid to a non-resident, without any deductions or expense offsets. The entire amount of accrued income, whether in cash or non-cash form, is subject to tax.

According to Articles 237–239 of the Tax Code, Withholding tax rates for various types of income generally range from 3% to 20%. This includes dividends, interest, royalties, insurance income, income from international transportation and telecommunications, and other income of non-residents, as well as salaries for both residents and non-residents.

The above rates apply if the income is paid to a non-resident who does not have a permanent establishment in Tajikistan. The responsibility for withholding and remitting the tax to the budget lies with the tax agent.

Value-Added Tax (VAT)

Tax Base: The taxable base includes the value of goods (works, services) sold and the value of goods imported into Tajikistan that are subject to VAT upon import.

According to Article 251 of the Tax Code of the Republic of Tajikistan, the sale of non-ferrous and precious metals within Tajikistan is exempt from VAT. However, imported raw materials and equipment, as well as purchases from domestic VAT-paying suppliers, are subject to VAT at a rate of 14%.

VAT paid on purchases is not deductible for the portion related to VAT-exempt operations. Therefore, despite the exemption on sales, VAT remains a significant tax burden for purchases and imports.

Social Tax

Tax Base: The tax base includes the total accrued income of employees, including wages, bonuses, allowances, compensations, and other payments, whether under employment contracts or civil law agreements.

Social tax must be paid on all employee-related payments with a 20% contribution paid by the employer on the wage fund and a 2% deduction withheld from the employee's salary. The taxable base covers basic salary, bonuses, allowances, compensation payments, and payments under both labor and civil contracts.

These rates apply uniformly to all employers, including subsoil users. Payments to foreign employees officially employed in Tajikistan are also subject to social tax.

Other Accounting and Reporting Aspects

- Companies must maintain separate accounting for each type of mineral resource;
- Separate tax returns must be filed for each tax obligation;
- Royalties and export rent must be paid regardless of profitability;
- In export operations, companies are required to disclose pricing methodologies and confirm arm's-length conditions.

LAWS AND REGULATIONS RELATED TO OUR AUSTRALIA OPERATIONS

Laws and Regulations on Mining Activities

Mining Activities in Western Australia

The *Mining Act 1978* (WA) (the **Mining Act**) is the principal legislation governing the exploration and development of mineral resources in Western Australia. It sets out the framework for the granting of mining tenements, environmental obligations (in conjunction with the environmental laws discussed below), and operational compliance for mining activities across the State. Under the Mining Act, there are various licences and leases that may be issued which authorize and govern participation in regulated mining activities. The key features of the different types of licences and leases which may be granted under the Mining Act are discussed below.

Prospecting Licence

The holder of a Prospecting Licence is permitted (amongst other things), subject to conditions and endorsements attaching to the tenement, to excavate, extract, or remove up to 500 tonnes of earth, soil, rock, stone, fluid, or mineral-bearing substances during the term of the licence, unless a greater amount is approved by the Minister. The holder of a Prospecting Licence has a priority entitlement to apply for a Mining Lease or General Purpose Lease over the same land.

A Prospecting Licence remains in force for a period of 4 years and may be extended for one further period of 4 years before expiry. An application for extension must be lodged during the final year of the term of the licence, on or prior to the expiry date. The application for an extension of term must be supported by information to support the ground claimed in respect of the extension request, a summary of work carried out under the licence, and a details programme of work the holder proposes to carry out under the licence if the extension were granted. The licence continues in force until the extension application is determined.

Prospecting Licences are subject to conditions which include minimum expenditure conditions, conditions relating to the payment of prescribed rent, and conditions relating to the prevention or reduction of injury to land and requisite approvals.

Exploration Licence

An Exploration Licence grants the holder the right to explore for specified minerals within the licensed area. The holder of an Exploration Licence may, subject to conditions and endorsements attaching to the tenement, excavate, extract, or remove up to 1,000 tonnes of earth, soil, rock, stone, fluid, or mineral-bearing substances during the term of the licence, unless a greater amount is approved by the Minister. The holder of an Exploration Licence has the right to apply for one or more Mining Leases over any part of the land covered by the Exploration Licence.

An Exploration Licence granted after 10 February 2006 are granted for one initial period of 5 years and may be extended for one further period of 5 years, followed by further periods of 2 years. An application for extension of term of an Exploration Licence must be lodged during the final year of the term of the licence, on or prior to the expiry date. The application for an extension of term must be supported by information to support the ground claimed in respect of the extension request, a summary of work carried out under the licence, and a details programme of work the holder proposes to carry out under the licence if the extension were granted.

Exploration Licences are subject to conditions which include minimum expenditure conditions, conditions relating to the payment of prescribed rent, requisite approvals, conditions relating to the prevention or reduction of injury to land, conditions relating to reserved land, conditions relating to consultation with an underlying Pastoral Lease holder, and the compulsory partial surrender of certain areas subject to Exploration Licences (relevantly, if applied for or granted after 10 February 2006 the holder must relinquish an area which constitutes not less than 40% of the area of the Exploration Licence at the end of 5 years).

Mining Lease

A Mining Lease authorizes the holder to mine for, and dispose of, any minerals from the land to which the Mining Lease applies. The Mining Lease grants the holder exclusive rights to use, occupy, and enjoy the land for mining purposes, and the holder owns all minerals lawfully extracted from the Mining Lease area.

A Mining Lease is granted for an initial term of 21 years. The holder of a Mining Lease is entitled to a renewal, as of right, in respect of the first renewal or if section 111A(1)(d) applies. A Mining Lease may be renewed for further successive terms up to 21 years at the discretion of the Minister, which discretion is subject to the considerations of (i) the leaseholder must have substantially complied with all obligations under the existing lease; (ii) there are no material breaches, regulatory actions, or adverse findings against the leaseholder; and (iii) the renewal application must be complete, accurate, and submitted within the prescribed time frame, with all supporting documentation required for renewal. An application for the renewal of a Mining Lease must be lodged during the final year of the term of the lease, on or prior to the expiry date.

Mining Leases are subject to conditions which include, minimum expenditure conditions, conditions relating to prescribed rent and royalties, survey requirements, purposes for which the land may be used, conditions relating to the prevention or reduction of injury to land, conditions relating to reserved land including the provision and acceptance of a mining proposal and mine closure plan, and reporting of results.

Miscellaneous Licence

A Miscellaneous Licence may be granted for a range of purposes directly connected to mining operations, such as the construction of roads, pipelines, or water extraction infrastructure. If another mining tenement is granted in respect of land that is subject to a miscellaneous licence the other mining tenement and the miscellaneous licence apply concurrently with respect to that land.

A Miscellaneous Licence is granted for an initial term of 21 years and may be renewed for further periods of 21 years. An application for the renewal of a Miscellaneous Licence must be lodged during the final year of the term of the lease, on or prior to the expiry date.

Miscellaneous Licences are subject to the same conditions as Prospecting Licences relating to the prevention or reduction of injury to land, compliance with the approved purpose for the tenement, and further terms and conditions as may be prescribed.

General Purpose Lease

A General Purpose Lease entitles the holder to exclusive occupation of the land for one or more specified purposes directly connected with mining operations. These purposes may include the erection and operation of machinery, the treatment or deposition of minerals or tailings, and other activities necessary to support mining operations, as outlined in the lease.

A General Purpose Lease is granted for an initial term of 21 years and may be renewed for successive 21 year terms.

General Purpose Leases are subject to conditions which include requisite approvals for ground disturbing work, mining proposal and mine closure plan requirements, survey requirements, and conditions relating to the prevention or reduction of injury to land.

Retention Licence

The holder of a Prospecting Licence or Exploration Licence granted, or applied for before 10 February 2006, and the holder of a Mining Lease (whenever granted or applied for) may apply for a Retention Licence.

A Retention Licence authorizes the holder to enter the subject land for further exploration for minerals, and to carry on such operations and carry out such works necessary for that purpose including digging pits, trenches and holes, excavating, extracting and removing earth, soil, rock, stone, fluid or mineral bearing substances not exceeding 1,000 tonnes and to take and divert water. The holder of a Retention Licence has priority entitlement to apply for a Mining or General Purpose Lease over the same land.

The holder of a Prospecting Licence or Exploration Licence granted or applied for after 10 February 2006 can no longer apply for a retention licence but may apply for "retention status". The "retention status" provisions are similar to the current retention licence provisions but a separate title will not be required. The Minister may approve retention status in respect of parts of the licence if a mineral resource is identified but it is impractical to mine because the resource is not economic at the time but may become so in the future, or the resource is required to sustain an existing or proposed mining operation, or there are existing political, environmental or other difficulties in obtaining requisite approvals. Once retention status has been granted, the holder of a Prospecting Licence or Exploration Licence is not required to comply with the prescribed expenditure conditions.

A Retention Licence remains in force for 5 years. The Minister may, on receipt of an application made within the prescribed time and in the prescribed manner, renew or further renew a Retention Licence for a period not exceeding 5 years.

Royalties

Royalties payable to the State of Western Australia are prescribed under the Mining Act and the *Mining Regulations 1981* (WA). In relation to gold, the applicable royalty rate is 2.5% of the royalty value of the gold metal produced. However, no royalty is payable in respect of the first 2,500 ounces of gold metal produced during a financial year from gold bearing material produced or obtained from the same gold royalty project.

Land Access

Under the Mining Act, the grant of a mining tenement does not automatically provide access to areas of private land or pastoral lease land that are within 30 metres of the natural surface and located within a specified distance of certain infrastructure or improvements (such as residences, buildings, or water sources), unless consent is obtained from the landowner and/or occupier.

While a tenement may still be granted without this consent, access to the restricted surface area will be limited to below a depth of 30 metres, and this restriction will be noted on the tenement register.

Consent is typically formalized through an access agreement, which may include terms for compensation to the landowner or occupier. Compensation generally covers losses such as surface disturbance, damage to improvements, or loss of earnings resulting from the tenement holder's activities.

Environmental Protections

Mining operations in Australia are subject to stringent environmental protection laws. These laws are primarily enforced at State and Territory levels, with only limited Federal legislation and regulatory involvement.

Federal environment protection laws

The *Environmental Protection and Biodiversity Conservation Act 1999* (Cth) ("**EPBC Act**") is the key piece of environmental protection legislation at the Federal level.

Amongst others, the objects of the EPBC Act are to provide for the protection of the environment, especially those aspects of the environment that are matters of national environmental significance, including (but not limited to) national heritage places, world heritage properties, wetlands of international importance, listed threatened species and ecological communities, migratory species, Commonwealth marine areas and nuclear actions (such as uranium mining).

The Commonwealth Department of the Environment and Energy ("**DoEE**") is the key Federal department supervising environment protection in Australia under the EPBC Act. The DoEE also designs and implements Australian Government policy and programs to protect and conserve the environment, water and heritage.

WA-based environment protection laws and approvals

The Mining Act and *Environmental Protection Act 1986* (WA) (the "**EPA Act**") are the principal pieces of legislation which regulate the environmental impacts of mining in Western Australia.

Under the Mining Act, proponents of large scale mining operations must secure a mining lease before starting commercial production in Western Australia. All mining lease applications must include a mining proposal and a mine closure plan. The mining proposal's main goal is to allow regulators to evaluate the environmental impact of the project. The mine closure plan outlines the steps that will be taken to ensure that the mine can be closed, decommissioned and rehabilitated to fulfil the legal requirements for rehabilitation and closure. With effect from August 2025, mining proposals and mine closure plans will be merged into a single document to be known as a 'Mining Development and Closure Proposal'. However, mine closure planning will continue to be required throughout the life of a mining project.

Where a mining proposal has potential to impact on the environment, it will be referred to the WA Environmental Protection Authority ("**WA EPA**") and the Minister to decide whether formal environmental assessment is required under Part IV of the EPA Act. A large scale mining operation usually initiates an assessment pathway known as 'Public Environmental Review'. This review is triggered when the proposal is of Statewide significance, requires substantial assessment to determine environmental impacts, involves numerous significant and complex environmental issues, or when the level of public interest warrants a public review.

The Commonwealth government has worked to minimize duplication between Commonwealth and State environmental impact assessment processes. Bilateral agreements have been established between the Commonwealth and each State and Territory government to create a unified assessment process for projects involving controlled actions. These agreements recognize the environmental assessment methods used by State or Territory governments but still mandate that assessment reports be submitted to the Commonwealth Minister for final approval.

In Western Australia, taking groundwater requires a licence under the *Rights in Water and Irrigation Act 1914* (WA), administered by the Department of Water and Environmental Regulation. The application process involves several stages, including pre-application consultation, assessment of environmental impacts and ongoing compliance with the conditions imposed on the licence.

Environmental licences and permits are subject to periodic renewal and review. Regulators may impose additional conditions or operational requirements over time to ensure continued environmental protection.

Personal Liability for Environmental Offences

Environment protection laws at both the State and Federal levels establish a range of environmental offences. These typically include a general duty to avoid causing environmental harm, along with specific offences related to various forms of pollution.

In Western Australia, legislation has been introduced that can hold directors and individuals involved in the management of a corporation personally liable for environmental offences committed by their company. Whether a regulator decides to prosecute a director or manager generally depends on the degree of control or influence they exercised over the conduct in question.

There are also statutory defences available to individuals facing personal liability, particularly where they can demonstrate that they took all reasonable steps to prevent the offence. This approach aligns with broader national principles aimed at ensuring personal criminal liability is only imposed where justified by public interest.

Liability for rehabilitation and financial assurance

In Western Australia, mine owners and operators are legally required to undertake rehabilitation activities both progressively during operations and at the end of the mine's life. These obligations are typically imposed through conditions attached to planning and environmental approvals, as well as under the terms of the relevant mining tenement.

To ensure that rehabilitation can be carried out even if a company defaults, the Western Australian State Government requires financial security. Regulators have the authority to determine the amount of this security and to enforce its provision.

Under the Mining Act and the *Mining Rehabilitation Fund Act 2012* (WA), all tenement holders must contribute annually to the Mining Rehabilitation Fund ("**MRF**"). The MRF is a pooled fund managed by the Department of Mines, Petroleum and Exploration, designed to cover the cost of rehabilitation in cases where operators fail to meet their obligations.

Laws Protecting Indigenous Australians

Federal and State legislation in Australia, particularly in Western Australia, plays a significant role in protecting the culture and heritage of Indigenous Australians, impacting mining projects. The *Native Title Act 1993* (Cth) ("**NTA**") recognizes native title as a distinct form of land ownership, acknowledging Indigenous Australians' rights to their traditional lands, and provides for the determination of the nature and extent of native title rights and interests of the native title holders, the extinguishment of native title by particular acts, the validation of certain historical acts which would otherwise be invalid because of their effect on native title and compensation for extinguishment or impairment of native title rights and interests.

Native title cannot be sold or transferred like freehold land and can only be surrendered to the Crown. The NTA requires compliance with specific procedures, such as the 'right to negotiate,' for the valid grant (and for WA mining leases, secondary and successive renewals) of mining tenements affecting native title. This involves negotiations between the State Government, tenement applicants, and registered native title claimants and holders of native title at the time. As an alternative to the 'right to negotiate' process, Indigenous Land Use Agreements ("**ILUAs**") can be negotiated with the relevant native title claimants detailing compensation, access rights and land management terms.

In addition to native title, cultural rights are protected under the *Aboriginal Heritage Act 1972* (WA) in Western Australia. This act requires mining tenement holders to consult with Aboriginal communities and ensure that their activities do not harm Aboriginal cultural heritage sites. Compliance with these acts is mandatory, with breaches potentially leading to legal offences and often constituting a breach of tenement conditions. Tenement holders are encouraged to assess their activities against duty of care guidelines to mitigate risks of non-compliance.

Labour Laws

Federal labour laws

The following Federal industrial relations laws and regulations are applicable to our Group's operation in Australia:

- *Fair Work Act 2009* (Cth) (the "**FWA**"); and
- *Fair Work Regulations 2009* (Cth).

Broadly speaking, the FWA is a key piece of legislation in Australia that regulates private sector employment and workplace relations, establishing, among other things, the rights and responsibilities for employees and employers.

The FWA establishes the foundational framework for Australia's national workplace relations system. It sets out minimum employment terms and conditions through the 'National Employment Standards', provides statutory protections for job security and employee rights, provides for minimum rates of pay and entitlements, governs collective bargaining and the role and conduct of trade unions and other registered organizations (together with the *Fair Work (Registered Organisations) Act 2009* (Cth)). Additionally, it outlines the powers and functions of the Fair Work Commission, the independent national workplace relations tribunal, and addresses a broad range of employment-related matters including dispute resolution, unfair dismissal, and general protections.

The FWA generally applies to "national system employees" and "national system employers" as defined in sections 13 and 14 of the FWA, respectively. The Fair Work Ombudsman is the federal workplace relations regulator that has broad powers to enforce provisions of the FWA. As such, strict compliance with the FWA by all national system employers is paramount.

In addition, the following Federal superannuation laws are applicable to our Group's operation in Australia:

- *Superannuation Guarantee (administration) Act 1992* (Cth); and
- *Superannuation Guarantee Charge Act 1992* (Cth).

Western Australia

(a) Work health and safety legislation

The following work health and safety laws and regulations are applicable to our Group's operations in Western Australia:

- *Work Health and Safety Act 2020* (WA) (the "**WHS Act**"); and
- *Work Health and Safety (Mines) Regulations 2022* (WA) (the "**WHS Mines Regulations**").

The recent introduction of the WHS Act, replacing the now repealed *Occupational Safety and Health Act 1984* (WA), and the supporting WHS Mining Regulations, seek to protect the health and safety of workers and other persons by eliminating and minimising risks arising from work or workplaces. The WHS Act also aims to ensure fair and effective mechanisms for representation, consultation, and cooperation between employers and workers to address and resolve health and safety matters in the workplace.

The WHS Act has replaced the work health and safety elements previously set out in the MSI Act. However, levies to cover the cost of regulating health and safety continue to be collected and used for these purposes under the MSI Act and supporting regulations.

(b) Worker's Compensation

The following workers' compensation laws and regulations are applicable to our Group's operations in Western Australia:

- *Worker's Compensation and Injury Management Act 2023* (WA) (the "**Compensation and Injury Act**"); and
- *Worker's Compensation and Injury Management Regulations 2024* (WA) (the "**Compensation and Injury Regulations**")

The Compensation and Injury Act, together with the supporting Compensation and Injury Regulations, implements a scheme for compensating employees who suffer injuries because of their employment.

Regulations on Foreign Investment in Australia

Australia's foreign investment regime is primarily governed by the Foreign Acquisitions and Takeovers Act 1975 (Cth) ("**FATA**"), the Foreign Acquisitions and Takeovers Fees Imposition Act 2015 (Cth), and the Foreign Acquisitions and Takeovers Regulation 2015 ("**FATR**"). Together, these laws empower the Australian Treasurer, advised by the Foreign Investment Review Board ("**FIRB**"), to review foreign investment proposals that meet certain thresholds and to block or impose conditions on proposals that are considered contrary to the national interest (these proposals are called 'significant actions').

Generally, the FATA applies to acquisition of shares and voting power in a company of 20% or more by a single foreign person and its associates ("**Substantial Interest**"), or 40% or more by two or more un-associated foreign persons and their associates ("**Aggregate Substantial Interest**"). Where a foreign person holds a Substantial Interest in the Company or foreign persons hold an Aggregate Substantial Interest in the Company, the Company will itself be a 'foreign person' for the purposes of FATA.

Some significant actions must be notified to the FIRB before they are taken (these are called 'notifiable actions'). Where a foreign person (as defined in the FATA) ("**Foreign Person**") is required to notify FIRB of a proposed notifiable action (which is also a significant action), the foreign person must not take the action until the Treasurer has issued a no objection notification — failure to do so is an offence under the law. The process of notifying a transaction and obtaining a statement of no objection in relation to it is known as obtaining 'FIRB approval'.

If a significant action does not have to be notified, the foreign person can elect to do so. Obtaining a statement of no objection removes the Treasurer's power to prevent the significant action except in very limited circumstances.

Whether an investment is a significant action (including a notifiable action) requiring FIRB approval depends on the background of the investor (particularly whether the investor is a "foreign government investor" (as defined in the FATR) ("**Foreign Government Investor**")), the type and value of the asset(s) to be acquired, and the sector in which the investment is to be made.

Investment restrictions on our Group under the FATA

Due to the identity of our major shareholders, each of the entities in the Group are currently classified as both a Foreign Person and a Foreign Government Investor. This classification will remain unchanged post-listing on the Hong Kong Stock Exchange, provided that Minxi Xinghang State-owned Assets Investment Company Limited (itself a Foreign Government Investor) retains a shareholding of at least 20% in Zijin Mining Group and Zijin Mining Group retains a shareholding of at least 20% in our Company. This is regardless of the proportion of shares allocated to other Foreign Persons or Foreign Government Investors.

As a result of this status, certain future investments by the Group in Australia may be subject to review and require prior approval from the Treasurer. Further, Norton Gold Fields and its subsidiaries will also be classified as a 'foreign person' for the purposes of the FATA and will be required to apply for and obtain FIRB approval for a range of operational matters that occur in the ordinary course of the business of the Australia Norton Gold Mine. These include the grant of new exploration or mining tenements (whether through application for grant, applications for amendments, conversion, substitution or otherwise), grants of extensions and renewals of previously granted exploration or mining tenements, and entry into or the grant of leases and licences over Australian land which they have a right to occupy for a term that is reasonably likely to exceed 5 years.

Such FIRB approval may be granted, denied, or granted subject to conditions that the relevant applicant would be required to comply with. If the necessary approval is not obtained for a particular investment, the relevant applicant will be unable to proceed with that investment or be granted the applicable mining tenement or other interest in Australian land.

Investment restrictions on investors under the FATA

The requirement for FIRB approval when a Foreign Person seeks to acquire an interest in the Company is assessed on a case-by-case basis. It is the investor's responsibility to determine whether FIRB approval is required before acquiring Shares under this Prospectus. Investors must also ensure compliance with FATA, including securing any necessary governmental or regulatory consents, and fulfilling all other applicable approval, registration, and procedural requirements.

A Foreign Person must obtain FIRB approval from the Treasurer to acquire Shares under this Prospectus if they are a Foreign Government Investor from the PRC unless they are already deemed to have an interest for FATA purposes in the Company's underlying Australian assets. This requirement arises due to the application of association rules under the FATA and the current level of ownership in the Company by Foreign Government Investors from the PRC. As a result, any acquisition of Shares by investors who are Foreign Government Investors from the PRC but not already deemed to have an interest for FATA purposes in the Company's underlying Australian assets requires prior approval from the Treasurer.

This summary does not cover all scenarios in which FIRB approval may be required for acquiring Shares under this Prospectus. Prospective investors are strongly encouraged to seek independent legal advice before proceeding with any acquisition of Shares under this Prospectus.

If FIRB approval is required but not obtained, the Treasurer has powers to take enforcement actions. These may include ordering the disposal of the acquired Shares, restricting the exercise of rights attached to those Shares, or prohibiting or delaying any payments related to them.

LAWS AND REGULATIONS RELATED TO OUR FUTURE OPERATIONS IN KAZAKHSTAN

Mining Regulation Overview

General

In Kazakhstan, subsoil resources such as solid minerals are the exclusive property of the State. However, rights to use mineral resources may be granted to local and foreign individuals and legal entities based on a subsoil use contract/licence concluded with/issued by the relevant industry's competent authority.

Subsoil use rights are granted for a fixed period subject to possible extension before expiration of the applicable subsoil use contract and licence (if applicable and permitted). Subsoil use rights may be terminated by the Competent Authority (as defined below) if, *inter alia*, subsoil users do not fulfil their contractual obligations.

Prior to August 1999, subsoil use rights for mining operations in Kazakhstan were granted by issuance of a licence and execution of a subsoil use contract. In August 1999, the Kazakhstan Government, in an attempt to simplify the procedure, abolished this two-tier process. Subsoil use rights were then granted only by means of a subsoil use contract, and no licence was required. However, previously issued licences remained in full force until their date of expiry.

With effect from 29 June 2018, the Code of the Republic of Kazakhstan dated 27 December 2017 "On Subsoil and Subsoil Use" (the "**Subsoil Code**") replaced the Law "On Subsoil and Subsoil Use" dated 24 June 2010 (the "**2010 Subsoil Law**"). The Subsoil Code's main aims include the attraction of investment into the mining sector and expansion of exploration activities. The Subsoil Code has for the first time introduced a rule under which licences for exploration of solid subsoil resources (except for uranium) can be granted on the basis of "first come — first served" principle (with certain exceptions).

Under the Subsoil Code, the regulation of grant of subsoil use rights in the mining area has changed. Subsoil use rights for solid minerals (except for uranium) are now granted by licences to be issued by the Competent Authority. Subsoil use rights for hydrocarbons and uranium are granted by execution of subsoil use contract as under the previous laws. All previously executed subsoil use contracts for solid minerals remain in force.

Legislation

The main statute regulating mining activities in Kazakhstan is the Subsoil Code. The Subsoil Code replaced the 2010 Subsoil Law. Before the 2010 Subsoil Law, the main statute in the mining area was the Law of the Republic of Kazakhstan dated 27 January 1996 "On Subsoil and Subsoil Use" (the "**1996 Subsoil Law**").

Other laws regulating various aspects of subsoil use operations include, among other things:

- the Ecological Code of the Republic of Kazakhstan dated 2 January 2021;
- the Water Code of the Republic of Kazakhstan dated 9 April 2025;
- the Land Code of the Republic of Kazakhstan dated 20 June 2003;
- the Entrepreneurship Code of the Republic of Kazakhstan dated 29 October 2015;
- the Civil Code of the Republic of Kazakhstan (General Part) dated 27 December 1994 and Civil Code of the Republic of Kazakhstan (Special Part) dated 1 July 1999;
- the Law of the Republic of Kazakhstan dated 16 May 2014 "On Permits and Notifications";
- the Law of the Republic of Kazakhstan dated 11 April 2014 "On Civil Protection";
- the Law of the Republic of Kazakhstan dated 13 December 2005 "On Mandatory Ecological Insurance";
- the Law of the Republic of Kazakhstan dated 7 February 2005 "On Mandatory Insurance of an Employee against Accidents when Carrying Out Employee's Labour Duties";
- the Law of the Republic of Kazakhstan dated 7 July 2004 "On Mandatory Insurance of Civil Liability of Owners of Facilities Associated with Danger of Damage to Third Parties";
- the Law of the Republic of Kazakhstan dated 1 July 2003 "On Mandatory Insurance of the Civil Liability of Transport Vehicle Owners".

In addition to laws, subsoil use operations are regulated by various acts of subordinate legislation.

Government Authorities

The subsoil use area is the heavily regulated industry. Various aspects of the activity are subject to laws and subordinate rules in different areas. Consequently, activities of a subsoil user are subject to supervision by various state authorities.

Competent Authority

There are two Kazakhstan Governmental bodies which are vested with main regulatory functions in the field of subsoil use:

- the Ministry of Energy, which is a competent authority in respect of uranium and hydrocarbons; and

- the Ministry of Industry and Construction (the "**Competent Authority**" or the "**Ministry**")), which is a competent authority in respect of solid minerals.

The Competent Authority represents the interests of the Republic of Kazakhstan and implements the state policy in the field of subsoil use for solid minerals. The Competent Authority grants exploration and production rights on behalf of the State.

Other Regulatory Authorities

Other governmental authorities which regulate various aspects of mineral extraction in Kazakhstan, among others, include:

- the Committee on Geology of the Ministry of Industry and Construction, which is responsible for, among other things, monitoring, collection and compilation of geological information, development of program on the management of the state subsoil fund, issuance of geological and mining allotments;

- the Ministry on Emergency Situations, which, among other things, supervises safety in mining operations;

- the Ministry of Labour and Social Protection of the Population, which is responsible for, among other things, supervising compliance with labour laws and investigating labour complaints from employees;

- the Ministry of Ecology and Natural Resources, which is responsible for, among other thing, issuance of ecological permits and control over compliance with environment protection laws;

- the Committee of Technical Regulation and Metrology of the Ministry of Trade and Integration, which is responsible for, among other things, control with compliance of equipment with technical regulations;

- the Ministry of Finance, subdivisions of which are responsible, among other things, for tax matters and compliance with customs regulations;

- various state authorities responsible for the approval of construction projects and use of water and land resources; and

- other state authorities responsible for monitoring compliance in their respective areas.

Title Documents

The Kazakhstan Government approved the program on the management of the state subsoil fund (which, among other things, contains information about the territories available for granting and methods by which the subsoil use rights can be granted).

Currently, the Subsoil Code allows the following types of title documents confirming subsoil use rights:

- Licences for exploration or production of solid minerals;
- Licences for geological survey of subsoil;
- Licences for production of commonly occurring minerals;
- Licences for use of underground space;
- Licences for digging precious metals and stones;
- Contracts for exploration and production or production of hydrocarbons; and
- Contracts for production of uranium.

Subsoil use contracts executed for exploration and/or production of solid minerals before enactment of the Subsoil Code remain in full force.

In addition to title documents, a subsoil user (depending on a type of subsoil use operations) must develop and approve project and technical documents. Such documents regulate technical aspects of conducting subsoil use operations.

Kazakhstan legislation generally limits the terms of the exploration and mining works.

In particular, the 1996 Subsoil Law provided for the following maximum exploration and production terms:

- Exploration term could be up to 6 years with the possibility to extend two times for 2 years per extension. A further extension could be granted for purposes of assessing an identified discovery.
- Production period could by up to 25 years (45 years — for large and unique deposits). The possibility of extending the production period was introduced in 2004.

The 2010 Subsoil Law provided for the maximum exploration period of 6 years. In the mining area, the exploration period could be extended for the purposes of assessing an identified discovery. Production period was to be determined by a project document. Subsequent changes to this law stipulated that production period could by up to 25 years (45 years — for large and unique deposits) with the possibility of extension.

The Subsoil Code provides that the exploration period can be up to 6 years, which could be extended once for a period up to 5 years. Production period can be up to 25 years, which can be extended for the period not exceeding the initial term. The number of extensions is not limited.

Transfer of Subsoil Use Rights

Transfers of subsoil use rights for solid minerals' deposits are only permitted after consent of the Competent Authority has been obtained. This requirement also applies to the transfer of participation interests, shares or securities confirming ownership or convertible to shares in a subsoil user or an entity that can directly or indirectly determine decisions of a subsoil user (i.e. so-called "objects connected with subsoil use rights").

A concept of a "transfer" covers various ways of a disposal, including transfers on the basis of civil law transactions; contribution to a charter capital of a legal entity; distribution in the course of a legal entity's liquidation; transfer in the course of enforcement of obligations, including enforcement of a pledge; increase of the charter capital through acceptance of new participants or shareholders; transfer in the course of a corporate reorganization; transfer in the course of inheritance; placement of shares at an organized stock exchange.

There are limited number of exemptions and, in case that such exemptions apply the Competent Authority's consent is not necessary.

An acquirer and a subsoil user must notify the Competent Authority of the change of control over the subsoil user within one month following the date of such change.

Liability for Violating Subsoil Use Contracts/Licences

In case of a breach of contractual obligations by the subsoil user, the Competent Authority shall notify the subsoil user in writing of such breach and requesting the subsoil user to pay relevant penalties (in the amount as specified in the subsoil use contract or the Subsoil Code) and/or to cure such breach within the term set forth in the notification of the Competent Authority.

The subsoil user shall cure the breach within the period specified in Competent Authority's notification and shall inform the Competent Authority in writing thereof enclosing documents confirming that the breach has been cured.

The Competent Authority is entitled to terminate unilaterally a subsoil use contract for solid minerals executed prior to enactment of the Subsoil Code in the following cases:

- if the subsoil user fails to cure more than two breaches of the subsoil use contract within period specified in the Competent Authority's notification;
- transfer of subsoil use rights or objects connected with subsoil use rights without required consent of the Competent Authority; or
- fulfillment of financial obligations for less than 30% within two consecutive years.

Additional grounds for termination of the subsoil use contract may be provided in the subsoil use contract itself.

Licences for exploration or production of solid minerals can be cancelled by the State in the following cases:

- breach of requirements in connected with the Competent Authority's consent for the transfer of subsoil use rights and objects connected with subsoil use rights, which resulted in a threat to the national security; or
- breach of licence terms.

Compliance with terms and conditions of subsoil use contracts/licences is essential, given that failure to comply may be the ground for the termination of contracts/licences by the Competent Authority.

Usually, compliance with contract/licence terms and requirements of applicable legislation is checked by the authorities during periodic state investigations. Upon results of the investigations, the relevant authorities issue an order to cure the relevant breaches and prescribe a term within which the breaches should be cured.

Failure to comply with applicable legislation, terms of title and project/technical documents may be the ground for criminal, administrative and civil liability.

Local Content Requirement

The law requires companies engaged in operating on extraction of solid minerals in Kazakhstan under licences or contracts to organize tenders for most goods, works and services that they procure in Kazakhstan, and to give preference to local goods, works and services. Usually, the local content requirements for personnel, goods, works and services (expressed in specific percentages/ratios) must be clearly outlined in a subsoil contract. However, in view of Kazakhstan joining the World Trade Organisation, it is envisaged that subsoil use contracts executed after 1 January 2015 should not contain any

obligations for subsoil users to procure goods from local manufacturers. The requirement for a minimum level of local works and services was retained, but the minimum level cannot exceed 50%.

The local content in personnel should be set forth in the subsoil use contracts.

Reporting

Subsoil users are subject to obligations to submit to the Competent Authority regular reports on their activities. Reports for mining operations are to cover the following:

- reports on fulfilment of licence obligations;
- reports on purchased goods, works and services and share of in-country value;
- reports on entities that directly or indirectly control a subsoil user;
- geological reports (for exploration);
- reports on extracted minerals; and
- reports on fulfilment of program of works (in case of a retention status).

Reports are submitted on an annual basis, except for reports on purchased goods, works and services and share of in-country value which should be submitted on a quarterly basis.

The State's Pre-emptive Rights

Under general civil laws and terms of most subsoil use contracts for solid minerals executed prior to the Subsoil Code, the Kazakhstan Government has the right of partial or complete requisition of mineral resources in case of war, acts of God or other events expressed in the legislation on emergency situations of the Republic of Kazakhstan, as necessary for the State's needs. The Kazakhstan Government guarantees compensation for mineral resources requisitioned by payment in kind or market value.

Also, under most subsoil use contracts, the State has the priority right on acquiring minerals from the a subsoil user at prices not higher than market value.

Further, in the area of precious metals, for the purposes of replenishing the National Bank's reserves, the State has the pre-emptive purchase right with regard to refined gold from entities producing gold (please also see — *Regulatory — Export Regulations*).

Financial and Social Obligations

In addition to the main obligation to finance subsoil use operations, the subsoil user is typically imposed with a number of ancillary financial and social obligations.

Under the Subsoil Code, starting from the second year of the production licence, the subsoil user must:

- annually finance training of local citizens in the amount of not less than 1% of production expenses of the previous year; and

- annually finance research, scientific and technical and/or development works in the amount of not less than 1% of production expenses for the previous year.

In addition to the above, subsoil use contracts executed prior to enactment of the Subsoil Code may provide for additional obligations (e.g. the same obligations as above for the exploration period, an obligation to make annual contributions to the regional executive body's budget for the region's social and economic development and infrastructure development in a fixed amount).

Liquidation of Consequences of Subsoil Use Operations

The Subsoil Code requires subsoil users to liquidate the consequences of their subsoil operations on the subsoil deposits at the expense of such subsoil users.

Prior to the effective date of the Subsoil Code, subsoil users were required to form a liquidation fund to secure their liquidation obligations. The amount of payments to such fund was established in the subsoil use contract as a percentage of annual exploration and production costs. This requirement remains effective for subsoil use contracts concluded prior to the effective date of the Subsoil Code for solid minerals.

Holders of exploration and production licences issued under the Subsoil Code must secure liquidation obligations by one of the security types set forth by the Subsoil Code: bank guarantee, pledge of a bank deposit and insurance. Requirements to provide a combination of these types of security depends on a stage of the subsoil use operations (i.e. exploration or production, years of a production licence).

Conducting subsoil use operations without a proper security of liquidation obligations is prohibited.

Health and Safety Compliance

The activities of subsoil user are subject to extensive laws and regulations governing health and safety and rational use of subsoil reserves. Failure to comply with applicable laws regulating health and safety matters and rational use of subsoil reserves may result in damages, suspension or revocation of subsoil use contracts and imposition of penalties and in criminal investigations against employees of the subsoil users.

Environment Protection

General

The Ecological Code of the Republic of Kazakhstan (the "**Ecological Code**") regulates environmental protection in Kazakhstan. It was adopted on 2 January 2021 and entered into force on 1 July 2021. It is generally believed to be close to international standards of environmental regulation.

The Ministry of Ecology and Natural Resources is the principal state authority for environmental protection. It issues environmental permits and licenses, and establishes limits for environmental emissions, among other things.

The Kazakhstan tax authorities are responsible for collecting payments for environmental contamination and emissions.

Individuals and legal entities that affect the environment are subject to state oversight. The Ministry of Ecology and Natural Resources exercises this oversight by organizing state environmental inspections.

Various aspects of business activity are subject to environmental requirements. For example, a positive state environmental expert evaluation must be obtained before certain types of projects that may harm the environment begin. In particular, the Ecological Code provides for: (i) the list of activities that are subject to a mandatory assessment of the environmental impact; and (ii) the list of activities that could fall under the requirement to conduct an assessment of the environmental impact as a result of screening the activity.

Enterprises engaged in potentially environmentally hazardous activities must obtain environmental insurance.

Violations of state environmental requirements entail civil, administrative and criminal liability for individuals and legal entities.

Ecological Permits

Under the Ecological Code, all industrial facilities/activities are divided into four categories, according to their level of impact on the environment. Activities that have the highest level of environmental impact (e.g., certain types of power production, manufacture and processing of metals, production and enrichment of solid minerals, chemical industry) are included in category I. Activities with the lowest level of environmental impact are included in category IV.

All individuals and legal entities that have a negative impact on the environment while operating facilities of categories I and II must obtain an ecological permit from the regulator, its local subdivisions or local executive authorities (depending on the type of relevant facilities and area of activities). Under the Ecological Code, there are two types of environmental permits:

- ecological permits for impact; and
- complex ecological permits.

Complex ecological permits are mandatory for facilities of category I and could be issued subject to compliance with the best environmental techniques. Ecological permits for impact are mandatory for facilities of category II and are issued until the relevant technologies used by a holder change, but for no more than 10 years. Entities that operate facilities falling under category III must submit a declaration on the environmental impact.

In addition, separate environmental licenses are required for individuals and legal entities involved in the following:

- environmental design or standardization for facilities of category I; and
- activity on the processing, disposal, utilization and destruction of dangerous waste.

The abovementioned licenses can be issued subject to compliance with certain requirements set out by legislation.

Foreign Investment Regulations

Restrictions and Consents of Government Bodies

There are no foreign investment restrictions for mining projects in Kazakhstan.

However, the following consents of government bodies are necessary for an acquisition of shares in a local mining company:

- A direct or indirect acquisition of more than 50% of shares requires consent of the local anti-trust authority if the combined assets or turnover of the purchaser's group of companies and the target entity exceed KZT 39,320,000,000. The anti-trust authority may reject to issue the consent only if the proposed transaction may restrict competition on the Kazakhstan market.

- A direct or indirect acquisition of 1% or more of shares requires consent of the Competent Authority which oversees mining regulations (please also see — *Regulatory — Transfer of Subsoil Use Rights*). The Competent Authority may reject to issue the consent if, among other things, the proposed transaction will adversely affect the national security of Kazakhstan (including by way of excessive concentration of mining rights by investors from one country).

Guarantees and Benefits

Kazakhstan laws provide a number of guarantees to foreign investors, including the right to freely repatriate after-tax profits from Kazakhstan and the right to fair compensation in the event of a nationalization or expropriation.

Kazakhstan is also a party to a number of bilateral and multilateral treaties concerning the encouragement and mutual protection of investments. Investors from treaty countries are entitled to additional guarantees, including the most favoured-nation treatment (with limited exceptions) and the right to refer investment disputes to international arbitration (according to a specified list) in the absence of an arbitration agreement with the State.

Investors operating in specified areas are entitled to certain investment benefits, including corporate income tax and customs duty exemptions. The eligible areas for claiming the benefits do not include gold mining companies, but generally include gold processing companies.

Foreign Exchange Regulations

The foreign exchange regime in Kazakhstan is quite flexible and allows payments between local and foreign companies in any currency. Payments between two local companies may be made only in the local currency (KZT) although it is possible to index contractual payments with reference to the foreign currency exchange rate.

Certain transactions between local and foreign companies (for example, share acquisitions or loans for an amount exceeding USD500,000) require registration with the National Bank of Kazakhstan. However, such registration is a mere formality taking up to five business days, and the National Bank does not have discretion to reject a compliant application.

Export Regulations

The export of refined precious metals, precious metals, and raw materials containing precious metals from the Republic of Kazakhstan is subject to specific state control procedures. Exporters are required to formally notify the Ministry regarding export activities, and must submit a comprehensive documentation package. This includes evidence of subsoil use rights, proof of ownership, foreign trade contracts, and laboratory analyses verifying the composition and quantity of all precious metals within the exported raw materials for the purposes of state oversight.

The Ministry conducts thorough state control over the export of such goods, including inspections of shipments, valuation according to prevailing global market prices, origin verification, legal compliance monitoring, validation of metal content, and evaluation of both technical feasibility and economic viability of extracting precious metals from raw materials within Kazakhstan. Upon completion of this process, the Ministry issues the requisite export license, an official export conclusion and conclusion on the possibility (or impossibility) and economic feasibility (or infeasibility) of industrial extraction of precious metals from raw materials in the Republic of Kazakhstan.

In addition, the State retains a pre-emptive right to purchase refined gold produced by precious metal producers or those deriving it through processing. These parties must first offer any domestically or internationally produced refined gold to the National Bank of the Republic of Kazakhstan.

Furthermore, export of raw materials containing precious metals from the territory of the Republic of Kazakhstan is subject to obtaining by the exporter of the relevant refusals from the processing and/or refining of such raw materials from entities listed by the Ministry as entities involved in the production of precious metals.

Export of gold from the Kazakhstan does not require payment of customs duties although the exporter would need to go through customs processing formalities (such as submission of a cargo customs declaration to the customs authorities).

Laws and Regulations on Labour Matters

General

Labor relations in Kazakhstan are regulated primarily by the Labor Code of the Republic of Kazakhstan dated 23 November 2015 No. 414-V (the "**Labor Code**"). The Labor Code is generally pro-employee and contains a significant number of requirements for employers.

The Labor Code establishes a standard workweek of 40 hours, with a daily limit of 8 working hours, and requires employers to provide overtime compensation in accordance with the law. Specific provisions also apply to shift-based work, which is common in the mining sector, to ensure compliance with rest periods and occupational safety standards.

The aggregate amount of permitted overtime is limited to a maximum 120 hours per year, 12 hours per month, 2 hours per day. Overtime work, work at night and work on non-working days must be compensated at a rate of at least 150% of the regular wage. Exceeding the maximum allowed overtime hours may lead to administrative penalties. Overtime is only allowed upon written consent of the employee.

Employers must grant employees annual paid leave, sick leave, and other statutory benefits, including extended annual leave for mining workers due to the hazardous nature of their work. In terms of occupational health and safety, mining companies are obligated to conduct regular risk assessments, maintain safe working conditions, and provide employees with appropriate personal protective equipment. They must also ensure that all workers assigned to physically demanding or dangerous tasks undergo mandatory pre-employment and periodic medical examinations to confirm fitness for duty.

Mandatory Insurance

All employers including mining companies are required to provide their employees with mandatory insurance against work-related accidents by entering insurance contracts with local insurance companies to cover employees against injuries, occupational diseases, and other health issues arising from workplace conditions. The insurance policy must be valid for 12 months and is renewed annually. The minimum coverage amount is tied to the annual payroll fund of the organization.

Engagement of Foreign Employees

As a general rule, employers engaging foreign employees in Kazakhstan must obtain a work permit for each foreign employee. In addition to a work permit, a foreign national who works in Kazakhstan must obtain a work visa. These are separate documents and must be obtained consecutively.

A business visa is not an appropriate type of visa for working in Kazakhstan. Therefore, the employer should only engage a foreign employee after obtaining a relevant work permit and work visa.

Employers must maintain and certify that the ratio of local versus foreign employees is as follows:

- At least 70% local/30% foreigner for the categories of chief executives and their deputies and department heads — in other words, the number of citizens of the Republic of Kazakhstan shall be not less than 70% of all employees in these categories combined.

- At least 90% local/10% foreigner for the categories of specialists and skilled workers — in other words, the number of citizens of the Republic of Kazakhstan shall be not less than 90% of all employees in these categories combined.

Russian citizens and other citizens of Eurasian Economic Union countries (who can work without work permits) are not included in the calculation of the ratio.

If the subsoil use contract establishes higher requirements for the employment of local personnel, such higher requirements should be followed.

The work permit rules provide for certain exemptions from the local content ratio requirement. The exemptions apply to: (i) small businesses; (ii) governmental organizations; (iii) certain "priority" projects; and (iv) branches and representative offices of foreign companies with less than 10 employees.

Termination Regulations

Kazakhstan does not follow the termination-at-will concept and dismissing an employee can be difficult. The only exception is the position of the CEOs, who can be dismissed by a resolution of the owner (or shareholders) of a company with no specific ground.

There are three main options to terminate an employment agreement: (i) termination by mutual consent; (ii) termination at the employee's initiative; or (iii) termination at the employer's initiative.

Also, the employment agreement can be terminated due to expiry of the term of the employment agreement, or circumstances that are beyond parties' control (such as death of an employee), breach of grounds for execution of the employment agreement (such as absence of work permit for foreign national when such permit is required).

Local courts are very pro-employee. Therefore, it is very important to comply with formal dismissal procedures to avoid an employee challenging a dismissal and his/her reinstatement in the job.

For terminations at the employer's initiative, the Labor Code provides special conditions and restrictions. An employer can only dismiss an employee at its own initiative if there are serious grounds such as habitual absence, theft, repeated disciplinary violations or intoxication. However, some exceptions to this include:

- liquidation of the employer (this option does not apply to the liquidation of a branch or representative office);
- staff redundancy;
- inability to perform the duties required by the position;
- refusal to accept changes in the conditions of employment proposed by the employer;
- disclosure of confidential information relating to the employer; and
- absence from work for more than 1 month for reasons unknown for the employer.

Additionally, an employer is entitled to dismiss an employee who has reached the pension age.

An employment agreement may be terminated during the probationary period by sending the employee a notification stating the reasons for dismissal at any time before the probation ends.

At least 1 month notice should be given to employees in case of termination due to liquidation of the employer and staff redundancy and in case of termination due to reaching of the pension age.

In case of termination due to redundancy or liquidation of the employer the employee is entitled to at least one month compensation.

In the case of an employee who is dismissed because they have reached the pension age, compensation set by the employment contract or collective agreement, or the employer's policy/order should be paid to the employee.

Laws and Regulations on Land Matters

General

Land relations in Kazakhstan are governed by the Land Code dated 20 June 2003 No. 442-II, which classifies land into seven categories based on its designated use:

- agricultural land;
- settlement land (urban and rural);
- industrial, transport, communication, defense, and other non-agricultural land;
- protected natural areas, recreational, and cultural land;
- forest fund land;
- water fund land; and
- reserve land.

Each category has a specific legal regime, and land use must conform to its designated purpose.

Reclassification of land from one category to another is permitted when the intended use no longer aligns with the current designation. This process is carried out by the Kazakhstan Government or local executive bodies, depending on jurisdiction.

Land Ownership and Land Use Right

Land in Kazakhstan is owned by the State on behalf of the people. Private ownership and land use right is permitted for citizens and legal entities of Kazakhstan. Foreign nationals and foreign company may own and lease land in Kazakhstan with certain exemptions. Foreign nationals and entities are prohibited from owning agricultural land and in border areas and strategic zones.

The State may provide the third parties with land on a basis of ownership or on a basis of the land use rights. Ownership and land use rights are formalized through state registration.

Land use rights may be acquired through:

- state grants (especially for investment projects);
- auctions or tenders; or
- direct allocation under specific conditions (e.g., for performance of subsoil contract/license, ownership to existing structures, completion of construction).

Obtaining subsoil use contract/license is a ground for provision of the land use rights for relevant land plot by the State.

Land Use Compliance and Environmental Obligations

Land users are required to:

- use land according to its designated purpose;
- maintain ecological safety and soil integrity; and
- comply with zoning and urban planning regulations.

Violations may result in administrative penalties, revocation of land rights, or mandatory remediation.

If land is to be used for purposes not permitted under its current category (e.g., converting agricultural land for industrial use), it must be formally reclassified. This process involves:

- approval by the relevant authority (government, local administration); and
- compensation payments for lost agricultural or forestry productivity.

HISTORY AND DEVELOPMENT

Overview

Zijin Mining was established in 2000 and principally engaged in the exploration, mining, processing, smelting, refining and sale of gold and other mineral resources in the PRC. Throughout the years, Zijin Mining has expanded its mining operations to various overseas jurisdictions.

Over the past 20 years, Zijin Mining (together with its subsidiaries) had made considerable progress in expanding its overseas gold mining assets, through acquiring the Tajikistan Jilau/Taror Gold Mines in 2007, the Kyrgyzstan Taldybulak Levoberezhny Gold Mine in 2011, the Australia Norton Gold Mine from 2012 to 2015, the Colombia Buriticá Gold Mine and Guyana Aurora Gold Mine in 2020, the Suriname Rosebel Gold Mine in 2023 and the Ghana Akyem Gold Mine in 2025. In addition, Zijin Mining also had held interest in the PNG Porgera Gold Mine since 2015.

To facilitate the Spin-off and the Global Offering, Zijin Mining has undergone corporate reorganization to consolidate all its overseas gold mine assets under our Company, positioning us as a significant player in the global gold mining industry. Save for the Colombia Buriticá Gold Mine which we operate via the Colombia Entrustment Arrangement, the equity interests of all the overseas gold mines will be transferred to our Company prior to the completion of the Spin-off, and Zijin Mining will not, following completion of the Spin-off, engage in the exploration and mining of gold outside the PRC. For further details, please refer to "— Our Company, our Shareholding and the Reorganization — The Reorganization" below and "Relationship with Zijin Mining — Clear Delineation of Business — Colombia Entrustment Arrangement".

Key business development milestones

The following is a summary of the key milestones and achievements in the business development of our Group:

Year	Event
2007	Acquisition of the Tajikistan Jilau/Taror Gold Mines.
2011	Acquisition of the Kyrgyzstan Taldybulak Levoberezhny Gold Mine.
2012 to 2015 . .	Acquisition of the Australia Norton Gold Mine.
2015	Investment in the PNG Porgera Gold Mine.
2020	Acquisition of the Colombia Buriticá Gold Mine and Guyana Aurora Gold Mine.
2023	Acquisition of the Suriname Rosebel Gold Mine.

Year	Event
2025	Acquisition of the Ghana Akyem Gold Mine.
	Completion of the Reorganization.
	Proposed acquisition of the Kazakhstan Raygorodok Gold Mine.

OUR COMPANY, OUR SHAREHOLDING CHANGES AND THE REORGANIZATION

Incorporation of our Company and initial shareholding changes

On October 22, 2007, our Company was incorporated in Hong Kong under the Companies Ordinance as a company with limited liability and a wholly-owned subsidiary of Zijin Northwest. As of the date of incorporation, one fully-paid Share was issued to Zijin Northwest at HK$1.

On January 25, 2013, our Company allotted 545,999,999 Shares to Zijin Northwest at HK$1 per Share.

The Reorganization

In preparation for the Listing, the following steps were implemented to establish our Group:

1. Subscription of Shares in our Company

On March 14, 2025, our Company further allotted 1,171,000,000 Shares to Gold Mountains (H.K.) at approximately HK$6.7 per Share. On May 6, 2025, our Company further allotted 558,000,000 Shares to Gold Mountains (H.K.) at approximately HK$28.5 per Share. The relevant consideration of US$3,040 million was paid in full by June 26, 2025.

Immediately after such share allotments, our Company was held as to 24% and 76% by Zijin Northwest and Gold Mountains (H.K.) respectively.

2. Acquisition of Porgera Jersey

On April 29, 2025, our Company entered into a share purchase agreement with Jinyu (H.K.), pursuant to which our Company agreed to acquire 50% of the equity interest in Porgera Jersey from Jinyu (H.K.), at a cash consideration of US$60,000,000, subject to post-completion adjustment with reference to the net asset value of Porgera Jersey on June 30, 2025.

Upon completion of the share purchase on June 24, 2025, Porgera Jersey became a joint venture between our Company and Barrick Mining Corporation, an Independent Third Party.

Porgera Jersey is a non-controlling shareholder of New Porgera, a company which holds the mining license of the PNG Porgera Gold Mine.

3. Acquisition of Superb Pacific

On April 29, 2025, our Company entered into a share purchase agreement with Gold Mountains (H.K.), pursuant to which our Company agreed to acquire 100% of the equity interest in Superb Pacific from Gold Mountains (H.K.), at a cash consideration of US$170,000,000, subject to post-completion adjustment with reference to the net asset value of Superb Pacific on June 30, 2025, i.e., the completion date of such transaction.

Upon completion of the share purchase on June 30, 2025, Superb Pacific became a wholly-owned subsidiary of our Company.

Superb Pacific is the investment holding company of Altynken LLC, which manages the Kyrgyzstan Taldybulak Levoberezhny Gold Mine and holds the mining license.

4. Acquisition of Guyana Goldfields

On April 29, 2025, our Company entered into a share purchase agreement with Gold Mountains (H.K.), pursuant to which our Company agreed to acquire 100% of the equity interest in Guyana Goldfields from Gold Mountains (H.K.), at a cash consideration of US$440,000,000, subject to post-completion adjustment with reference to the net asset value of Guyana Goldfields on June 30, 2025, i.e., the completion date of such transaction.

Upon completion of the share purchase on June 30, 2025, Guyana Goldfields became a wholly-owned subsidiary of our Company.

Guyana Goldfields is the investment holding company of AGM Inc., which manages the Guyana Aurora Gold Mine and holds the mining license.

5. Acquisition of Silver Source

On May 9, 2025, our Company entered into a share purchase agreement with Gold Mountains (H.K.), pursuant to which our Company agreed to acquire 100% of the equity interest in Silver Source from Gold Mountains (H.K.), at a cash consideration of US$320,000,000, subject to post-completion adjustment with reference to the net asset value of Silver Source on June 30, 2025, i.e., the completion date of such transaction.

Upon completion of the share purchase on June 30, 2025, Silver Source became a wholly-owned subsidiary of our Company.

Silver Source is the investment holding company of Rosebel GM, which manages the operations of the Suriname Rosebel Gold Mine and holds the mining license.

6. Acquisition of Norton Gold Fields

On May 15, 2025, our Group entered into a share purchase agreement with Jinyu (H.K.), pursuant to which our Group agreed to acquire 100% of the equity interest in Norton Gold Fields from Jinyu (H.K.), at a cash consideration of US$260,000,000, subject to post-completion adjustment with reference to the net asset value of Norton Gold Fields on June 30, 2025, i.e., the completion date of such transaction.

Upon completion of the share purchase on June 30, 2025, Norton Gold Fields became an indirect wholly-owned subsidiary of our Company.

Norton Gold Fields, together with its wholly-owned subsidiaries, own and operate the Australia Norton Gold Mine. The material mining licenses comprising the Australia Norton Gold Mine are held by Norton Gold Fields and its wholly-owned subsidiaries.

7. Colombia Entrustment Arrangement

We entered into the Colombia Entrustment Arrangement to allow our Company and our shareholders to enjoy the economic benefit of Zijin America, the intermediate holding company of the Colombia Buriticá Gold Mine, and maintain clear delineation between our Group and Zijin Mining Group. Please see "Relationship with Zijin Mining — Clear Delineation of Business — Colombia Entrustment Arrangement."

Completion of the Reorganization

Upon completion of the Reorganization and immediately before the Global Offering, our Company was held as to 24% and 76% by Zijin Northwest and Gold Mountains (H.K.) respectively, each in turn being wholly-owned by Zijin Mining. The necessary regulatory approvals in relation to the implementation of Reorganization have been obtained.

Our Subsidiaries and Joint Venture

We carry out our business through various principal subsidiaries and a joint venture, as well as two entities that are combined to our financial information through Colombia Entrustment Arrangement, the details of which are set out as follows:

No.	Name	Place and date of establishment	Issued share capital	Shareholding	Principal business activities
1.	Altynken LLC	April 2006, Kyrgyzstan	KGS$10,000	60% by Superb Pacific[1]	Operating the daily business of the Kyrgyzstan Taldybulak Levoberezhny Gold Mine
2.	AGM Inc..	November 2011, Guyana	US$63,000,500	100% by Guyana Goldfields	Operating the daily business of the Guyana Aurora Gold Mine

No.	Name	Place and date of establishment	Issued share capital	Shareholding	Principal business activities
3.	Rosebel GM	May 2002, Suriname	US$8,000,000	95% by Silver Source[2]	Operating the daily business of the Suriname Rosebel Gold Mine
4.	Zarafshon JV.	December 2008, Tajikistan	TJS$73,474,747	70% by our Company[3]	Operating the daily business of the Tajikistan Jilau/Taror Gold Mines
5.	Norton Gold Fields .	December 2004, Australia	AUD186,845,000	100% indirectly by our Company	Operating the daily business of the Australia Norton Gold Mine
6.	Continental Gold Colombia Branch *(a branch company of Continental Gold)*	July 2007, Colombia	COP11,238,405,220	100% by CGI[4]	Operating the daily business of the Colombia Buriticá Gold Mine[5]
7.	CGI.	July 7, 2021, Ontario, Canada	100 shares	100% by Zijin America[5]	Holding company of Continental Gold and trading of gold
8.	Zijin Golden Ridge . .	October 1997, Ghana	GHS$455,709,071.4	100% by Gold Source	Operating the daily business of the Ghana Akyem Gold Mine
9.	Porgera Jersey (*joint venture*)	September 2021, Jersey	US$18,600,002	50% by our Company	A non-controlling shareholder of New Porgera[6], a company which holds the mining license of the PNG Porgera Gold Mine

Notes:

1. Altynken LLC is directly held as to 60% by Superb Pacific and 40% by Kyrgyzaltyn Open Joint Stock Company, an Independent Third Party (save for being a connected person of our Company at subsidiary level due to its shareholding in Altynken LLC).
2. Rosebel GM is directly held as to 95% class A shares by Silver Source and 5% class A shares by the government of Suriname, an Independent Third Party. Silver Source holds 100% of the class B Shares of Rosebel GM. Pursuant to the constitutional documents of Robesel GM, while the class A shares do not carry any redemption rights, the two classes of shares of Rosebel GM carry the same rights to dividends, liquidation entitlement and voting rights. Pursuant to a shareholders' resolution of Rosebel GM, it was further agreed that only Class A shares are entitled to receive dividends.
3. Zarafshon JV is directly held as to 70% by our Company and 30% by the government of the Republic of Tajikistan, an Independent Third Party (save for being a connected person of our Company at subsidiary level due to its shareholding in Zarafshon JV).
4. Continental Gold Colombia Branch is a branch company of Continental Gold. Continental Gold is wholly-owned by CGI.
5. Pursuant to the Colombia Entrustment Arrangement, the assets, liabilities and operation results of Zijin America, the intermediate holding company of the Colombia Buriticá Gold Mine will be consolidated to the financial results of our Company. For further details, please refer to "Relationship with Zijin Mining — Clear Delineation of Business — Colombia Entrustment Arrangement" in this Prospectus.
6. New Porgera is held as to 49% by Porgera Jersey and the remaining 51% by (i) Kumul Minerals (Porgera) Limited as to 36%; (ii) MRDC Porgera (Escrow) Limited as to 10%; and (iii) Mineral Resources Enga Limited as to 5%, all of which are Independent Third Parties. Porgera Jersey is owned as to 50% by our Company and 50% by Barrick Mining Corporation, an Independent Third Party. As the Reorganization of New Porgera is not completed by end of December 31, 2024, the financial contribution by New Porgera is not reflected in the financial information of the Group for the three years ended December 31, 2024. New Porgera is not considered as our subsidiary upon completion of Reorganization and completion of the Global Offering.

ACQUISITIONS DURING AND AFTER THE TRACK RECORD PERIOD

Acquisition of the Suriname Rosebel Gold Mine

On October 18, 2022, Zijin Mining and Silver Source entered into a share purchase agreement with IAMGOLD Corporation ("**IAG**"), a New York Stock Exchange and Toronto Stock Exchange listed company (the "**Rosebel SPA**"). Pursuant to the Rosebel SPA, Silver Source acquired 95% of the outstanding class A Shares and 100% of the outstanding class B Shares of Rosebel GM held by IAG for a consideration of US$371 million (the "**Rosebel Acquisition**"). Pursuant to the articles of association of Robesel GM, while the class A shares do not carry any redemption rights, the two classes of shares of Rosebel GM carry the same rights to dividends, liquidation entitlement and voting rights. Pursuant to a shareholders' resolution of Rosebel GM, it was further agreed that only Class A shares are entitled to receive dividends. The purchase price of the Rosebel Acquisition was determined based on due diligence of Rosebel GM and on normal commercial terms. Rosebel GM is a Suriname company and is mainly engaged in the exploration, mining, processing and sales of gold and other minerals. It holds 100% ownership interest in the Suriname Rosebel Gold Mine. Following the completion of the Rosebel Acquisition on 1 February 2023, Rosebel GM became a non-wholly owned subsidiary by Silver Source.

Acquisition of the Ghana Akyem Gold Mine

On October 9, 2024, Zijin Mining and Gold Source entered into a share purchase agreement (the "**Akyem SPA**") with Newmont Corporation ("**Newmont**") and Newmont Golden Ridge Ltd (a wholly-owned subsidiary of Newmont, "**Newmont Golden Ridge**"). Pursuant to the Akyem SPA, Gold Source acquired 100% of the equity interest in Newmont Golden Ridge for a consideration of US$1 billion (the "**Akyem Acquisition**"). The purchase price of the Akyem Acquisition was determined based on due diligence of Newmont Golden Ridge and on normal commercial terms. Newmont Golden Ridge is a company registered in Ghana and owns 100% of the Ghana Akyem Gold Mine, which is located in one of the world's major gold metallogenic belts. The Akyem Acquisition was completed on April 16, 2025. Following the completion of the Akyem Acquisition, Newmont Golden Ridge became a wholly-owned subsidiary of Gold Source and was subsequently renamed as Zijin Golden Ridge. For the years ended December 31, 2022, 2023 and 2024, the financial results of Zijin Golden Ridge would not form part of our financial results.

Each of the Rosebel Acquisition and Akyem Acquisition did not constitute a major transaction pursuant to Note 1 to Rule 4.05A of the Listing Rules.

Acquisition of the Kazakhstan Raygorodok Gold Mine

Background

On June 28, 2025, our Group entered into an agreement with Cantech S.a.r.l ("**Cantech**") (the "**Raygorodok SPA**") in relation to the acquisition of all issued share capital in each of RG Gold LLP ("**RGG**") and RG Processing LLP ("**RGP**", together RGG, the "**Target Companies**"), which together held the Raygorodok Gold Mine in Kazakhstan (the "**Kazakhstan Raygorodok Gold Mine**") for a cash consideration of US$1.2 billion, subject to customary adjustments with reference to the financial information of the Target Companies as of September 30, 2025 (the "**Raygorodok Acquisition**"). The completion of the Ragorodok Acquisition is expected to take place after the Listing in the fourth quarter of 2025.

Cantech is an investment holding company, which is owned as to 65% by V Group International S.A (under management of Verny Capital, one of the largest equity investment companies in Kazakhstan, acting as an investment advisor to V Group International S.A.) and as to 35% by RCF VII-RG Gold S.a.r.l, which is affiliated with Resource Capital Funds, a U.S. private equity firm focused on mining and resource investments. Each of Cantech, V Group International S.A., and RCF VII-RG Gold S.a.r.l, is and their respective ultimate beneficial owners is an Independent Third Party.

Each of RGG and RGP was incorporated in Kazakhstan. The mining asset and mining rights of the Kazakhstan Raygorodok Gold Mine were held by RGG, and the processing plant asset of the Kazakhstan Raygorodok Gold Mine was held by RGP. The revenue, profit before tax and net profit for each of RGG and RGP for the years ended December 31, 2022, 2023 and 2024 are as follows:

	For the years ended December 31,		
	2022	2023	2024
		(US$ in millions)	
RGG			
Revenue	117	367	472
Profit before tax	45	127	213
Net profit	36	101	171
RGP			
Revenue	23	121	153
Profit before tax	1	29	31
Net profit	0.1	29	31

As of December 31, 2024, the total assets of RGG and RGP amounted to US$293 million and US$310 million, respectively; total liabilities of RGG and RGP amounted to US$88 million and US$221 million, respectively; and net assets of RGG and RGP amounted to US$205 million and US$89 million respectively.

The above financial information of RGG and RGP was extracted from the audited financial information of each of RGG and RGP prepared in accordance with the International Financial Reporting Standards. Given each of RGG and RGP is owned by the Seller, we have presented the financial information of RGG and RGP as separate standalone entities and not on a consolidated basis. See Appendix IC and Appendix IB to the Prospectus for further details.

Information about the Target Companies and the Kazakhstan Raygorodok Gold Mine

The Kazakhstan Raygorodok Gold Mine is located in the Burabay region of Akmola Province in northern Kazakhstan. The core mining right of the Kazakhstan Raygorodok Gold Mine is a subsoil use contract which is valid until December 31, 2040. The Kazakhstan Raygorodok Gold Mine also holds six exploration rights, two geological study permits, and one subsoil space use permit.

The Kazakhstan Raygorodok Gold Mine consists of 2 open pits (South Raygorodok and North Raygorodok). The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of the Mineral Resources as of June 30, 2025:

Mineral Resources

Mineralized Zone/Block	Category	Tonnage[(1)] (Mt)	Au Grade[(1)] (g/t)	Au Metal Contained[(1)] (koz)	(t)
Kazakhstan Raygorodok Gold Mine	Indicated	169.5	0.9	5,102	158.7
	Inferred	38.1	1.0	1,245	38.7
	Total	**207.5**	**1.0**	**6,347**	**197.4**

No Measured Mineral Resources are classified at Kazakhstan Raygorodok Gold Mine. Generally Indicated Mineral Resources were typically in those areas of the deposit that were informed by data nominally on a 40 m to 50 m drill spacing or better and informed on the first pass of the estimate.

Ore Reserves

Mineralized Zone/Block	Category	Tonnage[(1)] (Mt)	Au Grade[(1)] (g/t)	Au Metal Contained[(1)] (koz)	(t)
Kazakhstan Raygorodok Gold Mine	Proved	—	—	—	—
	Probable	97.0	0.9	2,800	87.0
	Total	**97.0**	**0.9**	**2,800**	**87.0**

The Kazakhstan Raygorodok Gold Mine is an active open-pit mine in production. The production and operation of both open-pits are stable, with a detailed mine plan. The types of ores in the open-pit mines include oxide ore, mixed ore and primary ore.

In 2016, the heap leach plant of the Kazakhstan Raygorodok Gold Mine completed construction and commenced operation, which was mainly used to treat oxide ore. In 2022, a new carbon-in-pulp (CIP) cyanidation plant was constructed and commissioned. Commencing in July 2025, the Kazakhstan Raygorodok Gold Mine will achieve a processing capacity of 6.0 million tonnes of ore per year. In 2022, 2023, 2024 and the six months ended June 30, 2025, Kazakhstan Raygorodok Gold Mine processed 3,111 kt, 6,742 kt, 7,497 kt and 3,612 kt of ore, and produced 69 koz (2.2 tonnes), 191 koz (5.9 tonnes), 226 koz (7.0 tonnes) and 109 koz (3.4 tonnes) of gold, respectively.

The Kazakhstan Raygorodok Gold Mine has a Life of Mine of 17 years (from 2025 to 2041). Based on the preliminary research of our technical team, if proper exploration, optimization and technical renovation investments are put in place, the mining and processing capacity may be upgraded to 10 million tonnes per annum. We also believe that the production volume and economic efficacy of the Kazakhstan Raygorodok Gold Mine may be further improved through optimization of open-pit mining, modification of processing technologies and procedures and other improvement measures.

Terms of the Raygorodok SPA

The principal terms of the Raygorodok SPA are set out as follows:

Date	June 28, 2025
Purchaser	Jinha (Singapore) Mining Pte. Ltd, a wholly owned subsidiary of our Company, which will set up a wholly-owned subsidiary in Astana International Financial Centre in Kazakhstan as the equity interest transferee of the interests in the Target Companies
Seller	Cantech S.a.r.l
Target	Entire issued share capital in each of RGG and RGP

Consideration . . . . . US$1.2 billion (on a "cash-free and debt-free" basis), to be further adjusted by Cantech and our Group based on the amount of cash, working capital, interest-bearing debts and other related items in the financial statements as at September 30, 2025, wherein the interest-bearing debts will continue to be borne by the Target Companies. If the Raygorodok Acquisition is completed after September 30, 2025, the operating income of the Target Companies after September 30, 2025 shall belong to our Group.

The Consideration was determined by the Cantech and our Group after arm's length negotiation with reference to the mineral resources and ore reserves, production, processing and recovery, expansion and optimization prospects, as well as the financial information of the Target Companies.

Conditions precedent . . . The conditions precedent to the completion of the Raygorodok Acquisition include:

a) the Purchaser having received the written consent for economic concentration from the Agency for Protection and Development of Competition of the Republic of Kazakhstan for the acquisition of the Target Companies;

b) the Purchaser having received the written consent of the relevant competent authority stating that it consents to the transaction contemplated under the Raygorodok SPA; and

c) the Purchaser having received the regulatory outbound investment approvals, filings or registration required to be obtained from or completed with the applicable PRC authorities.

Other terms . . . . . The Raygorodok SPA also includes representations, warranties, covenants of both the Purchaser and the Seller to the Raygorodok Acquisition, termination rights and other provisions customary for a transaction of this nature including with respect to transition services, tax matters, indemnification and dispute resolution.

Reasons for and Benefits of the Raygorodok Acquisition

The Kazakhstan Raygorodok Gold Mine hosts relatively significant resource. It is a large-scale, active open pit mine, with a long mine life, and well-established infrastructure. The processing technologies of the project are mature, with relatively low all-in sustaining costs, contributing to strong financial performance. We see further opportunities in improving its operational efficiency and production levels. The Raygorodok Acquisition is expected to have positive contribution to our Group's output and profits following the completion of the Raygorodok Acquisition.

The Raygorodok Acquisition aligns with our strategic direction to increase acquisitions of significant resources and projects. The Kazakhstan Raygorodok Gold Mine can generate favorable synergies with our Tajikistan Jilau/Taror Gold Mine and the Kyrgyzstan Taldybulak Levoberezhny Gold Mine. This can further deepen our engagement in the resource-rich Central Asia region in the future, and optimize our global resources allocation.

The Raygorodok Acquisition is expected to enhance our asset scale, profitability, and global industry position. This is in line with our growth strategy. We expect the Raygorodok Acquisition will further enrich our gold resource, increase our gold production, and accelerate the achievement our production growth.

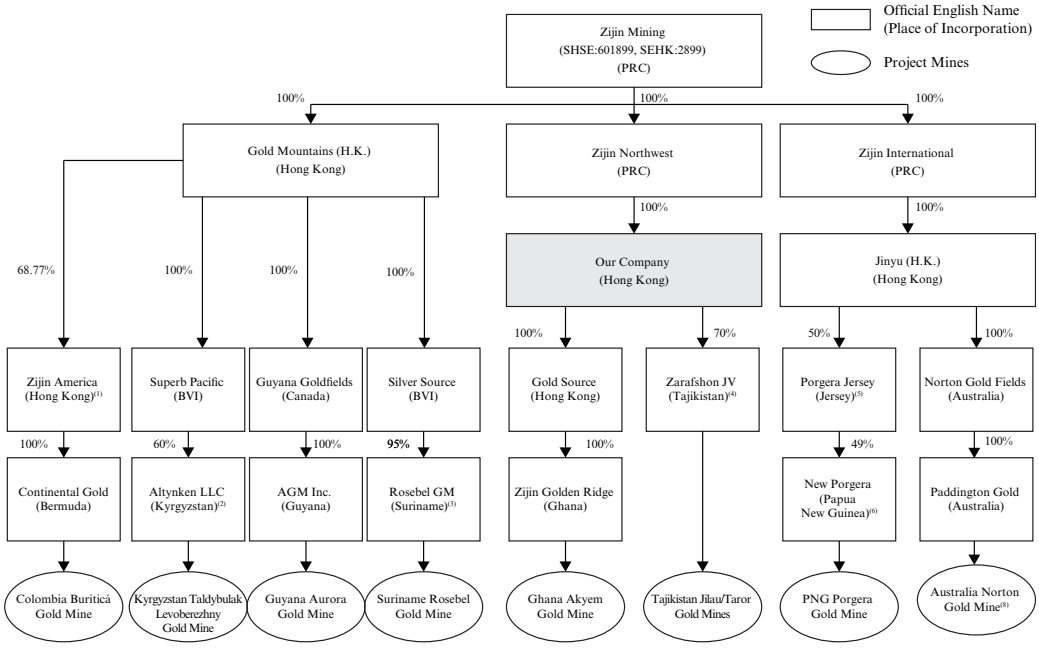
Our Directors are of the view that the terms of the Raygorodok Acquisition are fair and reasonable and in the interests of our Shareholders as a whole. We intend to obtain a loan to finance the payment of the consideration payable under the Raygorodok SPA.

Listing Rules Implications

On the basis that the highest applicable percentage ratio of the Raygorodok Acquisition is expected to exceed 25% but less than 100%, the Raygorodok Acquisition constitutes a major transaction under the Listing Rules. Pursuant to Rule 4.02(2) and (4), Rule 4.28, Rule 4.29, Rule 18.05 and Rule 18.09 of the Listing Rules, (a) the audited financial information of each of RGG and RGP for the financial years ended December 31, 2022, 2023 and 2024, and the audited financial information for the six months ended June 30, 2025 prepared in accordance with the International Financial Reporting Standards are set out in Appendix IC and Appendix IB to this Prospectus, respectively; (b) pro forma financial information of the enlarged Group in accordance with Rule 4.28 and Rule 4.29 of the Listing Rules is set out in Appendix IIB to this Prospectus, (c) a competent person's report (including a valuation report in accordance with Chapter 18 of the Listing Rules) on the Kazakhstan Raygorodok Gold Mine is included in the Competent Person's Report set out in Appendix III to this Prospectus.

PUBLIC FLOAT

Upon completion of the Global Offering (assuming that the Over-allotment Option is not exercised), a total of 2,275,000,000 Shares held by Gold Mountains (H.K.) and Zijin Northwest will not be counted towards the public float, representing approximately 86.70% of our share capital in aggregate upon Listing. Based on the above, it is expected that immediately following completion of the Global Offering (assuming that the Over-allotment Option is not exercised), a total of 348,990,700 Shares (being the Shares offered in the Global Offering), representing 13.30% of our total share capital upon the completion of the Global Offering (assuming that the Over-allotment Option is not exercised) will be counted as part of the public float.



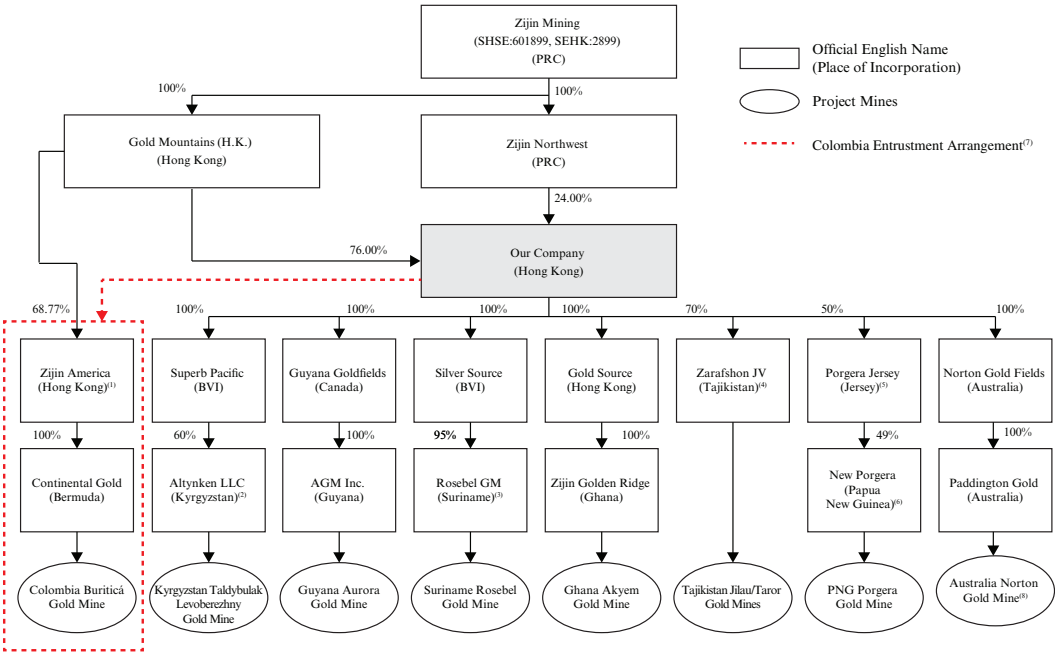
Based on the Offer Price and 2,623,990,700 Shares expected to be in issue immediately upon completion of the Global Offering, our expected market capitalization is expected to be HK$187.9 billion. As such, the minimum prescribed public float percentage under the Listing Rules is 10%, being the higher of the percentage that would result in the expected market value of publicly held securities being HK$4.5 billion at the time of listing (i.e. approximately 2.4%); and 10%

Based on a public float of 13.3%, the Company expects to comply with the public float requirement under Rule 8.08(1) of the Listing Rules.

On the basis that the portion of the Company's publicly held shares being free of restrictions on their disposals is expected to have an expected market value upon listing of at least HK$600 million, the Company expects to comply with the free float requirement under Rule 8.08A of the Listing Rules.

CORPORATE STRUCTURE OF OUR GROUP BEFORE THE REORGANIZATION

The following diagram sets out the corporate and shareholding structure of our Group immediately before the Reorganization:



Notes:

1. Zijin America is directly held as to 68.77% by Gold Mountains (H.K.) and by (i) CLAI Gilding (BVI) Investment Limited as to 22.74%, an Independent Third Party except being a connected person at subsidiary level due to its shareholding in Zijin America; (ii) ZLCFL-Cayman International Investment Cooperation Limited as to 7.26%, an Independent Third Party; and (iii) Longyan Xinjing Investment Partnership (Limited Partnership) as to 1.23%, an employee shareholding platform of the Zijin Mining Group.
2. Altynken LLC is directly held as to 60% by Superb Pacific and 40% by Kyrgyzaltyn JSC, an Independent Third Party (save for being a connected person of our Company at subsidiary level due to its shareholding in Altynken LLC).
3. Rosebel GM is directly held as to 95% class A shares by Silver Source and 5% class A shares by the government of Suriname, an Independent Third Party. Silver Source holds 100% of the class B Shares of Rosebel GM. Pursuant to the constitutional documents of Robesel GM, while the class A shares do not carry any redemption rights, the two classes of shares of Rosebel GM carry the same rights to dividends, liquidation entitlement and voting rights. Pursuant to a shareholders' resolution of Rosebel GM, it was further agreed that only Class A shares are entitled to receive dividends.
4. Zarafshon JV is directly held as to 70% by our Company and 30% by the government of the Republic of Tajikistan, an Independent Third Party (save for being a connected person of our Company at subsidiary level due to its shareholding in Zarafshon JV).
5. Porgera Jersey is a joint venture directly held as to 50% by our Company and 50% by Barrick Mining Corporation, an Independent Third Party.
6. New Porgera is directly held as to 49% by Porgera Jersey and the remaining 51% by (i) Kumul Minerals (Porgera) Limited as to 36%; (ii) MRDC Porgera (Escrow) Limited as to 10%; and (iii) Mineral Resources Enga Limited as to 5%, all of which are Independent Third Parties. Porgera Jersey is owned as to 50% by our Company and 50% by Barrick Mining Corporation, an Independent Third Party. As the Reorganization of New Porgera is not completed by end of December 31, 2024, the financial contribution by New Porgera is not reflected in the financial information of the Group for the three years ended December 31, 2024. New Porgera is not considered as our subsidiary upon completion of Reorganization and completion of the Global Offering.
7. The mining assets and mining titles of the Australia Norton Gold Mine are primarily held by Norton Gold Fields and Paddington Gold.

SIMPLIFIED CORPORATE STRUCTURE OF OUR GROUP AFTER THE REORGANIZATION

The following diagram sets out the simplified corporate and shareholding structure of our Group immediately after completion of the Reorganization but before completion of the Global Offering:

Notes:

1. Zijin America is directly held as to 68.77% by Gold Mountains (H.K.) and by (i) CLAI Gilding (BVI) Investment Limited as to 22.74%, an Independent Third Party except being a connected person at subsidiary level due to its shareholding in Zijin America; (ii) ZLCFL-Cayman International Investment Cooperation Limited as to 7.26%, an Independent Third Party; and (iii) Longyan Xinjing Investment Partnership (Limited Partnership) as to 1.23%, an employee shareholding platform of the Zijin Mining Group.
2. Altynken LLC is directly held as to 60% by Superb Pacific and 40% by Kyrgyzaltyn JSC, an Independent Third Party (save for being a connected person of our Company at subsidiary level due to its shareholding in Altynken LLC).
3. Rosebel GM is directly held as to 95% class A shares by Silver Source and 5% class A shares by the government of Suriname, an Independent Third Party. Silver Source holds 100% of the class B Shares of Rosebel GM. Pursuant to the constitutional documents of Robesel GM, while the class A shares do not carry any redemption rights, the two classes of shares of Rosebel GM carry the same rights to dividends, liquidation entitlement and voting rights. Pursuant to a shareholders' resolution of Rosebel GM, it was further agreed that only Class A shares are entitled to receive dividends.
4. Zarafshon JV is directly held as to 70% by our Company and 30% by the government of the Republic of Tajikistan, an Independent Third Party (save for being a connected person of our Company at subsidiary level due to its shareholding in Zarafshon JV).
5. Porgera Jersey is a joint venture directly held as to 50% by our Company and 50% by Barrick Mining Corporation, an Independent Third Party.
6. New Porgera is directly held as to 49% by Porgera Jersey and the remaining 51% by (i) Kumul Minerals (Porgera) Limited as to 36%; (ii) MRDC Porgera (Escrow) Limited as to 10%; and (iii) Mineral Resources Enga Limited as to 5%, all of which are Independent Third Parties. Porgera Jersey is owned as to 50% by our Company and 50% by Barrick Mining Corporation, an Independent Third Party. As the Reorganization of New Porgera is not completed by end of December 31, 2024, the financial contribution by New Porgera is not reflected in the financial information of the Group for the three years ended December 31, 2024. New Porgera is not considered as our subsidiary upon completion of Reorganization and completion of the Global Offering.

7. Pursuant to the Colombia Entrustment Arrangement, the assets, liabilities and operation results of Zijin America, the intermediate holding company of the Colombia Buriticá Gold Mine will be consolidated to the financial results of our Company. For further details, please refer to "Relationship with Zijin Mining — Clear Delineation of Business — Colombia Entrustment Arrangement".
8. The mining assets and mining titles of the Australia Norton Gold Mine are primarily held by Norton Gold Fields and Paddington Gold.

THE SPIN-OFF OF OUR GROUP FROM ZIJIN MINING

PRC Regulatory Requirement On The Spin-Off

Zijin Mining, one of our Controlling Shareholders, is a company listed in the Stock Exchange and the Shanghai Stock Exchange. The Listing of our Company constitutes a spin-off from an A-Share listed company as defined under the Spin-off Rules. The Spin-Off has been approved by the shareholders of Zijin Mining at an extraordinary general meeting held on June 26, 2025. Zijin Mining filed the relevant announcements related to the Spin-Off with the Shanghai Stock Exchange on May 1, 2025, May 27, 2025, June 25, 2025 and June 27, 2025.

Hong Kong Regulatory Requirement On The Spin-Off

Our Listing will constitute a spin-off from Zijin Mining, one of our Controlling Shareholders. The proposal in relation to the Spin-off was submitted by Zijin Mining to the Stock Exchange for approval pursuant to Practice Note 15 of the Listing Rules ("**Practice Note 15**"), and the Stock Exchange has confirmed that Zijin Mining may proceed with the Spin-off. The board of directors of Zijin Mining believes that the Spin-off is beneficial to both Zijin Mining and our Company for the following reasons, among others:

(a) The Spin-off would enable investors to better value Zijin Mining with its focus on its retained business. The timing of the Spin-off and listing coincides with the upward cycle of gold prices, which is beneficial for promoting the revaluation of Zijin Mining's gold assets. We will remain a subsidiary of Zijin Mining, with its financial results consolidated into Zijin Mining's consolidated financial statements upon listing. The Spin-off and listing are expected to significantly enhance Zijin Mining's overall value, shareholder value, and the levels of market value management and asset securitization;

(b) As the Group will be responsible for its own financing requirements, Zijin Mining will not need to consider the funding demands of the Group upon the completion of the Spin-off and the Global Offering and can therefore direct its financial resources to itself;

(c) As we are expected to remain as a subsidiary of Zijin Mining upon completion of the Spin-off and the Global Offering, Zijin Mining will continue to benefit from any potential upside in our business through consolidation of the Group's financial performance and receipt of dividend income from the Group;

(d) The Spin-off will allow for the value of the Group to be reflected on its own merits and increase its operational and financial transparency through which investors would be able to appraise and assess the performance and potential of the Group separately and distinctly from those of Zijin Mining.

(e) The business of the Group has grown to a size sufficient to command a separate listing status and the value of the Group is expected to be enhanced through the Spin-off given that:

(i) a listing on the Stock Exchange will enhance our profile amongst its customers, suppliers and other business partners, as well as its ability to recruit talent;

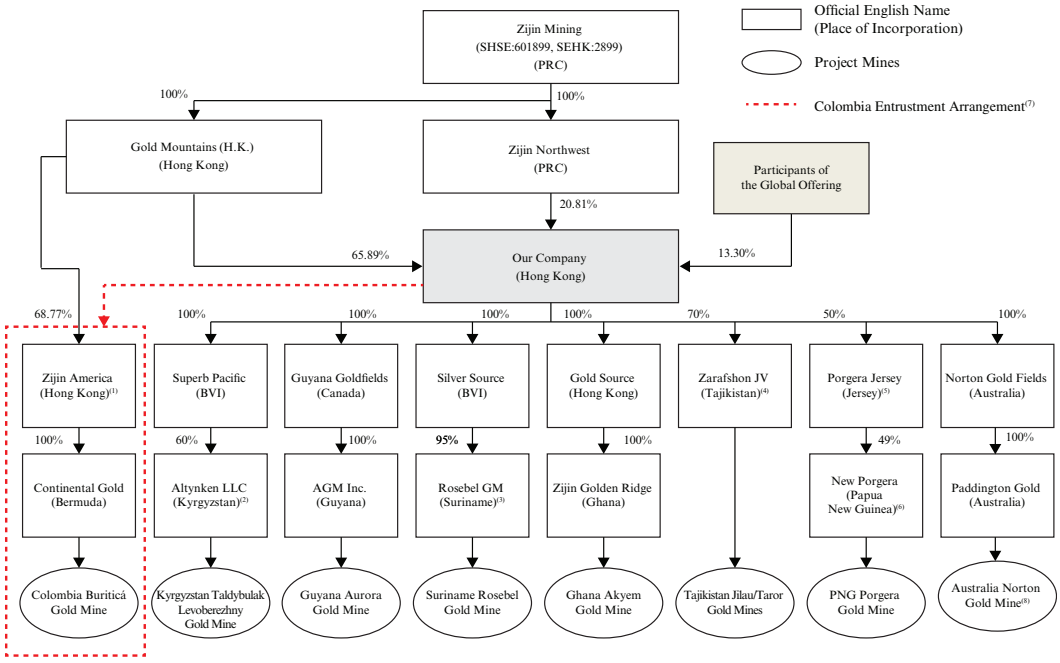
(ii) a listing on the Stock Exchange will provide clarity of the financial profile of our Group, thereby enabling us to directly and independently access both equity and debt capital markets and obtain better credit ratings in the future, should the need arise; and

(iii) our independent listing will lead to a more direct alignment of our management's responsibilities and accountability with our operating and financial performance. This is expected to result in enhanced management focus, which should in turn lead to improved decision-making processes, faster response time to market changes and increased operational efficiency. The management of our Company will be under heightened scrutiny from the investor community and it will be possible to measure their performance against the stock market performance of us relative to publicly traded industry peers. It will also be possible to link management incentives to such performance, thereby increasing management motivation and commitment.

The Spin-off, if it proceeds, will not constitute a notifiable transaction for Zijin Mining under the Listing Rules.

Practice Note 15 requires Zijin Mining to have due regard to the interests of their respective existing shareholders by providing them with an assured entitlement to the Shares, either by way of a distribution in specie of existing Shares or by way of a preferred application in the offering of existing or new Shares of our Company (the "**Assured Entitlement Requirement**").

Pursuant to the applicable laws and regulations in the PRC, due to the restrictions on profit distribution in the PRC Company Law and its articles of association, Zijin Mining will not be able to, by way of distribution in specie, distribute the Shares to its shareholders in order to fulfill the Assured Entitlement Requirement. Further, fulfilling the Assured Entitlement Requirement by way of preferred application in the issuance of Shares by our Company could only be provided to Zijin Mining H Shareholders but not the Zijin Mining A Shareholders. An extraordinary general meeting of all shareholders of Zijin Mining and class shareholders' meetings of each of the A Share shareholders and H Share shareholders of Zijin Mining was held on June 26, 2025 pursuant to Zijin Mining's articles of association to approve the Assured Entitlement only to the H Share shareholders of Zijin Mining by way of a special resolution. As a result, Zijin Mining will provide the assured entitlement to the Qualifying Zijin Mining H Shareholders by way of the Preferential Offering.



In respect of the Preferential Offering, pursuant to Article 23 of the Implementation Rules for Registration, Depository and Clearing Services under the Mainland-Hong Kong Stock Markets Connect Program (《內地與香港股票市場交易互聯互通機制登記、存管、結算業務實施細則》), China Securities Depository and Clearing Co., Ltd. does not provide services relating to the subscription of newly issued shares. Accordingly, Zijin Mining A Shareholders cannot exercise the Assured Entitlement through the Shanghai-Hong Kong Stock Connect or Shenzhen-Hong Kong Stock Connect upon our Listing. See "Structure of the Global Offering" for further details of the Preferential Offering.

APPLICATION FOR LISTING ON THE STOCK EXCHANGE

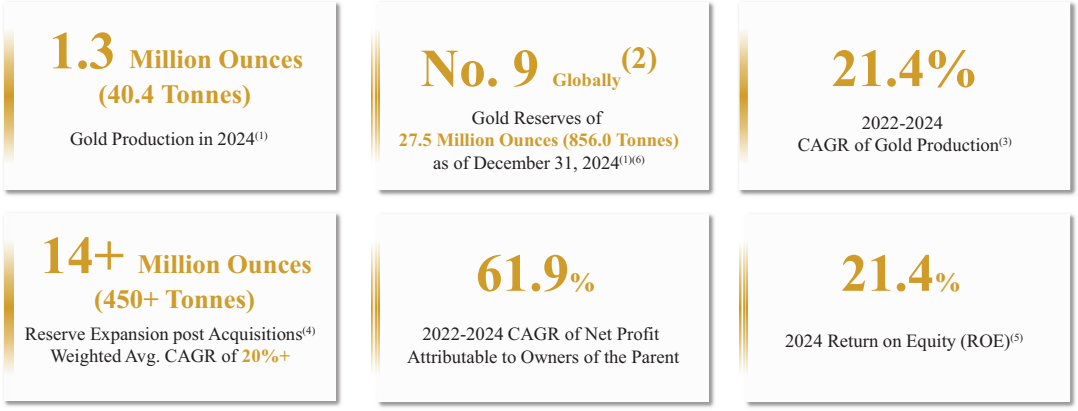
Our Company has made an application to the Stock Exchange for the listing of, and permission to deal in, our Shares. No part of the share or loan of our Company is listed or dealt in on any other stock exchange. At present, our Company is not seeking or proposing to seek such listing of, or permission to deal in, the share or loan of our Company on any other stock exchange.

SIMPLIFIED CORPORATE STRUCTURE OF OUR GROUP IMMEDIATELY AFTER THE GLOBAL OFFERING

The following diagram illustrates the simplified corporate and shareholding structure of our Group immediately following completion of the Global Offering (assuming the Over-allotment Option is not exercised):

Notes:

1. Zijin America is directly held as to 68.77% by Gold Mountains (H.K.) and by (i) CLAI Gilding (BVI) Investment Limited as to 22.74%, an Independent Third Party except being a connected person at subsidiary level due to its shareholding in Zijin America; (ii) ZLCFL-Cayman International Investment Cooperation Limited as to 7.26%, an Independent Third Party; and (iii) Longyan Xinjing Investment Partnership (Limited Partnership) as to 1.23%, an employee shareholding platform of the Zijin Mining Group.
2. Altynken LLC is directly held as to 60% by Superb Pacific and 40% by Kyrgyzaltyn JSC, an Independent Third Party (save for being a connected person of our Company at subsidiary level due to its shareholding in Altynken LLC).
3. Rosebel GM is directly held as to 95% class A shares by Silver Source and 5% class A shares by the government of Suriname, an Independent Third Party. Silver Source holds 100% of the class B Shares of Rosebel GM. Pursuant to the constitutional documents of Robesel GM, while the class A shares do not carry any redemption rights, the two classes of shares of Rosebel GM carry the same rights to dividends, liquidation entitlement and voting rights. Pursuant to a shareholders' resolution of Rosebel GM, it was further agreed that only Class A shares are entitled to receive dividends.
4. Zarafshon JV is directly held as to 70% by our Company and 30% by the government of the Republic of Tajikistan, an Independent Third Party (save for being a connected person of our Company at subsidiary level due to its shareholding in Zarafshon JV).
5. Porgera Jersey is a joint venture directly held as to 50% by our Company and 50% by Barrick Mining Corporation, an Independent Third Party.



6. New Porgera is directly held as to 49% by Porgera Jersey and the remaining 51% by (i) Kumul Minerals (Porgera) Limited as to 36%; (ii) MRDC Porgera (Escrow) Limited as to 10%; and (iii) Mineral Resources Enga Limited as to 5%, all of which are Independent Third Parties. As the Reorganization of New Porgera is not completed by end of December 31, 2024, the financial contribution by New Porgera is not reflected in the financial information of the Group for the three years ended December 31, 2024. New Porgera is not considered as our subsidiary upon completion of Reorganization and completion of the Global Offering.
7. Pursuant to the Colombia Entrustment Arrangement, the assets, liabilities and operation results of Zijin America, the intermediate holding company of the Colombia Buriticá Gold Mine will be consolidated to the financial results of our Company. For further details, please refer to "Relationship with Zijin Mining — Clear Delineation of Business — Colombia Entrustment Arrangement".
8. The mining assets and mining titles of the Australia Norton Gold Mine are primarily held by Norton Gold Fields and Paddington Gold.

OVERVIEW

Who We Are

We are one of the global leading gold mining companies formed by combining all of the gold mines of Zijin Mining located outside of China. Leveraging Zijin Mining's competitive advantage in the management of exploration, development and operation of low-grade and refractory resources, we have emerged as a global leading gold mining company principally engaged in exploration, mining, processing, smelting, refining and sale of gold. We integrate high-potential gold mine resources through global mergers and acquisitions, and by leveraging our geological exploration, R&D, engineering, construction, and mine operation capabilities, along with international ESG systems. This enables us to achieve continuous reserve expansion, production growth and efficient operations.

As of the Latest Practicable Date, we held interests in eight gold mines located in gold-rich regions across South America, Oceania, Central Asia and Africa. By tailoring our operation models to the unique characteristics of each mine, we produce gold in the forms of gold concentrates, gold doré and gold ingots from our mines. Through continuous gold resource acquisition, development and operational efficiency improvement, we have successfully established a leading position in the global gold mining industry and achieved proven track record of robust growth, as illustrated in the chart below:

Notes:

1) Calculated based on 100% of the equity interest for each mine held by the Company as of the Latest Practicable Date, except for PNG Porgera Gold Mine, which is presented based on 24.5% of the equity interest held by the Company
2) According to Frost & Sullivan, global ranking based on the gold reserves as of December 31, 2024, calculated based on 100% equity interest of each mine controlled by the Company as of the Latest Practicable Date
3) Calculated based on 100% of the equity interest for each mine held by the Company in the given years
4) Represented the accumulative gold reserve expansion in the mines the Company operated from the completion of the acquisitions to December 31, 2024
5) Calculated using profit for the year of 2024 divided by total equity as of December 31, 2024, multiplied by 100%
6) As of December 31, 2024, the total consolidated Proved and Probable Ore Reserves for our mines including the minority interests in PNG Porgera Gold Mine, were estimated to be about 608.6 Mt, with total Proved and Probable Au grade Ore Reserves of 1.4 g/t

Starting from the acquisition of the Tajikistan Jilau/Taror Gold Mines in 2007, we have expanded our business through global acquisitions, operational enhancement and production expansion of several large gold mines. According to Frost & Sullivan, our gold Reserves and gold production volume on a consolidated basis ranked ninth and eleventh globally, respectively, as of December 31, 2024 and in 2024. From 2022 to 2024, the CAGR of our gold production reached 21.4%, achieving a faster growth rate than other sizable companies, according to Frost & Sullivan, and the CAGR of net profit attributable to owners of the parent was 61.9%.

We are a leading mining company in terms of growth, operational efficiency and profitability in the global gold mining industry. Due to scarcity of high quality gold mines as acquisition targets in recent years, most of the mines we acquired were underperforming at the time of acquisition with poor operational management or resource endowments not fully identified. Through technological innovations, production expansion, and enhanced efficiency management, each of the Guyana Aurora Gold Mine and the Suriname Rosebel Gold Mine turned profitable within one year after our acquisitions in 2020 and 2023, respectively. In 2024, our AISC was US$1,458 per ounce, ranking sixth lowest among the top fifteen gold mining companies globally, according to Frost & Sullivan. We maintained high capital return in 2024, with ROE of 21.4%. During the Track Record Period, among the seven mines we operated, the mining cost per tonne of ore mined was US$38.7, US$31.3, US$34.3, US$36.5 and US$32.7 in 2022, 2023, 2024 and the six months ended June 30, 2024 and 2025, respectively, while the processing cost per tonne of ore milled was US$20.6, US$18.2, US$19.4, US$20.6 and US$17.2, respectively, of the same periods.

The following map illustrates the geographic coverage and locations of the eight gold mines:

Our Controlling Shareholder

Our controlling shareholder, Zijin Mining, is a global leading mining company primarily focused on mineral exploration and development. Zijin Mining has over 30 large mining projects across 17 countries worldwide as of December 31, 2024, covering metals including gold, copper, lithium, and zinc, among others. Zijin Mining ranks among the top five mining companies globally in terms of resources and reserves, production, revenue, profit, total asset and market capitalization. Zijin Mining is distinguished by its robust research and development team, which excels in technologies that facilitate the full process of the value chain. Zijin Mining has extensive experience in the exploration, construction and operation of large-scale metal mines, complemented by professional and efficient resource acquisition and in-house exploration expertise. Zijin Mining maintains a competitive advantage through its cost-efficient operations and upholds high standards in ESG practices and sustainable development capabilities.

Mr. Chen Jinghe, the founder and chairman of Zijin Mining, is highly esteemed in the global mining industry. Under his leadership, the team has developed the Five-Stage-Integrated Life-of-Mine Project Management Procedure that integrates and manages the process of exploration, mining, processing, smelting and environmental protection, aimed at maximizing economic and social benefits of our mine assets.

We inherit and are shaped by the extensive industry expertise accumulated over 30 years by Zijin Mining. Our aim is to empower green production operations and create sustainable value for shareholders and the society, enabling us to maintain low cost and high efficiency while expanding our operational scale. While we operate independently, Zijin Mining will continue to provide comprehensive and robust support in areas such as technology, talent, and operational know-how.

Our Market Opportunities

Gold, recognized as a strategic resource due to its combination of monetary, commodity and financial attributes, has increasingly taken on the role of a safe haven asset in recent years and experienced substantial shifts in its pricing dynamics, largely due to heightened geopolitical uncertainties and more frequent monetary easing cycles globally. Due to these factors, gold has become an increasingly important asset allocation for global central banks and investors. Emerging countries worldwide have been consistently purchasing gold in recent years. Despite this trend, according to Frost & Sullivan, the proportion of gold held by central banks constitutes only 8.9% of asset reserves in emerging countries (non-OECD countries), which is significantly lower than the average of 25.2% in developed countries (OECD member countries) as of December 31, 2024. This disparity highlights significant potential for increasing strategic reserves of gold among emerging countries. Furthermore, by incorporating gold into their asset portfolios, financial institutions can enhance their risk-return profile, which further increases investor interest in gold allocation. Driven by these factors, gold has officially

surpassed the Euros to become the second-largest reserve asset for global central banks, accounting for 20% of global official reserves as of December 31, 2024, surpassing the Euro's 16% for the first time, and second only to the US dollar's 46%.

According to Frost & Sullivan, in recent years, due to decreasing global gold mine exploration budgets, the proportion of investment in gold exploration within the global metals exploration budget decreased from approximately 65% in the 1990s to 44% in 2024. Additionally, discovering high-quality gold mines has become increasingly difficult, resulting in a noticeable decline in the pace and scale of newly discovered large gold mines worldwide. The annual average gold price rose by approximately 35% from 2020 to 2024, according to London Bullion Market Association (LBMA) Gold Price. In the future, gold prices are anticipated to gain further long-term support as the grade of gold mines continues to decline and extraction costs continue to increase.

Our Global Acquisitions

We have extensive experience in global mergers and acquisitions, demonstrating a strong track record in acquiring global resources. Over nearly two decades of development, we have acquired high-potential mine assets across various regions, including South America, Oceania, Central Asia and Africa through various acquisition transactions.

We actively pursue acquisitions of high-potential gold mines and under-valued low-grade and refractory gold mines. Our comprehensive experience in complex cross-border acquisitions, combined with our operational and technical expertise in the gold mining industry, enable us to accurately identify and acquire potential high-value assets globally and to conduct geological exploration and development in a cost-effective way, proactively leveraging our strong capabilities following the acquisitions. For example, we have achieved a total reserve expansion of over 14 million ounces in the six mines we operated during the period from completion of the mine acquisitions to December 31, 2024, representing a weighted average CAGR of over 20% of reserve expansion. Our acquisition experience, as well as construction and operation management capabilities, allow us to expand our resource and production volumes steadily in the evolving gold mining industry.

We have a track record of identifying and seizing low-cost acquisition opportunities. From 2019 to 2024, the average acquisition cost of the mines we acquired was approximately US$61.3 per ounce in terms of gold resources, while the average acquisition cost in the industry during the same period was approximately US$92.9 per ounce, according to Frost & Sullivan, which was 52% higher than ours.

Our Mine Development and Operation Capabilities

We possess advanced technology, advanced project operation and management systems, and optimized supply chain, which form the core of our mine development and operation capabilities. We focus on cost control and efficiency enhancement by combining the procurement of large-scale, intelligent equipment globally with localized employment and production materials to effectively reduce supply chain costs. We employ the Five-Stage-Integrated Life-of-Mine Project Management Procedure, which holistically considers and manages the five key processes — exploration, mining, processing, smelting, and environmental protection, based on the flow of ores. By doing so, we effectively reduce construction and production costs, maximizing economic and social benefits for the projects.

We have strong cost management capability, with several of our mines turning profitable shortly after our acquisitions. During the Track Record Period, among the seven mines we operated, the mining cost per tonne of ore mined was US$38.7,US$31.3, US$34.3, US$36.5 and US$32.7 in 2022, 2023, 2024 and the six months ended June 30, 2024 and 2025, respectively, while the processing cost per tonne of ore milled was US$20.6, US$18.2, US$19.4, US$20.6 and US$17.2, respectively, of the same periods. During the Track Record Period, our operating cost growth rate was below the average level of global gold mining companies. The Suriname Rosebel Gold Mine, the Tajikistan Jilau/Taror Gold Mines and the Guyana Aurora Gold Mine were all loss-making before our acquisitions and became profitable within one to two years after our acquisitions.

We have global leading technological capabilities for development and effective utilization of low-grade and refractory gold resources. Our Controlling Shareholder, Zijin Mining, owns the only State Key Laboratory for Comprehensive Recovery of Low-grade and Refractory Gold Resources in China's gold mining industry. Through technological innovations, Zijin Mining has achieved a series of breakthroughs in the efficient development of low-grade and refractory gold ores. For example, Taror Gold Mine contain copper, silver, arsenic, carbon, and sulfur, with fine gold particle size and significant differences in the characteristics of different ore types. Zijin Mining developed the POX technology for arsenic and carbon-bearing gold concentrates and copper concentrates to deal with the challenges of processing refractory gold ores. We have inherited the expertise from Zijin Mining and have been extensively utilizing technologies, such as hot-pressure pre-oxidation and bioleaching, to effectively develop low-grade and refractory ores, which have further enhanced the technical and operational capabilities of our team. From 2022 to 2024, the gold recovery increased from 78% to 81%. By applying Zijin Mining's technologies in the refinery built in 2023, the Tajikistan Jilau/Taror Gold Mines generated an additional profit of approximately US$57 million. This demonstrates that we have a successful model for the management of refractory polymetallic gold deposits globally.

ESG

Our ESG practice is integral in upholding our core value of empowering green production operations through technological innovation to create sustainable value for shareholders and society. We place significant emphasis on ESG by prioritizing mine safety and green mining initiative, fully integrating into local communities, adhering to the principle of "sharing project development benefits with local stakeholders" to drive the economic development for communities and complying with international standards such as ISO 14001 and United Nations Sustainable Development Goals, etc.

We are committed to carrying out business activities that positively benefit the local community. We adhere to the strategy of promoting local employment, with an average local employee ratio of approximately 95.7% (excluding the PNG Porgera Gold Mine) as of June 30, 2025. Our workforce is composed of individuals from 55 countries, and during the Track Record Period, we implemented over 205 public welfare projects.

We have consistently adopted high safety standards, risk control and preventive measures, and we continuously update and improve our internal control measures to enhance production safety in our operations. As a result, we did not have any material safety incidents involving our workforce during the Track Record Period and up to the Latest Practicable Date.

Our Financial Performance

Our total revenue was US$1,818.0 million, US$2,262.4 million and US$2,989.9 million, in 2022, 2023 and 2024, respectively, with a CAGR of 28.2%. Our net profit attributable to owners of the parent was US$183.7 million, US$230.4 million and US$481.4 million, in 2022, 2023 and 2024, respectively, with a CAGR of 61.9%. For the six months ended June 30, 2024 and 2025, our revenue was US$1,403.0 million and US$1,996.9 million, respectively, and our profit attributable to owners of the parent was US$214.4 million and US$520.2 million, respectively.

COMPETITIVE STRENGTHS

We are one of the global leading gold mining companies with high growth and highly certain prospects for reserve and production expansion.

We are one of the global leading gold mining companies. As of the Latest Practicable Date, we held interests in eight gold mines in gold-rich areas across South America, Oceania, Central Asia and Africa. As of December 31, 2024 and in 2024, our gold Reserves and gold production volume on a consolidated basis ranked ninth and eleventh globally, respectively, according to Frost & Sullivan.

We have maintained high growth through our continuous acquisitions, geological exploration, technological renovation and capacity expansion. From 2022 to 2024, our gold production achieved a CAGR of 21.4%, achieving a faster growth rate than other sizable companies, according to Frost & Sullivan.

Our gold mines offer clear and highly certain prospects for reserve expansion and production growth. For example, the Colombia Buriticá Gold Mine is a world-class, ultra-high-grade large gold mine, with resource and reserve grade as high as 7.2 g/t and 6.8 g/t, respectively, as of June 30, 2025. The main ore body of the mine remains open at depth and along the edges, with favorable geological conditions for mineralization. The Suriname Rosebel Gold Mine also shows promising prospects at depth and the periphery under exploration. We also see great potentials in our recently acquired Ghana Akyem Gold Mine. According to the feasibility study report on annual production capacity and mill feed grade, we anticipate that the mine's production capacity can be increased from the current approximately 190 koz (6 tons) per year to a peak of approximately 600 koz ounces (19 tons) per year. We plan to expand the production capacity by (i) optimizing the current production scale of 8.5 Mtpa through open pit optimization and continuously enhancing its capacity to reach full production capacity, (ii) simultaneously undertaking the construction of a 3.5 Mtpa high-grade underground mining project, and (iii) implementing technological upgrades to the processing plant to expand its capacity to 12 Mtpa.

We possess excellent track record of continuous expansion through acquisitions, with proven capabilities in target identification, transaction execution and resource integration to achieve value enhancement.

We have established our gold asset portfolio purely through acquisitions over the past nearly two decades, having accumulated extensive experience and established a highly mature and replicable model for expansion. We have utilized a variety of transaction models, including asset acquisition, public market transaction through tender offer and scheme of arrangement, and joint venture establishment with other leading gold mining companies. By skillfully utilizing these models, we maintain flexibility in the competitive dynamics of the acquisition opportunities and significantly enhance the execution efficiency of these transactions.

We are able to accurately identify acquisition opportunities with significant value upsides. From 2019 to 2024, the average acquisition cost of the mines we acquired was approximately US$61.3 per ounce in terms of gold resources, while the average acquisition cost in the industry during the same period was approximately US$92.9 per ounce, according to Frost & Sullivan, which was 52% higher than ours.

After the acquisitions, we utilized our strong technical expertise, engineering and construction and project management capabilities to address various challenges and rapidly enhance the economic value of the mines. We have achieved a highly successful track record, which was primarily attributed to: (1) our full-fledged capabilities in geological exploration, mine development, construction project development management and operation; (2) upgrades and improvements of the mining, processing flows and technologies; (3) optimization of the supply chains to achieve cost optimization; (4) our unique Five-Stage-Integrated Life-of-Mine Project Management Procedure, which integrates and manages the processes of exploration, mining, processing, smelting and environmental protection, aiming to maximize social and economic benefits; and (5) economies of scale achieved through capacity and production expansion.

Our value-enhancement practices have been consistently proven effective over time:

- In August 2020, when we completed the acquisition of the Guyana Aurora Gold Mine, it was in a state of shutdown due to technical issues in underground mining and financial constraints. Within three months post-acquisition, we achieved full resumption of operations. In November 2021, we initiated the underground mine construction, aiming to develop the mine into Guyana's first modern underground mine with a designed mining capacity of 6,000 tonnes of ores per day. We rapidly turned the mine from loss-making to profitable after the acquisition, and anticipate to fully recover our acquisition and construction investments with the accumulative net cash flow post-acquisition in 2026.

- The Suriname Rosebel Gold Mine faced significant challenges prior to our acquisition, including severe lack of stripping in open pits, low production efficiency and high costs, which resulted in underutilized capacity and sustained losses. In February 2023, we completed the acquisition and promptly initiated the technological renovation for mining and processing facilities and capacity expansion. We optimized the stripping plan and blasting parameters, enhanced maintenance of the mining equipment, and applied our expertise in large-scale low-grade ore development and utilization, a specialty of our Controlling Shareholder Zijin Mining. We increased the average gold recovery from 89% for the two years prior to the acquisition to 96% in 2023 and 94% in 2024. We successfully turned the mine profitable in 2023, the same year of our acquisition, and anticipate to fully recover our acquisition and construction investments with the accumulative net cash flow post-acquisition in 2025.

- In March 2020, we completed the acquisition of the Colombia Buriticá Gold Mine. Despite the challenges during the pandemic lockdown, we swiftly resumed construction and established mining and processing capacity of 3,000 tonnes of ores per day by October 2020. In 2020, we achieved gold production of 70.7 koz (2.2 tonnes). In December 2020, we initiated the construction and technological renovation of the processing plant of 4,000 tonnes of ores per day, completed the construction within 12 months by December 2021 and commenced the operations in March 2022. We comprehensively utilize the technologies of gravity separation, flotation, carbon leaching and zinc powder replacement and achieved effective recovery of gold, silver, and copper.

Our leading capabilities of geological exploration, and cost-effective expansion and construction contribute to the sustainable organic growth.

Our Controlling Shareholder, Zijin Mining, has significantly weighed on resource and reserve expansion through geological exploration. As of December 31, 2024, the accumulative copper and gold resources incremented through geological exploration by Zijin Mining accounted for 47% and 50% of the total resources, respectively. We have fully inherited Zijin Mining's advantages in this area and significantly expanded the reserves in our mines after the acquisitions. We have achieved a total reserve expansion of over 14 million ounces in the six mines we operated during the period from completion of the mine acquisitions to December 31, 2024, representing a weighted average CAGR of over 20% of reserve expansion.

We primarily employ an "acquisition — exploration — reserve expansion" model to achieve sustainable growth. Leveraging our expertise in geological structures and mineralization patterns, and the extensive experience accumulated through long-term exploration practices, we are able to quickly identify areas with promising reserve expansion prospects. We have developed a well-rounded exploration model that comprises three-dimensional geological survey, efficient geophysical detection, precise geochemical exploration, three-dimensional comprehensive location prediction and verification through drilling. We also benefit from the advanced geological exploration technology and self-developed equipment from our Controlling Shareholder, Zijin Mining, such as Sinian 3D Induced Polarization System, Fluxgate UAV Aeromagnetic and Three-component Borehole Magnetic Survey. By integrating these cutting-edge technologies and equipment, we have achieved significant reserve expansion at a low cost. From 2019 to the first half of 2025, the average exploration cost at the mines that we operated during the period (excluding Ghana Akyem Gold Mine) was as low as US$11.7 per ounce in terms of gold resources, which was significantly below the industry average of US$32.3 per ounce during the same period, according to Frost & Sullivan.

We have achieved superior execution efficiency and cost effectiveness along the mine development and capacity expansion. Our Controlling Shareholder, Zijin Mining, is one of the few mining companies with full-fledged capabilities covering the entire chain of research and development, engineering, construction and operation. It has developed more than 15 large-scale mining projects over the past decade and accumulated extensive experience. Zijin Mining has complete mining development capabilities, covering geological exploration, experimental research, testing and analysis, engineering design, and construction and installation. These technologies provide us with comprehensive technical solutions. Drawing on Zijin Mining's expertise, our skilled teams in various functions work together effectively, utilizing global resources to advance the project development and construction in an expedited manner. Additionally, we possess specialized expertise in geology, mining, mineral processing, and smelting, tailored to the specific production conditions of each mine, which enabled us to efficiently address and respond to production requirements and provide effective solutions. For example, we completed the construction and commenced the operation of the Binduli Project at the Australia Norton Gold Mine within 16 months, despite various restrictions and challenges during the pandemic. Among the capacity expansion and technological renovation projects we had completed by June 30, 2025, the weighted average capital expenditure intensity was approximately US$1,666 per ounce in terms of gold production capacity, significantly lower than the industry average of US$3,500 to US$4,000 per ounce, according to Frost & Sullivan.

We realize cost efficiency and value enhancement through our proprietary and advanced technologies, industry-leading expertise in low-grade and refractory ore utilization and strong mine operational capabilities.

We are empowered by our proprietary and advanced mining, processing and metallurgy technologies and exceptional operational capabilities. Although the mineral endowment varies in our mines, we have effectively achieved value enhancement through continuous research and development, technological renovation and operational optimization.

Our Controlling Shareholder, Zijin Mining, is known for expertise in handling low-grade and refractory ores and possesses the industry's only State Key Laboratory for Comprehensive Recovery of Low-grade and Refractory Gold Resources in China. The first gold mine of Zijin Mining, Zijinshan Gold and Cooper Mine, was initially regarded as low-grade and small-scale, but was developed into one of the largest gold mines in China through Zijin Mining's continuous technical innovation and breakthroughs, systematic management initiatives and operational optimization. We have inherited the expertise from Zijin Mining and have been extensively utilizing technologies, such as hot-pressure pre-oxidation and bioleaching, to effectively develop low-grade and refractory ores, which have significantly increased the economic value of our mines, and in turn further enhanced the technical and operational capabilities of our team. We

deploy technologies that adapt to the specific conditions and characteristics of each mine, through which we have achieved numerous accomplishments in production efficiency enhancement and cost reduction:

- *Australia Norton Gold Mine*: For the Paddington Mill in our Australia Norton Gold Mine, we use a series of processes including crushing, grinding, flotation, and CIL/CIP to process different types of ore during the free-milling and refractory process, and extract fine material from the heap leach plant. This process achieves high recovery and stable performance. The Binduli North Heap Leach Plant combines crushing, HPGR grinding, screening, heap leaching, and CIC adsorption, and works smoothly with high-salinity water.

- *Tajikistan Jilau/Taror Gold Mines:* Tajikistan Jilau/Taror Gold Mines feature a pressure oxidation project for arsenic- and carbon-bearing gold (copper) concentrates. To address challenges such as the coexistence of oxidized and sulfide ores at the Taror Gold Mine and the Jilau Gold Mine, we developed a comprehensive utilization technology for low-grade and refractory ores, combining flotation, pressure oxidation, CIL, and heap leaching. This enabled the efficient extraction and utilization of complex, low-grade ores and gold concentrates, effectively recovering multiple metal components and producing qualified gold ingots, silver ingots, and cathode copper.

- *Suriname Rosebel Gold Mine:* To tackle the challenges of low ore grade, carbon, and arsenic content, and refractory nature at the Suriname Rosebel Gold Mine, we developed an integrated recovery technology. This included optimizing the crushing and grinding system to increase the annual processing capacity of the plant to approximately 10 million tonnes. We conducted in-depth research on the refractory ores and implemented innovative optimizations of the gravity separation and CIL/CIC processes. As a result, we increased the average gold recovery of Suriname Rosebel Gold Mine from 89% for the two years prior to the acquisition to 97% in 2023 and 95% in 2024.

We carry out dedicated management and results-oriented operations in our mines throughout the mine life. We look into the detailed aspects of operations and utilize targeted measures that precisely cater to the specific conditions of each mine and therefore realize superior outcome. For example, to reduce the cost of procurement of certain equipment and raw materials for the Guyana Aurora Gold Mine and the Suriname Rosebel Gold Mine, we have globally extended our source of procurement, which significantly reduced the costs and led to optimization in our supply chain management. We are advancing the trial use of autonomous mining truck at the Australia Norton Gold Mine to optimize the utilization of labor force. During the Track Record Period, among the six mines we operated, the mining cost per tonne of ore mined was US$38.7, US$31.3, US$34.3, US$36.5 and US$32.7 in 2022, 2023, 2024 and the six months ended June 30, 2024 and 2025, respectively, while the processing cost per tonne of ore milled was

US$20.6, US$18.2, US$19.4, US$20.6 and US$17.2, respectively, of the same periods, that demonstrated the unit economics enhancement as our production and operation constantly scaled up.

We are committed to responsible mining practices, achieving green and sustainable development through high ESG standards.

We are committed to the "Zijin Model" for a responsible ESG framework and sustainable development. Our Controlling Shareholder, Zijin Mining, is a member of the World Gold Council and among the first gold mining companies in China to pledge adherence to RGMPs. Zijin Mining consistently maintains high ESG standards and has achieved significant results, such as an ESG rating of 89 in 2024 that ranked top five among the 525 global metals companies, by LSEG. Upon Listing, we will be committed to Zijin Mining's best ESG practices, adhering to the RGMPs and other international ESG standards, to promote green and sustainable development.

Under Zijin Mining's ESG framework, our ESG practices have been widely recognized in the regions where we operate, demonstrated by the awards we received for various aspects across multiple regions. For example, during the Track Record Period, Continental Gold received "the 2024 Sustainable Development Certification", Zeravshan received the "Outstanding Contribution to Environmental Protection Award", among others.

We follow comprehensive and multi-tiered international ESG standards, such as ISO 14001 and others. We focus on risk-oriented environmental management, continuously assessing environmental risks and aiming to minimize ecological impact while maximizing operational efficiency. We have adopted "green exploration" as one of our drilling quality acceptance criteria and promoted remote sensing technologies and geophysical exploration methods. We integrated the "Dual-Carbon" commitment into our core agenda of future development and are dedicated to clean energy solutions. The Tajikistan Jilau/Taror Gold Mines, the Colombia Buriticá Gold Mine, and the Suriname Rosebel Gold Mine had achieved 100% utilization of clean energy in purchased electricity as of June 30, 2025. The Guyana Aurora Gold Mine completed two phases of photovoltaic projects with a total capacity of 18MW in 2024, and the Suriname Rosebel Gold Mine's 25MW photovoltaic project is under construction. We advance green mining and prioritize ecological restoration across our global operations. While it is the industry normal practice to conduct reclamation only after the mine operations end, we carry out continuous reclamation concurrently with our development and mining activities. Furthermore, we have built wastewater monitoring systems in our mines to monitor the downstream water quality, while most of our mines have substantially achieved wastewater recycling and zero discharge. During the Track Record Period, we invested in dedicated environmental funds. Through innovative and responsible environmental protection practices, we are dedicated to long-term ecological balance and sustainable development.

We place significant importance to corporate social value, continuously enhancing investment in community development, employee growth and occupational health. We actively promote economic development in the regions where we operate and share benefits with the local communities. For example, our "Sowing the Future" agricultural development program in Colombia has been ongoing for five years. We actively promote the development of the Rosebel Community Fund in Suriname and provided financial support in the areas of education, health, sports, and socio-economic development in 2024. We value employee development and well-being, adopting localized and diverse talent development approaches. We also prioritize occupational safety in our operation. During the Track Record Period, our lost-time injury frequency rate was as low as 0.19 per million work hours. As of December 31, 2024, the ISO 45001 Occupational Health and Safety Management System certification coverage rate for all operational sites where we have held control for over three years reached 100%.

Our development is led by our visionary management team with extensive expertise and global insights, and the "Perseverance, Entrepreneurship and Innovation" spirit of Zijin Mining.

We are led by an elite management team with extensive experience in the mining industry and capital markets, with expertise across gold mining technology, acquisition and multinational operation as well as ESG. Our senior management team has rich experience in the gold mining industry and global mining practices.

Our Chairman, Mr. Lin Hongfu, is a leader with a strong background in both technology and management, possessing nearly three decades of experience in the mining industry and extensive management practice. Since joining Zijin Mining in 1997, Mr. Lin has progressed through a complete career path from technician to production manager, senior executive, and Director. He has held positions including Director of the Zijin Mining Group Gold Smelting Co., Ltd., General Manager of Bayannur Zijin Nonferrous Metals Co., Ltd., Mine Manager of the Zijinshan Gold and Copper Mine, etc., and has served as Vice President of Zijin Mining since 2006. Through the extensive experience, Mr. Lin has developed a deep understanding of mining technology and business practices through the entire value chain and overall management of mining enterprises. He has organized or led the construction and operational management of numerous large-scale mining projects. As a Director, Executive Vice President, and Chairman of the Overseas Business Management Committee of Zijin Mining, Mr. Lin is well positioned to integrate resources and provide us with technical and business support.

Our CEO and Executive Director, Dr. Guo Xian Jian, has over forty years of experience in research and development, engineering operation and management in the mining industry. He has held senior management positions at research institutions and mining companies such as Beijing General Research Institute for Nonferrous Metals, Noranda Inc. and Hatch Ltd. During his career, Dr. Guo has led numerous research and engineering projects, including several large-scale projects with investments exceeding billion dollars. Dr. Guo served as the Chief Engineer of Zijin Mining from 2017 to 2019 and has been a senior advisor in engineering and technology since 2019, leading multiple key R&D projects and achieving significant results. Dr. Guo has been deeply involved in and led the development and acquisition of several of our projects, including the commissioning and renovation of the Colombia Buriticá Gold Mine, the resumption of operations at the Guyana Aurora Gold Mine, the handover of the Suriname Rosebel Gold Mine, the pressure pre-oxidation project at the Tajikistan Jilau/Taror Gold Mines and low-grade heap leaching project of the Binduli Project at the Australia Norton Gold Mine.

Led by our senior management team, we will consistently enhance our technical and operational capabilities. We embrace and advance the "Perseverance, Entrepreneurship, Innovation" spirit of Zijin Mining, remaining steadfast in overcoming challenges. We actively pursue operational and technical breakthroughs. Our senior management team continues to guide us toward achieving ambitious goals and sustainable growth.

GROWTH STRATEGIES

We plan to implement the following business strategies.

Achieving continuous growth in gold resources and reserves through in-house geological exploration efforts and acquisitions, implementing a resource-first strategy

Mineral resources are the foundation for a mining company's survival and development. We will conduct further geological exploration on our existing mines and their surrounding areas to increase gold resources and reserves. Additionally, we will reassess existing mine resources based on gold prices, re-evaluate technical improvement and development plans, fully utilize low-grade resources, extend the Life of Mine and increase the value of our mines. We will also increase our efforts in acquiring gold mines to expand Mineral Resources and Ore Reserves, which is crucial to our production growth.

We are focusing on exploring areas in our existing mines with significant potential, particularly the Colombia Buriticá Gold Mine, the Suriname Rosebel Gold Mine and the Ghana Akyem Gold Mine:

- *Colombia Buriticá Gold Mine*: The Colombia Buriticá Gold Mine is located in Middle Cauca Copper-Gold Belt of the Northern Andes in South America, surrounded by numerous contemporaneous porphyry and hydrothermal copper-gold deposits, such as Titribi, Marmato, and La Cosola. The existing deposits at Buriticá, along with greenfield projects, have significant exploration potential. Areas around Colombia Buriticá Gold Mine, such as Greater Buriticá and Berlin, have revealed numerous gold-copper mineralization clues, with some verification completed. The Veta Sur vein extends to the southwest, and the "BMZ" type high-grade mineralization exposed at depths of 850m-450m remains open, indicating substantial potential for large-scale mineral deposits below 400m. Future comprehensive studies on mineralization patterns are expected to achieve significant exploration and reserves expansion goals.

- *Suriname Rosebel Gold Mine*: Located in the Guiana Shield of South America, the Suriname Rosebel Gold Mine is part of a world-renowned orogenic gold deposit cluster, with mineralization conditions similar to the West African Leo Shield. The existing Rosebel and Saramacca mines have significant potential for reserves expansion at depth and along the edges. We possess mining and exploration rights spanning a vast area across the two mines, with only a small fraction having reached brownfield exploration stages. Target areas within the Rosebel mining rights, such as Mamacreek and Blauwe Tent, have shown promising geophysical and geochemical anomalies. We are planning to integrate exploration resources and increase investment to achieve breakthroughs in reserves expansion in the deep and peripheral greenfield areas of existing mines.

- *Ghana Akyem Gold Mine*: The Akyem Gold Mine is located in the northeastern part of the renowned Ashanti Gold Belt within the orogenic gold deposit cluster of West Africa's "Gold Coast." The identified resources are primarily concentrated within the Ghana Akyem Gold Mine, with the majority of existing drilling controls distributed along the main pit and its deeper extensions. Sparse drilling results indicate that the Akyem mineralization zone continues to extend northeast and southwest along the strike beyond the main pit, with an additional strike length of about 2,200 meters at depth that has not yet been systematically drill-tested. Over the next three years, we plan to conduct systematic infill and supplementary exploration along the northeastern and southwestern extensions of the Akyem main mineralized zone.

Acquiring gold mines is crucial for further sustained growth in gold resources and reserves and production. We will prioritize regions in South America, Africa and Central Asia, focusing on areas near our existing gold mines to achieve management synergies. We give priority to target assets that are in or near production stage. We will draw on the extensive experience of our senior management team and Zijin Mining in global resource acquisitions, and we can effectively identify and secure acquisition opportunities with significant potential to expand our resources and enhance the operational efficiency of acquired mines. When evaluating potential acquisition targets, we will consider various factors such as the asset quality, community, the development stage of the asset as well as the potential for us to add value. We will fully leverage the advantages and strategies of our Controlling Shareholder's acquisition approach, carefully balancing the benefits and risks of acquisitions. We will strive to assess whether the acquired assets have value-added potential and whether our technological and management innovations can create new value from the acquisition. We have entered into an agreement in relation to the acquisition of the Kazakhstan Raygorodok Gold Mine. The Kazakhstan Raygorodok Gold Mine hosts relatively significant resource. It is a large-scale, active open pit mine, with a long mine life, and well-established infrastructure. The processing technologies of the project are mature, with relatively low all-in sustaining costs, contributing to strong financial performance. We see further opportunities in improving its operational efficiency and production levels. This acquisition is expected to have positive contribution to our output and profits. See "History, Reorganization and Corporate Structure — Acquisitions during and after the Track Record Period" for further details of Kazakhstan Raygorodok Gold Mine.

Enhancing production capacity and mineral resource recovery through technological upgrades and operational improvements

Global mining companies are currently facing challenges such as rising operational costs, shortage of high-potential resources, and increasing expenses related to resource acquisition. Amidst such challenges, we recognize that improving operational efficiency, reducing the cost of acquiring high-potential resources, lowering the capital expenditure intensity per unit of production capacity, and enhancing profitability and ROE are crucial for our sustainable growth. Our full-process technological capabilities and engineering expertise will enable us to enhance our construction and operational efficiencies and allow us to continuously improve our competitiveness.

We also plan to undertake a series of construction and expansion projects within our current mining sites to enhance production capacity and resource conversion. Our expansion plans include the following:

- *Tajikistan Jilau/Taror Gold Mines*: We will continue to develop comprehensive utilization technologies for low-grade and refractory ores, addressing challenges such as the coexistence of Taror oxide and sulfide ores at Jilau. We aim to continuously optimize our processing flow to achieve efficient extraction and to maximize utilization of complex ores and gold concentrates, further reducing costs and enhancing efficiency.

- *Australia Norton Gold Mine*: We are transitioning to in-house mining operations and optimizing global procurement to cut costs. Key projects are being fast-tracked, including Phase II of the Binduli North Heap Leach Plant, which will use fine screening for HPGR products to better sort and process ores of different grades. We are also upgrading processing plant to handle refractory ores at the Paddington Mill and applying ore-sorting technology to enhance pre-concentration efficiency and utilize waste rock. New underground mine development is in progress. Once operational, these projects will raise our annual processing capacity from 9 to 11 million tonnes of ores and gold output will increase accordingly, enhancing our profitability, competitiveness, and contribution to the local economy and communities.

- *Guyana Aurora Gold Mine*: We plan to gradually commission the Phase I underground mining project by 2025 and fully realize the commissioning and reaching design capacity of the 3.3 million tonnes per year processing plant upgrade project. We prioritize technological renovation, planning to utilize industry-leading processing technologies (such as Knelson gravity separation, tailings cyanide washing, and leaching tank processes) to achieve early recovery, improve gold leaching rates, and reduce sodium cyanide consumption, gradually achieving cost reduction and efficiency enhancement.

- *Colombia Buriticá Gold Mine*: We are actively engaged in exploration and reserve expansion efforts, focusing on the characteristics of narrow veins/reefs by promoting the miniaturization of mining equipment and implementing underground sorting measures to reduce ore loss and dilution rates and improve ore grade. Additionally, we plan to continuously optimize materials and energy consumption, as well as improve processing flow, and fully recover non-ferrous metals such as gold, silver, and copper for efficient resource utilization. We anticipate increasing daily ore mining and processing capacity from 4,000 tonnes to 5,000 tonnes and boosting annual mining capacity by 320,000 of ores to achieve an annual mining and processing target of 1.65 million tonnes of ores, thereby significantly enhancing the mine's production capacity.

- *Suriname Rosebel Gold Mine*: We are committed to developing the Suriname Rosebel Gold Mine into one of the main gold-producing mines in South America. To address challenges such as the low gold grade of RGM the ore and the carbon and arsenic content in Saramacca, we have developed large-scale utilization technology for low-grade ores, achieving an annual processing capacity of 10 million of ores with a uni-serial semi-autogenous mill and the overall gold recovery reaching 94% in 2024. Building on the current processing plant's annual processing capacity of 10 million tonnes of ores, we are exploring the feasibility of increasing such capacity to 11–13 million tonnes, thereby enhancing the mine's production capacity.

- *Ghana Akyem Gold Mine*: After completing the acquisition, our next step is to re-evaluate the open-pit mineable resources and reserves based on new cut-off grades, expand the open-pit boundaries, and comprehensively increase the open-pit mine life and resource utilization rate. Additionally, we plan to enhance the processing plant's technological renovation to increase the annual processing capacity from 7.6 million tonnes to 12.0 million tonnes of ores, significantly boosting gold production.

Continuously advancing technological innovation

Our technological expertise is a cornerstone of our competitive advantage, reinforced by over 30 years of technological innovation and accumulation of project experience from Zijin Mining. Our extensive expertise and experience span across geological exploration, mining, gold extraction and the comprehensive recovery and utilization of low-grade and refractory resources. Such expertise and experience enable us to establish a competitive edge in cost control and develop industry-leading solutions in green, low-carbon, efficient, and sustainable resource development. We will focus on addressing key industry challenges, such as:

- For low-grade gold ore, especially below 0.3 g/t, we plan to enhance extraction efficiency and promote profitable industrial production;

- For refractory ores with high arsenic and refractory gold ores with carbon, we plan to research on environmental protection technologies during cyanide slag recovery, gold concentrate pre-oxidation extraction, and bio-oxidation of gold concentrates;

- Modification of existing processes, systematic analysis of existing production processes to optimize the rationality of the process.

We plan to continue investing in technological innovation in order to lead the industry in creating intelligent and sustainable mining and green development solutions. We will focus on addressing key industry challenges, such as extracting more value from ores and advancing digitalization of mining operations and green mining. We are actively promoting the integration of digital information systems in our mine operations, accelerating the mechanization, automation, intelligence and AI application enhancements of our mines to reduce costs and improve production efficiency and safety. We are engaging in the digital and intelligent transformation of the mines.

Unwavering commitment to high-standard ESG practices

We are committed to maintaining high ESG standards consistent with Zijin Mining adhering to international standards and best practices, and ensuring that ESG principles are fully integrated into the operations of our mines across various regions. We recognize the significance of responsible and sustainable development in driving our growth. Our sustainable development strategy will focus on the following:

- We are committed to improving our environmental practices by installing clean energy facilities such as solar, wind and hydropower at our mining and refining sites. We aim to enhance our ecological and environmental protection capabilities by focusing on projects like mine closures and tailings storage facilities. These efforts are intended to reduce our environmental impact and promote a sustainable future.

- We are committed to maintaining a strong focus on communities, actively building positive relationships with the communities in which we operate while promoting our sustainable development goals. Additionally, during the Track Record Period, the Colombia Buriticá Gold Mine successfully finalized its first collective agreement, which balances sustainable development and employee welfare, establishing a new standard for overseas project governance. This collective agreement was signed on August 19, 2024, with a two-year term effective until August 18, 2026. Key terms of the agreement include (i) wage adjustment mechanism, (ii) supplementary medical plan, (iii) bonuses, including production bonus, June and December bonuses, signing bonus, seniority bonus and pension/disability compensation, (iv) loans and funds, including flexible investment loan fund for employee investment purposes, housing and renovation loan fund, and family disaster fund to support employees facing sudden family emergencies, (v) allowances and subsidies, including education allowance for employees' kids, 100% sick leave salary, optical medical allowance, temporary replacement allowance for employees temporarily replacing others for seven days or more, and vacation postponement reimbursement for direct costs incurred due to postponed vacations, (vi) leave for bereavement, family emergencies, maternity, paternity, and marriage, (vii) union subsidy, and (viii) free quality meals and laundry services for eligible employees. We plan to continue investing in community projects and increase the local employee ratio. We believe that fostering strong community relationships not only supports our long-term growth but also positively contributes to regional harmony and stability.

- We will continue to build a corporate governance system that aligns our operational management with international standards, tailored to the specific conditions of each mine. This system will create a practical governance structure, management processes, and internal control mechanisms based on the operational characteristics, scale, and environmental conditions of different mines. We are focusing on improving internal management and operational efficiency while adhering to international best practices and enhancing the Company's governance quality.

BUSINESS MODEL

We are one of the leading gold mining companies in the world, engaged in the exploration, mining, processing, smelting, refining and sale of gold. We held interests in eight gold mines located in gold-rich regions across South America, Oceania, Central Asia and Africa, namely the Tajikistan Jilau/Taror Gold Mines, Kyrgyzstan Taldybulak Levoberezhny Gold Mine, Australia Norton Gold Mine, Guyana Aurora Gold Mine, Colombia Buriticá Gold Mine (through Colombia Entrustment Arrangement), Suriname Rosebel Gold Mine, Ghana Akyem Gold Mine and PNG Porgera Gold Mine. Among these gold mines, we control and operate seven gold mines and hold a minority interest in the PNG Porgera Gold Mine. Leveraging the different production models of each mine, we produce gold concentrates, gold doré and gold ingots, which are then sold to downstream refineries, precious metal traders or financial institutions.

Gold concentrates

Gold doré

Gold ingots

Our gold production experienced rapid growth during the Track Record Period, with total gold production volume of approximately 849 koz (26.4 tonnes), 1,151 koz (35.8 tonnes), 1,298 koz (40.4 tonnes) and 656 koz (20.4 tonnes) for the years ended December 31, 2022, 2023 and 2024 and six months ended June 30, 2025, respectively[(1)].

Note:

(1) The total gold production volume includes the attributable gold production volume of PNG Porgera Gold Mine based on 24.5% of the equity interest held by the Company.

The following table sets out a summary of the details of our major operating mining assets as of the Latest Practicable Date:

Mineralized Zone/Block	Highlights
Tajikistan Jilau/Taror Gold Mines	• Acquired in 2007 • Tajikistan's largest gold producer and largest gold mine in terms of gold Resources • Open-pit mining • LOM: Until 2037 • Resumed production and achieved profitability through technological upgrades after acquisition within two years • As of June 30, 2025, total Mineral Resources amounted to 68.1 Mt, with average Au grade of 1.3 g/t, and Au metal Mineral Resources of 2,924 koz (90.9 tonnes) • In 2024, 174 koz (5.4 tonnes) of gold was produced • Our equity interest in the mine: 70%
Kyrgyzstan Taldybulak Levoberezhny Gold Mine	• Acquired in 2011 • Kyrgyzstan's third-largest gold mine in terms of gold Resources • Underground mining • LOM: Until 2033 • Commenced operation in 2016 and achieved profitability within two years • As of June 30, 2025, total Mineral Resources amounted to 13.4 Mt, with average Au grade of 3.6 g/t, and Au metal Mineral Resources of 1,569 koz (48.8 tonnes) • In 2024, 120 koz (3.7 tonnes) of gold was produced • Our equity interest in the mine: 60%

Mineralized Zone/Block	Highlights
Australia Norton Gold Mine	• Acquired approximately 89% during 2012, and further increased its interest to 100% in 2015 • One of Australia's largest gold producers and the only large heap leach project with an annual processing capacity exceeding 5 million tonnes • Open-pit mining and underground mining • LOM: Until 2039 • Was profitable before and after the acquisition • As of June 30, 2025, total Mineral Resources amounted to 304.5 Mt, with average Au grade of 0.9 g/t, and Au metal Mineral Resources of 9,108 koz (283.4 tonnes) • In 2024, 266 koz (8.3 tonnes) of gold was produced • Our equity interest in the mine: 100%
Guyana Aurora Gold Mine .	• Acquired in 2020 • The only large-scale gold mine project in Guyana with production volume of over 100 koz in 2024 • Open-pit mining and underground mining • LOM: Until 2037 • Originally a loss-making enterprise with suspended operations; resumed production and became profitable in the year of the acquisition • As of June 30, 2025, total Mineral Resources amounted to 78.1 Mt, with average Au grade of 2.4 g/t, and Au metal Mineral Resources of 5,970 koz (185.8 tonnes) • In 2024, 130 koz (4.1 tonnes) of gold was produced • Our equity interest in the mine: 100%

Mineralized Zone/Block	Highlights
Colombia Buriticá Gold Mine	• Acquired in 2020 • One of Colombia's largest producing gold mines, a globally ultra-high-grade large gold mine, and Colombia's first large modern underground mine • Underground mining • LOM: Until 2039 • Achieved profitability in the year of the acquisition • Recognized by the Colombian government as a "National Strategic Interest Project" • As of June 30, 2025, total Mineral Resources amounted to 50.1 Mt, with average Au grade of 7.2 g/t, and Au metal Mineral Resources of 11,500 koz (359.4 tonnes) • In 2024, 322 koz (10.0 tonnes) of gold was produced • Our economic interest in the mine: 68.8%
Suriname Rosebel Gold Mine	• Acquired in 2023 • A world-class gold mine and one of South America's largest producing open-pit gold mines • Open-pit mining • LOM: Until 2049 • Originally a loss-making project; turned profitable in the year of the acquisition • As of June 30, 2025, total Mineral Resources amounted to 451.2 Mt, with average Au grade of 0.8 g/t, and Au metal Mineral Resources of 11,876 koz (369.4 tonnes) • In 2024, 240 koz (7.5 tonnes) of gold was produced • Our equity interest in Rosebel GM: 95.0%

Mineralized Zone/Block	Highlights
Ghana Akyem Gold Mine . .	• Acquired in 2025 • One of Ghana's largest gold mines • Open-pit mining and underground mining • LOM: Until 2038 • Was profitable before and after the acquisition • As of June 30, 2025, total Mineral Resources amounted to approximately 159.5 Mt, with average Au grade of 1.8 g/t, and Au metal Mineral Resources of 9,436 koz (293.5 tonnes) • In 2024, 203 koz (6.3 tonnes) of gold was produced • Our equity interest in the mine: 100%
PNG Porgera Gold Mine. . .	• Acquired 47.5% interest in 2015; currently indirectly holding 24.5% equity interest • Papua New Guinea's second-largest gold mine • Open-pit mining and underground mining • LOM: Until 2043 • Resumed production in 2024 and has been profitable since 2024 • As of December 31, 2024, total Mineral Resources attributable to us on equity basis amounted to approximately 51.5 Mt, with average Au grade of 2.7 g/t, and Au metal Mineral Resources of 4,414 koz (137.3 tonnes) • In 2024 and first half of 2025, the gold production volume attributable to us on equity basis was 46 koz (1.4 tonnes) and 44 koz (1.4 tonnes), respectively • Our equity interest in the mine: 24.5%

Mineral Resources and Ore Reserves

Independent Report

We engaged SRK, an Independent Third Party and an international consulting company that offers advice and solutions to resource industries for mining projects, to prepare the Competent Person's Report as set out in Appendix III to this Prospectus, which is an independent assessment and evaluation of our Mineral Resources and Ore Reserves as of June 30, 2025.

The information set forth below relating to our Mineral Resources and Ore Reserves constitutes forward looking information, which is subject to certain risks and uncertainties. Please refer to "Risk Factors" and "Forward-Looking Statements" for details.

According to SRK, there was no material change in the Competent Person's Report, or our Mineral Resources and Ore Reserves estimate, since June 30, 2025, being the effective date of the Competent Person's Report, and up to the date of this Prospectus.

Our Mineral Resources and Ore Reserves

Mineral Resources

As of June 30, 2025, the total Mineral Resources for our mines, including our minority interests in PNG Porgera Gold Mine, were estimated to be about 1,176.2 Mt, with an average Au grade of 1.5 g/t and Au metal Mineral Resources of 56,797 koz (1,768.4 tonnes).

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our Mineral Resources (including gold Resource information) as of June 30, 2025:

Mineralized Zone/Block	Category	Tonnage[1] (Mt)	Au Grade[1] (g/t)	Au Metal Contained[1] (koz)	(t)
Tajikistan Jilau/Taror Gold Mines.	Measured	46.6	1.2	1,861	57.9
Equity interest: 70% . .	Indicated	13.9	1.7	760	23.6

Notes:

(1) Figures and economic interest are subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them. Except for PNG Porgera Gold Mine, the Mineral Resources Information of which is calculated based on 24.5% of the equity interest held by the Company, the Mineral Resources information is calculated based on 100% of the equity interest for each asset held by the Company.

(2) The information is presented based on the 24.5% equity interest we held as of December 31, 2024. A separate Competent Person's Report for the PNG Porgera Gold Mine is not included in this prospectus, as we only hold a minority interest in such asset while Barrick Mining Corporation is the operator and our Directors are of the view that given such background of ownership and operatorship, it is reasonable to cite Resources and Reserves information from public filings of Barrick Mining Corporation and SRK has conducted independent review and verified such information.

(3) The "Total consolidated" information is calculated based on 100% of the equity interest for each asset held by the Company, except for PNG Porgera Gold Mine, which is presented based on 24.5% of the equity interest held by the Company.

(4) The "Total attributable" information is calculated based on the percentage of the equity interest for each asset held by the Company.

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our non-gold Resources as of June 30, 2025:

Mineralized Zone/Block	Category	Ag Grade[(1)] (g/t)	Ag Metal Contained[(1)] (t)	Cu Grade[(1)] (%)	Cu Metal Contained[(1)] (t)
Tajikistan Jilau/Taror Gold Mines . .	Measured	13.3	137.1	0.61	62,844
	Indicated	12.1	85.9	0.49	35,076
	Inferred	13.5	46.1	0.54	18,470
	Total	**12.9**	**269.2**	**0.56**	**116,390**
Colombia Buriticá Gold Mine	Measured	22.6	222.0	—	—

	Inferred	20.6	432.2	—	—
	Total	**22.5**	**1,128.0**	**—**	**—**

Note:

(1) Figures are subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them.

Ore Reserves

As of June 30, 2025, the total Proved and Probable Ore Reserves for our mines including the minority interests in PNG Porgera Gold Mine, were estimated to be about 602.5 Mt, with total Proved and Probable Au grade Ore Reserves of 1.4 g/t, and our total Ore Reserves contained 27,156 koz (845.2 tonnes) of Au metal.

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our Ore Reserves (including gold Reserve information) as of June 30, 2025:

Mineralized Zone/Block	Category	Tonnage[(1)] (Mt)	Au Grade[(1)] (g/t)	Au Metal Contained[(1)] (koz)	(t)
Tajikistan Jilau/Taror Gold Mines.	Proved	41.6	1.2	1,644	51.1

Notes:

(1) Figures are subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them. Except for PNG Porgera Gold Mine, which is calculated based on 24.5% of the equity interest held by the Company, the Ore Reserves information is calculated based on 100% of the equity interest for each asset held by the Company.

(2) The information is presented based on the 24.5% equity interest we held as of December 31, 2024. A separate Competent Person's Report for the PNG Porgera Gold Mine is not included in this prospectus, as we only hold a minority interest in such asset and while Barrick Mining Corporation is the operator and our Directors are of the view that given such background of ownership and operatorship, it is reasonable to cite Resources and Reserves information from public filings of Barrick Mining Corporation and SRK has conducted independent review and verified such information.

(3) The "Total consolidated" information is calculated based on 100% of the equity interest for each asset held by the Company, except for PNG Porgera Gold Mine, which is presented based on 24.5% of the equity interest held by the Company.

(4) The "Total attributable" information is calculated based on the percentage of the equity interest for each asset held by the Company.

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our non-gold Reserves as of June 30, 2025:

Mineralized Zone/Block	Category	Ag Grade (g/t)	Cu Grade (%)	Ag Metal Contained (t)	Cu Metal Contained (t)
Tajikistan Jilau/Taror Gold Mines . .	Proved	3.1	0.14	127.2	58,730

Total[6]	**13,567**	**849**	**26.4**	**25,003**	**1,151**	**35.8**	**29,207**	**1,298**	**40.4**	**19,610**	**656**	**20.4**

Notes:

(1) Figures are subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them, and figures of tonnes/koz may not be an arithmetic conversion based on the rounding figures as shown in the table.

(2) The "Subtotal consolidated" information is calculated based on 100% of equity interest for each asset held by the Company.

(3) The "Subtotal attributable" information is calculated based on the percentage of equity interest for each asset held by the Company.

(4) The acquisition of the Ghana Akyem Gold Mine was completed in April 2025.

(5) PNG Porgera Gold Mine's operations were suspended in April 2020 due to the non-extension of the previous Special Mining Lease, and it resumed mining in January 2024. Figures shown in the table for the PNG Porgera Gold Mine is calculated based on 24.5% of the equity interest held by the Company.

(6) The "Total" information is calculated by adding the "Subtotal consolidated" information and PNG Porgera Gold Mine (based on 24.5% of the equity interest held by the Company).

Our Production Capacity

The following table sets forth the production capacity and utilization rates in relation to our gold mining businesses for the periods indicated:

2022	Designed Capacity (kt/annum)	Ore processed (kt)	Utilization rate[1]
Tajikistan Jilau/Taror Gold Mines			
Jilau Gold Mine	3,300	3,947	120%
Taror Gold Mine	1,150	1,221	106%
Kyrgyzstan Taldybulak Levoberezhny Gold Mine	924	1,015	110%
Australia Norton Gold Mine	3,630	3,658	101%
Guyana Aurora Gold Mine	2,500	2,489	100%
Colombia Buriticá Gold Mine	1,320	1,332	101%
Suriname Rosebel Gold Mine	—	—	—

2023	Designed Capacity (kt/annum)	Ore processed (kt)	Utilization rate[1]
Tajikistan Jilau/Taror Gold Mines			
Jilau Gold Mine	3,630	4,035	111%
Taror Gold Mine	1,320	1,520	115%
Kyrgyzstan Taldybulak Levoberezhny Gold Mine	924	1,087	118%
Australia Norton Gold Mine[2]	8,630	6,642	77%
Guyana Aurora Gold Mine	2,500	2,660	106%
Colombia Buriticá Gold Mine	1,320	1,454	110%
Suriname Rosebel Gold Mine	8,500	8,839[4]	104%

2024	Designed Capacity (kt/annum)	Ore processed (kt)	Utilization rate[1]
Tajikistan Jilau/Taror Gold Mines			
Jilau Gold Mine	3,630	4,148	114%
Taror Gold Mine	1,320	1,823	138%
Kyrgyzstan Taldybulak Levoberezhny Gold Mine	924	972	105%
Australia Norton Gold Mine[2]	8,630	8,065	93%
Guyana Aurora Gold Mine	2,500	2,712	108%
Colombia Buriticá Gold Mine	1,320	1,461	111%
Suriname Rosebel Gold Mine[3]	8,500	10,029[4]	118%

For the six months ended June 30, 2025	Designed Capacity (kt/annum)	Ore processed for the six months (kt)	Utilization rate[1]
Tajikistan Jilau/Taror Gold Mines			
Jilau Gold Mine	3,630	2,051	113%
Taror Gold Mine	1,320	872	132%
Kyrgyzstan Taldybulak Levoberezhny Gold Mine	924	446	97%
Australia Norton Gold Mine[2]	8,630	5,210	121%
Guyana Aurora Gold Mine	3,300	1,557	94%
Colombia Buriticá Gold Mine	1,320	706	107%
Suriname Rosebel Gold Mine[4]	10,000	5,145	103%
Ghana Akyem Gold Mine	8,500	3,861	91%

Notes:

(1) Utilization rate is calculated by dividing the amount of ore processed by the designed capacity for such year/period. For some of the periods, the utilization rate were over 100%. This was mainly because the relevant processing plants actually operated for more days than the planned schedule as the annual maintenance work took less than the anticipated time.

(2) The designed capacity and ore processed significantly increased for Australia Norton Gold Mine in 2023. This is because the north heap leach of Binduli Project came into operation in September 2022, and it achieved its designed processing capacity in 2024.

(3) Following upgrade to the crushing system in September 2024, the processing capacity has been increased to 10,000 kt/annum.

(4) The volume of ore processed is under the assumption that we held 100% equity interests for the entire year.

Our Gold Operating Costs

For the year ended December 31, 2024, our gold AISC was US$1,458 per ounce. According to Frost & Sullivan, our AISC was ranked sixth lowest among the top fifteen gold mining companies globally by gold production in 2024.

Set forth below is our gold AISC for the periods indicated as stated in the Competent Person's Report:

	Year Ended December 31,			Six Months Ended June 30,
	2022	2023	2024	2025
	(US$/oz)			
Tajikistan Jilau/Taror Gold Mines	759	1,475	1,581	1,166
Kyrgyzstan Taldybulak Levoberezhny Gold Mine	1,007	1,119	1,318	1,532
Australia Norton Gold Mine	1,604	2,112	2,047	2,332
Guyana Aurora Gold Mine	1,764	1,712	1,572	1,617
Colombia Buriticá Gold Mine	856	962	802	1,013
Suriname Rosebel Gold Mine	—	1,463	1,547	1,756
Ghana Akyem Gold Mine[(1)]	—	—	—	1,779
Our Group	**1,046**	**1,449**	**1,458**	**1,568**

Note:
(1) May 2025 to June 2025 after acquisition.

Set forth below is our gold AISC breakdown for each mine for the periods indicated as stated in the Competent Person's Report:

Tajikistan Jilau/Taror Gold Mines

	Year Ended December 31,			Six Months Ended June 30,
	2022	2023	2024	2025
	US$/oz			
Mining Cash Cost	206	299	213	268
Processing Cash Cost	259	448	753	440
Sales Expenses	15	4	2	1
General and Administrative Cash Costs	38	77	94	70
Non-income tax (royalties, sales tax, resources tax etc.	68	156	234	336
Sustaining Costs	173	491	285	50
Others	—	—	—	—
Total AISC	**759**	**1,475**	**1,581**	**1,166**

Our AISC of Tajikistan Jilau/Taror Gold Mines substantially increased from US$759 per ounce in 2022 to US$1,475 per ounce in 2023, primarily due to the decrease of sales volume in 2023, which led to the increase of production related costs per ounce.

Our AISC of Tajikistan Jilau/Taror Gold Mines substantially decreased from US$1,581 per ounce in 2024 to US$1,166 per ounce in the six months ended June 30, 2025, primarily due to the decrease of unit costs of raw material and the increase of mill feed grade.

Kyrgyzstan Taldybulak Levoberezhny Gold Mine

	Year Ended December 31,			Six Months Ended June 30,
	2022	2023	2024	2025
	US$/oz			
Mining Cash Cost	390	398	403	381
Processing Cash Cost	189	224	197	195
Sales Expenses	8	11	13	10
General and Administrative Cash Costs	74	71	84	86
Non-income tax (royalties, sales tax, resources tax etc.	333	409	617	840
Sustaining Costs	8	—	—	19
Others	5	5	5	—
Total AISC	**1,007**	**1,119**	**1,318**	**1,532**

Our AISC of Kyrgyzstan Taldybulak Levoberezhny Gold Mine increased from US$1,007 per ounce in 2022 to US$1,119 per ounce in 2023, and further increased to US$1,318 per ounce in 2024 and US$1,532 per once in the six months ended June 30, 2025, primarily due to the increase of non-income tax during the Track Record Period.

Australia Norton Gold Mine

	Year Ended December 31,			Six Months Ended June 30,
	2022	2023	2024	2025
	US$/oz			
Mining Cash Cost	712	891	943	1,199
Processing Cash Cost	262	471	541	515
Sales Expenses	1	1	1	1
General and Administrative Cash Costs	53	42	43	45
Non-income tax (royalties, sales tax, resources tax etc.	47	56	74	105
Sustaining Costs	420	578	386	412
Others	109	75	58	55
Total AISC	**1,604**	**2,112**	**2,047**	**2,332**

Our AISC of Australia Norton Gold Mine substantially increased from US$1,604 per ounce in 2022 to US$2,112 per ounce in 2023, primarily due to the decrease of sales volume in 2023, which led to the increased unit production costs in 2023 attributing to the decreased milled grade.

Our AISC of Australia Norton Gold Mine substantially increased from US$2,047 per ounce in 2024 to US$2,332 per ounce in the six months ended June 30, 2025, primarily due to the decrease of mill feed grade.

Guyana Aurora Gold Mine

	Year Ended December 31,			Six Months Ended June 30,
	2022	2023	2024	2025
	US$/oz			
Mining Cash Cost	530	654	529	594
Processing Cash Cost	350	348	251	299
Sales Expenses	6	5	5	5
General and Administrative Cash Costs	315	282	203	200
Non-income tax (royalties, sales tax, resources tax etc.	139	155	192	250
Sustaining Costs	402	258	384	264
Others	22	11	7	6
Total AISC	**1,764**	**1,712**	**1,572**	**1,617**

Our AISC of Guyana Aurora Gold Mine decreased from US$1,712 per ounce in 2023 to US$1,572 per ounce in 2024, primarily due to the increase of sales volume in 2024, which led to the decreased unit production costs in 2024.

Colombia Buriticá Gold Mine

	Year Ended December 31,			Six Months Ended June 30,
	2022	2023	2024	2025
	US$/oz			
Mining Cash Cost	319	371	312	463
Processing Cash Cost	171	148	94	126
Sales Expenses	33	39	8	7
General and Administrative Cash Costs	200	189	169	187
Non-income tax (royalties, sales tax, resources tax etc.	65	72	82	108
Sustaining Costs	47	119	116	98
Others	22	25	20	24
Total AISC	**856**	**962**	**802**	**1,013**

Our AISC of Colombia Buriticá Gold Mine decreased from US$962 per ounce in 2023 to US$802 per ounce in 2024, primarily due to the increase of sales volume in 2024, which led to the decreased unit production costs in 2024.

Our AISC of Colombia Buriticá Gold Mine substantially increased from US$802 per ounce in 2024 to US$1,013 per ounce in the six months ended June 30, 2025, primarily due to the decrease of mill feed grade.

Suriname Rosebel Gold Mine

	Year Ended December 31,			Six Months Ended June 30,
	2022	2023[1]	2024	2025
	US$/oz (approximately)			
Mining Cash Cost	—	521	473	555
Processing Cash Cost	—	349	341	437

Sustaining Costs	—	—	—	189
Others	—	—	—	294
Total AISC	**—**	**—**	**—**	**1,779**

Note:
(1) May 2025 to June 2025 after acquisition.

Our Revenue Breakdown

During the Track Record Period, we generated revenue from six different gold mines we operate. The Ghana Akyem Gold Mine and the PNG Porgera Gold Mine are not consolidated to our consolidated financial statements during the Track Record Period.

The following table sets forth a breakdown of our revenue by origin of our products for the periods indicated:

	Year ended December 31,						Six months ended June 30,			
	2022		2023		2024		2024		2025	
	US$	%	US$	%	US$	%	US$	%	US$	%
	(in thousands, except for percentages)									
Tajikistan Jilau/ Taror Gold Mines	691,122	38.0	440,604	19.5	515,849	17.3	228,024	16.3	328,936	16.5
Kyrgyzstan Taldybulak Levoberezhny Gold Mine	223,933	12.3	258,015	11.4	286,161	9.6	138,018	9.8	172,991	8.7

Total	**1,817,981**	**100.0**	**2,262,365**	**100.0**	**2,989,935**	**100.0**	**1,402,983**	**100.0**	**1,996,869**	**100.0**

OUR GOLD PRODUCTION BUSINESS OF TAJIKISTAN JILAU/TAROR GOLD MINES

Overview

The Tajikistan Jilau/Taror Gold Mines include Jilau and Taror Gold Mines, which are located at Sughd Province, Tajikistan. We hold the Tajikistan Jilau/Taror Gold Mines through Zeravshan, in which we hold 70% of the equity interest. The mines feature porphyry-skarn types. The extraction and processing methods employed at the mine include open mining and flotation. POX process are utilized in the Tajikistan Jilau/Taror Gold Mines to process refractory gold mines containing arsenic and copper.

Operation Performance

In 2022, 2023, 2024 and six months ended June 30, 2025, our gold production business in the Tajikistan Jilau/Taror Gold Mines processed 5,167 kt, 5,555 kt, 5,971 kt and 2,923 kt of ores, and produced 203 koz (6.3 tonnes), 202 koz (6.3 tonnes), 174 koz (5.4 tonnes) and 97 koz (3.0 tonnes) of gold, respectively.

The gold production volume of the Tajikistan Jilau/Taror Gold Mines slightly decreased from 203 koz (6.3 tonnes) in 2022 to 202 koz (6.3 tonnes) in 2023. The gold production volume decreased to 174 koz (5.4 tonnes) in 2024, primarily due to the decrease in the mill feed grade in 2024, resulting in a reduction of gold contained per ton of ore processed.

In 2022, 2023, 2024 and six months ended June 30, 2025, the gold recovery of the Tajikistan Jilau/Taror Gold Mines was approximately 83.4%, 79.3%, 78.6% and 75.7%, respectively. The decrease in recovery is mainly due to the reduction of the mill feed grade.

Development and Expansion

We will continue to develop comprehensive utilization technologies for low-grade refractory ores, addressing challenges such as the coexistence of Taror oxide and sulfide ores at Jilau. We aim to continuously optimize metallurgical technology indicators to achieve efficient extraction and utilization of complex ores and gold concentrates, fully reducing costs and enhancing efficiency.

Mineral Resources and Ore Reserves

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our Mineral Resources in Tajikistan Jilau/Taror Gold Mines as of June 30, 2025:

Mineralized Zone/Block	Category	Tonnage[(1)] (Mt)	Au Grade[(1)] (g/t)	Au Metal Contained[(1)] (koz)	(t)
Tajikistan Jilau/Taror Gold Mines.	Measured	46.6	1.2	1,861	57.9
	Indicated	13.9	1.7	760	23.6
	Inferred	7.7	1.2	303	9.4
Equity interest: 70%	**Total**	**68.1**	**1.3**	**2,924**	**90.9**

Note:

(1) Figures are subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them. The information is calculated based on 100% of equity interest for each asset held by the Company.

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our Ore Reserves in the Tajikistan Jilau/Taror Gold Mines as of June 30, 2025:

Tajikistan Jilau/Taror Gold Mines.	Probable	6.0	0.25	82.2	34,213
	Total	**3.8**	**0.17**	**209.4**	**92,943**

Note:
(1) Numbers have been subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them.

Mining Licenses and Exploration Permits

As of the Latest Practicable Date, we held four valid material gold mining licenses in relation to Tajikistan Jilau/Taror Gold Mines, details of which are set out below:

Type	Serial Number	Geographical Area (ha)	Effective Period	Status
Jilav Mining License . . .	0000117	N/A	November 29, 2023 to November 29, 2028	Valid
Taror Mining License . . .	0000118	N/A	November 29, 2023 to November 29, 2028	Valid
Hirshonai Shimoli Mining License . . .	0000105	N/A	October 31, 2022 to October 31, 2027	Valid
Olimpi Mining License . . .	0000104	N/A	October 31, 2022 to October 31, 2027	Valid

We aim to renew the above mining licenses before their respective expiry dates.

Historical Milestone and Planned Production Schedule

Historical Milestone

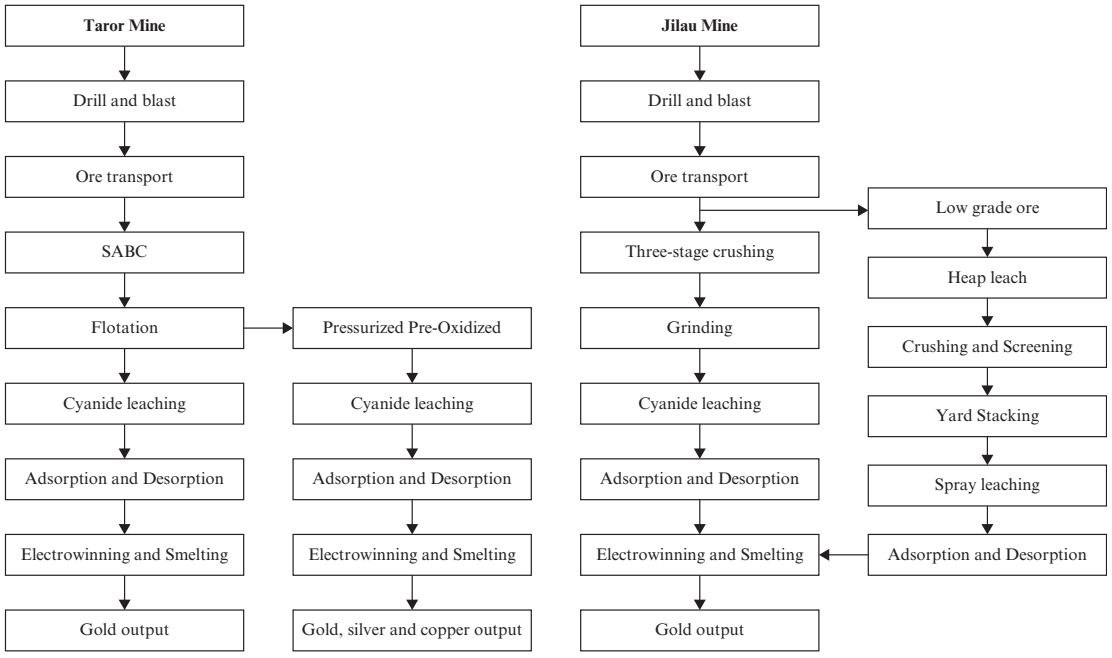
The following timeline illustrates key historical milestones in the development of the Tajikistan Jilau/Taror Gold Mines:

Year	Milestone
1937	• Taror Mine was discovered and exploited as a mine
1949	• Jilau Mine was discovered and prospected
2001	• Commenced commercial production in Taror Mine

Year	Milestone
2007	• Completed the acquisition
2012	• Commenced commercial production in Jilau Mine

Planned Production Schedule

As set forth in the Competent Person's Report, the following chart sets forth the planned production schedule for the operations at the Tajikistan Jilau/Taror Gold Mines for the periods indicated over the Life of Mine:



Type	Unit	LOM	2H2025	2026	2027	2028	2029	2030
Gold Produced	koz	1,816	83	200	201	211	227	189

Type	Unit	2031	2032	2033	2034	2035	2036	2037
Gold Produced	koz	171	135	96	92	82	97	32

Operating Process of Gold Production Business in Tajikistan

(a) Overview

The main mining process of Jilau Mine and Taror Mine are open-pit mining and flotation. The following diagram sets forth the general workflow of the production process:

(b) Mining

The Jilau Mine and Taror Mine utilize open-pit mining methods. The production process typically begins with drilling with down-the-hole drill rigs, followed by medium-to-deep hole blasting. After blasting, ore and rock are differentiated through geological secondary ore delineation. Ore is then loaded by hydraulic excavators and transported by dump trucks. Subsequently, the ore will be processed at the processing plant, while waste rock will be in accordance with environmental regulations.

(c) Processing

- In Jilau Mine, low grade ore are heap leached to gold cyanide complex. High grade ore are processed to gold-loaded carbon through crushing and grinding, as well as the CIL process. The gold-loaded carbon is transported to gold refineries to produce gold ingots.

- In Taror Mine, after the ore is crushed and grounded, it is processed in a full sulfur flotation process. The flotation concentrate is then transported to smelting plant for POX process and recovered in a CIL process, resulting in gold cyanide complex. The flotation tailings also undergo a CIL process to produce gold cyanide complex. Those gold cyanide complex are then transported to gold refineries to produce gold ingots.

Exploration Activities in Tajikistan Jilau/Taror Gold Mines

Since our acquisition in 2007, Zeravshan has consistently advanced production exploration and deep peripheral mineral prospecting. Looking ahead, the focus will be on two key areas:

- Exploration of the Southern Jilau Ore body: Over the next five years, the plan is to conduct 13,000 meters of drilling, with an expected addition of 10 tonnes of gold Resources.

- Expansion of the deep peripheral areas of the Taror Mine: Over the next five years, the plan is to conduct 23,000 meters of drilling, with an expected addition of 10 tonnes of gold Resources.

Copper and Silver Production Business in Tajikistan Jilau/Taror Gold Mines

Copper is a by product of our gold production in the Tajikistan Jilau/Taror Gold Mines. Considering this, we constructed and commenced operations at a copper smelting plant in July 2023. The first batch of cathode copper was produced in September 2023, with recognized revenue starting in 2024. Currently, the copper smelting plant has a daily processing capacity of 500 tonnes of concentrate. It was the first enterprise who has the capacity to produce high-purity copper in Tajikistan. In 2024, the production and sales volume of cathode copper were 4,905 tonnes.

The Tajikistan Jilau/Taror Gold Mines also produce and engage in the sale of silver ingots. In 2024, the production volume of silver ingots amounted to 4.8 tonnes.

OUR GOLD PRODUCTION BUSINESS OF KYRGYZSTAN TALDYBULAK LEVOBEREZHNY GOLD MINE

Overview

The Kyrgyzstan Taldybulak Levoberezhny Gold Mine is the third-largest gold mine in Kyrgyzstan. It is located in the Northern Tianshan Mountain gold-copper mineralization zone, known as the Golden Belt of Central Asia. The project is an integrated mining complex that includes mining, processing, smelting and sales, with a processing capacity of 2,800 tonnes per day. We hold the Kyrgyzstan Taldybulak Levoberezhny Gold Mine through Altynken LLC, in which we hold 60% of the equity interest. The Kyrgyzstan Taldybulak Levoberezhny Gold Mine features magmatic-hydrothermal Cu-Au deposit. The extraction and processing methods employed at the mine include underground mining and flotation.

Operation Performance

In 2022, 2023, 2024 and six months ended June 30, 2025, our gold production business in the Kyrgyzstan Taldybulak Levoberezhny Gold Mine processed 1,015 kt, 1,087 kt, 972 kt and 446 kt of ore, and produced 131 koz (4.1 tonnes), 129 koz (4.0 tonnes), 120 koz (3.7 tonnes) and 56 koz (1.7 tonnes) of gold, respectively.

The gold production volume of the Kyrgyzstan Taldybulak Levoberezhny Gold Mine slightly decreased from 131 koz (4.1 tonnes) in 2022 to 129 koz (4.0 tonnes) in 2023. The gold production volume of the Kyrgyzstan Taldybulak Levoberezhny Gold Mine decreased from 129 koz (4.0 tonnes) in 2023 to 120 koz (3.7 tonnes) in 2024, primarily due to the decreased ore processing arising from safety project construction.

In 2022, 2023, 2024 and six months ended June 30, 2025, the gold recovery of the Kyrgyzstan Taldybulak Levoberezhny Gold Mine was approximately 89.5%, 90.4%, 90.4% and 90.6%, respectively.

We aim to make continuous efforts to maintain the average gold processing recovery of the Kyrgyzstan Taldybulak Levoberezhny Gold Mine.

In accordance with the latest local tax regulations dated January 18, 2022 in the Kyrgyz Republic, the corporate income tax rate for enterprises engaged in gold doré and gold ingots is 0%.

Development and Expansion

As of the Latest Practicable Date, the Kyrgyzstan Taldybulak Levoberezhny Gold Mine did not have any concrete plan for expansion.

Mineral Resources and Ore Reserves

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our Mineral Resources in the Kyrgyzstan Taldybulak Levoberezhny Gold Mine as of June 30, 2025:

Mineralized Zone/Block	Category	Tonnage[(1)] (Mt)	Au Grade[(1)] (g/t)	Au Metal Contained[(1)] (koz)	(t)
Kyrgyzstan Taldybulak Levoberezhny Gold Mine	Measured	1.7	3.9	215	6.7
	Indicated	8.7	3.7	1,026	31.9
	Inferred	3.0	3.4	328	10.2
Equity interest: 60%	**Total**	**13.4**	**3.6**	**1,569**	**48.8**

Note:

(1) Figures are subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them. The information is calculated based on 100% of equity interest for each asset held by the Company.

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our Ore Reserves in the Kyrgyzstan Taldybulak Levoberezhny Gold Mine as of June 30, 2025:

Mineralized Zone/Block	Category	Tonnage[(1)] (Mt)	Au Grade[(1)] (g/t)	Au Metal Contained[(1)] (koz)	(t)
Kyrgyzstan Taldybulak Levoberezhny Gold Mine	Proved	1.3	3.8	153	4.8
	Probable	6.0	3.6	692	21.5
Equity interest: 60%	**Total**	**7.3**	**3.6**	**845**	**26.3**

Note:

(1) Figures are subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them. The information is calculated based on 100% of equity interest for each asset held by the Company.

Mining Licenses and Exploration Permits

As of the Latest Practicable Date, we held one valid material mining license in relation to Kyrgyzstan Taldybulak Levoberezhny Gold Mine, details of which are set out below:

Type	Serial Number	Geographical Area (ha)	Effective Period	Status
Mining License	471AE	98.0	April 7, 2006 to January 5, 2026	Valid

We aim to renew the above mining license before its expiry date. We have initiated the application process for extending such license in March 2025. The State Commission on Mineral Reserves of the Kyrgyz Republic has extended the deadline for submission of the Technical and Economic Justification to March 1, 2026, which allows us additional time to update the required recalculation of mineral reserves and submit the Technical and Economic Justification for regulatory review. Our legal advisor as to Kyrgyzstan law does not expect any legal impediments to such renewal applications on the basis that (i) the extension application has been submitted on a timely manner, (ii) there are remaining reserves, (iii) pursuant to the Kyrgyz Subsoil Law, a mining license holder has the right to extend the term of the mining license until full depletion of the reserves and (iv) there is currently no material non-compliance on material regulatory proceeding relating to the mining license. Furthermore, once an extension application is submitted, the mining license will remain valid until the mining regulator issues a formal decision on its extension or expiration.

Historical Milestones and Planned Production Schedule

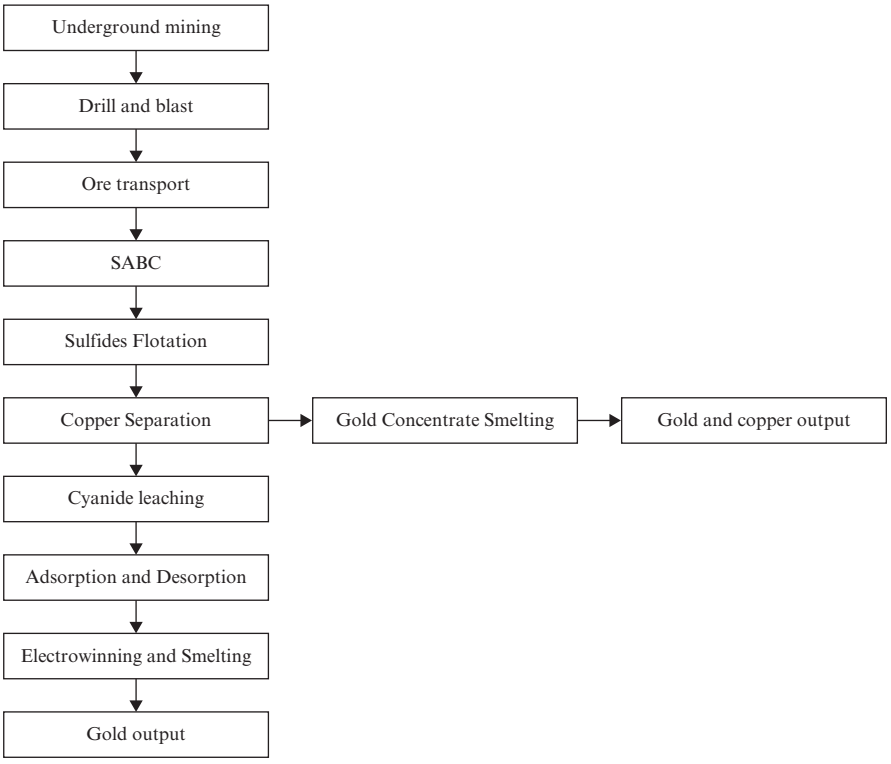
Historical Milestones

The following timeline illustrates key historical milestones in the development of the Kyrgyzstan Taldybulak Levoberezhny Gold Mine:

Year	Milestone
1963	• The exploration activities were first conducted
2011	• Acquired 60% of the equity interest of Altynken LLC
2013	• Commenced construction of Kyrgyzstan Taldybulak Levoberezhny Gold Mine
2015	• Commenced trial operation of Kyrgyzstan Taldybulak Levoberezhny Gold Mine
2016	• Commenced commercial production
2022	• Ore mined capacity increased to 1 million tonne per year

Planned Production Schedule

As set forth in the Competent Person's Report, the following chart sets forth the planned production schedule for the operations at the Kyrgyzstan Taldybulak Levoberezhny Gold Mine for the periods indicated over the Life of Mine:



Type	Unit	LOM	2H2025	2026	2027	2028
Gold produced	koz	734	51	96	86	85

Type	Unit	2029	2030	2031	2032	2033
Gold produced	koz	90	95	96	84	50

Operating Process of Gold Production Business in Kyrgyzstan

(a) Overview

The extraction and processing methods employed at the mine include underground mining and flotation. The following diagram sets forth the general workflow of the production process:

(b) Mining

The mining process of the Kyrgyzstan Taldybulak Levoberezhny Gold Mine is mainly upward drift horizontal slicing fill mining method, using a combination of main declines, flat tunnels, chutes, and vertical shaft lifting for truck transportation.

(c) Processing

- *Mineral Processing*. The gold mineral processing consists of multiple stages, starting with crushing the raw materials, followed by grinding to achieve the desired fineness. This is succeeded by mixed flotation and regrinding processes to further refine the material. Subsequently, copper sulfide-pyrite separation is conducted to extract valuable minerals, and the process concludes with the cyanide leaching of the sulphide concentrate to recover gold.

- *Smelting*. In the smelting phase, the procedure begins with the desorption electrowinning of gold-loaded carbon, which is essential for extracting gold. This step is followed by the removal of impurities to ensure the purity of the metal. The refined product is then subjected to further refining processes, culminating in the smelting of the material into alloyed gold, which enhances its properties for various applications.

Exploration Activities in Kyrgyzstan Taldybulak Levoberezhny Gold Mine

Altynken LLC has significantly increased its exploration investment in recent years. Through detailed exploration activities, including diamond drilling and comprehensive analysis, Altynken LLC has delineated several key target zones, verified through engineering efforts, resulting in the addition of new gold Resources. Concurrently, systematic research around the mine has further identified the extended strike of the ore body, enhancing the classification of resource categories.

Looking ahead, Altynken LLC plans to intensify its exploration efforts. Firstly, from 2026 to 2027, we intend to invest in deep and peripheral exploration within the core area of Taldybulak Levoberezhny, with the expectation of increasing gold Resources by more than 10 tonnes. Secondly, over the next two to three years, Altynken LLC will prioritize preliminary geological research and exploration in three potential target areas, aiming to add new high-potential resources to support sustainable development.

OUR GOLD PRODUCTION BUSINESS OF AUSTRALIA NORTON GOLD MINE

Overview

We operate our Australia Norton Gold Mine through our wholly-owned subsidiary, Norton Gold Fields, which is one of Australia's largest domestic gold producers. Norton Gold Fields has a mining and processing complex in Western Australia's Kalgoorlie gold region, including tenement packages of more than 870 km surrounding the Paddington Mill and the Binduli North Project. The mines of Australia Norton Gold Mine feature greenstone shear zone type. The extraction and processing methods employed at the mine include open-pit mining, underground mining, CIL/CIP, and heap leaching.

Operation Performance

In 2022, 2023, 2024 and six months ended June 30, 2025, our gold production business in the Australia Norton Gold Mine processed 3,658 kt, 6,642 kt, 8,065 kt and 5,210 kt of ore, and produced 177 koz (5.5 tonnes), 216 koz (6.7 tonnes), 266 koz (8.3 tonnes) and 125 koz (3.9 tonnes) of gold, respectively.

The gold production volume of the Australia Norton Gold Mine increased from 177 koz (5.5 tonnes) to 216 koz (6.7 tonnes) in 2023. This was primarily due to the commencement of commercial production at the Binduli Project in April 2023, which has continued to ramp up since then. The gold production volume of the Australia Norton Gold Mine increased from 216 koz (6.7 tonnes) to 266 koz (8.3 tonnes) in 2024, primarily driven by the increased processing capacity at the Binduli Project.

In 2022, 2023 and 2024 and the six months ended June 30, 2025, the gold recovery of the Australia Norton Gold Mine was approximately 85.8%, 85.8%, 86.8% and 86.4%, respectively. We have made constant efforts to improve the average gold recovery of the Australia Norton Gold Mine. In addition to on-site process optimization to improve gold recovery, the Paddington Mill is investing in pipeline infrastructure to improve quality of water source and reduce the impact of water quality fluctuations on gold recovery. The Binduli Project is improving its gold recovery by reducing particle size of leaching ore, improving water quality, and implementing a fines removal project.

Development and Expansion

Our current efforts are strategically centered on enhancing processing capacity and gold output, with a focus on driving system-wide synergies across our two operational hubs. To this end, we are transitioning to owner-operated mining and strengthening global procurement to reduce costs and improve efficiency. Aligned with this core objective, several key development projects are being fast-tracked. For example, Phase II of the Binduli North Heap Leach Plant will utilize fine aperture tension screens to process HPGR products more efficiently, enabling improved grade-based ore separation and enhanced heap leach performance. At the same time, we are upgrading refractory ore processing capabilities at the Paddington Mill and introducing ore-sorting technology to boost pre-concentration and recover value from waste rock. In parallel, a new phase of underground mine development is underway. These initiatives are not stand-alone — they are designed to work in coordination, improving feed grade, optimizing plant flexibility, and maximizing the return on our combined infrastructure. Once fully operational, these projects will increase annual processing capacity from 9 million tonnes to 12 million tonnes with production volume to be increased, significantly enhancing profitability, competitiveness, and our contribution to the regional economy and local communities.

Norton Gold Fields holds extensive tenement resources located within a world-class gold mineralization belt, offering significant geological exploration potential. The abundant resource base provides a solid foundation for sustainable growth and demonstrates strong long-term development prospects.

Mineral Resources and Ore Reserves

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our Mineral Resources in the Australia Norton Gold Mine as of June 30, 2025:

Mineralized Zone/Block	Category	Tonnage[(1)] (Mt)	Au Grade[(1)] (g/t)	Au Metal Contained[(1)] (koz)	(t)
Australia Norton Gold Mine	Measured	15.3	1.2	607	18.9
	Indicated	189.5	0.9	5,196	161.7
	Inferred	99.7	1.0	3,304	102.9
Equity interest: 100%	**Total**	**304.5**	**0.9**	**9,108**	**283.4**

Note:

(1) Figures are subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them. The information is calculated based on 100% of equity interest for each asset held by the Company.

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our Ore Reserves in the Australia Norton Gold Mine as of June 30, 2025:

Mineralized Zone/Block	Category	Tonnage[(1)] (Mt)	Au Grade[(1)] (g/t)	Au Metal Contained[(1)] (koz)	(t)
Australia Norton Gold Mine	Proved	4.8	1.2	191	5.9
	Probable	122.1	0.8	3,052	94.9
Equity interest: 100%	**Total**	**126.9**	**0.8**	**3,244**	**100.9**

Note:

(1) Figures are subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them. The information is calculated based on 100% of equity interest for each asset held by the Company.

Mining Leases

As of the Latest Practicable Date, we held 33 valid material mining leases in relation to Australia Norton Gold Mine, details of which is set out below:

Type	Tenement Number	Lease Area (ha)	Current Term	Status
Mining Lease	M24/20	533.85	October 20, 1983 to October 19, 2025	Live
Mining Lease	M24/181	41.41	December 29, 1987 to December 28, 2029	Live
Mining Lease	M24/180	45.76	December 29, 1987 to December 28, 2029	Live

Type	Tenement Number	Lease Area (ha)	Current Term	Status
Mining Lease . . .	M24/234	370.55	June 13, 1988 to June 12, 2030	Live
Mining Lease . . .	M24/302	985.90	December 8, 1989 to December 7, 2031	Live
Mining Lease . . .	M24/82	82.74	February 12 to 1986 to February 11, 2028	Live
Mining Lease . . .	M24/266	122.75	September 29, 1988 to September 28, 2030	Live
Mining Lease . . .	M16/45	614.85	November 3, 1987 to November 2, 2029	Live
Mining Lease . . .	M24/170	819.75	November 3, 1987 to November 2, 2029	Live
Mining Lease . . .	M24/616	984.10	February 19, 1998 to February 18, 2040	Live
Mining Lease . . .	M24/564	541.60	November 4, 1997 to November 3, 2039	Live
Mining Lease . . .	M26/474	893.55	November 4, 1997 to November 3, 2039	Live
Mining Lease . . .	M26/243	228.80	June 12, 1990 to June 11, 2032	Live
Mining Lease . . .	M26/447	876.40	January 25, 1995 to January 24, 2037	Live
Mining Lease . . .	M26/446	510.35	November 30, 1994 to November 29, 2036	Live
Mining Lease . . .	M26/387	111.20	December 11, 1992 to December 10, 2034	Live
Mining Lease . . .	M26/430	130.55	October 25, 1993 to October 24, 2035	Live
Mining Lease . . .	M26/420	121.20	September 17, 1993 to September 16, 2035	Live
Mining Lease . . .	M26/445	207.20	January 20, 1995 to January 19, 2037	Live
Mining Lease . . .	M26/468	881.60	November 4, 1997 to November 3, 2039	Live

Mining Lease . . .	M24/862	113.10	September 3, 2007 to September 2, 2028	Live
Mining Lease . . .	M24/187	221.70	January 19, 1988 to January 18, 2030	Live

We aim to make the necessary applications for renewal of the above mining leases before their respective expiry dates. The Mining Lease M24/20 has a current expiry date in October 2025. As such, we have already started the process of seeking the necessary regulatory approvals for this renewal. As of the Latest Practicable Date, we are in ongoing discussion with certain Australian authorities to seek to complete the renewal process prior to the relevant expiry date. Under Australian law, the extension of term or renewal of the above mining leases is subject to the exercise of administrative discretion by the applicable Minister responsible for the Western Australian Department of Mines, Petroleum and Exploration. Such discretion would typically consider whether (i) the leaseholder must have substantially complied with all obligations under the existing lease; (ii) there are no material breaches, regulatory actions, or adverse findings against the leaseholder; and (iii) the renewal application must be complete, accurate, and submitted within the prescribed time frame, with all supporting documentation required for renewal. In addition, as Norton Gold Fields is a "foreign government investor" under the FATA, any such proposed renewal or extension require prior notification to the Australian Commonwealth Treasurer, and a determination that such extension or renewal is not contrary to Australia's national interest or national security interest (which involves consideration of factors such as the character of the investor, the impact on competition, and the effect on the Australian economy and community).

Subject to our future compliance with relevant laws and regulations and the exercise of administrative discretions by the relevant Australian government authorities in respect of those extensions or renewals, our Australia legal advisor does not anticipate any legal impediment to the grant of those renewals on the basis that: (i) there are no current known material non-compliances or current material regulatory proceedings relating to those leases; and (ii) Norton Gold Fields and its subsidiaries have not received correspondence indicating that a relevant Australian authority intends to exercise their discretion to refuse or prohibit such extensions or renewals relating to those leases.

Historical Milestones and Planned Production Schedule

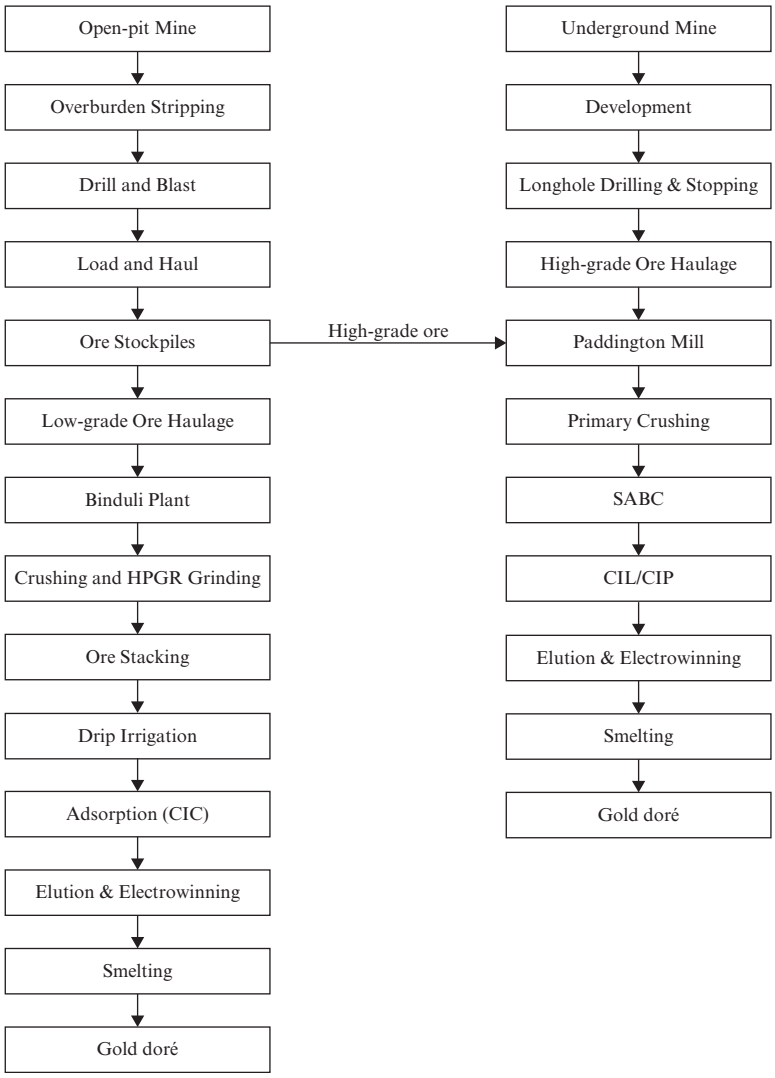
Historical Milestones

The following timeline illustrates key historical milestones in the development of the Australia Norton Gold Mine:

Year	Milestone
1897	• Gold was first discovered in this area
1985	• Commenced commercial production
2007	• Norton Gold Fields acquired Paddington Mill
2012	• Completed the acquisition of Australia Norton Gold Mine
2020	• Commenced low-grade refractory ore and the construction of north heap leach of Binduli Project
2022	• Completed the construction of north heap leach of Binduli Project
2024	• North heap leach of Binduli Project achieved its designed mining capacity

Planned Production Schedule

As set forth in the Competent Person's Report, the following chart sets forth the planned production schedule for the operations at the Australia Norton Gold Mine for the periods indicated over the Life of Mine:



Type	Unit	LOM	2H2025	2026	2027	2028	2029	2030
Gold Produced	koz	2,737	107	245	224	218	182	199

Type	Unit	2031	2032	2033	2034	2035	2036	2037	2038	2039
Gold Produced	koz	195	204	239	235	206	145	167	115	56

Operating Process of Gold Production Business in Australia

(a) Overview

The extraction and processing methods employed at the mine include open mining, underground mining, CIL/CIP process, and heap leaching and flotation depending on the depth and grade of the ore body. The following diagram sets forth the general workflow of the production process:

(b) Mining

The open-pit operation adopts conventional bench mining techniques commonly used in Australia. The process begins with the removal of overburden and waste rock to expose the ore body, followed by drilling and blasting to fragment the rock. Grade control drilling is conducted at close spacing ahead of mining to accurately define ore boundaries and minimize dilution. Based on the grade control model, material is classified as either ore or waste. Ore is loaded by hydraulic excavators or wheel loaders into haul trucks and transported to designated ore stockpiles. Waste rock is hauled to waste rock dumps (WRDs).

Underground mining operations utilize decline access and sublevel open stoping methods. A spiral decline is developed from surface to access the ore zones, with lateral development drives established to expose ore blocks — supported by detailed grade control sampling and geological mapping. Ore is extracted using long-hole stoping techniques. Once blasted, ore is collected by LHD (Load-Haul-Dump) units and transferred to underground haul trucks for transport to surface via the decline. Waste rock generated from development headings is similarly hauled to surface and either stored in approved waste facilities or used for underground backfilling where appropriate. Backfilling is also applied in mined-out stopes to maintain ground stability and support the sequencing of adjacent stopes, using either Cemented Rock Fill (CRF) or paste fill, depending on the mine design.

(c) Processing

Paddington Mill

Paddington Mill primarily treats high-grade ore sourced from both open-pit deposits and underground operations. After primary crushing by a gyratory crusher, (ROM) ore is fed into a SABC circuit, Gravity recovery is conducted using Knelson concentrators installed on the hydrocyclone underflow, targeting coarse gold particles. The recovered gravity concentrate is intensively leached in an Acacia Reactor to maximize gold recovery.

The hydrocyclone overflow is thickened and then subjected to cyanide leaching through a CIL/CIP process, during which activated carbon adsorbs the dissolved gold from solution. Gold is subsequently recovered via elution, electrowinning, and smelting to produce doré bars. These bars are transported to the Perth Mint for final refining into bullion before being sold to the market.

Binduli Project

The Binduli North Heap Leach Plant is purpose-built for the large-scale processing of low-grade gold ore. The ore undergoes two-stage crushing, followed by HPGR grinding. It is then conveyed via long-distance conveyors, grasshoppers, and a stacker to form engineered heap leach pads.

The stacked ore is irrigated with a leaching solution through a drip system, allowing gold to dissolve into the pregnant leach solution (PLS), which is collected and pumped to a carbon-in-column (CIC) adsorption circuit. Gold in the PLS is adsorbed onto activated carbon and subsequently recovered through elution, electrowinning, and smelting to produce doré gold. The doré is then transported to the Perth Mint for final refining and sale.

Exploration Activities in Australia Norton Gold Mine

Norton Gold Fields is committed to a balanced exploration strategy focused on expanding its resource base, extending mine life, and improving operational margins through targeted exploration activities. The primary goal is to sustain production at the Paddington Mill and Binduli Project while diversifying the company's mineral resource base. This includes resource and reserve growth at existing operations and brownfield exploration across high-potential tenements. Norton has achieved significant increases in Mineral Resources and Ore Reserves through its dedicated resource and reserve growth programs. These results support the company's strategic objective of increasing annual production to over 260 koz (approximately 8 tonnes), compared to historical levels of approximately 160 koz (approximately 4.5 tonnes). A key focus is on brownfield exploration in and around existing mines to extend their operational life. Priority targets are deposits of the Norton Gold Fields, including Tuart, Bullant, Enterprise, Federal, Binduli South, and Racetrack, where recent exploration has delivered encouraging results. A resource definition drilling program is currently underway to advance this opportunity. Additionally, refractory projects such as Racetrack are being studied for future development.

OUR GOLD PRODUCTION BUSINESS OF GUYANA AURORA GOLD MINE

Overview

The Guyana Aurora Gold Mine is the only large operational gold mining project in Guyana with production volume of over 100 koz in 2024. It is located at Cuyuni-Mazaruni District, Guyana. We hold the Guyana Aurora Gold Mine through our indirectly wholly-owned subsidiary, AGM Inc. The Guyana Aurora Gold Mine is greenstone-hosted gold deposit or orogenic gold deposit. The extraction and processing methods employed at the mine include open-pit mining, underground mining and gravity separation, leaching and carbon adsorption and elution and refining.

Operation Performance

In 2022, 2023, 2024 and six months ended June 30, 2025, our gold production business in the Guyana Aurora Gold Mine processed 2,489 kt, 2,660 kt, 2,712 kt and 1,557 kt of ore, and produced 91 koz (2.8 tonnes), 95 koz (3.0 tonnes), 130 koz (4.1 tonnes) and 66 koz (2.0 tonnes) of gold, respectively.

The gold production volume of the Guyana Aurora Gold Mine increased from 91 koz (2.8 tonnes) in 2022 to 95 koz (3.0 tonnes) in 2023, and further increased to 130 koz (4.1 tonnes) in 2024, primarily due to the operation of additional ball grinding machine we purchased in March 2023, which increased our daily processing capacity from 7.5 kt to 8.0 kt.

In 2022, 2023, 2024 and six months ended June 30, 2025, the gold recovery of the Guyana Aurora Gold Mine was approximately 91.1%, 90.5%, 92.9% and 92.8%, respectively. The general high recovery are mainly attributed to the commissioning of the upgraded ball mill machine we utilized, which optimized the grinding fineness.

We have made constant efforts to improve the average gold processing recovery of the Guyana Aurora Gold Mine. In February 2025, the new ball mill machine was put into operation, further optimizing the grinding fineness. Additionally, three newly constructed leaching tanks were commissioned in June 2025, increasing the leaching efficiency. Looking ahead, we expect that the gold processing recovery will increase further in 2025.

Development and Expansion

We plan to gradually commission the Phase I underground mining project by 2025 and fully realize the commissioning and production of the 3.3 million/year processing plant upgrade project. We prioritize technological upgrades, planning to utilize industry-leading process technologies (such as Knelson gravity separation, tailings cyanide washing, and leaching tank processes) to achieve early recovery, improve gold leaching rates, and reduce sodium cyanide consumption, gradually achieving cost reduction and efficiency enhancement.

Mineral Resources and Ore Reserves

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our Mineral Resources in the Guyana Aurora Gold Mine as of June 30, 2025:

Mineralized Zone/Block	Category	Tonnage[(1)] (Mt)	Au Grade[(1)] (g/t)	Au Metal Contained[(1)] (koz)	(t)
Guyana Aurora Gold Mine	Measured	1.7	2.9	161	5.0
	Indicated	39.7	2.7	3,380	105.2
	Inferred	36.7	2.1	2,429	75.6
Equity interest: 100%	**Total**	**78.1**	**2.4**	**5,970**	**185.8**

Note:

(1) Figures are subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them. The information is calculated based on 100% of equity interest for each asset held by the Company.

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our Ore Reserves in the Guyana Aurora Gold Mine as of June 30, 2025:

Mineralized Zone/Block	Category	Tonnage[(1)] (Mt)	Au Grade[(1)] (g/t)	Au Metal Contained[(1)] (koz)	(t)
Guyana Aurora Gold Mine	Proved	1.9	2.5	150	4.7
	Probable	31.3	2.1	2,157	67.1
Equity interest: 100%	**Total**	**33.2**	**2.2**	**2,307**	**71.8**

Note:

(1) Figures are subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them. The information is calculated based on 100% of equity interest for each asset held by the Company.

Mining Licenses and Exploration Permits

As of the Latest Practicable Date, we held one valid material mining licenses in relation to Guyana Aurora Gold Mine, details of which are set out below:

Type	Serial Number	Geographical Area (km^2)	Effective Period	Status
Mining License.	ML/G1	58.028	November 18, 2011 to November 18, 2031	Valid

The mining license also grants the permission to explore the deep deposit and adjacent area of the mining area. We aim to renew the above mining license before its expiry date.

We are in the process of renewing three expired prospecting permits. We plan to renew and use these permits for exploring additional deposits in other areas of the Guyana Aurora Gold Mine, which will be our potential strategic reserves for future operation.

Historical Milestones and Planned Production Schedule

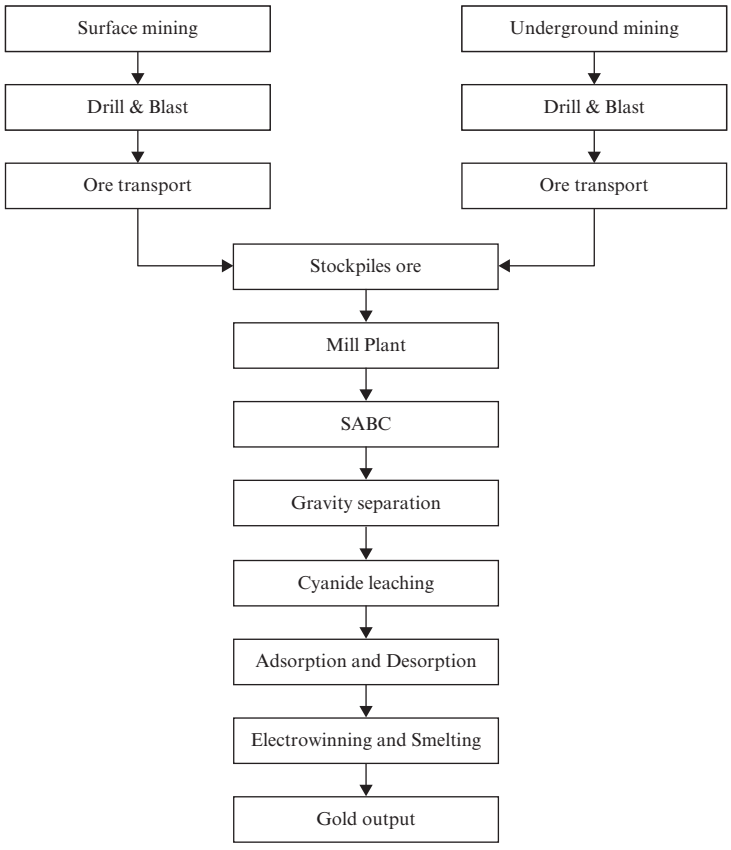
Historical Milestones

The following timeline illustrates key historical and planned milestones in the development of the Guyana Aurora Gold Mine:

Year	Milestone
1938	• The exploration activities were first conducted
2016	• Commenced commercial production
2020	• Completed acquisition
	• Resumed operations within 90 days following the completion of the acquisition
2021	• Resumed and commenced underground mining
2023	• The external audits for ISO 14001 and ISO 45001 environmental and occupational health and safety management systems were successfully completed
2023	• In March, the secondary mill at the Guyana Aurora Gold Mine processing plant was successfully commissioned with feed

Planned Production Schedule

As set forth in the Competent Person's Report, the following chart sets forth the planned production schedule for the operations at the Guyana Aurora Gold Mine for the periods indicated over the Life of Mine:



Type	Unit	LOM	2H2025	2026	2027	2028	2029	2030
Gold Produced	koz	2,111	80	153	188	175	153	205

Type	Unit	2031	2032	2033	2034	2035	2036	2037
Gold Produced	koz	159	180	193	170	193	146	115

Operating Process of Gold Production Business in Guyana

(a) Overview

The extraction and processing methods employed at the mine include open-pit mining, underground mining and gravity separation, leaching and carbon adsorption, acid wash and elution, refining. The following diagram sets forth the general workflow of the production process:

(b) Mining

The open-pit mining process includes down-the-hole drilling, medium and deep hole bench blasting, excavator loading, wide-body mining truck transportation, and dozer and front loader waste disposal process.

The first phase of underground mining development construction, including the main and auxiliary shaft construction, the development and mining of satellite ore bodies, as well as the construction of return air shafts. The mining methods used are the sublevel open stoping method and the large-diameter long hole open stoping with delayed backfill method.

(c) Processing

The mineral processing technology consists of the following procedures: crushing, semi-autogenous grinding with ball milling, cyclone classification, gravity separation, cyanide leaching, carbon adsorption, carbon desorption and regeneration, gold refining, cyanide removal, and tailings disposal. The ore is primarily supplied by the open-pit mining plant, with a small amount provided by the underground mining plant.

Exploration Activities in Guyana Aurora Gold Mine

In recent years, the geological exploration efforts at the Guyana Aurora Gold Mine have primarily focused on expanding the resource and reserves for underground mining and identifying successor resources for open-pit mining. This has involved supplementary exploration of the main production ore body, and screening and verifying peripheral target areas to extend the operational life of open-pit mining. Through surface drilling and combined exploration, the company has enhanced control over the strike and tendency of the ore body, thereby expanding its size. Additionally, based on metallogenic studies, the company has verified parallel ore body groups, adding new resources. By integrating geological, physical, and chemical exploration data, including geomagnetic and airborne magnetic surveys, the company has defined multiple mineral prospects and target areas through trenching and drilling validation.

Over the next three years, AGM Inc. plans to deepen exploration of the main ore body's deep side to expand known ore reserves. Efforts will also focus on exploring blank areas around the main ore body and evaluating greenfield target areas to accelerate the transformation of outcrop mining and replacement resources. The planned exploration activities include drilling, trenching, and sample analysis, with a budget allocated to support these initiatives. We anticipate adding new gold Resources and identifying several key exploration targets.

OUR GOLD PRODUCTION BUSINESS OF COLOMBIA BURITICÁ GOLD MINE

Overview

The Colombia Buriticá Gold Mine is located in Buriticá, Colombia. The Colombia Buriticá Gold Mine is a globally recognized large-scale gold mine with exceptionally high grades. It is Colombia's first large-scale underground mine and has been recognized by the Colombian government as a "Project of National Strategic Interest". We hold a 68.8% of the economic interest in this project through the Colombia Entrustment Agreement, which is currently in production and undergoing expansion. The mine features epithermal deposit types. The extraction and processing methods employed at the mine include underground mining, gravity separation, flotation, and cyanide leaching.

We operate the Colombia Buriticá Gold Mine through the Colombia Entrustment Arrangement. The assets, liabilities and operation results of the Colombia Buriticá Gold Mine will be consolidated to the financial results of our Company. For further details, please refer to the section headed "Relationship with Zijin Mining — Colombia Entrustment Arrangement" in this prospectus.

Operation Performance

In 2022, 2023, 2024 and six months ended June 30, 2025, our gold production business in Colombia Buriticá Gold Mine processed 1,238 kt, 1,269 kt, 1,265 kt and 706 kt of ore, and produced 247 koz (7.7 tonnes), 268 koz (8.3 tonnes), 322 koz (10.0 tonnes) and 125 koz (3.9 tonnes) of gold, respectively.

The gold production volume of the Colombia Buriticá Gold Mine increased from 248 koz (7.7 tonnes) in 2022 to 268 koz (8.3 tonnes) in 2023. This was primarily due to the technical upgrade we completed in late 2021. The gold production volume of the Colombia Buriticá Gold Mine increased from 268 koz (8.3 tonnes) in 2023 to 322 koz (10.0 tonnes) in 2024, primarily due to the increased mill feed grade in 2024.

In 2022, 2023, 2024 and six months ended June 30, 2025, the gold recovery of the Colombia Buriticá Gold Mine was approximately 88.4%, 90.6%, 91.9% and 91.1%, respectively. Following the transformation of flotation technology and the optimization of the process flow, the recovery of sulfide-encapsulated gold has progressively improved, leading to a gradual increase in the overall recovery.

In 2025, Continental Gold Colombia Branch was involved in a tax dispute with the Colombian tax authorities in relation to the tax levied to one of the then sellers of CGI arising from its disposal to Zijin Mining in 2020. The tax dispute is currently being addressed, and discussions are ongoing with various parties involved. Pursuant to the Return Swap Agreement, we are entitled to a tax indemnity from Zijin Mining, which will cover all expenses and taxes incurred prior to the date of the Return Swap Agreement. We do not expect such tax dispute will have material adverse impact over our operations and financial performance.

We have made constant efforts to improve the average gold processing recovery of the Colombia Buriticá Gold Mine. Looking ahead, we expect that the gold processing recovery will increase further by increasing the yield of gold concentrates.

Development and Expansion

We are actively engaged in exploration and reserve expansion/growth efforts, focusing on the characteristics of narrow veins/reefs by promoting the miniaturization of mining equipment and implementing underground sorting measures to reduce ore loss and dilution rates and improve ore grade. Additionally, we plan to continuously optimize material and energy consumption, enhance processing indicators and fully recover non-ferrous metals such as gold, silver, and copper for efficient resource utilization. We anticipate increasing daily ore production from 4,000 tonnes to 5,000 tonnes and boosting annual mining capacity by 320,000 tonnes to achieve an annual production target of 1.65 million tonnes, thereby significantly enhancing the mine's production capacity and market competitiveness.

Mineral Resources and Ore Reserves

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our Mineral Resources in the Colombia Buriticá Gold Mine as of June 30, 2025:

Mineralized Zone/Block	Category	Tonnage[(1)] (Mt)	Au Grade[(1)] (g/t)	Au Metal Contained[(1)] (koz)	(t)
Colombia Buriticá					
Gold Mine	Measured	9.8	7.4	2,300	73.0
	Indicated	19.2	7.1	4,400	136.6
Economic interest:	Inferred	21.0	7.1	4,800	149.8
68.8%	**Total**	**50.1**	**7.2**	**11,500**	**359.4**

Note:

(1) Figures are subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them. The information is calculated based on 100% of equity interest for each asset held by the Company.

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our Ore Reserves in Colombia as of June 30, 2025:

Mineralized Zone/Block	Category	Tonnage[(1)] (Mt)	Au Grade[(1)] (g/t)	Au Metal Contained[(1)] (koz)	(t)
Colombia Buriticá					
Gold Mine	Proved	6.9	7.4	1,650	51.3
	Probable	15.5	6.5	3,230	101.0
Economic interest:					
68.8%	**Total**	**22.4**	**6.8**	**4,880**	**152.0**

Note:

(1) Figures are subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them. The information is calculated based on 100% of equity interest for each asset held by the Company.

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of non-gold Resources in the Colombia Buriticá Gold Mine as of June 30, 2025:

Mineralized Zone/Block	Category	Ag Grade (g/t)	Ag Metal Contained (t)
Colombia Buriticá Gold Mine	Measured	22.6	222.0
	Indicated	24.7	473.8
	Inferred	20.6	432.2
	Total	**22.5**	**1,128.0**

Note:
(1) Numbers have been subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them.

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of non-gold Reserves in the Colombia Buriticá Gold Mine as of June 30, 2025:

Mineralized Zone/Block	Category	Ag Grade (g/t)	Ag Metal Contained (t)
Colombia Buriticá Gold Mine	Proved	20.9	144.0
	Probable	19.5	302.0
	Total	**19.9**	**446.0**

Note:
1. Numbers have been subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them.

Mining Concession Agreements

As of the Latest Practicable Date, Continental Gold held one valid material mining concession agreement in relation to the Colombia Buriticá Gold Mine, details of which are set out below:

Type	Serial Number	Geographical Area (ha)	Effective Period	Status
Mining concession agreement .	P7495011	1,894.8412	March 20, 2013 to March 20, 2043	Valid

We aim to renew the above mining concession agreement before its expiry date.

Historical Milestones and Planned Production Schedule

Historical Milestones

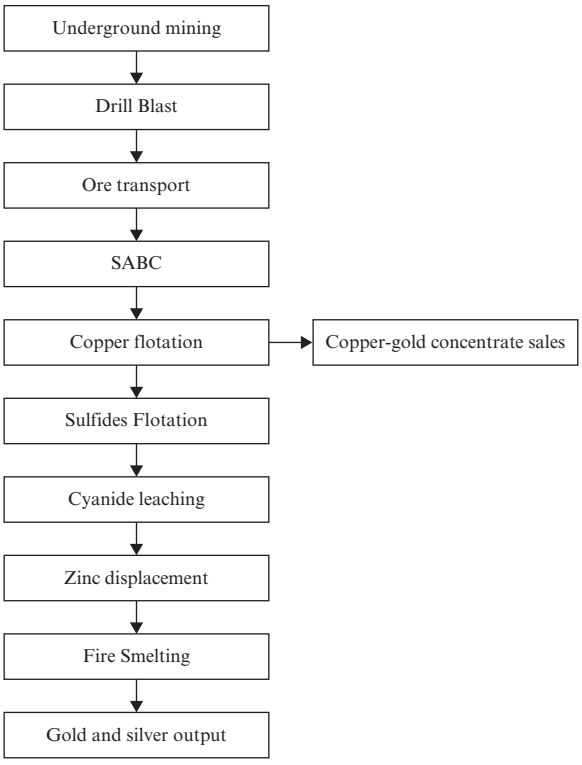
The following timeline illustrates key historical milestones in the development of the Colombia Buriticá Gold Mine:

Year	Milestone
2002	• Environmental license approved by the National Environmental Licensing Authority
2020	• Completed the acquisition and commenced commercial operation
2021	• Completed 4 kt per day technical upgrade project in processing plant
2024	• Higabra's second level tunnel has achieved full line penetration, which improved the underground ventilation system of the mine

Planned Production Schedule

As set forth in the Competent Person's Report, the following chart sets forth the planned production schedule for the operations at the Colombia Buriticá Gold Mine for the periods indicated over the Life of Mine:

Type	Unit	LOM	2H2025	2026	2027	2028	2029	2030	2031
Gold Produced	koz	4,308	146	290	294	300	298	283	291



Type	Unit	2032	2033	2034	2035	2036	2037	2038	2039
Gold Produced	koz	377	368	347	344	265	251	211	245

Operating Process of Gold Production Business in Colombia

(a) Overview

Continental Gold operates a comprehensive production process from resource exploration to product sales. The geological exploration department is tasked with drilling and exploring resources within the mining rights area, and it shares the resource model with the mining department. The mining department validates the resource model through

infill drilling, develops a grade control model, and uses this model to design and plan mining production. The following diagram sets forth the general workflow of the production process:

(b) Mining

The underground mine employs the long-hole stoping method, with access to the ore body provided by two declines and a tunnel. The mining process follows a sequence of rock drilling, blasting, loading, transportation, and backfilling. Blasted ore is loaded by Load-Haul-Dump **(LHD**) vehicles into dump trucks, which transport it to the surface stockpile via the declines. Front-End Loaders (**FELs)** then transfer the ore to the crusher at the processing plant.

(c) Processing

The processing circuit involves several stages, including pre-selection tailings disposal, grinding, semi-autogenous grinding in an open circuit, re-election, priority copper and gold selection, whole sulphide flotation, sulphide concentrate thickening, leaching, counter-current washing, zinc powder replacement, heavy sand and gold mud smelting, and tailings dehydration. This process produces refined copper-gold concentrate and high-quality gold ingots, which are subsequently sold. The crushing and grinding stages utilize a SABC circuit, with a gravity separation system integrated into the grinding circuit to recover liberated gold grains. The grinding products undergo a preferential flotation process to recover copper and other sulfide minerals, resulting in copper-gold concentrate, sulphide concentrate, and flotation tailings. The copper-gold concentrate is sold directly. Flotation tailings are filtered, with a portion of the filter cake used for underground filling and the remainder stored in the Tailings Storage Facility (**TSF)**. The sulphide concentrate undergoes cyanidation followed by the Merrill-Crowe zinc precipitation process to extract gold and silver.

Exploration Activities in Colombia Buriticá Gold Mine

In 2024, the deep exploration program at the Colombia Buriticá Gold Mine has led to significant increases in Mineral Resources. Notably, drilling activities have intercepted substantial high-grade gold ore bodies, with promising results indicating the extension of the Veta Sur vein to the southwest. Additionally, high-grade mineralization at depths between 850m and 450m elevation remains open, suggesting considerable potential for discovering large-scale high-grade gold or porphyry copper ore bodies below 400m elevation.

The Colombia Buriticá Gold Mine is strategically situated within the North Andean Middle Cauca copper-gold mineralization belt in South America, an area known for its numerous porphyry and hydrothermal copper-gold deposits, such as the Titiribí project, a copper-gold exploration project located near to Medellín in Colombia, the Marmato gold mine, an operating underground mine in Colombia's Marmato district, and La Colosa, a porphyry gold mine in Colombia. Continental Gold has identified deposits with significant exploration potential in both deep margins and greenfield projects. In the neighboring areas of the Colombia Buriticá Gold Mine and the Berlin mine, located further north of Medellín in Colombia, numerous gold and copper ore indicators have been discovered and partially verified. For these prospecting rights areas, we anticipates achieving substantial exploration and Mineral Resources increases by enhancing the comprehensive study of mineralization patterns in the future.

OUR GOLD PRODUCTION BUSINESS OF SURINAME ROSEBEL GOLD MINE

Overview

The Suriname Rosebel Gold Mine is one of the largest in-production open-pit gold mines in South America. It is located at Brokopondo and Sipaliwini Districts in northern Suriname. We hold the Suriname Rosebel Gold Mine through our indirect subsidiary, Rosebel GM. The Suriname Rosebel Gold Mine features greenstone-hosted gold deposit type. The extraction and processing methods employed at the mine include open-pit mining and cyanidation process. The main orebody of the Suriname Rosebel Gold Mine remains open at depth and along the strike, indicating significant potential for further resource expansion. The Suriname Rosebel Gold Mine includes Rosebel ore and Saramacca ore, two mining areas in Rosebel and Saramacca which Rosebel GM holds 100% and 70% equity interests, respectively.

We acquired Rosebel GM in 2023.

Operation Performance

In 2023 (after acquisition in February), 2024 and six months ended June 30, 2025, Suriname Rosebel Gold Mine processed 7,817 kt, 9,321 kt and 4,552 kt of ore, and produced 241 koz (7.5 tonnes), 240 koz (7.5 tonnes) and 106 koz (3.3 tonnes) of gold, respectively. Since our acquisition, the gold production volume of the Suriname Rosebel Gold Mine remained relatively stable.

In 2022, 2023, 2024 and six months ended June 30, 2025, the gold recovery of the Suriname Rosebel Gold Mine was approximately 93.7%, 96.6%, 94.5% and 90.7%, respectively. The decrease in the gold recovery in 2024 and six months ended June 30, 2025 was due to the processing challenges related to the refractory ores in Saramacca which contain carbon and arsenic that need further processing and extraction.

We have made constant efforts to improve the average gold processing recovery of the Suriname Rosebel Gold Mine through targeted technical upgrades to crushing and grinding circuits, coupled with extensive metallurgical test work on refractory ores. Looking ahead, the deployment of advanced mineral processing technologies, specifically tailored to treat refractory Saramacca ores, is expected to drive steady recovery improvements. These innovations aim to mitigate ore variability and optimize extraction efficiency, ensuring sustained progress in gold recovery performance.

Development and Expansion

We are committed to developing the Suriname Rosebel Gold Mine into one of the main gold-producing mines in South America. To address challenges such as the low gold grade of Rosebel ore and the carbon and arsenic content in Saramacca ore, we have developed large-scale utilization technology for low-grade ores, achieving an annual processing capacity of 10 million tonnes with a single-series semi-autogenous mill. The overall gold recovery reached 94% in 2024. Building on the current processing plant's annual capacity of 10 million tonnes, we are exploring the feasibility of increasing capacity to 11–13 million tonnes.

Mineral Resources and Ore Reserves

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our Mineral Resources in Suriname Rosebel Gold Mine as of June 30, 2025:

Mineralized Zone/Block	Category	Tonnage[(1)] (Mt)	Au Grade[(1)] (g/t)	Au Metal Contained[(1)] (koz)	(t)
Suriname Rosebel Gold Mine	Measured	265.0	0.8	7,034	218.8
	Indicated	156.2	0.8	4,062	126.4
	Inferred	30.0	0.8	779	24.2
Equity interest: 95%	**Total**	**451.2**	**0.8**	**11,876**	**369.4**

Note:

(1) Figures are subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them. The information is calculated based on 100% of equity interest for each asset held by the Company.

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our Ore Reserves in Suriname Rosebel Gold Mine as of June 30, 2025:

Mineralized Zone/Block	Category	Tonnage[(1)] (Mt)	Au Grade[(1)] (g/t)	Au Metal Contained[(1)] (koz)	(t)
Suriname Rosebel Gold Mine	Proved	176.3	0.8	4,453	138.5
	Probable	40.1	0.8	994	30.9
Equity interest: 95%	**Total**	**216.4**	**0.8**	**5,447**	**169.4**

Note:

(1) Figures are subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them. The information is calculated based on 100% of equity interest for each asset held by the Company.

Mining Licenses and Exploration Permits

As of the Latest Practicable Date, Rosebel GM held three valid exploitation concessions and nine valid exploration concessions in relation to Suriname Rosebel Gold Mine, details of which are set out below:

Type	Serial Number	Geographical Area (ha)	Effective Period	Status
Exploitation Concession	GMD 468/02	17,000	December 16, 2002 to December 16, 2027	Valid
Exploitation Concession	GMD 301/19	4,975	May 2, 2019 to May 2, 2044	Valid
Exploitation Concession	GMD 536/24	466	February 3, 2025 to February 3, 2030	Valid
Exploration Concession	GMD 467/24	7,769	November 18, 2024 to November 18, 2026	Valid
Exploration Concession	GMD 470/24	5,075	November 18, 2024 to November 18, 2026	Valid
Exploration Concession	GMD 472/24	112.1	February 3, 2025 to February 3, 2027	Valid
Exploration Concession	GMD 469/24	2,188	February 3, 2025 to February 3, 2027	Valid
Exploration Concession	GMD 471/24	1,459	February 3, 2025 to February 3, 2027	Valid
Exploration Concession	GMD 473/24	36.57	February 3, 2025 to February 3, 2027	Valid
Exploration Concession	GMD 468/24	3,425	18 November 2024 to 18 November 2026	Valid
Exploration Concession	GMD 537/24	7,095	8 April 2025 to 8 April 2027	Valid
Exploration Concession	GMD 421/24	2,540	15 May 2024 to 15 May 2026	Valid

We aim to renew the above concessions before their respective expiry dates to the extent permitted by applicable laws. However, exploration rights in Suriname may be extended up to a maximum of two times for a period of two years each. Several of Rosebel GM's exploration rights (particularly, GMD 470/24, GMD 469/24, GMD 471/24, GMD 468/24, GMD 467/24, GMD 473/24, GMD 472/24 and GMD 421/24) have already been extended twice and therefore cannot be extended further under applicable laws. There will not be any adverse impact on the business, operations and financial performance of the Group for those expiring exploration concessions as we rely on exploitation concessions to produce minerals, and there are three main exploitation rights on the list which either have a long remaining life or can be renewed for another 15 years. If there are economically mineable resources in the areas covered by exploration rights, we will apply for an exploitation right before the expiry of the exploration right.

Historical Milestones and Planned Production Schedule

Historical Milestones

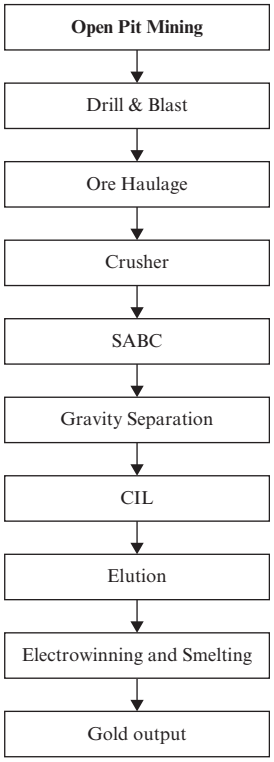
The following timeline illustrates key historical and planned milestones in the development of the Suriname Rosebel Gold Mine:

Year	Milestone
1879	• Gold was first discovered in this area
1885	• Initial production activities, including alluvial mining, surface deposits, and vein exploitation, were carried out
2004	• Commenced commercial production
2008	• Recorded mine throughput and gold production
2016	• Rosebel GM signs agreement to acquire a 70% interest in the Saramacca property
2020	• Commenced commercial production in Saramacca
2023	• Completed the acquisition of Rosebel GM

Planned Production Schedule

As set forth in the Competent Person's Report, the following chart sets forth the planned production schedule for the operations at the Suriname Rosebel Gold Mine for the periods indicated over the Life of Mine:

Type	Unit	LOM	2H2025	2026	2027	2028	2029	2030	2031	2032	2033
Gold Produced	koz	4,751	148	304	273	267	271	249	234	233	232



Type	Unit	2034	2035	2036	2037	2038	2039	2040	2041	2042
Gold Produced	koz	230	239	212	214	213	217	185	182	132

Type	Unit	2043	2044	2045	2046	2047	2048	2049
Gold Produced	koz	113	111	108	107	107	105	66

Operating Process of Gold Production Business in Suriname

(a) Overview

The Suriname Rosebel Gold Mine utilizes a combination of open-pit mining, gravity separation, and CIL for gold extraction and processing. The primary orebody exhibits geological continuity, remaining open at depth and along strike, which underscores substantial potential for future resource expansion through targeted exploration. The following diagram sets forth the general workflow of the production process:

(b) Mining

The Suriname Rosebel Gold Mine uses a traditional truck-and-shovel method for open-pit mining, which involves a sequence of drilling, blasting, loading, and hauling to effectively manage ore and waste rock. During blast hole drilling, geological sampling is conducted to analyze gold content, allowing for precise control over the ore grade and planning for resource allocation and cut-off points. Excavation strategies are guided by rock classifications: soft rock is excavated directly, while transition and hard rock require controlled blasting to break them down efficiently. After blasting, material that meets the gold grade criteria is either processed immediately or stored for future use, while waste rock that doesn't contain valuable gold is moved to specially designed storage areas that comply with environmental and safety standards. This organized approach improves operational efficiency by focusing on processing high-grade ore, reducing costs associated with low-grade material, and supporting long-term sustainability and productivity goals through flexible planning and strict environmental management.

(c) Processing

The gold extraction process at Suriname Rosebel Gold Plant follows an integrated flowsheet combining crushing, grinding, gravity separating, cyanide leaching and metallurgical recovering. Ore enters the circuit through haul trucks feeding a primary gyratory crusher, with subsequent ball mill via vibrating grizzly and cone crushers. Crushed material undergoes controlled blending through dual apron feeders before advancing to comminution.

The grinding circuit combines a semi-autogenous (SAG) mill operating in open configuration with three ball mills in closed-circuit cyclone loops. Screen oversize from the SAG mill undergoes cone crushing prior to recirculation. Cyclone underflow splits into two steps: 20% feeds the gravity separation circuit for gold recovery, while the majority progresses to classification.

Cyclone overflow enters into a high-rate thickener, which feeds two parallel processing lines, each containing leach tanks and CIL vessels. Depleted CIL tailings transfer to the TSF, while process water recirculates via a dedicated reclaim system.

A carbon-in-column (CIC) auxiliary circuit scavenges residual gold from solution prior to TSF discharge.

Gold recovery occurs through electrowinning cells. The resulting sludge combines with gravity concentrate for drying and flux addition before induction furnace smelting produces gold doré.

Exploration Activities in Suriname Rosebel Gold Mine

Rosebel GM places strong emphasis on exploration, consistently investing in annual drilling campaigns to expand its mineral resource base and extend the LOM. All current mining activities continue to use open-pit methods. Notably, the mineralization in existing pits remains open along strike and at depth. Historically, drilling has been concentrated within the top 300 meters, leaving substantial upside potential for deeper exploration and resource expansion.

Rosebel GM has conducted the following resource expansion projects over past two years:

- Infill Drilling: Enhances resource confidence within operational pits through high-density sampling, optimizing orebody modeling and mine planning.

- Near-Pit Exploration: Targets lateral extensions of known orebodies, enabling phased push-back designs to access additional mineralization adjacent to current mining areas.

- Deep Drilling Programs: Focus on select pits to evaluate underground mining potential, assessing depth continuity of high-grade zones for future underground development.

In parallel with these drilling programs, the Rosebel Gold Mine actively pursues regional expansion opportunities, targeting new concessions to diversify its resource base and scale operations. This strategic focus on securing additional mineral rights and developing untapped reserves aims to substantially extend the LOM.

OUR GOLD PRODUCTION BUSINESS OF GHANA AKYEM GOLD MINE

Overview

The Ghana Akyem Gold Mine is one of the largest in-production open-pit gold mines in Ghana. It is located at Eastern Region, Ghana. We hold the Ghana Akyem Gold Mine through our indirectly wholly-owned subsidiary, Zijin Golden Ridge. The Ghana Akyem Gold Mine features orogenic gold mine type. The extraction and processing methods employed at the mine include open-pit mining, underground mining and CIL process.

We completed the acquisition of Ghana Akyem Gold Mine in April 2025.

During the two months ended June 30, 2025 after acquisition, the gold production volume of Ghana Akyem Gold Mine amounted to 38 koz (1.2 tonnes). We expect the production volume will increase after the acquisition as we implement management and technical renovation plans.

Development and Expansion

After completing the acquisition, we plan to apply economic geology theories to re-evaluate the open-pit mineable resource and reserves based on new cut-off grades, expand the open-pit boundaries, and comprehensively increase the open-pit service life and resource utilization rate. Additionally, we plan to enhance the processing plant's technological renovation to increase the annual processing capacity from 7.6 million tonnes to 12.0 million tonnes, significantly boosting gold production and extending the Life of Mine.

Mineral Resources and Ore Reserves

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our Mineral Resources in Ghana Akyem Gold Mine as of June 30, 2025:

Mineralized Zone/Block	Category	Tonnage[(1)] (Mt)	Au Grade[(1)] (g/t)	Au Metal Contained[(1)] (koz)	(t)
Ghana Akyem Gold Mine	Measured	116.4	1.7	6,249	194.4
	Indicated	32.0	2.3	2,411	75.0
	Inferred	11.0	2.2	775	24.1
Equity interest: 100%	**Total**	**159.5**	**1.8**	**9,436**	**293.5**

Note:

(1) Figures are subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them. The information is calculated based on 100% of equity interest for each asset held by the Company.

The following table, which is based on the Competent Person's Report in accordance with the JORC Code, sets forth the information of our Ore Reserves in Ghana Akyem Gold Mine as of June 30, 2025:

Mineralized Zone/Block	Category	Tonnage[(1)] (Mt)	Au Grade[(1)] (g/t)	Au Metal Contained[(1)] (koz)	(t)
Ghana Akyem Gold Mine	Proved	105.0	1.5	4,974	154.7
	Probable	25.0	2.0	1,595	49.6
Equity interest: 100%	**Total**	**130.0**	**1.6**	**6,569**	**204.3**

Note:

(1) Figures are subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them. The information is calculated based on 100% of equity interest for each asset held by the Company.

Mining Leases and Prospecting Licenses

As of the Latest Practicable Date, Zijin Golden Ridge held two material mining leases and four prospecting licenses in relation to the Ghana Akyem Gold Mine, details of which are set out as follows:

Type	Serial Number	Geographical Area (ha)	Effective Period	Status
Mining Lease (Akyem West)	ML.5/199	16.59	January 19, 2025 to January 18, 2030	Valid
Mining Lease (Akyem East)	PL.5/126	47.67	January 19, 2025 to January 18, 2037	Valid

Type	Serial Number	Geographical Area (ha)	Effective Period	Status
Prospecting License (Abirem)	PL.5/160	31.5	June 7, 2024 to June 6, 2027	Valid
Prospecting License (Abodom)	PL.5/135	9.87	September 3, 2024 to September 2, 2027	Valid
Prospecting License (Kenbert)	PL.5/3VOL.2	14.7	September 3, 2024 to September 2, 2027	Valid
Prospecting License (Maman River)	PL.5/134	23.52	June 7, 2024 to June 6, 2027	Valid

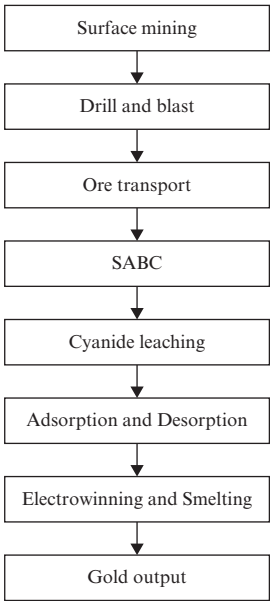
Historical Milestones and Planned Production Schedule

Historical Milestones

The following timeline illustrates key historical milestones in the development of the Ghana Akyem Gold Mine:

Year	Milestone
2013	• Open-pit mining operations commenced;
2025	• We completed the acquisition of Ghana Akyem Gold Mine.

Planned Production Schedule



As set forth in the Competent Person's Report, the following chart sets forth the planned production schedule for the operations at the Ghana Akyem Gold Mine for the periods indicated over the Life of Mine:

Type	Unit	LOM	2H2025	2026	2027	2028	2029	2030	2031
Gold Produced	koz	5,863	108	233	289	371	376	482	608

Type	Unit	2032	2033	2034	2035	2036	2037	2038
Gold Produced	koz	568	475	518	529	527	577	202

Operating Process of Gold Production Business in Ghana

We apply extraction and processing methods including open-pit mining, underground mining and CIL process. The following diagram sets forth the general workflow of the production process we plan to conduct in Ghana Akyem Gold Mine:

Exploration Activities in Ghana Akyem Gold Mine

The identified resources are primarily concentrated within the east side of Akyem, with existing drilling controls focused along the main pit and its deeper extensions. Preliminary drilling results suggest that the Akyem mineralization zone extends northeast and southwest beyond the main pit, with additional strike length at depth that remains largely unexplored.

Aligned with Golden Ridge's strategic plan, systematic infill and supplementary exploration will be conducted over the next three years along the northeastern and southwestern extensions of the Akyem main mineralized zone. This program includes diamond drilling and is supported by a significant investment. See "Future Plans and Use of Proceeds" for more details. Upon completion, the exploration is expected to enhance gold resources. Concurrently, preliminary prospecting in peripheral license areas aims to identify additional exploitable resource bases.

OUR GOLD PRODUCTION BUSINESS OF PNG PORGERA GOLD MINE

Overview

The PNG Porgera Gold Mine refers to our investment in Porgera Gold Mine, which is located at Enga Province, Papua New Guinea. We indirectly hold 24.5% equity interest in PNG Porgera Gold Mine through New Porgera. The PNG Porgera Gold Mine features epithermal vein-type gold deposit. The extraction and processing methods employed at the mine include open-pit mining and underground mining.

The PNG Porgera Gold Mine suspended production in April 2020 due to the non-extension of the previous Special Mining Lease. As part of the renewal process, the original group of shareholders (including Zijin Mining) has reached an agreement with the State of Papua New Guinea such that entities designated by the State of Papua New Guinea would have 51% equity interests in New Porgera (i.e. the new project company holding the PNG Porgera Gold Mine), whereas the original shareholders would have 49% of equity interests in New Porgera, and accordingly we indirectly hold 24.5% equity interests in PNG Porgera Gold Mine through New Porgera. After successful renegotiation and renewal of the Special Mining Lease held by New Porgera, it resumed mining in January 2024 and resumed production in February 2024. Barrick Niugini Limited, a wholly-owned subsidiary of Porgera Jersey, is currently operating the PNG Porgera Gold Mine.

The gold production volume attributable to us on equity basis of the PNG Porgera Gold Mine amounted to 46 koz (1.4 tonnes) in 2024.

The planned production schedule for the operations at the PNG Porgera Gold Mine in 2025 is 376 koz (11.7 tonnes) of gold, of which 92 koz (2.9 tonnes) will be attributable to us on equity interest basis.

A separate CPR for the PNG Porgera Gold Mine is not included in this Prospectus considering we only hold a minority interest in the asset and we are not the operator of the mine.

Mineral Resources and Ore Reserves

The following table sets forth the information of our Mineral Resources in PNG Porgera Gold Mine as of December 31, 2024:

Mineralized Zone/Block	Category	Tonnage[(1)] (Mt)	Au Grade[(1)] (g/t)	Au Metal Contained[(1)] (koz)	(t)
PNG Porgera Gold Mine	Measured	0.7	6.9	163	5.0
	Indicated	31.9	2.9	2,929	91.1
	Inferred	18.9	2.2	1,323	41.1
Equity interest: 24.5%	**Total**	**51.5**	**2.7**	**4,414**	**137.3**

Note:

(1) Figures are subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them. The information is calculated based on 24.5% of equity interest held by the Company.

The following sets forth the information of our gold Reserves in PNG Porgera Gold Mine as of December 31, 2024:

Mineralized Zone/Block	Category	Tonnage[(1)] (Mt)	Au Grade[(1)] (g/t)	Au Metal Contained[(1)] (koz)	(t)
PNG Porgera Gold Mine	Proved	0.8	5.8	151	4.7
	Probable	10.4	4.0	1,330	41.4
Equity interest: 24.5%	**Total**	**11.2**	**4.1**	**1,481**	**46.1**

Note:

(1) Figures are subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them. The information is calculated based on 24.5% of equity interest for each asset held by the Company.

SALES AND CUSTOMERS

Overview

During the Track Record Period, our primary products were gold. We also sold other mineral products such as silver and copper. Details of our sale of products of different mines as of the Latest Practicable Date are set out as below:

Business	Main Products
Tajikistan Jilau/Taror Gold Mines	Gold ingots and gold concentrates
Kyrgyzstan Taldybulak Levoberezhny Gold Mine	Gold ingots
Australia Norton Gold Mine	Gold doré
Guyana Aurora Gold Mine	Gold doré
Colombia Buriticá Gold Mine	Gold doré and gold concentrates
Suriname Rosebel Gold Mine	Gold doré
Ghana Akyem Gold Mine	Gold doré

Our average selling price of gold mining business is determined based on the gold metal contained in the gold products despite the variant grades of the products. For details of the average selling price, please refer to "Financial Information — Sales volume and Average Selling Price".

Sale arrangements

The following table sets forth our sale arrangements during the Track Record Period and as of the Latest Practicable Date:

Business	Sales arrangements
Tajikistan Jilau/Taror Gold Mines	Gold ingots are sold to Tajikistan National Bank. By-products including silver ingots and copper are sold to third party customers through Zijin Mining Group. See "Connected Transactions — Zijin Mining Sales Framework Agreement".
Kyrgyzstan Taldybulak Levoberezhny Gold Mine	Gold concentrates and gold doré are generally processed to gold ingots by third party processor and then sold to market customers including the National Bank of Kyrgyzstan, which also has the right of first refusal of our gold ingots. See "Connected Transactions — Altynken Sales Agreement".
Australia Norton Gold Mine	Gold doré are sold to third party refineries in Australia.
Guyana Aurora Gold Mine	Gold doré are sold to third party customers through the Zijin Mining Group. See "Connected Transactions — Zijin Mining Sales Framework Agreement".
Colombia Buriticá Gold Mine	Gold concentrates and gold doré are sold to third party customers through the Zijin Mining Group. See "Connected Transactions — Zijin Mining Sales Framework Agreement".
Suriname Rosebel Gold Mine	Gold doré are sold to sold to external customers through the Zijin Mining Group. See "Connected Transactions — Zijin Mining Sales Framework Agreement".
Ghana Akyem Gold Mine	Gold doré are sold to third party refineries.

The salient terms of standard third party refining agreements are set out as below:

- *Term*. The initial terms are generally a fix term of one or two years agreed by both parties with an option of automatic extension.

- *Pricing*. The prices are generally based on the London Bullion Market Association (LBMA) Gold and Silver Fix, minus the refining charge which typically ranges from $0.3 to $2 per ounce.

- *Payments term:* Pricing and payment are usually completed on the date when the gold are delivered to the refinery. To further enhance risk control, some payments are made in advance on the shipment date, requiring the payment of interest at market rates for the period from the shipment date to the arrival date.

- *Delivery*. Professional gold transport providers agreed by both parties are responsible for delivering the doré to the refineries, and we generally cover the cost.

- *Weighing*. Refineries generally need to promptly weigh the doré we delivered upon receipt.

- *Renewal or termination*: Our agreements with suppliers typically grant both parties rights to renew or terminate the agreement with notice in writing.

Sale of mining products to Zijin Mining Group

During the Track Record Period, in the usual and ordinary course of business, we had sold mining products (including gold and other by-products (such as copper)) to Zijin Mining Group. Zijin Mining Group, acting as traders of various mineral resources, was responsible for, among other things, arranging for the sale of mineral resources produced by us to third party refineries, end-customers or traders. By leveraging the centralized and experienced sales capabilities of Zijin Mining Group, the sales coordination within the Group has been enhanced, thereby optimizing operational efficiencies and economies of scale, and securing favorable commercial terms. Therefore, during the Track Record Period, Zijin Mining Group was our largest customer, and we expect to continue this business relationship with the Zijin Mining Group upon completion of the Global Offering.

The prices charged by the Group to Zijin Mining Group were determined on arm's length basis, with reference to (i) the prevailing market price of the mineral resources in international market such as London Bullion Market Association, Shanghai Huatong Silver Exchange and Shanghai Future Exchange and (ii) trading margins on the price of gold doré, gold ingot and gold concentrate in the range of 0% to 1.3% based on arm's length discussion with reference to similar arrangements in the open market.

We can also decide whether to use the centralized sales under Zijin Mining Group considering the costs and the benefits when deciding future sales arrangements. As such, some of the gold mines owned by us would engage in direct sales and has sold its mining products to other independent traders during the Track Record Period, and some would engage Zijin Mining Group as direct customers (as part of the intra-group arrangements of Zijin Mining Group as a whole). According to Frost & Sullivan, it is the industry norm to sell mineral products to global traders, who then resell the products to end users. Our Directors are of the view that the centralized sales function of Zijin Mining Group has been enabling economies of scale in terms of prices we obtained from customers as well as business partners (for modifying the gold products to commodity-level gold), and has

been a mutually beneficial arrangements for both Zijin Mining Group and us. According to Frost & Sullivan, similar centralized sales arrangements are in place for other major mining companies.

See "Connected Transaction — Zijin Mining Group Sales Framework Agreement" for further details.

Customers

During the Track Record Period, the brand and quality of our products were widely recognized by the market. In addition, we have established stable relationships with precious metals refiners and trading companies. In line with industry practice, we generally do not engage in marketing activities. This is mainly due to the scarcity of gold Resources and strong demand for gold. We mainly identify and procure customers by inviting bids from potential customers. We believe our customers typically would not directly export our products to other countries, as the majority of our customers are metal refineries, which would process our products in order to produce gold, silver or copper products for higher purity.

During the Track Record Period, our top five customers in the respective year were Zijin Mining Group, refiners of precious metals and other non-gold metals as well as trading companies. For each of the years ended December 31, 2022, 2023 and 2024, revenue contributed by our top five customers amounted to US$1,275.4 million, US$1,769.4 million and US$2,517.0 million, respectively, accounting for 70.2%, 78.2% and 84.2% of our total revenue for the same periods, respectively. Revenue contributed by our largest customer for each of years ended December 31, 2022, 2023 and 2024 amounted to US$597.7 million, US$635.8 million and US$1,272.9 million, respectively, accounting for 32.9%, 28.1% and 42.6% of our total revenue for the same periods, respectively. For the six months ended June 30, 2025, revenue contributed by our top five customers and our largest customer amounted to US$1,964.8 million and US$989.0 million, respectively, accounting for 98.4% and 49.6% of our total revenue for the same period, respectively. The following tables set out details of our five largest customers during the Track Record Period:

Rank	Customer	Type of Products Sold	Nature of Business	Commencement year of business relationship with the Group	Place of incorporation	Credit terms	Settlement Method	Revenue (US$ in thousands)	% of Total Revenue
For the six months ended June 30, 2025									
1. . . .	Zijin Mining Group	Gold, Copper, Silver	Production of mineral or smelting products of gold, copper, lead, zinc, and other metals	2007	Mainland China	30 days	Wire transfers	989,005	49.6
2. . . .	Customer B	Gold	Refining and Gold Trading	2014	Australia	3 days	Wire transfers	380,144	19.0
3. . . .	Customer A	Gold	Financial institution	2008	Tajikistan	30 days	Wire transfers	302,188	15.1
4. . . .	Kyrgyzaltyn JSC	Gold	Mining, processing, refining, and sales of gold	2017	Kyrgyzstan	30 days	Wire transfers	169,946	8.5
5. . . .	Customer G	Gold	Refining and sales of gold	2025	Sweden/Geneva	30 days	Wire transfers	123,483	6.2
							Sub-total	**1,964,766**	**98.4**

Rank	Customer	Type of Products Sold	Nature of Business	Commencement year of business relationship with the Group	Place of incorporation	Credit terms	Settlement Method	Revenue (US$ in thousands)	% of Total Revenue
For the year ended December 31, 2024

Note: Customer A is a national bank established in 1991.
Customer B is a state-owned refining and gold trading company incorporated in 1987.
Customer C is a private gold smelting company incorporated in 1852.
Customer D is a refining and gold trading company incorporated in 1935 and listed on the Singapore Exchange.
Customer E is a private gold smelting company incorporated in 1995.
Customer F is a limited liability partnership that manages wholesale and retail trade of various commodities.
Customer G is a private refining and gold sales company.

To the best of our knowledge, during the Track Record Period and up to the Latest Practicable Date, except for Zijin Mining Group and Kyrgyzaltyn JSC, all of our major customers were Independent Third Parties. As of the Latest Practicable Date, except for Zijin Mining Group and Kyrgyzaltyn JSC, none of our Directors, their associates or any of our shareholders (who or which to the knowledge of the Directors owned more than 5% of our issued share capital) had any interest in any of our five largest customers in each year of the Track record Period.

PROCUREMENT AND SUPPLIERS

Our Operations

We procure various materials, such as diesel fuel, processing chemicals, and related consumables, as well as machinery and equipment for our production operations mainly from (i) Zijin Mining Group, (ii) different local suppliers where we operate and/or (iii) the original equipment manufacturers. We also procure various services, such as security services, transporting services, engineering services and loading and hauling services, from various local suppliers. Except for Zijin Mining Group, we usually source qualified suppliers through market research and request of fee quotes and bidding process. We require candidates to provide the relevant licenses and permits for reference. We may undertake further due diligence, such as background checks and risk assessments, as and when necessary. The selected suppliers are put on our approved supplier list, which is reviewed and updated on a periodical basis.

During the Track Record Period, we had purchased equipment and raw materials from certain subsidiaries of Zijin Mining, as part of the centralized procurement arrangement implemented by us so that we could procure equipment and raw materials in accordance with the procurement policy of Zijin Mining and enjoy the economies of scale (the "**Centralized Procurement Arrangement**"). The relevant equipment and raw materials include, among other things, mainly spare parts (i.e. pipes, rubber pipe fittings) and consumables (i.e. crusher and ball mill accessories). While we are at our liberty and are able to obtain alternative source of procurement of such equipment and raw materials of similar pricing and quality at comparable terms in the market, the Centralized Procurement Arrangement has enabled us to procure equipment and raw materials for its business operations together with the other business units of Zijin Mining Group such that the bargaining power vis-à-vis third parties are enhanced, thereby ensuring competitive pricing and stable supply. In general, Zijin Mining Group charges the costs of the relevant items as required by us, and a fixed percentage of the costs of such items as service fees to cover its overheads and human resources. Therefore, during the Track Record Period, Zijin Mining Group was our largest supplier, and we expect to continue this business relationship with the Zijin Mining Group upon completion of the Global Offering.

See "Connected Transactions — Zijin Mining Group Centralized Procurement Framework Agreement" for further details.

Suppliers

To secure competitive prices, we may enter into long-term agreements with certain suppliers for the provision of materials and/or service (including processing and refining) from time to time. Our suppliers generally transport the purchased materials or supplies to our facilities.

During the Track Record Period, all of our top five suppliers in the respective year were service or commodity providers such as suppliers of electricity, fuel, and transportation. For each year of the Track Record Period, purchases from our top five suppliers amounted to US$348.0 million, US$423.3 million and US$454.3 million, respectively, accounting for 30.7%, 30.4% and 31.2% of our purchases for the same periods, respectively. Purchases from our largest supplier for each year of the Track Record Period amounted to US$154.1 million, US$195.6 million and US$175.7 million, respectively, accounting for 13.6%, 14.0% and 12.1% of our purchases for the same periods, respectively. For the six months ended June 30, 2025, purchases from our top five suppliers and our largest supplier amounted to US$225.2 million and US$115.2 million, respectively, accounting for 29.1% and 14.9% of our cost of sales for the same period, respectively. The following table sets forth our top five suppliers for each year during the Track Record Period:

Rank	Supplier	Type of products/ services provided	Nature of Business	Commencement year of business relationship with the Group	Place of incorporation	Credit terms	Settlement Method	Purchase amount (US$ in thousands)	% of our total purchases
For the six months ended June 30, 2025									
1. . . .	Zijin Mining Group	Engineering and technical services, equipment and raw materials, etc.	Production of mineral or smelting products of gold, copper, lead, zinc, and other metals	2007	Mainland China	30 days	Wire transfers	115,227	14.9
2. . . .	Supplier B	Underground mining development contracting	A specialist underground mining contractor	2020	Australia	30 days	Wire transfers	37,166	4.8
3. . . .	Supplier C	Diesel oil	Oil-bearing material management and sales	2018	Suriname	30 days	Wire transfers	26,136	3.4
4. . . .	Supplier F	Engineering construction services	Australian proprietary company, wholly owned by a publicly traded ASX-listed gold producer.	2024	Australia	30 days	Wire transfers	25,615	3.3

							Sub-total	**348,027**	**30.7%**

Note: Supplier A, incorporated in 2015, is a private company that carries mineral exploration, project development and contract-mining services.
Supplier B, incorporated in 2008, is a private company specializing in underground mining contracting, raise drilling and related mining support services.
Supplier C, incorporated in 1968, is a private company that imports, stores, distributes and retails petroleum products and liquefied petroleum gas.
Supplier D, incorporated in 2012, is a private company engaged in the importation, storage, marketing and retail distribution of fuels, lubricants and liquefied petroleum gas.
Supplier E, incorporated in 2006, is a private company providing engineering, procurement, construction and commissioning services to the mining and resources sectors.
Supplier F, incorporated in 2017, is a private company wholly owned by a publicly traded ASX-listed gold producer.
Supplier G, incorporated in 1957, is a private company acting as the authorized dealer for Caterpillar and other heavy-equipment brands, offering sales, rental, parts and maintenance services.

The salient terms of standard third-party suppliers' agreements are set out as below:

- *Term*. We and our suppliers typically have framework agreements with a term of one year. We also have agreements with a term of two or three years with some of our suppliers.

- *Pricing*. We employ various pricing mechanisms for different types of bulk materials, including annual fixed prices established in framework agreements, floating prices determined by formulas linked to publicly available indices, and prices negotiated and determined monthly by both parties.

- *Payment*. Our suppliers usually grant us a credit term of 14 to 30 days from our receipt of the invoice for payment settlement. Our processing/refining transactions are combined with gold sales transactions involving the same refinery customer. The processing/refining transaction amount is deducted from the sales transaction amount, and only the net amount is reflected in invoices of the third-party processors.

- *Qualification*. We require our suppliers to possess a business license and other necessary permits. For certain types of supplies, we require our suppliers to possess specialized certifications or qualifications for the materials or goods they provide.

- *Quality control*. Our agreements with suppliers typically include warranty and return clauses to address any potential defects or non-conformities of the supplies.

- *Delivery*. Our suppliers are generally responsible for delivering purchased materials or goods to locations designated by us.

- *Renewal or termination*: Our agreements with suppliers typically grant both parties rights to renew or terminate the agreement with notice in writing.

- *Minimum purchase commitment*: Subject to case by case negotiation, our agreements with suppliers may include the minimum purchase commitment of certain amount. We generally do not agree to penalty in case of shortfall of minimum purchase commitment.

During the Track Record Period and up to the Latest Practicable Date, there had been no material breaches of our agreements with suppliers.

During the Track Record Period and as of the Latest Practicable Date, we did not experience any material impact to our operation or financial condition due to any significant fluctuation in prices set by our suppliers or any material breach of contract on the part of our suppliers.

During the Track Record Period and as of the Latest Practicable Date, except for the Zijin Mining Group, none of our Directors, their associates or any of our shareholders (who or which to the knowledge of the Directors owned more than 5% of our issued share capital) had any interest in any of our five largest suppliers except for Zijin Mining Group, in each year of the Track Record Period and the top five suppliers are all independent third parties.

During the Track Record, Zijin Mining Group was our largest customer and supplier. In practice, distinctive subsidiaries of the Zijin Mining Group (in their capacity as distinctive business units) acted as the centralized sales and procurement entities for the entire Zijin Mining Group (as a whole and including our Group), and therefore, the Zijin Mining Group was accounted for both our Group's customers and suppliers for such reasons. Our Directors are of the view that there is not likely to be material adverse change and deterioration in or termination of the relationship between the Group and the Zijin Mining Group, on the basis that (i) Zijin Mining is and will continue to be our Controlling Shareholder, and (ii) the commercial relationship between Zijin Mining and us is longstanding and mutually beneficial. Please refer to "Relationship with Zijin Mining" and "Connected Transactions — Non-exempt Continuing Connected Transactions" for further details.

CONTRACTORS

In line with industry practice, from time to time, we may engage contractors to support our mining activities, such as construction or improvement of our mining activities. For example, we engaged contractors for part of the mining activities in Tajikistan Jilau/Taror Gold Mines, Kyrgyzstan Taldybulak Levoberezhny Gold Mine, Australia Norton Gold Mine and Colombia Buriticá Gold Mine during the Track Record Period. During the Track Record Period and up to the Latest Practicable Date, we did not have any material disputes with our contractors that would have material adverse impact on our operation. The table below sets forth the breakdown of the category, number and fees incurred during the Track Record Period:

	As of or for the year ended December 31,						As of or for the six months ended June 30,	
	2022		2023		2024		2025	
	Number of contractor	Fee incurred (US$ in thousands)	Number of contractor	Fee incurred (US$ in thousands)	Number of contractor	Fee incurred (US$ in thousands)	Number of contractor	Fee incurred (US$ in thousands)
Construction and Engineering	41	150,702	43	99,548	46	114,988	42	55,100
Exploration	14	25,891	15	26,899	15	26,572	13	18,297
Mining and Processing	40	193,267	52	274,499	52	330,941	55	216,001
Total	**95**	**369,860**	**110**	**400,946**	**113**	**472,501**	**110**	**289,398**

Due to the intensive competition in the relevant contracting service market, we do not believe that it would be difficult for us to find alternative contractors to provide similar services on terms comparable to those with our existing contractors. For relevant risks, see "Risk Factors — Risks Related to Our Business and Industry — We rely on third-party contractors to conduct certain portion of our business."

To the best of our knowledge, during the Track Record Period and up to the Latest Practicable Date, except for Zijin Mining Group, our contractors were independent third parties. As of the Latest Practicable Date, none of our Directors, their associates or any of our shareholders (who or which to the knowledge of the Directors owned more than 5% of our issued share capital) had any interest in any of our contractors except for Zijin Mining Group. The table below sets forth the breakdown of the category, number and fees incurred with Zijin Mining Group during the Track Record Period:

	As of or for the year ended December 31,						As of or for the six months ended June 30,	
	2022		2023		2024		2025	
	Number of contractor	Fee incurred (US$ in thousands)	Number of contractor	Fee incurred (US$ in thousands)	Number of contractor	Fee incurred (US$ in thousands)	Number of contractor	Fee incurred (US$ in thousands)
Construction and Engineering	2	5,420	3	29,633	3	37,001	2	15,041
Exploration	1	147	2	467	2	505	1	239
Mining and Processing	3	4,221	3	23,745	2	34,780	2	20,248
Total	**6**	**9,788**	**8**	**53,845**	**7**	**72,286**	**5**	**35,528**

We typically select contractors through bidding invitations. Before engaging a contractor, we will assess their qualification, competence and experience. In particular, we require candidates to provide copies of their qualifications, licenses, certificates and permits for review and verification. We then form an evaluation committee and supervision committee and follow the prescribed selection procedure to shortlist candidates for business negotiations, after which we will make the final decision.

We require our contractors to comply with all applicable laws and regulations in respect of safety and environmental protection. We also require our contractors to abide by our safety management system and our internal control requirements. The relevant departments in our Company undertake regular check of our contractors to confirm that they are operating in accordance with the technical specifications of our project and industry standards. In the event we discover significant non-compliance or other issues in the implementation of our project, we are entitled to suspend such contractor's work and require them to take correctional actions. In addition, we require our contractors to purchase insurance for their employees and properties.

GOLD FORWARD CONTRACTS AND STREAMING

Gold Forward Contracts

As part of Norton Gold Fields' risk management strategy, during the Track Record Period, Norton Gold Fields engages in gold forward contracts to hedge against gold price fluctuations for a portion of its anticipated gold sales. Norton Gold Fields entered into master gold forward contracts with financial institutions in Australia and agreed to deliver a specified amount of gold products at a predetermined price on a set future date. These gold forward contracts do not qualify as financial instruments for accounting purposes, as they fall under the normal purchase/sale exemption due to the physical delivery of gold upon contract fulfillment. All related transactions are executed in strict compliance with Norton Gold Fields' internal policies relating to derivative instrument trading and other risk management policies. Those gold forward contracts expired on December 31, 2024, and Norton Gold Fields has not entered into any gold forward contracts as of the Latest Practicable Date. In 2022, 2023, 2024 and the six months ended June 30, 2025, total transaction amount under the gold forward contracts was US$159.7 million, US$266.8 million, US$227.6 million and nil, respectively.

Metal Streaming

On June 25, 2019, Continental Gold entered into a metal streaming agreement with Triple Flag and obtained a prepayment of US$100,000,000 from Triple Flag. Continental Gold shall satisfy its delivery obligations with 2.1% of the future gold production of the Colombia Buriticá Gold Mine (the "**Gold Delivery Obligation**") and silver production equals to 1.84 times of the Gold Delivery Obligation (the "**Silver Delivery Obligation**"). For each ounce of products delivered under the agreement, Triple Flag would pay 10% and 5%, respectively, of the gold and silver market prices prevailing at the time of delivery. Besides, the agreement also stipulates that Continental Gold may choose to repurchase the Gold Delivery Obligation in advance before December 31, 2021, and the consideration would be US$80,000,000 less 90% of the value of the gold delivered. Continental Gold redeemed the Gold Delivery Obligation in advance in 2020 and began to fulfill the Silver Delivery Obligation. In 2022, 2023 and 2024 and the six months ended June 30, 2025, revenue generated from Silver Delivery Obligation was US$5.9 million, US$8.6 million, US$10.5 million and US$4.0 million, respectively.

Hedging Strategies and Internal Policies

We have set up guidelines for our foreign exchange and commodity hedging activities. It categorizes foreign exchange activities into current account, capital account, and related transactions, with hedging intended to manage exchange rate risk from non-functional currency assets and liabilities. Foreign exchange transactions include spot or forward trades, swaps, options, and structured financial instruments. Commodity hedging involves gold leasing and hedging operations for precious metals like gold and silver, using futures, forwards or options to mitigate price volatility. The principles for

hedging activities include compliance with laws, fairness, and a focus on hedging rather than speculation, with foreign exchange activities aimed at locking in forward rates and commodity hedging focused on stabilizing prices.

We have established internal policies and procedures for the management of foreign exchange and commodity price risks arising from our international operations and trading activities. Our internal policies set forth the framework for identifying, assessing, and mitigating risks associated with fluctuations in foreign exchange rates and commodity prices, particularly for precious metals such as gold and silver.

Our hedging activities are conducted for risk management purposes and not for speculative gain. All hedging transactions, including but not limited to forwards, futures, swaps and options, are subject to a rigorous approval process involving the relevant business units, financial management and executive leadership: (i) the business transaction department proposes hedging needs, including specific methods, duration, types, total hedging volume, direction, stop-loss limits, and funding requirements; (ii) the proposal is confirmed by the business supervisor, reviewed by the Chief Financial Officer, and approved by the Chief Executive Officer; (iii) the business transaction department submits the funding plan to the finance department for approval; (iv) the finance department handles fund allocation or obtains bank credit; and (v) the business transaction department manages hedging settlements and deliveries, completes transaction ledger registration and archiving, while the finance department handles subsequent accounting. Annual hedging plans are reviewed and approved by our Board.

To ensure effective risk control, we have implemented a system of internal controls, including independent risk management personnel and regular and ad hoc reviews of hedging activities. Our trading and risk management personnel closely monitor various risk factors, including but not limited to (i) trading risk arising from errors in orders, unauthorized transactions, and failure to execute stop-loss or take-profit limits, (ii) market risks related to changes in international and domestic macroeconomic conditions and the fundamentals of metal supply and demand, (iii). funding risks involving liquidity, short squeeze scenarios, and exchange rate fluctuations, (iv) regulatory risks associated with market trading rules and legal regulations, particularly position limits and expiration dates, and (v) technical risks related to system, network, and communication failures, as well as data security issues.

We establish an efficient emergency mechanism to achieve sensitive risk warnings, rapid handling of risk events, effective containment of risk spread, and timely remediation of losses. This mechanism will be activated immediately when sudden events cause significant market changes impacting trading contracts. We have clearly defined stop-loss. If risk events such as contract value approaching stop-loss limits, margin calls, or counterparty default or bankruptcy occur, personnel must promptly report to the business supervisor. The Chief Executive Officer, supervisor, and the Chief Financial Officer will urgently discuss and issue hedging instructions and other response measures, while also reporting to our Board. Additionally, a profit and loss control mechanism should be established for futures hedging activities, allowing for temporary or phased adjustments

within our Board's authorized limits. Our hedging activities must not exceed these profit and loss limits. We also maintain strict confidentiality protocols regarding all hedging strategies and transactions.

Our risk management framework is designed to ensure compliance with applicable laws and regulations, safeguard our assets, and support the stability of our financial results in the face of market volatility. We will continue to monitor and enhance our hedging policies and procedures in line with industry best practices and evolving regulatory standards.

During the Track Record Period, we entered into gold forward contracts to manage gold price volatility and secure stable cash flows. We only engaged in limited hedging activities during the Track Record Period, mainly because the international gold price was generally in a rising cycle.

Going forward, our hedging strategy will continue to be responsive to gold price fluctuations. When gold prices are expected to decline or become highly volatile, we may use fixed-price forwards, options (such as puts or collars), or swaps to hedge a portion of our future production or revenue. The choice of instrument and hedge ratio will be determined based on market conditions and risk evaluation. All hedging activities will follow our established internal controls and approval processes.

UTILITIES

Electricity

Our Operations in Tajikistan Jilau/Taror Gold Mines

The Tajikistan Jilau/Taror Gold Mines primarily obtain electricity through two 110KV high-voltage lines from the substation in Pangjakent City. The pricing for electricity is standardized by the government of Tajikistan. During the Track Record Period and up to the Latest Practicable Date, we did not experience any significant interruptions in our operations due to power shortages or outages.

Our Operations in Kyrgyzstan Taldybulak Levoberezhny Gold Mine

The Kyrgyzstan Taldybulak Levoberezhny Gold Mine's electricity supply is provided by the Kyrgyz National Grid Company, with the specific entry point at the Beslovka substation in the Kemin District of Chuy Region. Electricity is transmitted via a 110KV overhead line to our Zim 110 substation. The electricity pricing is set by the Kyrgyz government at a statutory rate. During the Track Record Period and up to the Latest Practicable Date, we did not experience any significant interruptions in our operations due to power shortages or outages.

Our Operations in Australia Norton Gold Mine

The Paddington Mill is supplied with electricity from the grid, while the Binduli processing plant uses a combination of diesel and solar power. Electricity costs vary by locations, with specific market rates set forth in the electricity supply agreements applicable to each location. During the Track Record Period and up to the Latest Practicable Date, we did not experience any significant interruptions in our operations due to power shortages or outages.

Our Operations in Guyana Aurora Gold Mine

The Guyana Aurora Gold Mine's current electricity supply consists of approximately 80% diesel-generated power, with pricing based on diesel procurement costs, and approximately 20% solar power. The solar power pricing is variable and settled according to the terms of an investment power supply service agreement with Zijin Longking Clean Energy (Georgetown) Co., Ltd., linked to the monthly average diesel price. During the Track Record Period and up to the Latest Practicable Date, we did not experience any significant interruptions in our operations due to power shortages or outages.

Our Operations in Colombia Buriticá Gold Mine

The Colombia Buriticá Gold Mine's electricity supply primarily comes from Empresas Públicas de Medellín, a state-owned utility company in Colombia and the main energy provider in the Antioquia region. The electricity pricing is determined within the framework set by the Colombian Energy and Gas Regulatory Commission and through medium- to long-term power purchase agreements with Empresas Públicas de Medellín. Specific price fluctuations are influenced by the national electricity auction mechanism, local grid stability, and price indices. During the Track Record Period and up to the Latest Practicable Date, we did not experience any significant interruptions in our operations due to power shortages or outages.

Our Operations in Suriname Rosebel Gold Mine

We primarily obtain electricity through a water plant near the Rosebel mind area. We also has a 5MW photovoltaic power generation equipment. The Saramacca mining area uses diesel power generation. Two power purchase arrangements ("**PPAs**"), totaling 32 MW, involve pricing based on variable and fixed monthly costs, with ongoing discussions for new terms since December 2022. The PPA-1 of 13MW was signed with the Suriname Ministry of Natural Resources, under which the electricity is supplied by Suriname Aluminum Company L.L.C. The electricity price fluctuates based on market gold prices, ranging from $0.09 to $0.14 per kWh, depending on gold prices from below $1,550 to above $1,850 per ounce. The PPA-2 of 13 MW plus expandable 6 MW was signed with the Suriname Electricity Company (EBS), which includes fixed and variable costs. The fixed cost is a fixed amount, subject to annual inflation adjustments. The variable cost is calculated as electricity usage under PPA-2 multiplied by the sum of (i) a fixed coefficient (adjusted annually for inflation correction) and (ii) the result of the

delivered costs of heavy fuel oil divided by generation thermal efficiency. During the Track Record Period and up to the Latest Practicable Date, we did not experience any significant interruptions in our operations due to power shortages or outages.

Our Operations in Ghana Akyem Gold Mine

The Ghana Akyem Gold Mine's electricity supply is primarily provided by the Volta River Authority, managed by the government of Ghana. The substation and transmission lines were funded by us, but their operation and maintenance are conducted by the government. During the Track Record Period and up to the Latest Practicable Date, we did not experience any significant interruptions in our operations due to power shortages or outages.

Water

Our Operations in Tajikistan Jilau/Taror Gold Mines

The Tajikistan Jilau/Taror Gold Mines sources water from wells drilled by Zeravshan, while production water is drawn from channels managed by the Pengjikent Water Authority, with water pricing standardized by the Tajikistan government. During the Track Record Period and up to the Latest Practicable Date, there were no significant interruptions in operations due to water supply issues.

Our Operations in Kyrgyzstan Taldybulak Levoberezhny Gold Mine

The Kyrgyzstan Taldybulak Levoberezhny Gold Mine's produces water primarily from the Taldybulak surface water. While Kyrgyz law does not require a permit for surface water use, it mandates the installation of calibrated water meters and the payment of surface water resource fees. In compliance, we have installed calibrated water meters at the water source intake and at the entry points of each water unit, with monthly water usage recorded and fees calculated accordingly. During the Track Record Period and up to the Latest Practicable Date, there were no significant interruptions in operations due to water supply issues.

Our Operations in Australia Norton Gold Mine

The Australia Norton Gold Mine sources its water from various old open pits in the tenement, which is the mixture of underground inflow water and surface rainfall rundown water. We have obtained the licenses to take water for underground water, and paid the one-time fees. There are no additional fees required for the use of underground water. During the Track Record Period and up to the Latest Practicable Date, there were no significant interruptions in operations due to water supply issues.

Our Operations in Guyana Aurora Gold Mine

The Guyana Aurora Gold Mine sources its production water from an on-site collection pond, while domestic water is drawn from underground wells. We have successfully registered our underground well usage with the relevant local government authority. There are no fees required for the use of underground water. During the Track Record Period and up to the Latest Practicable Date, there were no significant interruptions in operations due to water supply issues.

Our Operations in Colombia Buriticá Gold Mine

The Colombia Buriticá Gold Mine site uses pit water for production, which is treated on-site to meet industrial and environmental standards. As pit water is generated through mining activities, there is no cost for water acquisition. During the Track Record Period and up to the Latest Practicable Date, there were no significant interruptions in operations due to water supply issues.

Our Operations in Suriname Rosebel Gold Mine

The Suriname Rosebel Gold Mine primarily uses recycled water from TSFs for its processing plant, which handles approximately 10 million tonnes of ore annually. Drinking water is sourced from shallow wells, treated, and supplied to the camp and plant. During the Track Record Period and up to the Latest Practicable Date, there were no significant interruptions in operations due to water supply issues.

Our Operations in Ghana Akyem Gold Mine

The Ghana Akyem Gold Mine sources its water from self-extracted underground water and pit water, which incurs no usage fees or resource taxes. The primary cost associated with water usage is electricity. During the Track Record Period and up to the Latest Practicable Date, there were no significant interruptions in operations due to water supply issues.

LOGISTICS

During the Track Record Period, Zijin Mining Group were primary responsible for the logistics of the products and services we procured under the Centralized Procurement Arrangement. We also engage professional third-party logistics service providers for the cross-border transporting of our products to customers by air and/or land transport and, to a lesser extent, transporting of certain materials we procured from suppliers. Generally, such logistics service providers are responsible for maintaining insurance associated with the transportation and bear the relevant risks. During the Track Record Period and up to the Latest Practicable Date, we did not experience any material shortage of transportation capacity.

INVENTORY

Our inventories mainly include raw materials, work-in-progress, turnover materials and inventory consumables. Our inventory personnel are generally responsible for implementation of our inventory policies. Our inventory personnel are separated into: (i) a warehousing team, which is responsible for physical management, such as receiving, storing and issuing supplies; and (ii) an inventory team, which is responsible for managing our inventory system and data, such as the actual levels for individual items. Our inventory levels are managed pursuant to our consumption record and lead time for supplies. All inventory information is recorded in our inventory system and categorized for ease of data analysis. We set the minimum and maximum inventory levels in our inventory system, which assists us arrange timely procurement. We undertake inventory review routinely and periodically. We generally increase our inventory of raw materials prior to certain predicable events, such as monsoon seasons.

For details of relevant risks, see "Risk Factors — We are subject to risks relating to inventory, including the risk of obsolescence and impairment, as well as the transport and storage of inventory."

QUALITY CONTROL

Quality control is crucial to our operations. We have a dedicated product quality department, a measurement team and a sampling team to ensure quality control. We have also established a stringent quality control system to ensure the quality of our products throughout our different production stages. If a quality issue is raised by a customer, we will undertake comprehensive investigations and consult with the relevant customers, and, to the extent needed, may submit any dispute to qualified third-party organization for arbitration. During the Track Record Period, we did not receive any material complaints due to quality issues of our products.

With respect to mining and processing, we have implemented a comprehensive quality control system to monitor the quality at each key stage of our mining and processing procedures. We have established specific guidelines for procedures to manage the quality of the ores mined. Ores mined from our mines are sample-tested at our laboratories on a regular basis to monitor the grade of the ore. The quality control system and guidelines for procedures are applied consistently to all the mines owned or operated by us. According to the overall quality control system and guidelines, each mine is also required to maintain a quality management system aligned with ISO9001 principles. They are also encouraged to employ scientific quality management techniques to comply with industry, national, and international standards. Quality responsibilities are clearly defined across all levels, incorporating product quality into economic accountability and performance assessment frameworks.

We provide quality and technical specifications to our suppliers and generally require suppliers to provide warranties for the supplies they provide. We inspect shipments of raw materials before accepting delivery. We require our third-party contractors to meet our qualification requirements and conduct their operations in accordance with our internal standards, industry standards and relevant laws and regulations. We regularly inspect the work of our suppliers, and we conduct full quality inspections upon project completion. During the Track Record Period and up to the Latest Practicable Date, there had been no material quality issues or breach of warranties in respect of the supplies to the Group.

COMPETITION

According to Frost & Sullivan, the gold mining industry has become increasingly concentrated in recent years. This trend is largely driven by mergers and resource integration among leading gold producers. Major gold mining companies, with their efficient operations, global presence, financial strength, and other competitive advantages, are now at the forefront of the industry. These large gold mining companies have been able to achieve economies of scale through consolidation, which has allowed them to optimize production processes and reduce unit costs. The top 15 global gold producers contributed approximately 30.5% of the global gold production in 2024. Among these leading companies, our gold Reserves and gold production volume on a consolidated basis ranked ninth and eleventh globally, respectively, as of December 31, 2024 and in 2024, according to Frost & Sullivan.

Our major competitors are large international companies. We primarily compete based on our ability to obtain gold Reserves and Resources, which is dependent on our financial conditions, technical ability, equipment and machinery and human capital. We also compete with international players in acquiring attractive gold mining properties. The mining industry is a capital-intensive industry that requires significant technical, exploration and management experience. Moreover, mining is subject to extensive regulations and requires a number of licenses and permits to operate. These factors constitute significant barriers to enter the gold mining industry.

For further details of the competition landscape and our market position, see "Industry Overview."

OUR OPERATIONS IN NON-IOSCO COUNTRIES

Among the countries where we generated revenue during the Track Record Period, Tajikistan, Kyrgyzstan, Guyana and Suriname are Non-IOSCO MMOU Countries and have not signed any regulatory cooperation agreement or memorandum of understanding with the SFC or the Stock Exchange. This may present certain difficulties for the Hong Kong regulators to seek regulatory assistance and information from the statutory securities regulators in such Non-IOSCO MMOU Countries in a readily available manner.

Our business in the Non-IOSCO MMOU Countries, on an aggregate basis, is significant to our operations. In 2022, 2023 and 2024 and the six months ended June 30, 2024 and 2025, our revenue generated from our operations in the Non-IOSCO MMOU Countries in aggregate contributed to 59.1%, 60.0%, 56.7%, 55.3% and 51.8% of our total revenue, respectively, and the net profit attributable to the Group from our operations in the Non-IOSCO MMOU Countries in aggregate contributed to 108.7%, 92.5%, 76.5%, 69.0% and 53.5% of our total net profit, respectively. As of June 30, 2025, we had substantial mining assets in Non-IOSCO MMOU Countries. The Mineral Resources and Ore Reserves of the mines operated in the Non-IOSCO MMOU Countries accounted for 51.9% and 51.8% of our total Mineral Resources and Ore Reserves as of June 30, 2025, respectively.

We produce 424 koz (approximately 13.2 tonnes), 667 koz (approximately 20.8 tonnes) and 664 koz (approximately 20.7 tonnes), 324 koz (approximately 10.1 tonnes) and in 2022, 2023, 2024 and the six months ended June 30, 2025 from our operations in the Non-IOSCO MMOU Countries on a consolidated basis, respectively, representing 50.0%, 57.9%, 53.0% and 52.9% of our total gold production on a consolidated basis for the same periods, respectively.

Other than the Non-IOSCO MMOU Countries as set out above, all the countries where we generated revenue or had operations during the Track Record Period were IOSCO MMOU Countries.

While we continue to expand globally and enhance our market positions in various countries, we expect the contribution of our business in Non-IOSCO MMOU Countries to remain significant in the near future. We will continue to monitor the significance of our business in the Non-IOSCO MMOU Countries and ensure compliance with Rule 8.02A of the Listing Rules, by:

(1) **Maintaining a place of central management and control in Hong Kong:** our Company is incorporated in Hong Kong. The key management team and board of directors of our Company are residents in Hong Kong, the PRC and/or Canada, and all of the senior management of our Company manage and control or will manage and control the affairs of our Group from its office in Hong Kong, with the assistance of the local employees situated in the country where the mining projects are located.

(2) **Ensuring that access to the books and records of our operating entities are available to the Hong Kong regulators:** Notwithstanding that each of Tajikistan, Kyrgyzstan, Guyana and Suriname is not a signatory to the IOSCO MMOU, we undertake to maintain a set of digital copy of books and records of the Tajikistan, Kyrgyzstan, Guyana and Suriname entities in our Company's registered office in Hong Kong upon and after Listing.

(3) **Provision of Information to Regulators:** In addition, Zijin Mining is listed on both the Stock Exchange and the Shanghai Stock Exchange, and is regulated by the SFC, the Stock Exchange, the CSRC and the Shanghai Stock Exchange (collectively, the "**Regulators**"), and Zijin Mining is obliged to provide the Regulators with all information relating to the operations in the Non-IOSCO MMOU Countries upon request under the applicable laws and regulations.

Based on the foregoing, we believe we are and will be in compliance with Rule 8.02A of the Listing Rules. Based on the internal control measures implemented by the Company, documentation provided by the Company, the Joint Sponsors' due diligence and discussions with the Company, the Joint Sponsors are of the view that the Company are and will be in compliance with Rule 8.02A of the Listing Rules.

INTELLECTUAL PROPERTY

We conduct our business under the trade names of "Zijin Gold International".

During the Track Record Period, we did not possess intellectual property rights which are material to our business operations.

During the Track Record Period and up to the Latest Practicable Date, we were not involved in any material dispute or litigation relating to infringement of trademarks and patents nor, to the best of our knowledge, did we infringe any trademarks and patents belonging to other parties.

EMPLOYEES

We believe that our employees are critical to our success. Our human resources department is responsible for recruiting, managing and training our employees. As of June 30, 2025, we had 8,665 full-time employees in total.

The following table sets forth the number of our employees by function and by region as of the dates indicated:

	As of December 31,			As of June 30,
Function	**2022**	**2023**	**2024**	**2025**
Production	5,119	6,260	6,383	6,294
Sales	58	69	62	48
Technology	646	794	728	724
Finance	99	123	131	164
Administration	950	1,436	1,482	1,435
Total[(1)]	**6,872**	**8,682**	**8,786**	**8,665**

Notes:

1. The numbers shown above do not include Kazakhstan Raygorodok Gold Mine and PNG Porgera Gold Mine.

We have maintained a good relationship and expect to maintain an amicable relationship in the future with our employees. During the Track Record Period and up to the Latest Practicable Date, there were no material strikes which had an adverse impact on our operation and no material disputes between our Group and our employees.

We have established comprehensive human resources systems to manage recruitment, employee development, salary and compensation, among other things. We design our remuneration packages by reference to the local mining industry benchmark and are competitive compared with our competitors. We also make contributions to mandatory insurance for our employees as required by the relevant laws and regulations of jurisdictions where we operate, respectively, and provides employee benefits such as commercial insurance.

ENVIRONMENTAL, SOCIAL AND GOVERNANCE

We are committed to establishing the "Zijin Model" for sustainable development and building a responsible ESG framework. Zijin Mining consistently maintains high ESG standards and has achieved significant results, such as an LSEG ESG rating of 89 in 2024, ranking among the top five of 525 global metals and mining companies assessed by LSEG. Under Zijin Mining's ESG framework, our ESG practices have been widely recognized in the regions where we operate during the Track Record Period. Our commitment to environmental, social and governance matters is a key factor ensuring our long-term sustainable development and continued business success. Accordingly, we place great importance on implementing the environmental, social and governance policies at the highest level of our Company.

Under Zijin Mining's ESG framework, the ESG practices have been widely recognized in the regions where we operated during the Track Record Period. For example, Continental Gold received the Promoting the Establishment of the "Global Zero Harm Vision" Excellence in Safety Culture Award and the "2024 Sustainable Development Certification" from the Environmental Management Bureau of Antioquia. Zeravshan received the "Outstanding Contribution to Environmental Protection Award" from the Environmental Protection Department of Sughd Province. Altynken LLC received the "Labor Protection and Occupational Health Award", and AGM Inc. received the "Annual Carbon Footprint Reduction Award", among others. Upon our Listing, we will continue to adopt Zijin Mining's best practices and adhere to international ESG standards to promote green and sustainable development.

International industry standards and best international practices have been applied in our mines. For instance, Zijin Mining is a member of the World Gold Council and among the first gold mining companies in China to pledge adherence to the RGMPs. We have aligned our policies with industry standards to ensure that gold is responsibly produced under strict ESG governance. We prioritize human rights for our employees and communities, avoid involvement in conflicts, and conduct rigorous risk assessments through our supply chain. We continuously evaluate and improve our ESG performance and enforce systems to ensure legal and sustainable mining practices.

Furthermore, we have also been in compliance with International Organization for Standardization (ISO) 14001 and Global Reporting Initiative (GRI) standards. We have established the institutional standards and management practices by adhering to relevant guidelines, local regulations, and site-specific laws at each mine. This alignment with higher standards helps mitigate the risks of tailings dam failures and environmental leakage incidents.

In addition, we have established a sound ESG-governance structure under which the Board formulates our overall ESG strategies and goals. The Board participates in the analysis and evaluation of the materiality of the Company's ESG issues and the identification of ESG risks, and approves substantive issues that have a significant impact on the Company. The Board also determines the Company's priorities for sustainable development, and guides affiliated enterprises to establish an ESG targets management system that covers metrics such as pollutant emissions, energy consumption and water resource management. Besides, the Board keeps an eye on the execution of goals and reviews its progress. Among the board members, Huang Zhihua, our Chief Operating Officer and executive Director, is in charge of ESG matters. In addition, our ESG Department leads our ESG management efforts, focusing on developing systems, tracking industry trends, coordinating resources, and compiling annual reports. It ensures effective communication with the Board and reports progress to the Board. Functional and business support departments manage specific ESG issues, set performance targets, and assist in report compilation. Business supervisory departments oversee ESG management in business segments, promote system transformation, and support report compilation and stakeholder communication. Huang Yuanguang, our vice president, is responsible for the daily execution of our various ESG policies. In accordance with the ESG work plan set by the Board, the ESG core team and various departments, along with the ESG responsible staff at each mine, will implement specific ESG tasks. They will also supervise and support each department in carrying out the plan, report to management on a regular basis, gather statistics, and analyze ESG data and information on a daily basis, and assist in the preparation of the annual ESG report. Duties of our subsidiaries mainly include, in each entity, (i) establishing ESG organizational structures and appointing dedicated or part-time leaders and staff for ESG tasks; (ii) developing and refining ESG management systems, standards, and processes; (iii) creating and implementing ESG performance plans; (iv) managing, compiling, and reporting relevant information and data; (v) conducting internal ESG training and external communication; and (vi) establishing regular communication mechanisms with shareholders and providing necessary feedback and responses. The comprehensive ESG-governance structure we have developed has laid a solid foundation for our ESG performance.

We set up metrics and targets to assess and manage ESG related risks. For instance, we consistently monitor on two key indicators that have substantial impacts: carbon emissions and tailings management.

We may not be able to fully comply with these international industry standards at all times, which may impact our business, reputation, our results of operations and our ability to raise funds or obtain financing if we are perceived to have deficiencies in our ESG practice. For details, see "Risk Factors — Risks Related to Our Business and Industry — The failure of a tailings storage facilities could adversely impact our business, reputation and results of operations" and "Risk Factors — Risks Related to Our Business and Industry — Maintaining and increasing compliance with ESG standards and implementing initiatives to sustain our care for local communities and building our reputation could increase our operational costs".

We aim to continuously enhance our systematic environmental management system, optimize water resources, energy, and logistics management strategies, judiciously use natural resources, practice the principles of a circular economy, strictly control tailings, waste, wastewater, and pollutant management, and minimize the negative impact on the natural environment. Simultaneously, we actively address climate change, consider potential climate risks and opportunities impacts, continuously increase the proportion of renewable energy use through self-built photovoltaics and participation in green energy trading, as well as contribute to reduction of carbon emission.

We always prioritize the construction of green mines, actively seek a balance between mining development and ecological protection and strive to adhere to the development concept of "Mutual Prosperity and Development" with the community. We emphasize corporate social value, continuously enhancing investment in community development, employee growth, and occupational health. We actively promote economic development in the countries and regions in which our projects are located and share the benefits of corporate development with local communities.

We prohibit all forms of corruption and bribery and require our employees to comply with the anti-bribery laws and regulations applicable in the countries where they work and the countries where they conduct business. We have established a set of policies and regulations, including the Reporting Management Rules and Internal Supervision Rules, demonstrating our zero-tolerance and stringent investigation stance towards bribery and corruption. We hold anti-corruption training for our Board, senior management and employees on a regular basis. In 2024, we held a total of 70 anti-corruption training sessions.

Environmental Protection

We are fully committed to environmental protection and to adhering to the highest standards for sustainable development. Our business operations are subject to various legal requirements in relation to environmental protection, such as air pollution, wastewater discharge, solid waste disposal and noise control, under the relevant local laws and regulations. For more details, see "Regulations."

We use green exploration technologies, incorporating "green exploration" as one of the drilling quality acceptance criteria, and fully utilize remote sensing technologies (including drones, satellite imagery) and geophysical methods to reduce damage to surface vegetation and ecosystems. During the Track Record Period, we invested in dedicated environmental funds. We are committed to deploying clean energy solutions, actively promoting clean energy to replace traditional fuels, with the Tajikistan Jilau/Taror Gold Mines, the Colombia Buriticá Gold Mine, and the Suriname Rosebel Gold Mine achieving 100% clean energy utilization in purchased electricity. We are advancing photovoltaic power generation projects, with the Guyana Aurora Gold Mine completing the first phase of a 3MW and the second phase of a 15MW photovoltaic project in 2024, and the Suriname Rosebel Gold Mine continuing the construction of a 25MW photovoltaic project.

We are committed to promoting green mining in our global operations, placing a high emphasis on ecological restoration during the mine development process. During both the construction and production phases, we promptly carry out ecological restoration in stabilized areas, creating favorable conditions for a healthy ecological environment at the mines. This approach surpasses the international norm of conducting "reclamation" only after mining operations have concluded. We focus on controlling mine wastewater discharge, with most of our gold mines achieving near-complete wastewater recycling and zero discharge. Additionally, we have invested in building online monitoring systems downstream of the mines, which automatically monitor the water quality of downstream water bodies 1–2 times daily, ensuring that mine development does not impact downstream areas.

Our Environmental Protection Policy

In order to systematically address the various environmental protection matters arising from our operations, we have formulated environmental protection policies and measures, which set out the detailed procedures for undertaking various environmental protection work.

Our environmental protection policies and measures generally cover the major aspects of our operations, such as:

- **Hazardous materials**. We reinforce the groundwork at our industrial sites and store raw materials in our facilities in a way which prevents leakage of hazardous materials into the soil. Hazardous waste is segregated into specific color-coded waste receptacles. Generally, explosives packaging and cyanide packaging are removed for disposal by the qualified suppliers.

- **Prevention of air pollution**. In relation to processing plants, dust suppression sprays are utilized and dry dust collection systems have been installed on ore crushing circuits/conveyor belt transfer points. In relation to underground mining, we install major ventilation systems (including ventilation exhausts) and use water for dust suppression.

- **Wastewater treatment**. We have constructed water recycling systems to ensure that wastewater will be recycled for use as far as practicable. For wastewater which will be released to the external environment, we ensure that the wastewater must go through sediment retention systems before being discharged. We carry out relevant treatment at tailings dams to prevent groundwater pollution. We also maintain a comprehensive database of processed water data.

- **Solid waste**. Scrap steel and other clean underground wastes are collected for beneficial re-use where appropriate. Lead batteries are recycled by accredited vendors. We also employ a waste compactor to reduce landfill volumes and associated emissions. In addition, we divert wooden materials, plastics, and other recyclables away from landfill for recycling by approved vendors, thereby reducing landfill volumes and associated emissions.

- **Noise control**. We take various measures to reduce the noise generated in our operations, such as selecting low-noise equipment and machinery, installing silencers, and adsorption materials, as well as noise isolation and elimination equipment.

- **Tailing Storage**. Extensive monitoring systems are included in the design of tailings dams as early warning mechanisms. These systems also enable ongoing assessment of the stability and integrity of the structures. Inspections are conducted as per international standards. In addition, independent auditors conduct regular third-party audits.

- **Biodiversity**. Flora and fauna assessments and updates are undertaken to ensure appropriate planning and impact management. In the context of agreed post-mining land use, sequential re-vegetation is conducted for the establishment of self- sustaining ecosystems. We transplant various exotic and indigenous species to enhance biodiversity. There is also waste receptacle management to reduce risk of vermin infestation.

We have been tracking Scope 1 and Scope 2 greenhouse gas emissions, waste discharge, water reuse rate and use of resources during the Track Record Period. The following tables illustrate the Scope 1 and Scope 2 greenhouse gas emissions, generation of hazardous solid waste, water reuse rate and use of resources during the Track Record Period:

- Greenhouse Gas Emission

	Year ended December 31,			Six months ended June 30,
	2022	2023	2024	2025
Scope 1 Greenhouse Gas Emissions (tonne)	194,493.1	456,889.5	433,329.4	230,761.5
Scope 2 Greenhouse Gas Emissions (tonne)	251,226.4	106,940.0	102,293.1	52,558.6
Total	**445,719.4**	**563,829.5**	**535,622.5**	**283,320.1**

- Waste Discharge

	Year ended December 31,			Six months ended June 30,
	2022	2023	2024	2025
Hazardous Waste (kt)	140.4	5.9	6.6	1.4
Non-hazardous Waste (Mt)	82.8	162.1	156.5	90.4

- Water

	Year ended December 31,			Six months ended June 30,
	2022	2023	2024	2025
Water Reuse Rate (%)	94.9	95.1	88.8	87.8
Waste Water (kt)	22,800.6	18,166.7	7,881.5	4,891.2

- Use of Resources

	Year ended December 31,			Six months ended June 30,
	2022	2023	2024	2025
Electricity Consumption (kWh)	506,711,079	775,338,326	842,191,555	446,342,969
Water Consumption (t)	208,326,972	294,394,769	136,122,924	51,250,678

The increases in greenhouse gas emissions, non-hazardous waste and use of resources in 2023 were primarily attributed to the inclusion of data from the Suriname Rosebel Gold Mine following its acquisition that year. The significant reduction in hazardous waste and the increase in non-hazardous waste in 2023 were due to the reclassification of approximately 130,000 tons of cyanide tailings from hazardous to non-hazardous waste following the amendments to the PRC National Catalogue of Hazardous Wastes.

The slight decrease in greenhouse gas emissions in 2024 was mainly due to the implementation of some emission reduction projects, such as rational planning of transportation routes, which reduced diesel consumption. The increase in electricity consumption in 2024 was mainly due to the increase in production volume. The increased electricity consumption was entirely from purchased clean energy. The decrease in water consumption in 2024 was primarily due to further optimization of production processes and the implementation of more water-saving measures. Additionally, we increased the collection and use of rainwater, and some of the rainwater usage is not included in our total water consumption figures.

Our greenhouse gas emission target is the greenhouse gas emission for per unit of industrial added value decreases 18% by 2029, compared to 2020. By 2030, the use of renewable energy will account for more than 30% of the energy to be used, accelerating the transformation of the energy structure from the source. In environmental management, we will continuously maintain "zero environmental pollution incidents" to ensure that all production and operational activities do not cause irreversible damage to the environment. Our water consumption target is to maintain a water reuse rate of no less than 90% and reduce the water consumption for per unit of revenue by 10% by 2029, compared to 2020. Companies discharging waste water will continuously ensure 100% compliance with discharge standards. In waste management, we adhere to compliance as a baseline, strictly following the environmental laws and regulations of relevant jurisdictions and relevant international initiative standards. By 2030, the comprehensive utilization rate of general waste will increase by 5%, compared to 2020, and the harmless disposal rate of hazardous waste will remain at 100%. In land use, we follow the principle of "production, construction, and restoration simultaneously," ensuring that as one area of the mining site stabilizes, another is restored, with 100% of recoverable land being restored each year. In terms of biodiversity, each mine will fulfill the actions and targets outlined in its Biodiversity Management Plan (BMP) by 2030 to safeguard and manage biodiversity within the respective mining area.

In addition, due to the rapid advancement of environmental protection laws, regulations and industry standards, we closely monitor the latest developments in regulations and standards and regularly update our environmental protection policies and measures with the aim to ensure and uphold the highest possible standards.

Corporate Social Responsibility

We place great emphasis on fulfilling our corporate social responsibilities and are committed to ensuring that the communities and regions in which we operate can genuinely benefit from our development. We actively explore solutions that can bring a positive impact to the local community. We take practical actions in promoting employment, rural revitalization, improving people's livelihoods, public welfare education and other area.

We emphasize corporate social value, continuously enhancing investment in community development, employee growth, and occupational health. We actively promote economic development in the countries and regions in which our projects are located and share the benefits of corporate development with local communities. During

the Track Record Period, we invested in community development in the regions where we control mines. For example, our "Sowing the Future" agricultural development program in Colombia has been ongoing for five years, supporting farmers in developing specialized agriculture, participating in or implementing agricultural and livestock entrepreneurship projects and productive projects, directly benefiting community families and indirectly benefiting people. We actively promote the development of the Rosebel Community Fund in Suriname, focusing on community development, educational assistance, and the promotion of business and employment. In 2024, we provided financial support in the areas of education, health, sports, and socio-economic development. We value employee development and well-being, adopting localized and diverse talent development approaches.

Occupational health and safety

We adopt high safety standards, continuously update and enhance our internal control measures to enhance production safety in our operations. Our production management systems and technologies enable us to achieve automation, digitization, and intelligence control in the gold production process.

We have implemented safety guidelines on employees' proper use and maintenance of the equipment. Our employees are required to wear protective gear, such as safety helmets, work clothes, gloves, waterproof boots, dust masks and self-rescue devices, to ensure their safety at work, taking into account the level of risk of the particular task or production site. We conduct inspections on the condition of our employees' protective gear before they enter production sites. We offer regular training on health, safety and accident prevention to our employees from time to time.

In addition, we have established and implemented comprehensive safety protocols and periodically evaluate their sufficiency. Regular evaluations are conducted to identify and address potential health and safety risks in alignment with our internal work safety policies, ensuring that all production activities are carried out in a safe manner. For safety facilities within our mines, we conduct regular checks and maintenance to ensure they provide reliable protection for work safety. A dedicated safety responsibility team is in place to regularly inspect the implementation of work safety measures, identify potential issues, and address them promptly.

Our Occupational Health and Safety (OHS) management system strictly follows ISO 45001 standards and fully integrates local legal and regulatory requirements and industry best practices. During the Track Record Period, our fatality rate was 0.06 per million work hours. According to Frost & Sullivan, our fatality rate are around the middle of the fatality rate range in the gold mining industry, which is 0.00 to 0.11 per million work hours in 2024. During the Track Record Period, our lost-time injury frequency rate was as low as 0.19 per million work hours. According to the International Council on Mining and Metals (ICMM), the average level of the total recordable injury frequency rate of its members was 2.29 per million work hours in 2024. As of December 31, 2024, the ISO 45001 Occupational Health and Safety Management System certification coverage rate for all operational sites where we have held control for over three years reached 100%.

Continental Gold in Colombia received the Global "Zero Harm Vision" Award for promoting an excellent safety culture. Tajikistan Jilau/Taror Gold Mines received the Annual Outstanding Safety Production and Environmental Protection Award.

During the period of the COVID-19 pandemic, we swiftly implemented effective health and safety prevention and proactive response measures to protect our employees and maintain production. Our high level of production automation reduced reliance on on-site personnel, thereby minimizing the impact of the pandemic on production. We have a diversified and resilient supply chain that can quickly adapt to logistics and supply chain disruptions. The market demand for gold has remained stable. There had not been material adverse impact of the COVID-19 pandemic on our business operations and financial performance during the Track Record Period.

Potential ESG-Related Risks and Our Strategies

Our mining activities and production processes pose potential ESG-related risks such as gas emission, wastewater, noise, solid waste, tailings management, and land remediation and biodiversity risks. To mitigate the adverse impact of these risks, we have taken the following measures:

- **Greenhouse Gas emission** — strengthen the supervision of greenhouse gas emissions at all stages of production and take various measures on-site to reduce emissions, such as adoption of clean energy, energy-saving and emission-reducing technologies;

- **Wastewater** — enhance wastewater management measures. Wastewater discharge will only be allowed if it meets the environmental protection standards. Moreover, we improve the wastewater utilization system to achieve internal water resource recycling within the mine;

- **Noise** — purchase and use equipment and noise reduction technologies that could reduce the overall noise levels, equip relevant technical personnel with necessary noise reduction gear and conduct regular inspections on noise emissions;

- **Solid waste** — implement waste sorting management, requiring all departments and individuals to discard or store different types of solid waste at designated locations. At the same time, to reduce the pollution and hazardous of solid waste, we strive to recycle treated waste again in the production process;

- **Tailing management** — strictly adhere to international standards for tailings management and take various measures to properly handle tailings residues, such as striving for dry tailings disposal, using impermeable membranes, and improving ore dressing reagents, to avoid potential hazards to the surrounding ecological environment and communities. We also regularly conduct strict inspections and supervision of the safety, environmental protection, and anti-seepage aspects of tailings dams to ensure that tailings do not collapse, leak liquids, or cause other major incidents. At the same time, we have

established strict disposal processes and measures for closed tailings, and carried out greening and restoration work on closed tailings to ensure that the restored tailings do not pose any harm or negative impact on the environment and surrounding communities;

- **Land remediation and biodiversity** — rely on the existing site conditions to plan land use reasonably, striving to preserve the original appearance of the surrounding mountains during the process of mineral resource extraction. In the construction of open-pit mines, we will try to avoid soil erosion caused by the construction process and minimize land occupation. We will strictly design the construction machinery, operation modes, and construction seasons to reduce soil erosion caused by construction from entering water bodies. In addition, we strictly require our employees to prohibit hunting and capturing birds and other wild animals; and

- **Local community's concerns** — engage in regular communication with local residents in an open and honest manner, listening to the real needs of community members, and allocate resources to address actual issues. We also focus on the goals of community co-construction and sustainable development, such as supporting community projects, and improving road and water and electricity facilities, to provide a safe and convenient living environment for community residents.

At the same time, we commit to supporting education, healthcare, and poverty reduction projects, as well as public welfare and charitable causes, striving to create positive social impacts and cultural benefits. It is our policy to follow local legal regulations and industry standards in carrying out community work. Our goal is to create long-term benefits for the communities where we operate by improving infrastructure, promoting education and employment, and creating decent jobs. These efforts aim to stimulate local economic development and enhance the well-being of both society and the surrounding communities.

SEASONALITY

Our Directors considered that, and as confirmed by Frost & Sullivan, our gold mining and ore processing business is generally not subject to any seasonal fluctuations.

INSURANCE

We carry insurance covering risks in relation to safety production obligations. We also carry insurance for loss of and damages to our various machinery, equipment and inventories. We also maintain additional accident insurance for our employees engaged in mining activities. In line with industry practice, some of mines owned or operated by us do not carry any business interruptions or litigation insurance. We consider our insurance coverage to be adequate for the needs of our business operations and in line with the industry norm and the relevant laws and regulations in different jurisdictions we operate. If any significant uninsured damages to any of our properties, inventories or other assets

or liabilities claims against us occur, our business, financial condition and results of operations may be adversely affected. For details, see "Risk Factors — We may not be adequately insured against losses and liabilities arising from our operations."

PROPERTIES

Our headquarters is located at Unit 7508, Level 75, International Commerce Centre, 1 Austin Road West, Kowloon, Hong Kong. As of the Latest Practicable Date, our various businesses were located in Colombia, Tajikistan, Australia, Kyrgyzstan, Guyana, Suriname and Ghana. As of the Latest Practicable Date, we occupied or managed properties in various locations, for daily business operations, production and dormitories. These properties are used for non-property activities as defined under Rule 5.01(2) of the Listing Rules. As of the Latest Practicable Date, (i) we had ownership of or land uses rights to 197 parcels of land with an aggregate site area of approximately 42.3 million sq.m.; (ii) we leased 34 parcels of land with an aggregate site area of approximately 41.7 million sq.m.; (iii) we owned 102 properties with an aggregate gross floor area of 789,159.66 sq.m.; and (iv) we leased 32 properties with an aggregate gross floor area of 27,678.97 sq.m.

As of 30 June, 2025, none of the properties held or leased by us had a carrying amount of 15% or more of our consolidated total assets. Therefore, according to Chapter 5 of the Listing Rules and section 6(2) of the Companies (Exemption of Companies and Prospectuses from Compliance with Provisions) Notice (Cap. 32L of the Laws of Hong Kong), this document is exempted from compliance with the requirements of section 342(1)(b) of the Companies (Winding Up and Miscellaneous Provisions) Ordinance in relation to paragraph 34(2) of the Third Schedule to the Companies (Winding Up and Miscellaneous Provisions) Ordinance which requires a valuation report with respect to all our interests in land or buildings.

LICENSES AND PERMITS

In addition to mining and exploration permits, we are required to obtain various licenses, permits and certifications for our operations.

During the Track Record Period and as of the Latest Practicable Date, we have obtained the requisite licenses, permits and certificates required by the relevant laws and regulations for our current operations in all material aspects, other than the mining and exploration permits and/or licenses being renewed. As of the Latest Practicable Date, certain applications of extension or renewal filed by us in relation to licenses remained pending. We have received legal advices from our relevant legal advisors that (i) licenses subject to extension or renewal will remain in effect pending the government's decision; and (ii) the risk of being unable to continue our ongoing mining operations under the existing licenses is considered low, as our relevant legal advisors do not anticipate any legal impediments to the extension or renewal applications.

For more details, please see "— Our Gold Production Business of Tajikistan Jilau/Taror Gold Mines — Mining Licenses and Exploration Permits", "— Our Gold Production Business of Kyrgyzstan Taldybulak Levoberezhny Gold Mine — Mining

Licenses and Exploration Permits", "— Our Gold Production Business of Australia Norton Gold Mine — Mining Leases", "— Our Gold Production Business of Guyana Aurora Gold Mine — Mining Licenses and Exploration Permits", "— Our Gold Production Business of Colombia Buriticá Gold Mine — Mining Concession Agreements", "— Our Gold Production Business of Suriname Rosebel Gold Mine — Mining Licenses and Exploration Permits" and "— Our Gold Production Business of Ghana Akyem Gold Mine — Mining Leases and Prospecting Licenses".

LEGAL PROCEEDINGS AND NON-COMPLIANCES

Legal Proceedings

During the Track Record Period and up to the Latest Practicable Date, we had not been a party to, and were not aware of any threat of, any material legal, arbitral or administrative proceeding which, in our opinion, would likely have a material and adverse effect on our business, financial condition or results of operations. We may from time to time become a party to various legal, arbitral or administrative proceedings arising in the ordinary course of our business.

Legal Compliance

We primarily operate in eight jurisdictions and our business is regulated and supervised under different regulatory environments. We are subject to various regulatory requirements and guidelines issued by the regulatory authorities in the jurisdictions in which we operate. We aim to monitor regulatory environments and adopt adequate internal procedures and guidelines to manage our operations in order to avoid potential non-compliance or misconduct.

During the Track Record Period and up to the Latest Practicable Date, we had not been and were not involved in (i) any material non-compliance incidents that have led to fines, enforcement actions or other penalties which could, individually or in the aggregate, have a material adverse effect on our business, financial condition and results of operations, and (ii) any legal claims or proceedings that may have an material influence on our rights to explore or mine.

During the Track Record Period and up to the Latest Practicable Date, we had not been and were not involved in any non-compliance with environmental laws and regulations by the Group, any breach of anti-corruption, anti-bribery, anti-money laundering, sanctions, financial and export control regulations and similar laws and regulations by the Group or its employees or any material incident of economic, political or social instability in the regions where the Group operated that could, individually or in the aggregate, have a material adverse effect on our business, financial condition and results of operations. We had not experienced any material adverse impact from sanctions and export controls during the Track Record Period and up to the Latest Practicable Date.

RISK MANAGEMENT AND INTERNAL CONTROL MEASURES

We are subject to various risks relating to our operations. For details, please refer to the "Risk Assessment" section in each of the SRK Report set out in Appendices III to this Prospectus. We have established risk management systems consisting of the relevant organizational framework policies, risk management policies and risk control procedures to manage our risk exposures, primarily our operational risk, legal risk and liquidity risk. Our management has designed and implemented risk management policies to address various potential risks we have identified in relation to our operations, including financial risks and corporate governance risks. Our risk management policies set forth procedures to identify, analyze, mitigate and monitor the relevant risks. We are dedicated to establishing a comprehensive risk management system which operates effectively and is suitable for our long-term business development.

According to the SRK Report, we are subject to the risks of (i) unexpected groundwater ingress, (ii) significant unexpected geological faulting, (iii) significant geological structure leading slope failure, (iv) significant production shortfalls, and/or (v) poor waste rock and tailings management/approval. To mitigate these risks we adopt the following risk management policies or procedures: (i) conduct detailed surveys and use advanced geophysical techniques to understand subsurface conditions and map groundwater flow and geological anomalies; (ii) develop a risk assessment framework and implement contingency plans and emergency response strategies for unexpected events; (iii) design stable mine structures and slopes, incorporating drainage systems and barriers to manage groundwater ingress; (iv) install real-time monitoring systems to track groundwater levels and slope stability, using sensors and data analytics to predict geological changes; (v) create flexible production plans that adapt to geological challenges, regularly updating the LoM plan with new data; (vi) improve practices for waste rock and tailings management, ensuring regulatory compliance and obtaining necessary approvals; (vii) train staff on risk management and emergency protocols, fostering a culture of safety and proactive risk management; and (viii) engage experts and communities for insights and support, collaborating with regulatory bodies to ensure compliance and address risks proactively.

In addition, we have adopted internal control policies and procedures and we plan to continuously monitor and improve our management procedures to ensure the effective operation of those internal controls are in line with the growth of our business and good corporate governance practice.

Our Directors are of the view that we have taken all reasonable steps to establish a proper internal control system. As such, our Directors are of the view, that our internal control measures are adequate and effective.

OVERVIEW

As at the Latest Practicable Date, Zijin Mining, through its wholly owned subsidiaries, Zijin Northwest and Gold Mountains (H.K.), was indirectly interested in 100% of the issued share capital of our Company.

Immediately upon completion of the Global Offering (without taking into account any Shares which may be issued pursuant to the exercise of the Over-allotment Option), Zijin Mining will control approximately 86.70% of the issued share capital of our Company through Zijin Northwest and Gold Mountains (H.K.). Hence, upon Listing, Zijin Mining, Zijin Northwest and Gold Mountains (H.K.) constitute our Controlling Shareholders under the Listing Rules. Please refer to "History, Reorganization and Corporate Structure" for the simplified corporate structure of the Group.

BACKGROUND OF ZIJIN MINING

Zijin Mining is a multinational mining group dedicated to the exploration and development of copper, gold, zinc, lithium, silver, molybdenum and other metallic mineral resources globally, supplemented by refining, processing and sales of related products. The exploration and development of copper, gold and zinc mineral resources is the core component of Zijin Mining's business. Zijin Mining also covers refining and processing businesses, as well as other mining-related businesses such as research, design and application of mining engineering, etc. As at the end of 2024, Zijin Mining has more than 30 large and ultra-large mineral resource development bases in 16 overseas countries and 17 provinces (autonomous regions) in China. Zijin Mining's production volume of mine-produced copper, gold, zinc and silver in 2024 reached approximately 1.07 million tonnes, 73 tonnes, 450 thousand tonnes, and 436 tonnes, respectively. For the year ended December 31, 2024, Zijin Mining realized operating income of RMB303.6 billion and profits before tax of RMB48.1 billion. As at December 31, 2024, Zijin Group's total assets amounted to RMB396.6 billion. Zijin Mining was listed on the Stock Exchange in December 2003 (stock code: 2899) and was subsequently listed on the Shanghai Stock Exchange in April 2008 (stock code: 601899).

INDEPENDENCE OF OUR GROUP FROM OUR CONTROLLING SHAREHOLDERS

Our Directors are of the view that our Group is able to carry on its business independently from our Controlling Shareholders (including their close associates) following the completion of the Global Offering for the following reasons.

Clear Delineation of Business

Overview

Zijin Mining Group is primarily engaged in exploration, development, refining, and processing of copper, gold, zinc, and other metallic mineral resources globally, with significant operations in China.

Upon completion of the Spin-off, the businesses of our Group and Zijin Mining Group will be clearly delineated. Zijin Mining Group principally assumes the roles of owner, investor and/or operator in respect of its business in the exploration and mining of copper, zinc, lithium, and other metal resources, as well as gold mining within the PRC; whereas our Group will exclusively own and operate overseas gold mines.

In addition to the clear geographical delineation and difference in mining assets, the major customers and operation model of gold mine assets of our Group and Zijin Mining Group are also substantially different. For illustration, the gold doré and gold bullion produced by us are sold to overseas end customers, directly or via the offshore entities of the Zijin Mining Group, including overseas financial institutions, smelting companies and mining companies. Gold mines held by Zijin Mining Group (which are located in the PRC) mainly sell through its own smelters in the PRC, which in turn sell the gold ingots on the Shanghai Gold Exchange, for trading of gold on its trading platforms. Due to overseas export restrictions, Zijin Mining Group's gold mine assets in the PRC do not sell to overseas customers.

Save for the Colombia Buriticá Gold Mine, the equity interests of all the overseas gold mines will be transferred to our Group prior to the completion of the Spin-off, and Zijin Mining Group will not, following completion of the Spin-off, engage in the exploration and mining of gold outside the PRC. Please see "— Colombia Entrustment Arrangement" below for further details in relation to the Colombia Buriticá Gold Mine.

Colombia Entrustment Arrangement

Structure of Zijin America and the Colombia Buriticá Gold Mine

Colombia Buriticá Gold Mine is a gold mine located in Colombia, wholly owned by Continental Gold Colombia Branch, a branch of Continental Gold, which is in turn owned by CGI, which is in turned wholly-owned by Zijin America. Zijin America is directly held as to 68.77% by Gold Mountains (H.K.) and by (i) CLAI Gilding (BVI) Investment Limited as to 22.74%, an Independent Third Party save for being a connected person of our Company at subsidiary level due to its shareholding in Zijin America; (ii) ZLCFL-Cayman International Investment Cooperation Limited as to 7.26%, an Independent Third Party; and (iii) Longyan Xinjing Investment Partnership (Limited Partnership) as to 1.23%, an employee shareholding platform of the Zijin Mining Group.

International arbitration

In 2024, CGI initiated an international arbitration against the Republic of Colombia ("**Colombia**") under the Canada-Colombia Free Trade Agreement (the "**Treaty**"), which entered into force in 2011, and the Convention on the Settlement of Investment Disputes between States and Nationals of Other States ("**ICSID Convention**") in connection with certain acts and omissions by Colombia in violation of the Treaty's substantive investment protections for Canadian investors in Colombia. In particular, Colombia has failed to provide CGI's investment in the Colombia Buriticá Gold Mine with "fair and equitable treatment" and "full protection and security" as required under the Treaty.

The date of the hearing in this arbitration has not been fixed as of the Latest Practicable Date, as the parties are still at the written pleading stage of the international arbitration. In addition, a change in the ownership structure of CGI, which is the sole claimant in the international arbitration proceedings at this time, may have significant implications for the arbitration proceedings. We understand from the arbitration counsel of CGI that, there is currently no clear timeline for the international arbitration to conclude, and the hearing of the international arbitration is expected to take place as early as in the second half of 2026.

A change in the ownership structure of CGI, which is the sole claimant in the international arbitration proceeding at this time, may have significant implications for the arbitration proceedings, including, potentially, that it may increase the risk of certain objections by Colombia as to, among other topics, the jurisdiction of the arbitral tribunal constituted to decide the dispute. While these objections would not be unmeritorious under the Treaty and applicable law, they would necessarily add to the complexity, risk and uncertainty of the proceedings. Moreover, given the active and adversarial nature of the dispute, any interactions or tax adjudications with the Colombian Government, including in the context of any regulatory approvals that may be required under Colombian law in connection with a change in ownership structure, may potentially create additional risks, including possible retaliatory measures by Colombia in connection therewith or otherwise. See also "Risk Factors — There is an ongoing international arbitration with the Colombian government. We are also subject to risks relating to litigation and regulatory proceedings in jurisdictions where we operate."

Terms of the Colombia Entrustment Arrangement

Against this backdrop, in order to allow our Company and our shareholders to enjoy the economic benefit of the Colombia Buriticá Gold Mine from the completion of the Proposed Spin-off and to avoid any direct or indirect competition between the Group and Zijin Mining Group in any material respect and maintain clear business delineation

between our Group and Zijin Mining Group, our Group and Zijin Mining proposed to enter into the following arrangements (the "**Colombia Entrustment Arrangement**") before the completion of the Global Offering, the material terms of which are summarized below:

(a) ***Entrusted Operations Agreement:*** in consideration for an annual management fee of US$150,000, the Group will be entrusted with the exclusive management and operation of the Colombia Buriticá Gold Mine during the term of the Entrusted Operations Agreement, including without limitation, the exploration, development, extraction, processing, sales, transportation, and environmental restoration of the Colombia Buriticá Gold Mine. The management fee was determined based on (a) annual management fees for similar entrustment operations services provided by other mining companies, (b) costs of operations in Colombia, and (c) discussion with other minority investors of Zijin America. Our Group will be authorized to make business decisions and manage operations, except for the disposal of all or part of the assets of the Colombia Buriticá Gold Mine that requires review by Continental Gold Colombia Branch as required by applicable laws and its articles of association which requires consent by minority shareholders under its articles of association and the shareholders' agreement of Zijin America, while the Zijin Mining Group will require the shareholders' approval of our Company when they decide for such disposal pursuant to the Undertaking by Zijin Mining below. The Entrusted Operations Agreement is entered into by our wholly-owned subsidiary and Continental Gold Colombia Branch (without any minority shareholders of Zijin America), and will be governed by the laws of Colombia. The management fee is expected to be settled in cash between the parties to the Entrusted Operations Agreement. In addition, neither Zijin Mining Group nor the Group has the right to unilaterally terminate the Entrusted Operations Agreement.

(b) ***Return Swap Agreement:*** in return for an upfront consideration of US$880 million (which has been settled in full by 26 June 2025), as agreed based on a negotiated amount with reference to the fair value of such estimated total economic performance of Zijin America (taking into account the proportion attributable to Zijin Mining Group's shareholding interest in Zijin America and all assets owned by Zijin America including without limitation, the Colombia Buriticá Gold Mine), our Group is now entitled to all of the amounts received or entitled by Gold Mountains (H.K.), a direct shareholder of Zijin America, as the swap asset pursuant to the Return Swap Agreement, including without limitation, any dividend, capital arising from capital reduction, and cash return (if any) received or entitled by Gold Mountains (H.K.) from Zijin America (collectively, the "**Colombia Economic Benefits**"), during the term of the Return Swap Agreement. The Return Swap Agreement is entered into by Gold Excellence and Gold Mountains (H.K.), and will be governed by the laws of Hong Kong.

(c) ***Undertaking by Zijin Mining:*** in connection with the Global Offering, Zijin Mining will undertake to our Company that, at the appropriate time when conditions for a transfer are considered favorable, (i) Zijin Mining and our Group will enter into a transaction to enable our Group to acquire Zijin Mining's interests in Zijin America or the related assets held by Zijin America to our Company at a fair and reasonable price at the time of the transaction, subject to arm's length negotiation and compliance with the shareholders' agreement of Zijin America, provided that such transaction shall comply with all applicable rules and regulations which Zijin Mining and our Company are subject to, (ii) absent any shareholders' approval of our Company, Zijin Mining undertakes not to sell Zijin Mining's interests in Zijin America or the related assets held by Zijin America to any other third parties, and (iii) if the Zijin Mining Group intends to transfer, pledge, or impose any other rights restrictions on all or part of the related assets held by Zijin America, our Group's prior written consent is required. The relevant favorable conditions include (a) the conclusion of international arbitration, (b) the satisfaction of necessary regulatory requirements and/or the absence of negative regulatory environment for the transfer of Zijin America and/or the related assets held by Zijin America (the "**Regulatory Requirements**"), and (c) benefits to the strategic development of the Company, its financial results and profitability (including any material negative impacts to the shareholder value of both Zijin Mining and the Company) (collectively, the "**Favorable Conditions**").

The Colombia Entrustment Arrangement has been effective since 24 June 2025, and will last until the expiry of the mine life of the Colombia Buriticá Gold Mine, or until the Zijin Mining Group's interests in Zijin America are transferred to the Group, whichever is earlier.

The Colombia Entrustment Arrangement is designed to be a temporary but necessary arrangement to (i) deal with the uncertainties arising out of the international arbitration without delaying the Spin-off, (ii) ensure clear delineation of businesses and maximize shareholders' value in connection with the Spin-off by allowing the Company to manage the Colombia Buriticá Gold Mine and obtain the economic benefits derived from Zijin America pursuant to the Colombia Entrustment Arrangement, and (iii) offer sufficient protection to the Company over its future acquisition of Zijin America through equity transfer at an appropriate time.

In addition to the above key documentation for the Colombia Entrustment Arrangement, Zijin America also indirectly holds a number of potential projects in Colombia which CGI has been conducting preliminary exploration work. The main mineral contained in these potential mines could not be determined at this stage. Each of these exploration projects are held by separate subsidiaries under Zijin America (which is not Continental Gold Colombia Branch). Given the Entrusted Operations Agreement for the Colombia Buriticá Gold Mine as entered into by the Continental Gold Colombia Branch would not cover these exploration projects, the holding company of each relevant exploration project (which would be a subsidiary of Zijin America) has also entered into

an agreement with a wholly-owned subsidiary of the Company, pursuant to which, the management and decision making of the exploration work and relevant operation activity in the lifetime of these projects which would significant impact the returns of these potential projects would be determined by the Group. It is currently expected that, due to the same concern of possible unfavorable rulings by the Colombian government in connection with change in ownership structure and/or the clarification of calculation in capital tax arising from a transfer of equity interest in these potential projects, when the relevant mine can be classified as gold mine asset or non-gold mine asset based on the economic value of the resources inside the mine:

- "gold mine assets" will be retained under Zijin America through CGI, and a separate entrusted operations agreement (the terms of which are expected to be substantially similar to that for the Colombia Mine) would be entered into between the holding company of the relevant mine and a subsidiary of the Company prior to commencement of production of such relevant mine. When the Favorable Conditions of the transfers become available, together with the transfer of the Zijin Mining Group's interests in Zijin America or the relevant asset by Gold Mountains (H.K.) to the Group, these "gold mine assets" will be also be transferred to the Group in one go; and

- "non-gold mine assets" will be transferred to other members of the Zijin Mining Group (excluding Zijin America and its subsidiaries) with reference to its fair value at the time prior to their respective commencement of operations when the Favorable Conditions of the transfers become available. As such, overseas operation of "non-gold mine assets" would then be kept at the Zijin Mining Group.

The current Colombia Entrustment Arrangement covers the operations of the Colombia Buriticá Gold Mine and the exploration projects under Zijin America. Any additional entrusted operations agreement for the "gold mine assets" or transfer of "non-gold mine assets" to the Zijin Mining Group would constitute separate connected or continuing connected transactions between us and Zijin Mining Group, and we will further comply with the requirements under Chapter 14A at the time.

As the timetable of the international arbitration, and the completion of exploration work (particularly in relation to the discovery of new minerals), are subject to significant uncertainty, neither the Group nor the Zijin Mining Group considers it necessary to implement the aforementioned proposal during the term of the Colombia Entrustment Arrangement. Nonetheless, if it were to occur, the Group and the Zijin Mining Group would follow the aforementioned principles to complete the asset classification and transfer.

The unwinding of the Colombia Entrustment Arrangement

Pursuant to the undertaking from Zijin Mining to our Company, at the appropriate time when Favorable Conditions of the transfer become available, the Zijin Mining Group and the Group will enter into a transaction to enable the Group to acquire Zijin Mining Group's interests in Zijin America or the related assets held by Zijin America (the "**Unwinding**") at a fair and reasonable price (on a net-off basis) at the time of the transaction (which will be determined with the fair value of the Return Swap Agreement to be unwound at the time of transaction (on one hand), and to be partially off-set by the fair value of Zijin Mining Group's interests in Zijin America based on arm's length negotiation (on the other hand). As the fair value of the Return Swap Agreement and the fair value of the Zijin Mining Group's interests in Zijin America would both be derived from the economic value from the Colombia Buritica' Gold Mine for the remaining life of mine and any other assets held by Zijin America (to the proportion attributable to Zijin Mining Group's shareholding interest in Zijin America), and will be the same, the relevant consideration (on a net-off basis) for the unwinding of the Colombia Entrustment Arrangement is anticipated to be immaterial (nil or close to nil).

We will use our best endeavor to procure favorable conditions for the unwinding of the Colombia Entrustment Arrangement through Zijin Mining Group transferring its interests in Zijin America or the related assets held by Zijin America to us, and to ensure that the international arbitration will be resolved in an efficient manner to the extent practicable taking into the adversarial nature of the proceedings. Zijin Mining and its board of directors will provide regular update to us and our Board on the status of the international arbitration.

After Listing, we will report the latest status and timetable in our interim and annual reports.

As advised by the PRC legal advisor of Zijin Mining, no additional shareholder approval of Zijin Mining is required for the Unwinding provided that our Company will continue to be consolidated by Zijin Mining at the time of the transaction. Zijin Mining also undertakes that our Company will continue to be consolidated by Zijin Mining prior to the completion of the Unwinding.

Legal and accounting implications

The Colombia Entrustment Arrangement is designed to be a temporary but necessary arrangement to (i) deal with the uncertainties arising out of the international arbitration without delaying the Spin-off, (ii) ensure clear delineation of businesses and maximize shareholders' value in connection with the Spin-off by allowing the Company to manage the Colombia Buriticá Gold Mine and obtain the Colombia Economic Benefits pursuant to the Colombia Entrustment Arrangement, and (iii) offer sufficient protection to the Company over its future acquisition of Zijin America through equity transfer at an appropriate time.

Despite that Zijin Mining has legal ownership over Zijin America, pursuant to the Colombia Entrustment Arrangement (including the Entrusted Operations Agreement, Return Swap Agreement and the undertaking of Zijin Mining Group), from an accounting perspective, we would consolidate the assets, liabilities and operation results of Zijin America (which includes CGI and Continental Gold, subsidiaries of Zijin America, and the Colombia Buriticá Gold Mine (controlled by Continental Gold)) into the consolidated financial information of the Group as our Directors are of the view that the Colombia Entrustment Arrangement has enabled the Company to exercise effective control Zijin America and have the abilities to affect those returns through its power over Zijin America, given that:

a) the Colombia Entrustment Arrangement has commercial substance;

b) the relevant activities of Zijin America will be focusing on the directing the operation of Colombia Buriticá Gold Mine to enjoy the relevant economic benefit, while our Group is authorized, to the extent and within the capacity of Gold Mountains (H.K.), to make normal course of business decision of Zijin America including without limitation, the daily operation, the management of its affiliated companies, the investment and financing decisions, and other activities which would significantly impact the operation of Colombia Buriticá Gold Mine and correspondingly the return of Zijin America;

c) our Group has the right to direct the exploration, development, extraction, processing, sales, transportation, and environmental restoration activities with the exclusive management and operation of the Colombia Buriticá Gold Mine, and the management and decision making of the exploration work of other potential projects. Our Group can independently make business decisions and manage operations on these relevant activities;

d) our Group is entitled to the cash dividend, distribution, or consideration that the Gold Mountains (H.K.) actually receives from Zijin America which constitutes substantially all of the economic benefits of Zijin America;

e) Zijin Mining undertakes to the Group that, i) at the appropriate time when conditions for a transfer are considered favorable, Zijin Mining will enter into a transaction to enable the Group to acquire the Gold Mountains (H.K.)'s equity interests in Zijin America or the relevant assets held by Zijin America at a fair and reasonable price (on a net-off basis) at the time of the transaction (which will be determined with the fair value of the Return Swap Agreement to be unwound at the time of transaction (on one hand), and to be partially off-set by the fair value of Gold Mountains (H.K.)'s interests in Zijin America based on arm's length negotiation (on the other hand)), ii) Zijin Mining will not dispose any assets that belong to the Colombia Buriticá Gold Mine, nor will hold any collateral against the Colombia Buriticá Gold Mine.

See "2. Reorganization and Basis of Preparation and Presentation of Historical Financial Information" in the Accountants' Report of the Group set out in the Appendix IA to this Prospectus for further details.

As advised by the Company's legal advisor as to the Colombia law, the entry into the Entrusted Operations Agreement and/or the Return Swap Agreement would not require any notification, filings, authorizations or approvals from the Colombian governmental or regulatory authorities in Colombia, and would not affect the mining rights held by the Colombia Buriticá Gold Mine for its operations; the Entrusted Operations Agreement is valid, binding and enforceable pursuant to the applicable laws and regulations in Colombia. In addition, the Entrusted Operations Agreement and the Return Swap Agreement, as a whole, is not in contravention of any legal and regulatory restrictions under Colombian laws and regulations.

We have been further advised by our Special Hong Kong legal advisor, Deheng Law Offices (Hong Kong) LLP, that the obligations of the parties under the Return Swap Agreement, upon due authorization, execution and delivery by the parties thereto, constitute legally valid, binding and enforceable obligations under Hong Kong law, subject to general principles of law and equity, and any applicable bankruptcy, insolvency, similar laws or other customary limitations, and there are no registrations, filings, or similar formalities imposed by any regulatory authority or government agency in Hong Kong upon the parties in relation to the execution and delivery of the Return Swap Agreement or the performance by such entities of their respective obligations thereunder under the laws of Hong Kong.

The Colombia Entrustment Arrangement will, upon completion of the Spin-off and the Global Offering, constitute continuing connected transactions between the Company and the Zijin Mining Group, and will be subject to the reporting, annual review, announcement and independent shareholders' approval requirements under Chapter 14A of the Listing Rules. See "Connected Transactions — Non-Exempt Continuing Connected Transactions — Colombia Entrustment Arrangement and Zijin America Sales Framework Agreement" for further details.

Based on the foregoing, we believe that (i) there is clear delineation between our business and the business of Zijin Mining Group; (ii) there will be no direct or material competition between our Group and Zijin Mining Group upon completion of the Spin-off; and (iii) sufficient arrangements are or will be in place to ensure the clear delineation and minimal competition between Zijin Mining Group and our Group.

During the term of the Colombia Entrustment Arrangement, the Company will provide updates on the status of the international arbitration and the pending transfer of Zijin Mining's interests in Zijin America and the related assets of Colombia Buriticá Gold Mine under the Colombia Entrustment Arrangement in its annual and interim report after Listing.

Deed of Non-Competition

Notwithstanding there is a clear delineation between the businesses of Zijin Mining Group and our Group as detailed above, Zijin Mining Group has irrevocably and unconditionally provided the Deed of Non-Competition to our Company in connection with the Listing to ensure there remains a clear delineation of our respective businesses in the future. Pursuant to the Deed of Non-Competition:

(i) After the completion of the Global Offering, provided that Zijin Mining Group is our indirect Controlling Shareholder, Zijin Mining Group guarantees not to use its position as an indirect Controlling Shareholder to adversely impact our interests and the interests of our other shareholders. Zijin Mining will continue to maintain our independence in terms of personnel, assets, business, finance, and institutions, and ensure that our Company has the required business system and the ability to operate independently;

(ii) Zijin Mining undertakes to strictly comply with the information disclosure requirements for related parties and connected persons of listed companies and to disclose the relevant information about Zijin Mining and all directly or indirectly controlled enterprises in a truthful, accurate and complete manner;

(iii) After the completion of the Global Offering, during the period when Zijin Mining Group is our indirect Controlling Shareholder, Zijin Mining will not directly or indirectly engage in the business of our Group ("**Spin-off Business**") (save for its interests via our Company) or any business activities which competes with the Spin-off Business or otherwise may have a significant adverse impact to the Spin-off Business, except for the Colombia Entrustment Arrangement, including: (1) directly or indirectly engaging in the Spin-off Business; (2) investing in, acquiring, or merging with companies or economic organizations whose principal business is engaged in the Spin-off Business; (3) operating companies or economic organizations whose principal business is engaged in the Spin-off Business through contracted operations, leasing operations, etc.; (4) providing funding, business, and technical support or assistance to companies or economic organizations whose principal business is in completion with us in any manner;

(iv) Zijin Mining will take legal and effective measures to ensure that existing or future subsidiaries and other enterprises or entities controlled by it do not engage in the Spin-off Business;

(v) If there is a significant adverse competitive relationship between any business opportunities obtained by Zijin Mining and the business operated by us, including without limitation, the Spin-off Business, we have the right to, either through priority acquisition or entrusted operation, require Zijin Mining to consolidate the competing business into our Group; and

(vi) If Zijin Mining obtains any business opportunities that compete or may compete with the Spin-off Business (i.e., overseas exploration and mining of gold, supplemented by refining, processing and sales of related products outside the PRC), Zijin Mining will immediately notify us and give priority to us in participating in such business opportunities.

Administrative independence

All of the essential administrative functions of our Group will be handled by our own team independently of Zijin Mining and without support from Zijin Mining upon completion of the Spin-off and the Global Offering.

Our Group and Zijin Mining have been sharing certain financial, procurement, warehousing, contract management and engineering management systems and software on a clear cost allocation basis based on the number of personnel engaged for certain gold mine assets. Upon completion of the Global Offering, our Group and Zijin Mining will continue to share non-essential administrative costs related to the operations of departments such as IT and marketing and logistics with a clear cost allocation basis with reference to the number of personnel in accordance with the exemption available under chapter 14A of the Listing Rules. Our Group established independent finance, internal audit and legal departments, and does not rely on the services provided by the existing departments of Zijin Mining.

Notwithstanding any sharing of resources to optimize the administration costs structure of our Group, all essential functions involving any management decision or discretion will be retained and performed by our Group independently of Zijin Mining. Given the immateriality of the relevant transaction amounts for the sharing of non-essential administrative functions between our Group and Zijin Mining, our administrative independence would not be affected.

Management independence

Our Board comprises three executive Directors, three non-executive Directors and three independent non-executive Directors. For further details of our Directors, please refer to "Directors and Senior Management". Among the nine Directors, only three non-executive Directors currently are expected to hold positions in Zijin Mining upon Listing, details of which are set out below:

Name of Director	Position(s) in our Company upon Listing	Position(s) in Zijin Mining upon Listing
Mr. Lin Hongfu	Non-executive Director and chairman of the Board	Executive Director and standing vice president
Mr. Wang Chun	Non-executive Director	Vice president
Mr. Jian Ximing	Non-executive Director	Chief executive officer at the overseas operations department

Our Group does not rely on Zijin Mining Group in terms of directorship and management, and that the day-to-day operations and management functions of our Group, upon Listing, can be managed independently of Zijin Mining Group, given that:

(i) as at the Latest Practicable Date, other than Mr. Lin Hongfu, Mr. Wang Chun and Mr. Jian Ximing, there is no other overlapping management upon Listing;

(ii) none of the executive Directors and core management team of our Group with executive functions will hold any position in Zijin Mining Group upon Listing;

(iii) our Group has and will have a sufficient level of independence of directorship and management and a team of full-time senior management and employees focused exclusively on its businesses;

(iv) our Company will have a sufficient number of independent non-executive directors which meets the requirements of the Listing Rules to protect the interests of our Company and the Shareholders as a whole; and

(v) each of the Directors is aware of his/her fiduciary duties as a Director, which require, among other things, that he/she acts for the benefit and in the best interests of our Company and does not allow any conflict between his/her duties as a Director and his/her personal interests. In the event of any actual or potential conflict of interest between our Group and Zijin Mining, the conflicted directors will be required to abstain from voting on the relevant board resolution and the other directors will vote and decide on the matter.

Nevertheless, to address potential conflict of interests that may arise in the future, our Company has adopted certain corporate governance measures. Please refer to "— Corporate Governance" in this section for details.

Based on the reasons above, our Directors are of the view that our Group is capable of managing our business independently from Zijin Mining and its close associates following the completion of the Spin-off.

Financial independence

As at June 30, 2025, our Group had certain amounts due to Zijin Mining and its subsidiaries in the amount of US$803.7 million (the "**Gross Amount Due**"). Given Zijin Mining has US$160.3 million due to us as of the same date, the net amount due to Zijin Mining is US$643.4 million (the "**Net Amount Due**"). In addition, as of June 30, 2025, our Group has recorded lease liabilities amounting to US$38.0 million in relation to certain financial lease arrangements of motor vehicles between our Group and Zijin Mining. Save as disclosed above, (i) there is no outstanding loan facility or other form of credit granted by our Group to Zijin Mining, or vice versa; (ii) none of the loans of our Group was guaranteed, secured or indemnified by Zijin Mining; and (iii) our Group has not provided any guarantee, security or indemnification in respect of any loans of Zijin Mining.

Our Company has been repaying a portion of the Net Amount Due since June 30, 2025 such that the Gross Amount Due as of August 31, 2025 was approximately US$750 million, and the Gross Amount Due will be within the range of approximately US$700–750 million at the time of Listing.

We will repay the remainder of the Gross Amount Due by 2028, either by refinancing with financial institutions or by cash payment.

Our Directors are of the view that our Company is financially independent from Zijin Mining, and the Gross Amount Due to Zijin Mining will not affect our financial independence based on the following reasons:

Our ability to secure financing independently

Our Group is able to finance our operations through our internally generated working capital and through borrowings, loans and credit facilities from independent third parties without guarantees or other security provided by Zijin Mining.

In addition, as at the Latest Practicable Date, we have obtained credit facilities of approximately US$970 million, the terms of which are afforded to us on similar terms as other facilities previously provided by the relevant banks to the Zijin Mining Group.

Strong financial position

Our profit attributable to equity holders of our Group amounted to US$520.2 million for the six months ended June 30, 2025, and consolidated total assets and net assets as of June 30, 2025 amounted to US$7,475.6 million and US$4,636.3 million, respectively. We did not incur any bank loans and bank borrowings for the year ended December 31, 2024 and in the six months ended June 30, 2025. During the Track Record Period, our Group had generated over US$2.9 billion of net operating cash flow in aggregate. During the Track Record Period, our Group had generated US$714.7 million, US$924.9 million, US$876.5 million and US$417.4 million of net operating cash flow in the three financial years ended December 31, 2022, 2023 and 2024 and in the six months ended June 30, 2025, respectively. As of June 30, 2025, we also have financial resources (including cash and cash equivalents as well as prepayments, other receivables and other assets) of not less than US$650 million.

Further, it is expected that the Listing will enhance our profile in Hong Kong, the PRC and internationally, facilitate investment by Hong Kong and other international investors, enable us to gain access to Hong Kong's capital markets and benefit us by exposing it to a wide range of private and institutional investors, thereby further enhancing the financial position of our Group.

Independent financial operation

Our Group has established our own finance department with a team of financial staff, who are responsible for financial control, accounting, reporting, group credit and the internal control function of the our Group, independent from Zijin Mining. Our Group is also able to make financial decisions independently and Zijin Mining does not intervene with our use of funds. Our Group has also established an independent audit system, a standardized financial and accounting system and a complete financial management system.

Mutual Commercial Benefits to Zijin Mining Group and the Group

Zijin Mining's businesses are mainly conducted through its subsidiaries (including our Group). However, in light of Zijin Mining's listing status and by leveraging and benefiting from its market standing, creditworthiness and industry reputation, Zijin Mining is in a better position to obtain third party financing at lower costs through various means such as, debt offerings, equity financings and commercial loans. By utilizing these financings obtained from various sources, Zijin Mining (through itself and/or its wholly owned subsidiaries) could fund the business and operations of its operating subsidiaries, and its operating subsidiaries could in turn benefit from intra-group loans, which are on more favorable terms and at lower interest rates than the financings that each operating subsidiary of Zijin Mining could directly obtain from independent third parties. Both Zijin Mining and its operating subsidiaries (including our Group) could benefit from the economies of scale generated therefrom and the synergies achieved in respect of operation, business and cost control.

Therefore, there is a strong commercial reason for our Group to retain the Net Amount Due. If the Gross Amount Due had to be repaid (along with the corresponding loans incurred by the Retained Group) upon completion of the Global Offering, it would either force us to undertake a costly and unnecessarily burdensome refinancing exercise or apply the proceeds of the Global Offering for the repayment of the Gross Amount Due, which could have been otherwise utilized to further invest in our operations to meet investors' expectation and for the benefit for our Group and our shareholders as a whole.

In addition, other than the Gross Amount Due, we will not obtain any additional financial assistance from the Zijin Mining Group after the Listing, and the transactions pursuant to the Zijin Mining Financial Services Framework Agreement (as set out in "Connected Transactions") would not include loans or other financial assistance from Zijin Mining Group.

Operational independence

Our Directors believe that we can continue operating independently from Zijin Mining Group after the Listing for the following reasons:

(i) we have the necessary qualifications for carrying out our business;

(ii) we have independent production capabilities, and do not rely on the production capacities of Zijin Mining Group;

(iii) we have independent channels to contact customers and suppliers, and have our own management team to carry out business; and

(iv) we have independent sales and supplies channels.

During the Track Record Period, we conducted certain transactions with Zijin Mining and its close associates, and such transactions are expected to continue upon the Listing and will constitute connected transactions of our Company. These connected transactions have been and will continue to be conducted on arm's length and on normal commercial terms in the ordinary and usual course of business of our Group, and the pricing policy of our Group and our connected persons and not be prejudicial to the interests of any of the parties. See "Connected Transactions" for further details.

Based on the above, our Directors are satisfied that we have been operating independently from Zijin Mining Group and their respective close associates will continue to be able to operate independently.

CORPORATE GOVERNANCE

Zijin Mining has confirmed that it fully comprehends its obligations to act in our Shareholders' best interests as a whole. Our Directors believe that there are adequate corporate governance measures in place to manage existing and potential conflicts of interest. In order to further avoid potential conflicts of interest, we have implemented the following measures:

(a) as part of our preparation for the Global Offering, we will adopt, upon Listing, our Articles of Association to comply with the Listing Rules. In particular, our Articles of Association provided that, unless otherwise provided, a Director shall not vote on any resolution approving any contract or arrangement or any other proposal in which such Director or any of his/her associates have a material interest, and if he/she shall do so his/her vote shall not be counted (nor shall such Director be counted in the quorum for the resolution);

(b) a Director with material interests shall make full disclosure in respect of matters that may have actual or potential conflict with any of our interest and abstain from the board meetings on matters in which such Director or his/her associates

have a material interest, unless the attendance or participation of such Director at such meeting of the Board is specifically requested by a majority of the independent non-executive Directors;

(c) we are committed that our Board should include a balanced composition of executive Directors, non-executive Directors and independent non-executive Directors. We have appointed three independent non-executive Directors and we believe our independent non-executive Directors possess sufficient experience and they are free of any business or other relationship which could interfere in any material manner with the exercise of their independent judgment and will be able to provide an impartial, external opinion to protect the interests of our public Shareholders. For details of our independent non-executive Directors, please refer to "Directors and Senior Management";

(d) we have appointed Somerley Capital Limited as our compliance advisor, which will provide advice and guidance to us in respect of compliance with the applicable laws and the Listing Rules including various requirements relating to Directors' duties and corporate governance;

(e) we have adopted the internal control and corporate governance measures to ensure that the terms of our continuing connected transactions are fair and reasonable and not prejudicial to the interests of our Company and the minority Shareholders, as further described in "Connected Transactions — Internal Control Measures";

(f) as required by the Listing Rules, our independent non-executive Directors shall review any continuing connected transaction annually and confirm in our annual report that such transactions have been entered into in our ordinary and usual course of business, are either on normal commercial terms or on terms no less favorable to us than those available to or from Independent Third Parties and on terms that are fair and reasonable and in the interests of our Shareholders as a whole;

(g) Zijin Mining has undertaken to us in the Deed of Non-Competition that it will not, and will procure its close associates not to, engage in any Spin-off Business, save for the exceptions as disclosed under the paragraphs headed "Deed of Non-Competition" above, which will protect our Group from potential competition from the Zijin Mining Group in respect of the operation of overseas gold mine assets;

(h) on an annual basis, our independent non-executive Directors will review the non-compete undertakings provided by Zijin Mining and its compliance with such undertakings; and

(i) our Company will disclose in its annual report each year the compliance status of the Deed of Non-Competition.

Rule 8.10 of the Listing Rules

Save as disclosed above, as at the Latest Practicable Date, none of Zijin Mining, Zijin Northwest, Gold Mountains (H.K.) and our Directors had any interest in any other business which competes or is likely to compete, either directly or indirectly with our business which would require disclosure under Rule 8.10 of the Listing Rules.

OUR CONNECTED PERSONS

Upon the Spin-off and Listing, the following connected persons of our Company will conduct non-exempted or partially exempted transactions with our Group:

Name	Information of our Connected Persons and Relationship with our Group
Zijin Mining Group	As at the Latest Practicable Date, Zijin Mining is our Controlling Shareholder. Therefore, the Zijin Mining Group will become a connected person of our Company upon Listing for the purpose of the Listing Rules.
Kyrgyzaltyn JSC.	As at the Latest Practicable Date, Kyrgyzaltyn JSC is a substantial shareholder of Altynken LLC, an indirect non-wholly owned subsidiary of our Company. Therefore, Kyrgyzaltyn JSC will become a connected person of our Company at the subsidiary level upon Listing for the purpose of the Listing Rules.

SUMMARY OF OUR CONTINUING CONNECTED TRANSACTIONS

The following table sets forth a summary of our non-exempt or partially-exempt continuing connected upon Listing:

No.	Transaction	Applicable Listing Rules	Waiver sought	Annual caps for the year ending December 31,		
				2025	2026	2027
				(unless otherwise specified: US$ in million)		
A.	**Partially Exempt Continuing Connected Transactions**					
1)	Altynken Sales Agreement	14A.35, 14A.53, 14A.101 and 14A.105	Announcement and the annual cap requirements under Chapter 14A of the Listing Rules	4 tonnes of gold	N/A	N/A
B.	**Non-exempt Continuing Connected Transactions**					
2)	Zijin Mining Technical Service Framework Agreement	14A.35, 14A.36, 14A.46 and 14A.105	Announcement and independent Shareholders' approval requirements under Chapter 14A of the Listing Rules	190	281	340
3)	Zijin Mining Centralized Procurement Framework Agreement	14A.35, 14A.36, 14A.46 and 14A.105	Announcement and independent Shareholders' approval requirements under Chapter 14A of the Listing Rules	210	420	370
4)	Colombia Entrustment Arrangement and Zijin America Sales Framework Agreement	14A.35, 14A.36, 14A.46, 14A.52, 14A.53 and 14A.105	Announcement and independent Shareholders' approval, contractual term and annual cap requirements under Chapter 14A of the Listing Rules	See "— Colombia Entrustment Arrangement and Zijin America Sales Framework Agreement" below		

No.	Transaction	Applicable Listing Rules	Waiver sought	Annual caps for the year ending December 31,		
				2025	2026	2027
				(unless otherwise specified: US$ in million)		
5)	Zijin Mining Sales Framework Agreement	14A.35, 14A.36, 14A.46, 14A.53 and 14A.105	Announcement and independent Shareholders' approval, and the annual cap requirements under Chapter 14A of the Listing Rules	28 tonnes of gold, 31.0 tonnes of silver and 4,800 tonnes of copper	29 tonnes of gold, 31.0 tonnes of silver and 5,200 tonnes of copper	30 tonnes of gold, 32.0 tonnes of silver and 5,900 tonnes of copper
6)	Zijin Mining Financial Services Framework Agreement	14A.35, 14A.36, 14A.46 and 14A.105	Announcement and independent Shareholders' approval under Chapter 14A of the Listing Rules	See "— Zijin Mining Financial Services Framework Agreement" below		

PARTIALLY EXEMPT CONTINUING CONNECTED TRANSACTIONS

Altynken Sales Agreement

Principal Terms

On March 20, 2025, Altynken LLC, an indirect non-wholly owned subsidiary of our Company, entered into a sales agreement (the "**2025 Altynken Sales Agreement**") with Kyrgyzaltyn JSC, pursuant to which Altynken LLC will sell gold doré to Kyrgyzaltyn JSC for further processing, consistent with the Altynken Sale Arrangement (as defined below) during the Track Record Period. The term of the 2025 Altynken Sales Agreement is valid for a term of one year.

Subject to compliance with the Listing Rules and applicable laws and regulations, the parties expect to enter into a new sales agreement on similar terms upon the expiry of the 2025 Altynken Sales Agreement.

Reasons for the transaction

During the Track Record Period, Altynken LLC has entered into sales contracts with Kyrgyzaltyn Open Joint Stock Company annually (the "**Altynken Sale Arrangement**"). Pursuant to the joint venture agreement between our Group and Kyrgyzaltyn Open Joint Stock Company in relation to Altynken LLC, Kyrgyzaltyn JSC has the right to purchase all or part of the gold produced from the Kyrgyzstan Taldybulak Levoberezhny Gold Mine in the event that the Kyrgyzstan National Bank or any other entities authorized by the Kyrgyzstan government did not exercise their right of first refusal.

Kyrgyzaltyn JSC is the only gold processor in Kyrgyzstan that has the technology and qualifications required to process gold doré into gold ingots. Since banks only accept gold ingots, Altynken LLC has been selling gold doré to Kyrgyzaltyn JSC for processing prior to its onward-selling to banks. The Altynken Sale Arrangement has enabled Altynken LLC to leverage the expertise of Kyrgyzaltyn JSC to refine and process the unprocessed gold doré.

Pricing policies

The price payable of the gold doré under the Altynken Sales Agreement will be determined with reference to the (i) prevailing market price of the gold in the London Bullion Market Association and (ii) to be partially net off by the refinery and processing fee that would be charged by Kyrgyzaltyn JSC.

Historical transaction amounts and historical transaction volume

The total transaction amount received by Altynken LLC from Kyrgyzaltyn JSC under the Altynken Sale Arrangement for the years ended December 31, 2022, 2023 and 2024 and for the six months ended June 30, 2025 are set forth below:

	Year ended December 31,			For the six months ended June 30,
	2022	2023	2024	2025
	(US$ in thousands)	(US$ in thousands)	(US$ in thousands)	(US$ in thousands)
Transaction amount received under the Altynken Sale Arrangement	212,432 (representing 3.75 tonnes of gold)	250,933 (representing 4.08 tonnes of gold)	279,815 (representing 3.7 tonnes of gold)	169,946 (representing 1.7 tonnes of gold)

Proposed cap

The proposed cap for the transactions contemplated under the 2025 Altynken Sales Agreement is 4 tonnes of gold. Since all of the gold doré produced from the Kyrgyzstan Taldybulak Levoberezhny Gold Mine will be sold to Kyrgyzaltyn JSC, our Company has taken into account the historical transaction amount and the expected gold doré production for the term of the 2025 Altynken Sales Agreement when arriving at the annual cap.

Waiver from strict compliance with annual cap requirements

Under Rule 14A.53(1) of the Listing Rules, an annual cap expressed in monetary terms must be set for continuing connected transactions. We have applied to the Stock Exchange for, and the Stock Exchange has granted, a waiver to us from strict compliance with Rule 14A.53(1) in respect of the annual cap of the transactions under 2025 Altynken Sales Agreement to be expressed as the transaction volume of gold ores to be sold under the 2025 Altynken Sales Agreement.

Our Directors are of the view that an annual cap with a fixed monetary amount for the transactions under the Altynken Sales Agreement would impose an arbitrary ceiling as all the gold ores extracted from the Kyrgyzstan Taldybulak Levoberezhny Gold Mine will be sold to Kyrgyzaltyn JSC, and it would not be possible to provide any meaningful estimates given the fluctuations in the global market price for mining resources, which influence the sales price of gold ore. Such a cap would neither accurately reflect the actual transaction amount nor provide meaningful information to investors of our Group.

Our Directors consider an alternative non-monetary cap based on the transaction volume to be appropriate in the circumstances because it will be difficult for our Company to reasonably estimate the monetary annual cap for the transactions under the 2025 Altynken Sales Agreement. Our Directors are, therefore, of the view that it is not in the interest of our Company and our Shareholders to impose an annual cap in monetary terms for the 2025 Altynken Sales Agreement as prescribed by Rule 14A.53(1) of the Listing Rules. As a condition to the waiver from strict compliance with the monetary annual cap requirement for the transactions under the 2025 Altynken Sales Agreement, the Company will disclose in its annual reports the transaction volumes under the 2025 Altynken Sales Agreement after Listing, and any material changes to the basis of the annual caps would be subject to the approval of independent shareholders.

Listing Rules implications

Since the 2025 Altynken Sales Agreement has been entered into with connected person at the subsidiary level during the ordinary course of our business and on normal commercial terms where our Directors have approved the transactions and our independent non-executive Directors have confirmed that the terms of the transactions are fair and reasonable, the transaction is on normal commercial terms and in the interests of our Company and our Shareholders as a whole, pursuant to Rule 14A.101 of the Listing Rules, the transaction will be subject to the reporting, annual review and announcement requirements but exempt from the independent shareholders' approval requirement.

NON-EXEMPT CONTINUING CONNECTED TRANSACTIONS

Zijin Mining Technical Services and Support Framework Agreement

Principal Terms

On September 16, 2025, we entered into a technical services and support framework agreement (the "**Zijin Mining Technical Services and Support Framework Agreement**") with Zijin Mining Group, pursuant to which Zijin Mining Group will provide technical services and support to us, including construction, installation and engineering service, and we shall pay fees for the service rendered in return, consistent with the Zijin Mining Technical Service Arrangement (as defined below) during the Track Record Period.

The initial term of the Zijin Mining Technical Services and Support Framework Agreement will commence on the Listing Date and end on December 31, 2027. Subject to compliance with the Listing Rules and the applicable laws and regulations, the Zijin Mining Technical Services and Support Framework Agreement may be renewed upon mutual consent by the parties.

Reasons for the transaction

During the Track Record Period, in the usual and ordinary course of business, Zijin Mining Group has provided technical services and support to our Group, including construction, installation and engineering service (the "**Zijin Mining Technical Service Arrangement**"). The relevant technical services provided include, among other things, provision of underground mining services, factory design and construction, building of geological models, issue reserve reports, assay services etc. The Technical Service Arrangement has enabled our Group to leverage the technical expertise accumulated by Zijin Mining Group throughout its operating history, particularly in the construction and installation of necessary facilities within the mine assets, which in turn enabled the gold mine assets within our Group to adhere to the operating standard of Zijin Mining Group as one of the largest mining group in the PRC. While technical services such as construction and installation services can be easily sourced at comparable terms in the market, the rich experience by the Zijin Mining Group would enable smooth cooperation and quick implementation time.

Pricing policies

The fees payable to Zijin Mining Group by our Group under the Zijin Mining Technical Service Arrangement will be determined on arm's length basis with reference to the relevant labor costs, time needed, and expertise required, and with reference to third-party quotations for similar services. The terms offered to us by Zijin Mining Group shall not be less favorable to our Group than the terms offered to us by our independent suppliers for the same or similar type and scope of technical services.

Historical transaction amounts

The total transaction amount paid by our Group to Zijin Mining Group under the Zijin Mining Technical Service Arrangement for the years ended December 31, 2022, 2023 and 2024 and for the six months ended June 30, 2025 are set forth below:

	Year ended December 31,			For the six months ended June 30,
	2022	2023	2024	2025
	(US$ in thousands)	(US$ in thousands)	(US$ in thousands)	(US$ in thousands)
Transaction amount paid under the Zijin Mining Technical Service Arrangement	38,059	78,174	74,096	57,581

Annual caps

The following table sets forth the proposed annual caps for the maximum annual amounts of fees payable by our Group to Zijin Mining Group pursuant to the Zijin Mining Technical Service and Support Framework Agreement:

	Year ending December 31,		
	2025	2026	2027
	(US$ in thousands)	(US$ in thousands)	(US$ in thousands)
Maximum aggregate annual amount of fees payable by our Group for the Zijin Mining Technical Service and Support Framework Agreement	190,000	281,000	340,000

The annual caps are calculated based on the expected business growth of our Group after the completion of the Akyem Acquisition and the Kazahkstan Acquisition, our historical demand for such services and the current asset portfolio of our Group. In addition, Guyana Aurora Gold Mine and Suriname Rosebel Gold Mine have recently engaged Zijin Mining Group in relation to open pit mine with the Zijin Mining Group in replacement of their original service providers and/or self-operation after taking into account, (i) costs incurred, (ii) service quality. In addition, the technical advancement project on newly acquired mines from the Akyem Acquisition and Raygorodok Acquisition would require additional technical services from the Zijin Mining Group including system establishment, engineering services, construction services, exploration services, etc. The technical advancement projects include, among other things, the construction and design services of open-pit mining operations and concentrators to be supplied by the Zijin Mining Group with a view to (a) aligning the mining standards, system and practice to that of the Zijin Mining Group, and (b) improving the production capacity and quality in the relevant mines. The technical advancement projects are expected to cost approximately an aggregate of US$230,000 to be used in 2026 to 2027 for Ghana Akyem Gold Mine and Kazakhstan Raygorodok Gold Mine.

Listing Rules implications

As the highest applicable percentage ratio of the Technical Service and Support Framework Agreement calculated for the purposes of chapter 14A of the Listing Rules is expected to exceed 5%, the Zijin Mining Technical Service and Support Framework Agreement will, upon Listing, constitute continuing connected transactions under the Listing Rules subject to reporting, annual review, announcement and independent shareholders' approval requirements.

Zijin Mining Centralized Procurement Framework Agreement

Principal Terms

On September 16, 2025, we entered into a centralized procurement framework agreement (the "**Zijin Mining Centralized Procurement Framework Agreement**") with Zijin Mining Group, pursuant to which we will procure equipment and raw materials from Zijin Mining Group, and we shall pay fees for the equipment and materials procured, consistent with the Zijin Mining Centralized Procurement Arrangement (as defined below) during the Track Record Period.

The initial term of the Centralized Procurement Framework Agreement will commence on the Listing Date and end on December 31, 2027. Subject to compliance with the Listing Rules and applicable laws and regulations, the Zijin Mining Centralized Procurement Framework Agreement may be renewed upon mutual consent by the parties.

Reasons for the transaction

During the Track Record Period, in the usual and ordinary course of business, our Group had purchased equipment and raw materials under an arrangement (the "**Zijin Mining Centralized Procurement Arrangement**") from Zijin Mining Group, as part of the centralized procurement arrangement implemented by Zijin Mining Group so that members of the Zijin Mining Group could procure equipment and raw materials to enjoy the benefits of economies of scale.

The relevant equipment and raw materials include mainly spare parts (i.e. pipes, rubber pipe fittings) and consumables (i.e. crusher and ball mill accessories). The Zijin Mining Centralized Procurement Arrangement has enabled our Group to procure equipment and raw materials for its business operations together with the other business units of Zijin Mining Group such that the bargaining power vis-à-vis third parties are enhanced, thereby enhancing ensuring competitive pricing and stable supply.

Pricing policies

The fees payable to Zijin Mining Group by our Group under the Zijin Mining Centralized Procurement Arrangement will be determined on arm's length basis with reference to the costs of the relevant items as required by our Group with a fixed percentage of costs of such items in the range of 4% to 5% as service fees to cover overhead and human resources cost. The terms offered to us shall not be less favorable to our Group than the terms offered to us by our independent suppliers for the same or similar type and scope of procurement services.

Historical transaction amounts

The total transaction amount paid by our Group to Zijin Mining Group under the Zijin Mining Centralized Procurement Arrangement for the years ended December 31, 2022, 2023 and 2024 and for the six months ended June 30, 2025 are set forth below:

	Year ended December 31,			For the six months ended June 30,
	2022	2023	2024	2025
	(US$ in thousands)	(US$ in thousands)	(US$ in thousands)	(US$ in thousands)
Transaction amount paid under the Zijin Mining Centralized Procurement Arrangement	110,941	111,095	80,254	48,143

Annual caps

The following table sets forth the proposed annual caps for the maximum annual amounts of fees payable by our Group to Zijin Mining Group pursuant to the Zijin Mining Centralized Procurement Framework Agreement:

	Year ending December 31,		
	2025	2026	2027
	(US$ in thousands)	(US$ in thousands)	(US$ in thousands)
Maximum aggregate annual amount of fees payable by our Group pursuant to the Zijin Mining Centralized Procurement Framework Agreement	210,000	420,000	370,000

The following factors were considered in arriving at the above annual caps: (i) the total consumption value (annual material purchase amount) expected by each mine of our Group; (ii) the estimated future demand considering business growth; (iii) the Akyem Acquisition and the Kazahkstan Acquisition; and (iv) the current asset portfolio of our Group. In particular, it is expected that the Suriname Rosebel Gold Mine will gradually procure additional raw materials from China for costs efficiency upon an evaluation of its financial performance since its acquisition. Further, Guyana Aurora Gold Mine is expected to undertake construction projects in 2026, and as such, additional procurement of consumables and equipment would be required.

Listing Rules implications

As the highest applicable percentage ratio for the Zijin Mining Centralized Procurement Framework Agreement calculated for the purposes of chapter 14A of the Listing Rules is expected to exceed 5%, the Zijin Mining Centralized Procurement Framework Agreement will, upon Listing, constitute continuing connected transactions under the Listing Rules subject to reporting, annual review, announcement and independent shareholders' approval requirements.

Colombia Entrustment Arrangement and Zijin America Sales Framework Agreement

Principal Terms

We have entered into the Colombia Entrustment Arrangement, which includes (i) an Entrusted Operations Agreement between our Group and Continental Gold (a non-wholly owned subsidiary of Zijin Mining); and (ii) a Return Swap Agreement between our Group and Gold Mountains (H.K.) before Listing, pursuant to which we and our prospective Shareholders upon Listing are entitled to enjoy the economic benefit of the Colombia Buriticá Gold Mine despite not having any legal ownership in it. For the detailed terms of the Colombia Entrustment Arrangement, please refer to "Relationship with Zijin Mining — Clear Delineation of Business — Colombia Entrustment Arrangement".

In addition, from time to time, given that the financial results of Zijin America is consolidated to our Group pursuant to the Colombia Entrustment Arrangement, there will be transactions between the Group and Zijin America (and its subsidiaries) arising from the implementation of the Colombia Entrustment Arrangement, as we manage the Colombia Buriticá Gold Mine pursuant to the Colombia Entrustment Arrangement. This includes the sales of minerals from Zijin America (and its subsidiaries) to other members of our Group for onward selling to our customers (the "**Zijin America Sales Arrangement**"), and these transactions would be necessary on the premise that the Group operates and manages the mining operations held under Zijin America (and all its subsidiaries) as a single listing group, despite the fact that Zijin America was legally held by the Zijin Mining Group instead of the Group and would be considered as a connected person of our Company.

On September 16, 2025, we entered into a Zijin America sales framework agreement (the "**Zijin America Sales Framework Agreement**") with Zijin America, pursuant to which we will procure minerals from Zijin America and/or its subsidiaries, and we shall pay purchase price for the products sold in return, consistent with the Zijin America Sales Arrangement.

The initial term of the Zijin America Sales Framework Agreement will commence on the Listing Date and end on December 31, 2027. Subject to compliance with the Listing Rules and applicable laws and regulations, the Zijin America Sales Framework Agreement may be renewed upon mutual consent by the parties.

In addition, if there is any other transactions between Zijin America (and its subsidiaries) (on one hand), and the Group (on the other hand) upon Listing, the Company will further comply with the requirements under the Listing Rules as necessary.

The Colombia Entrustment Arrangement will last until the expiry of the mine life of the Colombia Buriticá Gold Mine, or until the Colombia Buriticá Gold Mine is no longer held by Zijin Mining Group, whichever is earlier.

Reasons for the transaction

Please refer to "Relationship with Zijin Mining — Clear Delineation of Business — Colombia Entrustment Arrangement" for details and reasons for such transaction.

Pricing policies for the Zijin America Sales Arrangement

The prices payable by the Group to Zijin America (and its subsidiaries) for the Zijin America Sales Arrangement will be determined on arm's length basis with reference to (i) the prevailing market price of the mineral resources in international market such as the London Bullion Market Association, the Shanghai Huatong Silver Exchange and the Shanghai Future Exchange and (ii) trading margins on the price of gold doré, gold ingot and gold concentrate in the range of 0% to 1.3% based on arm's length discussion with reference to similar arrangements in the open market.

Historical transaction amounts and historical transaction volume for the Zijin America Sales Arrangement

There has not been any transactions under Zijin America Sales Arrangement between Zijin America (and its subsidiaries) and other members of our Group for the years ended December 31, 2022, 2023 and 2024 and for the six months ended June 30, 2025.

Annual caps for the Zijin America Sales Framework Agreement

The following table sets forth the proposed annual caps for the volume (tonnage) of mining products sold by Zijin America (and its subsidiaries) to our Group pursuant to the Zijin America Sales Framework Agreement:

	Year ending December 31,		
	2025	2026	2027
	(tonnes)	(tonnes)	(tonnes)
Maximum annual transaction volume (tonnage) purchased by our Group from Zijin America (and its subsidiaries)			
Gold	9.5	9.2	9.0
Silver	27.1	27.2	27.4
Copper	900	900	900

The annual cap of sales volume of mining products sold by Zijin America (and its subsidiaries) our Group is based on the expected output of the Colombia Buriticá Gold Mine in line with the mine plan as set out in "Business".

Listing Rules Implications

As the highest applicable percentage ratio for the transactions arising from the Colombia Entrustment Arrangement and the Zijin America Sales Arrangement calculated for the purposes of Chapter 14A of the Listing Rules is expected to exceed 5%, the Colombia Entrustment Arrangement and the Zijin America Sales Arrangement will, upon Listing, constitute continuing connected transactions under the Listing Rules subject to reporting, annual review, announcement and independent shareholders' approval requirements.

Waiver from strict compliance with contractual term requirements

Under Rule 14A.52 of the Listing Rules, a listed issuer is required to set a contractual term not exceeding three years. It is impracticable for us to set a contractual term not exceeding three years in respect of the Colombia Entrustment Arrangement. Our Directors are of the view that, in order for the Colombia Entrustment Arrangement to be fully effective, and to enable our Group and our investors to enjoy the economic benefits of the Colombia Buriticá Gold Mine, the nature of the Colombia Entrustment Arrangement would require the Entrusted Operation Agreement and the Return Swap Agreement to be of a duration longer than three years, which promotes stability and continuity in operations and assignment of economic benefits, and is beneficial to us and our shareholders as a whole and it would be detrimental to the Group to quantify and limit the nature and amount of such potential transactions. The Joint Sponsors are of the view that the nature of the Colombia Entrustment Arrangement would require the Entrusted Operation Agreement and the Return Swap Agreement to be of a duration longer than three years, on the basis that: (i) it is uncertain when the conditions for a transfer of Zijin Mining's interests in Zijin America or the relevant mining assets to the Group would be favorable, due to the ongoing international arbitration between CGI (a wholly-owned subsidiary of Zijin America) with the Colombian government; (ii) this can promote stability and continuity in the operations of the Colombia Buriticá Gold Mine, by entrusting the Group with the exclusive authority to manage the mine and make business decisions; and (iii) this would allow the Company's investors to enjoy the continued assignment of economic benefits arising from the Colombia Buriticá Gold Mine, which we consider to be beneficial to the Company and the shareholders as a whole. Based on the advice given by the arbitration counsel of CGI, documentation provided by the Company, the Joint Sponsors' due diligence and discussions with the Company, the Joint Sponsors are of the view that it is normal business practice for such arrangements to be of a duration of longer than three years. Please refer to "Relationship with Zijin Mining — Clear Delineation of Business — Colombia Entrustment Arrangement" for further details in relation to the Entrusted Operation Agreement and the Return Swap Agreement. Therefore, we have applied to the Stock Exchange for, and the Stock Exchange has granted, a waiver under Rule 14A.52 of the Listing Rules from strict compliance with the contractual term requirements.

Waiver from strict compliance with annual cap requirements

Under Rule 14A.53(1) of the Listing Rules, an annual cap expressed in monetary terms must be set for continuing connected transactions. We have applied to the Stock Exchange for, and the Stock Exchange has granted, a waiver to us from strict compliance with Rule 14A.53(1) in respect of the annual caps of the transactions under the Colombia Entrustment Arrangement, and in respect of the annual caps of the transactions under the Sales Framework Agreement to be expressed as the transaction volume of gold, silver and copper respectively to be sold under the Zijin America Sales Framework Agreement.

For the Colombia Entrustment Arrangement, our Directors are of the view that it is impractical for Zijin Mining Group and us to accurately estimate the economic benefits to be received each year, and it would also not be in our interest and the interest of our shareholders to adopt fixed monetary caps for such transactions as such caps will impose an arbitrary ceiling on the dividend that we could receive from Colombia Buriticá Gold Mine, in contrary to the purpose of adopting the Colombia Entrustment Arrangement.

Our Directors are, therefore, of the view that it is not in the interest of our Company and our Shareholders to impose an annual cap in monetary terms for the Colombia Entrustment Arrangement (including without limitation to, annual management fee, the entitlement of the Colombia Economic Benefits as prescribed by Rule 14A.53(1) of the Listing Rules.

For the Zijin America Sales Arrangement, our Directors are of the view that an annual cap with a fixed monetary amount for the transactions under the Zijin America Sales Framework Agreement would impose an arbitrary ceiling on the sales of mining products by Zijin America (and its subsidiaries) to our Group and impact the amount of products that could be sold. It would not be possible to provide any meaningful estimates given the unpredictable fluctuations in the global market price for mining resources, which influence the sales price of mining resources under the Zijin America Sales Framework Agreement, setting a fixed monetary cap for the next three years is impractical. Such a cap would neither accurately reflect actual transaction amounts nor provide meaningful information to investors of our Group.

Moreover, it could also restrict the business operations, reduce flexibility, and weaken competitiveness of our Group. Unless unrealistically large amounts are set as the annual caps, a fixed monetary annual cap would unnecessarily restrain our Group from smoothly conducting or expanding our businesses in the ordinary course and as part of our normal businesses, weaken the flexibility of future development and adjustments, and lessen the competitive edge of businesses operated by our Group. The annual caps will also be easily exceeded as a result of increasing mining product prices and fluctuating foreign exchange rates. Such volatile movement in the price of mining products is not within the control of, or predictable by, our Company. Any increased mining products market price may result in increased monetary transaction amount, which in turn could

lead to the annual cap being exceeded, thus setting such an annual cap in monetary terms would be inappropriate as it would not be within our Group's control as to whether the annual cap is exceeded.

Our Directors are also of the view that setting an annual cap with a fixed monetary amount would cause unnecessary disruption to our Group's operations, and would not be in the best interest of our Group and would not be commercially practicable if we are required to seek our Board's approval regularly to increase the monetary annual cap to align the cap with fluctuations in the mining resources market price, considering that the convening of Board meetings and Shareholders' meetings shall require compliance with, among others, our internal corporate governance policy, our Articles of Association and the compliance requirements arising from our status as a listed company on the Stock Exchange. Our Directors consider an alternative non-monetary cap based on the transaction volume to be appropriate in the circumstances because it will be difficult for our Company to reasonably estimate the monetary annual cap for the transactions under the Zijin America Sales Framework Agreement. Our Directors are, therefore, of the view that it is not in the interest of our Company and our Shareholders to impose an annual cap in monetary terms for the Zijin America Sales Framework Agreement as prescribed by Rule 14A.53(1) of the Listing Rules. As a condition to the waiver from strict compliance with the monetary annual cap requirement for the transactions under the Zijin America Sales Framework Agreement, the Company will disclose in its annual reports the transaction volumes under the Zijin America Sales Framework Agreement after Listing, and any material changes to the basis of the annual caps would be subject to the approval of independent shareholders.

Zijin Mining Sales Framework Agreement

Principal Terms

On September 16, 2025, we entered into a sales framework agreement (the "**Zijin Mining Sales Framework Agreement**") with Zijin Mining Group, pursuant to which we will sell gold and other by-products (such as copper and silver) to Zijin Mining Group, and Zijin Mining Group shall pay the purchase price for the products sold in return, consistent with the Sale Arrangement (as defined below) during the Track Record Period.

The initial term of the Zijin Mining Sales Framework Agreement will commence on the Listing Date and end on December 31, 2027. Subject to compliance with the Listing Rules and applicable laws and regulations, the Zijin Mining Sales Framework Agreement may be renewed upon mutual consent by the parties.

Reasons for the transaction

During the Track Record Period, in the usual and ordinary course of business, our Group had sold mining products to Zijin Mining Group under an arrangement (the "**Zijin Mining Sale Arrangement**"), which involved the sale of gold and other by-products (such as copper and silver) from our Group to the Zijin Mining Group. Certain subsidiaries within the Zijin Mining Group, acting as traders of various mineral resources, are responsible for, among other things, arranging for the external sale of mineral resources produced by our Group to external refineries, end-customers or traders. By leveraging the centralized and experienced sales capabilities of Zijin Mining Group, the Zijin Mining Sale Arrangement has enhanced sales coordination within the Zijin Mining Group, thereby optimizing operational efficiencies and economies of scale, and securing mutually favorable commercial terms.

Pricing policies

The prices payable by Zijin Mining Group to our Group under the Zijin Mining Sales Framework Agreement will be determined on arm's length basis with reference to (i) the prevailing market price of the mineral resources in international market such as the London Bullion Market Association, the Shanghai Huatong Silver Exchange and the Shanghai Future Exchange and (ii) trading margins on the price of gold doré, gold ingot and gold concentrate in the range of 0% to 1.3% based on arm's length discussion with reference to similar arrangements in the open market.

Historical transaction amounts and historical transaction volume

The total transaction received by our Group from Zijin Mining Group for the Sale Arrangement for the years ended December 31, 2022, 2023 and 2024 and for the six months ended June 30, 2025 are set forth below:

	Year ended December 31,			For the six months ended June 30,
	2022	2023	2024	2025
	(US$ in thousands)	(US$ in thousands)	(US$ in thousands)	(US$ in thousands)
Transaction amount received for the Zijin Mining Sale Arrangement	597,704 (related to 10.3 tonnes of gold; 20.3 tonnes of silver; 1,588.4 tonnes of copper)	635,785 (related to 10.3 tonnes of gold; 29.7 tonnes of silver; 2,304.4 tonnes of copper)	1,272,927 (related to 15.6 tonnes of gold; 30.2 tonnes of silver; 6,795.9 tonnes of copper)	989,005 (representing 11.5 tonnes of gold; 15.5 tonnes of silver; 2,592.7 tonnes of copper)

Annual caps

The following table sets forth the proposed annual caps for the volume (tonnage) of mining products sold by our Group to the Zijin Mining Group pursuant to the Sale Framework Agreement:

	Year ending December 31,		
	2025 (tonnes)	2026 (tonnes)	2027 (tonnes)
Maximum annual transaction volume (tonnage) sold by our Group under the Sale Framework Agreement			
Gold	28.0	29.0	30.0
Silver	31.0	31.0	32.0
Copper	4,800	5,200	5,900

The annual cap of sales volume of mining products sold by our Group is based on the expected output for each mine in line with the mine plan as set out in "Business", the expected business growth of our Group, the expected gold to be produced from the Ghana Akyem Gold Mine and the Kazakhstan Raygorodok Gold Mine, and the current asset portfolio of our Group.

Waiver from strict compliance with annual cap requirements

Under Rule 14A.53(1) of the Listing Rules, an annual cap expressed in monetary terms must be set for continuing connected transactions. We have applied to the Stock Exchange for, and the Stock Exchange has granted, a waiver to us from strict compliance with Rule 14A.53(1) in respect of the annual caps of the transactions under the Zijin Mining Sales Framework Agreement to be expressed as the transaction volume of gold, silver and copper respectively to be sold under the Zijin Mining Sales Framework Agreement.

Our Directors are of the view that an annual cap with a fixed monetary amount for the transactions under each of the Sales Framework Agreement would impose an arbitrary ceiling on the sales of mining products to the Sales Entities and impact the amount of products that could be sold. It would not be possible to provide any meaningful estimates given the unpredictable fluctuations in the global market price for mining resources, which influence the sales price of mining resources under the Sales Framework Agreement, setting a fixed monetary cap for the next three years is impractical. Such a cap would neither accurately reflect actual transaction amounts nor provide meaningful information to investors of our Group.

Moreover, it could also restrict the business operations, reduce flexibility, and weaken competitiveness of our Group. Unless unrealistically large amounts are set as the annual caps, a fixed monetary annual cap would unnecessarily restrain our Group from smoothly conducting or expanding our businesses in the ordinary course and as part of our normal businesses, weaken the flexibility of future development and adjustments, and

lessen the competitive edge of businesses operated by our Group. The annual caps will also be easily exceeded as a result of increasing mining product prices and fluctuating foreign exchange rates. Such volatile movement in the price of mining products is not within the control of, or predictable by, our Company. Any increased mining products market price may result in increased monetary transaction amount, which in turn could lead to the annual cap being exceeded, thus setting such an annual cap in monetary terms would be inappropriate as it would not be within our Group's control as to whether the annual cap is exceeded.

Our Directors are also of the view that setting an annual cap with a fixed monetary amount would cause unnecessary disruption to our Group's operations, and would not be in the best interest of our Group and would not be commercially practicable if we are required to seek our Board's approval regularly to increase the monetary annual cap to align the cap with fluctuations in the mining resources market price, considering that the convening of Board meetings and Shareholders' meetings shall require compliance with, among others, our internal corporate governance policy, our Articles of Association and the compliance requirements arising from our status as a listed company on the Stock Exchange. Our Directors consider an alternative non-monetary cap based on the transaction volume to be appropriate in the circumstances because it will be difficult for our Company to reasonably estimate the monetary annual cap for the transactions under the Sales Framework Agreement. Our Directors are, therefore, of the view that it is not in the interest of our Company and our Shareholders to impose an annual cap in monetary terms for the Sales Framework Agreement as prescribed by Rule 14A.53(1) of the Listing Rules. As a condition to the waiver from strict compliance with the monetary annual cap requirement for the transactions under the Zijin Mining Sales Framework Agreement, the Company will disclose in its annual reports the transaction volumes under the Zijin Mining Sales Framework Agreement after Listing, and any material changes to the basis of the annual caps would be subject to the approval of independent shareholders.

Listing Rules implications

As the highest applicable percentage ratio for the transactions arising from the Zijin Mining Sales Arrangement calculated for the purposes of Chapter 14A of the Listing Rules is expected to exceed 5%, the Zijin Mining Sales Arrangement will, upon Listing, constitute continuing connected transactions under the Listing Rules subject to reporting, annual review, announcement and independent shareholders' approval requirements.

Zijin Mining Financial Services Framework Agreement

Principal Terms

On September 16, 2025, we entered into a financial services framework agreement (the "**Zijin Mining Financial Services Framework Agreement**") with the Zijin Mining Group, pursuant to which, the Zijin Mining Group will provide our Group with financial services, among others (i) deposits and related services (the "**Deposit Services**"), (ii)

financial lease services (the "**Financial Lease Services**"), (iii) insurance underwriting services (the "**Insurance Underwriting Services**"), similar to the Financial Services Arrangement (as defined below) during the Track Record Period.

The initial term of the Zijin Mining Financial Services Framework Agreement will commence on the Listing Date and end on December 31, 2027. Subject to compliance with the Listing Rules and the applicable laws and regulations, the Zijin Mining Financial Services Framework Agreement may be renewed upon mutual consent by the parties.

Reasons for the transaction

During the Track Record Period, in the usual and ordinary course of business, certain subsidiaries of the Zijin Mining Group ("**Relevant Entities**") provided to our Group the Deposit Services, Financial Lease Services and Insurance Underwriting Services (the "**Zijin Mining Financial Services Arrangement**"), as the Relevant Entities have been acting as the asset management hubs of the Zijin Mining's operations and financial management, in order to the satisfy capital needs of various subsidiaries of Zijin Mining in different jurisdictions more effectively and efficiently.

The Zijin Mining Financial Services Arrangement has enabled our Group to enjoy the Deposit Services, Financial Lease Services and Insurance Underwriting Services at a lower rate than otherwise available to us from third party financial institutions, as the rates on deposits offered by the Relevant Entities to our Group will be equal to or more favorable than those offered by other commercial banks in jurisdictions where we operate. As such, the financial services provided by the Zijin Mining Group can effectively reduce our finance costs.

Our Group is also expected to benefit from the Zijin Mining Group's better understanding of operations of our Group which should allow expedient and efficient service provision. In addition, the customers of the Zijin Mining Group in respect of the financial services are limited to entities within the Zijin Mining Group (including our Group), thereby reducing the credit and operational risks that Zijin Mining Group may otherwise be exposed to if its customers included other entities unrelated to the Zijin Mining Group.

Pricing policies

Deposit Services. The interest rates applicable to the Deposit Services provided by the Zijin Mining Group to us shall be determined at a percentage of the amount of the deposits to be determined from time to time (i) on normal commercial terms; (ii) no less than benchmark interest rates for comparable deposit for the same period provided by other major commercial banks in Hong Kong or in the PRC; and (iii) no less than interest rates for comparable deposit for the same period applicable to other members of the Zijin Mining Group provided by the Relevant Entities, at the time of the relevant transaction, upon comparing with at least two contemporaneous quotations from commercial banks and two contemporaneous transactions with other members of Zijin Mining Group.

Financial Leases. We enter into financial leases with the Zijin Mining Group (as lessor), whereby Zijin Mining Group normally purchases the leased asset from the supplier in accordance with the instructions and selection by our Group (as lessee) and will then lease the leased asset to the our Group for an agreed period and receive rentals regularly.

The consideration for the lease consists of the purchase price of the leased equipment, interests on the lease as agreed between the parties and handling fees (if any).

- The principal amount of the Financial Lease Services shall be the price at which the leased asset is purchased from the supplier and shall be arrived at after negotiation between our Group and the supplier on normal commercial terms with reference to the market price of such leased asset.

- The lease interests of the Financial Lease Services shall be charged at a percentage of the amount of the principal amounts to be determined with reference to, among others, (i) market conditions and the benchmark interest rate for term loans from third party financial lease providers from time to time; (ii) terms and conditions which are no less favorable to our Group than those offered by lessors of similar qualifications; and (iii) the credit assessment of lessor, the term of finance lease agreement, principal amount, regulatory policy orientation, industry development strategy and the business model and credit enhancement measures of the lessor, at the time of the relevant transaction, upon comparing with at least two contemporaneous quotations from financial leasing companies and two contemporaneous transactions with other member of Zijin Mining Group.

- The handling fees of the Financial Lease Services shall be charged at a fixed sum to be determined with reference to, among others, (i) the official rates or standards published by monetary authorities (if applicable); (ii) no higher than handling fees for similar financial services provided by other commercial banks to members of our Group, if there are no official rates or standards applicable, at the time of the relevant transaction, upon comparing with at least two contemporaneous quotations from financial leasing companies.

Insurance Underwriting Services. The insurance premiums and/or handling fees provided by the Zijin Mining Group shall be charged at a percentage of the insurance amount or at a fixed handling fee to be determined, with reference to, (i) the official rates or standards published by monetary authorities (if applicable), and (ii) no higher than handling fees for similar financial services provided by other insurance companies to members of our Group, if there are no official rates or standards applicable, at the time of the relevant transaction, upon comparing with at least two contemporaneous quotations from insurance companies.

Taking into account the no less favorable interest rates and other commercial benefits to our Group, we consider that the preservation of such financial arrangement with the Zijin Mining Group is beneficial to our Shareholders as a whole. In addition, our Company has the right to choose the financial services provided by independent third parties to us, and we are not under any obligation to use financial services provided by Zijin Mining Group.

Historical transaction amounts

The relevant historical amount of the relevant financial services under the Zijin Mining Financial Services Arrangement for the years ended December 31, 2022, 2023 and 2024 and for the six months ended June 30, 2025 are set forth below:

	Year ended December 31,			For the six months ended June 30,
	2022	2023	2024	2025
	(US$ in thousands)			
Transaction Amount in relation to Zijin Mining Financial Services Arrangement				
Maximum daily balance of Deposit Services	140,048	242,413	372,061	441,366
Total transaction amount of the Financial Lease Services	N/A	2,292	48,867	2,535
Insurance premiums and handling fees	N/A	N/A	4,897	3,324

Annual caps

The following table sets forth the proposed annual caps for the maximum annual amounts of fees payable by our Group to Zijin Mining Group pursuant to the Zijin Mining Financial Services Framework Agreement:

	Year ended December 31,		
	2025	2026	2027
	(US$ in thousands)		
Maximum transaction amount under Zijin Mining Financial Services Framework Agreement			
Maximum daily balance of Deposit Services	600,000	800,000	1,000,000
Total transaction amount of the Financial Lease Services	73,000	68,000	36,000
Insurance premiums and handling fees	13,000	16,000	18,000

The following factors were considered in arriving at the above annual caps:

- **Deposit Services:** the annual caps were determined with reference to the maximum daily balance of deposits under the Deposit Services during the Track Record Period. In light of our Group's overall development plan, mine merger and acquisition plan and steady year-by-year expansion of development scale, the scale of our Group's funds is expected to show an increasing trend and the caps for deposits for the relevant period are determined on a year-by-year increase correspondingly, particularly driven by the capital generated from our overseas operations in accordance with the mine plans set out in "Business", the additional capital and revenue generating ability led by the technical advancement on our gold mines which will be implemented by the net proceeds of the Offering, the increasing gold prices.

- **Financial Lease Services:**

  - The International Financial Reporting Standards 16 (Leases) are applicable to the Financial Lease Services, we recognize right-of-use assets at the commencement date of the lease (i.e. the date on which the underlying asset is available for use). Right-of-use assets are measured at cost, less any accumulated depreciation and impairment losses, and adjusted for any remeasurement of lease liabilities. At the commencement date of a lease, our Company recognizes lease liabilities measured at the present value of lease payments to be made over the lease term. Accordingly, under International Financial Reporting Standards 16 (Leases), we will recognize the target assets of the relevant financial leases, which represent our right to use the assets for which our Company (subject to the specific lease terms and conditions set out in each lease agreement) is reasonably certain to obtain ownership of the leased assets at the expiry of the lease term, which are included in right-of-use assets and lease liabilities on initial recognition.

  - The annual caps are determined with reference to the expected financial leases to be renewed and entered into based on the development plan of our Group and equipment age. We expect this to increase in light of our Group's overall development plan, mine merger and acquisition plan and steady year-by-year expansion of development scale. In particular, certain equipment which has been put in operation for more than 8 years is expected to be replaced, and therefore new financial leases are required to be entered into.

- **Insurance premiums and handling fees:** the annual caps are based on the expected insurance services to be provided by the Zijin Mining Group. We expect this to increase in light of our overall development plan, mine merger and acquisition plan and steady year-by-year expansion of development scale. In particular, the insurance practice of the Zijin Mining Group commenced in late 2024 and is in

its ramp-up stage. It is expected that various gold mines under the Group will require insurance services from Zijin Mining Group from 2025 onwards. In addition, given the increasing gold price, the total asset value of the gold mines has increased and as such, the insurance premium would be increased correspondingly. The increase of the insurance premium has also taken into account the insurance required for Ghana Akyem Gold Mine and Kazakhstan Raygorodok Gold Mine.

Listing Rules implications

As the highest applicable percentage ratio for the transactions arising from the Zijin Mining Financial Services Framework Agreement calculated for the purposes of Chapter 14A of the Listing Rules is expected to exceed 5%, the Zijin Mining Financial Services Framework Agreement will, upon Listing, constitute continuing connected transactions under the Listing Rules subject to reporting, annual review, announcement and independent shareholders' approval requirements.

INTERNAL CONTROL MEASURES

We have adopted the following internal control and corporate governance measures to ensure that the terms of our transactions with the connected persons are fair and reasonable and not prejudicial to the interests of our Company and the minority Shareholders:

- our Board (including our independent non-executive Directors) will be responsible for reviewing and evaluating the terms of the framework agreements for the continuing connected transactions (including any renewal thereof), in particular the pricing principles and annual caps, to ensure that such terms are fair and reasonable to our Group and compliant with relevant laws and regulations, our Group's internal policies and the Listing Rules;

- various internal departments of our Company (including but not limited to our finance department and legal department) will regularly monitor the implementation of the continuing connected transactions and keep track of the aggregate transaction amounts under the relevant framework agreements to ensure that the pricing principles and annual caps contained therein are complied with;

- when determining the fees payable by the connected persons to our Group (and vice versa) under the framework agreements, our Group will regularly research into prevailing market conditions and practices and make reference to the pricing and terms offered by our Group to Independent Third Parties for similar transactions, to ensure that the terms and conditions offered to/by the connected persons are fair and reasonable and are no less favorable to our Group than those offered to other comparable Independent Third Parties; and

- our independent non-executive Directors and auditors will conduct annual review of the continuing connected transactions under the framework agreements and provide annual confirmations in accordance with Rules 14A.55 and 14A.56 of the Listing Rules.

APPLICATION FOR WAIVERS

Our Directors (including our independent non-executive Directors) consider that disclosure of all the partially-exempt and non-exempt continuing connected transactions in full compliance with the Listing Rules would be impracticable and would add unnecessary administrative costs to our Group. In addition, our Directors (including the independent non-executive Directors) believe that it is in our Group's interests to continue these continuing connected transactions after the Listing.

Pursuant to Rule 14A.105 of the Listing Rules, we have applied for, and the Stock Exchange has granted, a waiver from strict compliance with the requirements under Chapter 14A of the Listing Rules in respect of the partially-exempt and non-exempt continuing connected transactions. In addition, we confirm that we will comply with the Listing Rules in relation to the partially-exempt and non-exempt continuing connected transactions.

In addition, we have applied for, and the Stock Exchange has granted, a waiver from strict compliance with monetary annual caps under Rule 14A.53(1) of the Listing Rules in relation to the 2025 Altynken Sale Agreement, the Colombia Entrustment Arrangement and Zijin America Sales Framework Agreement and the Zijin Mining Sale Framework Agreement. We have also applied for, and the Stock Exchange has granted, a waiver from strict compliance with the requirements to set contractual term not exceeding three years under Rule 14A.52 of the Listing Rules in relation to the Colombia Entrustment Arrangement.

As required by the Listing Rules, our independent non-executive Directors shall review the continuing connected transactions annually and confirm in the annual report and accounts of our Company that such transactions have been entered into in our Company's ordinary and usual course of business, are either on normal commercial terms or on terms no less favorable to our Group than those available to, or from, independent third parties, and on terms that are fair and reasonable and in the interests of the Shareholders as a whole.

In the event of any future amendments to the Listing Rules imposing more stringent requirements than those applicable as of the Latest Practicable Date on the continuing connected transactions referred to in this Prospectus, our Company will take immediate steps to ensure compliance with such new requirements within a reasonable time.

Apart from the requirements for three-year contractual term, setting annual cap, announcement, and independent Shareholders' approval (where applicable), of which waivers are sought above, we will comply at all times with the other applicable provisions under Chapter 14A of the Listing Rules in respect of the non-exempt continuing connected transactions.

If there are any material changes to the terms of the continuing connected transactions as set out above, we will further comply with the requirements under Chapter 14A of the Listing Rules.

DIRECTORS' VIEW

Our Directors (including the independent non-executive Directors) are of the view that (i) the continuing connected transactions as set out above have been and will be entered into in the ordinary and usual course of business of our Company and on normal commercial terms or better, and are fair and reasonable and in the interest of our Company and our Shareholders as a whole; (ii) the longer term of the Colombia Entrustment Arrangement promotes stability and continuity in operations and assignment of economic benefits, and is beneficial to us and our shareholders as a whole; (iii) the proposed monetary caps or alternative caps (where applicable) for the 2025 Altynken Sale Agreement, the Zijin Mining Sales Framework Agreement, the Zijin Mining Centralized Procurement Agreement, the Zijin Mining Technical Service and Support Framework Agreement, Zijin America Sales Framework Agreement and the Zijin Mining Financial Services Framework Agreement as described above are fair and reasonable and in the interests of our Shareholders as a whole; and (iv) the absence of cap for the Colombia Entrustment Arrangement is fair and reasonable and in the interests of our Company and our Shareholders as a whole.

JOINT SPONSORS' CONFIRMATION

Based on the documentation provided by the Company, the Joint Sponsors' due diligence and discussions with the Company, the Joint Sponsors are of the view that (i) the continuing connected transactions as set out above have been and will be entered into in the ordinary and usual course of business of the Company and on normal commercial terms or better, and are fair and reasonable and in the interest of the Company and the Shareholders as a whole; (ii) the longer term of the Colombia Entrustment Arrangement promotes stability and continuity in operations and assignment of economic benefits, and is beneficial to the Company and the shareholders as a whole; (iii) the proposed monetary caps or alternative caps (where applicable) for the 2025 Altynken Sales Agreement, the Zijin Mining Sales Framework Agreement, the Zijin Mining Centralized Procurement Agreement, the Zijin Mining Technical Service and Support Framework Agreement, Zijin America Sales Framework Agreement and the Zijin Mining Financial Services Framework Agreement as described above are fair and reasonable and in the interests of the Shareholders as a whole; and (iv) the absence of cap for the Colombia Entrustment Arrangement is fair and reasonable and in the interests of the Company and its Shareholders as a whole.

BOARD OF DIRECTORS

Our Board currently consists of 9 Directors, including 3 executive Directors, 3 non-executive Directors and 3 independent non-executive Directors.

Note: Denotes the time from which the relevant Director joined Zijin Group (for the purpose of this note, the term Zijin Group here includes our Group).

DIRECTORS

Our Board currently consists of 9 Directors, comprising 3 executive Directors, 3 non-executive Directors and 3 independent non-executive Directors. The powers and duties of our Board include convening general meetings and reporting our Board's work at our Shareholders' meetings, determining our business and investment plans, preparing our annual financial budgets and final reports, formulating proposals for profit distributions and exercising other powers, functions and duties as conferred by the Articles of Association.

Executive Directors

Guo Xian Jian (郭先健)

Dr. Guo Xian Jian, aged 66, is an executive Director and the chief executive officer of our Group.

Dr. Guo joined Zijin Mining as chief engineer in August 2017, and has been the senior advisor of Zijin Mining since December 2019, guiding the company's engineering and technology, as well as the development and operation of overseas projects. Upon completion of the Global Offering, Dr. Guo will focus on his role and responsibilities as the chief executive officer of our Group and will no longer have any roles and responsibilities in the Zijin Mining Group. During his tenure with Zijin Mining, he was deeply involved in several key projects comprising our Group, including the commissioning and technical renovation of the Colombia Buriticá Gold Mine the operation resumption and technical renovation of the Guyana Aurora Gold Mine, the implementation of the pressure pre-oxidation project for the Tajikistan Jilau/Taror Gold Mines, the commissioning and ram-up of the heap leaching project at Australia Norton Gold Mine, the transfer and production upgrade of the Suriname Rosebel Gold Mine.

Dr. Guo has been engaged in research and development, engineering, project management, and plant operation optimization in the metal and mining field for over forty years. He began his career in July 1982 and has held several prominent positions in research institutions and metal and mining enterprises, including as deputy director, among other positions, of the Beijing General Research Institute for Nonferrous Metals from April 1989 to February 1995, senior researcher at the Technology Center of Noranda Inc. from January 1997 to December 2001, and as the director (non-ferrous metals — China region) and technical director (China region) at Hatch Ltd respectively from 2002 to 2005, and 2011 to 2017. He also served as the vice president at Ramu NiCo Management (MCC) Limited from January 2006 to August 2011 and technical advisor for CGN Mining Company Ltd's Husab Uranium Project in Namibia from September 2013 to November 2016. Dr. Guo had his residency at the University of Science and Technology Beijing as visiting professor in 2017. In his career, he led the completion of dozens of research and engineering and metallurgical projects, including several large-scale mining and mineral processing (metallurgy) projects with investments exceeding billion dollars.

Dr. Guo is a registered engineer in Ontario, Canada and possesses great industry knowledge and expertise in Non-ferrous Metal industry. He graduated with a bachelor's degree in Non-ferrous Metallurgy from Jiangxi University of Science and Technology, the PRC, in July 1982, followed by a master's degree in Non-ferrous Metallurgy from Kunming University of Science and Technology, the PRC, in June 1986, and a doctorate degree in same field in March 1989. Subsequent to his academic studies, he furthered his academic pursuits with research collaboration with the Mackay School of Earth Sciences and Engineering (formerly Mackay School of Mines), University of Nevada, USA and McGill University, Canada. Dr. Guo has published over 40 papers in renowned domestic and international journals and international academic conferences and is the writer of the books "Chemistry and Application of Copper Pyro-metallurgical Slag" published in 2023 and "Theory and Practice of Comprehensive Utilization of Low-grade Gold Resources" to be published.

Yiu Kai (饒佳)

Mr. Yiu Kai, aged 44, is an executive Director and chief financial officer of our Group.

Mr. Yiu joined Zijin Mining in February 2011 and from September 2022 to June 2025, he has been serving as the general manager of the planning and finance department of Zijin Mining. Upon completion of the Global Offering, Mr. Yiu will focus on his role and responsibilities as the chief financial officer of our Group and will no longer have any roles and responsibilities in the Zijin Mining Group. During his tenure in Zijin Mining, he was involved in the financial management of Norton Gold Fields and New Porgera, and has been managing the financial function of the Group as the general manager of the planning and finance department of Zijin Mining.

Mr. Yiu has previously held positions as an accountant at HLM CPA Limited from December 2003 to February 2005, a senior accountant at Ernst & Young from February 2005 to May 2008, an assistant manager at John Lees & Associates Limited from May 2008 to October 2008, and as a senior accountant and subsequently a manager at the transaction advisory services department at Ernst & Young Transactions Limited from October 2008 to February 2011.

Mr. Yiu is a certified public accountant in China and Hong Kong, a chartered certified accountant in the United Kingdom, and a certified practising accountant in Australia. He graduated with a bachelor's degree in accounting from the Hong Kong University of Science and Technology, in November 2003 and obtained a master's degree in business administration from the University of Hong Kong in November 2015.

Huang Zhihua (黃志華)

Dr. Huang Zhihua, aged 43, is an executive Director and the chief operating officer of our Group.

Dr. Huang joined Zijin Mining in August 2007, and he served as the executive deputy general manager of Hunan Zijin Lithium Co., Ltd., a wholly-owned subsidiary of Zijin Mining, from August 2022 to October 2024 before serving as their executive director and general manager from October 2024 until his departure in June 2025. Upon completion of the Global Offering, Dr. Huang will focus on his role and responsibilities as the chief operating officer of our Group and will no longer have any roles and responsibilities in the Zijin Mining Group. During his tenure with Zijin Mining, he was involved in several key projects comprising the Group, including the plant manager of Zijinshan Gold-Copper Mine, the concentrator manager at Kamoa Copper S.A., and the executive deputy general manager of Hunan Zijin Lithium Co., Ltd.

Dr. Huang is a registered senior engineer in the PRC. He graduated with a bachelor's degree in mineral processing engineering from Central South University in June 2004, followed by a master's degree in May 2007, and a doctorate degree in June 2021 in mineral engineering from Central South University, the PRC.

Non-executive Directors

Lin Hongfu (林泓富)

Mr. Lin Hongfu, aged 51, is a non-executive Director and the chairman of the Board of our Company.

Mr. Lin is a registered senior engineer in the PRC. He began his career in September 1997 at Zijin Mining and held the positions of plant manager at Zijin Mining's gold refinery plant, deputy chief of the Zijinshan Gold Mine, general manager and chairman of Bayannur Zijin Non-ferrous Metals Co., Ltd., etc. He served as a vice president of Zijin Mining from August 2006 to October 2013. He served as a director of Zijin Mining and vice president of Zijin Mining from October 2013 to December 2019. He has been serving as a director and standing vice president of Zijin Mining since December 2019.

Mr. Lin has also been concurrently serving as the chairman of the board of Fujian Longking Co., Ltd, a company listed on the Shanghai Stock Exchange (stock code: 600388), since June 2022.

He obtained a master's degree in executive business administration from Tsinghua University, the PRC, in January 2011.

Wang Chun (王春)

Mr. Wang Chun, aged 56, is a non-executive Director of our Company.

Mr. Wang is a registered senior engineer in the PRC. He previously served as the researcher of the Beijing General Research Institute of Mining and Metallurgy, the technical director of Ramu Nico Management (MCC), vice president of operations and technology of CMOC Group Limited.

Mr. Wang joined Zijin Mining in February 2013, serving as deputy chief engineer of Zijin Mining and president of the Zijin Mining Metallurgy Research Institute. From March 2018 to September 2019, he worked at Beijing Yongbo Resources Investment Holding Co., Ltd. Since February 2013, Mr. Wang has held various roles, including being the deputy chief engineer of Zijin Mining, general manager of Continental Gold Limited Sucursal Colombia from October 2019 to October 2021 and general manager of Gold Mountains (H.K.) from November 2021 to December 2022. He has been serving as a vice president of Zijin Mining since December 2022.

He also currently serves as a non-independent director of Ivanhoe Mines Ltd (listed on the Toronto Stock Exchange, stock code: IVN).

He graduated with a bachelor's degree in applied chemistry from Central South University of Technology, the PRC in July 1990 and obtained a doctorate in inorganic chemistry from the Changchun Institute of Applied Chemistry, Chinese Academy of Sciences, the PRC, in April 1996.

Jian Ximing (簡錫明)

Mr. Jian Ximing, aged 48, is a non-executive Director of our Company.

Mr. Jian joined Zijin Mining in October 2000 and has held various positions, including project leader (deputy director) at the Zijinshan Copper-Gold Mine Technical Reform Command department, deputy manager, manager, and assistant general manager of the infrastructure department at Bayannur Zijin Nonferrous Metals Co., Ltd., manager of the infrastructure department, assistant general manager, and deputy general manager at Zijin Copper Co., Ltd., general manager of Hunchun Polymetallic Co., Ltd., general manager of Hunchun Zijin Mining Co., Ltd., general manager of the construction department of Zijin Mining, executive deputy general manager of Serbia Zijin Copper Doo Bor, and director and general manager of overseas operations of Zijin Mining. Since August 2023, he has been serving as the chief executive officer of the overseas operations department of Zijin Mining.

He is a senior engineer and was recognized as a senior reserve talent of Zijin Mining in 2021 and 2022. Mr. Jian graduated with a diploma in housing construction engineering from Fujian University of Technology (then Fujian College of Architecture), the PRC, in July 1999 and later obtained a diploma in civil engineering from Southwest University, the PRC, in 2012.

Independent non-executive Directors

Xie Shaobo (謝少波)

Mr. Xie Shaobo, aged 51, is an independent non-executive Director of our Company.

Mr. Xie Shaobo is a seasoned professional with a distinguished career in the banking and finance sector, specializing in metals and mining advisory services across the Asia Pacific region. He is recognized for his strategic leadership and expertise in mergers and acquisitions, capital markets, and financial advisory services.

Mr. Xie has over 20 years of investment banking experience in the mining sector. From June 2014 to September 2024, Mr. Xie served as the managing director and head of metals and mining for North Asia and Greater China at Standard Chartered Bank.

Prior to his current role, Mr. Xie held a significant position at Citi as director of their Asian Industrials Investment Banking Division from July 2011 to April 2014, where he secured key buy-side mandates and fostering relationships with major Chinese state-owned and private enterprises. His earlier experience includes working in Alcoa Asia Pacific from 2004, where he managed major acquisition projects and financial analysis for large-scale operations. Following his departure from Alcoa, he joined HSBC in 2007, where he led a team in the metal and mining resources and energy group until he left to join Citi in 2011.

Mr. Xie graduated with a bachelor's degree in applied chemistry from East China University of Science and Technology in July 1994.

Hui Lai Kwan (許麗君)

Ms. Hui Lai Kwan, aged 54, is an independent non-executive Director of our Company.

Ms. Hui has extensive experience in accounting, corporate governance, and strategic consulting. Since February 2021, she has been serving as an independent non-executive director at Yuexiu Services Group Limited (stock code: 6626), where she chairs the audit committee and is a member of the environmental, social and governance committee, nomination committee, and remuneration committee. Yuexiu Services Group Limited is a provider of property management services, value-added services, and operational services. It was spun off from Yuexiu Property Company Limited (listed on the Stock Exchange, stock code: 0123) in June 2021.

Ms. Hui has over 25 years of professional experience as a registered accountant, with a strong background in audit, consulting, business transformation, crisis management, financial and IT control and risk management. Her expertise extends to regulatory reporting and compliance, capital markets, mergers and acquisitions, process optimization, internal control and risk assessment, ESG compliance management, corporate governance, and strategic planning. Since 2024, Ms. Hui has been working as a self-employed consultant, providing advisory services to enterprises, startups, and social enterprises.

Previously, Ms. Hui held various senior roles, including corporate governance and strategy director at i-CABLE Network Operations Limited, part of the i-CABLE Communications Limited Group (stock code: 1097) (i-CABLE group), from August

2022 to January 2024. From September 2018 to August 2022, she has acted as the consultant for Golden Advice Enterprises Limited and transformation lead for i-CABLE group. She also served as chief financial officer at Asana (Hong Kong) Limited from February to August 2018, as head of finance at Aviva Life Insurance Company Limited from May 2016 to February 2018 and as director in the regional controllers department at Manulife Financial Asia Limited from December 2014 to November 2015. From August 1992 to December 2010, she worked in KPMG where she gained experience in audit, tax and advisory services across diverse industries and her past position therein was senior manager of capital markets group and was responsible for provision of technical support services to audit team on listing matters.

Ms. Hui holds a bachelor of social sciences from the University of Hong Kong in December 1992, and both a postgraduate diploma in early childhood education and a kindergarten principal certificate from Hong Kong Baptist University in November 2012 and June 2013, respectively. She is a registered accountant with the Hong Kong Institute of Certified Public Accountants.

Chan Hon (陳漢)

Mr. Chan Hon, aged 65, is an independent non-executive Director of our Company.

Mr. Chan has an extensive career in legal advisory and compliance services, specializing in financial law across various international markets. He is known for his expertise in investment banking securities, asset securitization, structured notes issuance, foreign exchange derivatives, bank lending, and investment funds, as well as his role as an arbitrator for commercial disputes.

Mr. Chan started his legal career with Allen & Overy in London and then moved to their Hong Kong office before becoming an in-house legal counsel with international banks. He worked at Deutsche Bank from July 2006 to November 2016, where he was appointed head of compliance, PRC until 2009, with his last in-house position with them being associate general counsel at the Shanghai branch of Deutsche Bank China. He was head of legal and compliance at ING Group in Singapore from September 2004 to July 2006, and senior legal advisor at ING Group in Hong Kong from April 1999 to August 2004. His legal expertise was further developed during his tenure at Credit Suisse in Hong Kong from July 1997 to April 1999, following his departure from Allen & Overy in Hong Kong. Since January 2017, Mr. Chan has been serving as a senior consultant and now as an international arbitrator, primarily in Hong Kong, Singapore and China. Mr. Chan has also been concurrently serving as the independent non-executive Director for Orient Securities Co., Ltd (listed on the Stock Exchange, stock code: 3958) since November 2022.

Mr. Chan obtained a bachelor of laws from the University of Leeds in 1991 and completed the Solicitor Qualifying Examination Course in 1992. He further enhanced his expertise with legal and financial training programmes. He was admitted as a solicitor in England and Wales in 1994 and in Hong Kong in 1996.

Note: Denotes the time from which the relevant members of senior management first became involved in matters relating to the business of our Group while under the employment of Zijin Mining or our Group (where applicable).

Dr. Guo Xian Jian is our chief executive officer. For details of his biography, see "— Directors — Executive Directors" in this section.

Mr. Yiu Kai is our chief financial officer. For details of his biography, see "— Directors — Executive Directors" in this section.

Dr. Huang Zhihua is our chief operating officer. For details of his biography, see "— Directors — Executive Directors" in this section.

Huang Xiaohong (黃曉虹)

Ms. Huang Xiaohong, aged 42, is a vice president and a joint company secretary of our Group.

Ms. Huang joined Zijin Mining Group Co., Ltd. in November 2015 and has held various management positions, including deputy general manager of the Overseas Operations Department of Zijin Mining, deputy general manager of the Investment Department, and general manager of Gold Mountains (H.K.) International Mining Company. She was appointed executive general manager of the International Business Department of Zijin Mining in August 2024. Upon completion of the Global Offering, Ms. Huang will focus on her role and responsibilities as the vice president of our Group and as one of the joint company secretaries of the Company, and will no longer have any roles and responsibilities in the Zijin Mining Group. During her tenure with Zijin Mining, Ms. Huang contributed to the exploration and development of international business opportunities.

Prior to joining Zijin Mining, Ms. Huang accumulated nearly ten years of professional experience in investment management. From January 2006 to August 2008, she served in the investment advisory team at ROI Group in New York. She then joined Waitex International (New York) as Assistant to Chairman and financial associate from 2008 to 2010. From May 2010 to June 2013, she served as vice president of ICAN Capital in Beijing. From May 2014 to June 2015, she served as Investment General Manager at Qingdao Furi Group.

Ms. Huang obtained a bachelor's of arts degree from Iowa Wesleyan College in the United States in August 2006, a master's degree in Financial Management from Pace University in the United States in May 2009, and a Master of Business Administration from the Massachusetts Institute of Technology in the United States in May 2024.

Huang Yuanguang (黃遠光)

Mr. Huang Yuanguang, aged 45, is the vice president of our Group.

Mr. Huang joined Zijin Mining in June 2016, where he initially served as the human resources director. In February 2023, he transitioned to Norton Gold Fields as its chief executive officer, before returning to Zijin Mining in July 2024 to resume his role as human resources director. He also has been serving the chairman of the board's risk control and supervision committee of Norton Gold Fields ever since. Upon completion of the Global Offering, Mr. Huang will focus on his role and responsibilities as the vice president of our Group and will no longer have any roles and responsibilities in the Zijin Mining Group. During his tenure with Zijin Mining, he has been involved in managing the operations of Norton Gold Fields, contributing to its growth and development. He was also a member of the management committee of Zijinshan gold copper mine.

Mr. Huang began his career in July 2002 and has held strategic and senior positions at various organizations prior to joining Zijin Mining, including serving as the Human Resources Director at Nine Dragons Paper Holdings Limited from September 2013 to September 2015.

Mr. Huang graduated with a bachelor's degree in Economics from Guangdong Ocean University in the PRC in June 2002 and obtained a master's degree in Business Administration from Lanzhou University in the PRC in June 2008.

Liao Jiansheng (廖建生)

Mr. Liao Jiansheng, aged 58, is the vice president of our Group.

Mr. Liao first joined Zijin Mining in August 2009 and has since held several key positions, including executive deputy general manager and executive general manager of the Overseas Operations Department of Zijin Mining and head of the Representative Office of Zijin Mining in Belgrade. With extensive experience in foreign affairs and international trade, and fluency in both Russian and English, Mr. Liao has played a vital role in strengthening the company's global development and international engagement.

Upon completion of the Global Offering, Mr. Liao will focus on his role and responsibilities as the vice president of our Group and will no longer have any roles and responsibilities in the Zijin Mining Group. During his tenure with Zijin Mining, he has been deeply involved in key managerial role in the key projects comprising the Group, including his position as the deputy general manager in JV Zeravshan LLC.

Mr. Liao began his career in August 1989 and has held positions in various government institutions and agencies. These include two entities under the former Ministry of Foreign Trade and Economic Cooperation of China — the China (Fujian) Foreign Trade Center (Holdings) Co., Ltd. from February 1993 to October 2001, and the Economic and Commercial Counsellor's Office of the Embassy of China in the Republic of Tajikistan from December 1993 to December 1996. At the provincial level, Mr. Liao served at the Fujian Provincial Foreign Economic and Trade Cadres' Training Center and as deputy director of the Fujian Provincial Foreign Economic and Trade Talent Exchange Service Center, both of which are government agencies under the former Fujian Provincial Department of Foreign Trade and Economic Cooperation, from October 2001 to July 2009.

Mr. Liao previously also held managerial positions in the International Engineering Company of Fujian Construction Engineering Group Co., Ltd. from September 2012 to January 2017 and served as deputy director of the general office of China Wu Yi Co., Ltd., a company listed on the Shenzhen Stock Exchange (stock code: 000797), from January 2017 until his departure in February 2018.

Mr. Liao graduated with a bachelor's degree in Russian from Fujian Normal University in July 1989.

Lin Wei (林煒)

Mr. Lin Wei, aged 43, is the vice president of the Group.

Mr. Lin joined Zijin Mining in January 2008 and was appointed chief executive officer of Norton Gold Fields in July 2024. Upon the completion of the Global Offering, Mr. Lin will focus on his role and responsibilities as the vice president of our Group and will no longer have any roles and responsibilities in the Zijin Mining Group. Mr. Lin began his career at the Zijinshan Gold-Copper Mine, where he worked for seven years across various departments including processing, mining, and functional roles, progressing from entry-level positions to department manager. In 2015, he was seconded to Norton Gold Fields in Australia, where he successively served as project manager, and general manager of projects. In March 2024, he was appointed chief operating officer of Norton Gold Fields.

Mr. Lin obtained a Bachelor's degree in Mineral Processing Engineering from China University of Mining and Technology (Beijing) in the PRC in July 2005, and a Master's degree in Non-ferrous Metallurgy from the University of Science and Technology Beijing in the PRC in January 2008. In April 2022, he earned a Master of Philosophy in Mining and Metallurgical Engineering from Curtin University in Australia. In 2024, he was certified as a Quarry Manager and Site Senior Executive by the WorkSafe Commissioner of the Department of Local Government, Industry Regulation and Safety (LGIRS) (formerly the Department of Energy, Mines, Industry Regulation and Safety (DEMIRS)), Western Australia.

Wang Qianjie (王乾杰)

Mr. Wang Qianjie, aged 43, is the vice president of our Group.

Mr. Wang commenced his professional journey in February 2007. His career has spanned various esteemed positions within the Zijin Mining Group (including the Group) since June 2009, including roles at various Zijin Mining subsidiaries such as Southeast Geological and Mineral Exploration Branch Company, where he advanced from a project manager to deputy general manager, and at Zijin Mining, where he served as director of the international geological exploration division and deputy general manager of the international division. He has also worked at Barrick (Niugini) Limited, the then holding company of the PNG Porgera Gold Mine, as a senior geologist.

In July 2024, Mr. Wang assumed his current role at Rosebel GM. His expertise and leadership have been recognized through various accolades, including a Group Second-Class Merit and a Ministerial Science and Technology Award for his contributions to geological exploration and mineral discovery in China's central and eastern regions.

Mr. Wang holds a bachelor's degree in Geochemistry from Peking University in the PRC, obtained in June 2004, and a master's degree in Mineralogy, Petrology, and Ore Deposit Studies from the same institution, completed in January 2007.

Save as disclosed above, each of our Directors and senior management members confirms with respect to himself or herself that (1) he or she had no other relationship with any Director, senior management or substantial Shareholder of our Company as at the Latest Practicable Date; (2) he or she did not hold any other directorships in the three years prior to the Latest Practicable Date in any public companies of which the securities are listed on any stock exchange in Hong Kong and/or overseas; and (3) there are no other matters concerning our Directors' appointment that need to be brought to the attention of our Shareholders and the Stock Exchange or shall be disclosed pursuant to Rule 13.51(2)(h) to (v) of the Listing Rules.

JOINT COMPANY SECRETARIES

Ms. Huang Xiaohong was appointed as a joint company secretary of our Company with effect from June 17, 2025. For details of her biography, please refer to "— Senior Management" in this section.

Mr. Ho Kin Wai was appointed as a joint company secretary of our Company with effect from June 17, 2025.

Mr. Ho obtained a bachelor's degree in business administration from the Hong Kong University of Science and Technology in November 2005. He is a fellow of the Hong Kong Institute of Certified Public Accountants, a member of the Hong Kong Chartered Governance Institute and the Chartered Governance Institute, and holds the qualifications of Chartered Secretary, Chartered Governance Professional and Certified Public Accountant of Hong Kong. He joined Zijin Mining in July 2013, and served as the assistant company secretarial manager, company secretarial manager and senior company secretarial manager of Gold Mountains (H.K.). Mr. Ho is also a joint company secretary of Zijin Mining.

BOARD COMMITTEES

Our Board has established the Audit Committee, the Remuneration Committee and the Nomination Committee and delegated various responsibilities to these committees, which assist our Board in discharging its duties and overseeing particular aspects of our Group's activities.

Audit Committee

We have established an Audit Committee in compliance with Rule 3.21 of the Listing Rules and the Corporate Governance Code set out in Appendix C1 to the Listing Rules with written terms of reference. The primary duties of the Audit Committee are to (i) review and supervise our financial reporting process and internal control system, risk management and internal audit of our Group; (ii) provide advice and comments to our Board in respect of financial risk, risk management and internal control matters; and (iii) perform other duties and responsibilities as may be assigned by the Board.

The Audit Committee comprises three independent non-executive Directors, namely, Ms. Hui Lai Kwan, Mr. Xie Shaobo and Mr. Chan Hon. Ms. Hui Lai Kwan is the chairperson of the Audit Committee. Ms. Hui holds the appropriate professional qualifications as required under Rules 3.10(2) and 3.21 of the Listing Rules.

Remuneration Committee

We have established a Remuneration Committee in compliance with Rule 3.25 of the Listing Rules and the Corporate Governance Code set out in Appendix C1 to the Listing Rules with written terms of reference. The primary duties of the Remuneration Committee include, but are not limited to, the following: (i) making recommendations to our Board on our policy and structure for all remuneration of Directors and senior management and on the establishment of a formal and transparent procedure for developing policy on such remuneration; and (ii) reviewing and approving matters relating to share schemes of our Company.

The Remuneration Committee comprises one non-executive Director and two independent non-executive Directors, namely, Mr. Xie Shaobo, Mr. Chan Hon and Mr. Lin Hongfu. Mr. Xie Shaobo is the chairperson of the Remuneration Committee.

Nomination Committee

We have established a Nomination Committee in compliance with Rule 3.27A of the Listing Rules and the Corporate Governance Code set out in Appendix C1 to the Listing Rules with written terms of reference. The primary duties of the Nomination Committee include, but are not limited to, (i) reviewing the structure, size and composition of our Board on a regular basis and make recommendations to the Board regarding any proposed changes to the composition of our Board; (ii) identifying, selecting or making recommendations to our Board on the selection of individuals nominated for directorship, and ensuring the diversity of our Board members; (iii) performing review on the contributions made by our Directors (including our independent non-executive Directors) and the sufficiency of time devoted to perform their duties; (iv) assessing the independence of our independent non-executive Directors; and (v) making recommendations to our Board on relevant matters relating to the appointment, re-appointment and removal of our Directors.

The Nomination Committee comprises one non-executive Director and two independent non-executive Directors, namely, Mr. Lin Hongfu, Ms. Hui Lai Kwan and Mr. Xie Shaobo. Mr. Lin Hongfu is the chairperson of the Nomination Committee.

REMUNERATION OF DIRECTORS AND SENIOR MANAGEMENT

Our Directors and members of our senior management receive compensation from our Group in the form of salaries, bonuses and other benefits in kind such as contributions to a retirement benefit scheme.

The aggregate remuneration (including fees, salaries, contributions to a retirement benefit scheme, discretionary bonuses and other allowances and other benefits in kind) paid to our Directors for the years ended December 31, 2022, 2023 and 2024 and for the six months ended June 30, 2025 was US$276,000, US$268,000, US$263,000 and US$107,000, respectively. Save as disclosed in Note 11 to the Accountants' Report in Appendix I to this Prospectus, no other amounts have been paid or are payable by any member of our Group to our Directors during the Track Record Period.

The aggregate amount of wages, salaries and bonuses, pension costs and other allowances and other benefits in kind paid to our five highest paid individuals in respect of each of the three years ended December 31, 2022, 2023 and 2024 and for the six months ended June 30, 2025 was US$2.5 million, US$2.4 million, US$2.6 million and US$1.7 million, respectively.

No remuneration was paid by us to our Directors or the five highest paid individuals as an inducement to join or upon joining us or as a compensation for loss of office during the Track Record Period. Further, none of our Directors had waived or agreed to waive any remuneration during the Track Record Period.

Under the existing arrangements that are currently in force as of the date of this Prospectus, the aggregate remuneration (including fees, salaries, contributions to pension schemes and other allowances and other benefits in kind but excluding discretionary bonuses) payable to our Directors for the year ending December 31, 2025 is estimated to be around US$1.8 million in aggregate.

Our Board will review and determine the remuneration and compensation packages of our Directors and senior management and will, following the Listing, receive recommendation from the Remuneration Committee which will take into account salaries paid by comparable companies, time commitment and responsibilities of our Directors and performance of our Group.

CORPORATE GOVERNANCE

Our Company recognizes the importance of incorporating elements of good corporate governance in the management structures and internal control procedures of our Group so as to achieve effective accountability.

Our Company has adopted the code provisions stated in the Corporate Governance Code. Our Company is committed to the view that the Board should include a balanced composition of executive Directors, non-executive Directors and independent non-executive Directors so that there is a strong independent element on the Board, which can effectively exercise independent judgment.

BOARD DIVERSITY POLICY

Our Board has adopted a board diversity policy which sets out the approach to achieve diversity on our Board. Our Company recognizes and embraces the benefits of having a diverse Board and sees increasing diversity at the Board level as an essential element in supporting the attainment of our Company's strategic objectives and sustainable development. Our Company seeks to achieve Board diversity through the consideration of a number of factors, including but not limited to talent, skills, gender, age, cultural and educational background, ethnicity, professional experience, independence, knowledge and length of service. We will select potential Board candidates based on merit and their potential contribution to our Board while taking into consideration our own business model and specific needs from time to time. All Board appointments will be based on meritocracy and candidates will be considered against objective criteria, having due regard to the benefits of diversity on our Board.

Our Board has a balanced mix of knowledge, skills and experience. They completed studies in various majors including but without limitation to non-ferrous metallurgy, accounting, mineral processing, applied chemistry and construction engineering. We have three independent non-executive Directors who have different industry backgrounds. Furthermore, our Directors are of a wide range of age, from 43 to 66 years old. Taking into account our business model and specific needs as well as the presence of one female Director out of a total of nine Board members, we consider that the composition of our Board satisfies our board diversity policy.

We will implement policies to ensure gender diversity when recruiting staff to develop a pipeline of female senior management and potential successors to the Board. We will strive to enhance our female representation and achieve appropriate balance of gender diversity with reference to the stakeholders' expectation and international and local recommended best practices. Furthermore, we will implement comprehensive programs aimed at identifying and training our female staff who display leadership and potential, with the goal of promoting them to the senior management or the Board.

Our Nomination Committee is responsible for ensuring the diversity of our Board members. After Listing, our Nomination Committee will review our board diversity policy and its implementation annually to monitor its continued effectiveness and we will disclose the implementation of our board diversity policy, including any measurable objectives set for implementing the board diversity policy and the progress on achieving these objectives, in our corporate governance report on an annual basis.

COMPLIANCE ADVISOR

We have appointed Somerley Capital Limited as our compliance advisor pursuant to Rule 3A.19 of the Listing Rules. Pursuant to Rule 3A.23 of the Listing Rules, our compliance advisor will advise us in the following circumstances:

- before the publication of any regulatory announcement, circular or financial report;

- when a transaction, which might be a notifiable or connected transaction, is contemplated, including share issues and share repurchases;

- where we propose to use the proceeds from the Global Offering in a manner different from that detailed in this Prospectus or where our business activities, developments or results deviate from any forecast, estimate, or other information in this Prospectus; and

- where the Stock Exchange makes an inquiry of us regarding unusual movements in the price or trading volume of our Shares.

Pursuant to Rule 3A.24 of the Listing Rules, the compliance advisor will, on a timely basis, inform our Company of any amendment or supplement to the Hong Kong Listing Rules that are announced by the Hong Kong Stock Exchange. The compliance advisor will also inform our Company of any new or amended law, regulation or code in Hong Kong applicable to us, and advise us on the continuing requirements under the Hong Kong Listing Rules and applicable laws and regulations.

The term of the appointment shall commence on the Listing Date and end on the date on which we distribute our annual report in respect of our financial results for the first full financial year commencing after the Listing Date and such appointment may be subject to extension by mutual agreement.

CONFIRMATION FROM OUR DIRECTORS

Rule 3.09D of the Listing Rules

Each of our Directors confirms that he or she (1) has obtained the legal advice referred to under Rule 3.09D of the Listing Rules in June 2025; and (2) understands his or her obligations as a director of a listed issuer under the Listing Rules.

Rule 3.13 of the Listing Rules

Each of the independent non-executive Directors confirms (1) his/her independence as regards each of the factors referred to in Rule 3.13(1) to (8) of the Listing Rules; (2) that he/she has no past or present financial or other interest in the business of our Company or our subsidiaries or any connection with any core connected person of our Company under the Listing Rules as of the Latest Practicable Date; and (3) that there are no other factors that may affect his/her independence at the time of his/her appointment.

So far as our Directors are aware, immediately prior to and following the completion of the Global Offering, the following persons will have an interest or a short position in the Shares or the underlying Shares of our Company which will be required to be disclosed to our Company and the Stock Exchange pursuant to the provisions of Division 2 and 3 of Part XV of the SFO:

Name of Shareholder	Nature of interest	Shares held immediately prior to the completion of the Global Offering		Shares held immediately after the Global Offering (assuming that the Over-allotment Option is not exercised)		Shares held immediately after the Global Offering (assuming that the Over-allotment Option is exercised in full)	
		Number	Percentage	Number	Percentage	Number	Percentage
Gold Mountains (H.K.)	Beneficial owner	1,729,000,000	76%	1,729,000,000	65.89%	1,729,000,000	64.60%
Zijin Northwest	Beneficial owner	546,000,000	24%	546,000,000	20.81%	546,000,000	20.40%
Zijin Mining	Interest in controlled corporation[1]	2,275,000,000	100%	2,275,000,000	86.70%	2,275,000,000	85.00%

Note:

(1) Zijin Mining held the entire equity interests in Gold Mountains (H.K.) and Zijin Northwest. For the purpose of the SFO, Zijin Mining is deemed to be interested in the Shares beneficially owned by Gold Mountains (H.K.) and Zijin Northwest.

Save as disclosed above, our Directors are not aware of any person who will, immediately following the completion of the Global Offering, have an interest or a short position in the Shares or underlying Shares which will be required to be disclosed to our Company and the Stock Exchange under the provisions of Division 2 and 3 of Part XV of the SFO or will be, directly or indirectly, interested in 10% or more of the nominal value of any class of share capital carrying rights to vote in all circumstances at general meetings of our Company or any of our subsidiaries. Our Directors are not aware of any arrangement which may at a subsequent date result in a change of control in our Company.

ISSUED SHARE CAPITAL

The following is a description of the share capital of our Company in issue as of the Latest Practicable Date and to be issued as fully paid or credited as fully paid immediately following the Global Offering.

Assuming the Over-allotment Option is not exercised, our Company's issued share capital immediately after completion of the Global Offering will be as follows:

Shares in issue as at the date of this Prospectus	2,275,000,000 Shares
Shares to be issued pursuant to the Global Offering	348,990,700 Shares
Total issued Shares upon completion of the Global Offering	**2,623,990,700 Shares**

Assuming the Over-allotment Option is exercised in full, our Company's issued share capital immediately after completion of the Global Offering will be as follows:

Shares in issue as at the date of this Prospectus	2,275,000,000 Shares
Shares to be issued pursuant to the Global Offering	401,339,300 Shares
Total issued Shares upon completion of the Global Offering and the Over-allotment Option	**2,676,339,300 Shares**

ASSUMPTIONS

The above table assumes that the Global Offering becomes unconditional and is completed in accordance with the relevant terms and conditions and that the Shares are issued pursuant to the Global Offering. The above does not take into account any Shares which may be issued or repurchased by our Company pursuant to the general mandates granted to our Directors to issue or repurchase Shares as described below.

RANKING

The Offer Shares are ordinary shares in the share capital of our Company and will rank equally and carry the same rights in all respects with all Shares currently in issue or to be issued as mentioned in this Prospectus and, in particular, will rank in full for all dividends or other distributions declared, made or paid on the Shares in respect of a record date which falls after the date of this Prospectus.

GENERAL MANDATE TO ISSUE SHARES

Subject to the Global Offering becoming unconditional, our Directors have been granted a general mandate to allot, issue and deal with Shares or securities convertible into Shares and to make or grant share sale plans, offers, agreements or options which would or might require the exercise of such powers to allot, issue and deal with the Shares, with an aggregate number of Shares allotted or agreed to be allotted, otherwise than by

way of rights issue or pursuant to the exercise of any options which may be granted under any share option scheme or by virtue of scrip dividend schemes or similar arrangements in accordance with our Articles, not more than the sum of:

(i) 20% of the aggregate number of Shares in issue immediately following completion of the Global Offering on the Listing Date (excluding Shares which may be allotted and issued pursuant to the exercise of the Over-allotment Option); and

(ii) the aggregate number of Shares repurchased by our Company (if any) under the general mandate to repurchase Shares granted to our Directors referred to below.

This general mandate will expire at the earliest of:

(i) the conclusion of our Company's next annual general meeting; or

(ii) the expiration of the period within which the next annual general meeting of our Company is required by the Articles or any other applicable laws and regulations of Hong Kong to be held; or

(iii) when varied, revoked or renewed by an ordinary resolution of our Shareholders in a general meeting.

Please refer to "Appendix V — Statutory and General Information — 1. Further Information about our Group — (c) Written Resolutions of our Shareholders passed on September 17, 2025" for details of this general mandate.

GENERAL MANDATE TO REPURCHASE SHARES

Subject to the Global Offering becoming unconditional, our Directors have been granted a general mandate to exercise all the powers of our Company to repurchase Shares with a total number of Shares of not more than 10% of the aggregate number of Shares immediately following completion of the Global Offering but excluding any Shares which may be issued pursuant to the exercise of the Over-allotment Option.

This mandate only relates to repurchases made on the Stock Exchange, or any other approved stock exchange(s) on which the Shares are listed (and which is recognized by the SFC and the Stock Exchange for this purpose), and which are made in accordance with all applicable laws and/or requirements of the Listing Rules. A summary of the relevant Listing Rules is set out in "Appendix VI — Statutory and General Information — 1. Financial Information about our Group — (f) Repurchase by our Company of our own securities — (i) Provisions of the Listing Rules.".

This mandate will expire at the earliest of:

(i) the conclusion of our Company's next annual general meeting; or

(ii) the expiration of the period within which the next annual general meeting of our Company is required by the Articles or any other applicable laws and regulations of Hong Kong to be held; or

(iii) when varied, revoked or renewed by an ordinary resolution of our Shareholders in a general meeting.

Please refer to "Appendix V — Statutory and General Information — 1. Further Information about our Group — (f) Repurchase by our Company of our own securities — (iii) General information relevant to the Repurchase Mandate." for details of this repurchase mandate.

CIRCUMSTANCES UNDER WHICH GENERAL MEETING AND CLASS MEETING ARE REQUIRED

Pursuant to the Companies Ordinance and the Articles of Association, our Company may from time to time by ordinary Shareholders' resolution (i) increase its capital; (ii) capitalize its profits; (iii) allot and issue bonus shares; (iv) convert its shares into a larger or smaller number; (v) dividing its shares into several classes; (vi) cancel any shares which have not been taken or that have been forfeited; and (vii) make provisions for the issue and allotment of shares. In addition, our Company may reduce its share capital by Shareholders' special resolution. For details, see "Appendix IV — Summary of Articles of Association — Alteration of Capital".

Further, subject to the provisions of the Companies Ordinance, all or any of the special rights (unless otherwise provided by the terms of issue) attached to any class of shares may be varied or abrogated either with the consent in writing of the holders of not less than 75% of the total voting rights of the holders of the shares of that class, or with the sanction of a special resolution passed at a general meeting of the holders of the shares of that class. For details, see "Appendix IV — Summary of Articles of Association — Variation of Rights".

OVERVIEW

We are a global leading gold mining company formed by integrating all of the gold mines of Zijin Mining located outside of China. Leveraging Zijin Mining's competitive advantage in the management of exploration, development and operation of low-grade and refractory resources, we have emerged as a global leading gold mining company principally engaged in exploration, mining, processing, refining and sale of gold. We integrate high-potential gold mine resources through global mergers and acquisitions, and by leveraging our geological exploration, R&D, engineering, construction, and mine operation capabilities, along with international ESG systems. This enables us to achieve continuous reserve expansion, production growth and efficient operations.

In 2022, 2023 and 2024, our revenue was US$1,818.0 million, US$2,262.4 million and US$2,989.9 million, respectively, with a CAGR of 28.2%. Our profit attributable to owners of the parent was US$183.7 million, US$230.4 million and US$481.4 million, respectively, with a CAGR of 61.9%. For the six months ended June 30, 2024 and 2025, our revenue was US$1,403.0 million and US$1,996.9 million, respectively, and our profit attributable to owners of the parent was US$214.4 million and US$520.2 million, respectively.

MAJOR FACTORS AFFECTING OUR RESULTS OF OPERATIONS

We believe that the most significant factors affecting our results of operations include the following key factors:

Gold Prices and Demand in End Markets

During the Track Record Period, we derived a substantial portion of our revenue from the sales of gold. Our revenue derived from the sales of gold was 94.8%, 95.8%, 94.9%, 96.2% and 97.9% in 2022, 2023 and 2024 and the six months ended June 30, 2024 and 2025, respectively. Fluctuations in gold price directly affect our results of operations.

The market price of gold is largely subject to market forces, in particular, the supply and demand for gold products. We generally sell gold to the end customers including international gold refineries, precious metal traders or financial institutions, the price of which is referenced to the market prices. The gold price is affected by numerous factors beyond our control, for example, the global economic cycles, fluctuations in the global currency markets, general supply of and demand for gold, gold sales and purchases by central banks, macroeconomic factors such as GDP growth prospects, inflation and interest rates of major economies, geopolitical conflicts, and speculative trading activities. Historically, the gold price has experienced significant volatility. This is primarily because gold is often seen as a safe-haven asset during times of geopolitical uncertainty. Since November 2022, the gold price has climbed due to market turbulence, rising recession expectations, slower interest rate hike prospects, and more gold purchases from central banks which underpinned the gold demand. The global annual average gold price in the global market increased from US$1,801.3 per ounce in 2022 to US$1,942.1 per ounce in

2023, and further to US$2,386.4 per ounce in 2024, according to London Bullion Market Association (LBMA) Gold Price. Any significant decrease in the gold price may materially and adversely affect our business, financial condition and results of operations.

Production Volume

Our results of operations are dependent on our production volume of gold. The following table sets forth our production volume in relation to our gold mining business for the periods indicated:

	Year Ended December 31,									Six Months Ended June 30,		
	2022			2023			2024			2025		
	Ore Processed[1]	Gold Production[1]		Ore Processed[1]	Gold Production[1]		Ore Processed[1]	Gold Production[1]		Ore Processed[1]	Gold Production[1]	
	(kt)	(koz)	(t)	(kt)	(koz)	(t)	(kt)	(koz)	(t)	(kt)	(koz)	(t)
Consolidated mines												
Tajikistan Jilau/Taror Gold Mines	5,167	203	6.3	5,555	202	6.3	5,971	174	5.4	2,923	97	3.0
Kyrgyzstan Taldybulak Levoberezhny Gold Mine	1,014	131	4.1	1,060	129	4.0	990	120	3.7	451	56	1.7
Australia Norton Gold Mine	3,658	177	5.5	6,642	216	6.7	8,065	266	8.3	5,210	125	3.9
Guyana Aurora Gold Mine	2,489	91	2.8	2,660	95	3.0	2,712	130	4.1	1,557	65	2.0
Colombia Buriticá Gold Mine	1,238	248	7.7	1,269	268	8.3	1,265	322	10.0	706	125	3.9
Suriname Rosebel Gold Mine	—	—	—	7,817	241	7.5	9,321	240	7.5	4,552	106	3.3
Ghana Akyem Gold Mine[4]	—	—	—	—	—	—	—	—	—	3,861	38	1.2
Subtotal consolidated[2]	**13,567**	**849**	**26.4**	**25,003**	**1,151**	**35.8**	**28,325**	**1,252**	**38.9**	**19,260**	**612**	**19.0**
Subtotal attributable[3]	**11,224**	**658**	**20.5**	**22,126**	**943**	**29.3**	**25,277**	**1,039**	**32.3**	**17,755**	**516**	**16.1**
Non-consolidated mines												
PNG Porgera Gold Mine[5]	—	—	—	—	—	—	882	46	1.4	350	44	1.4
Total[6]	**13,567**	**849**	**26.4**	**25,003**	**1,151**	**35.8**	**29,207**	**1,298**	**40.4**	**19,610**	**656**	**20.4**

Notes:

(1) Figures are subject to rounding. Accordingly, figures shown as totals in the table may not be an arithmetic aggregation of the figures preceding them, and figures of tonnes/koz may not be an arithmetic conversion based on the rounding figures as shown in the table.

(2) The "Subtotal consolidated" information is calculated based on 100% of equity interest for each asset held by the Company.

(3) The "Subtotal attributable" information is calculated based on the percentage of equity interest for each asset held by the Company.

(4) The acquisition of the Ghana Akyem Gold Mine was completed in April 2025.

(5) PNG Porgera Gold Mine's operations were suspended in April 2020 due to the expiration of mining lease, and it resumed mining in January 2024. Figures shown in the table for the PNG Porgera Gold Mine is calculated based on 24.5% of the equity interest held by the Company.

(6) The "Total" information is calculated by adding the "Subtotal consolidated" information and PNG Porgera Gold Mine (based on 24.5% of the equity interest held by the Company).

Our production volume is influenced by several factors, including the capacity and efficiency of our processing operations. The actual production volume may differ from our production plan, potentially causing our actual results of operations to deviate from our projected outcomes. This variation can be attributed to a range of reasons, such as discrepancies in the grade, tonnage, metallurgical, and other characteristics of the actual gold ores mined compared to estimates. Additionally, decreases in gold price may change the way we operate the mine, leading to lower production volume. Furthermore, natural phenomena, including weather conditions, floods, droughts, and rock falls, many of which are beyond our control, can also impact our production volume. Our sales volume is generally correlated with our production volume during the Track Record Period.

Cost of Sales and Recovery Rate

Our cost of sales primarily comprises raw material costs, depreciation and amortization, labor cost, royalty expenses, energy consumption costs and others. The cost of raw materials primarily consists of costs for grinding materials and other materials used in our operations. Depreciation and amortization costs are associated with the depreciation of fixed assets and the amortization of intangible assets. Labor cost refers to the salaries and benefits paid to personnel involved in our production activities. Certain major components of our operating cash costs, such as mining and processing-related expenses, are directly linked to our mining and sales volume. Consequently, increases in our mining, production and sales volume will lead to higher costs in these areas. Additionally, increased capital expenditures will raise our depreciation and amortization costs, which, in turn, will increase our cost of sales. Raw material costs constitute the largest component of our cost of sales, which represented 36.6%, 42.7%, 39.8%, 42.9% and 36.0% of our total cost of sales for the years ended December 31, 2022, 2023 and 2024 and for the six months ended June 30, 2024 and 2025, respectively. The increases of raw material costs in 2023 and 2024 were mainly due to the increase in our sales volume.

Our mining efficiency is also measured by the recovery rate, in particular, the gold processing recovery rate in our mines. Our processing recovery rate is affected by both the grade and mineralization characteristic of the ores and the specific processing techniques employed. A lower recovery rate would result in increased cost of sales per unit. For information regarding the recovery rates of our mines, please see the description of each of our mines in "Business." We have made constant efforts to improve the gold processing recovery rate in our mines.

Strategic Acquisitions and Investments

Our overall growth is driven by both organic expansion and strategic acquisitions and investments. We believe that successfully executing acquisition strategies and integrating acquired operations are major drivers of business and operational success. We may also incur costs from acquisitions of gold assets to ensure robust and sustainable growth. During the Track Record Period, we acquired 95% equity of the Suriname Rosebel Gold Mine in February 2023, with a total consideration of US$371.5 million. After the acquisition, during the same year, the Suriname Rosebel Gold Mine contributed US$468.8 million to our revenue and US$93.7 million to our profit. In April 2025, we acquired the Ghana Akyem Gold Mine, which will be included in our consolidated financial statements for the year ending December 31, 2025. Looking ahead, we will continue to explore strategic acquisitions and investments. Our capacity to identify quality acquisition and investment targets, negotiate favorable terms, and effectively integrate and optimize acquired operations will continue to influence our business, financial condition, and operational outcomes.

Furthermore, strategic acquisitions and investments present various risks, such as operational integration challenges, difficulties in assimilating cultures and personnel, diversion of management focus, risks associated with entering new markets, and potential loss of key personnel from acquired businesses. These factors could have a significant adverse impact on our business, financial standing, and operational outcomes.

Expansion and Capital Expenditures

The gold mining industry is capital-intensive, requiring substantial upfront investment in equipment, land, and compliance with stringent safety and environmental regulations. This high barrier to entry means that only entities with significant financial resources can engage in large-scale gold mining operations. To expand production of our mining assets, we continue to invest in construction and processing equipment to renovate and improve our mining facilities. We invest in advanced technology to enhance operational efficiency, safety, and environmental sustainability — for example, addressing the challenges posed by declining gold grades and the necessity to mine at greater depths and utilizing technologies that allow for enhanced monitoring and control to ensure safety and reduction of emission. We believe by focusing on capital expenditures, we can increase our production volume, thereby maximizing the potential of our existing mines while maintaining a commitment to sustainability and efficiency.

During the Track Record Period, our capital expenditure primarily included (i) purchase of items of property, plant and equipment; and (ii) purchase of intangible assets. The total cash outflow of purchase of property, plant and equipment and intangible assets amounted to US$518.4 million, US$436.9 million, US$487.0 million, US$268.8 million and US$258.2 million for the years ended December 31, 2022, 2023 and 2024 and for the six months ended June 30, 2024 and 2025, respectively, representing 28.5%, 19.3%, 16.3%, 19.2% and 12.9% of our revenue, respectively, for the same periods. The costs associated with our capital expenditure plans could significantly impact our financial condition and operational results, especially if we are unable to deliver expansion projects on time and within budget, or fail to generate sufficient gold production and sales to recover our investment or achieve profitability. Therefore, management must consistently evaluate the necessary capital investments to meet our sustainable production objectives and drive revenue growth, when balancing competing cash needs and the impact of increased depreciation expenses on cost of sales.

Government Policies Relating to Gold Mining Industry

Government policies play a significant role in shaping the gold mining industry, and can impact various aspects of mining operations, from exploration and extraction to environmental management and economic contributions. The local, provincial, and central authorities of Tajikistan, Kyrgyzstan, Australia, Guyana, Colombia, Suriname, Ghana and Papua New Guinea each exercise a substantial degree of control over the gold and mining industry within their respective territories. Our operations in these countries are subject to a range of national laws, regulations, policies, standards, and requirements, particularly concerning exploration, mining, production, taxation, labor standards,

occupational health and safety, waste treatment, environmental protection, and operational management. In each of these jurisdictions, the respective governments hold full authority to grant, renew, and terminate the permits and licenses for exploration, mining, and production activities. While we anticipate being able to renew our licenses and permits in each of the markets we operate, any inability to do so for any reason could materially and adversely affect our business and results of operations.

ACQUISITION OF THE KAZAKHSTAN RAYGORODOK GOLD MINE

On June 28, 2025, we entered into the Raygorodok SPA with Cantech in relation to the acquisition of all issued share capital in each of RGG and RGP, which together held the Kazakhstan Raygorodok Gold Mine for a cash consideration of US$1.2 billion, subject to customary adjustments with reference to the financial information of RGG and RGP as of September 30, 2025. The completion of the acquisition is expected to take place after the Listing in the fourth quarter of 2025. See "History, Reorganization and Corporate Structure" for more details.

The revenue, profit before tax and net profit for each of RGG and RGP for the years ended December 31, 2022, 2023 and 2024 are as follows:

	For the years ended December 31,		
	2022	2023	2024
		(US$ in millions)	
RGG			
Revenue	117	367	472
Profit before tax	45	127	213
Net profit	36	101	171
RGP			
Revenue	23	121	153
Profit before tax	1	29	31
Net profit	0.1	29	31

As of December 31, 2024, the total assets of RGG and RGP amounted to US$293 million and US$310 million, respectively; total liabilities of RGG and RGP amounted to US$88 million and US$221 million, respectively; and net assets of RGG and RGP amounted to US$205 million and US$89 million, respectively. The above financial information of RGG and RGP was extracted from the audited financial information of each of RGG and RGP prepared in accordance with the International Financial Reporting Standards. See Appendix IC and Appendix IB to the Prospectus for more details.

SENSITIVITY ANALYSIS

Our results of operations are principally affected by gold price and sales volume. The following table sets out a sensitivity analysis of gold price, reflecting the impact that a hypothetical fluctuation of gold price, with all other variables remain constant, would have on our gross profit and profit for the year. The hypothetical analysis presented below are not necessarily indicative of the results that may be expected for any future period.

	For the year ended December 31, 2022 (US$ in millions, except for percentages)									
Hypothetical fluctuation of gold price	(30%)	(20%)	(15%)	(10%)	(5%)	5%	10%	15%	20%	30%
Change in gross profit	(480)	(320)	(240)	(160)	(80)	80	160	240	320	480
Percentage change in gross profit	(78%)	(52%)	(39%)	(26%)	(13%)	13%	26%	39%	52%	78%
Change in profit for the year	(366)	(244)	(183)	(122)	(61)	61	122	183	244	366
Percentage change in profit for the year	(125%)	(83%)	(63%)	(42%)	(21%)	21%	42%	63%	83%	125%

	For the year ended December 31, 2023 (US$ in millions, except for percentages)									
Hypothetical fluctuation of gold price	(30%)	(20%)	(15%)	(10%)	(5%)	5%	10%	15%	20%	30%
Change in gross profit	(600)	(400)	(300)	(200)	(100)	100	200	300	400	600
Percentage change in gross profit	(102%)	(68%)	(51%)	(34%)	(17%)	17%	34%	51%	68%	102%
Change in profit for the year	(438)	(292)	(219)	(146)	(73)	73	146	219	292	438
Percentage change in profit for the year	(139%)	(93%)	(70%)	(46%)	(23%)	23%	46%	70%	93%	139%

	For the year ended December 31, 2024 (US$ in millions, except for percentages)									
Hypothetical fluctuation of gold price	(30%)	(20%)	(15%)	(10%)	(5%)	5%	10%	15%	20%	30%
Change in gross profit	(786)	(524)	(393)	(262)	(131)	131	262	393	524	786
Percentage change in gross profit	(69%)	(46%)	(35%)	(23%)	(12%)	12%	23%	35%	46%	69%
Change in profit for the year	(564)	(376)	(282)	(188)	(94)	94	188	282	376	564
Percentage change in profit for the year	(89%)	(60%)	(45%)	(30%)	(15%)	15%	30%	45%	60%	89%

	For the six months ended June 30, 2025 (US$ in millions, except for percentages)									
Hypothetical fluctuation of gold price/sales volume	(30%)	(20%)	(15%)	(10%)	(5%)	5%	10%	15%	20%	30%
Change in gross profit	(552)	(368)	(276)	(184)	(92)	92	184	276	368	552
Percentage change in gross profit margin	(59%)	(40%)	(30%)	(20%)	(10%)	10%	20%	30%	40%	59%
Change in profit for the year	(396)	(264)	(198)	(132)	(66)	66	132	198	264	396
Percentage change in net profit	(63%)	(42%)	(32%)	(21%)	(11%)	11%	21%	32%	42%	63%

BASIS OF PREPARATION

The historical financial information has been prepared in accordance with IFRS Accounting Standards (which include all International Financial Reporting Standards), which comprise all standards and interpretations approved by the International Accounting Standards Board.

Our Directors believe that we have adequate resources to continue operations and meet our abilities as at when they fall due for the foreseeable future of not less than 12 months from the end of the reporting period, by taking into account: (a) our expected cash inflows from operating activities; and (b) the bank facilities obtained subsequent to the reporting date. Therefore, our Directors are of the opinion that it is appropriate to prepare the historical financial information on a going concern basis.

The historical financial information has been prepared under the historical cost convention except for equity investments designated at fair value through other comprehensive income and certain financial instruments which have been measured at fair value at the end of each of the Track Record Periods.

MATERIAL ACCOUNTING POLICIES, SIGNIFICANT ACCOUNTING JUDGMENTS AND ESTIMATES

Some of our accounting policies require us to apply estimates and assumptions and complex judgments relating to accounting items. The estimates and assumptions we use and the judgments we make in applying our accounting policies have a significant impact on our financial position and operating results. Our management continually evaluates such estimates, assumptions and judgments based on past experience and other factors, including industry practices and expectations of future events that are believed to be reasonable under the circumstances. There has not been any material deviation between our management's estimates or assumptions and actual results, and we have not made any material changes to these estimates or assumptions during the Track Record Period. We do not expect any material changes in these estimates and assumptions in the foreseeable future.

When reviewing our consolidated financial statements, you should consider, amongst other things: (i) information about our material accounting policy; (ii) the judgments and other uncertainties affecting the application of such policies; and (iii) the sensitivity of reported results to changes in conditions and assumptions. Information about our material accounting policy, estimates and judgments, which are important for an understanding of our financial condition and results of operations, including any changes in accounting policy and disclosures, are set out in detail in notes 4 and 5 to the Accountants' Report in Appendix I to this Prospectus.

Revenue Recognition

Revenue from Contracts with Customers

Revenue from contracts with customers is recognized when control of goods or services is transferred to the customers at an amount that reflects the consideration to which we expect to be entitled in exchange for those goods or services.

When the consideration in a contract includes a variable amount, the amount of consideration is estimated to which we will be entitled in exchange for transferring the goods or services to the customer. The variable consideration is estimated at contract inception and constrained until it is highly probable that a significant revenue reversal in the amount of cumulative revenue recognized will not occur when the associated uncertainty with the variable consideration is subsequently resolved.

When the contract contains a financing component which provides the customer with a significant benefit of financing the transfer of goods or services to the customer for more than one year, revenue is measured at the present value of the amount receivable, discounted using the discount rate that would be reflected in a separate financing transaction between we and the customer at contract inception. When the contract contains a financing component which provides us with a significant financial benefit for more than one year, revenue recognized under the contract includes the interest expense accreted on the contract liability under the effective interest method. For a contract where the period between the payment by the customer and the transfer of the promised goods or services is one year or less, the transaction price is not adjusted for the effects of a significant financing component, using the practical expedient in IFRS 15.

Sale of Mineral Products

Revenue from the sale of products is recognized at the point in time when control of the asset is transferred to the customer, generally on delivery of the products. A portion of the Group's sales of metal in concentrate allow for price adjustments based on the market price at the end of the relevant quotation periods ("**QP**") stipulated in the contract. These are referred to as provisional pricing arrangements and are such that the selling price for metal in concentrate is based on prevailing spot prices on a specified future date after shipment to the customer. Adjustments to the sales price occur based on movements in quoted market prices up to the end of the QP. The QPs can range between one and two months post shipment and final payment is due within 30 days after the end of the QP.

Revenue is recognized when control passes to the customer, which occurs at a point in time when the metal in concentrate is physically transferred onto a vessel, train, conveyor or other delivery mechanism.

Metal Streaming Arrangement

There was a metal streaming arrangement in Continental Gold Inc, a company which was acquired by Zijin Mining in 2020. In that arrangement, Continental Gold received an upfront amount in cash from an investor and in return, the investor received the right to purchase a certain proportion of future gold and silver production for the life of the mine at a price of a certain proportion of the market price at the time of delivery.

This upfront amount is considered to be a partial prepayment for the future delivery of an unknown, but estimable, amount of gold and silver ounces, with each ounce presenting a separate performance obligation. Upon receipt, the upfront amount is recognized as a contract liability. The upfront consideration is considered to represent variable consideration, on the basis that the portion of the upfront amount to be allocated to each future ounce will depend on the number of ounces estimated to remain in the mine. Revenue is recognized at the point in time when control of the goods is transferred. In addition, the transaction price is considered to contain a significant financing component, given the long-term nature of the upfront payment and the period of time between the receipt of the upfront cash, and the satisfaction of the future performance obligations. Given this, when the underlying production profile of the mine changes and the reserves and resources are updated, the variable portion of the transaction price allocated to each ounce will need to be updated in accordance with the requirements in IFRS 15 relating to changes in variable transaction price. The change in transaction price per unit will therefore result in a retrospective adjustment to revenue in the period in which the change occurs, reflecting the updated number of ounces expected to be delivered under the streaming arrangement. There will also be a corresponding adjustment to the interest charge.

Revenue from Other Sources

Rental income is recognized on a time proportion basis over the lease terms. Variable lease payments that do not depend on an index or a rate are recognized as income in the accounting period in which they are incurred.

Property, Plant and Equipment and Depreciation

Property, plant and equipment, other than construction in progress, are stated at cost less accumulated depreciation and any impairment losses. The cost of an item of property, plant and equipment comprises its purchase price and any directly attributable costs of bringing the asset to its working condition and location for its intended use.

Expenditure incurred after items of property, plant and equipment have been put into operation, such as repairs and maintenance, is normally charged to the statement of profit or loss in the period in which it is incurred. In situations where the recognition criteria are satisfied, the expenditure for a major inspection is capitalized in the carrying amount of the asset as a replacement. Where significant parts of property, plant and equipment are required to be replaced at intervals, we recognize such parts as individual assets with specific useful lives and depreciates them accordingly.

Depending on the nature of the item of property, plant and equipment, depreciation is calculated on the straight-line basis to write off the cost of each asset to its residual value over our estimated useful life or it is calculated on the UOP basis to write off the

cost of the asset proportionately to the extraction of the proven and probable mineral reserves. The estimated useful lives and annual depreciation rates for the assets depreciated on the straight-line basis are as follows:

	Estimated useful lives	Annual depreciation rates
Buildings	8 to 20 years	5.00%–12.50%
Plant, machinery and equipment	5 to 15 years	6.67% to 20.00%
Motor vehicles	4 to 15 years	6.67%–25.00%
Power generation and transmission equipment	8 to 30 years	3.33%–12.50%
Office equipment, electronic equipment and others	3 to 10 years	10.00%–33.33%
Mining properties	5 to 40 years	2.50%–20.00%

Where parts of an item of property, plant and equipment have different useful lives, the cost of that item is allocated on a reasonable basis among the parts and each part is depreciated separately. Residual values, useful lives and the depreciation method are reviewed, and adjusted if appropriate, at least at the end of each of the Track Record Periods.

An item of property, plant and equipment including any significant part initially recognized is derecognized upon disposal or when no future economic benefits are expected from its use or disposal. Any gain or loss on disposal or retirement recognized in the statement of profit or loss in the years the asset is derecognized is the difference between the net sales proceeds and the carrying amount of the relevant asset.

Construction in progress is stated at cost less any impairment losses, and is not depreciated. It is reclassified to the appropriate category of property, plant and equipment when completed and ready for use.

Intangible Assets

Intangible assets acquired separately are measured on initial recognition at cost. The cost of intangible assets acquired in a business combination is the fair value at the date of acquisition. The useful lives of intangible assets are assessed to be either finite or indefinite. Intangible assets with finite lives are subsequently amortized over the useful economic life and assessed for impairment whenever there is an indication that the intangible asset may be impaired. The amortization period and the amortization method for an intangible asset with a finite useful life are reviewed at least at each financial year end.

Intangible assets are amortized on the straight-line basis over the following useful-economic lives:

Software:	4 to 8 years

Exploration and evaluation assets

Exploration and evaluation assets are stated at cost less impairment losses. Exploration and evaluation assets includes costs of geological prospecting for technical consultancy and costs of feasibility study for commercial development which incurred in the surroundings, outer ring and deep areas of the existing or externally acquired mineral properties, and costs of drilling, trench sampling and other associated activities. Such expenditures may be capitalized when the mineral properties are reasonably determined to be commercially available and recognized as mining rights after obtaining mining rights or permits, which will be amortized under the units-of-production method. If any construction was abandoned in the development phase or belongs to the productive exploration, all costs shall be written off and recognized in the statement of profit or loss for the period in which it arises.

Impairment reviews of exploration and evaluation assets are undertaken if events or changes in circumstances indicate a potential impairment. The carrying value of exploration and evaluation assets is compared to the recoverable amount, which is the higher of value-in-use and the fair value less costs of disposal. For the purposes of assessing impairment, assets are grouped at the lowest levels for which there are separately identifiable cash-generating units. Exploration and evaluation assets that suffered impairment are reviewed for possible reversal of the impairment at each of the Relevant Periods.

Exploration and mining rights

Exploration rights are stated at cost less impairment losses. Exploration rights include the cost of acquiring exploration rights.

Mining rights are stated at cost less accumulated amortization and any impairment losses. Mining rights include the cost of acquiring mining licenses, exploration rights and exploration and evaluation assets upon determination that an exploration property is capable of commercial production, and the cost of acquiring interests in the mining reserves of existing mining properties. The mining rights are amortized in accordance with the production plans of the entities concerned and the proven and probable mineral reserves of the mines using the UOP method. Mining rights are written off to profit or loss if the mining property is disposed of.

Estimation Uncertainty

Exploration Expenditures

After determining the capitalization amount of exploration expenditures, we will regularly evaluate the exploration results. If the reviewed geological exploration report shows that there are no prospecting results or no economically recoverable reserves, or that the economic benefits of mining cannot be achieved and further exploration is unnecessary due to low grade and difficulties in mining and processing, the exploration and development costs previously collected will be expensed and included in the profit and loss for the current period in a lump sum.

Proved Mineral Reserves

Proved mineral reserves are estimated based on professional knowledge, experience and industry practice. Generally, the mineral reserve volume estimated based on probing and estimation may not be very accurate. The estimation is updated in accordance with new technologies and new information. Any changes in estimation will have impacts on the amounts of mining assets' depreciation and mining rights' amortization using the units-of-production method, on the stripping ratio which was used in the capitalization of stripping costs, and on each of the transaction prices of the metal streaming arrangement. This may result in changes of or impacts on our development and operation plan, and hence our operations and operating results.

Inventories

Inventories are stated at the lower of cost and net realizable value. Cost is determined on the weighted average basis and, in the case of work in progress and finished goods, comprises direct materials, direct labor and an appropriate proportion of overheads. Net realizable value is based on estimated selling prices less any estimated costs to be incurred to completion and disposal.

Provisions

A provision is recognized when a present obligation (legal or constructive) has arisen as a result of a past event and it is probable that a future outflow of resources will be required to settle the obligation, provided that a reliable estimate can be made of the amount of the obligation.

When the effect of discounting is material, the amount recognized for a provision is the present value at the end of each of the Track Record Periods of the future expenditures expected to be required to settle the obligation. The increase in the discounted present value amount arising from the passage of time is included in finance costs in the statement of profit or loss.

Provisions for our obligations for environmental rehabilitation and restoration of mines are based on estimates of required expenditure at the mines in accordance with the local rules and regulations where the mines are located. We estimate our liabilities for final reclamation and mine closure based upon detailed calculations of the amount and timing of the future cash expenditure for the required work. Spending estimates are escalated for inflation, then discounted at a discount rate that reflects current market assessments of the time value of money and the risks specific to the liability such that the amount of provision reflects the present value of the expenditures expected to be required to settle the obligation. We record a corresponding asset in the period in which the liability is incurred. The liability is accreted to the projected expenditure date. As changes in estimates occur (such as mine plan revisions, changes in estimated costs, or changes in the timing of the performance of reclamation activities), the revisions to the obligation and the asset are recognized at the appropriate discount rate.

Business Combinations

Business Combinations of Entities under Common Control

Business combinations of entities under common control are accounted for using the pooling of interests method. The results of subsidiaries are combined from the beginning of the Track Record Periods or the date on which a subsidiary first came under the common control of the controlling shareholders, whichever is later, and continue to be combined until the date that the Company's control ceases. The assets and liabilities of the combining entities are reflected at their existing carrying values at the date of combination. No amount is recognized in respect of goodwill or excess of the acquirer's interest in the net fair value of the acquiree's identifiable assets, liabilities and contingent liabilities over cost at the time of common control combination, which, instead, is recorded as part of equity.

Business Combinations (other than Business Combinations of Entities under Common Control) and Goodwill

Business combinations are accounted for using the acquisition method. The consideration transferred is measured at the acquisition date fair value which is the sum of the acquisition date fair values of assets transferred by us, liabilities assumed by us to the former owners of the acquiree and the equity interests issued by us in exchange for control of the acquiree. For each business combination, we elect whether to measure the non-controlling interests in the acquiree at fair value or at the proportionate share of the acquiree's identifiable net assets. All other components of non-controlling interests are measured at fair value. Acquisition-related costs are expensed as incurred.

We determine that we have acquired a business when the acquired set of activities and assets includes an input and a substantive process that together significantly contribute to the ability to create outputs.

When we acquire a business, we assess the financial assets and liabilities assumed for appropriate classification and designation in accordance with the contractual terms, economic circumstances and pertinent conditions as at the acquisition date. This includes the separation of embedded derivatives in host contracts of the acquiree.

Any contingent consideration to be transferred by the acquirer is recognized at fair value at the acquisition date. Contingent consideration classified as an asset or liability is measured at fair value with changes in fair value recognized in profit or loss. Contingent consideration that is classified as equity is not remeasured and subsequent settlement is accounted for within equity.

Goodwill is initially measured at cost, being the excess of the aggregate of the consideration transferred, the amount recognized for non-controlling interests and any fair value of our previously held equity interests in the acquiree over the identifiable assets acquired and liabilities assumed. If the sum of this consideration and other items is lower than the fair value of the net assets acquired, the difference is, after reassessment, recognized in profit or loss as a gain on bargain purchase.

After initial recognition, goodwill is measured at cost less any accumulated impairment losses. Goodwill is tested for impairment annually or more frequently if events or changes in circumstances indicate that the carrying value may be impaired. We perform our annual impairment test of goodwill as of December 31. For the purpose of impairment testing, goodwill acquired in a business combination is, from the acquisition date, allocated to each of our cash-generating units, or groups of cash-generating units, that are expected to benefit from the synergies of the combination, irrespective of whether our other assets or liabilities are assigned to those units or groups of units.

Impairment is determined by assessing the recoverable amount of the cash-generating unit (group of cash-generating units) to which the goodwill relates. Where the recoverable amount of the cash-generating unit (group of cash-generating units) is less than the carrying amount, an impairment loss is recognized. An impairment loss recognized for goodwill is not reversed in a subsequent period.

Where goodwill has been allocated to a cash-generating unit (or group of cash-generating units) and part of the operation within that unit is disposed of, the goodwill associated with the operation disposed of is included in the carrying amount of the operation when determining the gain or loss on the disposal. Goodwill disposed of in these circumstances is measured based on the relative value of the operation disposed of and the portion of the cash-generating unit retained.

Impairment of Non-financial Assets

Where an indication of impairment exists, or when annual impairment testing for an asset is required (other than inventories, deferred tax assets and financial assets), the asset's recoverable amount is estimated. An asset's recoverable amount is the higher of the asset's or cash-generating unit's value in use and its fair value less costs of disposal, and is determined for an individual asset, unless the asset does not generate cash inflows that are largely independent of those from other assets or groups of assets, in which case the recoverable amount is determined for the cash-generating unit to which the asset belongs. In testing a cash-generating unit for impairment, a portion of the carrying amount of a corporate asset (e.g., a headquarters building) is allocated to an individual cash-generating unit if it can be allocated on a reasonable and consistent basis or, otherwise, to the smallest group of cash-generating units.

An impairment loss is recognized only if the carrying amount of an asset exceeds our recoverable amount. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. An impairment loss is charged to the statement of profit or loss in the period in which it arises in those expense categories consistent with the function of the impaired asset.

An assessment is made at the end of each of the Track Record Periods as to whether there is an indication that previously recognized impairment losses may no longer exist or may have decreased. If such an indication exists, the recoverable amount is estimated. A previously recognized impairment loss of an asset other than goodwill is reversed only if there has been a change in the estimates used to determine the recoverable amount of that asset, but not to an amount higher than the carrying amount that would have been determined (net of any depreciation/amortization) had no impairment loss been recognized for the asset in prior years. A reversal of such an impairment loss is credited to the statement of profit or loss in the period in which it arises.

Share-based Payments

The Company's Controlling Shareholder Zijin Mining operates some share award schemes. Our employees (including Directors) receive remuneration in the form of share-based payments, whereby employees render services in exchange for equity instruments ("**equity-settled transactions**"). The cost of equity-settled transactions with employees is measured by reference to the fair value at the date at which they are granted, further details of which are given in note 38 to the Accountants' Report set out in Appendix I to this Prospectus.

The cost of equity-settled transactions is recognized in employee benefit expense, together with a corresponding increase in equity, over the period in which the performance and/or service conditions are fulfilled. The cumulative expense recognized for equity-settled transactions at the end of each reporting period until the vesting date reflects the extent to which the vesting period has expired and our best estimate of the number of equity instruments that will ultimately vest. The charge or credit to the statement of profit or loss for a period represents the movement in the cumulative expense recognized as at the beginning and end of that period.

Service and non-market performance conditions are not taken into account when determining the grant date fair value of awards, but the likelihood of the conditions being met is assessed as part of our best estimate of the number of equity instruments that will ultimately vest. Market performance conditions are reflected within the grant date fair value. Any other conditions attached to an award, but without an associated service requirement, are considered to be non-vesting conditions. Non-vesting conditions are reflected in the fair value of an award and lead to an immediate expensing of an award unless there are also service and/or performance conditions.

For awards that do not ultimately vest because non-market performance and/or service conditions have not been met, no expense is recognized. Where awards include a market or non-vesting condition, the transactions are treated as vesting irrespective of whether the market or non-vesting condition is satisfied, provided that all other performance and/or service conditions are satisfied.

Where the terms of an equity-settled award are modified, as a minimum an expense is recognized as if the terms had not been modified, if the original terms of the award are met. In addition, an expense is recognized for any modification that increases the total fair value of the share-based payments, or is otherwise beneficial to the employee as measured at the date of modification. Where an equity-settled award is canceled, it is treated as if it had vested on the date of cancelation, and any expense not yet recognized for the award is recognized immediately.

CONSOLIDATED STATEMENTS OF PROFIT OR LOSS AND COMPREHENSIVE INCOME

The following table sets forth a summary of our consolidated statements of profit or loss, in U.S. dollars and percentage of our total revenue, for the periods indicated. This information should be read together with our consolidated financial statements and related notes included elsewhere in this Prospectus. Our historical results presented below are not necessarily indicative of the results that may be expected for any future period.

	Year ended December 31,						Six months ended June 30,			
	2022		2023		2024		2024		2025

NON-IFRS FINANCIAL MEASURE

In evaluating our business, we consider and use EBITDA (Non-IFRS measure), adjusted EBITDA (Non-IFRS measure) and adjusted EBITDA margin (Non-IFRS measure), which are non-IFRS measures, as supplemental measures to review and assess our operating performance. We believe that these non-IFRS measures facilitate comparison of operating performance from period to period.

We provide a reconciliation of EBITDA (Non-IFRS measure), adjusted EBITDA (Non-IFRS measure) and adjusted EBITDA margin (Non-IFRS measure) to profit for the year, calculated and presented in accordance with IFRS. EBITDA (Non-IFRS measure) refers to profit for the year adjusted by income tax, finance costs, interest income from bank deposits, and depreciation and amortization. Adjusted EBITDA (non-IFRS measure) refers to EBITDA (non-IFRS measure) adjusted by equity-settled share award schemes expenses which are non-cash. Adjusted EBITDA margin (Non-IFRS measure) is calculated based on the Adjusted EBITDA (Non-IFRS measure) for the year divided by the total revenue for such year and multiplied by 100%. The terms EBITDA (Non-IFRS

measure), adjusted EBITDA (Non-IFRS measure) and adjusted EBITDA margin (Non-IFRS measure) are not defined under IFRS and should not be considered in isolation or construed as alternatives to profit from operations or any other measure of performance or as an indicator of our operating performance or profitability. The use of EBITDA (Non-IFRS measure), adjusted EBITDA (Non-IFRS measure) and adjusted EBITDA margin (Non-IFRS measure) have limitations as an analytical tool, and you should not consider them in isolation from, or as a substitute for analysis of, our results of operations or financial condition as reported under IFRS Accounting Standards.

The following table presents a reconciliation of EBITDA (Non-IFRS measure), adjusted EBITDA (Non-IFRS measure) and adjusted EBITDA margin (Non-IFRS measure) to profit for each of the years indicated:

	For the year ended December 31,			For the six months ended June 30,	
	2022	2023	2024	2024	2025
	(US$ in millions, except for percentages)			(unaudited)	
Profit for the year	290.3	322.2	620.6	277.4	624.6
Adjustments for:					
Income tax	137.1	92.6	316.4	147.5	239.7
Finance costs	57.0	50.9	43.2	21.7	18.7
Interest income from bank deposits	(1.6)	(2.8)	(9.1)	(3.2)	(5.9)
Depreciation and amortization	344.8	402.3	412.2	214.9	269.1
EBITDA (Non-IFRS measure)[1]	**827.6**	**865.2**	**1,383.3**	**658.3**	**1,146.1**
Adjustment for:					
Equity-settled share award schemes expenses	1.1	0.7	1.3	0.6	0.3
Adjusted EBITDA (Non-IFRS measure)[2]	**828.7**	**865.8**	**1,384.5**	**658.9**	**1,146.4**
Adjusted EBITDA margin (Non-IFRS measure)[3] (%)	45.6%	38.3%	46.3%	47.0%	57.4%

Notes:

(1) EBITDA (Non-IFRS measure), as we present it, represents profit for the year before income tax, finance costs, interest income from bank deposits, and depreciation and amortization.

(2) Adjusted EBITDA (Non-IFRS measure), as we present it, represents EBITDA adjusted by equity-settled share award schemes expenses which are non-cash.

(3) Adjusted EBITDA margin (Non-IFRS measure) is calculated based on the Adjusted EBITDA for the year (Non-IFRS measure) divided by the total revenue for such year and multiplied by 100%.

DESCRIPTION OF KEY STATEMENT OF PROFIT OR LOSS ITEMS

Revenue

We generate substantially all of our revenue from the sales of gold. Our other revenue mainly includes the sales of other non-ferrous metals such as silver and copper, as well as rental income from rentals of machinery equipment. Our revenue amounted to US$1,818.0 million, US$2,262.4 million and US$2,989.9 million in 2022, 2023 and 2024 and US$1,403.0 million and US$1,996.9 million for the six months ended June 30, 2024 and 2025, respectively.

The following table sets forth our disaggregated revenue information and percentage of our total revenue for the periods indicated:

	Year ended December 31,						Six months ended June 30,			
	2022		2023		2024		2024		2025	
	US$	%	US$	%	US$	%	US$	%	US$	%
	(in thousands, except for percentages)									
							(unaudited)

Tajikistan Jilau/ Taror Gold Mines	691,122	38.0	440,604	19.5	515,849	17.3	228,024	16.3	328,936	16.5
Kyrgyzstan Taldybulak Levoberezhny Gold Mine	223,933	12.3	258,015	11.4	286,161	9.6	138,018	9.8	172,991	8.7
Australia Norton Gold Mine	303,798	16.7	373,044	16.5	562,882	18.8	260,079	18.5	381,529	19.1
Guyana Aurora Gold Mine	160,107	8.9	190,145	8.4	318,125	10.6	141,238	10.1	205,871	10.3
Colombia Buriticá Gold Mine	439,021	24.1	531,735	23.5	729,517	24.4	365,592	26.1	456,706	22.9
Suriname Rosebel Gold Mine	—	—	468,822	20.7	577,401	19.3	270,032	19.2	327,486	16.4
Ghana Akyem Gold Mine	—	—	—	—	—	—	—	—	123,350	6.1
Total	1,817,981	100.0	2,262,365	100.0	2,989,935	100.0	1,402,983	100.0	1,996,869	100.0

Our revenue increased by 24.4% from US$1,818.0 million in 2022 to US$2,262.4 million in 2023, and further increased by 32.2% to US$2,989.9 million in 2024 and our revenue increased by 42.3% from US$1,403.0 million for the six months ended June 30, 2024 to US$1,996.9 million for the six months ended June 30, 2025, primarily attributable to the year-on-year increase in average selling price of gold and sales volume. Our revenue generated from Tajikistan Jilau/Taror Gold Mines decreased from US$691.1 million in 2022 to US$440.6 million in 2023, primarily due to the additional revenue generated from sales of historical gold stock in 2022.

Gold Sales

Our revenue is predominantly derived from the sales of gold. Our revenue from gold sales was US$1,724.2 million, US$2,167.2 million, US$2,838.7 million, US$1,349.2 million and US$1,954.1 million in 2022, 2023 and 2024 and the six months ended June 30, 2024 and 2025, respectively, accounting for 94.8%, 95.8%, 94.9%, 96.2% and 97.9%, respectively, of our total revenue.

The following table sets forth the key statistics of our gold sales for the periods indicated:

	Year ended December 31,			For the six months ended June 30,	
	2022	2023	2024	2024	2025
Revenue from gold sales (US$ in thousands)	1,724,229	2,167,179	2,838,696	1,349,230	1,954,061
Sales volume (koz)	1,020	1,163	1,229	619	633
Sales volume (t)	31.7	36.2	38.2	19.3	19.8
Average selling price (US$/oz)[(1)]	1,690	1,863	2,310	2,180	3,085
Market price of gold (US$/oz)[(2)]	1,801	1,942	2,386	2,205	3,071

Note:

(1) Calculated as revenue from gold sales divided by sales volume.

(2) The average gold price in the global market for the periods indicated, according to London Bullion Market Association (LBMA) Gold Price.

Our average selling prices of gold, calculated as our revenue from gold sales divided by sales volume, were generally in line with the gold prices in the global market because most of our gold were sold to the end customers including international gold refineries, precious metal traders or financial institutions, at prices which were referenced to the spot prices. Our average selling prices were generally slightly lower than the gold market prices in 2022, 2023 and 2024, primarily because (i) Norton Gold Fields entered into master gold forward contracts with financial institutions in Australia and agreed to deliver a specified amount of gold products at a predetermined price on a set future date, and (ii) we sold different volume of gold at different spot prices while the market price reflects the average of the spot prices over each year. For details of our hedging arrangements, please refer to "Business — Gold Forward Contracts and Streaming". Our sales volume is generally correlated with our production volume during the Track Record Period.

Sales Volume and Average Selling Price

The following table sets forth our sales volume and average selling price for each mine for the periods indicated:

	Year ended December 31,						Six months ended June 30,			
	2022		2023		2024		2024		2025	
	Sales volume (koz)	Average selling price[1] (US$/oz)	Sales volume (koz)	Average selling price[1] (US$/oz)	Sales volume (koz)	Average selling price[1] (US$/oz)	Sales volume (koz)	Average selling price[1] (US$/oz)	Sales volume (koz)	Average selling price[1] (US$/oz)
Tajikistan Jilau/Taror Gold Mines[2]	387	1,602	213	1,815	171	2,469	85	2,271	96	3,173
Kyrgyzstan Taldybulak Levoberezhny Gold Mine	123	1,758	131	1,910	119	2,347	62	2,177	56	3,048
Australia Norton Gold Mine	177	1,718	212	1,762	265	2,120	125	2,084	124	3,079
Guyana Aurora Gold Mine	89	1,797	97	1,944	131	2,407	63	2,239	66	3,141
Colombia Buriticá Gold Mine	244	1,731	269	1,854	300	2,280	161	2,177	149	2,986
Suriname Rosebel Gold Mine	—	—	241	1,948	243	2,380	123	2,208	106	3,110
Ghana Akyem Gold Mine	—	—	—	—	—	—	—	—	38	3,266
Total	**1,020**	**1,690**	**1,163**	**1,863**	**1,229**	**2,310**	**619**	**2,180**	**633**	**3,085**

Notes:

(1) Calculated as revenue from gold sales divided by sales volume on an actual basis.

(2) In 2022, the average selling price of gold at the Tajikistan Jilau/Taror Gold Mines was relatively low, primarily because sales composed of gold concentrate, selling price of which had a higher discount.

Our sales volume increased in 2022, 2023 and 2024, mainly reflecting the increase in our production volume during the same period. For details of our production volume changes during the Track Record Period, please refer to "Business". For details of average selling price changes, see "— Gold Sales". Our sales volume remained stable in the six months ended June 30, 2024 and 2025.

Cost of Sales

Our cost of sales primarily comprises raw material costs, depreciation and amortization, labor cost, royalty expenses, energy consumption costs and others. Our cost of sales increased during the Track Record Period, which was generally in line with the increase in our sales volume. For the years ended December 31, 2022, 2023 and 2024 and the six months ended June 30, 2024 and 2025, our cost of sales amounted to US$1,197.5 million, US$1,669.7 million, US$1,855.6 million, US$885.2 million and US$1,069.1 million respectively.

The following table sets forth a breakdown of our cost of sales for the periods indicated:

	Year ended December 31,						Six months ended June 30,			
	2022		2023		2024		2024		2025	
	US$	%	US$	%	US$	%	US$	%	US$	%
	(in thousands, except for percentages)						(unaudited)			
Raw material costs[(1)]	438,767	36.6	712,427	42.7	737,685	39.8	379,408	42.9	384,830	36.0
Depreciation and amortization	287,675	24.0	309,929	18.6	321,197	17.3	163,972	18.5	202,322	18.9
Royalty expenses[(2)]	77,383	6.5	154,394	9.2	223,825	12.1	62,230	7.0	105,979	9.9
Labor cost	109,603	9.2	176,832	10.6	204,838	11.0	99,472	11.2	125,588	11.7
Energy consumption costs	76,589	6.4	116,993	7.0	121,394	6.5	53,473	6.0	77,782	7.3
Others[(3)]	207,510	17.3	199,114	11.9	246,672	13.3	126,612	14.3	172,575	16.1
Total	**1,197,527**	**100.0**	**1,669,689**	**100.0**	**1,855,611**	**100.0**	**885,167**	**100.0**	**1,069,076**	**100.0**

Notes:

(1) Raw materials included the costs of purchasing raw and auxiliary materials, and outsourcing costs related to production process such as blasting and loading, which would constitute production costs relating to raw materials.

(2) Royalty expenses included fees paid to the local government for the use of mineral resources, based on the amount of the resource extracted or the revenue.

(3) Others mainly include production related supporting costs, such as security costs, transportation costs and repairment costs, etc.

Our raw material costs increased from US$438.8 million in 2022 to US$712.4 million in 2023, and further increased to US$737.7 million in 2024, primarily due to the increase in our sales volume during the Track Record Period. Our raw material costs remained stable in the six months ended June 30, 2024 and 2025.

Our depreciation and amortization increased from US$287.7 million in 2022 to US$309.9 million in 2023, and remained relatively stable at US$321.2 million in 2024, primarily due to the increased equipment depreciation and amortization after the acquisition of the Suriname Rosebel Gold Mine in 2023. Our depreciation and amortization increased from US$164.0 million for the six months ended June 30, 2024 to US$202.3 million for the six months ended June 30, 2025, primarily due to the increased equipment depreciation and amortization after the acquisition of the Ghana Akyem Gold Mine in 2025.

Our royalty expenses increased from US$77.4 million in 2022 to US$154.4 million in 2023, and further increased to US$223.8 million in 2024, and it also increased from US$62.2 million for the six months ended June 30, 2024 to US$106.0 million for the six months ended June 30, 2025, primarily due to the increase in our revenue during the Track Record Period.

Our labor cost increased from US$109.6 million in 2022 to US$176.8 million in 2023, and further increased to US$204.8 million in 2024 and it also increased from US$99.5 million for the six months ended June 30, 2024 to US$125.6 million for the six months ended June 30, 2025, primarily due to (i) the additional labor cost of the Suriname Rosebel Gold Mine after the acquisition in 2023, (ii) increased bonuses to employees due to the increase in our sales volume during the Track Record Period and (iii) the additional labor cost of the Ghana Akyem Gold Mine after the acquisition in 2025.

The following table sets forth a breakdown of our cost of sales by products for the periods indicated:

	Year ended December 31,						Six months ended June 30,			
	2022		2023		2024		2024		2025	
	US$	%	US$	%	US$	%	US$	%	US$	%
	(in thousands, except for percentages)									
							(unaudited)			
Gold	1,163,533	97.2	1,630,903	97.7	1,765,373	95.1	857,369	96.9	1,046,393	97.9
Others	33,994	2.8	38,786	2.3	90,238	4.9	27,798	3.1	22,683	2.1
Total	**1,197,527**	**100.0**	**1,669,689**	**100.0**	**1,855,611**	**100.0**	**885,167**	**100.0**	**1,069,076**	**100.0**

Gross Profit and Gross Profit Margin

Our gross profit consists of revenue less cost of sales. Gross profit margin represents gross profit divided by total revenue, expressed as a percentage.

The following table sets forth a breakdown of our gross profit and gross profit margin by products for the periods indicated:

	Year ended December 31,						Six months ended June 30,			
	2022		2023		2024		2024		2025	
	US$	%	US$	%	US$	%	US$	%	US$	%
	(in thousands, except for percentages)									
							(unaudited)			
Gold	560,696	32.5	536,276	24.6	1,073,323	37.8	491,861	36.5	907,667	46.5
Others	59,758	63.7	56,400	59.3	61,001	40.3	25,955	48.3	20,126	47.0
Total	**620,454**	**34.1**	**592,676**	**26.2**	**1,134,324**	**37.9**	**517,816**	**36.9**	**927,793**	**46.5**

Our gross profit of gold sales decreased by 4.4% from US$560.7 million in 2022 to US$536.3 million in 2023 and our gross profit margin of gold sales decreased from 32.5% in 2022 to 24.6% in 2023. The decreases were primarily due to (i) the increased unit operating costs attributing to the slightly decreased milled grade at the Colombia Buriticá Gold Mine, the Guyana Aurora Gold Mine and the Australia Norton Gold Mine, (ii) the increased contractor costs for the Australia Norton Gold Mine and the Colombia Buriticá Gold Mine in relation to mining activities, and (iii) the additional costs relating to the newly-launched underground mining at the Guyana Aurora Gold Mine in 2023.

Our gross profit of gold sales increased by 89.7% from US$536.3 million in 2023 to US$1,073.3 million in 2024, and our gross profit margin of gold sales increased from 24.6% in 2023 to 37.8% in 2024. The increases were primarily due to (i) the 24.0% year-on-year increase in our average selling price of gold from US$1,863 per ounce in 2023 to US$2,310 per ounce in 2024 and (ii) decreased unit operating costs attributing to improved milled grade at the Colombia Buriticá Gold Mine and the Guyana Aurora Gold Mine, primarily due to the dynamic adjustments of extraction and production plans in 2024.

Our gross profit of gold sales increased by 84.5% from US$491.9 million for the six months ended June 30, 2024 to US$907.7 million for the six months ended June 30, 2025, and our gross profit margin of gold sales increased from 36.5% for the six months ended June 30, 2024 to 46.5% for the six months ended June 30, 2025. The increases were primarily due to the 41.1% period-on-period increase in our average selling price of gold from US$2,180 per ounce for the six months ended June 30, 2024 to US$3,085 per ounce for the six months ended June 30, 2025.

Our gross profit of others was US$59.8 million, US$56.4 million, US$117.1 million, US$26.0 million and US$20.1 million in 2022, 2023 and 2024 and the six months ended June 30, 2024 and 2025, respectively. Our gross profit margin of others was 63.7%, 59.3%, 40.3%, 48.3% and 47.0% in 2022, 2023 and 2024 and the six months ended June 30, 2024 and 2025, respectively. Our gross profit margin for others in 2022 and 2023 was significantly higher than gold, primarily because we sold stocks of other products with lower unit costs in these two years.

Other Income and Gains

Our other income and gains mainly represent fair value gains from interest income generated from fixed deposits and current deposits, fair value gains from derivative instrument transactions such as power purchase agreements, convertible bonds, and foreign exchange forward contracts, exchange gains, and fair value gains from financial assets such as listed equity investments.

The following table sets forth a breakdown of our other income and gains for the periods indicated:

	Year ended December 31,			For the six months ended June 30,	
	2022	2023	2024	2024	2025
			(US$ in thousands)		
				(unaudited)	
Other income					
Interest income	1,588	2,768	9,104	3,200	5,907
Others[(1)]	647	2,903	1,069	949	528
Gains					
Foreign exchange gain, net	341	5,452	—	—	1,658
Fair value gains, net:					
Financial assets at fair value through profit or loss	—	—	494	238	542
Derivative instruments — transactions not qualifying as hedges	—	1,927	—	840	2,579
Realized gains on settlement of foreign currency forwards	2,324	—	—	—	—
Gain on disposal of subsidiaries	—	—	—	—	82,130
Total	**4,900**	**13,050**	**10,667**	**5,227**	**93,344**

Note:

(1) Others mainly include insurance reimbursement fees, fine income received due to suppliers' breach of contracts, etc. In 2023, others amounted to US$2.9 million, an increase of US$2.3 million compared to 2022. This was mainly due to Continental Gold Inc. receiving equipment insurance reimbursement of US$1.6 million.

In 2023, we incurred fair value gains, net from derivative instrument transactions of US$1.9 million from derivative instruments, primarily because of the fair value gains of US$2.7 million arising from the power purchase agreement of the Suriname Rosebel Gold Mine, partially offset by the US$0.8 million fair value loss from forward currency contracts. According to the power purchase agreement entered between Rosebel and the Suriname Electricity Company, the electricity price paid by Rosebel is linked to the gold price. We identified it as a derivative financial instrument measured at fair value and with its changes recognized in the current period's profit and loss. Please refer to Appendix I — Note 29 for more details.

In 2023, we recorded a net foreign exchange gain of US$5.5 million. This gain was primarily attributable to the depreciation of the RMB against the US dollar during the year, which resulted in foreign exchange gains on RMB denominated borrowings due to Zijin Mining that were settled in 2023.

In the first half of 2025, we had gain on disposal of subsidiaries of US$82.1 million because Norton Gold Fields disposed of 100% equity interest in two subsidiaries. On April 3, 2025, Norton Gold Fields disposed of its 100% equity interests in Bullabulling Gold Pty Ltd and Bullabulling Operations Pty Ltd, both the entities holding the interests of the gold project in Bullabulling, Australia, to Minerals 260 Limited, a listed company in Australia. The total consideration for the disposal was AUD166,443,519 (approximately US$108,854,000), comprising AUD156,443,519 (approximately US$102,314,000) in cash and 83,333,333 shares of Minerals 260 Limited with a fair value of AUD10,000,000 (approximately US$6,540,000). The disposal was carried out to optimize the Group's asset allocation and to focus resources on the construction and operation of existing production projects.

Our interest income increased from US$1.6 million in 2022 to US$2.8 million in 2023, and further increased to US$9.1 million in 2024, and it also increased from US$3.2 million for the six months ended June 30, 2024 to US$5.9 million for the six months ended June 30, 2025 primarily due to the increase in bank deposits.

Selling and Distribution Expenses

Our selling and distribution expenses primarily consist of labor cost, travel expenses, depreciation and amortization, vehicle expenses, and others. For the years ended December 31, 2022, 2023, 2024 and the six months ended June 30, 2024 and 2025, our selling and distribution expenses amounted to US$0.7 million, US$0.5 million, US$0.3 million, US$0.1 million and US$0.1 million, respectively. The decrease in the selling and distribution expenses during the Track Record Period was primarily due to the reduction in sales staff in the Tajikistan Jilau/Taror Gold Mines due to changes in sales products in 2024.

Administrative Expenses

Our administrative expenses primarily consist of wages and benefits for administrative staff, depreciation and amortization, exploration expenses, office expenses, consulting service fees, and others.

The following table sets forth a breakdown of our administrative expenses for the periods indicated:

	Year ended December 31,						Six months ended June 30,			
	2022		2023		2024		2024		2025	
	US$	%	US$	%	US$	%	US$	%	US$	%
	(in thousands, except for percentages)						(unaudited)			
Wages and benefits	53,330	43.8	52,997	43.8	64,834	46.0	29,888	45.5	32,910	41.1
Depreciation and amortization	7,274	6.0	8,709	7.2	11,531	8.2	5,161	7.9	5,515	6.9
Exploration expenses	9,043	7.4	11,656	9.6	9,041	6.4	4,857	7.4	5,526	6.9
Office expenses	7,247	5.9	8,234	6.8	7,587	5.4	2,850	4.3	2,864	3.6
Consulting service fees	8,028	6.6	4,891	4.0	5,922	4.2	3,321	5.1	11,427	14.3
Travel and meeting expenses	4,624	3.8	5,304	4.4	5,300	3.7	2,344	3.6	2,593	3.2
Rental expenses	3,457	2.9	3,938	3.2	2,092	1.5	1,063	1.6	807	1.0
Other taxes	6,033	5.0	6,860	5.7	9,290	6.6	3,904	5.9	4,171	5.2
Equity Incentives	1,130	0.9	659	0.5	1,307	0.9	602	0.9	298	0.4
Property insurance premiums	1,392	1.1	2,909	2.4	2,831	2.0	1,510	2.3	1,328	1.7
Others[(1)]	20,243	16.6	14,971	12.4	21,360	15.1	10,147	15.5	12,569	15.7
Total	**121,801**	**100.0**	**121,128**	**100.0**	**141,095**	**100.0**	**65,647**	**100.0**	**80,008**	**100.0**

Note:
(1) Others mainly include miscellaneous labor cost.

Impairment Losses on Financial Assets, Net

Our impairment losses on financial assets, net, primarily consist of impairment losses on accounts receivable and other receivables, which are calculated based on expected credit loss rate of our accounts receivable and other receivables. Our impairment losses on financial assets, net amounted to US$0.3 million, US$0.1 million, US$2.0 thousand, US$1.0 thousand and US$0.2 million in 2022, 2023 and 2024 and the six months ended June 30, 2024 and 2025, respectively, primarily reflecting the changes in impairment losses on accounts receivable and other receivables during the same period. The significant decrease in impairment losses on financial assets in 2024 compared to 2023 is primarily due to the decrease in ending balances of accounts receivables at amortized cost and therefore the decreased loss allowance. The significant decrease in impairment losses on financial assets in 2024 compared to 2023 is primarily due to the decrease in ending balances of trade receivables at amortized cost and therefore the decreased loss allowance. Our trade receivables decreased from US$142.3 million as of December 31, 2023 to US$118.2 million as of December 31, 2024, primarily due to the decrease in the outstanding amount of trade receivables generated from the sales of gold concentrates, which we generally grant longer credit period for customers, as of the year end.

Other Expenses

Our other expenses primarily consist of exchange losses, donation expenses, fixed assets loss expenses, losses from changes in fair value, and compensation expenses.

The table below lists the details of other expenses for the periods indicated:

	Year ended December 31,			For the six months ended June 30,	
	2022	2023	2024	2024	2025
			(US$ in thousands)		
				(unaudited)	
Foreign exchange loss, net	—	—	12,703	4,054	—
Donation expenses	2,296	4,176	3,572	1,472	2,668
Fixed assets loss expenses	395	2,622	1,612	—	—
Derivative instruments — transactions not qualifying as hedges	8,351	5,624	4,396	3,369	2,823
Compensation expenses	5,628	24	—	—	48,416
Losses from changes in fair value	78	646	—	—	—
Losses on derecognition of foreign currency forwards	—	4,448	—	—	—
Others	1,419	782	1,244	1,765	4,327
Total	**18,167**	**18,322**	**23,527**	**10,660**	**58,234**

Finance Costs

Our finance costs primarily consist of interest on related-party borrowings, interest expense arising from metal streaming arrangement and interest on lease liabilities.

The following table sets forth a breakdown of our finance costs for the periods indicated:

	Year ended December 31,			For the six months ended June 30,	
	2022	2023	2024	2024	2025
			(US$ in thousands)		
				(unaudited)	
Interest on bank loans	367	775	653	422	—
Interest on related-party borrowings	57,018	47,289	44,304	21,501	17,913
Interest expense arising from metal streaming arrangement	6,603	7,165	9,020	4,612	3,378
Interest on lease liabilities	761	648	2,411	1,231	1,825
Less: Interest capitalized	(9,438)	(7,669)	(16,230)	(7,645)	(7,143)
Unwinding of discount on provisions and other long-term liabilities	1,656	2,674	2,992	1,594	2,762
Total	**56,967**	**50,882**	**43,150**	**21,715**	**18,735**

Income Tax Expenses

For the years ended December 31, 2022, 2023, 2024 and the six months ended June 30, 2024 and 2025, our income tax expenses amounted to US$137.1 million, US$92.6 million, US$316.4 million, US$147.5 million and US$239.7 million respectively. Our income tax expense consists of current income tax and deferred income tax. Current income tax comprises Hong Kong profit tax and tax prevailing in the jurisdictions in which we operate. Our effective income tax rate, calculated as income tax expense divided by profit before taxation, was 32.1%, 22.3%, 33.8%, 34.7% and 27.7% for the years ended December 31, 2022, 2023 and 2024 and the six months ended June 30, 2024 and 2025, respectively.

The following table sets forth a breakdown of our income tax expense for the periods indicated:

	Year ended December 31,			For the six months ended June 30,	
	2022	2023	2024	2024	2025
			(US$ in thousands)		
				(unaudited)	
Current — Hong Kong	10,208	18,372	12,769	4,459	(128)

Deferred	8,201	(27,773)	114,332	63,584	(2,862)
Total	**137,088**	**92,580**	**316,400**	**147,458**	**239,661**

PERIOD-TO-PERIOD COMPARISON OF RESULTS OF OPERATIONS

Six Months Ended June 30, 2025 Compared with Six Months Ended June 30, 2024

Revenue

Our revenue increased by 42.3% from US$1,403.0 million in the six months ended June 30, 2024 to US$1,996.9 million in the six months ended June 30, 2025, primarily attributable to the 41.1% period-on-period increase in our average selling price of gold from US$2,180 per ounce in the six months ended June 30, 2024 to US$3,085 per ounce in the same period in 2025. Our sales volume of gold increased 2.6% from 619 koz (19.3 tonnes) in the six months ended June 30, 2024 to 633 koz (19.8 tonnes) in the same period in 2025.

Cost of Sales

Our cost of sales increased by 20.7% from US$885.2 million in the six months ended June 30, 2024 to US$1,069.1 million in the six months ended June 30, 2025, primarily due to (i) the increase in our depreciation and amortization from US$164.0 million for the six months ended June 30, 2024 to US$202.3 million for the six months ended June 30, 2025, resulting from the increased equipment depreciation and amortization after the acquisition of the Ghana Akyem Gold Mine in 2025, (ii) the increase in our royalty expenses from US$62.2 million for the six months ended June 30, 2024 to US$106.0 million for the six months ended June 30, 2025 resulting from the increase in our revenue

during the same periods, (iii) the increase in our labor cost from US$99.5 million for the six months ended June 30, 2024 to US$125.6 million for the six months ended June 30, 2025 resulting from the additional labor cost of the Ghana Akyem Gold Mine after the acquisition in 2025.

Gross Profit and Gross Profit Margin

Our gross profit increased by 79.2% from US$517.8 million in the six months ended June 30, 2024 to US$927.8 million in the six months ended June 30, 2025. Our gross profit margin increased from 36.9% in the six months ended June 30, 2024 to 46.5% in the six months ended June 30, 2025, primarily due to the 41.1% period-on-period increase in our average selling price of gold from US$2,180 per ounce in the six months ended June 30, 2024 to US$3,085 per ounce in the same period in 2025.

Other Income and Gains

Our other income and gains increased significantly by 1,694.2% from US$5.2 million in the six months ended June 30, 2024 to US$93.3 million in the six months ended June 30, 2025, primarily due to the gain on disposal of subsidiaries of US$82.1 million from Norton Gold Fields' disposal of 100% equity interest in two subsidiaries.

Selling and Distribution Expenses

Our selling and distribution expenses remained stable at US$135 thousand in the six months ended June 30, 2024 and US$115 thousand in the same period in 2025. Our selling and distribution expenses accounted for less than 0.1% of our total revenue in both the six months ended June 30, 2024 and 2025.

Administrative Expenses

Our administrative expenses increased by 22.0% from US$65.6 million in the six months ended June 30, 2024 to US$80.0 million in the six months ended June 30, 2025, primarily attributable to the listing expenses, the consulting service fees incurred by Norton Gold Fields for its disposal of subsidiaries and the increase in employee salaries and bonuses driven by the performance improvement. Our administrative expenses accounted for 4.7% and 4.0% of our total revenue in the six months ended June 30, 2024 and 2025, respectively.

Impairment Losses on Financial Assets, Net

We recorded impairment losses on financial assets, net of US$1 thousand in the six months ended June 30, 2024 and US$186 thousand in the six months ended June 30, 2025, respectively, primarily attributable to changes on the trade receivables.

Other Expenses

Our other expenses increased from US$10.7 million in the six months ended June 30, 2024 to US$58.2 million in the six months ended June 30, 2025, primarily due to a one-time payment of US$48.4 million to resolve a disagreement in connection with the Kyrgyzstan Taldybulak Levoberezhny Gold Mine between the Kyrgyz state authorities and us, which had been completely settled.

Finance Costs

Our finance costs decreased from US$21.7 million in the six months ended June 30, 2024 to US$18.7 million in the six months ended June 30, 2025, primarily because in the six months ended June 30, 2025, we replaced some borrowings from related parties with borrowings from related parties with lower interest rates.

Income Tax Expenses

Our income tax expenses increased from US$147.5 million in the six months ended June 30, 2024 to US$239.7 million in the six months ended June 30, 2025, primarily due to the increased profit before tax.

Profit for the Period

As a result of the foregoing, our profit for the period increased significantly by 125.2% from US$277.4 million in the six months ended June 30, 2024 to US$624.6 million in the six months ended June 30, 2025.

Profit for the Period Attributable to Owners of the Parent

As a result of the foregoing, profit for the period attributable to owners of the parent increased significantly by 142.6% from US$214.4 million in the six months ended June 30, 2024 to US$520.2 million in the six months ended June 30, 2025.

Year Ended December 31, 2024 Compared with Year Ended December 31, 2023

Revenue

Our revenue increased by 32.2% from US$2,262.4 million in 2023 to US$2,989.9 million in 2024, primarily attributable to (i) the 24.0% year-on-year increase in our average selling price of gold from US$1,863 per ounce in 2023 to US$2,310 per ounce in 2024, and (ii) increase in sales volume from 1,163 koz (36.2 tonnes) in 2023 to 1,229 koz (38.2 tonnes) in 2024, mainly due to the significant increase in gold sales at the Australia Norton Gold Mine, the Colombia Buriticá Gold Mine and the Guyana Aurora Gold Mine.

Cost of Sales

Our cost of sales increased by 11.1% from US$1,669.7 million in 2023 to US$1,855.6 million in 2024, primarily due to our increase in sales volume of gold. In particular, our royalty expenses increased from US$154.4 million in 2023 to US$224.2 million in 2024, which was in line with the increase in our revenue.

Gross Profit and Gross Profit Margin

Our gross profit increased by 91.4% from US$592.7 million in 2023 to US$1,134.3 million in 2024. Our gross profit margin increased from 26.2% in 2023 to 37.9% in 2024, primarily due to the 24.0% year-on-year increase in our average selling price of gold from US$1,863 per ounce in 2023 to US$2,310 per ounce in 2024.

Other Income and Gains

Our other income and gains decreased by 18.3% from US$13.1 million in 2023 to US$10.7 million in 2024, primarily due to the decrease in derivative instruments — transactions not qualifying as hedges from US$1.9 million in 2023 to nil in 2024 and exchange gain from US$5.5 million in 2023 to nil in 2024. These decreases were offset by an increase in our interest income from US$2.8 million in 2023 to US$9.1 million in 2024, primarily due to the increase in bank deposits.

Selling and Distribution Expenses

Our selling and distribution expenses decreased by 49.1% from US$515 thousand in 2023 to US$262 thousand in 2024, primarily attributable to a reduction in sales staff in the Tajikistan Jilau/Taror Gold Mines due to changes in sales products. Our selling and distribution expenses accounted for less than 0.1% of our total revenue in both of 2023 and 2024.

Administrative Expenses

Our administrative expenses increased by 16.5% from US$121.1 million in 2023 to US$141.1 million in 2024, primarily attributable to the increase in employee salaries and bonuses driven by the performance improvement. Our administrative expenses accounted for 5.4% and 4.7% of our total revenue in 2023 and 2024, respectively.

Impairment Losses on Financial Assets, Net

We recorded impairment losses on financial assets, net of US$0.1 million in 2023 and US$2.0 thousand in 2024, respectively, primarily attributable to changes in impairment losses on accounts receivable and other receivables.

Other Expenses

Our other expenses increased from US$18.3 million in 2023 to US$23.5 million in 2024, primarily attributable to (i) exchange losses arising from the settlement with certain clients in RMB and the depreciation of RMB against US dollars in 2024; and (ii) exchange loss experienced by the Colombia Buriticá Gold Mine due to the depreciation of the Colombian peso against US dollar, devaluing its local peso-denominated monetary assets in 2024.

Finance Costs

Our finance costs decreased from US$50.9 million in 2023 to US$43.2 million in 2024, primarily attributable to the increase in capitalized interest and the decrease in interest on related-party borrowings.

Income Tax Expenses

Our income tax expenses increased from US$92.6 million in 2023 to US$316.4 million in 2024, primarily because of (i) the increased profit before tax in 2024 and (ii) the low income tax expenses in 2023 due to the impact of deferred tax caused by exchange rate changes of the Colombia Buriticá Gold Mine.

Profit for the Year

As a result of the foregoing, our profit for the year increased significantly by 92.6% from US$322.2 million in 2023 to US$620.6 million in 2024.

Profit for the Year Attributable to Owners of the Parent

As a result of the foregoing, profit for the year attributable to owners of the parent increased significantly by 108.9% from US$230.4 million in 2023 to US$481.4 million in 2024.

Year Ended December 31, 2023 Compared with Year Ended December 31, 2022

Revenue

Our revenue increased by 24.4% from US$1,818.0 million in 2022 to US$2,262.4 million in 2023, primarily attributable to (i) the 10.2% year-on-year increase in our average selling price of gold from US$1,690 per ounce in 2022 to US$1,863 per ounce in 2023, and (ii) increase in sales volume from 1,020 koz (31.7 tonnes) in 2022 to 1,163 koz (36.2 tonnes) in 2023, partially due to additional sales volume from the Suriname Rosebel Gold Mine acquired in 2023.

Cost of Sales

Our cost of sales increased by 39.4% from US$1,197.5 million in 2022 to US$1,669.7 million in 2023, primarily due to a higher sales volume of gold, largely resulting from the acquisition of the Suriname Rosebel Gold Mine. In particular, our royalty expenses increased from US$77.4 million in 2022 to US$154.4 million in 2023, mainly due to increased revenue.

Gross Profit and Gross Profit Margin

Our gross profit decreased by 4.5% from US$620.5 million in 2022 to US$592.7 million in 2023. Our gross profit margin decreased from 34.1% in 2022 to 26.2% in 2023.

Our gross profit of gold sales decreased by 4.4% from US$560.7 million in 2022 to US$536.3 million in 2023. Our gross profit margin of gold sales decreased from 32.5% in 2022 to 24.6% in 2023, primarily due to (i) newly-launched heap leach project in the Australia Norton Gold Mine which was ramping up in 2023, (ii) the increased unit operating costs attributing to the decreased milled grade at the Colombia Buriticá Gold Mine, the Guyana Aurora Gold Mine and the Australia Norton Gold Mine, and (iii) the increased contractor costs for the Colombia Buriticá Gold Mine in relation to the increase in mining activities and higher outsourcing unit prices.

Other Income and Gains

Our other income and gains increased by 167.3% from US$4.9 million in 2022 to US$13.1 million in 2023, primarily attributable to the foreign exchange gain arising from repaying the principal and interest of the interest-bearing borrowings due from Zijin Mining in 2023 in RMB and the depreciation of RMB against US dollars in 2023.

Selling and Distribution Expenses

Our selling and distribution expenses were US$670 thousand in 2022 and US$515 thousand in 2023. Our selling and distribution expenses accounted for less than 0.1% of our total revenue in both 2022 and 2023.

Administrative Expenses

Our administrative expenses remained relatively stable at US$121.8 million in 2022 and US$121.1 million in 2023. Administrative expenses accounted for 6.7% of our total revenue in 2022 and 5.4% of our total revenue in 2023.

Impairment Losses on Financial Assets, Net

We recorded impairment losses on financial assets, net, of US$0.3 million in 2022 and US$0.1 million in 2023, respectively.

Other Expenses

Our other expenses remained stable at US$18.2 million in 2022 and US$18.3 million in 2023.

Finance Costs

Our finance costs decreased from US$57.0 million in 2022 to US$50.9 million in 2023, primarily due to the decrease of interest on related-party borrowings, which was because we repaid certain loans from related party at the beginning of 2023.

Income Tax Expenses

Our income tax expenses decreased from US$137.1 million in 2022 to US$92.6 million in 2023, primarily attributable to the impact of (i) the US27.8 million deferred tax incurred in 2023, mainly caused by exchange rate changes and (ii) deferred income tax liability of the Colombia Buriticá Gold Mine in 2023.

Profit for the Year

As a result of the foregoing, our profit for the year increased by 11.0% from US$290.3 million in 2022 to US$322.2 million in 2023.

Profit for the Year Attributable to Owners of the Parent

As a result of the foregoing, profit for the year attributable to owners of the parent increased by 25.4% from US$183.7 million in 2022 to US$230.4 million in 2023.

DISCUSSION ON KEY ITEMS OF CONSOLIDATED STATEMENTS OF FINANCIAL POSITION

The following table sets out selected information from our summary consolidated balance sheet as of the dates indicated, which has been extracted from our audited consolidated financial statements included in Appendix I to this Prospectus.

	As of December 31,			As of June 30,
	2022	2023	2024	2025
	(US$ in thousands)			
Non-Current Assets

Property, Plant and Equipment

The following table sets forth the net carrying amounts of our property, plant and equipment as of the dates indicated.

	As of December 31,			As of June 30,
	2022	2023	2024	2025
	(US$ in thousands)			
Mining properties[(1)]	614,809	1,033,071	1,018,785	1,469,306
Plant, machinery and equipment	458,488	631,026	635,179	846,246
Buildings	121,902	190,759	190,751	209,341
Power generation and transmission equipment	42,670	77,156	72,879	69,199
Office equipment, electronic equipment and others	9,169	9,145	10,038	13,966
Motor vehicles	67,095	180,758	224,361	223,821
Construction in progress	439,346	238,397	381,646	447,729
Total	**1,753,479**	**2,360,312**	**2,533,639**	**3,279,608**

Note:
(1) Mining properties mainly included mine structures and buildings, such as workshops and tailings storage facilities.

The net carrying amounts of our mining properties increased from US$614.8 million as of December 31, 2022 to US$1,033.1 million as of December 31, 2023, primarily due to (i) the acquisition of the Suriname Rosebel Gold Mine in 2023, (ii) continued infrastructure stripping for new open-pit mines, which increased capitalized stripping costs in 2023, and (iii) the additional fixed assets due to the completion of new construction projects in the Australia Norton Gold Mine. The net carrying amounts of

our mining properties remained relatively stable at US$1,018.8 million as of December 31, 2024, and it further increased to US$1,469.3 million as of June 30, 2025, primarily due to the acquisition of Ghana Akyem Gold Mine.

The net carrying amounts of our plant, machinery and equipment increased from US$458.5 million as of December 31, 2022 to US$631.0 million as of December 31, 2023, primarily due to (i) the acquisition of the Suriname Rosebel Gold Mine in 2023, which led to an increase in machinery and equipment, and (ii) additional machinery and equipment we purchased in 2023. The net carrying amounts of plant, machinery and equipment further increased to US$635.2 million as of December 31, 2024, and it further increased to US$846.2 million as of June 30, 2025, primarily due to the acquisition of Ghana Akyem Gold Mine.

The net carrying amounts of our construction in progress decreased from US$439.3 million as of December 31, 2022 to US$238.4 million as of December 31, 2023, primarily because we completed several construction projects in 2023 such as the construction projects in the Australia Norton Gold Mine and the Colombia Buriticá Gold Mine. The net carrying amounts of our construction in progress then increased to US$381.6 million as of December 31, 2024, primarily because we had new construction projects in the Australia Norton Gold Mine in 2024, and it further increased to US$447.7 million as of June 30, 2025, primarily due to the open-pit mining and underground mining construction of Guyana Aurora Gold Mine.

Right-of-use Assets

Our right-of-use assets represented our leasehold land, buildings, machinery and equipment and motor vehicles. The following table sets forth a breakdown of right-of-use assets as of the dates indicated:

	As of December 31,			As of June 30,
	2022	2023	2024	2025
	(US$ in thousands)			
Leasehold land	3,072	2,539	2,006	1,739
Buildings	837	1,748	1,903	1,651
Machinery and equipment	19,033	10,352	10,019	9,148
Motor vehicles	—	1,359	41,465	41,399
Total	**22,942**	**15,998**	**55,393**	**53,937**

Our right-of-use assets decreased from US$22.9 million as of December 31, 2022 to US$16.0 million as of December 31, 2023, primarily due to the normal depreciation and amortization of right-of-use assets.

Our right-of-use assets increased from US$16.0 million as of December 31, 2023 to US$55.4 million as of December 31, 2024, primarily due to the increase of motor vehicles at the Suriname Rosebel Gold Mine, which was a one-off purchase for production and transportation needs.

Intangible Assets

The following table sets forth the net carrying amounts of our intangible assets as of the dates indicated.

	As of December 31,			As of June 30,
	2022	2023	2024	2025
	(US$ in thousands)			
Exploration and mining rights[(1)]	1,394,547	1,383,254	1,286,773	2,165,857
Exploration and evaluation assets	131,762	145,980	150,261	133,147
Software	1,480	1,641	2,444	5,062
Total	**1,527,789**	**1,530,875**	**1,439,478**	**2,304,066**

Note:

(1) Exploration and mining rights mainly included acquisition costs and added value of the exploration and mining rights.

The net carrying amounts of our exploration and mining rights decreased from US$1,394.5 million as of December 31, 2022 to US$1,383.3 million as of December 31, 2023, and further decreased to US$1,286.8 million, primarily due to the normal amortization during the Track Record Period. The net carrying amounts of our exploration and mining rights increased to US$2,165.9 million as of June 30, 2025, primarily due to the acquisition of Ghana Akyem Gold Mine.

Investments in a Joint Venture

We recorded an investment in a joint venture of US$94.8 million as of June 30, 2025, reflecting the completion of the restructuring of shareholders' interests in Porgera Jersey on June 24, 2025. The operational results of the joint venture will be incorporated into our consolidated financial statements from the second half of 2025 and going forward under the equity method.

Investments in an Associate

We recorded investments in associates of US$13.5 million, US$13.7 million, US$12.5 million and US$13.1 million as of December 31, 2022, 2023 and 2024 and June 30, 2025, respectively. The slight decrease in 2024 was primarily attributable to foreign currency translation differences.

Equity Investments Designated at Fair Value through Other Comprehensive Income

Our equity investments designated at fair value through other comprehensive income represented investment in equity of non-listed companies. We recorded equity investments designated at fair value through other comprehensive income of US$137 thousand as of each of December 31, 2022, 2023 and 2024 and June 30, 2025.

Deferred Tax Assets

Our deferred tax assets represented recognized deferred assets due to tax-accounting differences. The following table sets forth a breakdown of our deferred tax assets as of the dates indicated:

	As of December 31,			As of June 30,
	2022	2023	2024	2025
	(US$ in thousands)			
Tax losses	45,848	98,206	25,700	—
Unrealized profit	11,105	10,701	10,138	9,854
Accruals and other provisions	3,742	2,076	4,028	4,742
Rehabilitation provision	23,349	27,580	24,980	164,589
Others	5,581	7,079	19,747	26,966
Total	**89,625**	**145,642**	**84,593**	**206,151**

Our deferred tax assets increased from US$89.6 million as of December 31, 2022 to US$145.6 million as of December 31, 2023, primarily attributable to an increase in tax losses arising from the acquisition of Suriname Rosebel Gold Mine and an increase in tax losses of the Australia Norton Gold Mine.

Our deferred tax assets decreased from US$145.6 million as of December 31, 2023 to US$84.6 million as of December 31, 2024, primarily due to the utilized tax losses from previous year of Australia Norton Gold Mine, Suriname Rosebel Gold Mine and Guyana Aurora Gold Mine.

Our deferred tax assets substantially increased from US$84.6 million as of December 31, 2024 to US$206.2 million as of June 30, 2025, primarily due to the increase of rehabilitation provision of Ghana Akyem Gold Mine acquired in 2025.

Other Non-current Assets

Our other non-current assets primarily consisted of stockpiled ore, value-added tax refundable, advance payment for equipment, underground development costs and others. The following table sets out a breakdown of our inventories as of the dates indicated:

	As of December 31,			As of June 30,
	2022	2023	2024	2025
	(US$ in thousands)			
Stockpiled ore[(1)]	37,587	89,127	108,272	104,193
Value-added tax refundable	22,340	31,807	19,184	35,185
Advance payment for equipment	50,148	8,773	5,252	5,981
Underground development costs	2,692	4,462	5,942	4,376
Others	8,395	13,181	11,888	23,308
Total	**121,162**	**147,350**	**150,538**	**173,043**

Note:

(1) If the ore stockpile is not expected to be processed in 12 months after the reporting date, it is included in non-current assets.

Our other non-current assets increased from US$121.2 million as of December 31, 2022 to US$147.4 million as of December 31, 2023, primarily due to the acquisition of Suriname Rosebel Gold Mine in 2023, which led to an increase in stockpiled ores. This was partially offset by a decrease in advance payment for equipment, primarily because we prepaid the construction related fees of Zarafshon JV and the Guyana Aurora Gold Mine in 2022 while the construction was completed in 2023.

Our other non-current assets increased from US$147.4 million as of December 31, 2023 to US$150.5 million as of December 31, 2024, primarily due to an increase in stockpiled ores from Suriname Rosebel Gold Mine, partially offset by a decrease in Continental Gold Colombia Branch's value added tax refundable.

Our other non-current assets increased from US$150.5 million as of December 31, 2024 to US$173.0 million as of June 30, 2025, primarily due to an increase in prepaid stockyard resource tax in Tajikistan Jilau/Taror Gold Mines and an increase in Continental Gold Colombia Branch's value-added tax refundable.

Inventories

Our inventories primarily consisted of raw materials, work in process and finished goods. The following table sets out a breakdown of our inventories as of the dates indicated:

	As of December 31,			As of June 30,
	2022	2023	2024	2025
	(US$ in thousands)			
Raw materials	180,746	261,319	273,598	328,290
Work in process	100,648	123,375	138,339	153,171
Finished goods	32,401	15,578	25,425	11,907
Total	313,795	400,272	437,362	493,368

Our inventories increased from US$313.8 million as of December 31, 2022 to US$400.3 million as of December 31, 2023, primarily due to the acquisition of Suriname Rosebel Gold Mine in 2023, which led to an increase in the balance of raw materials.

Our inventories increased from US$400.3 million as of December 31, 2023 to US$437.4 million as of December 31, 2024, primarily due to (i) an increase in raw materials, largely because of the Guyana Aurora Gold Mine's procurement of essential materials as basic inventory to mitigate stockout risks; and (ii) an increase in work-in-process balance primarily from the Suriname Rosebel Gold Mine, due to the increase production volume; and partially offset by an increase in impairment provision.

Our inventories increased from US$437.4 million as of December 31, 2024 to US$493.4 million as of June 30, 2025, primarily due to the acquisition of Ghana Akyem Gold Mine and delivery of bulk materials purchased by Suriname Rosebel Gold Mine in the six months ended June 30, 2025.

The table below sets forth an aging analysis for our inventories, net of loss allowances as of the dates indicated.

	As of December 31,			As of June 30,
	2022	2023	2024	2025
	(US$ in thousands)			
Within 1 year	217,422	268,828	283,064	358,088
1–2 years	58,710	48,631	65,895	43,120
2–3 years	20,082	50,460	36,811	38,437
over 3 years	17,581	32,353	51,592	53,723
Total	**313,795**	**400,272**	**437,362**	**493,368**

The following table sets forth our inventory turnover days for the periods indicated:

	Year ended December 31,			As of June 30,
	2022	2023	2024	2025
Inventory turnover days[(1)]	103	78	82	79

Note:

(1) Inventory turnover days are calculated using the average of opening balance and closing balance of inventories for a year divided by cost of sales for the relevant year and multiplied by 365 days.

Our inventory turnover days decreased from 103 days in 2022 to 78 days in 2023 primarily because of the sales of the gold concentrate we produced and stored in previous years. The inventory turnover days remained stable at 82 days in 2024 and 79 days for the first half of 2025.

As of July 31, 2025, US$108.5 million, or 22.1% of our inventories as of June 30, 2025, had been consumed.

Trade Receivables

Our trade receivables primarily referred to trade receivables from trading companies, less impairment. The following table sets forth a breakdown of our trade receivables as of the dates indicated:

	As of December 31,			As of June 30,
	2022	2023	2024	2025
	(US$ in thousands, except turnover days)			
Trade receivables (subject to provisional pricing[1]) — fair value	2,199	10,848	6,756	139,922
Trade receivables (not subject to provisional pricing) — amortize cost	115,965	131,864	111,833	127,739
Impairment	(362)	(433)	(365)	(491)
Total[2]	**117,802**	**142,279**	**118,224**	**267,170**
Average trade receivable turnover days[3]	15	21	16	18

Notes:

(1) Products are sold under provisional pricing where final prices are set at a specified future date based on market commodity prices.

(2) Included trade receivables from Zijin Mining of US$24.4 million, US$90.1 million, US$79.9 million and US$187.5 million as of December 31, 2022, 2023 and 2024 and June 30, 2025, respectively.

(3) Average trade receivables equal the average of the trade receivables of continuing operations at the beginning of the period plus trade receivables of continuing operations at the end of the period. Average trade receivable turnover days equals average trade receivables divided by revenue and then multiplied by the number of days in the period.

We maintain strict control over our outstanding receivables. Overdue balances are reviewed regularly by senior management.

Our trade receivables increased from US$117.8 million as of December 31, 2022 to US$142.3 million as of December 31, 2023, and decreased to US$118.2 million as of December 31, 2024. The changes were primarily due to the changes in the outstanding amount of trade receivables generated from the sales of gold concentrates as of the year end. Compared to sales of gold ingots and gold doré, we generally grant longer credit period for customers of gold concentrates. Our trade receivables increased from US$118.2 million as of December 31, 2024 to US$267.2 million as of June 30, 2025, primarily due to an increase in the trade receivables resulting from the increased sales and the acquisition of Ghana Akyem Gold Mine.

Our average trade receivable turnover days increased from 15 days to 21 days as of December 31, 2022 and 2023, respectively, primarily because the refined gold ores had a longer billing period in 2023. Our average trade receivable turnover days decreased from 21 days to 16 days as of December 31, 2023 and 2024, respectively, primarily due to a decrease in sales of gold concentrate as of the end of year 2024. Our average trade receivable turnover days remained stable at 18 days as of June 30, 2025.

The credit period of trade receivables (not subject to provisional pricing) is generally 30 days. Trade receivables (not subject to provisional pricing) are non-interest-bearing.

An aging analysis of the trade receivables (not subject to provisional pricing) as of dates indicated is as follows:

	As of December 31,			As of June 30,
	2022	2023	2024	2025
	(US$ in thousands)			
Less than one year	115,585	131,421	111,403	127,022
Over one year	18	10	65	226
Total	**115,603**	**131,431**	**111,468**	**127,248**

As of December 31, 2022, 2023, and 2024 and June 30, 2025, the aging of all the receivables were primarily within one year and no trade debtors were determined to be impaired. We do not hold any collateral or other credit enhancements over these balances.

As of July 31, 2025, US$267.2 million, or 99.8%, of our trade receivables as of June 30, 2025, had been settled.

Prepayments, Other Receivables and Other Assets

Our prepayments, other receivables and other assets include prepaid accounts, other receivables eligible for tax refunds, and related party receivables.

	As of December 31,			As of June 30,
	2022	2023	2024	2025
	(US$ in thousands)			
Prepayments	38,128	56,845	37,328	33,131
Value-added tax refundable	9,778	28,203	39,917	33,050
Deposits in related party[(1)(2)]	124,290	134,339	233,443	148,370
Amounts due from related parties[(2)]	15,291	32,670	16,893	11,894
Income tax recoverable	8,434	66,998	51,189	26,007
Bank deposits in transit	—	—	—	15,000
Prepaid dividend tax	—	—	—	18,872
Other assets	12,370	42,955	25,536	27,166
Less: Impairment of other receivables	(1,629)	(1,696)	(1,767)	(1,688)
Total	**206,662**	**360,314**	**402,539**	**311,802**

Notes:

(1) Zijin International Capital Company Limited is responsible for the overall management and operation of the Group's funds, including cash pooling and coordinated financial operations. According to the physical cash pooling agreements signed with Zijin International Capital Company Limited, a subsidiary of Zijin Mining Group, the Company's subsidiaries deposited idle cash to bank accounts of Zijin International Capital Company Limited with interest rate between 0.3% and 5.1% per annum, which were unsecured and had no fixed terms of repayment. As of December 31, 2022, 2023 and 2024 and June 30, 2025, the balance of such deposit of idle cash amounted to US$124.3 million, US$134.3 million, US$233.4 million and US$148.4 million, respectively.

(2) Included prepayments, other receivables and other assets from Zijin Mining and a non-controlling shareholder of a subsidiary of US$139.6 million, US$167.0 million, US$250.3 million and US$160.3 million as of December 31, 2022, 2023 and 2024 and June 30, 2025, respectively.

Our prepayments, other receivables and other assets increased from US$206.7 million as of December 31, 2022 to US$360.3 million as of December 31, 2023, and further increased to US$402.5 million as of December 31, 2024, primarily because our interest-bearing deposits of cash pooling with the related party Zijin International Capital Company increased. Our prepayments, other receivables and other assets decreased from US$402.5 million as of December 31, 2024 to US$311.8 million as of June 30, 2025, primarily because our interest-bearing deposits of cash pooling with the related party Zijin International Capital Company decreased.

Our income tax recoverable increased from US$8.4 million as of December 31, 2022 to US$67.0 million as of December 31, 2023, primarily due to the US$34.7 million increases in income tax prepayments in 2023 of Zeravshan which was because of the increased profit in previous year that income tax prepayments measured as base, and the US$23.9 million income tax prepayments of Rosebel newly acquired in 2023.

As of July 31, 2025, we had collected US$26.4 million, or 8.5%, of our prepayments, other receivables and other assets outstanding as of June 30, 2025. Our Directors confirm that we did not have any default in payment of prepayments, other receivables and other assets during the Track Record Period.

Financial Assets at Fair Value through Profit or Loss

Our financial assets at fair value through profit or loss represented our equity investments in listed company. We recorded financial assets at fair value through profit or loss of US$1.7 million, US$1.0 million, US$1.5 million and US$9.6 million as of December 31, 2022, 2023 and 2024 and June 30, 2025, respectively, primarily due to changes in stock value of our listed equity investment, which was the equity investment made by one of Zijin America's subsidiary prior to our acquisition. Our financial assets at fair value through profit or loss substantially increased as of June 30, 2025, primarily due to the stock consideration we received from disposal of one of our subsidiaries. We currently plan to hold these equity investments for the long term.

Restricted cash

Our restricted cash represented mine environmental restoration deposit. We recorded restricted cash of US$4.9 million, US$6.1 million, US$6.7 million and US$100.8 million as of December 31, 2022, 2023 and 2024 and June 30, 2025, respectively, primarily attributable to our mine restoration plans at certain sites, which necessitated a higher provision amount in accordance with government-mandated provisioning ratios. The significant increase from US$6.7 million as of December 31, 2024 to US$100.8 million as of June 30, 2025 was due to the increase in the mine restoration guarantee deposit resulting from the acquisition of Ghana Akyem Gold Mine.

Cash and Cash Equivalents

As of December 31, 2022, 2023 and 2024 and June 30, 2025, our cash and cash equivalents amounted to US$86.5 million, US$154.8 million, US$234.6 million and US$364.1 million, respectively. Our cash and cash equivalents primarily consist of cash held at banks and other financial institutions, readily accessible on demand to support our operational and liquidity needs.

Trade Payables

The following table sets forth the components of our trade payables as of the dates indicated and the average trade payable turnover days as of the dates indicated.

	As of December 31,			As of June 30,
	2022	2023	2024	2025
	(US$ in thousands, except turnover days)			
Total[(1)]	**155,370**	**306,667**	**244,768**	**288,105**
Trade payables turnover days[(2)]	38	51	54	45

Notes:

(1) Included trade payables to Zijin Mining of US$86.4 million, US$93.8 million, US$80.6 million and US$59.6 million as of December 31, 2022, 2023 and 2024 and June 30, 2025, respectively.

(2) Calculated by dividing the average balance of trade payables by cost of sales for the relevant period multiplied by the number of days during the period. Average balance equals the sum of the beginning balance and ending balance for the period divided by two.

Our trade payables increased from US$155.4 million as of December 31, 2022 to US$306.7 million as of December 31, 2023, primarily because of the acquisition of the Suriname Rosebel Gold Mine and the increase in mining and stripping activities in the Guyana Aurora Gold Mine in 2023 and hence the increased payables. Our trade payables decreased to US$244.8 million as of December 31, 2024, which was due to the settlement of the payments relating to the mining and stripping activities in 2023 in the Guyana Aurora Gold Mine. Our trade payables increased to US$288.1 million as of June 30, 2025, which was due to the acquisition of Ghana Akyem Gold Mine.

As of July 31, 2025, US$131.5 million, or 45.6%, of our trade payables as of June 30, 2025 had been subsequently settled.

The trade payables are non-interest-bearing and are normally settled on one-year terms. The following table sets forth the aged analysis of our trade payables, net, as of the dates indicated:

	As of December 31,			As of June 30,
	2022	2023	2024	2025
	(US$ in thousands)			
Less than one year	141,383	289,373	233,902	280,270
Over one year	13,987	17,294	10,866	7,835
Total	**155,370**	**306,667**	**244,768**	**288,105**

Other Payables and Accruals

The following table sets forth the components of our other payables and accruals as of the dates indicated:

	As of December 31,			As of June 30,
	2022	2023	2024	2025
	(US$ in thousands)			
Payables and accruals	64,410	102,742	118,903	264,385
Contract liabilities	572	1,590	—	671
Current portion of contract liabilities -metals streaming agreement	1,232	2,537	3,229	3,926
Amount due to related parties	213,334	545,956	377,455	136,817
Total[(1)]	**279,548**	**652,825**	**499,587**	**405,799**

(1) Included trade payables to Zijin Mining and a non-controlling shareholder of a subsidiary of US$213.3 million, US$546.0 million, US$377.5 million and US$136.8 million as of December 31, 2022, 2023 and 2024 and June 30, 2025, respectively.

Our other payables and accruals increased from US$279.5 million as of December 31, 2022 to US$652.8 million as of December 31, 2023, primarily due to the increased payables and accruals in 2023 related to the acquisition of the Suriname Rosebel Gold Mine, and then decreased to US$499.6 million as of December 31, 2024, primarily due to the repayment to related parties in 2024. It further decreased to US$405.8 million as of June 30, 2025, primarily due to the repayment to related parties, partially by the increased in payables and accruals resulting from the acquisition of Ghana Akyem Gold Mine.

As of July 31, 2025, US$107.5 million, or 28.1%, of our other payables and accruals as of June 30, 2025 had been subsequently settled.

Income Tax Payables

We recorded income tax payable of US$29.6 million, US$24.1 million, US$73.7 million and US$150.9 million as of December 31, 2022, 2023 and 2024 and June 30, 2025, respectively. The significant increase in 2024 and first half of 2025 was primarily due to the increased profit during the same periods.

As of July 31, 2025, US$5.7 million, or 3.9%, of our income tax payable as of December 31, 2024 had been subsequently settled.

Convertible Debentures

We issued the US$50,000,000 convertible debentures to Gold Mountains (H.K.) on December 13, 2019. The interest rate is 5%, payable semi-annually. For more details, see note 35 to the Accountants' Report set out in Appendix I to this Prospectus. As of December 31, 2022, 2023 and 2024 and June 30, 2025, we recorded convertible debentures of US$62.0 million, US$67.7 million,US$70.9 million and US$73.7 million, respectively, as current portion.

Derivative Financial Liabilities

As of December 31, 2023 and 2024 and June 30, 2025, we recorded total derivative financial liabilities of US$30.8 million, US$32.0 million and US$29.4 million, respectively, primarily attributable to the power purchase agreement between Suriname Rosebel Gold Mine and Suriname Power Company.

The following table sets forth our derivative financial liabilities as of the dates indicated:

	As of December 31,			As of June 30,
	2022	2023	2024	2025
	(US$ in thousands)			
Derivative Financial Liabilities				
Current portion	—	4,959	5,484	5,085
Non-current portion	—	25,842	26,520	24,340
Total	**—**	**30,801**	**32,004**	**29,425**

Interest-bearing Bank and Other Borrowings

We recorded interest-bearing bank and other borrowings of US$607.9 million, US$655.2 million, US$610.8 million and US$615.0 million as of December 31, 2022, 2023 and 2024 and June 30, 2025. We recorded bank loans-unsecured, current, of US$13.5million, US$13.7 million, nil and nil as of December 31, 2022, 2023 and 2024 and June 30, 2025, respectively. We recorded interest-bearing borrowings from the related parties, current, of nil, nil, US$41.7 million and nil as of December 31, 2022, 2023 and 2024 and June 30, 2025, respectively. We recorded interest-bearing borrowings from the related parties, non-current, of US$594.4 million, US$641.5million, US$569.1 million and US$615.0 million as of December 31, 2022, 2023 and 2024 and June 30, 2025, respectively. For details of the effective interest rates and the maturity, see note 33 to the Accountant's Report set out in Appendix I of this Prospectus.

For more discussion on our bank loans, see "— Indebtedness."

As of July 31, 2025, US$8.6 million, or 1.4%, of our interest-bearing bank and other borrowings as of June 30, 2025 had been subsequently settled.

Lease Liabilities

Our lease liabilities were mainly generated from lease contracts for various items of leasehold land, buildings, machinery, motor vehicles and other equipment used in our operations. The following table sets forth a breakdown of our lease liabilities balance as of the dates indicated:

	As of December 31,			As of June 30,
	2022	2023	2024	2025
	(US$ in thousands)			
Lease liabilities	20,336	12,166	51,257	49,760
Non-current portion	9,995	4,124	32,270	27,137
Current portion	10,341	8,042	18,987	22,623

For details of maturity analysis of lease liabilities, see note 48 to the Accountant's Report set out in Appendix I of this Prospectus.

Our lease liabilities decreased from US$20.3 million as of December 31, 2022 to US$12.2 million as of December 31, 2023, primarily due to the payment of rentals, and then increased to US$51.3 million as of December 31, 2024, primarily due to the increase in Rosebel's financial lease business for transportation equipment.

As of July 31, 2025, US$2.5 million, or 5.1%, of our lease liabilities as of June 30, 2025 had been subsequently settled.

Deferred Tax Liabilities

Our deferred tax liabilities consisted of differences in depreciation policies, differences in exploration and development cost amortization policies, dividend withholding tax, and merger and acquisition amortization. The following table sets forth a breakdown of our deferred tax liabilities as of the dates indicated:

	As of December 31,			As of June 30,
	2022	2023	2024	2025
	(US$ in thousands)			
Depreciation in excess of depreciation allowance	57,968	172,710	194,786	320,559
Fair value adjustment on acquisition	343,204	328,128	307,227	558,834
Withholding tax	31,486	34,062	65,142	65,142
Others	95,462	56,216	77,244	104,013
Total	**528,120**	**591,116**	**644,399**	**1,048,548**

Our deferred tax liabilities increased from US$528.1 million as of December 31, 2022 to US$591.1 million as of December 31, 2023, primarily due to the increase in differences in depreciation policies of Suriname Rosebel Gold Mine.

Our deferred tax liabilities increased from US$591.1 million as of December 31, 2023 to US$644.4 million as of December 31, 2024, primarily due to higher withholding tax on dividends, which resulted from an increase in retained profit of the year.

Our deferred tax liabilities increased from US$644.4 million as of December 31, 2024 to US$1,048.5 million as of June 30, 2025, primarily due to fair value adjustment on acquisition relating to the Ghana Akyem Gold Mine.

Provisions

Our provisions consisted of environmental rehabilitation and litigation. Pursuant to the regulations of the governmental authorities in the places where the mines are located, we recognize provision for environmental rehabilitation and restoration of mines. The amount of provision is an estimate based upon the mine closure plan, size and scale of the mining operation, Life of Mine and mining methods.

The following table sets forth a breakdown of our provisions as of the dates indicated:

	As of December 31,			As of June 30,
	2022	2023	2024	2025
	(US$ in thousands)			
Rehabilitation	91,016	226,064	230,604	658,270
Litigation	2,503	2,545	2,502	2,502
Total	**93,519**	**228,609**	**233,106**	**660,772**

Our provisions increased from US$93.5 million as of December 31, 2022 to US$228.6 million as of December 31, 2023, and further increased to US$233.1 million as of December 31, 2024, primarily due to the acquisition of the Suriname Rosebel Gold Mine in 2023, and it further increased to US$660.8 million as of June 30, 2025, primarily due to the rehabilitation provision of Ghana Akyem Gold Mine acquired in 2025.

Other Non-current Liabilities

Our other non-current liabilities represented contract liabilities pursuant to a metals streaming agreement ("**Metal Streaming Arrangement**") entered into on June 25, 2019 between CGI and Triple Flag. CGI obtained a prepayment of US$100 million from Triple Flag. CGI shall satisfy its delivery obligations with 2.1% of the future gold production of the Colombia Buriticá Gold Mine (the "**Gold Delivery Obligation**") and silver production equals to 1.84 times of the Gold Delivery Obligation (the "**Silver Delivery Obligation**"). For each ounce of products delivered under the agreement, Triple Flag would pay 10% and 5%, respectively, of the gold and silver market prices prevailing at the time of delivery. The agreement also stipulates that CGI might choose to repurchase the Gold Delivery Obligation in advance before December 31, 2021, and the consideration would be US$80 million less 90% of the value of the gold delivered. We redeemed the Gold Delivery Obligation in advance in 2020 and have begun to fulfil the Silver Delivery Obligation.

On March 5, 2020, when Zijin Mining acquired CGI, it recognized contract liabilities amounting to US$113 million for the Gold Delivery Obligation and US$119 million for the Silver Delivery Obligation, both assessed at fair value in accordance with IFRS 3 — Business Combination. These liabilities represented the present value of all gold and silver that CGI is obligated to deliver under the Metal Streaming Arrangement. As such, the contract liabilities recognized during the Track Record Period exceeded the historical cash prepayment of US$100 million.

Our other non-current liabilities represent the contract liabilities arising from the Metal Streaming Arrangement.

The following table sets forth the components of our other non-current liabilities as of the dates indicated:

	As of December 31,			As of June 30,
	2022	2023	2024	2025
	(US$ in thousands)			
Contract liabilities — metals streaming agreement	124,733	118,325	114,659	113,263
Total	**124,733**	**118,325**	**114,659**	**113,263**

For more details on the balance of our metals streaming agreement as of December 31, 2022, 2023 and 2024 and June 30, 2025, see note 36 to the Accountant's Report set out in Appendix I of this Prospectus.

LIQUIDITY AND CAPITAL RESOURCES

Our principal source of liquidity has been, and is expected to continue to be, cash generated from operating activities together with available credit facilities and bank borrowings. Our liquidity requirements primarily relate to funding our working capital requirements and our capital expenditures. We had cash and cash equivalents of US$86.5 million, US$154.8 million, US$234.6 million and US$364.1 million as of December 31, 2022, 2023 and 2024 and June 30, 2025, respectively. As of July 31, 2025, the latest practicable date for determining our indebtedness, we had cash and cash equivalents of US$393.7 million.

Sufficiency of Working Capital

Taking into account the financial resources available to us, including our cash and cash equivalents, available borrowings, and the estimated net proceeds from the Global Offering, our Directors are of the opinion that we have sufficient working capital required for 125% of our present requirements, that is for at least the next 12 months from the date of this Prospectus. Going forward, we believe our liquidity requirements will be satisfied by using funds from a combination of our cash and cash equivalents, bank and other borrowings and net proceeds from the Global Offering. The majority of our projects under development are expansion projects of our current mines. We believe that we are able to finance such projects using net operating cash flow from our existing operations.

Net Current Assets and Net Current Liabilities

As of December 31, 2022 and 2024 and June 30, 2025, we recorded net current assets of US$186.1 million, US$245.9 million and US$506.8 million, respectively. As of December 31, 2023, we recorded net current liabilities of US$13.1 million. As of July 31, 2025, we recorded net current assets of US$616.1 million.

The following table sets forth our current assets/(liabilities) as of the dates indicate:

	As of December 31,			As of June 30,	As of July 31,
	2022	2023	2024	2025	2025
			(US$ in thousands)		(unaudited)
CURRENT ASSETS					
Inventories	313,795	400,272	437,362	493,368	495,407
Trade receivables	117,802	142,279	118,224	267,170	186,756

Income tax payables	29,561	24,057	73,665	150,857	193,506
Interest-bearing bank and other borrowings	13,536	13,690	41,650	—	16,727
Lease liabilities	10,341	8,042	18,987	22,623	22,781
TOTAL CURRENT LIABILITIES	**550,398**	**1,077,906**	**955,000**	**946,151**	**874,194**
NET CURRENT ASSETS/ (LIABILITIES)	**186,135**	**(13,131)**	**245,874**	**506,818**	**616,070**

We recorded net current assets of US$186.1 million as of December 31, 2022 and net current liabilities of US$13.1 million as of December 31, 2023, primarily attributable to an increase in other payables and accruals and an increase in trade payables, partially offset by an increase in prepayments, other receivables and other assets and increase in cash and cash equivalents.

We recorded net current liabilities of US$13.1 million as of December 31, 2023 and net current assets of US$245.9 million as of December 31, 2024, primarily attributable to a decrease in other payables and accruals, a decrease in trade payables, an increase in cash and cash equivalents, an increase in prepayments, other receivables and other assets and an increase in inventories.

Our net current assets increased from US$245.9 million as of December 31, 2024 to US$506.8 million as of June 30, 2025, primarily attributable to an increase in trade receivables, an increase in cash and cash equivalents. an increase in inventories, a decrease in other payables and accruals, partially offset by a decrease in prepayments, other receivables and other assets, an increase in trade payables and an increase in income tax payables.

Consolidated Statements of Cash Flow

The following table sets forth a summary of our cash flows for the periods indicated:

	For the year ended December 31,			For the six months ended June 30,	
	2022	2023	2024	2024	2025
			(US$ in thousands)		
				(unaudited)	
Net cash flows from operating activities	714,749	924,874	876,455	316,803	417,443
Net cash flows used in investing activities	(453,412)	(720,992)	(399,633)	(282,233)	(3,066,639)
Net cash flows (used in)/ from financing activities	(346,560)	(135,633)	(396,959)	(16,502)	2,777,121

Cash and cash equivalents at beginning of year	171,228	86,458	154,754	154,754	234,585
Effect of foreign exchange rate changes, net	453	47	(32)	(299)	1,608
Cash and cash equivalents at end of year	86,458	154,754	234,585	172,523	364,118

Net Cash from Operating Activities

For the six months ended June 30, 2025, we had net cash flows from operating activities of US$417.4 million, which was primarily attributable to our profit before tax of US$864.2 million, adjusted by (i) depreciation of property and plant and equipment of US$202.7 million, (ii) amortization of intangible assets of US$57.8 million, and (iii) finance costs of US$18.7 million. The amount was further adjusted by changes in working capital, which primarily comprised (i) a decrease in other payables and accruals of US$293.1 million, (ii) an increase in trade receivables of US$122.5 million and (iii) an increase in inventories of US$13.6 million.

In 2024, we had net cash flows from operating activities of US$876.5 million, which was primarily attributable to our profit before tax of US$937.0 million, adjusted by (i) depreciation of property and plant and equipment and investment properties of US$296.5 million, (ii) amortization of intangible assets of US$102.4 million and (iii) finance costs of US$43.2 million. The amount was further adjusted by changes in working capital, which primarily comprised (i) an increase in prepayments, deposits and other receivables of US$132.8 million, (ii) a decrease in other payables and accruals of US$123.9 million, (iii) an increase in inventories of US$71.1 million and (iv) a decrease in trade payables of US$61.9 million.

In 2023, we had net cash flows from operating activities of US$924.9 million, which was primarily attributable to our profit before tax of US$414.7 million, adjusted by (i) depreciation of property and plant and equipment and investment properties of US$285.6 million, (ii) amortization of intangible assets of US$105.7 million and (iii) finance costs of US$50.9 million. The amount was further adjusted by changes in working capital, which primarily comprised (i) an increase in other payables and accruals of US$175.2 million, (ii) an increase in trade payables of US$129.4 million, and (iii) a decrease in other non-current assets of US$90.8 million, partially offset by an increase in prepayments, deposits and other receivables of US$103.6 million.

In 2022, we had net cash flows from operating activities of US$714.7 million, which was primarily attributable to our profit before tax of US$427.4 million, adjusted by (i) depreciation of property and plant and equipment and investment properties of US$239.4 million, (ii) amortization of intangible assets of US$98.9 million and (iii) finance costs of US$57.0 million. The amount was further adjusted by changes in working capital, which primarily comprised (i) an increase in other payables and accruals of US$140.3 million, (ii) an increase in trade payables of US$62.0 million, and (iii) a decrease in inventories of US$48.2 million, partially offset by (i) an increase in trade receivables of US$89.5 million, and (ii) an increase in prepayments, deposits and other receivables of US$88.3 million.

Net Cash Flows Used in Investing Activities

For the six months ended June 30, 2025, we had net cash flows used in investing activities of US$3,066.6 million, which was primarily attributable to (i) cash payment to Zijin Mining upon group reorganization of US$2,070.0 million, (ii) acquisition of a subsidiary for US$866.0 million, and (iii) purchase of items of property, plant, and equipment of US$250.2 million.

In 2024, we had net cash flows used in investing activities of US$399.6 million, which was primarily attributable to (i) purchase of items of property, plant and equipment of US$474.2 million and (ii) advances to related-parties of US$81.4 million, partially offset by advances from related-parties of US$165.3 million.

In 2023, we had net cash flows used in investing activities of US$721.0 million, which was primarily attributable to (i) purchase of items of property, plant and equipment of US$422.2 million and (ii) acquisition of Suriname Rosebel Gold Mine of US$269.6 million.

In 2022, we had net cash flows used in investing activities of US$453.4 million, which was primarily attributable to (i) purchase of items of property, plant and equipment of US$497.3 million and (ii) advances to related-parties of US$105.1 million.

Net Cash Flows (Used in)/from Financing Activities

For the six months ended June 30, 2025, we had net cash flows from financing activities of US$2,777.1 million, which was primarily attributable to proceeds of US$3,040.0 million from the issuance of 1,729,000,000 Shares to Gold Mountains (H.K.), partially offset by (i) repayment of bank and other loans of US$203.3 million, (ii) dividends paid to non-controlling shareholders of US$142.9 million, and (iii) interest paid of US$14.1 million.

In 2024, we had net cash flows used in financing activities of US$397.0 million, which was primarily attributable to capital reduction of a subsidiary resulting in return of the capital contribution of US$215.0 million to its shareholders, repayment of bank and other loans of US$139.3 million and dividends paid to non-controlling shareholders of US$83.7 million, partially offset by new bank and other loans of US$94.9 million.

In 2023, we had net cash flows used in financing activities of US$135.6 million, which was primarily attributable to repayment of bank and other loans of US$115.2 million, dividends paid to non-controlling shareholders of US$122.3 million and interest paid of US$47.6 million, partially offset by new bank and other loans of US$162.4 million.

In 2022, we had net cash flows used in financing activities of US$346.6 million, which was primarily attributable to repayment of bank and other loans of US$402.2 million, dividends paid to non-controlling shareholders of US$93.3 million and interest paid of US$54.6 million, partially offset by new bank and other loans of US$212.5 million.

INDEBTEDNESS

As of December 31, 2022, 2023 and 2024, and June 30 and July 31, 2025, our indebtedness included convertible debentures, interest-bearing bank and other borrowings and lease liabilities. The following table sets forth the breakdown of our indebtedness as of the dates indicated:

	As of December 31,			As of June 30,	As of July 31,
	2022	2023	2024	2025	2025
			(US$ in thousands)		(unaudited)
Current					
Convertible debentures	62,042	67,666	70,859	73,682	74,426
Interest-bearing bank borrowings	13,536	13,690	—	—	10,014
Interest-bearing borrowings from the related parties	—	—	41,650	—	6,713
Lease liabilities	10,341	8,042	18,987	22,623	22,781

Convertible Debentures

For more details, see "— Discussion on Key Items of Consolidated Statements of Financial Position — Convertible Debentures" in this section and note 35 to the Accountants' Report in Appendix I to this Prospectus.

Interest-bearing Bank and Other Borrowings

Our interest-bearing bank borrowings represented unsecured bank loans and interest-bearing borrowings from the related parties.

We recorded total interest-bearing bank and other borrowings of US$607.9 million as of December 31, 2022, comprising total unsecured bank loans of US$13.5 million and interest-bearing borrowings from the related parties of US$594.4 million. We recorded total interest-bearing bank and other borrowings of US$655.2 million as of December 31, 2023, comprising total unsecured bank loans of US$13.7 million and interest-bearing borrowings from the related parties of US$641.5 million. We recorded total interest-bearing bank and other borrowings of US$610.8 million and US$615.2 million as of December 31, 2024 and June 30, 2025, respectively, all of which were interest-bearing borrowings from the related parties.

Our unsecured bank loans, current were US$13.5 million, US$13.7 million, nil and nil as of December 31, 2022, 2023 and 2024, and June 30, 2025, respectively. The effective interest rates were 2.61% and 5.66% as of December 31, 2022 and 2023, respectively. We did not record any non-current bank loans as of December 31, 2022, 2023 and 2024, and June 30, 2025, respectively. Our current interest-bearing bank borrowings and non-current interest-bearing bank borrowings were US$10.0 million and nil as of July 31, 2025, respectively.

Our interest-bearing borrowings from the related parties, current, were nil, nil, US$41.7 million and nil as of December 31, 2022, 2023 and 2024, and June 30, 2025, respectively. A loan of US$41.7 million from Zijin International Capital Company was reclassified from non-current to current as of December 31, 2024 as the loan was due within one year, which was fully repaid in June 2025. The effective interest rates were 11.39% as of December 31, 2024. Our interest-bearing borrowings from the related parties, current, were US$6.7 million as of July 31, 2025.

Our interest-bearing borrowings from the related parties, non-current, were US$594.4 million, US$641.5 million, US$569.1 million and US$615.0 million as of December 31, 2022, 2023 and 2024, and June 30, 2025, respectively. The increase was primarily due to the increased intragroup borrowings in 2023. The decrease in 2024 was primarily due to the repayment of certain intragroup borrowings. The increase in the first half of 2025 was primarily due to increase of compound interest. The effective interest rates were 4.16%–10.55%, 4.16%–11.46%, 4.16%–11.39%, 4.16%–11.39% and 4.16%–10.35% as of the same dates. Our interest-bearing borrowings from the related parties, non-current, were US$603.3 million as of July 31, 2025, with effective rates of 4.16%–10.35%.

For details of the effective interest rates and maturity, see note 33 to the Accountant's Report set out in Appendix I of this Prospectus.

As of July 31, 2025, we had unutilized credit facilities of US$90 million.

During the Track Record Period, the bank borrowing agreements that we entered into with banks and financial institutions were subject to general and customary covenants commonly found in lending arrangements with financial institutions. If we were to breach the covenants, the loans would become payable on demand. We regularly monitor our compliance with these covenants. Agreements for our bank borrowings do not contain any material covenants that may have a material adverse effect on our ability to obtain additional borrowings or issue debt or equity securities in the future. Our Directors confirmed that we have not defaulted in the repayment of the bank borrowings and relevant interest expenses or breached any covenants of the loans during the Track Record Period and up to the Latest Practicable Date. We did not experience any difficulty in obtaining bank loans and other borrowings during the Track Record Period and up to the Latest Practicable Date, and there has not been any material change in our indebtedness since July 31, 2025 and up to the date of this Prospectus.

Lease Liabilities

We recognized total lease liabilities of US$20.3 million, US$12.2 million, US$51.3 million and US$49.8 million as of December 31, 2022, 2023 and 2024 and June 30, 2025, respectively. For more details, see "— Discussion on Key Items of Consolidated Statements of Financial Position — Lease Liabilities" in this section and note 17(b) to the Accountants' Report in Appendix I to this Prospectus.

As of July 31, 2025, US$2.5 million, or 5.1%, of our lease liabilities as of June 30, 2025 had been subsequently settled.

CAPITAL EXPENDITURES

During the Track Record Period, our capital expenditure primarily consisted of (i) purchase of items of property, plant and equipment; and (ii) purchase of intangible assets.

The table below sets forth our capital expenditure for the periods indicated:

	As of December 31,			As of June 30,
	2022	2023	2024	2025
	(US$ in thousands)			
Purchase of items of property, plant and equipment	497,343	422,216	474,229	250,225
Purchase of intangible assets	21,083	14,704	12,819	8,012
Total	**518,426**	**436,920**	**487,048**	**258,237**

We had total cash outflow of purchase of property, plant and equipment and intangible assets of US$518.4 million, US$436.9 million, US$487.0 million and US$258.2 million in 2022, 2023 and 2024 and the six months ended June 30, 2025, respectively. We funded the capital expenditures mainly with our operating cashflows and the interest-bearing bank and other borrowings.

Following the Global Offering, we will continue to incur capital expenditure to grow our business. We plan to fund our planned capital expenditure primarily with cash flows generated from our operations, interest-bearing bank borrowings, and the net proceeds received from the Global Offering. See "Future Plans and Use of Proceeds." We may adjust our capital expenditure for any given year according to our development plans or in light of market conditions and other factors we believe to be appropriate.

CONTRACTUAL OBLIGATIONS

Capital Commitments

Our capital commitments contracted but not provided for as of the end of each Track Record Period primarily related to our purchase of property, plant and equipment and purchase commitment. As of December 31, 2022, 2023 and 2024 and June 30, 2025, our capital commitments amounted to US$114.7 million, US$250.3 million, US$176.8 million and US$148.8 million, respectively.

We had various lease contracts that had not yet commenced as of June 30, 2025. The future lease payments for these non-cancellable lease contracts are US$12.6 million due within one year and US$30.0 million due in the second to fifth years.

Contingent Liabilities

As of December 31, 2022, 2023 and 2024, and June 30 and July 31, 2025, we did not have any material contingent liability, guarantee or any litigation or claim of material importance, pending or threatened against us or any member of our Group that is likely to have a material and adverse effect on our business, financial condition and result of operations.

CASH OPERATING COSTS

Cash operating costs for our mines primarily consist of mining operation costs and processing costs. A majority of these costs relate to the costs of workforce employment, consumables and fuel, electricity, water and other services.

The tables below set forth a summary of historical and forecast of the cash operating costs per gram of gold produced of the Tajikistan Jilau/Taror Gold Mines, the Kyrgyzstan Taldybulak Levoberezhny Gold Mine, the Australia Norton Gold Mine, the Guyana Aurora Gold Mine, the Colombia Buriticá Gold Mine, the Suriname Rosebel Gold Mine and the Ghana Akyem Gold Mine respectively, for the periods indicated, based on the SRK Reports.

The forecast of the cash operating costs is based on certain assumptions, including but not limited to (i) production rates are planned annually with ore quality evenly distributed using average grades; (ii) analyzes are conducted in real terms using US dollars, without accounting for inflation; (iii) unit cash costs are constant over the LoM and exclude depreciation and amortization; (iv) product prices are based on the price forecast of Consensus Market Forecast for gold, silver and copper; and (v) exploration capex aimed at discovering additional Resources beyond current estimates is not included. For details, please refer to the "Principal Assumptions" section in each of the SRK Report set out in Appendices III to this Prospectus.

The following table is based on the SRK Report and sets forth the cash operating costs of Tajikistan Jilau/Taror Gold Mines:

KEY FINANCIAL RATIOS

The following table sets forth our key financial ratios as of and for the periods indicated:

	As of and for the year ended December 31,			As of and for the six months ended June 30,
	2022	2023	2024	2025
	(US$ in thousands)			
Rates of return				
Return on assets[(1)] (%) . . .	6.9	6.2	11.5	8.4
Return on equity[(2)] (%). . .	12.3	12.4	21.4	14.7
Liquidity ratios				
Current ratio[(3)] (times) . . .	1.34	0.99	1.26	1.54
Quick ratio[(4)] (times).	0.77	0.62	0.80	1.01
Gearing ratio[(5)] (times) . . .	0.29	0.28	0.25	0.17
Profit margin				
Gross profit margin[(6)] (%).	34.1	26.2	37.9	46.5
Net profit margin[(7)] (%) . .	16.0	14.2	20.8	31.3

Notes:

(1) Return on assets ratio is calculated using the profit for the year divided by total assets at the end of the year, multiplied by 100%.

(2) Return on equity ratio is calculated using the profit for the year divided by total equity at the end of the year, multiplied by 100%.

(3) Current ratio is calculated using total current assets divided by total current liabilities.

(4) Quick ratio is calculated using total current assets less inventories divided by total current liabilities.

(5) Gearing ratio is calculated by dividing total debt (which includes current and non-current portions of convertible debentures, interest-bearing bank and other borrowings, and lease liabilities) by total equity.

(6) Gross profit margin is calculated based on the gross profit for the year divided by the total revenue for the respective year and multiplied by 100%. See the paragraphs headed "Period to period comparison of results of operations" above in this section for more details on our gross profit margins.

(7) Net profit margin is calculated based on the profit for the year divided by the total revenue for the respective year and multiplied by 100%. See the paragraphs headed "Period to period comparison of results of operations" above in this section for more details on our net profit margins.

RELATED PARTY TRANSACTIONS

We enter into transactions with our related parties from time to time. For details of our related party transactions, see note 45 to the Accountants' Report set out in Appendix I to this Prospectus. The non-trade balances with related parties will be settled by 2028, and the non-trade balances with Zijin Mining will be no more than US$750 million prior to the Listing.

Our Directors confirmed that each of the related party transactions set out in note 45 to the Accountants' Report set out in Appendix I to this Prospectus was conducted in the ordinary course of business on an arm's length basis and with normal commercial terms between the relevant parties. Our Directors also confirmed that our related party transactions during the Track Record Period would not distort our track record results or cause our historical results to become non-reflective of our future performance.

OFF-BALANCE SHEET COMMITMENTS AND ARRANGEMENTS

As of the Latest Practicable Date, we did not enter into any off-balance sheet arrangements. We also have not entered into any financial guarantees or other commitments to guarantee the payment obligations of third parties. In addition, we have not entered into any derivative contracts that are indexed to our equity interests and classified as owners" equity. Furthermore, we do not have any retained or contingent interest in assets transferred to an unconsolidated entity that serves as credit, liquidity or market risk support to such entity. We do not have any variable interest in any unconsolidated entity that provides financing, liquidity, market risk or credit support to us or that engages in leasing, hedging or research and development services with us.

FINANCIAL RISKS DISCLOSURE

We are exposed to various risks in relation to financial instruments in our daily operations, mainly credit risk, liquidity risk and market risk (including interest rate risk, exchange rate risk and commodity price risk). Our major financial instruments include cash and cash equivalents, financial assets at fair value through profit or loss, derivative financial assets, trade receivables, other non-current assets, short-term and long-term loans, financial liabilities at fair value through profit or loss, trade payables, other payables and accruals, etc. We also enter into certain derivative transactions, including interest rate swaps, commodity future contracts and forward exchange contracts. The purpose is to manage the interest rate risk, commodity price risk and currency risks arising from our operations and its sources of finance. We manage the market risks of derivatives based on the difference between the metal price in the market and the target metal price pre-determined by management. Risks in connection with such financial instruments, and the risk management strategies adopted by us to mitigate such risks are summarized as follows.

Interest Rate Risk

Our exposure to the risk of changes in market interest rates relates primarily to our long-term debt obligations with a floating interest rate. For a sensitivity analysis of interest rate risk, see note 48 to the Accountants' Report set out in Appendix I to this Prospectus.

Foreign Currency Risk

We have transactional exchange rate risk exposures mainly arising from sales or purchases by subsidiaries in currencies other than the subsidiaries' functional currencies. These subsidiaries have transactions in currencies other than their functional currencies. In addition, we have exchange rate exposures arising from foreign currency borrowings. We adopt an overall management on our foreign exchange business, and reduce our exchange rate exposures using forward currency contracts based on the market trend as necessary. For a sensitivity analysis of foreign currency risk, see note 48 to the Accountants' Report set out in Appendix I to this Prospectus.

Credit Risk

We only deal with approved and reputable third parties. According to our policy, all customers who require credit transactions are subject to credit review. In addition, we continuously monitor the balance of trade receivables to ensure that we are not exposed to significant bad debt risks. Since counterparties of cash and bank balances are banks with good reputation and high credit ratings, credit risk arising from these financial instruments is insignificant. Our other financial assets include receivables and some derivatives. The credit risk on these financial assets arises from the default of counterparties, with a maximum exposure equal to the carrying amounts of these instruments. We only deal with approved and reputable third parties, so no need for collateral. Credit risk is managed centrally based on customers/counterparties, geographic regions and industries. As of December 31, 2022, 2023 and 2024 June 30, 2025, we had a specific concentration of credit risk. 25.9%, 63.2%, 67.4% and 70.1% of our trade receivables were from the largest customers in terms of trade receivable balances, 87.8%, 97.3%, 96.7% and 99.4% of our trade receivables were from the top five customers in terms of trade receivable balances during the same periods. The balance of our trade receivables did not hold any collateral or other credit enhancements. For more details on our credit risk, see note 48 to the Accountants' Report set out in Appendix I to this Prospectus.

Liquidity Risk

Our objective is to maintain a balance between continuity of funding and flexibility through the use of loans and bank borrowings. For details of the maturity profile of our financial liabilities as of the end of each of the Track Record Periods, based on the contractual undiscounted payments, see note 48 to the Accountants' Report set out in Appendix I to this Prospectus.

Capital Management

The primary objective of our capital management is to ensure that it maintains strong credit rating and healthy capital ratios in order to support its business and maximize shareholders' value.

We regard total equity as our capital and manage our capital structure and make adjustments to it, in light of changes in economic conditions. To maintain or adjust the capital structure, we may adjust the dividend payment to shareholders, return capital to shareholders or issue new shares. No changes were made in the objectives, policies and processes during the Track Record Periods.

During the Track Record Periods, our strategy was to maintain the gearing ratio at a healthy level in order to monitor capital. The principal strategies adopted by us include, but are not limited to, reviewing future cash flow requirements and the ability to meet debt repayment schedules when they fall due, maintaining a reasonable level of available banking facilities and adjusting investment plans and financing plans, if necessary, to ensure that we have a reasonable level of capital to support its business.

DIVIDENDS

We do not currently have a dividend policy. We did not declare or pay any dividend during the Track Record Period. We may only pay dividends out of the profits of the Company available for distribution and we may only pay dividends after recovery of accumulated losses. The Company may by ordinary resolution declare dividends but no dividend shall exceed the amount recommended by the Board. The declaration, payment and amount of any future dividends will depend on our earnings and financial condition, operating requirements, capital requirements and any other conditions that our Directors may deem relevant.

Our Board may declare dividends by considering our results of operations, cash flows and financial conditions, operating and capital requirements and other relevant factors. The payment of any dividends will also depend on the availability of dividends, if any, received from the entities, which is the immediate subsidiary of the Company and the holding vehicle of our operating subsidiaries in each region. In addition to capital injection, such entities may also provide our operating subsidiaries with shareholder loans, which will be repaid to those entities.

The ability of our operating subsidiaries to declare dividends is subject to compliance with the local laws. Besides, as we expect our operations to generate positive cash flow in the future, it is expected that the operating subsidiaries would be able to repay the shareholder loans back to the immediate subsidiary of the Company which holds vehicle of our operating subsidiaries in each region, which will also enable such immediate subsidiary to pay dividend to the Company. Accordingly, since our Company derives all of its earnings and cash flows from dividends paid by these immediate subsidiaries, we will only be able to pay dividends to our shareholders subject to compliance with the local laws. See "Risk Factors — Risks Related to Doing Business in Jurisdiction in which We Operate — We may rely to a significant extent on dividends and other distributions on equity paid by our principal operating subsidiaries to fund cash and financing requirements. Any limitation on the ability of our operating subsidiaries to make payments to us could have a material adverse effect on our ability to conduct our business."

DISTRIBUTABLE RESERVES

As of June 30, 2025, our reserves were US$511.8 million, which represented our distributable reserve as of the same date.

LISTING EXPENSES

Our listing expenses mainly include (i) underwriting-related expenses, such as underwriting fees and commissions, and (ii) non-underwriting-related expenses, comprising professional fees paid to our legal advisors and Reporting Accountants for their services rendered in relation to the Spin-off and the Global Offering, and other fees and expenses. Assuming full payment of the discretionary incentive fee, the estimated total listing expenses (assuming that the Over-allotment Option is not exercised) for the Global Offering are approximately HK$514.3 million (approximately US$66.0 million), accounting for approximately of 2.1% of our gross proceeds.

Among such estimated total listing expenses, we expect to pay underwriting-related expenses of HK$299.8 million, professional fees for our legal advisors and Reporting Accountants of HK$48.5 million and other fees and expenses of HK$166.0 million. An estimated amount of HK$77.1 million for our listing expenses, accounting for approximately 15.0% of the total listing expenses, is expected to be expensed through the statement profit or loss and other comprehensive income and the remaining amount of HK$437.2 million is expected to be recognized directly as a deduction from equity upon the Listing.

NO MATERIAL ADVERSE CHANGE

Our Directors have confirmed that up to the date of this Prospectus there has been no material adverse change in our financial or trading position or prospects since June 30, 2025, being the end date of the periods reported in Appendix I to this Prospectus, and there is no event since June 30, 2025 that would materially affect the information as set out in the Accountants" Report in Appendix I to this Prospectus.

DISCLOSURE REQUIRED UNDER THE LISTING RULES

Our Directors confirm that, as of the Latest Practicable Date, there was no circumstance that would give rise to a disclosure requirement under Rules 13.13 to 13.19 of the Listing Rules.

In addition, our Listing will take place within three months after June 30, 2025. The Accountants' Report of our Group set out in Appendix IA to this Prospectus has included audited financial information of the Group for the six months ended June 30, 2025. The management discussion and analysis of our financial performance for the six months ended June 30, 2025, see "— Period-to-Period Comparison of Results of Operations — Six Months Ended June 30, 2025 Compared with Six Months Ended June 30, 2024" above.

We have complied with the code provisions Part 2 of Appendix C1 to the Listing Rules. We are not in breach of our Articles of Association or applicable laws and regulations of the Hong Kong or other regulatory requirements regarding our obligation to publish and distribute interim reports and interim results announcements in accordance with the requirements under Rule 13.48(1) of the Listing Rules. Pursuant to the Note to Rule 13.48(1) of the Listing Rules, we have fulfilled the three requirements to waive the publication of a separate interim report, and we do not intend to publish a separate interim report in respect of the six months ended June 30, 2025 under the aforementioned Rule.

UNAUDITED PRO FORMA STATEMENT OF ADJUSTED CONSOLIDATED NET TANGIBLE ASSETS

For details of our unaudited pro forma adjusted consolidated net tangible assets, see Appendix II to this Prospectus.

THE CORNERSTONE PLACING

We have entered into cornerstone investment agreements (each a "**Cornerstone Investment Agreement**", and together the "**Cornerstone Investment Agreements**") with the cornerstone investors set out below (each a "**Cornerstone Investor**", and together the "**Cornerstone Investors**"), pursuant to which the Cornerstone Investors have agreed to, subject to certain conditions, subscribe, or cause their designated entities to subscribe, at the Offer Price for such number of Offer Shares (rounded down to the nearest whole board lot of 100 Shares) that may be purchased for an aggregate amount of approximately US$1,600 million (or approximately HK$12,468 million) and exclusive of brokerage fee, the SFC transaction levy, the AFRC transaction levy and the Stock Exchange trading fee) (the "**Cornerstone Placing**").

Based on the Offer Price of HK$71.59 per Share, being the Offer Price, the total number of Offer Shares to be subscribed for by the Cornerstone Investors would be 174,161,200 Shares, representing 49.9% of the Offer Shares pursuant to the Global Offering and 6.6% of the Shares in issue immediately following the completion of the Global Offering (assuming the Over-allotment Option) is not exercised.

We believe that the Cornerstone Placing signifies our Cornerstone Investors' confidence in our Company and its business prospect, and that the Cornerstone Placing will help to raise the profile of our Company. We became acquainted with each of the Cornerstone Investors in its ordinary course of operation through our Group's business network, or through introduction by our Company's business partners or the Overall Coordinators of the Global Offering.

The Cornerstone Placing will form part of the International Offering, and save as otherwise obtained consent from the Stock Exchange, the Cornerstone Investors (and for Pacific Asset Management Co., Limited, China Universal Asset Management Company Limited, Taikang Life Insurance Co., Ltd. and Fullgoal Fund Management Co., Ltd., who will subscribe for our Offer Shares through qualified domestic institutional investors ("**QDII(s)**"), the QDIIs), and their respective close associates will not subscribe for any Offer Shares under the Global Offering (other than pursuant to the Cornerstone Investment Agreements). The Offer Shares to be subscribed by the Cornerstone Investors (and for Pacific Asset Management Co., Limited, China Universal Asset Management Company Limited, Taikang Life Insurance Co., Ltd. and Fullgoal Fund Management Co., Ltd., who will subscribe for our Offer Shares through the QDIIs) will rank *pari passu* in all respects with the fully paid Shares in issue following the Global Offering of the Company and will be counted towards the public float of our Company under Rule 8.08 of the Listing Rules. Immediately following the completion of the Global Offering, the Cornerstone Investors or their close associates will not, by virtue of their cornerstone investments, have any Board representation in our Company; and none of the Cornerstone Investors and their close associates will become a substantial Shareholder of our Company. Other than a guaranteed allocation of the relevant Offer Shares at the final Offer Price, the Cornerstone Investors do not have any preferential rights under each of their respective Cornerstone Investment Agreements, as compared with other public

Shareholders. There are no side arrangements or agreements between our Company and the Cornerstone Investors or any benefit, direct or indirect, conferred on the Cornerstone Investors by virtue of or in relation to the Listing, other than a guaranteed allocation of the relevant Offer Shares at the final Offer Price, following the principles as set out in Chapter 4.15 of the Listing Guide.

To the best knowledge of the Company and the Overall Coordinators, and based on the indicative interest of investment of the Cornerstone Investors and/or their close associates as of the date of this prospectus, certain Cornerstone Investors and/or their close associates may participate in the International Offering as placees and subscribe for further Offer Shares in the Global Offering. The Company will seek the Stock Exchange's consent and/or waiver to allow the Cornerstone Investors and/or their close associates to participate in the International Offering as placees pursuant to Chapter 4.15 of the Guide for New Listing Applicants. Whether such Cornerstone Investors and/or their close associates will place orders in the International Offering is uncertain and will be subject to the final investment decisions of such investors and the terms and conditions of the Global Offering.

Save as otherwise disclosed, to the best knowledge of our Company, (i) each of the Cornerstone Investors (and for Pacific Asset Management Co., Limited, China Universal Asset Management Company Limited, Taikang Life Insurance Co., Ltd. and Fullgoal Fund Management Co., Ltd., who will subscribe for our Offer Shares through the QDIIs) is an Independent Third Party; (ii) none of the Cornerstone Investors (and for Pacific Asset Management Co., Limited, China Universal Asset Management Company Limited, Taikang Life Insurance Co., Ltd. and Fullgoal Fund Management Co., Ltd., who will subscribe for our Offer Shares through QDIIs) is accustomed to taking instructions from our Company, the Directors, chief executive, substantial Shareholders, existing Shareholders or any of their respective subsidiaries or their respective close associates in relation to the acquisition, disposal, voting or other disposition of the Offer Shares; and (iii) none of the subscription of the relevant Offer Shares by any of the Cornerstone Investors (or for Pacific Asset Management Co., Limited, China Universal Asset Management Company Limited, Taikang Life Insurance Co., Ltd. and Fullgoal Fund Management Co., Ltd., who will subscribe for our Offer Shares through the QDIIs) is financed by our Company, the Directors, chief executive, substantial Shareholders, existing Shareholders or any of their respective subsidiaries or their respective close associates, each Cornerstone Investor will be utilizing its internal financial resources, financial resources of its shareholders or (in the case of Cornerstone Investors which are funds or investment managers) the assets managed for its investors as its source of funding for the subscription of the Offer Shares, and each Cornerstone Investor has sufficient funds to settle its respective investment under the Cornerstone Placing; and (iv) each of the Cornerstone Investors has confirmed that all necessary approvals have been obtained with respect to the Cornerstone Placing and that no specific approval from any stock exchange (if relevant) is required for the relevant Cornerstone Placing. In addition, to the best knowledge of our Company, save as otherwise disclosed, each of the Cornerstone Investors is independent from each other and makes independent investment decisions.

The Cornerstone Investors have agreed to pay for the relevant Offer Shares that they have subscribed before dealings in the Company's Shares commence on the Stock Exchange. There will be no delayed delivery arrangement in respect of the Cornerstone Placing.

Details of the actual number of Offer Shares to be allocated to the Cornerstone Investors will be disclosed in the allotment results announcement of our Company to be published on or around Friday, 26 September 2025.

The information about our Cornerstone Investors set forth below has been provided by the Cornerstone Investors in connection with the Cornerstone Placing.

GIC

GIC Private Limited ("**GIC**") is a leading global investment firm established in 1981 to secure Singapore's financial future. As the manager of Singapore's foreign reserves, GIC takes a long-term, disciplined approach to investing, and is uniquely positioned across a wide range of asset classes and active strategies globally, which includes equities, fixed income, real estate, private equity, venture capital, and infrastructure. Headquartered in Singapore, GIC has a global talent force of over 2,300 people in 11 key financial cities and has investments in over 40 countries.

HHLRA

HHLR Advisors, Ltd. ("**HHLRA**"), part of the Hillhouse Group, is an exempted company incorporated in the Cayman Islands that acts as the investment manager of investment funds (collectively the "**HHLRA Funds**"), which are limited partnerships formed under the laws of the Cayman Islands. There is no individual limited partner investor who holds an economic interest of 30% or more in the HHLRA Funds.

HHLRA collaborates with industry-defining enterprises, aiming to establish alignment with sustainable, forward-thinking companies across industrial, consumer, healthcare and business services sectors. HHLRA manages capital for global institutions, including non-profit foundations, endowments, and pensions. HHLRA is entering the Cornerstone Investment Agreement with the Company in its capacity as an investment manager and on behalf of the HHLRA Funds.

BlackRock

Investment management subsidiaries of BlackRock, Inc. ("**BlackRock**") have discretionary investment management power over BlackRock Global Funds — World Gold Fund, BlackRock Gold and General Fund, Global Alpha Opportunities Master Fund Ltd., BLACKROCK STRATEGIC FUNDS — BlackRock Systematic Asia Pacific Equity Absolute Return Fund, BlackRock Systematic Total Alpha Master Fund Ltd., BlackRock Systematic China Absolute Return Master Fund Ltd., Emerging Markets Alpha Master Fund Ltd., Pan Asia Opportunities Master Fund Ltd., BlackRock Global Equity Market Neutral Fund of BlackRock Funds, BLACKROCK STRATEGIC FUNDS — BlackRock Systematic Global Equity Absolute Return Fund, and The 32 Capital Master Fund SPC Ltd. and certain separately managed accounts (as several and not joint nor joint and several investors, each, a "**BlackRock Fund**", and collectively the "**BlackRock Funds**"). BlackRock is listed on the New York Stock Exchange (stock code:

BLK). As of June 30, 2025, the firm managed approximately US$12.5 trillion in assets on behalf of investors worldwide. BlackRock's shareholders' and New York Stock Exchange's approval are not required for BlackRock Funds' subscription for the Offer Shares pursuant to the Cornerstone Investment Agreement.

In addition to the conditions precedent as set out in "— Closing Conditions", the subscription obligation of the BlackRock Funds is subject to the respective representations, warranties, acknowledgements, undertakings and confirmations of the Company being accurate, true and complete in all material respects and not misleading and there being no material breach of the Cornerstone Investment Agreement on the part of the Company. Further, the BlackRock Funds are entitled to terminate the Cornerstone Investment Agreement in the event there is a material breach of the Cornerstone Investment Agreement by the Company or other contracting parties or it is prevented or delayed from performing its obligations under the Cornerstone Investment Agreement as a result of circumstances beyond its control.

Schroders

Schroder Investment Management Limited ("**SIML**"), Schroder Investment Management (Singapore) Ltd ("**SIMSL**") and Schroder Investment Management (Hong Kong) Limited ("**SIMHK**"), each acting as a discretionary investment manager for and on behalf of a total of 26 funds and/or segregated accounts focusing on areas including but not limited to global emerging markets and Asian equities, have entered into the cornerstone investment agreement with the Company. To the best of Schroders' knowledge, no single ultimate beneficial owner holds 30% or more interest in the participating accounts of such funds/accounts, and each of such fund/account is an Independent Third Party.

SIML is a company incorporated in England and Wales. SIMSL is a company incorporated in Singapore. SIMHK is a company incorporated in Hong Kong. Each of SIML, SIMSL and SIMHK is ultimately wholly owned by Schroders plc, whose ordinary shares are listed on the London Stock Exchange (LON: SDR).

There is no individual person who is the "ultimate controlling shareholder" of Schroders plc. The interests of some members of the Schroder family, are spread across a number of parties, who are collectively known as the Principal Shareholder Group (PSG).

Perseverance Asset Management

Perseverance Asset Management International (Singapore) Pte. Ltd. ("**Perseverance Asset Management**") acts as the investment advisor or investment manager on a discretionary basis of no more than six investment funds and/or separated managed accounts (collectively the "**Perseverance Funds**"). No single ultimate beneficial owner holds 30% or more interest in each of the Perseverance Funds. Perseverance Asset Management is a private limited company incorporated in Singapore in October 2018, and holds a Capital Markets Services License for fund management with Monetary Authority of Singapore. Perseverance Asset Management is wholly owned by Perseverance Asset

Management International, which is principally engaged in investment management and investment advisory services and an Independent Third Party. Certain investments funds for which Perseverance Asset Management acts as the investment advisor or investment manager invested in Nanjing Leads Biolabs Co., Ltd. (南京維立志博生物科技股份有限公司) (HKEX: 9887), Contemporary Amperex Technology Co., Limited (寧德時代新能源科技股份有限公司) (HKEX: 3750) and Acotec Scientific Holdings Limited (先瑞達醫療科技控股有限公司) (HKEX: 6669) as cornerstone investor. Perseverance Asset Management is entering the Cornerstone Investment Agreement with the Company in its capacity as an investment advisor or investment manager and on behalf of the Perseverance Funds.

Shanghai Gaoyi and CITIC Securities International Capital Management Limited (in connection with CITICS Back-to-back TRS and CITICS Client TRS)

CITIC Securities International Capital Management Limited ("**CSICM**") and CITIC Securities Company Limited ("**CITICS**") will enter into back-to-back total return swap transactions (the "**CITICS Back-to-back TRS**"), in connection with a total return swap order (the "**CITICS Client TRS**") placed by and fully funded by ultimate clients (the "**Ultimate Clients (Gaoyi)**"), under which terms and conditions the full economic return and loss of the Offer Shares placed to CSICM will be ultimately borne by the Ultimate Clients (Gaoyi). CSICM will hold the Offer Shares on a non-discretionary basis to hedge the CITICS Back-to-back TRS in connection with the CITICS Client TRS order placed by the Ultimate Clients (Gaoyi), and the full economic return and loss of the Offer Shares will be ultimately borne by the Ultimate Clients (Gaoyi) according to the terms and conditions under the CITICS Back-to-back TRS and the CITICS Client TRS, subject to customary fees and commissions. CSICM will not take part in any economic return or bear any economic loss in relation to the Offer Shares. The Ultimate Clients (Gaoyi) may, after expiration of the lock-up period beginning from the date of the cornerstone agreement entered into among CSICM, the Company and the Joint Sponsors, and ending on the date which is six months from the Listing Date, request to early terminate the CITICS Client TRS at their own discretions, upon which CSICM may terminate the CITICS Back-to-back TRS and dispose of the Offer Shares on the secondary market and the Ultimate Clients (Gaoyi) will receive a final settlement amount of the CITICS Client TRS in cash in accordance with the terms and conditions of the CITICS Client TRS. Despite that CSICM will hold the legal title of the Offer Shares by itself, it will not exercise the voting right of the Offer Shares during the tenor of the CITICS Back-to-back TRS according to its internal policy.

To the best of CSICM's knowledge having made all reasonable inquiries, each of the CSICM Ultimate Clients (Gaoyi) is an independent third party of (i) the Company, the connected persons or associates thereof, and (ii) CSICM and the companies which are members of the same group of CSICM.

CSICM is a wholly-owned subsidiary of CITICS, of which its shares are listed on the Shanghai Stock Exchange (stock code: 600030) and the Stock Exchange (stock code: 6030). CSICM is a connected client (as defined under Appendix F1 to the Listing Rules) of CITIC Securities (Hong Kong) Limited and CLSA Limited, holding securities on a non-discretionary basis on behalf of independent third parties.

The Company has applied to the Stock Exchange for, and the Stock Exchange has granted, its consent under paragraph 1C(1) of Appendix F1 to the Listing Rules to permit us to allocate the Offer Shares to CSICM. See "Waivers — Consent in respect of the Proposed Subscription of Shares by Certain Cornerstone Investors who Are Connected Clients."

CSICM Ultimate Clients (Gaoyi) are certain investment funds managed by Shanghai Gaoyi Asset Management Partnership (Limited Partnership) (上海高毅資產管理合夥企業(有限合夥)) ("**Shanghai Gaoyi**") on a discretionary basis. Shanghai Gaoyi is a limited partnership established in the PRC, which is engaged in asset management and investment management with a primary focus on investments in secondary market. Certain investment funds managed by Shanghai Gaoyi entered into delta-one OTC swap transactions in connection with the cornerstone investment in Nanjing Leads Biolabs Co., Ltd. (南京維立志博生物科技股份有限公司) (HKEX: 9887) and Contemporary Amperex Technology Co., Limited (寧德時代新能源科技股份有限公司) (HKEX: 3750) and bear all economic return and loss. Shanghai Gaoyi holds the Qualification of Private Investment Fund Manager (私募投資基金管理人資格) accredited by the Asset Management Association of China (中國證券投資基金業協會). The managing partner of Shanghai Gaoyi is Shanghai Gaoyi Investment Management Co., Ltd. (上海高毅投資管理有限公司) ("**Gaoyi Investment**"). Perseverance Asset Management (as defined below) is an affiliate of Shanghai Gaoyi (together, "**Gaoyi Entities**"). As confirmed by Shanghai Gaoyi, there is no single ultimate beneficial owner holding 30% or more interest in each of the Ultimate Clients (Gaoyi).

According to our PRC Legal Advisors, the aforementioned transaction structure does not violate the PRC laws and regulations.

FIL Investment

FIL Investment Management (Hong Kong) Limited ("**FIL Investment**") has entered into a Cornerstone Investment Agreement with the Company and the Joint Sponsors in the capacity as fiduciary and agent for the following entities: a sub-fund of Fidelity Investment Funds — Fidelity Asia Pacific Opportunities Fund, Fidelity China Special Situations PLC, a sub-fund of Fidelity Investment Funds IX — Fidelity South East Asia Fund, a sub-fund of Fidelity Funds — Asian Special Situations, a sub-fund of Fidelity Funds — Institutional Asia Pacific (ex Japan) Opportunities, a sub-fund of Fidelity Funds — China Consumer, a sub-fund of Fidelity Funds — China Innovation Pool, a sub-fund of Fidelity Funds — Multi Asset Asia Defensive Equities Pool, Fidelity Asia Fund, a sub-fund of Fidelity Active Strategy — Asia Fund, a sub-fund of Fidelity Investment Funds — Fidelity Asia Fund, Fidelity Global Investment Fund — Asia Pacific Equity

Fund, Fidelity Japan Asia Growth Mother Fund, Fidelity Korea — Asia Pacific Mother Investment Trust and certain other third-party funds and accounts all of which are advised or sub-advised by FIL Investment Management (Hong Kong) Limited and its related group of companies collectively known as Fidelity International. In addition to the conditions precedent as set out in "— Closing Conditions", the subscription obligation of Fidelity International is subject to the respective representations, warranties, undertakings and confirmations of the Company being accurate and true in all material respects and not misleading in any material respect and there being no material breach of the Cornerstone Investment Agreement on the part of the Company.

Shanghai Greenwoods and CITIC Securities International Capital Management Limited (in connection with CITICS Back-to-back TRS and CITICS Client TRS)

CSICM and CITICS will enter the CITICS Back-to-back TRS, in connection the CITICS Client TRS placed by and fully funded by ultimate clients (the "**Ultimate Clients (Shanghai Greenwoods)**"), under which terms and conditions the full economic return and loss of the Offer Shares placed to CSICM will be ultimately borne by the Ultimate Clients (Shanghai Greenwoods). CSICM will hold the Offer Shares on a non-discretionary basis to hedge the CITICS Back-to-back TRS in connection with the CITICS Client TRS order placed by the Ultimate Clients (Shanghai Greenwoods), and the full economic return and loss of the Offer Shares will be ultimately borne by the Ultimate Clients (Shanghai Greenwoods) according to the terms and conditions under the CITICS Back-to-back TRS and the CITICS Client TRS, subject to customary fees and commissions. CSICM will not take part in any economic return or bear any economic loss in relation to the Offer Shares. The Ultimate Clients (Shanghai Greenwoods) may, after expiration of the lock-up period beginning from the date of the cornerstone agreement entered into among CSICM, the Company and the Joint Sponsors, and ending on the date which is six months from the Listing Date, request to early terminate the CITICS Client TRS at their own discretions, upon which CSICM may terminate the CITICS Back-to-back TRS and dispose of the Offer Shares on the secondary market and the Ultimate Clients (Shanghai Greenwoods) will receive a final settlement amount of the CITICS Client TRS in cash in accordance with the terms and conditions of the CITICS Client TRS. Despite that CSICM will hold the legal title of the Offer Shares by itself, it will not exercise the voting right of the Offer Shares during the tenor of the CITICS Back-to-back TRS according to its internal policy.

To the best of CSICM's knowledge having made all reasonable inquiries, each of the CSICM Ultimate Clients (Shanghai Greenwoods) is an independent third party of (i) the Company, the connected persons or associates thereof, and (ii) CSICM and the companies which are members of the same group of CSICM.

CSICM is a wholly-owned subsidiary of CITICS, of which its shares are listed on the Shanghai Stock Exchange (stock code: 600030) and the Hong Kong Stock Exchange (stock code: 6030). CSICM is a connected client (as defined under Appendix F1 to the Listing Rules) of CITIC Securities (Hong Kong) Limited and CLSA Limited, holding securities on a non-discretionary basis on behalf of independent third parties.

The Company has applied to the Stock Exchange for, and the Stock Exchange has granted, its consent under paragraph 1C(1) of Appendix F1 to the Listing Rules to permit us to allocate the Offer Shares to CSICM. See "Waivers — Consent in respect of the Proposed Subscription of Shares by Certain Cornerstone Investors Who Are Connected Clients."

CSICM Ultimate Clients (Shanghai Greenwoods) are certain domestic private funds (including a total of no more than fourteen funds) managed by Shanghai Greenwoods Asset Management Co., Ltd (上海景林資產管理有限公司) ("**Shanghai Greenwoods**"). Shanghai Greenwoods is a private fund management company with the registration under Asset Management Association of China. Shanghai Greenwoods is one of the largest and earliest PRC domestic asset managers mainly specializing in investing into companies in the Greater China region. Shanghai Greenwoods focuses on fundamental research, value investments, and local due diligence. Investors of funds managed by Shanghai Greenwoods include institutional investors and high-net-worth individuals professional investors. Mr. Jiang Jinzhi is the Chairman, a major shareholder and an ultimate beneficial owner of Shanghai Greenwoods. No single ultimate beneficial owner holds 30% or more interest in each of the Ultimate Clients (Shanghai Greenwoods). As confirmed by Shanghai Greenwoods, the subscription of the Offer Shares as cornerstone investor will be made by Shanghai Greenwoods in its capacity as the fund manager of domestic private funds.

According to our PRC Legal Advisors, the aforementioned transaction structure does not violate the PRC laws and regulations.

HK Greenwoods

Greenwoods Asset Management Hong Kong Limited ("**HK Greenwoods**") is a private fund management company incorporated in Hong Kong with limited liability. Established in 2005, HK Greenwoods is one of the largest and earliest China-focused asset managers mainly specializing in investing into companies in the Greater China region. HK Greenwoods focuses on fundamental research, value investments, and local due diligence. Investors of funds and accounts managed by HK Greenwoods includes institutional investors and high-net-worth individuals professional investors. ("**UBS AM Singapore**"), a company incorporated in Singapore in December 1993, has entered into a cornerstone investment agreement with the Company and the Joint Sponsors, in its capacity as the investment advisor or delegate of the investment manager for and on behalf of the following fund(s): (i) UBS (Lux) Equity Fund — Greater China (USD); (ii) UBS (Lux) Equity Fund —

China Opportunity (USD); (iii) UBS (HK) Fund Series — China Opportunity Equity (USD); (iv) UBS (Lux) Equity SICAV — All China (USD); (v) UBS (Lux) Investment SICAV — China A Opportunity (USD); (vi) UBS (CAY) China A Opportunity; (vii) NINETEEN77 GLOBAL MULTI-STRATEGY ALPHA MASTER LIMITED; (viii) UBS (IRL) INVESTOR SELECTION PLC — O'CONNOR CHINA LONG/SHORT ALPHA STRATEGIES UCITS and (ix) certain other segregated accounts and mandates. As confirmed by UBS AM Singapore, no single ultimate beneficial owner holds 30% or more interest in those funds.

UBS AM Singapore is a wholly owned subsidiary of UBS Asset Management AG, an investment management company, which is wholly ultimately owned by UBS Group AG, which is a company organized under Swiss law as a corporation that has issued shares of common stock to investors. UBS Group AG's shares are listed on the SIX Swiss Exchange (stock code: UBSG) and the New York Stock Exchange (stock code: UBS).

GF International

GF International Investment Management Limited ("**GF International**") was incorporated in Hong Kong in December 2010 as a wholly-owned subsidiary of GF Fund Management Co., Ltd. ("**GF Fund**"). GF International is licensed by SFC to carry on Type 1 (dealing in securities), Type 4 (advising on securities) and Type 9 (asset management) regulated activities in Hong Kong.

GF Fund is a large fund management company with comprehensive asset management capabilities and experience. It is controlled as to 54.53% by GF Securities Co., Ltd. (廣發証券股份有限公司), a company listed on the Shenzhen Stock Exchange (stock code: 000776.SZ) and the Stock Exchange (stock code: 01776.HK).

The Company has applied to the Stock Exchange for, and the Stock Exchange has granted, its consent under paragraph 1C(1) of Appendix F1 to the Listing Rules to permit us to allocate the Offer Shares to GF International. See "Waivers — Consent in respect of the Proposed Subscription of Shares by Certain Cornerstone Investors Who Are Connected Clients."

The subscription of the Offer Shares as a cornerstone investor will be made by GF International in its capacity as the discretionary investment manager of certain funds and/or independent segregated accounts under its management. To the best knowledge of GF International, each fund and/or account is an Independent Third Party.

Dao Yi

China Special Opportunity Fund SPC is an exempted company with limited liability incorporated on July 22, 2022 and registered as a segregated portfolio company incorporated in the Cayman Islands, acting for one of its segregated portfolios, GOLD SP (a fund incorporated in the Cayman Islands). Dao Yi Capital Limited ("**Dao Yi**") holds 100% of the management shares of China Special Opportunity Fund SPC.

GOLD SP is managed by DOY Capital Limited ("**DOY**") as the fund manager. DOY is a company incorporated in the BVI with limited liability and is a BVI approved manager, with 90% equity interest owned by Dao Yi and 10% owned by JINYI (SINGAPORE) MINING PTE. LTD. Dao Yi is a company incorporated in the BVI with limited liability and is ultimately wholly owned by Mr. Qin Chong, an independent third party.

Investors holding more than 30% interest in GOLD SP include New Huadu Group (HK) Investment Limited and GOLD VIRTUE LIMITED, whose ultimate beneficial owners are Mr. Chen Fashu and Mr. Ke Xiping, both independent third parties, respectively. No other ultimate beneficial owner holds 30% or more interest in GOLD SP.

New Golden Future Limited

New Golden Future Limited is a limited liability company incorporated in the BVI, which is wholly owned by Yunfeng Investments Limited ("**Yunfeng Investments**").

Yunfeng Investments is majority-owned and controlled by Mr. Yu Feng, who is an Independent Third Party. The other minority stakeholder is also an Independent Third Party.

RBC Global Asset Management (Asia) Limited

RBC China Equity Fund, RBC Asia Pacific ex-Japan Equity Fund and RP — Fonds Institutionnel — Actions marchés émergents are sub-advised by RBC Global Asset Management (Asia) Limited, a member company of RBC Global Asset Management ("RBC GAM"), the asset management division of Royal Bank of Canada.

RBC GAM is a provider of global investment management services and solutions to institutional, high-net-worth and individual investors through separate accounts, pooled funds, mutual funds, hedge funds, exchange-traded funds and specialty investment strategies.

As of June 30, 2025, the RBC GAM group of companies manage approximately US$534 billion in assets and have approximately 1,650 employees located across Canada, the United States, Europe and Asia.

To the best of its knowledge, no ultimate beneficial owner is holding 30% or more interests in (i) RBC China Equity Fund, (ii) RBC Asia Pacific ex-Japan Equity Fund or (iii) RP — Fonds Institutionnel — Actions marchés émergents.

IHKL

Invesco Ltd. ("**Invesco**"), a Bermuda-incorporated company, is a leading independent investment management firm with approximately US$1,844.8 billion in assets under management as of March 31, 2025. Invesco is a global company focused on investment management, and its services are provided through a variety of vehicles that meet the

needs of a wide range of clients through the world, including but not limited to, Open-end mutual funds, Closed-end funds, Exchange-traded funds, Individual Savings Accounts, Investment Companies with Variable Capital (ICVC), Private Funds, Investment Trusts, Real Estate Investment Trusts (REIT), Separately Managed Accounts (SMA), Société d'investissement à Capital Variable (SICAV), Unit Investment Trusts (UITs) and Variable Insurance Funds. Invesco is a public company and is listed on the New York Stock Exchange (NYSE: IVZ). Invesco's shareholders' and New York Stock Exchange's approval are not required for the subscription for the Offer Shares pursuant to the relevant cornerstone investment agreement.

Invesco Hong Kong Limited ("**IHKL**") is an asset management subsidiary of Invesco and is licensed by the Securities and Futures Commission of Hong Kong as an asset manager in Hong Kong. IHKL, acting as discretionary investment manager for and on behalf of various funds (the "**IHKL Managed Funds**"), has agreed to participate in the Global Offering and for such IHKL Managed Funds to invest in the Company's Shares as a cornerstone investor. No ultimate beneficial owner is holding 30% or more interests in the IHKL Managed Funds.

The IHKL Managed Funds are open-end mutual funds, collective trust funds and other pooled investment vehicles established under various jurisdictions and have multiple holders (who are, to the best of the knowledge, information and belief of the Company, Independent Third Parties).

CPE River

CPE River Investment Limited ("**CPE River**") is a business company incorporated under the laws of the BVI and its primary business activity is investment holding. It is wholly owned by CPE Global Opportunities Fund II, L.P. ("**CPE GOF II**"), an exempted limited partnership formed under the laws of the Cayman Islands. The general partner of CPE GOF II is CPE GOF GP Limited, a company incorporated in the Cayman Islands with limited liability. CPE GOF GP Limited is directly and wholly owned by CPE Management International Limited, which is in turn wholly owned by CPE Management International II Limited, both of which are companies incorporated in the Cayman Islands with limited liability. CPE Management International II Limited is owned by a number of shareholders that are natural persons, all of whom are independent third parties of the Company and none of whom holds 30% or more interest in CPE Management International II Limited. CPE GOF II's investor base comprises both corporate and entrepreneurial investors. No ultimate beneficial owner of any limited partner or general partner holds more than 30% interests in CPE River.

Oaktree

Oaktree Capital Management, L.P. **("Oaktree**") is the investment manager of Oaktree Emerging Markets Equity Fund, L.P. and certain funds and separately managed accounts within its Emerging Markets Equity strategy (severally and not jointly) (each, an "**Oaktree Fund**", and collectively the "**Oaktree Funds**"). Oaktree Emerging Markets Equity Fund, L.P. had more than 50 limited partners as of July 31, 2025, and no limited

partner of Oaktree Emerging Markets Equity Fund, L.P. holds 30% or more interests in Oaktree Emerging Markets Equity Fund, L.P. as of July 31, 2025, while the other Oaktree Funds are separately managed accounts of Oaktree. Oaktree is a Delaware limited partnership and is registered as an investment adviser with the United States Securities and Exchange Commission. Oaktree is a global investment management firm managing a broad array of complementary strategies in four asset classes: credit, private equity, real assets and listed equities, and maintains a contrarian, value-oriented investment philosophy. Oaktree's investor base includes institutional investors such as pension plans, insurance companies, endowments, foundations and sovereign wealth funds. Brookfield Corporation, a company public listed on the New York Stock Exchange (ticker symbol: BN) and the Toronto Stock Exchange (ticker symbol: BN), is the only ultimate beneficial owner that indirectly holds an economic interest of more than 30% in Oaktree as of May 1, 2025.

Mirae Asset Financial Group

Mirae Asset Securities Co., Ltd. ("**Mirae Asset Securities**"), Mirae Asset Global Investments Co., Ltd. ("**Mirae Asset Global Investments**"), and Mirae Asset Securities (HK) Ltd. ("**Mirae Asset Securities HK**") (together, the "**Mirae Asset Financial Group**") have entered into Cornerstone Investment Agreements with our Company.

Mirae Asset Securities

Mirae Asset Securities is one of the largest investment banks in the Republic of Korea, providing a comprehensive range of financial services, including brokerage, wealth management, investment banking, sales & trading, and principal investments. It is ultimately controlled by Mirae Asset Capital Co., Ltd., a financial investment company in the Republic of Korea. Mirae Asset Securities is listed on the Korea Exchange under stock code 006800.KS.

Mirae Asset Global Investments

Mirae Asset Global Investments is a leading independent asset management company headquartered in Seoul, Republic of Korea. Founded in 1997, it is a core part of the Mirae Asset Financial Group, one of Asia's largest financial services groups. The company has established itself as a global asset manager with a strong presence in major financial markets worldwide, operating in 15 countries and regions and providing innovative investment solutions.

As of July 2025, Mirae Asset Global Investments manages assets totaling $308.3 billion, including $166.5 billion in ETF assets and offering 682 ETF products across 12 global markets. In addition to ETFs, the company provides traditional fund management, real estate fund management, infrastructure fund management, private equity, and multi-asset solutions etc. Mirae Asset Global Investments is owned as to 60.19% by Mr. Park Hyeon-joo and 36.92% by Mirae Asset Consulting Co., Ltd., which is in turn held as

to 48.49% by Mr. Park Hyeon-joo, whose spouse also holds 10.15%. Other than Mr. Park Hyeon-joo, no ultimate beneficial owner holds 30% or more in Mirae Asset Consulting Co., Ltd. Both Mr. Park Hyeon-joo and his spouse are Independent Third Parties.

Mirae Asset Securities HK

Mirae Asset Securities HK, a wholly owned subsidiary of Mirae Asset Securities, was established in Hong Kong in July 2005 and is licensed by the SFC to carry on type 9 (asset management) regulated activity. Mirae Asset Securities HK is the fund manager of, and subscribe for the Offer Shares on behalf of, a discretionary fund, Mirae Asset Visionary X Fund. All of the investors in such fund are independent third parties and none of the investors hold more than 30% interest in the fund.

Fullgoal HK and Fullgoal Fund

Established in 2012 in Hong Kong, Fullgoal Asset Management (HK) Limited ("**Fullgoal HK**") is a wholly owned subsidiary of Fullgoal Fund Management Co., Ltd. ("**Fullgoal Fund**"). Fullgoal HK has Type 1 (Dealing in Securities), Type 4 (Advising on Securities) and Type 9 (Asset Management) licenses issued by the SFC. The subscription of the Offer Shares as a cornerstone investor will be made by Fullgoal HK in its capacity as the sole management shareholder or investment manager of certain funds under its management, being one open-ended publicly raised securities investment fund and one asset management scheme. As confirmed by Fullgoal HK, no single ultimate beneficial owner holds 30% or more interest in such funds, and, to the best knowledge of Fullgoal HK, each of such funds is an Independent Third Party.

Fullgoal Fund is a fund management company established in China in April 1999, and is one of the first ten fund management companies authorized by the CSRC and other regulatory authorities to obtain full licenses to provide asset management services in the PRC. Fullgoal Fund has a registered capital of RMB520 million and its main scope of business includes the provision of traditional fund management services, fund raising, fund sale and asset management solutions to both domestic and overseas clients. Fullgoal Fund is a QDII approved by the relevant PRC authority and is also the first fund management company with foreign equity participation among the first ten fund management companies in China. The relevant funds proposed to subscribe for the Offer Shares under the management of Fullgoal Fund are open-ended publicly raised securities investment funds registered with the CSRC. Each of such funds has a wide spread of ultimate clients, none of whom holds more than 30% interest therein, and to the best knowledge of Fullgoal Fund, each fund is an Independent Third Party.

The shareholders of Fullgoal Fund include (i) Guotai Haitong Securities Co., Ltd. (國泰海通證券股份有限公司) holding 27.775% in Fullgoal Fund; (ii) Shenwan Hongyuan Securities Co., Ltd. (申萬宏源證券有限公司) holding 27.775% in Fullgoal Fund; (iii) Bank of Montreal holding 27.775% in Fullgoal Fund, and (iv) Shandong Financial Asset Management Co., Ltd. (山東省金融資產管理股份有限公司), holding 16.675% in Fullgoal Fund.

IDG Breyer Fund

IDG Breyer Capital Fund L.P. ("**IDG Breyer Fund**"), an exempted limited partnerships established under the laws of the Cayman Islands. It is a capital fund with a primary purpose of making equity and equity-related investments, in the next-generation technology and technology-driven sectors, including, without limitation, artificial intelligence, autonomous driving, intelligent manufacturing, genome technology, fintech and 5G enabled next generation cloud services. IDG Breyer Fund is ultimately controlled by Ho Chi Sing, Zhou Quan and Yang Fei, none of them holding more than 30% of IDG Breyer Fund.

Arc Avenue

Arc Avenue Asset Management Pte. Ltd. ("**Arc Avenue**") is a fund management company incorporated in Singapore and regulated by the Monetary Authority of Singapore ("**MAS**"). It holds an Accredited/Institutional Licensed Fund Management Company (A/I LFMC) license, authorizing it to manage investment funds exclusively for accredited and institutional investors. It specializes in asset management, with a primary focus on equity investment funds. Arc Avenue serves as the discretionary investment manager to Enreal China Master Fund and Forreal China Value Fund. These two funds are focused on investing in technology-driven opportunities in China. Specifically, they invest in the Hong Kong/mainland China equity market as well as ADRs, and mainly cover sectors including TMT, advanced manufacturing, consumer and healthcare etc. The ultimate beneficial owner of Enreal China Master Fund and Forreal China Value Fund holding 30% or more of its interest is a global institutional investor with several hundred billion USD of assets under management rather than an individual investor.

GBAHIL

Mega Prime Development Limited ("**Mega Prime**") and Poly Platinum Enterprises Limited ("**Poly Platinum**") have, respectively, entered into Cornerstone Investment Agreements with our Company.

Mega Prime is a company incorporated in the BVI with limited liability and is a wholly-owned subsidiary of GBA Homeland Limited, which in turn is wholly owned by Greater Bay Area Homeland Investments Limited ("**GBAHIL**").

Poly Platinum is a company incorporated in the BVI with limited liability and is wholly-controlled by Greater Bay Area Homeland Development Fund LP ("**GBA Fund**"). GBA Fund is a private fund established in the Cayman Islands and is jointly owned by a number of international large-scale industrial institutions, financial institutions and new economic enterprises, each of which holds less than 16% equity interest therein. The general partner of the GBA Fund is Greater Bay Area Homeland Development Fund (GP) Limited, which is ultimately wholly-owned by GBAHIL.

GBAHIL is a company incorporated in Hong Kong with limited liability and is jointly owned by a number of international large-scale industrial institutions, financial institutions and new economic enterprises, each of which holds less than 13% equity interest therein. GBAHIL's business encompasses investment, investment holding and the establishment or management of private equity funds through its subsidiaries to grasp the historical opportunities of the development of Guangdong-Hong Kong-Macao Greater Bay Area, and the construction of an international innovation and technology hub, focusing on technological innovation, industrial upgrading, quality of life, smart city and all other related industries.

Mega Prime, Poly Platinum and GBA Fund are managed by Greater Bay Area Development Fund Management Limited (大灣區發展基金管理有限公司), a company wholly owned by GBAHIL and licensed under the SFO to conduct Type 1 (dealing in securities), Type 4 (advising on securities) and Type 9 (asset management) regulated activities in Hong Kong. No single ultimate beneficial owner holds 30% or more interests in Greater Bay Area Development Fund Management Limited.

Millennium

Millennium Capital Management (Singapore) Pte. Ltd. ("**Millennium Capital**") is the principal investment manager of Integrated Core Strategies (Asia) Pte. Ltd. ("**Millennium ICSA**"), the cornerstone investor. Millennium Capital is one of the investment management entities in the Millennium Group (Millennium Capital, together with its affiliated entities, are collectively referred to herein as "**Millennium**"). Millennium is a global, diversified alternative investment management firm and seeks to pursue a diverse range of investment strategies across industry sectors, asset classes and geographies. Millennium ICSA is incorporated in Singapore and Millennium Capital is licensed by the Monetary Authority of Singapore. No ultimate beneficial owner holds more than 30% interests in Millennium ICSA.

Globe Asia

Globe Asia Investments Limited ("**Globe Asia**"), incorporated in Hong Kong with limited liability, is dedicated to long-term strategic investments and the holding of financial assets across the Asia-Pacific region. The company is a wholly-owned subsidiary of SMG Management Limited, a leading global investment and holding company with consistent history of successful investments across diverse sectors, including financial services, energy and resources, material sciences, logistics, consumer and healthcare. With a disciplined approach to capital allocation, SMG Management focuses on long-term growth and sustainable value creation. SMG Management Limited is wholly owned by a natural person who is an Independent Third Party.

Sparky

Sparky International Company Limited ("**Sparky**") is a company incorporated in Hong Kong and is wholly-owned by Zhaojin Mining Industry Company Limited, a company listed on the Hong Kong Stock exchange (stock code: 1818) ("**Zhaojin Mining**"). Zhaojin Mining is a joint stock limited company incorporated in the PRC and is primarily engaged in the exploration, mining, ore processing, and smelting of gold products.

CLOSING CONDITIONS

The obligation of each Cornerstone Investor to subscribe for the Offer Shares under the respective Cornerstone Investment Agreement is subject to, among other things, the following closing conditions:

(a) the Underwriting Agreements for the Hong Kong Public Offering and the International Offering being entered into and having become effective and unconditional (in accordance with their respective original terms or as subsequently waived or varied by agreement of the parties thereto) by no later than the time and date as specified in the Underwriting Agreements, and neither of the aforesaid Underwriting Agreements having been terminated;

(b) the Offer Price having been agreed upon between our Company and the Overall Coordinators (for themselves and on behalf of the underwriters of the Global Offering);

(c) the Listing Committee of the Stock Exchange having granted the approval for the listing of, and permission to deal in, the Shares (including the Shares subscribed for by the Cornerstone Investors) as well as other applicable waivers and approvals, and such approval, permission or waiver having not been revoked prior to the commencement of dealings in the Shares on the Stock Exchange;

(d) no laws shall have been enacted or promulgated by any governmental authority which prohibits the consummation of the transactions contemplated in the Global Offering or in the respective Cornerstone Investment Agreements and there shall be no orders or injunctions from a court of competent jurisdiction in effect precluding or prohibiting consummation of such transactions; and

(e) the respective acknowledgements, representations, warranties, undertakings and confirmations of relevant Cornerstone Investor under the respective Cornerstone Investment Agreement are accurate and true in all material respects and not misleading and that there is no material breach of the Cornerstone Investment Agreement on the part of the relevant Cornerstone Investor.

RESTRICTIONS ON THE CORNERSTONE INVESTORS

Each of the Cornerstone Investors has agreed that it will not, whether directly or indirectly, at any time during the period of six months from (and inclusive of) the Listing Date (the "**Lock-up Period**"), dispose of, in any way, any of the Offer Shares or any interest in any company or entity holding such Offer Shares that they have purchased pursuant to the relevant Cornerstone Investment Agreement, save for certain limited circumstances, such as transfers to any of its wholly-owned subsidiaries who will be bound by the same obligations of such Cornerstone Investor, including the Lock-up Period restriction.

FUTURE PLANS

See "Business — Growth Strategies" in this Prospectus for a detailed description of our future plans.

USE OF PROCEEDS

Assuming that the Over-allotment Option is not exercised, after deducting the underwriting commissions and other estimated offering expenses payable by us in connection with the Global Offering, we estimate that we will receive net proceeds of approximately HK$24,469.9 million from the Global Offering.

We intend to use the proceeds from the Global Offering for the purposes and in the amounts set forth below, subject to adjustments based on our evolving business needs and changing market conditions:

(i) Approximately 33.4% of the net proceeds, or HK$8,182.3 million, is expected to be used to settle the consideration for the acquisition of the Kazakhstan Raygorodok Gold Mine. Please see "History, Reorganization and Corporate Structure" for details of the Kazakhstan Raygorodok Gold Mine.

(ii) Approximately 50.1% of the net proceeds, or HK$12,250.0 million, is expected to be used over the next five years for the upgrade and construction project of existing mines to fully enhance our production capabilities. See "Business — Growth Strategies — Enhancing production capacity and mineral resource recovery through technological upgrades and operational improvements" for details of our development and expansion plan.

- Approximately 20.4% or HK$4,994.7 million is expected to be allocated to our Ghana Akyem Mine for mine development. In particular, we plan to (1) expand the open-pit boundaries and increase the open-pit service life and resource utilization rate, and (2) conduct the processing plant's technological renovation to increase processing capacity, boost production volume, and extend the Life of Mine.

- Approximately 13.2% or HK$3,230.0 million is expected to be allocated to our operations in Suriname Rosebel Mine, including, but not limited to, multiple equipment investments and tailings storage projects. Specifically, we plan to purchase equipment including vehicles, small mobile equipment, and relevant land and buildings to enhance our mining capacities. Such undertakings are expected to expand processing capacity and production volume, provide stable tailings storage capacities. We plan to increase its annual processing capacity to 11–13 million tonnes, and thereby raise its annual gold production volume, significantly enhancing the mine's production capacity and competitiveness.

- Approximately 16.5% or HK$4,025.3 million is expected to be allocated to the Kazakhstan Raygorodok Gold Mine for mine development. In particular, we plan to (1) optimize open-pit mining boundaries, (2) purchase new mining equipment, and (3) expand the processing plant and increase processing capacity.

(iii) Approximately 6.5% of the net proceeds, or HK$1,590.5 million, is expected to be used over the next five years for the exploration activities in all the mines we operated to fully realize our growth potential. We will continue intensifying geological exploration efforts and expanding exploration activities within existing mines while exploring new mines surrounding our mineralization areas. For more details, please see "Business — Our Gold Production Business of Tajikistan Jilau/Taror Gold Mines — Exploration Activities in Tajikistan Jilau/Taror Gold Mines", "Business — Our Gold Production Business of Kyrgyzstan Taldybulak Levoberezhny Gold Mine — Exploration Activities in Kyrgyzstan Taldybulak Levoberezhny Gold Mine", "Business — Our Gold Production Business of Australia Norton Gold Mine — Exploration Activities in Australia Norton Gold Mine", "Business — Our Gold Production Business of Guyana Aurora Gold Mine — Exploration Activities in Guyana Aurora Gold Mine", "Business — Our Gold Production Business of Colombia Buritica' Gold Mine — Exploration Activities in Colombia Buritica' Gold Mine", "Business — Our Gold Production Business of Suriname Rosebel Gold Mine — Exploration Activities in Suriname Rosebel Gold Mine", "Business — Our Gold Production Business of Ghana Akyem Gold Mine — Exploration Activities in Ghana Akyem Gold Mine" and "History, Reorganization and Corporate Structure — Acquisitions during and after the Track Record Period".

(iv) Approximately 10% of the net proceeds, or HK$2,447.0 million, is expected to be used for general corporate purposes.

The additional net proceeds that we would receive if the Over-allotment Option was to be exercised in full would be HK$3,683.6 million. Assuming that the Over-allotment Option is exercised, after deducting the underwriting commissions and other estimated offering expenses payable by us in connection with the Global Offering, we estimate that we will receive net proceeds of approximately HK$28,153.5 million from the Global Offering.

To the extent that the net proceeds from the Global Offering are either more or less than expected, we will adjust our allocation of the net proceeds for the above purposes on a pro rata basis.

To the extent that the net proceeds of the Global Offering are not immediately used for the aforementioned purposes, we will only deposit such funds into short-term interest-bearing accounts at licensed commercial banks and/or other authorized financial institutions (as defined under the Securities and Futures Ordinance, or applicable laws and regulations in other jurisdictions). In such event, we will comply with the appropriate disclosure requirements under the Listing Rules.

HONG KONG UNDERWRITERS

Huatai Financial Holdings (Hong Kong) Limited

Macquarie Capital Limited

China Industrial Securities International Capital Limited

UNDERWRITING

This Prospectus is published solely in connection with the Hong Kong Public Offering. The Hong Kong Public Offering is fully underwritten by the Hong Kong Underwriters on a conditional basis. The International Offering is expected to be fully underwritten by the International Underwriters.

The Global Offering comprises the Hong Kong Public Offering of initially 34,899,100 Hong Kong Offer Shares and the International Offering of initially 314,091,600 International Offer Shares, subject, in each case, to reallocation on the basis as described in "Structure of the Global Offering" as well as to the Over-allotment Option in the case of the International Offering.

UNDERWRITING ARRANGEMENTS AND EXPENSES

Hong Kong Public Offering

Hong Kong Underwriting Agreement

The Hong Kong Underwriting Agreement was entered into on Thursday, September 18, 2025. Pursuant to the Hong Kong Underwriting Agreement, we are offering the Hong Kong Offer Shares for subscription by the public in Hong Kong on the terms and conditions set out in this Prospectus and the Hong Kong Underwriting Agreement at the Offer Price.

Subject to (i) the Listing Committee granting approval for the listing of, and permission to deal in the Shares in issue and to be issued pursuant to Global Offering (including any additional Shares that may be issued pursuant to the exercise of the Over-allotment Option), and such approval not having been withdrawn and (ii) certain other conditions set out in the Hong Kong Underwriting Agreement, the Hong Kong Underwriters have agreed severally, but not jointly, to subscribe or procure subscribers

for their respective applicable proportions of the Hong Kong Offer Shares being offered which are not taken up under the Hong Kong Public Offering on the terms and conditions set out in this Prospectus and the Hong Kong Underwriting Agreement.

The Hong Kong Underwriting Agreement is conditional on, amongst other things, the International Underwriting Agreement having been signed and becoming unconditional and not having been terminated in accordance with its terms.

Grounds for Termination

If any of the events set out below shall occur at any time prior to 8:00 a.m. on the Listing Date, the Joint Sponsors and the Overall Coordinators (for themselves and on behalf of the other Hong Kong Underwriters) in their sole and absolute discretion may, by giving a written notice to our Company, terminate the Hong Kong Underwriting Agreement with immediate effect:

a. there develops, occurs, exists or comes into force:

   i. any event or series of events in the nature of force majeure (including, without limitation, any acts of government, paralysis in government operations, declaration of a local, regional, national or international emergency or war, calamity, crisis, epidemic, pandemic, outbreaks of diseases or its escalation, mutation, or aggravation (including, without limitation, COVID-19, Severe Acute Respiratory Syndrome (SARS), swine or avian flu, H5N1, H1N1, H1N7, H7N9, Ebola virus, Middle East respiratory syndrome (MERS) and such related/mutated forms), accidents or prolonged interruption or delay in transportation, economic sanctions, strikes, labor disputes, lock-outs, fire, explosion, flooding, earthquake, volcanic eruption, civil commotion, riots, public disorder, acts of war, outbreak or escalation of hostilities (whether or not war is declared), acts of God or acts of terrorism (whether or not responsibility has been claimed)) in or affecting directly or indirectly Hong Kong, the PRC, the United States, the United Kingdom, the European Union (or any member thereof), or any other jurisdiction relevant to any member of our Group or the Global Offering (collectively, the "**Relevant Jurisdictions**");

   ii. any change or development involving a prospective change in or affecting any local, national, regional or international financial, economic, political, military, industrial, legal, fiscal, regulatory, currency, credit or market matters or conditions, equity securities or taxation or currency rates or foreign exchange regulations or exchange control or any monetary or trading settlement system or other financial markets (including, without limitation, conditions in the stock and bond markets, money and foreign exchange markets, the interbank markets and credit markets), in or affecting any of the Relevant Jurisdictions;

iii. any moratorium, suspension or restriction (including, without limitation, any imposition of or requirement for any minimum or maximum price limit or price range) in or on trading in securities generally on the Stock Exchange, the New York Stock Exchange, the NASDAQ Global Market, the London Stock Exchange, the Shanghai Stock Exchange or the Shenzhen Stock Exchange;

iv. any general moratorium on commercial banking activities in or affecting Hong Kong (imposed by the Financial Secretary or the Hong Kong Monetary Authority or other competent authority), New York (imposed at the U.S. Federal or New York State level or by any other competent authority), London, the PRC, the European Union (or any member thereof) or any of the other Relevant Jurisdictions (declared by the relevant authorities) or any disruption in commercial banking or foreign exchange trading or securities settlement or clearance services, procedures or matters in or affecting any of those places or jurisdictions;

v. any new law or regulation or any change or development involving a prospective change in existing laws or regulations or any change or development involving a prospective change in the interpretation or application thereof by any court or governmental authority in or affecting any of the Relevant Jurisdictions;

vi. the imposition of sanctions or export controls in whatever form, or the withdrawal of trading privileges, in whatever form, directly or indirectly, by, or for, any of the Relevant Jurisdictions, or on or relevant to any member of our Group;

vii. any change or development involving a prospective change or amendment in or affecting taxation or foreign exchange control, currency exchange rates or foreign investment regulations (including, without limitation, a material devaluation of the HK dollar, U.S. dollar or Renminbi against any foreign currencies, or a change in the system under which the value of the HK dollar is linked to that of the U.S. dollar or Renminbi is linked to any foreign currency or currencies), or the implementation of any exchange control, in or affecting any of the Relevant Jurisdictions or affecting an investment in the Offer Shares;

viii. the issue or requirement to issue by our Company of a supplement or amendment to this Prospectus or other documents in connection with the offer and sale of the Shares pursuant to the Companies Ordinance, the Companies (Winding Up and Miscellaneous Provisions) Ordinance or the Listing Rules or upon any requirement or request of the Stock Exchange and/or the SFC;

ix. any valid demand by any creditor for repayment or payment of any indebtedness of any member of our Group or in respect of which any member of our Group is liable prior to its stated maturity;

x. any matter has arisen or has been discovered which would, had it arisen or been discovered immediately before the date of this Prospectus, constitute a misstatement in, or omission from any offering document in connection with the Global Offering (including all amendments or supplements thereto);

xi. any breach of, or any event or circumstance rendering untrue, inaccurate or incorrect or misleading in any respect, any of the warranties given by our Company or Zijin Mining (as applicable) in the Hong Kong Underwriting Agreement or the International Underwriting Agreement (including any supplement or amendment thereto), as applicable;

xii. any Director or member of senior management of our Company being charged with an indictable offence or prohibited by operation of law or otherwise disqualified from taking part in the management of a company or the commencement by any governmental, political, regulatory body of any action against any Director or member of senior management in his or her capacity as such or any member of our Group or an announcement by any governmental, political, regulatory body that it intends to take any such action;

xiii. any litigation, dispute, legal action or claim being threatened or instigated by any third party against any member of our Group or any Director or member of senior management of our Company as named in this Prospectus, that has not been disclosed in writing to the Joint Sponsors or the Overall Coordinators prior to the date of the Hong Kong Underwriting Agreement; or

xiv. any change or prospective change or development, or a materialization of, any of the risks set out in "Risk Factors" in this Prospectus,

which, individually or in the aggregate, in the sole and absolute opinion of the Joint Sponsors and the Overall Coordinators (for themselves and on behalf of the Hong Kong Underwriters), (1) has or will have or may have a material adverse effect on the assets, liabilities, business, general affairs, management, shareholder's equity, profits, losses, prospects, results of operations, financial, operational or trading position or condition or performance, of our Group as a whole, or (2) has or will have or may have a material adverse effect on the success or marketability of the Global Offering or the level of applications or the distribution of the Offer Shares under the Hong Kong Public Offering and the Preferential Offering or the level of interest under the International Offering, or (3) makes or will make or may make it inadvisable, inexpedient, impracticable or incapable for the Hong Kong Public Offering, the Preferential

Offering and/or the International Offering to proceed or to market the Global Offering or the delivery or distribution of the Offer Shares on the terms and in the manner contemplated by the offering documents in connection with the Global Offering; or

b. there has come to the notice of the Joint Sponsors and/or the Overall Coordinators:

   i. that any statement contained in the offering documents in connection with the Global Offering (including all amendments or supplements thereto), the formal notice of our Company and/or any notices, announcements, advertisements, communications or other documents (including any announcement, circular, document or other communication pursuant to the Hong Kong Underwriting Agreement) issued or used by, for or on behalf of our Company in connection with the Global Offering (including any supplement or amendment thereto) was, when it was issued, or has become, untrue, incorrect, inaccurate, incomplete in any material respect or misleading, or that any estimate, forecast, expression of opinion, intention or expectation contained in any of such documents is not fair and honest and based on reasonable grounds or reasonable assumptions;

   ii. any contravention by our Company, any member of our Group, or any Director or any member of the senior management of our Company named in this Prospectus of any law or the Listing Rules;

   iii. non-compliance of this Prospectus (or any other documents used in connection with the contemplated subscription and sale of the Offer Shares), or any aspect of the Global Offering with the Listing Rules, the Companies Ordinance, the Companies (Winding Up and Miscellaneous Provisions) Ordinance or any other applicable laws;

   iv. any material breach of any of the obligations imposed upon our Company under the Hong Kong Underwriting Agreement or the International Underwriting Agreement including any supplement or amendment thereto;

   v. any event, act or omission which gives or is likely to give rise to any material liability of any of our Company and Zijin Mining (as applicable) pursuant to the indemnities given by any of them under the Hong Kong Underwriting Agreement or the International Underwriting Agreement, as applicable;

   vi. that there is any material adverse change or development or likely to be any prospective material adverse change or development in the assets, liabilities, general affairs, business, management, prospects, shareholders' equity, profits, losses, earnings, results of operations, financial or trading position or condition, financial, operational or otherwise, or performance of our Group as a whole;

vii. the chairman, the chief executive officer, the chief financial officer, the chief operating officer, any other Directors, other members of senior management of our Company vacating his or her office or role within the Company;

viii. a prohibition applicable to our Company, any of the Underwriters, and/or any of the foregoing's respective affiliates, for whatever reason from offering, allotting, issuing or selling any of the Offer Shares (including the additional Shares which may be issued pursuant to the exercise of the Over-allotment Option) pursuant to the terms of the Global Offering;

ix. that the approval by or agreement to approve by the Listing Committee of the listing of, and permission to deal in, the Shares in issue and to be issued pursuant to the Global Offering (including the additional Shares which may be issued pursuant to the exercise of the Over-allotment Option) is refused or not granted, other than subject to customary conditions, on or before the Listing Date, or if granted, the approval is subsequently withdrawn, canceled, qualified (other than by customary conditions), revoked or withheld;

x. any of the reporting accountants, the industry consultant or any of the counsels or experts has withdrawn its respective consent to the issue of this Prospectus with the inclusion of its reports, letters and/or legal opinions (as the case may be) and references to its name included in the form and context in which it respectively appears;

xi. that our Company withdraws this Prospectus (and/or any other documents issued or used in connection with the Global Offering) or the Global Offering;

xii. that a material portion of the orders in the bookbuilding process at the time when the International Underwriting Agreement is entered into, or the investment commitments by any corporate or cornerstone investors after signing of the agreements with such corporate or cornerstone investors, have been withdrawn, terminated, canceled or otherwise not fulfilled; or

xiii. any order or petition for the winding-up or liquidation of any member of our Group or any composition or arrangement made by any member of our Group with its creditors or a scheme of arrangement entered into by any member of our Group or any resolution for the winding-up of any member of our Group or the appointment of a provisional liquidator, receiver or manager over all or part of the assets or undertaking of any member of our Group or anything analogous thereto occurring in respect of any member of our Group.

Undertakings to the Stock Exchange pursuant to the Listing Rules

Undertakings by our Controlling Shareholders

Pursuant to Rule 10.07(1) of the Listing Rules, each of our Controlling Shareholders has undertaken to the Stock Exchange and to us that, except pursuant to the Global Offering and the Over-allotment Option as specified in this Prospectus, it will not (and will procure that the relevant registered holder(s) will not):

(i) in the period commencing on the date by reference to which disclosure of its shareholding in our Company is made in this Prospectus and ending on the date which is six months from the Listing Date, dispose of, nor enter into any agreement to dispose of or otherwise create any options, rights, interests or encumbrances in respect of, any of the Shares or securities of our Company in respect of which it is shown by this Prospectus to be the beneficial owner; and

(ii) in the period of six months commencing on the date on which the period referred to in paragraph (i) above expires, dispose of, nor enter into any agreement to dispose of, or otherwise create any options, rights, interests or encumbrances in respect of, any of the Shares or securities referred to in the immediately preceding paragraph (i) above if, immediately following such disposal or upon the exercise or enforcement of such options, rights, interests or encumbrances, it would cease to be a Controlling Shareholder of our Company.

Pursuant to Note (3) to Rule 10.07(2) of the Listing Rules, each of our Controlling Shareholders has undertaken to the Stock Exchange and to us that, within the period commencing on the date by reference to which disclosure of its shareholding in us is made in this Prospectus and ending on the date which is 12 months from the Listing Date, it will:

(a) when it pledges or charges any Shares or other securities of our Company beneficially owned by it in favor of an authorized institution (as defined in the Banking Ordinance (Chapter 155 of the Laws of Hong Kong)) for a bona fide commercial loan pursuant to Note (2) to Rule 10.07(2) of the Listing Rules, immediately inform us in writing of such pledge or charge together with the number of securities so pledged or charged; and

(b) when it receives indications, either verbal or written, from the pledgee or chargee of any Shares or other securities of our Company pledged or charged that any of the pledged or charged securities will be disposed of, immediately inform us in writing of such indications.

Undertakings Pursuant to the Hong Kong Underwriting Agreement

Undertakings by our Company

Lock-up on our Company

Our Company has undertaken to the Overall Coordinators, the Joint Global Coordinators, the Joint Sponsors, the Joint Bookrunners, the Joint Lead Managers, the Hong Kong Underwriters, the Capital Market Intermediaries and each of them not to (save for the issue, offer, or sale of the Offer Shares pursuant to the Global Offering, including pursuant to the exercise of the Over-allotment Option) and will procure the subsidiaries of our Company not to, without the prior written consent of the Joint Sponsors and the Overall Coordinators (for themselves and on behalf of the Hong Kong Underwriters) and unless in compliance with the Listing Rules, at any time during the period commencing on the date of the Hong Kong Underwriting Agreement and ending on, and including, the date falling six months after the Listing Date (the "**First Six-Month Period**"):

(i) offer, allot, issue, sell, accept subscription for, offer to allot, issue or sell, contract or agree to allot, issue or sell, assign, mortgage, charge, pledge, hypothecate, hedge, lend, grant or sell any option, warrant, right or contract to subscribe for or purchase, grant or purchase any option, warrant, right or contract to allot, issue or sell, or otherwise transfer or dispose of, or create an encumbrance over, or agree to transfer or dispose of or create an encumbrance over, either directly or indirectly, conditionally or unconditionally, or repurchase, any legal or beneficial interest in any Shares or other securities of our Company or any shares or other securities of such other member of our Group, as applicable, or any interest in any of the foregoing (including, but not limited to, any securities that are convertible into or exercisable or exchangeable for, or that represent the right to receive, or any warrants or other rights to purchase, any Shares or any shares or other securities of such other member of our Group, as applicable), or deposit any Shares or other securities of our Company or any shares or other securities of such other member of our Group, as applicable, with a depositary in connection with the issue of depositary receipts; or

(ii) enter into any swap or other arrangement that transfers to another, in whole or in part, any of the economic consequences of subscription or ownership (legal or beneficial) of any Shares, or other securities of our Company or any shares or other securities of such other member of our Group, as applicable, or any interest therein (including, without limitation, any securities which are convertible into or exchangeable or exercisable for, or represent the right to receive, or any warrants or other rights to purchase, any Shares or any shares or other securities of such other member of our Group, as applicable); or

(iii) enter into any transaction with the same economic effect as any transaction described in paragraph (i) or (ii) above; or

(iv) offer to or agree to or contract to or announce, or publicly disclose any intention to enter into or effect any such transaction described in paragraph (i), (ii) or (iii) above,

in each case, whether any such transaction described in paragraph (i), (ii) or (iii) above is to be settled by delivery of the Shares or other securities of our Company or shares or other securities of such other member of our Group, as applicable, in cash or otherwise (whether or not the issue of such Shares or other shares or securities will be completed within the First Six-Month Period).

In the event that, during the six-month period immediately following the First Six-Month Period (the "**Second Six-Month Period**"), our Company enters into any transactions described in paragraph (i), (ii) or (iii) above or offers or agrees or contracts to, or announces, or publicly discloses, any intention to, enter into any such transactions, our Company will take all reasonable steps to ensure that it will not create a disorderly or false market in the securities of our Company.

Maintenance of public float and sufficiency of free float

Each of our Company and Zijin Mining has undertaken to the Overall Coordinators, the Joint Global Coordinators, the Joint Sponsors, the Joint Bookrunners, the Joint Lead Managers, the Hong Kong Underwriters, the Capital Market Intermediaries and each of them that (i) it will not effect any purchase of Shares, or agree to do so, which may reduce the holdings of the Shares held by the public (as defined in Rule 8.24 of the Listing Rules) below the minimum public float requirements specified in the Listing Rules (subject to modification by any waiver granted and not revoked by the Stock Exchange) on or before the date falling two years after the Listing Date without first having obtained the prior written consent of the Joint Sponsors and the Overall Coordinators (for themselves and on behalf of the Hong Kong Underwriters); and (ii) it will not enter into any agreement, arrangement or transaction which shall cause or have the effect of causing the portion of the Shares that are held by the public and that are available for trading and not subject to any disposal restrictions (whether under contract, Listing Rules, applicable laws or otherwise) on the Listing Date to fall below the prescribed level under Rule 8.08A of the Listing Rules.

Undertakings by Zijin Mining

Zijin Mining agrees and has undertaken to our Company, the Overall Coordinators, the Joint Global Coordinators, the Joint Sponsors, the Joint Bookrunners, the Joint Lead Managers, the Hong Kong Underwriters and the Capital Market Intermediaries that,

without the prior written consent of the Joint Sponsors and the Overall Coordinators (for themselves and on behalf of the Hong Kong Underwriters) and unless in compliance with the Listing Rules:

(a) save for any lending of the Shares by Gold Mountains (H.K.) pursuant to the Stock Borrowing Agreement, during the First Six-Month Period, it will not, and will procure that the relevant registered holder(s) of the Shares, any nominee or trustee holding the Shares on trust for it, its affiliates and companies controlled by it will not:

(i) sell, offer to sell, contract or agree to sell, mortgage, charge, pledge, hypothecate, hedge, lend, grant or agree to grant or sell any option, warrant, contract or right to purchase or subscribe for, grant, or purchase any option, warrant, contract or right to sell, lend or otherwise transfer or dispose of or create an encumbrance over, or agree to transfer or dispose of or create an encumbrance over, either directly or indirectly, conditionally or unconditionally, any of the share capital or other securities of our Company or any interest therein (including but not limited to any securities that are convertible into or exchangeable or exercisable for, or that represent the right to receive, or any warrants or other rights to purchase, any such capital or securities or any interest therein), or deposit any Shares or other securities of our Company with a depositary in connection with the issue of depositary receipts;

(ii) enter into any swap or other arrangement that transfers to another, in whole or in part, any of the economic consequences of ownership of any Shares or other securities of our Company or any interest therein (including, without limitation, any securities convertible into or exchangeable or exercisable for, or represent the right to receive, or any warrants or other rights to purchase, any Shares or other securities of our Company);

(iii) enter into any transaction with the same economic effect as any transaction described in paragraph (i) or (ii) above; or

(iv) offer to or agree to or contract to or announce, or publicly disclose any intention to enter into or effect any transaction described in paragraph (i), (ii) or (iii) above,

in each case, whether any such transaction described in paragraph (i), (ii) or (iii) above is to be settled by delivery of such Shares or other securities of our Company, in cash or otherwise (whether or not the issue of such Shares or other securities will be completed within the First Six-Month Period);

(b) during the Second Six-Month Period, it will not, and will procure that the relevant registered holder(s) of the Shares, any nominee or trustee holding the Shares on trust for it, its affiliates and companies controlled by it will not, enter

into any transaction described in paragraph (a)(i), (ii) or (iii) above or offer to or agree to or contract to or announce or publicly disclose any intention to enter into or effect any such transaction if, immediately following such transaction or upon the exercise or enforcement of any option, right, interest or encumbrance pursuant to such transaction, it would cease to be a "controlling shareholder" (as defined in the Listing Rules) of our Company;

(c) until the expiry of the Second Six-Month Period, in the event that it enters into any such transactions described in paragraph (a)(i), (ii) or (iii) above or offers to or agrees to or contracts to or announces or publicly announces any intention to enter into or effect any such transactions, it will take all reasonable steps to ensure that it will not create a disorderly or false market in the securities of our Company; and

(d) at any time after the date of the Hong Kong Underwriting Agreement up to and including the date falling 12 months after the Listing Date, it shall, among other things:

(i) if and when it pledges or charges any securities or interests in the securities of our Company beneficially owned by it, immediately inform our Company, the Joint Sponsors and the Overall Coordinators in writing of such pledge or charge together with the number of securities so pledged or charged; and

(ii) if and when it receives indications, either verbal or written, from any pledgee or chargee that any of the pledged or charged securities or interests in the securities of our Company will be disposed of, immediately inform our Company, the Joint Sponsors and the Overall Coordinators in writing of such indications.

Our Company agrees and has undertaken that upon receiving such information in writing as described in paragraph (d)(i) or (d)(ii) above from Zijin Mining, it shall, as soon as practicable and if required pursuant to the Listing Rules, notify the Stock Exchange and make a public disclosure in relation to such information by way of press announcement.

Our Company agrees to use reasonable endeavors to procure that none of our Directors nor their respective associates will apply for any of the Offer Shares pursuant to the Global Offering, either directly or indirectly, whether in his/her/its own name or through nominee, unless permitted to do so under the Listing Rules.

The undertakings given by the Company and Zijin Mining as stated under this "Undertakings Pursuant to the Hong Kong Underwriting Agreement" section are not, and shall not be construed as being, provided in favour of CITIC Securities (Hong Kong) Limited, CLSA Limited, GF Securities (Hong Kong) Brokerage Limited, Huatai Financial Holdings (Hong Kong) Limited or China Industrial Securities International Capital Limited. Morgan Stanley Asia Limited agrees that it will consult with CITIC

Securities (Hong Kong) Limited and CLSA Limited prior to providing any waiver of the undertaking under this "Undertakings Pursuant to the Hong Kong Underwriting Agreement" section.

Joint Sponsors' and Hong Kong Underwriters' Interests in our Company

Save as disclosed below and save for their respective obligations under the Hong Kong Underwriting Agreement and/or the International Underwriting Agreement and, if applicable, the Stock Borrowing Agreement, and the sponsor fee payable to each of the Joint Sponsors in connection with the Listing, as of the Latest Practicable Date, none of the Joint Sponsors and the Hong Kong Underwriters was interested legally or beneficially, directly or indirectly, in any Shares or other securities of our Company or any other member of our Group or had any right or option (whether legally enforceable or not) to subscribe for or purchase, or to nominate persons to subscribe for or purchase, any Shares or other securities of our Company or any other member of our Group.

Following the completion of the Global Offering, the Hong Kong Underwriters and their affiliated companies may hold a certain portion of the Shares as a result of fulfilling their respective obligations under the Hong Kong Underwriting Agreement and/or the International Underwriting Agreement.

Joint Sponsors' Independence

As of the Latest Practicable Date, members of the sponsor group (as defined in the Listing Rules) of Morgan Stanley Asia Limited held less than 2% of the total issued shares of Zijin Mining and members of the sponsor group (as defined in the Listing Rules) of CITIC Securities (Hong Kong) Limited held less than 4% of the total issued shares of Zijin Mining. Each of the Joint Sponsors satisfies the independence criteria applicable to them set out in Rule 3A.07(1) of the Listing Rules.

CITIC Securities Company Limited ("**CITIC Securities**"), the parent company of CITIC Securities (Hong Kong) Limited ("**CITIC Hong Kong**", one of the Joint Sponsors), acted as the independent financial advisor to Zijin Mining in connection with the Spin-off and the Listing.

Notwithstanding the above, considering that (i) the work of independent financial advisor is a restricted one purely to satisfy the regulatory requirements imposed by the CSRC, and the role of independent financial advisor of CITIC Securities is not in conflict with CITIC Hong Kong's role as an independent sponsor for the Listing (such work is also in line with that undertaken by other financial advisors in similar spin-off cases); and (ii) there is no fee payable to CITIC Securities for its role of independent financial advisor, such relationship between CITIC Securities and Zijin Mining would not be reasonably considered to affect CITIC Hong Kong's independence as sponsor to the Company in performing its duties, and should not reasonably give rise to a perception that CITIC Hong Kong's independence would be so affected under Rule 3A.07(9) of the Listing Rules, and there are no other circumstances affecting CITIC Hong Kong's independence under Rule 3A.07 of the Listing Rules.

Each of the Joint Sponsors satisfies the independence criteria applicable to sponsors as set out in Rule 3A.07 of the Listing Rules. The Joint Sponsors will receive a fee of US$800,000 in total for acting as the sponsors for the Listing.

International Offering

International Underwriting Agreement

In connection with the International Offering, we and Zijin Mining expect to enter into the International Underwriting Agreement with, among others, the International Underwriters on or around Thursday, September 25, 2025. Under the International Underwriting Agreement and subject to the Over-allotment Option, the International Underwriters would, subject to certain conditions set out therein, agree severally and not jointly to procure purchasers for, or themselves purchase, their respective proportions of the International Offer Shares being offered pursuant to the International Offering. It is expected that the International Underwriting Agreement may be terminated on similar grounds as the Hong Kong Underwriting Agreement. Potential investors should note that in the event that the International Underwriting Agreement is not entered into or is terminated, the Global Offering will not proceed. Please see "Structure of the Global Offering — The International Offering." The Preferential Offering forms part of the International Placing. See "Structure of the Global Offering — The Preferential Offering" for further details.

Over-allotment Option

We are expected to grant to the International Underwriters the Over-allotment Option, exercisable by the Overall Coordinators (for themselves and on behalf of the International Underwriters) at any time from the date of the International Underwriting Agreement until 30 days after the last date for the lodging of applications under the Hong Kong Public Offering, pursuant to which we may be required to allot and issue up to an aggregate of 52,348,600 additional Shares representing no more than 15.0% of the number of the initial Offer Shares, at the same price per Offer Share under the International Offering to cover, among other things, over-allocations (if any) in the International Offering.

Commissions and Expenses

Our Company will pay an underwriting commission of up to 1.7% of the aggregate Offer Price of all the Offer Shares, including additional Shares to be issued pursuant to the exercise of the Over-allotment Option (0.5% of the aggregate Offer Price of all the Offer Shares are subject to our sole and absolute discretion). For unsubscribed Hong Kong Offer Shares reallocated to the International Offering, we will pay an underwriting commission at the rate applicable to the International Offering and such commission will be paid to the International Underwriters and not the Hong Kong Underwriters. Assuming the discretionary portion of the underwriting commission is paid in full and the Over-Allotment Option is not exercised, the ratio of fixed fee and discretionary fee payable by our Company to all Capital Market Intermediaries is expected to be

approximately 64:36. The commissions payable to the Underwriters will be borne by our Company with respect to the new Offer Shares to be issued by our Company under the Global Offering (including any additional Shares to be issued pursuant to the exercise of the Over-allotment Option). The Joint Sponsors will receive an aggregate fee of US$800,000 for acting as the Joint Sponsors for the Listing.

The aggregate underwriting commissions and fees payable to the Underwriters, together with the Stock Exchange listing fees, the SFC transaction levy, the Stock Exchange trading fee and the AFRC transaction levy, legal and other professional fees and printing and all other expenses in relation to the Global Offering are estimated to be approximately HK$514.3 million (assuming the Over-allotment Option is not exercised at all) and will be paid by us.

Indemnity

We and Zijin Mining have agreed to indemnify, among others, the Overall Coordinators, the Joint Sponsors, the Joint Global Coordinators, the Joint Bookrunners, the Joint Lead Managers, the Hong Kong Underwriters and the Capital Market Intermediaries for certain losses which they may suffer or incur, including, among others, losses arising from their performance of their obligations under the Hong Kong Underwriting Agreement.

ACTIVITIES BY SYNDICATE MEMBERS

The underwriters of the Hong Kong Public Offering and the International Offering (together, the "**Syndicate Members**") and their affiliates may each individually undertake a variety of activities (as further described below) which do not form part of the underwriting or stabilizing process.

The Syndicate Members and their affiliates are diversified financial institutions with relationships in countries around the world. These entities engage in a wide range of commercial and investment banking, brokerage, funds management, trading, hedging, investing and other activities for their own account and for the account of others. In the ordinary course of their various business activities, the Syndicate Members and their respective affiliates may purchase, sell or hold a broad array of investments and actively trade securities, derivatives, loans, commodities, currencies, credit default swaps and other financial instruments for their own account and for the accounts of their customers. Such investment and trading activities may involve or relate to assets, securities and/or instruments of us and/or persons and entities with relationships with our Company and may also include swaps and other financial instruments entered into for hedging purposes in connection with our loans and other debts.

THE GLOBAL OFFERING

This prospectus is published in connection with the Hong Kong Public Offering as part of the Global Offering. Morgan Stanley Asia Limited and CLSA Limited are the Overall Coordinators of the Global Offering.

The listing of the Shares on the Stock Exchange is sponsored by the Joint Sponsors. The Joint Sponsors have made an application on behalf of our Company to the Listing Committee of the Stock Exchange for the listing of, and permission to deal in, the Shares in issue and to be issued pursuant to the Global Offering (including the additional Shares which may be issued pursuant to the exercise of the Over-allotment Option).

The Global Offering comprises:

(i) the Hong Kong Public Offering of initially 34,899,100 Offer Shares (subject to reallocation) in Hong Kong as described in "The Hong Kong Public Offering" below; and

(ii) the International Offering of initially 314,091,600 Offer Shares (subject to reallocation and the Over-allotment Option) (i) in the United States only to persons who are QIBs in reliance on Rule 144A, or pursuant to another exemption from, or in a transaction not subject to, registration requirements of the U.S. Securities Act and (ii) outside the United States (including to professional and institutional investors within Hong Kong) in offshore transactions in accordance with Regulation S, as described in "The International Offering" below.

Of the 314,091,600 Offer Shares initially being offered under the International Offering, 17,449,600 Offer Shares (representing approximately 5.6% and 5.0% of the Offer Shares initially being offered under the International Offering and the Global Offering, respectively) will be offered to the Qualifying Zijin Mining H Shareholders as an Assured Entitlement as described in "The Preferential Offering" below.

Investors may either:

(i) apply for Hong Kong Offer Shares under the Hong Kong Public Offering; or

(ii) apply for or indicate an interest for International Offer Shares under the International Offering,

but may not do both (except that Qualifying Zijin Mining H Shareholders who are eligible to apply for Reserved Shares in the Preferential Offering may also either (a) apply for Hong Kong Offer Shares under the Hong Kong Public Offering, if eligible; or (b) indicate an interest for International Offer Shares under the International Offering, if qualified to do so).

The Offer Shares will represent approximately 13.3% of the total Shares in issue immediately following the completion of the Global Offering, assuming that the Over-allotment Option is not exercised. If the Over-allotment Option is exercised in full, the Offer Shares will represent approximately 15.0% of the total Shares in issue immediately following the completion of the Global Offering and the exercise of the Over-allotment Option.

The number of Offer Shares to be offered under the Hong Kong Public Offering and the International Offering respectively may be subject to reallocation as described in "The Hong Kong Public Offering — Reallocation" below.

References in this prospectus to applications, application monies or the procedure for applications relate solely to the Hong Kong Public Offering and the Preferential Offering.

THE HONG KONG PUBLIC OFFERING

Number of Offer Shares initially offered

We are initially offering 34,899,100 Offer Shares for subscription by the public in Hong Kong at the Offer Price, representing 10% of the total number of Offer Shares initially available under the Global Offering. The Hong Kong Offer Shares initially offered under the Hong Kong Public Offering, subject to any reallocation of Offer Shares between the International Offering and the Hong Kong Public Offering, will represent approximately 1.3% of the total Shares in issue immediately following the completion of the Global Offering (assuming that the Over-allotment Option is not exercised).

The Hong Kong Public Offering is open to members of the public in Hong Kong as well as to institutional and professional investors. Professional investors generally include brokers, dealers, companies (including fund managers) whose ordinary business involves dealing in shares and other securities and corporate entities that regularly invest in shares and other securities.

Completion of the Hong Kong Public Offering is subject to the conditions set out in "Conditions of the Global Offering" below.

Allocation

Allocation of Hong Kong Offer Shares to investors under the Hong Kong Public Offering will be based solely on the level of valid applications received under the Hong Kong Public Offering. The basis of allocation may vary, depending on the number of Hong Kong Offer Shares validly applied for by applicants. Such allocation could, where appropriate, consist of balloting, which could mean that some applicants may receive a higher allocation than others who have applied for the same number of Hong Kong Offer Shares, and those applicants who are not successful in the ballot may not receive any Hong Kong Offer Shares.

For allocation purposes only, the total number of Hong Kong Offer Shares available under the Hong Kong Public Offering (after taking into account any reallocation referred to below) will be divided equally (to the nearest board lot) into two pools: pool A and pool B with any odd board lots being allocated to pool A. The Hong Kong Offer Shares in pool A will be allocated on an equitable basis to applicants who have applied for Hong Kong Offer Shares with an aggregate subscription price of HK$5 million (excluding the brokerage, the SFC transaction levy, the Stock Exchange trading fee and the AFRC transaction levy payable) or less. The Hong Kong Offer Shares in pool B will be allocated on an equitable basis to applicants who have applied for Hong Kong Offer Shares with an aggregate subscription price of more than HK$5 million (excluding the brokerage, the SFC transaction levy, the Stock Exchange trading fee and the AFRC transaction levy payable) and up to the total value in pool B.

Investors should be aware that applications in pool A and applications in pool B may receive different allocation ratios. If any Hong Kong Offer Shares in one (but not both) of the pools are undersubscribed, such undersubscribed Hong Kong Offer Shares will be transferred to the other pool to satisfy demand in that other pool and be allocated accordingly. For the purpose of the immediately preceding paragraph only, the "price" for Hong Kong Offer Shares means the price payable on application therefor. Applicants can only receive an allocation of Hong Kong Offer Shares from either pool A or pool B and not from both pools. Multiple or suspected multiple applications under the Hong Kong Public Offering and any application for more than 17,449,500 Hong Kong Offer Shares (being 50% of the 34,899,100 Hong Kong Offer Shares initially available under the Hong Kong Public Offering) are liable to be rejected.

Reallocation

The Offer Shares to be offered in the Hong Kong Public Offering and the International Offering may, in certain circumstances, be reallocated as between these offerings at the discretion of the Overall Coordinators. Subject to the allocation cap described in the subsequent paragraph, the Overall Coordinators may at their discretion reallocate Offer Shares from the International Offering to the Hong Kong Public Offering to satisfy valid applications under the Hong Kong Public Offering. In addition, if the Hong Kong Public Offering is not fully subscribed, the Overall Coordinators will have the discretion (but shall not be under any obligation) to reallocate to the International Offering all or any unsubscribed Hong Kong Offer Shares in such amounts as they deem appropriate.

In each case, the additional Offer Shares reallocated to the Hong Kong Public Offering will be allocated between pool A and pool B and the number of Offer Shares allocated to the International Offering will be correspondingly reduced in such manner as the Overall Coordinators deem appropriate. In the event of reallocation of Offer Shares between the International Offering and the Hong Kong Public Offering in the circumstances where (a) the International Offer Shares are fully subscribed or oversubscribed and the Hong Kong Offer Shares are fully subscribed or oversubscribed irrespective of the number of times; or (b) the International Offer Shares are

undersubscribed and the Hong Kong Offer Shares are fully subscribed or oversubscribed irrespective of the number of times, then up to 17,449,500 Offer Shares may be reallocated from the International Offering to the Hong Kong Public Offering, so that the total number of Offer Shares available for subscription under the Hong Kong Public Offering will increase up to 52,348,600 Offer Shares, representing approximately 15% of the number of Offer Shares initially available under the Global Offering (before exercise of the Over-allotment Option) in accordance with Chapter 4.14 of the Guide for New Listing Applicants (the "**Guide**"). In the circumstance where the International Offer Shares are fully subscribed or oversubscribed and the Hong Kong Offer Shares are undersubscribed, there will be no reallocation from the International Offering to the Hong Kong Public Offering, and no over-allocation of Shares to the Hong Kong Public Offering.

Given the initial allocation of the Offer Shares to the Hong Kong Public Offering and the International Offering follows Mechanism B set out under paragraph 2 of Chapter 4.14 of the Guide and the provision of Paragraph 4.2(b) of Practice Note 18 of the Listing Rules, no mandatory clawback or reallocation mechanism is required to increase the number of Offer Shares under the Hong Kong Public Offering to a certain percentage of the total number of Offer Shares offered under the Global Offering.

The Reserved Shares which are offered under the Preferential Offering to Qualifying Zijin Mining H Shareholders out of the Offer Shares being offered under the International Offering will not be subject to reallocation between the Hong Kong Public Offering and the International Offering.

Details of any reallocation of Offer Shares between the Hong Kong Public Offering and the International Offering will be disclosed in the allotment results announcement of the Global Offering, which is expected to be published on Friday, September 26, 2025.

Where the International Offer Shares are undersubscribed, if the Hong Kong Offer Shares are also undersubscribed, the Global Offering will not proceed unless the Underwriters would subscribe or procure subscribers for their respective applicable proportions of the Offer Shares being offered which are not taken up under the Global Offering on the terms and conditions of this Prospectus and the Underwriting Agreements.

Applications

Each applicant under the Hong Kong Public Offering will be required to give an undertaking and confirmation in the application submitted by him/her/it that he/she/it and any person(s) for whose benefit he/she/it is making the application has not applied for or taken up, or indicated an interest for, and will not apply for or take up, or indicate an interest for, any International Offer Shares under the International Offering (except in respect of the Reserved Shares applied for pursuant to the Preferential Offering). Such applicant's application is liable to be rejected if such undertaking and/or confirmation is breached and/or untrue (as the case may be) or if he/she/it has been or will be placed or allocated International Offer Shares under the International Offering.

Applicants under the Hong Kong Public Offering may be required to pay, on application (subject to application channel), the Offer Price of HK$71.59 per Offer Share in addition to the brokerage, the SFC transaction levy, the Stock Exchange trading fee and the AFRC transaction levy payable on each Offer Share, amounting to a total of HK$7,231.19 for one board lot of 100 Shares. For further details, see "How to Apply for Hong Kong Offer Shares and Reserved Shares."

THE PREFERENTIAL OFFERING

Basis of the Assured Entitlement

In order to enable Zijin Mining H Shareholders to participate in the Global Offering on a preferential basis as to allocation only, subject to the Stock Exchange granting approval for the listing of, and permission to deal in, the Shares on the Main Board of the Stock Exchange and such approval not having been withdrawn and the Global Offering becoming unconditional, Qualifying Zijin Mining H Shareholders are being invited to apply for an aggregate of 17,449,600 Reserved Shares in the Preferential Offering, representing approximately 5.6% and approximately 5.0% of the Offer Shares initially available under the International Offering and the Global Offering, respectively, as an Assured Entitlement. The Reserved Shares are being offered out of the International Offer Shares under the International Offering and are not subject to reallocation as described in subsection "The Hong Kong Public Offering — Reallocation" above.

The basis of the Assured Entitlement is one Reserved Share for every integral multiple of 344 Zijin Mining H Shares held by each Qualifying Zijin Mining H Shareholder as at 4:30 p.m. on the Record Date.

Qualifying Zijin Mining H Shareholders should note that Assured Entitlement to Reserved Shares may not represent a number of a full board lot of 100 Shares. Further, the Reserved Shares allocated to the Qualifying Zijin Mining H Shareholders will be rounded down to the nearest whole number if required. No odd lot matching services will be provided and dealings in odd lots of the Shares may be at a price below the prevailing market price for full board lots.

Assured Entitlement of Qualifying Zijin Mining H Shareholders to Reserved Shares are not transferrable. There will be no trading in nil-paid entitlements on the Stock Exchange.

Qualifying Zijin Mining H Shareholders who hold less than 344 Zijin Mining H Shares on the Record Date and therefore will not have an Assured Entitlement to the Reserved Shares will still be entitled to participate in the Preferential Offering by applying for excess Reserved Shares as further described below.

Basis of Allocation for Applications for Reserved Shares

Qualifying Zijin Mining H Shareholders may apply for a number of Reserved Shares which is greater than, less than or equal to their Assured Entitlement or may apply only for excess Reserved Shares under the Preferential Offering and make a payment of the corresponding amount.

Where a Qualifying Zijin Mining H Shareholder applies for Reserved Shares, the Qualifying Zijin Mining H Shareholder's Assured Entitlement portion under such application will be satisfied in full, subject to the terms and conditions set out on the designated website of the **Blue Form eIPO** Service Provider (**www.eipo.com.hk**) and assuming the conditions of the Preferential Offering are satisfied, but the excess portion under such application will only be satisfied to the extent that there are sufficient Available Reserved Shares (as defined below).

Qualifying Zijin Mining H Shareholders (other than HKSCC Nominees) who intend to apply for less than their Assured Entitlement or who intend to apply for excess Reserved Shares, should apply for a number which is one of the numbers set out in the payment table of numbers and payments on the designated website of **Blue Form eIPO** service provider, **www.eipo.com.hk** and make a payment of the corresponding amount.

To the extent that excess applications for the Reserved Shares are:

(a) less than the Reserved Shares not taken up by the Qualifying Zijin Mining H Shareholders (the "**Available Reserved Shares**"), the Available Reserved Shares will first be allocated to satisfy such excess applications for the Reserved Shares in full and thereafter will be reallocated, at the discretion of the Overall Coordinators and Joint Global Coordinators, to the International Offering;

(b) equal to the Available Reserved Shares, the Available Reserved Shares will be allocated to satisfy such excess applications for the Reserved Shares in full; or

(c) more than the Available Reserved Shares, the Available Reserved Shares will be allocated on an allocation basis which will be consistent with the allocation basis commonly used in the case of over-subscriptions in public offerings in Hong Kong, where a higher allocation percentage will be applied in respect of smaller applications of excess Reserved Shares.

If there are any Shares remaining after satisfying the excess applications, such Shares will be reallocated, at the discretion of the Overall Coordinators and Joint Global Coordinators, to the International Offering. No preference will be given to any excess applications made to top up odd lot holdings to whole lot holdings of Shares.

Save for the above, the Preferential Offering will not be subject to the reallocation arrangement between the International Offering and the Hong Kong Public Offering.

Beneficial Zijin Mining H Shareholders (not being Non-Qualifying Zijin Mining H Shareholders) whose Zijin Mining H Shares are held by a nominee company should note that our Company will regard the nominee company as a single Zijin Mining H Shareholder according to the register of members of Zijin Mining. Accordingly, such Beneficial Zijin Mining H Shareholders whose Zijin Mining H Shares are held by a nominee company should note that the arrangement under paragraph (c) above will not apply to them individually. Any Beneficial Zijin Mining H Shareholders (not being Non-Qualifying Zijin Mining H Shareholders) whose Zijin Mining H Shares are registered in the name of a nominee, trustee or registered holder in any other capacity should make arrangements with such nominee, trustee or registered holder in relation to the applications for Reserved Shares under the Preferential Offering. Any such person is advised to consider whether it wishes to arrange for registration of the relevant Zijin Mining H Shares in the name of the beneficial owner prior to the Record Date.

Applications by Qualifying Zijin Mining H Shareholders for Hong Kong Offer Shares

In addition to any application for Reserved Shares made through the **Blue Form eIPO** service, Qualifying Zijin Mining H Shareholders, if eligible, will be entitled to make one application for Hong Kong Offer Shares by applying through the **HKSCC EIPO** channel or through the **White Form eIPO** service. Qualifying Zijin Mining H Shareholders will receive no preference as to entitlement or allocation in respect of applications for Hong Kong Offer Shares through the **HKSCC EIPO** channel or through the **White Form eIPO** service under the Hong Kong Public Offering.

Qualifying Zijin Mining H Shareholders and Non-Qualifying Zijin Mining H Shareholders

Only Zijin Mining H Shareholders whose names appeared on the register of members of Zijin Mining on the Record Date and who are not Non-Qualifying Zijin Mining H Shareholders are entitled to subscribe for the Reserved Shares under the Preferential Offering.

Non-Qualifying Zijin Mining H Shareholders are those Zijin Mining H Shareholders with registered addresses in, or who are otherwise known by Zijin Mining to be residents of, jurisdictions outside Hong Kong on the Record Date, in respect of whom the directors of Zijin Mining and our Company, based on the enquiries made by them, consider it necessary or expedient to exclude from the Preferential Offering on account either of the legal restrictions under the laws of the relevant jurisdiction in which the relevant Zijin Mining H Shareholder is resident or the requirements of the relevant regulatory body or stock exchange in that jurisdiction.

The directors of Zijin Mining and our Company have made enquiries regarding the legal restrictions under the applicable securities legislation of the Excluded Jurisdictions and the requirements of the relevant regulatory bodies or stock exchanges with respect to the offer of the Reserved Shares to the Zijin Mining H Shareholders in the Excluded Jurisdictions. Having considered the circumstances, the directors of Zijin Mining and our Company have formed the view that it is necessary or expedient to restrict the ability of Zijin Mining H Shareholders in the Excluded Jurisdictions to take up their Assured Entitlement to the Reserved Shares under the Preferential Offering due to the time and costs involved in the registration or filing of this prospectus and/or approval required by the relevant authorities in such territories and/or additional steps which our Company and the Zijin Mining H Shareholders would need to take to comply with the local legal, regulatory and/or other requirements in such territories.

Accordingly, for the purposes of the Preferential Offering, the Non-Qualifying Zijin Mining H Shareholders are:

(a) Zijin Mining H Shareholders whose names appeared in the register of members of Zijin Mining on the Record Date and whose addresses as shown in such register are in any of the Excluded Jurisdictions; and

(b) Zijin Mining H Shareholders or Beneficial Zijin Mining H Shareholders on the Record Date who are otherwise known by Zijin Mining to be resident in any of the Excluded Jurisdictions.

Notwithstanding any other provision in this prospectus or on the designated website of the **Blue Form eIPO** Service Provider (**www.eipo.com.hk**), our Company reserves the right to permit any Zijin Mining H Shareholder to take up his/her/its Assured Entitlement to the Reserved Shares if our Company, in its absolute discretion, is satisfied that the transaction in question is exempt from or not subject to the legislation or regulations giving rise to the restrictions described above.

Distribution of this prospectus

Distribution of this prospectus into any jurisdiction other than Hong Kong may be restricted by law. Persons who come into possession of this prospectus (including, without limitation, agents, custodians, nominees and trustees) should inform themselves of, and observe, any such restrictions. Any failure to comply with such restrictions may constitute a violation of the securities laws of any such jurisdiction.

Receipt of this prospectus does not and will not constitute an offer in those jurisdictions in which it would be illegal to make an offer and, in those circumstances, this prospectus must be treated as sent for information only and should not be copied or redistributed.

Application Procedures

The procedures for application under, and the terms and conditions of, the Preferential Offering are set out in "How to Apply for Hong Kong Offer Shares and Reserved Shares — B. Application for Reserved Shares" and at the designated website of the **Blue Form eIPO** Service Provider (**www.eipo.com.hk**).

The documents to be issued in connection with the Hong Kong Public Offering and the Preferential Offering will not be registered or filed under applicable securities or equivalent legislation of any jurisdiction other than Hong Kong. No action has been taken to permit an offering of the Hong Kong Offer Shares and the Reserved Shares or the distribution of this prospectus in any jurisdiction other than Hong Kong. Accordingly, this prospectus may not be used for the purpose of, and does not constitute, an offer or invitation in any jurisdiction or in any circumstances in which such an offer or invitation is not authorized or to any person to whom it is unlawful to make such an offer or invitation.

THE INTERNATIONAL OFFERING

Number of Offer Shares initially offered

Subject to reallocation as described above and the Over-allotment Option, the International Offering will consist of an offering of initially 314,091,600 Offer Shares, representing 90% of the total number of Offer Shares initially available under the Global Offering. The number of Offer Shares initially offered under the International Offering, subject to any reallocation of Offer Shares between the International Offering and the Hong Kong Public Offering, will represent approximately 12.0% of the total Shares in issue immediately after completion of the Global Offering (assuming that the Over-allotment Option is not exercised). The Reserved Shares being offered pursuant to the Preferential Offering are being offered out of the International Offer Shares.

Allocation

The International Offering will include selective marketing of Offer Shares in the United States only to persons who are QIBs in reliance on Rule 144A, or pursuant to another exemption from, or in a transaction not subject to, the registration requirements of the U.S. Securities Act, as well as institutional and professional investors and other investors anticipated to have a sizeable demand for such Offer Shares in Hong Kong and other jurisdictions outside the United States in reliance on Regulation S. Professional investors generally include brokers, dealers, companies (including fund managers) whose ordinary business involves dealing in shares and other securities and corporate entities that regularly invest in shares and other securities. Allocation of Offer Shares pursuant to the International Offering will be effected in accordance with the "book-building" process described in the "Pricing and Allocation" below and based on a number of factors, including the level and timing of demand, the total size of the relevant investor's invested assets or equity assets in the relevant sector and whether or not it is expected that the relevant investor is likely to buy further Offer Shares, and/or hold or sell its Offer Shares,

after the Listing. Such allocation is intended to result in a distribution of the Offer Shares on a basis which would lead to the establishment of a solid professional and institutional shareholder base to the benefit of our Company and the Shareholders as a whole.

The Overall Coordinators (for themselves and on behalf of the Underwriters) may require any investor who has been offered Offer Shares under the International Offering and who has made an application under the Hong Kong Public Offering to provide sufficient information to the Overall Coordinators so as to allow them to identify the relevant applications under the Hong Kong Public Offering and to ensure that they are excluded from any allocation of Offer Shares under the International Offering.

Reallocation

The total number of Offer Shares to be issued pursuant to the International Offering may change as a result of the exercise of the Over-allotment Option in whole or in part and/or any reallocation of unsubscribed Offer Shares originally included in the Hong Kong Public Offering.

OVER-ALLOTMENT OPTION

In connection with the Global Offering, we are expected to grant the Over-allotment Option to the International Underwriters, exercisable by the Overall Coordinators (for themselves and on behalf of the International Underwriters).

Pursuant to the Over-allotment Option, the International Underwriters will have the right, exercisable by the Overall Coordinators (for themselves and on behalf of the International Underwriters) at any time from the date of the International Underwriting Agreement until 30 days after the last day for lodging applications under the Hong Kong Public Offering, to require us to issue up to an aggregate of 52,348,600 additional Offer Shares, representing 15.0% of the total number of Offer Shares initially available under the Global Offering, at the Offer Price under the International Offering to cover over-allocations in the International Offering, if any.

If the Over-allotment Option is exercised in full, the additional Offer Shares to be issued pursuant thereto will represent approximately 2.0% of the total Shares in issue immediately following the completion of the Global Offering and the exercise of the Over-allotment Option. If the Over-allotment Option is exercised, an announcement will be made.

STABILIZATION

Stabilization is a practice used by underwriters in some markets to facilitate the distribution of securities. To stabilize, the underwriters may bid for, or purchase, the securities in the secondary market, during a specified period of time, to retard and, if possible, prevent a decline in the initial public market price of the securities below the offer price. Such transactions may be effected in all jurisdictions where it is permissible to

do so, in each case in compliance with all applicable laws and regulatory requirements, including those of Hong Kong. In Hong Kong, the price at which stabilization is effected is not permitted to exceed the offer price.

In connection with the Global Offering, the Stabilizing Manager, its affiliates or any person acting for it, on behalf of the Underwriters, may effect transactions with a view to stabilizing or supporting the market price of the Shares at a level higher than that which might otherwise prevail for a limited period on and after the Listing Date. However, there is no obligation on the Stabilizing Manager, its affiliates or any person acting for it, to conduct any such stabilizing action. Such stabilizing action, if taken, (i) will be conducted at the sole and absolute discretion of the Stabilizing Manager, its affiliates or any person acting for it and in what the Stabilizing Manager reasonably regards as the best interest of us, (ii) may be discontinued at any time and (iii) is required to be brought to an end within 30 days of the last day for lodging applications under the Hong Kong Public Offering.

Stabilization action permitted in Hong Kong pursuant to the Securities and Futures (Price Stabilizing) Rules of the SFO includes (i) over-allocating for the purpose of preventing or minimizing any reduction in the market price of the Shares, (ii) selling or agreeing to sell the Shares so as to establish a short position in them for the purpose of preventing or minimizing any reduction in the market price of the Shares, (iii) purchasing, or agreeing to purchase, the Shares pursuant to the Over-allotment Option in order to close out any position established under (i) or (ii) above, (iv) purchasing, or agreeing to purchase, any of the Shares for the sole purpose of preventing or minimizing any reduction in the market price of the Shares, (v) selling or agreeing to sell any Shares in order to liquidate any position established as a result of those purchases and (vi) offering or attempting to do anything as described in (ii), (iii), (iv) or (v) above.

Specifically, prospective applicants for and investors in the Offer Shares should note that:

- the Stabilizing Manager (or any person acting for it) may, in connection with the stabilizing action, maintain a long position in the Shares;

- there is no certainty as to the extent to which and the time or period for which the Stabilizing Manager (or any person acting for it) will maintain such a long position;

- liquidation of any such long position by the Stabilizing Manager (or any person acting for it) and selling in the open market may have an adverse impact on the market price of the Shares;

- no stabilizing action can be taken to support the price of the Shares for longer than the stabilization period, which will begin on the Listing Date, and is expected to expire on the 30th day after the last day for lodging applications under the Hong Kong Public Offering. After this date, when no further stabilizing action may be taken, demand for the Shares, and therefore the price of the Shares, could fall;

- the price of the Shares cannot be assured to stay at or above the Offer Price by the taking of any stabilizing action; and

- stabilizing bids or transactions effected in the course of the stabilizing action may be made at any price at or below the Offer Price and can, therefore, be done at a price below the price paid by applicants for, or investors in, the Offer Shares.

We will ensure or procure that an announcement in compliance with the Securities and Futures (Price Stabilizing) Rules of the SFO will be made within seven days of the expiration of the stabilization period.

Over-allocation

Following any over-allocation of the Shares in connection with the Global Offering, the Stabilizing Manager (or any person acting for it) may cover such over-allocations by, amongst others, exercising the Over-allotment Option in full or in part, by using Shares purchased by the Stabilizing Manager (or any person acting for it) in the secondary market at prices that do not exceed the Offer Price or through the stock borrowing arrangement as detailed below or a combination of these means.

STOCK BORROWING ARRANGEMENT

In order to facilitate the settlement of over-allocations, if any, in connection with the Global Offering, the Stabilizing Manager (on its own or through its affiliates) may choose to borrow up to 52,348,600 Shares (being the maximum number of Shares which may be issued pursuant to the exercise of the Over-allotment Option) from Gold Mountains (H.K.), pursuant to the Stock Borrowing Agreement, which is expected to be entered into between the Stabilizing Manager and/or its affiliates and Gold Mountains (H.K.), on or around Thursday, September 25, 2025, or acquire Shares from other sources, including exercising the Over-allotment Option or by making purchases in the secondary market at prices that do not exceed the Offer Price.

If the Stock Borrowing Agreement with Gold Mountains (H.K.) is entered into, the borrowing of Shares will only be effected by the Stabilizing Manager (on its own or through its affiliates) for the settlement of over-allocations in the International Offering.

The same number of the Shares so borrowed must be returned to Gold Mountains (H.K.) or its nominees, as the case may be, on or before the third Business Day following the earlier of (i) the last day for exercising the Over-allotment Option and (ii) the day on which the Over-allotment Option is exercised in full.

The stock borrowing arrangement described above will be for the sole purpose of covering any short position prior to the exercise of the Over-allotment Option in connection with the International Offering, and will be effected in compliance with all

applicable laws, rules and regulatory requirements. No payment will be made to Gold Mountains (H.K.) by the Stabilizing Manager (on its own or through its affiliates) in relation to such stock borrowing arrangement.

PRICING AND ALLOCATION

The Offer Price will be HK$71.59 per Offer Share unless otherwise announced, as further explained below. Applicants under the Hong Kong Public Offering may be required to pay, on application (subject to application channel), the offer price of HK$71.59 per Offer Share plus brokerage of 1%, SFC transaction levy of 0.0027%, Stock Exchange trading fee of 0.00565% and AFRC transaction levy of 0.00015%, amounting to a total of HK$7,231.19 for one board lot of 100 Shares.

The International Underwriters will be soliciting from prospective investors indications of interest in acquiring Offer Shares in the International Offering. Prospective professional and institutional investors will be required to specify the number of Offer Shares under the International Offering they would be prepared to acquire. This process, known as "book-building", is expected to continue up to, and to cease on or around, the last day for lodging applications under the Hong Kong Public Offering.

Reduction in number of Offer Shares and/or Offer Price

The Overall Coordinators (for themselves and on behalf of the Underwriters), may, where they deem appropriate, based on the level of interest expressed by prospective institutional, professional and other investors during the book-building process in respect of the International Offering, and with the consent of us, reduce the number of Offer Shares offered and/or the Offer Price below that stated in this prospectus at any time on or prior to the morning of the last day for lodging applications under the Hong Kong Public Offering. In such a case, we will, as soon as practicable following the decision to make such reduction, and in any event not later than the morning of the last day for lodging applications under the Hong Kong Public Offering, cause to be published on the websites of our Company and the Stock Exchange at **www.zijingoldintl.com** and **www.hkexnews.hk**, respectively, notices of the reduction of the Offer Shares and/or the Offer Price.

Supplemental prospectus will also be issued by our Company in the event of a reduction in the number of Offer Shares and/or the Offer Price. Such supplemental prospectus will also include confirmation or revision, as appropriate, of the working capital statement and the Global Offering statistics as currently set out in this prospectus. The Global Offering must first be canceled and subsequently relaunched on FINI pursuant to the supplemental prospectus.

In the absence of any such notice and supplemental prospectus so published, the number of Offer Shares and/or the Offer Price will not be reduced.

Before submitting applications for the Hong Kong Offer Shares, applicants should have regard to the possibility that any announcement of a reduction in the number of Offer Shares and/or the Offer Price may not be made until the last day for lodging applications under the Hong Kong Public Offering.

If there is any change to the offer size due to change in the number of Offer Shares offered in the Global Offering (other than pursuant to the exercise of the Over-allotment Option and/or the reallocation mechanism as disclosed in this prospectus), or change to the Offer Price, or if the Company becomes aware that there has been a significant change affecting any matter contained in this prospectus or a significant new matter has arisen, the inclusion of information in respect of which would have been required to be in this prospectus if it had arisen before this prospectus was issued, after the issue of this prospectus and before the commencement of dealings in our Shares as prescribed under Rule 11.13 of the Listing Rules, we are required to cancel the Global Offering and relaunch the offer on FINI and issue a supplemental prospectus or a new prospectus.

In the event of a reduction in the number of Offer Shares being offered under the Global Offering, the Overall Coordinators may at their discretion reallocate the number of Offer Shares to be offered under the Hong Kong Public Offering and the International Offering, provided that the number of the initial Hong Kong Offer Shares shall not be less than 10% of the total number of Offer Shares in the Global Offering. The International Offer Shares to be offered in the International Offering and the Offer Shares to be offered in the Hong Kong Public Offering may, in certain circumstances, be reallocated as between these offerings at the discretion of the Overall Coordinators.

An indication of the level of interest in the International Offering, the level of applications in the Hong Kong Public Offering and the Preferential Offering, the basis of allocation of the Hong Kong Offer Shares and the Reserved Shares and the results of allocations in the Hong Kong Public Offering and the Preferential Offering are expected to be made available through a variety of channels in the manner described in "How to Apply for Hong Kong Offer Shares and Reserved Shares — C. Publication of Results."

UNDERWRITING

The Hong Kong Public Offering is fully underwritten by the Hong Kong Underwriters under the terms and conditions of the Hong Kong Underwriting Agreement and is conditional upon the International Underwriting Agreement being signed and becoming unconditional.

We expect to enter into the International Underwriting Agreement relating to the International Offering on or around Thursday, September 25, 2025.

These underwriting arrangements, including the Underwriting Agreements, are summarized in "Underwriting."

CONDITIONS OF THE GLOBAL OFFERING

Acceptance of all applications for Offer Shares will be conditional on:

(i) the Listing Committee granting approval for the listing of, and permission to deal in, the Shares in issue and to be issued pursuant to the Global Offering (including the additional Shares which may be issued pursuant to the exercise of the Over-allotment Option) on the Main Board of the Stock Exchange, and such listing and permission not subsequently having been withdrawn or revoked prior to the commencement of dealings in the Shares on the Stock Exchange;

(ii) the execution and delivery of the International Underwriting Agreement on or around Thursday, September 25, 2025; and

(iii) the obligations of the Underwriters under each of the Hong Kong Underwriting Agreement and the International Underwriting Agreement becoming and remaining unconditional and not having been terminated in accordance with the terms of the respective agreements, in each case on or before the dates and times specified in the respective Underwriting Agreements,

(unless and to the extent such conditions are validly waived on or before such dates and times).

The consummation of each of the Hong Kong Public Offering and the International Offering is conditional upon, among other things, the other offering becoming unconditional and not having been terminated in accordance with its terms.

If the above conditions are not fulfilled or waived prior to the dates and times specified, the Global Offering will lapse and the Stock Exchange will be notified immediately. Notice of the lapse of the Hong Kong Public Offering will be published by us on the websites of the Stock Exchange at **www.hkexnews.hk** and us at **www.zijingoldintl.com** on the next day following such lapse. In such a situation, all application monies will be returned, without interest, on the terms set out in "How to Apply for Hong Kong Offer Shares and Reserved Shares — E. Dispatch/Collection of Share Certificates and Refund of Application Monies." In the meantime, all application monies will be held in separate bank account(s) with the receiving bank or other bank(s) in Hong Kong licensed under the Banking Ordinance (Chapter 155 of the Laws of Hong Kong).

Share certificates for the Offer Shares will only become valid at 8:00 a.m. on Monday, September 29, 2025 provided that the Global Offering has become unconditional in all respects and the right of termination described in "Underwriting" has not been exercised.

DEALING ARRANGEMENTS

Assuming that the Hong Kong Public Offering becomes unconditional at or before 8:00 a.m. in Hong Kong on Monday, September 29, 2025, it is expected that dealings in the Shares on the Stock Exchange will commence at 9:00 a.m. on Monday, September 29, 2025.

The Shares will be traded in board lots of 100 Shares each and the stock code of the Shares will be 2259.

IMPORTANT NOTICE TO INVESTORS
OF HONG KONG OFFER SHARES
FULLY ELECTRONIC APPLICATION PROCESS

We have adopted a fully electronic application process for the Hong Kong Public Offering and below are the procedures for application. We will not provide any printed copies of this prospectus for use by the public.

This prospectus is available at the website of the Stock Exchange at ***www.hkexnews.hk*** *under the "HKEXnews > New Listings > New Listing Information" section, and our website at* ***www.zijingoldintl.com****. If you require a printed copy of this prospectus, you may download and print from the website addresses above.*

The contents of this prospectus are identical to the prospectus as registered with the Registrar of Companies in Hong Kong pursuant to Section 38D of the Companies (Winding Up and Miscellaneous Provisions) Ordinance.

Set out below are procedures through which you can apply for the Hong Kong Offer Shares electronically. We will not provide any physical channels to accept any application for the Hong Kong Offer Shares by the public.

If you are an intermediary, broker or agent, please remind your customers, clients or principals, as applicable, that this prospectus is available online at the website addresses above.

A. APPLICATION FOR HONG KONG OFFER SHARES

1. Who Can Apply

You can apply for Hong Kong Offer Shares if you or the person(s) for whose benefit you are applying for:

- are 18 years of age or older; and
- have a Hong Kong address (*for the* ***White Form eIPO*** *service only*).

Unless permitted by the Listing Rules or a waiver and/or consent has been granted by the Stock Exchange, you cannot apply for any Hong Kong Offer Shares if you or the person(s) for whose benefit you are applying for:

- are an existing shareholder of our Company and/or any of our subsidiaries; or
- are a director or chief executive of our Company and/or any of our subsidiaries; or

- are a close associate (as defined in the Listing Rules) of any of the above; or
- have been allocated or have applied for any International Offer Shares or otherwise participate in the International Offering (except in respect of Reserved Shares applied for pursuant to the Preferential Offering).

2. Application Channels

The Hong Kong Public Offering period will begin at 9:00 a.m. on Friday, September 19, 2025 and end at 12:00 noon on Wednesday, September 24, 2025 (Hong Kong time).

To apply for Hong Kong Offer Shares, you may use one of the following application channels:

Application Channel	Platform	Target Investors	Application Time
White Form eIPO service .	Apply online via the **White Form eIPO** service at **www.eipo.com.hk**	Investors who would like to receive a physical Share certificate. Hong Kong Offer Shares successfully applied for will be allotted and issued in your own name.	From 9:00 a.m. on Friday, September 19, 2025 to 11:30 a.m. on Wednesday, September 24, 2025, Hong Kong time. The latest time for completing full payment of application monies will be 12:00 noon on Wednesday, September 24, 2025, Hong Kong time.
HKSCC EIPO channel	Your **broker** or **custodian** who is a HKSCC Participant will submit electronic application instruction(s) on your behalf through HKSCC's FINI system in accordance with your instruction.	Investors who would not like to receive a physical Share certificate. Hong Kong Offer Shares successfully applied for will be allotted and issued in the name of HKSCC Nominees, deposited directly into CCASS and credited to your designated HKSCC Participant's stock account.	Contact your **broker** or **custodian** for the earliest and latest time for giving such instructions, as this may vary by broker or custodian.

The **White Form eIPO** service and the **HKSCC EIPO** channel are facilities subject to capacity limitations and potential service interruptions and you are advised not to wait until the last day of the application period to apply for Hong Kong Offer Shares.

For those applying through the **White Form eIPO** service, once you complete payment in respect of any application instructions given by you or for your benefit through the **White Form eIPO** service to make an application for Hong Kong Offer Shares, an actual application shall be deemed to have been made. If you are a person for whose benefit the **electronic application instructions** are given, you shall be deemed to have declared that only one set of **electronic application instructions** has been given for your benefit. If you are an agent for another person, you shall be deemed to have declared that you have only given one set of **electronic application instructions** for the benefit of the person for whom you are an agent and that you are duly authorized to give those instructions as an agent.

For the avoidance of doubt, giving an application instruction under the **White Form eIPO** service more than once and obtaining different application reference numbers without effecting full payment in respect of a particular reference number will not constitute an actual application.

If you apply through the **White Form eIPO** service, you are deemed to have authorized the **White Form eIPO** Service Provider to apply on the terms and conditions in this prospectus, as supplemented and amended by the terms and conditions of the **White Form eIPO** service.

By instructing your broker or custodian to apply for the Hong Kong Offer Shares on your behalf through the **HKSCC EIPO** channel, you (and, if you are joint applicants, each of you jointly and severally) are deemed to have instructed and authorized HKSCC to cause HKSCC Nominees (acting as nominee for the relevant HKSCC Participants) to apply for Hong Kong Offer Shares on your behalf and to do on your behalf all the things stated in this prospectus and any supplement to it.

For those applying through the **HKSCC EIPO** channel, an actual application will be deemed to have been made for any application instructions given by you or for your benefit to HKSCC (in which case an application will be made by HKSCC Nominees on your behalf) provided such application instruction has not been withdrawn or otherwise invalidated before the closing time of the Hong Kong Public Offering.

HKSCC Nominees will only be acting as a nominee for you and neither HKSCC nor HKSCC Nominees shall be liable to you or any other person in respect of any actions taken by HKSCC or HKSCC Nominees on your behalf to apply for Hong Kong Offer Shares or for any breach of the terms and conditions of this prospectus.

3. Information Required to Apply

You must provide the following information with your application:

For Individual/Joint Applicants	For Corporate Applicants
• Full name(s) as shown on your identity document • Identity document's issuing country or jurisdiction • Identity document type, with order of priority: i. Hong Kong identity ("**HKID**") card; or ii. National identification document; or iii. Passport; and • Identity document number	• Full name(s) as shown on your identity document • Identity document's issuing country or jurisdiction • Identity document type, with order of priority: i. Legal entity identifier ("**LEI**") registration document; or ii. Certificate of incorporation; or iii. Business registration certificate; or iv. Other equivalent document; and • Identity document number

Notes:

1. If you are applying through the **White Form eIPO** service, you are required to provide a valid e-mail address, a contact telephone number and a Hong Kong address. You are also required to declare that the identity information provided by you follows the requirements as described in Note 2 below. In particular, where you cannot provide a HKID number, you must confirm that you do not hold a HKID card. The number of joint applicants may not exceed four. If you are a firm, the applicant must be in the individual members' names.
2. The applicant's full name as shown on their identity document must be used and the surname, given name, middle and other names (if any) must be input in the same order as shown on the identity document. If an applicant's identity document contains both an English and Chinese name, both English and Chinese names must be used. Otherwise, either English or Chinese names will be accepted. The order of priority of the applicant's identity document type must be strictly followed and where an individual applicant has a valid HKID card (including both Hong Kong Residents and Hong Kong Permanent Residents), the HKID number must be used when making an application to subscribe for Shares in a public offer. Similarly for corporate applicants, a LEI number must be used if an entity has a LEI certificate.
3. If the applicant is a trustee, the client identification data ("**CID**") of the trustee, as set out above, will be required. If the applicant is an investment fund (i.e. a collective investment scheme, or CIS), the CID of the asset management company or the individual fund, as appropriate, which has opened a trading account with the broker will be required, as above.
4. The maximum number of joint applicants on FINI is capped at 4 in accordance with market practice.
5. If you are applying as a nominee, you must provide: (i) the full name (as shown on the identity document), the identity document's issuing country or jurisdiction, the identity document type; and (ii) the identity document number, for each of the beneficial owners or, in the case(s) of joint beneficial owners, for each joint beneficial owner. If you do not include this information, the application will be treated as being made for your benefit.
6. If you are applying as an unlisted company and (i) the principal business of that company is dealing in securities; and (ii) you exercise statutory control over that company, then the application will be treated as being made for your benefit and you should provide the required information in your application as stated above.
   "Unlisted company" means a company with no equity securities listed on the Stock Exchange or any other stock exchange.
   "Statutory control" means you:
   - control the composition of the board of directors of the company;
   - control more than half of the voting power of the company; or
   - hold more than half of the issued share capital of the company (not counting any part of it which carries no right to participate beyond a specified amount in a distribution of either profits or capital).

For those applying through the **HKSCC EIPO** channel, and making an application under a power of attorney, we and the Overall Coordinators, as our agent, have discretion to consider whether to accept it on any conditions we think fit, including evidence of the attorney's authority.

Failing to provide any required information may result in your application being rejected.

4. Permitted Number of Hong Kong Offer Shares for Application

Board lot size	:	100 Offer Shares
Permitted number of Hong Kong Offer Shares for application and amount payable on application/ successful allotment	:	Hong Kong Offer Shares are available for application in specified board lot sizes only. Please refer to the amount payable associated with each specified board lot size in the table below. The Offer Price is HK$71.59 per Share. If you are applying through the **HKSCC EIPO** channel, you are required to pre-fund your application based on the amount specified by your broker or custodian, as determined based on the applicable laws and regulations in Hong Kong. By instructing your broker or custodian to apply for the Hong Kong Offer Shares on your behalf through the **HKSCC EIPO** channel, you (and, if you are joint applicants, each of you jointly and severally) are deemed to have instructed and authorized HKSCC to cause HKSCC Nominees (acting as nominee for the relevant HKSCC Participants) to arrange payment of the Offer Price, brokerage, SFC transaction levy, the Stock Exchange trading fee and the AFRC transaction levy by debiting the relevant nominee bank account at the designated bank for your broker or custodian. If you are applying through the **White Form eIPO** service, you may refer to the table below for the amount payable for the number of Shares you have selected. You must pay the respective amount payable on application in full upon application for Hong Kong Offer Shares.

No. of Hong Kong Offer Shares applied for	Amount payable[2] on application	No. of Hong Kong Offer Shares applied for	Amount payable[2] on application	No. of Hong Kong Offer Shares applied for	Amount payable[2] on application	No. of Hong Kong Offer Shares applied for	Amount payable[2] on application
	HK$		HK$		HK$		HK$
100	7,231.19	2,500	180,779.96	30,000	2,169,359.56	1,000,000	72,311,985.16

1,000	72,311.98	9,000	650,807.87	300,000	21,693,595.55	12,500,000	903,899,814.38
1,500	108,467.98	10,000	723,119.85	400,000	28,924,794.05	15,000,000	1,084,679,777.26
2,000	144,623.97	20,000	1,446,239.71	500,000	36,155,992.58	17,449,500[1]	1,261,807,984.87

(1) Maximum number of Hong Kong Offer Shares you may apply for and this is 50% of the Hong Kong Offer Shares initially offered.

(2) The amount payable is inclusive of brokerage, SFC transaction levy, the Stock Exchange trading fee and the AFRC transaction levy. If your application is successful, brokerage will be paid to the Exchange Participants (as defined in the Listing Rules) or to the **White Form eIPO** Service Provider (for applications made through the application channel of the **White Form eIPO** Service Provider) while the SFC transaction levy, the Stock Exchange trading fee and the AFRC transaction levy will be paid to the SFC, the Stock Exchange and the AFRC, respectively.

5. Multiple Applications Prohibited

You or your joint applicant(s) shall not make more than one application for your own benefit, except (i) where you are a nominee and provide the information of the underlying investor in your application as required under the paragraph headed "A. Applications for Hong Kong Offer Shares — 3. Information Required to Apply" in this section or (ii) where you are a Qualifying Zijin Mining H Shareholder, in which case you may also apply for the Reserved Shares through the **Blue Form eIPO** service via **www.eipo.com.hk**. If you are suspected of submitting or cause to submit more than one application, all of your applications will be rejected.

Multiple applications made either through (i) the **White Form eIPO** service, (ii) the **HKSCC EIPO** channel, or (iii) both channels concurrently are prohibited and will be rejected. If you have made an application through the **White Form eIPO** service or the **HKSCC EIPO** channel, you or the person(s) for whose benefit you have made the application shall not apply for any Offer Shares in the International Offering (except where you applied as or for a Qualifying Zijin Mining H Shareholder under the Preferential Offering).

Since applications are subject to personal information collection statements, beneficial owner identification codes displayed are redacted. Applicants with beneficial names only but not identification document numbers are not disclosed due to personal privacy issue.

6. Terms and Conditions of Application

By applying for Hong Kong Offer Shares through the **White Form eIPO** service or the **HKSCC EIPO** channels, you (or as the case may be, HKSCC Nominees will do the following things on your behalf):

(i) **undertake** to execute all relevant documents and instruct and authorize us and/or the Overall Coordinators, as our agent, to execute any documents for you and to do on your behalf all things necessary to register any Hong Kong Offer Shares allocated to you in your name or in the name of HKSCC Nominees as required by the Articles of Association, and (if you are applying through the **HKSCC EIPO** channel) to deposit the allotted Hong Kong Offer Shares directly into CCASS for the credit of your designated HKSCC Participant's stock account on your behalf;

(ii) **confirm** that you have read and understand the terms and conditions and application procedures set out in this prospectus and the designated website of the **White Form eIPO** Service Provider (or as the case may be, the agreement you entered into with your broker or custodian), and agree to be bound by them;

(iii) (if you are applying through the **HKSCC EIPO** channel) **agree** to the arrangements, undertakings and warranties under the participant agreement between your broker or custodian and HKSCC and observe the General Rules of HKSCC and the HKSCC Operational Procedures for giving application instructions to apply for Hong Kong Offer Shares;

(iv) **confirm** that you are aware of the restrictions on offers and sales of shares set out in this prospectus and they do not apply to you, or the person(s) for whose benefit you have made the application;

(v) **confirm** that you have read this prospectus and any supplement to it and have relied only on the information and representations contained therein in making your application (or as the case may be, causing your application to be made) and will not rely on any other information or representations;

(vi) **agree** that the Relevant Persons, the Hong Kong Share Registrar and HKSCC will not be liable for any information and representations not in this prospectus and any supplement to it;

(vii) **agree** to disclose the details of your application and your personal data and any other personal data which may be required about you and the person(s) for whose benefit you have made the application to us, the Relevant Persons, the Hong Kong Share Registrar, HKSCC, HKSCC Nominees, the Stock Exchange, the SFC and any other statutory, regulatory or governmental bodies or otherwise as required by laws, rules or regulations, for the purposes under the paragraph headed "H. Personal Data — 3. Purposes and 4. Transfer of personal data" in this section;

(viii) **agree** (without prejudice to any other rights which you may have once your application (or as the case may be, HKSCC Nominees' application) has been accepted) that you will not rescind it because of an innocent misrepresentation;

(ix) **agree** that subject to Section 44A(6) of the Companies (Winding Up and Miscellaneous Provisions) Ordinance, any application made by you or HKSCC Nominees on your behalf cannot be revoked once it is accepted, which will be evidenced by the notification of the result of the ballot by the Hong Kong Share Registrar by way of publication of the results at the time and in the manner as specified in the paragraph headed "C. Publication of Results" in this section;

(x) **confirm** that you are aware of the situations specified in the paragraph headed "D. Circumstances In Which You Will Not Be Allocated Hong Kong Offer Shares And/Or Reserved Shares" in this section;

(xi) **agree** that your application or HKSCC Nominees' application, any acceptance of it and the resulting contract will be governed by and construed in accordance with the laws of Hong Kong;

(xii) **agree** to comply with the Companies Ordinance, the Companies (Winding Up and Miscellaneous Provisions) Ordinance, the Articles of Association and laws of any place outside Hong Kong that apply to your application and that neither we nor the Relevant Persons will breach any law inside and/or outside Hong Kong as a result of the acceptance of your offer to purchase, or any action arising from your rights and obligations under the terms and conditions contained in this prospectus;

(xiii) **confirm** that (a) your application or HKSCC Nominees' application on your behalf is not financed directly or indirectly by the Company, any of the directors, chief executives, substantial shareholder(s) or existing shareholder(s) of the Company or any of its subsidiaries or any of their respective close associates; and (b) you are not accustomed or will not be accustomed to taking instructions from the Company, any of the directors, chief executives, substantial shareholder(s) or existing shareholder(s) of the Company or any of its subsidiaries or any of their respective close associates in relation to the acquisition, disposal, voting or other disposition of the Shares registered in your name or otherwise held by you;

(xiv) **warrant** that the information you have provided is true and accurate;

(xv) **confirm** that you understand that we and the Overall Coordinators will rely on your declarations and representations in deciding whether or not to allocate any Hong Kong Offer Shares to you and that you may be prosecuted for making a false declaration;

(xvi) **agree** to accept Hong Kong Offer Shares applied for or any lesser number allocated to you under the application;

(xvii) **declare** and **represent** that this is the only application made and the only application intended by you to be made to benefit you or the person for whose benefit you are applying;

(xviii) (if the application is made for your own benefit) **warrant** that no other application has been or will be made for your benefit by giving **electronic application instructions** to HKSCC directly or indirectly or through the **White Form eIPO** Service Provider or by any one as your agent or by any other person (except in respect of application for Reserved Shares pursuant to the Preferential Offering); and

(xix) (if you are making the application as an agent for the benefit of another person) **warrant** that (a) no other application has been or will be made by you as agent for or for the benefit of that person or by that person or by any other person as agent for that person by giving **electronic application instructions** to HKSCC or the **White Form eIPO** Service Provider and (b) you have due authority to give **electronic application instructions** on behalf of that other person as its agent.

B. APPLICATION FOR RESERVED SHARES

1. Who Can Apply

Only Zijin Mining H Shareholders whose names appeared on the register of members of Zijin Mining at 4:30 p.m. on the Record Date and who are not Non-Qualifying Zijin Mining H Shareholders are entitled to subscribe for the Reserved Shares under the Preferential Offering.

Non-Qualifying Zijin Mining H Shareholders are those Zijin Mining H Shareholders with registered addresses in, or who are otherwise known by Zijin Mining to be residents of, jurisdictions outside Hong Kong on the Record Date, in respect of whom the directors of Zijin Mining and the Company, based on the enquiries made by them, consider it necessary or expedient to exclude them from the Preferential Offering on account either of the legal restrictions under the laws of the relevant jurisdiction in which the relevant Zijin Mining H Shareholder is resident or the requirements of the relevant regulatory body or stock exchange in that jurisdiction.

The directors of Zijin Mining and the Company have made enquiries regarding the legal restrictions under the applicable securities legislation of the Excluded Jurisdictions and the requirements of the relevant regulatory bodies or stock exchanges with respect to the offer of the Reserved Shares to the Zijin Mining H Shareholders in the Excluded Jurisdictions. Having considered the circumstances, the directors of Zijin Mining and the Company have formed the view that it is necessary or expedient to restrict the ability of the Zijin Mining H Shareholders in the Excluded Jurisdictions to take up their Assured Entitlement to the Reserved Shares under the Preferential Offering due to the time and costs involved in the registration or filing of this prospectus and/or approval required by the relevant authorities in such territories and/or additional steps which the Company and the Zijin Mining H Shareholders would need to take to comply with the local legal, regulatory and/or other requirements in such territories.

Accordingly, for the purposes of the Preferential Offering, the Non-Qualifying Zijin Mining H Shareholders are:

(i) Zijin Mining H Shareholders whose names appeared in the register of members of Zijin Mining on the Record Date and whose addresses as shown in such register are in any of the Excluded Jurisdictions; and

(ii) Zijin Mining H Shareholders or Beneficial Zijin Mining H Shareholders on the Record Date who are otherwise known by Zijin Mining to be resident in any of the Excluded Jurisdictions.

Notwithstanding any other provision in this prospectus or on the designated website of the **Blue Form eIPO** Service Provider (**www.eipo.com.hk**), the Company reserves the right to permit any Zijin Mining H Shareholder to take up his/her/its Assured Entitlement to the Reserved Shares if the Company, in its absolute discretion, is satisfied that the transaction in question is exempt from or not subject to the legislation or regulations giving rise to the restrictions described above.

With respect to the Excluded Jurisdictions, Zijin Mining has sent a letter to CCASS Participants (other than CCASS Investor Participants) notifying them that in light of applicable laws and regulations of the Excluded Jurisdictions, to the extent they hold any Zijin Mining H Shares on behalf of the Non-Qualifying Zijin Mining H Shareholders, they are excluded from participating in the Preferential Offering.

Qualifying Zijin Mining H Shareholders are entitled to apply on the basis of an Assured Entitlement of one Reserved Share for every 344 Zijin Mining H Shares held by them as at 4:30 p.m. on the Record Date.

Qualifying Zijin Mining H Shareholders who hold less than 344 Zijin Mining H Shares as at 4:30 p.m. on the Record Date will not have an Assured Entitlement to the Reserved Shares, but they will still be entitled to participate in the Preferential Offering by applying for excess Reserved Shares.

If an application is made by a duly authorized person under a valid power of attorney, the Company and the Overall Coordinators, as the Company's agents, may accept it at their discretion, and on any conditions they think fit, including requiring evidence of the attorney's authority. The Company and the Overall Coordinators, as the Company's agents, will have full discretion to reject or accept any application, in full or in part, without giving any reason.

You cannot apply for any Reserved Shares if you are:

- an existing beneficial owner of Shares in our Company and/or any of our subsidiaries;
- a director or chief executive of our Company and/or any of our subsidiaries (other than a director and/or his associates who are Qualifying Zijin Mining H Shareholders who may apply for Reserved Shares pursuant to the Preferential Offering);
- a close associate (as defined in the Listing Rules) of any of the above persons; or
- a Non-Qualifying Zijin Mining H Shareholder.

None of you or your joint applicant(s) may make more than one application (whether individually or jointly), except (i) where you are a nominee and provide the required information in your application; and (ii) where you are a Qualifying Zijin Mining H Shareholder, in which case you may, in addition to the application for Hong Kong Offer Shares, also apply for the Reserved Shares through the **Blue Form eIPO** service.

Our Company, the Overall Coordinators, the Joint Global Coordinators, the **White Form eIPO** Service Provider, the **Blue Form eIPO** Service Provider and their respective agents may reject or accept any application in full or in part for any reason at their discretion.

2. How to Apply

An application for Reserved Shares under the Preferential Offering may only be made by Qualifying Zijin Mining H Shareholders through the **Blue Form eIPO** service.

Qualifying Zijin Mining H Shareholders may apply for a number of Reserved Shares which is greater than, less than or equal to their Assured Entitlement or may apply only for excess Reserved Shares under the Preferential Offering and make a payment of the corresponding amount. Qualifying Zijin Mining H Shareholders who hold less than 344 Zijin Mining H Shares as at 4:30 p.m. on the Record Date and therefore will not have an Assured Entitlement to the Reserved Shares will still be entitled to participate in the Preferential Offering by applying only for excess Reserved Shares.

Where a Qualifying Zijin Mining H Shareholder applies for Reserved Shares, the Qualifying Zijin Mining H Shareholder's Assured Entitlement portion under such application will be satisfied in full (subject to the terms and conditions of an application mentioned above and set out on the designated website of the **Blue Form eIPO** Service Provider (**www.eipo.com.hk**) and assuming the conditions of the Preferential Offering are satisfied), but the excess portion under such application will only be satisfied to the extent that there are sufficient Available Reserved Shares as described below.

Qualifying Zijin Mining H Shareholders should make a payment of the corresponding amount on the designated website of the **Blue Form eIPO** Service Provider at **www.eipo.com.hk**.

To the extent that excess applications for the Reserved Shares are:

(a) less than the Available Reserved Shares, the Available Reserved Shares will first be allocated to satisfy such excess applications for the Reserved Shares in full and thereafter will be reallocated, at the discretion of the Overall Coordinators, to the International Offering;

(b) equal to the Available Reserved Shares, the Available Reserved Shares will be allocated to satisfy such excess applications for the Reserved Shares in full; or

(c) more than the Available Reserved Shares, the Available Reserved Shares will be allocated on an allocation basis which will be consistent with the allocation basis commonly used in the case of over-subscription in public offerings in Hong Kong, where a higher allocation percentage will be applied in respect of smaller applications of excess Reserved Shares.

If there are any Shares remaining after satisfying the excess applications, such Shares will be reallocated, at the discretion of the Overall Coordinators, to the International Offering. No preference will be given to any excess applications made to top up odd lot holdings to whole lot holdings of Shares.

Save for the above, the Preferential Offering will not be subject to the reallocation arrangement between the International Offering and the Hong Kong Public Offering.

Qualifying Zijin Mining H Shareholders who have applied for Reserved Shares under the Preferential Offering through the **Blue Form eIPO** service, if eligible, may also make one application through the **HKSCC EIPO** channel or through the **White Form eIPO** service for the Hong Kong Offer Shares in the Hong Kong Public Offering. However, Qualifying Zijin Mining H Shareholders will receive no preference as to entitlement or allocation in respect of applications for Hong Kong Offer Shares through the **HKSCC EIPO** channel or through the **White Form eIPO** service under the Hong Kong Public Offering.

Persons who held their Zijin Mining H Shares as at 4:30 p.m. on the Record Date in CCASS indirectly through a broker/custodian, and wish to participate in the Preferential Offering, should instruct their broker or custodian to apply for the Reserved Shares on their behalf by no later than the deadline set by HKSCC or HKSCC Nominees. In order to meet the deadline set by HKSCC or HKSCC Nominees, such persons should check with their broker/custodian for the timing on the processing of their instructions, and submit their instructions to their broker/custodian as required by them. Persons who held their Zijin Mining H Shares as at 4:30 p.m. on the Record Date in CCASS directly as a CCASS Investor Participant, and wish to participate in the Preferential Offering, should give their instruction to HKSCC via the CCASS Internet System by no later than the deadline set by HKSCC or HKSCC Nominees.

3. Distribution of this Prospectus

Distribution of this prospectus into any jurisdiction other than Hong Kong may be restricted by law. Persons who come into possession of this prospectus (including, without limitation, agents, custodians, nominees and trustees) should inform themselves of, and observe, any such restrictions. Any failure to comply with such restrictions may constitute a violation of the securities laws of any such jurisdiction. In particular, this prospectus should not be distributed, forwarded or transmitted in, into or from the Excluded Jurisdictions, except to Qualifying Zijin Mining H Shareholders as specified in this prospectus.

Receipt of this prospectus does not and will not constitute an offer in those jurisdictions in which it would be illegal to make an offer and, in those circumstances, this prospectus must be treated as sent for information only and should not be copied or redistributed.

Persons (including, without limitation, agents, custodians, nominees and trustees) who receive a copy of this prospectus should not, in connection with the Preferential Offering, distribute or send the same in, into or from, the Excluded Jurisdictions. Any person (including, without limitation, agents, custodians, nominees and trustees) who forwards this prospectus in, into or from the Excluded Jurisdictions (whether under a contractual or legal obligation or otherwise) should draw the recipient's attention to the contents of this section.

4. Applying through the Blue Form eIPO Service

If you apply for Reserved Shares online through the **Blue Form eIPO** service:

(i) detailed instructions for application through the **Blue Form eIPO** service are set out on the designated website at **www.eipo.com.hk**. You should read these instructions carefully. If you do not follow the instructions, your application may be rejected by the **Blue Form eIPO** Service Provider and may not be submitted to our Company;

(ii) you must also be willing to provide a valid e-mail address and a contact telephone number; and

(iii) once payment is completed via electronic application instructions given by you or for your benefit, an actual application is deemed to have been made.

5. When May Applications Be Made

Application through the Blue Form eIPO service

You may submit your application via the **Blue Form eIPO** service at **www.eipo.com.hk** (24 hours daily, except on the first and last application dates) from 9:00 a.m., Friday, September 19, 2025 until 11:30 a.m., Wednesday, September 24, 2025 and the latest time for completing full payment of application monies in respect of such applications will be 12:00 noon, Wednesday, September 24, 2025 or such later time as sets out in "F. Severe Weather Arrangements" in this section.

Application lists

The application lists will be open from 11:45 a.m. to 12:00 noon on Wednesday, September 24, 2025, the last application day or such later time as described in "F. Severe Weather Arrangements" in this section. No proceedings will be taken on applications for Reserved Shares and no allotment of any such Reserved Shares will be made until after the closing of the application lists.

How many applications may be made

You should refer to "A. Application for Hong Kong Offer Shares — 5. Multiple Applications Prohibited" in this section for the situations where you may make an application for Hong Kong Offer Shares under the Hong Kong Public Offer in addition to application(s) for Reserved Shares under the Preferential Offering.

6. Permitted Number of Reserved Shares for Application

Qualifying Zijin Mining H Shareholders may apply for a number of Reserved Shares which is greater than, less than or equal to their Assured Entitlement or may apply only for excess Reserved Shares under the Preferential Offering through the **Blue Form eIPO** service and should make a payment of the corresponding amount as calculated by and set out on the designated website of the **Blue Form eIPO** Service Provider at **www.eipo.com.hk**.

7. Additional Terms and Conditions and Instructions

You should refer to the terms on the **Blue Form eIPO** service website for details of the additional terms and conditions and instructions which apply to applications for Reserved Shares.

C. PUBLICATION OF RESULTS

Results of Allocation

You can check whether you are successfully allocated any Hong Kong Offer Shares and/or Reserved Shares through:

Platform		Date/Time
Applying through **White Form eIPO** service, the **Blue Form eIPO** service or the **HKSCC EIPO** channel:		
Website	The designated results of allocation at **www.iporesults.com.hk** (alternatively: **www.eipo.com.hk/eIPOAllotment**) with a "search by ID" function.	24 hours, from 11:00 p.m. on Friday, September 26, 2025 to 12:00 midnight on Thursday, October 2, 2025 (Hong Kong time)
	The full list of (i) wholly or partially successful applicants using the **White Form eIPO** service, the **Blue Form eIPO** service and the **HKSCC EIPO** channel, and (ii) the number of Hong Kong Offer Shares and/or Reserved Shares conditionally allotted to them, among other things, will be displayed on the "Allotment Results" webpage of the **White Form eIPO** service at **www.iporesults.com.hk** (alternatively: **www.eipo.com.hk/eIPOAllotment**).	
	The Stock Exchange's website at **www.hkexnews.hk** and our website at **www.zijingoldintl.com** which will provide links to the abovementioned websites of the Hong Kong Share Registrar.	No later than 11:00 p.m. on Friday, September 26, 2025 (Hong Kong time)
Telephone . .	+ 852 2862 8555 — the allocation results telephone enquiry line provided by the Hong Kong Share Registrar	Between 9:00 a.m. and 6:00 p.m., from Monday, September 29, 2025 to Friday, October 3, 2025 (Hong Kong time) on a business day

For those applying through the **HKSCC EIPO** channel, you may also check with your broker or custodian from 6:00 p.m. on Thursday, September 25, 2025 (Hong Kong time).

HKSCC Participants can log into FINI and review the allotment result from 6:00 p.m. on Thursday, September 25, 2025 (Hong Kong time) on a 24-hour basis and should report any discrepancies on allotments to HKSCC as soon as practicable.

Allocation Announcement

We expect to announce an indication of the level of interest in the Global Offering, the level of applications in the Hong Kong Public Offering and the Preferential Offering and the basis of allocations of Hong Kong Offer Shares and Reserved Shares on the Stock Exchange's website at **www.hkexnews.hk** and our website at **www.zijingoldintl.com** by no later than 11:00 p.m. on Friday, September 26, 2025 (Hong Kong time).

D. CIRCUMSTANCES IN WHICH YOU WILL NOT BE ALLOCATED HONG KONG OFFER SHARES AND/OR RESERVED SHARES

You should note the following situations in which Hong Kong Offer Shares and/or Reserved Shares will not be allocated to you or the person(s) for whose benefit you are applying for:

1. If your application is revoked:

Your application or the application made by HKSCC Nominees on your behalf may be revoked pursuant to Section 44A(6) of the Companies (Winding Up and Miscellaneous Provisions) Ordinance.

2. If we or our agents exercise our discretion to reject your application:

We, the Overall Coordinators, the Hong Kong Share Registrar and their respective agents and nominees have full discretion to reject or accept any application, or to accept only part of any application, without giving any reasons.

3. If the allocation of Hong Kong Offer Shares and/or Reserved Shares is void:

The allocation of Hong Kong Offer Shares and/or Reserved Shares will be void if the Stock Exchange does not grant permission to list the Shares either:

- within three weeks from the closing date of the application lists; or
- within a longer period of up to six weeks if the Stock Exchange notifies us of that longer period within three weeks of the closing date of the application lists.

4. If:

- you make multiple applications or suspected multiple applications (other than an application (if any) made through the **Blue Form eIPO** service in your capacity as a Qualifying Zijin Mining H Shareholder). You may refer to the paragraph headed "A. Applications for Hong Kong Offer Shares — 5. Multiple Applications Prohibited" in this section on what constitutes multiple applications;

- your application instruction is incomplete;

- your payment (or confirmation of funds, as the case may be) is not made correctly;

- the Underwriting Agreements do not become unconditional or are terminated;

- we or the Overall Coordinators believe that by accepting your application, they or we would violate applicable securities or other laws, rules or regulations.

5. If there is money settlement failure for allotted Shares:

Based on the arrangements between HKSCC Participants and HKSCC, HKSCC Participants will be required to hold sufficient application funds on deposit with their designated bank before balloting. After balloting of Hong Kong Offer Shares, the receiving banks will collect the portion of these funds required to settle each HKSCC Participant's actual Hong Kong Offer Share allotment from their designated bank.

There is a risk of money settlement failure. In the extreme event of money settlement failure by a HKSCC Participant (or its designated bank), who is acting on your behalf in settling payment for your allotted shares, HKSCC will contact the defaulting HKSCC Participant and its designated bank to determine the cause of failure and request such defaulting HKSCC Participant to rectify or procure to rectify the failure.

However, if it is determined that such settlement obligation cannot be met, the affected Hong Kong Offer Shares will be reallocated to the International Offering. Hong Kong Offer Shares applied for by you through the broker or custodian may be affected to the extent of the settlement failure. In the extreme case, you will not be allocated any Hong Kong Offer Shares due to the money settlement failure by such HKSCC Participant. None of us, the Relevant Persons, the Hong Kong Share Registrar and HKSCC is or will be liable if Hong Kong Offer Shares are not allocated to you due to the money settlement failure.

E. DISPATCH/COLLECTION OF SHARE CERTIFICATES AND REFUND OF APPLICATION MONIES

You will receive one Share certificate for all Hong Kong Offer Shares and/or Reserved Shares allotted to you under the Hong Kong Public Offering and/or the Preferential Offering (except pursuant to applications made through the HKSCC EIPO channel where the Share certificates will be deposited into CCASS as described below).

No temporary document of title will be issued in respect of the Shares. No receipt will be issued for sums paid on application.

Share certificates will only become valid evidence of title at 8:00 a.m. on Monday, September 29, 2025 (Hong Kong time), provided that the Global Offering has become unconditional and the right of termination described in "Underwriting" has not been exercised. Investors who trade Shares prior to the receipt of Share certificates or the Share certificates becoming valid evidence of title do so entirely at their own risk.

The right is reserved to retain any Share certificate(s) and (if applicable) any surplus application monies pending clearance of application monies.

The following sets out the relevant procedures and time:

	White Form eIPO service or Blue Form eIPO service	HKSCC EIPO channel
Dispatch/collection of Share certificate[1]		
For application of 1,000,000 Hong Kong Offer Shares/ Reserved Shares or more	Collection in person at the Hong Kong Share Registrar, Computershare Hong Kong Investor Services Limited, at Shops 1712-1716, 17th Floor, Hopewell Centre, 183 Queen's Road East, Wan Chai, Hong Kong Time: from 9:00 a.m. to 1:00 p.m. on Monday, September 29, 2025 (Hong Kong time) If you are an individual, you must not authorize any other person to collect for you. If you are a corporate applicant, your authorized representative must bear a letter of authorization from your corporation stamped with your corporation's chop. Both individuals and authorized representatives must produce, at the time of collection, evidence of identity acceptable to the Hong Kong Share Registrar. *Note:* If you do not collect your Share certificate(s) personally within the time above, it/they will be sent to the address specified in your application instructions by ordinary post at your own risk	Share certificate(s) will be issued in the name of HKSCC Nominees, deposited into CCASS and credited to your designated HKSCC Participant's stock account No action by you is required

1 Except in the event of any Severe Weather Signals (as defined below) in force in Hong Kong in the morning on Friday, September 26, 2025 rendering it impossible for the relevant Share certificates to be dispatched to HKSCC in a timely manner, the Company shall procure the Hong Kong Share Registrar to arrange for delivery of the supporting documents and Share certificates in accordance with the contingency arrangements as agreed between them. You may refer to "F. Severe Weather Arrangements" in this section.

	White Form eIPO service or Blue Form eIPO service	HKSCC EIPO channel
For application of less than 1,000,000 Hong Kong Offer Shares/Reserved Shares	Your Share certificate(s) will be sent to the address specified in your application instructions by ordinary post at your own risk Date: Friday, September 26, 2025

Responsible party . .	Hong Kong Share Registrar	Your broker or custodian
Application monies paid through single bank account	White Form e-Refund payment instructions/Blue Form e-Refund payment instructions to your designated bank account	Your broker or custodian will arrange refund to your designated bank account subject to the arrangement between you and it
Application monies paid through multiple bank accounts	Refund check(s) will be dispatched to the address as specified in your application instructions by ordinary post at your own risk	

F. SEVERE WEATHER ARRANGEMENTS

Opening and Closing of the Application Lists

The application lists will not open or close on Wednesday, September 24, 2025 if, there is/are:

- a tropical cyclone warning signal number 8 or above;
- a black rainstorm warning; and/or
- Extreme Conditions

(collectively, "**Severe Weather Signals**"),

in force in Hong Kong at any time between 9:00 a.m. and 12:00 noon on Wednesday, September 24, 2025.

Instead they will open between 11:45 a.m. and 12:00 noon and/or close at 12:00 noon on the next business day which does not have Severe Weather Signals in force at any time between 9:00 a.m. and 12:00 noon.

Prospective investors should be aware that a postponement of the opening/closing of the application lists may result in a delay in the listing date. Should there be any changes to the dates mentioned in "Expected Timetable," an announcement will be made and published on the Stock Exchange's website at **www.hkexnews.hk** and our website at **www.zijingoldintl.com** of the revised timetable.

If a Severe Weather Signal is hoisted on Friday, September 26, 2025, the Hong Kong Share Registrar will make appropriate arrangements for the delivery of the Share certificates to the CCASS Depository's service counter so that they would be available for trading on Monday, September 29, 2025.

If a Severe Weather Signal is hoisted on Friday, September 26, 2025, for application of less than 1,000,000 Offer Shares, the despatch of physical Share certificate(s) will be made by ordinary post when the post office re-opens after the Severe Weather Signal is lowered or canceled (e.g. in the afternoon of Friday, September 26, 2025 or on Monday, September 29, 2025).

If a Severe Weather Signal is hoisted on Monday, September 29, 2025, for application of 1,000,000 Offer Shares or more, physical Share certificate(s) will be available for collection in person at the Hong Kong Share Registrar's office after the Severe Weather Signal is lowered or canceled (e.g. in the afternoon of Monday, September 29, 2025 or on Tuesday, September 30, 2025).

Prospective investors should be aware that if they choose to receive physical Share certificates issued in their own name, there may be a delay in receiving the Share certificates.

G. ADMISSION OF THE SHARES INTO CCASS

If the Stock Exchange grants the listing of, and permission to deal in, the Shares on the Stock Exchange and we comply with the stock admission requirements of HKSCC, the Shares will be accepted as eligible securities by HKSCC for deposit, clearance and settlement in CCASS with effect from the date of commencement of dealings in the Shares or any other date HKSCC chooses. Settlement of transactions between Exchange Participants is required to take place in CCASS on the second settlement day after any trading day.

All activities under CCASS are subject to the General Rules of HKSCC and HKSCC Operational Procedures in effect from time to time.

All necessary arrangements have been made enabling the Shares to be admitted into CCASS.

You should seek the advice of your broker or other professional advisor for details of the settlement arrangement as such arrangements may affect your rights and interests.

H. PERSONAL DATA

The following Personal Information Collection Statement applies to any personal data collected and held by the Company, the Hong Kong Share Registrar, the receiving banks and the Relevant Persons about you in the same way as it applies to personal data about applicants other than HKSCC Nominees. This personal data may include client identifier(s) and your identification information. By giving application instructions to HKSCC, you acknowledge that you have read, understood and agree to all of the terms of the Personal Information Collection Statement below.

1. Personal Information Collection Statement

This Personal Information Collection Statement informs the applicant for, and holder of, Hong Kong Offer Shares and/or Reserved Shares, of the policies and practices of the Company and the Hong Kong Share Registrar in relation to personal data and the Personal Data (Privacy) Ordinance (Chapter 486 of the Laws of Hong Kong).

2. Reasons for the collection of your personal data

It is necessary for applicants and registered holders of Hong Kong Offer Shares and/or Reserved Shares to ensure that personal data supplied to the Company or its agents and the Hong Kong Share Registrar is accurate and up-to-date when applying for Hong Kong Offer Shares and/or Reserved Shares or transferring Hong Kong Offer Shares and/or Reserved Shares into or out of their names or in procuring the services of the Hong Kong Share Registrar.

Failure to supply the requested data or supplying inaccurate data may result in your application for Hong Kong Offer Shares and/or Reserved Shares being rejected, or in the delay or the inability of the Company or the Hong Kong Share Registrar to effect transfers or otherwise render their services. It may also prevent or delay registration or transfers of Hong Kong Offer Shares and/or Reserved Shares which you have successfully applied for and/or the dispatch of Share certificate(s) to which you are entitled.

It is important that applicants for and holders of Hong Kong Offer Shares and/or Reserved Shares inform the Company and the Hong Kong Share Registrar immediately of any inaccuracies in the personal data supplied.

3. Purposes

Your personal data may be used, held, processed, and/or stored (by whatever means) for the following purposes:

- processing your application and refund check, White Form e-Refund payment instruction(s) and Blue Form e-Refund payment instruction(s), where applicable, verification of compliance with the terms and application procedures set out in this prospectus and announcing results of allocation of Hong Kong Offer Shares and/or Reserved Shares;
- compliance with applicable laws and regulations in Hong Kong and elsewhere;
- registering new issues or transfers into or out of the names of the holders of the Shares including, where applicable, HKSCC Nominees;
- maintaining or updating the register of members of the Company;
- verifying identities of applicants for and holders of the Shares and identifying any duplicate applications for the Shares;
- facilitating Hong Kong Offer Shares and/or Reserved Shares balloting;
- establishing benefit entitlements of holders of the Shares, such as dividends, rights issues, bonus issues, etc.;
- distributing communications from the Company and its subsidiaries;
- compiling statistical information and profiles of the holder of the Shares;
- disclosing relevant information to facilitate claims on entitlements; and
- any other incidental or associated purposes relating to the above and/or to enable the Company and the Hong Kong Share Registrar to discharge their obligations to applicants and holders of the Shares and/or regulators and/or any other purposes to which applicants and holders of the Shares may from time to time agree.

4. Transfer of personal data

Personal data held by the Company and the Hong Kong Share Registrar relating to the applicants for and holders of Hong Kong Offer Shares and/or Reserved Shares will be kept confidential but the Company and the Hong Kong Share Registrar may, to the extent necessary for achieving any of the above purposes, disclose, obtain or transfer (whether within or outside Hong Kong) the personal data to, from or with any of the following:

- the Company's appointed agents such as financial advisors and receiving banks;

- HKSCC or HKSCC Nominees, who will use the personal data and may transfer the personal data to the Hong Kong Share Registrar, in each case for the purposes of providing its services or facilities or performing its functions in accordance with its rules or procedures and operating FINI and CCASS (including where applicants for the Hong Kong Offer Shares and/or Reserved Shares request a deposit into CCASS);

- any agents, contractors or third-party service providers who offer administrative, telecommunications, computer, payment or other services to the Company or the Hong Kong Share Registrar in connection with their respective business operation;

- the Stock Exchange, the SFC and any other statutory, regulatory or governmental bodies or otherwise as required by laws, rules or regulations, including for the purpose of the Stock Exchange's administration of the Listing Rules and the SFC's performance of its statutory functions; and

- any persons or institutions with which the holders of Hong Kong Offer Shares and/or Reserved Shares have or propose to have dealings, such as their bankers, solicitors, accountants or brokers etc.

5. Retention of personal data

The Company and the Hong Kong Share Registrar will keep the personal data of the applicants for and holders of Hong Kong Offer Shares and/or Reserved Shares for as long as necessary to fulfill the purposes for which the personal data was collected. Personal data which is no longer required will be destroyed or dealt with in accordance with the Personal Data (Privacy) Ordinance (Chapter 486 of the Laws of Hong Kong).

6. Access to and correction of personal data

Applicants for and holders of Hong Kong Offer Shares and/or Reserved Shares have the right to ascertain whether the Company or the Hong Kong Share Registrar hold their personal data, to obtain a copy of that data, and to correct any data that is inaccurate. The Company and the Hong Kong Share Registrar have the right to charge a reasonable fee for the processing of such requests. All requests for access to data or correction of data should be addressed to the Company and the Hong Kong Share Registrar, at their registered address disclosed in "Corporate Information" or as notified from time to time, for the attention of the company secretary, or the Hong Kong Share Registrar for the attention of the privacy compliance officer.

The following is the text of a report, prepared for inclusion in this document, received from the independent reporting accountants of the Company, Ernst & Young, Certified Public Accountants, Hong Kong.

ACCOUNTANTS' REPORT ON HISTORICAL FINANCIAL INFORMATION TO THE DIRECTORS OF ZIJIN GOLD INTERNATIONAL COMPANY LIMITED, MORGAN STANLEY ASIA LIMITED AND CITIC SECURITIES (HONG KONG) LIMITED

INTRODUCTION

We report on the historical financial information of Zijin Gold International Company Limited (the "Company") and its subsidiaries (together, the "Group") set out on pages IA-4 to IA-81, which comprises the consolidated statements of profit or loss, the consolidated statements of comprehensive income, the consolidated statements of changes in equity and the consolidated statements of cash flows of the Group for each of the years ended 31 December 2022, 2023, 2024 and the six months ended 30 June 2025 (the "Relevant Periods"), and the consolidated statements of financial position of the Group and the statements of financial position of the Company as at 31 December 2022, 2023, 2024 and 30 June 2025 and material accounting policy information and other explanatory information (together, the "Historical Financial Information"). The Historical Financial Information set out on pages IA-4 to IA-81 forms an integral part of this report, which has been prepared for inclusion in the prospectus of the Company dated 19 September 2025 (the "Prospectus") in connection with the initial listing of the shares of the Company on the Main Board of The Stock Exchange of Hong Kong Limited (the "Stock Exchange").

DIRECTORS' RESPONSIBILITY FOR THE HISTORICAL FINANCIAL INFORMATION

The directors of the Company are responsible for the preparation of the Historical Financial Information that gives a true and fair view in accordance with the basis of presentation and preparation set out in note 2 to the Historical Financial Information, and for such internal control as the directors determine is necessary to enable the preparation of the Historical Financial Information that is free from material misstatement, whether due to fraud or error.

REPORTING ACCOUNTANTS' RESPONSIBILITY

Our responsibility is to express an opinion on the Historical Financial Information and to report our opinion to you. We conducted our work in accordance with Hong Kong Standard on Investment Circular Reporting Engagements 200 *Accountants' Reports on Historical Financial Information in Investment Circulars* issued by the Hong Kong Institute of Certified Public Accountants ("HKICPA"). This standard requires that we comply with ethical standards and plan and perform our work to obtain reasonable assurance about whether the Historical Financial Information is free from material misstatement.

Our work involved performing procedures to obtain evidence about the amounts and disclosures in the Historical Financial Information. The procedures selected depend on the reporting accountants' judgement, including the assessment of risks of material misstatement of the Historical Financial Information, whether due to fraud or error. In making those risk assessments, the reporting accountants consider internal control relevant to the entity's preparation of the Historical Financial Information that gives a true and fair view in accordance with the basis of presentation and preparation set out in note 2 to the Historical Financial Information in order to design procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Our work also included evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by the directors, as well as evaluating the overall presentation of the Historical Financial Information.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

OPINION

In our opinion, the Historical Financial Information gives, for the purposes of the accountants' report, a true and fair view of the financial position of the Group and the Company as at 31 December 2022, 2023, 2024 and 30 June 2025 and of the financial performance and cash flows of the Group for each of the Relevant Periods in accordance with the basis of presentation and preparation set out in note 2 to the Historical Financial Information.

REVIEW OF INTERIM COMPARATIVE FINANCIAL INFORMATION

We have reviewed the interim comparative financial information of the Group which comprises the consolidated statement of profit or loss, the consolidated statement of comprehensive income, the consolidated statement of changes in equity and the consolidated statement of cash flows for the six months ended 30 June 2024 and other explanatory information (the "Interim Comparative Financial Information").

The directors of the Company are responsible for the preparation and presentation of the Interim Comparative Financial Information in accordance with the basis of presentation and preparation set out in note 2 to the Historical Financial Information. Our responsibility is to express a conclusion on the Interim Comparative Financial Information based on our review. We conducted our review in accordance with Hong Kong Standard on Review Engagements 2410 *Review of Interim Financial Information Performed by the Independent Auditor of the Entity* as issued by the HKICPA. A review consists of making inquiries, primarily of persons responsible for financial and accounting matters, and applying analytical and other review procedures. A review is substantially less in scope than an audit conducted in accordance with Hong Kong Standards on Auditing and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion. Based on our review, nothing has come to our attention that causes us to believe that the Interim Comparative Financial Information, for the purposes of the accountants' report, is not prepared, in all material respects, in accordance with the basis of presentation and preparation set out in note 2 to the Historical Financial Information.

REPORT ON MATTERS UNDER THE RULES GOVERNING THE LISTING OF SECURITIES ON THE STOCK EXCHANGE AND THE COMPANIES (WINDING UP AND MISCELLANEOUS PROVISIONS) ORDINANCE

Adjustments

In preparing the Historical Financial Information, no adjustments to the Underlying Financial Statements as defined on page I-3 have been made.

Dividends

We refer to note 15 to the Historical Financial Information which states that no dividends have been paid by the Company in respect of the Relevant Periods.

I. HISTORICAL FINANCIAL INFORMATION

Preparation of Historical Financial Information

Set out below is the Historical Financial Information which forms an integral part of this accountants' report.

The financial statements of the Group for the Relevant Periods, on which the Historical Financial Information is based, were audited by Ernst & Young in accordance with Hong Kong Standards on Auditing issued by the HKICPA (the "Underlying Financial Statements").

The Historical Financial Information is presented in United States Dollar ("USD") and all values are rounded to the nearest thousand (USD'000) except when otherwise indicated.

II. NOTES TO THE HISTORICAL FINANCIAL INFORMATION

1. CORPORATE INFORMATION

The Company is a limited liability company incorporated in Hong Kong on 22 October 2007. Its registered office is located at Unit 7508, Level 75, International Commerce Centre, 1 Austin Road West, Kowloon, Hong Kong.

In the opinion of the directors, the Company's holding company is Zijin Mining Group Co., Ltd. ("Zijin Mining" or the "Holding Company"), a company established in the People's Republic of China ("PRC") and listed both on the Main Board of the Stock Exchange of Hong Kong Limited and the Shanghai Stock Exchange. The Company's ultimate holding company is Minxi Xinghang State-owned Assets Investment Company Limited, which is established in the PRC.

During the Relevant Periods, the Company was acting as an investment holding company and its subsidiaries (together, the "Group") were involved in the mining of gold and non-ferrous metal. The main products are gold bars, alloy gold and gold concentrate. The Group's principal operations and geographical markets are outside Mainland China.

As at the date of this report, the Company had direct and indirect interests in its subsidiaries, all of which are private limited liability companies, the particulars of which are set out below:

Name*	Place and date of incorporation/ registration and place of operations	Registered Capital	Percentage of equity attributable to the Company		Principal activities
			Direct	Indirect	
Altynken Limited Liability Company ("Altynken LLC", *note (a)*)*	Kyrgyzstan 2006/4/5	KGS10,000	—	60%	Exploration, mining processing, and sales
Continental Gold Inc. ("CGI")	Canada 2015/4/27	USD 1,335,786,132	—	68.77%	Investment holding
Continental Gold Limited Sucursal Colombia *(note (b))**	Colombia 2007/5/23	COP 11,238,405,220	—	68.77%	Exploration, mining, processing, and sales
AGM Inc. *(note (c))**	Guyana 2011/11/16	USD63,000,500	—	100%	Exploration, mining, processing, and sales
Rosebel Gold Mines N.V. ("Rosebel GM", *note (d)*)*	Suriname 2002/5/8	USD 8,000,000	—	95%	Exploration, mining, processing, and sales

Zijin Golden Ridge Limited ("Zijin Golden Ridge, formerly known as Golden Ridge Resources Limited and Newmont Golden Ridge Limited)	Ghana 1997/10/17	GHS 455,709,071.4	—	100%	Exploration, mining, processing, and sales

Notes:

The above table lists the subsidiaries of the Company which, in the opinion of the directors, principally affected the results for the Relevant Periods or formed a substantial portion of the revenue/assets of the Group. To give details of other subsidiaries would, in the opinion of the directors, result in particulars of excessive length.

(a) The statutory financial statements for the years ended 31 December 2022, 2023 and 2024, prepared under IFRS Accounting Standards were audited by Ernst & Young, Kyrgyzstan.

(b) A subsidiary of Zijin America, of which the consolidated basis is disclosed in note 2 to the Historical Financial Information. The statutory financial statements for the years ended 31 December 2022, 2023 and 2024 prepared under local Financial Reporting Standards were audited by PricewaterhouseCoopers, Columbia.

(c) The statutory financial statements for the years ended 31 December 2022, 2023 and 2024 prepared under IFRS Accounting Standards were audited by TSD LAL & CO, Guyana.

(d) The statutory financial statements for the year ended 31 December 2023 and 2024 prepared under IFRS Accounting Standards were audited by Ernst & Young, Suriname.

(e) The statutory financial statements for the year ended 31 December 2022 prepared under IFRS Accounting Standards were audited by RSM Tajikistan, and the statutory financial statements for the year ended 31 December 2023 and 2024 prepared under IFRS Accounting Standards were audited by Baker Tilly, Tajikistan.

(f) The statutory financial statements for the years ended 31 December 2022, 2023 and 2024 prepared under Australian Accounting Standards — Simplified Disclosures were audited by Ernst & Young, Australia.

2. REORGANISATION AND BASIS OF PREPARATION AND PRESENTATION OF HISTORICAL FINANCIAL INFORMATION

Pursuant to the Reorganisation, as more fully explained in the paragraph headed "The Reorganisation" in the section headed "HISTORY, REORGANIZATION AND CORPORATE STRUCTURE" in the Prospectus, the Company became the holding company of the companies now comprising the Group on 30 June 2025.

Contractual Arrangement

In June 2025, the Company entered into a series of arrangements (the "Contractual Arrangements") under the relevant laws and regulations in the Colombia with Zijin America and its direct controlling shareholder, Gold Mountain (H.K.) International Mining Company Limited ("GMHK", Nominee Shareholder) which mainly holds the Columbia Buriticá Gold Mine in Colombia ("Colombia Mine"), including Entrusted Operations Agreement, Return Swap Agreement and Undertaking by Zijin Mining as more fully explained in the paragraph headed "Clear Delineation of Business" in the section headed "RELATIONSHIP WITH ZIJIN MINING" in the Prospectus. These Contractual Arrangements cannot be terminated and last until the expiry of the mine life of the Colombia Mine, or until GMHK's equity interests in Zijin America are transferred to the Group, whichever is earlier.

The Contractual Arrangements enable the Company to exercise effective control Zijin America and have the abilities to affect those returns through its power over Zijin America, given that:

a) the Contractual Arrangements has commercial substance;

b) the relevant activities of Zijin America will be focusing on the directing the operation of Columbia mine to enjoy the relevant economic benefit, while the Group are authorised, to the extent and within the capacity of GMHK, to make normal course of business decision of Zijin America including without limitation, the daily operation, the management of its affiliated companies, the investment and financing decisions, and other activities which would significantly impact the operation of Colombia mine and correspondingly the return of Zijin America;

c) the Group has the right to direct the exploration, development, extraction, processing, sales, transportation, and environmental restoration activities with the exclusive management and operation of the Colombia Mine, and the management and decision making of the exploration work of other potential projects. The Group can independently make business decisions and manage operations on these relevant activities;

d) the Group are entitled to the cash dividend, distribution, or consideration that the GMHK actually receives from Zijin America which constitutes substantially all of the economic benefits of Zijin America;

e) Zijin Mining undertakes to the Group that, i) at the appropriate time when conditions for a transfer are considered favourable, Zijin Mining will enter into a transaction to enable the Group to acquire the GMHK's equity interests in Zijin America at a fair and reasonable price (on a net-off basis) at the time of the transaction (which will be determined with the fair value of the Return Swap Agreement to be unwound at the time of transaction (on one hand), and to be partially off-set by the fair value of GMHK's interests in Zijin America based on arm's length negotiation (on the other hand)), ii) Zijin Mining will not dispose any assets that belong to the Colombia Mine, nor will hold any collateral against Colombia Mine.

The consolidated statements of profit or loss, statements of comprehensive income, statements of changes in equity and statements of cash flows of the Group for the Relevant Periods and in the period covered by the Interim Comparative Financial Information include the results and cash flows of all companies now comprising the Group from the earliest date presented or since the date when the subsidiaries and/or businesses first came under the common control of Zijin Mining, where this is a shorter period. The consolidated statements of financial position of the Group as at 31 December 2022, 2023, 2024 and 30 June 2025 have been prepared to present the assets and liabilities of the subsidiaries now comprising the Group using the existing book values. No adjustments are made to reflect fair values or recognise any new assets or liabilities as a result of the Reorganisation.

All intra-group transactions and balances have been eliminated on consolidation.

The Historical Financial Information has been prepared in accordance with IFRS Accounting Standards, which comprise all standards and interpretations approved by the International Accounting Standards Board (the "IASB"). All IFRS Accounting Standards effective for the accounting period commencing from 1 January 2025, together with the relevant transitional provisions, have been early adopted by the Group in the preparation of the Historical Financial Information throughout the Relevant Periods and in the period covered by the Interim Comparative Financial Information.

The Historical Financial Information has been prepared under the historical cost convention except for equity investments designated at fair value through other comprehensive income and certain financial instruments which have been measured at fair value at the end of each of the Relevant Periods.

3. ISSUED BUT NOT YET EFFECTIVE IFRS ACCOUNTING STANDARDS

The Group has not applied the following new and amended IFRS Accounting Standards, that have been issued but are not yet effective. The Group intends to apply these new and amended IFRS Accounting Standards, if applicable, when they become effective.

IFRS 18	*Presentation and Disclosure in Financial Statements*[2]
IFRS 19	*Subsidiaries without Public Accountability: Disclosures*[2]
Amendments to IFRS 9 and IFRS 7	*Amendments to the Classification and Measurement of Financial Instruments*[1]
Amendments to IFRS 9 and IFRS 7	*Contracts Referencing Nature-dependent Electricity*[1]
Amendments to IFRS 10 and IAS 28	*Sale or Contribution of Assets between an Investor and its Associate or Joint Venture*[3]
Annual Improvements to IFRS Accounting Standards — Volume 11	*Amendments to IFRS 1, IFRS 7, IFRS 9, IFRS 10 and IAS 7*[1]

1 Effective for annual periods beginning on or after 1 January 2026
2 Effective for annual/reporting periods beginning on or after 1 January 2027
3 No mandatory effective date yet determined but available for adoption

The Group is in the process of making an assessment of the impact of these new and amended IFRS Accounting Standards upon initial application. So far, the Group considers that these new and amended IFRS Accounting Standards may result in changes in accounting policies but are unlikely to have a significant impact on the Group's results of operation and financial position.

4. MATERIAL ACCOUNTING POLICIES

Subsidiaries

A subsidiary is an entity (including a structured entity), directly or indirectly, controlled by the Company.

Control is achieved when the Group is exposed, or has rights, to variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee (i.e., existing rights that give the Group the current ability to direct the relevant activities of the investee).

When the Company has, directly or indirectly, less than a majority of the voting or similar rights of an investee, the Group considers all relevant facts and circumstances in assessing whether it has power over an investee, including:

(a) the contractual arrangement with the other vote holders of the investee;

(b) rights arising from other contractual arrangements; and

(c) the Group's voting rights and potential voting rights.

The Group reassesses whether or not it controls an investee if facts and circumstances indicate that there are changes to one or more of the three elements of control described above. A change in the ownership interest of a subsidiary, without a loss of control, is accounted for as an equity transaction. The results of subsidiaries are included in the Company's profit or loss to the extent of dividends received and receivable. The Company's investments in subsidiaries are stated at cost less any impairment losses.

Investments in associates and joint ventures

An associate is an entity in which the Group has a long term interest of generally not less than 20% of the equity voting rights and over which it has significant influence. Significant influence is the power to participate in the financial and operating policy decisions of the investee, but is not control or joint control over those policies.

A joint venture is a type of joint arrangement whereby the parties that have joint control of the arrangement have rights to the net assets of the joint venture. Joint control is the contractually agreed sharing of control of an arrangement, which exists only when decisions about the relevant activities require the unanimous consent of the parties sharing control.

The Group's investments in associates and joint ventures are stated in the consolidated statement of financial position at the Group's share of net assets under the equity method of accounting, less any impairment losses.

The Group's share of the post-acquisition results and other comprehensive income of associates and joint ventures is included in the consolidated statement of profit or loss and consolidated other comprehensive income, respectively. In addition, when there has been a change recognised directly in the equity of the associate or joint venture, the Group recognises its share of any changes, when applicable, in the consolidated statement of changes in equity. Unrealised gains and losses resulting from transactions between the Group and its associates or joint ventures are eliminated to the extent of the Group's investments in the associates or joint ventures, except where unrealised losses provide evidence of an impairment of the assets transferred. Goodwill arising from the acquisition of associates or joint ventures is included as part of the Group's investments in associates or joint ventures.

If an investment in an associate becomes an investment in a joint venture or vice versa, the retained interest is not remeasured. Instead, the investment continues to be accounted for under the equity method. In all other cases, upon loss of significant influence over the associate or joint control over the joint venture, the Group measures and recognises any retained investment at its fair value. Any difference between the carrying amount of the associate or joint venture upon loss of significant influence and the fair value of the retained investment and proceeds from disposal is recognised in profit or loss.

When an associate or joint venture is acquired from an entity under common control, the Group recognises the investment in the associate or joint venture at its predecessor equity-accounted carrying amount on the date of acquisition. Any difference between this amount and the consideration given is accounted for as an equity contribution or distribution.

Business combinations of entities under common control

Business combinations of entities under common control are accounted for using the pooling of interests method. The results of subsidiaries are consolidated from the beginning of the Relevant Periods or the date on which a subsidiary first came under the common control of the controlling shareholders, whichever is later, and continue to be consolidated until the date that the Company's control ceases. The assets and liabilities of the combining entities are reflected at their existing carrying values at the date of combination. No amount is recognised in respect of goodwill or excess of the acquirer's interest in the net fair value of the acquiree's identifiable assets, liabilities and contingent liabilities over cost at the time of common control combination, which, instead, is recorded as part of equity.

Business combinations (other than business combinations of entities under common control) and goodwill

Business combinations are accounted for using the acquisition method. The consideration transferred is measured at the acquisition date fair value which is the sum of the acquisition date fair values of assets transferred by the Group, liabilities assumed by the Group to the former owners of the acquiree and the equity interests issued by the Group in exchange for control of the acquiree. For each business combination, the Group elects whether to measure the non-controlling interests in the acquiree at fair value or at the proportionate share of the acquiree's identifiable net assets. All other components of non-controlling interests are measured at fair value. Acquisition-related costs are expensed as incurred.

The Group determines that it has acquired a business when the acquired set of activities and assets includes an input and a substantive process that together significantly contribute to the ability to create outputs.

When the Group acquires a business, it assesses the financial assets and liabilities assumed for appropriate classification and designation in accordance with the contractual terms, economic circumstances and pertinent conditions as at the acquisition date. This includes the separation of embedded derivatives in host contracts of the acquiree.

Any contingent consideration to be transferred by the acquirer is recognised at fair value at the acquisition date. Contingent consideration classified as an asset or liability is measured at fair value with changes in fair value recognised in profit or loss. Contingent consideration that is classified as equity is not remeasured and subsequent settlement is accounted for within equity.

Goodwill is initially measured at cost, being the excess of the aggregate of the consideration transferred, the amount recognised for non-controlling interests and any fair value of the Group's previously held equity interests in the acquiree over the identifiable assets acquired and liabilities assumed. If the sum of this consideration and other items is lower than the fair value of the net assets acquired, the difference is, after reassessment, recognised in profit or loss as a gain on bargain purchase.

After initial recognition, goodwill is measured at cost less any accumulated impairment losses. Goodwill is tested for impairment annually or more frequently if events or changes in circumstances indicate that the carrying value may be impaired. The Group performs its annual impairment test of goodwill as at 31 December. For the purpose of impairment testing, goodwill acquired in a business combination is, from the acquisition date, allocated to each of the Group's cash-generating units, or groups of cash-generating units, that are expected to benefit from the synergies of the combination, irrespective of whether other assets or liabilities of the Group are assigned to those units or groups of units.

Impairment is determined by assessing the recoverable amount of the cash-generating unit (group of cash-generating units) to which the goodwill relates. Where the recoverable amount of the cash-generating unit (group of cash-generating units) is less than the carrying amount, an impairment loss is recognised. An impairment loss recognised for goodwill is not reversed in a subsequent period.

Where goodwill has been allocated to a cash-generating unit (or group of cash-generating units) and part of the operation within that unit is disposed of, the goodwill associated with the operation disposed of is included in the carrying amount of the operation when determining the gain or loss on the disposal. Goodwill disposed of in these circumstances is measured based on the relative value of the operation disposed of and the portion of the cash-generating unit retained.

Fair value measurement

The Group measures certain of its financial assets and financial liabilities at fair value at the end of each of the Relevant Periods. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The fair value measurement is based on the presumption that the transaction to sell the asset or transfer the liability takes place either in the principal market for the asset or liability, or in the absence of a principal market, in the most advantageous market for the asset or liability. The principal or the most advantageous market must be accessible by the Group. The fair value of an asset or a liability is measured using the assumptions that market participants would use when pricing the asset or liability, assuming that market participants act in their economic best interest.

A fair value measurement of a non-financial asset takes into account a market participant's ability to generate economic benefits by using the asset in its highest and best use or by selling it to another market participant that would use the asset in its highest and best use.

The Group uses valuation techniques that are appropriate in the circumstances and for which sufficient data are available to measure fair value, maximising the use of relevant observable inputs and minimising the use of unobservable inputs.

All assets and liabilities for which fair value is measured or disclosed in the Historical Financial Information are categorised within the fair value hierarchy, described as follows, based on the lowest level input that is significant to the fair value measurement as a whole:

Level 1 — based on quoted prices (unadjusted) in active markets for identical assets or liabilities
Level 2 — based on valuation techniques for which the lowest level input that is significant to the fair value measurement is observable, either directly or indirectly
Level 3 — based on valuation techniques for which the lowest level input that is significant to the fair values measurement is unobservable

For assets and liabilities that are recognised in the Historical Financial Information on a recurring basis, the Group determines whether transfers have occurred between levels in the hierarchy by reassessing categorisation (based on the lowest level input that is significant to the fair value measurement as a whole) at the end of each of the Relevant Periods.

Impairment of non-financial assets

Where an indication of impairment exists, or when annual impairment testing for an asset is required (other than inventories, deferred tax assets and financial assets), the asset's recoverable amount is estimated. An asset's recoverable amount is the higher of the asset's or cash-generating unit's value in use and its fair value less costs of disposal, and is determined for an individual asset, unless the asset does not generate cash inflows that are largely independent of those from other assets or groups of assets, in which case the recoverable amount is determined for the cash-generating unit to which the asset belongs. In testing a cash-generating unit for impairment, a portion of the carrying amount of a corporate asset (e.g., a headquarters building) is allocated to an individual cash-generating unit if it can be allocated on a reasonable and consistent basis or, otherwise, to the smallest group of cash-generating units.

An Impairment loss is recognised only if the carrying amount of an asset exceeds its recoverable amount. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. An impairment loss is charged to the statement of profit or loss in the period in which it arises in those expense categories consistent with the function of the impaired asset.

An assessment is made at the end of each of the Relevant Periods as to whether there is an indication that previously recognised impairment losses may no longer exist or may have decreased. If such an indication exists, the recoverable amount is estimated. A previously recognised impairment loss of an asset other than goodwill is reversed only if there has been a change in the estimates used to determine the recoverable amount of that asset, but not to an amount higher than the carrying amount that would have been determined (net of any depreciation/amortisation) had no impairment loss been recognised for the asset in prior years. A reversal of such an impairment loss is credited to the statement of profit or loss in the period in which it arises.

Related parties

A party is considered to be related to the Group if:

(a) the party is a person or a close member of that person's family and that person:

  (i) has control or joint control over the Group;

  (ii) has significant influence over the Group; or

  (iii) is a member of the key management personnel of the Group or of a parent of the Group;

or

(b) the party is an entity where any of the following conditions applies:

  (i) the entity and the Group are members of the same group;

  (ii) one entity is an associate or joint venture of the other entity (or of a parent, subsidiary or fellow subsidiary of the other entity);

  (iii) the entity and the Group are joint ventures of the same third party;

  (iv) one entity is a joint venture of a third entity and the other entity is an associate of the third entity;

  (v) the entity is a post-employment benefit plan for the benefit of employees of either the Group or an entity related to the Group;

  (vi) the entity is controlled or jointly controlled by a person identified in (a);

  (vii) a person identified in (a)(i) has significant influence over the entity or is a member of the key management personnel of the entity (or of a parent of the entity); and

  (viii) the entity, or any member of a group of which it is a part, provides key management personnel services to the Group or to the parent of the Group.

Property, plant and equipment and depreciation

Property, plant and equipment, other than construction in progress, are stated at cost less accumulated depreciation and any impairment losses. The cost of an item of property, plant and equipment comprises its purchase price and any directly attributable costs of bringing the asset to its working condition and location for its intended use.

Expenditure incurred after items of property, plant and equipment have been put into operation, such as repairs and maintenance, is normally charged to the statement of profit or loss in the period in which it is incurred. In situations where the recognition criteria are satisfied, the expenditure for a major inspection is capitalised in the carrying amount of the asset as a replacement. Where significant parts of property, plant and equipment are required to be replaced at intervals, the Group recognises such parts as individual assets with specific useful lives and depreciates them accordingly.

Depending on the nature of the item of property, plant and equipment, depreciation is calculated on the straight-line basis to write off the cost of each asset over its estimated useful life or it is calculated on the units-of-production ("UOP") basis to write off the cost of the asset proportionately to the extraction of the proven and probable mineral reserves. The estimated useful lives and annual depreciation rates for the assets depreciated on the straight-line basis are as follows:

	Estimated useful lives	Annual depreciation rates
Buildings	8 to 20 years	5.00% to 12.50%
Plant, machinery and equipment	5 to 15 years	6.67% to 20.00%
Motor vehicles	4 to 15 years	6.67% to 25.00%
Power generation and transmission equipment	8 to 30 years	3.33% to 12.50%
Office equipment, electronic equipment and others	3 to 10 years	10.00% to 33.33%
Mining properties	5 to 40 years	2.50% to 20.00%

Where parts of an item of property, plant and equipment have different useful lives, the cost of that item is allocated on a reasonable basis among the parts and each part is depreciated separately. Residual values, useful lives and the depreciation method are reviewed, and adjusted if appropriate, at least at the end of each of the Relevant Periods.

An item of property, plant and equipment including any significant part initially recognised is derecognised upon disposal or when no future economic benefits are expected from its use or disposal. Any gain or loss on disposal or retirement recognised in the statement of profit or loss in the year the asset is derecognised is the difference between the net sales proceeds and the carrying amount of the relevant asset.

Construction in progress is stated at cost less any impairment losses, and is not depreciated. It is reclassified to the appropriate category of property, plant and equipment when completed and ready for use.

Intangible assets

Intangible assets acquired separately are measured on initial recognition at cost. The cost of intangible assets acquired in a business combination is the fair value at the date of acquisition. The useful lives of intangible assets are assessed to be either finite or indefinite. Intangible assets with finite lives are subsequently amortised over the useful economic life and assessed for impairment whenever there is an indication that the intangible asset may be impaired. The amortisation period and the amortisation method for an intangible asset with a finite useful life are reviewed at least at the end of each of the Relevant Periods.

Intangible assets are amortised on the straight-line basis over the following useful-economic lives:

Software	4 to 8 years

Exploration and evaluation assets

Exploration and evaluation assets are stated at cost less impairment losses. Exploration and evaluation assets includes costs of geological prospecting for technical consultancy and costs of feasibility study for commercial development which incurred in the surroundings, outer ring and deep areas of the existing or externally acquired mineral properties, and costs of drilling, trench sampling and other associated activities. Such expenditures may be capitalised when the mineral properties are reasonably determined to be commercially available and recognised as mining rights after obtaining mining rights or permits, which will be amortised under the UOP method. If any construction was terminated in the development phase or belongs to the productive exploration, all costs shall be written off and recognised in the statement of profit or loss for the period in which it arises.

Impairment reviews of exploration and evaluation assets are undertaken if events or changes in circumstances indicate a potential impairment. The carrying value of exploration and evaluation assets is compared to the recoverable amount, which is the higher of value-in-use and the fair value less costs of disposal. For the purposes of assessing impairment, assets are grouped at the lowest levels for which there are separately identifiable cash-generating units. Exploration and evaluation assets that suffered impairment are reviewed for possible reversal of the impairment at the end of each of the Relevant Periods.

Exploration and mining rights

Exploration rights are stated at cost less impairment losses. Exploration rights include the cost of acquiring exploration rights.

Mining rights are stated at cost less accumulated amortisation and any impairment losses. Mining rights include the cost of acquiring mining licenses, exploration rights and exploration and evaluation assets upon determination that an exploration property is capable of commercial production, and the cost of acquiring interests in the mining reserves of existing mining properties. The mining rights are amortised in accordance with the production plans of the entities concerned and the proven and probable mineral reserves of the mines using the UOP method. Mining rights are written off to the statement of profit or loss if the mining property is disposed.

Leases

The Group assesses at contract inception whether a contract is, or contains, a lease. A contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration.

Group as a lessee

The Group applies a single recognition and measurement approach for all leases, except for short-term leases and leases of low-value assets. The Group recognises lease liabilities to make lease payments and right-of-use assets representing the right to use the underlying assets.

(a) Right-of-use assets

Right-of-use assets are recognised at the commencement date of the lease (that is the date the underlying asset is available for use). Right-of-use assets are measured at cost, less accumulated depreciation and any impairment losses, and adjusted for any remeasurement of lease liabilities. The cost of right-of-use assets includes the amount of lease liabilities recognised, initial direct costs incurred, and lease payments made at or before the commencement date less any lease incentives received. Right-of-use assets are depreciated on a straight-line basis over the shorter of the lease terms and the estimated useful lives of the assets as follows:

Leasehold land	7 to 10 years
Buildings	2 to 5 years
Machinery and equipment	2 to 10 years
Motor vehicles	2 to 15 years

If ownership of the leased asset transfers to the Group by the end of the lease term or the cost reflects the exercise of a purchase option, depreciation is calculated using the estimated useful life of the asset.

(b) Lease liabilities

Lease liabilities are recognised at the commencement date of the lease at the present value of lease payments to be made over the lease term. The lease payments include fixed payments (including in-substance fixed payments) less any lease incentives receivable, variable lease payments that depend on an index or a rate, and amounts expected to be paid under residual value guarantees. The lease payments also include the exercise price of a purchase option reasonably certain to be exercised by the Group and payments of penalties for termination of a lease, if the lease term reflects the Group exercising the option to terminate the lease. The variable lease payments that do not depend on an index or a rate are recognised as an expense in the period in which the event or condition that triggers the payment occurs.

In calculating the present value of lease payments, the Group uses its incremental borrowing rate at the lease commencement date because the interest rate implicit in the lease is not readily determinable. After the commencement date, the amount of lease liabilities is increased to reflect the accretion of interest and reduced for the lease payments made. In addition, the carrying amount of lease liabilities is remeasured if there is a modification, a change in the lease term, a change in lease payments (e.g., a change to future lease payments resulting from a change in an index or rate) or a change in assessment of an option to purchase the underlying asset.

(c) Short-term leases and leases of low-value assets

The Group applies the short-term lease recognition exemption to its short-term leases of plant equipment and motor vehicles (that is those leases that have a lease term of 12 months or less from the commencement date and do not contain a purchase option). It also applies the recognition exemption for leases of low-value assets to leases of office equipment and laptop computers that are considered to be of low value. Lease payments on short-term leases and leases of low-value assets are recognised as an expense on a straight-line basis over the lease term.

Group as a lessor

When the Group acts as a lessor, it classifies at lease inception (or when there is a lease modification) each of its leases as either an operating lease or a finance lease.

Leases in which the Group does not transfer substantially all the risks and rewards incidental to ownership of an asset are classified as operating leases. When a contract contains lease and non-lease components, the Group allocates the consideration in the contract to each component on a relative stand-alone selling price basis. Rental income is accounted for on a straight-line basis over the lease term and is included in revenue in the statement of profit or loss due to its operating nature. Initial direct costs incurred in negotiating and arranging an operating lease are added to the carrying amount of the leased asset and recognised over the lease term on the same basis as rental income. Contingent rents are recognised as revenue in the period in which they are earned.

Leases that transfer substantially all the risks and rewards incidental to ownership of an underlying asset to the lessee are accounted for as finance leases.

Investments and other financial assets

Initial recognition and measurement

Financial assets are classified, at initial recognition, as subsequently measured at amortised cost, fair value through other comprehensive income, and fair value through profit or loss.

The classification of financial assets at initial recognition depends on the financial asset's contractual cash flow characteristics and the Group's business model for managing them. With the exception of trade receivables that do not contain a significant financing component or for which the Group has applied the practical expedient of not adjusting the effect of a significant financing component, the Group initially measures a financial asset at its fair value plus in the case of a financial asset not at fair value through profit or loss, transaction costs. Trade receivables that do not contain a significant financing component or for which the Group has applied the practical expedient are measured at the transaction price determined under IFRS 15 in accordance with the policies set out for "Revenue recognition" below.

In order for a financial asset to be classified and measured at amortised cost or fair value through other comprehensive income, it needs to give rise to cash flows that are solely payments of principal and interest ("SPPI") on the principal amount outstanding. Financial assets with cash flows that are not SPPI are classified and measured at fair value through profit or loss, irrespective of the business model.

The Group's business model for managing financial assets refers to how it manages its financial assets in order to generate cash flows. The business model determines whether cash flows will result from collecting contractual cash flows, selling the financial assets, or both. Financial assets classified and measured at amortised cost are held within a business model with the objective to hold financial assets in order to collect contractual cash flows, while financial assets classified and measured at fair value through other comprehensive income are held within a business model with the objective of both holding to collect contractual cash flows and selling. Financial assets which are not held within the aforementioned business models are classified and measured at fair value through profit or loss.

Purchases or sales of financial assets that require delivery of assets within the period generally established by regulation or convention in the marketplace are recognised on the trade date, that is, the date that the Group commits to purchase or sell the asset.

Subsequent measurement

The subsequent measurement of financial assets depends on their classification as follows:

Financial assets at amortised cost (debt instruments)

Financial assets at amortised cost are subsequently measured using the effective interest method and are subject to impairment. Gains and losses are recognised in profit or loss when the asset is derecognised, modified or impaired.

Financial assets designated at fair value through other comprehensive income (equity investments)

Upon initial recognition, the Group can elect to classify irrevocably its equity investments as equity investments designated at fair value through other comprehensive income when they meet the definition of equity under IAS 32 Financial Instruments: Presentation and are not held for trading. The classification is determined on an instrument-by-instrument basis.

Gains and losses on these financial assets are never recycled to the statement of profit or loss. Dividends are recognised as other income in the statement of profit or loss when the right of payment has been established, except when the Group benefits from such proceeds as a recovery of part of the cost of the financial asset, in which case, such gains are recorded in other comprehensive income. Equity investments designated at fair value through other comprehensive income are not subject to impairment assessment.

Financial assets at fair value through profit or loss

Financial assets at fair value through profit or loss are carried in the statement of financial position at fair value with net changes in fair value recognised in the statement of profit or loss.

This category includes derivative instruments and equity investments which the Group had not irrevocably elected to classify at fair value through other comprehensive income. Dividends on the equity investments are also recognised as other income in the statement of profit or loss when the right of payment has been established.

A derivative embedded in a hybrid contract, with a financial liability or non-financial host, is separated from the host and accounted for as a separate derivative if the economic characteristics and risks are not closely related to the host; a separate instrument with the same terms as the embedded derivative would meet the definition of a derivative; and the hybrid contract is not measured at fair value through profit or loss. Embedded derivatives are measured at fair value with changes in fair value recognised in the statement of profit or loss. Reassessment occurs if there is a change in the terms of the contract that significantly modifies the cash flows.

A derivative embedded within a hybrid contract containing a financial asset host is not accounted for separately. The financial asset host together with the embedded derivative is required to be classified in its entirety as a financial asset at fair value through profit or loss.

Derecognition of financial assets

A financial asset (or, where applicable, a part of a financial asset or part of a group of similar financial assets) is primarily derecognised (i.e., removed from the Group's consolidated statements of financial position) when:

- the rights to receive cash flows from the asset have expired; or
- the Group has transferred its rights to receive cash flows from the asset or has assumed an obligation to pay the received cash flows in full without material delay to a third party under a "pass-through" arrangement; and either (a) the Group has transferred substantially all the risks and rewards of the asset, or (b) the Group has neither transferred nor retained substantially all the risks and rewards of the asset, but has transferred control of the asset.

When the Group has transferred its rights to receive cash flows from an asset or has entered into a pass-through arrangement, it evaluates if, and to what extent, it has retained the risk and rewards of ownership of the asset. When it has neither transferred nor retained substantially all the risks and rewards of the asset nor transferred control of the asset, the Group continues to recognise the transferred asset to the extent of the Group's continuing involvement. In that case, the Group also recognises an associated liability. The transferred asset and the associated liability are measured on a basis that reflects the rights and obligations that the Group has retained.

Continuing involvement that takes the form of a guarantee over the transferred asset is measured at the lower of the original carrying amount of the asset and the maximum amount of consideration that the Group could be required to repay.

Impairment of financial assets

The Group recognises an allowance for expected credit losses ("ECLs") for all debt instruments not held at fair value through profit or loss. ECLs are based on the difference between the contractual cash flows due in accordance with the contract and all the cash flows that the Group expects to receive, discounted at an approximation of the original effective interest rate. The expected cash flows will include cash flows from the sale of collateral held or other credit enhancements that are integral to the contractual terms.

General approach

ECLs are recognised in two stages. For credit exposures for which there has not been a significant increase in credit risk since initial recognition, ECLs are provided for credit losses that result from default events that are possible within the next 12 months (a 12-month ECL). For those credit exposures for which there has been a significant increase in credit risk since initial recognition, a loss allowance is required for credit losses expected over the remaining life of the exposure, irrespective of the timing of the default (a lifetime ECL).

At the end of each of the Relevant Periods, the Group assesses whether the credit risk on a financial instrument has increased significantly since initial recognition. When making the assessment, the Group compares the risk of a default occurring on the financial instrument as at the end of each of the Relevant Periods with the risk of a default occurring on the financial instrument as at the date of initial recognition and considers reasonable and supportable information that is available without undue cost or effort, including historical and forward-looking information. The Group considers that there has been a significant increase in credit risk when contractual payments are more than 90 days past due.

The Group considers a financial asset in default when contractual payments are 90 days past due. However, in certain cases, the Group may also consider a financial asset to be in default when internal or external information indicates that the Group is unlikely to receive the outstanding contractual amounts in full before taking into account any credit enhancements held by the Group.

A financial asset is written off when there is no reasonable expectation of recovering the contractual cash flows.

Financial assets at amortised cost are subject to impairment under the general approach and they are classified within the following stages for measurement of ECLs except for trade receivables which apply the simplified approach as detailed below.

Stage 1 — Financial instruments for which credit risk has not increased significantly since initial recognition and for which the loss allowance is measured at an amount equal to 12-month ECLs;
Stage 2 — Financial instruments for which credit risk has increased significantly since initial recognition but that are not credit-impaired financial assets and for which the loss allowance is measured at an amount equal to lifetime ECLs;
Stage 3 — Financial assets that are credit-impaired at the end of each of the Relevant Periods (but that are not purchased or originated credit-impaired) and for which the loss allowance is measured at an amount equal to lifetime ECLs.

Simplified approach

For trade receivables that do not contain a significant financing component or when the Group applies the practical expedient of not adjusting the effect of a significant financing component, the Group applies the simplified approach in calculating ECLs. Under the simplified approach, the Group does not track changes in credit risk, but instead recognises a loss allowance based on lifetime ECLs at the end of each of the Relevant Periods. The Group has established a provision matrix that is based on its historical credit loss experience, adjusted for forward-looking factors specific to the debtors and the economic environment.

Financial liabilities

Initial recognition and measurement

Financial liabilities are classified, at initial recognition, as financial liabilities at fair value through profit or loss, loans and borrowings, or payables, as appropriate.

All financial liabilities are recognised initially at fair value and, in the case of loans and borrowings and payables, net of directly attributable transaction costs.

The Group's financial liabilities include interest-bearing bank and other borrowings, trade payables, derivative financial liabilities, convertible debentures, other payables and other non-current liabilities.

Subsequent measurement

The subsequent measurement of financial liabilities depends on their classification as follows:

Financial liabilities at fair value through profit or loss

Financial liabilities at fair value through profit or loss include financial liabilities held for trading and financial liabilities designated upon initial recognition as at fair value through profit or loss.

Financial liabilities are classified as held for trading if they are incurred for the purpose of repurchasing in the near term. This category also includes derivative financial instruments entered into by the Group that are not designated as hedging instruments in hedge relationships as defined by IFRS 9. Separated embedded derivatives are also classified as held for trading unless they are designated as effective hedging instruments. Gains or losses on liabilities held for trading are recognised in the statement of profit or loss. The net fair value gain or loss recognised in the statement of profit or loss does not include any interest charged on these financial liabilities.

Financial liabilities designated upon initial recognition as at fair value through profit or loss are designated at the initial date of recognition, and only if the criteria in IFRS 9 are satisfied. Gains or losses on liabilities designated at fair value through profit or loss are recognised in the statement of profit or loss, except for the gains or losses arising from the Group's own credit risk which are presented in other comprehensive income with no subsequent reclassification to the statement of profit or loss. The net fair value gain or loss recognised in the statement of profit or loss does not include any interest charged on these financial liabilities.

Financial liabilities at amortised cost (trade payables, other payables and interest-bearing bank and other borrowings)

After initial recognition, payables and borrowings are subsequently measured at amortised cost, using the effective interest rate method unless the effect of discounting would be immaterial, in which case they are stated at cost. Gains and losses are recognised in the statement of profit or loss when the liabilities are derecognised as well as through the effective interest rate amortisation process.

Amortised cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the effective interest rate. The effective interest rate amortisation is included in finance costs in the statement of profit or loss.

Derivative financial instruments

The Group uses derivative financial instruments, such as forward currency contracts and sales contracts with provisional pricing arrangements. Such derivative financial instruments are initially recognised at fair value on the date on which a derivative contract is entered into and are subsequently remeasured at fair value. Derivatives are carried as assets when the fair value is positive and as liabilities when the fair value is negative.

Any gains or losses arising from changes in fair value of derivatives are taken directly to the statement of profit or loss, except for the effective portion of cash flow hedges, which is recognised in other comprehensive income and later reclassified to profit or loss when the hedged item affects profit or loss.

Convertible debentures

The convertible debentures issued by CGI were designated upon initial recognition at fair value through profit or loss. It is initially recognised at fair value. Any directly attributable transaction costs are recognised as finance costs in profit or loss. The component of fair value changes relating to the issuer's own credit risk is recognised in other comprehensive income. Amounts recorded in other comprehensive income related to credit risk are not subject to recycling in profit or loss, but are transferred to retained earnings when realised. The net fair value changes relating to market risk are recognised in profit or loss which do not include any interest charged on these financial liabilities.

Inventories

Inventories are stated at the lower of cost and net realisable value. Cost is determined on the weighted average basis and, in the case of work in progress and finished goods, comprises direct materials, direct labour and an appropriate proportion of overheads. Net realisable value is based on estimated selling prices less any estimated costs to be incurred to completion and disposal.

Cash and cash equivalents

Cash and cash equivalents in the consolidated statement of financial position comprise cash on hand and at banks, and short-term highly liquid deposits with a maturity of generally within three months that are readily convertible into known amounts of cash, subject to an insignificant risk of changes in value and held for the purpose of meeting short-term cash commitments.

For the purpose of the consolidated statement of cash flows, cash and cash equivalents comprise cash on hand and at banks, including term deposits, and assets similar in nature to cash, which are not restricted as to use.

Provisions

A provision is recognised when a present obligation (legal or constructive) has arisen as a result of a past event and it is probable that a future outflow of resources will be required to settle the obligation, provided that a reliable estimate can be made of the amount of the obligation.

When the effect of discounting is material, the amount recognised for a provision is the present value at the end of each of the Relevant Periods of the future expenditures expected to be required to settle the obligation. The increase in the discounted present value amount arising from the passage of time is included in finance costs in the statement of profit or loss.

Provisions for the Group's obligations for environmental rehabilitation and restoration of mines are based on estimates of required expenditure at the mines in accordance with the local rules and regulations where the mines are located. The Group estimates its liabilities for final reclamation and mine closure based upon detailed calculations of the amount and timing of the future cash expenditure for the required work. Spending estimates are escalated for inflation, then discounted at a discount rate that reflects current market assessments of the time value of money and the risks specific to the liability such that the amount of provision reflects the present value of the expenditures expected to be required to settle the obligation. The Group records a corresponding asset in the period in which the liability is incurred. The liability is accreted to the projected expenditure date. As changes in estimates occur (such as mine plan revisions, changes in estimated costs, or changes in the timing of the performance of reclamation activities), the revisions to the obligation and the asset are recognised at the appropriate discount rate.

Income tax

Income tax comprises current and deferred tax. Income tax relating to items recognised outside profit or loss is recognised outside profit or loss, either in other comprehensive income or directly in equity.

Current tax assets and liabilities are measured at the amount expected to be recovered from or paid to the taxation authorities, based on tax rates (and tax laws) that have been enacted or substantively enacted by the end of each of the Relevant Periods, taking into consideration interpretations and practices prevailing in the countries in which the Group operates.

Deferred tax is provided, using the liability method, on all temporary differences at the end of each of the Relevant Periods between the tax bases of assets and liabilities and their carrying amounts for financial reporting purposes, except that deferred tax is not recognised for the Pillar Two income taxes.

Deferred tax liabilities are recognised for all taxable temporary differences, except:

- when the deferred tax liability arises from the initial recognition of goodwill or an asset or liability in a transaction that is not a business combination and, at the time of the transaction, affects neither the accounting profit nor taxable profit or loss and does not give rise to equal taxable and deductible temporary differences; and

- in respect of taxable temporary differences associated with investments in subsidiaries and associates, when the timing of the reversal of the temporary differences can be controlled and it is probable that the temporary differences will not reverse in the foreseeable future.

Deferred tax assets are recognised for all deductible temporary differences, and the carryforward of unused tax credits and any unused tax losses. Deferred tax assets are recognised to the extent that it is probable that taxable profit will be available against which the deductible temporary differences, and the carryforward of unused tax credits and unused tax losses can be utilised, except:

- when the deferred tax asset relating to the deductible temporary differences arises from the initial recognition of an asset or liability in a transaction that is not a business combination and, at the time of the transaction, affects neither the accounting profit nor taxable profit or loss and does not give rise to equal taxable and deductible temporary differences; and

- in respect of deductible temporary differences associated with investments in subsidiaries and associates, deferred tax assets are only recognised to the extent that it is probable that the temporary differences will reverse in the foreseeable future and taxable profit will be available against which the temporary differences can be utilised.

The carrying amount of deferred tax assets is reviewed at the end of each of the Relevant Periods and reduced to the extent that it is no longer probable that sufficient taxable profit will be available to allow all or part of the deferred tax asset to be utilised. Unrecognised deferred tax assets are reassessed at the end of each of the Relevant Periods and are recognised to the extent that it has become probable that sufficient taxable profit will be available to allow all or part of the deferred tax asset to be recovered.

Deferred tax assets and liabilities are measured at the tax rates that are expected to apply to the period when the asset is realised or the liability is settled, based on tax rates (and tax laws) that have been enacted or substantively enacted by the end of each of the Relevant Periods.

Deferred tax assets and deferred tax liabilities are offset if and only if the Group has a legally enforceable right to set off current tax assets and current tax liabilities and the deferred tax assets and deferred tax liabilities relate to income taxes levied by the same taxation authority on either the same taxable entity or different taxable entities which intend either to settle current tax liabilities and assets on a net basis, or to realise the assets and settle the liabilities simultaneously, in each future period in which significant amounts of deferred tax liabilities or assets are expected to be settled or recovered.

Revenue recognition

Revenue from contracts with customers

Revenue from contracts with customers is recognised when control of goods or services is transferred to the customers at an amount that reflects the consideration to which the Group expects to be entitled in exchange for those goods or services.

When the consideration in a contract includes a variable amount, the amount of consideration is estimated to which the Group will be entitled in exchange for transferring the goods or services to the customer. The variable consideration is estimated at contract inception and constrained until it is highly probable that a significant revenue reversal in the amount of cumulative revenue recognised will not occur when the associated uncertainty with the variable consideration is subsequently resolved.

When the contract contains a financing component which provides the customer with a significant benefit of financing the transfer of goods or services to the customer for more than one year, revenue is measured at the present value of the amount receivable, discounted using the discount rate that would be reflected in a separate financing transaction between the Group and the customer at contract inception. When the contract contains a financing component which provides the Group with a significant financial benefit for more than one year, revenue recognised under the contract includes the interest expense accreted on the contract liability under the effective interest method. For a contract where the period between the payment by the customer and the transfer of the promised goods or services is one year or less, the transaction price is not adjusted for the effects of a significant financing component, using the practical expedient in IFRS 15.

Sale of mineral products

Revenue from the sale of products is recognised at the point in time when control of the asset is transferred to the customer, generally on delivery of the products. A portion of the Group's sales of metal in concentrate allow for price adjustments based on the market price at the end of the relevant quotation periods ("QP") stipulated in the contract. These are referred to as provisional pricing arrangements and are such that the selling price for metal in concentrate is based on prevailing spot prices on a specified future date after shipment to the customer. Adjustments to the sales price occur based on movements in quoted market prices up to the end of the QP. The QPs can range between one and two months post shipment and final payment is due within 30 days after the end of the QP.

Revenue is recognised when control passes to the customer, which occurs at a point in time when the metal in concentrate is physically transferred onto a vessel, train, conveyor or other delivery mechanism.

Metal streaming arrangement

There is a metal streaming arrangement in CGI since 2020. In this arrangement, CGI received an upfront amount in cash from an investor and the investor in return received the right to purchase a certain proportion of future gold and silver production for the life of the mine at a price of a certain proportion of the market price at the time of delivery.

This upfront amount is considered to be a partial prepayment for the future delivery of an unknown but estimable amount of gold and silver ounces, with each ounce presenting a separate performance obligation. Upon receipt, the upfront amount is recognised as a contract liability. The upfront consideration is considered to represent variable consideration, on the basis that the portion of the upfront amount to be allocated to each future ounce will depend on the number of ounces estimated to remain in the mine. Revenue is recognised at the point in time when control of the goods is transferred. In addition, the transaction price is considered to contain a significant financing component, given the long-term nature of the upfront payment and the period of time between the receipt of the upfront cash, and the satisfaction of the future performance obligations. Given this, when the underlying production profile of the mine changes and the reserves and resources are updated, the variable portion of the transaction price allocated to each ounce will need to be updated relating to changes in variable transaction price in accordance with the requirements in IFRS 15. The change in transaction price per unit will therefore result in a cumulative catch up adjustment to revenue in the period in which the change is made, reflecting the updated number of ounces expected to be delivered under the streaming arrangement. There will also be a corresponding adjustment to the interest charge.

Revenue from other sources

Rental income is recognised on a time proportion basis over the lease terms. Variable lease payments that do not depend on an index or a rate are recognised as income in the accounting period in which they are incurred.

Other income

Interest income is recognised on an accrual basis using the effective interest method by applying the rate that exactly discounts the estimated future cash receipts over the expected life of the financial instrument or a shorter period, when appropriate, to the net carrying amount of the financial asset.

Contract liabilities

A contract liability is recognised when a payment is received or a payment is due (whichever is earlier) from a customer before the Group transfers the related goods or services. Contract liabilities are recognised as revenue when the Group performs under the contract (i.e., transfers control of the related goods or services to the customer).

Share-based payments

The Holding Company operates certain restricted A share incentive scheme and employee stock ownership scheme. Employees (including directors) of the Group receive remuneration in the form of share-based payments, whereby employees render services in exchange for equity instruments ("equity-settled transactions") of the Holding Company. The cost of equity-settled transactions with employees is measured by reference to the fair value at the date at which they are granted, further details of which are given in note 39 to the financial statements.

The cost of equity-settled transactions is recognised in employee benefit expense, together with a corresponding increase in equity, over the period in which the performance and/or service conditions are fulfilled. The cumulative expense recognised for equity-settled transactions at the end of each Relevant Periods until the vesting date reflects the extent to which the vesting period has expired and the Group's best estimate of the number of equity instruments that will ultimately vest. The charge or credit to the statement of profit or loss for a period represents the movement in the cumulative expense recognised as at the beginning and end of that period.

Service and non-market performance conditions are not taken into account when determining the grant date fair value of awards, but the likelihood of the conditions being met is assessed as part of the Group's best estimate of the number of equity instruments that will ultimately vest. Market performance conditions are reflected within the grant date fair value. Any other conditions attached to an award, but without an associated service requirement, are considered to be non-vesting conditions. Non-vesting conditions are reflected in the fair value of an award and lead to an immediate expensing of an award unless there are also service and/or performance conditions.

For awards that do not ultimately vest because non-market performance and/or service conditions have not been met, no expense is recognised. Where awards include a market or non-vesting condition, the transactions are treated as vesting irrespective of whether the market or non-vesting condition is satisfied, provided that all other performance and/or service conditions are satisfied.

Where the terms of an equity-settled award are modified, as a minimum an expense is recognised as if the terms had not been modified, if the original terms of the award are met. In addition, an expense is recognised for any modification that increases the total fair value of the share-based payments, or is otherwise beneficial to the employee as measured at the date of modification. Where an equity-settled award is cancelled, it is treated as if it had vested on the date of cancellation, and any expense not yet recognised for the award is recognised immediately.

Other employee benefits

Pension schemes

The Group operates a defined contribution Mandatory Provident Fund retirement benefit scheme (the "MPF Scheme") under the Mandatory Provident Fund Schemes Ordinance for all of its employees in Hong Kong. The assets of the MPF Scheme are held separately from those of the Group in an independently administered fund. Contributions are made based on a percentage of the employees' basic salaries and are charged to the statement of profit or loss as and when the contributions fall due.

The employees of the Group's subsidiaries which operate overseas are required to participate in a central pension scheme operated by the local municipal government. Contributions are made based on a percentage of the employees' salaries and are charged to the statement of profit or loss as they become payable. The contributions are charged to the statement of profit or loss as they become payable in accordance with the rules of the central pension scheme.

Termination benefits

Termination benefits are recognised at the earlier of when the Group can no longer withdraw the offer of those benefits and when the Group recognises restructuring costs involving the payment of termination benefits.

Borrowing costs

Borrowing costs directly attributable to the acquisition, construction or production of qualifying assets, i.e., assets that necessarily take a substantial period of time to get ready for their intended use or sale, are capitalised as part of the cost of those assets. The capitalisation of such borrowing costs ceases when the assets are substantially ready for their intended use or sale. All other borrowing costs are expensed in the period in which they are incurred. Borrowing costs consist of interest and other costs that an entity incurs in connection with the borrowing of funds.

Events after the Relevant Periods

If the Group receives information after the Relevant Periods, but prior to the date of authorisation for issue, about conditions that existed at the end of each of the Relevant Periods, it will assess whether the information affects the amounts that it recognises in its financial statements. The Group will adjust the amounts recognised in its financial statements to reflect any adjusting events after the Relevant Periods and update the disclosures that relate to those conditions in light of the new information. For non-adjusting events after the Relevant Periods, the Group will not change the amounts recognised in its financial statements, but will disclose the nature of the non-adjusting events and an estimate of their financial effects, or a statement that such an estimate cannot be made, if applicable.

Dividends

Final dividends are recognised as a liability when they are approved by the shareholders in a general meeting. Proposed final dividends are disclosed in the note 15 to the Historical Financial Information.

Foreign currencies

The Historical Financial Information is presented in United States Dollar ("USD"), which is the Company's functional currency. Each entity in the Group determines its own functional currency and items included in the financial statements of each entity are measured using that functional currency. Foreign currency transactions recorded by the entities in the Group are initially recorded using their respective functional currency rates prevailing at the dates of the transactions. Monetary assets and liabilities denominated in foreign currencies are translated at the functional currency rates of exchange ruling at the end of each of the Relevant Periods. Differences arising on settlement or translation of monetary items are recognised in the statement of profit or loss.

Non-monetary items that are measured in terms of historical cost in a foreign currency are translated using the exchange rates at the dates of the initial transactions. Non-monetary items measured at fair value in a foreign currency are translated using the exchange rates at the date when the fair value was measured. The gain or loss arising on translation of a

non-monetary item measured at fair value is treated in line with the recognition of the gain or loss on change in fair value of the item (i.e., translation difference on the item whose fair value gain or loss is recognised in other comprehensive income or profit or loss is also recognised in other comprehensive income or profit or loss, respectively).

In determining the exchange rate on initial recognition of the related asset, expense or income on the derecognition of a non-monetary asset or non-monetary liability relating to an advance consideration, the date of initial transaction is the date on which the Group initially recognises the non-monetary asset or non-monetary liability arising from the advance consideration. If there are multiple payments or receipts in advance, the Group determines the transaction date for each payment or receipt of the advance consideration.

The functional currencies of certain overseas subsidiaries and associates are currencies other than the USD. As at the end of each of the Relevant Periods, the assets and liabilities of these entities are translated into USD at the exchange rates prevailing at the end of each of the Relevant Periods and their statements of profit or loss are translated into USD at the exchange rates that approximate to those prevailing at the dates of the transactions.

The resulting exchange differences are recognised in other comprehensive income and accumulated in the exchange fluctuation reserve, except to the extent that the differences are attributable to non-controlling interests. On disposal of a foreign operation, the cumulative amount in the reserve relating to that particular foreign operation is recognised in the statement of profit or loss.

For the purpose of the consolidated statement of cash flows, the cash flows of overseas subsidiaries are translated into USD at the exchange rates that approximate to those prevailing at the dates of the transactions. Frequently recurring cash flows of overseas subsidiaries which arise throughout the year are translated into USD at the weighted average exchange rates for the year.

5. SIGNIFICANT ACCOUNTING JUDGEMENTS AND ESTIMATES

The preparation of the Group's Historical Financial Information requires management to make judgements, estimates and assumptions that affect the reported amounts of revenues, expenses, assets and liabilities, and their accompanying disclosures, and the disclosure of contingent liabilities at the end of each of the Relevant Periods. Uncertainty about these estimates and assumptions could result in outcomes that could require a material adjustment to the carrying amount of the assets or liabilities affected in the future.

Judgements

In the process of applying the Group's accounting policies, management has made the following judgements, apart from those involving estimations, which have the most significant effects on the amounts recognised in the financial statements:

Consolidation of affiliated entities through contractual agreements

The Group executive effective control over Zijin America by entering into a series of contractual arrangements. Nevertheless, the contractual arrangements and other measures may not be as effective as direct legal ownership in providing the Group with direct control over Zijin America and uncertainties presented by possible litigation could impede the Group's beneficiary rights of the results, assets and liabilities of Zijin America. The directors of the Company, based on the advice of its legal counsel, consider that the contractual arrangements in relation to Zijin America are in compliance with the relevant laws and are legally enforceable.

Corporate income tax

As a result of the fact that certain matters relating to the corporate income taxes have not been confirmed by the local tax bureau as at the end of the Relevant Periods, objective estimates based on currently enacted tax laws, regulations and other related policies are required in determining the provision for corporate income tax expenses to be made for the each of the Relevant Periods. Where the final tax outcome of these matters is different from the amounts originally recorded, the differences will be accounted for in the income tax expenses in the period in which the differences are realised.

Estimation uncertainty

The key assumptions concerning the future and other key sources of estimation uncertainty at the balance sheet date, that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the future accounting periods, are described below.

Impairment of financial assets

The Group has adopted the expected credit loss model to evaluate the impairment of financial assets. The application of the expected credit loss model requires significant judgements and estimates and the consideration of all reasonable and soundly based information, including forward-looking information. In making such judgements and estimates, the Group estimates the projected movements of the debtor's credit risk according to past repayment records, economic policies, macro-economic indicators and industry risks, etc. Different estimates may affect the impairment provision, and the amount of impairment provision may not equal to the actual amount of impairment loss in the future.

Impairment of non-current assets other than financial assets (excluding goodwill)

The Group assesses whether there are any indicators of impairment for non-current assets other than financial assets at the end of the each of the Relevant Periods. Other non-current assets other than financial assets are tested for impairment when there are indicators that the carrying amounts may not be recoverable. An impairment exists when the carrying value of an asset or asset group exceeds its recoverable amount, which is the higher of its fair value less costs of disposal and its value in use. The calculation of the fair value less costs of disposal based on available data from binding sales transactions in an arm's length transaction of similar assets or observable market prices less incremental costs for disposing of the asset. When value in use calculations are undertaken, management must estimate the expected future cash flows from the asset or asset group and choose a suitable discount rate in order to calculate the present value of those cash flows. These estimates and judgements may be recognised affected by changes in future market or economic conditions.

Exploration expenditures

After determining the capitalisation amount of exploration expenditures, the Group will regularly evaluate the exploration results. If the reviewed geological exploration report shows that there are no prospecting results or no economically recoverable reserves, or that the economic benefits of mining cannot be achieved and further exploration is unnecessary due to low grade and difficulties in mining and processing, the exploration and development costs previously collected will be expensed and included in the statement of profit and loss for the current period in a lump sum.

Proved mineral reserves

Proved mineral reserves are estimated based on professional knowledge, experience and industry practice. Generally, the mineral reserve volume estimated based on probing and estimation may not be very accurate. The estimation is updated in accordance with new technologies and new information. Any changes in estimation will have impacts on the amounts of mining assets' depreciation and mining rights' amortisation using the UOP method, on the stripping ratio which was used in the capitalisation of stripping costs, and on each of the transaction prices of the metal streaming arrangement, etc. This may result in changes of or impacts on the Group's development and operation plan, and hence the Group's operations and operating results.

Deferred tax assets

To the extent that it is probable that there are sufficient taxable profits to offset the deductible losses, deferred tax assets shall be recognised for all unused deductible losses. Substantial management's judgements regarding the timing, amount of future taxable profit as well as tax planning strategies are needed when estimating the amount of deferred tax assets. Further details are included in note 22 to the Historical Financial Information.

Provision for environmental rehabilitation and restoration of mines

Pursuant to the regulations of the governmental authorities of the places where the mines are located, the Group recognises provision for environmental rehabilitation and restoration of mines. The amount of provision is an estimate based upon the life of mining rights, timing of mine closure and cost of such rehabilitation. When this estimate changes, it may affect the Group's operations and performance. Further details are included in note 34 to the Historical Financial Information.

Leases — Estimating the incremental borrowing rate

The Group cannot readily determine the interest rate implicit in a lease, and therefore, it uses an incremental borrowing rate ("IBR") to measure lease liabilities. The IBR is the rate of interest that the Group would have to pay to borrow over a similar term, and with a similar security, the funds necessary to obtain an asset of a similar value to the right-of-use asset in a similar economic environment. The IBR therefore reflects what the Group "would have to pay", which requires estimation when no observable rates are available (such as for subsidiaries that do not enter into financing transactions) or when it needs to be adjusted to reflect the terms and conditions of the lease (for example, when leases are not in the subsidiary's functional currency). The Group estimates the IBR using observable inputs (such as market interest rates) when available and is required to make certain entity-specific estimates (such as the subsidiary's stand-alone credit rating).

6. OPERATING SEGMENT INFORMATION

The Company identifies operating segments and prepares segment information based on the regular internal financial information reported to the executive directors for their decisions about resources allocation to the Group's business components and for their review of the performance of those components. The business components in the internal financial information reported to the executive directors are determined following the Group's major product lines.

During the Relevant Periods and the six months ended 30 June 2024, the Group was principally engaged in exploration and mining of gold and non-ferrous metal. Management reviews the operating results of the businesses as a single operating segment to make decisions about resources to be allocated. Therefore, the executive directors regard that there is only one segment which is used to make strategic decisions.

The Republic of Tajikistan	691,122	440,600	515,841	228,021	328,936
The Republic of Ghana	—	—	—	—	123,350
	1,816,967	2,260,420	2,986,278	1,400,545	1,995,980
Timing of revenue recognition					
Goods and services transferred at a point in time	1,816,967	2,260,420	2,986,278	1,400,545	1,995,980
	1,816,967	2,260,420	2,986,278	1,400,545	1,995,980

The following table shows the amounts of revenue recognised in the Relevant Periods and the six months ended 30 June 2024 that were included in the contract liabilities at the beginning of each of the Relevant Periods and the six months ended 30 June 2024:

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000
Revenue recognised that was included in contract liabilities at the beginning of each of the Relevant Periods:					
Sale of goods	1,443	572	1,590	1,590	—
Sale of silver from metal streaming arrangement *(note 36)*	5,876	8,616	10,473	3,812	4,038
	7,319	9,188	12,063	5,402	4,038

(b) Information about the Group's performance obligations

Sale of goods:

The Group recognises revenue when customers gain the control of goods. Prepayments received from customers before delivery of goods are recognised as contract liabilities in the consolidated financial statements. Among them, the sales arrangement related to the metal streaming arrangement is detailed in note 36.

The Group has elected the practical expedient as described in IFRS 15.121(b) to not disclose the remaining performance obligations for these types of contracts.

8. OTHER INCOME AND GAINS

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000

HKD6,000,000 to HKD7,500,000	—	—	1	—	—
	5	5	5	5	5

13. INCOME TAX

Hong Kong profits tax has been provided at the rate of 16.5% on the estimated assessable profits arising in Hong Kong during the during the Relevant Periods and the six months ended 30 June 2024. Taxes on profits assessable elsewhere have been calculated at the rates of tax prevailing in the jurisdictions in which the Group operates.

Pillar Two income taxes

The Group is within the scope of the Pillar Two model rules. The Group has applied the mandatory exception to recognizing and disclosing information about deferred tax assets and liabilities arising from Pillar Two income taxes, and will account for the Pillar Two income taxes as current tax when incurred. Pillar Two legislation has been enacted or substantively enacted but not yet in effect as at 30 June 2025 in certain jurisdictions in which the Group operates.

The Group has assessed its potential exposure based on the information available regarding the financial performance of the Group in the Relevant Periods and the six months ended 30 June 2024. As such, it may not be entirely representative of future circumstances. Based on the assessment, the Group's effective tax rates in all jurisdictions in which it operates are above 15% and the directors of the Company are not currently aware of any circumstances under which they might change. Therefore, the Group does not expect potential exposure to Pillar Two "top-up" taxes. The Group continues to follow Pillar Two legislative developments, as more countries prepare to enact the Pillar Two model rules, to evaluate the potential future impact on its financial statements. List of other corporate income tax rates applicable to the Group's subsidiaries:

Countries and regions	Rates
Kyrgyz Republic *(note i)*	10.00%
The Republic of Colombia	35.00%
Cooperative Republic of Guyana	25.00%
Republic Suriname	36.00%
The Republic of Tajikistan	18.00%
The Commonwealth of Australia	30.00%
The Republic of Ghana	32.50%

(i) In accordance with the latest local tax law regulations dated 18 January 2022 in the Kyrgyz Republic, the subsidiary of the Company located there is subject to the following tax rates: Corporate income tax rate for enterprises engaged in mining activities and selling gold concentrate is 10%; Corporate income tax rate for enterprises engaged in gold doré and gold bullion is 0%.

An analysis of the Group's provision for tax is as follows:

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000
Current — Hong Kong	10,208	18,372	12,769	4,459	(128)
Current — Elsewhere	118,679	101,981	189,299	79,415	242,651
Deferred *(note 22)*	8,201	(27,773)	114,332	63,584	(2,862)
	137,088	92,580	316,400	147,458	239,661

A reconciliation of the tax expense applicable to profit before tax at the statutory rates for jurisdictions in which the Company and the majority of its subsidiaries are domiciled and/or operate to the tax expense at the effective tax rates are as follows:

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000
Profit before tax	427,404	414,741	936,955	424,887	864,231
Tax at the statutory tax rate of 16.5%	70,522	68,432	154,598	70,106	142,598
Effect of different tax rates available to different jurisdictions	15,791	38,779	110,007	50,350	104,359
Non-deductible expenses	33,768	36,281	28,358	17,849	19,903
Tax losses utilised from previous periods	(2,634)	(320)	(15)	(9)	—
Income not subject to tax	(33,556)	(40,322)	(39,370)	(20,559)	(21,440)
Adjustments in respect of current tax of previous periods	—	965	2,339	2,247	3,096
Effect of non-monetary items with a tax base determined in a different currency *(note i)*	18,075	(31,921)	11,782	4,979	(15,075)
Effect of withholding tax on the interest income and dividend income from overseas companies	34,324	20,567	48,348	22,128	4,500
Tax losses not recognised	798	119	353	367	1,720
Tax charge at the effective rate	137,088	92,580	316,400	147,458	239,661

(i) A subsidiary of the Group with major business operating in the Republic of Colombia adopts USD as its functional currency, while make tax declaration and annual filing in Columbian Peso("COP") for the operating activities in the Republic of Colombia in accordance with local tax regulations in the Republic of Colombia. Non-monetary items including inventories and fixed assets of such enterprises on the consolidated statement of financial position are recognised and subsequently measured at historical exchange rate, resulting temporary difference between their tax bases and carrying amounts upon tax accounting, the Company accordingly recognise the relevant temporary difference as a deferred tax asset/liability and charged or credited to the consolidated statement of profit or loss in accordance with IAS 12.58.

14. EARNINGS PER SHARE ATTRIBUTABLE TO ORDINARY EQUITY HOLDERS OF THE PARENT

The calculation of the basic earnings per share amounts is based on the profit for each of the Relevant Periods and the six months ended 30 June 2024 attributable to ordinary equity holders of the parent, and the weighted average number of ordinary shares of 546,000,000, 546,000,000, 546,000,000, 2,275,000,000 and 546,000,000 for each of the Relevant Periods and the six months ended 30 June 2024, respectively, as adjusted to reflect the rights issue during each of the Relevant Periods and the six months ended 30 June 2024.

The calculation of the diluted earnings per share amounts is based on the profit for the year attributable to ordinary equity holders of the parent. The weighted average number of ordinary shares used in the calculation is the number of ordinary shares in issue during the year, as used in the basic earnings per share calculation, and the weighted average number of ordinary shares assumed to have been issued at no consideration on the deemed exercise or conversion of all dilutive potential ordinary shares into ordinary shares.

The Group had no potentially dilutive ordinary shares outstanding for each of the Relevant Periods and the six months ended 30 June 2024.

The calculations of basic and diluted earnings per share are based on:

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000
Earnings					
Profit attributable to ordinary equity holders of the parent, used in the basic earnings per share calculation:	183,680	230,383	481,371	214,363	520,227

17. LEASES

The Group as a lessee

The Group has lease contracts for various items of leasehold land, buildings, machinery, motor vehicles and other equipment used in its operations. Lump sum payments were made upfront to acquire the leased land from the owners with lease periods of 7 to 10 years, and no ongoing payments will be made under the terms of these land leases. Leases of building and motor vehicles generally have lease terms between 2 and 15 years, while machinery and vehicles generally have lease terms between 2 and 10 years. Other equipment generally has lease terms of 12 months or less and/or is individually of low value. Generally, the Group is restricted from assigning and subleasing the leased assets outside the Group.

(a) Right-of-use assets

The carrying amounts of the Group's right-of-use assets and the movements are as follows:

	Leasehold land	Buildings	Machinery and equipment	Motor vehicles	Total

19. INVESTMENTS IN A JOINT VENTURE

The Group and the Company

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Share of net assets	—	—	—	94,755

Particulars of the joint venture are as follows:

Name	Particulars of issued shares held	Place of incorporation and business	Percentage of ownership interest attributable to the Group	Principal activity
Porgera (Jersey) Limited ("Porgera Jersey")	Ordinary shares	Papua New Guinea	50%	Investment

The above investment is directly held by the Company.

On 29 April 2025, the Company entered into a share purchase agreement with a fellow subsidiary Jinyu (H.K.) International Company Limited ("Jinyu (H.K.)"), pursuant to which the Company agreed to acquire 50% of the equity interest in Porgera Jersey from Jinyu (H.K.), at a consideration of USD94,755,000 with reference to the net value of Porgera Jersey at acquisition date. Out of the adjusted purchase consideration of approximately USD60,000,000 has been settled and the remaining balance of USD34,755,000 has been recorded under other payables as at June 30, 2025.

In accordance with the investment agreement, the Group is entitled to 50% of voting rights of Porgera Jersey. Proposed actions should be approved by more than 50% of the affirmative vote before shareholders, directors, manager or general manager execute.

20. INVESTMENT IN AN ASSOCIATE

The Group

	31 December			30 June

	USD'000	USD'000	USD'000	USD'000
Share of net assets	13,536	13,690	12,540	13,080

Particulars of the associate are as follows:

Name	Particulars of issued shares held	Place of incorporation/ registration and business	Percentage of ownership interest attributable to the Group	Principal activities
Yilgiron Pty Ltd. ("Yilgiron")	Ordinary shares	Australia	35%	Mining

In accordance with the investment agreement, the Group is entitled to 35% voting rights of Yilgiron. As at 30 June 2025, Yilgiron was still under the stage of preliminary exploration with no material business undertaking and the share of profit or loss on Yilgiron was insignificant.

21. INVESTMENTS IN SUBSIDIARIES

The Company

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Investment costs	37,382	104,768	104,768	1,958,040
Less: provision for impairment	—	—	—	—
	37,382	104,768	104,768	1,958,040

22. DEFERRED TAX

The movements in deferred tax assets and liabilities during the Relevant Periods, without taking into consideration the offsetting of the balance within the same tax jurisdiction, are as follows:

Deferred tax assets	Tax losses	Unrealised profit	Accruals and other provisions	Rehabilitation provision	Others	Total
	USD'000	USD'000	USD'000	USD'000	USD'000	USD'000
At 1 January 2022	48,624	9,515	4,054	21,618	764	84,575
(Charged)/credited to the consolidated statement of profit or loss *(note 13)*	(2,776)	1,590	(312)	1,731	4,817	5,050
Gross deferred tax assets at 31 December 2022	45,848	11,105	3,742	23,349	5,581	89,625

Charged/(credited) to the consolidated statement of profit or loss *(note 13)*	22,076	(20,901)	31,080	21,028	53,283
Gross deferred tax liabilities at 31 December 2024	194,786	307,227	65,142	77,244	644,399
(Credited)/charged to the consolidated statement of profit or loss *(note 13)*	5,887	(10,355)	—	(21,238)	(25,706)
Acquisition of a subsidiary	119,886	261,962	—	48,007	429,855
Gross deferred tax liabilities at 30 June 2025	320,559	558,834	65,142	104,013	1,048,548

For presentation purposes, certain deferred tax assets and liabilities have been offset in the statements of financial position. The following is an analysis of the deferred tax balances of the Group for financial reporting purposes:

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Net deferred tax assets recognised in the consolidated statement of financial position	16,545	21,754	10,138	10,244
Net deferred tax liabilities recognised in the consolidated statement of financial position	455,040	467,228	569,944	852,641

Deferred tax assets have not been recognised in respect of the following item:

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Tax losses	2,506	1,858	3,164	9,381

The above tax losses are available for offsetting against future taxable profits of the companies in which the losses arose, subject to certain tax rules of the countries/jurisdictions in which the Group operates. Deferred tax assets have not been recognised in respect of the above items as it is not considered probable that taxable profits will be available against which the above item can be utilised.

23. OTHER NON-CURRENT ASSETS

The Group

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Stockpiled ore *(note i)*	37,587	89,127	108,272	104,193
Value-added tax refundable	22,340	31,807	19,184	35,185
Advance payment for equipment	50,148	8,773	5,252	5,981
Underground development costs	2,692	4,462	5,942	4,376
Others	8,395	13,181	11,888	23,308
	121,162	147,350	150,538	173,043

(i) If the ore stockpile is not expected to be processed in 12 months after the reporting date, it is included in non-current assets.

24. DUE FROM SUBSIDIARIES

The Company

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Amount due from subsidiaries	130,371	188,576	215,690	1,449,971
Analysed into:				
Current portion	37,758	95,957	215,690	1,287,879
Non-current portion	92,613	92,619	—	162,092

25. INVENTORIES

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Raw materials	180,746	261,319	273,598	328,290
Work in progress	100,648	123,375	138,339	153,171
Finished goods	32,401	15,578	25,425	11,907
	313,795	400,272	437,362	493,368

26. TRADE RECEIVABLES

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Trade receivables (subject to provisional pricing) — fair value *(note i)*	2,199	10,848	6,756	139,922
Trade receivables (not subject to provisional pricing) — amortised cost	115,965	131,864	111,833	127,739
Impairment	(362)	(433)	(365)	(491)
	117,802	142,279	118,224	267,170

(i) Trade receivables (subject to provisional pricing) are non-interest bearing, but as discussed in note 4 above, are exposed to future commodity price movements over the QP and, hence, fail the SPPI test and are measured at fair value up until the date of settlement. Approximately 95%–100% of the provisional invoice (based on the provisional price) is received in cash when the goods are loaded onto the ship, which reduces the initial receivable recognised under IFRS 15. The QPs can range between one and two months post shipment and final payment is due within 30 days after the end of the QP.

Trade receivables (not subject to provisional pricing) are non-interest-bearing and generally have a credit period within 30 days.

An ageing analysis of the trade receivables (not subject to provisional pricing) as at the end of each of the Relevant Periods, based on the invoice date and net of loss allowance, is as follows:

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Less than 1 year	115,585	131,421	111,403	127,022
Over 1 year	18	10	65	226
	115,603	131,431	111,468	127,248

Set out below is the information about the credit risk exposure on the Group's trade receivables using a provision matrix:

As at 31 December 2022

	Expected credit loss rate	Gross carrying amount	Expected credit losses	Net carrying amount
		USD'000	USD'000	USD'000
Provision on collective basis				
Aged less than 1 year	0.29%	115,939	336	115,603
Aged 1 to 2 years	30.00%	—	—	—
Aged 2 to 3 years	50.00%	—	—	—
Aged over 3 years	100.00%	26	26	—
At end of year	0.31%	115,965	362	115,603

As at 31 December 2023

	Expected credit loss rate	Gross carrying amount	Expected credit losses	Net carrying amount
		USD'000	USD'000	USD'000
Provision on collective basis				
Aged less than 1 year	0.32%	131,849	418	131,431
Aged 1 to 2 years	30.00%	—	—	—
Aged 2 to 3 years	50.00%	—	—	—
Aged over 3 years	100.00%	15	15	—
At end of year	0.33%	131,864	433	131,431

As at 31 December 2024

	Expected credit loss rate	Gross carrying amount	Expected credit losses	Net carrying amount
		USD'000	USD'000	USD'000

Aged 2 to 3 years	50.00%	—	—	—
Aged over 3 years	100.00%	15	15	—
At end of year	0.33%	111,833	365	111,468

As at 30 June 2025

	Expected credit loss rate	Gross carrying amount	Expected credit losses	Net carrying amount
		USD'000	USD'000	USD'000
Provision on collective basis				
Aged less than 1 year	0.30%	127,401	379	127,022
Aged 1 to 2 years	30.00%	323	97	226
Aged 2 to 3 years	50.00%	—	—	—
Aged over 3 years	100.00%	15	15	—
At end of period	0.38%	127,739	491	127,248

27. PREPAYMENTS, OTHER RECEIVABLES AND OTHER ASSETS

The Group

	Note	31 December			30 June
		2022	2023	2024	2025
		USD'000	USD'000	USD'000	USD'000
Prepayments		38,128	56,845	37,328	33,131
Value-added tax refundable		9,778	28,203	39,917	33,050
Deferred listing expenses		—	—	—	685
Deposit in a related party *(note i)*	45	124,290	134,339	233,443	148,370
Amounts due from related parties	45	15,291	32,670	16,893	11,894
Income tax recoverable		8,434	66,998	51,189	26,007
Bank deposits in transit		—	—	—	15,000
Prepaid dividend tax		—	—	—	18,872
Other assets		12,370	42,955	25,536	26,481
Less: Impairment of other receivables		(1,629)	(1,696)	(1,767)	(1,688)
		206,662	360,314	402,539	311,802

(i) According to the physical cash pooling agreements signed with Zijin International Capital Company Limited ("ZIC"), a fellow subsidiary, the Group deposited idle cash to ZIC's bank accounts with interest rate between 0.3% and 5.1% per annum, which were unsecured and have no fixed terms of repayment. As at 31 December 2022, 2023, 2024 and 30 June 2025, the balance of such deposited idle cash were equal to USD124,290,000, USD134,339,000, USD233,443,000 and USD148,370,000, respectively.

The Company

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Deferred listing expenses	—	—	—	400
Deposit in a related party	90,723	106,289	169,380	46,292
Other assets	156	156	156	156
Less: Impairment of other receivables	(129)	(203)	(359)	(46)
	90,750	106,242	169,177	46,802

Other receivables are unsecured. An impairment analysis is performed at the end of each of the Relevant Periods. The credit quality of the financial assets included in the line items of prepayments, other receivables and other assets is considered to be normal unless they are past due and there is no information indicating that the financial assets had a significant increase in credit risk since initial recognition.

28. FINANCIAL ASSETS AT FAIR VALUE THROUGH PROFIT OR LOSS

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Listed equity investments, at fair value	1,666	1,020	1,514	9,558

The above equity investments were classified as financial assets at fair value through profit or loss as they were held for trading.

29. CASH AND CASH EQUIVALENTS, AND RESTRICTED CASH

The Group

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Cash and bank balances	91,339	160,890	241,235	464,873
Less: restricted cash				
— Current	(4,881)	(6,136)	(6,650)	(6,953)
— Non-current	—	—	—	(93,802)
Cash and cash equivalents	86,458	154,754	234,585	364,118

Cash at banks earns interest at floating rates based on daily bank deposit rates. The bank balances and restricted cash are deposited with creditworthy banks with no recent history of default.

The Company

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Cash and bank balances	3,061	2,513	2,641	113,068
Less: restricted cash	—	—	—	—
Cash and cash equivalents	3,061	2,513	2,641	113,068

Cash at banks earns interest at floating rates based on daily bank deposit rates. The bank balances and restricted cash are deposited with creditworthy banks with no recent history of default.

30. DERIVATIVE FINANCIAL INSTRUMENTS

Derivative financial asset:

The Group and the Company

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Forward currency contracts	5,269	—	—	—

Derivative financial liability:

The Group

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Power purchase agreement	—	30,801	32,004	29,425
Analysed into:				
Current portion	—	4,959	5,484	5,085
Non-current portion	—	25,842	26,520	24,340

In 2023, the Group acquired Rosebel GM. According to the power purchase agreement signed between Rosebel GM and the Suriname Electricity Company, the electricity price paid by Rosebel GM is linked to the gold price. The Group identified it as a derivative financial instrument measured at fair value and with its changes recognised in the statements of profit and loss.

31. TRADE PAYABLES

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Trade payables	155,370	306,667	244,768	288,105

The trade payables are non-interest-bearing and are normally settled on 30-day terms.

An ageing analysis of trade payables as at the end of each of the Relevant Periods is as follows:

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000

	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Rehabilitation *(note i)*	91,016	226,064	230,604	658,270
Litigation	2,503	2,545	2,502	2,502
Total	93,519	228,609	233,106	660,772

(i) Pursuant to the regulations of the governmental authorities of the places where the mines are located, the Group recognises provision for environmental rehabilitation and restoration of mines. The amount of provision is an estimate based upon the life of mining tenements, timing of mine closure and cost of such rehabilitation. The management will update the estimation basis annually. The movements in the present value of the provision for rehabilitation are as follows:

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000

35. CONVERTIBLE DEBENTURES

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Convertible debentures	62,042	67,666	70,859	73,682

On 13 December 2019, CGI issued convertible debentures to GMHK for a total of USD50,000,000. The key terms and conditions of the agreements are as follows:

- Maturity date of 16 December 2024, which was extended to 16 December 2025 by a renewal agreement in 2024.
- Interest of 5%, payable semi-annually.
- The debentures being convertible, at the option of the Debenture Holder, GMHK, and at any time prior to the maturity date, into common shares of the Continental Gold Inc. based on a conversion price of CAD4.50 per share.

The convertible debentures contain embedded derivatives relating to the conversion option, a foreign currency feature (since the conversion price is in CAD), the anti-dilutive provision, a voluntary redemption option and a change of control feature. The convertible debentures issued by CGI are designated as financial liabilities at fair value through profit or loss and were subsequently measured at fair value, which was calculated using the Black-Scholes option pricing model.

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
At beginning of year/period	57,059	62,042	67,666	70,859
Fair value change	4,983	5,624	3,193	2,823
At end of year/period	62,042	67,666	70,859	73,682

36. OTHER NON-CURRENT LIABILITIES

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Contract liabilities — metal streaming arrangement *(note i)*	124,733	118,325	114,659	113,263
	124,733	118,325	114,659	113,263

(i): On 25 June 2019, CGI entered into a metal streaming arrangement with Triple Flag Precious Metals Corp. ("Triple Flag") and obtained a prepayment of USD100,000,000 from Triple Flag. CGI shall satisfy its delivery obligations with 2.1% of the future gold production of the Columbia Mine (the "Gold Delivery Obligation") and silver production equals to 1.84 times of the Gold Delivery Obligation (the "Silver Delivery Obligation"). For each ounce of product delivered under the agreement, Triple Flag would pay 10% and 5%, respectively, of the gold and silver market prices prevailing at the time of delivery. Besides, the agreement also stipulated that CGI might choose to repurchase the Gold Delivery Obligation in advance before 31 December 2021, and the consideration would be USD80,000,000 less 90% of the value of the gold delivered (the "Redemption Right of the Gold Delivery Obligation"). The Group redeemed the gold delivery obligation in advance in 2020 and began to fulfill the silver delivery obligation.

37. SHARE CAPITAL

	2022 USD'000	31 December 2023 USD'000	2024 USD'000	30 June 2025 USD'000
Issued and fully paid:				
2,275,000,000 (as at 31 December 2022, 31 December 2023 and 31 December 2024: 546,000,000) ordinary shares	69,706	69,706	69,706	3,109,706

A summary of movements in the Company's share capital is as follows:

	Number of shares in issue	Share capital USD'000
At 1 January 2022, 31 December 2022, 31 December 2023 and 31 December 2024	546,000,000	69,706
Issue of ordinary shares during the period *(note(i))*	1,729,000,000	3,040,000
At 30 June 2025	2,275,000,000	3,109,706

(i) On 14 March 2025, the Company further issued 1,171,000,000 Shares to GMHK at approximately HKD6.7 per share. On 6 May 2025, the Company further issued 558,000,000 Shares to GMHK at approximately HKD28.5 per share. Immediately after such share issuance, the Company was held as to 24% and 76% by Zijin Mining Group Northwest Co., Ltd and GMHK respectively.

38. RESERVES

The Group

The amounts of the Group's reserve and the movements therein for the Relevant Periods and the six months ended 30 June 2024 are presented in the consolidated statements of changes in equity of the Historical Financial Information.

Merger reserve

The merger reserve of the Group represents the difference between the aggregate of the paid-up share capital and capital reserve of the subsidiaries now comprising the Group and the consideration paid by the Group for the business combination under common control.

Awarded shares reserve

Awarded shares reserve represents the share-based compensation reserve due to equity-settled share award, details of which were set out in note 39 to the Historical Financial Information.

Exchange fluctuation reserve

The exchange fluctuation reserve comprises all foreign exchange differences arising from the translation of the financial statements of foreign operations with functional currency other than USD. The reserve is dealt with in accordance with the accounting policies set out in note 4 to the Historical Financial Information.

The Company

A summary of the Company's reserves is as follows:

	Retained profits USD'000
At 1 January 2022	65,193
Profit for the year	61,875
At 31 December 2022 and 1 January 2023	127,068
Profit for the year	135,055
At 31 December 2023 and 1 January 2024	262,123
Profit for the year	98,164
At 31 December 2024	360,287
Profit for the period	(22,494)
At 30 June 2025	337,793

39. SHARE BASED PAYMENTS

The share-based payments to the Group's employees are granted under Zijin Mining 2020 Restricted A Share Incentive Scheme and Zijin Mining 2023 Employee Stock Ownership Scheme as historically the Group did not have its own share incentive plan. The Historical Financial Information includes allocation of the expenses recorded at Zijin Mining based on the Group's employees participating under Zijin Mining 2020 Restricted A Share Incentive Scheme and Zijin Mining 2023 Employee Stock Ownership Scheme.

The Group accounted for the Zijin Mining 2020 Restricted A Share Incentive Scheme and Zijin Mining 2023 Employee Stock Ownership Scheme by measuring the fair value of the restricted shares in accordance with the requirement applicable to equity-settled share-based payment transactions in accordance with IFRS 2 and recognised a corresponding increase in equity as a deemed contribution from Zijin Mining.

The Group recognises share-based payments in its consolidated statements of profit or loss based on shares ultimately expected to vest, after considering estimated forfeitures conditions of the Group. Forfeitures are estimated based on the historical experience and revised in the subsequent periods if actual forfeitures differ from those estimates. The total expense recognised for the Relevant Periods and the six months ended 30 June 2024 arising from share-based payment are USD1,130,000, USD659,000, USD1,307,000, USD298,000 and USD602,000, respectively.

Zijin Mining 2020 Restricted A Share Incentive Scheme

The restricted A shares are generally market-based and service-based, which were granted by Zijin Mining on 13 January 2021, and the registration completed on 28 January 2021. If the unlocking conditions of the restricted A shares as stipulated in the scheme are met, the participants under the scheme can apply to unlock the A shares on 28 January 2023, 28 January 2024 and 28 January 2025, respectively, with the upper limit of 33%, 33% and 34% of the number of A shares granted under the Zijin Mining 2020 Restricted A share Incentive Scheme. If the unlocking conditions of the restricted A shares are not met, the unlocked restricted A shares will be repurchased and cancelled by Zijin Mining at the grant price plus the bank deposit interest for the same period.

The following table summarises the Company's involvement in Zijin Mining 2020 Restricted A Share Incentive Scheme activities during the Relevant Periods:

	Number of Restricted A shares
Outstanding as of 1 January 2022 and as of 31 December 2022	4,178,100
Vested during the year	(1,405,800)
Outstanding as of 31 December 2023	2,772,300
Vested during the year	(1,415,700)
Outstanding as of 31 December 2024	1,356,600
Vested during the period	(1,356,600)
Outstanding as of 30 June 2025	—

The estimated compensation cost of restricted A shares was based on the fair value of Zijin Mining's ordinary shares on the date of the grant. The Group recognises the compensation cost, net of estimated forfeitures, over the vesting term of the restricted A shares.

Zijin Mining 2023 Employee Stock Ownership Scheme

Zijin Mining operates 2023 Employee Stock Ownership Scheme for the purpose of providing incentives and rewards to eligible participants who contribute to the success of the Zijin Mining's operations, including certain employees of the Group. Zijin Mining granted the related A shares on 26 February 2024, and the registration completed on 16 April 2024. If the unlocking conditions of the employee stock ownership as stipulated in the scheme are met, the participants under the scheme can apply to unlock the shares on 16 April 2025. If the unlocking conditions of the A shares are not met, the unlocked employee stock ownership will be repurchased and cancelled by Zijin Mining at the grant price plus the bank deposit interest for the same period.

The following table summarises the Company's involvement in Zijin Mining 2023 Employee Stock Ownership Scheme activities during the Relevant Periods:

	Number of Restricted A shares
Outstanding as of 1 January 2022, as of 31 December 2022 and as of 31 December 2023	—
Granted	2,269,700
Forfeited	(155,000)
Outstanding as of 31 December 2024	2,114,700
Granted	—
Vested	(2,084,700)
Forfeited	(30,000)
Outstanding as of 30 June 2025	—

40. BUSINESS COMBINATION

Acquisitions of Rosebel GM

On 1 February 2023, Silver Source Group Limited, a subsidiary of the Group, acquired 95% equity interest in Rosebel GM, at a total consideration of USD371,532,000, including USD309,426,000 for equity interest and USD62,106,000 for assuming shareholder's loans.

The Group has elected to measure the non-controlling interests in Rosebel GM at the non-controlling interest's proportionate share of Rosebel GM identifiable net assets.

The fair values of the identifiable assets and liabilities of Rosebel GM as at the date of acquisition were as follows:

	Notes	Fair value recognised on acquisition
		USD'000
Property, plant and equipment	16	381,016
Intangible assets	18	96,140
Other non-current assets		65,431
Cash and cash equivalents		39,781
Trade receivables		301
Prepayments, deposits and other receivables		15,660
Inventories		100,650
Provisions	34	103,765
Deferred tax liabilities	22	34,752
Other non-current liabilities		9,348
Trade payables		21,903
Other payables and accruals *(note i)*		203,500
Total identifiable net assets at fair value		325,711
Non-controlling interests		16,286
Satisfied by cash		309,425

(i) Other payables included shareholder loans of USD62,106,000.

Analysis of net cash outflows of cash and cash equivalent in respect of the acquisition of the subsidiary is as follows:

	2023 USD'000
Cash consideration	(309,425)
Cash and bank balances acquired	39,781
Total net cash outflow	(269,644)

Since the acquisition, Rosebel GM contributed USD468,823,000 to the Group's revenue and a profit of USD93,708,000 to the Group's consolidated profit for the year ended 31 December 2023.

Had the combination taken place at the beginning of the year ended 31 December 2023, the revenue from continuing operations of the Group and the profit of the Group for the year ended 31 December 2023 would have been USD2,309,710,000 and USD311,724,000, respectively.

Acquisitions of Zijin Golden Ridge

On 16 April 2025, Gold Source International Holdings Company Limited, a subsidiary of the Group, acquired 100% equity interest in Newmont Golden Ridge Ltd. (a wholly-owned subsidiary of Newmont Corporation), at a total consideration of USD1,007,769,000 ("the Acquisition"). Following the completion of the Acquisition, Newmont Golden Ridge became a wholly-owned subsidiary of Gold Source and was subsequently renamed as Zijin Golden Ridge after the completion of the Acquisition on 30 April 2025.

The fair values of the identifiable assets and liabilities of Zijin Golden Ridge as at the date of acquisition were as follows:

	Notes	Fair value recognised on acquisition USD'000
Property, plant and equipment	16	671,019
Intangible assets	18	935,099
Right of use assets	17	3,487
Cash and cash equivalents		21,732
Restricted cash		93,468
Trade and other receivables		31,529
Inventories		37,599
Provisions	34	419,725
Deferred tax liabilities	22	285,453
Lease liabilities	17	3,175
Trade and other payables		77,811
Total identifiable net assets at fair value		1,007,769
Satisfied by cash		887,691
Other payables and accruals *(note i)*		120,078

(i) Out of the adjusted purchase consideration of approximately USD887,691,000 has been settled and the remaining balance of USD120,078,000 has been recorded under other payables as at 30 June 2025.

Analysis of net cash outflows of cash and cash equivalent in respect of the acquisition of the subsidiary is as follows:

	2025 USD'000
Cash consideration	(887,691)
Cash and bank balances acquired	115,200
Less: restricted cash	(93,468)
Total net cash outflow	(865,959)

Since the acquisition, Zijin Golden Ridge contributed USD123,350,000 to the Group's revenue and a profit of USD30,359,000 to the Group's consolidated profit for the six months ended 30 June 2025.

Had the combination taken place at the beginning of the six months ended 30 June 2025, the revenue from continuing operations of the Group and the profit of the Group for the six months ended 30 June 2025 would have been USD2,251,640,000 and USD685,903,000 respectively.

41. DISPOSAL OF SUBSIDIARIES

On 3 April 2025, Norton Gold disposed 100% equity interest in Bullabulling Gold Pty Ltd and Bullabulling Operations Pty Ltd ("BAB") to Minerals 260 Limited (a listed company in Australia), at a total consideration of AUD166,443,519 (equivalent to USD108,854,000), including AUD156,443,519 (equivalent to USD102,314,000) for cash and 83,333,333 shares of Minerals 260 Limited with fair value of AUD10,000,000 (equivalent to USD6,540,000). Gain on disposal of BAB is disclosed in note 8.

An analysis of the net inflow of cash and cash equivalents in respect of the disposal of subsidiaries is as follows:

	2025 USD'000
Cash consideration	102,314
Cash and bank balances disposed of	(3)
Net inflow of cash and cash equivalents in respect of the disposal of subsidiaries	102,311

42. PARTLY-OWNED SUBSIDIARIES WITH MATERIAL NON-CONTROLLING INTERESTS

	Year ended 31 December			Six months ended 30 June

(c) Total cash outflows for leases

The total cash outflows for leases included in the consolidated statement of cash flows are as follows:

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000
Within operating activities	7,833	5,112	5,323	1,848	2,432
Within financing activities	9,078	12,952	16,049	6,478	10,044
	16,911	18,064	21,372	8,326	12,476

44. COMMITMENTS AND CONTINGENCIES

(a) The Group had the following capital commitments at the end of each of the Relevant Periods:

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Contracted, but not provided for:				
Property, plant and equipment	114,680	250,290	176,753	148,840

(b) The Group has various lease contracts that have not yet commenced as at 30 June 2025. The future lease payments for these non-cancellable lease contracts are USD12,624,000 due within one year, USD29,980,000 due in the second to fifth years.

45. RELATED PARTY TRANSACTIONS

(a) The Group had the following related parties during the Relevant Periods:

The Holding Company of the Company is Zijin Mining Group Co., Ltd. and the ultimate holding company is Minxi Xinghang State-owned Assets Investment Company Limited.

Name of related parties	Relationship between related parties and the Company
Staatsolie Maatschappij Suriname N.V.	Non-controlling shareholder of a subsidiary
The Government of the Republic of Tajikistan	Non-controlling shareholder of a subsidiary
CLAI Gilding (BVI) Investment Limited	Non-controlling shareholder of a subsidiary
ZLCFL-Cayman International Investment Cooperation Limited	Non-controlling shareholder of a subsidiary
Kyrgyzaltyn Joint Stock Company	Non-controlling shareholder of a subsidiary

(b) In addition to the transactions detailed elsewhere in the Historical Financial Information, the Group had the following transactions with related parties during the Relevant Periods and the six months ended 30 June 2024:

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000
Sales to related parties under the sales arrangement *(note i)*					
The Holding Company and fellow subsidiaries of the Group (the "Zijin Mining Group")	597,704	635,785	1,272,927	489,193	989,005
Non-controlling shareholder of a subsidiary	212,432	250,933	279,815	134,922	169,946
	810,136	886,718	1,552,742	624,115	1,158,951
Purchase from a related party under centralised procurement arrangement *(note ii)*					
Zijin Mining Group	110,941	111,095	80,254	40,226	48,143
Purchases from related parties under technical service arrangement *(note iii)*					
Zijin Mining Group	38,629	80,052	77,565	35,871	57,689
Associate of Zijin Mining Group	1,116	974	2,504	787	1,399
	39,745	81,026	80,069	36,658	59,088
Insurance service purchases from related parties under financial service arrangement					
Zijin Mining Group	—	—	4,897	805	3,324
Management fee paid to related parties					
Zijin Mining Group	4,520	4,433	13,017	5,763	8,741
Non-controlling shareholder of a subsidiary	1,200	1,218	1,200	600	600
	5,720	5,651	14,217	6,363	9,341
Interest expense on interest-bearing borrowings from related parties					
Zijin Mining Group	50,332	42,547	43,631	20,828	17,913
Non-controlling shareholders of a subsidiary	6,686	4,742	673	673	—
	57,018	47,289	44,304	21,501	17,913
Interest income from related parties					
Zijin Mining Group	181	378	2,746	421	2,156

(i) The sales to related parties under the sales arrangement represents the sales of gold and other by-products (such as copper and silver) to related parties with reference to the market price based on arm's length discussion with reference to similar arrangements in the open market.

(ii) The purchases from related parties under Zijin Mining Centralized Procurement Arrangement represents the purchases of equipment and raw materials from certain subsidiaries of Zijin Mining Group with reference to the terms offered to the Group by independent suppliers for the same or similar type and scope of procurement services.

(iii) The purchases from related parties under technical service arrangement represents the purchases of provision of underground mining services factory design and construction and other services with reference to the terms offered to the Group by independent suppliers for the same or similar type and scope of procurement services.

(c) Advances to/from a related party

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000
Advances to a related party					
Zijin Mining Group	105,117	161,306	81,425	49,639	783,462
Advances from a related party					
Zijin Mining Group	216,675	188,251	165,264	35,946	868,977

According to the physical cash pooling agreements signed with ZIC, a fellow subsidiary, the Group deposited idle cash to ZIC's bank accounts with interest rate between 0.3% and 5.1% per annum, which were unsecured and have no fixed terms of repayment.

(d) New borrowings from related parties

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000

	1,276,519	103,107	1,379,626

47. FAIR VALUE AND FAIR VALUE HIERARCHY OF FINANCIAL INSTRUMENTS

Management has assessed that the fair values of cash and cash equivalents, trade receivables not subject to provisional pricing, financial assets included in prepayments, other receivables and other assets, trade payables, financial liabilities included in other payables and accruals approximate to their carrying amounts largely due to the short-term maturities of these instruments.

The fair values of interest bearing bank and other loans, lease liabilities and financial liabilities included in other payables and accruals were determined by discounting the expected future cash flows using market rates of return currently available for other financial instruments with similar terms, credit risk and remaining maturities or incremental borrowing rate. The Group's own non-performance risk for short-term and long-term loans was assessed to be insignificant. The listed equity investments is determined based on quoted market prices.

The Group's finance department headed by the finance manager is responsible for determining the policies and procedures for the fair value measurement of financial instruments. The finance manager reports directly to the chief financial officer and the audit committee. At the end of each of the Relevant Periods, the finance department analyses the movements in the values of financial instruments and determines the major inputs applied in the valuation. The valuation is reviewed and approved by the chief financial officer. The valuation process and results are discussed with the audit committee twice a year for interim and annual financial reporting.

Fair value hierarchy

The following tables illustrate the fair value measurement hierarchy of the Group's financial instruments:

Assets measured at fair value:

As at 31 December 2022

	—	—	102,863	102,863

As at 30 June 2025

	Fair value measurement using			
	Quoted prices in active markets (Level 1)	Significant observable inputs (Level 2)	Significant unobservable inputs (Level 3)	Total
	USD'000	USD'000	USD'000	USD'000
Convertible debentures	—	—	73,682	73,682
Derivative financial instrument — power purchase agreement	—	—	29,425	29,425
	—	—	103,107	103,107

During the Relevant Periods, there were no transfers between Level 1 and Level 2, or transfers into or out of Level 3 for both financial assets and financial liabilities. The Group's policy is to recognise transfers between levels of the fair value hierarchy as at the end of each of the Relevant Periods in which they occur.

Below is a summary of significant unobservable inputs to the valuation of financial instruments together with a quantitative sensitivity analysis as at the end of each of the Relevant Periods:

As at 31 December 2022

	Valuation technique	Significant unobservable input	Range	Sensitivity of fair value to the input
Convertible debentures	Binomial tree model	Discount rate	4.51%	1% increase/decrease in multiple would result in decrease/increase in fair value by USD227,111

As at 31 December 2023

	Valuation technique	Significant unobservable input	Range	Sensitivity of fair value to the input
Convertible debentures	Binomial tree model	Discount rate	4.84%	1% increase/decrease in multiple would result in decrease/increase in fair value by USD124,808
Derivative financial instrument-power purchase agreement	Monte Carlo Simulation	Discount rate	3.85%–5.38%	1% increase/decrease in multiple would result in decrease/increase in fair value by USD2,128,261

As at 31 December 2024

	Valuation technique	Significant unobservable input	Range	Sensitivity of fair value to the input
Convertible debentures . .	Binomial tree model	Discount rate	4.26%	1% increase/decrease in multiple would result in decrease/increase in fair value by USD133,601
Derivative financial instrument — power purchase agreement	Monte Carlo Simulation	Discount rate	4.26–4.62%	1% increase/decrease in multiple would result in decrease/increase in fair value by USD1,427,151

As at 30 June 2025

	Valuation technique	Significant unobservable input	Range	Sensitivity of fair value to the input
Convertible debentures . .	Binomial tree model	Discount rate	4.26%	1% increase/decrease in multiple would result in decrease/increase in fair value by USD65,524
Derivative financial instrument — power purchase agreement	Monte Carlo Simulation	Discount rate	3.72%–4.52%	1% increase/decrease in multiple would result in decrease/increase in fair value by USD3,993,427

48. FINANCIAL RISK MANAGEMENT OBJECTIVES AND POLICIES

The Group is exposed to various risks in relation to financial instruments in its daily operations, mainly credit risk, liquidity risk and market risk (including interest rate risk, exchange rate risk, and commodity price risk). The Group's major financial instruments include cash and cash equivalents, financial assets at fair value through profit or loss, derivative financial assets, trade receivables, financial assets included in prepayments, other receivables and other assets, interest-bearing bank and other borrowings, derivative financial liabilities, convertible debentures, trade payables and other payables and accruals. The Group also enters into certain derivative transactions, including forward currency contracts. The purpose is to manage currency risks arising from the Group's foreign currency borrowings. Risks in connection with such financial instruments, and the risk management strategies adopted by the Group to mitigate such risks are summarised as follows.

Interest rate risk

The Group's exposure to the risk of changes in market interest rates relates primarily to the Group's long-term debt obligations with a floating interest rate.

The following table demonstrates the sensitivity to a reasonably possible change in interest rate, with all other variables held constant, of the Group's profit after tax (through the impact on floating rate borrowings) and the Group's equity.

	Increase/ (decrease) in basis points	Increase/ (decrease) in profit before tax USD'000
2022		
United States dollar	100/(100)	(4)/4
2023		
United States dollar	100/(100)	(8)/8
2024		
United States dollar	100/(100)	—
Six months ended 30 June 2025		
United States dollar	100/(100)	—

Foreign currency risk

The Group has transactional exchange rate risk exposures mainly arising from sales or purchases by subsidiaries in currencies other than the subsidiaries' functional currencies. These subsidiaries have transactions in currencies other than their functional currencies. In addition, the Group has exchange rate exposures arising from foreign currency borrowings. The Group adopts an overall management on its foreign exchange business, and reduces its exchange rate exposures using forward currency contracts based on the market trend as necessary.

The following tables present a sensitivity analysis of exchange rate risk, reflecting the impact that a reasonable and probable change in the exchange rates of COP, CAD, KGS, AUD, CNY, TJS, with all other variables remain constant, would have on net profit or loss and other comprehensive income, net of tax.

	Increase/ (decrease) in exchange rate	Increase/ (decrease) in profit before tax USD'000
2022		
If USD weakens against AUD	5%	980
If USD strengthens against AUD	(5%)	(980)

If USD weakens against RMB	5%	756
If USD strengthens against RMB	(5%)	(756)
If USD weakens against CAD	5%	93
If USD strengthens against CAD	(5%)	(93)

Credit risk

The Group only deals with approved and reputable third parties. According to the Group's policy, all customers who require credit transactions are subject to credit review. In addition, the Group continuously monitors the balance of trade receivables to ensure that the Group is not exposed to significant bad debt risks.

Since counterparties of cash and bank balances are banks with good reputation and high credit ratings, credit risk arising from these financial instruments is insignificant.

Other financial assets of the Group include receivables and some derivatives. The credit risk on these financial assets arises from the default of counterparties, with a maximum exposure equal to the carrying amounts of these instruments.

The Group only deals with approved and reputable third parties, so no need for collateral. Credit risk is managed centrally based on customers/counterparties, geographic regions and industries. As at 31 December 2022, 2023 and 2024, and 30 June 2025, the Group had a specific concentration of credit risk 25.93%, 63.16%, 67.35% and 70.06% of the Group's trade receivables were from the largest customers. And 87.80%, 97.30%, 96.73% and 99.35% of the Group's trade receivables were from the top five customers. The balance of trade receivables of the Group did not hold any collateral or other credit enhancements.

Determination of significant increase in credit risk

At the end of each of the Relevant Periods, the Group assesses whether the credit risk on the relevant financial instruments has increased significantly since initial recognition. When determining whether the credit risk has increased significantly since initial recognition, the Group considers reasonable and supportable information that is relevant and available without undue cost or effort, including qualitative and quantitative analysis based on historical data of the Group, external credit risk ratings and forward-looking information.

Definition of credit-impaired financial assets

In order to determine whether credit impairment occurs, the defined criteria adopted by the Group are consistent with the internal credit risk management objectives for relevant financial instruments, both of which incorporate quantitative and qualitative indicators. When assessing whether a debtor has suffered a credit impairment, the Group usually considers the following factors:

(1) significant financial difficulty of the issuer or the debtor;

(2) breach of contract by the debtor, such as default or overdue payment in interest or principal repayment;

(3) a concession granted by the creditor to the debtor due to economic or contractual considerations related to the debtor's financial difficulty, which will not be granted under any other circumstances;

(4) possible bankruptcy or other financial reorganisation of the debtor;

(5) disappearance of an active market for the financial asset due to financial difficulty of the issuer or the debtor;

(6) financial assets purchased or sourced at large discounts indicating credit losses have occurred.

Financial assets may be credit-impaired due to the joint effects of multiple events rather than separately identifiable events.

Liquidity risk

The Group's objective is to maintain a balance between continuity of funding and flexibility through the use of loans and bank borrowings.

The maturity profile of the Group's financial liabilities as at the end of each of the Relevant Periods, based on the contractual undiscounted payments, is as follows:

	As at 31 December 2022			
	Within 1 year	1 to 2 years	2 to 5 years	Total
	USD'000	USD'000	USD'000	USD'000

Other payables and accruals	323,634	—	—	—	323,634
	758,012	416,692	297,077	3,746	1,470,211

During the Relevant Periods, the Group's strategy was to maintain the gearing ratio at a healthy level in order to monitor capital. The principal strategies adopted by the Group include, but are not limited to, reviewing future cash flow requirements and the ability to meet debt repayment schedules when they fall due, maintaining a reasonable level of available banking facilities and adjusting investment plans and financing plans, if necessary, to ensure that the Group has a reasonable level of capital to support its business. Gearing ratio is calculated by dividing total interest-bearing debt (which includes current and non-current portions of convertible debentures, interest-bearing bank and other borrowings and lease liabilities) by total equity.

The gearing ratios at the end of each of the Relevant Periods were as follows:

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Convertible bonds	62,042	67,666	70,859	73,682
Interest-bearing bank and other borrowings	607,895	655,217	610,797	615,020
Lease liabilities	20,336	12,166	51,257	49,760
	690,273	735,049	732,913	738,462
Total equity	2,364,079	2,591,330	2,902,091	4,236,317
Gearing ratio	29%	28%	25%	17%

Capital management

The primary objective of the Group's capital management is to ensure that it maintains strong credit rating and healthy capital ratios in order to support its business and maximise shareholders' value.

The Group regards total equity as its capital and manages its capital structure and makes adjustments to it, in light of changes in economic conditions. To maintain or adjust the capital structure, the Group may adjust the dividend payment to shareholders, return capital to shareholders or issue new shares. No changes were made in the objectives, policies and processes during the Relevant Periods.

49. EVENTS AFTER THE RELEVANT PERIODS

On 28 June 2025, the Group entered into an agreement with Cantech S.a.r.l ("Cantech") (the "Raygorodok SPA") in relation to the acquisition of all issued share capital in each of RG Gold LLP ("RGG") and RG Processing LLP ("RGP", together RGG, the "Target Companies"), which own and operate the Raygorodok Gold Mine in Kazakhstan (the "Kazakhstan Raygorodok Gold Mine") for a cash consideration of US$1.2 billion, subject to customary adjustments with reference to the financial information of the Target Companies as of 30 September 2025.

50. SUBSEQUENT FINANCIAL STATEMENTS

No audited financial statements have been prepared by the Company, the Group or any of its subsidiaries in respect of any period subsequent to 30 June 2025.

The following is the text of a report set out on pages IB-1 to IB-3, received from the Company's reporting accountant, Ernst & Young, Certified Public Accountants, Hong Kong, for the purpose of incorporation in this document. It is prepared and addressed to the directors of the Company and to the Joint Sponsors pursuant to the requirements of HKSIR 200 Accountants' Reports on Historical Financial Information in Investment Circulars issued by the Hong Kong Institute of Certified Public Accountants.

ACCOUNTANTS' REPORT ON HISTORICAL FINANCIAL INFORMATION OF RG PROCESSING LLP TO THE DIRECTORS OF ZIJIN GOLD INTERNATIONAL COMPANY LIMITED, MORGAN STANLEY ASIA LIMITED AND CITIC SECURITIES (HONG KONG) LIMITED

INTRODUCTION

We report on the historical financial information of RG Processing LLP ("RGP") set out on pages IB-4 to IB-32, which comprises the statements of profit or loss and other comprehensive income, the statements of changes in equity and the statements of cash flows of RGP for each of the years ended 31 December 2022, 2023, 2024 and the six months ended 30 June 2025 (the "Relevant Periods"), and the statements of financial position of RGP as at 31 December 2022, 2023, 2024 and 30 June 2025 and material accounting policy information and other explanatory information (together, the "Historical Financial Information"). The Historical Financial Information set out on pages IB-4 to IB-32 forms an integral part of this report, which has been prepared for inclusion in the prospectus of Zijin Gold International Company Limited (the "Company") dated 19 September 2025 (the "Prospectus") in connection with the initial listing of the shares of the Company on the Main Board of The Stock Exchange of Hong Kong Limited (the "Stock Exchange").

DIRECTORS' RESPONSIBILITY FOR THE HISTORICAL FINANCIAL INFORMATION

The directors of the Company are responsible for the preparation of the Historical Financial Information that gives a true and fair view in accordance with the basis of preparation set out in Note 2 to the Historical Financial Information.

The Underlying Financial Statements of RGP as defined on page IB-4, on which the Historical Financial Information is based, were prepared by the directors of RGP. The directors of RGP are responsible for the preparation of the Underlying Financial Statements that give a true and fair view in accordance with IFRS Accounting Standards,

and for such internal control as the directors of RGP determine is necessary to enable the preparation of Underlying Financial Statements that is free from material misstatement, whether due to fraud or error.

REPORTING ACCOUNTANTS' RESPONSIBILITY

Our responsibility is to express an opinion on the Historical Financial Information and to report our opinion to you. We conducted our work in accordance with Hong Kong Standard on Investment Circular Reporting Engagements 200 *Accountants' Reports on Historical Financial Information in Investment Circulars* issued by the Hong Kong Institute of Certified Public Accountants ("HKICPA"). This standard requires that we comply with ethical standards and plan and perform our work to obtain reasonable assurance about whether the Historical Financial Information is free from material misstatement.

Our work involved performing procedures to obtain evidence about the amounts and disclosures in the Historical Financial Information. The procedures selected depend on the reporting accountants' judgement, including the assessment of risks of material misstatement of the Historical Financial Information, whether due to fraud or error. In making those risk assessments, the reporting accountants consider internal control relevant to the entity's preparation of the Historical Financial Information that gives a true and fair view in accordance with the basis of preparation set out in Note 2 to the Historical Financial Information in order to design procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Our work also included evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by the directors, as well as evaluating the overall presentation of the Historical Financial Information.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

OPINION

In our opinion, the Historical Financial Information gives, for the purposes of the accountants' report, a true and fair view of the financial position of RGP as at 31 December 2022, 2023, 2024 and 30 June 2025 and of the financial performance and cash flows of RGP for each of the Relevant Periods in accordance with the basis of preparation set out in Note 2 to the Historical Financial Information.

REVIEW OF INTERIM COMPARATIVE FINANCIAL INFORMATION

We have reviewed the interim comparative financial information of RGP which comprises the statement of profit or loss and other the statement of comprehensive income, the statement of changes in equity and the statement of cash flows for the six months ended 30 June 2024 and other explanatory information (the "Interim Comparative Financial Information").

The directors of the Company are responsible for the preparation of the Interim Comparative Financial Information in accordance with the basis of preparation set out in Note 2 to the Historical Financial Information. Our responsibility is to express a conclusion on the Interim Comparative Financial Information based on our review. We conducted our review in accordance with Hong Kong Standard on Review Engagements 2410 *Review of Interim Financial Information Performed by the Independent Auditor of the Entity* as issued by the HKICPA. A review consists of making inquiries, primarily of persons responsible for financial and accounting matters, and applying analytical and other review procedures. A review is substantially less in scope than an audit conducted in accordance with Hong Kong Standards on Auditing and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion. Based on our review, nothing has come to our attention that causes us to believe that the Interim Comparative Financial Information, for the purposes of the accountants' report, is not prepared, in all material respects, in accordance with the basis of preparation set out in Note 2 to the Historical Financial Information.

REPORT ON MATTERS UNDER THE RULES GOVERNING THE LISTING OF SECURITIES ON THE STOCK EXCHANGE AND THE COMPANIES (WINDING UP AND MISCELLANEOUS PROVISIONS) ORDINANCE

Adjustments

The Historical Financial Information is stated after making such adjustments to the Underlying Financial Statements as defined on page IB-4 as were considered necessary.

Dividends

We refer to Note 13 to the Historical Financial Information which states that no dividends have been paid by RGP in respect of the Relevant Periods.

I. HISTORICAL FINANCIAL INFORMATION

Preparation of Historical Financial Information

Set out below is the Historical Financial Information which forms an integral part of this accountants' report.

The financial statements of RGP for the Relevant Periods, on which the Historical Financial Information is based, were audited by Ernst & Young Limited Liability Partnership in accordance with International Standards on Auditing issued by the International Auditing and Assurance Standards Board (the "Underlying Financial Statements").

The Historical Financial Information is presented in United States Dollar ("USD") and all values are rounded to the nearest thousand (USD'000) except when otherwise indicated.

II. NOTES TO THE HISTORICAL FINANCIAL INFORMATION

1. CORPORATE INFORMATION

RGP was established and registered as a limited liability company on 3 October 2018 in accordance with the legislation of the Republic of Kazakhstan. RGP was founded by Cantech S.a.r.l a private limited liability company registered in accordance with the laws of the Grand Duchy of Luxembourg, R.C.S. Luxembourg B213810, registered office: 1B, Heienhaff, L-1736 Senningerberg. The legal address of RGP is: Republic of Kazakhstan, 021723, Akmola region, Burabay district, Uspenoyurievsky rural district, Raigorodok village, Centralnaya street, 39.

Cantech S.a.r.l is owned by V Group International S.A. (65%) and RCF VII — RG Gold S.à r.l. (35%). RGP is controlled by Cantech S.a.r.l. RGP's ultimate beneficiaries are the members of the family of Mr. B. Utemuratov, resident of Republic of Kazakhstan.

In September 2022, a mining and metallurgical complex with a capacity of up to 5 million tons of ore per year was put into operation. Accordingly, since October 2022, RGP has been providing services for the processing of primary ore, which is the main activity of RGP.

2. BASIS OF PREPARATION

The Historical Financial Information has been prepared in accordance with IFRS Accounting Standards, which comprise all standards and interpretations approved by the International Accounting Standards Board (the "IASB"). All IFRS Accounting Standards effective for the accounting period commencing from 1 January 2025, together with the relevant transitional provisions, have been early adopted by RGP in the preparation of the Historical Financial Information throughout the Relevant Periods and in the period covered by the Interim Comparative Financial Information.

The Historical Financial Information has been prepared under the historical cost convention, except as discussed in the accounting policies and the notes to these financial statements.

The Historical Financial Information is presented in USD and all values are rounded to the nearest thousands, except when otherwise indicated.

The preparation of financial statements in conformity with IFRS Accounting Standards requires the use of certain critical accounting estimates. It also requires management to exercise its judgement in the process of applying RGP's accounting policies. The areas involving a higher degree of judgement or complexity, or areas where assumptions and estimates are significant to the Historical Financial Information are disclosed in Note 5.

Terms of business

The operations of RGP are located in Kazakhstan. Consequently, RGP is exposed to the economic and financial markets of the Republic of Kazakhstan which display characteristics of an emerging market. The legal, tax and regulatory frameworks continue development, but are subject to varying interpretations and frequent changes which together with other legal and fiscal impediments contribute to the challenges faced by entities operating in Kazakhstan.

The financial statements reflect management's assessment of the impact of the Kazakhstan business environment on the operations and the financial position of RGP. The future business environment may differ from management's assessment.

3. ISSUED BUT NOT YET EFFECTIVE IFRS ACCOUNTING STANDARDS

RGP has not applied the following new and amended IFRS Accounting Standards, that have been issued but are not yet effective. RGP intends to apply these new and amended IFRS Accounting Standards, if applicable, when they become effective.

IFRS 18	Presentation and Disclosure in Financial Statements[2]
IFRS 19	Subsidiaries without Public Accountability: Disclosures[2]
Amendments to IFRS 9 and IFRS 7	Amendments to the Classification and Measurement of Financial Instruments[1]
Amendments to IFRS 9 and IFRS 7	Contracts Referencing Nature-dependent Electricity[1]
Amendments to IFRS 10 and IAS 28	Sale or Contribution of Assets between an Investor and its Associate or Joint Venture[3]
Annual Improvements to IFRS Accounting Standards — Volume 11	Amendments to IFRS 1, IFRS 7, IFRS 9, IFRS 10 and IAS 7[1]

[1] Effective for annual periods beginning on or after 1 January 2026
[2] Effective for annual/reporting periods beginning on or after 1 January 2027
[3] No mandatory effective date yet determined but available for adoption

RGP is in the process of making an assessment of the impact of these new and amended IFRS Accounting Standards upon initial application. So far, RGP considers that these new and amended IFRS Accounting Standards may result in changes in accounting policies but are unlikely to have a significant impact on the RGP's results of operation and financial position.

4. MATERIAL ACCOUNTING POLICIES

Fair value measurement

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The fair value measurement is based on the presumption that the transaction to sell the asset or transfer the liability takes place either:

- In the principal market for the asset or liability; or
- In the absence of a principal market, in the most advantageous market for the asset or liability.

The principal or the most advantageous market must be accessible by RGP.

The fair value of an asset or a liability is measured using the assumptions that market participants would use when pricing the asset or liability, assuming that market participants act in their economic best interest.

A fair value measurement of a non-financial asset takes into account a market participant's ability to generate economic benefits by using the asset in its highest and best use or by selling it to another market participant that would use the asset in its highest and best use.

RGP uses valuation techniques that are appropriate in the circumstances and for which sufficient data are available to measure fair value, maximising the use of relevant observable inputs and minimising the use of unobservable inputs.

All assets and liabilities for which fair value is measured or disclosed in the financial statements are categorised within the fair value hierarchy, described as follows, based on the lowest level input that is significant to the fair value measurement as a whole:

- Level 1 — based on quoted prices (unadjusted) in active markets for identical assets or liabilities;
- Level 2 — based on valuation techniques for which the lowest level input that is significant to the fair value measurement is directly or indirectly observable;
- Level 3 — based on valuation techniques for which the lowest level input that is significant to the fair value measurement is unobservable.

For assets and liabilities that are revalued in the financial statements at fair value on a recurring basis, RGP determines whether transfers have occurred between levels in the hierarchy by re-assessing categorisation (based on the lowest level input that is significant to the fair value measurement as a whole) at the end of each Relevant periods.

Property, plant and equipment

Property, plant and equipment, other than construction in progress, are stated at cost less accumulated depreciation and accumulated impairment losses, if any. Such cost includes the cost of replacing part of plant and equipment and borrowing costs for long-term construction projects if the recognition criteria are met. When significant parts of property, plant and equipment are required to be replaced in intervals, RGP recognises such parts as individual assets with specific useful lives and depreciation, respectively. Likewise, when a major inspection is performed, its cost is recognised in the carrying amount of the property, plant and equipment as a replacement if the recognition criteria are satisfied. All other repair and maintenance costs are recognised in the statement of profit or loss and other comprehensive income as incurred. Depreciation is calculated on a straight-line basis over the estimated useful life of the asset as follows:

	Estimated useful lives
Buildings and constructions	10–30 years
Machinery and equipment	4–20 years
Vehicles	7–8 years
Other	3–7 years

An item of property, plant and equipment and any significant part initially recognised is derecognised upon disposal or when no future economic benefits are expected from its use or disposal. Gain or loss arising on derecognition of the asset (calculated as the difference between the net disposal proceeds and the carrying amount of the asset) is included in the statement of profit or loss and other comprehensive income when the asset is derecognised.

Construction in progress comprises costs directly related to facility construction, infrastructure, machinery and equipment. Construction in progress is stated at cost less any impairment losses, and is not depreciated.

Once the asset is completed and commissioned, the cost associated with the asset is transferred to property, plant and equipment. Amortisation of these assets commences when the assets are ready for their intended use.

Intangible assets

Intangible assets are stated at cost, net of accumulated depreciation and accumulated impairment losses, if any.

Intangible assets with finite lives are amortised over useful lives and assessed for impairment whenever there is an indication that the intangible asset may be impaired. The amortisation period and the amortisation method for an intangible asset are reviewed at least at the end of each of the Relevant Periods. Intangible assets are amortised on a straight-line basis over 3 to 7 years.

Changes in the expected useful life or the expected pattern of consumption of future economic benefits embodied in the assets are accounted for by changing the amortisation period or method, as appropriate, and are treated as changes in accounting estimates. The amortisation expense on intangible assets with finite lives is recognised in the statement of profit or loss and other comprehensive income in the expense category consistent with the function of the intangible assets.

Impairment of non-financial assets

RGP assesses at the end of each of the Relevant Periods whether there is an indication that an asset may be impaired. If any indication exists, or when annual impairment testing for an asset is required, RGP estimates the asset's recoverable amount. An asset's recoverable amount is the higher of an asset's or CGU's fair value less costs of disposal and its value in use. The recoverable amount is determined for an individual asset, unless the asset does not generate cash inflows that are largely independent of those from other assets or groups of assets, in which case the recoverable amount is determined for the cash-generating unit to which the asset belongs. When the carrying amount of an asset or CGU exceeds its recoverable amount, the asset is considered impaired and is written down to its recoverable amount. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. In determining fair value less costs of disposal, recent market transactions are taken into account. If no such transactions can be identified, an appropriate valuation model is used. These calculations are corroborated by valuation multiples, quoted share prices for publicly traded companies or other available fair value indicators.

RGP bases its impairment calculation on most recent budgets and forecast calculations, which are prepared for RGP that is considered as one CGU to which the individual assets are allocated. These budgets and forecast calculations generally cover a period of five years. A long-term growth rate is calculated and applied to project future cash flows after the fifth year.

Provisions

In accordance with the amendments made to the Environmental Code of the Republic of Kazakhstan, after the termination of the operation of facilities that have a negative impact on the environment, the owners of the facilities are obliged to ensure the elimination of the consequences of the operation of the facilities in accordance with the requirements of the legislation of the Republic of Kazakhstan. As part of the liquidation of the consequences of the operation of facilities that have a negative impact on the environment, work must be carried out to bring land plots into a condition that ensures the safety and (or) health of people, environmental protection and suitable for their further use for their intended purpose, in the manner provided by the land legislation of the Republic of Kazakhstan. According to the Environmental Code of the Republic of Kazakhstan, RGP's facilities is classified as an object that has a significant negative impact on the environment (objects of the 1st category). Accordingly, in 2022, RGP recognised a provision for decommissioning of the gold processing plant and recultivation of the land.

According to the management of RGP, the total undiscounted amount of the costs of decommissioning of the gold processing and recultivation of land after the completion of RGP's activities as at 30 June 2025 is USD18,280 thousand. The discounted value of the initially recognized liability is calculated based on the estimated design costs for the liquidation and dismantling of the plant and amounts to USD9,082 thousand. In June 2025, the management determined the present value of the restoration costs by discounting the estimated restoration cost using the rate of 9.52%, including the estimated inflation rate of 5.39%. Estimated liabilities formed on the cost of liquidation and dismantling of the plant are based on the assessment of RGP's specialists.

Financial assets

Initial recognition and measurement

Financial assets are classified, at initial recognition, as subsequently measured at amortised cost, fair value through other comprehensive income (OCI), and fair value through profit or loss.

The classification of financial assets at initial recognition depends on the financial asset's contractual cash flow characteristics and RGP's business model for managing them. With the exception of trade receivables that do not contain a significant financing component or for which RGP has applied the practical expedient of not adjusting the effect of a significant financing component, RGP initially measures a financial asset at its fair value plus, in the case of a financial asset not at fair value through profit or loss, transaction costs. Trade receivables that do not contain a significant financing component or for which RGP has applied the practical expedient are measured at the transaction price determined under IFRS 15 in accordance with the policies set out for "Revenue from contracts with customers" below.

In order for a financial asset to be classified and measured at amortised cost or fair value through OCI, the asset's contractual terms must give rise to cash flows that are 'solely payments of principal and interest ("SPPI") on the principal amount outstanding. This assessment is referred to as the SPPI test and is performed at an instrument level. Financial assets with cash flows that are not SPPI are classified and measured at fair value through profit or loss, irrespective of the business model. RGP's business model for managing financial assets refers to how it manages its financial assets in order to generate cash flows. The business model determines whether cash flows will result from collecting contractual cash flows, selling the financial assets, or both. Financial assets classified and measured at amortised cost are held within a business model with the objective to hold financial assets in order to collect contractual cash flows, while financial assets classified and measured at fair value through other comprehensive income are held within a business model with the objective of both holding to collect contractual cash flows and selling. Financial assets which are not held within the aforementioned business models are classified and measured at fair value through profit or loss.

Purchases or sales of financial assets that require delivery of assets within a time frame established by regulation or convention in the market place (regular way trades) are recognised on the trade date, i.e., the date that RGP commits to purchase or sell the asset.

Subsequent measurement

The subsequent measurement of financial assets depends on their classification as follows:

The category of financial assets measured at amortised cost is the most appropriate for RGP.

Financial assets at amortised cost are subsequently measured using the effective interest (EIR) method and are subject to impairment. Gains and losses are recognised in profit or loss when the asset is derecognised, modified or impaired.

Derecognition

A financial asset (or, where applicable a part of a financial asset or part of a group of similar financial assets) is derecognised when:

- The rights to receive cash flows from the asset have expired;
- RGP has transferred its rights to receive cash flows from the asset or has assumed an obligation to pay the received cash flows in full without material delay to a third party under a "pass-through" arrangement; and either (a) RGP has transferred substantially all the risks and rewards of the asset, or (b) RGP has neither transferred nor retained substantially all the risks and rewards of the asset, but has transferred control of the asset.

When RGP has transferred its rights to receive cash flows from an asset or has entered into a pass-through arrangement and has neither transferred nor retained substantially all the risks and rewards of the asset nor transferred control of the asset, the asset is recognised to the extent of RGP's continuing involvement in the asset. In that case, RGP also recognises an associated liability. The transferred asset and the associated liability are measured on a basis that reflects the rights and obligations that RGP has retained.

Continuing involvement that takes the form of a guarantee over the transferred asset is measured at the lower of the original carrying amount of the asset and the maximum amount of consideration that RGP could be required to repay.

Impairment of financial assets

Further disclosures relating to impairment of financial assets are also provided in the note — Significant accounting judgements and estimates (Note 5).

RGP recognises an allowance for expected credit losses (ECLs) for all debt instruments not held at fair value through profit or loss. ECLs are based on the difference between the contractual cash flows due in accordance with the contract and all the cash flows that RGP expects to receive, discounted at an approximation of the original effective interest rate. The expected cash flows will include cash flows from the sale of collateral held or other credit enhancements that are integral to the contractual terms.

General approach: ECLs are recognised in two stages. For credit exposures for which there has not been a significant increase in credit risk since initial recognition, ECLs are provided for credit losses that result from default events that are possible within the next 12-months (a 12-month ECL). For those credit exposures for which there has been a significant increase in credit risk since initial recognition, a loss allowance is required for credit losses expected over the remaining life of the exposure, irrespective of the timing of the default (a lifetime ECL).

Simplified approach: For trade receivables that do not contain a significant financing component or when RGP applies the practical expedient of not adjusting the effect of a significant financing component, RGP applies the simplified approach in calculating ECLs. Under the simplified approach, RGP does not track changes in credit risk, but instead recognises a loss allowance based on lifetime ECLs at the end of each of the Relevant Periods. RGP has established a provision matrix that is based on its historical credit loss experience, adjusted for forward-looking factors specific to the debtors and the economic environment.

Financial liabilities

Initial recognition and measurement

Financial liabilities are classified, at initial recognition, as financial liabilities at fair value through profit or loss, loans and borrowings, payables, or as derivatives designated as hedging instruments in an effective hedge, as appropriate.

All financial liabilities are recognised initially at fair value and, in the case of loans and borrowings and payables, net of directly attributable transaction costs.

RGP's financial liabilities include trade and other accounts payable, and interest-bearing bank and other borrowings.

Subsequent measurement

Subsequent measurement of financial liabilities depends on their classification, as described below:

Trade and other accounts payable

Trade and other accounts payable are recognised at fair value to be paid in the future for goods and services received, whether or not billed to RGP.

Interest-bearing bank and other borrowings

After initial recognition, interest-bearing bank and other borrowings are subsequently measured at amortised cost using the EIR method. Gains and losses are recognised in the statement of profit or loss and other comprehensive income when the liabilities are derecognised, as well as through the EIR amortisation process.

Amortised cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the EIR. The EIR amortisation is included as finance costs in the statement of profit or loss and other comprehensive income.

Derecognition

A financial liability is derecognised when the obligation under the liability is discharged or cancelled or expires. When an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability are substantially modified, such an exchange or modification is treated as a derecognition of the original liability and the recognition of a new liability, and the difference between the respective carrying amounts is recognised in the statement of profit or loss and other comprehensive income.

Inventories

Inventories are measured at the lower of cost or net realisable value intended for use in operating activities and/or during the construction of the plant. The cost of inventories is based on the weighted average cost method, and includes expenditure incurred in acquiring the inventories, production or conversion costs and other costs incurred in bringing them to their existing location and condition.

Net realisable value is the estimated selling price in the ordinary course of business, less the estimated costs of completion and selling expenses.

Cash and cash equivalents

Cash and cash equivalents include cash on hand, demand deposits with banks, cash in current bank accounts, and other short-term highly liquid investments with original maturities of three months or less.

Prepayment

Advances paid are recorded at initial cost less impairment provision. Advances paid are classified as non-current when goods or services associated with advances are to be received beyond a year, or if advances are associated with an asset, which at the initial recognition is classified as non-current. Advances for PPE are charged to the cost of these PPE when RGP obtains control over these assets and there is a probability that future economic benefits associated with these assets will flow

to RGP. When there are indications of inability to receive goods or services related to advances paid, the carrying amount of advances paid is decreased and related impairment loss is recognised in the statement of profit or loss and other comprehensive income.

Leases

RGP assesses at contract inception whether a contract is, or contains, a lease. A contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration.

RGP as a lessee

RGP applies a single recognition and measurement approach for all leases, except for short-term leases and leases of low-value assets. RGP recognises lease liabilities to make lease payments and right-of-use assets representing the right to use the underlying assets.

(a) Right-of-use assets

RGP recognises right-of-use assets at the commencement date of the lease (that is the date the underlying asset is available for use). Right-of-use assets are measured at cost, less accumulated depreciation and any impairment losses, and adjusted for any remeasurement of lease liabilities. The initial cost of right-of-use assets includes the amount of lease liabilities recognised, initial direct costs incurred, and lease payments made at or before the commencement date less any lease incentives received. Right-of-use assets are depreciated on a straight-line basis over the shorter of the lease term and the estimated useful lives of the assets. If ownership of the leased asset transfers to RGP at the end of the lease term or the cost reflects the exercise of a purchase option, depreciation is calculated using the estimated useful life of the asset.

(b) Lease liabilities

At the commencement date of the lease, RGP recognises lease liabilities measured at the present value of lease payments to be made over the lease term. The lease payments include fixed payments (including in-substance fixed payments) less any lease incentives receivable, variable lease payments that depend on an index or a rate, and amounts expected to be paid under residual value guarantees. The lease payments also include the exercise price of a purchase option reasonably certain to be exercised by RGP and payments of penalties for terminating the lease, if the lease term reflects RGP exercising the option to terminate the lease. Variable lease payments that do not depend on an index or a rate are recognised as expenses (unless they are incurred to produce inventories) in the period in which the event or condition that triggers the payment occurs.

In calculating the present value of lease payments, RGP uses its incremental borrowing rate at the lease commencement date because the interest rate implicit in the lease is not readily determinable. After the commencement date, the amount of lease liabilities is increased to reflect the accretion of interest and reduced for the lease payments made. In addition, the carrying amount of lease liabilities is remeasured if there is a modification, a change in the lease term, a change in the lease payments (e.g., changes to future payments resulting from a change in an index or rate used to determine such lease payments) or a change in the assessment of an option to purchase the underlying asset.

(c) Short-term leases and leases of low-value assets

RGP applies the short-term lease recognition exemption to its short-term leases (i.e., those leases that have a lease term of 12 months or less from the commencement date and do not contain a purchase option). RGP also applies recognition exemption for lease of low-value assets to leases of office equipment that are considered to be low value. Lease payments on short-term leases and leases of low-value assets are recognised as expense on a straight-line basis over the lease term.

Revenue from contracts with customers

RGP's activities are related to processing the ore from a related party, RG Gold LLP. Revenue from contracts with customers is recognised at the point in time when control of the ore processed is transferred.

Revenue is recognised when there is persuasive evidence (usually in the form of a completed sales contract) that significant risks and rewards of ownership have been transferred to the buyer/customer, it is highly probable that the related consideration will be received, the incurred and potential costs (including product returns) can be measured reliably, RGP ceases involvement in the management of the services provided, and the amount of revenue can be measured reliably.

Borrowing costs

Borrowing costs directly attributable to the acquisition, construction or production of qualifying assets, i.e., assets that necessarily take a substantial period of time to get ready for their intended use or sale, are capitalised as part of the cost of those assets. The capitalisation of such borrowing costs ceases when the assets are substantially ready for their intended use or sale. All other borrowing costs are expensed in the period in which they are incurred. Borrowing costs consist of interest and other costs that an entity incurs in connection with the borrowing of funds.

Taxes

Current income tax

Current income tax assets and liabilities for the current and prior periods are measured at the amount expected to be recovered from or paid to the tax authorities.

The tax rates and tax laws used to compute the amount are those that are enacted or substantively enacted in the Republic of Kazakhstan at the end of each of the Relevant Periods.

Deferred income tax

Deferred income tax is provided using the liability method on temporary differences at the end of each of the Relevant Periods between the tax bases of assets and liabilities and their carrying amounts for financial reporting purposes.

Deferred tax assets are recognised for all deductible temporary differences, carry forward of unused tax credits and unused tax losses. Deferred tax assets are recognised to the extent that it is probable that taxable profit will be available against which the deductible temporary differences and the carry forward of unused tax credits and unused tax losses can be utilised, except when the deferred tax asset relating to the deductible temporary difference arises from the initial recognition of an asset or liability in a transaction that, at the time of the transaction, affects neither the accounting profit nor taxable profit or loss.

The carrying amount of deferred tax assets is reviewed at the end of each of the Relevant Periods and reduced to the extent that it is no longer probable that sufficient taxable profit will be available to allow all or part of the deferred tax asset to be utilised. Unrecognised deferred tax assets are reassessed at the end of each of the Relevant Periods and are recognised to the extent that it has become probable that future taxable profit will allow the deferred tax asset to be recovered.

Deferred tax assets and liabilities are measured at the tax rates that are expected to apply to the period when the asset is realised or the liability is settled, based on tax rates (and tax laws) that have been enacted or substantively enacted by the end of each of the Relevant Periods.

Dividends

Final dividends are recognised as a liability when they are approved by the shareholders in a general meeting. Proposed final dividends are disclosed in the Note 13 to the Historical Financial Information.

Contingent assets and liabilities

Contingent assets are not recognised in the Historical Financial Information. Where an inflow of economic benefits is probable, contingent assets are disclosed in the Historical Financial Information.

Contingent liabilities are not recognised in the Historical Financial Information. Contingent liabilities are disclosed in the Historical Financial Information unless the possibility of an outflow of resources embodying economic benefits is remote.

Related parties

In accordance with IAS 24 Related Party Disclosures, parties are considered to be related if one party has the ability to control the other party or exercise significant influence over the other party in making financial or operational decisions.

Transactions with related parties are used to reflect the status of settlements for property, works and services received from companies or sold to companies that are related parties to RGP. Items of a similar nature are disclosed in aggregate except when separate disclosure is necessary for an understanding of the effects of related party transactions on the Historical Financial Information.

Subsequent events

The results of events after the end of each of the Relevant Periods that provide evidence of conditions that existed at the Relevant Periods (adjusting events) are reflected in the financial statements. Events after the end of each of the Relevant Periods that are not adjusting events are disclosed in the notes to the financial statements when material.

Foreign currency translation

Functional and presentation currency

Items included in the financial statements are measured using the currency of the primary economic environment in which RGP operate ("the functional currency").

RGP selected USD as presentation currency for the preparation of the Underlying Financial Statements while the functional currency of RGP is tenge. The financial statements of RGP prepared in tenge are translated to USD based on the provision of IAS 21 *The Effect of Changes in Foreign Exchange Rates.*

Transactions and balances

Foreign currency transactions are translated into the functional currency using the exchange rates prevailing at the dates of the transactions. Foreign exchange gains and losses resulting from the settlement of such transactions and from the translation at the end of each of the Relevant Periods exchange rates of monetary assets and liabilities denominated in foreign currencies are recognised in the statement of profit or loss and other comprehensive income.

Non-monetary items that are measured in terms of historical cost in a foreign currency are translated using the exchange rates as at dates of the initial transactions. Non-monetary items measured at fair value in a foreign currency are translated using the exchange rates at the date when the fair value is determined.

Going concern

The Historical Financial Information have been prepared on a going concern basis, which involves the continuation of activities, the sale of assets and the settlement of liabilities in the ordinary course of business.

As at the date of the Historical Financial Information, management was satisfied with reasonable grounds that RGP would be able to continue as a going concern. Following the launch of a gold processing plant with a capacity of up to 5 million tons of ore per year in September 2022, RGP is generating sufficient cash flows from operating activities.

5. SIGNIFICANT ACCOUNTING JUDGEMENTS AND ESTIMATES

The preparation of RGP's financial statements requires the management to make judgements, estimates and assumptions that affect the reported amounts of revenues, expenses, assets and liabilities, and the disclosure of these items and contingent liabilities. Uncertainty about these assumptions and estimates could result in outcomes that require a significant adjustment to the carrying amount of assets or liabilities for which such assumptions and estimates are made.

Estimates and assumptions

The key assumptions concerning the future and other key sources of estimation uncertainty at the end of each of the Relevant Periods, that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year, are described below. Assumptions and estimates are based on RGP's initial data, which it had at the time of preparation of the relevant financial statements. However, current circumstances and assumptions about the future may vary due to market changes or circumstances beyond the control of RGP. Such changes are reflected in the assumptions when they occur.

Impairment of non-financial assets

An impairment exists when the carrying amount of an asset or cash generating unit exceeds its recoverable amount, which is the higher of: its fair value less costs of disposal and its value in use. The fair value less costs to sell calculations are based on available data from binding sales transactions in an arm's length transaction of similar assets or observable market prices less incremental costs for disposing of the asset. The value in use calculation is based on a discounted cash flow model.

The cash flows are derived from the budget for the next 5 (five) years and do not include restructuring activities that RGP is not yet committed to or significant future investments that will enhance the asset's performance of the cash generating unit being tested. The recoverable amount is most sensitive to the discount rate used for the discounted cash flow model as well as the expected future cash inflows and growth rates used for extrapolation purposes. RGP assesses at the end of the each of the Relevant Periods whether there is an indication that an asset may be impaired. If any indication exists, also in cases when circumstances indicate that it's carrying value may be impaired, RGP estimates the asset's recoverable amount.

Provision for decommissioning of the gold processing plant and recultivation of the land

RGP estimates the cost of future dismantling of the plant facilities and other structures based on estimates received from internal or external specialists after taking into account the expected method of dismantling and the degree of land reclamation required by this legislation and industry practice.

The amount of the estimated obligation for decommissioning is the current value of the estimated costs that are expected to be required, adjusted for the expected inflation rate, risks inherent in the Kazakh market, and discounted using average risk-free interest rates on US treasury bills. The present value of the estimated obligation to restore the site is reviewed at the end of each of the Relevant Periods and adjusted to reflect the best estimate. In estimating future costs, significant estimates and judgments made by management were used.

Long-term inflation rates used to determine the liability in the statement of financial position as at 31 December 2022, 2023, 2024 and 30 June 2025 were 4.42%, 4.76%, 5.30% and 5.39%, respectively. Discount rates used to determine the liability in the statement of financial position as at 31 December 2022, 2023, 2024 and 30 June 2025 were 8.82%, 8.89%, 9.53% and 9.52%, respectively. The decommissioning activities are planned for the period from 2040 to 2042, in accordance with the liquidation plan of the factory.

Useful life of property, plant and equipment

RGP assesses the remaining useful lives of items of property, plant and equipment at least at each financial year-end. If expectations differ from previous estimates, the changes are accounted for as a change in an accounting estimate in accordance with IAS 8 Accounting Policies, Changes in Accounting Estimates and Errors. These estimates may have a material impact on the carrying amount of property, plant and equipment and on depreciation recognised in the statement of profit or loss and other comprehensive income.

Provision for expected credit losses

RGP recognises provision for expected credit losses for other accounts receivable and funds in credit institutions (cash and cash equivalents, bank deposits).

For funds in credit institutions (cash and cash equivalents, bank deposits), RGP calculated expected credit losses based on the 12-month period. The 12-month expected credit losses are the portion of lifetime expected credit losses that results from default events on a financial instrument that are possible within 12 months after the end of each of the Relevant Periods. However, when there has been a significant increase in credit risk since origination, the allowance will be based on the lifetime expected credit losses.

Deferred tax assets

Management judgement is required for the calculation of current and deferred income taxes. Deferred tax assets are recognised to the extent that their utilisation is probable. The utilisation of deferred tax assets will depend on whether it is possible to generate sufficient taxable income in respective tax type and jurisdiction.

Various factors are used to assess the probability of the future utilisation of deferred tax assets, including past operating results, operational plan, expiration of tax losses carried forward, and tax planning strategies. If actual results differ from those estimates or if these estimates must be adjusted in future periods, the financial position, results of operations and cash flows may be negatively affected. In the event that the assessment of future utilisation of deferred tax assets must be reduced and this reduction be recognised in the statement of profit or loss and other comprehensive income.

In 2022, RGP entered into an investment contract for implementation of an investment project with the Republican State Institution "Investment Committee of the Ministry of Foreign Affairs of the Republic of Kazakhstan", according to which RGP within the investment project is provided with preferences for payment of corporate income tax on income received from priority activities by 100% starting from 1 January 2022 for implementation of the investment priority project and ending no later than 10 years later. RGP has not recognised deferred tax assets with respect to temporary differences because it is not possible to reliably estimate the recoverability of deferred tax assets at the date RGP exits the investment contract.

6. REVENUE

An analysis of revenue is as follows:

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000
Revenue from ore processing	22,872	121,006	152,464	71,526	90,604
Revenue from coal processing	—	284	172	—	92
	22,872	121,290	152,636	71,526	90,696

During the Relevant Periods and the six months ended 30 June 2024, all revenue under contracts with customers was received from processing the ore from a related party, RG Gold LLP. During the Relevant Periods and the six months ended 30 June 2024, revenue from contracts with customers was generated on the territory of the Republic of Kazakhstan and was recognised at a point in time.

RGP has elected the practical expedient as described in IFRS 15.121(b) to not disclose the remaining performance obligations for these types of contracts.

7. COST OF SALES

An analysis of cost of sales is as follows:

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000
Materials	6,048	28,472	31,513	12,890	14,916
Depreciation and amortisation	5,360	21,276	21,077	10,933	10,036
Electricity	160	6,759	10,948	5,333	7,216
Staff costs and related taxes	2,200	6,989	9,905	5,101	5,487
Laboratory work	79	1,746	2,239	1,017	1,188
Insurance	—	986	1,831	1,053	942
Repair and maintenance	286	1,105	1,268	562	804
Security services	107	611	684	360	343
Food	91	563	457	249	210
Taxes other than income tax	177	205	190	104	104
Travel expenses	6	42	55	26	26
Leases	1	14	7	1	1
Consulting services	—	462	—	—	—
Other	106	402	2,097	548	961
Work in progress *(Note 16)*	—	(328)	(275)	(172)	(1,319)
	14,621	69,304	81,996	38,005	40,915

8. OTHER INCOME AND GAINS

In 2022, other income and gains primarily comprised income from expense reimbursements of USD211 thousand and exchange rate gains of USD2,155 thousand, respectively.

In 2023, other income and gains mainly include income for sales of fixed assets, sales of maintenance services in the amount of USD1,026 thousand and exchange rate gains of USD2,468 thousand, respectively.

In 2024, other income and gains mainly include reimbursement from the supplier for defective engine in the amount of USD1,983 thousand and reimbursement for construction defects in the amount of USD1,089 thousand. The reimbursement was fully received by cash and presented within other proceeds in the statement of cash flows.

For the six months ended 30 June 2025, other income and gains mainly include exchange rate gains of USD2,927 thousand.

For the six months ended 30 June 2024, other income and gains mainly include reimbursement from the supplier for defective engine in the amount of USD1,983 thousand and reimbursement for construction defects in the amount of USD1,089 thousand, respectively.

9. ADMINISTRATIVE EXPENSES

An analysis of administrative expenses is as follows:

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000
Wages and related costs	1,896	1,467	2,012	1,148	1,338
Depreciation and amortisation	148	252	436	257	190

Legal services	—	59	130	97	—
Recruitment services	—	81	—	—	—
Others	208	266	195	38	68
	2,935	2,733	3,412	1,859	1,900

10. OTHER EXPENSES

An analysis of other expenses is as follows:

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000
Foreign exchange losses, net	—	—	18,079	5,313	—
Others	1,103	1,490	242	172	992
Total	1,103	1,490	18,321	5,485	992

11. FINANCE COSTS

An analysis of finance costs is as follows:

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000
Interest expense on loans and borrowings	5,106	22,337	19,680	10,044	10,275
Unwinding of discount *(Note 22)*	155	681	657	343	436
Amortisation of bank commissions	118	244	1,534	1,400	81
Interest expense on lease agreements	12	8	61	34	24
Total	5,391	23,270	21,932	11,821	10,816

12. INCOME TAX EXPENSES

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000
Current tax expense	—	206	391	192	174
Deferred tax expense	1,196	—	—	—	—
	1,196	206	391	192	174

Below is a reconciliation of the profit before tax for financial reporting purposes with the income tax expenses:

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000
Profit before tax	1,281	28,860	31,253	18,038	40,514
Income tax calculated at the official rate tax 20%	256	5,772	6,251	3,608	8,103
Effect of income tax preferences	(6,287)	(3,993)	(4,770)	(3,799)	(8,328)
Change in unrecognised deferred tax assets	7,434	(1,626)	(1,380)	227	526
Other permanent differences	(207)	53	290	156	(127)
Tax charge at the effective rate	1,196	206	391	192	174

RGP is exempt from paying corporate income tax related to processing activities until 2032 according to the investment contracts concluded with the Investment Committee of the Ministry of Foreign Affairs of the Republic of Kazakhstan. The effect of income tax preferences relates to tax benefits of RGP receives with respect to the investment contract.

The deferred tax balances calculated by applying the officially established tax rate effective on the Relevant Periods to the temporary differences between the tax base and the amounts indicated in the Historical Financial Information include the following:

	1 January 2022	Translation reserve	Change through profit or loss	31 December 2022	Translation reserve	Change through profit or loss	31 December 2023	Translation reserve	Change through profit or loss	31 December 2024	Translation reserve	Change through profit or loss	30 June 2025
Deferred tax assets													
Tax loss carried forward	1,169	(93)	3,142	4,218	59	(4,277)	—	—	—	—	—	—	—
Provisions	6	(1)	(5)	—	—	—	—	—	—	—	—	—	—
Lease liabilities	3	—	—	3	—	(2)	1	(7)	71	65	—	(12)	53
Estimated employee benefit obligations	50	(4)	119	165	3	(111)	57	(8)	6	55	(3)	182	234
Property, plant and equipment	38	(16)	2,976	2,998	64	2,777	5,839	(716)	(507)	4,616	16	675	5,307
Intangible assets	—	—	—	—	—	—	—	3	(29)	(26)	—	1	(25)
Bank commission related to loan	—	—	—	—	—	—	—	24	(236)	(212)	(1)	16	(197)
Accounts receivable	—	—	—	—	—	—	—	71	(684)	(613)	1	(336)	(948)
Taxes	11	(3)	6	14	—	(13)	1	—	(1)	—	—	—	—
Less: unrecognised deferred tax assets	—	36	(7,434)	(7,398)	(126)	1,626	(5,898)	633	1,380	(3,885)	(13)	(526)	(4,424)
Deferred income tax expense	—	—	(1,196)	—	—	—	—	—	—	—	—	—	—
Net deferred tax assets	1,277	—	—	—	—	—	—	—	—	—	—	—	—

RGP has not recognised deferred tax assets in respect of temporary differences as it is not possible to reliably estimate the recoverability of deferred tax assets in 10 years from the date RGP exits from the investment contract.

13. DIVIDENDS

No dividends had been paid or declared by RGP during the Relevant Periods and six months ended 30 June 2024.

14. PROPERTY, PLANT AND EQUIPMENT

Property, plant and equipment as at 31 December 2022, 2023, 2024 and 30 June 2025 are presented as follows:

	Buildings and constructions USD'000	Vehicles USD'000	Machinery and equipment USD'000	Other USD'000	Construction in progress USD'000	Total USD'000
Initial cost

As at 31 December 2023	175,159	2,048	101,817	4,565	70	283,659
As at 31 December 2024	146,208	1,485	84,065	3,647	693	236,098
As at 30 June 2025	142,476	1,376	80,484	3,504	1,607	229,447

In 2023, RGP completed construction of a shift camp in Raigorodok village and put it into operation. The amount of borrowing costs capitalised during the year ended 31 December 2022 was USD11,334 thousand. The rate used to determine the amount of borrowing costs eligible for capitalisation was 8.96%, which is the effective interest rate of the specific borrowing.

As at 31 December 2022, 2023, 2024 and 30 June 2025, RGP's property, plant and equipment with a carrying amount of USD219,523 thousand, USD232,358 thousand, USD182,234 thousand and USD175,669 thousand, respectively, were pledged as collateral for a loan received from Halyk Bank of Kazakhstan JSC and Development Bank of Kazakhstan JSC.

15. OTHER NON-CURRENT ASSETS

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
VAT recoverable	26,603	4,244	—	—
Stockpiled ore	—	—	1,216	2,068
Others	379	330	50	116
	26,982	4,574	1,266	2,184

A significant balance of long-term VAT recoverable as at 31 December 2022 was due to works under the project for the construction of the gold processing plant.

16. INVENTORIES

As at 31 December 2022, 2023, 2024 and 30 June 2025, inventories included:

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Raw materials and supplies	15,891	27,051	19,735	24,376
Workwear and inventory	144	966	491	172
Work in progress	328	275	172	1,319
	16,363	28,292	20,398	25,867

During the Relevant Periods, purchases were made as part of RGP's normal business activities and were aimed at meeting the needs of the production process, including the procurement of production materials for ore processing, ensuring the operation of production workshops, the surrounding infrastructure, and the central warehouse.

17. TRADE RECEIVABLES

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Trade receivables	6,984	1,405	33,073	22,055
	6,984	1,405	33,073	22,055

The entire amount of trade receivable as at 31 December 2022, 2023, 2024 and 30 June 2025 was denominated in Tenge. Trade receivables are fully due from the related party RG Gold LLP, and are adjusted in accordance with fluctuations in the USD to Tenge exchange rate.

As at 31 December 2022, 2023, 2024 and 30 June 2025, RGP did not recognise a provision for expected credit losses on trade receivables as the credit risk of the related party is low.

18. PREPAYMENTS, OTHER RECEIVABLES AND OTHER ASSETS

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Advances paid to suppliers	6,685	9,672	8,942	7,727
VAT recoverable	—	14,611	5,575	—
Income tax prepaid	4	—	126	322
Other taxes prepaid	—	53	290	262
Other receivables	181	237	169	154
Other current assets	161	1,984	1,504	1,052
	7,031	26,557	16,606	9,517

19. CASH AND CASH EQUIVALENTS

As at 31 December 2022, 2023, 2024 and 30 June 2025, cash and cash equivalents included:

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Cash on current bank accounts	7,634	37	1,845	5,891
Short-term bank deposits (less than three months)	—	104	182	42,488
Cash and cash equivalents	7,634	141	2,027	48,379

As at 31 December 2022, 2023, 2024 and 30 June 2025, the carrying amount of cash and cash equivalents is denominated in the following currencies:

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Tenge	81	141	207	42,784
USD	7,553	—	1,754	5,595
Pound Sterling	—	—	66	—
Cash and cash equivalents	7,634	141	2,027	48,379

During the Relevant Periods, no interest was accrued on cash balances on current bank accounts. During the six months ended 30 June 2025, short-term bank deposits in Tenge accrued interest at the rate from 13.75% to 15.5% per annum (2024: 12.75% to 14.25% per annum; 2023: 14.25% per annum).

20. TRADE PAYABLES

As at 31 December 2022, 2023, 2024 and 30 June 2025, trade payables are as follows:

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Accounts payable to third parties	16,341	13,717	4,793	4,455
Accounts payable to related parties *(Note 24)*	218	1,391	259	141
	16,559	15,108	5,052	4,596

As at 31 December 2022, 2023, 2024 and 30 June 2025, trade payables are non-interest bearing and are generally repayable within 30 days.

21. INTEREST-BEARING BANK AND OTHER BORROWINGS

	31 December 2022			31 December 2023			31 December 2024			30 June 2025		
	Effective interest rate	Maturity	USD'000	Effective interest rate	Maturity	USD'000	Effective interest rate	Maturity	USD'000	Effective interest rate	Maturity	USD'000
Halyk Bank of Kazakhstan JSC			—			—	18.40% (The NBRK base rate +2.5%)	5 August 2031	57,868	18.40% (The NBRK base rate +2.5%)	5 August 2031	54,192
Halyk Bank of Kazakhstan JSC			—			—	7.60% (6m SOFR +2.5%)	4 August 2031	147,939	7.60% (6m SOFR +2.5%)	4 August 2031	137,509

Short-term part			61,975			51,707			29,552			29,869

As at 31 December 2022, 2023, 2024 and 30 June 2025, the carrying amount of interest-bearing bank and other borrowings is denominated in the following currencies:

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Tenge	75,179	82,861	57,868	54,192
USD	220,667	167,636	147,939	137,509
Interest-bearing bank and other borrowings	295,846	250,497	205,807	191,701

Loans from Development Bank of Kazakhstan JSC

On 17 May 2021, RGP entered into a credit line agreement # SKL-101–21 with the Development Bank of Kazakhstan JSC ("DBK"). Under this agreement, DBK provides a credit line in the amount of USD300,000 thousand, including: Limit #1 — USD217,000 thousand; Limit #2 — USD75,219 thousand.

The interest rate on the loan was set at 9% per annum. The maturity of borrowings funds is 17 May 2030. The purpose of borrowings was the construction and operation of a complex for processing gold primary ores, with a capacity of 5 million tons per year.

As of 31 December 2024, RGP had early repaid loans to Development Bank of Kazakhstan JSC (hereinafter "DBK") under Credit Line Agreement No. SKL-101–21. Under this agreement, DBK provided a credit line of USD300,000 thousand, including: Limit No. 1 -USD217,000 thousand; Limit No. 2 -USD71,965 thousand. During the year ended 31 December 2024 RGP fully repaid the loan in the amount of USD36,984 thousand as well as USD110,954 thousand. The amount of USD106,357 thousand was repaid by RG Gold LLP on behalf of RGP under the tripartite agreement and was also fully reimbursed.

Loans from Forte Bank JSC

On 8 February 2024, RGP received a short-term loan in the amount of USD6,000 thousand. The principal loan amount USD6,000 thousand, as well as interest on the loan in the amount of USD65 thousand, were fully repaid.

Loans from RG Gold LLP

During the year ended 31 December 2023, RGP repaid part of the interest in the amount of USD24,954 thousand to the related party RG Gold LLP. During the year ended 31 December 2022, the repaid remuneration amount was equal to USD5,252 thousand.

Loans from Halyk Bank of Kazakhstan JSC

The Credit Line Agreement No. KS 01–24–49 was signed with Halyk Bank of Kazakhstan JSC on 9 August 2024. The purpose of the loan under Limit-1 is the refinancing of the loan from Development Bank of Kazakhstan JSC, while the purpose under Limit-2 is to replenish working capital. The credit line is provided within the limits for a term of up to 84 months, with the term for Limit-2 being up to 36 months.

On 3 September 2024, RGP received loans from Halyk Bank of Kazakhstan JSC under Bank Loan Agreement No. KD 01–24–49–01 dated 3 September 2024, in the amount of USD147,938 thousand, and No. KD 01–24–49–02 dated 3 September 2024, in the amount of USD63,934 thousand. According to the agreement, no grace period for loan repayment is provided. By the end of the Relevant Periods, RGP had repaid interest in the amount of USD10,009 thousand and principle in the amount of USD14,693 thousand.

As of 30 June 2025, to secure obligations under the credit line agreement with Halyk Bank of Kazakhstan JSC, 100% of the shares of RGP were pledged.

RGP is required to comply with the financial and non-financial covenants under the loan agreement with Halyk Bank of Kazakhstan JSC. Under the terms of the loan agreement, failure to meet the covenants may lead to the repayment of these long-term loans upon the first demand. As of 31 December 2024 and 30 June 2025, RGP has complied with the existing financial and non-financial covenants.

22. PROVISIONS

As at 31 December 2022, 2023, 2024 and 30 June 2025, provisions are represented by the obligation to dismantle the plant facilities.

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
As at 1 January	—	7,169	7,632	8,943
Changes in estimates	—	(347)	1,926	(349)
Incurred during the year	7,047	—	—	—
Unwinding of discount *(Note 11)*	155	681	657	436
Translation reserve	(33)	129	(1,272)	52
As at 31 December	7,169	7,632	8,943	9,082

In accordance with the Environmental Code of the Republic of Kazakhstan, after the termination of the operation of facilities that have a negative impact on the environment, the operators (owners) of the facilities are obliged to ensure the elimination of the consequences of the operation of the facilities in accordance with the requirements of the legislation of the Republic of Kazakhstan. Accordingly, in 2022 RGP created a provision for the decommissioning of the gold processing plant and land recultivation.

23. SHARE CAPITAL

As at 31 December 2022, 2023, 2024 and 30 June 2025, the paid-in share capital of RGP amounted to USD51,487 thousand.

24. RELATED PARTY DISCLOSURES

In accordance with IAS 24 Related Party Disclosures, parties are considered to be related if one party has the ability to control the other party or exercise significant influence over the other party in making financial or operational decisions. In considering each possible related party relationship, attention is directed to the substance of the relationship, not merely the legal form.

Related parties include key management personnel of RGP, enterprises that are controlled, jointly controlled or significantly influenced by, or for which significant voting power in such enterprises resides with, directly or indirectly, RGP's key management personnel, the participants and entities under common control. Related party transactions were made on terms agreed to between the parties that may not necessarily be at market rates, except for certain regulated services, which are provided based on the tariffs available to related and third parties.

Related parties may enter into transactions which unrelated parties might not. Prices and terms of such transactions may differ from prices and terms of transactions between unrelated parties.

	31 December			30 June

Other income	275	1,346	179	144	44

Revenues from contracts with customers from entities under common control of the ultimate controlling party were mainly represented by ore and coal processing services provided to RG Gold LLP. During the Relevant Periods and the six months ended 30 June 2024, revenue from RG Gold LLP were USD22,872 thousand, USD121,290 thousand, USD152,636 thousand, USD90,696 thousand and USD71,526 thousand, respectively.

During 2024, RG Gold LLP made loan payment to the Development bank of Kazakhstan LLP on behalf of RGP in the amount of USD106,357 thousand on the basis of tripartite agreement.

Compensation to key management personnel

Total compensation to key management personnel included in general and administrative expenses in the statement of profit or loss and other comprehensive income and capitalised as part of property, plant and equipment in the statement of financial position amounted to USD478 thousand for 2022, USD489 thousand for 2023, USD472 thousand for 2024, USD335 thousand for the six months ended 30 June 2025. As at 31 December 2022, 2023, 2024 and 30 June 2025, key management personnel of RGP consisted of 4 people. Transactions with key management personnel are mainly represented by payroll, premium, vacation allowance and other current payments.

25. CONTRACTUAL AND CONTINGENT LIABILITIES AND OPERATIONAL RISKS

Economic environment

The Republic of Kazakhstan continues economic reforms and development of its legal, tax and regulatory frameworks as required by a market economy. The future stability of the Kazakhstani economy is largely dependent upon these reforms and developments and the effectiveness of economic, financial and monetary measures undertaken by the government.

Legal issues

In the ordinary course of business, RGP is subject to legal actions and complaints. In the opinion of management, there are no current legal proceedings or other claims outstanding, which could have a material effect on the result of operations or financial position of RGP, and which have not been accrued or disclosed in Historical Financial Information.

Conditions of economic activity in Kazakhstan

RGP's activities are mainly carried out in Kazakhstan. Accordingly, RGP's business is influenced by the economy and financial markets of Kazakhstan, which are characterized by the characteristics of the developing market. The legal, tax and administrative systems continue to develop, however, they are associated with the risk of ambiguity in the interpretation of their requirements, which are also subject to frequent changes, which, together with other legal and fiscal barriers, creates additional problems for organizations doing business in Kazakhstan.

The presented financial statements reflect management's view of the impact of the business environment in Kazakhstan on RGP's operations and financial position. The actual impact of future business conditions may differ from the estimates of their management.

Taxes

Various types of legislation and regulations are not always clearly written, and their interpretation is subject to the opinions of the local tax inspectors and the Ministry of Finance of the Republic of Kazakhstan. Instances of inconsistent opinions between local, regional and national tax authorities are not unusual, including opinions on IFRS interpretations with regard to revenue, expenses and other items of the financial statements.

The current regime of penalties and interest related to reported and discovered violations of Kazakhstan's law, are severe. Penalties are generally 80% of the taxes additionally assessed and interest is assessed at the refinancing rate established by the National Bank of Kazakhstan multiplied by 1.25. As a result, penalties and interest can amount to multiples of any assessed taxes.

RGP believes that it has paid or accrued all taxes that are applicable. Where legislation concerning the provision of taxes is unclear, RGP has accrued tax liabilities based on management's best estimate. RGP's policy is to accrue contingencies in the accounting period in which a loss is deemed probable and the amount is reasonably determinable. Because of the uncertainties associated with Kazakhstan's tax system, the ultimate amount of taxes, penalties and interest, if any, may be in excess of the amount expensed to date and accrued at 31 December 2022, 2023, 2024 and 30 June 2025.

The resulting effect of this matter is that additional tax liabilities may arise. However, due to the range of uncertainties described above in assessing any potential additional tax liabilities, it is not practicable for the management to estimate the financial effect in terms of the amount of additional tax liabilities, if any, together with any associated penalties and charges for which RGP may be liable.

Transfer pricing control

Transfer pricing control in Kazakhstan has a very wide scope and applies to many transactions that directly or indirectly relate to international business regardless of whether the transaction participants are related or not. The transfer pricing legislation requires that all taxes applicable to a transaction should be calculated based on market prices determined as per the arm's length principle.

The law on transfer pricing came into effect in Kazakhstan from 1 January 2009. The law is not explicit and there is little precedence with some of its provisions. Moreover, the law is not supported by detailed guidance, which is still under development.

Transfer pricing control in Kazakhstan has a very wide scope and applies to many transactions that directly or indirectly relate to international business regardless of whether the transaction participants are related or not. The transfer pricing legislation requires that all taxes applicable to a transaction should be calculated based on market prices determined as per the arm's length principle.

There are different interpretations of transfer pricing law and some of its provisions shall exclusively prevail. Moreover, the law is not supported by detailed guidance. As a result, there is no clear regulation for transfer pricing control for different types of transactions.

Due to uncertainties associated with transfer pricing legislation of the Republic of Kazakhstan there is a risk that tax authorities may take a position different from the position of RGP, which may result in additional taxes, penalties and interest as at 31 December 2022, 2023, 2024 and 30 June 2025.

The management of RGP believes that as at 31 December 2022, 2023, 2024 and 30 June 2025 its interpretation of the relevant legislation is appropriate and that RGP's positions with respect to transfer pricing will be sustained.

Insurance

The insurance industry in the Republic of Kazakhstan is in a developing state and many forms of insurance protection common in other parts of the world are not yet generally available. RGP does not have full coverage for its business interruption, or third-party liability in respect of property or environmental damage arising from accidents on RGP's property or relating to RGP's operations. Until RGP obtains adequate insurance coverage, there is a risk that the loss or destruction of certain assets could have a material adverse effect on RGP's operations and financial position. RGP entered into a voluntary all-risk and business interruption property insurance contract No. Z01–6750–0015333871 with JSC Insurance Company Halyk on 6 December 2024.

Contingent liabilities

RGP assesses the likelihood of material liabilities arising from individual circumstances and establishes provisions in its financial statements when it is probable that events giving rise to a liability will occur and the amount of the liability can be reasonably estimated.

26. FINANCIAL RISK MANAGEMENT OBJECTIVES AND POLICIES

Credit risk

Credit risk is the risk that RGP will incur finance costs because its customers, clients or counterparties failed to discharge their contractual obligations. RGP manages and controls credit risk by setting limits on the amount of risk it is willing to accept, and by monitoring exposures in relation to such limits.

The table below shows the balances of bank accounts and deposits at the end of each of the Relevant Periods using the Fitch's credit ratings:

		31 December			As at 30 June
	Location	2022	2023	2024	2025
		USD'000	USD'000	USD'000	USD'000
Forte Bank JSC	Kazakhstan	7,634	141	1,889	4,041
Halyk Bank of Kazakhstan JSC	Kazakhstan	—	—	138	44,338
Total		**7,634**	**141**	**2,027**	**48,379**

		Rating			
		31 December			As at 30 June
	Location	2022	2023	2024	2025
Forte Bank JSC	Kazakhstan	Ba2	Ba2	BB	B+/Stable
Halyk Bank of Kazakhstan JSC	Kazakhstan	Baa2	Baa2	BBB-	BBB-/Stable

With respect to credit risk arising from other financial assets of RGP, comprising cash and cash equivalents and other financial assets, RGP's exposure to credit risk arises from default of counterparty, with a maximum exposure equal to the carrying amount of these financial instruments.

Interest rate risk

Interest rate risk is the risk that the value of a financial instrument will fluctuate as a result of changes in market interest rates. RGP's exposure to interest rate risk relates primarily to RGP's long-term borrowings with floating interest rates of 6m SOFR + 2.5%.

The following table shows the sensitivity of RGP's profit before income taxes (due to the availability of loans with floating interest rates) to possible changes in floating interest rates, provided that all other parameters are held constant.

	Increase/ (decrease) in basis points*	Impact on profit/ (loss)
		USD'000
2022	397	(9,052)
6m LIBOR	(397)	9,052
2023	397	(6,352)
6m LIBOR	(397)	6,352
2024	441	(10,111)
6m SOFR	(9)	211
Six months ended 30 June 2025	441	(8,567)
6m SOFR	(9)	179

* *1 basis point = 0.01%.*

Foreign currency risk

Currency risk arises when future currency proceeds, or recognised assets and liabilities are denominated in the currency other than RGP's functional currency.

RGP's exposure to currency risk mainly relates to balance of the cash and cash equivalents, trade account payables denominated in USD. Thus, changes in currency rates might have a significant effect on financial position of RGP.

The following table provides an analysis of the sensitivity of RGP's profit before income tax (due to changes in the fair value of monetary assets and liabilities) to possible changes in the exchange rate of the USD, given that all other parameters are assumed to be constant:

	Increase/ (decrease) in foreign exchange rate	Effect on profit/ (loss)
		USD'000
2022	21%	34,407
USD	(21%)	(34,407)
2023	14.5%	(23,587)
USD	(14.5%)	23,587
2024	9.09%	(14,891)
USD	(7.34%)	12,024
30 June 2025	9.09%	(12,319)
USD	(7.34%)	9,947

Liquidity risk

Liquidity risk is the risk that RGP will encounter difficulty in raising funds to meet commitments associated with its financial instruments. Liquidity risk may result from an inability to sell a financial asset quickly at close to its fair value. Liquidity requirements are monitored on a regular basis and management ensures that sufficient funds are available to meet any commitments as they arise.

RGP monitors its liquidity risk on a regular basis by considering payments associated with financial instruments and projected cash flows from operations using the planning tool.

The table below summarizes the maturity profile of RGP's financial liabilities based on contractual undiscounted payments.

	On demand	From 1 to 3 months	From 3 months to 1 year	From 1 year up to 5 years	Over 5 years	Total

Capital management

RGP manages its capital to ensure that RGP will be able to continue as a going concern while maximising the return to stakeholders through the optimisation of the debt and equity balance. There were no changes in RGP's approach to capital management. The structure of RGP's capital consists of equity and debt, which includes trade and other payables and loans.

Fair value of financial instruments and non-financial assets

Fair value is defined as the amount at which an instrument could be exchanged in a current transaction between knowledgeable willing parties according to arm's length conditions, other than in a forced or liquidation sale.

The table below discloses the measurement hierarchy for assets and liabilities of RGP at the fair value.

		Fair value measurement using			
	Date of measurement	Quoted prices in active markets (Level 1)	Significant observable inputs (Level 2)	Significant non-observable source data (Level 3)	Total
Liabilities for which fair values are disclosed					
Interest-bearing bank and other borrowings. . .	31 December 2022	—	—	282,338	282,338
	31 December 2023	—	—	263,269	263,269
	31 December 2024	—	—	206,833	206,833
	30 June 2025	—	—	193,628	193,628

Methods of measurement and assumptions

The following describes the methodologies and assumptions used to determine fair values for those financial instruments and non-financial assets which are not already recorded at fair value in the financial statements.

Assets for which fair value approximates carrying value

For financial assets and financial liabilities that are liquid or have a short-term maturity (less than three months) it is assumed that their fair value approximates carrying amount. This assumption is also applied to demand deposits and savings accounts without a specific maturity.

Financial liabilities carried at amortised cost

The fair value of loans and borrowings as of 30 June 2025 represents the present value of future cash flows discounted at market interest rates, according to data from the National Bank of Kazakhstan (NBK), at rates of 18.34% for tenge-denominated loans; as of 31 December 2024 at rates of 17.53% for tenge-denominated loans and 7.90% for USD-denominated loans; as of 31 December 2023 at rates of 19.54% for tenge-denominated loans and 4.50% for USD-denominated loans; as of 31 December 2022 at rates of 19.82% for tenge-denominated loans and 7.87% for USD-denominated loans.

Changes in liabilities resulting from financing activities

	1 January 2022	Cash received	Principal payment	Interest payment	Interest expense	Commission amortisation	Commission paid	Foreign exchange differences	Translation reserve	31 December 2022

ACCOUNTANTS' REPORT ON HISTORICAL FINANCIAL INFORMATION OF RG GOLD LLP TO THE DIRECTORS OF ZIJIN GOLD INTERNATIONAL COMPANY LIMITED, MORGAN STANLEY ASIA LIMITED AND CITIC SECURITIES (HONG KONG) LIMITED

INTRODUCTION

We report on the historical financial information of RG Gold LLP ("RGG") set out on pages IC-4 to IC-47, which comprises the statements of profit or loss and other comprehensive income, the statements of changes in equity and the statements of cash flows of RGG for each of the years ended 31 December 2022, 2023, 2024 and the six months ended 30 June 2025 (the "Relevant Periods"), and the statements of financial position of RGG as at 31 December 2022, 2023, 2024 and 30 June 2025 and material accounting policy information and other explanatory information (together, the "Historical Financial Information"). The Historical Financial Information set out on pages IC-4 to IC-47 forms an integral part of this report, which has been prepared for inclusion in the prospectus of Zijin Gold International Company Limited (the "Company") dated 19 September 2025 (the "Prospectus") in connection with the initial listing of the shares of the Company on the Main Board of The Stock Exchange of Hong Kong Limited (the "Stock Exchange").

DIRECTORS' RESPONSIBILITY FOR THE HISTORICAL FINANCIAL INFORMATION

The directors of the Company are responsible for the preparation of the Historical Financial Information that gives a true and fair view in accordance with the basis of preparation set out in Note 2 to the Historical Financial Information.

The Underlying Financial Statements of RGG as defined on page IC-4, on which the Historical Financial Information is based, were prepared by the directors of RGG. The directors of RGG are responsible for the preparation of the Underlying Financial Statements that give a true and fair view in accordance with IFRS Accounting Standards,

and for such internal control as the directors of RGG determine is necessary to enable the preparation of Underlying Financial Statements that is free from material misstatement, whether due to fraud or error.

REPORTING ACCOUNTANTS' RESPONSIBILITY

Our responsibility is to express an opinion on the Historical Financial Information and to report our opinion to you. We conducted our work in accordance with Hong Kong Standard on Investment Circular Reporting Engagements 200 *Accountants' Reports on Historical Financial Information in Investment Circulars* issued by the Hong Kong Institute of Certified Public Accountants ("HKICPA"). This standard requires that we comply with ethical standards and plan and perform our work to obtain reasonable assurance about whether the Historical Financial Information is free from material misstatement.

Our work involved performing procedures to obtain evidence about the amounts and disclosures in the Historical Financial Information. The procedures selected depend on the reporting accountants' judgement, including the assessment of risks of material misstatement of the Historical Financial Information, whether due to fraud or error. In making those risk assessments, the reporting accountants consider internal control relevant to the entity's preparation of the Historical Financial Information that gives a true and fair view in accordance with the basis of preparation set out in Note 2 to the Historical Financial Information in order to design procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Our work also included evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by the directors, as well as evaluating the overall presentation of the Historical Financial Information.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

OPINION

In our opinion, the Historical Financial Information gives, for the purposes of the accountants' report, a true and fair view of the financial position of RGG as at 31 December 2022, 2023, 2024 and 30 June 2025 and of the financial performance and cash flows of RGG for each of the Relevant Periods in accordance with the basis of preparation set out in Note 2 to the Historical Financial Information.

REVIEW OF INTERIM COMPARATIVE FINANCIAL INFORMATION

We have reviewed the interim comparative financial information of RGG which comprises the statement of profit or loss and other comprehensive income, the statement of changes in equity and the statement of cash flows for the six months ended 30 June 2024 and other explanatory information (the "Interim Comparative Financial Information").

The directors of the Company are responsible for the preparation of the Interim Comparative Financial Information in accordance with the basis of preparation set out in Note 2 to the Historical Financial Information. Our responsibility is to express a conclusion on the Interim Comparative Financial Information based on our review. We conducted our review in accordance with Hong Kong Standard on Review Engagements 2410 *Review of Interim Financial Information Performed by the Independent Auditor of the Entity* as issued by the HKICPA. A review consists of making inquiries, primarily of persons responsible for financial and accounting matters, and applying analytical and other review procedures. A review is substantially less in scope than an audit conducted in accordance with Hong Kong Standards on Auditing and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion. Based on our review, nothing has come to our attention that causes us to believe that the Interim Comparative Financial Information, for the purposes of the accountants' report, is not prepared, in all material respects, in accordance with the basis of preparation set out in Note 2 to the Historical Financial Information.

REPORT ON MATTERS UNDER THE RULES GOVERNING THE LISTING OF SECURITIES ON THE STOCK EXCHANGE AND THE COMPANIES (WINDING UP AND MISCELLANEOUS PROVISIONS) ORDINANCE

Adjustments

The Historical Financial Information is stated after making such adjustments to the Underlying Financial Statements as defined on page IC-4 as were considered necessary.

Dividends

We refer to Note 10 to the Historical Financial Information which contains information about the dividends paid by RGG in respect of the Relevant Periods.

I. HISTORICAL FINANCIAL INFORMATION

Preparation of Historical Financial Information

Set out below is the Historical Financial Information which forms an integral part of this accountants' report.

The financial statements of RGG for the Relevant Periods, on which the Historical Financial Information is based, were audited by Ernst & Young Limited Liability Partnership in accordance with International Standards on Auditing issued by the International Auditing and Assurance Standards Board (the "Underlying Financial Statements").

The Historical Financial Information is presented in United States Dollar ("USD") and all values are rounded to the nearest thousand (USD'000) except when otherwise indicated.

II. NOTES TO THE HISTORICAL FINANCIAL INFORMATION

1. CORPORATE INFORMATION

RGG is a limited liability partnership as defined in the Civil Code of the Republic of Kazakhstan and was established on 5 July 2013 (reregistration certificate number 897–1902–24-ТОО dated 5 July 2013) as Raygorodok LLP. In December 2015, RGG was renamed into RG Gold LLP. Legal address of RGG is 80 Mukhtar Auezov Str, Shchuchinsk, Akmola region, Republic of Kazakhstan, 021700.

RGG is fully owned by Cantech S.a.r.l (the "Parent"), Cantech S.a.r.l, is owned by V Group International S.A. (65%) and RCF VII — RG Gold S.à r.l. (35%). RGG's ultimate beneficiaries are the members of the family of Mr. B. Utemuratov, resident of Republic of Kazakhstan.

Principal activities of RGG

RGG's principal activity is gold mining and production and related operations, including exploration, development and processing in the Republic of Kazakhstan under the "Contract for Exploration with Subsequent Extraction of Gold-Bearing Ores within Novodneprovskaya Area in Burabai District of Akmola Oblast of the Republic of Kazakhstan, in accordance with the License of series MG No. 890". Act of State Registration No. 486 dated 19 June 2000 (the "Contract") was signed between Gold Land LLC (the "Predecessor Subsurface User") and Investment Agency of the Republic of Kazakhstan (the "Competent Body"). In October 2012, the rights to the Contract were transferred to Orion Minerals LLP, RGG acquired the subsurface use right from Orion Minerals LLP under the Contract of Subsurface Use Right Purchase and Sale No. III-474 dated 18 July 2013. At the time of acquisition of the subsurface use right, Severny Raygorodok field had been developed and ready for further mining and processing.

Under the Contract RGG has a subsurface use right in Novodneprovskaya contract territory where two ore fields are located: Novodenprovskoye (including Novodneprovskoye field) and Raygorodskoye (including Severny Raygorodok and Yuzhny Raygorodok fields and prospecting site Sharyk; Central Raygorodok ore occurrence and Zapadny Raygorodok and Mokhovy prospecting blocks). The contract territory is located in Burabai District of Akmola Oblast, Republic of Kazakhstan.

Severny Raygorodok and Yuzhny Raygorodok fields form the basis of RGG's raw material resources base; reserves of oxidised and primary ores were explored and approved by the State Commission for Mineral Reserves of the Republic of Kazakhstan (the "SCMR") in 2008 (Minute No. 724–08-У dated 13 August 2008) with regard to Severny Raygorodok, and in 2013 — with regard to Yuzhny Raygorodok field (Minute No. 1281–13-У dated 12 April 2013). The updated reserves of oxidised and primary ores on Yuzhny Raygorodok field were explored and approved in 2017 (Minute No. 1801–17-У dated 11 April 2017). In 2018, the SCMR approved the reserves of oxidised and primary ores in the Severny Raygorodok field (Minute No. 1936–18-У dated 14 June 2018). In 2023, ore reserves at North Raygorodok and South Raygorodok were restated in accordance with the KAZRC code.

In 2020, RGG applied to Ministry of Industry and Infrastructure Development ("MID") for extending the extraction period until 2040. On 14 August 2021, RGG signed Addendum No. 15 to the Contract on extension of extraction period until 31 December 2040.

On 30 December 2022, RGG signed Addendum No. 18 to the Contract to extend the exploration period until 31 December 2024. Exploration license applied for renewal for 3 years. In 2024, RGG applied to the Ministry of Industry and Construction ("MIC") for a 3-year extension of the exploration license. On 30 December 2024, approval was received for the application. Under the terms, RGG is required to submit further material for consideration by the working group of MIC within one year.

2. BASIS OF PREPARATION

The Historical Financial Information has been prepared in accordance with IFRS Accounting Standards, which comprise all standards and interpretations approved by the International Accounting Standards Board (the "IASB"). All IFRS Accounting Standards effective for the accounting period commencing from 1 January 2025, together with the relevant transitional provisions, have been early adopted by RGG in the preparation of the Historical Financial Information throughout the Relevant Periods and in the period covered by the Interim Comparative Financial Information.

These Historical Financial Information has been prepared under the historical cost convention, except as discussed in the accounting policies and the notes to these financial statements.

The Historical Financial Information is presented in USD and all values are rounded to the nearest thousands, except when otherwise indicated.

The Historical Financial Information have been prepared on a historical cost basis, except as discussed in the accounting policies.

The preparation of financial statements in conformity with IFRS Accounting Standards requires the use of certain critical accounting estimates. It also requires management to exercise its judgement in the process of applying RGG's accounting policies. The areas involving a higher degree of judgement or complexity, or areas where assumptions and estimates are significant to the Historical Financial Information are disclosed in Note 5.

3. ISSUED BUT NOT YET EFFECTIVE IFRS ACCOUNTING STANDARDS

RGG has not applied the following new and amended IFRS Accounting Standards, that have been issued but are not yet effective. RGG intends to apply these new and amended IFRS Accounting Standards, if applicable, when they become effective.

IFRS 18	*Presentation and Disclosure in Financial Statements*[2]
IFRS 19	*Subsidiaries without Public Accountability: Disclosures*[2]
Amendments to IFRS 9 and IFRS 7	*Amendments to the Classification and Measurement of Financial Instruments*[1]
Amendments to IFRS 9 and IFRS 7	*Contracts Referencing Nature-dependent Electricity*[1]
Amendments to IFRS 10 and IAS 28	*Sale or Contribution of Assets between an Investor and its Associate or Joint Venture*[3]
Annual Improvements to IFRS Accounting Standards — Volume 11	*Amendments to IFRS 1, IFRS 7, IFRS 9, IFRS 10 and IAS 7*[1]

1 Effective for annual periods beginning on or after 1 January 2026
2 Effective for annual/reporting periods beginning on or after 1 January 2027
3 No mandatory effective date yet determined but available for adoption

RGG is in the process of making an assessment of the impact of these new and amended IFRS Accounting Standards upon initial application. So far, RGG considers that these new and amended IFRS Accounting Standards may result in changes in accounting policies but are unlikely to have a significant impact on RGG's results of operation and financial position.

4. MATERIAL ACCOUNTING POLICIES

Fair value measurement

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The fair value measurement is based on the presumption that the transaction to sell the asset or transfer the liability takes place either:

- In the principal market for the asset or liability; or
- In the absence of a principal market, in the most advantageous market for the asset or liability.

The principal or the most advantageous market must be accessible by RGG.

The fair value of an asset or a liability is measured using the assumptions that market participants would use when pricing the asset or liability, assuming that market participants act in their economic best interest.

A fair value measurement of a non-financial asset takes into account a market participant's ability to generate economic benefits by using the asset in its highest and best use or by selling it to another market participant that would use the asset in its highest and best use.

RGG uses valuation techniques that are appropriate in the circumstances and for which sufficient data are available to measure fair value, maximising the use of relevant observable inputs and minimising the use of unobservable inputs.

All assets and liabilities for which fair value is measured or disclosed in the financial statements are categorised within the fair value hierarchy, described as follows, based on the lowest level input that is significant to the fair value measurement as a whole:

- Level 1 — based on quoted prices (unadjusted) in active markets for identical assets or liabilities;
- Level 2 — based on valuation techniques for which the lowest level input that is significant to the fair value measurement is directly or indirectly observable;
- Level 3 — based on valuation techniques for which the lowest level input that is significant to the fair value measurement is unobservable.

For assets and liabilities that are recognised in the financial statements at fair value on a recurring basis, RGG determines whether transfers have occurred between levels in the hierarchy by re-assessing categorisation (based on the lowest level input that is significant to the fair value measurement as a whole) at the end of each Relevant periods.

Fair-value related disclosures for financial instruments and non-financial assets that are measured at fair value or where fair values are disclosed, are summarised in Note 30.

Property, plant and equipment

Property, plant and equipment, other than construction in progress, are stated at cost less accumulated depreciation and accumulated impairment losses, if any. Such cost includes the cost of replacing part of plant and equipment and borrowing costs for long-term construction projects if the recognition criteria are met. When significant parts of property, plant and equipment are required to be replaced in intervals, RGG recognises such parts as individual assets with specific useful lives and depreciation, respectively.

Likewise, when a major inspection is performed, its cost is recognised in the carrying amount of the property, plant and equipment as a replacement if the recognition criteria are satisfied. All other repair and maintenance costs are recognised in the statement of profit or loss and other comprehensive income as incurred.

Depreciation of property, plant and equipment other than assets related to open-pit mine operation is calculated on a straight-line basis over the following estimated useful lives:

	Estimated useful lives
Buildings and constructions	10–15 years
Machinery and equipment	3–7 years
Motor vehicles	7–10 years
Other	3–7 years

Major renovations are depreciated over the remaining useful life of the relevant asset or up to the date of the next major renovation, whichever is earlier.

Land and construction in progress are not depreciated. Assets related to open-pit mine operation are depreciated using the unit of production method depending on the proved geological reserves.

The cost of technical maintenance, repairs, and replacement of minor items of property, plant and equipment is charged to maintenance expense. Upon sale or disposal, the cost and respective accumulated depreciation are eliminated from the accounts of property, plant and equipment. Any resulting gains or losses arising on sale or disposal are included in the statement of profit or loss and other comprehensive income.

Construction in progress comprises costs directly related to field development, construction of buildings, infrastructure, machinery and equipment. Construction in progress is stated at cost less any impairment losses, and is not depreciated.

Once the asset is completed and commissioned, the cost associated with the asset is transferred to property, plant and equipment. Amortisation of these assets commences when the assets are ready for their intended use.

Provision

Provisions are recognised when RGG has a present obligation (legal or constructive) as a result of a past event, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation and a reliable estimate can be made of the amount of the obligation. Where RGG expects some or all of a provision to be reimbursed, for example under an insurance contract, the reimbursement is recognised as a separate asset but only when the reimbursement is virtually certain. The expense relating to any provision is presented in the statement of profit or loss and other comprehensive income net of any reimbursement.

Site restoration

RGG assesses site restoration costs based on the estimates of RGG's engineers, with due account of required restoration works according to the current legislation and practice. Site restoration liability is recognised at the present value using the discount rate of the expected cost of debt repayment and is recognised provided that the current liability exists. The liability amount is included in the carrying amount of respective assets and amortised over the useful life of the asset. The liability increases over time by regular charging of costs to profit or loss and decreases by the actually incurred site restoration costs.

The current environmental activity costs are expensed as incurred. Changes in the estimate of the existing site restoration liability, which arise due to changes in the estimates of timing or amount of outflows of resources, which entail economic benefits required to fulfil this obligation, or change in the discount rate, are added to or deducted from the value of the respective assets in the current period. When a respective asset reaches the end of useful life, these changes are recognised in the statement of profit or loss and other comprehensive income.

The management reviews total site restoration costs at the end of each Relevant period to determine whether significant changes have been made in the estimated costs. The management's assessment of the site restoration costs may change as a result of change in the applicable legislation, site restoration plan and estimates of costs and timing of expected costs.

In accordance with the amendments made to the Environmental Code of the Republic of Kazakhstan, after the termination of the operation of facilities that have a negative impact on the environment, the owners of the facilities are obliged to ensure the elimination of the consequences of the operation of the facilities in accordance with the requirements of the legislation of the Republic of Kazakhstan. As part of the liquidation of the consequences of the operation of facilities that have a negative impact on the environment, work must be carried out to bring land plots into a condition that ensures the safety and (or) health of people, environmental protection and suitable for their further use for their intended purpose, in the manner provided by the land legislation of the Republic of Kazakhstan.

In 2021, a new Environmental Code came into force. One of the provisions of this Code obliges to obtain integrated environmental permits related to the use of the best available techniques (BAT) issued by the Committee for Environmental Regulation and Control of the Ministry of Ecology, Geology and Natural Resources of the Republic of Kazakhstan. In addition, according to the new provisions of the Code in relation to the category of objects that have a negative impact on the environment, RGG is classified as an object that has a significant negative impact on the environment (objects of the 1st category).

Management believes that RGG does not have significant obligations under applicable law that are not reflected in RGG's financial statements. Estimated liabilities formed on the cost of restoring sites after depletion of reserves are based on the assessment of RGG's specialists, In the event of events that affect the estimated future costs of carrying out these types of work, the provisions will be adjusted accordingly.

Lease

RGG assesses at contract inception whether a contract is, or contains, a lease. A contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration.

RGG as a lessee

RGG applies a single recognition and measurement approach for all leases, except for short-term leases and leases of low-value assets. RGG recognises lease liabilities to make lease payments and right-of-use assets representing the right to use the underlying assets.

(a) Right-of-use assets

RGG recognises right-of-use assets at the commencement date of the lease (i.e. the date the underlying asset is available for use). Right-of-use assets are measured at cost, less accumulated depreciation and any impairment losses, and adjusted for any remeasurement of lease liabilities. The cost of right-of-use assets includes the amount of lease liabilities recognised, initial direct costs incurred, and lease payments made at or before the commencement date less any lease incentives received. sets are depreciated on a straight-line basis over the shorter of the lease term and the estimated useful lives of the assets.

Right-of-use assets are depreciated on a straight-line basis over the shorter of the lease term and the estimated useful lives of the assets. If ownership of the leased asset transfers to RGG at the end of the lease term or the cost reflects the exercise of a purchase option, depreciation is calculated using the estimated useful life of the asset.

Right-of-use assets are also tested for impairment. See description of accounting policies in Impairment of non-financial assets.

(b) Lease liabilities

At the commencement date of the lease, RGG recognises lease liabilities measured at the present value of lease payments to be made over the lease term. The lease payments include fixed payments (including in-substance fixed payments) less any lease incentives receivable, variable lease payments that depend on an index or a rate, and amounts expected to be paid under residual value guarantees. The lease payments also include the exercise price of a purchase option reasonably certain to be exercised by RGG and payments of penalties for terminating the lease, if the lease term reflects RGG exercising the option to terminate the lease. Variable lease payments that do not depend on an index or a rate are recognised as expenses (unless they are incurred to produce inventories) in the period in which the event or condition that triggers the payment occurs.

In calculating the present value of lease payments, RGG uses its incremental borrowing rate at the lease commencement date because the interest rate implicit in the lease is not readily determinable. After the commencement date, the amount of lease liabilities is increased to reflect the accretion of interest and reduced for the lease payments made. In addition, the carrying amount of lease liabilities is remeasured if there is a modification, a change in the lease term, a change in the lease payments (e.g. changes to future payments resulting from a change in an index or rate used to determine such lease payments) or a change in the assessment of an option to purchase the underlying asset.

(c) Short-term leases and leases of low-value assets

RGG applies the short-term lease recognition exemption to its short-term leases (i.e. those leases that have a lease term of 12 months or less from the commencement date and do not contain a purchase option). It also applies recognition exemption for lease of low-value assets to leases of parking places that are considered to be low value. Lease payments on short-term leases and leases of low-value assets are recognised as expense on a straight-line basis over the lease term.

Impairment of non-financial assets

RGG assesses at the end of each of the Relevant Periods whether there is an indication that an asset may be impaired. If any indication exists, or when annual impairment testing for an asset is required, RGG estimates the asset's recoverable amount. An asset's recoverable amount is the higher of an asset's or CGU's fair value less costs of disposal and its value in use. The recoverable amount is determined for an individual asset, unless the asset does not generate cash inflows that are largely independent of those from other assets or groups of assets, in which case the recoverable amount is determined for the cash-generating unit to which the asset belongs. When the carrying amount of an asset or CGU exceeds its recoverable amount, the asset is considered impaired and is written down to its recoverable amount.

In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. In determining fair value less costs of disposal, recent market transactions are taken into account. If no such transactions can be identified, an appropriate valuation model is used. These calculations are corroborated by valuation multiples, quoted share prices for publicly traded companies or other available fair value indicators.

RGG bases its impairment calculation on most recent budgets and forecast calculations, which are prepared separately for each of RGG's CGUs to which the individual assets are allocated. These budgets and forecast calculations generally cover a period of five years. A long-term growth rate is calculated and applied to project future cash flows after the fifth year.

Financial instruments — initial recognition and subsequent measurement

A financial instrument is any contract that gives rise to a financial asset of one entity and a financial liability or equity instrument of another entity.

Financial assets

Initial recognition and measurement

Financial assets are classified, at initial recognition, as subsequently measured at amortised cost, fair value through other comprehensive income, and fair value through profit or loss.

The classification of financial assets at initial recognition depends on the financial asset's contractual cash flow characteristics and RGG's business model for managing them. With the exception of trade and other accounts receivable that do not contain a significant financing component or for which RGG has applied the practical expedient of not adjusting the effect of a significant financing component, RGG initially measures a financial asset at its fair value plus, in the case of a financial asset not at fair value through profit or loss, transaction costs. Trade receivables that do not contain a significant financing component or for which RGG has applied the practical expedient are measured at the transaction price determined under IFRS 15.

In order for a financial asset to be classified and measured at amortised cost or fair value through OCI, it needs to give rise to cash flows that are solely payments of principal and interest ("SPPI") on the principal amount outstanding. This assessment is referred to as the SPPI test and is performed at an instrument level. Financial assets with cash flows that are not SPPI are classified and measured at fair value through profit or loss, irrespective of the business model.

RGG's business model for managing financial assets refers to how it manages its financial assets in order to generate cash flows. The business model determines whether cash flows will result from collecting contractual cash flows, selling the financial assets, or both. Financial assets classified and measured at amortised cost are held within a business model with the objective to hold financial assets in order to collect contractual cash flows while financial assets classified and measured at fair value through OCI are held within a business model with the objective of both holding to collect contractual cash flows and selling. Financial assets which are not held within the aforementioned business models are classified and measured at fair value through profit or loss.

Purchases or sales of financial assets that require delivery of assets within a time frame established by regulation or convention in the marketplace (regular way trades) are recognised on the trade date, i.e. the date that RGG commits to purchase or sell the asset.

Subsequent measurement

The subsequent measurement of financial assets depends on their classification.

The category of financial assets measured at amortised cost is the most appropriate for RGG.

Financial assets at amortised cost are subsequently measured using the effective interest (EIR) method and are subject to impairment, Gains and losses are recognised in profit or loss when the asset is derecognised, modified, or impaired.

RGG's financial assets at amortised cost include trade and other accounts receivable and loans issued.

Derecognition

A financial asset (or, where applicable a part of a financial asset or part of a group of similar financial assets) is derecognised when:

- The rights to receive cash flows from the asset have expired;
- RGG has transferred its rights to receive cash flows from the asset or has assumed an obligation to pay the received cash flows in full without material delay to a third party under a "pass-through" arrangement; and either (a) RGG has transferred substantially all the risks and rewards of the asset, or (b) RGG has neither transferred nor retained substantially all the risks and rewards of the asset, but has transferred control of the asset.

When RGG has transferred its rights to receive cash flows from an asset or has entered into a pass-through arrangement, it evaluates if, and to what extent, it has retained the risks and rewards of ownership. When it has neither transferred nor retained substantially all the risks and rewards of the asset, nor transferred control of the asset, RGG continues to recognise the transferred asset to the extent of its continuing involvement. In that case, RGG also recognises an associated liability. The transferred asset and the associated liability are measured on a basis that reflects the rights and obligations that RGG has retained.

Continuing involvement that takes the form of a guarantee over the transferred asset is measured at the lower of the original carrying amount of the asset and the maximum amount of consideration that RGG could be required to repay.

Impairment of financial assets

RGG recognises an allowance for expected credit losses (ECLs) for all debt instruments not held at fair value through profit or loss. ECLs are based on the difference between the contractual cash flows due in accordance with the contract and all the cash flows that RGG expects to receive, discounted at an approximation of the original effective interest rate. The expected cash flows will include cash flows from the sale of collateral held or other credit enhancements that are integral to the contractual terms.

General approach: ECLs are recognised in two stages. For credit exposures for which there has not been a significant increase in credit risk since initial recognition. ECLs are provided for credit losses that result from default events that are possible within the next 12-months (a 12-month ECL). For those credit exposures for which there has been a significant increase in credit risk since initial recognition, a loss allowance is required for credit losses expected over the remaining life of the exposure, irrespective of the timing of the default (a lifetime ECL).

Simplified approach: For trade receivables that do not contain a significant financing component or when RGG applies the practical expedient of not adjusting the effect of a significant financing component, RGG applies a simplified approach in calculating ECLs. Under the simplified approach, RGG does not track changes in credit risk, but instead recognises a loss allowance based on lifetime ECLs at the end of each of the Relevant Periods. RGG used a provision matrix based on its historical credit loss experience, adjusted for forward-looking factors specific to the debtors and the economic environment.

RGG considers a financial asset in default when contractual payments are 90 days past due. However, in certain cases, RGG may also consider a financial asset to be in default when internal or external information indicates that RGG is unlikely to receive the outstanding contractual amounts in full before taking into account any credit enhancements held by RGG. A financial asset is written off when there is no reasonable expectation of recovering the contractual cash flows.

Financial liabilities

Initial recognition and measurement

Financial liabilities are classified, at initial recognition, as financial liabilities at fair value through profit or loss, loans and borrowings, payables, or as derivatives designated as hedging instruments in an effective hedge, as appropriate. All financial liabilities are recognised initially at fair value, net of (in the case of loans and borrowings and trade and other accounts payable) directly attributable transaction costs.

RGG's financial liabilities include trade and other accounts payable, interest-bearing bank and other borrowings.

Subsequent measurement

The subsequent measurement of financial liabilities depends on their classification, as described below:

Trade and other accounts payable

Trade and other accounts payable are carried at cost which is the fair value of the consideration to be paid in the future for goods and services received, whether or not billed to RGG.

Interest-bearing bank and other borrowings

After initial recognition, interest-bearing bank and other borrowings are measured at amortised cost using the EIR method. Gains and losses on such financial liabilities are recognised in profit or loss when the liabilities are derecognised as well as through the EIR amortisation process.

Amortised cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the EIR. The EIR amortisation is included as finance costs in the statement of profit or loss and other comprehensive income.

This category mainly includes interest-bearing loans and borrowings, more details are provided in Note 25.

Derecognition

A financial liability is derecognised when the obligation under the liability is discharged or cancelled or expires.

When an existing financial liability is replaced by another from the same lender on substantially different terms, or the terms of an existing liability are substantially modified, such an exchange or modification is treated as the derecognition of the original liability and the recognition of a new liability. The difference between the respective carrying amounts is recognised in the statement of profit or loss and other comprehensive income.

Offsetting of financial instruments

Financial assets and financial liabilities are offset, and the net amount reported in the statement of financial position if, and only if:

- There is a currently enforceable legal right to offset the recognised amounts; and
- There is an intention to settle on a net basis, or to realise the assets and settle the liabilities simultaneously.

Intangible assets

Intangible assets acquired by RGG, which have finite useful lives, are stated at cost (which comprises its purchase price plus any directly attributable costs of preparing the asset for its intended use) less accumulated amortisation and impairment losses.

In accordance with subsurface use contract RGG shall compensate a certain portion of historical costs incurred by Kazakhstan government in licensing, prior to the issue of the licenses. These historical costs are recognised as a part of the cost of acquisition of a contract with a respective liability equalling the present value of payments, which will be made during the effective period of the license.

Amortisation of historical costs, subsurface use right, exploration and evaluation assets with proven reserves, temporary land use right and field restoration assets is recognised in profit or loss for the period using the units-of-production ("UOP") method. The amount of amortisation for the period is calculated based on the volume of extracted ore in tons during the Relevant Periods.

Other intangible assets represent software and licenses and are recorded at cost less accumulated amortisation, which are amortised using the straight-line method over the estimated period of their useful life, comprising 3 to 7 years.

Exploration and evaluation assets

(a) Recognition and subsequent measurement

Exploration and evaluation assets are measured at cost less accumulated impairment.

Deposit exploration and evaluation costs refer to those costs, which have arisen from exploration and evaluation of potential reserves of mineral resources and include the following: acquisition of the rights for geological exploration; conducting geological survey; exploratory drilling and sampling; assessment of technical and economic feasibility and commercial viability of production of mineral resources.

Costs incurred prior to the works on exploration and evaluation of potential reserves of mineral resources, which are performed before acquisition of the legal right for exploration on the respective block, are expensed as incurred.

The capitalised costs include expenses directly associated with exploration and evaluation on the respective prospecting site. Costs are accumulated for each individual deposit. General and administrative expenses are allocated to exploration and evaluation asset only to the extent that may be directly attributable to the operating activity on the respective prospecting site. Capitalisation takes place either in property, plant and equipment, or intangible assets depending on the nature of the expenses.

Borrowings costs relating to acquisition of exploration and evaluation assets are not capitalised.

Exploration and evaluation assets shall no longer be classified as such when technical feasibility and commercial viability of extracting mineral resources on the respective prospecting site are demonstrable.

Once the recoverable reserves of mineral resources have been discovered, the exploration and evaluation assets are transferred to development assets and depreciated prorated to the production volume based on the proved and probable reserves. No amortisation is charged during the exploration and evaluation phase.

(b) Impairment of exploration and evaluation assets

Exploration and evaluation assets are tested for impairment at the time of their reclassification to the tangible or intangible assets of the extracting activity, or if there are facts and circumstances, which evidence impairment thereof. Impairment loss is recognised in the amount of excess of the carrying amount of an exploration and evaluation asset over its recoverable amount.

The recoverable amount of exploration and evaluation asset is the greater of its value in use and its fair value less costs to sell. For the purpose of impairment testing, the exploration and evaluation assets to be tested are grouped together with the available generating units of the developed deposits.

Inventories

Inventories are valued at the lower of cost or net realisable value. Costs comprise charges incurred in bringing inventory to its present location and condition. Net realisable value is the estimated selling price in the ordinary course of business, less estimated costs of completion and the estimated costs necessary to make the sale. Cost is determined on the following bases:

- Raw materials and consumables are measured using the weighted average cost method; and
- Work in progress and finished goods is the cost of production, including the appropriate proportion of depreciation, labour and overheads based on normal operating capacity. The cost of work in progress and finished goods is based on the weighted average cost method.

Net realisable value is based on estimated selling price in the ordinary course of business less any further costs expected to be incurred to completion and disposal.

Cash and cash equivalents

Cash and cash equivalents include cash on hand, demand deposits with banks, cash in current bank accounts, and other short-term highly liquid investments with original maturities of three months or less.

Restricted cash balances are excluded from cash and cash equivalents for the purpose of cash flow statement. Cash balances restricted from being exchanged or used to settle a liability for at least twelve months after the end of each of the Relevant Periods are included in cash restricted in use.

Prepayment

Advances paid are recorded at initial cost less impairment provision. Advances paid are classified as non-current when goods or services associated with advances are to be received beyond a year, or if advances are associated with an asset, which at the initial recognition is classified as non-current. Advances for PPE are charged to the cost of these PPE when RGG obtains control over these assets and there is a probability that future economic benefits associated with these assets will flow to RGG. When there are indications of inability to receive goods or services related to advances paid, the carrying amount of advances paid is decreased and related impairment loss is recognised in the statement of profit or loss and other comprehensive income.

Revenue from contracts with customers

RGG's activities are related to the production of gold-silver Dore alloy and its subsequent sale. Revenue from contracts with customers is recognised when control of the goods or services are transferred to the customer at an amount that reflects the consideration to which RGG expects to be entitled in exchange for those goods or services. RGG has generally concluded that it is the principal in its revenue arrangements because it typically controls the goods or services before transferring them to the customer.

Below are the criteria that also apply to certain other revenue-generating transactions with customers:

Sale of goods

Revenue from the sale of goods or services is recognised after (or in the course) RGG settled its performance obligation by transferring the goods or services to the customer. An asset is transferred when (or as) the customer takes control over the asset. Revenue from sale of products and rendering of services is estimated to reflect the recovery that RGG expects to receive in exchange for those goods or services, net of related sales taxes (VAT).

RGG's sales of Dore gold allow for price adjustments based on the market price at the end of the relevant quotation periods ("QP") stipulated in the contract. These are referred to as provisional pricing arrangements and are such that the selling price for metal in concentrate is based on prevailing spot prices on a specified future date after shipment to the customer. Adjustments to the sales price occur based on movements in quoted market prices up to the end of the QP.

Contract balances

Trade receivables

Trade receivables are recognised when the amount of refund that is unconditional (i.e. the moment when such consideration becomes payable is due only to the passage of time) becomes payable by the customer. Accounting policy for financial assets are discussed in "Financial instruments — initial recognition and subsequent measurement".

Contract liabilities

Contract liability is recognised, if a customer pays consideration before RGG transfers goods or services to the customer (whichever is earlier). Contract liabilities are recognised as revenue when RGG fulfils the performance obligation under the contract (i.e. transfers control of the related goods or services to a customer).

Interest income

Interest income is recognised using the EIR method for all financial instruments measured at amortized cost and interest-bearing financial assets classified as available-for-sale. EIR is the rate that exactly discounts expected future cash payments or receipts through the expected life of the financial instrument or, if appropriate, a shorter period, to the net carrying amount of the financial asset or liability. Interest income is included in finance income in the statement of profit or loss and other comprehensive income.

Expense recognition

Expenses are accounted for at the time the actual flow of the related goods or services occur, regardless of when cash or its equivalent is paid, and are reported in the financial statements in the period to which they relate.

Taxes

Current income tax

Current income tax assets and liabilities for the current period are measured at the amount expected to be recovered from or paid to the taxation authorities. The tax rate and tax law used to compute the amount are those that are enacted or substantially enacted in the Republic of Kazakhstan as at the end of each of the Relevant Periods.

Current income tax relating to items recognised directly in equity is recognised in equity and not in the statement of profit or loss and other comprehensive income. Management periodically evaluates positions taken in the tax returns with respect to situations in which applicable tax regulations are subject to interpretation and establishes provisions where appropriate.

Deferred income tax

Deferred tax is provided using the liability method on temporary differences at the end of each of the Relevant Periods between the tax bases of assets and liabilities and their carrying amounts for financial reporting purposes.

Deferred tax liabilities are recognised for all taxable temporary differences, except where the deferred income tax liability arises from the initial recognition of an asset or liability and, at the time of the transaction, affects neither the accounting profit nor taxable profit or loss.

Deferred tax assets are recognised for all deductible temporary differences, carry forward of unused tax credits and unused tax losses. Deferred tax assets are recognised to the extent that it is probable that taxable profit will be available against which the deductible temporary differences and the carry forward of unused tax credits and unused tax losses can be utilised, except when the deferred tax asset relating to the deductible temporary difference arises from the initial recognition of an asset or liability in a transaction that, at the time of the transaction, affects neither the accounting profit nor taxable profit or loss.

The carrying amount of deferred tax assets is reviewed at the end of each of the Relevant Periods and reduced to the extent that it is no longer probable that sufficient taxable profit will be available to allow all or part of the deferred tax asset to be utilised. Unrecognised deferred tax assets are reassessed at the end of each of the Relevant Periods and are recognised to the extent that it has become probable that future taxable profit will allow the deferred tax asset to be recovered.

Deferred tax assets and liabilities are measured at the tax rates that are expected to apply to the period when the asset is realised or the liability is settled, based on tax rates (and tax laws) that have been enacted or substantively enacted at the end of each of the Relevant Periods.

Deferred tax relating to items recognised outside profit or loss is recognised outside profit or loss. Deferred tax items are recognised in correlation to the underlying transaction either in OCI or directly in equity.

Deferred tax assets and deferred tax liabilities are offset, if a legally enforceable right exists to set off current tax assets against current tax liabilities and the deferred income taxes relate to the same taxable entity and the same taxation authority.

Value added tax (VAT)

Revenues, expenses, and assets are recognised net off VAT, except:

- When VAT incurred on acquisition of assets or services is not recoverable from tax authorities, in this case VAT is recognised as a part of asset acquisition cost or a part of expense item, as appropriate;
- Amounts of receivables and payables are recorded together with VAT.

Net VAT amount expected to be recovered from or paid to the taxation authority is included into receivables or payables in the statement of financial position. VAT receivable can be offset with VAT payable, and at the request of RGG, VAT receivable may be returned in cash by the state tax authorities, in case of compliance with certain requirements of tax legislation for the recovery of the declared VAT amounts. In case when according to the existing tax legislation the recovery or offset of VAT is postponed for the next 12 months after the end of each of the Relevant Periods, such VAT recoverable is transferred to non-current assets. When unrecoverable, VAT recoverable is charged to expenses in the statement of profit or loss and other comprehensive income.

Dividends

Dividends are recognised as a liability and deducted from equity at the end of each of the Relevant Periods only if they are declared before or on the end of each of the Relevant Periods. Dividends are disclosed when they are proposed before the end of each of the Relevant Periods or proposed or declared after the end of each of the Relevant Periods but before the financial statements are authorised for issue.

Events after the reporting period

The results of events after the end of each of the Relevant Periods that provide evidence of conditions that existed at the end of each of the Relevant Periods (adjusting events) are reflected in the financial statements. Events after the end of each of the Relevant Periods that are not adjusting events are disclosed in the notes to the financial statements when material.

Foreign currency translation

Functional and presentation currency

Items included in the financial statements are measured using the currency of the primary economic environment in which the entity operate ("the functional currency").

RGG selected USD as presentation currency for the presentation of Underlying Financial Statements while the functional currency of RGG is tenge. The financial statements of RGG prepared in tenge are translated to USD based on the provision of IAS 21 *The Effect of Changes in Foreign Exchange Rates*.

Transactions and balances

Foreign currency transactions are translated into the functional currency using the exchange rates prevailing at the dates of the transactions. Foreign exchange gains and losses resulting from the settlement of such transactions and from the translation at the end of each of the Relevant Periods exchange rates of monetary assets and liabilities denominated in foreign currencies are recognised in the statement of profit or loss and other comprehensive income.

Non-monetary items that are measured in terms of historical cost in a foreign currency are translated using the exchange rates as at dates of the initial transactions. Non-monetary items measured at fair value in a foreign currency are translated using the exchange rates at the date when the fair value is determined.

Foreign exchange rate

Weighted average currency exchange rates established by the Kazakhstan Stock Exchange ("KASE") are used as official currency exchange rates in the Republic of Kazakhstan.

Going concern

The financial statements have been prepared on a going concern basis, which assumes continuation of the course of business, realisation of assets and settlement of liabilities in the normal course of business.

5. SIGNIFICANT ACCOUNTING JUDGEMENTS AND ESTIMATES

The preparation of RGG's financial statements requires the management to make judgements, estimates and assumptions that affect the reported amounts of revenues, expenses, assets and liabilities, and the disclosure of these items and contingent liabilities. Uncertainty about these assumptions and estimates could result in outcomes that require a material adjustment to the carrying amount of assets or liabilities affected in future periods.

Disclosure of other information regarding RGG's exposure to risks and uncertainties are presented in Note 30.

Judgements

In the process of applying RGG's accounting policies, management made the following judgments, which have the most significant effect on the amounts recognised in the financial statements:

Determining the lease term of contracts with renewal and termination options — RGG as a lessee

RGG determines the lease term as the non-cancellable term of the lease, together with any periods covered by an option to extend the lease if it is reasonably certain to be exercised, or any periods covered by an option to terminate the lease, if it is reasonably certain not to be exercised.

RGG has an office lease agreement that includes extension option. RGG applies judgement in evaluating whether it is reasonably certain whether or not to exercise the option to renew the lease. Taking into account all relevant factors that give rise to an economic incentive to exercise the option, RGG has concluded that the option to renew the lease will not be taken into account when determining the lease term.

Estimates and assumptions

The key assumptions concerning the future and other key sources of estimation uncertainty at the end of each of the Relevant Periods, that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year, are described below, Assumptions and estimates are based on RGG's initial data, which it had at the time of preparation of the financial statements, However, current circumstances and assumptions about the future may vary due to market changes or circumstances beyond the control of RGG, Such changes are reflected in the assumptions while they occur.

Leases — Estimating the incremental borrowing rate

RGG cannot readily determine the interest rate implicit in the lease, therefore, it uses its incremental borrowing rate (IBR) to measure lease liabilities. The IBR is the rate of interest that RGG would have to pay to borrow over a similar term, and with a similar security, the funds necessary to obtain an asset of a similar value to the right-of-use asset in a similar economic environment. The IBR therefore reflects what RGG "would have to pay", which requires estimation when no observable rates are available or when they need to be adjusted to reflect the terms and conditions of the lease. RGG estimates the IBR using observable inputs (such as market interest rates) when available and is required to make certain entity-specific estimates (such as the subsidiary's stand-alone credit rating). RGG determined incremental borrowing rate at 16%.

Determination of ore reserves and useful lives of property, plant and equipment

Reserves are estimates of the amount of product that can be economically and legally extracted from RGG's mining properties. In order to estimate reserves, assumptions are required about a range of geological, technical and economic factors, including quantities, grades, production techniques, recovery rates, production costs, transport costs, commodity demand, commodity prices and exchange rates.

A review of RGG's reserves and resources is undertaken on a regular basis with the approval by state authorities of the Republic of Kazakhstan.

Resources and reserves of the Severny and Yuzhniy Raygorodok gold deposits have been accepted for State subsoil registration of the Republic of Kazakhstan in accordance with the KAZRC Mineral Resources and Mineral Reserves Report for the Severny and Yuzhniy Raygorodok gold deposits in Burabay district of Akmola region of the Republic of Kazakhstan as of 2 January 2023.

In assessing the life of a mine for accounting purposes, mineral reserves are only taken into account where there is a high degree of confidence of economic extraction. Since the economic assumptions used to estimate reserves change from period to period, and as additional geological data is generated during the course of operations, estimates of reserves may change. Changes in reported reserves may affect RGG's financial results and financial position in a number of ways, including the following:

- Asset carrying values may be affected due to changes in estimated future cash flows;
- Depreciation, depletion and amortisation charged in the statement of profit or loss and other comprehensive income may change where such charges are determined by the unit of production basis, or where the useful economic lives of assets change;
- Decommissioning, site restoration and environmental provisions may change where changes in estimated reserves affect expectations about the timing or cost of these activities; and
- The carrying value of deferred tax assets may change due to changes in estimates of the likely recovery of tax benefits.

There are numerous uncertainties inherent in estimating ore reserves, and assumptions that are valid at the time of estimation may change significantly when new information becomes available. Changes in the forecast prices of commodities, exchange rates, production costs or recovery rates may change the economic status of reserves and may, ultimately, result in reserves being revised.

For property, plant and equipment depreciated on a straight-line basis over its useful economic life, the appropriateness of the assets' useful economic life is reviewed at least annually, and any changes could affect prospective depreciation rates and asset carrying values.

Impairment of non-financial assets

Impairment exists when the carrying amount of an asset or cash generating unit exceeds its recoverable amount, which is the higher of its fair value less costs of disposal and its value in use. The fair value less costs of disposal calculations are based on available data from binding sales transactions, conducted at arm's length, for similar assets or observable market prices less incremental costs for disposing of the asset. The value in use calculation is based on a discounted cash flow model. The cash flows are derived from the budget for the next five years and do not include restructuring activities that RGG is not yet committed to or significant future investments that will enhance the asset's performance of the CGU being tested. The recoverable amount is sensitive to the discount rate used for the DCF model as well as the expected future cash-inflows and the growth rate used for extrapolation purposes.

RGG assesses at the end of each of the Relevant Periods whether there is an indication that an asset may be impaired. If any indication exists, also in cases when circumstances indicate that it's carrying value may be impaired, RGG estimates the asset's recoverable amount.

While analysing impairment indicators, RGG, among other factors, takes into account gold price dynamics, increase in RGG's cost of production and demand from key players of precious metals market.

Provision for expected credit losses

RGG uses a provision matrix to calculate ECLs for trade receivables and other receivables. The provision rates are based on days past due for groupings of various customer segments that have similar loss patterns (i.e. by geography, product type, customer type and rating, and coverage by letters of credit and other forms of credit insurance).

The provision matrix is initially based on RGG's historical observed default rates. RGG will calibrate the matrix to adjust the historical credit loss experience with forward-looking information. In making such judgements and estimates, RGG estimates the projected movements of the debtor's credit risk according to past repayment records, economic policies, macro-economic indicators and industry risks, etc. Different estimates may affect the impairment provision, and the amount of impairment provision may not equal to the actual amount of impairment loss in the future. At the end of each of the Relevant Periods, the historical observed default rates are updated and changes in the forward-looking estimates are analysed.

The assessment of the correlation between historical observed default rates, forecast economic conditions and ECLs is a significant estimate. The amount of ECLs is sensitive to changes in circumstances and forecast economic conditions. RGG's historical credit loss experience may also not be representative of customer's actual default in the future.

Site restoration provisions

RGG estimates the cost of future site restoration on the field based on estimates received from internal or external specialists after accounting for the expected method of dismantling and the degree of site restoration required by this legislation and industry practice.

The amount of the provision for site restoration is the present value of the estimated costs that are expected to be required to settle the obligation, adjusted for the expected level of inflation, risks inherent in the Kazakh market, and discounted using average risk-free interest rates on foreign securities. The present value of the provision for site restoration is reviewed at the end of each of the Relevant Periods and adjusted to reflect the best estimate. Estimating the future costs involves significant estimates and judgments by management.

The long-term inflation rates used in the calculation of the obligations in the statement of financial position as at 31 December 2022, 2023, 2024 and 30 June 2025 were 5.34%, 4.75%, 5.38%, and 5.71%, respectively. The discount rates used in the calculation of the obligations in the statement of financial position as at 31 December 2022, 2023, 2024 and 30 June 2025 were 8.92%, 8.77%, 9.21%, and 9.38%, respectively (Note 26). In accordance with the site restoration plan, field restoration activities are planned for the period from 2030 to 2040.

Impairment of inventories

At the end of each of the Relevant Periods, RGG is testing the carrying amount of inventories for recoverability. For these purposes, RGG carries out a comprehensive assessment of inventories to be written off to their net realisable value. To a large extent, the assessment is subjective and is based on assumptions, in particular, on the forecast of production and repair, and also analyses stocks that have been idle for a certain amount of time.

Taxation

In assessing tax risks, management considers the likelihood of a liability arising in areas of tax positions for which it is known that RGG will not appeal against the tax authorities' interests or does not believe that the outcome of such appeals will be successful. Such estimates are based on significant judgment and are subject to changes in the event of changes in tax legislation, estimates of the expected outcome of potential litigation and the outcome of ongoing tax compliance audits by the tax authorities. RGG's tax liabilities and tax contingencies are disclosed in Note 13.

6. REVENUE

An analysis of revenue is as follows:

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000
Income from sale of Dore alloy	115,186	367,003	465,441	201,069	327,502
Income from sale of Gold-bearing off-grade activated carbon	1,869	428	238	249	—
Fair value gains on provisionally priced trade receivables	206	—	6,820	4,244	11,321
	117,261	367,431	472,499	205,562	338,823

During the Relevant Periods and the six months ended 30 June 2024, revenue from Kazzinc LLP represented 69%, 63%, 68%, 83% and 74% of total revenue from contracts with customers, respectively. Revenue from Tau Ken LLP accounted for 31%, 37%, 32%, 17% and 26% of total revenue from contracts with customers, respectively.

During the Relevant Periods and the six months ended 30 June 2024, revenue from contracts with customers was generated in the Republic of Kazakhstan and recognised at a point in time.

RGG has elected the practical expedient as described in IFRS 15.121(b) to not disclose the remaining performance obligations for these types of contracts.

7. COST OF SALES

An analysis of cost of sales is as follows:

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000
Processing costs *(i)*	22,872	121,290	152,636	71,526	90,696
Mineral extraction tax	13,652	43,384	46,583	17,177	23,390
Mining costs	35,678	67,798	45,015	23,321	21,363
Payroll and related expenses	8,283	10,383	11,680	5,855	6,633
Depreciation and amortisation	3,693	6,615	6,869	3,111	3,617
Materials	9,347	9,958	5,547	2,981	2,912
Taxes other than income tax	490	2,175	2,629	897	1,272
Catering services	761	1,049	997	523	574
Repair and maintenance	229	524	844	294	314
Security services	391	498	567	286	300
Utility services	755	769	549	226	264
Laboratory-based work	1,524	1,390	1,640	616	205
Transportation expenses	54	85	118	41	52
Education and trainings	8	474	84	23	30
Engineer works	52	48	75	—	4
Change in work in progress and ore *(Note 19)*	(30,287)	(29,242)	(26,260)	(7,529)	(916)
Other	885	1,120	1,419	669	1,449
	68,387	238,318	250,992	120,017	152,159

(i) Processing costs are represented by primary ore processing services provided by RG Processing LLP.

8. OTHER INCOME AND GAINS

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000
Other income					
Interest income	3,097	2,953	7,262	1,369	5,675
Others	316	1,358	1,983	677	663

Insurance	155	42	15	5	5
Bank fees	13	10	9	—	3
Utilities	41	3	5	3	2
Taxes other than income tax	264	139	17	13	1
Repair and maintenance	9	1	5	—	1
Fines and penalties	20	1	15	—	—
Research and development	—	—	3,510	169	—
Other	161	427	596	161	145
	3,343	4,638	9,035	3,020	3,589

10. DIVIDENDS

During the year ended 31 December 2024, RGG declared dividends of USD196,785 thousand and paid USD185,331 thousand. The remaining balance of dividends payable was paid in January 2025.

11. OTHER EXPENSES

An analysis of other expenses is as follows:

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000
Charity expenses	351	269	2,850	2,874	38,119
Foreign exchange loss, net	551	—	3,962	3,552	954
Disposal of non-current assets	—	32	23	21	7
Other	695	407	292	127	3,126
	1,597	708	7,127	6,574	42,206

For the six months ended 30 June 2025, RGG donated USD35,769 thousand to the Private Foundation "Bulat Utemuratov Foundation" for charitable purposes.

12. FINANCE COSTS

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000
Interest expenses on loans and borrowings	1,844	1,729	802	310	808
Interest expenses on leases *(Note 15)*	59	148	152	83	63
Unwinding of discount *(Note 26)*	119	179	317	64	177
	2,022	2,056	1,271	457	1,048

13. INCOME TAX EXPENSES

An analysis of RGG's provision for tax is as follows:

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000
Current tax expense	8,977	25,521	42,697	18,554	39,677
Deferred tax (benefit)/expense	(58)	198	(651)	(3,899)	(3,429)
Adjustment of prior years	—	392	(626)	(626)	—
	8,919	26,111	41,420	14,029	36,248

RGG is subject to corporate income tax determined in accordance with the laws of the Republic of Kazakhstan. During the Relevant Periods and the six months ended 30 June 2024, the corporate income tax rate was 20%.

Profit before tax for financial reporting purposes is reconciled to income tax expense as follows:

	Year ended 31 December			Six months ended 30 June	
	2022	2023	2024	2024	2025
	USD'000	USD'000	USD'000	USD'000 (Unaudited)	USD'000
Profit before tax	45,061	126,874	212,885	77,160	146,054
Theoretical income tax charge at statutory tax rate of 20%	9,012	25,375	42,577	15,432	29,211
Correction of current income tax	—	392	(626)	(626)	—
Non-deductible expenses	46	344	229	86	7,075
Income not subject to tax	(139)	—	(760)	(863)	(38)
Total income tax expense	8,919	26,111	41,420	14,029	36,248

14. PROPERTY, PLANT AND EQUIPMENT

Property, plant and equipment as at 31 December 2022, 2023, 2024 and 30 June 2025 are presented as follows:

	Buildings and constructions	Machinery and equipment	Development assets	Other property, plant and equipment	Construction in progress	Total
	USD'000	USD'000	USD'000	USD'000	USD'000	USD'000
Initial Cost						
As at 1 January 2022	5,371	10,477	18,632	1,239	19,879	55,598

As at 30 June 2025	685

On 11 December 2019, RGG has concluded an agreement for the rent of office premise for a period of 5 years, RGG has a primary right to conclude a lease for a new term after expiration of a lease term under the contract. In March 2023, RGG entered into an agreement extending th"e lease term to 1 April 2028 with an option to renew.

RGG also has certain leases of office with lease terms of 12 months or less and leases of parking places with low value. RGG applies recognition exemptions for the short-term lease and lease of low-value assets for these leases.

(b) Lease liabilities

Set out below is the carrying amount of the lease liability and the movements during the Relevant Periods:

	31 December			30 June
	2022 USD'000	2023 USD'000	2024 USD'000	2025 USD'000

As at 30 June 2025	1,482	11,999	1,584	20,003	1,244	36,312

As at 31 December 2022 and 2024 and 30 June 2025, no intangible assets were pledged as collateral for the loan. As at 31 December 2023, intangible assets namely the subsurface use right under Contract No. 486 dated 19 June 2000 with a net book value of USD1,533 thousand temporary land- use right for 8 land plots (under a contract for exploration with subsequent gold mining) with a net book value of USD151 thousand and temporary land use right for 1 land plots (for the implementation of the gold processing plant, overhead lines, tailings) with a net book value of USD185 thousand were pledged as collateral for a loan received from Development Bank of Kazakhstan JSC.

At the end of each of the Relevant Periods, the depreciation methods, useful lives and residual values are reviewed for any necessary revisions and revised as necessary.

RGG owns the following licenses for the exploration of solid minerals which provide the right to use subsurface plots for the purpose of conducting exploration operations for solid minerals in accordance with the Code of the Republic of Kazakhstan dated 27 December 2017 On Subsurface and Subsurface Use:

- No. 663-EL dated 24 June 2020, valid for 6 years from the date of issue;
- No. 664-EL dated 24 June 2020, valid for 6 years from the date of issue;
- No. 665-EL dated 24 June 2020, valid for 6 years from the date of issue;
- No. 666-EL dated 24 June 2020, valid for 6 years from the date of issue;
- No. 667-EL dated 24 June 2020, valid for 6 years from the date of issue;
- No. 668-EL dated 24 June 2020, valid for 6 years from the date of issue;

RGG also owns a license to use the subsurface territory, which grants the rights to use land plots:

- No. 7-IPN dated 22 February 2021, valid until 2046 from the date of issue.

17. DEFERRED TAX

Deferred tax balances calculated by applying the income tax rates in effect at the end of each of the Relevant Periods to the temporary differences between the tax basis of assets and liabilities and the amounts reported in the Historical Financial Information, comprised the following:

	1 January 2022	Change through profit or loss	Translation reserve	31 December 2022	Change through profit or loss	Translation reserve	31 December 2023	Change through profit or loss	Translation reserve	31 December 2024	Change through profit or loss	Translation reserve	30 June 2025

Net deferred tax (liabilities)/assets	(890)	—	—	(773)	—	—	(985)	—	—	(271)	—	—	3,097

18. OTHER NON-CURRENT ASSETS

As at 31 December 2022, 2023, 2024 and 30 June 2025, other non-current assets comprised:

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Advances paid for property, plant and equipment and intangible assets	1,155	850	2,388	3,318
Inventories, non-current portion	—	5,740	3,175	3,357
Total	1,155	6,590	5,563	6,675

19. INVENTORIES

As at 31 December 2022, 2023, 2024 and 30 June 2025 inventories comprised:

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Ore in stockpile	35,880	55,841	73,109	74,895
Work-in-progress	16,363	18,889	15,856	18,425
Raw materials	2,247	7,620	3,494	4,160
Finished products	—	2,057	3,060	—
Spare parts	297	500	459	366
Total	54,787	84,907	95,978	97,846

Spare parts and production materials in warehouses as of 31 December 2022, 2023, 2024 and 30 June 2025 were purchased to support the production works, processing workshop operations and infrastructure.

No heap leach stacking operations were planned or carried out in 2024, and all oxide ore reserves were classified as non-current inventory as of 31 December 2023. According to the production plan, the start of stacking is again planned for 2025. Consequently, a portion of the oxide ore stockpiles have been reclassified to short-term inventory as at 31 December 2024 and 30 June 2025.

20. TRADE RECEIVABLES

At 31 December 2022, 2023, 2024 and 30 June 2025, trade receivables comprised:

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Trade receivables (subject to provisional pricing) — fair value *(i)*	20,674	29,888	51,051	35,233

(i) Trade receivables (subject to provisional pricing) are non-interest bearing, but as discussed in Note 4 above, are exposed to future commodity price movements over the QP and, hence, fail the SPPI test and are measured at fair value up until the date of settlement.

21. PREPAYMENTS, OTHER RECEIVABLES AND OTHER ASSETS

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Prepayment for supply of inventories	898	586	530	252
Prepayment for services	1,463	779	345	165
Loans issued (a)	50,543	7,274	—	—
Other receivables	1,625	4,733	6,194	1,059
Less: allowance for expected credit losses	(67)	(2)	(1)	(1)
	54,462	13,370	7,068	1,475

(a) At 31 December 2022, 2023, 2024 and 30 June 2025, loans issued comprised:

	Currency	Interest rate	Maturity date	31 December			30 June
				2022	2023	2024	2025
				USD'000	USD'000	USD'000	USD'000
RG Processing LLP	USD	0–6%	On demand	50,291	7,008	—	—
Cantech S.a.r.l	Euro	2%	On demand	252	266	—	—
				50,543	7,274	—	—

In 2024, Cantech S.a.r.l repaid principal amount for USD256 thousand and related interest.

Principal and interest amount must be repaid on each loan by the borrower within 15 days after receiving from RGG a formal written collection notice.

Set out below is the information about the credit risk exposure on RGG's other receivables using a matrix of reserves:

As at 31 December 2022

			Past due			
	Total	Current	Less than 90 days	90–180 days	180–270 days	More than 270 days
Estimated credit loss rate		0.45%	—	—	20.75%	—
Estimated total gross carrying amount at default	365	46	—	—	319	—
Allowance for expected credit losses	67	1	—	—	66	—

As at 31 December 2023

			Past due			
	Total	Current	Less than 90 days	90–180 days	180–270 days	More than 270 days
Estimated credit loss rate		0.11%	—	—	—	0.00%
Estimated total gross carrying amount at default	1,382	182	—	—	—	1,200
Allowance for expected credit losses	2	2	—	—	—	—

As at 31 December 2024

			Past due			
	Total	Current	Less than 90 days	90–180 days	180–270 days	More than 270 days
Estimated credit loss rate		0.06%	—	—	—	—
Estimated total gross carrying amount at default	18	18	—	—	—	—
Allowance for expected credit losses	1	1	—	—	—	—

As at 30 June 2025

			Past due			
	Total	Current	Less than 90 days	90–180 days	180–270 days	More than 270 days
30 June 2025						
Estimated credit loss rate		0.19%	—	—	—	—
Estimated total gross carrying amount at default	103	103	—	—	—	—
Allowance for expected credit losses	1	1	—	—	—	—

As at 31 December 2022, 2023, 2024 and 30 June 2025, RGG did not recognise an allowance for expected credit losses on loans issued to related parties, as the credit risk of the related parties is low.

22. CASH AND CASH EQUIVALENTS, AND RESTRICTED CASH

Cash and cash equivalents

At 31 December 2022, 2023, 2024 and 30 June 2025, cash and cash equivalents comprised:

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000
Cash on deposit accounts in KZT (less than three months)	—	3	6,018	138,008
Cash on current bank accounts in KZT	16,297	69,690	72	62
Cash on current bank accounts in USD	5,378	—	—	3,855
Cash on current bank accounts in RUB*	—	—	—	15
	21,675	69,693	6,090	141,940

* *RUB represents Russian Ruble*

During the Relevant Periods, no interest was accrued on cash balances on current bank accounts. As at 31 December 2022, 2023 and 2024 and 30 June 2025, deposit accounts of up to three months denominated in KZT bear interest ranging from 12.50% to 15.50% per annum.

Restricted cash

At 31 December 2022, 2023, 2024 and 30 June 2025, restricted cash comprised:

	31 December			30 June
	2022	2023	2024	2025
Restricted cash in KZT	807	1,492	1,964	1,984
Restricted cash in USD	1,031	1,160	1,160	1,160
	1,838	2,652	3,124	3,144

Amounts reserved for execution of liabilities on future site restoration will be available for use with the permission of competent body, approved by the authorised agency on protection and subsurface use and the Central executive body on environmental protection.

23. TRADE PAYABLES

As at 31 December 2022, 2023, 2024 and 30 June 2025, trade payables comprised:

	31 December			30 June
	2022	2023	2024	2025
	USD'000	USD'000	USD'000	USD'000

Current portion					35,140	2,332	19,102	1,101

Development Bank of Kazakhstan JSC

Under the terms of interest-bearing loans, RGG ensured the fulfilment of financial and non-financial covenants and prematurely repaid the principal debt and interest as of 31 December 2022 and 2023.

Halyk Bank of Kazakhstan JSC

On 21 May 2024, RGG prematurely repaid its obligations to the Development Bank of Kazakhstan JSC for the principal debt in the amount of USD8,168 thousand and interest in the amount of USD2,201 thousand.

On 5 September 2024, RGG entered into a loan agreement for USD8,168 thousand with Halyk Bank of Kazakhstan JSC to reimburse incurred expenses for repayment of the principal debt on the loan from Development Bank of Kazakhstan JSC.

On 23 December 2024, RGG received a short-term loan of USD30,000 thousand (equivalent to 15,715,800 thousand tenge) from Halyk Bank of Kazakhstan JSC, of which USD12,000 thousand (equivalent to 6,261,720 thousand tenge) was repaid at the end of 2024.

According to the terms of the loan agreement with Halyk Bank of Kazakhstan JSC, RGG is obliged to comply with certain financial and non-financial covenants. Under the terms of the loan agreement, non-compliance with financial covenants may lead to the repayment of this long-term loan on demand. As at 31 December 2022, 2023, 2024 and 30 June 2025, 100% interest in RG Gold LLP and tailings storage facility with a carrying value of USD42,020 thousand are pledged to secure obligations under the credit line agreement with Halyk Bank of Kazakhstan JSC. RGG monitors compliance with covenants under the loan agreement at the end of each of the Relevant Periods.

26. PROVISIONS

During the Relevant Periods, movements of provisions were as follows:

	Site restoration	Social program commitments	Total
	USD'000	USD'000	USD'000

Site Restoration

In accordance with the legislation of the Republic of Kazakhstan on the environment, land pollution allowed by RGG in Burabai District of Akmola region is subject to elimination, and the site is subject to restoration to its original condition after RGG's activities completion.

The estimated total undiscounted cost of dismantling of property, plant and equipment and land restoration after the completion of RGG's operations as at 31 December 2022, 2023, 2024 and 30 June 2025 were USD2,559 thousand, USD5,013 thousand, USD4,935 thousand and USD5,500 thousand, respectively. As at 31 December 2022, 2023, 2024 and 30 June 2025, the discounted amount of provision for land restoration amounted were USD1,712 thousand, USD3,314 thousand, USD3,453 thousand and USD3,760 thousand, respectively.

The amount of this provision was calculated taking into account the risks associated with the amount and dates of origination of land rehabilitation costs based on the known scope of damage. During the Relevant Periods, the management determined the present value of the restoration costs by discounting the estimated restoration cost using the rate of 8.92%, 8.77%, 9.21% and 9.38% respectively, including the estimated inflation rate of 5.34%, 4.75%, 5.38% and 5.71% respectively.

Social program commitments

According to the subsurface use contract, RGG is committed to provide financing of USD30,000 per year for social development up to the expiry of the subsurface use contract in 31 December 2040. As at 31 December 2022, 2023, 2024 and 30 June 2025, a social program commitment were equal to USD289 thousand, USD283 thousand, USD272 thousand and USD284 thousand, respectively. And the present value of costs were calculated by discounting their estimated value at a USD rate of 9.08%, 8.81%, 9.08% and 9.38%, respectively.

27. SHARE CAPITAL

As at 31 December 2022, 2023, 2024 and 30 June 2025 the amount of the declared and fully paid-up share capital was USD12,428 thousand. The share capital was formed through cash contribution. As of 31 December 2022, 2023, 2024 and 30 June 2025, Cantech S.a.r.l is a 100% participant of RGG.

28. RELATED PARTY DISCLOSURES

In accordance with IAS 24 Related Party Disclosures, parties are considered to be related if one party has the ability to control the other party or exercise significant influence over the other party in making financial or operational decisions. In considering each possible related party relationship, attention is directed to the substance of the relationship, not merely the legal form.

Related parties may enter into transactions, which unrelated parties might not, and transactions between related parties may not be affected on the same terms, conditions and amounts as transactions between unrelated parties.

Terms and conditions of transactions with related parties

Related party transactions were made on terms agreed to between the parties that may not necessarily be at market rates, Outstanding balances at 31 December 2022, 2023, 2024 and 30 June 2025 are unsecured, non-interest bearing and settlement occurs in cash, No guarantees were provided with respect to accounts payable of related parties, This assessment is undertaken each financial year through examining the financial position of the related party and the market in which the related party operates.

The nature of the related party relationships for those related parties with whom RGG entered into significant transactions or had significant balances outstanding at 31 December 2022, 2023, 2024 and 30 June 2025 are detailed below.

	Parent	Entities under common control of the ultimate controlling party

Purchases of goods and services

Entities under common control of the ultimate controlling party

During the Relevant Periods and the six months ended 30 June 2024, purchases from entities under common control of the ultimate controlling party were mainly represented by ore and coal processing services provided by RG Processing LLP in the amount of USD22,872 thousand, USD121,290 thousand, USD152,636 thousand, USD90,696 thousand and USD71,526 thousand, respectively.

Compensation to the key management personnel

During the Relevant Periods, total compensation to key management personnel included in general and administrative expenses in the statement of profit or loss and other comprehensive income amounts to USD926 thousand, USD1,454 thousand, USD1,413 thousand and USD1,065 thousand, respectively. Compensation to the key personnel includes salaries, bonuses, expenses on vacations and other payments in accordance with the internal provisions of RGG.

29. COMMITMENTS, CONTINGENCIES AND OPERATING RISKS

Operating environment

Kazakhstan continues economic reforms and development of its legal, tax and regulatory frameworks as required by a market economy, The future stability of the Kazakh economy is largely dependent upon these reforms and developments and the effectiveness of economic, financial and monetary measures undertaken by the government.

Taxation

Various types of legislation and regulations are not always clearly written, and their interpretation is subject to the opinions of the local tax inspectors and the Ministry of Finance of the Republic of Kazakhstan. Instances of inconsistent opinions between local, regional and national tax authorities are not unusual, including opinions on IFRS interpretations with regard to revenue, expenses and other items of the financial statements.

The current regime of penalties and interest related to reported and discovered violations of Kazakhstan's law, are severe. Penalties are generally 80% of the taxes additionally assessed and interest is assessed at the refinancing rate established by the National Bank of Kazakhstan multiplied by 1.25. As a result, penalties and interest can amount to multiples of any assessed taxes.

RGG believes that it has paid or accrued all taxes that are applicable. Where legislation concerning the provision of taxes is unclear, RGG has accrued tax liabilities based on management's best estimate. RGG's policy is to accrue contingencies in the accounting period in which a loss is deemed probable and the amount is reasonably determinable. Because of the uncertainties associated with Kazakhstan's tax system, the ultimate amount of taxes, penalties and interest, if any, may be in excess of the amount expensed to date and accrued at 31 December 2022, 2023, 2024 and 30 June 2025.

The resulting effect of this matter is that additional tax liabilities may arise. However, due to the range of uncertainties described above in assessing any potential additional tax liabilities, it is not practicable for the management to estimate the financial effect in terms of the amount of additional tax liabilities, if any, together with any associated penalties and charges for which RGG may be liable.

Use of subsurface and exploration rights

In Kazakhstan, all subsurface reserves belong to the State, with the Ministry of Energy (the "Ministry") granting exploration and production rights to third parties. Subsurface and exploration rights are not granted in perpetuity, and any renewal must be agreed before the expiration of the relevant contract or licence. These rights may be terminated by the Ministry if RGG does not satisfy its contractual obligations.

Work program

As at 31 December 2022, 2023, 2024 and 30 June 2025, RGG fully complies with certain requirements of the working program on mine fields, except for exploration obligations, for which RGG has fulfilled its obligations by 100%.

Education commitments

According to the subsurface use contract, RGG is committed to provide 1% of the total comprehensive income per year for financing of research and development up to the expiry of the subsurface use contract. As at 31 December 2022, 2023, 2024 and 30 June 2025, RGG's management believes that RGG complied with the substantial commitments for financing of R&D.

According to the requirements of the subsurface use contract RGG is obliged to hire Kazakh personnel and purchase goods, works and services of Kazakh origin in the following percentage:

Personnel:

- Specialists and workers — 100%.

Work and services:

- Not less than 80% of the total cost.

As at 31 December 2022, 2023, 2024 and 30 June 2025, RGG's management believes that RGG complied with Kazakh content commitments.

Liabilities for licenses for exploration for solid minerals and usage of land plots. In accordance with the terms of licenses for the exploration of solid minerals and usage of land plots, RGG is obliged to make the following payments:

- Payment of a signature bonus;
- Payment during the term of the license for the use of land plots in the amount and in the manner established by the tax legislation of the Republic of Kazakhstan;
- Annual minimum cost incurrence for solid mineral exploration.

As at 31 December 2022, 2023, 2024 and 30 June 2025, the Management of RGG believes that RGG fulfilled its significant obligations under licenses for exploration of solid minerals and the use of subsurface space.

Contingent liabilities

RGG assesses the likelihood of material liabilities arising from individual circumstances and makes provision in its financial statements only where it is probable that actual events giving rise to liability will occur and the amount of the liability can be reasonably estimated.

Contractual liabilities

As at 31 December 2022, 2023, 2024 and 30 June 2025, there were no contractual obligations for capital expenditures.

Guarantees

As of 31 December 2022 and 2024 and 30 June 2025, RGG had no guarantee obligations to a related party RG Processing LLP. As of 31 December 2023, in respect of 70% from the total cost of contracts for the supply of spare parts of USD297 thousand from Metso Outotec Kazakhstan LLP. Moreover, RGG and RG Processing LLP are coborrowers under credit lines opened with ForteBank JSC and Development Bank of Kazakhstan JSC, under which they are jointly and severally liable for repayment of loans received. As of 31 December 2022, 2023, 2024 and 30 June 2025, the balance of liabilities of RG Processing LLP to the bank is USD245,555 thousand, USD244,824 thousand, USD205,807 thousand and USD191,701 thousand.

Environmental protection

RGG also may suffer potential losses as a result of claims by regional environmental authorities, which may arise in respect of previous periods of fields development, which are currently mined by RGG. As Kazakhstan's laws and regulations evolve concerning environmental assessments and site restoration, RGG may incur future costs, the amount of which is currently indeterminable due to such factors as the ultimate determination of responsible parties associated with these costs and the Government's assessment of the respective parties' ability to pay for the costs related to environmental reclamation. However, depending on any unfavourable claims or penalties assessed by the Kazakh regulatory agencies it is possible that RGG's future results of operations or cash flow could be materially affected in a particular period.

The management believes it is unlikely that such costs will have a material effect on the financial position of RGG and accordingly no additional provisions for possible environmental claims or penalties are included in the accompanying financial statements.

The management believes that there are no significant liabilities under the current legislation, which are not accrued in RGG's financial statements. The provisions that have been made for costs associated with restoration of sites upon depletion of deposits, are based upon the estimation of RGG's specialists. Where events occur that change the level of estimated future costs for these activities, the provisions will be adjusted accordingly.

Legal claims

In the ordinary course of business, RGG is subject to various legal proceedings and claims. Management believes that the ultimate liability, if any, arising from such proceedings and claims will not have a material adverse effect on RGG's financial position or results of operations.

During the year ended 31 December 2023, RGG continued to pursue claims and litigation work based on the results of the inspection with the Department of Ecology in Akmola region. RGG's management appealed the results of the inspection in court and as a result, the administrative claim of RG Gold limited liability partnership against the republican state institution "Department of Ecology in Akmola region of the Committee for Environmental Regulation and Control of the Ministry of Ecology and Natural Resources of the Republic of Kazakhstan" was satisfied, recognising it as illegal thereby cancelling the instruction to eliminate violations No. 17 dated 11 July 2023.

Since 8 January 2024, the application for cassation review of the judicial act has been under consideration by the Supreme Court of the Republic of Kazakhstan. The decision of the Supreme Court of the Republic of Kazakhstan of 1 October 2024 left the decision of the lower court unchanged. On 11 October 2024, the Burabai District Court issued a ruling to discontinue the case proceedings.

Insurance

The insurance industry in the Republic of Kazakhstan is in a developing stage and many forms of insurance protection common in other parts of the world are not yet generally available. However, RGG has insurance coverage for civil liability to third parties at the level of generally accepted principles in the gold mining industry. Management of RGG believes that, as at 31 December 2022, 2023, 2024 and 30 June 2025, RGG's insurance program complies with the main provisions of the subsurface use contract.

30. FINANCIAL RISK MANAGEMENT OBJECTIVES AND POLICIES

Major financial liabilities of RGG comprise interest-bearing bank and other borrowings, trade payables, lease liabilities and social program commitments. The main purpose of these financial liabilities is to support RGG's operating activities. RGG's principal financial assets comprise trade receivables, loans issued, cash and cash equivalents, and restricted cash that directly arrive from its operations. During the Relevant Periods, RGG did not undertake trading in financial instruments.

RGG is exposed to market risk, credit risk and liquidity risk.

Market risk

Market risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market interest rates. Market risk includes three types of risks: interest rate risk, currency risk and commodity price risk. Financial instruments exposed to market risk include cash and cash equivalents, restricted cash, loans issued, trade receivables, interest-bearing bank and other borrowing, lease liabilities, social program commitments and trade payables.

Interest rate risk

Interest rate risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates. RGG is not exposed to risk of changes in market interest rates, since it does not have financial instruments with floating rates.

Currency risk

Currency risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market interest rates.

RGG is exposed to foreign currency risk while performing sales, purchases, attracting borrowings denominated in the currency other than the functional currency of RGG. The main income of RGG is denominated in USD, whereas the main part of expenses is denominated in tenge, accordingly, the operating profit could be adversely impacted by the increase in the exchange rate of tenge against USD.

RGG has the following types of financial assets and liabilities denominated in foreign currency at the end of each of the Relevant Periods:

	31 December 2022	31 December 2023	31 December 2024	30 June 2025	31 December 2022	31 December 2023	31 December 2024	30 June 2025
	USD'000 EUR denominated	USD'000 EUR denominated	USD'000 EUR denominated	USD'000 RUB denominated	USD'000 USD denominated	USD'000 USD denominated	USD'000 USD denominated	USD'000 USD denominated
Cash and cash equivalents *(Note 22)*	—	—	—	15	5,378	—	—	3,855
Restricted cash	—	—	—	—	1,031	1,160	1,160	1,160
Loans issued *(Note 21)*	252	266	—	—	50,291	7,008	—	—
Total assets	252	266	—	15	56,700	8,168	1,160	5,015
Interest-bearing bank and other borrowings *(Note 25)*	—	—	—	—	44,763	10,576	18,003	—
Trade payables *(Note 23)*	—	—	—	18	15	—	2	60
Social program commitments *(Note 26)*	—	—	—	—	288	283	272	283
Lease liabilities *(Note 15)*	—	—	—	—	489	1,154	901	790
Total liabilities	—	—	—	18	45,555	12,013	19,178	1,133
Net amount of financial assets/ (liabilities) in foreign currency	252	266	—	(3)	11,145	(3,845)	(18,018)	3,882

The following table demonstrates the sensitivity to a reasonably possible change in the foreign exchange rate of USD of RGG's income before tax (due to changes in the fair value of monetary assets and liabilities), taking into account that all other parameters are held constant:

	Increase/ (decrease) of exchange rate against USD	Effect on profit before tax USD'000
2022	21.00%	6,226
USD	(21.00%)	(6,226)
2023	14.00%	(39)
USD	(14.00%)	39
2024	9.09%	(1,827)
USD	(7.34%)	1,475
30 June 2025	9.09%	278
USD	(7.34%)	(225)

Commodity price risk

RGG is exposed to the effect of fluctuations in the price of gold, which is quoted in USD per ounce on the international markets. RGG prepares annual budgets and periodic forecasts including sensitivity analyses in respect of various levels of gold prices in the future.

RGG's exposure to the risk of changes in gold prices is set out in the following table:

	Gold price changes	Effect on profit before tax
		USD'000
2022	10%	11,753
	(10%)	(11,753)
2023	10%	36,736
	(10%)	(36,736)
2024	10%	47,250
	(10%)	(47,250)
The six months ended 30 June 2025	10%	33,246
	(10%)	(33,246)

Credit risk

Credit risk is the risk that a counterparty to a financial instrument will cause a financial loss for the other party by failing to discharge an obligation. RGG is exposed to potential credit risk from potential default by the counterparty. Taking into account the specific nature of the business in the Relevant Periods RGG has a significant concentration of credit risk since the main income of RGG is received from the only major counterparty. In accordance with RGG's policy, accounts receivable is monitored on an ongoing basis with the result that RGG's exposure to bad debts is not significant. The maximum exposure to credit risk of RGG is expressed by the carrying amount of each financial asset recognised in the statement of financial position.

RGG trades with recognised, creditworthy counterparties. It is RGG's policy that all counterparties who wish to trade on credit terms are subject to credit verification procedures. In addition, accounts receivable of such customer are monitored on an ongoing basis with the result that RGG's exposure to bad debts is not significant. The maximum exposure to credit risk at the end of each of the Relevant Periods is the carrying value of each class of financial assets described in appropriate notes.

RGG places deposits at Kazakhstani banks. RGG's management reviews credit ratings of these banks periodically to eliminate extraordinary credit risk exposure.

The table below shows the balances of bank deposits and cash on current accounts and long-term deposits with banks at the end of the period using the credit ratings:

Credit risk

		31 December 2022

Liquidity risk

Liquidity risk is the risk that RGG will be unable to settle all liabilities when they are due. RGG has in place a detailed budgeting and cash forecasting process to help ensure that it has adequate cash available to meet its payment obligations.

The summary of the maturity profile of RGG's financial liabilities as at 31 December 2022, 2023, 2024 and 30 June 2025 based on contractual payments are presented below:

In thousands of USD	On demand	Less than 3 months	3 to 12 months	1 to 5 years	Over 5 years	Total
As at 31 December 2022						
Interest-bearing bank and other borrowings	—	389	35,557	8,951	4,307	49,204

Capital management

The overriding objectives of RGG's capital management policy are to safeguard and support the business as a going concern through the commodity cycle and to maintain an optimal capital structure with a view to maximising returns to the founder and benefits to other stakeholders by reducing RGG's cost of capital.

RGG monitors equity using a gearing ratio, which is net debt divided by equity plus net debt. RGG includes interest bearing loans and borrowings, trade payables less cash and cash equivalents to net debt.

No changes were made in the objectives, policies or processes for managing capital during the Relevant Periods.

Fair value of financial instruments

Fair value is defined as the amount at which an instrument could be exchanged in a current transaction between knowledgeable willing parties according to arm's length conditions, other than in a forced or liquidation sale. The following methods and assumptions were used to estimate the fair values:

- The carrying amount of cash and cash equivalents, restricted cash, trade payables, other payables and accruals, and other financial liabilities approximates their fair value due to the short-term nature of these financial instruments;

- Long-term fixed-rate and variable-rate borrowings are evaluated by RGG based on parameters such as interest rates, specific country risk factors, and individual creditworthiness of the customer and the risk characteristics of the financed project. Based on this evaluation, allowances are taken into account for the expected losses of these receivables. As at 31 December 2022, 2023, 2024 and 30 June 2025, the carrying amounts of such receivables, net of allowances, were not materially different from their calculated fair values;

- The fair value of quoted debentures and bonds is based on the prices at the end of each of the Relevant Periods. The fair value of unquoted instruments, bank loans and other liabilities, finance lease liabilities and other long-term liabilities was estimated by discounting the expected future cash flows at current interest rates with similar conditions, credit risk and remaining maturities.

Fair value measurement hierarchy

The fair value of loans and borrowings as of 31 December 2022 represents the present value of future cash flows discounted at market interest rates, according to data from the National Bank of Kazakhstan (NBK), at rates of 19.82% for tenge-denominated loans and 6.42% for USD-denominated loans; as of 31 December 2023 at rates of 19.54% for tenge-denominated loans and 7.25% for USD-denominated loans; as of 31 December 2024 at rates of 17.60% for tenge-denominated loans and 7.00% for USD-denominated loans; as of 30 June 2025 at rates of 18.34% for tenge-denominated loans.

The table below discloses the evaluation hierarchy of RGG at the fair value:

	As at 31 December 2022			
	Level 1	Level 2	Level 3	Total
	USD'000	USD'000	USD'000	USD'000
Assets measured at fair value				
Trade receivables *(Note 20)*	—	20,674	—	20,674
Assets for which fair values are disclosed				
Loans issued *(Note 21)*	—	—	50,543	50,543
Financial liabilities whose fair value is disclosed				
Interest-bearing bank and other borrowings *(Note 25)*	—	—	41,485	41,485

	As at 31 December 2023			
	Level 1	Level 2	Level 3	Total
	USD'000	USD'000	USD'000	USD'000
Assets measured at fair value				
Trade receivables *(Note 20)*	—	29,888	—	29,888
Assets for which fair values are disclosed				
Loans issued *(Note 21)*	—	—	7,274	7,274
Financial liabilities whose fair value is disclosed				
Interest-bearing bank and other borrowings *(Note 25)*	—	—	8,139	8,139

	As at 31 December 2024			
	Level 1	Level 2	Level 3	Total
	USD'000	USD'000	USD'000	USD'000
Assets measured at fair value				
Trade receivables *(Note 20)*	—	51,051	—	51,051
Financial liabilities whose fair value is disclosed				
Interest-bearing bank and other borrowings *(Note 25)*	—	—	26,062	26,062

	As at 30 June 2025			
	Level 1	Level 2	Level 3	Total
	USD'000	USD'000	USD'000	USD'000
Assets measured at fair value				
Trade receivables *(Note 20)*	—	35,233	—	35,233
Financial liabilities whose fair value is disclosed				
Interest-bearing bank and other borrowings *(Note 25)*	—	—	7,150	7,150

During the Relevant Periods, there were no transfers between Levels 1, 2 and 3 of the financial instruments' fair value.

31. SUBSEQUENT FINANCIAL STATEMENTS

On 10 July 2025, dividends in the amount of USD97,201 thousand have been declared and fully paid in accordance with the resolution of the sole shareholder of RGG.

No audited financial statements have been prepared by RGG in respect of any period subsequent to 30 June 2025.

The following information does not form part of the Accountants' Report from Ernst & Young, Certified Public Accountants, Hong Kong, the Company's reporting accountants, as set out in Appendix I to this Document, and is included herein for information purpose only. The unaudited pro forma financial information should be read in conjunction with the section headed "Financial Information" in this Document and the Accountants' Report set out in Appendix I to this Document.

A. UNAUDITED PRO FORMA STATEMENT OF ADJUSTED CONSOLIDATED NET TANGIBLE ASSETS

The following statement of unaudited pro forma adjusted consolidated net tangible assets of the Group prepared in accordance with paragraph 4.29 of the Rules Governing the Listing of Securities on the Stock Exchange of Hong Kong Limited and with reference to Accounting Guideline 7 *Preparation of Pro Forma Financial Information for Inclusion in Investment Circulars* issued by the Hong Kong Institute of Certified Public Accountants is set out here to illustrate the effect of the Global Offering on the consolidated net tangible assets of the Group attributable to owners of the parent as if the Global Offering had taken place on 30 June 2025.

The unaudited pro forma statement of adjusted consolidated net tangible assets of the Group has been prepared for illustrative purpose only and, because of its hypothetical nature, it may not give a true picture of the consolidated net tangible assets of the Group attributable to owners of the parent had the Global Offering been completed as of 30 June 2025 or as at any future dates. It is prepared based on the consolidated net tangible assets of our Group as at 30 June 2025 as set out in the Accountants' Report of our Group, the text of which is set out in Appendix I to this Prospectus, and adjusted as described below. The unaudited pro forma statement of adjusted consolidated net tangible assets does not form part of the Accountants' Report.

	Consolidated net tangible assets of the Group attributable to owners of the parent as at 30 June 2025	Estimated net proceeds from the Global Offering	Unaudited pro forma adjusted consolidated net tangible assets attributable to owners of the parent as at 30 June 2025	Unaudited pro forma adjusted consolidated net tangible assets per Share as at 30 June 2025	
	USD'000 (Note 1)	USD'000 (Note 2&4)	USD'000	USD (Note 3)	HK$ (Note 4)
Based on an Offer Price of HK$71.59 per Share . . .	1,317,427	3,145,077	4,462,504	1.70	13.25

Notes:

1. The consolidated net tangible assets of the Group attributable to owners of the parent as at 30 June 2025 were equal to the audited net assets attributable to owners of the parent as at 30 June 2025 of approximately USD3,621,493,000 less intangible assets of approximately USD2,304,066,000 as at 30 June 2025 set out in the Accountants' Report in Appendix I to this document.
2. The estimated net proceeds from the Global Offering are based on Offer Price of HK$71.59 per Share, after deduction of the underwriting fees and other related expenses payable by the Group (excluding the listing expenses that have been charged to profit or loss during the Track Record Period) and do not take into account any share which may be issued upon exercise of the Over-allotment Option.
3. The unaudited pro forma adjusted consolidated net tangible assets attributable to owners of the parent per share are arrived at by dividing the unaudited pro forma adjusted net tangible assets by 2,623,990,700 shares, which is presented for illustrative purposes and assumes that (i) Global Offering of 348,990,700 shares had been completed on 30 June 2025 (without taking into account any shares which may be issued upon exercise of the Over-allotment Option).
4. For the purpose of this unaudited pro forma statement of adjusted consolidated net tangible assets, the estimated net proceeds from the Global Offering are converted from Hong Kong dollars into United States Dollar ("USD") at an exchange rate of USD1.00 to HK$7.7927 and the unaudited pro forma adjusted consolidated net tangible assets attributable to owners of the parent per Share is converted from USD into Hong Kong dollars at the same exchange rate. No representation is made that USD amounts have been, could have been or may be converted to Hong Kong dollars, or vice versa. at that rate.
5. No adjustment has been made to reflect any trading result or other transactions of the Group entered into subsequent to 30 June 2025.

B. INDEPENDENT REPORTING ACCOUNTANTS' ASSURANCE REPORT ON THE COMPILATION OF UNAUDITED PRO FORMA FINANCIAL INFORMATION

The Directors
Zijin Gold International Company Limited
Unit 7508, Level 75, International Commerce Centre,
1 Austin Road West, Kowloon, Hong Kong

We have completed our assurance engagement to report on the compilation of unaudited pro forma financial information of ZIJIN GOLD INTERNATIONAL COMPANY LIMITED (the "Company") and its subsidiaries (hereinafter collectively referred to as the "Group") by the directors of the Company (the "Directors") for illustrative purposes only. The unaudited pro forma financial information consists of the unaudited pro forma consolidated net tangible assets as at 30 June 2025, and related notes as set out on pages IIA-1 to IIA-2 of the prospectus dated 19 September 2025 issued by the Company (the "Unaudited Pro Forma Financial Information"). The applicable criteria on the basis of which the Directors have compiled the Unaudited Pro Forma Financial Information are described in Part A of Appendix II to the Prospectus.

The Unaudited Pro Forma Financial Information has been compiled by the Directors to illustrate the impact of the global offering of shares of the Company on the Group's financial position as at 30 June 2025 as if the transaction had taken place at 30 June 2025. As part of this process, information about the Group's financial position has been extracted by the Directors from the Group's financial statements for the year ended 30 June 2025, on which an accountants' report has been published.

Directors' responsibility for the Unaudited Pro Forma Financial Information

The Directors are responsible for compiling the Unaudited Pro Forma Financial Information in accordance with paragraph 4.29 of the Rules Governing the Listing of Securities on The Stock Exchange of Hong Kong Limited (the "Listing Rules") and with reference to Accounting Guideline ("AG") 7 *Preparation of Pro Forma Financial Information for Inclusion in Investment Circulars* issued by the Hong Kong Institute of Certified Public Accountants (the "HKICPA").

Our independence and quality management

We have complied with the independence and other ethical requirements of the *Code of Ethics for Professional Accountants* issued by the HKICPA, which is founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behavior.

Our firm applies Hong Kong Standard on Quality Management 1 *Quality Management for Firms that Perform Audits or Reviews of Financial Statements, or Other Assurance or Related Services Engagements* which requires the firm to design, implement and operate a system of quality management including policies or procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

Reporting accountants' responsibilities

Our responsibility is to express an opinion, as required by paragraph 4.29(7) of the Listing Rules, on the Unaudited Pro Forma Financial Information and to report our opinion to you. We do not accept any responsibility for any reports previously given by us on any financial information used in the compilation of the Unaudited Pro Forma Financial Information beyond that owed to those to whom those reports were addressed by us at the dates of their issue.

We conducted our engagement in accordance with Hong Kong Standard on Assurance Engagements 3420 *Assurance Engagements to Report on the Compilation of Pro Forma Financial Information Included in a Prospectus* issued by the HKICPA. This standard requires that the reporting accountants plan and perform procedures to obtain reasonable assurance about whether the Directors have compiled the Unaudited Pro Forma Financial Information in accordance with paragraph 4.29 of the Listing Rules and with reference to AG 7 issued by the HKICPA.

For purposes of this engagement, we are not responsible for updating or reissuing any reports or opinions on any historical financial information used in compiling the Unaudited Pro Forma Financial Information, nor have we, in the course of this engagement, performed an audit or review of the financial information used in compiling the Unaudited Pro Forma Financial Information.

The purpose of the Unaudited Pro Forma Financial Information included in the Prospectus is solely to illustrate the impact of the global offering of shares of the Company on unadjusted financial information of the Group as if the transaction had been undertaken at an earlier date selected for purposes of the illustration. Accordingly, we do not provide any assurance that the actual outcome of the transaction would have been as presented.

A reasonable assurance engagement to report on whether the Unaudited Pro Forma Financial Information has been properly compiled on the basis of the applicable criteria involves performing procedures to assess whether the applicable criteria used by the

Directors in the compilation of the Unaudited Pro Forma Financial Information provide a reasonable basis for presenting the significant effects directly attributable to the transaction, and to obtain sufficient appropriate evidence about whether:

- the related pro forma adjustments give appropriate effect to those criteria; and
- the Unaudited Pro Forma Financial Information reflects the proper application of those adjustments to the unadjusted financial information.

The procedures selected depend on the reporting accountants' judgement, having regard to the reporting accountants' understanding of the nature of the Group, the transaction in respect of which the Unaudited Pro Forma Financial Information has been compiled, and other relevant engagement circumstances.

The engagement also involves evaluating the overall presentation of the Unaudited Pro Forma Financial Information.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Opinion

In our opinion:

(a) the Unaudited Pro Forma Financial Information has been properly compiled on the basis stated;

(b) such basis is consistent with the accounting policies of the Group; and

(c) the adjustments are appropriate for the purpose of the Unaudited Pro Forma Financial Information as disclosed pursuant to paragraph 4.29(1) of the Listing Rules.

Yours faithfully,

Ernst & Young
Certified Public Accountants
Hong Kong

19 September 2025

The following information sets out in this appendix does not form part of the Accountants' Report from Ernst & Young, Certified Public Accountants, Hong Kong, the Company's reporting accountants, as set out in Appendix IA to this prospectus, and is included herein for information purpose only. The unaudited pro forma financial information should be read in conjunction with the section headed "Financial Information" in this Document and the Accountants' Report set out in Appendix IA, Appendix IB and Appendix IC to this prospectus.

A. UNAUDITED PRO FORMA FINANCIAL INFORMATION OF THE ENLARGED GROUP

(1) Basis of preparation

On 28 June 2025, Zijin Gold International Company Limited (the "Company") and its subsidiaries (together, the "Group") entered into an agreement with Cantech S.a.r.l ("Cantech") in relation to the acquisition of its equity interests in RG Gold LLP ("RGG") and RG Processing LLP ("RGP") (collectively as the "Target Companies") (the "Raygorodok Acquisition") for a cash consideration of USD1.2 billion, subject to customary adjustments with reference to the financial information of the Target Companies as of 30 September 2025.

The following is a summary of an illustrative and unaudited pro forma consolidated statement of financial position of the Group and Target Companies (the "Enlarged Group") (the "Unaudited Pro Forma Financial Information of the Enlarged Group"), which have been prepared on the basis of the notes set out below for the purpose of illustrating the impact of the Raygorodok Acquisition on the Group's consolidated statement of financial position as at 30 June 2025 as if the Raygorodok Acquisition had been completed as at 30 June 2025.

This Unaudited Pro Forma Financial Information of the Enlarged Group has been prepared by the directors of the Company in accordance with paragraph 4.29 of the Listing Rules and Accounting Guideline 7 Preparation of Pro Forma Financial Information for Inclusion in Investment Circulars issued by the Hong Kong Institute of Certified Public Accountants for illustrative purposes only, based on their judgments, estimations and assumptions, and because of its hypothetical nature, it may not give a true picture of the financial position of the Enlarged Group as at 30 June 2025 or at any future date following the completion of the Raygorodok Acquisition.

The Unaudited Pro Forma Financial Information of the Enlarged Group is prepared based on the audited consolidated statement of financial position of the Group at 30 June 2025 as set out in Appendix IA to the Prospectus, the audited statement of financial position of RGP as at 30 June 2025 as set out in the accountant's report of RGP included in Appendix IB to the Prospectus, and the audited statement of financial position of RGG as at 30 June 2025 as set out in the accountant's report of RGG included in Appendix IC to the Prospectus, after giving effect to the pro forma adjustments relating to the Raygorodok Acquisition as

described in the accompanying notes. Narrative description of the pro forma adjustments that are (i) directly attributable to the Raygorodok Acquisition and not relating to future events or decisions; and (ii) factually supported, is summarised in the accompanying notes.

The Unaudited Pro Forma Financial Information of the Enlarged Group is based on a number of assumptions, estimates, and uncertainties. Accordingly, the Unaudited Pro Forma Financial Information of the Enlarged Group does not purport to describe the actual financial position of the Enlarged Group that would have been attained had the Raygorodok Acquisition been completed as at 30 June 2025. The Unaudited Pro Forma Financial Information of the Enlarged Group does not purport to predict future financial positions or results of the Enlarged Group.

(2) Unaudited pro forma consolidated statement of financial position of the Enlarged Group as at 30 June 2025

Notes:

1. The amounts are extracted from the audited consolidated statement of financial position of the Group as at 30 June 2025 as set out in Appendix IA to the Prospectus.
2. The amounts are extracted from the audited statement of financial position of RGG as at 30 June 2025 as set out in Appendix IC to the Prospectus.
3. The amounts are extracted from the audited statement of financial position of RGP as at 30 June 2025 as set out in Appendix IB to the Prospectus.
4. The adjustments represent the elimination of intercompany balances between RGG and RGP.
5. The adjustments represent:
   (i) the estimated purchase consideration payable of USD1,113,901,000 in relation to the Raygorodok Acquisition.
   Pursuant to the agreement entered with Cantech and the Group, the purchase consideration of USD1.2 billion in cash (the "Purchase Consideration"), is further adjusted by Cantech and the Group based on the amount of cash, working capital, interest-bearing debts and other related items in the financial statements as at 30 September 2025, wherein the interest-bearing debts will continue to be borne by the Target Companies (the "Adjustment To Purchase Consideration"). After the closing, subject to certain

conditions and adjustments, approximately USD1.2 billion would be deposited in an escrow account and should be paid no earlier than 29 September 2025, and the escrow account will release the full payment when certain conditions achieved.

The Company intends to obtain a loan to finance the payment of the consideration payable under the Raygorodok Acquisition. The directors of the Company have estimated the amount of Adjustment To Purchase Consideration is USD86,099 thousand.

The adjustments to share capital and reserves represent the elimination of pre-acquisition reserves of Target Companies at 30 June 2025.

(ii) The provisional fair value adjustments on net identifiable assets of the Target Companies as if the Raygorodok Acquisition had been completed on 30 June 2025.

The Group has applied the acquisition method in accordance with IFRS 3 Business Combinations to account for the Raygorodok Acquisition as if the acquisition had been completed on 30 June 2025. The acquisition method of accounting requires that the consideration transferred to be allocated to the assets, including separately identifiable assets and liabilities acquired, based on their estimated fair values. In applying acquisition method of accounting, the identifiable assets and liabilities of Target Companies acquired would be recorded on the pro forma consolidated statement of financial position of the Enlarged Group at their fair values as at the date of completion of the Raygorodok Acquisition.

The directors of the Company have estimated the fair values of the identifiable assets and liabilities of the Target Companies as of 30 June 2025 based on a draft valuation report prepared by an independent valuer. For the purpose of the pro forma consolidated financial statement of the Enlarged Group, the provisional purchase price allocation arising from the Raygorodok Acquisition is calculated as follows:

	Notes	USD'000
Total identifiable net assets of RGP at book value	a	129,573
Total identifiable net assets of RGG at book value	b	314,014
Fair value adjustments	c	837,892
Deferred income tax liabilities arising from fair value adjustments	c	(167,578)
Total identifiable net assets of the Target Companies at fair value	c	1,113,901
Purchase Consideration	5(i)	1,200,000
Adjustment to Purchase Consideration	5(i)	(86,099)
Adjusted purchase consideration	5(i)	1,113,901

Notes:

a. The amounts are extracted from the audited statement of financial position of RGP as at 30 June 2025 as set out in the accountant's report of RGP included in Appendix IB to the Prospectus.

b. The amounts are extracted from the audited statement of financial position of RGG as at 30 June 2025 as set out in the accountant's report of RGG included in Appendix IC to the Prospectus.

c. Fair value adjustments related to intangible assets. Deferred income tax liabilities have been recognised for the temporary differences arising from the fair value adjustments. The directors of the Company have estimated the fair values of the identifiable assets and liabilities of RGP and RGG, based on a draft valuation report prepared by an independent valuer, and have applied it as the fair value of the identifiable assets and liabilities of RGP and RGG in preparing the Unaudited Pro Forma Financial Information of the Enlarged Group. Since the fair value of identifiable net assets of RGP and RGG at the completion date of the Raygorodok Acquisition may substantially be different from the fair values used in the preparation of the Unaudited Pro Forma Financial Information of the Enlarged Group, the final amounts of the identified net assets of RGP and RGG to be recognised in connection with the Raygorodok Acquisition may be different from the amounts presented above.

6. Other than the above adjustments, no adjustments have been made to reflect any trading results or other transactions of the Group and the Target Companies entered into subsequent to 30 June 2025.

B. INDEPENDENT REPORTING ACCOUNTANTS' ASSURANCE REPORT ON THE COMPILATION OF UNAUDITED PRO FORMA FINANCIAL INFORMATION OF THE ENLARGED GROUP

The Directors
Zijin Gold International Company Limited
Unit 7508, Level 75, International Commerce Centre,
1 Austin Road West, Kowloon, Hong Kong

We have completed our assurance engagement to report on the compilation of unaudited pro forma financial information of Zijin Gold International Company Limited (the "Company") and its subsidiaries (hereinafter collectively referred to as the "Group") by the directors of the Company (the "Directors") for illustrative purposes only. The unaudited pro forma financial information consists of the unaudited pro forma consolidated statement of financial position of the Group and RG Gold LLP and RG Processing LLP (the "Target Companies") (hereinafter collectively referred to as the "Enlarged Group") as at 30 June 2025 and related notes as set out on pages IIB-1 to IIB-4 of Appendix IIB to the prospectus dated 19 September 2025 (the "Prospectus") issued by the Company (the "Unaudited Pro Forma Financial Information of the Enlarged Group"). The applicable criteria on the basis of which the Directors have compiled the Unaudited Pro Forma Financial Information of the Enlarged Group are described in Part A of Appendix IIB to the Prospectus.

The Unaudited Pro Forma Financial Information of the Enlarged Group has been compiled by the Directors to illustrate the impact of the post-trading record acquisition of Target Companies on the Group's financial position as at 30 June 2025 as if the transaction had taken place at 30 June 2025. As part of this process, information about the Group's financial position has been extracted by the Directors from the Group's consolidated financial statements for the six months ended 30 June 2025 included in Appendix IA to the Prospectus, on which an accountants' report has been published. Information about the Target Companies' financial position has been extracted by the Directors from the Target Companies' financial statements for the six months ended 30 June 2025 included in Appendix IB and Appendix IC to the Prospectus, on which an accountant's reports have been published, respectively.

Directors' responsibility for the Unaudited Pro Forma Financial Information of the Enlarged Group

The Directors are responsible for compiling the Unaudited Pro Forma Financial Information of the Enlarged Group in accordance with paragraph 4.29 of the Rules Governing the Listing of Securities on The Stock Exchange of Hong Kong Limited (the "Listing Rules") and with reference to Accounting Guideline ("AG") 7 *Preparation of Pro Forma Financial Information for Inclusion in Investment Circulars* issued by the Hong Kong Institute of Certified Public Accountants (the "HKICPA").

Our independence and quality management

We have complied with the independence and other ethical requirements of the *Code of Ethics for Professional Accountants* issued by the HKICPA, which is founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behavior.

Our firm applies Hong Kong Standard on Quality Management 1 *Quality Management for Firms that Perform Audits or Reviews of Financial Statements, or Other Assurance or Related Services Engagements* which requires the firm to design, implement and operate a system of quality management including policies or procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

Reporting accountants' responsibilities

Our responsibility is to express an opinion, as required by paragraph 4.29(7) of the Listing Rules, on the Unaudited Pro Forma Financial Information of the Enlarged Group and to report our opinion to you. We do not accept any responsibility for any reports previously given by us on any financial information used in the compilation of the Unaudited Pro Forma Financial Information of the Enlarged Group beyond that owed to those to whom those reports were addressed by us at the dates of their issue.

We conducted our engagement in accordance with Hong Kong Standard on Assurance Engagements 3420 *Assurance Engagements to Report on the Compilation of Pro Forma Financial Information Included in a Prospectus* issued by the HKICPA. This standard requires that the reporting accountants plan and perform procedures to obtain reasonable assurance about whether the Directors have compiled the Unaudited Pro Forma Financial Information of the Enlarged Group in accordance with paragraph 4.29 of the Listing Rules and with reference to AG 7 issued by the HKICPA.

For purposes of this engagement, we are not responsible for updating or reissuing any reports or opinions on any historical financial information used in compiling the Unaudited Pro Forma Financial Information of the Enlarged Group, nor have we, in the course of this engagement, performed an audit or review of the financial information used in compiling the Unaudited Pro Forma Financial Information of the Enlarged Group.

The purpose of the Unaudited Pro Forma Financial Information of the Enlarged Group included in the Prospectus is solely to illustrate the impact of the acquisition of the Target Companies on unadjusted financial information of the Group as if the transaction had been undertaken at an earlier date selected for purposes of the illustration. Accordingly, we do not provide any assurance that the actual outcome of the transaction would have been as presented.

A reasonable assurance engagement to report on whether the Unaudited Pro Forma Financial Information of the Enlarged Group has been properly compiled on the basis of the applicable criteria involves performing procedures to assess whether the applicable criteria used by the Directors in the compilation of the Unaudited Pro Forma Financial Information of the Enlarged Group provide a reasonable basis for presenting the significant effects directly attributable to the transaction, and to obtain sufficient appropriate evidence about whether:

- the related pro forma adjustments give appropriate effect to those criteria; and

- the Unaudited Pro Forma Financial Information of the Enlarged Group reflects the proper application of those adjustments to the unadjusted financial information.

The procedures selected depend on the reporting accountants' judgement, having regard to the reporting accountants' understanding of the nature of the Group, the transaction in respect of which the Unaudited Pro Forma Financial Information of the Enlarged Group has been compiled, and other relevant engagement circumstances.

The engagement also involves evaluating the overall presentation of the Unaudited Pro Forma Financial Information of the Enlarged Group.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Opinion

In our opinion:

(a) the Unaudited Pro Forma Financial Information of the Enlarged Group has been properly compiled on the basis stated;

(b) such basis is consistent with the accounting policies of the Group; and

(c) the adjustments are appropriate for the purpose of the Unaudited Pro Forma Financial Information of the Enlarged Group as disclosed pursuant to paragraph 4.29(1) of the Listing Rules.

Yours faithfully,

Ernst & Young

ACKNOWLEDGMENTS

SRK would like to acknowledge the support and collaboration provided by Zijin Gold International Company Limited personnel for this assignment. Their collaboration was greatly appreciated and instrumental to the success of this project.

SRK Consulting China Ltd. has prepared this document for Zijin Gold International Company Limited, our client. Any use or decisions by which a third party makes of this document are the responsibility of such third parties. In no circumstance does SRK accept any consequential liability arising from commercial decisions or actions resulting from the use of this report by a third party.

The opinions expressed in this document have been based on the information available to SRK at the time of preparation. SRK has exercised all due care in reviewing information supplied by others for use on this project. While SRK has compared key supplied data with expected values, the accuracy of the results and conclusions from the review are entirely reliant on the accuracy and completeness of the supplied data. SRK does not accept responsibility for any errors or omissions in the supplied information, except to the extent that SRK was hired to verify the data.

USEFUL DEFINITIONS

This list contains definitions of symbols, units, abbreviations, and terminology that may be unfamiliar to the reader.

Term/Abbreviation	Meaning/Definition
%	percent
°	degree, angle of inclination
°C	degrees of temperature
/	per
3D	Three-dimensional
AAS	atomic absorption spectrometry
AER	Annual Environmental Report
Ag	The chemical symbol for silver
AISC	All-in sustaining cost; the cost consists of cash cost, taxations and fees (excluding income tax), and sustaining Capex
AN/FO	Ammonium nitrate/fuel oil
ARD	Acid rock drainage
As	The chemical symbol for arsenic
ASL	above sea level
Au	the element symbol of gold
Au Eq.	Gold equivalent; including gold, and other elements salable converted into gold equivalent
AusIMM	Australasian Institute of Mining and Metallurgy
B.Eng.	Bachelor of Engineering
B × H	breadth × height
BD	bulk density
Capex	capital expenditure(s)
CIL	carbon-in-leach, a continuous agitation cyanide leaching process with active carbon in the leaching tanks to adsorb resolved gold and silver
CIP	carbon-in-pulp, similar with CIL, there is pre-leaching operation before carbon adsorption. Most of the time, the two processes are not distinguished in expressions""
CIT	corporate income tax

Term/Abbreviation	Meaning/Definition
cm	centimetres
COG	cut-off grade
CPR	Competent Person's Report
DCF	discounted cash flow
Dr.	Doctor of Philosophy
E	East
EIA	Environmental Impact Assessment
EPMP	Environmental Protection and Management Plan
Exploration Results	Data and information generated by mineral exploration programs that might be of use to investors, but which do not form part of a declaration of Mineral Resources or Ore Reserves
Exploration Target	A statement or estimate of the exploration potential of a mineral deposit in a defined geological setting where the statement or estimate, quoted as a range of tonnes and a range of grade (or quality), relates to mineralisation for which there has been insufficient exploration to estimate a Mineral Resources
FAusIMM	Fellow of the Australasian Institute of Mining and Metallurgy
FS or Feasibility Study	A Feasibility Study is a comprehensive technical and economic study of the selected development option for a mineral project that includes appropriately detailed assessments of applicable Modifying Factors together with any other relevant operational factors and detailed financial analysis that are necessary to demonstrate at the time of reporting that extraction is reasonably justified (economically mineable). The results of the study may reasonably serve as the basis for a final decision by a proponent or financial institution to proceed with, or finance, the development of the project. The confidence level of the study will be higher than that of a Pre-Feasibility Study
FY	financial year
G&A	general and administration
g	gram
g/cm^3	gram(s) per cubic centimetre
g/t	gram per tonne
ha	hectare(s)
HKEx	Hong Kong Exchanges and Clearing Ltd.

Term/Abbreviation	Meaning/Definition
Indicated Mineral Resource	That part of a Mineral Resource for which quantity, grade (or quality), densities, shape and physical characteristics are estimated with sufficient confidence to allow the application of Modifying Factors in sufficient detail to support mine planning and evaluation of the economic viability of the deposit
Inferred Mineral Resource	That part of a Mineral Resource for which quantity and grade (or quality) are estimated on the basis of limited geological evidence and sampling. Geological evidence is sufficient to imply but not verify geological and grade (or quality) continuity. It is based on exploration, sampling and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes
Intertek	Intertek Laboratory in Beijing
IP	Induced Polarisation, which is an exploration technique whereby an electrical current is pulsed through the ground and the response from the sub surface measured in order to identify minerals of interest. Strong IP responses may be a result of sulphide which may be associated with gold mineralisation
IPO	Initial Public Offering
IRR	internal rate of return
JORC Code	2012 edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves prepared by the Joint Ore Reserves Committee of the Australasian Institute of Mining and Metallurgy, Australian Institute of Geoscientists and Minerals Council of Australia
JORC Committee	Joint Ore Reserves Committee
K	the element symbol of potassium
kg	kilogram, equivalent to 1,000 grams
km	kilometres, equivalent to 1,000 metres
km^2	square kilometres
kt	thousand tonnes
ktpa	thousand tonnes per annum
kV	kilovolts, equivalent to 1,000 volts
kVA	kilovolt ampers
kW	kilowatt, equivalent to 1,000 watts
kWh	kilowatt hours
L	litres

Term/Abbreviation	Meaning/Definition
L/s	litres per second
LHD	load-haul-dump
Li	the element symbol of lithium
LoM	life-of-mine
M	million
m	metres
m^2	square metre
m^3	cubic metre
m ASL	metres above sea level
m/s	metres per second
MAusIMM	member of the Australasian Institute of Mining and Metallurgy
Measured Mineral Resource	That part of a Mineral Resource for which quantity, grade (or quality), densities, shape, and physical characteristics are estimated with confidence sufficient to allow the application of Modifying Factors to support detailed mine planning and final evaluation of the economic viability of the deposit
mg	milligram
Mineral Resource	A concentration or occurrence of solid material of economic interest in or on the Earth's crust in such form, grade (or quality), and quantity that there are reasonable prospects for eventual economic extraction. The location, quantity, grade (or quality), continuity and other geological characteristics of a Mineral Resource are known, estimated or interpreted from specific geological evidence and knowledge, including sampling. Mineral Resources are sub-divided, in order of increasing geological confidence, into Inferred, Indicated and Measured categories
ML	megalitres (million metres); Mining Licence
mm	millimeter(s)
MRE	Mineral Resource estimate
Mt	million tonnes
Mtpa	million tonnes per annum
MW	megawatts
MWh	megawatts hours
NPV	net present values

Term/Abbreviation	Meaning/Definition
NSR	net smelter return
OHS	occupational health and safety
OK	Ordinary Kriging
Opex	operating expenditure(s)/cost(s)
Ore Reserve	The economically mineable part of a Measured and/or Indicated Mineral Resource. It includes diluting materials and allowances for losses, which may occur when the material is mined or extracted and is defined by studies at Pre-Feasibility or Feasibility level as appropriate that include application of Modifying Factors. Such studies demonstrate that, at the time of reporting, extraction could reasonably be justified
ORM	Ore Reserves Model
PFS	A Preliminary Feasibility Study (Pre-Feasibility Study) is a comprehensive study of a range of options for the technical and economic viability of a mineral project that has advanced to a stage where a preferred mining method, in the case of underground mining, or the pit configuration, in the case of an open pit, is established and an effective method of mineral processing is determined. It includes a financial analysis based on reasonable assumptions on the Modifying Factors and the evaluation of any other relevant factors which are sufficient for a Competent Person, acting reasonably, to determine if all or part of the Mineral Resources may be converted to an Ore Reserve at the time of reporting. A Pre-Feasibility Study is at a lower confidence level than a Feasibility Study
PPE	Personal protective equipment
ppm	parts per million, equivalent to gram(s) per tonne (g/t)
Probable Ore Reserve	the economically mineable part of an Indicated, and in some circumstances, a Measured Mineral Resource. The confidence in the Modifying Factors applying to a Probable Ore Reserve is lower than that applying to a Proved Ore Reserve
Projects	Taror and Jilau Gold Projects
Proved Ore Reserve	the economically mineable part of a Measured Mineral Resource. A Proved Ore Reserve implies a high degree of confidence in the Modifying Factors
QA/QC	quality assurance/quality control
RC	reverse circulation
ROM	run-of-mine
RPEEE	reasonable prospects for eventual economic extraction
S	South, also the element symbol of sulphur
SG	specific gravity

Term/Abbreviation	Meaning/Definition
SRK	SRK Consulting China Ltd.
Stock Exchange	The Stock Exchange of Hong Kong Ltd., a wholly owned subsidiary of Hong Kong Exchanges and Clearing Ltd. ("HKEx")
t	tonnes
t/d or tpd	tonnes per day
t/m^3	tonnes per cubic metre
TSF	tailings storage facilities
US$	United States dollar
VALMIN Code	2015 edition of the Australasian Code for the Public Reporting of Technical Assessments and Valuations of Mineral Assets.
VAT	value-added tax
WRD	waste rock dump
Zijin Gold International	Zijin Gold International Company Limited
Zijin Mining	Zijin Mining Group Co., Ltd. (紫金礦業集團股份有限公司)

EXECUTIVE SUMMARY

Introduction

SRK Consulting China Ltd. ("**SRK**") was commissioned by Zijin Gold International Company Limited. ("**Zijin Gold International**" or the "**Company**") to undertake an independent assessment of all relevant technical aspects of the Taror and Jilau Gold Projects (collectively "**Zeravshan Project**" or the "**Project**") which is located in Sughd Region, Tajikistan. The Zeravshan Project is operated by the Joint Venture Zeravshan Limited Liability Company ("**Zeravshan LLC**") between Tajikistan Government (30%) and Zijin Mining Group Co., Ltd. ("**Zijin Mining**") which has 70% shares. Zijin Gold International is wholly-owned by Zijin Mining.

It is SRK's understanding that the independent technical assessment on the Zeravshan Project is required to be included in a Competent Person's Report ("**CPR**", the "**Report**" or this "**Report**") suitable for inclusion in a prospectus prepared to support the proposed listing of Zijin Gold International on the Main Board of the Stock Exchange of Hong Kong Ltd. (the "**Stock Exchange**"), a wholly owned subsidiary of Hong Kong Exchanges and Clearing Ltd. ("**HKEx**").

The Report has therefore been prepared following the requirements of the 2012 edition of the *Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves* (the "**JORC Code**") and in accordance with the rules governing the listing of securities on *the Stock Exchange of Hong Kong Limited* (the "***Listing Rules***") including the Chapter 18 requirements and other relevant regulations of the Stock Exchange and HKEx.

This Report does not express an opinion as to the value of the minerals or other assets involved.

Summary of Principal Objectives

The principal objective of this Report is to provide Zijin Gold International and potential equity investors and future shareholders of Zijin Gold International with an independent technical assessment of the geology and exploration, Mineral Resources and Ore Reserves, mining methodologies, processing and metallurgical technologies, environmental and social aspects of the Zeravshan Project based on all available technical data, as of the Effective Date of this report. It is understood that the aim of this Report will be used by Zijin Gold International for the proposed listing on the Stock Exchange and HKEx.

Outline of Work Programme

The work program for this project consisted of:

- Review of dataset and Mineral Resource models provided by Zeravshan LLC and Zijin Gold International, and preparation of the data verification plan which will be conducted during site inspection.
- A site visit between 14 and 18 April 2025 to the Projects, including the locations of exploration and production boreholes, drill cores and underground stopes showing the gold mineralisation, the ore processing and metallurgical plant, ore and waste stockpiles, tailings storage facilities ("**TSF**"), water source and power supply station, the office and living areas, and other infrastructure, etc.
- Review of all available documents, including operating licences and permits, geology reports and environmental impact assessment ("**EIA**") reports, mineral processing technology and mining methodologies, capital expenditures ("**Capex**") and operating expenses ("**Opex**"), etc.

- Discussion with Zeravshan LLC and Zijin Gold International management and technical personnel, as well as the professionals of Zijin (Xiamen) Engineering Design Co., Ltd. ("**Zijin Xiamen**"), who conducted either the geology and exploration or the feasibility study ("**FS**") on the Zeravshan Project.
- Preparation of a draft report in accordance with the JORC Code guidelines and the requirements of the Chapter 18 on the Stock Exchange and other regulations of the HKEx, where the declaration date of Mineral Resources and Ore Reserves is 31 December 2024.
- Submission of the draft to Zijin Gold International and Zeravshan LLC and related third party for comments and finalisation of the draft Report based on the feedback.
- Completion of a new version report to update the Mineral Resources and Ore Reserves as of 30 June 2025, by reviewing the production records of the first half of 2025.

Results

Overall

The Taror Gold Project (the "**Taror Project**" or "**Taror Mine**") has one mining licence, located in Panjakant, Republic of Tajikistan. It is about 31 km southeast of Panjakant city and 13 km northwest from Jilau Gold Project. Jilau Gold Project has three mining licences, including Jilau, Olympic, and Khirshona mining licences (collectively referred as the "**Jilau Projects**" of "**Jilau Mine**"). The Jilau Projects are located 18 km southeast of Panjakant city, under the jurisdiction of Panjakant City, Sughd State, Republic of Tajikistan.

SRK conducted Mineral Resource verification in accordance with the requirements of the JORC Code guidelines, based on the database acquired in previous exploration programs on the Projects. The following tables summarise the Mineral Resources as of 30 June 2025.

Table ES-1: Mineral Resource Statement[1, 2], Zeravshan Project, Prepared by SRK Consulting China Limited, 30 June 2025[3]

Mine	Category	Tonnage	Grade			Au Metal Contained	Au Metal Contained	Ag Metal Contained	Cu Metal Contained
		(Mt)	Au (g/t)	Ag (g/t)	Cu (%)	(kg)	(koz)	(kg)	(t)
Taror	Measured	10.33	2.97	13.27	0.61	30,678	986	137,147	62,844
	Indicated	7.12	2.65	12.07	0.49	18,849	606	85,943	35,076
	Measured + Indicated	17.45	2.84	12.78	0.56	49,526	1,592	223,090	97,920
	Inferred	3.42	2.18	13.46	0.54	7,465	240	46,108	18,470
	Subtotal	20.87	2.73	12.90	0.56	56,992	1,832	269,198	116,390
Jilau.	Measured	21.18	0.81			17,183	552		
	Indicated	3.31	0.74			2,442	79		
	Measured + Indicated	24.49	0.80			19,625	631		
	Inferred	1.66	0.57			947	30		
	Subtotal	26.15	0.79			20,573	661		
Khirshona . . .	Measured	15.05	0.67			10,022	322		
	Indicated	3.44	0.68			2,344	75		
	Measured + Indicated	18.49	0.67			12,366	398		
	Inferred	2.61	0.39			1,019	33		
	Subtotal	21.10	0.63			13,386	430		
Total	Measured	46.56	1.24			57,883	1,861	137,147	62,844
	Indicated	13.87	1.70			23,635	760	85,943	35,076
	Measured + Indicated	60.43	1.35			81,518	2,621	223,090	97,920
	Inferred	7.69	1.23			9,431	303	46,108	18,470

Notes:

1 All figures are rounded to reflect the relative accuracy of the estimate. All composites have been capped where appropriate.

[2] The information in this report which relates to Mineral Resource is based on information compiled by Mr. Liang Li and Dr. Anshun Xu who are full time employee of SRK Consulting China Ltd. Mr. Li is a member of AusIMM and Dr. Xu is a Fellow of AusIMM. Mr. Li and Dr. Xu have sufficient experience which is relevant to the style of mineralisation and the type of deposits under consideration and to the activity which they are undertaking to qualify as a Competent Person as defined in the 2012 edition of the "Australasian Code for Reporting of Exploration results, Mineral Resources and Ore Reserves", the JORC Code. Mr. Li and Dr. Xu consent to the reporting of this information in the form and context in which it appears.

[3] Open pit Mineral Resources of the Taror Mine are reported at a cut-off grade is 0.6g/t, the Jilau and Khirshona Mine at 0.2g/t.

Taror Mine has been operating since 2001. It is an open pit mine at a capacity of 3,000 tonnes per day ("**tpd**") (990 thousand tonnes per annum ("**ktpa**") feed ore. It is planned to be expanded to 4,500 tpd (1,650 ktpa) in 2027.

Based on current Mineral Resources, SRK reviewed the open pit optimization and converted the qualified Mineral Resources into Ore Reserves. As of 30 June 2025, Taror Project possesses 9.82 Mt of Proved Ore Reserves averaging 2.96 g/t gold ("**Au**"), 12.96 g/t silver ("**Ag**") and 0.6% copper ("**Cu**"); and 6.40 Mt of Probable Ore Reserves averaging 2.78 g/t Au, 12.01 g/t Ag, and 0.5% Cu, as well as 0.8 Mt stockpiled ores. The Ore Reserves can support 13 years or more of mining production.

The Jilau Projects (including Jilau open pit and Khirshona open pit) has been operating since 2012. It is currently run by ZRV as an open pit mine at a capacity of 12,000 tpd (4,000 ktpa) feed ore.

Based on current Mineral Resources, SRK reviewed the open pit optimization and converted the qualified Mineral Resources into Ore Reserves. As of 30 June 2025, the Jilau Project possesses 18.38 Mt of Proved Ore Reserves averaging 0.75 g/t Au, and 2.88 Mt of Probable Ore Reserves averaging 0.88 g/t Au; the Khirshona Project possesses 13.42 Mt of Proved Ore Reserves averaging 0.62 g/t Au, and 3.24 Mt of Probable Ore Reserves averaging 0.60 g/t Au, as well as 0.29 Mt stockpiled ores. The Ore Reserves can support 7 years or more of mining production.

Previous Capex invested into the project with a total net value of about US$227.65 million as of 30 June 2025, has established the facilities for the project to produce saleable final products of gold doré bullions, silver doré bullions and copper cathodes from its mining, ore processing, and smelter production. By reviewing the production records in previous years, and the FS 2025, and considering the expansion and sustaining Capex of about US$171.1 million for technical upgrade and expansions of the TSF, as well as equipment replacement and using a discounted cash flow method, SRK assessed that the project has a net present value ("**NPV**") of about US$1.33 billion at a discount rate of 10%, over a life of mine for 13 years. The all-in-sustaining cost ("**AISC**") over the life of the mine is about US$1,313/oz gold. The analysis indicates that the project is financially viable and supports the Ore Reserve statements.

Operational Licences and Permits

The Company has obtained four mining licences to carry out mining, processing and smelting. In addition, it has other approvals and permits including a business licence, land use permits, and a water use permit.

Accessibility, Climate, Local Resources, Infrastructure and Physiography

Taror Project is located in Panjakant, Republic of Tajikistan. It is about 31 km from southeast of Panjakant city and 13 km northwest from Jilau Project. The Jilau Project is located in the Northern Slope of The Zeravshan Mountains in the western section of the Southern Tianshan Mountains, 18 km southeast of Panjakant city, under the jurisdiction of Panjakant City, Sughd State, Republic of Tajikistan. The Jilau Mine is centred at approximately 67°43'28"East and 39°20'20"North.

The mine is connected by tarred roads to Dushanbe, the capital city of Tajikistan, and Khujand, the capital city of the State of Sughd State, and the mining area is connected internally with gravel roads. The distance between the mining area and Dushanbe is about 270 km, and the distance from site to Khujand is about 250 km. The distance from Khujand to Kashgar in Xinjiang is about 2,600 km through Karasu port. It takes 40-hours for vehicles to pass through. Both Dushanbe and Khujand have commercial flights connected to Urumqi, China. The transportation is convenient.

The climate of the region is continental. It is dry and warm in summer, and there is precipitation and snow in spring, autumn and winter. The maximum precipitation (below 120 mm) occurs from March to April, and the minimum precipitation (0~18 mm) occurs from July to August. The average annual precipitation is 308.4 mm.

Tajikistan's manufacturing industry is poorly developed, and mining materials are scarce. Most of the production equipment and parts need to be imported from China, and diesel fuel is mostly purchased from Russia. Food, vegetables and fruits are in sufficient supply.

Sughd State, where the mining area is located, is in the northwest of Tajikistan, adjacent to Uzbekistan in the West and North, and bordering with Kyrgyzstan in the East.

The industry of Sughd State is dominated by the mining industry, supplemented by agricultural products processing industry. There are 214 deposits discovered, explored and mined. The rich mineral resources support the rapid development of mining economy. The processing industry of agricultural products has wool spinning, canned fruit and other enterprises.

History

In 2003, Taror Mine and Jilau Mine were acquired by London listed Avocet Mining Plc ("**Avocet**").

In 2007, Zijin acquired 75% share of JV Zeravshan LLC held by Avocet and renamed it as Sino-Tajik Zeravshan Corporation Limited. In 2008, 5% was transferred out. For now, Zijin holds 70% while Tajik government holds 30%.

The following geological investigations have been undertaken on Taror-Jilau Project areas.

Taror Mine

In 1937, Taror Mine was discovered and exploited as an Arsenic ("**As**") mine from 1937 to 1946.

1951–1978, Tajik Geological Brigade conducted prospecting and exploration at Taror mine.

1999, Nelson built model using Datamine software for Taror Mine.

2010–2012, Zijin conducted mineral evaluation and studies, and geological exploration at Taror Mine.

Jilau-Olympic Mine

In 1949, Jilau Mine was discovered by placer survey. Between 1949 and 1952, Tajik Geological Bureau conducted tungsten prospecting activity at Jilau Mine.

1956–1985, Tajik Geological Brigade conducted prospecting and exploration activities at Jilau mine.

1994–2007, British Nelson Company and Avocet conducted production exploration at Jilau mine. In 2005, Avocet prepared an updated Mineral Resource and Ore Reserve.

2007–2014, Zijin Mining Group acquired Jilau mine and conducted production exploration and prospecting at Jilau and Olympic mines.

2015–2019, Zeravshan LLC commissioned Zijin Northwest Mineral Geological Institute to conduct Mineral Resource verification and modelling using Surpac software at Jilau and Olympic mine.

Khirshona Mine

In 1948, Tajik Geological Brigade conducted geological survey at Khirshona mine.

1949–1983, Tajik Geological Brigade conducted prospecting and exploration at Khirshona mine.

1995–2001, Marcion Geological Brigade and Zeravshan LLC conducted geological exploration at Khirshona mine.

2010, Jinfeng Company of Zijin Group conducted Mineral Resource verification at Khirshona mine.

2010–2012, Zijin conducted deep geological exploration at Khirshona mine.

Geological Setting and Gold Mineralisation

The Taror-Jilau Projects are located in the Zeravshan-Ghizar Inter-arc Basin, the South Tienshan orogenic belt, northern margin of the Tarim-Karakum Plate. The projects are part of Kizilkuli-Alai Mountain, which are of femic-salic fold formation.

Regional strata occur as Silurian-Carboniferous carbonate rocks, sandstone and shale, Jurassic, Tertiary, and Quaternary. Magmatic rocks are developed while granodiorites dominate, and the secondary are diorite and gabbro. Dykes consist of granite-porphyry dykes, porphyrite dykes and quartz veins.

The gold mineralization of Taror Mine is hosted by the skarn rocks between the Devonian and the granodiorite, controlled and altered by the faults.

The Jilau Projects is located in the eastern side of Chinoise granodiorite. Intrusive rocks are part of the Chinoise granodiorite, and they are closely related with the gold mineralization. The gold mineralization is primarily hosted by the intrusive rocks and controlled by faults and joints.

Deposit Types

The deposit type of Taror Mine is typical Au-Cu-Ag-As polymetallic contact-metasomatic deposit formed by the interaction of intermediate-acidic magmatic rocks and carbonate rocks. Au-Cu-Ag-As enrichment occurs along the skarn rocks and breccia.

The deposit type of the Jilau Projects is of hydrothermal deposit type. Au mineralisation develops along the joints and fractures.

Exploration

The deposit has been explored with geophysics and geochemical studies, exploration, geological mapping, surveying and drilling by Geological Institute of Tajik Geological Bureau, Avocet and Zijin.

Drilling, Trenching and Underground Channelling

At Jilau Mine, a total of 1,141 diamond drill holes have been completed at the exploration and production stages, with an aggregate length of 117,992.01 m. Drilling was conducted by Avocet between 1995 and 2006. between 2007 and 2019, drilling was conducted by Zijin. A total of 107,430 samples were collected from the surface diamond drilling.

At Khirshona mine, a total of 189 diamond drill holes have been completed with an aggregate length of 36,294.33 m. At Taror mine, a total of 424 diamond drill holes have been completed at the exploration and production stages, with an aggregate length of 51,948.02 m.

Surface trenches were completed at the prospecting and exploration stage. Bench trenches were used at the production stage:

- At Taror mine, a total of 31 bench trenches have been completed at the production stage, with an aggregate length of 2,735.879 m. A total of 90 surface trenches have been completed at the exploration stage, with an aggregate length of 3,360.72 m.
- At Jilau mine, a total of 298 bench trenches have been completed at the production stage, with an aggregate length of 11,413.38 m.
- At Khirshona mine, a total of 178 surface trenches have been completed at the exploration stage, with an aggregate length of 16,733.83 m.

Adit channel samples are designed and carried out for prospecting and geological exploration.

Sample Preparation, Analyses, and Quality Assurance and Quality Control ("QA/QC")

All samples of Taror mine, Jilau-Olympic mine, and Khirshona mine were logged and then shipped to the central laboratory of Zeravshan LLC.

Specific gravity ("**SG**") samples for Jilau mine and Khirshona mine were collected and analysed by the central laboratory of Zeravshan LLC. Density, humidity and gold grade were determined. A density of 2.65 t/m^3 is adopted for the Mineral Resource estimation. SG samples for Taror mine were collected and analysed by the central laboratory of Zeravshan LLC. Densities of 2.74 t/m^3 and 2.65 t/m^3 are adopted for ore and waste, respectively.

All samples of Taror mine, Jilau-Olympic mine and Khirshona mine, were logged and were then shipped to the central laboratory of Zeravshan LLC.

Sample preparation was performed for routine chemical assays by the laboratory of Zeravshan LLC following a standard rock preparation procedure of drying, weighing, crushing, splitting, and pulverization. The pulverized pulps were about 74 microns ("**μm**", Tyler 200 mesh).

Samples from Jilau-Olympic mine and Taror mine are assayed using fire with wet assay methodology. Samples of Khirshona mine are assayed using flame atomic absorption spectrometry method ("**AAS**").

Duplicates and Umpire Duplicates

The duplicates and umpire duplicates performance are generally acceptable, most pairs are within ±20%, although some low-grade samples shown greater bias due to the sensitivity of numbers.

Blanks

Only blank assay samples were adopted in the laboratory, and coarse blanks were not applied thus the sample preparation contamination is not monitored.

CRMs

All the CRMs in Taror, Jilau and Khirshona sample streams are within 2 Standard Deviations ("SDs") which demonstrated the assay performances are robust.

In general, the QA/QC performance of Taror, Jilau and Khirshona project are considered of industry best practices, which provide reliable assay data for Mineral Resource estimation.

Mineral Resource Estimation

The Mineral Resource estimation methodology involved consolidating and verifying borehole and topographic data. Wireframe models delineated mineralisation boundaries based on assay data and lithology. Mineral Resource domains were defined, and sample results were composited and capped for analysis. Block models were interpolated, and Mineral Resources classified and validated to determine economic prospects and cut-off grades.

SRK reviewed the databases of the Taror project, Jilau project and Khirshona project, and modified the Mineral Resource models accordingly. As of 30 June 2025, the Mineral Resources of the projects are reported (see Table ES-1 for details) as follows:

- At a cut-off grade of 0.6 g/t Au, the Taror Mine is estimated to contain 10.33 million tonnes ("**Mt**") of Measured Mineral Resources with an average grade of 2.97 g/t Au, 13.27 g/t Ag, and 0.61% Cu, containing 986 koz of Au, 137,147 kg of Ag, and 62,844 t of Cu, 7.12 Mt of Indicated Mineral Resources with an average grade of 2.65 g/t Au, 12.07 g/t Ag, and 0.49% Cu, containing 606 koz of Au, 85,943 kg of Ag, and 35,076 t of Cu, and 3.42 Mt of Inferred Mineral Resources with an average grade of 2.18 g/t Au, 13.46 g/t Ag, and 0.54% Cu, containing 240 koz of Au, 46,108 kg of Ag, and 18,470 t of Cu.
- At a cut-off grade of 0.2 g/t Au, the Jilau Mine is estimated to contain 21.18 Mt of Measured Mineral Resources with an average grade of 0.81 g/t Au, containing 552 koz of Au, 3.31 Mt of Indicated Mineral Resources with an average grade of 0.74 g/t Au, containing 79 koz of Au, and 1.66 Mt of Inferred Mineral Resources with an average grade of 0.57g/t Au, containing 30 koz of Au.
- At a cut-off grade of 0.2 g/t Au, the Khirshona Mine is estimated to contain 15.05 Mt of Measured Mineral Resources with an average grade of 0.67 g/t Au, containing 322 koz of Au, 3.44 Mt of Indicated Mineral Resources with an average grade of 0.68 g/t Au, containing 75 koz of Au, and 2.61 Mt of Inferred Mineral Resources with an average grade of 0.39 g/t Au, containing 33 koz of Au.

Exploration Potential

Outside the mining pit boundary, there are still some sections with good mineralization potential and favorable mineralization, and some exploration drill holes have revealed promising mineralization information. It is recommended to carry out further geological studies and mineability assessments (including metallurgical testing and preliminary economic evaluations) to better define the potential of these mineralized materials.

Ore Reserves

SRK has estimated the Ore Reserves for the Taror, Jilau, and Khriskhona deposits in accordance with the guidelines outlined in the JORC Code. These Ore Reserve estimates are underpinned by modifying factors based on technical studies and ongoing operational records, which meet the minimum of a Pre-Feasibility Study level of confidence. The key factors applied in the estimation process include design slope, open pit optimization, open pit design, mining losses, and dilution. Additional considerations include processing capabilities, marketing conditions, as well as environmental, legal, and political constraints, or any other factors that may affect the quantity and classification of the Ore Reserves.

The economically mineable portions of the Measured and Indicated Mineral Resources within the designed open pits, inclusive of diluting material and allowances for losses, have been classified as Proved Ore Reserves and Probable Ore Reserves, respectively.

Table ES-2: Ore Reserve Statement for the Zeravshan Project as of 30 June 2025 by SRK Consulting China Ltd.

Category	Tonnes	Grade			Contained Metal			
	Mt	Au (g/t)	Ag (g/t)	Cu (%)	Au (kg)	Au (koz)	Ag (kg)	Cu (t)
Open Pit								
Proved	41.62	1.23	3.06	0.14	51,149	1,644	127,169	58,730
Probable	12.52	1.74	6.14	0.26	21,771	700	76,927	32,662
Sub-total open pit	54.15	1.35	3.77	0.17	72,920	2,344	204,096	91,392
Stockpile								
Proved								
Probable	1.09	1.14	4.88	0.14	1,245	40	5,321	1,551
Sub-total stockpile	1.09	1.14	4.88	0.14	1,245	40	5,321	1,551
Total								
Proved	41.62	1.23	3.06	0.14	51,149	1,644	127,169	58,730
Probable	13.61	1.69	6.04	0.25	23,017	740	82,248	34,213
Total Ore Reserves	55.24	1.34	3.79	0.17	74,166	2,384	209,417	92,943

Sources: SRK

Notes:

1 The information in this report which relates to Ore Reserve is based on information compiled by Mr. Donghao Luo and Mr. Falong Hu, who are full time employee of SRK Consulting China Ltd. Mr. Falong Hu is Fellow of AusIMM and he supervised the Ore Reserve estimation. Both have sufficient experience which is relevant to the style of mineralisation and the type of deposits under consideration and to the activity which they are undertaking to qualify as a Competent Person as defined in the 2012 edition of the "Australasian Code for Reporting of Exploration results, Mineral Resources and Ore Reserves", the JORC Code. Both consent to the reporting of this information in the form and context in which it appears.

2 Numbers were rounded to the second significant digit to reflect the uncertainties in estimate.

3 Total may not add due to rounding discrepancies.

4 For Taror Mine, mining dilution (waste rock and Inferred Mineral Resources) rate is 4.7%. Mining loss rate is 3.4%.

5 For Jilau pit at Jilau Mine, mining dilution (waste rock and Inferred Mineral Resources) rate is 4.6%. Mining loss rate is 3.6%.

6 For Khirshona pit at Jilau Mine, mining dilution (waste rock and Inferred Mineral Resources) rate 4.8%. Mining loss rate is 3.7%.

7 The Ore Reserves are included in the Mineral Resources. They should not be added to the Mineral Resources.

Mining Assessment

The Company owns two mines comprising three pits: the Taror open pit at the Taror Mine and the Jilau open pit and Khirshona open pit at the Jilau Mine. All three pits are currently planned as open pit mining operations. As of 30 June 2025, these open pits remain operational for open pit mining.

Processing and Metallurgy

Zeravshan LLC has constructed and operated the No.1 Processing Plant (Taror Processing Plant), No.2 Processing Plant (Jilau Processing Plant), Heap leach plant, Copper Smelter, Gold Smelter, and Tailings Wastewater Treatment Plant. These facilities adopted a combined mineral processing and metallurgy flow to treat gold ore from the various mines, producing gold bullion, silver bullion, and cathode copper. The combined process offers flexibility suitable for adapting to variations in ore properties and has achieved stable recovery rates.
