VOLUNTARY ANNOUNCEMENT

A DOUBLE-STRANDED SMALL INTERFERING RNA DRUG (SYH2061 INJECTION) OBTAINS CLINICAL TRIAL APPROVAL IN THE U.S.

The Board of Directors (the “**Board**”) of CSPC Pharmaceutical Group Limited (the “**Company**”, together with its subsidiaries, the “**Group**”) is pleased to announce that a double-stranded small interfering RNA (“**siRNA**”) drug (SYH2061 Injection) (the “**Product**”), a Class 1 new chemical drug independently developed by the Group, has obtained approval from the U.S. Food and Drug Administration (FDA) to conduct clinical trials in the U.S. The Product also obtained approval from the National Medical Products Administration of the People’s Republic of China in October 2025 to conduct clinical trials in China.

The Product is an siRNA drug that achieves liver-targeted delivery through N-acetylgalactosamine (GalNAc) conjugation and targets complement component C5 (“**C5**”) via subcutaneous administration, effectively reducing C5 levels. Through sequence optimization and chemical modification strategies, the Product achieves a more sustained gene silencing effect, representing the first independently developed, ultra-long-lasting siRNA drug that reduces C5 levels to have entered clinical trials in China. It is indicated for the treatment of IgA nephropathy and other complement-mediated diseases.

Preclinical studies showed that the Product exhibited superior pharmacological activity and duration of efficacy compared to similar siRNA products, and demonstrated differentiated advantages, such as long-lasting therapeutic effects, good safety profile and high patient adherence, providing a promising clinical development value.
