VOLUNTARY ANNOUNCEMENT

**PUBLICATION OF CLINICAL RESULTS OF OUR CORE PRODUCT
TINENGOTINIB AGAINST CHOLANGIOCARCINOMA**

This announcement is made by TransThera Sciences (Nanjing), Inc. (the “**Company**”, together with its subsidiaries, the “**Group**”) on a voluntary basis to inform the shareholders and potential investors of the Company about the latest business advancement of the Group.

The board of directors of the Company (the “**Board**”) is pleased to announce the recent publication of clinical results from a US-based Phase 2 trial evaluating the Company’s core product, Tinengotinib, in patients with Cholangiocarcinoma (CCA) on The Lancet Gastroenterology and Hepatology (Impact Factor: 38.6).

CCA is an aggressive malignancy of the bile ducts, frequently driven by FGFR2 fusions-genomic alterations that are targetable by FGFR inhibitors such as pemigatinib and futibatinib. However, resistance to these agents commonly arises due to secondary FGFR2 mutations. In a multicenter, open-label Phase 2 trial (NCT04919642), patients with FGFR2 fusion-positive CCA who had either primary resistance or developed acquired resistance to prior FGFR inhibitor (FGFRi) therapy were enrolled, along with patients harboring other FGFR alterations or FGFR wild-type tumors. Tinengotinib demonstrated clinical activity in patients with FGFR2 fusion-positive CCA with acquired FGFRi resistance, as well as in those with other FGFR-altered subtypes.

Warning under Rule 18A.08(3) of the Listing Rules: There is no assurance that the relevant product will ultimately be successfully developed and marketed by the Company.

By order of the Board
