II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

1. PRINCIPAL ACTIVITIES AND ORGANISATION

Principal activities

The Target Company is a limited liability company established in the People's Republic of China (the "PRC"). The registered office of the Target Company is located at Room 201-203, Property Office Building, Shugutu New District Digital Garden Community, Shiguai District, Baotou, Inner Mongolia Autonomous Region, the PRC.

During the Relevant Periods, the Target Group was involved in the provision of coal mining related services in the PRC.

In the opinion of the directors, the immediate holding company and the ultimate holding company of the Target Company is China Energy Investment Corporation Limited ("China Energy Group"), which is established in the PRC.

As at the date of this report, the Target Company had direct and indirect interests in its subsidiaries, all of which are private limited liability companies, the particulars of which are set out below:

Name	Place and date of registration and place of operations	Registered/paid-up capital	Proportion of ownership interest held by the Target Group (%)	Principal activities
		RMB million		
Baotou Mining Bureau construction and Installation co., Ltd. (note (i))（包头矿务局建筑安装有限总公司）	PRC/Mainland China 29 May 1997	25	100	Coal mining related services
Baotou Shiguai Shantytown Relocation and construction Co., Ltd. (note (ii))（包头市石拐棚户区搬迁建设有限公司）	PRC/Mainland China 18 September 2007	10	100	Coal mining related services

Notes:

(i) The statutory financial statements of this entity for the year ended 31 December 2022 prepared under China Accounting Standards were audited by ShineWing Certified Public Accountants, certified public accountants registered in the PRC. The statutory financial statements of this entity for the years ended 31 December 2023 and 2024 prepared under China Accounting Standards were audited by Baker Tilly China Certified Public Accountants, certified public accountants registered in the PRC.

(ii) The statutory financial statements of this entity for the year ended 31 December 2024 prepared under China Accounting Standards were audited by Baker Tilly China Certified Public Accountants, certified public accountants registered in the PRC. There was no audited statutory financial statements of this entity for the years ended 31 December 2022 and 2023.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.1 BASIS OF PRESENTATION

Pursuant to the Acquisition, as more fully explained in the paragraph headed "Pre-reorganisation" in the section headed "MAJOR AND CONNECTED TRANSACTION" in the Circular, the Target Company agreed to dispose of its 49% interest of Shanxi Coal Sales Guodian Energy Co., Ltd. (the "Shanxi Coal Sales") and the related liabilities of Shanxi Coal Sales amounting RMB180 million (collectively, the "Excluded Business") to related parties with nil consideration before the Acquisition (the "Disposal"). The Target Group then comprised the Target Company and its subsidiaries except the Excluded Businesses.

The Historical Financial Information excludes the Excluded Business, which are under the control of ultimate holding company, but are not strategically complementary for the Acquisition purpose. In evaluating whether the Historical Financial Information fairly presents the history of the Target Group's businesses, the directors considered, among others, the following:

1) whether the Excluded Business was in dissimilar businesses;
2) whether the Excluded Business was and would be operated autonomously both before and after the Disposal; and
3) whether the Excluded Business had no more than incidental common facilities and costs.

The Historical Financial Information has been prepared as if the Disposal had been completed at the beginning of the Relevant Periods and accounted for as a distribution to the holding company of the Target Company. The Historical Financial Information does not include the assets, liabilities, results of the operations and cash flows of the Excluded Business. The transactions and balances between the Target Group and the Excluded Business have not been eliminated.

2.2 BASIS OF PREPARATION

The Historical Financial Information has been prepared in accordance with IFRS Accounting Standards (which include all International Financial Reporting Standards, International Accounting Standards ("IASs") and Interpretations) as issued by the International Accounting Standards Board (the "IASB"). All IFRS Accounting Standards effective for the accounting period commencing from 1 January 2025, together with the relevant transitional provisions, have been early adopted by the Target Group in the preparation of the Historical Financial Information throughout the Relevant Periods and in the period covered by the Interim Comparative Financial Information.

The Historical Financial Information has been prepared on the historical cost basis.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.2 BASIS OF PREPARATION (CONTINUED)

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date, regardless of whether that price is directly observable or estimated using another valuation technique. In estimating the fair value of an asset or a liability, the Target Group takes into account the characteristics of the asset or liability if market participants would take those characteristics into account when pricing the asset or liability at the measurement date. Fair value for measurement and/or disclosure purposes in the Historical Financial Information is determined on such a basis, except for share-based payment transactions that are within the scope of IFRS 2 *Share-based Payment*, leasing transactions that are within the scope of IFRS 16 *Leases*, and measurements that have some similarities to fair value but are not fair value, such as net realisable value in IAS 2 *Inventories* or value in use in IAS 36 *Impairment of Assets*.

In addition, for financial reporting purposes, fair value measurements are categorised into Level 1, 2 or 3 based on the degree to which the inputs to the fair value measurements are observable and the significance of the inputs to the fair value measurement in its entirety, which are described as follows:

– Level 1 inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities that the entity can access at the measurement date;

– Level 2 inputs are inputs, other than quoted prices included within Level 1, that are observable for the asset or liability, either directly or indirectly; and

– Level 3 inputs are unobservable inputs for the asset or liability.

The preparation of the Historical Financial Information in conformity with IFRS Accounting Standards requires management to make judgements, estimates and assumptions that affect the application of policies and reported amounts of assets, liabilities, income and expenses. The estimates and associated assumptions are based on historical experience and various other factors that are believed to be reasonable under the circumstances, the results of which form the basis of making the judgements about carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates.

The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised if the revision affects only that period, or in the period of the revision and future periods if the revision affects both current and future periods.

Judgements made by management in the application of IFRS Accounting Standards that have significant effect on the Historical Financial Information and major sources of estimation uncertainty are discussed in note 3 to the Historical Financial Information.

Material accounting policies adopted by the Target Group are disclosed below.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 ISSUED BUT NOT YET EFFECTIVE IFRS ACCOUNTING STANDARDS

The Target Group has not applied the following new and revised IFRS Accounting Standards, that have been issued but are not yet effective, in the Historical Financial Information . The Target Group intends to apply these new and revised IFRS Accounting Standards, if applicable, when they become effective.

IFRS 18	*Presentation and Disclosure in Financial Statements*[2]
IFRS 19	*Subsidiaries without Public Accountability: Disclosures*[2]
Amendments to IFRS 9 and IFRS 7	*Amendments to the Classification and Measurement of Financial Instruments*[1]
Amendments to IFRS 9 and IFRS 7	*Contracts Referencing Nature-dependent Electricity*[1]
Amendments to IFRS 10 and IAS 28	*Sale or Contribution of Assets between an Investor and its Associate or Joint Venture*[3]
Annual Improvements to IFRS Accounting Standards – Volume 11	Amendments to IFRS 1, IFRS 7, IFRS 9, IFRS 10 and IAS 7[1]

1 Effective for annual periods beginning on or after 1 January 2026
2 Effective for annual/reporting periods beginning on or after 1 January 2027
3 No mandatory effective date yet determined but available for adoption

The Target Group is in the process of making an assessment of the impact of these new and revised IFRS Accounting Standards upon initial application. IFRS 18 introduces new requirements for presentation within the statement of profit or loss and other comprehensive income, including specified totals and subtotals. It also requires disclosure of management-defined performance measures and includes new requirements for aggregation and disaggregation of financial information. The new requirements are expected to impact the Target Group's presentation in the statement of profit or loss and other comprehensive income and disclosures of the Target Group's financial performance. The new standard is not expected to have any impact on the Target Group's results of operations and financial position but has impact on the presentation and disclosure of the Historical Financial Information. Other than IFRS 18, so far, the Target Group considers that IFRS 19 and the revised IFRS Accounting Standards are unlikely to have a significant impact on the Target Group's results of operations and financial position.

2.4 MATERIAL ACCOUNTING POLICIES

Basis of consolidation

The Historical Financial Information incorporates the financial statements of the Target Company and its subsidiaries except the Excluded Business. Control is achieved when the Target Company:

– has power over the investee;

– is exposed, or has rights, to variable returns from its involvement with the investee; and

– has the ability to use its power to affect its returns.

The Target Group reassesses whether or not it controls an investee if facts and circumstances indicate that there are changes to one or more of the three elements of control listed above.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.4 MATERIAL ACCOUNTING POLICIES (CONTINUED)

Basis of consolidation (continued)

When the Target Group has less than a majority of the voting rights of an investee, it has power over the investee when the voting rights are sufficient to give it the practical ability to direct the relevant activities of the investee unilaterally. The Target Group considers all relevant facts and circumstances in assessing whether or not the Target Group's voting rights in an investee are sufficient to give it power, including:

- the size of the Target Group's holding of voting rights relative to the size and dispersion of holdings of the other vote holders;
- potential voting rights held by the Target Group, other vote holders or other parties;
- rights arising from other contractual arrangements; and
- any additional facts and circumstances that indicate that the Target Group has, or does not have, the current ability to direct the relevant activities at the time that decisions need to be made, including voting patterns at previous shareholders' meetings.

Consolidation of a subsidiary begins when the Target Group obtains control over the subsidiary and ceases when the Target Group loses control of the subsidiary. Specifically, income and expenses of a subsidiary acquired or disposed of during the year are included in the consolidated statement of profit or loss and other comprehensive income from the date the Target Group gains control until the date when the Target Group ceases to control the subsidiary.

Profit or loss and each item of other comprehensive income are attributed to equity holders of the Target Company and to the non-controlling interests. Total comprehensive income of subsidiaries is attributed to equity holders of the Target Company and to the non-controlling interests even if this results in the non-controlling interests having a deficit balance.

Where necessary, adjustments are made to the financial statements of subsidiaries to bring their accounting policies into line with the Target Group's accounting policies.

All intragroup assets and liabilities, equity, income, expenses and cash flows relating to transactions between members of the Target Group are eliminated in full on consolidation.

Non-controlling interests in subsidiaries are presented separately from the Target Group's equity therein, which represent present ownership interests entitling their holders to a proportionate share of net assets of the relevant subsidiaries upon liquidation.

Changes in the Target Group's ownership interests in existing subsidiaries

Changes in the Target Group's interests in subsidiaries that do not result in the Target Group losing control over the subsidiaries are accounted for as equity transactions. The carrying amounts of the Target Group's relevant components of equity and the non-controlling interests are adjusted to reflect the changes in their relative interests in the subsidiaries, including re-attribution of relevant reserves between the Target Group and the non-controlling interests according to the Target Group's and the non-controlling interests' proportionate interests.

Any difference between the amount by which the non-controlling interests are adjusted, and the fair value of the consideration paid or received is recognised directly in equity and attributed to owners of the Target Company.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.4 MATERIAL ACCOUNTING POLICIES (CONTINUED)

Business combinations

Acquisitions of businesses, other than business combination under common control are accounted for using the acquisition method. The consideration transferred in a business combination is measured at fair value, which is calculated as the sum of the acquisition-date fair values of the assets transferred by the Target Group, liabilities incurred by the Target Group to the former owners of the acquiree and the equity interests issued by the Target Group in exchange for control of the acquiree. Acquisition-related costs are generally recognised in profit or loss as incurred.

At the acquisition date, the identifiable assets acquired and the liabilities assumed are recognised at their fair value, except that deferred tax assets or liabilities, and assets or liabilities related to employee benefit arrangements are recognised and measured in accordance with IAS 12 *Income Taxes* and IAS 19 *Employee Benefits*, respectively.

Goodwill is measured as the excess of the sum of the consideration transferred, the amount of any non-controlling interests in the acquiree, and the fair value of the acquirer's previously held equity interest in the acquiree (if any) over the net of the acquisition-date amounts of the identifiable assets acquired and the liabilities assumed. If, after re-assessment, the net of the acquisition-date amounts of the identifiable assets acquired and liabilities assumed exceeds the sum of the consideration transferred, the amount of any non-controlling interests in the acquiree and the fair value of the acquirer's previously held interest in the acquiree (if any), the excess is recognised immediately in profit or loss as a bargain purchase gain.

Non-controlling interests that are present ownership interests and entitle their holders to a proportionate share of the entity's net assets in the event of liquidation are initially measured at the non-controlling interests' proportionate share of the recognised amounts of the acquiree's identifiable net assets.

Revenue from contracts with customers

Under IFRS 15, the Target Group recognises revenue when (or as) a performance obligation is satisfied, i.e. when "control" of the goods or services underlying the particular performance obligation is transferred to the customer.

A performance obligation represents a good or service (or a bundle of goods or services) that is distinct or a series of distinct goods or services that are substantially the same.

Control is transferred over time and revenue is recognised over time by reference to the progress towards complete satisfaction of the relevant performance obligation if one of the following criteria is met:

- the customer simultaneously receives and consumes the benefits provided by the Target Group's performance as the Target Group performs;

- the Target Group's performance creates and enhances an asset that the customer controls as the Target Group performs; or

- the Target Group's performance does not create an asset with an alternative use to the Target Group and the Target Group has an enforceable right to payment for performance completed to date.

Otherwise, revenue is recognised at a point in time when the customer obtains control of the distinct good or service.

A contract asset represents the Target Group's right to consideration in exchange for goods or services that the Target Group has transferred to a customer that is not yet unconditional. It is assessed for impairment in accordance with IFRS 9. In contrast, a receivable represents the Target Group's unconditional right to consideration, i.e. only the passage of time is required before payment of that consideration is due.

A contract liability represents the Target Group's obligation to transfer goods or services to a customer for which the Target Group has received consideration (or an amount of consideration is due) from the customer.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.4 MATERIAL ACCOUNTING POLICIES (CONTINUED)

Foreign currencies

In preparing the financial statements of each individual group entity, transactions in currencies other than entity's functional currencies (foreign currencies) are recognised at the rates of exchange prevailing on the dates of the transactions. At the end of the reporting period, monetary items denominated in foreign currencies are retranslated at the rates prevailing at that date. Non-monetary items that are measured in terms of historical cost in a foreign currency are not retranslated. Exchange differences on monetary items are recognised in profit or loss in the period in which they arise.

Borrowing costs

Borrowing costs directly attributable to the acquisition, construction or production of qualifying assets, which are assets that necessarily take a substantial period of time to get ready for their intended use or sale, are added to as part of the cost of those assets, until such time as the assets are substantially ready for their intended use or sale. All other borrowing costs are expensed in the period in which they are incurred.

Government grants

Government grants are not recognised until there is reasonable assurance that the Target Group will comply with the conditions attaching to them and that the grants will be received.

Government grants are recognised in profit or loss on a systematic basis over the periods in which the Target Group recognises as expenses the related costs for which the grants are intended to compensate. Specifically, government grants whose primary condition is that the Target Group should purchase, construct or otherwise acquire non-current assets are recognised as deferred income in the consolidated statement of financial position and transferred to profit or loss on a systematic and rational basis over the useful lives of the related assets.

Government grants that are receivable as compensation for expenses or losses already incurred or for the purpose of giving immediate financial support to the Target Group with no future related costs are recognised in profit or loss in the period in which they become receivable.

Retirement benefit costs

Payments to state-managed retirement benefit schemes and a supplemental defined contribution pension plan approved by the government are recognised as an expense when employees have rendered service entitling them to the contributions.

The contributions made by the Target Group to such insurance plans on behalf of employees are fully attributed to the employees at the time of payment, therefore the Target Group has no abandoned contributions that can be utilised.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.4 MATERIAL ACCOUNTING POLICIES (CONTINUED)

Taxation

Income tax expense represents the sum of the tax currently payable and deferred tax.

The tax currently payable is based on taxable profit for the reporting period. Taxable profit differs from "profit before income tax" as reported in the consolidated statement of profit or loss and other comprehensive income because of income or expense that are taxable or deductible in other years and items that are never taxable or deductible. The Target Group's liability for current tax is calculated using tax rates that have been enacted or substantively enacted by the end of the reporting period.

Deferred tax is recognised on temporary differences between the carrying amounts of assets and liabilities in the Historical Financial Information and the corresponding tax bases used in the computation of taxable profit. Deferred tax liabilities are generally recognised for all taxable temporary differences. Deferred tax assets are generally recognised for all deductible temporary differences to the extent that it is probable that taxable profits will be available against which those deductible temporary differences can be utilised.

Deferred tax is not recognised for:

- temporary differences on the initial recognition of assets or liabilities in a transaction that is not a business combination and that affects neither accounting nor taxable profit or loss and does not give rise to equal taxable and deductible temporary differences;

- temporary differences related to investment in subsidiaries, associates and joint venture to the extent that the Target Group is able to control the timing of the reversal of the temporary differences and it is probable that they will not reverse in the foreseeable future;

- taxable temporary differences arising on the initial recognition of goodwill; and

- those related to the income taxes arising from tax laws enacted or substantively enacted to implement the Pillar Two model rules published by the Organisation for Economic Co-operation and Development ("OECD").

The Target Group recognised deferred tax assets and deferred tax liabilities separately in relation to its lease liabilities and right-of-use assets.

Deferred tax liabilities are recognised for taxable temporary differences associated with investments in subsidiaries, except where the Target Group is able to control the reversal of the temporary difference and it is probable that the temporary difference will not reverse in the foreseeable future. Deferred tax assets arising from deductible temporary differences associated with such investments and interests are only recognised to the extent that it is probable that there will be sufficient taxable profits against which to utilise the benefits of the temporary differences and they are expected to reverse in the foreseeable future.

The carrying amount of deferred tax assets is reviewed at the end of each reporting period and reduced to the extent that it is no longer probable that sufficient taxable profits will be available to allow all or part of the asset to be recovered. Unrecognised deferred tax assets are reassessed at the end of each reporting year and are recognised to the extent that it has become probable that future taxable profit will be available to allow all or part of the deferred tax asset to be recovered.

Deferred tax assets and liabilities are measured at the tax rates that are expected to apply in the period in which the liability is settled or the asset is realised, based on tax rate (and tax laws) that have been enacted or substantively enacted by the end of the reporting period.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.4 MATERIAL ACCOUNTING POLICIES (CONTINUED)

Taxation (continued)

The measurement of deferred tax liabilities and assets reflects the tax consequences that would follow from the manner in which the Target Group expects, at the end of the reporting period, to recover or settle the carrying amount of its assets and liabilities.

Deferred tax assets and liabilities are offset when there is a legally enforceable right to set off current tax assets against current tax liabilities and when they relate to income taxes levied by the same taxation authority and the Target Group intends to settle its current tax assets and liabilities on a net basis.

Current and deferred tax are recognised in profit or loss, except when they relate to items that are recognised in other comprehensive income or directly in equity, in which case, the current and deferred tax are also recognised in other comprehensive income or directly in equity respectively. Where current tax or deferred tax arises from the initial accounting for a business combination, the tax effect is included in the accounting for the business combination.

Property, plant and equipment

Property, plant and equipment, which consists of freehold land and buildings, mining structures and mining rights, mining related machinery and equipment, and other items of plant and equipment, held for use in the production or supply of goods or services, or for administrative purposes, are stated in the consolidated statement of financial position at cost less subsequent accumulated depreciation and subsequent accumulated impairment losses, if any.

Depreciation is recognised so as to write-off the cost of items of property, plant and equipment (other than freehold land and construction in progress, which are subject to impairment assessment) less their residual values over their estimated useful lives. The estimated useful lives, residual values and depreciation method are reviewed at the end of each reporting period, with the effect of any changes in estimate accounted for on a prospective basis.

Property, plant and equipment, except for freehold land, and mining structures and mining rights, are depreciated on a straight-line basis at the following rates per annum:

Categories	Term for deprecation (year)
Land and buildings	35 – 55
Railway-specific equipment	10
Furniture, fixtures, motor vehicles and other equipment	2 – 20

The Directors reviewed the estimated useful lives of the assets annually based on the Target Group's historical experience with similar assets and taking into account anticipated technological changes.

Construction in progress intended to be used for production, supply or administrative purposes are carried at cost, less any recognised impairment loss. Costs include professional fees and, for qualifying assets, borrowing costs capitalised in accordance with the Target Group's accounting policy. Such properties are classified to the appropriate categories of property, plant and equipment when completed and ready for intended use. Depreciation of these assets, on the same basis as other property, plant and equipment, commences when the assets are ready for their intended use.

Items may be produced while bringing an item of property, plant and equipment to the location and condition necessary for it to be capable of operating in the manner intended by management. The proceeds from selling any such items and the related cost are recognised in profit or loss.

An item of property, plant and equipment is derecognised upon disposal or when no future economic benefits are expected to arise from the continued use of the asset. Any gain or loss arising on the disposal or retirement of an item of property, plant and equipment is determined as the difference between the sales proceeds and the carrying amount of the asset and is recognised in profit or loss.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.4 MATERIAL ACCOUNTING POLICIES (CONTINUED)

Property, plant and equipment (continued)

Mining structures and mining rights

The costs of mining structures and mining rights, which include the costs of acquiring and developing mining structures and mining rights, are firstly capitalised as "construction in progress" in the reporting period in which they are incurred and then reclassified to "Mining structures and mining rights" under property, plant and equipment when they are ready for commercial production.

Mining structures and mining rights are depreciated on a units-of-production basis utilising only proved and probable coal reserves in the depletion base.

The Target Group's mining rights are of sufficient duration (or convey a legal right to renew for sufficient duration) to enable all reserves to be mined in accordance with current production schedules.

Stripping costs incurred to develop a mine (or pit) before the production commences or to improve access to the component of the ore body during the production stage are capitalised as part of the cost of constructing the mine (or pit) and subsequently amortised over the life of the mine (or pit) on a units-of-production basis. Stripping costs and secondary development expenditure, mainly comprising costs on blasting, haulage, excavation, etc. incurred during the production stage of the ore body and does not providing any improved access to the ore body are charged to profit or loss as incurred.

Commercial reserves are proved and probable reserves. Changes in the commercial reserves affecting unit of production calculations are dealt with prospectively over the revised remaining reserves.

Exploration and evaluation assets

Exploration and evaluation assets comprise costs which are directly attributable to the search for mineral resources, the determination of technical feasibility and the assessment of commercial viability of an identified resource:

- researching and analysing historical exploration data;
- gathering exploration data through topographical, geochemical and geophysical studies;
- exploratory drilling, trenching and sampling;
- determining and examining the volume and grade of the resource;
- surveying transportation and infrastructure requirements; and
- conducting market and finance studies.

Expenditure during the initial exploration preparation stage of a project is charged to profit or loss as incurred. Exploration and evaluation costs, including the costs of acquiring licenses, are capitalised as exploration and evaluation assets on a project-by-project basis pending determination of the technical feasibility and commercial viability of the project.

Once the final feasibility study has been completed and a development decision has been taken, accumulated capitalised exploration and evaluation expenditures in respect of an area of interest are transferred to property, plant and equipment. In circumstances when an area of interest is abandoned or management decides it is not commercially viable, any accumulated costs in respect of that area are written off in the period the decision is made.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.4 MATERIAL ACCOUNTING POLICIES (CONTINUED)

Property, plant and equipment (continued)

Obligations for land reclamation

The Target Group's obligations for land reclamation consist of spending estimates at both surface and underground mines in accordance with the PRC rules and regulations. The Target Group estimates its liabilities for land reclamation and mine closure based upon detailed calculations of the amount and timing of the future cash flows for the required work. Spending estimates are escalated for inflation, then discounted at a discount rate that reflects current market assessments of the time value of money and the risks specific to the liability such that the amount of provision reflects the present value of the expenditures expected to be required to settle the obligation. The Target Group records a corresponding asset associated with the liability for final reclamation and mine closure. The obligation and corresponding asset are recognised in the period in which the liability is incurred. The asset is depreciated on the units-of-production method over its expected life and the liability is accreted to the projected spending date. As changes in estimates occur (such as mine plan revisions, changes in estimated costs, or changes in timing of the performance of reclamation activities), the revisions to the obligation and the corresponding asset are recognised at the appropriate discount rate.

Intangible assets

Intangible assets acquired separately

Intangible assets with finite useful lives that are acquired separately are carried at costs less accumulated amortisation and any accumulated impairment losses. Amortisation for intangible assets with finite useful lives is recognised on a straight-line basis over their estimated useful lives. The estimated useful life and amortisation method are reviewed at the end of each reporting period, with the effect of any changes in estimate being accounted for on a prospective basis.

Internally-generated intangible assets – research and development expenditure

Expenditure on research activities is recognised as an expense in the period in which it is incurred.

An internally-generated intangible asset arising from development activities (or from the development phase of an internal project) is recognised if, and only if, all of the following have been demonstrated:

- the technical feasibility of completing the intangible asset so that it will be available for use or sale;
- the intention to complete the intangible asset and use or sell it;
- the ability to use or sell the intangible asset;
- how the intangible asset will generate probable future economic benefits;
- the availability of adequate technical, financial and other resources to complete the development and to use or sell the intangible asset; and the ability to measure reliably the expenditure attributable to the intangible asset during its development.

The amount initially recognised for internally-generated intangible asset is the sum of the expenditure incurred from the date when the intangible asset first meets the recognition criteria listed above. Where no internally-generated intangible asset can be recognised, development expenditure is recognised in profit or loss in the period in which it is incurred.

Subsequent to initial recognition, internally-generated intangible asset is measured at cost less accumulated amortisation and accumulated impairment losses (if any), on the same basis as intangible assets acquired separately.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.4 MATERIAL ACCOUNTING POLICIES (CONTINUED)

Intangible assets (continued)

Intangible assets acquired in a business combination not under common control

Intangible assets acquired in a business combination are recognised separately from goodwill and are initially recognised at their fair value at the acquisition date (which is regarded as their cost).

Subsequent to initial recognition, intangible assets acquired in a business combination with finite useful lives are reported at cost less accumulated amortisation and any accumulated impairment losses, on the same basis as intangible assets that are acquired separately.

Derecognition of intangible assets

An intangible asset is derecognised on disposal, or when no future economic benefits are expected from use or disposal. Gains and losses arising from derecognition of an intangible asset are measured as the difference between the net disposal proceeds and the carrying amount of the asset and are recognised in profit or loss in the period when the asset is derecognised.

Impairment of tangible and intangible assets other than goodwill

At the end of the reporting period, the Target Group reviews the carrying amounts of its tangible and intangible assets with finite useful lives to determine whether there is any indication that these assets have suffered an impairment loss. If any such indication exists, the recoverable amount of the relevant asset is estimated in order to determine the extent of the impairment loss (if any).

The recoverable amount of tangible and intangible assets are estimated individually, when it is not possible to estimate the recoverable amount individually, the Target Group estimates the recoverable amount of the cash-generating unit to which the asset belongs. When a reasonable and consistent basis of allocation can be identified, corporate assets are also allocated to individual cash-generating units, or otherwise they are allocated to the smallest group of cash-generating units for which a reasonable and consistent allocation basis can be identified.

Recoverable amount is the higher of fair value less costs of disposal and value in use. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset (or a cash-generating unit) for which the estimates of future cash flows have not been adjusted.

If the recoverable amount of an asset (or a cash-generating unit) is estimated to be less than its carrying amount, the carrying amount of the asset (or a cash-generating unit) is reduced to its recoverable amount. In allocating the impairment loss, the impairment loss is allocated first to reduce the carrying amount of any goodwill (if applicable) and then to the other assets on a basis based on the carrying amount of each asset in the unit. The carrying amount of an asset is not reduced below the highest of its fair value less costs of disposal (if measurable), its value in use (if determinable) and zero. The amount of the impairment loss that would otherwise have been allocated to the asset is allocated pro rata to the other assets of the unit. An impairment loss is recognised immediately in profit or loss.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.4 MATERIAL ACCOUNTING POLICIES (CONTINUED)

Leased assets

At inception of a contract, the Target Group assesses whether the contract is, or contains, a lease. A contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration. Control is conveyed where the customer has both the right to direct the use of the identified asset and to obtain substantially all of the economic benefits from that use.

(i) As a lessee

Where the contract contains lease component(s) and non-lease component(s), the Target Group has elected not to separate non-lease components and accounts for each lease component and any associated non-lease components as a single lease component for all leases.

At the lease commencement date, the Target Group recognises a right-of-use asset and a lease liability, except for short-term leases that have a lease term of 12 months or less and leases of low-value assets. When the Target Group enters into a lease in respect of a low-value asset, the Target Group decides whether to capitalise the lease on a lease-by-lease basis. The lease payments associated with those leases which are not capitalised are recognised as an expense on a systematic basis over the lease term.

Where the lease is capitalised, the lease liability is initially recognised at the present value of the lease payments payable over the lease term, discounted using the interest rate implicit in the lease or, if that rate cannot be readily determined, using a relevant incremental borrowing rate. After initial recognition, the lease liability is measured at amortised cost and interest expense is calculated using the effective interest method. Variable lease payments that do not depend on an index or rate are not included in the measurement of the lease liability and hence are charged to profit or loss in the accounting period in which they are incurred.

The right-of-use asset recognised when a lease is capitalised is initially measured at cost, which comprises the initial amount of the lease liability plus any lease payments made at or before the commencement date, and any initial direct costs incurred. Where applicable, the cost of the right-of-use assets also includes an estimate of costs to dismantle and remove the underlying asset or to restore the underlying asset or the site on which it is located, discounted to their present value, less any lease incentives received. The right-of-use asset is subsequently stated at cost less accumulated depreciation and impairment losses.

The lease liability is remeasured when there is a change in future lease payments arising from a change in an index or rate, or there is a change in the Target Group's estimate of the amount expected to be payable under a residual value guarantee, or there is a change arising from the reassessment of whether the Target Group will be reasonably certain to exercise a purchase, extension or termination option. When the lease liability is remeasured in this way, a corresponding adjustment is made to the carrying amount of the right-of-use asset, or is recorded in profit or loss if the carrying amount of the right-of-use asset has been reduced to zero.

The lease liability is also remeasured when there is a change in the scope of a lease or the consideration for a lease that is not originally provided for in the lease contract ("lease modification") that is not accounted for as a separate lease. In this case the lease liability is remeasured based on the revised lease payments and lease term using a revised discount rate at the effective date of the modification.

In the consolidated statement of financial position, the current portion of long-term lease liabilities is determined as the present value of contractual payments that are due to be settled within twelve months after the reporting period.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.4 MATERIAL ACCOUNTING POLICIES (CONTINUED)

Leased assets (continued)

(ii) As a lessor

When the Target Group acts as a lessor, it determines at lease inception whether each lease is a finance lease or an operating lease. A lease is classified as a finance lease if it transfers substantially all the risks and rewards incidental to the ownership of an underlying assets to the lessee. If this is not the case, the lease is classified as an operating lease.

When a contract contains lease and non-lease components, the Target Group allocates the consideration in the contract to each component on a relative stand-alone selling price basis.

When the Target Group is an intermediate lessor, the sub-leases are classified as a finance lease or as an operating lease with reference to the right-of-use asset arising from the head lease. If the head lease is a short-term lease to which the Target Group applies the exemption method, then the Target Group classifies the sub-lease as an operating lease.

Inventories

Inventories are stated at the lower of cost and net realisable value. Costs of inventories are calculated using the weighted average method. Net realisable value represents the estimated selling price for inventories less all estimated costs of completion and costs necessary to make the sale.

Provisions

Provisions are recognised when the Target Group has a present obligation (legal or constructive) as a result of a past event, it is probable that the Target Group will be required to settle that obligation, and a reliable estimate can be made of the amount of the obligation.

Provisions are measured at the best estimate of the consideration required to settle the present obligation at the end of the reporting period, taking into account the risks and uncertainties surrounding the obligation. When a provision is measured using the cash flows estimated to settle the present obligation, its carrying amount is the present value of those cash flows (where the effect of the time value of money is material).

When some or all of the economic benefits required to settle a provision are expected to be recovered from a third party, a receivable is recognised as an asset if it is virtually certain that reimbursement will be received and the amount of the receivable can be measured reliably.

Financial instruments

Financial assets and financial liabilities are recognised when a group entity becomes a party to the contractual provisions of the instrument. All regular way purchases or sales of financial assets are recognised and derecognised on a trade date basis. Regular way purchases or sales are purchases or sales of financial assets that require delivery of assets within the time frame established by regulation or convention in the market place.

Financial assets and financial liabilities are initially measured at fair value except for trade receivables arising from contracts with customers. Transaction costs that are directly attributable to the acquisition or issue of financial assets and financial liabilities (other than financial assets or financial liabilities measured at fair value through profit and loss (the "FVTPL")) are added to or deducted from the fair value of the financial assets or financial liabilities, as appropriate, on initial recognition. Transaction costs directly attributable to the acquisition of financial assets or financial liabilities FVTPL are recognised immediately in profit or loss.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.4 MATERIAL ACCOUNTING POLICIES (CONTINUED)

Financial instruments (continued)

Effective interest method

The effective interest method is a method of calculating the amortised cost of a financial asset or financial liability and of allocating interest income and interest expense over the relevant period. The effective interest rate is the rate that exactly discounts estimated future cash receipts and payments (including all fees and points paid or received that form an integral part of the effective interest rate, transaction costs and other premiums or discounts) through the expected life of the financial asset or financial liability, or, where appropriate, a shorter period, to the net carrying amount on initial recognition.

Financial assets

Classification and subsequent measurement of financial assets

Financial assets that meet the following conditions are subsequently measured at amortised cost:

- the financial asset is held within a business model whose objective is to collect contractual cash flows; and
- the contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

Financial assets that meet the following conditions are subsequently measured at fair value through other comprehensive income (the "FVTOCI"):

- the financial asset is held within a business model whose objective is achieved by both collecting contractual cash flows and selling; and
- the contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

All other financial assets are subsequently measured at FVTPL, except that at the date of initial application/initial recognition of a financial asset the Target Group may irrevocably elect to present subsequent changes in fair value of an equity investment in other comprehensive income if that equity investment is neither held for trading nor contingent consideration recognised by an acquirer in a business combination to which IFRS 3 *Business Combinations* applies.

In addition, the Target Group may irrevocably designate a financial asset that are required to be measured at the amortised cost or FVTOCI as measured at FVTPL if doing so eliminates or significantly reduces an accounting mismatch.

(i) Amortised cost and interest income

Interest income is recognised using the effective interest method for financial assets measured subsequently at amortised cost. Interest income is calculated by applying the effective interest rate to the gross carrying amount of a financial asset, except for financial assets that have subsequently become credit-impaired (see below). For financial assets that have subsequently become credit-impaired, interest income is recognised by applying the effective interest rate to the amortised cost of the financial asset from the next reporting period. If the credit risk on the credit-impaired financial instrument improves so that the financial asset is no longer credit-impaired, interest income is recognised by applying the effective interest rate to the gross carrying amount of the financial asset from the beginning of the reporting period following the determination that the asset is no longer credit impaired.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.4 MATERIAL ACCOUNTING POLICIES (CONTINUED)

Financial instruments (continued)

Financial assets (continued)

Classification and subsequent measurement of financial assets (continued)

(ii) Equity instruments designated as at FVTOCI

Investments in equity instruments at FVTOCI are subsequently measured at fair value with gains and losses arising from changes in fair value recognised in other comprehensive income and accumulated in the other reserves; and are not subject to impairment assessment. The cumulative gain or loss will not be reclassified to profit or loss on disposal of the equity investments, and will be transferred to retained earnings.

Dividends from these investments in equity instruments are recognised in profit or loss when the Target Group's right to receive the dividends is established, unless the dividends clearly represent a recovery of part of the cost of the investment. Dividends are included in the "other income" line item in profit or loss.

(iii) Financial assets at FVTPL

Financial assets that do not meet the criteria for being measured at amortised cost or FVTOCI or designated as FVTOCI are measured at FVTPL.

Financial assets at FVTPL are measured at fair value at the end of each reporting period, with any fair value gains or losses recognised in profit or loss. The net gain or loss recognised in profit or loss includes any dividend or interest earned on the financial asset and is included in the "other gains and losses" line item.

Impairment of financial assets

The Target Group recognises a loss allowance for expected credit loss ("ECL") on financial assets which are subject to impairment under IFRS 9 (including accounts receivable and other receivables). The amount of ECL is updated at each reporting date to reflect changes in credit risk since initial recognition.

Lifetime ECL represents the ECL that will result from all possible default events over the expected life of the relevant instrument. In contrast, 12-month ECL represents the portion of lifetime ECL that is expected to result from default events that are possible within 12 months after the reporting date. Assessments are done based on the Target Group's historical credit loss experience, adjusted for factors that are specific to the debtors, general economic conditions and an assessment of both the current conditions at the reporting date as well as the forecast of future conditions.

The Target Group always recognises lifetime ECL for accounts receivable. The ECL on these assets are assessed individually for credit-impaired debtors or using a provision matrix with appropriate groupings.

For all other instruments, the Target Group measures the loss allowance equal to 12-month ECL, unless when there has been a significant increase in credit risk since initial recognition, the Target Group recognises lifetime ECL. The assessment of whether lifetime ECL should be recognised is based on significant increases in the likelihood or risk of a default occurring since initial recognition.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.4 MATERIAL ACCOUNTING POLICIES (CONTINUED)

Financial instruments (continued)

Impairment of financial assets (continued)

(i) Significant increase in credit risk

In assessing whether the credit risk has increased significantly since initial recognition, the Target Group compares the risk of a default occurring on the financial instrument as at the reporting date with the risk of a default occurring on the financial instrument as at the date of initial recognition. In making this assessment, the Target Group considers both quantitative and qualitative information that is reasonable and supportable, including historical experience and forward-looking information that is available without undue cost or effort.

In particular, the following information is taken into account when assessing whether credit risk has increased significantly:

- an actual or expected significant deterioration in the financial instrument's external credit rating (if available);
- significant deterioration in external market indicators of credit risk, e.g. a significant increase in the credit spread, the credit default swap prices for the debtor;
- existing or forecast adverse changes in business, financial or economic conditions that are expected to cause a significant decrease in the debtor's ability to meet its debt obligations;
- an actual or expected significant deterioration in the operating results of the debtor;
- an actual or expected significant adverse change in the regulatory, economic, or technological environment of the debtor that results in a significant decrease in the debtor's ability to meet its debt obligations.

Irrespective of the outcome of the above assessment, the Target Group presumes that the credit risk has increased significantly since initial recognition when contractual payments are more than 30 days past due, unless the Target Group has reasonable and supportable information that demonstrates otherwise.

Despite the foregoing, the Target Group assumes that the credit risk on a debt instrument has not increased significantly since initial recognition if the debt instrument is determined to have low credit risk at the reporting date. A debt instrument is determined to have low credit risk if i) it has a low risk of default, ii) the borrower has a strong capacity to meet its contractual cash flow obligations in the near term and iii) adverse changes in economic and business conditions in the longer term may, but will not necessarily, reduce the ability of the borrower to fulfil its contractual cash flow obligations.

For financial guarantee contracts, the date that the Target Group becomes a party to the irrevocable commitment is considered to be the date of initial recognition for the purposes of assessing the financial instrument for impairment. In assessing whether there has been a significant increase in the credit risk since initial recognition of financial guarantee contracts, the Target Group considers the changes in the risk that the specified debtor will default on the contract.

The Target Group regularly monitors the effectiveness of the criteria used to identify whether there has been a significant increase in credit risk and revises them as appropriate to ensure that the criteria are capable of identifying significant increase in credit risk before the amount becomes past due.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.4 MATERIAL ACCOUNTING POLICIES (CONTINUED)

Financial instruments (continued)

Impairment of financial assets (continued)

(ii) Definition of default

For internal credit risk management, the Target Group considers an event of default occurs when information developed internally or obtained from external sources indicates that the debtor is unlikely to pay its creditors, including the Target Group, in full (without taking into account any collaterals held by the Target Group). The Target Group considers both quantitative and qualitative information that is reasonable and supportable, including historical experience and forward-looking information that is available without undue cost or effort.

(iii) Credit-impaired financial assets

A financial asset is credit-impaired when one or more events of default that have a detrimental impact on the estimated future cash flows of that financial asset have occurred. Evidence that a financial asset is credit-impaired includes observable data about the following events:

(a) significant financial difficulty of the issuer or the borrower;

(b) a breach of contract, such as a default or past due event;

(c) the lenders of the borrower, for economic or contractual reasons relating to the borrower's financial difficulty, having granted to the borrower a concessions that the lenders would not otherwise consider;

(d) it is becoming probable that the borrower will enter bankruptcy or other financial re-organisation; or

(e) the disappearance of an active market for that financial asset because of financial difficulties.

(iv) Write-off policy

The Target Group writes off a financial asset when there is information indicating that the counterparty is in severe financial difficulty and there is no realistic prospect of recovery. Financial assets written off may still be subject to enforcement activities under the Target Group's recovery procedures, taking into account legal advice where appropriate. A write-off constitutes a derecognition event. Any subsequent recoveries are recognised in profit or loss.

(v) Measurement and recognition of ECL

The measurement of ECL is a function of the probability of default, loss given default (i.e. the magnitude of the loss if there is a default) and the exposure at default. The assessment of the probability of default and loss given default is based on historical data adjusted by forward-looking information. Estimation of ECL reflects an unbiased and probability-weighted amount that is determined with the respective risks of default occurring as the weights.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.4 MATERIAL ACCOUNTING POLICIES (CONTINUED)

Financial instruments (continued)

Impairment of financial assets (continued)

(v) Measurement and recognition of ECL (continued)

Generally, the ECL is the difference between all contractual cash flows that are due to the Target Group in accordance with the contract and the cash flows that the Target Group expects to receive, discounted at the effective interest rate determined at initial recognition.

For a financial guarantee contract, the Target Group is required to make payments only in the event of a default by the debtor in accordance with the terms of the instrument that is guaranteed. Accordingly, the expected losses is the present value of the expected payments to reimburse the holder for a credit loss that it incurs less any amounts that the Target Group expects to receive from the holder, the debtor or any other party.

For ECL on financial guarantee contracts, the Target Group will apply a discount rate that reflects the current market assessment of the time value of money and the risks that are specific to the cash flows but only if, and to the extent that, the risks are taken into account by adjusting the discount rate instead of adjusting the cash shortfalls being discounted.

Where ECL is measured on a collective basis or cater for cases where evidence at the individual instrument level may not yet be available, the financial instruments are grouped on the following basis:

– Nature of financial instruments (i.e. the Target Group's accounts and bills receivables and other receivables are each assessed as a separate group. Loans receivable are assessed for ECL on an individual basis);

– Past-due status; and

– External credit ratings where available.

The grouping is regularly reviewed by management to ensure the constituents of each group continue to share similar credit risk characteristics.

Interest income is calculated based on the gross carrying amount of the financial asset unless the financial asset is credit impaired, in which case interest income is calculated based on amortised cost of the financial asset.

For financial guarantee contracts, the loss allowances are recognised at the higher of the amount of the loss allowance determined in accordance with IFRS 9; and the amount initially recognised less, where appropriate, cumulative amount of income recognised over the guarantee period.

ECLs are remeasured at each reporting date to reflect changes in the financial instrument's credit risk since initial recognisation. Any change in the ECL amount is recognised as an impairment gain or loss in profit or loss. The Target Group recognises an impairment gain or loss for all financial instruments with a corresponding adjustment to their carrying amount through a loss allowance account.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.4 MATERIAL ACCOUNTING POLICIES (CONTINUED)

Financial instruments (continued)

Derecognition of financial assets

The Target Group derecognises a financial asset only when the contractual rights to the cash flows from the asset expire, or when it transfers the financial asset and substantially all the risks and rewards of ownership of the asset to another entity. If the Target Group retains substantially all the risks and rewards of ownership of a transferred financial asset, the Target Group continues to recognise the financial asset and also recognises a collateralised borrowing for the proceeds received.

On derecognition of a financial asset measured at amortised cost, the difference between the asset's carrying amount and the sum of the consideration received and receivable is recognised in profit or loss.

On derecognition of an investment in equity instrument which the Target Group has elected on initial recognition to measure at FVTOCI upon application of IFRS 9, the cumulative gain or loss previously accumulated in other reserves is not reclassified to profit or loss, but is transferred to retained earnings.

Financial liabilities and equity

Classification as debt or equity

Debt and equity instruments are classified as either financial liabilities or as equity in accordance with the substance of the contractual arrangements and the definitions of a financial liability and an equity instrument.

Equity instruments

An equity instrument is any contract that evidences a residual interest in the assets of an entity after deducting all of its liabilities. Equity instruments issued by the Target Company are recognised at the proceeds received, net of direct issue costs.

Financial liabilities

All financial liabilities are subsequently measured at amortised cost using the effective interest method.

Financial liabilities at amortised cost

Financial liabilities including accounts payable and other payables are subsequently measured at amortised cost, using the effective interest method.

Derecognition of financial liabilities

The Target Group derecognises financial liabilities when, and only when, the Target Group's obligations are discharged, cancelled or have expired. The difference between the carrying amount of the financial liability derecognised and the consideration paid and payable is recognised in profit or loss.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.4 MATERIAL ACCOUNTING POLICIES (CONTINUED)

Related parties

(a) A person, or a close member of that person's family, is related to the Target Group if that person:

(i) has control or joint control over the Target Group;

(ii) has significant influence over the Target Group; or

(iii) is a member of the key management personnel of the Target Group or the Target Group's parent.

(b) An entity is related to the Target Group if any of the following conditions applies:

(i) The entity and the Target Group are members of the same group.

(ii) One entity is an associate or joint venture of the other entity (or an associate or joint venture of a member of a group of which the other entity is a member).

(iii) Both entities are joint ventures of the same third party.

(iv) One entity is a joint venture of a third entity and the other entity is an associate of the third entity.

(v) The entity is a post-employment benefit plan for the benefit of employees of either the Target Group or an entity related to the Target Group.

(vi) The entity is controlled or jointly controlled by a person identified in (a).

(vii) A person identified in (a)(i) has significant influence over the entity or is a member of the key management personnel of the entity (or of a parent of the entity).

(viii) The entity, or any member of a group of which it is a part, provides key management personnel services to the Target Group or to the Target Group's parent.

Close members of the family of a person are those family members who may be expected to influence, or be influenced by, that person in their dealings with the entity.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

3. CRITICAL ACCOUNTING JUDGEMENTS AND KEY SOURCES OF ESTIMATION UNCERTAINTY

In the application of the Target Group's accounting policies, which are described in note 2, the Directors are required to make judgements, estimates and assumptions about the carrying amounts of assets and liabilities that are not readily apparent from other sources. The estimates and associated assumptions are based on historical experience and other factors that are considered to be relevant. Actual results may differ from these estimates.

The estimates and underlying assumptions are reviewed on an on-going basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised if the revision affects only that period or in the period of the revision and future periods if the revision affects both current and future periods.

Key sources of estimation uncertainty

The following are the key assumptions concerning the future, and other key sources of estimation uncertainty at the end of the reporting period that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year.

Impairment losses

In considering the impairment losses that may be required for certain of the Target Group's assets which mainly include property, plant and equipment, construction in progress, exploration and evaluation assets, intangible assets, right-of-use assets, interests in associates and other non-current assets, the recoverable amount of the asset need to be determined. The recoverable amount is the higher of its fair value less cost of disposal and value in use. It is difficult to precisely estimate fair value because quoted market prices for these assets may not be readily available. In determining the value in use, the Target Group uses all readily available information in determining expected cash flows generated by the cash-generating unit to which the asset belongs, and they are discounted to their present value, which requires significant judgement relating to cash flow items such as level of sale volume, selling price, amount of operating costs and future returns.

In considering the impairment losses that may be required for current receivables and other financial assets, future cash flows need to be determined. One of the key assumptions that has to be applied is about the ability of the debtors to settle the receivables.

Notwithstanding that the Target Group has used all available information to make this estimation, inherent uncertainty exists and actual write-offs may be higher or lower than the amount estimated.

Estimation of amortisation periods of concession intangible assets

The Target Group amortises the concession intangible assets using the straight-line method over the concession periods granted. The concession periods are approved by the Ordos Municipal-People's-Government therefore the Target Group does not have renewal or termination option for the concession periods. For those toll roads without formal concession period granted, the Target Group's management determines the estimated granted concession periods based on the historical experience.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

3. CRITICAL ACCOUNTING JUDGEMENTS AND KEY SOURCES OF ESTIMATION UNCERTAINTY (CONTINUED)

Key sources of estimation uncertainty (continued)

Deferred tax assets

The Target Group recognises the deferred income tax assets to the extent that it is probable that future taxable profit and taxable temporary differences will be available against which the deductible temporary differences and tax losses carried forward can be utilised, using tax rates that are expected to be applied in the period when the asset is recovered. Recognition of deferred income tax assets was complex because it requires significant estimation and judgement, and it involves significant assumptions, including future taxable profits, future tax rates, the reversal of deductible and taxable temporary differences, and the possible utilisation of tax losses carried forward that could be significantly affected by changes in the tax law framework and future market or economic conditions. Further details on deferred taxes are disclosed in note 24 to the Historical Financial Information.

4. REVENUE FROM GOODS AND SERVICES

Disaggregation of revenue of business lines is as follows:

	Year ended 31 December 2022 RMB million	Year ended 31 December 2023 RMB million	Year ended 31 December 2024 RMB million	Seven months ended 31 July 2024 RMB million (unaudited)	Seven months ended 31 July 2025 RMB million
Revenue from goods and services					
– Highway toll	127	141	128	72	87
– Others	55	27	4	1	6
	182	168	132	73	93

The Target Group's revenues from contracts with customers are RMB166 million, RMB162 million, RMB130 million, RMB72 million (unaudited) and RMB87 million for the years ended 31 December 2022, 2023 and 2024 and the seven months ended 31 July 2024 and 2025, respectively.

The Group's operating revenue is primarily derived from highway toll and container station leasing.

Highway toll revenue is collected through three primary methods, revenue recognition for each method occurs as follows:

- POS terminal payments: Revenue is recognised at the point when a vehicle completes a QR code scan (or card swipe) at the toll gate and a successful payment notification is received from the bank or third-party payment platform.
- Cash payments: Revenue is recognized at the point when a vehicle passes through the toll gate and the toll collector completes the cash collection and issues a receipt.
- Electronic Toll Collection (ETC) payments: Revenue is recognized at the point when the vehicle passes through the toll gate and the system successfully processes the electronic deduction.

Container station leasing revenue is recognized on a straight-line basis over the lease term specified in the contractual agreements.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

5. SEGMENT AND OTHER INFORMATION

For management purposes, the Target Group is not organised into business units based on their services and only has one reportable operating segment. Management monitors the operating results of the Target Group's operating segment as a whole for the purpose of making decisions about resource allocation and performance assessment.

All of the Target Group's revenue from external customers was from Mainland China during the Relevant Periods and the seven months ended 31 July 2024. All of the Target Group's non-current non-financial assets (excluding deferred tax assets) were located at Mainland China as at the end of each of the Relevant Periods.

No single customer's revenue was accounted for 10% or more of the Target Group's total revenue during the Relevant Periods and the seven months ended 31 July 2024.

6. COST OF SALES

	Year ended 31 December 2022 RMB million	Year ended 31 December 2023 RMB million	Year ended 31 December 2024 RMB million	Seven months ended 31 July 2024 RMB million (unaudited)	Seven months ended 31 July 2025 RMB million

* Amount less than RMB500,000

Note:

The recoverable amount is the higher of the fair value of the cash generating units ("CGU") less costs to sell and value in use ("VIU") of the CGUs.

Recoverable amount by calculating fair value less costs to sell:

As at 31 December 2024, the Target Group had determined the recoverable amount by using fair value less cost of disposal. Certain assets had been valued via market method. The fair value was categorised into Level 3 measurement.

Recoverable amount by calculating present value of estimated future cash flow:

The Target Group had treated long-term assets of Menggeqin Energy as individual CGU and had made relevant impairment assessment by calculating the present value of estimated future cash flow of the CGU.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

Deposits with banks and other financial institutions	273	144	329	1,567
Less: Time deposits with original maturity over three months	180	81	252	1,223
Cash and cash equivalents	93	63	77	344

As at the end of each of the Relevant Periods, the Target Company performed impairment assessment on bank balances and concluded that the probability of defaults of the counterparty banks are insignificant and accordingly, no allowance for credit losses is provided. Details of impairment assessment of bank deposits are set out in note 30.1 to the Historical Financial Information.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

24. DEFERRED TAXATION

The Target Group

	31 December 2022 RMB million	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Deferred tax assets	29	29	-*	-*

* Amount smaller than RMB500,000.

The following are the deferred tax assets recognised and movements thereon during the year/period:

	1 January 2022 RMB million	Credited/(charged) to profit or loss RMB million	31 December 2022 RMB million
Allowances, primarily for receivables and inventories	-*	29	29

	1 January 2023 RMB million	Credited/(charged) to profit or loss RMB million	31 December 2023 RMB million
Allowances, primarily for receivables and inventories	29	-	29

	1 January 2024 RMB million	Credited/(charged) to profit or loss RMB million	31 December 2024 RMB million
Allowances, primarily for receivables and inventories	29	(29)	-*

	1 January 2025 RMB million	Credited/(charged) to profit or loss RMB million	31 July 2025 RMB million
Allowances, primarily for receivables and inventories	-*	-	-*

* Amount smaller than RMB500,000.

As at 31 December 2022, 2023 and 2024 and 31 July 2025, the Target Group had unused tax losses of RMB61 million, RMB43 million, nil and nil, respectively, and unrecognised deductible temporary differences of RMB1,549 million, RMB1,549 million, RMB1,649 million, and RMB1,579 million, respectively, available for offset against future profits. No deferred tax asset has been recognised in respect of the remaining RMB61 million, RMB43 million, nil and nil losses at 31 December 2022, 2023 and 2024 and 31 July 2025, respectively, due to the unpredictability of future profit streams.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

24. DEFERRED TAXATION (CONTINUED)

The Target Group (continued)

The expiry dates of the tax losses of the Target Group for which no deferred income tax assets were recognised are summarised as follows:

	79	3,958	79	79
Analysed for reporting purpose as:				
Current liabilities (note (i))	-	3,879	-	-
Non-current liabilities (note (ii))	79	79	79	79
	79	3,958	79	79

Notes:

(i) On March 20, 2007, Wushenqi State-owned Assets Investment and Operation Co., Ltd. ("Wushenqi State-owned") and Menggeqin Energy ehtered into the *Exploration Rights Transfer Contract* pursuant to which Wushenqi State-owned agreed to transfer the exploration rights for the Meilinmiao Mine in the Hujierte Mining Area to Menggeqin Energy. The total explored coal reserves of the mine field were 1,956 million tons, with a unit price of RMB0.209 per ton, resulting in a total transaction consideration of RMB409 million. As the transfer price of the exploration rights was significantly lower than the pricing stipulated by relevant regulations, Wushenqi State-owned filed a lawsuit with the court, demanding Menggeqin Energy to pay the price difference for the exploration rights transfer, which is the current portion of the long-term liabilities of the Target Group.

(ii) The non-current portion of the long-term liabilities of the Target Group primarily comprises the allowance for estimated insolvency deficiency expenses.

The Target Company

	31 December 2022 RMB million	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Accrued expenses	79	79	79	79
Analysed for reporting purpose as:				
Non-current liabilities (note (i))	79	79	79	79

Note:

(i) The non-current portion of the long-term liabilities of the Target Company primarily comprises the allowance for estimated insolvency deficiency expenses.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

28. PAID-UP CAPITAL

	31 December 2022 RMB million	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Registered and paid-up capital	2,378	2,378	2,378	2,378

29. CAPITAL RISK MANAGEMENT

The Target Group's policy is to maintain a strong capital base so as to maintain investor, creditor and market confidence and to sustain future development of the business.

The Target Group manages the capital structure and makes adjustments to it in the light of changes in economic conditions and the risk characteristics of the underlying assets. In order to maintain or adjust the capital structure, the Target Group may adjust the amount of dividends paid to shareholders, return capital to shareholders or issue new shares to reduce debts.

The Target Group monitors capital using a gearing ratio which is total liabilities divided by total assets. The Target Group aims to maintain the gearing ratio at a reasonable level. The Target Group's gearing ratio as at 31 December 2022, 2023 and 2024 and 31 July 2025 was 19%,75%, 8% and 4%, respectively.

There were no changes in the Target Group's approach to capital management during the Relevant Periods.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

30. FINANCIAL INSTRUMENTS

30.1 Financial risk management objectives and policies

The Target Group's major financial instruments include accounts and bills receivables, prepaid expenses and other current assets, accounts and bills payables, other receivables, long-term liabilities. Details of the financial instruments are disclosed in the respective notes. The risks associated with these financial instruments include market risk (interest rate and currency risks), credit risk and liquidity risk. The policies on how to mitigate these risks are set out below. The management manages and monitors these exposures to ensure appropriate measures are implemented on a timely and effective manner.

Market risk

Credit risk and impairment assessment

As at the end of each of the Relevant Periods, the Target Group does not hold any collateral or other credit enhancements to cover its credit risks associated with its financial assets.

Accounts and bills receivables arising from contracts with customers

In order to minimise the credit risk, the management of the Target Group has delegated a team responsible for determination of credit limits and credit approvals. Before accepting any new customer, the Target Group uses an internal credit scoring system to assess the potential customer's credit quality and defines credit limits by customer. Limits and scoring attributed to customers are reviewed once a year. Other monitoring procedures are in place to ensure that follow-up action is taken to recover overdue debts. In this regard, the Directors consider that the Target Group's credit risk is significantly reduced.

Bank balances

The credit risks on bank balances are limited because the counterparties are banks with high credit ratings assigned by credit-rating agencies, such as Industrial and Commercial Bank of China.

Other receivables

Other receivables are mainly pledge and guarantee deposit. The pledge and guarantee deposit is paid for regular businesses. Thus, the credit risk on other receivables are limited.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

30. FINANCIAL INSTRUMENTS (CONTINUED)

30.1 Financial risk management objectives and policies (continued)

Credit risk and impairment assessment (continued)

The tables below detail the credit risk exposures of the Target Group's financial assets, which are subject to ECL assessment:

	Notes	External credit rating	12-month or lifetime ECL	31 December 2022 RMB million	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Financial assets at amortised costs							
Other non-current assets	19	N/A	12-month ECL	-	151	3,169	2,490
Cash and cash equivalents	23	N/A	12-month ECL	104	80	364	352
Time deposits with original maturity over three months	23	N/A	12-month ECL	180	81	252	1,223
Other receivables	22	N/A	12-month ECL	161	154	36	13
			Credit-impaired	118	118	1	1
Accounts receivable (note)	21	N/A	Lifetime ECL	39	21	20	14
			Credit-impaired	-	-	-	-

Note:

For accounts receivable, the Target Group has applied the simplified approach in IFRS 9 to measure the loss allowance at lifetime ECL.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

30. FINANCIAL INSTRUMENTS (CONTINUED)

30.1 Financial risk management objectives and policies (continued)

Credit risk and impairment assessment (continued)

Provision matrix – debtors' ageing

As part of the Target Group's credit risk management, the Target Group uses debtors' ageing to assess the impairment for its receivables from customers in relation to operation activities because these customers consist of a large number of customers with common risk characteristics that are representative of the customers' abilities to pay all amounts due in accordance with the contractual terms. The following table provides information about the exposure to credit risk for accounts receivables which are assessed based on provision matrix as at the end of each of the Relevant Periods within lifetime ECL (not credit-impaired). As at 31 December 2022, 2023 and 2024 and 31 July 2025, there were no impairment assessed individually for accounts receivable.

Gross carrying amount

	Average loss rate 31 December 2022	Accounts receivable 31 December 2022 RMB million	Average loss rate 31 December 2023	Accounts receivable 31 December 2023 RMB million	Average loss rate 31 December 2024	Accounts receivable 31 December 2024 RMB million	Average loss rate 31 July 2025	Accounts receivable 31 July 2025 RMB million
Current (not past due)	0%	39	0%	21	0%	20	0%	14

The estimated loss rates are estimated based on historical observed default rates over the expected life of the debtors and are adjusted for forward-looking information that is available without undue cost or effort. The grouping is regularly reviewed by management to ensure relevant information about specific debtors is updated.

During the years ended 31 December 2022, 2023 and 2024 and for the seven months ended 31 July 2025, There was no impairment provided or reversed for accounts receivable of the Target Group, based on the provision matrix.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, there was no lifetime ECL has been recognised for accounts receivable under the simplified approach.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

30. FINANCIAL INSTRUMENTS (CONTINUED)

30.1 Financial risk management objectives and policies (continued)

Credit risk and impairment assessment (continued)

Gross carrying amount (continued)

The following tables show reconciliation of loss allowances that has been recognised for other receivables and other loans.

	12-month ECL (not credit-impaired) RMB million	Lifetime ECL (credit-impaired) RMB million	Total RMB million
As at 1 January 2022	-	-	-
– Impairment losses recognised	118	-	118
As at 1 January 2023	118	-	118
– Impairment losses recognised	-	-	-
As at 1 January 2024	118	-	118
– Impairment losses reversed	(117)	-	(117)
As at 1 January 2025	1	-	1
– Impairment losses reversed	-*	-	-*
As at 31 July 2025	1	-	1

Liquidity risk

Liquidity risk is the risk that the Target Group will not be able to meet its financial obligation as they fall due. The approach to managing liquidity is to ensure, as far as possible, that it will always have sufficient liquidity to meet its liabilities when due, under both normal and stressed conditions, without incurring unacceptable losses or risk damage to the Target Group's reputation.

The Target Group closely monitors cash flow requirements and optimising its cash return. The Target Group prepares cash flow forecasts and ensures it has sufficient cash for the servicing of operation, financial, and capital obligations; this excludes the potential impact of extreme circumstances that cannot reasonably be predicted, such as natural disasters.

* Amount smaller than RMB500,000.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

30. FINANCIAL INSTRUMENTS (CONTINUED)

30.1 Financial risk management objectives and policies (continued)

Liquidity risk (continued)

The following table details the remaining contractual maturity of the Target Group's financial liabilities at the end of each of the Relevant Periods, which are based on contractual undiscounted cash flows (including interest payments computed using contractual rates or, if floating, based on rates current at the end of the reporting period) and the earliest date the Target Group can be required to pay:

	31 December 2022						
	Weighted average interest rate %	On demand or less than 1 year RMB million	1 – 2 years RMB million	2 – 5 years RMB million	More than 5 years RMB million	Total undiscounted cash flows RMB million	Total carrying amount RMB million
Financial liabilities:							
Accounts and bills payables, other payables, lease liabilities and long-term liabilities	-	57	48	113	79	297	297

	31 December 2023						
	Weighted average interest rate %	On demand or less than 1 year RMB million	1 – 2 years RMB million	2 – 5 years RMB million	More than 5 years RMB million	Total undiscounted cash flows RMB million	Total carrying amount RMB million
Financial liabilities:							
Accounts and bills payables, other payables, lease liabilities and long-term liabilities	-	3,981	-	-	79	4,060	4,060

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

30. FINANCIAL INSTRUMENTS (CONTINUED)

30.1 Financial risk management objectives and policies (continued)

Liquidity risk (continued)

	31 December 2024						
	Weighted average interest rate %	On demand or less than 1 year RMB million	1 – 2 years RMB million	2 – 5 years RMB million	More than 5 years RMB million	Total undiscounted cash flows RMB million	Total carrying amount RMB million
Financial liabilities:							
Accounts and bills payables, other payables, lease liabilities and long-term liabilities	-	313	-	-	79	392	392

	31 July 2025						
	Weighted average interest rate %	On demand or less than 1 year RMB million	1 – 2 years RMB million	2 – 5 years RMB million	More than 5 years RMB million	Total undiscounted cash flows RMB million	Total carrying amount RMB million
Financial liabilities:							
Accounts and bills payables, other payables, lease liabilities and long-term liabilities	-	69	-	-	79	148	148

Saved as discussed above, the Target Group also makes use of banks and financial institutions facilities as one of the effective sources of liquidity.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

30. FINANCIAL INSTRUMENTS (CONTINUED)

30.2 Fair value measurements

Fair value of the Target Group's financial assets and financial liabilities that are measured at fair value on a recurring basis

The directors consider that the carrying amounts of financial assets and financial liabilities recorded at amortised cost in the Historical Financial Information approximate their fair values.

31. COMMITMENTS AND CONTINGENT LIABILITIES

As at 31 December 2022, 2023 and 2024 and 31 July 2025, The Target Group had no material commitments and contingent liabilities need to be disclosed.

32. EMPLOYEE BENEFITS PLAN

The Target Group participates, in line with the regulations of the PRC, mainly in various defined contribution retirement plans organised by municipal and provincial governments for its employees. The Target Group is required to make contributions to the retirement plans at a certain proportion of the salaries, bonuses and certain allowances of the employees. In addition, as approved by the government, the Target Group makes contribution to a supplemental defined contribution pension plan for its employees. The fund is managed by a qualified fund manager. The Target Group has no other material obligation for the payment of pension benefits associated with these plans beyond the annual contributions described above. The Target Group's contributions for the year ended 31 December 2022, 2023 and 2024, and for the seven months ended 31 July 2024 and 2025 were RMB5 million, RMB6 million, RMB5 million, RMB2 million and RMB2 million, respectively.

33. RELATED PARTY TRANSACTIONS

33.1 Transactions with China Energy Group and fellow subsidiaries

The Target Group is controlled by China Energy Group and has significant transactions and relationships with China Energy Group and subsidiaries of China Energy Group ("fellow subsidiaries"). Related parties refer to enterprises over which China Energy Group is able to exercise significant influence or control.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

33. RELATED PARTY TRANSACTIONS (CONTINUED)

33.1 Transactions with China Energy Group and fellow subsidiaries (continued)

The Target Group had the following transactions with China Energy Group and fellow subsidiaries that were carried out in the normal course of business during the years ended 31 December 2022, 2023 and 2024 and seven months ended 31 July 2024 and 2025:

	Notes	Year ended 31 December 2022 RMB million	Year ended 31 December 2023 RMB million	Year ended 31 December 2024 RMB million	Seven months ended 31 July 2024 RMB million (unaudited)	Seven months ended 31 July 2025 RMB million
Purchases of ancillary materials and spare parts	(i)	-*	1	1	-*	-*
Purchases of ancillary and social services	(ii)	-*	-*	1	1	1
Purchase of equipment and construction work	(iii)	-*	-	-*	-	-
Ancillary services income	(iv)	-	-	2	1	1
Construction services income	(v)	39	21	2	-	-
Interest income	(vi)	3	4	26	5	43
Net deposits placed with Finance Company	(vii)	9	27	3,473	3,763	278

(i) Purchases of ancillary materials and spare parts represent purchase of materials and utility supplies related to the Target Group's operations from fellow subsidiaries of China Energy Group.

(ii) Purchases of ancillary and social services represent expenditures for social welfare and support services such as property management, water and electricity supply, and canteen expense paid to China Energy Group, fellow subsidiaries of China Energy Group.

(iii) Purchase of equipment and construction work represents expenditure related to equipment and construction service provided by fellow subsidiaries.

(iv) Ancillary services income represents revenue related to the container station leasing to China Energy Group and fellow subsidiaries.

(v) Construction services income represents revenue related to the provision of engineering, installation, repair services, etc. earned from China Energy Group and fellow subsidiaries.

(vi) Interest income represents interest earned from deposits in fellow subsidiaries. The applicable interest rate is determined in accordance with the prevailing interest rates published by the PBOC.

(vii) Net deposits placed with Finance Company represents net deposits placed by the Target Group with Finance Company.

* Amount smaller than RMB500,000.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

33. RELATED PARTY TRANSACTIONS (CONTINUED)

33.1 Transactions with China Energy Group and fellow subsidiaries (continued)

The Target Group entered into a number of agreements with China Energy Group and fellow subsidiaries. The terms of the principal agreements are summarised as follows:

(i) The Target Company has entered into a mutual supply agreement for the mutual provision of production supplies and ancillary services with China Energy Group and fellow subsidiaries. Pursuant to the agreement, China Energy Group and fellow subsidiaries provide the Target Group with the production supplies and services, ancillary production services including ancillary administrative services. On the other hand, the Target Group provides fellow subsidiaries with ancillary services and construction services.

The products and services provided under the agreement are provided in accordance with the following pricing policy:

- price prescribed by the state (including any price prescribed by any relevant local government), if applicable;
- where there is no state-prescribed price but where there is a state-guidance price, then the state-guidance price;
- where there is neither a state-prescribed price nor a state-guidance price, the market price; or
- where none of the above is applicable or where it is not practical to apply the above pricing policies in reality, the price to be agreed between the relevant parties shall be based on reasonable costs incurred in providing the goods or services plus a reasonable profit margin of such costs.

(ii) The Target Company has entered into a financial services agreement with Finance Company. Pursuant to the agreement, Finance Company provides financial services to the Target Group. The interest rate for the deposits with Finance Company from the Target Group should not be lower than the lowest limit published by the PBOC for the same type of deposit. The interest rate for loans made by Finance Company to the Target Group should not be higher than the highest limit published by the PBOC for the same type of loan. The above interest rates should be determined by reference to the rate charged by normal commercial banks in the PRC for comparable deposits and loans on normal commercial terms. The fees charged by Finance Company for the provision of other financial services shall be determined according to the rates chargeable by the PBOC or the China Banking Regulatory Commission.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

33. RELATED PARTY TRANSACTIONS (CONTINUED)

33.1 Transactions with China Energy Group and fellow subsidiaries (continued)

Amounts due from/to China Energy Group and fellow subsidiaries:

	31 December 2022 RMB million	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Cash and time deposits at bank	284	312	3,785	4,064
Accounts and bills receivables	39	20	20	14
Prepaid expenses and other current assets	10	10	10	10
Total amounts due from China Energy Group and fellow subsidiaries	333	342	3,815	4,088
Accounts payable	-*	-*	-*	-*
Accrued expenses and other payables	-*	1	-*	1
Total amounts due to China Energy Group and fellow subsidiaries	-*	1	-*	1

Other than those disclosed in notes 21, 22, 25 and 26 to the Historical Financial Information, amounts due from/to China Energy Group and fellow subsidiaries bear no interest, are unsecured and are repayable in accordance with normal commercial terms.

* Amount smaller than RMB500,000.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

33. RELATED PARTY TRANSACTIONS (CONTINUED)

33.2 Key management personnel emoluments

Key management personnel receive compensation in the form of fees, basic salaries, housing and other allowances, benefits in kind, discretionary bonuses and retirement scheme contributions.

As of the reporting period, the Directors did not receive any fees or emoluments for their services to the Company. The Directors are not paid directly by the Target Company, but are remunerated by China Energy Group Baotou Energy Co., Ltd. for their services.

33.3 Contributions to post-employment benefit plans

The Target Group participates in various defined contribution post-employment benefit plans organised by municipal and provincial governments and a supplemental defined contribution pension plan approved by the government for its employees. Further details of the Target Group's post-employment benefit plans are disclosed in note 32 to the Historical Financial Information.

33.4 Transactions with other government-related entities in the PRC

The Target Company is ultimately controlled by the PRC government and the Target Group operates in an economic environment currently predominated by government-related entities.

Other than those transactions with China Energy Group and fellow subsidiaries as disclosed above, the Target Group conducts business with other government-related entities which include but are not limited to the following:

– Purchases of ancillary materials and spare parts;

– Ancillary and social services; and

– Financial services arrangements.

These transactions are conducted in the ordinary course of the Target Group's business on terms comparable to those with other entities that are not government-related. The Target Group has established its pricing policies in respect of sale of goods and provision of services, and approval process for purchases of products and services. Such policies and approval process apply to all counterparties regardless of whether the counterparty is government-related or not.

Having considered the potential for transactions to be impacted by related party relationships, the Target Group's buying, pricing strategy and approval processes, and what information would be necessary for an understanding of the potential effect of the relationship on the financial statements, the Directors are of the opinion that the following transactions with other government-related entities require disclosure:

Transactions with other government-related entities, including state-controlled banks in the PRC:

	Year ended 31 December 2022 RMB million	Year ended 31 December 2023 RMB million	Year ended 31 December 2024 RMB million	Seven months ended 31 July 2024 RMB million (unaudited)	Seven months ended 31 July 2025 RMB million
Interest income	-*	-*	6	-*	-*

* Amount smaller than RMB500,000.

ACCOUNTANTS' REPORT ON HISTORICAL FINANCIAL INFORMATION OF CHINA ENERGY SHIPPING CO., LTD. TO THE DIRECTORS OF CHINA SHENHUA ENERGY COMPANY LIMITED

Introduction

We report on the historical financial information of China Energy Shipping Co., Ltd. (the "Target Company") and its subsidiaries (together, the "Target Group") set out on pages II-J-3 to II-J-92, which comprises the consolidated statements of profit or loss and other comprehensive income, statements of changes in equity and statements of cash flows of the Target Group for each of the years ended 31 December 2022, 2023 and 2024 and the seven months ended 31 July 2025 (the "Relevant Periods"), and the consolidated statements of financial position of the Target Group and the statements of financial position of the Target Company as at 31 December 2022, 2023 and 2024 and 31 July 2025 and material accounting policy information and other explanatory information (together, the "Historical Financial Information"). The Historical Financial Information set out on pages II-J-3 to II-J-92 forms an integral part of this report, which has been prepared for inclusion in the circular of China Shenhua Energy Company Limited ("China Shenhua") dated 24 December 2025 (the "Circular") in connection with the proposed acquisition by China Shenhua (the "Acquisition").

Directors' responsibility for the Historical Financial Information

The directors of the Target Company are responsible for the preparation of the Historical Financial Information that gives a true and fair view in accordance with the basis of preparation set out in note 2.1 to the Historical Financial Information, and for such internal control as the directors determine is necessary to enable the preparation of the Historical Financial Information that is free from material misstatement, whether due to fraud or error.

Reporting accountants' responsibility

Our responsibility is to express an opinion on the Historical Financial Information and to report our opinion to you. We conducted our work in accordance with Hong Kong Standard on Investment Circular Reporting Engagements 200 *Accountants' Reports on Historical Financial Information in Investment Circulars* issued by the Hong Kong Institute of Certified Public Accountants ("HKICPA"). This standard requires that we comply with ethical standards and plan and perform our work to obtain reasonable assurance about whether the Historical Financial Information is free from material misstatement.

Our work involved performing procedures to obtain evidence about the amounts and disclosures in the Historical Financial Information. The procedures selected depend on the reporting accountants' judgement, including the assessment of risks of material misstatement of the Historical Financial Information, whether due to fraud or error. In making those risk assessments, the reporting accountants consider internal control relevant to the entity's preparation of the Historical Financial Information that gives a true and fair view in accordance with the basis of preparation set out in note 2.1 to the Historical Financial Information, in order to design procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Our work also included evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by the directors, as well as evaluating the overall presentation of the Historical Financial Information.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Opinion
In our opinion, the Historical Financial Information gives, for the purposes of the accountants' report, a true and fair view of the financial position of the Target Group and the Target Company as at 31 December 2022, 2023 and 2024 and 31 July 2025 and of the financial performance and cash flows of the Target Group for each of the Relevant Periods in accordance with the basis of preparation set out in note 2.1 to the Historical Financial Information.

Review of interim comparative financial information
We have reviewed the interim comparative financial information of the Target Group which comprises the consolidated statement of profit or loss and other comprehensive income, statement of changes in equity and statement of cash flows for the seven months ended 31 July 2024 and other explanatory information (the "Interim Comparative Financial Information"). The directors of the Target Company are responsible for the preparation of the Interim Comparative Financial Information in accordance with the basis of preparation set out in note 2.1 to the Historical Financial Information. Our responsibility is to express a conclusion on the Interim Comparative Financial Information based on our review. We conducted our review in accordance with Hong Kong Standard on Review Engagements 2410 *Review of Interim Financial Information Performed by the Independent Auditor of the Entity* issued by the HKICPA. A review consists of making inquiries, primarily of persons responsible for financial and accounting matters, and applying analytical and other review procedures. A review is substantially less in scope than an audit conducted in accordance with Hong Kong Standards on Auditing and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion. Based on our review, nothing has come to our attention that causes us to believe that the Interim Comparative Financial Information, for the purposes of the accountants' report, is not prepared, in all material respects, in accordance with the basis of preparation set out in note 2.1 to the Historical Financial Information.

Report on matters under the Rules Governing the Listing of Securities on the Stock Exchange and the Companies (Winding Up and Miscellaneous Provisions) Ordinance

Adjustments
In preparing the Historical Financial Information, no adjustments to the Underlying Financial Statements as defined on page II-J-3 have been made.

Dividends
We refer to note 13 to the Historical Financial Information which states that no dividends have been paid by the Target Company in respect of the Relevant Periods.

I HISTORICAL FINANCIAL INFORMATION

Preparation of Historical Financial Information

Set out below is the Historical Financial Information which forms an integral part of this accountants' report.

The financial statements of the Target Group for the Relevant Periods, on which the Historical Financial Information is based, were audited by Ernst & Young in accordance with Hong Kong Standards on Auditing ("HKSAs") issued by the Hong Kong Institute of Certified Public Accountants ("HKICPA") (the "Underlying Financial Statements").

The Historical Financial Information is presented in Renminbi ("RMB") and all values are rounded to the nearest million except when otherwise indicated.

I HISTORICAL FINANCIAL INFORMATION
CONSOLIDATED STATEMENTS OF CHANGES IN EQUITY (continued)

Seven months ended 31 July 2025 (continued)

Notes:

(i) The capital reserve mainly represents the amount of the net assets acquired from or transferred to related parties under common control for no consideration.

(ii) Statutory reserves

Statutory surplus reserve

According to the PRC Company Law and the Target Company's Articles of Association, the Target Company is required to transfer 10% of its net profit as determined in accordance with the China Accounting Standards for Business Enterprises ("China Accounting Standards") to its statutory surplus reserve until the reserve balance reaches 50% of the registered capital. The transfer to this reserve must be made before distribution of a dividend to shareholders.

Statutory surplus reserve can be used to make up losses, if any, or to expand the Target Company's business, and may be converted into paid-up capital by the issue of new shares to shareholders in proportion to their existing shareholdings or by increasing the par value of the shares currently held by them, provided that the balance after such issue is not less than 25% of the registered capital of the Target Company. The statutory surplus reserve is not distributable.

Specific reserve for maintenance and production funds

Pursuant to the relevant PRC regulations, the Target Group is required to transfer production and maintenance funds at fixed rates based on revenue, to a specific reserve account. The production and maintenance funds could be utilised when expenses or capital expenditures on production maintenance and safety measures are incurred. The amount of production and maintenance funds utilised would be transferred from the specific reserve account to retained earnings.

Discretionary surplus reserve

The appropriation to the discretionary surplus reserve is subject to the shareholders' approval. The utilisation of the reserve is similar to that of the statutory surplus reserve.

The directors of the Target Company (the "Directors") have not proposed any appropriation to the discretionary surplus reserve during the Relevant Periods.

(iii) Retained earnings

Included in the retained earnings of the Target Group were its share of the statutory surplus reserve of its domestic subsidiaries amounted to RMB132 million, RMB134 million, RMB140 million and RMB140 million as at 31 December 2022, 2023 and 2024 and 31 July 2025, respectively.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

1. PRINCIPAL ACTIVITIES AND ORGANISATION

The Target Company is a limited liability company established in the People's Republic of China (the "PRC") on 22 March 2023 with a registered capital of RMB1,000 million. The registered office of the Target Company is located at 9th Floor, No. 6, Caihefang Road, Haidian District, Beijing, the PRC.

During the Relevant Periods, the Target Group was involved in the river shipping and coastal shipping activities.

In the opinion of the directors, the immediate holding company and the ultimate holding company of the Target Company is China Energy Investment Corporation Limited ("China Energy Group"), which is established in the PRC.

The acquisition of Tianjin Guoneng Shipping Co., Ltd. and Guoneng (Wuhan) Shipping Co., Ltd. in 2023 was accounted for using the principles of merger accounting as these entities were controlled by China Energy Group before and after the acquisition.

As at the date of this report, the Target Company had direct and indirect interests in its subsidiaries, all of which are private limited liability companies, the particulars of which are set out below:

Name	Place and date of incorporation/ registration and place of operations	Registered capital RMB/USD million	Proportion of ownership interest held by the Target Group (%)	Principal activities
Guoneng (Wuhan) Shipping Co., Ltd. (note (i))	PRC/Mainland China 28 March 2012	RMB100	100.00	River shipping
Tianjin Guoneng Shipping Co., Ltd. (note (i))	PRC/Mainland China 30 May 2008	RMB1,000	60.00	Coastal shipping
Guoneng (Tianjin) Shipping Co., Ltd. (note (ii))	PRC/Mainland China 20 September 2024	RMB463	100.00	Coastal shipping
CHN ENERGY OCEAN SHIPPING (HK) CO., LIMITED (note (ii))	Hong Kong 28 November 2024	USD20	100.00	Coastal shipping

Notes:

(i) The statutory financial statements of the entities for the year ended 31 December 2022 prepared under China Accounting Standards were audited by BDO China Shu Lun Pan Certified Public Accountants LLP, certified public accountants registered in the PRC. The statutory financial statements of the entities for the years ended 31 December 2023 and 2024 prepared under China Accounting Standards were audited by Zhongxinghua Certified Public Accountants LLP, certified public accountants registered in the PRC.

(ii) The entities had not commenced business operations in 2024, and they had no audited financial statements.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.1 BASIS OF PREPARATION

The Historical Financial Information has been prepared in accordance with IFRS Accounting Standards (which include all International Financial Reporting Standards, International Accounting Standards ("IASs") and Interpretations) as issued by the International Accounting Standards Board (the "IASB"). All IFRS Accounting Standards effective for the accounting period commencing from 1 January 2025, together with the relevant transitional provisions, have been early adopted by the Target Group in the preparation of the Historical Financial Information throughout the Relevant Periods and in the period covered by the Interim Comparative Financial Information.

The Historical Financial Information has been prepared on the historical cost basis.

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date, regardless of whether that price is directly observable or estimated using another valuation technique. In estimating the fair value of an asset or a liability, the Target Group takes into account the characteristics of the asset or liability if market participants would take those characteristics into account when pricing the asset or liability at the measurement date. Fair value for measurement and/or disclosure purposes in the Historical Financial Information is determined on such a basis, except for share-based payment transactions that are within the scope of IFRS 2 *Share-based Payment*, leasing transactions that are within the scope of IFRS 16 *Leases*, and measurements that have some similarities to fair value but are not fair value, such as net realisable value in IAS 2 *Inventories* or value in use in IAS 36 *Impairment of Assets*.

In addition, for financial reporting purposes, fair value measurements are categorised into Level 1, 2 or 3 based on the degree to which the inputs to the fair value measurements are observable and the significance of the inputs to the fair value measurement in its entirety, which are described as follows:

- Level 1 inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities that the entity can access at the measurement date;

- Level 2 inputs are inputs, other than quoted prices included within Level 1, that are observable for the asset or liability, either directly or indirectly; and

- Level 3 inputs are unobservable inputs for the asset or liability.

For business combination under common control in which subsidiaries directly or indirectly held by the ultimate holding company of the Target Company (the "Common Control Acquiree Entities") are acquired by the Target Group, it is accounted for using the principles of merger accounting. The consolidated statements of profit or loss and other comprehensive income, statements of changes in equity and statements of cash flows of the Target Group for the Relevant Periods and the seven months ended 31 July 2024 include the results and cash flows of the Common Control Acquiree Entities from the beginning of the Relevant Periods or since the date when the Common Control Acquiree Entities first came under the common control of the ultimate holding company, where this is a shorter period. The consolidated statements of financial position of the Target Group as at 31 December 2022, 2023 and 2024 and 31 July 2025 have been prepared to present the assets and liabilities of the Common Control Acquiree Entities using the existing book values from the ultimate holding company's perspective. No adjustments are made to reflect fair values, or recognise any new assets or liabilities as a result of the business combination under common control.

The preparation of the Historical Financial Information in conformity with IFRS Accounting Standards requires management to make judgements, estimates and assumptions that affect the application of policies and reported amounts of assets, liabilities, income and expenses. The estimates and associated assumptions are based on historical experience and various other factors that are believed to be reasonable under the circumstances, the results of which form the basis of making the judgements about carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.1 BASIS OF PREPARATION (continued)

The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised if the revision affects only that period, or in the period of the revision and future periods if the revision affects both current and future periods.

Judgements made by management in the application of IFRS Accounting Standards that have significant effect on the Historical Financial Information and major sources of estimation uncertainty are discussed in note 3 to the Historical Financial Information.

Material accounting policies adopted by the Target Group are disclosed below.

2.2 ISSUED BUT NOT YET EFFECTIVE IFRS ACCOUNTING STANDARDS

The Target Group has not applied the following new and revised IFRS Accounting Standards, that have been issued but are not yet effective, in the Historical Financial Information. The Target Group intends to apply these new and revised IFRS Accounting Standards, if applicable, when they become effective.

IFRS 18	*Presentation and Disclosure in Financial Statements*[2]
IFRS 19	*Subsidiaries without Public Accountability: Disclosures*[2]
Amendments to IFRS 9 and IFRS 7	*Amendments to the Classification and Measurement of Financial Instruments*[1]
Amendments to IFRS 10 and IAS 28	*Sale or Contribution of Assets between an Investor and its Associate or Joint Venture*[3]
Annual Improvements to IFRS Accounting Standards – Volume 11	Amendments to IFRS 1, IFRS 7, IFRS 9, IFRS 10 and IAS 7[1]

1 Effective for annual periods beginning on or after 1 January 2026
2 Effective for annual/reporting periods beginning on or after 1 January 2027
3 No mandatory effective date yet determined but available for adoption

The Target Group is in the process of making an assessment of the impact of these new and amended IFRS Accounting Standards upon initial application. IFRS 18 introduces new requirements for presentation within the statement of profit or loss and other comprehensive income, including specified totals and subtotals. It also requires disclosure of management-defined performance measures and includes new requirements for aggregation and disaggregation of financial information. The new requirements are expected to impact the Target Group's presentation in the statement of profit or loss and other comprehensive income and disclosures of the Target Group's financial performance. The new standard is not expected to have any impact on the Target Group's results of operations and financial position but has impact on the presentation and disclosure of the Historical Financial Information. Other than IFRS 18, so far, the Target Group considers that IFRS 19 and the revised IFRS Accounting Standards are unlikely to have a significant impact on the Target Group's results of operations and financial position.

2.3 MATERIAL ACCOUNTING POLICIES

Basis of consolidation

The Historical Financial Information incorporates the financial statements of the Target Company and its subsidiaries. Control is achieved when the Target Company:

- has power over the investee;
- is exposed, or has rights, to variable returns from its involvement with the investee; and
- has the ability to use its power to affect its returns.

The Target Group reassesses whether or not it controls an investee if facts and circumstances indicate that there are changes to one or more of the three elements of control listed above.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Basis of consolidation (continued)

When the Target Group has less than a majority of the voting rights of an investee, it has power over the investee when the voting rights are sufficient to give it the practical ability to direct the relevant activities of the investee unilaterally. The Target Group considers all relevant facts and circumstances in assessing whether or not the Target Group's voting rights in an investee are sufficient to give it power, including:

- the size of the Target Group's holding of voting rights relative to the size and dispersion of holdings of the other vote holders;
- potential voting rights held by the Target Group, other vote holders or other parties;
- rights arising from other contractual arrangements; and
- any additional facts and circumstances that indicate that the Target Group has, or does not have, the current ability to direct the relevant activities at the time that decisions need to be made, including voting patterns at previous shareholders' meetings.

Consolidation of a subsidiary begins when the Target Group obtains control over the subsidiary and ceases when the Target Group loses control of the subsidiary. Specifically, income and expenses of a subsidiary acquired or disposed of during the year are included in the consolidated statement of profit or loss and other comprehensive income from the date the Target Group gains control until the date when the Target Group ceases to control the subsidiary.

Profit or loss and each item of other comprehensive income are attributed to equity holders of the Target Company and to the non-controlling interests. Total comprehensive income of subsidiaries is attributed to equity holders of the Target Company and to the non-controlling interests even if this results in the non-controlling interests having a deficit balance.

Where necessary, adjustments are made to the Historical Financial Information of subsidiaries to bring their accounting policies into line with the Target Group's accounting policies.

All intragroup assets and liabilities, equity, income, expenses and cash flows relating to transactions between members of the Target Group are eliminated in full on consolidation.

Non-controlling interests in subsidiaries are presented separately from the Target Group's equity therein, which represent present ownership interests entitling their holders to a proportionate share of net assets of the relevant subsidiaries upon liquidation.

Changes in the Target Group's ownership interests in existing subsidiaries

Changes in the Target Group's interests in subsidiaries that do not result in the Target Group losing control over the subsidiaries are accounted for as equity transactions. The carrying amounts of the Target Group's relevant components of equity and the non-controlling interests are adjusted to reflect the changes in their relative interests in the subsidiaries, including re-attribution of relevant reserves between the Target Group and the non-controlling interests according to the Target Group's and the non-controlling interests' proportionate interests.

Any difference between the amount by which the non-controlling interests are adjusted, and the fair value of the consideration paid or received is recognised directly in equity and attributed to owners of the Target Company.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Business combinations

Acquisitions of businesses, other than business combination under common control are accounted for using the acquisition method. The consideration transferred in a business combination is measured at fair value, which is calculated as the sum of the acquisition-date fair values of the assets transferred by the Target Group, liabilities incurred by the Target Group to the former owners of the acquiree and the equity interests issued by the Target Group in exchange for control of the acquiree. Acquisition-related costs are generally recognised in profit or loss as incurred.

At the acquisition date, the identifiable assets acquired and the liabilities assumed are recognised at their fair value, except that deferred tax assets or liabilities, and assets or liabilities related to employee benefit arrangements are recognised and measured in accordance with IAS 12 *Income Taxes* and IAS 19 *Employee Benefits,* respectively.

Goodwill is measured as the excess of the sum of the consideration transferred, the amount of any non-controlling interests in the acquiree, and the fair value of the acquirer's previously held equity interest in the acquiree (if any) over the net of the acquisition-date amounts of the identifiable assets acquired and the liabilities assumed. If, after re-assessment, the net of the acquisition-date amounts of the identifiable assets acquired and liabilities assumed exceeds the sum of the consideration transferred, the amount of any non-controlling interests in the acquiree and the fair value of the acquirer's previously held interest in the acquiree (if any), the excess is recognised immediately in profit or loss as a bargain purchase gain.

Non-controlling interests that are present ownership interests and entitle their holders to a proportionate share of the entity's net assets in the event of liquidation are initially measured at the non-controlling interests' proportionate share of the recognised amounts of the acquiree's identifiable net assets.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Investments in associates

An associate is an entity over which the Target Group has significant influence. Significant influence is the power to participate in the financial and operating policy decisions of the investee but is not control or joint control over those policies.

The results and assets and liabilities of associates are incorporated in the Historical Financial Information using the equity method of accounting. The Historical Financial Information of associates used for equity accounting purposes are prepared using uniform accounting policies as those of the Target Group for like transactions and events in similar circumstances. Under the equity method, an investment in an associate is initially recognised in the consolidated statement of financial position at cost and adjusted thereafter to recognise the Target Group's share of the profit or loss and other comprehensive income of the associate. When the Target Group's share of losses of an associate exceeds the Target Group's interest in that associate (which includes any long-term interests that, in substance, form part of the Target Group's net investment in the associate, after applying the expected credit losses (the "ECL") model to such other long-term interests where applicable), the Target Group discontinues recognising its share of further losses. Additional losses are recognised only to the extent that the Target Group has incurred legal or constructive obligations or made payments on behalf of that associate.

On acquisition of the investment in an associate, any excess of the cost of acquisition over the Target Group's share of the net fair value of the identifiable assets, liabilities of the investee is recognised as goodwill, which is included within the carrying amount of the investment. Any excess of the Target Group's share of the net fair value of the identifiable assets and liabilities over the cost of investment, after reassessment, is recognised immediately in profit or loss in the period in which the investment is acquired.

The Target Group assesses whether there is an objective evidence that the interest in an associate may be impaired. When any objective evidence exists, the entire carrying amount of the investment (including goodwill) is tested for impairment in accordance with IAS 36 as a single asset by comparing its recoverable amount (higher of value in use and fair value less costs of disposal) with its carrying amount. Any impairment loss is recognised when the recoverable amount is less than the carrying value of the investment in associates. Any reversal of that impairment loss is recognised in accordance with IAS 36 to the extent that the recoverable amount of the investment subsequently increases.

When the Target Group reduces its ownership interest in an associate but the Target Group continues to use the equity method, the Target Group reclassifies to profit or loss the proportion of the gain or loss that had previously been recognised in other comprehensive income relating to that reduction in ownership interest if that gain or loss would be reclassified to profit or loss on the disposal of the related assets or liabilities.

When a group entity transacts with an associate of the Target Group, profits and losses resulting from the transactions with the associate are recognised in the Historical Financial Information only to the extent of interests in the associate that are not related to the Target Group.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Revenue from contracts with customers

Under IFRS 15, the Target Group recognises revenue when (or as) a performance obligation is satisfied, i.e. when "control" of the goods or services underlying the particular performance obligation is transferred to the customer.

A performance obligation represents a good or service (or a bundle of goods or services) that is distinct or a series of distinct goods or services that are substantially the same.

Control is transferred over time and revenue is recognised over time by reference to the progress towards complete satisfaction of the relevant performance obligation if one of the following criteria is met:

- the customer simultaneously receives and consumes the benefits provided by the Target Group's performance as the Target Group performs;

- the Target Group's performance creates and enhances an asset that the customer controls as the Target Group performs; or

- the Target Group's performance does not create an asset with an alternative use to the Target Group and the Target Group has an enforceable right to payment for performance completed to date.

Otherwise, revenue is recognised at a point in time when the customer obtains control of the distinct good or service.

A contract asset represents the Target Group's right to consideration in exchange for goods or services that the Target Group has transferred to a customer that is not yet unconditional. It is assessed for impairment in accordance with IFRS 9. In contrast, a receivable represents the Target Group's unconditional right to consideration, i.e. only the passage of time is required before payment of that consideration is due.

A contract liability represents the Target Group's obligation to transfer goods or services to a customer for which the Target Group has received consideration (or an amount of consideration is due) from the customer.

Foreign currencies

In preparing the Historical Financial Information of each individual group entity, transactions in currencies other than entity's functional currencies (foreign currencies) are recognised at the rates of exchange prevailing on the dates of the transactions. At the end of the reporting period, monetary items denominated in foreign currencies are retranslated at the rates prevailing at that date. Non-monetary items that are measured in terms of historical cost in a foreign currency are not retranslated. Exchange differences on monetary items are recognised in profit or loss in the period in which they arise.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Borrowing costs

Borrowing costs directly attributable to the acquisition, construction or production of qualifying assets, which are assets that necessarily take a substantial period of time to get ready for their intended use or sale, are added to as part of the cost of those assets, until such time as the assets are substantially ready for their intended use or sale. All other borrowing costs are expensed in the period in which they are incurred.

Government grants

Government grants are not recognised until there is reasonable assurance that the Target Group will comply with the conditions attaching to them and that the grants will be received.

Government grants are recognised in profit or loss on a systematic basis over the periods in which the Target Group recognises as expenses the related costs for which the grants are intended to compensate. Specifically, government grants whose primary condition is that the Target Group should purchase, construct or otherwise acquire non-current assets are recognised as deferred income in the consolidated statement of financial position and transferred to profit or loss on a systematic and rational basis over the useful lives of the related assets.

Government grants that are receivable as compensation for expenses or losses already incurred or for the purpose of giving immediate financial support to the Target Group with no future related costs are recognised in profit or loss in the period in which they become receivable.

Retirement benefit costs

Payments to state-managed retirement benefit schemes and a supplemental defined contribution pension plan approved by the government are recognised as an expense when employees have rendered service entitling them to the contributions.

The contributions made by the Target Group to such insurance plans on behalf of employees are fully attributed to the employees at the time of payment, therefore the Target Group has no abandoned contributions that can be utilised.

Taxation

Income tax expense represents the sum of the tax currently payable and deferred tax.

The tax currently payable is based on taxable profit for the reporting period. Taxable profit differs from "profit before income tax" as reported in the consolidated statement of profit or loss and other comprehensive income because of income or expense that are taxable or deductible in other years and items that are never taxable or deductible. The Target Group's liability for current tax is calculated using tax rates that have been enacted or substantively enacted by the end of the reporting period.

Deferred tax is recognised on temporary differences between the carrying amounts of assets and liabilities in the Historical Financial Information and the corresponding tax bases used in the computation of taxable profit. Deferred tax liabilities are generally recognised for all taxable temporary differences. Deferred tax assets are generally recognised for all deductible temporary differences to the extent that it is probable that taxable profits will be available against which those deductible temporary differences can be utilised.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Taxation (continued)

Deferred tax is not recognised for:

- temporary differences on the initial recognition of assets or liabilities in a transaction that is not a business combination and that affects neither accounting nor taxable profit or loss and does not give rise to equal taxable and deductible temporary differences;

- temporary differences related to investment in subsidiaries, associates and joint venture to the extent that the Target Group is able to control the timing of the reversal of the temporary differences and it is probable that they will not reverse in the foreseeable future;

- taxable temporary differences arising on the initial recognition of goodwill; and

- those related to the income taxes arising from tax laws enacted or substantively enacted to implement the Pillar Two model rules published by the Organisation for Economic Co-operation and Development ("OECD").

The Target Group recognised deferred tax assets and deferred tax liabilities separately in relation to its lease liabilities and right-of-use assets.

Deferred tax liabilities are recognised for taxable temporary differences associated with investments in subsidiaries and associates, except where the Target Group is able to control the reversal of the temporary difference and it is probable that the temporary difference will not reverse in the foreseeable future. Deferred tax assets arising from deductible temporary differences associated with such investments and interests are only recognised to the extent that it is probable that there will be sufficient taxable profits against which to utilise the benefits of the temporary differences and they are expected to reverse in the foreseeable future.

The carrying amount of deferred tax assets is reviewed at the end of each reporting period and reduced to the extent that it is no longer probable that sufficient taxable profits will be available to allow all or part of the asset to be recovered. Unrecognised deferred tax assets are reassessed at the end of each reporting year and are recognised to the extent that it has become probable that future taxable profit will be available to allow all or part of the deferred tax asset to be recovered.

Deferred tax assets and liabilities are measured at the tax rates that are expected to apply in the period in which the liability is settled or the asset is realised, based on tax rate (and tax laws) that have been enacted or substantively enacted by the end of the reporting period.

The measurement of deferred tax liabilities and assets reflects the tax consequences that would follow from the manner in which the Target Group expects, at the end of the reporting period, to recover or settle the carrying amount of its assets and liabilities.

Deferred tax assets and liabilities are offset when there is a legally enforceable right to set off current tax assets against current tax liabilities and when they relate to income taxes levied by the same taxation authority and the Target Group intends to settle its current tax assets and liabilities on a net basis.

Current and deferred tax are recognised in profit or loss, except when they relate to items that are recognised in other comprehensive income or directly in equity, in which case, the current and deferred tax are also recognised in other comprehensive income or directly in equity respectively. Where current tax or deferred tax arises from the initial accounting for a business combination, the tax effect is included in the accounting for the business combination.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Property, plant and equipment

Property, plant and equipment, which consists buildings, vessels and other items of plant and equipment, held for use in the production or supply of goods or services, or for administrative purposes, are stated in the consolidated statement of financial position at cost less subsequent accumulated depreciation and subsequent accumulated impairment losses, if any.

Depreciation is recognised so as to write-off the cost of items of property, plant and equipment (other than freehold land and construction in progress, which are subject to impairment assessment) less their residual values over their estimated useful lives. The estimated useful lives, residual values and depreciation method are reviewed at the end of each reporting period, with the effect of any changes in estimate accounted for on a prospective basis.

Property, plant and equipment are depreciated on a straight-line basis at the following rates per annum:

Categories	Term for deprecation (year)
Buildings	35 years
Vessels	5 – 25 years
Furniture, motor vehicles and other equipment	5 – 10 years

The Directors reviewed the estimated useful lives of the assets annually based on the Target Group's historical experience with similar assets and taking into account anticipated technological changes.

Construction in progress intended to be used for production, supply or administrative purposes are carried at cost, less any recognised impairment loss. Costs include professional fees and, for qualifying assets, borrowing costs capitalised in accordance with the Target Group's accounting policy. Such properties are classified to the appropriate categories of property, plant and equipment when completed and ready for intended use. Depreciation of these assets, on the same basis as other property, plant and equipment, commences when the assets are ready for their intended use.

Items may be produced while bringing an item of property, plant and equipment to the location and condition necessary for it to be capable of operating in the manner intended by management. The proceeds from selling any such items and the related cost are recognised in profit or loss.

An item of property, plant and equipment is derecognised upon disposal or when no future economic benefits are expected to arise from the continued use of the asset. Any gain or loss arising on the disposal or retirement of an item of property, plant and equipment is determined as the difference between the sales proceeds and the carrying amount of the asset and is recognised in profit or loss.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Intangible assets

Intangible assets acquired separately

Intangible assets with finite useful lives that are acquired separately are carried at costs less accumulated amortisation and any accumulated impairment losses. Amortisation for intangible assets with finite useful lives is recognised on a straight-line basis over their estimated useful lives. The estimated useful life and amortisation method are reviewed at the end of each reporting period, with the effect of any changes in estimate being accounted for on a prospective basis.

Internally-generated intangible assets – research and development expenditure

Expenditure on research activities is recognised as an expense in the period in which it is incurred.

An internally-generated intangible asset arising from development activities (or from the development phase of an internal project) is recognised if, and only if, all of the following have been demonstrated:

- the technical feasibility of completing the intangible asset so that it will be available for use or sale;
- the intention to complete the intangible asset and use or sell it;
- the ability to use or sell the intangible asset;
- how the intangible asset will generate probable future economic benefits;
- the availability of adequate technical, financial and other resources to complete the development and to use or sell the intangible asset; and the ability to measure reliably the expenditure attributable to the intangible asset during its development.

The amount initially recognised for internally-generated intangible asset is the sum of the expenditure incurred from the date when the intangible asset first meets the recognition criteria listed above. Where no internally-generated intangible asset can be recognised, development expenditure is recognised in profit or loss in the period in which it is incurred.

Subsequent to initial recognition, internally-generated intangible asset is measured at cost less accumulated amortisation and accumulated impairment losses (if any), on the same basis as intangible assets acquired separately.

Intangible assets acquired in a business combination not under common control

Intangible assets acquired in a business combination are recognised separately from goodwill and are initially recognised at their fair value at the acquisition date (which is regarded as their cost).

Subsequent to initial recognition, intangible assets acquired in a business combination with finite useful lives are reported at cost less accumulated amortisation and any accumulated impairment losses, on the same basis as intangible assets that are acquired separately.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Intangible assets (continued)

Derecognition of intangible assets

An intangible asset is derecognised on disposal, or when no future economic benefits are expected from use or disposal. Gains and losses arising from derecognition of an intangible asset are measured as the difference between the net disposal proceeds and the carrying amount of the asset and are recognised in profit or loss in the period when the asset is derecognised.

Impairment of tangible and intangible assets other than goodwill

At the end of the reporting period, the Target Group reviews the carrying amounts of its tangible and intangible assets with finite useful lives to determine whether there is any indication that these assets have suffered an impairment loss. If any such indication exists, the recoverable amount of the relevant asset is estimated in order to determine the extent of the impairment loss (if any).

The recoverable amount of tangible and intangible assets are estimated individually, when it is not possible to estimate the recoverable amount individually, the Target Group estimates the recoverable amount of the cash-generating unit to which the asset belongs. When a reasonable and consistent basis of allocation can be identified, corporate assets are also allocated to individual cash-generating units, or otherwise they are allocated to the smallest group of cash-generating units for which a reasonable and consistent allocation basis can be identified.

Recoverable amount is the higher of fair value less costs of disposal and value in use. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset (or a cash-generating unit) for which the estimates of future cash flows have not been adjusted.

If the recoverable amount of an asset (or a cash-generating unit) is estimated to be less than its carrying amount, the carrying amount of the asset (or a cash-generating unit) is reduced to its recoverable amount. In allocating the impairment loss, the impairment loss is allocated first to reduce the carrying amount of any goodwill (if applicable) and then to the other assets on a basis based on the carrying amount of each asset in the unit. The carrying amount of an asset is not reduced below the highest of its fair value less costs of disposal (if measurable), its value in use (if determinable) and zero. The amount of the impairment loss that would otherwise have been allocated to the asset is allocated pro rata to the other assets of the unit. An impairment loss is recognised immediately in profit or loss.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Leased assets

At inception of a contract, the Target Group assesses whether the contract is, or contains, a lease. A contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration. Control is conveyed where the customer has both the right to direct the use of the identified asset and to obtain substantially all of the economic benefits from that use.

(i) As a lessee

Where the contract contains lease component(s) and non-lease component(s), the Target Group has elected not to separate non-lease components and accounts for each lease component and any associated non-lease components as a single lease component for all leases.

At the lease commencement date, the Target Group recognises a right-of-use asset and a lease liability, except for short-term leases that have a lease term of 12 months or less and leases of low-value assets. When the Target Group enters into a lease in respect of a low-value asset, the Target Group decides whether to capitalise the lease on a lease-by-lease basis. The lease payments associated with those leases which are not capitalised are recognised as an expense on a systematic basis over the lease term.

Where the lease is capitalised, the lease liability is initially recognised at the present value of the lease payments payable over the lease term, discounted using the interest rate implicit in the lease or, if that rate cannot be readily determined, using a relevant incremental borrowing rate. After initial recognition, the lease liability is measured at amortised cost and interest expense is calculated using the effective interest method. Variable lease payments that do not depend on an index or rate are not included in the measurement of the lease liability and hence are charged to profit or loss in the accounting period in which they are incurred.

The right-of-use asset recognised when a lease is capitalised is initially measured at cost, which comprises the initial amount of the lease liability plus any lease payments made at or before the commencement date, and any initial direct costs incurred. Where applicable, the cost of the right-of-use assets also includes an estimate of costs to dismantle and remove the underlying asset or to restore the underlying asset or the site on which it is located, discounted to their present value, less any lease incentives received. The right-of-use asset is subsequently stated at cost less accumulated depreciation and impairment losses.

The lease liability is remeasured when there is a change in future lease payments arising from a change in an index or rate, or there is a change in the Target Group's estimate of the amount expected to be payable under a residual value guarantee, or there is a change arising from the reassessment of whether the Target Group will be reasonably certain to exercise a purchase, extension or termination option. When the lease liability is remeasured in this way, a corresponding adjustment is made to the carrying amount of the right-of-use asset, or is recorded in profit or loss if the carrying amount of the right-of-use asset has been reduced to zero.

The lease liability is also remeasured when there is a change in the scope of a lease or the consideration for a lease that is not originally provided for in the lease contract ("lease modification") that is not accounted for as a separate lease. In this case the lease liability is remeasured based on the revised lease payments and lease term using a revised discount rate at the effective date of the modification.

In the consolidated statement of financial position, the current portion of long-term lease liabilities is determined as the present value of contractual payments that are due to be settled within twelve months after the reporting period.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Inventories

Inventories are stated at the lower of cost and net realisable value. Costs of inventories are calculated using the weighted average method. Net realisable value represents the estimated selling price for inventories less all estimated costs of completion and costs necessary to make the sale.

Provisions

Provisions are recognised when the Target Group has a present obligation (legal or constructive) as a result of a past event, it is probable that the Target Group will be required to settle that obligation, and a reliable estimate can be made of the amount of the obligation.

Provisions are measured at the best estimate of the consideration required to settle the present obligation at the end of the reporting period, taking into account the risks and uncertainties surrounding the obligation. When a provision is measured using the cash flows estimated to settle the present obligation, its carrying amount is the present value of those cash flows (where the effect of the time value of money is material).

When some or all of the economic benefits required to settle a provision are expected to be recovered from a third party, a receivable is recognised as an asset if it is virtually certain that reimbursement will be received and the amount of the receivable can be measured reliably.

Financial instruments

Financial assets and financial liabilities are recognised when a group entity becomes a party to the contractual provisions of the instrument. All regular way purchases or sales of financial assets are recognised and derecognised on a trade date basis. Regular way purchases or sales are purchases or sales of financial assets that require delivery of assets within the time frame established by regulation or convention in the market place.

Financial assets and financial liabilities are initially measured at fair value except for accounts receivable arising from contracts with customers. Transaction costs that are directly attributable to the acquisition or issue of financial assets and financial liabilities (other than financial assets or financial liabilities measured at fair value through profit and loss (the "FVTPL")) are added to or deducted from the fair value of the financial assets or financial liabilities, as appropriate, on initial recognition. Transaction costs directly attributable to the acquisition of financial assets or financial liabilities FVTPL are recognised immediately in profit or loss.

Effective interest method

The effective interest method is a method of calculating the amortised cost of a financial asset or financial liability and of allocating interest income and interest expense over the relevant period. The effective interest rate is the rate that exactly discounts estimated future cash receipts and payments (including all fees and points paid or received that form an integral part of the effective interest rate, transaction costs and other premiums or discounts) through the expected life of the financial asset or financial liability, or, where appropriate, a shorter period, to the net carrying amount on initial recognition.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Financial instruments (continued)

Financial assets

Classification and subsequent measurement of financial assets

Financial assets that meet the following conditions are subsequently measured at amortised cost:

- the financial asset is held within a business model whose objective is to collect contractual cash flows; and
- the contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

Amortised cost and interest income

Interest income is recognised using the effective interest method for financial assets measured subsequently at amortised cost. Interest income is calculated by applying the effective interest rate to the gross carrying amount of a financial asset, except for financial assets that have subsequently become credit-impaired (see below). For financial assets that have subsequently become credit-impaired, interest income is recognised by applying the effective interest rate to the amortised cost of the financial asset from the next reporting period. If the credit risk on the credit-impaired financial instrument improves so that the financial asset is no longer credit-impaired, interest income is recognised by applying the effective interest rate to the gross carrying amount of the financial asset from the beginning of the reporting period following the determination that the asset is no longer credit impaired.

Impairment of financial assets

The Target Group recognises a loss allowance for expected credit loss ("ECL") on financial assets which are subject to impairment under IFRS 9 (including accounts receivable and other receivables). The amount of ECL is updated at each reporting date to reflect changes in credit risk since initial recognition.

Lifetime ECL represents the ECL that will result from all possible default events over the expected life of the relevant instrument. In contrast, 12-month ECL represents the portion of lifetime ECL that is expected to result from default events that are possible within 12 months after the reporting date. Assessments are done based on the Target Group's historical credit loss experience, adjusted for factors that are specific to the debtors, general economic conditions and an assessment of both the current conditions at the reporting date as well as the forecast of future conditions.

The Target Group always recognises lifetime ECL for accounts receivable. The ECL on these assets are assessed individually for credit-impaired debtors or using a provision matrix with appropriate groupings.

For all other instruments, the Target Group measures the loss allowance equal to 12-month ECL, unless when there has been a significant increase in credit risk since initial recognition, the Target Group recognises lifetime ECL. The assessment of whether lifetime ECL should be recognised is based on significant increases in the likelihood or risk of a default occurring since initial recognition.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Financial instruments (continued)

Impairment of financial assets (continued)

(i) Significant increase in credit risk

In assessing whether the credit risk has increased significantly since initial recognition, the Target Group compares the risk of a default occurring on the financial instrument as at the reporting date with the risk of a default occurring on the financial instrument as at the date of initial recognition. In making this assessment, the Target Group considers both quantitative and qualitative information that is reasonable and supportable, including historical experience and forward-looking information that is available without undue cost or effort.

In particular, the following information is taken into account when assessing whether credit risk has increased significantly:

- an actual or expected significant deterioration in the financial instrument's external credit rating (if available);
- significant deterioration in external market indicators of credit risk, e.g. a significant increase in the credit spread, the credit default swap prices for the debtor;
- existing or forecast adverse changes in business, financial or economic conditions that are expected to cause a significant decrease in the debtor's ability to meet its debt obligations;
- an actual or expected significant deterioration in the operating results of the debtor;
- an actual or expected significant adverse change in the regulatory, economic, or technological environment of the debtor that results in a significant decrease in the debtor's ability to meet its debt obligations.

Irrespective of the outcome of the above assessment, the Target Group presumes that the credit risk has increased significantly since initial recognition when contractual payments are more than 30 days past due, unless the Target Group has reasonable and supportable information that demonstrates otherwise.

Despite the foregoing, the Target Group assumes that the credit risk on a debt instrument has not increased significantly since initial recognition if the debt instrument is determined to have low credit risk at the reporting date. A debt instrument is determined to have low credit risk if i) it has a low risk of default, ii) the borrower has a strong capacity to meet its contractual cash flow obligations in the near term and iii) adverse changes in economic and business conditions in the longer term may, but will not necessarily, reduce the ability of the borrower to fulfil its contractual cash flow obligations.

The Target Group regularly monitors the effectiveness of the criteria used to identify whether there has been a significant increase in credit risk and revises them as appropriate to ensure that the criteria are capable of identifying significant increase in credit risk before the amount becomes past due.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Financial instruments (continued)

Impairment of financial assets (continued)

(ii) Definition of default

For internal credit risk management, the Target Group considers an event of default occurs when information developed internally or obtained from external sources indicates that the debtor is unlikely to pay its creditors, including the Target Group, in full (without taking into account any collaterals held by the Target Group). The Target Group considers both quantitative and qualitative information that is reasonable and supportable, including historical experience and forward-looking information that is available without undue cost or effort.

(iii) Credit-impaired financial assets

A financial asset is credit-impaired when one or more events of default that have a detrimental impact on the estimated future cash flows of that financial asset have occurred. Evidence that a financial asset is credit-impaired includes observable data about the following events:

(a) significant financial difficulty of the issuer or the borrower;

(b) a breach of contract, such as a default or past due event;

(c) the lenders of the borrower, for economic or contractual reasons relating to the borrower's financial difficulty, having granted to the borrower a concessions that the lenders would not otherwise consider;

(d) it is becoming probable that the borrower will enter bankruptcy or other financial re-organisation; or

(e) the disappearance of an active market for that financial asset because of financial difficulties.

(iv) Write-off policy

The Target Group writes off a financial asset when there is information indicating that the counterparty is in severe financial difficulty and there is no realistic prospect of recovery. Financial assets written off may still be subject to enforcement activities under the Target Group's recovery procedures, taking into account legal advice where appropriate. A write-off constitutes a derecognition event. Any subsequent recoveries are recognised in profit or loss.

(v) Measurement and recognition of ECL

The measurement of ECL is a function of the probability of default, loss given default (i.e. the magnitude of the loss if there is a default) and the exposure at default. The assessment of the probability of default and loss given default is based on historical data adjusted by forward-looking information. Estimation of ECL reflects an unbiased and probability-weighted amount that is determined with the respective risks of default occurring as the weights.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Financial instruments (continued)

Impairment of financial assets (continued)

(v) Measurement and recognition of ECL (continued)

Generally, the ECL is the difference between all contractual cash flows that are due to the Target Group in accordance with the contract and the cash flows that the Target Group expects to receive, discounted at the effective interest rate determined at initial recognition.

Where ECL is measured on a collective basis or cater for cases where evidence at the individual instrument level may not yet be available, the financial instruments are grouped on the following basis:

– Nature of financial instruments (i.e. the Target Group's accounts and bills receivables and other receivables are each assessed as a separate group.);

– Past-due status; and

– External credit ratings where available.

The grouping is regularly reviewed by management to ensure the constituents of each group continue to share similar credit risk characteristics.

Interest income is calculated based on the gross carrying amount of the financial asset unless the financial asset is credit impaired, in which case interest income is calculated based on amortised cost of the financial asset.

ECLs are remeasured at each reporting date to reflect changes in the financial instrument's credit risk since initial recognisation. Any change in the ECL amount is recognised as an impairment gain or loss in profit or loss. The Target Group recognises an impairment gain or loss for all financial instruments with a corresponding adjustment to their carrying amount through a loss allowance account.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Financial instruments (continued)

Derecognition of financial assets

The Target Group derecognises a financial asset only when the contractual rights to the cash flows from the asset expire, or when it transfers the financial asset and substantially all the risks and rewards of ownership of the asset to another entity. If the Target Group retains substantially all the risks and rewards of ownership of a transferred financial asset, the Target Group continues to recognise the financial asset and also recognises a collateralised borrowing for the proceeds received.

On derecognition of a financial asset measured at amortised cost, the difference between the asset's carrying amount and the sum of the consideration received and receivable is recognised in profit or loss.

Financial liabilities and equity

Classification as debt or equity

Debt and equity instruments are classified as either financial liabilities or as equity in accordance with the substance of the contractual arrangements and the definitions of a financial liability and an equity instrument.

Equity instruments

An equity instrument is any contract that evidences a residual interest in the assets of an entity after deducting all of its liabilities. Equity instruments issued by the Target Company are recognised at the proceeds received, net of direct issue costs.

Financial liabilities

All financial liabilities are subsequently measured at amortised cost using the effective interest method.

Financial liabilities at amortised cost

Financial liabilities including borrowings, accounts payables, other payables and long-term liabilities are subsequently measured at amortised cost, using the effective interest method.

Derecognition of financial liabilities

The Target Group derecognises financial liabilities when, and only when, the Target Group's obligations are discharged, cancelled or have expired. The difference between the carrying amount of the financial liability derecognised and the consideration paid and payable is recognised in profit or loss.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Related parties

(a) A person, or a close member of that person's family, is related to the Target Group if that person:

(i) has control or joint control over the Target Group;

(ii) has significant influence over the Target Group; or

(iii) is a member of the key management personnel of the Target Group or the Target Group's parent.

(b) An entity is related to the Target Group if any of the following conditions applies:

(i) The entity and the Target Group are members of the same group.

(ii) One entity is an associate or joint venture of the other entity (or an associate or joint venture of a member of a group of which the other entity is a member).

(iii) Both entities are joint ventures of the same third party.

(iv) One entity is a joint venture of a third entity and the other entity is an associate of the third entity.

(v) The entity is a post-employment benefit plan for the benefit of employees of either the Target Group or an entity related to the Target Group.

(vi) The entity is controlled or jointly controlled by a person identified in (a).

(vii) A person identified in (a)(i) has significant influence over the entity or is a member of the key management personnel of the entity (or of a parent of the entity).

(viii) The entity, or any member of a group of which it is a part, provides key management personnel services to the Target Group or to the Target Group's parent.

Close members of the family of a person are those family members who may be expected to influence, or be influenced by, that person in their dealings with the entity.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

3. CRITICAL ACCOUNTING JUDGEMENTS AND KEY SOURCES OF ESTIMATION UNCERTAINTY

In the application of the Target Group's accounting policies, which are described in note 2.3 to the Historical Financial Information, the Directors are required to make judgements, estimates and assumptions about the carrying amounts of assets and liabilities that are not readily apparent from other sources. The estimates and associated assumptions are based on historical experience and other factors that are considered to be relevant. Actual results may differ from these estimates.

The estimates and underlying assumptions are reviewed on an on-going basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised if the revision affects only that period or in the period of the revision and future periods if the revision affects both current and future periods.

Key sources of estimation uncertainty

The following are the key assumptions concerning the future, and other key sources of estimation uncertainty at the end of the reporting period that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year.

Impairment losses

In considering the impairment losses that may be required for certain of the Target Group's assets which mainly include property, plant and equipment, construction in progress, intangible assets, right-of-use assets, interests in an associate and other non-current assets, the recoverable amount of the asset needs to be determined. The recoverable amount is the higher of its fair value less cost of disposal and value in use. It is difficult to precisely estimate fair value because quoted market prices for these assets may not be readily available. In determining the value in use, the Target Group uses all readily available information in determining expected cash flows generated by the cash-generating unit to which the asset belongs, and they are discounted to their present value, which requires significant judgement relating to cash flow items such as level of sale volume, selling price, amount of operating costs and future returns.

In considering the impairment losses that may be required for current receivables and other financial assets, future cash flows need to be determined. One of the key assumptions that has to be applied is about the ability of the debtors to settle the receivables.

Notwithstanding that the Target Group has used all available information to make this estimation, inherent uncertainty exists and actual write-offs may be higher or lower than the amount estimated.

Deferred tax assets

The Target Group recognises the deferred income tax assets to the extent that it is probable that future taxable profit and taxable temporary differences will be available against which the deductible temporary differences and tax losses carried forward can be utilised, using tax rates that are expected to be applied in the period when the asset is recovered. Recognition of deferred income tax assets was complex because it requires significant estimation and judgement, and it involves significant assumptions, including future taxable profits, future tax rates, the reversal of deductible and taxable temporary differences, and the possible utilisation of tax losses carried forward that could be significantly affected by changes in the tax law framework and future market or economic conditions. Further details on deferred taxes are disclosed in note 25 to the Historical Financial Information.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

4. REVENUE FROM GOODS AND SERVICES

Disaggregation of revenue of business lines is as follows:

	Year ended 31 December 2022 RMB million	Year ended 31 December 2023 RMB million	Year ended 31 December 2024 RMB million	Seven months ended 31 July 2024 RMB million (unaudited)	Seven months ended 31 July 2025 RMB million
Revenue from goods and services					
– Transportation and other services	3,076	2,465	4,156	2,255	2,858
Others	-*	1	4	2	-*
	3,076	2,466	4,160	2,257	2,858

* Amount less than RMB500,000

The Target Group's revenues from contracts with customers are RMB3,076 million, RMB2,465 million, RMB4,156 million, RMB2,255 million and RMB2,858 million for the years ended 31 December 2022, 2023 and 2024 and the seven months ended 31 July 2024 and 2025, respectively.

The Target Group provides shipment transportation service to customers. This service are recognised as a performance obligation satisfied over time as the Target Group rendering the services. Revenue is recognised for these services based on the stage of completion of the performance obligation using output method.

All performance obligations of sales of shipment transportation service is part of contracts with an original expected duration of one year or less, and as permitted under IFRS 15, the transaction price allocated to these unsatisfied contracts is not disclosed.

5. SEGMENT AND OTHER INFORMATION

For management purposes, the Target Group only has one reportable operating segment. Management monitors the operating results of the Target Group's operating segment as a whole for the purpose of making decisions about resource allocation and performance assessment.

The revenue information of continuing operations above is based on the locations of the customers.

Geographical information

	Year ended 31 December 2022 RMB million	Year ended 31 December 2023 RMB million	Year ended 31 December 2024 RMB million	Seven months ended 31 July 2024 RMB million (unaudited)	Seven months ended 31 July 2025 RMB million
Mainland China	3,076	2,466	4,160	2,257	2,849
Hong Kong	-	-	-	-	9
Total revenue	3,076	2,466	4,160	2,257	2,858

All of the Target Group's non-current and non-financial assets (excluding deferred tax assets) were located at Mainland China as at the end of each of the Relevant Periods.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

5. SEGMENT AND OTHER INFORMATION (continued)

Revenue derived from a single customer which accounted for 10% or more of the Target Group's total revenue is as follows:

	Year ended 31 December 2022 RMB million	Year ended 31 December 2023 RMB million	Year ended 31 December 2024 RMB million	Seven months ended 31 July 2024 RMB million (unaudited)	Seven months ended 31 July 2025 RMB million
Customer A	2,968	2,417	3,812	1,999	2,574

6. COST OF SALES

	Year ended 31 December 2022 RMB million	Year ended 31 December 2023 RMB million	Year ended 31 December 2024 RMB million	Seven months ended 31 July 2024 RMB million (unaudited)	Seven months ended 31 July 2025 RMB million
Materials and fuel	397	357	339	195	231

	4	-*	8	-*	(3)

* Amount less than RMB500,000

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

10. PROFIT/(LOSS) FOR THE YEAR/PERIOD (continued)

	Year ended 31 December 2022 RMB million	Year ended 31 December 2023 RMB million	Year ended 31 December 2024 RMB million	Seven months ended 31 July 2024 RMB million (unaudited)	Seven months ended 31 July 2025 RMB million
Other gains and losses, represent					
– losses/(gains) on disposal of property, plant and equipment, intangible assets and non-current assets	-*	15	12	(12)	-*
– impairment losses on property, plant and equipment (note 14) (note)	-	4	78	26	49
	-*	19	90	14	49
Operating lease charges relating to short-term leases, leases of low-value assets and variable lease payments	1	3	1	1	1
Auditors' remuneration					
– audit service	-*	-*	-*	-*	-*

* Amount less than RMB500,000

Note:

The Target Group has recorded impairment losses for certain long-term assets.

The recoverable amount is the higher of the fair value of the cash generating units ("CGU") less costs to sell and value in use ("VIU") of the CGUs.

Recoverable amount by calculating fair value less costs to sell:

As at 31 December 2022, 2023 and 2024 and the seven months ended 31 July 2025, the Group had determined the recoverable amount by using fair value less cost of disposal. Certain assets had been valued via market method. The fair value was categorised into Level 3 measurement.

Recoverable amount by calculating present value of estimated future cash flow:

The Group had treated companies with impairment indicators as individual cash-generating units and had made relevant impairment assessment by calculating the present value of estimated future cash flow of each cash generating unit.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

11. DIRECTOR'S AND SUPERVISOR'S EMOLUMENTS

	152	82	225	447

As at the end of each of the Relevant Periods, all accounts and bills receivables are from contracts with customers.

Bills receivable were mainly issued by the PRC banks and other financial institutions, were expiring within one year. As at the end of each of the Relevant Periods, the Target Group has no had pledged to secure bills payable.

As at the end of each of the Relevant Periods, the ageing analysis of accounts receivables, based on the invoice date and net of loss allowance, is less than one year.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

21. ACCOUNTS AND BILLS RECEIVABLES (continued)

The Target Group (continued)

As at 31 December 2022, 2023 and 2024 and 31 July 2025, the Target Group measured the impairment provision for accounts receivable at an amount equivalent to lifetime expected credit losses and calculated its expected credit losses based on the comparison table of overdue days and expected credit loss rate. In addition to the accounts receivable for which the provision for expected credit losses is made on a collective basis, the Target Group has individually assessed the accounts receivable for which credit losses have occurred with gross carrying amounts of RMB271 million, RMB271 million and RMB272 million, respectively.

The Target Group substantially ceased coal trading business in the year 2017. Due to disputes between the Target Group and certain customers who refused to comply with its duty, the Target Group filed the lawsuits against these customers in prior years which were either supported by the courts or still undergoing the legal process. As these counterparties were not willing and also unable to fulfil its duty, the Target Group assessed the expected loss rate individually for each customer, and made a full provision on balances due in prior years.

Details of credit risks of accounts and bills receivables as at 31 December 2022, 2023 and 2024 and 31 July 2025 are set out in note 33.2 to the Historical Financial Information.

The Target Company

	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Accounts receivable			
– China Energy Group and fellow subsidiaries	-*	108	285

* Amount less than RMB500,000

As at 31 December 2023, 2024 and 31 July 2025, all accounts receivables are from contracts with customers.

As at 31 December 2023, 2024 and 31 July 2025, the ageing analysis of accounts receivables, based on the invoice date and net of loss allowance, is less than one year and not past due.

22. CONTRACT ASSETS

The Target Group

	31 December 2022 RMB million	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Contract assets arising from:				
Transportation services	56	75	144	141
Impairment	-	-	-	-
Net carrying amount	56	75	144	141

As at 31 December 2022, 2023 and 2024 and 31 July 2025, the carrying amount of contract assets was mainly due from related parties within China Energy Group, and there was no significant credit risk. The Target Group did not make provision for impairment.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

22. CONTRACT ASSETS (continued)

The Target Group (continued)

The expected timing of recovery or settlement for contract assets as at the end of each of the Relevant Periods:

	31 December 2022 RMB million	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Within one year	56	75	144	141

The Target Company

	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Contract assets arising from:			
Transportation services	-	76	71
Impairment	-	-	-
Net carrying amount	-	76	71

As at 31 December 2022, 2023 and 2024 and 31 July 2025, the carrying amount of contract assets was mainly due from related parties within China Energy Group, and there was no significant credit risk. The Target Company did not make provision for impairment.

The expected timing of recovery or settlement for contract assets as at the end of each of the Relevant Periods:

	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Within one year	-	76	71

23. PREPAID EXPENSES AND OTHER CURRENT ASSETS

The Target Group

	31 December 2022 RMB million	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Financial assets measured at amortised cost – Other receivables	74	70	68	54
Less: impairment losses	9	12	20	15
	65	58	48	39
Prepaid expenses	4	8	5	11
Deductible VAT and other taxes	6	38	5	10
	75	104	58	60

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

23. PREPAID EXPENSES AND OTHER CURRENT ASSETS (continued)

The Target Company

	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Financial assets measured at amortised cost			
– Other receivables	7	7	89
Less: impairment losses	-	-	-
	7	7	89
Prepaid expenses	6	2	1
Deductible VAT and other taxes	18	3	2
	31	12	92

24. CASH AND CASH EQUIVALENTS AND TIME DEPOSITS

(a) Cash and cash equivalents

The Target Group

Cash and cash equivalents in the consolidated statements of financial position and the consolidated statements of cash flows comprise cash at bank and in hand, and time deposits with original maturity within three months.

	31 December 2022 RMB million	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Deposits with banks and other financial institutions	307	407	403	1,116
Less: Time deposits with original maturity over three months	51	41	20	20
Cash and cash equivalents in the consolidated cash flow statement	256	366	383	1,096

As at the end of each of the Relevant Periods, the Target Group performed impairment assessment on bank balances and concluded that the probability of defaults of the counterparty banks are insignificant and accordingly, no allowance for credit losses is provided. Details of impairment assessment of bank deposits are set out in note 33.2 to the Historical Financial Information.

The Target Company

Cash and cash equivalents in the statements of financial position comprise cash at bank and in hand, and time deposits with original maturity within three months.

	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Deposits with banks and other financial institutions	121	132	409
Cash and cash equivalents in the cash flow statement	121	132	409

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

24. CASH AND CASH EQUIVALENTS AND TIME DEPOSITS (continued)

(a) Cash and cash equivalents (continued)

The Target Company (continued)

As at the end of each of the Relevant Periods, the Target Group performed impairment assessment on bank balances and concluded that the probability of defaults of the counterparty banks are insignificant and accordingly, no allowance for credit losses is provided.

(b) Major non-cash transaction

During the Relevant Periods, the Target Group had non-cash additions to right-of-use assets and lease liabilities of nil, RMB55 million, RMB20 million and RMB9 million, respectively, in respect of lease arrangements.

(c) Reconciliation of liabilities arising from financing activities

The table below shows the detailed changes in the Target Group's liabilities arising from financing activities, including both cash and non-cash changes. Liabilities arising from financing activities are those for which cash flows were, or future cash flows will be, classified in the Target Group's consolidated statement of cash flows as cash flows from financing activities.

	Borrowings RMB million (note 26)	Lease liabilities RMB million (note 27)	Long-term liabilities RMB million (note 30)	Total RMB million
At 1 January 2022	447	-	171	618

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

24. CASH AND CASH EQUIVALENTS AND TIME DEPOSITS (continued)

(d) Total cash outflow for leases

Amounts included in the consolidated statements of cash flows for leases comprise the following:

	Year ended 31 December 2022 RMB million	Year ended 31 December 2023 RMB million	Year ended 31 December 2024 RMB million	Seven months ended 31 July 2024 RMB million (unaudited)	Seven months ended 31 July 2025 RMB million
Within operating cash flows	1	3	1	1	1
Within financing cash flows	-	15	22	10	22
	1	18	23	11	23

These amounts relate to the following:

	Year ended 31 December 2022 RMB million	Year ended 31 December 2023 RMB million	Year ended 31 December 2024 RMB million	Seven months ended 31 July 2024 RMB million (unaudited)	Seven months ended 31 July 2025 RMB million
Lease rental paid	1	17	25	21	24

25. DEFERRED TAXATION

The Target Group

	31 December 2022 RMB million	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Deferred tax assets	71	74	93	104

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

25. DEFERRED TAXATION (continued)

The Target Group (continued)

The following are the deferred tax assets recognised and movements thereon during the year/period:

	1 January 2022 RMB million	Credited to profit or loss RMB million	31 December 2022 RMB million
Allowances, primarily for receivables and inventories	70	1	71

	1 January 2023 RMB million	Credited to profit or loss RMB million	31 December 2023 RMB million
Allowances, primarily for receivables and inventories	71	-*	71
Property, plant and equipment	-	1	1
Lease transactions	-	1	1
Others	-	1	1
Net deferred tax assets	71	3	74

	1 January 2024 RMB million	Credited/(charged) to profit or loss RMB million	31 December 2024 RMB million
Allowances, primarily for receivables and inventories	71	2	73
Property, plant and equipment	1	18	19
Lease transactions	1	-*	1
Others	1	(1)	-*
Net deferred tax assets	74	19	93

	1 January 2025 RMB million	Credited to profit or loss RMB million	31 July 2025 RMB million
Allowances, primarily for receivables and inventories	73	-*	73
Property, plant and equipment	19	11	30
Lease transactions	1	-	1
Others	-*	-	-*
Net deferred tax assets	93	11	104

* Amount less than RMB500,000

As at 31 December 2022, 2023 and 2024 and 31 July 2025, the Target Group had unused tax losses of nil, RMB83 million, nil and nil, respectively, available for offset against future profits. No deferred tax asset has been recognised in respect of the unused tax losses due to the unpredictability of future profit streams.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

25. DEFERRED TAXATION (continued)

The Target Group (continued)

The expiry dates of the tax losses of the Target Group for which no deferred income tax assets were recognised are summarised as follows:

	31 December 2022 RMB million	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Year of expiry				
2023	-	-	-	-
2024	-	-	-	-
2025	-	-	-	-
2026	-	-	-	-
2027	-	-	-	-
2028	-	83	-	-
Total	-	83	-	-

The Target Company

	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Deferred tax assets	2	1	1

The following are the major deferred tax assets recognised and movements thereon during the year/period:

	22 March 2023 RMB million	Credited to profit or loss RMB million	31 December 2023 RMB million
Others	-	2	2

	1 January 2024 RMB million	Charged to profit or loss RMB million	31 December 2024 RMB million
Others	2	(1)	1

	1 January 2025 RMB million	Credited to profit or loss RMB million	31 July 2025 RMB million
Others	1	-	1

As at 31 December 2022, 2023 and 2024 and 31 July 2025, the Target Company had unused tax losses of nil, RMB83 million, nil and nil, respectively, available for offset against future profits. No deferred tax asset has been recognised in respect of the unused tax losses due to the unpredictability of future profit streams.

The expiry dates of the tax losses of the Target Company for which no deferred income tax assets were recognised are summarised as follows:

	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Year of expiry			
2024	-	-	-
2025	-	-	-
2026	-	-	-
2027	-	-	-
2028	83	-	-
Total	83	-	-

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

26. BORROWINGS

The Target Group

An analysis of the Target Group's borrowings is as follows:

	31 December 2022 RMB million	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Current borrowings:				
Short-term bank and othe borrowings	641	661	280	140

As at 31 December 2022, 2023 and 2024 and 31 July 2025, the Target Group's short-term borrowings were unsecured and bore interest at rates ranging from 2.20% to 3.20%, 2.25% to 2.95%, 2.22% to 2.35% and 2.60% to 2.70%, respectively.

27. LEASE LIABILITIES

The Target Group

The lease liabilities were repayable as follow:

	31 December 2023		31 December 2024		31 July 2025	
	Present value of the minimum lease payments RMB million	Total minimum lease payments RMB million	Present value of the minimum lease payments RMB million	Total minimum lease payments RMB million	Present value of the minimum lease payments RMB million	Total minimum lease payments RMB million
Within 1 year	18	19	21	22	9	10
After 1 year but within 2 years	18	19	7	7	5	5
After 2 years but within 5 years	6	6	4	4	6	6

The above balances are unsecured, interest-free and payable on demand.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

29. ACCRUED EXPENSES AND OTHER PAYABLES (continued)

The Target Company

	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Accrued staff wages and welfare benefits	2	3	22
Taxes payable other than income tax	4	19	19
Other accrued expenses and payables	-*	4	1
	6	26	42

* Amount less than RMB500,000

30. LONG-TERM LIABILITIES

The Target Group

	31 December 2022 RMB million	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Payables for acquisition of fixed assets	-	-	1,465	2,059
Others	54	-	-	-
	54	-	1,465	2,059
Analysed for reporting purpose as:				
Current liabilities	54	-	15	2
Non-current liabilities	-	-	1,450	2,057
	54	-	1,465	2,059

As at 31 December 2024 and 31 July 2025, the interest rate of the Target Group's payables for acquisition of fixed assets were 2.75%.

The Target Company

	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Payables for acquisition of fixed assets	-	1,465	1,075
Analysed for reporting purpose as:			
Current liabilities	-	15	1
Non-current liabilities	-	1,450	1,074
	-	1,465	1,075

As at 31 December 2024 and 31 July 2025, the interest rate of the Target Company's payables for acquisition of fixed assets were 2.75%.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

31. PAID-UP CAPITAL

	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Paid-up capital	1,000	1,024	1,524

During 22 March 2023 (date of registration) to 31 December 2023, the paid-up capital increased by RMB898 million as a result of the acquisition of Tianjin Guoneng Shipping Co., Ltd. and Guoneng (Wuhan) Shipping Co., Ltd. and by RMB102 million from cash contribution from the equity holder.

For the year ended 31 December 2024, the Target Company capitalised its retained earnings of RMB24 million into its paid-up capital of the same amount.

For the seven months ended 31 July 2025, the equity holder made a cash contribution of RMB500 million to the Target Company's paid-up capital.

32. CAPITAL RISK MANAGEMENT

The Target Group's policy is to maintain a strong capital base so as to maintain investor, creditor and market confidence and to sustain future development of the business.

The Target Group manages the capital structure and makes adjustments to it in the light of changes in economic conditions and the risk characteristics of the underlying assets. In order to maintain or adjust the capital structure, the Target Group may adjust the amount of dividends paid to shareholders, return capital to shareholders or issue new shares to reduce debts.

The Target Group monitors capital using a gearing ratio which is total liabilities divided by total assets. The Target Group aims to maintain the gearing ratio at a reasonable level. The Target Group's gearing ratio as at 31 December 2022, 2023 and 2024 and 31 July 2025 was 40%, 43%, 59% and 57%, respectively.

There were no changes in the Target Group's approach to capital management during the Relevant Periods.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

33. FINANCIAL INSTRUMENTS

33.1 Categories of financial instruments

The carrying amounts of each of the following categories of financial assets and financial liabilities at the end of each of the Relevant Periods are set out as follows:

	31 December 2022 RMB million	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Financial assets				
Financial assets at amortised cost	503	530	648	1585
Financial liabilities				
Amortised cost	933	1,033	2,251	2,984

33.2 Financial risk management objectives and policies

The Target Group's major financial instruments include accounts and bills receivables, other receivables, accounts payables, borrowings and other payables. Details of the financial instruments are disclosed in the respective notes. The risks associated with these financial instruments include market risk (interest rate and currency risks), credit risk and liquidity risk. The policies on how to mitigate these risks are set out below. The management manages and monitors these exposures to ensure appropriate measures are implemented on a timely and effective manner.

Market risk

(i) Currency risk

The functional currency of the entities is RMB in which most of the transactions are denominated. The Target Group has no significant currency risk.

(ii) Interest rate risk

The Target Group has no variable-rate liabilities, thus the Target Group has no significant interest rate risk.

The Target Group's exposures to interest rates on financial liabilities are detailed in the liquidity risk management section of this note.

Credit risk and impairment assessment

As at the end of each of the Relevant Periods, other than those financial assets whose carrying amounts best represent the maximum exposure to credit risk, there are no financial guarantees provided by the Target Company. The Target Group does not hold any collateral or other credit enhancements to cover its credit risks associated with its financial assets and financial guarantee contracts.

Accounts and bills receivables arising from contracts with customers

In order to minimise the credit risk, the management of the Target Group has delegated a team responsible for determination of credit limits and credit approvals. Before accepting any new customer, the Target Group uses an internal credit scoring system to assess the potential customer's credit quality and defines credit limits by customer. Limits and scoring attributed to customers are reviewed once a year. Other monitoring procedures are in place to ensure that follow-up action is taken to recover overdue debts. In this regard, the Directors consider that the Target Group's credit risk is significantly reduced.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

33. FINANCIAL INSTRUMENTS (continued)

33.2 Financial risk management objectives and policies (continued)

Credit risk and impairment assessment (continued)

Bank balances

The credit risks on bank balances are limited because the counterparties are banks with high credit ratings assigned by credit-rating agencies, such as China Construction Bank, Industrial and Commercial Bank of China, Bank of China and Agricultural Bank of China.

Other receivables

Other receivables represent pledge and guarantee deposit. The pledge and guarantee deposit are paid for regular businesses.

The tables below detail the credit risk exposures of the Target Group's financial assets which are subject to ECL assessment:

	Notes	External credit rating	12-month or lifetime ECL	31 December 2022 RMB million	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Financial assets at amortised costs							
Cash and cash equivalents and time deposits	24	N/A	12-month ECL	307	407	403	1,116
Other receivables	23	N/A	12-month ECL	74	70	68	54
			Credit-impaired	9	12	20	15
Accounts receivable (note)	21	N/A	Provision matrix	406	337	469	704
			Credit-impaired	275	272	272	274

Note:

For accounts receivable, the Target Group has applied the simplified approach in IFRS 9 to measure the loss allowance at lifetime ECL. Except for debtors with credit-impaired, the Target Group determines the ECL on these items by using a provision matrix, grouped by debtors' aging.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

33. FINANCIAL INSTRUMENTS (continued)

33.2 Financial risk management objectives and policies (continued)

Credit risk and impairment assessment (continued)

Provision matrix – debtors' ageing

As part of the Target Group's credit risk management, the Target Group uses debtors' ageing to assess the impairment for its receivables from customers in relation to its provision of transportation services because these customers consist of a large number of customers with common risk characteristics that are representative of the customers' abilities to pay all amounts due in accordance with the contractual terms. The following table provides information about the exposure to credit risk for accounts receivables which are assessed based on provision matrix as at the end of each of the Relevant Periods within lifetime ECL (not credit-impaired). Accounts receivable with credit-impaired with gross carrying amounts of RMB275 million, RMB272 million, RMB271 million and RMB271 million as at 31 December 2022, 2023 and 2024 and 31 July 2025, respectively, were assessed individually.

Gross carrying amount

	Average loss rate 31 December 2022	Accounts receivable 31 December 2022 RMB million	Average loss rate 31 December 2023	Accounts receivable 31 December 2023 RMB million	Average loss rate 31 December 2024	Accounts receivable 31 December 2024 RMB million	Average loss rate 31 July 2025	Accounts receivable 31 July 2025 RMB million
Current (not past due)	1%	131	0%	65	0%	198	1%	433
More than three years past due	100%	275	100%	272	100%	271	100%	271
		406		337		469		704

The estimated loss rates are estimated based on historical observed default rates over the expected life of the debtors and are adjusted for forward-looking information that is available without undue cost or effort. The grouping is regularly reviewed by management to ensure relevant information about specific debtors is updated.

As at 31 July 2025	11	4	15

Liquidity risk

Liquidity risk is the risk that the Target Group will not be able to meet its financial obligation as they fall due. The approach to managing liquidity is to ensure, as far as possible, that it will always have sufficient liquidity to meet its liabilities when due, under both normal and stressed conditions, without incurring unacceptable losses or risk damage to the Target Group's reputation.

The Target Group closely monitors cash flow requirements and optimising its cash return. The Target Group prepares cash flow forecasts and ensures it has sufficient cash for the servicing of operation, financial, and capital obligations; this excludes the potential impact of extreme circumstances that cannot reasonably be predicted, such as natural disasters.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

33. FINANCIAL INSTRUMENTS (continued)

33.2 Financial risk management objectives and policies (continued)

Liquidity risk (continued)

The following table details the remaining contractual maturity of the Target Group's financial liabilities at the end of each of the Relevant Periods, which are based on contractual undiscounted cash flows (including interest payments computed using contractual rates and the earliest date the Target Group can be required to pay:

	31 December 2022					
	Weighted average interest rate %	On demand or less than 1 year RMB million	1 – 2 years RMB million	2 – 5 years RMB million	Total undiscounted cash flows RMB million	Total carrying amount RMB million
Financial liabilities:						
Accounts payables, accrued expenses and other payables, lease liabilities and long-term liabilities		293	-	-	293	292
Borrowings fixed interest rate	2.94%	649	-	-	649	641
		942	-	-	942	933

	31 December 2023					
	Weighted average interest rate %	On demand or less than 1 year RMB million	1 – 2 years RMB million	2 – 5 years RMB million	Total undiscounted cash flows RMB million	Total carrying amount RMB million
Financial liabilities:						
Accounts payables, accrued expenses and other payables, lease liabilities and long-term liabilities		349	19	6	374	372
Borrowings fixed interest rate	2.79%	669	-	-	669	661
		1,018	19	6	1,043	1,033

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

		815	48	448	1,279	2,590	2,251

	31 July 2025						
	Weighted average interest rate %	On demand or less than 1 year RMB million	1 – 2 years RMB million	2 – 5 years RMB million	More than 5 years RMB million	Total undiscounted cash flows RMB million	Total carrying amount RMB million
Financial liabilities:							
Accounts payables, other payables, lease liabilities and long-term liabilities		832	220	623	1,615	3,290	2,844
Borrowings fixed interest rate	2.66%	143	-	-	-	143	140
		975	220	623	1,615	3,433	2,984

Saved as discussed above, the Target Group also makes use of banks and financial institutions facilities as one of the effective sources of liquidity.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

34. COMMITMENTS AND CONTINGENT LIABILITIES

34.1 Capital commitments

As at 31 December 2022, 2023 and 2024 and 31 July 2025, the Target Group had capital commitments for equipment and other as follows:

	31 December 2022 RMB million	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Contracted for but not provided				
– Equipment and others	-*	10	598	8

* Amount less than RMB500,000

34.2 Legal contingencies

The Target Group is the defendant in certain lawsuits as well as the plaintiff in other proceedings arising in the ordinary course of business. While the outcomes of such contingencies, lawsuits or other proceedings cannot be determined at present, management believes that any resulting liabilities will not have a material adverse effect on the financial position or operating results of the Target Group.

35. EMPLOYEE BENEFITS PLAN

The Target Group participates, in line with the regulations of the PRC, mainly in various defined contribution retirement plans organised by municipal and provincial governments for its employees. The Target Group is required to make contributions to the retirement plans at a certain proportion of the salaries, bonuses and certain allowances of the employees. The Target Group has no other material obligation for the payment of pension benefits associated with these plans beyond the annual contributions described above. The Target Group's contributions for the years ended 31 December 2022, 2023 and 2024 and for the seven months ended 31 July 2024 and 2025 were RMB2 million, RMB8 million, RMB17 million, RMB7 million and RMB9 million, respectively.

36. RELATED PARTY TRANSACTIONS

36.1 Transactions with China Energy Group and fellow subsidiaries

The Target Group is controlled by China Energy Group and has significant transactions and relationships with China Energy Group and subsidiaries of China Energy Group ("fellow subsidiaries"). Related parties refer to enterprises over which China Energy Group is able to exercise significant influence or control.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

36. RELATED PARTY TRANSACTIONS (continued)

36.1 Transactions with China Energy Group and fellow subsidiaries (continued)

The Target Group had the following transactions with China Energy Group and fellow subsidiaries that were carried out in the normal course of business during the years ended 31 December 2022, 2023 and 2024 and seven months ended 31 July 2024 and 2025:

	Notes	Year ended 31 December 2022 RMB million	Year ended 31 December 2023 RMB million	Year ended 31 December 2024 RMB million	Seven months ended 31 July 2024 RMB million (unaudited)	Seven months ended 31 July 2025 RMB million

* Amount less than RMB500,000

Note: China Energy Finance Co., Ltd.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

36. RELATED PARTY TRANSACTIONS (continued)

36.1 Transactions with China Energy Group and fellow subsidiaries (continued)

(i) Interest income represents interest earned from deposits in fellow subsidiaries. The applicable interest rate is determined in accordance with the prevailing interest rates published by the PBOC.

(ii) Interest expense represents interest incurred from loans from China Energy Group and fellow subsidiaries. The applicable interest rate is determined in accordance with the prevailing interest rates published by the PBOC.

(iii) Purchases of ancillary materials and spare parts represent purchase of materials and utility supplies related to the Target Group's operations from fellow subsidiaries.

(iv) Ancillary and social services represent expenditures for social welfare and support services such as property management, water and electricity supply, and canteen expense paid to China Energy Group and fellow subsidiaries.

(v) Transportation service income represents income earned from fellow subsidiaries in respect of coal and materials transportation services.

(vi) Transportation service expense represents expenses paid to fellow subsidiaries in respect of coal and materials transportation services.

(vii) Granting of loans from China Energy Group and fellow subsidiaries.

(viii) Repayment of loans from China Energy Group and fellow subsidiaries.

(ix) Property leasing expense represents rental paid or payable in respect of properties leased from fellow subsidiaries.

(x) Purchase of equipment and construction work represents expenditure related to equipment and construction service provided by fellow subsidiaries.

(xi) Net deposits placed with Finance Company represents net deposits placed by the Target Group with Finance Company.

The Directors are of the opinion that the above transactions with related parties were conducted in the ordinary course of business and in accordance with the agreements governing such transactions.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

36. RELATED PARTY TRANSACTIONS (continued)

36.1 Transactions with China Energy Group and fellow subsidiaries (continued)

The Target Group entered into a number of agreements with China Energy Group and fellow subsidiaries. The terms of the principal agreements are summarised as follows:

(i) The Target Company has entered into a mutual supply agreement for the mutual provision of production supplies and ancillary services with fellow subsidiaries. Pursuant to the agreement, fellow subsidiaries provide the Target Group with the production supplies and services, ancillary production services including the use of the information network system and ancillary administrative services. On the other hand, the Target Group provides fellow subsidiaries with shipping transportation and use of the information network system.

The products and services provided under the agreement, other than the sharing of use of the information network system which is free of charge, are provided in accordance with the following pricing policy:

- price prescribed by the state (including any price prescribed by any relevant local government), if applicable;
- where there is no state-prescribed price but where there is a state-guidance price, then the state-guidance price;
- where there is neither a state-prescribed price nor a state-guidance price, the market price; or
- where none of the above is applicable or where it is not practical to apply the above pricing policies in reality, the price to be agreed between the relevant parties shall be based on reasonable costs incurred in providing the goods or services plus a reasonable profit margin of such costs.

(ii) The Target Company has entered into a financial services agreement with Finance Company. Pursuant to the agreement, Finance Company provides financial services to the Target Group. The interest rate for the deposits with Finance Company from the Target Group should not be lower than the lowest limit published by the PBOC for the same type of deposit. The interest rate for loans made by Finance Company to the Target Group should not be higher than the highest limit published by the PBOC for the same type of loan. The above interest rates should be determined by reference to the rate charged by normal commercial banks in the PRC for comparable deposits and loans on normal commercial terms. The fees charged by Finance Company for the provision of other financial services shall be determined according to the rates chargeable by the PBOC or the China Banking Regulatory Commission.

(iii) The Target Group has entered into a property leasing agreement with fellow subsidiaries of China Energy Group for leasing of certain properties to each other. No rent is payable by the Target Group before fellow subsidiaries obtains the relevant property ownership certificate. The rental charges are based on comparable market rates. If fellow subsidiaries of China Energy Group negotiate to sell a leased property to a third party, the Target Company has a pre-emptive right to purchase such property under terms no less favorable than other third party.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

36. RELATED PARTY TRANSACTIONS (continued)

36.1 Transactions with China Energy Group and fellow subsidiaries (continued)

Amounts due from/to China Energy Group and fellow subsidiaries:

	31 December 2022 RMB million	31 December 2023 RMB million	31 December 2024 RMB million	31 July 2025 RMB million
Deposits with Finance Company	306	406	402	1,115
Accounts and bills receivables	128	65	170	387
Contract assets	55	70	133	122
Prepaid expenses and other current assets	-	6	6	1
Total amounts due from China Energy Group and fellow subsidiaries	489	547	711	1,625
Borrowings	500	661	280	140
Accounts payable	2	133	13	36
Accrued expenses and other payables	-	-	2	-
Contract liabilities	-	-	6	-

ACCOUNTANTS' REPORT ON HISTORICAL FINANCIAL INFORMATION OF SHENHUA COAL TRADING CO., LTD. TO THE DIRECTORS OF CHINA SHENHUA ENERGY COMPANY LIMITED

Introduction

We report on the historical financial information of Shenhua Coal Trading Co., Ltd. (the "Target Company") and its subsidiaries (together, the "Target Group") set out on pages II-K-3 to II-K-86, which comprises the consolidated statements of profit or loss and other comprehensive income, statements of changes in equity and statements of cash flows of the Target Group for each of the years ended 31 December 2022, 2023 and 2024 and the seven months ended 31 July 2025 (the "Relevant Periods"), and the consolidated statements of financial position of the Target Group and the statements of financial position of the Target Company as at 31 December 2022, 2023 and 2024 and 31 July 2025 and material accounting policy information and other explanatory information (together, the "Historical Financial Information"). The Historical Financial Information set out on pages II-K-3 to II-K-86 forms an integral part of this report, which has been prepared for inclusion in the circular of China Shenhua Energy Company Limited ("China Shenhua") dated 24 December 2025 (the "Circular") in connection with the proposed acquisition by China Shenhua (the "Acquisition").

Directors' responsibility for the Historical Financial Information

The directors of the Target Company are responsible for the preparation of the Historical Financial Information that gives a true and fair view in accordance with the basis of preparation set out in note 2.1 to the Historical Financial Information and for such internal control as the directors determine is necessary to enable the preparation of the Historical Financial Information that is free from material misstatement, whether due to fraud or error.

Reporting accountants' responsibility

Our responsibility is to express an opinion on the Historical Financial Information and to report our opinion to you. We conducted our work in accordance with Hong Kong Standard on Investment Circular Reporting Engagements 200 *Accountants' Reports on Historical Financial Information in Investment Circulars* issued by the Hong Kong Institute of Certified Public Accountants ("HKICPA"). This standard requires that we comply with ethical standards and plan and perform our work to obtain reasonable assurance about whether the Historical Financial Information is free from material misstatement.

Our work involved performing procedures to obtain evidence about the amounts and disclosures in the Historical Financial Information. The procedures selected depend on the reporting accountants' judgement, including the assessment of risks of material misstatement of the Historical Financial Information, whether due to fraud or error. In making those risk assessments, the reporting accountants consider internal control relevant to the entity's preparation of the Historical Financial Information that gives a true and fair view in accordance with the basis of preparation set out in note 2.1 to the Historical Financial Information, in order to design procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Our work also included evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by the directors, as well as evaluating the overall presentation of the Historical Financial Information.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Opinion
In our opinion, the Historical Financial Information gives, for the purposes of the accountants' report, a true and fair view of the financial position of the Target Group and the Target Company as at 31 December 2022, 2023 and 2024 and 31 July 2025 and of the financial performance and cash flows of the Target Group for each of the Relevant Periods in accordance with the basis of preparation set out in note 2.1 to the Historical Financial Information.

Review of interim comparative financial information
We have reviewed the interim comparative financial information of the Target Group which comprises the consolidated statement of profit or loss and other comprehensive income, statement of changes in equity and statement of cash flows for the seven months ended 31 July 2024 and other explanatory information (the "Interim Comparative Financial Information"). The directors of the Target Company are responsible for the preparation of the Interim Comparative Financial Information in accordance with the basis of preparation set out in note 2.1 to the Historical Financial Information. Our responsibility is to express a conclusion on the Interim Comparative Financial Information based on our review. We conducted our review in accordance with Hong Kong Standard on Review Engagements 2410 *Review of Interim Financial Information Performed by the Independent Auditor of the Entity* issued by the HKICPA. A review consists of making inquiries, primarily of persons responsible for financial and accounting matters, and applying analytical and other review procedures. A review is substantially less in scope than an audit conducted in accordance with Hong Kong Standards on Auditing and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion. Based on our review, nothing has come to our attention that causes us to believe that the Interim Comparative Financial Information, for the purposes of the accountants' report, is not prepared, in all material respects, in accordance with the basis of preparation set out in note 2.1 to the Historical Financial Information.

Report on matters under the Rules Governing the Listing of Securities on the Stock Exchange and the Companies (Winding Up and Miscellaneous Provisions) Ordinance

Adjustments
In preparing the Historical Financial Information, no adjustments to the Underlying Financial Statements as defined on II-K-3 have been made.

Dividends
We refer to note 13 to the Historical Financial Information which contains information about the dividends paid by the Target Company in respect of the Relevant Periods.

I HISTORICAL FINANCIAL INFORMATION

Preparation of Historical Financial Information

Set out below is the Historical Financial Information which forms an integral part of this accountants' report.

The financial statements of the Target Group for the Relevant Periods, on which the Historical Financial Information is based, were audited by Ernst & Young in accordance with Hong Kong Standards on Auditing ("HKSAs") issued by the Hong Kong Institute of Certified Public Accountants ("HKICPA") (the "Underlying Financial Statements").

The Historical Financial Information is presented in Renminbi ("RMB") and all values are rounded to the nearest thousand (RMB'000) except when otherwise indicated.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

1. PRINCIPAL ACTIVITIES AND ORGANISATION

The Target Company is a limited liability company established in the People's Republic of China (the "PRC"). The registered office of the Target Company is located at No.26 Beiwa Street, Haidian District, Beijing, the PRC.

During the Relevant Periods, the Target Group was involved in coal sales and import/export, and comprehensive utilisation and deep processing of coal in the PRC.

In the opinion of the directors, the immediate holding company and the ultimate holding company of the Target Company is China Energy Investment Corporation Limited ("China Energy Group"), which is established in the PRC.

As at the date of this report, the Target Company had direct and indirect interests in its subsidiaries, all of which are private limited liability companies, the particulars of which are set out below:

Name	Place and date of registration and place of operations	Registered capital RMB'000	Proportion of ownership interest by the Target Group (%)	Principal activities
Guoneng Guoyuan Power Fuel Co., Ltd. ("Guoyuan Fuel") 國能國源電力燃料有限公司 (note (a))	PRC/Mainland China 27 July 2003	50,000	100	Coal sales
Guoneng Coking Coal (Tianjin) Co., Ltd. 國能焦煤（天津）有限公司 (note (b))	PRC/Mainland China 6 November 2023	1,000,000	100	Coal sales
Guoneng Shipping (Hainan) Supply Chain Co., Ltd. 國能運銷(海南)供應鏈有限公司 (note (b))	PRC/Mainland China 29 December 2023	500,000	100	Coal sales

Notes:

(a) The statutory financial statements of this entity for the year ended 31 December 2022 prepared under China Accounting Standards were audited by ShineWing Certified Public Accountants LLP, certified public accountants registered in the PRC, and the statutory financial statements of this entity for the years ended 31 December 2023 and 2024 prepared under China Accounting Standards were audited by Baker Tilly China Certified Public Accountants LLP ("Baker Tilly"), certified public accountants registered in the PRC.

(b) The statutory financial statements of these entities for the year ended 31 December 2024 prepared under China Accounting Standards were audited by Baker Tilly.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.1 BASIS OF PREPARATION

The Historical Financial Information has been prepared in accordance with IFRS Accounting Standards which comprise all standards and interpretations approved by the International Accounting Standards Board (the "IASB"). All IFRS Accounting Standards effective for the accounting period commencing from 1 January 2025, together with the relevant transitional provisions, have been early adopted by the Group in the preparation of the Historical Financial Information throughout the Relevant Periods and in the period covered by the Interim Comparative Financial Information.

The Historical Financial Information has been prepared on a historical cost basis, except for certain financial instruments as disclosed in note 32.3 to the Historical Financial Information, which have been measured at fair value at the end of each reporting period, as explained in the accounting policies set out below.

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date, regardless of whether that price is directly observable or estimated using another valuation technique. In estimating the fair value of an asset or a liability, the Target Group takes into account the characteristics of the asset or liability if market participants would take those characteristics into account when pricing the asset or liability at the measurement date. Fair value for measurement and/or disclosure purposes in the Historical Financial Information is determined on such a basis, except for share-based payment transactions that are within the scope of IFRS 2 *Share-based Payment*, leasing transactions that are within the scope of IFRS 16 *Leases*, and measurements that have some similarities to fair value but are not fair value, such as net realisable value in IAS 2 *Inventories* or value in use in IAS 36 *Impairment of Assets*.

In addition, for financial reporting purposes, fair value measurements are categorised into Level 1, 2 or 3 based on the degree to which the inputs to the fair value measurements are observable and the significance of the inputs to the fair value measurement in its entirety, which are described as follows:

- Level 1 inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities that the entity can access at the measurement date;

- Level 2 inputs are inputs, other than quoted prices included within Level 1, that are observable for the asset or liability, either directly or indirectly; and

- Level 3 inputs are unobservable inputs for the asset or liability.

For business combination under common control in which subsidiaries directly or indirectly held by the ultimate holding company of the Target Company (the "Common Control Acquiree Entities") are acquired by the Target Group, it is accounted for using the principles of merger accounting. The consolidated statements of profit or loss and other comprehensive income, statements of changes in equity and statements of cash flows of the Target Group for the Relevant Periods and the seven months ended 31 July 2024 include the results and cash flows of the Common Control Acquiree Entities from the beginning of the Relevant Periods or since the date when the Common Control Acquiree Entities first came under the common control of the ultimate holding company, where this is a shorter period. The consolidated statements of financial position of the Target Group as at 31 December 2022, 2023 and 2024 and 31 July 2025 have been prepared to present the assets and liabilities of the Common Control Acquiree Entities using the existing book values from the ultimate holding company's perspective. No adjustments are made to reflect fair values, or recognise any new assets or liabilities as a result of the business combination under common control.

The preparation of the Historical Financial Information in conformity with IFRS Accounting Standards requires management to make judgements, estimates and assumptions that affect the application of policies and reported amounts of assets, liabilities, income and expenses. The estimates and associated assumptions are based on historical experience and various other factors that are believed to be reasonable under the circumstances, the results of which form the basis of making judgements about the carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates.

The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised if the revision affects only that period, or in the period of the revision and future periods if the revision affects both current and future periods.

Judgements made by management in the application of IFRS Accounting Standards that have a significant effect on the Historical Financial Information and major sources of estimation uncertainty are discussed in note 3 to the Historical Financial Information.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.1 BASIS OF PREPARATION (continued)

Material accounting policies adopted by the Target Group are disclosed below.

2.2 ISSUED BUT NOT YET EFFECTIVE IFRS ACCOUNTING STANDARDS

The Target Group has not applied the following new and revised IFRS Accounting Standards, that have been issued but are not yet effective, in the Historical Financial Information. The Target Group intends to apply these new and revised IFRS Accounting Standards, if applicable, when they become effective.

IFRS 18	*Presentation and Disclosure in Financial Statements*[2]
IFRS 19	*Subsidiaries without Public Accountability: Disclosures*[2]
Amendments to IFRS 9 and IFRS 7	*Amendments to the Classification and Measurement of Financial Instruments*[1]
Amendments to IFRS 9 and IFRS 7	*Contracts Referencing Nature-dependent Electricity*[1]
Amendments to IFRS 10 and IAS 28	*Sale or Contribution of Assets between an Investor and its Associate or Joint Venture*[3]
Annual Improvements to IFRS Accounting Standards – Volume 11	Amendments to IFRS 1, IFRS 7, IFRS 9, IFRS 10 and IAS 7[1]

1 Effective for annual periods beginning on or after 1 January 2026
2 Effective for annual/reporting periods beginning on or after 1 January 2027
3 No mandatory effective date yet determined but available for adoption

The Target Group is in the process of making an assessment of the impact of these new and revised IFRS Accounting Standards upon initial application. IFRS 18 introduces new requirements for presentation within the statement of profit or loss and other comprehensive income, including specified totals and subtotals. It also requires disclosure of management-defined performance measures and includes new requirements for aggregation and disaggregation of financial information. The new requirements are expected to impact the Target Group's presentation in the statement of profit or loss and other comprehensive income and disclosures of the Target Group's financial performance. The new standard is not expected to have any impact on the Target Group's results of operations and financial position but has an impact on the presentation and disclosure of the Historical Financial Information. Other than IFRS 18, so far, the Target Group considers that IFRS 19 and the revised IFRS Accounting Standards are unlikely to have a significant impact on the Target Group's results of operations and financial position.

2.3 MATERIAL ACCOUNTING POLICIES

Basis of consolidation

The Historical Financial Information incorporates the financial statements of the Target Company and its subsidiaries. Control is achieved when the Target Company:

– has power over the investee;

– is exposed, or has rights, to variable returns from its involvement with the investee; and

– has the ability to use its power to affect its returns.

The Target Group reassesses whether or not it controls an investee if facts and circumstances indicate that there are changes to one or more of the three elements of control listed above.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Basis of consolidation (continued)

When the Target Group has less than a majority of the voting rights of an investee, it has power over the investee when the voting rights are sufficient to give it the practical ability to direct the relevant activities of the investee unilaterally. The Target Group considers all relevant facts and circumstances in assessing whether or not the Target Group's voting rights in an investee are sufficient to give it power, including:

- the size of the Target Group's holding of voting rights relative to the size and dispersion of holdings of the other vote holders;
- potential voting rights held by the Target Group, other vote holders or other parties;
- rights arising from other contractual arrangements; and
- any additional facts and circumstances that indicate that the Target Group has, or does not have, the current ability to direct the relevant activities at the time that decisions need to be made, including voting patterns at previous shareholders' meetings.

Consolidation of a subsidiary begins when the Target Group obtains control over the subsidiary and ceases when the Target Group loses control of the subsidiary. Specifically, income and expenses of a subsidiary acquired or disposed of during the year are included in the consolidated statement of profit or loss and other comprehensive income from the date the Target Group gains control until the date when the Target Group ceases to control the subsidiary.

Profit or loss and each item of other comprehensive income are attributed to equity holders of the Company and to the non-controlling interests. Total comprehensive income of subsidiaries is attributed to equity holders of the Company and to the non-controlling interests even if this results in the non-controlling interests having a deficit balance.

Where necessary, adjustments are made to the financial statements of subsidiaries to bring their accounting policies into line with the Target Group's accounting policies.

All intra-group assets and liabilities, equity, income, expenses and cash flows relating to transactions between members of the Target Group are eliminated in full on consolidation.

Non-controlling interests in subsidiaries are presented separately from the Target Group's equity therein, which represent present ownership interests entitling their holders to a proportionate share of the net assets of the relevant subsidiaries upon liquidation.

Changes in the Target Group's ownership interests in existing subsidiaries

Changes in the Target Group's interests in subsidiaries that do not result in the Target Group losing control over the subsidiaries are accounted for as equity transactions. The carrying amounts of the Target Group's relevant components of equity and the non-controlling interests are adjusted to reflect the changes in their relative interests in the subsidiaries, including re-attribution of relevant reserves between the Target Group and the non-controlling interests according to the Target Group's and the non-controlling interests' proportionate interests.

Any difference between the amount by which the non-controlling interests are adjusted, and the fair value of the consideration paid or received is recognised directly in equity and attributed to owners of the Target Company.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Business combinations

Acquisitions of businesses, other than business combination under common control are accounted for using the acquisition method. The consideration transferred in a business combination is measured at fair value, which is calculated as the sum of the acquisition-date fair values of the assets transferred by the Target Group, liabilities incurred by the Target Group to the former owners of the acquiree and the equity interests issued by the Target Group in exchange for control of the acquiree. Acquisition-related costs are generally recognised in profit or loss as incurred.

At the acquisition date, the identifiable assets acquired and the liabilities assumed are recognised at their fair value, except that deferred tax assets or liabilities, and assets or liabilities related to employee benefit arrangements are recognised and measured in accordance with IAS 12 *Income Taxes* and IAS 19 *Employee Benefits*, respectively.

Goodwill is measured as the excess of the sum of the consideration transferred, the amount of any non-controlling interests in the acquiree, and the fair value of the acquirer's previously held equity interest in the acquiree (if any) over the net of the acquisition-date amounts of the identifiable assets acquired and the liabilities assumed. If, after reassessment, the net of the acquisition-date amounts of the identifiable assets acquired and liabilities assumed exceeds the sum of the consideration transferred, the amount of any non-controlling interests in the acquiree and the fair value of the acquirer's previously held interest in the acquiree (if any), the excess is recognised immediately in profit or loss as a bargain purchase gain.

Non-controlling interests that are present ownership interests and entitle their holders to a proportionate share of the entity's net assets in the event of liquidation are initially measured at the non-controlling interests' proportionate share of the recognised amounts of the acquiree's identifiable net assets.

Goodwill

Goodwill arising on an acquisition of a business is carried at cost as established at the date of acquisition of the business less accumulated impairment losses, if any.

For the purposes of impairment testing, goodwill is allocated to each of the Target Group's cash-generating units (or the group of cash-generating units) that is expected to benefit from the synergies of the combination, which represent the lowest level at which the goodwill is monitored for internal management purposes and not larger than an operating segment.

A cash-generating unit to which goodwill has been allocated is tested for impairment annually or more frequently when there is indication that the unit may be impaired. For goodwill arising on an acquisition in a reporting period, the cash-generating unit to which goodwill has been allocated is tested for impairment before the end of that reporting period. If the recoverable amount of the cash-generating unit is less than its carrying amount, the impairment loss is allocated first to reduce the carrying amount of any goodwill allocated to the unit and then to the other assets of the unit on a pro-rata basis based on the carrying amount of each asset in the unit. Any impairment loss for goodwill is recognised directly in profit or loss. An impairment loss recognised for goodwill is not reversed in subsequent periods.

On disposal of the relevant cash-generating unit or any of the cash-generating unit within the group of cash-generating units, the attributable amount of goodwill is included in the determination of the amount of profit or loss on disposal. When the Target Group disposes of an operation within the cash-generating unit (or a cash-generating unit within a group of cash-generating units), the amount of goodwill disposed of is measured on the basis of the relative values of the operation (or the cash-generating unit) disposed of and the portion of the cash-generating unit (or the group of cash-generating units) retained.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Revenue from contracts with customers

Under IFRS 15, the Target Group recognises revenue when (or as) a performance obligation is satisfied, i.e., when "control" of the goods or services underlying the particular performance obligation is transferred to the customer.

A performance obligation represents a good or service (or a bundle of goods or services) that is distinct or a series of distinct goods or services that are substantially the same.

Control is transferred over time and revenue is recognised over time by reference to the progress towards complete satisfaction of the relevant performance obligation if one of the following criteria is met:

- the customer simultaneously receives and consumes the benefits provided by the Target Group's performance as the Target Group performs;

- the Target Group's performance creates and enhances an asset that the customer controls as the Target Group performs; or

- the Target Group's performance does not create an asset with an alternative use to the Target Group and the Target Group has an enforceable right to payment for performance completed to date.

Otherwise, revenue is recognised at a point in time when the customer obtains control of the distinct good or service.

A contract asset represents the Target Group's right to consideration in exchange for goods or services that the Target Group has transferred to a customer that is not yet unconditional. It is assessed for impairment in accordance with IFRS 9. In contrast, a receivable represents the Target Group's unconditional right to consideration, i.e., only the passage of time is required before payment of that consideration is due.

A contract liability represents the Target Group's obligation to transfer goods or services to a customer for which the Target Group has received consideration (or an amount of consideration is due) from the customer.

Foreign currencies

In preparing the financial statements of each individual Target Group entity, transactions in currencies other than entity's functional currency (foreign currency) are recognised at the rates of exchange prevailing on the dates of the transactions. At the end of the reporting period, monetary items denominated in foreign currencies are retranslated at the rates prevailing at that date. Non-monetary items that are measured in terms of historical cost in a foreign currency are not retranslated. Exchange differences on monetary items are recognised in profit or loss in the period in which they arise.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Borrowing costs

Borrowing costs directly attributable to the acquisition, construction or production of qualifying assets, which are assets that necessarily take a substantial period of time to get ready for their intended use or sale, are capitalised as part of the cost of those assets, until such time as the assets are substantially ready for their intended use or sale. All other borrowing costs are expensed in the period in which they are incurred.

Government grants

Government grants are not recognised until there is reasonable assurance that the Target Group will comply with the conditions attaching to them and that the grants will be received.

Government grants are recognised in profit or loss on a systematic basis over the periods in which the Target Group recognises as expenses the related costs for which the grants are intended to compensate. Specifically, government grants whose primary condition is that the Target Group should purchase, construct or otherwise acquire non-current assets are recognised as deferred income in the consolidated statement of financial position and transferred to profit or loss on a systematic and rational basis over the useful lives of the related assets.

Government grants that are receivable as compensation for expenses or losses already incurred or for the purpose of giving immediate financial support to the Target Group with no future related costs are recognised in profit or loss in the period in which they become receivable.

Retirement benefit costs

Payments to state-managed retirement benefit schemes and a supplemental defined contribution pension plan approved by the government are recognised as an expense when employees have rendered service entitling them to the contributions.

The contributions made by the Target Group to such insurance plans on behalf of employees are fully attributed to the employees at the time of payment, and therefore, the Target Group has no abandoned contributions that can be utilised.

Taxation

Income tax expense represents the sum of the tax currently payable and deferred tax.

The tax currently payable is based on taxable profit for the reporting period. Taxable profit differs from "profit before income tax" as reported in the consolidated statement of profit or loss and other comprehensive income because of income or expenses that are taxable or deductible in other years and items that are never taxable or deductible. The Target Group's liability for current tax is calculated using tax rates that have been enacted or substantively enacted by the end of the reporting period.

Deferred tax is recognised on temporary differences between the carrying amounts of assets and liabilities in the Historical Financial Information and the corresponding tax bases used in the computation of taxable profit. Deferred tax liabilities are generally recognised for all taxable temporary differences. Deferred tax assets are generally recognised for all deductible temporary differences to the extent that it is probable that taxable profits will be available against which those deductible temporary differences can be utilised.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Taxation (Continued)

Deferred tax is not recognised for:

- temporary differences on the initial recognition of assets or liabilities in a transaction that is not a business combination, that affects neither accounting nor taxable profit or loss and that does not give rise to equal taxable and deductible temporary differences;

- temporary differences related to investments in subsidiaries, associates and joint venture to the extent that the Target Group is able to control the timing of the reversal of the temporary differences and it is probable that they will not reverse in the foreseeable future;

- taxable temporary differences arising on the initial recognition of goodwill; and

- those related to the income taxes arising from tax laws enacted or substantively enacted to implement the Pillar Two model rules published by the Organisation for Economic Co-operation and Development ("OECD").

The Target Group recognises deferred tax assets and deferred tax liabilities separately in relation to its lease liabilities and right-of-use assets.

Deferred tax liabilities are recognised for taxable temporary differences associated with investments in subsidiaries, except where the Target Group is able to control the reversal of the temporary difference and it is probable that the temporary difference will not reverse in the foreseeable future. Deferred tax assets arising from deductible temporary differences associated with such investments and interests are only recognised to the extent that it is probable that there will be sufficient taxable profits against which to utilise the benefits of the temporary differences and they are expected to reverse in the foreseeable future.

The carrying amount of deferred tax assets is reviewed at the end of each reporting period and reduced to the extent that it is no longer probable that sufficient taxable profits will be available to allow all or part of the asset to be recovered. Unrecognised deferred tax assets are reassessed at the end of each reporting period and are recognised to the extent that it has become probable that future taxable profit will be available to allow all or part of the deferred tax asset to be recovered.

Deferred tax assets and liabilities are measured at the tax rates that are expected to apply in the period in which the liability is settled or the asset is realised, based on tax rate (and tax laws) that have been enacted or substantively enacted by the end of the reporting period.

The measurement of deferred tax liabilities and assets reflects the tax consequences that would follow from the manner in which the Target Group expects, at the end of the reporting period, to recover or settle the carrying amounts of its assets and liabilities.

Deferred tax assets and liabilities are offset when there is a legally enforceable right to set off current tax assets against current tax liabilities and when they relate to income taxes levied by the same taxation authority and the Target Group intends to settle its current tax assets and liabilities on a net basis.

Current and deferred tax are recognised in profit or loss, except when they relate to items that are recognised in other comprehensive income or directly in equity, in which case the current and deferred tax are also recognised in other comprehensive income or directly in equity, respectively. Where current tax or deferred tax arises from the initial accounting for a business combination, the tax effect is included in the accounting for the business combination.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Property, plant and equipment

Property, plant and equipment, which consist of buildings, furniture, fixtures, motor vehicles and other equipment, are stated in the consolidated statement of financial position at cost less subsequent accumulated depreciation and subsequent accumulated impairment losses, if any.

Depreciation is recognised so as to write off the cost of items of property, plant and equipment (other than construction in progress, which is subject to impairment assessment) less their residual values over their estimated useful lives. The estimated useful lives, residual values and depreciation method are reviewed at the end of each reporting period, with the effect of any changes in estimate accounted for on a prospective basis.

Property, plant and equipment are depreciated on a straight-line basis at the following rates per annum:

Categories	Term for depreciation (year)
Buildings	23 – 45 years
Furniture, fixtures, motor vehicles and other equipment	5 – 10 years

The directors review the estimated useful lives of the assets annually based on the Target Group's historical experience with similar assets, taking into account anticipated technological changes.

Construction in progress intended to be used for production, supply or administrative purposes is carried at cost, less any recognised impairment loss. Costs include professional fees and, for qualifying assets, borrowing costs capitalised in accordance with the Target Group's accounting policy. Such properties are classified to the appropriate categories of property, plant and equipment when completed and ready for their intended use. Depreciation of these assets, on the same basis as other property, plant and equipment, commences when the assets are ready for their intended use.

Items may be produced while bringing an item of property, plant and equipment to the location and condition necessary for it to be capable of operating in the manner intended by management. The proceeds from selling any such items and the related costs are recognised in profit or loss.

An item of property, plant and equipment is derecognised upon disposal or when no future economic benefits are expected to arise from the continued use of the asset. Any gain or loss arising on the disposal or retirement of an item of property, plant and equipment is determined as the difference between the sales proceeds and the carrying amount of the asset and is recognised in profit or loss.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Intangible assets

Intangible assets acquired separately

Intangible assets with finite useful lives that are acquired separately are carried at cost less accumulated amortisation and any accumulated impairment losses. Amortisation for intangible assets with finite useful lives is recognised on a straight-line basis over their estimated useful lives. The estimated useful life and amortisation method are reviewed at the end of each reporting period, with the effect of any changes in estimate being accounted for on a prospective basis.

Internally-generated intangible assets – research and development expenditure

Expenditure on research activities is recognised as an expense in the period in which it is incurred.

An internally-generated intangible asset arising from development activities (or from the development phase of an internal project) is recognised if, and only if, all of the following have been demonstrated:

- the technical feasibility of completing the intangible asset so that it will be available for use or sale;
- the intention to complete the intangible asset and to use or sell it;
- the ability to use or sell the intangible asset;
- how the intangible asset will generate probable future economic benefits;
- the availability of adequate technical, financial and other resources to complete the development and to use or sell the intangible asset; and the ability to measure reliably the expenditure attributable to the intangible asset during its development.

The amount initially recognised for an internally-generated intangible asset is the sum of the expenditure incurred from the date when the intangible asset first meets the recognition criteria listed above. Where no internally-generated intangible asset can be recognised, development expenditure is recognised in profit or loss in the period in which it is incurred.

Subsequent to initial recognition, internally-generated intangible assets are measured at cost less accumulated amortisation and accumulated impairment losses (if any), on the same basis as intangible assets acquired separately.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Intangible assets (Continued)

Intangible assets acquired in a business combination not under common control

Intangible assets acquired in a business combination are recognised separately from goodwill and are initially recognised at their fair value at the acquisition date (which is regarded as their cost).

Subsequent to initial recognition, intangible assets acquired in a business combination with finite useful lives are reported at cost less accumulated amortisation and any accumulated impairment losses, on the same basis as intangible assets that are acquired separately.

Derecognition of intangible assets

An intangible asset is derecognised on disposal, or when no future economic benefits are expected from use or disposal. Gains and losses arising from derecognition of an intangible asset are measured as the difference between the net disposal proceeds and the carrying amount of the asset and are recognised in profit or loss in the period when the asset is derecognised.

Impairment of tangible and intangible assets other than goodwill

At the end of the reporting period, the Target Group reviews the carrying amounts of its tangible and intangible assets with finite useful lives to determine whether there is any indication that these assets have suffered an impairment loss. If any such indication exists, the recoverable amount of the relevant asset is estimated in order to determine the extent of the impairment loss (if any).

The recoverable amount of tangible and intangible assets is estimated individually. When it is not possible to estimate the recoverable amount individually, the Target Group estimates the recoverable amount of the cash-generating unit to which the asset belongs. When a reasonable and consistent basis of allocation can be identified, corporate assets are also allocated to individual cash-generating units, or otherwise they are allocated to the smallest Target Group of cash-generating units for which a reasonable and consistent allocation basis can be identified.

Recoverable amount is the higher of fair value less costs of disposal and value in use. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset (or a cash-generating unit) for which the estimates of future cash flows have not been adjusted.

If the recoverable amount of an asset (or a cash-generating unit) is estimated to be less than its carrying amount, the carrying amount of the asset (or a cash-generating unit) is reduced to its recoverable amount. In allocating the impairment loss, the impairment loss is allocated first to reduce the carrying amount of any goodwill (if applicable) and then to the other assets on a basis determined by the carrying amount of each asset in the unit. The carrying amount of an asset is not reduced below the highest of its fair value less costs of disposal (if measurable), its value in use (if determinable) and zero. The amount of the impairment loss that would otherwise have been allocated to the asset is allocated pro rata to the other assets of the unit. An impairment loss is recognised immediately in profit or loss.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Leased assets

At inception of a contract, the Target Group assesses whether the contract is, or contains, a lease. A contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration. Control is conveyed where the customer has both the right to direct the use of the identified asset and the right to obtain substantially all of the economic benefits from that use.

(i) As a lessee

Where a contract contains lease components and non-lease components, the Target Group has elected not to separate the non-lease components and accounts for each lease component and any associated non-lease components as a single lease component for all leases.

At the lease commencement date, the Target Group recognises a right-of-use asset and a lease liability, except for short-term leases that have a lease term of 12 months or less and leases of low-value assets. When the Target Group enters into a lease in respect of a low-value asset, the Target Group decides whether to capitalise the lease on a lease-by-lease basis. The lease payments associated with those leases which are not capitalised are recognised as an expense on a systematic basis over the lease term.

Where a lease is capitalised, the lease liability is initially recognised at the present value of the lease payments payable over the lease term, discounted using the interest rate implicit in the lease or, if that rate cannot be readily determined, using a relevant incremental borrowing rate. After initial recognition, the lease liability is measured at amortised cost and interest expense is calculated using the effective interest method. Variable lease payments that do not depend on an index or rate are not included in the measurement of the lease liability and hence are charged to profit or loss in the accounting period in which they are incurred.

The right-of-use asset recognised when a lease is capitalised is initially measured at cost, which comprises the initial amount of the lease liability plus any lease payments made at or before the commencement date, and any initial direct costs incurred. Where applicable, the cost of the right-of-use assets also includes an estimate of costs to dismantle and remove the underlying asset or to restore the underlying asset or the site on which it is located, discounted to their present value, less any lease incentives received. The right-of-use asset is subsequently stated at cost less accumulated depreciation and impairment losses.

When is remeasured when there is a change in future lease payments arising from a change in an index or rate, or there is a change in the Target Group's estimate of the amount expected to be payable under a residual value guarantee, or when there is a change arising from the reassessment of whether the Target Group will be reasonably certain to exercise a purchase, extension or termination option. When the lease liability is remeasured in this way, a corresponding adjustment is made to the carrying amount of the right-of-use asset, or is recorded in profit or loss if the carrying amount of the right-of-use asset has been reduced to zero.

The lease liability is also remeasured when there is a change in the scope of a lease or the consideration for a lease that is not originally provided for in the lease contract ("lease modification") that is not accounted for as a separate lease. In this case, the lease liability is remeasured based on the revised lease payments and lease term using a revised discount rate at the effective date of the modification.

In the consolidated statement of financial position, the current portion of long-term lease liabilities is determined as the present value of contractual payments that are due to be settled within twelve months after the reporting period.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Leased assets (continued)

(ii) As a lessor

When the Target Group acts as a lessor, it determines at lease inception whether each lease is a finance lease or an operating lease. A lease is classified as a finance lease if it transfers substantially all the risks and rewards incidental to the ownership of an underlying asset to the lessee. If this is not the case, the lease is classified as an operating lease.

When a contract contains lease and non-lease components, the Target Group allocates the consideration in the contract to each component on a relative stand-alone selling price basis.

When the Target Group is an intermediate lessor, the sub-leases are classified as finance leases or operating leases with reference to the right-of-use asset arising from the head lease. If the head lease is a short-term lease to which the Target Group applies the exemption method, then the Target Group classifies the sub-lease as an operating lease.

Inventories

Inventories are stated at the lower of cost and net realisable value. Costs of inventories are calculated using the first-in, first-out method. Net realisable value represents the estimated selling price for inventories less all estimated costs of completion and costs necessary to make the sale.

Provisions

Provisions are recognised when the Target Group has a present obligation (legal or constructive) as a result of a past event, it is probable that the Target Group will be required to settle that obligation, and a reliable estimate can be made of the amount of the obligation.

Provisions are measured at the best estimate of the consideration required to settle the present obligation at the end of the reporting period, taking into account the risks and uncertainties surrounding the obligation. When a provision is measured using the cash flows estimated to settle the present obligation, its carrying amount is the present value of those cash flows (where the effect of the time value of money is material).

When some or all of the economic benefits required to settle a provision are expected to be recovered from a third party, a receivable is recognised as an asset if it is virtually certain that reimbursement will be received and the amount of the receivable can be measured reliably.

Financial instruments

Financial assets and financial liabilities are recognised when a Target Group entity becomes a party to the contractual provisions of an instrument. All regular-way purchases or sales of financial assets are recognised and derecognised on a trade date basis. Regular-way purchases or sales are purchases or sales of financial assets that require delivery of assets within the time frame established by regulation or convention in the marketplace.

Financial assets and financial liabilities are initially measured at fair value, except for accounts receivable arising from contracts with customers. Transaction costs that are directly attributable to the acquisition or issue of financial assets and financial liabilities (other than financial assets or financial liabilities measured at fair value through profit or loss (the "FVTPL") are added to or deducted from the fair value of the financial assets or financial liabilities, as appropriate, on initial recognition. Transaction costs directly attributable to the acquisition of financial assets or financial liabilities FVTPL are recognised immediately in profit or loss.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Financial instruments (Continued)

Effective interest method

The effective interest method is a method of calculating the amortised cost of a financial asset or financial liability and of allocating interest income and interest expense over the relevant period. The effective interest rate is the rate that exactly discounts the estimated future cash receipts and payments (including all fees and points paid or received that form an integral part of the effective interest rate, transaction costs and other premiums or discounts) through the expected life of the financial asset or financial liability, or, where appropriate, a shorter period, to the net carrying amount on initial recognition.

Financial assets

Classification and subsequent measurement of financial assets

Financial assets that meet the following conditions are subsequently measured at amortised cost:

– the financial asset is held within a business model whose objective is to collect contractual cash flows; and

– the contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

Financial assets that meet the following conditions are subsequently measured at fair value through other comprehensive income ("FVTOCI"):

– the financial asset is held within a business model whose objective is achieved by both collecting contractual cash flows and selling; and

– the contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

All other financial assets are subsequently measured at FVTPL, except that at the date of initial application/initial recognition of a financial asset, the Target Group may irrevocably elect to present subsequent changes in fair value of an equity investment in other comprehensive income if that equity investment is neither held for trading nor contingent consideration recognised by an acquirer in a business combination to which IFRS 3 *Business Combinations* applies.

In addition, the Target Group may irrevocably designate a financial asset that is required to be measured at amortised cost or FVTOCI to be measured at FVTPL if doing so eliminates or significantly reduces an accounting mismatch.

(i) Amortised cost and interest income

Interest income is recognised using the effective interest method for financial assets measured subsequently at amortised cost. Interest income is calculated by applying the effective interest rate to the gross carrying amount of a financial asset, except for financial assets that have subsequently become credit-impaired (see below). For financial assets that have subsequently become credit-impaired, interest income is recognised by applying the effective interest rate to the amortised cost of the financial asset from the next reporting period. If the credit risk on the credit-impaired financial instrument improves so that the financial asset is no longer credit-impaired, interest income is recognised by applying the effective interest rate to the gross carrying amount of the financial asset from the beginning of the reporting period following the determination that the asset is no longer credit-impaired.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Financial instruments (continued)

Financial assets (continued)

Classification and subsequent measurement of financial assets (continued)

(ii) Equity instruments designated as at FVTOCI

Investments in equity instruments at FVTOCI are subsequently measured at fair value with gains and losses arising from changes in fair value recognised in other comprehensive income and accumulated in other reserves, and they are not subject to impairment assessment. The cumulative gain or loss is not reclassified to profit or loss on disposal of the equity investments, and is transferred to retained earnings.

Dividends from these investments in equity instruments are recognised in profit or loss when the Target Group's right to receive the dividends is established, unless the dividends clearly represent a recovery of part of the cost of the investment. Dividends are included in the "other income" line item in profit or loss.

(iii) Financial assets at FVTPL

Financial assets that do not meet the criteria for being measured at amortised cost or FVTOCI or designated as FVTOCI are measured at FVTPL.

Financial assets at FVTPL are measured at fair value at the end of each reporting period, with any fair value gains or losses recognised in profit or loss. The net gain or loss recognised in profit or loss includes any dividend or interest earned on the financial asset and is included in the "other gains and losses" line item.

Impairment of financial assets

The Target Group recognises a loss allowance for expected credit loss ("ECL") on financial assets which are subject to impairment under IFRS 9 (including accounts and bills receivables, other receivables, etc). The amount of ECL is updated at each reporting date to reflect changes in credit risk since initial recognition.

Lifetime ECL represents the ECL that will result from all possible default events over the expected life of the relevant instrument. In contrast, 12-month ECL represents the portion of lifetime ECL that is expected to result from default events that are possible within 12 months after the reporting date. Assessments are done based on the Target Group's historical credit loss experience, adjusted for factors that are specific to the debtors, general economic conditions and an assessment of both the current conditions at the reporting date as well as the forecast of future conditions.

The Target Group always recognises lifetime ECL for accounts receivable. The ECL on these assets is assessed individually for credit-impaired debtors or using a provision matrix with appropriate groupings.

For all other instruments, the Target Group measures the loss allowance equal to 12-month ECL, unless when there has been a significant increase in credit risk since initial recognition, the Target Group recognises lifetime ECL. The assessment of whether lifetime ECL should be recognised is based on significant increases in the likelihood or risk of a default occurring since initial recognition.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Financial instruments (continued)

Impairment of financial assets (continued)

(i) Significant increase in credit risk

In assessing whether the credit risk has increased significantly since initial recognition, the Target Group compares the risk of a default occurring on the financial instrument as at the reporting date with the risk of a default occurring on the financial instrument as at the date of initial recognition. In making this assessment, the Target Group considers both quantitative and qualitative information that is reasonable and supportable, including historical experience and forward-looking information that is available without undue cost or effort.

In particular, the following information is taken into account when assessing whether credit risk has increased significantly:

- an actual or expected significant deterioration in the financial instrument's external credit rating (if available);
- significant deterioration in external market indicators of credit risk, e.g., a significant increase in the credit spread, the credit default swap prices for the debtor;
- existing or forecast adverse changes in business, financial or economic conditions that are expected to cause a significant decrease in the debtor's ability to meet its debt obligations;
- an actual or expected significant deterioration in the operating results of the debtor; and
- an actual or expected significant adverse change in the regulatory, economic, or technological environment of the debtor that results in a significant decrease in the debtor's ability to meet its debt obligations.

Irrespective of the outcome of the above assessment, the Target Group presumes that the credit risk has increased significantly since initial recognition when contractual payments are more than 30 days past due, unless the Target Group has reasonable and supportable information that demonstrates otherwise.

Despite the foregoing, the Target Group assumes that the credit risk on a debt instrument has not increased significantly since initial recognition if the debt instrument is determined to have low credit risk at the reporting date. A debt instrument is determined to have low credit risk if (i) it has a low risk of default; (ii) the borrower has a strong capacity to meet its contractual cash flow obligations in the near term; and (iii) adverse changes in economic and business conditions in the longer term may, but will not necessarily, reduce the ability of the borrower to fulfil its contractual cash flow obligations.

For financial guarantee contracts, the date that the Target Group becomes a party to the irrevocable commitment is considered to be the date of initial recognition for the purposes of assessing the financial instrument for impairment. In assessing whether there has been a significant increase in the credit risk since initial recognition of financial guarantee contracts, the Target Group considers the changes in the risk that the specified debtor will default on the contract.

The Target Group regularly monitors the effectiveness of the criteria used to identify whether there has been a significant increase in credit risk and revises them as appropriate to ensure that the criteria are capable of identifying a significant increase in credit risk before the amount becomes past due.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Financial instruments (continued)

Impairment of financial assets (continued)

(ii) Definition of default

For internal credit risk management, the Target Group considers that an event of default occurs when information developed internally or obtained from external sources indicates that the debtor is unlikely to pay its creditors, including the Target Group, in full (without taking into account any collateral held by the Target Group). The Target Group considers both quantitative and qualitative information that is reasonable and supportable, including historical experience and forward-looking information that is available without undue cost or effort.

(iii) Credit-impaired financial assets

A financial asset is credit-impaired when one or more events of default that have a detrimental impact on the estimated future cash flows of that financial asset have occurred. Evidence that a financial asset is credit-impaired includes observable data about the following events:

(a) significant financial difficulty of the issuer or the borrower;

(b) a breach of contract, such as a default or past due event;

(c) the lenders of the borrower, for economic or contractual reasons relating to the borrower's financial difficulty, having granted the borrower concessions that the lenders would not otherwise consider;

(d) it is becoming probable that the borrower will enter bankruptcy or other financial reorganisation; or

(e) the disappearance of an active market for that financial asset because of financial difficulties.

(iv) Write-off policy

The Target Group writes off a financial asset when there is information indicating that the counterparty is in severe financial difficulty and there is no realistic prospect of recovery. Financial assets written off may still be subject to enforcement activities under the Target Group's recovery procedures, taking into account legal advice where appropriate. A write-off constitutes a derecognition event. Any subsequent recoveries are recognised in profit or loss.

(v) Measurement and recognition of ECL

The measurement of ECL is a function of the probability of default, loss given default (i.e., the magnitude of the loss if there is a default) and the exposure at default. The assessment of the probability of default and loss given default is based on historical data adjusted for forward-looking information. Estimation of ECL reflects an unbiased and probability-weighted amount that is determined with the respective risks of default occurring as the weights.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Financial instruments (continued)

Impairment of financial assets (continued)

(v) Measurement and recognition of ECL (continued)

Generally, the ECL is the difference between all contractual cash flows that are due to the Target Group in accordance with the contract and the cash flows that the Target Group expects to receive, discounted at the effective interest rate determined at initial recognition.

For a financial guarantee contract, the Target Group is required to make payments only in the event of a default by the debtor in accordance with the terms of the instrument that is guaranteed. Accordingly, the expected losses are the present value of the expected payments to reimburse the holder for a credit loss that it incurs less any amounts that the Target Group expects to receive from the holder, the debtor or any other party.

For ECL on financial guarantee contracts, the Target Group applies a discount rate that reflects the current market assessment of the time value of money and the risks that are specific to the cash flows but only if, and to the extent that, the risks are taken into account by adjusting the discount rate instead of adjusting the cash shortfalls being discounted.

Where ECL is measured on a collective basis or to cater for cases where evidence at the individual instrument level may not yet be available, the financial instruments are Target Grouped on the following basis:

– nature of financial instruments (i.e., the Target Group's accounts and bills receivables and other receivables are each assessed as a separate Target Group. Loans receivable are assessed for ECL on an individual basis);

– past-due status; and

– external credit ratings, where available.

The grouping is regularly reviewed by management to ensure the constituents of each group continue to share similar credit risk characteristics.

Interest income is calculated based on the gross carrying amount of the financial asset unless the financial asset is credit-impaired, in which case interest income is calculated based on the amortised cost of the financial asset.

For financial guarantee contracts, the loss allowances are recognised at the higher of the amount of the loss allowance determined in accordance with IFRS 9; and the amount initially recognised less, where appropriate, the cumulative amount of income recognised over the guarantee period.

ECLs are remeasured at each reporting date to reflect changes in a financial instrument's credit risk since initial recognition. Any change in the ECL amount is recognised as an impairment gain or loss in profit or loss. The Target Group recognises an impairment gain or loss for all financial instruments with a corresponding adjustment to their carrying amount through a loss allowance account.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Financial instruments (continued)

Derecognition of financial assets

The Target Group derecognises a financial asset only when the contractual rights to the cash flows from the asset expire, or when it transfers the financial asset and substantially all the risks and rewards of ownership of the asset to another entity. If the Target Group retains substantially all the risks and rewards of ownership of a transferred financial asset, the Target Group continues to recognise the financial asset and also recognises a collateralised borrowing for the proceeds received.

On derecognition of a financial asset measured at amortised cost, the difference between the asset's carrying amount and the sum of the consideration received and receivable is recognised in profit or loss.

On derecognition of an investment in an equity instrument which the Target Group has elected on initial recognition to measure at FVTOCI upon application of IFRS 9, the cumulative gain or loss previously accumulated in other reserves is not reclassified to profit or loss, but is transferred to retained earnings.

Financial liabilities and equity

Classification as debt or equity

Debt and equity instruments are classified as either financial liabilities or as equity in accordance with the substance of the contractual arrangements and the definitions of a financial liability and an equity instrument.

Equity instruments

An equity instrument is any contract that evidences a residual interest in the assets of an entity after deducting all of its liabilities. Equity instruments issued by the Company are recognised at the proceeds received, net of direct issue costs.

Financial liabilities

All financial liabilities are subsequently measured at amortised cost using the effective interest method.

Financial liabilities at amortised cost

Financial liabilities including borrowings, accounts payables and other payables are subsequently measured at amortised cost, using the effective interest method.

Derecognition of financial liabilities

The Target Group derecognises financial liabilities when, and only when, the Target Group's obligations are discharged, cancelled or have expired. The difference between the carrying amount of the financial liability derecognised and the consideration paid or payable is recognised in profit or loss.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Related parties

(a) A person, or a close member of that person's family, is related to the Target Group if that person:

(i) has control or joint control over the Target Group;

(ii) has significant influence over the Target Group; or

(iii) is a member of the key management personnel of the Target Group or the Target Group's parent.

(b) An entity is related to the Target Group if any of the following conditions applies:

(i) the entity and the Target Group are members of the same Target Group;

(ii) one entity is an associate or joint venture of the other entity (or an associate or joint venture of a member of a Target Group of which the other entity is a member);

(iii) both entities are joint ventures of the same third party;

(iv) one entity is a joint venture of a third entity and the other entity is an associate of the third entity;

(v) the entity is a post-employment benefit plan for the benefit of employees of either the Target Group or an entity related to the Target Group;

(vi) the entity is controlled or jointly controlled by a person identified in (a);

(vii) a person identified in (a)(i) has significant influence over the entity or is a member of the key management personnel of the entity (or of a parent of the entity); and

(viii) the entity, or any member of a Target Group of which it is a part, provides key management personnel services to the Target Group or to the Target Group's parent.

Close members of the family of a person are those family members who may be expected to influence, or be influenced by, that person in their dealings with the entity.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

3. CRITICAL ACCOUNTING JUDGEMENTS AND KEY SOURCES OF ESTIMATION UNCERTAINTY

In the application of the Target Group's accounting policies, which are described in note 2.3 to the Historical Financial Information, the directors are required to make judgements, estimates and assumptions about the carrying amounts of assets and liabilities that are not readily apparent from other sources. The estimates and associated assumptions are based on historical experience and other factors that are considered to be relevant. Actual results may differ from these estimates.

The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised if the revision affects only that period or in the period of the revision and future periods if the revision affects both current and future periods.

Key sources of estimation uncertainty

The following are the key assumptions concerning the future, and other key sources of estimation uncertainty at the end of the reporting period that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year.

Impairment losses

In considering the impairment losses that may be required for certain of the Target Group's assets which mainly include property, plant and equipment intangible assets and right-of-use assets, the recoverable amount of the asset needs to be determined. The recoverable amount is the higher of its fair value less cost of disposal and value in use. It is difficult to precisely estimate fair value because quoted market prices for these assets may not be readily available. In determining the value in use, the Target Group uses all readily available information in determining expected cash flows generated by the cash-generating unit to which the asset belongs, and they are discounted to their present value, which requires significant judgement relating to cash flow items such as level of sale volume, selling price, amount of operating costs and future returns.

In considering the impairment losses that may be required for current receivables and other financial assets, future cash flows need to be determined. One of the key assumptions that has to be applied is about the ability of the debtors to settle the receivables.

Notwithstanding that the Target Group has used all available information to make this estimation, inherent uncertainty exists and actual write-offs may be higher or lower than the amount estimated.

Deferred tax assets

The Target Group recognises deferred income tax assets to the extent that it is probable that future taxable profits and taxable temporary differences will be available against which the deductible temporary differences and tax losses carried forward can be utilised, using tax rates that are expected to be applied in the period when the asset is recovered. Recognition of deferred income tax assets is complex because it requires significant estimation and judgement, and it involves significant assumptions, including future taxable profits, future tax rates, the reversal of deductible and taxable temporary differences, and the possible utilisation of tax losses carried forward that could be significantly affected by changes in the tax law framework and future market or economic conditions. Further details on deferred taxes are disclosed in note 23 to the Historical Financial Information.

Provision of ECL for accounts and bills receivables

The Target Group uses a provision matrix to calculate ECL for accounts receivable. The provision rates are based on the ageing of accounts receivable as groupings of receivables that have similar loss patterns. The provision matrix is based on the Target Group's historical default rates, taking into consideration forward-looking information that is available without undue cost or effort. At each reporting date, the historical observed default rates are reassessed and changes in the forward-looking information are considered. In addition, accounts and bills receivables with significant balances and that are credit-impaired are assessed for ECL individually.

The provision for ECL is sensitive to changes in estimates. The information about the ECL and the Target Group's accounts receivable are disclosed in notes 19 and 32.2 to the Historical Financial Information.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

4. REVENUE FROM GOODS AND SERVICES

Disaggregation of revenue by business line is as follows:

	Year ended 31 December 2022 RMB'000	Year ended 31 December 2023 RMB'000	Year ended 31 December 2024 RMB'000	Seven months ended 31 July 2024 RMB'000 (unaudited)	Seven months ended 31 July 2025 RMB'000
Revenue from goods and services					
– Coal	3,753,159	5,421,231	9,103,210	4,824,999	2,364,871
– Agency services	19,510	7,328	20,794	7,778	67,348
– Others	-	3,875	-	-	-
Others	206	70	491	-	79
	3,772,875	5,432,504	9,124,495	4,832,777	2,432,298

The Target Group's revenues from contracts with customers are RMB3,772,669,000, RMB5,432,434,000, RMB 9,124,004,000, RMB4,832,777,000 (unaudited) and RMB2,432,219,000 for the years ended 31 December 2022, 2023 and 2024 and the seven months ended 31 July 2024 and 2025, respectively.

The Target Group sells coal to customers at the spot market. For the sale of coal, revenue is recognised when control of the goods has transferred, being when the goods have been shipped to the customers' specified locations. According to the Target Group's historical experience, there was no significant exchange or return of coal. There are no sales-related warranties associated with coal.

In the course of the Target Group's trading business of coal, If the Group does not obtain the control of the goods before transferring to customer, revenue is recognised on a net basis and presented in "revenue from agency services ".

All performance obligations for the sale of coal are part of contracts with an original expected duration of one year or less, and as permitted under IFRS 15, the transaction price allocated to these unsatisfied contracts is not disclosed.

5. SEGMENT AND OTHER INFORMATION

For management purposes, the Target Group only has one reportable operating segment. Management monitors the operating results of the Target Group's operating segment as a whole for the purpose of making decisions about resource allocation and performance assessment.

The following table sets out information about geographical location of the Target Group's revenue from external customers. The geographical location of customers is based on the location at which the services were provided or the goods delivered.

	Year ended 31 December 2022 RMB'000	Year ended 31 December 2023 RMB'000	Year ended 31 December 2024 RMB'000	Seven months ended 31 July 2024 RMB'000 (unaudited)	Seven months ended 31 July 2025 RMB'000
Mainland China	3,011,066	4,836,712	8,631,144	4,661,741	2,098,771

At 31 December 2024	31,827	3,706	35,533
At 31 July 2025	31,147	3,218	34,365

Notes:

(i) As at 31 December 2022, the net carrying amount of the Target Group's investment properties included in the property, plant and equipment was RMB2,666,000. The fair value of the investment properties as at 31 December 2022 was RMB52,045,000, which is determined using the market comparison approach by reference to the recent sales price of comparable properties on a price per square metre basis using market data which is publicly available. The fair value measurement is categorised into Level 3.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

14. PROPERTY, PLANT AND EQUIPMENT (continued)

Notes:

(ii) There is no pledged property, plant and equipment of the Target Group at 31 December 2022, 2023 and 2024 and 31 July 2025.

(iii) The Group was in the process of applying for the title certificates of certain of its properties with an aggregate carrying amount of RMB5,378,000, RMB5,075,000, RMB3,114,000, RMB2,983,000 as at the end of each of the Relevant Periods. The directors of the Target Company are of the opinion that the Target Group is entitled to lawfully and validly occupy or use the above mentioned properties.

The Target Company

	-	-	-	2,057,779
	319,517	579,204	589,904	2,517,691

As at the end of each of the Relevant Periods, all accounts and bills receivables of the Target Group are from contracts with customers.

Bills receivable were issued by the related parties of the Target Group named CHN Energy Finance Co.,Ltd. ("CHN Energy Finance") and CHN Energy (Beijing) Commercial Factoring Company Limited ("CHN Energy Commercial Factoring"), which would expire within six months. As at 31 December 2022, 2023 and 2024 and 31 July 2025, the Target Group had no bills receivable that were pledged to secure bills payable.

As at the end of each of the Relevant Periods, the ageing analysis of accounts receivable, based on the invoice date (or date of revenue recognition, if earlier) and net of loss allowance, is less than one year.

As at 31 December 2022, 2023 and 2024, included in the Target Group's accounts receivable are debtors with aggregate gross carrying amounts of RMB1,101,000, RMB1,048,000 and RMB1,048,000 which are past due as at the reporting dates. The past due balances are considered as in default because the debtors are not able and likely to pay for the debts, and full provision was made against the above accounts receivable as at the reporting dates. As at 31 July 2025, the Target Group's accounts receivable are not past due. The Target Group does not hold any collateral over these balances.

Details of credit risks of accounts and bills receivables as at 31 December 2022, 2023 and 2024 and 31 July 2025 are set out in note 32.2 to the Historical Financial Information.

All accounts and bills receivables are denominated in RMB.

Transfers of financial assets

As at 31 July 2025, the Target Group endorsed bills receivable that had not yet matured amounting to RMB1,568,114,000 to suppliers to settle the accounts payable of the same amounts. Since the Target Group had not transferred the significant risks and rewards relating to these bills receivables, the Target Group did not derecognise these bills receivable.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

19. ACCOUNTS AND BILLS RECEIVABLES (continued)

The Target Company

	31 December 2022 RMB'000	31 December 2023 RMB'000	31 December 2024 RMB'000	31 July 2025 RMB'000

21. RESTRICTED BANK DEPOSITS

The Target Group and the Target Company

Restricted bank deposits represented the housing reform fund and housing maintenance fund.

The Target Group performed an impairment assessment on restricted bank deposits and concluded that the probability of default of the counterparty banks was insignificant and accordingly, no allowance for credit losses was provided.

Details of the impairment assessment of restricted bank deposits are set out in note 32.2 to the Historical Financial Information.

22. CASH AND CASH EQUIVALENTS AND TIME DEPOSITS

(a) Cash and cash equivalents

The Target Group

Cash and cash equivalents in the consolidated statements of financial position and the consolidated statements of cash flows of the Target Group comprise cash at bank and in hand, and time deposits with original maturity within three months.

	31 December 2022 RMB'000	31 December 2023 RMB'000	31 December 2024 RMB'000	31 July 2025 RMB'000
Deposits with banks and other financial institutions	402,699	514,879	995,617	1,389,129

22. CASH AND CASH EQUIVALENTS AND TIME DEPOSITS (continued)

(b) Reconciliation of liabilities arising from financing activities (continued)

	Borrowings RMB '000 (note 24)	Lease liabilities RMB '000 (note 25)	Total RMB '000
At 1 January 2024	370,278	8,796	379,074
Capital element of lease rentals paid	-	(6,578)	(6,578)
Interest element of lease rentals paid	-	(179)	(179)
Interest paid	(17,419)	-	(17,419)
New borrowings	1,377,819	-	1,377,819
Repayments of borrowings	(1,070,000)	-	(1,070,000)
Interest expenses	17,637	179	17,816
Increase in lease liabilities from entering into new leases during the year	-	703	703
At 31 December 2024	678,315	2,921	681,236
At 1 January 2025	678,315	2,921	681,236
Capital element of lease rentals paid	-	(1,974)	(1,974)
Interest paid	(3,325)	-	(3,325)
New borrowings	220,000	-	220,000
Repayments of borrowings	(897,819)	-	(897,819)
Interest expenses	2,829	-	2,829
At 31 July 2025	-	947	947

(c) Total cash outflow for leases

Amounts included in the consolidated statement of cash flows for leases comprise the following:

	Year ended 31 December 2022 RMB '000	Year ended 31 December 2023 RMB '000	Year ended 31 December 2024 RMB '000	Seven months ended 31 July 2024 RMB '000 (unaudited)	Seven months ended 31 July 2025 RMB '000
Within operating cash flows	173	192	53	-	6,911
Within financing cash flows	6,987	4,658	6,757	4,303	1,974
	7,160	4,850	6,810	4,303	8,885

These amounts relate to the following:

	Year ended 31 December 2022 RMB'000	Year ended 31 December 2023 RMB'000	Year ended 31 December 2024 RMB'000	Seven months ended 31 July 2024 RMB'000 (unaudited)	Seven months ended 31 July 2025 RMB'000
Lease rentals paid	7,160	4,850	6,810	4,303	8,885

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

23. DEFERRED TAXATION

The Target Group

For presentation in the consolidated statement of financial position, certain deferred tax assets and liabilities have been offset. The following is an analysis of the deferred tax balances for financial reporting purposes.

	31 December 2022 RMB'000	31 December 2023 RMB'000	31 December 2024 RMB'000	31 July 2025 RMB'000
Deferred tax assets	4,776	5,885	2,577	2,392

The following are the major deferred tax assets recognised and the movements thereon during the year/period:

	1 January 2022 RMB'000	Credited/(charged) to profit or loss RMB'000	31 December 2022 RMB'000
Allowances for receivables and prepayments	3,198	-	3,198
Impairment of property, plant and equipment	1,578	-	1,578
Net deferred tax assets	4,776	-	4,776

	1 January 2023 RMB'000	Credited/(charged) to profit or loss RMB'000	31 December 2023 RMB'000
Allowances for receivables and prepayments	3,198	-	3,198
Impairment of property, plant and equipment	1,578	-	1,578
Lease transactions	-	1,109	1,109
Net deferred tax assets	4,776	1,109	5,885

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

23. DEFERRED TAXATION (continued)

The Target Group (continued)

The following are the deferred tax assets recognised and the movements thereon during the year/period:

	1 January 2024 RMB'000	Credited/(charged) to profit or loss RMB'000	31 December 2024 RMB'000
Allowances for receivables and prepayments	3,198	(2,130)	1,068
Impairment of property, plant and equipment	1,578	-	1,578
Lease transactions	1,109	(1,178)	(69)
Net deferred tax assets	5,885	(3,308)	2,577

	1 January 2025 RMB'000	Credited/(charged) to profit or loss RMB'000	31 July 2025 RMB'000
Allowances for receivables	1,068	(268)	800
Impairment of property, plant and equipment	1,578	-	1,578
Lease transactions	(69)	83	14
Net deferred tax assets	2,577	(185)	2,392

As at the end of each of the Relevant Periods, the Target Group had no unused tax losses.

The Target Company

	31 December 2022 RMB'000	31 December 2023 RMB'000	31 December 2024 RMB'000	31 July 2025 RMB'000
Deferred tax assets	1,588	1,588	1,588	1,588

The following are the major deferred tax assets recognised and movements thereon during the year/period:

	1 January 2022 RMB'000	Credited/(charged) to profit or loss RMB'000	31 December 2022 RMB'000
Allowances for receivables	10	-	10
Impairment of property, plant and equipment	1,578	-	1,578
Deferred tax assets	1,588	-	1,588

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

23. DEFERRED TAXATION (continued)

The Target Company (continued)

	1 January 2023 RMB'000	Credited/(charged) to profit or loss RMB'000	31 December 2023 RMB'000
Allowances for receivables	10	-	10
Impairment of property, plant and equipment	1,578	-	1,578
Deferred tax assets	1,588	-	1,588

	1 January 2024 RMB'000	Credited/(charged) to profit or loss RMB'000	31 December 2024 RMB'000
Allowances for receivables	10	-	10
Impairment of property, plant and equipment	1,578	-	1,578
Deferred tax assets	1,588	-	1,588

	1 January 2025 RMB'000	Credited/(charged) to profit or loss RMB'000	31 July 2025 RMB'000
Allowances for receivables	10	-	10
Impairment of property, plant and equipment	1,578	-	1,578
Deferred tax assets	1,588	-	1,588

As at the end of each of the Relevant Periods, the Target Company has no unused tax losses.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

24. BORROWINGS

The Target Group and the Target Company

An analysis of the Target Group's and the Target Company's borrowings is as follows:

	31 December 2022 RMB'000	31 December 2023 RMB'000	31 December 2024 RMB'000	31 July 2025 RMB'000
Current borrowings:				
Short-term other borrowings	-	370,278	678,315	-

The Target Group's and the Target Company's short-term other borrowings are all from CHN Energy Finance. They were unsecured and bore interest at 2.55% per annum as at 31 December 2023 and at rates ranging from 2.20% to 2.55% per annum as at 31 December 2024.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

25. LEASE LIABILITIES

The Target Group

The lease liabilities were repayable as follows:

	31 December 2022		31 December 2023		31 December 2024		31 July 2025	
	Present value of the minimum lease payments RMB'000	Total minimum lease payments RMB'000	Present value of the minimum lease payments RMB'000	Total minimum lease payments RMB'000	Present value of the minimum lease payments RMB'000	Total minimum lease payments RMB'000	Present value of the minimum lease payments RMB'000	Total minimum lease payments RMB'000
Within 1 year	8,511	8,872	8,796	8,872	2,921	2,961	947	958
After 1 year but within 2 years	6,514	6,654	-	-	-	-	-	-
	15,025	15,526	8,796	8,872	2,921	2,961	947	958
Less: Total future interest expenses		(501)		(76)		(40)		(11)

During the year ended 31 December 2024, the equity holders made a cash contribution of RMB214,510,000 to the Target Company's paid-up capital.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

30. RESERVES

The Target Group

	Notes	31 December 2022 RMB'000	31 December 2023 RMB'000	31 December 2024 RMB'000	31 July 2025 RMB'000
Capital reserve	(i)	197,921	197,921	197,921	197,921
Statutory reserves	(ii)	79,067	83,115	87,849	87,849
Retained earnings	(iii)	66,588	102,889	156,536	142,270
		343,576	383,925	442,306	428,040

Notes:

(i) Capital reserve

The capital reserve mainly represents the amount of the net assets acquired from or transferred to entities under common control with nil consideration.

(ii) Statutory reserves

According to the PRC Company Law and the Company's Articles of Association, the Company is required to transfer 10% of its net profit as determined in accordance with the China Accounting Standards for Business Enterprises to its statutory surplus reserve until the reserve balance reaches 50% of the registered capital. The transfer to this reserve must be made before the distribution of a dividend to shareholders.

(iii) Retained earnings

Included in the retained earnings of the Target Group is its share of the surplus reserve of its subsidiaries, amounting to RMB35,653,000, RMB35,653,000, RMB36,186,000 and RMB36,186,000 as at 31 December 2022, 31 December 2023, 31 December 2024 and 31 July 2025, respectively.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

31. CAPITAL RISK MANAGEMENT

The Target Group's policy is to maintain a strong capital base so as to maintain investor, creditor and market confidence and to sustain future development of the business.

The Target Group manages the capital structure and makes adjustments to it in the light of changes in economic conditions and the risk characteristics of the underlying assets. In order to maintain or adjust the capital structure, the Target Group may adjust the amount of dividends paid to shareholders, return capital to shareholders or issue new shares to reduce debts.

The Target Group monitors capital using a liability-to-asset ratio which is total liabilities divided by total assets. The Target Group aims to maintain the gearing ratio at a reasonable level. The Target Group's gearing ratios as at 31 December 2022, 2023 and 2024 and 31 July 2025 were 45.6%, 61.3%, 64.6% and 82.7%, respectively.

32. FINANCIAL INSTRUMENTS

32.1 Categories of financial instruments

The carrying amounts of each of the following categories of financial assets and financial liabilities at the end of each of the Relevant Periods are set out as follows:

	31 December 2022 RMB'000	31 December 2023 RMB'000	31 December 2024 RMB'000	31 July 2025 RMB'000
Financial assets				
Financial assets at amortised cost	723,151	1,095,977	1,588,580	3,910,139
Equity securities at FVTOCI (Note 16)	6,436	6,436	6,436	4,936
	729,587	1,102,413	1,595,016	3,915,075
Financial liabilities				
Amortised cost	353,177	737,776	1,327,155	3,342,784

32.2 Financial risk management objectives and policies

The Target Group's major financial instruments include accounts and bills receivables, loans and advances to/deposits from/amounts due to China Energy Group and fellow subsidiaries, other receivables, accounts payable, borrowings, other payables and lease liabilities. Details of the financial instruments are disclosed in the respective notes. The risks associated with these financial instruments include market risk (interest rate and currency risks), credit risk and liquidity risk. The policies on how to mitigate these risks are set out below. The management manages and monitors these exposures to ensure appropriate measures are implemented in a timely and effective manner.

Market risk

(i) Currency risk

The functional currency of most of the Target Group entities is RMB, in which most of the transactions are denominated. However, certain of the Target Group's accounts payable are denominated in USD, as set out in note 26 to the Historical Financial Information.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

32. FINANCIAL INSTRUMENTS (continued)

32.2 Financial risk management objectives and policies (continued)

Market risk (continued)

(i) Currency risk (continued)

The carrying amounts of the Target Group's USD denominated monetary assets and monetary liabilities at the end of each of the Relevant Periods are as follows:

	Liabilities			
	Year ended 31 December 2022 RMB'000	Year ended 31 December 2023 RMB'000	Year ended 31 December 2024 RMB'000	Seven months ended 31 July 2025 RMB'000
USD	14,185	51,119	2,267	317,287

	Assets			
	Year ended 31 December 2022 RMB'000	Year ended 31 December 2023 RMB'000	Year ended 31 December 2024 RMB'000	Seven months ended 31 July 2025 RMB'000
USD	160,437	26,729	156,868	120,102

Sensitivity analysis

The following table details the Target Group's sensitivity to a 10% increase or decrease in the USD/RMB exchange rate, with all other variables held constant. The sensitivity analysis includes only outstanding USD denominated monetary items at the end of the reporting period.

	Year ended 31 December 2022 RMB'000	Year ended 31 December 2023 RMB'000	Year ended 31 December 2024 RMB'000	Seven months ended 31 July 2024 RMB'000 (unaudited)	Seven months ended 31 July 2025 RMB'000
Increase/(decrease) in profit after tax for the year/ period:					
– if RMB weakens against USD	10,969	(1,829)	11,595	(25,765)	(14,789)
– if RMB strengthens against USD	(10,969)	1,829	(11,595)	25,765	14,789

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

32. FINANCIAL INSTRUMENTS (continued)

32.2 Financial risk management objectives and policies (continued)

Market risk (continued)

(ii) Interest rate risk

The Target Group is exposed to cash flow interest rate risk in relation to variable-rate other borrowings. Other than the concentration of interest rate risk related to the movements in the loan interest rate published by the People's Bank of China ("PBOC"), the Target Group has no significant concentration of interest rate risk.

The Target Group's exposures to interest rates on financial liabilities are detailed in the liquidity risk section of this note.

Sensitivity analysis

The sensitivity analysis below has been determined based on the exposure to interest rates for variable-rate other borrowings at the end of each of the Relevant Periods. No sensitivity analysis has been presented for the exposure to interest rates for bank balances as the management of the Target Group considers that, taking into account that the fluctuation in interest rates on bank balances is minimal, the impact on profit or loss for the year is insignificant.

The analysis is prepared on the assumption that variable-rate other borrowings outstanding at the end of the reporting period were outstanding for the whole year.

If interest rates had been 100 basis points, 100 basis points, 100 basis points, 100 basis points, 100 basis points higher/lower and all other variables were held constant, the Target Group's profit for the years ended 31 December 2022, 2023 and 2024, and for the seven months ended 31 July 2024 and 2025 would decrease/increase by RMB nil, decrease/increase by RMB2,777,000, decrease/ increase by RMB5,087,000, decrease/increase by RMB2,968,000 and decrease/increase by RMB2,544,000, respectively.

Credit risk and impairment assessment

As at 31 December 2022, 2023 and 2024 and 31 July 2025, the carrying amounts of the financial assets of the Target Group best represent the maximum exposure to credit risk of these financial assets. The Target Group does not hold any collateral or other credit enhancements to cover its credit risks associated with its financial assets.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

32. FINANCIAL INSTRUMENTS (continued)

32.2 Financial risk management objectives and policies (continued)

Credit risk and impairment assessment (continued)

Accounts and bills receivables arising from contracts with customers

In order to minimise the credit risk, the management of the Target Group has delegated a team responsible for determining credit limits and credit approvals. Before accepting any new customer, the Target Group uses an internal credit scoring system to assess the potential customer's credit quality and defines credit limits by customer. Limits and scores attributed to customers are reviewed once a year. Other monitoring procedures are in place to ensure that follow-up action is taken to recover overdue debts. In this regard, the directors of the Target Company consider that the Target Group's credit risk is significantly reduced.

Bank balances

The credit risk on bank balances is limited because the counterparties are banks with high credit ratings assigned by credit-rating agencies, such as China Construction Bank, Industrial and Commercial Bank of China, Bank of China and Agricultural Bank of China.

Other receivables

Other receivables mainly represent current account transactions, pledged and guarantee deposits. The pledged and guarantee deposits are paid in the ordinary course of businesses. Thus, the credit risk on other receivables are limited.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

32. FINANCIAL INSTRUMENTS (continued)

32.2 Financial risk management objectives and policies (continued)

Credit risk and impairment assessment (continued)

The tables below detail the credit risk exposures of the Target Group's financial assets, which are subject to ECL assessment:

	Notes	External credit rating	12-month or lifetime ECL	31 December 2022 RMB'000	31 December 2023 RMB'000	31 December 2024 RMB'000	31 July 2025 RMB'000
Financial assets at amortised cost							
Restricted bank deposits	21	N/A	12-month ECL	49,224	9,183	9,233	9,247
Cash and cash equivalents and time deposits	22	N/A	12-month ECL	353,475	505,696	986,384	1,379,882
Other receivables	20	N/A	12-month ECL	935	1,894	3,059	3,319
			Credit-impaired	8,710	8,702	3,226	3,202
Bills receivable	19	N/A	12-month ECL	-	-	-	2,057,779
Accounts receivable (Note)	19	N/A	Provision matrix	319,517	579,204	589,904	459,912
			Credit-impaired	1,101	1,048	1,048	-

Note:

For accounts receivable, the Target Group has applied the simplified approach in IFRS 9 to measure the loss allowance at lifetime ECL. Except for debtors that are credit-impaired, the Target Group determines the ECL on these items by using a provision matrix, grouped by debtors' ageing.

Provision matrix – debtors' ageing

As part of the Target Group's credit risk management, the Target Group uses debtors' ageing to assess the impairment for its receivables from customers in relation to its sales of coal products because these customers consist of a large number of customers with common risk characteristics that are representative of the customers' ability to pay all amounts due in accordance with the contractual terms. The following table provides information about the exposure to credit risk for accounts receivable which are assessed based on a provision matrix as at the end of each of the Relevant Periods within lifetime ECL (not credit-impaired). Accounts receivable that are credit-impaired with gross carrying amounts of RMB1,101,000, RMB1,048,000 and RMB1,048,000 as at 31 December 2022, 2023 and 2024, respectively, were assessed individually.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

32. FINANCIAL INSTRUMENTS (continued)

32.2 Financial risk management objectives and policies (continued)

Credit risk and impairment assessment (continued)

Gross carrying amount

	Average loss rate 31 December 2022	Accounts receivable 31 December 2022 RMB'000	Average loss rate 31 December 2023	Accounts receivable 31 December 2023 RMB'000	Average loss rate 31 December 2024	Accounts receivable 31 December 2024 RMB'000	Average loss rate 31 July 2025	Accounts receivable 31 July 2025 RMB'000
Current (not past due)	-	319,517	-	579,204	-	589,904	-	459,912
	-	319,517	-	579,204	-	589,904	-	459,912

The estimated loss rates are based on historical observed default rates over the expected life of the debtors and are adjusted for forward-looking information that is available without undue cost or effort. The group is regularly reviewed by management to ensure relevant information about specific debtors is updated.

The following table shows the movement in lifetime ECL that has been recognised for accounts receivable under the simplified approach.

	Lifetime ECL (not credit-impaired) RMB'000	Lifetime ECL (credit-impaired) RMB'000	Total RMB'000

Liquidity risk

Liquidity risk is the risk that the Target Group will not be able to meet its financial obligations as they fall due. The approach to managing liquidity is to ensure, as far as possible, that it will always have sufficient liquidity to meet its liabilities when due, under both normal and stressed conditions, without incurring unacceptable losses or damage to the Target Group's reputation.

The Target Group closely monitors cash flow requirements and optimises its cash returns. The Target Group prepares cash flow forecasts and ensures it has sufficient cash for the servicing of operation, financial, and capital obligations; this excludes the potential impact of extreme circumstances that cannot reasonably be predicted, such as natural disasters.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

32. FINANCIAL INSTRUMENTS (continued)

32.2 Financial risk management objectives and policies (continued)

Liquidity risk (continued)

The following table details the remaining contractual maturity of the Target Group's financial liabilities as at the end of each of the Relevant Periods which are based on contractual undiscounted cash flows (including interest payments computed using contractual rates) and the earliest date on which the Target Group can be required to pay:

	31 December 2022						
	Weighted average interest rate %	On demand or less than 1 year RMB'000	1 to 2 years RMB'000	2 to 5 years RMB'000	More than 5 years RMB'000	Total undiscounted cash flows RMB'000	Total carrying amount RMB'000
Financial liabilities:							
Accounts and bills payables, other payables, and lease liabilities	-	347,025	6,654	-	-	353,679	353,177

	31 December 2023						
	Weighted average interest rate %	On demand or less than 1 year RMB'000	1 to 2 years RMB'000	2 to 5 years RMB'000	More than 5 years RMB'000	Total undiscounted cash flows RMB'000	Total carrying amount RMB'000
Financial liabilities:						-

Financial liabilities:							
Accounts and bills payables, other payables, and lease liabilities	-	3,342,794	-	-	-	3,342,794	3,342,784

Save as discussed above, the Target Group also makes use of bank facilities as one of the effective sources of liquidity.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

32. FINANCIAL INSTRUMENTS (continued)

32.3 Fair value measurements

Fair value of the Target Group's financial assets and financial liabilities that are measured at fair value on a recurring basis

	31 December 2022 RMB'000	31 December 2023 RMB'000	31 December 2024 RMB'000	31 July 2025 RMB'000	Fair value hierarchy	Valuation technique(s) and key input(s)
Financial assets:						
Unlisted equity securities	6,436	6,436	6,436	4,936	Level 3	Net asset method

There were no transfers between Level 1, Level 2 and Level 3 during the years ended 31 December 2022, 2023 and 2024, and for the seven months ended 31 July 2024 and 2025.

The directors of the Target Company consider that the carrying amounts of financial assets and financial liabilities recorded at amortised cost as at the end of each of the Relevant Periods in the Historical Financial Information approximate to their fair values.

33. EMPLOYEE BENEFIT PLANS

The Target Group participates, in line with the regulations of the PRC, mainly in various defined contribution retirement plans organised by municipal and provincial governments for its employees. The Target Group is required to make contributions to the retirement plans at a certain proportion of the salaries, bonuses and certain allowances of the employees. In addition, as approved by the government, the Target Group makes contribution to a supplemental defined contribution pension plan for its employees. The fund is managed by a qualified fund manager. The Target Group has no other material obligation for the payment of pension benefits associated with these plans beyond the annual contributions described above. The Target Group's contributions for the year ended 31 December 2022, 2023 and 2024 and for the seven months ended 31 July 2024 and 2025 were RMB 4,767,000, RMB3,880,000, RMB4,579,000, RMB2,590,000 and RMB6,842,000, respectively.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

34. RELATED PARTY TRANSACTIONS

34.1 Transactions with China Energy Group, an associate of China Energy Group and fellow subsidiaries

The Target Group is controlled by China Energy Group and has significant transactions and relationships with China Energy Group, associates of China Energy Group and subsidiaries of China Energy Group ("fellow subsidiaries"). Related parties refer to enterprises over which China Energy Group is able to exercise significant influence or control.

The Target Group had the following transactions with China Energy Group, an associate of China Energy Group and fellow subsidiaries that were carried out in the normal course of business during the years ended 31 December 2022, 2023 and 2024 and seven months ended 31 July 2024 and 2025 :

	Notes	Year ended 31 December 2022 RMB'000	Year ended 31 December 2023 RMB'000	Year ended 31 December 2024 RMB'000	Seven months ended 31 July 2024 RMB'000 (unaudited)	Seven months ended 31 July 2025 RMB'000

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

34. RELATED PARTY TRANSACTIONS (continued)

34.1 Transactions with China Energy Group, an associate of China Energy Group and fellow subsidiaries (continued)

(i) Interest income represents interest earned from deposits placed with CHN Energy Finance. The applicable interest rate is determined in accordance with the prevailing interest rates published by the PBOC.

(ii) Income from entrusted loans represents interest earned from entrusted loans to a fellow subsidiary. The applicable interest rate is determined in accordance with the prevailing interest rates published by the PBOC.

(iii) Granting of loans and repayment of loans represent the transactions with CHN Energy Finance. The applicable interest rate is determined in accordance with the prevailing interest rates published by the PBOC.

(iv) Transportation service expense represents expenses paid to fellow subsidiaries in respect of coal transportation services.

(v) Sale of coal represents income from the sale of coal to fellow subsidiaries and an associate of China Energy Group.

(vi) Agency income represents income from the provision of agency services relates to coal sales and purchase to the fellow subsidiaries.

(vii) Purchase of coal represents coal purchased from fellow subsidiaries.

(viii) Property leasing expense represents rentals and related property management fee paid or payable in respect of properties leased from fellow subsidiaries.

(ix) Net deposits placed with CHN Energy Finance represent net deposits placed by the Target Group with CHN Energy Finance.

(x) Factoring services refer to receiving accounts receivable factoring services from CHN Energy Commercial Factoring.

The directors of the Target Company are of the opinion that the above transactions with related parties were conducted in the ordinary course of business and in accordance with the agreements governing such transactions.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

34. RELATED PARTY TRANSACTIONS (continued)

34.1 Transactions with China Energy Group, associates of China Energy Group and fellow subsidiaries (continued)

Amounts due from/to China Energy Group and fellow subsidiaries are as follows:

	31 December 2022 RMB'000	31 December 2023 RMB'000	31 December 2024 RMB'000	31 July 2025 RMB'000
Cash and time deposits at CHN Energy Finance	232,241	477,331	826,791	1,254,678
Accounts and bills receivables	179,798	506,387	469,491	2,459,295
Prepaid expenses and other current assets	126	4,334	7,683	5,686
Other non-current assets	-	-	233	-
Total amounts due from China Energy Group and fellow subsidiaries	412,165	988,052	1,304,198	3,719,659
Borrowings	-	370,278	678,315	-
Accounts payable	14,630	117,512	370,503	3,026,247
Accrued expenses and other payables	-	2,006	2,770	28,721
Contract liabilities	-	15,427	17,633	18,937
Total amounts due to China Energy Group and fellow subsidiaries	14,630	505,223	1,069,221	3,073,905

Except as disclosed in note 24 to the Historical Financial Information, amounts due from/to China Energy Group and fellow subsidiaries bear no interest, are unsecured and are repayable in accordance with normal commercial terms.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

34. RELATED PARTY TRANSACTIONS (continued)

34.2 Key management personnel emoluments

Key management personnel receive compensation in the form of fees, basic salaries, housing and other allowances, benefits in kind, discretionary bonuses and retirement scheme contributions.

Key management personnel compensation of the Target Group is summarised as follows:

	Year ended 31 December 2022 RMB'000	Year ended 31 December 2023 RMB'000	Year ended 31 December 2024 RMB'000	Seven months ended 31 July 2024 RMB'000 (unaudited)	Seven months ended 31 July 2025 RMB'000
Short-term employee benefits	4,289	3,836	3,606	1,512	2,192
Post-employment benefits	363	575	573	338	531
	4,652	4,411	4,179	1,850	2,723

Total remuneration is included in "personnel expenses" as disclosed in note 10 to the Historical Financial Information.

34.3 Contributions to post-employment benefit plans

The Target Group participates in various defined contribution post-employment benefit plans organised by municipal and provincial governments and a supplemental defined contribution pension plan approved by the government for its employees. Further details of the Target Group's post-employment benefit plans are disclosed in note 33 to the Historical Financial Information.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

34. RELATED PARTY TRANSACTIONS (continued)

34.4 Transactions with other government-related entities in the PRC

The Target Company is ultimately controlled by the PRC government and the Target Group operates in an economic environment currently predominated by government-related entities.

Other than those transactions with China Energy Group, associates of China Energy Group and fellow subsidiaries as disclosed above, the Target Group conducts business with other government-related entities, including but not limited to the following:

– Sales and purchases of coal;

– Purchases of ancillary materials and spare parts;

– Ancillary and social services; and

– Financial services arrangements.

These transactions are conducted in the ordinary course of the Target Group's business on terms comparable to those with other entities that are not government-related. The Target Group has established its pricing policies in respect of the sale of goods and the provision of services, and approval processes for the purchase of products and services. Such policies and approval process apply to all counterparties regardless of whether the counterparty is government-related.

35. CONTINGENT LIABILITIES

In October 2024, China Railway Materials Group East China Co., Ltd. ("CRMGE") filed a litigation with the Shanghai Putuo District People's Court, requesting the court to rule that Qinhuangdao Yuanhai Electric Power Energy Co., Ltd. ("Yuanhai Electric Power") repay a financing loan of RMB10,326,000 and overdue loan interest of RMB18,541,000 (calculated as of 11 October 2024). Guoyuan Fuel, the subsidiary of the Target Company, is also named as a co-defendant in this litigation. CRMGE further requests the court to require Guoyuan Fuel to assume supplementary liability for any unpaid amounts by Yuanhai Electric Power within its scope of fault. As at the approval date of the Historical Financial Information, the litigation is currently under first-instance trial, and no judgment has been rendered. The Target Group will continue to monitor the latest progress of the litigation to assess any potential impact.

36. NON-ADJUSTING EVENTS AFTER THE REPORTING PERIOD

Up to the Historical Financial Information approval date, there was no significant event after the Relevant periods that need to be disclosed.

ACCOUNTANTS' REPORT ON HISTORICAL FINANCIAL INFORMATION OF CHINA ENERGY PORT CO., LTD. TO THE DIRECTORS OF CHINA SHENHUA ENERGY COMPANY LIMITED

Introduction

We report on the historical financial information of China Energy Port Co., Ltd. (the "Target Company") and its subsidiary (together, the "Target Group") set out on pages II-L-3 to II-L-66, which comprises the consolidated statements of profit or loss and other comprehensive income, statements of changes in equity and statements of cash flows of the Target Group for the period from 27 March 2023 (date of registration) to 31 December 2023, the year ended 31 December 2024 and the seven months ended 31 July 2025 (the "Relevant Periods"), and the consolidated statements of financial position of the Target Group and the statements of financial position of the Target Company as at 31 December 2023 and 2024 and 31 July 2025 and material accounting policy information and other explanatory information (together, the "Historical Financial Information"). The Historical Financial Information set out on pages II-L-3 to II-L-66 forms an integral part of this report, which has been prepared for inclusion in the circular of China Shenhua Energy Company Limited ("China Shenhua") dated 24 December 2025 (the "Circular") in connection with the proposed acquisition by China Shenhua (the "Acquisition").

Directors' responsibility for the Historical Financial Information

The directors of the Target Company are responsible for the preparation of the Historical Financial Information that gives a true and fair view in accordance with the basis of preparation set out in note 2.1 to the Historical Financial Information, and for such internal control as the directors determine is necessary to enable the preparation of the Historical Financial Information that is free from material misstatement, whether due to fraud or error.

Reporting accountants' responsibility

Our responsibility is to express an opinion on the Historical Financial Information and to report our opinion to you. We conducted our work in accordance with Hong Kong Standard on Investment Circular Reporting Engagements 200 *Accountants' Reports on Historical Financial Information in Investment Circulars* issued by the Hong Kong Institute of Certified Public Accountants ("HKICPA"). This standard requires that we comply with ethical standards and plan and perform our work to obtain reasonable assurance about whether the Historical Financial Information is free from material misstatement.

Our work involved performing procedures to obtain evidence about the amounts and disclosures in the Historical Financial Information. The procedures selected depend on the reporting accountants' judgement, including the assessment of risks of material misstatement of the Historical Financial Information, whether due to fraud or error. In making those risk assessments, the reporting accountants consider internal control relevant to the entity's preparation of the Historical Financial Information that gives a true and fair view in accordance with the basis of preparation set out in note 2.1 to the Historical Financial Information, in order to design procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. Our work also included evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by the directors, as well as evaluating the overall presentation of the Historical Financial Information.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Opinion
In our opinion, the Historical Financial Information gives, for the purposes of the accountants' report, a true and fair view of the financial position of the Target Group and the Target Company as at 31 December 2023 and 2024 and 31 July 2025 and of the financial performance and cash flows of the Target Group for each of the Relevant Periods in accordance with the basis of preparation set out in note 2.1 to the Historical Financial Information.

Review of interim comparative financial information
We have reviewed the interim comparative financial information of the Target Group which comprises the consolidated statement of profit or loss and other comprehensive income, statement of changes in equity and statement of cash flows for the seven months ended 31 July 2024 and other explanatory information (the "Interim Comparative Financial Information"). The directors of the Target Company are responsible for the preparation of the Interim Comparative Financial Information in accordance with the basis of preparation set out in note 2.1 to the Historical Financial Information. Our responsibility is to express a conclusion on the Interim Comparative Financial Information based on our review. We conducted our review in accordance with Hong Kong Standard on Review Engagements 2410 *Review of Interim Financial Information Performed by the Independent Auditor of the Entity* issued by the HKICPA. A review consists of making inquiries, primarily of persons responsible for financial and accounting matters, and applying analytical and other review procedures. A review is substantially less in scope than an audit conducted in accordance with Hong Kong Standards on Auditing and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion. Based on our review, nothing has come to our attention that causes us to believe that the Interim Comparative Financial Information, for the purposes of the accountants' report, is not prepared, in all material respects, in accordance with the basis of preparation set out in note 2.1 to the Historical Financial Information.

Report on matters under the Rules Governing the Listing of Securities on the Stock Exchange and the Companies (Winding Up and Miscellaneous Provisions) Ordinance

Adjustments
In preparing the Historical Financial Information, no adjustments to the Underlying Financial Statements as defined on page II-L-3 have been made.

Dividends
We refer to note 13 to the Historical Financial Information which states that no dividends have been paid by the Target Company in respect of the Relevant Periods.

Consolidated Statements of Changes in Equity (continued)

Note:

Statutory reserves

Statutory surplus reserve

According to the PRC Company Law and the Target Company's Articles of Association, the Target Company is required to transfer 10% of its net profit as determined in accordance with the China Accounting Standards for Business Enterprises ("China Accounting Standards") to its statutory surplus reserve until the reserve balance reaches 50% of the registered capital. The transfer to this reserve must be made before distribution of a dividend to shareholders.

Specific reserve for maintenance and production funds

Pursuant to the relevant PRC regulations, the Target Group is required to transfer production and maintenance funds at fixed rates based on revenue, to a specific reserve account. The production and maintenance funds could be utilised when expenses or capital expenditures on production maintenance and safety measures are incurred. The amount of production and maintenance funds utilised would be transferred from the specific reserve account to retained earnings.

Discretionary surplus reserve

The appropriation to the discretionary surplus reserve is subject to the shareholders' approval. The utilisation of the reserve is similar to that of the statutory surplus reserve.

The directors of the Target Company (the "Directors") have not proposed any appropriation to the discretionary surplus reserve during the Relevant Periods.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

1. PRINCIPAL ACTIVITIES AND ORGANISATION

The Target Company is a limited liability company established in the People's Republic of China (the "PRC"). The registered office of the Target Company is located at Room 808, 8th Floor, Port Development Building, Canghai Road, Bohai New Area, Cangzhou, Hebei Province, the PRC.

During the Relevant Periods, the Target Group was involved in port operation business.

In the opinion of the directors, the immediate holding company and the ultimate holding company of the Target Company is China Energy Investment Corporation Limited ("China Energy Group"), which is established in the PRC.

As at the date of this report, the Target Company had direct interests in its subsidiary, a private limited liability company, the particulars of which is set out below:

Name	Place and date of registration and place of operations	Registered capital	Proportion of ownership interest held by the Target Company (%)	Principal activities
Guoneng (Taizhou) Port Co., Ltd.	PRC/Mainland China 7 August 2024	RMB50,000,000	70	Port operation

The statutory financial statements of this entity for the period from 7 August 2024 to 31 December 2024 prepared under China Accounting Standards were audited by Zhongxinghua Certified Public Accountants LLP, certified public accountants registered in the PRC.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.1 BASIS OF PREPARATION

The Historical Financial Information has been prepared in accordance with IFRS Accounting Standards (which include all International Financial Reporting Standards, International Accounting Standards ("IASs") and Interpretations) as issued by the International Accounting Standards Board (the "IASB"). All IFRS Accounting Standards effective for the accounting period commencing from 1 January 2025, together with the relevant transitional provisions, have been early adopted by the Target Group in the preparation of the Historical Financial Information throughout the Relevant Periods and in the period covered by the Interim Comparative Financial Information.

The Historical Financial Information has been prepared on the historical cost basis.

The preparation of the Historical Financial Information in conformity with IFRS Accounting Standards requires management to make judgements, estimates and assumptions that affect the application of policies and reported amounts of assets, liabilities, income and expenses. The estimates and associated assumptions are based on historical experience and various other factors that are believed to be reasonable under the circumstances, the results of which form the basis of making the judgements about carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates.

The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised if the revision affects only that period, or in the period of the revision and future periods if the revision affects both current and future periods.

Judgements made by management in the application of IFRS Accounting Standards that have significant effect on the Historical Financial Information and major sources of estimation uncertainty are discussed in note 3 to the Historical Financial Information.

Material accounting policies adopted by the Target Group are disclosed below.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.2 ISSUED BUT NOT YET EFFECTIVE IFRS ACCOUNTING STANDARDS

The Target Group has not applied the following new and revised IFRS Accounting Standards, that have been issued but are not yet effective, in the Historical Financial Information. The Target Group intends to apply these new and revised IFRS, if applicable, when they become effective.

IFRS 18	*Presentation and Disclosure in Financial Statements*[2]
IFRS 19	*Subsidiaries without Public Accountability: Disclosures*[2]
Amendments to IFRS 9 and IFRS 7	*Amendments to the Classification and Measurement of Financial Instruments*[1]
Amendments to IFRS 10 and IAS 28	*Sale or Contribution of Assets between an Investor and its Associate or Joint Venture*[3]
Annual Improvements to IFRS Accounting Standards – Volume 11	Amendments to IFRS 1, IFRS 7, IFRS 9, IFRS 10 and IAS 7[1]

1 Effective for annual periods beginning on or after 1 January 2026
2 Effective for annual/reporting periods beginning on or after 1 January 2027
3 No mandatory effective date yet determined but available for adoption

The Target Group is in the process of making an assessment of the impact of these new and amended IFRS Accounting Standards upon initial application. IFRS 18 introduces new requirements for presentation within the statement of profit or loss and other comprehensive income, including specified totals and subtotals. It also requires disclosure of management-defined performance measures and includes new requirements for aggregation and disaggregation of financial information. The new requirements are expected to impact the Target Group's presentation in the statement of profit or loss and other comprehensive income and disclosures of the Target Group's financial performance. The new standard is not expected to have any impact on the Target Group's results of operations and financial position but has impact on the presentation and disclosure of the Historical Financial Information. Other than IFRS 18, so far, the Target Group considers that IFRS 19 and the revised IFRS Accounting Standards are unlikely to have a significant impact on the Target Group's results of operations and financial position.

2.3 MATERIAL ACCOUNTING POLICIES

Basis of consolidation

The Historical Financial Information incorporates the financial statements of the Target Company and its subsidiary. Control is achieved when the Target Company:

– has power over the investee;

– is exposed, or has rights, to variable returns from its involvement with the investee; and

– has the ability to use its power to affect its returns.

The Target Group reassesses whether or not it controls an investee if facts and circumstances indicate that there are changes to one or more of the three elements of control listed above.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Basis of consolidation (continued)

When the Target Group has less than a majority of the voting rights of an investee, it has power over the investee when the voting rights are sufficient to give it the practical ability to direct the relevant activities of the investee unilaterally. The Target Group considers all relevant facts and circumstances in assessing whether or not the Target Group's voting rights in an investee are sufficient to give it power, including:

- the size of the Target Group's holding of voting rights relative to the size and dispersion of holdings of the other vote holders;
- potential voting rights held by the Target Group, other vote holders or other parties;
- rights arising from other contractual arrangements; and
- any additional facts and circumstances that indicate that the Target Group has, or does not have, the current ability to direct the relevant activities at the time that decisions need to be made, including voting patterns at previous shareholders' meetings.

Consolidation of a subsidiary begins when the Target Group obtains control over the subsidiary and ceases when the Target Group loses control of the subsidiary. Specifically, income and expenses of a subsidiary acquired or disposed of during the year are included in the Consolidated Statements of profit or loss and other comprehensive income from the date the Target Group gains control until the date when the Target Group ceases to control the subsidiary.

Profit or loss and each item of other comprehensive income are attributed to equity holders of the Target Company and to the non-controlling interests. Total comprehensive income of subsidiaries is attributed to equity holders of the Target Company and to the non-controlling interests even if this results in the non-controlling interests having a deficit balance.

Where necessary, adjustments are made to the Historical Financial Information of subsidiaries to bring their accounting policies into line with the Target Group's accounting policies.

All intragroup assets and liabilities, equity, income, expenses and cash flows relating to transactions between members of the Target Group are eliminated in full on consolidation.

Non-controlling interests in subsidiaries are presented separately from the Target Group's equity therein, which represent present ownership interests entitling their holders to a proportionate share of net assets of the relevant subsidiaries upon liquidation.

Changes in the Target Group's ownership interests in existing subsidiaries

Changes in the Target Group's interests in subsidiaries that do not result in the Target Group losing control over the subsidiaries are accounted for as equity transactions. The carrying amounts of the Target Group's relevant components of equity and the non-controlling interests are adjusted to reflect the changes in their relative interests in the subsidiaries, including re-attribution of relevant reserves between the Target Group and the non-controlling interests according to the Target Group's and the non-controlling interests' proportionate interests.

Any difference between the amount by which the non-controlling interests are adjusted, and the fair value of the consideration paid or received is recognised directly in equity and attributed to equity holder of the Target Company.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Revenue from contracts with customers

Under IFRS 15, the Target Group recognises revenue when (or as) a performance obligation is satisfied, i.e. when "control" of the goods or services underlying the particular performance obligation is transferred to the customer.

A performance obligation represents a good or service (or a bundle of goods or services) that is distinct or a series of distinct goods or services that are substantially the same.

Control is transferred over time and revenue is recognised over time by reference to the progress towards complete satisfaction of the relevant performance obligation if one of the following criteria is met:

- the customer simultaneously receives and consumes the benefits provided by the Target Group's performance as the Target Group performs;

- the Target Group's performance creates and enhances an asset that the customer controls as the Target Group performs; or

- the Target Group's performance does not create an asset with an alternative use to the Target Group and the Target Group has an enforceable right to payment for performance completed to date.

Otherwise, revenue is recognised at a point in time when the customer obtains control of the distinct good or service.

A contract asset represents the Target Group's right to consideration in exchange for goods or services that the Target Group has transferred to a customer that is not yet unconditional. It is assessed for impairment in accordance with IFRS 9. In contrast, a receivable represents the Target Group's unconditional right to consideration, i.e. only the passage of time is required before payment of that consideration is due.

A contract liability represents the Target Group's obligation to transfer goods or services to a customer for which the Target Group has received consideration (or an amount of consideration is due) from the customer.

Foreign currencies

In preparing the financial statements of each individual group entity, transactions in currencies other than entity's functional currencies (foreign currencies) are recognised at the rates of exchange prevailing on the dates of the transactions. At the end of the reporting period, monetary items denominated in foreign currencies are retranslated at the rates prevailing at that date. Non-monetary items that are measured in terms of the historical cost in a foreign currency are not retranslated. Exchange differences on monetary items are recognised in profit or loss in the period in which they arise.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Borrowing costs

Borrowing costs directly attributable to the acquisition, construction or production of qualifying assets, which are assets that necessarily take a substantial period of time to get ready for their intended use or sale, are added to as part of the cost of those assets, until such time as the assets are substantially ready for their intended use or sale. All other borrowing costs are expensed in the period in which they are incurred.

Government grants

Government grants are not recognised until there is reasonable assurance that the Target Group will comply with the conditions attaching to them and that the grants will be received.

Government grants are recognised in profit or loss on a systematic basis over the periods in which the Target Group recognises as expenses the related costs for which the grants are intended to compensate. Specifically, government grants whose primary condition is that the Target Group should purchase, construct or otherwise acquire non-current assets are recognised as deferred income in the Consolidated Statements of financial position and transferred to profit or loss on a systematic and rational basis over the useful lives of the related assets.

Government grants that are receivable as compensation for expenses or losses already incurred or for the purpose of giving immediate financial support to the Target Group with no future related costs are recognised in profit or loss in the period in which they become receivable.

Retirement benefit costs

Payments to state-managed retirement benefit schemes and a supplemental defined contribution pension plan approved by the government are recognised as an expense when employees have rendered service entitling them to the contributions.

The contributions made by the Target Group to such insurance plans on behalf of employees are fully attributed to the employees at the time of payment, therefore the Target Group has no abandoned contributions that can be utilised.

Taxation

Income tax expense represents the sum of the tax currently payable and deferred tax.

The tax currently payable is based on taxable profit for the reporting period. Taxable profit differs from "profit before income tax" as reported in the Consolidated Statements of profit or loss and other comprehensive income because of income or expense that are taxable or deductible in other years and items that are never taxable or deductible. The Target Group's liability for current tax is calculated using tax rates that have been enacted or substantively enacted by the end of the reporting period.

Deferred tax is recognised on temporary differences between the carrying amounts of assets and liabilities in the Historical Financial Information and the corresponding tax bases used in the computation of taxable profit. Deferred tax liabilities are generally recognised for all taxable temporary differences. Deferred tax assets are generally recognised for all deductible temporary differences to the extent that it is probable that taxable profits will be available against which those deductible temporary differences can be utilised.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Taxation (continued)

Deferred tax is not recognised for:

- temporary differences on the initial recognition of assets or liabilities in a transaction that is not a business combination and that affects neither accounting nor taxable profit or loss and does not give rise to equal taxable and deductible temporary differences;

- temporary differences related to investment in subsidiaries, associates and joint venture to the extent that the Target Group is able to control the timing of the reversal of the temporary differences and it is probable that they will not reverse in the foreseeable future;

- taxable temporary differences arising on the initial recognition of goodwill; and

- those related to the income taxes arising from tax laws enacted or substantively enacted to implement the Pillar Two model rules published by the Organisation for Economic Co-operation and Development ("OECD").

The Target Group recognised deferred tax assets and deferred tax liabilities separately in relation to its lease liabilities and right-of-use assets.

Deferred tax liabilities are recognised for taxable temporary differences associated with investments in subsidiaries, except where the Target Group is able to control the reversal of the temporary difference and it is probable that the temporary difference will not reverse in the foreseeable future. Deferred tax assets arising from deductible temporary differences associated with such investments and interests are only recognised to the extent that it is probable that there will be sufficient taxable profits against which to utilise the benefits of the temporary differences and they are expected to reverse in the foreseeable future.

The carrying amount of deferred tax assets is reviewed at the end of each reporting period and reduced to the extent that it is no longer probable that sufficient taxable profits will be available to allow all or part of the asset to be recovered. Unrecognised deferred tax assets are reassessed at the end of each reporting year and are recognised to the extent that it has become probable that future taxable profit will be available to allow all or part of the deferred tax asset to be recovered.

Deferred tax assets and liabilities are measured at the tax rates that are expected to apply in the period in which the liability is settled or the asset is realised, based on tax rate (and tax laws) that have been enacted or substantively enacted by the end of the reporting period.

The measurement of deferred tax liabilities and assets reflects the tax consequences that would follow from the manner in which the Target Group expects, at the end of the reporting period, to recover or settle the carrying amount of its assets and liabilities.

Deferred tax assets and liabilities are offset when there is a legally enforceable right to set off current tax assets against current tax liabilities and when they relate to income taxes levied by the same taxation authority and the Target Group intends to settle its current tax assets and liabilities on a net basis.

Current and deferred tax are recognised in profit or loss, except when they relate to items that are recognised in other comprehensive income or directly in equity, in which case, the current and deferred tax are also recognised in other comprehensive income or directly in equity respectively. Where current tax or deferred tax arises from the initial accounting for a business combination, the tax effect is included in the accounting for the business combination.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Property, plant and equipment

Property, plant and equipment, which consists of items of plant and equipment, held for use in the production or supply of goods or services, or for administrative purposes, are stated in the Consolidated Statements of financial position at cost less subsequent accumulated depreciation and subsequent accumulated impairment losses, if any.

Depreciation is recognised so as to write-off the cost of items of property, plant and equipment (other than freehold land and construction in progress, which are subject to impairment assessment) less their residual values over their estimated useful lives. The estimated useful lives, residual values and depreciation method are reviewed at the end of each reporting period, with the effect of any changes in estimate accounted for on a prospective basis.

Property, plant and equipment are depreciated on a straight-line basis at the following rates per annum:

Categories	Term for deprecation (year)
Furniture and other equipment	5-8 years

The Directors reviewed the estimated useful lives of the assets annually based on the Target Group's historical experience with similar assets and taking into account anticipated technological changes.

Construction in progress intended to be used for production, supply or administrative purposes are carried at cost, less any recognised impairment loss. Costs include professional fees and, for qualifying assets, borrowing costs capitalised in accordance with the Target Group's accounting policy. Such properties are classified to the appropriate categories of property, plant and equipment when completed and ready for intended use. Depreciation of these assets, on the same basis as other property, plant and equipment, commences when the assets are ready for their intended use.

Items may be produced while bringing an item of property, plant and equipment to the location and condition necessary for it to be capable of operating in the manner intended by management. The proceeds from selling any such items and the related cost are recognised in profit or loss.

An item of property, plant and equipment is derecognised upon disposal or when no future economic benefits are expected to arise from the continued use of the asset. Any gain or loss arising on the disposal or retirement of an item of property, plant and equipment is determined as the difference between the sales proceeds and the carrying amount of the asset and is recognised in profit or loss.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Intangible assets

Intangible assets acquired separately

Intangible assets with finite useful lives that are acquired separately are carried at costs less accumulated amortisation and any accumulated impairment losses. Amortisation for intangible assets with finite useful lives is recognised on a straight-line basis over their estimated useful lives. The estimated useful life and amortisation method are reviewed at the end of each reporting period, with the effect of any changes in estimate being accounted for on a prospective basis.

Internally-generated intangible assets – research and development expenditure

Expenditure on research activities is recognised as an expense in the period in which it is incurred.

An internally-generated intangible asset arising from development activities (or from the development phase of an internal project) is recognised if, and only if, all of the following have been demonstrated:

- the technical feasibility of completing the intangible asset so that it will be available for use or sale;
- the intention to complete the intangible asset and use or sell it;
- the ability to use or sell the intangible asset;
- how the intangible asset will generate probable future economic benefits;
- the availability of adequate technical, financial and other resources to complete the development and to use or sell the intangible asset; and the ability to measure reliably the expenditure attributable to the intangible asset during its development.

The amount initially recognised for internally-generated intangible asset is the sum of the expenditure incurred from the date when the intangible asset first meets the recognition criteria listed above. Where no internally-generated intangible asset can be recognised, development expenditure is recognised in profit or loss in the period in which it is incurred.

Subsequent to initial recognition, internally-generated intangible asset is measured at cost less accumulated amortisation and accumulated impairment losses (if any), on the same basis as intangible assets acquired separately.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Intangible assets (continued)

Derecognition of intangible assets

An intangible asset is derecognised on disposal, or when no future economic benefits are expected from use or disposal. Gains and losses arising from derecognition of an intangible asset are measured as the difference between the net disposal proceeds and the carrying amount of the asset and are recognised in profit or loss in the period when the asset is derecognised.

Impairment of tangible and intangible assets other than goodwill

At the end of the reporting period, the Target Group reviews the carrying amounts of its tangible and intangible assets with finite useful lives to determine whether there is any indication that these assets have suffered an impairment loss. If any such indication exists, the recoverable amount of the relevant asset is estimated in order to determine the extent of the impairment loss (if any).

The recoverable amount of tangible and intangible assets are estimated individually, when it is not possible to estimate the recoverable amount individually, the Target Group estimates the recoverable amount of the cash-generating unit to which the asset belongs. When a reasonable and consistent basis of allocation can be identified, corporate assets are also allocated to individual cash-generating units, or otherwise they are allocated to the smallest group of cash-generating units for which a reasonable and consistent allocation basis can be identified.

Recoverable amount is the higher of fair value less costs of disposal and value in use. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset (or a cash-generating unit) for which the estimates of future cash flows have not been adjusted.

If the recoverable amount of an asset (or a cash-generating unit) is estimated to be less than its carrying amount, the carrying amount of the asset (or a cash-generating unit) is reduced to its recoverable amount. In allocating the impairment loss, the impairment loss is allocated first to reduce the carrying amount of any goodwill (if applicable) and then to the other assets on a basis based on the carrying amount of each asset in the unit. The carrying amount of an asset is not reduced below the highest of its fair value less costs of disposal (if measurable), its value in use (if determinable) and zero. The amount of the impairment loss that would otherwise have been allocated to the asset is allocated pro rata to the other assets of the unit. An impairment loss is recognised immediately in profit or loss.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Leased assets

At inception of a contract, the Target Group assesses whether the contract is, or contains, a lease. A contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration. Control is conveyed where the customer has both the right to direct the use of the identified asset and to obtain substantially all of the economic benefits from that use.

(i) As a lessee

Where the contract contains lease component(s) and non-lease component(s), the Target Group has elected not to separate non-lease components and accounts for each lease component and any associated non-lease components as a single lease component for all leases.

At the lease commencement date, the Target Group recognises a right-of-use asset and a lease liability, except for short-term leases that have a lease term of 12 months or less and leases of low-value assets. When the Target Group enters into a lease in respect of a low-value asset, the Target Group decides whether to capitalise the lease on a lease-by-lease basis. The lease payments associated with those leases which are not capitalised are recognised as an expense on a systematic basis over the lease term.

Where the lease is capitalised, the lease liability is initially recognised at the present value of the lease payments payable over the lease term, discounted using the interest rate implicit in the lease or, if that rate cannot be readily determined, using a relevant incremental borrowing rate. After initial recognition, the lease liability is measured at amortised cost and interest expense is calculated using the effective interest method. Variable lease payments that do not depend on an index or rate are not included in the measurement of the lease liability and hence are charged to profit or loss in the accounting period in which they are incurred.

The right-of-use asset recognised when a lease is capitalised is initially measured at cost, which comprises the initial amount of the lease liability plus any lease payments made at or before the commencement date, and any initial direct costs incurred. Where applicable, the cost of the right-of-use assets also includes an estimate of costs to dismantle and remove the underlying asset or to restore the underlying asset or the site on which it is located, discounted to their present value, less any lease incentives received. The right-of-use asset is subsequently stated at cost less accumulated depreciation and impairment losses.

The lease liability is remeasured when there is a change in future lease payments arising from a change in an index or rate, or there is a change in the Target Group's estimate of the amount expected to be payable under a residual value guarantee, or there is a change arising from the reassessment of whether the Target Group will be reasonably certain to exercise a purchase, extension or termination option. When the lease liability is remeasured in this way, a corresponding adjustment is made to the carrying amount of the right-of-use asset, or is recorded in profit or loss if the carrying amount of the right-of-use asset has been reduced to zero.

The lease liability is also remeasured when there is a change in the scope of a lease or the consideration for a lease that is not originally provided for in the lease contract ("lease modification") that is not accounted for as a separate lease. In this case the lease liability is remeasured based on the revised lease payments and lease term using a revised discount rate at the effective date of the modification.

In the Consolidated Statements of financial position, the current portion of long-term lease liabilities is determined as the present value of contractual payments that are due to be settled within twelve months after the reporting period.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Inventories

Inventories are stated at the lower of cost and net realisable value. Costs of inventories are calculated using the weighted average method. Net realisable value represents the estimated selling price for inventories less all estimated costs of completion and costs necessary to make the sale.

Provisions

Provisions are recognised when the Target Group has a present obligation (legal or constructive) as a result of a past event, it is probable that the Target Group will be required to settle that obligation, and a reliable estimate can be made of the amount of the obligation.

Provisions are measured at the best estimate of the consideration required to settle the present obligation at the end of the reporting period, taking into account the risks and uncertainties surrounding the obligation. When a provision is measured using the cash flows estimated to settle the present obligation, its carrying amount is the present value of those cash flows (where the effect of the time value of money is material).

When some or all of the economic benefits required to settle a provision are expected to be recovered from a third party, a receivable is recognised as an asset if it is virtually certain that reimbursement will be received and the amount of the receivable can be measured reliably.

Financial instruments

Financial assets and financial liabilities are recognised when a group entity becomes a party to the contractual provisions of the instrument. All regular way purchases or sales of financial assets are recognised and derecognised on a trade date basis. Regular way purchases or sales are purchases or sales of financial assets that require delivery of assets within the time frame established by regulation or convention in the market place.

Financial assets and financial liabilities are initially measured at fair value except for accounts receivable arising from contracts with customers. Transaction costs that are directly attributable to the acquisition or issue of financial assets and financial liabilities (other than financial assets or financial liabilities measured at fair value through profit and loss (the "FVTPL")) are added to or deducted from the fair value of the financial assets or financial liabilities, as appropriate, on initial recognition. Transaction costs directly attributable to the acquisition of financial assets or financial liabilities FVTPL are recognised immediately in profit or loss.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Financial instruments (continued)

Effective interest method

The effective interest method is a method of calculating the amortised cost of a financial asset or financial liability and of allocating interest income and interest expense over the Relevant Period. The effective interest rate is the rate that exactly discounts estimated future cash receipts and payments (including all fees and points paid or received that form an integral part of the effective interest rate, transaction costs and other premiums or discounts) through the expected life of the financial asset or financial liability, or, where appropriate, a shorter period, to the net carrying amount on initial recognition.

Financial assets

Classification and subsequent measurement of financial assets

Financial assets that meet the following conditions are subsequently measured at amortised cost:

- the financial asset is held within a business model whose objective is to collect contractual cash flows; and
- the contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding.

Amortised cost and interest income

Interest income is recognised using the effective interest method for financial assets measured subsequently at amortised cost. Interest income is calculated by applying the effective interest rate to the gross carrying amount of a financial asset, except for financial assets that have subsequently become credit-impaired (see below). For financial assets that have subsequently become credit-impaired, interest income is recognised by applying the effective interest rate to the amortised cost of the financial asset from the next reporting period. If the credit risk on the credit-impaired financial instrument improves so that the financial asset is no longer credit-impaired, interest income is recognised by applying the effective interest rate to the gross carrying amount of the financial asset from the beginning of the reporting period following the determination that the asset is no longer credit impaired.

Impairment of financial assets

The Target Group recognises a loss allowance for expected credit loss ("ECL") on financial assets which are subject to impairment under IFRS 9 (including accounts receivable and other receivables). The amount of ECL is updated at each reporting date to reflect changes in credit risk since initial recognition.

Lifetime ECL represents the ECL that will result from all possible default events over the expected life of the relevant instrument. In contrast, 12-month ECL represents the portion of lifetime ECL that is expected to result from default events that are possible within 12 months after the reporting date. Assessments are done based on the Target Group's historical credit loss experience, adjusted for factors that are specific to the debtors, general economic conditions and an assessment of both the current conditions at the reporting date as well as the forecast of future conditions.

The Target Group always recognises lifetime ECL for accounts receivable. The ECL on these assets are assessed individually for credit-impaired debtors or using a provision matrix with appropriate groupings.

For all other instruments, the Target Group measures the loss allowance equal to 12-month ECL, unless when there has been a significant increase in credit risk since initial recognition, the Target Group recognises lifetime ECL. The assessment of whether lifetime ECL should be recognised is based on significant increases in the likelihood or risk of a default occurring since initial recognition.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Financial instruments (continued)

Impairment of financial assets (continued)

(i) Significant increase in credit risk

In assessing whether the credit risk has increased significantly since initial recognition, the Target Group compares the risk of a default occurring on the financial instrument as at the reporting date with the risk of a default occurring on the financial instrument as at the date of initial recognition. In making this assessment, the Target Group considers both quantitative and qualitative information that is reasonable and supportable, including the historical experience and forward-looking information that is available without undue cost or effort.

In particular, the following information is taken into account when assessing whether credit risk has increased significantly:

- an actual or expected significant deterioration in the financial instrument's external credit rating (if available);
- significant deterioration in external market indicators of credit risk, e.g. a significant increase in the credit spread, the credit default swap prices for the debtor;
- existing or forecast adverse changes in business, financial or economic conditions that are expected to cause a significant decrease in the debtor's ability to meet its debt obligations;
- an actual or expected significant deterioration in the operating results of the debtor;
- an actual or expected significant adverse change in the regulatory, economic, or technological environment of the debtor that results in a significant decrease in the debtor's ability to meet its debt obligations.

Irrespective of the outcome of the above assessment, the Target Group presumes that the credit risk has increased significantly since initial recognition when contractual payments are more than 30 days past due, unless the Target Group has reasonable and supportable information that demonstrates otherwise.

Despite the foregoing, the Target Group assumes that the credit risk on a debt instrument has not increased significantly since initial recognition if the debt instrument is determined to have low credit risk at the reporting date. A debt instrument is determined to have low credit risk if i) it has a low risk of default, ii) the borrower has a strong capacity to meet its contractual cash flow obligations in the near term and iii) adverse changes in economic and business conditions in the longer term may, but will not necessarily, reduce the ability of the borrower to fulfil its contractual cash flow obligations.

The Target Group regularly monitors the effectiveness of the criteria used to identify whether there has been a significant increase in credit risk and revises them as appropriate to ensure that the criteria are capable of identifying significant increase in credit risk before the amount becomes past due.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Financial instruments (continued)

Impairment of financial assets (continued)

(ii) Definition of default

For internal credit risk management, the Target Group considers an event of default occurs when information developed internally or obtained from external sources indicates that the debtor is unlikely to pay its creditors, including the Target Group, in full (without taking into account any collaterals held by the Target Group). The Target Group considers both quantitative and qualitative information that is reasonable and supportable, including the historical experience and forward-looking information that is available without undue cost or effort.

(iii) Credit-impaired financial assets

A financial asset is credit-impaired when one or more events of default that have a detrimental impact on the estimated future cash flows of that financial asset have occurred. Evidence that a financial asset is credit-impaired includes observable data about the following events:

(a) significant financial difficulty of the issuer or the borrower;

(b) a breach of contract, such as a default or past due event;

(c) the lenders of the borrower, for economic or contractual reasons relating to the borrower's financial difficulty, having granted to the borrower a concessions that the lenders would not otherwise consider;

(d) it is becoming probable that the borrower will enter bankruptcy or other financial re-organisation; or

(e) the disappearance of an active market for that financial asset because of financial difficulties.

(iv) Write-off policy

The Target Group writes off a financial asset when there is information indicating that the counterparty is in severe financial difficulty and there is no realistic prospect of recovery. Financial assets written off may still be subject to enforcement activities under the Target Group's recovery procedures, taking into account legal advice where appropriate. A write-off constitutes a derecognition event. Any subsequent recoveries are recognised in profit or loss.

(v) Measurement and recognition of ECL

The measurement of ECL is a function of the probability of default, loss given default (i.e. the magnitude of the loss if there is a default) and the exposure at default. The assessment of the probability of default and loss given default is based on the historical data adjusted by forward-looking information. Estimation of ECL reflects an unbiased and probability-weighted amount that is determined with the respective risks of default occurring as the weights.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Financial instruments (continued)

Impairment of financial assets (continued)

(v) Measurement and recognition of ECL (continued)

Generally, the ECL is the difference between all contractual cash flows that are due to the Target Group in accordance with the contract and the cash flows that the Target Group expects to receive, discounted at the effective interest rate determined at initial recognition.

Where ECL is measured on a collective basis or cater for cases where evidence at the individual instrument level may not yet be available, the financial instruments are grouped on the following basis:

– Nature of financial instruments (i.e. the Target Group's accounts and bills receivables and other receivables are each assessed as a separate group.);

– Past-due status; and

– External credit ratings where available.

The grouping is regularly reviewed by management to ensure the constituents of each group continue to share similar credit risk characteristics.

Interest income is calculated based on the gross carrying amount of the financial asset unless the financial asset is credit impaired, in which case interest income is calculated based on amortised cost of the financial asset.

ECLs are remeasured at each reporting date to reflect changes in the financial instrument's credit risk since initial recognisation. Any change in the ECL amount is recognised as an impairment gain or loss in profit or loss. The Target Group recognises an impairment gain or loss for all financial instruments with a corresponding adjustment to their carrying amount through a loss allowance account.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Financial instruments (continued)

Derecognition of financial assets

The Target Group derecognises a financial asset only when the contractual rights to the cash flows from the asset expire, or when it transfers the financial asset and substantially all the risks and rewards of ownership of the asset to another entity. If the Target Group retains substantially all the risks and rewards of ownership of a transferred financial asset, the Target Group continues to recognise the financial asset and also recognises a collateralised borrowing for the proceeds received.

On derecognition of a financial asset measured at amortised cost, the difference between the asset's carrying amount and the sum of the consideration received and receivable is recognised in profit or loss.

On derecognition of an investment in equity instrument which the Target Group has elected on initial recognition to measure at FVTOCI upon application of IFRS 9, the cumulative gain or loss previously accumulated in other reserves is not reclassified to profit or loss, but is transferred to retained earnings.

Financial liabilities and equity

Classification as debt or equity

Debt and equity instruments are classified as either financial liabilities or as equity in accordance with the substance of the contractual arrangements and the definitions of a financial liability and an equity instrument.

Financial liabilities

All financial liabilities are subsequently measured at amortised cost using the effective interest method.

Financial liabilities at amortised cost

Financial liabilities including accounts and bills payables and other payables are subsequently measured at amortised cost, using the effective interest method.

Derecognition of financial liabilities

The Target Group derecognises financial liabilities when, and only when, the Target Group's obligations are discharged, cancelled or have expired. The difference between the carrying amount of the financial liability derecognised and the consideration paid and payable is recognised in profit or loss.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

2.3 MATERIAL ACCOUNTING POLICIES (continued)

Related parties

(a) A person, or a close member of that person's family, is related to the Target Group if that person:

(i) has control or joint control over the Target Group;

(ii) has significant influence over the Target Group; or

(iii) is a member of the key management personnel of the Target Group or the Target Group's parent.

(b) An entity is related to the Target Group if any of the following conditions applies:

(i) The entity and the Target Group are members of the same group.

(ii) One entity is an associate or joint venture of the other entity (or an associate or joint venture of a member of a group of which the other entity is a member).

(iii) Both entities are joint ventures of the same third party.

(iv) One entity is a joint venture of a third entity and the other entity is an associate of the third entity.

(v) The entity is a post-employment benefit plan for the benefit of employees of either the Target Group or an entity related to the Target Group.

(vi) The entity is controlled or jointly controlled by a person identified in (a).

(vii) A person identified in (a)(i) has significant influence over the entity or is a member of the key management personnel of the entity (or of a parent of the entity).

(viii) The entity, or any member of a group of which it is a part, provides key management personnel services to the Target Group or to the Target Group's parent.

Close members of the family of a person are those family members who may be expected to influence, or be influenced by, that person in their dealings with the entity.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

3. CRITICAL ACCOUNTING JUDGEMENTS AND KEY SOURCES OF ESTIMATION UNCERTAINTY

In the application of the Target Group's accounting policies, which are described in note 2.3 to the Historical Financial Information, the Directors are required to make judgements, estimates and assumptions about the carrying amounts of assets and liabilities that are not readily apparent from other sources. The estimates and associated assumptions are based on the historical experience and other factors that are considered to be relevant. Actual results may differ from these estimates.

The estimates and underlying assumptions are reviewed on an on-going basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised if the revision affects only that period or in the period of the revision and future periods if the revision affects both current and future periods.

Key sources of estimation uncertainty

The following are the key assumptions concerning the future, and other key sources of estimation uncertainty at the end of the reporting period that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year.

Impairment losses

In considering the impairment losses that may be required for certain of the Target Group's assets which mainly include property, plant and equipment, construction in progress, intangible assets, right-of-use assets and other non-current assets, the recoverable amount of the asset need to be determined. The recoverable amount is the higher of its fair value less cost of disposal and value in use. It is difficult to precisely estimate fair value because quoted market prices for these assets may not be readily available. In determining the value in use, the Target Group uses all readily available information in determining expected cash flows generated by the cash-generating unit to which the asset belongs, and they are discounted to their present value, which requires significant judgement relating to cash flow items such as level of sale volume, selling price, amount of operating costs and future returns.

In considering the impairment losses that may be required for current receivables and other financial assets, future cash flows need to be determined. One of the key assumptions that has to be applied is about the ability of the debtors to settle the receivables.

Notwithstanding that the Target Group has used all available information to make this estimation, inherent uncertainty exists and actual write-offs may be higher or lower than the amount estimated.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

4. REVENUE FROM GOODS AND SERVICES

Disaggregation of revenue of business lines is as follows:

	From 27 March 2023 (date of registration) to 31 December 2023 RMB'000	Year ended 31 December 2024 RMB'000	Seven months ended 31 July 2024 RMB'000 (unaudited)	Seven months ended 31 July 2025 RMB'000
Revenue from goods and services	76,797	112,363	74,663	64,606
– Revenue related to port services	76,797	112,363	74,663	64,606
Others	-	2	1	1
	76,797	112,365	74,664	64,607

The Target Group's revenues are all derived from contracts with customers.

The Target Group provides port operation services to customers. Such services are recognised as a performance obligation satisfied over time as the Target Group is rendering the services. Revenue is recognised for these services based on the stage of completion of the performance obligation using output method.

All performance obligations of sales of port operation services are part of contracts with an original expected duration of one year or less, and as permitted under IFRS 15, the transaction price allocated to these unsatisfied contracts is not disclosed.

5. SEGMENT AND OTHER INFORMATION

For management purposes, the Target Group only has one reportable operating segment. Management monitors the operating results of the Target Group's operating segment as a whole for the purpose of making decisions about resource allocation and performance assessment.

All of the Target Group's revenue from external customers was from Mainland China during the Relevant Periods and the seven months ended 31 July 2024. All of the Target Group's non-current non-financial assets (excluding deferred tax assets) were located at Mainland China as at the end of the each of the Relevant Periods.

Revenue derived from single customers which accounted for 10% or more of the Target Group's total revenue is as follows:

	From 27 March 2023 (date of registration) to 31 December 2023 RMB'000	Year ended 31 December 2024 RMB'000	Seven months ended 31 July 2024 RMB'000 (unaudited)	Seven months ended 31 July 2025 RMB'000
Customer A	52,632	82,227	52,978	49,802
Customer B	9,870	11,591	7,421	8,880
Customer C	8,523	10,137	6,670	634

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

6. COST OF SALES

	From 27 March 2023 (date of registration) to 31 December 2023 RMB'000	Year ended 31 December 2024 RMB'000	Seven months ended 31 July 2024 RMB'000 (unaudited)	Seven months ended 31 July 2025 RMB'000
Personnel expenses	1,050	1,126	621	757
Depreciation and amortisation	273	254	148	130
Taxes and surcharges	346	584	357	229
Other operating costs	236	549	163	325
	1,905	2,513	1,289	1,441

7. OTHER INCOME

	From 27 March 2023 (date of registration) to 31 December 2023 RMB'000	Year ended 31 December 2024 RMB'000	Seven months ended 31 July 2024 RMB'000 (unaudited)	Seven months ended 31 July 2025 RMB'000
Value-added tax additional deduction	152	-	-	-
Others	-	4	4	-
	152	4	4	-

8. INTEREST INCOME/FINANCE COSTS

	From 27 March 2023 (date of registration) to 31 December 2023 RMB'000	Year ended 31 December 2024 RMB'000	Seven months ended 31 July 2024 RMB'000 (unaudited)	Seven months ended 31 July 2025 RMB'000
Interest income from:				
– bank deposits	180	438	198	161
Total interest income	180	438	198	161
Interest on:				
– lease liabilities	497	170	170	-
Total finance costs on financial liabilities	497	170	170	-
Others	2	2	2	-
Total finance costs	499	172	172	-
Net finance costs	319	(266)	(26)	(161)

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

9. INCOME TAX EXPENSE

	From 27 March 2023 (date of registration) to 31 December 2023 RMB'000	Year ended 31 December 2024 RMB'000	Seven months ended 31 July 2024 RMB'000 (unaudited)	Seven months ended 31 July 2025 RMB'000
Current tax	10,591	14,917	11,630	6,607
Income tax difference adjustment in respect of prior year/period	-	(90)	(90)	102
Deferred tax	919	(44)	(592)	(492)
	11,510	14,783	10,948	6,217

The tax charge for the year/period can be reconciled to the profit before income tax per consolidated statement of profit or loss and other comprehensive income as follows:

	From 27 March 2023 (date of registration) to 31 December 2023 RMB'000	Year ended 31 December 2024 RMB'000	Seven months ended 31 July 2024 RMB'000 (unaudited)	Seven months ended 31 July 2025 RMB'000
Profit before income tax	41,151	56,929	47,189	26,140
Tax at the PRC income tax rate of 25%	10,288	14,232	11,797	6,535
Tax effects of:				
– non-deductible expenses	202	716	261	112
– utilisation of tax losses and deductible temporary difference previously not recognised	-	(75)	(1,020)	(532)
– tax losses and deductible temporary difference not recognised	1,020	-	-	-
– Income tax difference adjustment in respect of prior year/period	-	(90)	(90)	102
Income tax expense	11,510	14,783	10,948	6,217

Under the Law of the PRC on Enterprise Income Tax (the "EIT Law") and Implementation Regulation of the EIT Law, the tax rate applicable for the PRC group entities was 25% for the Relevant Periods and for the seven months ended 31 July 2024.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

Depreciation	2,146	2,146
At 31 July 2025	10,815	10,815
Net carrying amounts		
At 31 December 2023	8,430	8,430
At 31 December 2024	3,679	3,679
At 31 July 2025	1,533	1,533

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

20. ACCOUNTS RECEIVABLE

The Target Group and the Target Company

	31 December 2023 RMB'000	31 December 2024 RMB'000	31 July 2025 RMB'000
Accounts receivable			
– China Energy Group and fellow subsidiaries	18,001	14,410	9,844
– Third parties	6,645	8,792	10,127
	24,646	23,202	19,971
Less: allowance for credit losses	-	-	-
	24,646	23,202	19,971

As at the end of each of the Relevant Periods, all accounts receivables were from contracts with customers.

As at the end of each of the Relevant Periods, the ageing analysis of accounts receivable, based on the invoice date and net of loss allowance, is less than one year.

As at the end of each of the Relevant Periods, there were no accounts receivable of the Target Group that were past due.

Details of credit risks of accounts receivables as at the end of each of the Relevant Periods are set out in note 29.2 to the Historical Financial Information.

All amounts of receivables are denominated in RMB.

21. PREPAID EXPENSES AND OTHER CURRENT ASSETS

The Target Group and the Target Company

	31 December 2023 RMB'000	31 December 2024 RMB'000	31 July 2025 RMB'000
Financial assets measured at amortised cost			
– Other receivables (note)	27,627	26,993	25,143
Less: impairment losses	-	-	-
	27,627	26,993	25,143
Prepaid expenses	5,690	5,012	2,452
Deductible VAT	1,967	1,907	269
	35,284	33,912	27,864

Note:

As at 31 December 2023, 2024 and 31 July 2025, other receivables from China Energy Group and fellow subsidiaries amounted to RMB20,453,000, RMB18,551,000 and RMB16,128,000, respectively.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

22. CASH AND CASH EQUIVALENTS

(a) Cash and cash equivalents

The Target Group

Cash and cash equivalents in the consolidated statements of financial position and the consolidated statements of cash flows comprise cash at bank and in hand, and time deposits with original maturity within three months.

	31 December 2023 RMB'000	31 December 2024 RMB'000	31 July 2025 RMB'000
Deposits with banks and other financial institutions	103,541	157,663	159,534

As at the end of each of the Relevant Periods, the Target Group performed impairment assessment on bank balances and concluded that the probability of defaults of the counterparty banks are insignificant and accordingly, no allowance for credit losses is provided. Details of impairment assessment of bank deposits are set out in note 29.2 to the Historical Financial Information.

The Target Company

Cash and cash equivalents in the statements of financial position comprise cash at bank and in hand, and time deposits with original maturity within three months.

	31 December 2023 RMB'000	31 December 2024 RMB'000	31 July 2025 RMB'000
Deposits with banks and other financial institutions	103,541	107,645	109,495

As at the end of each of the Relevant Periods, the Target Company performed impairment assessment on bank balances and concluded that the probability of defaults of the counterparty banks are insignificant and accordingly, no allowance for credit losses is provided. Details of impairment assessment of bank deposits are set out in note 29.2 to the Historical Financial Information.

(b) Major non-cash transaction

During the period from 27 March 2023 (date of registration) to 31 December 2023, the Target Group had non-cash additions to right-of-use assets and lease liabilities of RMB12,348,000, in respect of lease arrangements.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

22. CASH AND CASH EQUIVALENTS (continued)

(c) Reconciliation of liabilities arising from financing activities

The table below shows the detailed changes in the Target Group's liabilities arising from financing activities, including both cash and non-cash changes. Liabilities arising from financing activities are those for which cash flows were, or future cash flows will be, classified in the Target Group's consolidated statements of cash flows as cash flows from financing activities.

	Lease liabilities RMB'000 (note 24)	Total RMB'000
At 27 March 2023 (date of registration)	-	-
Capital element of lease rentals paid	(8,319)	(8,319)
Interest element of lease rentals paid	(497)	(497)
Interest expenses	497	497
Increase in lease liabilities from entering into new leases during the period	12,349	12,349
At 31 December 2023	4,030	4,030
At 1 January 2024	4,030	4,030
Capital element of lease rentals paid	(4,030)	(4,030)
Interest element of lease rentals paid	(170)	(170)
Interest expenses	170	170
At 31 December 2024	-	-
At 1 January 2025	-	-
Capital element of lease rentals paid	-	-
Interest element of lease rentals paid	-	-
Interest expenses	-	-
At 31 July 2025	-	-

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

22. CASH AND CASH EQUIVALENTS (continued)

(d) Total cash outflow for leases

Amounts included in the consolidated statements of cash flows for leases comprise the following:

	From 27 March 2023 (date of registration) to 31 December 2023 RMB'000	Year ended 31 December 2024 RMB'000	Seven months ended 31 July 2024 RMB'000 (unaudited)	Seven months ended 31 July 2025 RMB'000
Within operating cash flows	2,294	5,484	3,479	4,941
Within financing cash flows	8,816	4,200	178	-
	11,110	9,684	3,657	4,941

These amounts relate to the following:

	From 27 March 2023 (date of registration) to 31 December 2023 RMB'000	Year ended 31 December 2024 RMB'000	Seven months ended 31 July 2024 RMB'000 (unaudited)	Seven months ended 31 July 2025 RMB'000
Lease rental paid	11,110	9,684	3,657	4,941

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

23. DEFERRED TAXATION

The Target Group and the Target Company

	31 December 2023 RMB'000	31 December 2024 RMB'000	31 July 2025 RMB'000
Deferred tax liabilities	(919)	(875)	(383)

The following are the deferred tax assets recognised and movements thereon during the year/period:

	At 27 March 2023 (date of registration) RMB'000	Charged to profit or loss RMB'000	31 December 2023 RMB'000
Lease transactions	-	(919)	(919)

	At 1 January 2024 RMB'000	Charged to profit or loss RMB'000	31 December 2024 RMB'000
Lease transactions	(919)	44	(875)

	At 1 January 2025 RMB'000	Charged to profit or loss RMB'000	31 July 2025 RMB'000
Lease transactions	(875)	492	(383)

As at the end of each of the Relevant Periods, the Target Group and the Target Company had no unused tax losses.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

24. LEASE LIABILITIES

The Target Group and the Target Company

The lease liabilities were repayable as follow:

	31 December 2023		31 December 2024		31 July 2025	
	Present value of the minimum lease payments RMB'000	Total minimum lease payments RMB'000	Present value of the minimum lease payments RMB'000	Total minimum lease payments RMB'000	Present value of the minimum lease payments RMB'000	Total minimum lease payments RMB'000
Within 1 year	4,030	4,200	-	-	-	-
Less: total future interest expenses		(170)		-		-
Present value of lease liabilities		4,030		-		-

25. ACCOUNTS PAYABLE

The Target Group and the Target Company

	31 December 2023 RMB'000	31 December 2024 RMB'000	31 July 2025 RMB'000
Accounts payable			
– China Energy Group and fellow subsidiaries	2,238	2,716	17,340
– Third parties	66	291	692
	2,304	3,007	18,032

As the end of each of the Relevant Periods, the ageing analysis of accounts payable, based on invoice date, is less than one year.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

26. ACCRUED EXPENSES AND OTHER PAYABLES

The above balances are unsecured, interest-free and payable on demand.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

27. PAID-UP CAPITAL

The Target Group

	31 December 2023 RMB'000	31 December 2024 RMB'000	31 July 2025 RMB'000
Registered and paid-up capital	100,000	100,000	100,000

28. CAPITAL RISK MANAGEMENT

The Target Group's policy is to maintain a strong capital base so as to maintain investor, creditor and market confidence and to sustain future development of the business.

The Target Group manages the capital structure and makes adjustments to it in the light of changes in economic conditions and the risk characteristics of the underlying assets. In order to maintain or adjust the capital structure, the Target Group may adjust the amount of dividends paid to shareholders, return capital to shareholders or issue new shares to reduce debts.

The Target Group monitors capital using a gearing ratio which is total liabilities divided by total assets. The Target Group aims to maintain the gearing ratio at a reasonable level. The Target Group's gearing ratio as at 31 December 2023 and 2024 and 31 July 2025 was 25.4%, 19.1% and 18.7%, respectively.

There were no changes in the Target Group's approach to capital management during the Relevant Periods.

29. FINANCIAL INSTRUMENTS

29.1 Categories of financial instruments

The carrying amounts of each of the following categories of financial assets and financial liabilities at the end of each of the Relevant Periods are set out as follows:

	31 December 2023 RMB'000	31 December 2024 RMB'000	31 July 2025 RMB'000
Financial assets			
Financial assets at amortised cost	155,814	207,858	204,648
Financial liabilities			
Amortised cost	26,702	33,037	32,703

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

29. FINANCIAL INSTRUMENTS (continued)

29.2 Financial risk management objectives and policies

The Target Group's major financial instruments include accounts receivables, other receivables, accounts payables and other payables. Details of the financial instruments are disclosed in the respective notes. The risks associated with these financial instruments include credit risk and liquidity risk. The policies on how to mitigate these risks are set out below. The management manages and monitors these exposures to ensure appropriate measures are implemented on a timely and effective manner.

Credit risk and impairment assessment

As at the end of each of the Relevant Periods, other than those financial assets whose carrying amounts best represent the maximum exposure to credit risk, there are no financial guarantees provided by the Target Company. The Target Group does not hold any collateral or other credit enhancements to cover its credit risks associated with its financial assets and financial guarantee contracts.

Accounts receivable arising from contracts with customers

In order to minimise the credit risk, the management of the Target Group has delegated a team responsible for determination of credit limits and credit approvals. Before accepting any new customer, the Target Group uses an internal credit scoring system to assess the potential customer's credit quality and defines credit limits by customer. Limits and scoring attributed to customers are reviewed once a year. Other monitoring procedures are in place to ensure that follow-up action is taken to recover overdue debts. In this regard, the Directors consider that the Target Group's credit risk is significantly reduced.

Bank balances

The credit risks on bank balances are limited because the counterparties are banks with high credit ratings assigned by credit-rating agencies, such as China Construction Bank and Industrial and Commercial Bank of China.

Other receivables

Other receivables represent pledge and guarantee deposit. The pledge and guarantee deposit is paid for regular businesses. Thus, the credit risk on other receivables are limited.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

29. FINANCIAL INSTRUMENTS (continued)

29.2 Financial risk management objectives and policies (continued)

The tables below detail the credit risk exposures of the Target Group's financial assets, which are subject to ECL assessment:

	Notes	External credit rating	12-month or lifetime ECL	31 December 2023 RMB'000	31 December 2024 RMB'000	31 July 2025 RMB'000
Financial assets at amortised costs						
Cash and cash equivalents	22	N/A	12-month ECL	103,541	157,663	159,534
Other receivables	21	N/A	12-month ECL	27,627	26,993	25,143
			Credit-impaired	-	-	-
Accounts receivable (note)	20	N/A	Provision matrix	24,646	23,202	19,971
			Credit-impaired	-	-	-

Note:

For accounts receivable, the Target Group has applied the simplified approach in IFRS 9 to measure the loss allowance at lifetime ECL. Except for debtors with credit-impaired, the Target Group determines the ECL on these items by using a provision matrix, grouped by debtors' aging.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

29. FINANCIAL INSTRUMENTS (continued)

29.2 Financial risk management objectives and policies (continued)

Credit risk and impairment assessment

Provision matrix – debtors' ageing

As part of the Target Group's credit risk management, the Target Group uses debtors' ageing to assess the impairment for its receivables from customers because these customers consist of a large number of customers with common risk characteristics that are representative of the customers' abilities to pay all amounts due in accordance with the contractual terms. The following table provides information about the exposure to credit risk for accounts receivables which are assessed based on provision matrix as at the end of each of the Relevant Periods within lifetime ECL (not credit-impaired).

Gross carrying amount

	Average loss rate 31 December 2023	Accounts receivable 31 December 2023 RMB'000	Average loss rate 31 December 2024	Accounts receivable 31 December 2024 RMB'000	Average loss rate 31 July 2025	Accounts receivable 31 July 2025 RMB'000
Current (not past due)	-	24,646	-	23,202	-	19,971

The estimated loss rates are estimated based on the historical observed default rates over the expected life of the debtors and are adjusted for forward-looking information that is available without undue cost or effort. The Target Grouping is regularly reviewed by management to ensure relevant information about specific debtors is updated.

Liquidity risk

Liquidity risk is the risk that the Target Group will not be able to meet its financial obligation as they fall due. The approach to managing liquidity is to ensure, as far as possible, that it will always have sufficient liquidity to meet its liabilities when due, under both normal and stressed conditions, without incurring unacceptable losses or risk damage to the Group's reputation.

The Target Group closely monitors cash flow requirements and optimising its cash return. The Group prepares cash flow forecasts and ensures it has sufficient cash for the servicing of operation, financial, and capital obligations; this excludes the potential impact of extreme circumstances that cannot reasonably be predicted, such as natural disasters.

The remaining contractual maturity of the Target Group's financial liabilities at the end of each of the Relevant Periods are all within one year.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

30. COMMITMENTS AND CONTINGENT LIABILITIES

Capital commitments

As at 31 December 2023 and 2024 and 31 July 2025, the Target Group had capital commitments for equipment and other as follows:

	31 December 2023 RMB'000	31 December 2024 RMB'000	31 July 2025 RMB'000
Contracted for but not provided			
– Equipment	1,975	15,917	191,909
– Other (note)	-	35,000	35,000
	1,975	50,917	226,909

Note: In July 2024, the Target Company committed to entering into an agreement as an investor with other companies to jointly invest, develop, construct and operate the Guoneng Taizhou Coal Storage and Transportation Trading Center Project (the "Project"), and agreed to establish a project company specifically responsible for the Project. The investment amount under this agreement is RMB70,000,000. In August 2024, the Target Company established Guoneng (Taizhou) Port Co., Ltd. As of 31 July 2025 and 31 December 2024, the remaining uninvested amount was both RMB35,000,000.

31. EMPLOYEE BENEFITS PLAN

The Target Group participates, in line with the regulations of the PRC, mainly in various defined contribution retirement plans organised by municipal and provincial governments for its employees. The Target Group is required to make contributions to the retirement plans at a certain proportion of the salaries, bonuses and certain allowances of the employees. In addition, as approved by the government, the Target Group makes contribution to a supplemental defined contribution pension plan for its employees. The fund is managed by a qualified fund manager. The Target Group has no other material obligation for the payment of pension benefits associated with these plans beyond the annual contributions described above. The Target Group's contributions for the Relevant Periods and the seven months ended 31 July 2024 were RMB1,471,000, RMB2,890,000, RMB2,015,000 and RMB1,585,000, respectively.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

32. RELATED PARTY TRANSACTIONS

32.1 Transactions with China Energy Group and fellow subsidiaries

The Target Group is controlled by China Energy Group and has significant transactions and relationships with China Energy Group and subsidiaries of China Energy Group ("fellow subsidiaries"). Related parties refer to enterprises over which China Energy Group is able to exercise significant influence or control.

The Target Group had the following transactions with China Energy Group and fellow subsidiaries that were carried out in the normal course of business during the Relevant Periods and seven months ended 31 July 2024:

	Notes	From 27 March 2023 (date of registration) to 31 December 2023 RMB'000	Year ended 31 December 2024 RMB'000	Seven months ended 31 July 2024 RMB'000 (unaudited)	Seven months ended 31 July 2025 RMB'000
Interest income	(i)	179	437	198	161
Property leasing	(ii)	3,771	3,963	2,312	2,312
Ancillary and social services	(iii)	53	5,253	2,188	1,801
Revenue related to port services	(iv)	52,632	82,227	52,978	49,802
Purchase of equipment and construction work	(v)	1,975	1,751	1,751	15,537
Net deposits placed with Finance Company*	(vi)	103,110	53,797	45,718	1,915

* China Energy Finance Co., Ltd.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

32. RELATED PARTY TRANSACTIONS (continued)

32.1 Transactions with China Energy Group and fellow subsidiaries (continued)

(i) Interest income represents interest earned from deposits in fellow subsidiaries. The applicable interest rate is determined in accordance with the prevailing interest rates published by the PBOC.

(ii) Property leasing expense represents rental paid or payable in respect of properties leased from fellow subsidiaries.

(iii) Ancillary and social services represent expenditures for support services paid to fellow subsidiaries of China Energy Group.

(iv) Revenue related to port services rendered represents income earned from fellow subsidiaries of China Energy Group in respect of port agency services.

(v) Purchase of equipment and construction work represents expenditure related to equipment and construction service provided by fellow subsidiaries of China Energy Group .

(vi) Net deposits placed with Finance Company represents net deposits placed by the Group with Finance Company.

The Directors are of the opinion that the above transactions with related parties were conducted in the ordinary course of business and in accordance with the agreements governing such transactions.

The Target Group entered into a number of agreements with China Energy Group and fellow subsidiaries. The terms of the principal agreements are summarised as follows:

(i) The Target Company has entered into a mutual supply agreement for the mutual provision of production supplies and ancillary services with fellow subsidiaries. Pursuant to the agreement, fellow subsidiaries provide the Target Group with the production supplies and services, ancillary production services including the use of the information network system and ancillary administrative services. On the other hand, the Target Group provides fellow subsidiaries with port agency services and use of the information network system.

The products and services provided under the agreement, other than the sharing of use of the information network system which is free of charge, are provided in accordance with the following pricing policy:

- price prescribed by the state (including any price prescribed by any relevant local government), if applicable;
- where there is no state-prescribed price but where there is a state-guidance price, then the state-guidance price;
- where there is neither a state-prescribed price nor a state-guidance price, the market price; or
- where none of the above is applicable or where it is not practical to apply the above pricing policies in reality, the price to be agreed between the relevant parties shall be based on reasonable costs incurred in providing the goods or services plus a reasonable profit margin of such costs.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

32. RELATED PARTY TRANSACTIONS (continued)

32.1 Transactions with China Energy Group and fellow subsidiaries (continued)

(ii) The Target Company has entered into a financial services agreement with Finance Company. Pursuant to the agreement, Finance Company provides financial services to the Target Group. The interest rate for the deposits with Finance Company from the Target Group should not be lower than the lowest limit published by the PBOC for the same type of deposit. The interest rate for loans made by Finance Company to the Target Group should not be higher than the highest limit published by the PBOC for the same type of loan. The above interest rates should be determined by reference to the rate charged by normal commercial banks in the PRC for comparable deposits and loans on normal commercial terms. The fees charged by Finance Company for the provision of other financial services shall be determined according to the rates chargeable by the PBOC or the China Banking Regulatory Commission.

(iii) The Target Group has entered into a property leasing agreement with fellow subsidiaries of China Energy Group for leasing of certain properties to each other. No rent is payable by the Target Group before fellow subsidiaries obtain the relevant property ownership certificate. The rental charges are based on comparable market rates. If fellow subsidiaries of China Energy Group negotiate to sell a leased property to a third party, the Target Company has a pre-emptive right to purchase such property under terms no less favorable than other third party.

Amounts due from/to China Energy Group and fellow subsidiaries:

	31 December 2023 RMB'000	31 December 2024 RMB'000	31 July 2025 RMB'000
Deposits with Finance Company	103,110	156,907	158,822
Accounts receivables	18,001	14,410	9,844
Prepaid expenses and other current assets	26,003	23,447	16,255
Total amounts due from China Energy Group and fellow subsidiaries	147,114	194,764	184,921
Accounts payable	2,238	2,716	17,340
Accrued expenses and other payables	15,285	23,334	9,399
Total amounts due to China Energy Group and fellow subsidiaries	17,523	26,050	26,739

Amounts due from/to China Energy Group and fellow subsidiaries bear no interest, are unsecured and are repayable in accordance with normal commercial terms.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

32. RELATED PARTY TRANSACTIONS (continued)

32.2 Key management personnel emoluments

Key management personnel receive compensation in the form of fees, basic salaries, housing and other allowances, benefits in kind, discretionary bonuses and retirement scheme contributions.

Key management personnel compensation of the Target Group is summarised as follows:

	From 27 March 2023 (date of registration) to 31 December 2023 RMB'000	Year ended 31 December 2024 RMB'000	Seven months ended 31 July 2024 RMB'000 (unaudited)	Seven months ended 31 July 2025 RMB'000
Short-term employee benefits	718	2,300	800	1,399
Post-employment benefits	76	309	142	237
	794	2,609	942	1,636

Total remuneration is included in "personnel expenses" as disclosed in note 6 to the Historical Financial Information .

32.3 Contributions to post-employment benefit plans

The Target Group participates in various defined contribution post-employment benefit plans organised by municipal and provincial governments and a supplemental defined contribution pension plan approved by the government for its employees. Further details of the Target Group's post-employment benefit plans are disclosed in note 31 to the Historical Financial Information.

33. NON-ADJUSTING EVENTS AFTER THE REPORTING PERIOD

Up to the Historical Financial Information approval date, there was no significant event after the Relevant Periods that need to be disclosed.

II NOTES TO THE HISTORICAL FINANCIAL INFORMATION

34. SUBSIDIARY

A. UNAUDITED PRO FORMA FINANCIAL INFORMATION OF THE ENLARGED GROUP

The following is an illustrative unaudited pro forma consolidated statement of financial position (the "Unaudited Pro Forma Financial Information") of China Shenhua Energy Company Limited (the "Company") and its subsidiaries (together, the "Group"), as enlarged by acquisition of 100% equity interests in Guoyuan Electric Power Co., Ltd. ("Guoyuan Power"), 100% equity interests in China Energy Xinjiang Energy & Chemical Co., Ltd. ("Xinjiang Energy"), 100% equity interests in China Shenhua Coal Liquefaction and Chemical Company Limited ("Chemical Company"), 100% equity interests in China Energy Wuhai Coal Group Corporation Limited ("Wuhai Energy"), 100% equity interests in Inner Mongolia Pingzhuang Coal (Group) Co., Ltd. ("Pingzhuang Coal"), 41% equity interests in China Energy Shaanxi Shenyan Coal Co., Ltd. ("Shenyan Coal"), 100% equity interests in China Energy Baotou Mining Co., Ltd. ("Baotou Mining"), 100% equity interests in China Energy Shipping Co., Ltd. ("Shipping Company"), 100% equity interests in Shenhua Coal Trading Co., Ltd. ("Coal Trading Company") and 100% equity interests in China Energy Port Co., Ltd. ("Port Company") held by China Energy Investment Corporation Limited ("China Energy"), and 100% equity interests in Guodian Construction and Investment Inner Mongolia Energy Co., Ltd. ("Inner Mongolia Construction Investment") held by China Energy Western Energy Investment Co., Ltd. ("Western Energy"), which is a wholly-owned subsidiary of China Energy. As part of the transaction, the Company also agreed to acquire 49% equity interests in Shanxi Province Jinshen Energy Co., Ltd. ("Jinshen Energy") held by China Energy as an associate. The acquirees are collectively referred to as the "Target Companies", and together with their respective subsidiaries (together, the "Target Groups"), the equity interests in Jinshen Energy and its subsidiaries and the Group, they are collectively referred to as the "Enlarged Group". The acquisition of the Target Groups and Jinshen Energy are collectively referred to as the "Acquisition". The Unaudited Pro Forma Financial Information has been prepared by the directors of the Company (the "Directors") in accordance with paragraph 4.29 of the Rules Governing the Listing of Securities on The Stock Exchange of Hong Kong Limited and on the basis of the notes set forth below for the purpose of illustrating the effects of the Acquisition, as if the Acquisition had been completed on 30 June 2025.

The Unaudited Pro Forma Financial Information has been prepared by the Directors for illustrative purposes only, based on their judgments, estimations and assumptions, and because of its hypothetical nature, it may not give a true picture of the financial position of the Enlarged Group had the Acquisition been completed on 30 June 2025 or any future date.

The Unaudited Pro Forma Financial Information has been prepared based on the unaudited consolidated statement of financial position of the Group as at 30 June 2025 as extracted from the published interim report of the Group for the six months ended 30 June 2025 and the audited consolidated statements of financial position of the Target Groups and Jinshen Energy as at 31 July 2025 as extracted from the accountants' reports of the Target Companies and Jinshen Energy thereon set out in Appendix II to the circular of the Company dated 24 December 2025 (the "Circular"), after giving effect to the unaudited pro forma adjustments as described in the accompanying notes that are directly attributable to the Acquisition and factually supportable as if the Acquisition had been undertaken as at 30 June 2025.

The Unaudited Pro Forma Financial Information should be read in conjunction with the unaudited interim financial information of the Group for the six months ended 30 June 2025 as set out in the Group's published interim report, the historical financial information of the Target Companies as set out in Appendix II to this Circular, and other financial information included elsewhere in this Circular.

NOTES TO THE UNAUDITED PRO FORMA FINANCIAL INFORMATION

1. The amounts of assets and liabilities of the Group as at 30 June 2025 are extracted from the unaudited consolidated statement of financial position of Group as at 30 June 2025 as set out in the published interim report of the Group for the six months ended 30 June 2025.

2. The combined amounts of assets and liabilities of the Target Groups as at 31 July 2025 are extracted from the accountants' reports of the Target Companies as set out in Appendix II to the Circular, and 59% of net asset amount of Shenyan Coal, which is classified as a non-wholly-owned subsidiary of the Enlarged Group, is included in non-controlling interests.

3. The Company, China Energy and Western Energy entered into an asset purchase agreement and a supplement asset purchase agreement on 15 August 2025 and 19 December 2025, respectively, pursuant to which the Company conditionally agree to acquire the respective equity interests of the Target Companies held by China Energy and Western Energy at an aggregate consideration of RMB 129,817 million, to be satisfied in the form of consideration shares to be issued by the Company of RMB38,875 million and cash consideration of RMB90,942 million.

   According to the paragraph 1.2.2 of the supplemental asset purchase agreement entered into between the Company, China Energy and Western Energy on 19 December 2025, the aforementioned aggregate consideration of RMB129,817 million included RMB4,927 million which is equal to the capital of the same amount contributed by China Energy to Chemical Company on 13 November 2025. Since the capital contribution occurred subsequent to 31 July 2025 and was directly related to the amount of the aforementioned aggregate consideration, there is an adjustment with respect to other receivables and equity amounting to RMB4,927 million made in the pro forma financial information.

   As the Group and the Target Companies were under the common control of China Energy before and after the acquisition, and that control is not transitory, the acquisition of the Target Companies is accounted for using the principles of merger accounting in accordance with Accounting Guideline 5 (Revised) *Merger Accounting for Common Control Combinations* as issued by the Hong Kong Institute of Certified Public Accountants. Under the principles of merger accounting, the consolidated financial statements incorporate the financial statement items of the acquired entities or businesses for the reporting period in which the common control combination occurs from the date when the acquired entities or businesses first come under the control of the controlling party. Accordingly, the pro forma financial information of the Enlarged Group has been prepared to present the assets and liabilities of the Target Groups using the existing book values as at 31 July 2025 from China Energy's perspective. No adjustments are made to reflect fair values, or recognise any new assets or liabilities as a result of the common control combination. All differences between the cost of acquisition (fair value of consideration paid) and the amounts at which the assets and liabilities are recorded are recognised directly in equity as part of the merger reserve.

   The carrying amounts of certain assets and liabilities of Guoyuan Power were adjusted to reflect their corresponding book values recorded in the unaudited consolidated statement of financial position of China Energy as at 31 July 2025, because China Energy acquired Guoyuan Power from State Grid Corporation of China in 2012 and the acquisition was accounted for using the acquisition method, which gave rise to goodwill and certain acquisition date fair value adjustments to the then assets and liabilities of Guoyuan Power with an aggregate amount of RMB21,940 million, in the unaudited consolidated financial statements of China Energy.

4. The 49% equity interest of Jinshen Energy and its subsidiaries as at 31 July 2025 is recognised as investments in associates in the Unaudited Pro Forma Financial Information as if the acquisition had been completed on 30 June 2025, at the consideration amount as stipulated in the aforementioned asset purchase agreement, to be satisfied in the form of consideration shares to be issued by the Company of RMB1,204 million and cash consideration of RMB2,577 million.

NOTES TO THE UNAUDITED PRO FORMA FINANCIAL INFORMATION (continued)

5. The adjustment represents the elimination of the inter-company balances and the effects on the assets and liabilities as well as the unrealised gains or losses arising from transactions within the Enlarged Group. The eliminations between balances and transactions of the Group at 30 June 2025 and the Target Groups and Jinshen Energy at 31 July 2025 are at the amounts whichever are smaller if not equal.

6. The adjustment represents the estimated transaction costs directly attributable to the Acquisition of RMB106 million yet to be settled.

7. Save as set out above, no other adjustment has been made to the Unaudited Pro Forma Financial Information to reflect any trading results or other transactions of the Group entered into subsequent to 30 June 2025 and of the Target Groups and Jinshen Energy entered into subsequent to 31 July 2025.

B. REPORT ON THE PRO FORMA FINANCIAL INFORMATION OF THE ENLARGED GROUP

The following is the text of a report on the unaudited pro forma information of the Enlarged Group and Jinshen Energy received from Ernst & Young, Certified Public Accountants, Hong Kong, for the purposes of incorporation into this circular.

INDEPENDENT REPORTING ACCOUNTANTS' ASSURANCE REPORT ON THE COMPILATION OF UNAUDITED PRO FORMA FINANCIAL INFORMATION

To the Directors of China Shenhua Energy Company Limited

We have completed our assurance engagement to report on the compilation of unaudited pro forma financial information of China Shenhua Energy Company Limited (the "Company") and its subsidiaries (hereinafter collectively referred to as the "Group") by the directors of the Company (the "Directors") for illustrative purposes only. The unaudited pro forma financial information consists of the unaudited pro forma consolidated statement of financial position as at 30 June 2025 and related notes as set out on pages III-1 to III-7 of the circular dated 24 December 2025 (the "Circular") issued by the Company (the "Unaudited Pro Forma Financial Information"), in connection with acquisition of 100% equity interests in Guoyuan Electric Power Co., Ltd., 100% equity interests in China Energy Xinjiang Energy & Chemical Co., Ltd., 100% equity interests in China Shenhua Coal Liquefaction and Chemical Company Limited, 100% equity interests in China Energy Wuhai Coal Group Corporation Limited, 100% equity interests in Inner Mongolia Pingzhuang Coal (Group) Co., Ltd., 41% equity interests in China Energy Shaanxi Shenyan Coal Co., Ltd., 100% equity interests in China Energy Baotou Mining Co., Ltd., 100% equity interests in China Energy Shipping Co., Ltd., 100% equity interests in Shenhua Coal Trading Co., Ltd., 100% equity interests in China Energy Port Co., Ltd. and 100% equity interests in Guodian Construction and Investment Inner Mongolia Energy Co., Ltd. The acquirees are collectively referred to as the "Target Companies", and together with their respective subsidiaries, they are collectively referred to as the "Target Groups". In addition to the Target Companies, the Company also agreed to acquire 49% equity interests in Shanxi Province Jinshen Energy Co., Ltd. ("Jinshen Energy"), which is included in the Unaudited Pro Forma Financial Information as an associate. The acquisition of the Target Groups and Jinshen Energy are collectively referred to as the "Acquisition". The applicable criteria on the basis of which the Directors have compiled the Unaudited Pro Forma Financial Information are described in Appendix III to the Circular.

The Unaudited Pro Forma Financial Information has been compiled by the Directors to illustrate the impact of the Acquisition on the Group's assets and liabilities as at 30 June 2025 as if the Acquisition had taken place at 30 June 2025. As part of this process, information about the assets and liabilities of the Group has been extracted by the Directors from the Group's financial statements for the period ended 30 June 2025, on which the interim report has been published, and information about the assets and liabilities of the Target Groups and Jinshen Energy and its subsidiaries has been extracted by the Directors from the Target Companies' and Jinshen Energy and its subsidiaries' consolidated financial statements for the period ended 31 July 2025, on which the accountants' reports have been published and set out in Appendix II to the Circular.

Directors' responsibility for the Unaudited Pro Forma Financial Information

The Directors are responsible for compiling the Unaudited Pro Forma Financial Information in accordance with paragraph 4.29 of the Rules Governing the Listing of Securities on The Stock Exchange of Hong Kong Limited (the "Listing Rules") and with reference to Accounting Guideline ("AG") 7 *Preparation of Pro Forma Financial Information for Inclusion in Investment Circulars* issued by the Hong Kong Institute of Certified Public Accountants (the "HKICPA").

B. REPORT ON THE PRO FORMA FINANCIAL INFORMATION OF THE ENLARGED GROUP
(continued)

Our independence and quality management

We have complied with the independence and other ethical requirements of the *Code of Ethics for Professional Accountants* issued by the HKICPA, which is founded on fundamental principles of integrity, objectivity, professional competence and due care, confidentiality and professional behavior.

Our firm applies Hong Kong Standard on Quality Management 1 *Quality Management for Firms that Perform Audits or Reviews of Financial Statements, or Other Assurance or Related Services Engagements* which requires the firm to design, implement and operate a system of quality management including policies or procedures regarding compliance with ethical requirements, professional standards and applicable legal and regulatory requirements.

Reporting accountants' responsibilities

Our responsibility is to express an opinion, as required by paragraph 4.29(7) of the Listing Rules, on the Unaudited Pro Forma Financial Information and to report our opinion to you. We do not accept any responsibility for any reports previously given by us on any financial information used in the compilation of the Unaudited Pro Forma Financial Information beyond that owed to those to whom those reports were addressed by us at the dates of their issue.

We conducted our engagement in accordance with Hong Kong Standard on Assurance Engagements 3420 *Assurance Engagements to Report on the Compilation of Pro Forma Financial Information Included in a Prospectus* issued by the HKICPA. This standard requires that the reporting accountants plan and perform procedures to obtain reasonable assurance about whether the Directors have compiled the Unaudited Pro Forma Financial Information in accordance with paragraph 4.29 of the Listing Rules and with reference to AG 7 issued by the HKICPA.

For purposes of this engagement, we are not responsible for updating or reissuing any reports or opinions on any historical financial information used in compiling the Unaudited Pro Forma Financial Information, nor have we, in the course of this engagement, performed an audit or review of the financial information used in compiling the Unaudited Pro Forma Financial Information.

The purpose of the Unaudited Pro Forma Financial Information included in the Circular is solely to illustrate the impact of the Acquisition on unadjusted financial information of the Group as if the Acquisition had been undertaken at an earlier date selected for purposes of the illustration. Accordingly, we do not provide any assurance that the actual outcome of the transaction would have been as presented.

A reasonable assurance engagement to report on whether the Unaudited Pro Forma Financial Information has been properly compiled on the basis of the applicable criteria involves performing procedures to assess whether the applicable criteria used by the Directors in the compilation of the Unaudited Pro Forma Financial Information provide a reasonable basis for presenting the significant effects directly attributable to the transaction, and to obtain sufficient appropriate evidence about whether:

- the related pro forma adjustments give appropriate effect to those criteria; and
- the Unaudited Pro Forma Financial Information reflects the proper application of those adjustments to the unadjusted financial information.

B. REPORT ON THE PRO FORMA FINANCIAL INFORMATION OF THE ENLARGED GROUP (continued)

Reporting accountants' responsibilities (continued)

The procedures selected depend on the reporting accountants' judgment, having regard to the reporting accountants' understanding of the nature of the Group, the transaction in respect of which the Unaudited Pro Forma Financial Information has been compiled, and other relevant engagement circumstances.

The engagement also involves evaluating the overall presentation of the Unaudited Pro Forma Financial Information.

We believe that the evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Opinion

In our opinion:

(a) the Unaudited Pro Forma Financial Information has been properly compiled on the basis stated;

(b) such basis is consistent with the accounting policies of the Group; and

(c) the adjustments are appropriate for the purpose of the Unaudited Pro Forma Financial Information as disclosed pursuant to paragraph 4.29(1) of the Listing Rules.

Set out below is the management discussion and analysis on the Target Companies for the years ended 31 December 2022, 2023 and 2024 and seven months ended 31 July 2025, which is based on and should be read in conjunction with the historical financial information of the Target Companies as set out in Appendix II to this circular.

A. MANAGEMENT DISCUSSION AND ANALYSIS ON GUOYUAN POWER GROUP

The following performance discussion of Guoyuan Electric Power Co., Ltd. and its subsidiaries (collectively, the "**Guoyuan Power Group**") should be read in conjunction with the historical financial information for the three years ended 31 December 2024 and for the seven months ended 31 July 2025 set forth in the accountants' report, the text of which is set out in Appendix II of this circular.

Business overview

Guoyuan Electric Power Co., Ltd. is a company established in the PRC with limited liability in 2008. It operates in the power, heat production, and supply industry as well as coal mining and washing industry and is mainly engaged in, among others, coal mining, washing, processing and sales, pithead coal-fired power generation business, heat supply and construction of power transmission and distribution facilities.

Revenue

For the three years ended 31 December 2022, 2023 and 2024, the revenue of Guoyuan Power Group amounted to approximately RMB30,050 million, RMB31,096 million and RMB25,844 million, respectively. The revenue in 2023 remained relatively stable compared to that in 2022. The decrease in revenue in 2024 was mainly due to the deconsolidation of two subsidiaries in January 2024 and August 2024, respectively, which reduced Guoyuan Power Group's consolidated revenue base.

For the seven months ended 31 July 2024 and 2025, the revenue of Guoyuan Power Group decreased from approximately RMB15,586 million to RMB12,468 million, primarily due to the deconsolidation of a subsidiary in August 2024, which reduced Guoyuan Power Group's consolidated revenue in the seven months ended 31 July 2025.

Cost of sales

For the three years ended 31 December 2022, 2023 and 2024, the cost of sales of Guoyuan Power Group amounted to approximately RMB22,216 million, RMB22,949 million and RMB19,767 million, respectively. The cost of sales in 2023 remained relatively stable compared to that in 2022. The decrease in cost of sales in 2024 was mainly due to the deconsolidation of two subsidiaries, which reduced Guoyuan Power Group's overall cost base.

For the seven months ended 31 July 2024 and 2025, the cost of sales of Guoyuan Power Group amounted to approximately RMB11,354 million and RMB8,784 million, respectively. The decrease was mainly due to the deconsolidation of a subsidiary in August 2024, which reduced Guoyuan Power Group's overall cost base.

Gross profit and gross profit margin

For the three years ended 31 December 2022, 2023 and 2024, the gross profit generated from the operations of Guoyuan Power Group amounted to approximately RMB7,834 million, RMB8,147 million and RMB6,077 million, respectively. The corresponding gross profit margins were 26.1%, 26.2% and 23.5%, respectively. The gross profit in 2023 remained relatively stable compared to that in 2022. The decrease in gross profit in 2024 was mainly due to the deconsolidation of two subsidiaries in 2024, which reduced Guoyuan Power Group's revenue and profit base. The gross profit margin remained relatively stable in 2022 and 2023. The slight decrease in gross profit margin in 2024 was also attributable to the same reason of gross profit.

For the seven months ended 31 July 2024 and 2025, the gross profit generated from the operations of Guoyuan Power Group amounted to approximately RMB4,232 million and RMB3,684 million, respectively. The corresponding gross profit margins were 27.2% and 29.5%, respectively. The decrease in gross profit was mainly due to lower coal prices, which reduced electricity revenue and gross profit compared with same period of 2024. The increase in gross profit margin was mainly due to the deconsolidation of a loss-making subsidiary in August 2024, which removed its negative margin impact from Guoyuan Power Group's results and therefore raised the overall gross profit margin in 2025.

Total comprehensive income for the year/period

For the three years ended 31 December 2022, 2023 and 2024, the total comprehensive income of Guoyuan Power Group amounted to approximately RMB2,394 million, RMB3,029 million and RMB3,375 million, respectively. The increase in total comprehensive income in 2023 was mainly due to the decrease of impairment losses on property, plant and equipment. The increase in 2024 was mainly due to the absence of the large impairment provision recorded in 2023 and partial reversal of loss allowances recorded in 2024.

For the seven months ended 31 July 2024 and 2025, the total comprehensive income of Guoyuan Power Group amounted to approximately RMB2,303 million and RMB2,913 million, respectively. The increase was mainly due to the absence of charitable donation recorded in 2024, which did not recur in 2025.

General information of assets and liabilities

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the total assets of Guoyuan Power Group amounted to approximately RMB60,151 million, RMB63,610 million, RMB61,030 million and RMB60,066 million, respectively. The increase in total assets as at 31 December 2023 was mainly due to the increase in cash and cash equivalents, interests in joint ventures and associates and prepayments. The decrease in total assets as at 31 December 2024 was mainly due to the decrease in right-of-use assets, cash and cash equivalents, and property, plant and equipment. The slight decrease in total assets as at 31 July 2025 was mainly due to the decrease in prepaid expenses and other current assets and property, plant and equipment.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the total liabilities of Guoyuan Power Group amounted to approximately RMB37,455 million, RMB38,408 million, RMB30,904 million and RMB28,019 million, respectively. The increase in total liabilities as at 31 December 2023 was primarily due to the increase in non-current borrowings. The decrease as at 31 December 2024 was mainly due to the decrease in borrowings and accrued expenses and other payables. The decrease in total liabilities as at 31 July 2025 was mainly due to the decrease in non-current borrowings and accrued reclamation obligations.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the respective gearing ratios (calculated as total liability divided by total assets) of Guoyuan Power Group were: 62.3%, 60.4%, 50.6% and 46.6%.

Liquidity and capital resources

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the current assets of Guoyuan Power Group amounted to approximately RMB11,015 million, RMB13,972 million, RMB11,818 million and RMB11,666 million, respectively.

Among which, cash and cash equivalents amounted to approximately RMB2,993 million, RMB5,046 million, RMB3,632 million and RMB4,366 million, respectively, accounting for 27.2%, 36.1%, 30.7%, and 37.4% of current assets, respectively.

Accounts and bills receivables amounted to approximately RMB2,802 million, RMB2,497 million, RMB2,240 million and RMB2,564 million, respectively, accounting for 25.4%, 17.9%, 19.0%, and 22.0% of current assets, respectively.

Prepaid expense and other current assets amounted to approximately RMB4,439 million, RMB5,334 million, RMB5,114 million and RMB3,892 million, respectively, accounting for 40.3%, 38.2%, 43.3%, and 33.4% of current assets, respectively.

Liquidity ratios (current assets divided by current liabilities) were 0.44, 0.69, 0.82 and 0.74, respectively.

Capital management

Guoyuan Power Group's policy is to maintain a strong capital base so as to maintain investor, creditor and the market and to sustain future development of the business.

Guoyuan Power Group manages the capital structure and makes adjustments to it in the light of changes in economic conditions and the risk characteristics of the underlying assets. In order to maintain or adjust the capital structure, Guoyuan Power Group may adjust the amount of dividends paid to shareholders, return capital to shareholders or issue new shares to reduce debts. Guoyuan Power Group monitors capital using a gearing ratio which is total liabilities divided by total assets. Guoyuan Power Group aims to maintain the gearing ratio at a reasonable level.

Foreign exchange risks

As the principal business of Guoyuan Power Group is domiciled in the PRC and most of the functional currency are denominated in RMB, the foreign exchange risks are insignificant.

Segment information

The management of Guoyuan Power Group assesses the performance and allocates the resources of Guoyuan Power Group as a whole, therefore no segment information is presented.

As at 31 December 2022, 2023 and 2024 and as at 31 July 2025, substantially all of the non-current assets of Guoyuan Power Group were located in the PRC.

Contingent liabilities

As at 31 December 2022, 2023 and 2024, and 31 July 2025, Guoyuan Power Group had no significant contingent liabilities, with the exception of its accrued reclamation obligations. Guoyuan Power Group has not incurred any significant expenditure for environmental remediation, is currently not involved in any environmental remediation, and apart from the provision for land reclamation costs, has not accrued any further amounts for environmental remediation relating to its operations. Guoyuan Power Group had no material unrecognized obligations from guarantees or litigation. Guoyuan Power Group is involved in certain legal proceedings arising in the ordinary course of business; however, management believes that the outcomes will not have a material adverse effect on financial position or operating results.

Capital commitments

As at 31 July 2025, Guoyuan Power Group had capital commitments of RMB5,412 million contracted for but not provided in relation to land, buildings and mining rights, exploration and evaluation assets and RMB6,931 million for equipment. The equipment-related commitment primarily related to the equipment procurement contracts for certain large-scale power generation projects that commenced construction in 2024.

Charges on assets

As at 31 December 2022, 2023 and 2024 and as at 31 July 2025, Guoyuan Power Group did not have any charge over its assets.

Material investment and material acquisitions and disposals

For the years ended 31 December 2022, 2023 and 2024 and seven months ended 31 July 2025, Guoyuan Power Group did not have any material investment.

During the same period, Guoyuan Power Group carried out several equity disposals, including: (i) in December 2023, the disposal of a 35% equity interest in a subsidiary of Guoyuan Power Group, at the consideration of RMB514 million; (ii) in January 2024, the transfer of all equity interests in another subsidiary out of Guoyuan Power Group with nil consideration; (iii) in August 2024, the transfer of two subsidiaries out of the Guoyuan Power Group with nil consideration; and (iv) in January 2025, the disposal of a 2% equity interest in a subsidiary of Guoyuan Power Group, at the consideration of RMB19 million, and upon the completion of the disposal, the equity interests held by Guoyuan Power Group was reduced to 49% and thus the entity was controlled by another shareholder.

Future plans for material investments or capital assets

As at the Latest Practicable Date, Guoyuan Power Group had no plans in relation to significant investments or capital assets.

Employees and remuneration policy

As at 31 July 2025, the total number of employees of Guoyuan Power Group was 9,174. Guoyuan Power Group determines employee remuneration with reference to market level as well as personal qualifications, experience, skills, performance and contributions. Guoyuan Power Group reviews the remuneration and benefits policies, and employee's personal performance on a regular basis to ensure employees are fairly rewarded.

In accordance with PRC regulations, the Group participates in various defined contribution retirement plans organized by municipal and provincial governments for its employees. The Group is required to make contributions to these plans based on a specified percentage of employees' salaries, bonuses and certain allowances. Additionally, with government approval, the Group contributes to a supplemental defined contribution pension plan, which is managed by a qualified fund manager. Beyond the required annual contributions, the Group has no further material obligations for pension benefit payments.

The Group's contributions to these retirement benefit plans were RMB718 million, RMB773 million and RMB712 million for the years ended 31 December 2022, 2023 and 2024 respectively, and RMB306 million for the seven months ended 31 July 2025.

B. MANAGEMENT DISCUSSION AND ANALYSIS ON XINJIANG ENERGY GROUP

The following performance discussion of China Energy Xinjiang Energy & Chemical Co., Ltd. and its subsidiaries (collectively, the "**Xinjiang Energy Group**") should be read in conjunction with the historical financial information for the three years ended 31 December 2024 and for the seven months ended 31 July 2025 set forth in the accountants' report, the text of which is set out in Appendix II of this circular.

Business overview

China Energy Xinjiang Energy & Chemical Co., Ltd. is a company established in the PRC with limited liability in 2000. It operates in the coal mining and washing industry and is mainly engaged in, among others, coal mining, washing and processing, and sales.

Revenue

For the three years ended 31 December 2022, 2023 and 2024, the revenue of Xinjiang Energy Group amounted to approximately RMB18,543 million, RMB19,423 million and RMB18,232 million, respectively. The increase in 2023 was mainly due to the increase in coal sales volume. The decrease in 2024 was mainly due to the decline in coal prices.

For the seven months ended 31 July 2024 and 2025, the revenue of Xinjiang Energy Group decreased from approximately RMB10,443 million to RMB6,990 million, respectively, primarily due to the decrease in both coal prices and coal sales volume.

Cost of sales

For the three years ended 31 December 2022, 2023 and 2024, the cost of sales of Xinjiang Energy Group amounted to approximately RMB11,100 million, RMB14,314 million and RMB14,680 million, respectively. The increase in cost of sales in 2023 was mainly due to the increase in coal mining costs and coal production volume and remained relatively stable in 2024.

For the seven months ended 31 July 2024 and 2025, the cost of sales of Xinjiang Energy Group amounted to approximately RMB7,880 million and RMB5,964 million, respectively. The decrease was mainly due to the decrease in coal production volume.

Gross profit and gross profit margin

For the three years ended 31 December 2022, 2023 and 2024, the gross profit generated from the operations of Xinjiang Energy Group amounted to approximately RMB7,443 million, RMB5,109 million and RMB3,552 million, respectively. The corresponding gross profit margins were 40.1%, 26.3% and 19.5%, respectively. The decrease in gross profit in 2023 was mainly due to the increase in coal mining costs outpacing the increase in coal prices and the further decrease in gross profit in 2024 was mainly due to the decrease in coal prices. The decrease in gross profit margin in 2023 was mainly due to the increase in coal mining costs outpacing the increase in coal prices and the further decrease in gross profit margin in 2024 was mainly due to a larger decrease in coal prices.

For the seven months ended 31 July 2024 and 2025, the gross profit generated from the operations of Xinjiang Energy Group amounted to approximately RMB2,563 million and RMB1,026 million, respectively. The corresponding gross profit margins were 24.5% and 14.7%, respectively. The decrease in gross profit was mainly due to the decrease in coal prices and the further decrease in gross profit margin was mainly due to a larger decrease in coal prices.

Total comprehensive profit for the year/period

For the three years ended 31 December 2022, 2023 and 2024, the total comprehensive income of Xinjiang Energy Group amounted to approximately RMB5,225 million, RMB2,611 million and RMB2,145 million, respectively. The decrease in 2023 was mainly due to the decrease in gross profit. The further decrease in 2024 was mainly due to the further decrease in gross profit.

For the seven months ended 31 July 2024 and 2025, the total comprehensive income of Xinjiang Energy Group amounted to approximately RMB1,779 million and RMB176 million, respectively. The decrease was mainly due to the decrease in gross profit.

General information of assets and liabilities

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the total assets of Xinjiang Energy Group amounted to approximately RMB21,566 million, RMB26,723 million, RMB30,858 million and RMB31,095 million, respectively. The increase as at 31 December 2023 was mainly due to the increase in property, plant and equipment and construction in progress. The increase as at 31 December 2024 was mainly due to the increase in other non-current assets and right-of-use assets.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the total liabilities of Xinjiang Energy Group amounted to approximately RMB12,606 million, RMB16,040 million, RMB18,969 million and RMB19,261 million, respectively. The increase as at 31 December 2023 was mainly due to the increase in long-term liabilities and lease liabilities. The increase as at 31 December 2024 was mainly due to the increase in borrowings and accounts and bills payables. The slight increase as at 31 July 2025 was mainly due to the increase in current borrowings.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the gearing ratios (calculated as total liability divided by total assets) of Xinjiang Energy Group were 58.5%, 60.0%, 61.5% and 61.9%, respectively.

Liquidity and capital resources

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the current assets of Xinjiang Energy Group amounted to approximately RMB7,173 million, RMB8,038 million, RMB8,741 million, and RMB8,896 million, respectively.

Among which, prepaid expenses and other current assets amounted to approximately RMB3,544 million, RMB2,916 million, RMB3,729 million, and RMB4,155 million, respectively, accounting for 49.4%, 36.3%, 42.7%, and 46.7% of current assets, respectively.

Cash and cash equivalents amounted to approximately RMB1,585 million, RMB3,039 million, RMB2,946 million, and RMB2,281 million, respectively, accounting for 22.1%, 37.8%, 33.7%, and 25.6% of current assets, respectively.

Accounts and bills receivables amounted to approximately RMB1,695 million, RMB1,457 million, RMB1,634 million, and RMB1,626 million, respectively, accounting for 23.6%, 18.1%, 18.7%, and 18.3% of current assets, respectively.

Liquidity ratios (current assets divided by current liabilities) were 0.82, 0.77, 0.73, and 0.76, respectively.

Capital management

Xinjiang Energy Group's policy is to maintain a strong capital base so as to maintain investor, creditor and the market and to sustain future development of the business.

Xinjiang Energy Group manages the capital structure and makes adjustments to it in the light of changes in economic conditions and the risk characteristics of the underlying assets. In order to maintain or adjust the capital structure, Xinjiang Energy Group may adjust the amount of dividends paid to shareholders, return capital to shareholders or issue new shares to reduce debts. Xinjiang Energy Group monitors capital using a gearing ratio which is total liabilities divided by total assets. Xinjiang Energy Group aims to maintain the gearing ratio at a reasonable level.

Foreign exchange risks

As the principal business of Xinjiang Energy Group is domiciled in the PRC and denominated in RMB, Xinjiang Energy Group is not exposed to foreign exchange risks.

Segment information

The management of Xinjiang Energy Group assesses the performance and allocates the resources of Xinjiang Energy Group as a whole, therefore no segment information is presented.

As at 31 December 2022, 2023 and 2024 and as at 31 July 2025, substantially all of the non-current assets of Xinjiang Energy Group were located in the PRC.

Contingent liabilities

As at 31 December 2022, 2023 and 2024, and 31 July 2025, Xinjiang Energy Group had no significant contingent liabilities, with the exception of its accrued reclamation obligations. Beyond these recognized amounts of RMB367 million, RMB407 million, RMB900 million, and RMB862 million, respectively, Xinjiang Energy Group had no material unrecognized obligations from guarantees or litigation. Xinjiang Energy Group is involved in certain legal proceedings arising in the ordinary course of business; however, management believes that the outcomes will not have a material adverse effect on financial position or operating results

Capital commitments

As at 31 July 2025, Xinjiang Energy Group had capital commitments of RMB306 million contracted for but not provided in relation to equipment, RMB141 million for land, buildings and exploration and evaluation assets, and RMB165 million for the others. The equipment-related commitments mainly reflect the normal timing difference between contract signing and delivery for the purchased fully mechanized mining equipment.

Charges on assets

As at 31 December 2022, 2023 and 2024 and as at 31 July 2025, Xinjiang Energy Group did not have any charge over its assets.

Material investment and material acquisitions and disposals

For the years ended 31 December 2022, 2023 and 2024 and seven months ended 31 July 2025, Xinjiang Energy Group did not have any material investment or material acquisition and disposal.

Future plans for material investments or capital assets

As at the Latest Practicable Date, Xinjiang Energy Group had no plans in relation to significant investments or capital assets.

Employees and remuneration policy

As at 31 July 2025, the total number of employees of Xinjiang Energy Group was 4,647. Xinjiang Energy Group determines employee remuneration with reference to market level as well as personal qualifications, experience, skills, performance and contributions. Xinjiang Energy Group reviews the remuneration and benefits policies, and employee's personal performance on a regular basis to ensure employees are fairly rewarded.

In accordance with PRC regulations, Xinjiang Energy Group participates in various defined contribution retirement plans organized by municipal and provincial governments for its employees. Xinjiang Energy Group is required to make contributions to these plans based on a specified percentage of employees' salaries, bonuses and certain allowances. Additionally, with government approval, Xinjiang Energy Group contributes to a supplemental defined contribution pension plan, which is managed by a qualified fund manager. Beyond the required annual contributions, Xinjiang Energy Group has no further material obligations for pension benefit payments.

Xinjiang Energy Group's contributions to these retirement benefit plans were RMB139 million, RMB164 million and RMB178 million for the years ended 31 December 2022, 2023 and 2024 respectively, and RMB104 million and RMB122 million for the seven months ended 31 July 2024 and 2025 respectively.

C. MANAGEMENT DISCUSSION AND ANALYSIS ON CHEMICAL COMPANY GROUP

The following performance discussion of China Shenhua Coal Liquefaction and Chemical Company Limited and its subsidiaries (collectively, the "**Chemical Company Group**") should be read in conjunction with the historical financial information for the three years ended 31 December 2024 and for the seven months ended 31 July 2025 set forth in the accountants' report, the text of which is set out in Appendix II of this circular.

Business overview

China Shenhua Coal Liquefaction and Chemical Company Limited is a company established in the PRC with limited liability in 2003. It operates in the coal, and other fuel processing industry and is mainly engaged in the production, processing, and sale of coal chemical products, as well as the businesses related to the clean conversion and utilisation of coal.

Revenue

For the three years ended 31 December 2022, 2023 and 2024, the revenue of Chemical Company Group amounted to approximately RMB27,982 million, RMB25,651 million and RMB26,429 million, respectively. The decrease in 2023 was mainly due to the overall downward adjustment in coal-chemical product prices as the market retreated from the unusually high price levels in 2022. The increase in 2024 was mainly due to a recovery in market prices of polyolefin.

For the seven months ended 31 July 2024 and 2025, the revenue of Chemical Company Group decreased from approximately RMB15,767 million to RMB11,962 million, mainly due to the decline in production volume resulting from the suspension of certain major production units for technological upgrades.

Cost of sales

For the three years ended 31 December 2022, 2023 and 2024, the cost of sales of Chemical Company Group amounted to approximately RMB23,813 million, RMB22,921 million and RMB23,024 million, respectively. The decrease in 2023 was mainly due to the overall downward adjustment in coal prices as the market retreated from the unusually high price levels in 2022 and remained relatively stable in 2024.

For the seven months ended 31 July 2024 and 2025, the cost of sales of Chemical Company Group amounted to approximately RMB13,791 million and RMB11,383 million, respectively. The decrease was mainly due to the decline in production volume resulting from the temporary suspension of certain major production units for technological upgrades.

Gross profit and gross profit margin

For the three years ended 31 December 2022, 2023 and 2024, the gross profit generated from the operations of Chemical Company Group amounted to approximately RMB4,169 million, RMB2,730 million and RMB3,405 million, respectively. The corresponding gross profit margins were 14.9%, 10.6% and 12.9%, respectively. The decrease in gross profit in 2023 was mainly due to the decrease in product prices outpaced the decline in raw material prices while production volume remained stable. The increase in gross profit in 2024 was mainly due to improved cost efficiency, as unit production costs decreased. The decrease in gross profit margin in 2023 and the increase in 2024 were mainly attributable to the same factors affecting gross profit.

For the seven months ended 31 July 2024 and 2025, the gross profit generated from the operations of Chemical Company Group amounted to approximately RMB1,976 million and RMB579 million, respectively. The corresponding gross profit margins were 12.5% and 4.8%, respectively. The decrease in gross profit and the decrease in gross profit margin was mainly due to the decline in production volume resulting from the suspension of certain production units for technological upgrades.

Total comprehensive profit/(loss) for the year/period

For the three years ended 31 December 2022, 2023 and 2024, the total comprehensive income of Chemical Company Group amounted to approximately RMB2,224 million, RMB278 million and RMB1,265 million, respectively. The decrease from 2022 to 2023 was mainly due to lower gross profit accompanied with higher general and administrative expenses, while the increase from 2023 to 2024 was mainly due to higher gross profit accompanied with lower general and administrative expenses.

For the seven months ended 31 July 2024 and 2025, Chemical Company Group recorded a total comprehensive income of approximately RMB674 million and a total comprehensive loss of approximately RMB550 million, respectively. The decrease was mainly due to the decline in production volume resulting from the suspension of certain production units for technological.

General information of assets and liabilities

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the total assets of Chemical Company Group amounted to approximately RMB37,515 million, RMB35,754 million, RMB37,071 million and RMB40,757 million, respectively. The decrease as at 31 December 2023 was mainly due to the decrease in property, plant and equipment and cash and cash equivalents. The increase as at 31 December 2024 was mainly due to the increase in cash and cash equivalents and prepaid expenses and other current assets. The increase as at 31 July 2025 was mainly due to the increase in cash and cash equivalents and right-of-use assets.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the total liabilities of Chemical Company Group amounted to approximately RMB21,509 million, RMB19,452 million, RMB19,315 million and RMB23,474 million, respectively. The decrease as at 31 December 2023 was mainly due to the decrease in current borrowings. The decrease as at 31 December 2024 was mainly due to the decrease in non-current borrowings. The increase as at 31 July 2025 was mainly due to the increase in current borrowings.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the gearing ratios (calculated as total liability divided by total assets) of Chemical Company Group were 57.3%, 54.4%, 52.1% and 57.6%, respectively.

Liquidity and capital resources

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the current assets of Chemical Company Group amounted to approximately RMB7,339 million, RMB6,532 million, RMB7,626 million, and RMB10,708 million, respectively.

Among which, cash and cash equivalents amounted to approximately RMB3,705 million, RMB3,078 million, RMB4,118 million, and RMB6,387 million, respectively, accounting for 50.5%, 47.1%, 54.0%, and 59.6% of current assets, respectively.

Inventories amounted to approximately RMB1,812 million, RMB1,812 million, RMB1,710 million, and RMB1,915 million, respectively, accounting for 24.7%, 27.7%, 22.4%, and 17.9% of current assets, respectively.

Prepaid expenses and other current assets amounted to approximately RMB875 million, RMB733 million, RMB955 million, and RMB945 million, respectively, accounting for 11.9%, 11.2%, 12.5%, and 8.8% of current assets, respectively.

Liquidity ratios (current assets divided by current liabilities) were 0.66, 0.82, 0.83, and 0.65, respectively.

Capital management

Chemical Company Group's policy is to maintain a strong capital base so as to maintain investor, creditor and the market and to sustain future development of the business.

Chemical Company Group manages the capital structure and makes adjustments to it in the light of changes in economic conditions and the risk characteristics of the underlying assets. In order to maintain or adjust the capital structure, Chemical Company Group may adjust the amount of dividends paid to shareholders, return capital to shareholders or issue new shares to reduce debts. Chemical Company Group monitors capital using a gearing ratio which is total liabilities divided by total assets. Chemical Company Group aims to maintain the gearing ratio at a reasonable level.

Foreign exchange risks

As the principal business of Chemical Company Group is domiciled in the PRC and mostly denominated in RMB, the foreign exchange risks are insignificant.

Segment information

The management of Chemical Company Group assesses the performance and allocates the resources of Chemical Company Group as a whole, therefore no segment information is presented.

As at 31 December 2022, 2023 and 2024 and as at 31 July 2025, substantially all of the non-current assets of Chemical Company Group were located in the PRC.

Contingent liabilities

As at 31 December 2022, 2023 and 2024, and 31 July 2025, Chemical Company Group had no significant contingent liabilities.

Capital commitments

As at 31 July 2025, Chemical Company Group had capital commitments of RMB1,494 million in relation to land, buildings, and exploration and evaluation assets.

Charges on assets

As at 31 December 2022, 2023 and 2024 and as at 31 July 2025, Chemical Company Group did not have any charge over its assets.

Material investment and material acquisitions and disposals

For the years ended 31 December 2022, 2023 and 2024 and seven months ended 31 July 2025, Chemical Company Group did not have any material investment or material acquisition and disposal.

Future plans for material investments or capital assets

In November 2025, Chemical Company Group successfully bid for an exploration right located in Shaanxi Province at a bid price of approximately RMB20,530 million. The transaction has not yet been formally contracted or completed and remains subject to the execution of relevant transfer agreement.

Employees and remuneration policy

As at 31 July 2025, the total number of employees of Chemical Company Group was 6,743. Chemical Company Group determines employee remuneration with reference to market level as well as personal qualifications, experience, skills, performance and contributions. Chemical Company Group reviews the remuneration and benefits policies, and employee's personal performance on a regular basis to ensure employees are fairly rewarded.

In accordance with PRC regulations, the Group participates in various defined contribution retirement plans organized by municipal and provincial governments for its employees. The Group is required to make contributions to these plans based on a specified percentage of employees' salaries, bonuses and certain allowances. Additionally, with government approval, the Group contributes to a supplemental defined contribution pension plan, which is managed by a qualified fund manager. Beyond the required annual contributions, the Group has no further material obligations for pension benefit payments.

The Group's contributions to these retirement benefit plans were RMB287 million, RMB343 million and RMB387 million for the years ended 31 December 2022, 2023 and 2024 respectively, and RMB258 million and RMB290 million for the seven months ended 31 July 2024 and 2025 respectively.

D. MANAGEMENT DISCUSSION AND ANALYSIS ON WUHAI ENERGY GROUP

The following performance discussion of China Energy Wuhai Coal Group Corporation Limited and its subsidiaries (collectively, the "**Wuhai Energy Group**") should be read in conjunction with the historical financial information for the three years ended 31 December 2024 and for the seven months ended 31 July 2025 set forth in the accountants' report, the text of which is set out in Appendix II of this circular.

Business overview

China Energy Wuhai Coal Group Corporation Limited is a company established in the PRC with limited liability in 2002. It operates in the coal mining and washing industry and is mainly engaged in coal mining, washing and processing, and sales.

Revenue

For the three years ended 31 December 2022, 2023 and 2024, the revenue of Wuhai Energy Group amounted to approximately RMB12,606 million, RMB10,744 million and RMB9,770 million, respectively. The decrease in 2023 was mainly due to the decline in coking coal prices and the further decrease in 2024 was mainly due to the continued downward trend in coking coal prices.

For the seven months ended 31 July 2024 and 2025, the revenue of Wuhai Energy Group decreased from approximately RMB6,459 million to RMB4,040 million, primarily due to the continued decline in coking coal prices.

Cost of sales

For the three years ended 31 December 2022, 2023 and 2024, the cost of sales of Wuhai Energy Group amounted to approximately RMB5,672 million, RMB7,481 million and RMB5,982 million, respectively. The increase in cost of sales in 2023 was mainly due to higher coal mining cost. The decrease in cost of sales in 2024 was mainly attributable to the decrease in material, fuel and energy costs and other coal mining costs.

For the seven months ended 31 July 2024 and 2025, the cost of sales of Wuhai Energy Group amounted to approximately RMB3,608 million and RMB3,120 million, respectively. The slight decrease was mainly due to lower raw material, fuel, and power costs.

Gross profit and gross profit margin

For the three years ended 31 December 2022, 2023 and 2024, the gross profit generated from the operations of Wuhai Energy Group amounted to approximately RMB6,934 million, RMB3,263 million and RMB3,788 million, respectively. The corresponding gross profit margins were 55.0%, 30.4%, and 38.8%, respectively. The decrease in gross profit in 2023 was mainly due to the lower sales revenue resulting from declining coking coal prices as well as higher coal mining costs. The increase in gross profit in 2024 was mainly due to the increase in coal sales and the decrease in coal mining costs. The decrease in gross profit margin in 2023 was mainly due to higher coal mining cost. The increase in gross profit margin in 2024 was mainly due to the decrease in coal mining costs.

For the seven months ended 31 July 2024 and 2025, the gross profit generated from the operations of Wuhai Energy Group amounted to approximately RMB2,851 million and RMB920 million, respectively. The corresponding gross profit margins were 44.1% and 22.8%, respectively. The decrease in both gross profit and gross profit margin were mainly due to the continued decrease in coking coal prices.

Total comprehensive profit for the year/period

For the three years ended 31 December 2022, 2023 and 2024, the total comprehensive income of Wuhai Energy Group amounted to approximately RMB4,614 million, RMB933 million and RMB1,124 million, respectively. The decrease from 2022 to 2023 was mainly due to the lower sales revenue by the decline in coking coal prices. The increase from 2023 to 2024 was mainly due to the decrease in coal mining costs.

For the seven months ended 31 July 2024 and 2025, Wuhai Energy Group recorded a total comprehensive income of approximately RMB1,955 million and a total comprehensive loss of RMB84 million, respectively. The decrease was mainly due to the continued decline in coking coal prices and higher coal mining costs.

General information of assets and liabilities

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the total assets of Wuhai Energy Group amounted to approximately RMB20,941 million, RMB22,502 million, RMB23,401 million and RMB23,407 million, respectively. The increase as at 31 December 2023 was mainly due to increase in prepaid expenses and other current assets. The increase as at 31 December 2024 was mainly due to increase in property, plant and equipment and construction in progress. The slight increase as at 31 July 2025 was mainly due to the increase in construction in progress and time deposits with original maturity of three months and over.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the total liabilities of Wuhai Energy Group amounted to approximately RMB9,958 million, RMB10,572 million, RMB10,333 million and RMB10,423 million, respectively. The increase as at 31 December 2023 was mainly due to the increase in accrued reclamation obligations. The slight decrease as at 31 December 2024 was mainly due to the decrease in accounts and bills payables. The slight increase as at 31 July 2025 was mainly due to the increase in accrued expenses and other payables and current portion of long-term liabilities.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the gearing ratios (calculated as total liability divided by total assets) of Wuhai Energy Group were 47.6%, 47.0%, 44.2% and 44.5%, respectively.

Liquidity and capital resources

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the current assets of Wuhai Energy Group amounted to approximately RMB12,798 million, RMB14,285 million, RMB14,855 million, and RMB15,055 million, respectively.

Among which, time deposits with original maturity of three months or over amounted to approximately RMB9,400 million, RMB5,580 million, RMB5,300 million, and RMB8,037 million, respectively, accounting 73.4%, 39.1%, 35.7%, and 53.4% of current assets, respectively. Cash and cash equivalents amounted to approximately RMB1,445 million, RMB3,146 million, RMB4,438 million, and RMB2,880 million, respectively, accounting for 11.3%, 22.0%, 29.9%, and 19.1% of current assets, respectively.

Liquidity ratios (current assets divided by current liabilities) were 2.22, 2.90, 3.29, and 2.88, respectively.

Capital management

Wuhai Energy Group's policy is to maintain a strong capital base so as to maintain investor, creditor and the market and to sustain future development of the business.

Wuhai Energy Group manages the capital structure and makes adjustments to it in the light of changes in economic conditions and the risk characteristics of the underlying assets. In order to maintain or adjust the capital structure, Wuhai Energy Group may adjust the amount of dividends paid to shareholders, return capital to shareholders or issue new shares to reduce debts. Wuhai Energy Group monitors capital using a gearing ratio which is total liabilities divided by total assets. Wuhai Energy Group aims to maintain the gearing ratio at a reasonable level.

Foreign exchange risks

As the principal business of Wuhai Energy Group is domiciled in the PRC and denominated in RMB, Wuhai Energy Group is not exposed to foreign exchange risks.

Segment information

The management of Wuhai Energy Group assesses the performance and allocates the resources of Wuhai Energy Group as a whole, therefore no segment information is presented.

As at 31 December 2022, 2023 and 2024 and as at 31 July 2025, substantially all of the non-current assets of Wuhai Energy Group were located in the PRC.

Contingent liabilities

As at 31 December 2022, 2023 and 2024, and 31 July 2025, Wuhai Energy Group had no significant contingent liabilities, with the exception of its accrued reclamation obligations. Beyond these recognized amounts of RMB838 million, RMB2,677 million, RMB2,831 million, and RMB2,497 million, respectively, Wuhai Energy Group had no material unrecognized obligations from guarantees or litigation. Wuhai Energy Group is involved in certain legal proceedings arising in the ordinary course of business; however, management believes that the outcomes will not have a material adverse effect on financial position or operating results.

Capital commitments

As at 31 July 2025, Wuhai Energy Group had capital commitments of RMB343 million contracted for but not provided in relation to equipment, RMB249 million for land, buildings and exploration and evaluation, and RMB91 million for the others. The equipment commitment of Wuhai Energy primarily arised from agreements are related to coal mine production equipment, including hydraulic supports, loading shovels, integrated boring and mining machines, and tunnelling machines, etc.

Charges on assets

As at 31 December 2022, 2023 and 2024 and as at 31 July 2025, Wuhai Energy Group did not have any charge over its assets.

Material investment and material acquisitions and disposals

For the years ended 31 December 2022, 2023 and 2024 and seven months ended 31 July 2025, Wuhai Energy Group did not have any material investment or material acquisition and disposal.

Future plans for material investments or capital assets

As at the Latest Practicable Date, Wuhai Energy Group had no plans in relation to significant investments or capital assets.

Employees and remuneration policy

As at 31 July 2025, the total number of employees of Wuhai Energy Group was 8,854. Wuhai Energy Group determines employee remuneration with reference to market level as well as personal qualifications, experience, skills, performance and contributions. Wuhai Energy Group reviews the remuneration and benefits policies, and employee's personal performance on a regular basis to ensure employees are fairly rewarded.

In accordance with PRC regulations, the Group participates in various defined contribution retirement plans organized by municipal and provincial governments for its employees. The Group is required to make contributions to these plans based on a specified percentage of employees' salaries, bonuses and certain allowances. Additionally, with government approval, the Group contributes to a supplemental defined contribution pension plan, which is managed by a qualified fund manager. Beyond the required annual contributions, the Group has no further material obligations for pension benefit payments.

The Group's contributions to these retirement benefit plans were RMB343 million, RMB369 million and RMB371 million for the years ended 31 December 2022, 2023 and 2024 respectively, and RMB216 million and RMB222 million for the seven months ended 31 July 2024 and 2025 respectively.

E. MANAGEMENT DISCUSSION AND ANALYSIS ON PINGZHUANG COAL GROUP

The following performance discussion of Inner Mongolia Pingzhuang Coal (Group) Co., Ltd. and its subsidiaries (collectively, the "**Pingzhuang Coal Group**") should be read in conjunction with the historical financial information for the three financial years ended 31 December 2024 and for the seven months ended 31 July 2025 set forth in the accountants' report, the text of which is set out in Appendix II of this circular.

Business overview

Inner Mongolia Pingzhuang Coal (Group) Co., Ltd. is a company established in the PRC with limited liability in 2000. It operates in the coal mining and washing industry and is mainly engaged in coal mining and sales.

Revenue

For the three years ended 31 December 2022, 2023 and 2024, the revenue of Pingzhuang Coal Group amounted to approximately RMB9,837 million, RMB9,199 million and RMB10,045 million, respectively. The decrease in 2023 was primarily attributable to lower coal output during the year, which resulted from the river diversion project undertaken at Pingzhuang Coal Group's Yuanbaoshan open-pit coal mine to facilitate production continuity. The increase in 2024 was primarily attributable to the completion of the river diversion project in May 2024, following which coal production resumed to normal levels.

For the seven months ended 31 July 2024 and 2025, the revenue of Pingzhuang Coal Group increased slightly from approximately RMB5,744 million to RMB5,905 million, resulting from the increase of production of coal.

Cost of sales

For the three years ended 31 December 2022, 2023 and 2024, the cost of sales of Pingzhuang Coal Group amounted to approximately RMB5,690 million, RMB5,796 million and RMB6,475 million, respectively. The increase in cost of sales for 2023 was mainly due to the increase in stripping expenses, while the further rise in 2024 was mainly due to increased personnel expenses, taxes, and surcharges.

For the seven months ended 31 July 2024 and 2025, the costs of sales of Pingzhuang Coal Group decreased slightly from RMB3,648 million to RMB3,630 million.

Gross profit and gross profit margin

For the three years ended 31 December 2022, 2023 and 2024, the gross profit generated from the operations of Pingzhuang Coal Group amounted to approximately RMB4,147 million, RMB3,403 million, and RMB3,570 million, respectively. The corresponding gross profit margins were 42.2%, 37.0% and 35.5%, respectively. The decrease in gross profit margin was primarily driven by higher stripping expenses in 2023, and subsequently by increased taxes and surcharges in 2024.

For the seven months ended 31 July 2024 and 2025, the gross profit generated from the operations of Pingzhuang Coal Group increased slightly from RMB2,096 million to RMB2,275 million, with the gross margin rising from 36.5% to 38.5%, resulting from the increase of production of coal.

Total comprehensive income for the year/period

For the three years ended 31 December 2024, the total comprehensive income of Pingzhuang Coal Group amounted to approximately RMB2,143 million, RMB1,537 million and a loss of RMB3,860 million, respectively. The loss in 2024 was primarily due to a significant donation expense of RMB4,934 million for ecological remediation initiatives.

For the seven months ended 31 July 2024 and 2025, the total comprehensive income of Pingzhuang Coal Group changed from a loss of approximately RMB580 million to a profit of approximately RMB1,157 million. This significant improvement was primarily because the substantial donation expense that impacted the financial results in 2024 was not repeated in 2025.

General Information of assets and liabilities

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the total assets of Pingzhuang Coal Group amounted to approximately RMB32,892 million, RMB33,693 million, RMB34,354 million and RMB35,794 million, respectively. This consistent growth was primarily driven by increments in key asset categories: the increase as of 31 December 2023 was led by construction in progress, financial assets at fair value through other comprehensive income and other non-current assets; the further rise in 2024 was supported by right-of-use assets and other non-current assets; and the growth as of 31 July 2025 was attributable to increases in right-of-use assets, accounts and bills receivable, and cash and cash equivalents.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the total liabilities of Pingzhuang Coal Group amounted to approximately RMB25,250 million, RMB25,458 million, RMB30,758 million and RMB31,042 million, respectively. The significant increase in total liabilities as at 31 December 2024 was mainly due to the increase in borrowings and long-term liabilities raised for the donation for ecological remediation initiatives.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the respective gearing ratios (calculated as total liability divided by total assets) of Pingzhuang Coal Group were: 76.8%, 75.6%, 89.5% and 86.7%.

Liquidity and capital resources

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the current assets of Pingzhuang Coal Group amounted to approximately RMB3,729 million, RMB3,661 million, RMB3,271 million and RMB4,243 million, respectively. Among which, cash and cash equivalents amounted to approximately RMB1,536 million, RMB1,508 million, RMB1,261 million and RMB1,502 million, respectively, accounting for 41.2%, 41.2%, 38.6% and 35.4% of current assets, respectively. Restricted bank deposits amounted to approximately RMB299 million, RMB491 million, RMB488 million and RMB441 million respectively, accounting for 8.0%, 13.4%, 14.9% and 10.4% of current assets, respectively. Prepaid expenses and other current assets amounted to approximately RMB876 million, RMB825 million, RMB659 million and RMB739 million respectively, accounting for 23.5%, 22.5%, 20.1% and 17.4% of current assets, respectively. Accounts and bills receivables amounted to approximately RMB980 million, RMB815 million, RMB845 million and RMB1,448 million respectively, accounting for 26.3%, 22.3%, 25.8% and 34.1% of current assets, respectively.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, liquidity ratios (current assets divided by current liabilities) were 0.2, 0.2, 0.2 and 0.2, respectively.

Capital management

Pingzhuang Coal Group's policy is to maintain a strong capital base so as to maintain investor, creditor and the market and to sustain future development of the business.

Pingzhuang Coal Group manages the capital structure and makes adjustments to it in the light of changes in economic conditions and the risk characteristics of the underlying assets. In order to maintain or adjust the capital structure, Pingzhuang Coal Group may adjust the amount of dividends paid to shareholders, return capital to shareholders or issue new shares to reduce debts. Pingzhuang Coal Group monitors capital using a gearing ratio which is total liabilities divided by total assets. Pingzhuang Coal Group aims to maintain the gearing ratio at a reasonable level.

Foreign exchange risks

As the principal business of Pingzhuang Coal Group is domiciled in the PRC and denominated in RMB, Pingzhuang Coal Group is not exposed to foreign exchange risks.

Segment information

The management of Pingzhuang Coal Group assesses the performance and allocates the resources of the Pingzhuang Coal Group as a whole, therefore no segment information is presented.

As at 31 December 2022, 2023 and 2024 and as at 31 July 2025, substantially all of the non-current assets of Pingzhuang Coal Group were located in the PRC.

Contingent liabilities

As at 31 December 2022, 2023, 2024, and 31 July 2025, Pingzhuang Coal Group had no significant contingent liabilities, with the exception of its accrued reclamation obligations. Beyond these recognized amounts of RMB651 million, RMB576 million, RMB620 million, and RMB592 million, respectively, Pingzhuang Coal Group had no material unrecognized obligations from guarantees or litigation. Pingzhuang Coal Group is involved in certain legal proceedings arising in the ordinary course of business; however, management believes that the outcomes will not have a material adverse effect on financial position or operating results.

Capital commitments

As at 31 July 2025, Pingzhuang Coal Group had capital commitments of RMB403 million contracted for but not provided in relation to land, buildings and exploration and evaluation assets, and 223 million for equipment.

Charges on assets

As at 31 December 2022, 2023 and 2024 and as at 31 July 2025, the balances of the restricted assets of the Pingzhuang Coal Group were RMB939 million, RMB560 million RMB653 million and RMB686 million of which, the fund in the bank deposit subject to restrictions (including restricted time deposits maturing in more than one year) amounted to RMB448 million, RMB560 million, RMB653 million and RMB586 million mainly the mine geographical environment treatment and restoration fund of coal mines, restoration development deposits; accounts receivable amounting to nil, nil, nil and RMB100 million pledged to secure the Target Group's factoring financing activities; other restricted assets were RMB491 million, nil, nil and nil in aggregate, mainly consisted of property, plant and equipment secured for finance leases.

Material investment and material acquisitions and disposals

For the years ended 31 December 2022, 2023 and 2024 and seven months ended 31 July 2025, Pingzhuang Coal Group did not have any material investment or material acquisition and disposal.

Future plans for material investments or capital assets

As at the Latest Practicable Date, Pingzhuang Coal Group has no plans in relation to significant investments or capital assets, other than those capital commitments disclosed below.

Employees and remuneration policy

As at 31 July 2025, the total number of employees of Pingzhuang Coal Group was 13,008. Pingzhuang Coal Group determines employee remuneration with reference to market level as well as personal qualifications, experience, skills, performance and contributions. Pingzhuang Coal Group reviews the remuneration and benefits policies, and employee's personal performance on a regular basis to ensure employees are fairly rewarded.

In accordance with PRC regulations, the Group participates in various defined contribution retirement plans organized by municipal and provincial governments for its employees. The Group is required to make contributions to these plans based on a specified percentage of employees' salaries, bonuses and certain allowances. Additionally, with government approval, the Group contributes to a supplemental defined contribution pension plan, which is managed by a qualified fund manager. Beyond the required annual contributions, the Group has no further material obligations for pension contribution payments.

The Group's contributions to these retirement contribution plans were RMB296 million, RMB314 million, RMB313 million for the years ended 31 December 2022, 2023 and 2024 respectively, and RMB179 million and RMB198 million for the seven months ended 31 July 2024 and 2025 respectively.

F. MANAGEMENT DISCUSSION AND ANALYSIS ON INNER MONGOLIA CONSTRUCTION INVESTMENT

The following performance discussion of Guodian Construction and Investment Inner Mongolia Energy Co., Ltd ("**Inner Mongolia Construction Investment**") should be read in conjunction with the historical financial information for the three financial years ended 31 December 2024 and for the seven months ended 31 July 2025 set forth in the accountants' report, the text of which is set out in Appendix II of this circular.

Business overview

Guodian Construction and Investment Inner Mongolia Energy Co., Ltd. is a company established in the PRC with limited liability in 2005. It operates in the power production and supply industry as well as coal mining and washing industry and is mainly engaged in pithead coal-fired power generation, heat supply, and coal mining, washing, processing, and sales.

Revenue

For the three years ended 31 December 2022, 2023 and 2024, the revenue of Inner Mongolia Construction Investment amounted to approximately RMB7,307 million, RMB2,705 million and RMB3,066 million, respectively. The significant decrease in revenue for 2023 was mainly due to the suspension of coal operations during the conversion of exploration rights to mining rights, coupled with a decline in power generation.

For the seven months ended 31 July 2024 and 2025, the revenue of Inner Mongolia Construction Investment increased from approximately RMB1,131 million to RMB2,872 million, primarily due to the resumption of coal operations.

Cost of sales

For the three years ended 31 December 2022, 2023 and 2024, the cost of sales of Inner Mongolia Construction Investment amounted to approximately RMB3,286 million, RMB2,898 million and RMB3,373 million, respectively. The decrease in cost of sales for 2023 was mainly due to temporary suspension of coal operations. The increase in cost of sales for 2024 was mainly due to the increase in fuel cost.

For the seven months ended 31 July 2024 and 2025, the cost of sales of Inner Mongolia Construction Investment amounted to approximately RMB1,992 million and RMB1,602 million, respectively. The decrease was mainly due to the decrease in fuel cost.

Gross profit and gross profit margin

For the three years ended 31 December 2022, 2023 and 2024, Inner Mongolia Construction Investment reported a gross profit of approximately RMB4,021 million, followed by gross losses of RMB193 million, and RMB307 million, respectively. The corresponding gross profit margins were 55.0% in 2022, which turned negative to -7.1% in 2023 and further to -10.0% in 2024. The decrease in gross profit and gross profit margin was mainly due to the decrease in revenue from coal.

For the seven months ended 31 July 2024 and 2025, Inner Mongolia Construction Investment reported a gross loss of approximately RMB861 million and a gross profit of RMB1,270 million, respectively. This return to profitability was largely attributable to higher revenue generated from coal operations.

Total comprehensive income for the year/period

For the three years ended 31 December 2024, the total comprehensive income of Inner Mongolia Construction Investment was approximately RMB1,022 million, a loss of RMB495 million and a loss of RMB7,137 million, respectively. The significant decline in 2023 was primarily driven by a decrease in gross profit and an increase of other expense. The further substantial loss in 2024 was largely due to significant donations made to public welfare foundation.

For the seven months ended 31 July 2024 and 2025, the total comprehensive income of Inner Mongolia Construction Investment improved from a loss of approximately RMB1,585 million to an income of approximately RMB1,035 million, primarily driven by an increase in gross profit.

General Information of assets and liabilities

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the total assets of Inner Mongolia Construction Investment amounted to approximately RMB15,595 million, RMB14,687 million, RMB15,003 million and RMB15,040 million, respectively. The decrease in total assets as at 31 December 2023 was mainly due to the decrease in construction in progress, other non-current assets and cash and cash equivalents.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the total liabilities of Inner Mongolia Construction Investment amounted to approximately RMB9,375 million, RMB9,747 million, RMB17,200 million and RMB16,202 million, respectively. The significant increase in total liabilities as at 31 December 2024 was mainly due to increase in borrowings and long-term liabilities. The decrease in total liabilities as at 31 July 2025 was mainly due to decrease in long-term liabilities.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the respective gearing ratios (calculated as total liability divided by total assets) of Inner Mongolia Construction Investment were: 60.1%, 66.4%, 114.6% and 107.7%.

Liquidity and capital resources

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the current assets of Inner Mongolia Construction Investment amounted to approximately RMB1,612 million, RMB1,113 million, RMB1,028 million and RMB1,183 million, respectively. Among which, cash and cash equivalents amounted to approximately RMB751 million, RMB333 million, RMB416 million and RMB241 million, respectively, accounting for 46.6%, 29.9%, 40.5% and 20.4% of current assets, respectively. Restricted bank deposits amounted to approximately RMB170 million, RMB273 million, RMB132 million and RMB157 million respectively, accounting for 10.5%, 24.5%, 12.8% and 13.3% of current assets, respectively. Prepaid expenses and other current assets amounted to approximately RMB198 million, RMB249 million, RMB105 million and RMB259 million respectively, accounting for 12.3%, 22.4%, 10.2% and 21.9% of current assets, respectively. Accounts and bills receivables amounted to approximately RMB379 million, RMB149 million, RMB289 million and RMB418 million respectively, accounting for 23.5%, 13.4%, 28.1% and 35.3% of current assets, respectively.

Liquidity ratios (current assets divided by current liabilities) were 0.3, 0.2, 0.1 and 0.1, respectively.

Capital management

Inner Mongolia Construction Investment's policy is to maintain a strong capital base so as to maintain investor, creditor and the market and to sustain future development of the business.

Inner Mongolia Construction Investment manages the capital structure and makes adjustments to it in the light of changes in economic conditions and the risk characteristics of the underlying assets. In order to maintain or adjust the capital structure, Inner Mongolia Construction Investment may adjust the amount of dividends paid to shareholders, return capital to shareholders or issue new shares to reduce debts. Inner Mongolia Construction Investment monitors capital using a gearing ratio which is total liabilities divided by total assets. Inner Mongolia Construction Investment aims to maintain the gearing ratio at a reasonable level.

Foreign exchange risks

As the principal business of Inner Mongolia Construction Investment is domiciled in the PRC and denominated in RMB, Inner Mongolia Construction Investment is not exposed to foreign exchange risks.

Segment information

The management of Inner Mongolia Construction Investment assesses the performance and allocates the resources of the Inner Mongolia Construction Investment as a whole, therefore no segment information is presented.

As at 31 December 2022, 2023 and 2024 and as at 31 July 2025, substantially all of the non-current assets of Inner Mongolia Construction Investment were located in the PRC.

Contingent liabilities

As at 31 December 2022, 2023, 2024, and 31 July 2025, Inner Mongolia Construction Investment had no significant contingent liabilities, with the exception of its accrued reclamation obligations. Beyond these recognized amounts of RMB220 million as at 31 December 2024 and 31 July 2025, Inner Mongolia Construction Investment had no material unrecognized obligations from guarantees or litigation. Inner Mongolia Construction Investment is involved in certain legal proceedings arising in the ordinary course of business; however, management believes that the outcomes will not have a material adverse effect on financial position or operating results.

In September 2025, Inner Mongolia Construction Investment received a notice from the Ordos Bureau of Natural Resources requiring it to carry out the payment procedures for the mining rights grant proceeds in respect of the Chahasu Coal Mine. Inner Mongolia Construction Investment and China Energy Group are currently engaged in ongoing discussions with the relevant authorities regarding this matter. China Energy Group has further confirmed that, if Inner Mongolia Construction Investment is required to make any additional payment of mining rights grant proceeds for the Chahasu Coal Mine (License No.: C1500002024071210157148), China Energy Group will be responsible for coordinating the resolution of such payment obligation.

Capital commitments

As at 31 July 2025, Inner Mongolia Construction Investment had capital commitments of RMB584 million contracted for but not provided in relation to land, buildings and exploration and evaluation assets, and 821 million for equipment and others.

Charges on assets

As at 31 December 2022, 2023 and 2024 and as at 31 July 2025, certain property, plant and equipment of Inner Mongolia Construction Investment with carrying amounts of approximately RMB1,641 million, RMB1,504 million, RMB2,408 million and RMB2,408 million, respectively, were pledged to financial institutions as security for loans provided to Inner Mongolia Construction Investment.

Material investment and material acquisitions and disposals

For the years ended 31 December 2022, 2023 and 2024 and seven months ended 31 July 2025, Inner Mongolia Construction Investment did not have any material investment or material acquisition and disposal.

Future plans for material investments or capital assets

As at the Latest Practicable Date, Inner Mongolia Construction Investment has no plans in relation to significant investments or capital assets.

Employees and remuneration policy

As at 31 July 2025, the total number of employees of Inner Mongolia Construction Investment was 1,274. Inner Mongolia Construction Investment determines employee remuneration with reference to market level as well as personal qualifications, experience, skills, performance and contributions. Inner Mongolia Construction Investment reviews the remuneration and benefits policies, and employee's personal performance on a regular basis to ensure employees are fairly rewarded.

In accordance with PRC regulations, Inner Mongolia Construction Investment participates in various defined contribution retirement plans organized by municipal and provincial governments for its employees. Inner Mongolia Construction Investment is required to make contributions to these plans based on a specified percentage of employees' salaries, bonuses and certain allowances. Additionally, with government approval, the Group contributes to a supplemental defined contribution pension plan, which is managed by a qualified fund manager. Beyond the required annual contributions, Inner Mongolia Construction Investment has no further material obligations for pension benefit payments.

Inner Mongolia Construction Investment's contributions to these retirement benefit plans were RMB52 million, RMB76 million and RMB82 million for the years ended 31 December 2022, 2023 and 2024 respectively, and RMB60 million and RMB50 million for the seven months ended 31 July 2024 and 2025 respectively.

G. MANAGEMENT DISCUSSION AND ANALYSIS ON SHENYAN COAL

The following performance discussion of China Energy Shaanxi Shenyan Coal Co., Ltd. ("**Shenyan Coal**") should be read in conjunction with the historical financial information for the three years ended 31 December 2024 and for the seven months ended 31 July 2025 set forth in the accountants' report, the text of which is set out in Appendix II of this circular.

Business overview

Shenyan Coal is a company established in the PRC with limited liability in 2009. It operates in the coal mining and washing industry and is mainly engaged in coal mining, washing and processing, and sales.

Revenue

For the three years ended 31 December 2022, 2023 and 2024, the revenue of Shenyan Coal amounted to approximately RMB7,137 million, RMB6,824 million and RMB7,059 million, respectively. The revenue remained relatively stable in 2022, 2023 and 2024.

For the seven months ended 31 July 2024 and 2025, the revenue of Shenyan Coal decreased from approximately RMB4,244 million to RMB3,585 million, primarily due to the decrease in coal prices in 2025 as compared with 2024.

Cost of sales

For the three years ended 31 December 2022, 2023 and 2024, the cost of sales of Shenyan Coal amounted to approximately RMB2,784 million, RMB3,377 million and RMB3,409 million, respectively. The increase in cost of sales in 2023 was primarily driven by higher personnel expenses, depreciation and amortization costs, as well as stripping costs. The slight increase in cost of sales for 2024 was mainly due to higher sales volume, which led to a corresponding increase in cost of sales.

For the seven months ended 31 July 2024 and 2025, the cost of sales of Shenyan Coal amounted to approximately RMB2,168 million and RMB1,833 million, respectively. The decrease was mainly due to lower cost of sales in line with the decrease in revenue.

Gross profit and gross profit margin

For the three years ended 31 December 2022, 2023 and 2024, the gross profit generated from the operations of Shenyan Coal amounted to approximately RMB4,353 million, RMB3,447 million and RMB3,650 million, respectively. The corresponding gross profit margins were 61.0%, 50.5% and 51.7%, respectively. The decrease in gross profit in 2023 was mainly due to the increase in cost of sales. The slight increase in gross profit margin in 2024 was mainly due to a higher sales volume in 2024 compared with 2023.

For the seven months ended 31 July 2024 and 2025, the gross profit generated from the operations of Shenyan Coal amounted to approximately RMB2,076 million and RMB1,752 million, respectively, and the gross profit margins remained stable at 48.9% in both periods.

Total comprehensive profit for the year/period

For the three years ended 31 December 2022, 2023 and 2024, the total comprehensive income of Shenyan Coal amounted to approximately RMB3,601 million, RMB2,846 million and RMB2,973 million, respectively. The decrease in 2023 was mainly due to the decrease in gross profit. The slight increase in 2024 was mainly due to the increase in coal sales volume.

For the seven months ended 31 July 2024 and 2025, the total comprehensive income of Shenyan Coal amounted to approximately RMB1,729 million and RMB1,475 million, respectively. The decrease was mainly due to the decrease in gross profit resulting from a lower average selling price per ton of coal in 2025 compared with 2024.

General information of assets and liabilities

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the total assets of Shenyan Coal amounted to approximately RMB12,208 million, RMB11,710 million, RMB11,671 million and RMB12,898 million, respectively. The decrease as at 31 December 2023 was mainly due to the decrease in property, plant and equipment and other non-current assets. The slight decrease as at 31 December 2024 was mainly due to the decrease in property, plant and equipment and other non-current assets from charging depreciation and amortization, partially offset by the increase in cash and cash equivalents. The increase as at 31 July 2025 was mainly due to the increase in time deposits with original maturity over three months.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the total liabilities of Shenyan Coal amounted to approximately RMB2,594 million, RMB4,987 million, RMB2,046 million and RMB1,798 million, respectively. The increase as at 31 December 2023 was mainly due to the increase in accrued expenses and other payables and borrowings. The decrease as at 31 December 2024 was mainly due to the repayment of and the decrease in accrued expenses and other payables. The slight decrease as at 31 July 2025 was mainly due to the reduction in income tax payables.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the gearing ratios (calculated as total liability divided by total assets) of Shenyan Coal were 21.2%, 42.6%, 17.5%, and 13.9%, respectively.

Liquidity and capital resources

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the current assets of Shenyan Coal amounted to approximately RMB4,618 million, RMB4,536 million, RMB4,978 million, and RMB6,495 million, respectively.

Among which, cash and cash equivalents amounted to approximately RMB1,000 million, RMB2,222 million, RMB2,757 million, and RMB1,642 million, respectively, accounting for 21.7%, 49.0%, 55.4%, and 25.3% of current assets, respectively.

Time deposits with original maturity over three months amounted to approximately RMB1,500 million, nil, nil, and RMB2,812 million, respectively, accounting for 32.5%, nil, nil, and 43.3% of current assets, respectively.

Accounts receivables amounted to approximately RMB1,323 million, RMB1,226 million, RMB1,055 million, and RMB667 million, respectively, accounting for 28.6%, 27.0%, 21.2%, and 10.3% of current assets, respectively.

Liquidity ratios (current assets divided by current liabilities) were 2.05, 0.95, 2.56, and 3.83, respectively.

Capital management

Shenyan Coal's policy is to maintain a strong capital base so as to maintain investor, creditor and the market and to sustain future development of the business.

Shenyan Coal manages the capital structure and makes adjustments to it in the light of changes in economic conditions and the risk characteristics of the underlying assets. In order to maintain or adjust the capital structure, Shenyan Coal may adjust the amount of dividends paid to shareholders, return capital to shareholders or issue new shares to reduce debts. Shenyan Coal monitors capital using a gearing ratio which is total liabilities divided by total assets. Shenyan Coal aims to maintain the gearing ratio at a reasonable level.

Foreign exchange risks

As the principal business of Shenyan Coal is domiciled in the PRC and denominated in RMB, Shenyan Coal is not exposed to foreign exchange risks.

Segment information

The management of Shenyan Coal assesses the performance and allocates the resources of Shenyan Coal as a whole, therefore Shenyan Coal only has one reportable operating segment.

As at 31 December 2022, 2023 and 2024 and as at 31 July 2025, all of the non-current non-financial assets (excluding deferred tax assets) of Shenyan Coal were located in the PRC.

Contingent liabilities

As at 31 December 2022, 2023 and 2024, and 31 July 2025, Shenyan Coal had no significant contingent liabilities, with the exception of its accrued reclamation obligations. Beyond these recognized amounts of RMB537 million, RMB225 million, RMB155 million, and RMB123 million, respectively, Shenyan Coal had no material unrecognized obligations from guarantees or litigation.

Capital commitments

As at 31 July 2025, Shenyan Coal had capital commitments of RMB437 million contracted for but not provided in relation to equipment, and RMB36 million for land and buildings. Of the RMB437 million allocated to equipment, RMB194 million was committed to the coal production system extension project. Additionally, Shenyan Coal committed RMB98 million for the procurement of bulldozers, dump trucks, and wheels to support ongoing operations.

Charges on assets

As at 31 December 2022, 2023 and 2024 and as at 31 July 2025, Shenyan Coal did not have any charge over its assets.

Material investment and material acquisitions and disposals

For the years ended 31 December 2022, 2023 and 2024 and seven months ended 31 July 2025, Shenyan Coal did not have any material investment or material acquisition and disposal.

Future plans for material investments or capital assets

As at the Latest Practicable Date, Shenyan Coal had no plans in relation to significant investments or capital assets.

Employees and remuneration policy

As at 31 July 2025, the total number of employees of Shenyan Coal was 887. Shenyan Coal determines employee remuneration with reference to market level as well as personal qualifications, experience, skills, performance and contributions. Shenyan Coal reviews the remuneration and benefits policies, and employee's personal performance on a regular basis to ensure employees are fairly rewarded.

In accordance with PRC regulations, Shenyan Coal participates in various defined contribution retirement plans organized by municipal and provincial governments for its employees. Shenyan Coal is required to make contributions to these plans based on a specified percentage of employees' salaries, bonuses and certain allowances. Additionally, with government approval, Shenyan Coal contributes to a supplemental defined contribution pension plan, which is managed by a qualified fund manager. Beyond the required annual contributions, Shenyan Coal has no further material obligations for pension benefit payments.

Shenyan Coal contributions to these retirement benefit plans were RMB40 million, RMB47 million and RMB60 million for the years ended 31 December 2022, 2023 and 2024 respectively, and RMB35 million and RMB38 million for the seven months ended 31 July 2024 and 2025 respectively.

H. MANAGEMENT DISCUSSION AND ANALYSIS ON JINSHEN ENERGY GROUP

The following performance discussion of Shanxi Province Jinshen Energy Co., Ltd. and its subsidiaries (collectively, the "**Jinshen Energy Group**") should be read in conjunction with the historical financial information for the three financial years ended 31 December 2024 and for the seven months ended 31 July 2025 set forth in the accountants' report, the text of which is set out in Appendix II of this circular.

Business overview

Shanxi Province Jinshen Energy Co., Ltd. is a company established in the PRC with limited liability in 2004. It operates in the coal mining and washing industry and is mainly engaged in coal mining, washing, processing and sales, and a small amount of coal distribution.

Revenue

For the three years ended 31 December 2022, 2023 and 2024, the revenue of Jinshen Energy Group amounted to approximately RMB5,917 million, RMB5,625 million and RMB3,060 million, respectively. The revenue remained stable for 2022 and 2023. The decrease in revenue for 2024 was primarily due to the temporary shutdown of one of our coal mines for rectification.

For the seven months ended 31 July 2024 and 2025, the revenue of Jinshen Energy Group decreased from approximately RMB2,006 million to RMB1,771 million, primarily driven by a decline in the average selling price per ton of coal.

Cost of sales

For the three years ended 31 December 2022, 2023 and 2024, the cost of sales of Jinshen Energy Group amounted to approximately RMB2,345 million, RMB2,446 million and RMB1,789 million, respectively. The fluctuations in cost of sales were mainly due to variations in the cost of in materials, fuel and power.

For the seven months ended 31 July 2024 and 2025, the costs of sales of Jinshen Energy Group increased from approximately RMB1,087 million to RMB1,383 million, largely attributable to increased spending in materials, fuel and power.

Gross profit and gross profit margin

For the three years ended 31 December 2022, 2023 and 2024, the gross profit generated from the operations of Jinshen Energy Group amounted to approximately RMB3,572 million, RMB3,179 million, and RMB1,271 million, respectively. The corresponding gross profit margins were 60.4%, 56.5% and 41.5%, respectively. The decrease in gross profit and gross profit margin was primarily due to a decline in the average selling price of coal and the temporary suspension of a mining operation for rectification.

For the seven months ended 31 July 2024 and 2025, the gross profit generated from the operations of Jinshen Energy Group amounted to approximately RMB919 million and RMB388 million, respectively. The corresponding gross profit margins were 45.8% and 21.9%, respectively. The decrease in gross profit and gross profit margin was primarily due to a decline in the average selling price per ton of coal.

Total comprehensive income for the year/period

For the three years ended 31 December 2024, the total comprehensive income of Jinshen Energy Group amounted to approximately RMB2,312 million, RMB2,044 million and RMB649 million, respectively. The decrease in total comprehensive income was mainly due to decrease in gross profit.

For the seven months ended 31 July 2024 and 2025, the total comprehensive income of Jinshen Energy Group dropped from approximately RMB513 to approximately RMB96 million. The decrease was primarily due to a decline in the average selling price per ton of coal.

General Information of assets and liabilities

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the total assets of Jinshen Energy Group amounted to approximately RMB8,019 million, RMB8,116 million, RMB8,330 million and RMB7,703 million, respectively. The increase in total assets as at 31 December 2023 and 2024 was mainly due to the increase in property, plant and equipment. The decrease in total assets as at 31 July 2025 was mainly due to the decrease in prepaid expenses and other current assets.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the total liabilities of Jinshen Energy Group amounted to approximately RMB2,389 million, RMB1,866 million, RMB1,909 million and RMB1,186 million, respectively. The decrease in total liabilities as at 31 December 2023 was mainly due to decrease in bank and other borrowings. The decrease in total liabilities as at 31 July 2025 was mainly due to decrease in dividends payable.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the respective gearing ratios (calculated as total liability divided by total assets) of Jinshen Energy Group were: 29.79%, 22.99%, 22.92% and 15.40%.

Liquidity and capital resources

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the current assets of Jinshen Energy Group amounted to approximately RMB4,428 million, RMB4,476 million, RMB4,084 million and RMB3,471 million, respectively. Among which, cash and cash equivalents amounted to approximately RMB2,847 million, RMB95 million, RMB14 million and RMB79 million, respectively, accounting for 64.3%, 2.1%, 0.3% and 2.3% of current assets, respectively. Restricted bank deposits amounted to approximately RMB429 million, RMB662 million, RMB688 million and RMB610 million respectively, accounting for 9.7%, 14.8%, 16.8% and 17.6% of current assets, respectively. Prepaid expenses and other current assets amounted to approximately RMB771 million, RMB3,518 million, RMB3,177 million and RMB2,398 million respectively, accounting for 17.4%, 78.6%, 77.8% and 69.1% of current assets, respectively.

Liquidity ratios (current assets divided by current liabilities) were 3.0, 3.3, 2.8 and 4.7, respectively.

Capital management

Jinshen Energy Group's policy is to maintain a strong capital base so as to maintain investor, creditor and the market and to sustain future development of the business.

Jinshen Energy Group manages the capital structure and makes adjustments to it in the light of changes in economic conditions and the risk characteristics of the underlying assets. In order to maintain or adjust the capital structure, Jinshen Energy Group may adjust the amount of dividends paid to shareholders, return capital to shareholders or issue new shares to reduce debts. Jinshen Energy Group monitors capital using a gearing ratio which is total liabilities divided by total assets. Jinshen Energy Group aims to maintain the gearing ratio at a reasonable level.

Foreign exchange risks

As the principal business of Jinshen Energy Group is domiciled in the PRC and denominated in RMB, Jinshen Energy Group is not exposed to foreign exchange risks.

Segment information

The management of Jinshen Energy Group assesses the performance and allocates the resources of Jinshen Energy Group as a whole, therefore no segment information is presented.

As at 31 December 2022, 2023 and 2024 and as at 31 July 2025, substantially all of the non-current assets of Jinshen Energy Group were located in the PRC.

Contingent liabilities

As at 31 December 2022, 2023, 2024, and 31 July 2025, Jinshen Energy Group had no significant contingent liabilities, with the exception of its accrued reclamation obligations. Beyond these recognized amounts of RMB558 million, RMB498 million, RMB440 million, and RMB432 million, respectively, Jinshen Energy Group had no material unrecognized obligations from guarantees or litigation. Jinshen Energy Group is involved in certain legal proceedings arising in the ordinary course of business; however, management believes that the outcomes will not have a material adverse effect on financial position or operating results.

Capital commitments

As of 31 July 2025, Jinshen Energy Group had capital commitments of RMB346 million, primarily comprising RMB330 million for equipment and RMB16 million for other items. The equipment-related commitments mainly reflect the normal timing difference between contract signing and delivery for the purchased fully mechanized mining equipment.

Charges on assets

As at 31 December 2022, 2023 and 2024 and as at 31 July 2025, Jinshen Energy Group did not have any charge over its assets.

Material investment and material acquisitions and disposals

For the years ended 31 December 2022, 2023 and 2024 and seven months ended 31 July 2025, Jinshen Energy Group did not have any material investment or material acquisition and disposal.

Future plans for material investments or capital assets

As at the Latest Practicable Date, Jinshen Energy Group has no plans in relation to significant investments or capital assets.

Employees and remuneration policy

As at 31 July 2025, the total number of employees of Jinshen Energy Group was 2,484. Jinshen Energy Group determines employee remuneration with reference to market level as well as personal qualifications, experience, skills, performance and contributions. Jinshen Energy Group reviews the remuneration and benefits policies, and employee's personal performance on a regular basis to ensure employees are fairly rewarded.

In accordance with PRC regulations, Jinshen Energy Group participates in various defined contribution retirement plans organized by municipal and provincial governments for its employees. Jinshen Energy Group is required to make contributions to these plans based on a specified percentage of employees' salaries, bonuses and certain allowances. Additionally, with government approval, Jinshen Energy Group contributes to a supplemental defined contribution pension plan, which is managed by a qualified fund manager. Beyond the required annual contributions, Jinshen Energy Group has no further material obligations for pension benefit payments.

Jinshen Energy Group's contributions to these retirement benefit plans were RMB55 million, RMB60 million and RMB67 million for the years ended 31 December 2022, 2023 and 2024 respectively, and RMB39 million and RMB37 million for the seven months ended 31 July 2024 and 2025 respectively.

I. MANAGEMENT DISCUSSION AND ANALYSIS ON BAOTOU MINING GROUP

The following performance discussion of China Energy Baotou Mining Co., Ltd. and its subsidiaries (collectively, the "**Baotou Mining Group**") should be read in conjunction with the historical financial information for the three years ended 31 December 2024 and for the seven months ended 31 July 2025 set forth in the accountants' report, the text of which is set out in Appendix II of this circular.

Business overview

China Energy Baotou Mining Co., Ltd. is a company established in the PRC with limited liability in 1980. It operates in the road transportation industry and is mainly engaged in road transportation.

Revenue

For the three years ended 31 December 2022, 2023 and 2024, the revenue of Baotou Mining Group amounted to approximately RMB182 million, RMB168 million and RMB132 million, respectively. The decrease in 2023 was mainly due to the decrease in the construction and installation service revenue as its business volume decreased in 2023 and the further decrease in 2024 was mainly due to the continued decline in construction and installation service revenue and the decrease in toll revenue due to reduced traffic volume amid the downturn of the coal market.

For the seven months ended 31 July 2024 and 2025, the revenue of Baotou Mining Group amounted to approximately RMB73 million and RMB93 million, respectively. The increase was mainly due to the increase in the local coal production volumes in 2025, which led to increased traffic volume and higher toll revenue.

Cost of sales

For the three years ended 31 December 2022, 2023 and 2024, the cost of sales of Baotou Mining Group amounted to approximately RMB119 million, RMB133 million and RMB156 million, respectively. The increase in cost of sales in 2023 was mainly due to the increased repair and maintenance expenses resulting from major overhaul works carried out in 2023 and the further increase in cost of sales in 2024 was mainly due to the additional taxes and surcharges incurred upon the disposal of a coal exploration right.

For the seven months ended 31 July 2024 and 2025, the cost of sales of Baotou Mining Group amounted to approximately RMB113 million and RMB57 million, respectively. The decrease was mainly due to the additional taxes and surcharges incurred in 2024, which did not recur in 2025.

Gross profit and gross profit margin

For the three years ended 31 December 2022, 2023 and 2024, Baotou Mining Group recorded a gross profit of approximately RMB63 million and RMB35 million and a gross loss of RMB24 million from operations, respectively. The corresponding gross profit margins were 34.6%, 20.8% and (18.2%), respectively.

The decrease in gross profit in 2023 was mainly due to (i) the decrease in the construction and installation service revenue and (ii) the increase in repair expenses arising from the major overhaul works of highways. The further decrease in gross profit in 2024 was mainly due to the additional taxes and surcharges incurred upon the disposal of a coal exploration right. The decreases in gross profit margin in both 2023 and 2024 were mainly attributable to the same underlying factors that drove the changes in gross profit for each respective year.

For the seven months ended 31 July 2024 and 2025, Baotou Mining Group recorded a gross loss of approximately RMB40 million and a gross profit of RMB36 million from the operations, respectively. The corresponding gross profit margins were (54.8%) and 38.7%, respectively. The increase from gross loss to gross profit was mainly due to absence in 2025 of the additional taxes and surcharges incurred in 2024. The increase in gross profit margin was mainly due to the same reason as the change in gross profit.

Total comprehensive profit for the year/period

For the three years ended 31 December 2022, 2023 and 2024, Baotou Mining Group recorded a total comprehensive loss of approximately RMB23 million, total comprehensive income of RMB51 million and RMB3,747 million, respectively. The increase in 2023 was mainly due to the expected credit loss recognized in 2022 for long-aged other receivables, which did not recur in 2023. The further increase in 2024 was mainly due to the gains arising from the disposal of a coal exploration right.

For the seven months ended 31 July 2024 and 2025, Baotou Mining Group recorded a total comprehensive income of approximately RMB3,747 million and a total comprehensive loss of approximately RMB10 million, respectively. The decrease was mainly attributable to the absence of the additional gains arising from the disposal of a coal exploration right in 2024.

General information of assets and liabilities

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the total assets of Baotou Mining Group amounted to approximately RMB1,592 million, RMB5,451 million, RMB4,979 million and RMB4,574 million, respectively. The increase as at 31 December 2023 was mainly due to the increase in exploration and evaluation assets and the increase in other non-current assets. The decrease as at 31 December 2024 was mainly due to the decrease in exploration and evaluation assets. The decrease as at 31 July 2025 was mainly due to the decrease in other non-current assets and accounts and bills receivables.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the total liabilities of Baotou Mining Group amounted to approximately RMB307 million, RMB4,068 million, RMB420 million and RMB169 million, respectively. The increase as at 31 December 2023 was mainly due to the increase in the current portion of long-term liabilities. The decrease as at 31 December 2024 was mainly due to the settlement of the current portion of long-term liabilities. The decrease as at 31 July 2025 was mainly due to lower accrued expenses and other payables and contract liabilities.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the gearing ratios (calculated as total liability divided by total assets) of Baotou Mining Group were 19.3%, 74.7%, 8.4% and 3.7%, respectively.

Liquidity and capital resources

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the current assets of Baotou Mining Group amounted to approximately RMB372 million, RMB224 million, RMB675 million, and RMB1,603 million, respectively.

Among which, cash and cash equivalents amounted to approximately RMB104 million, RMB80 million, RMB364 million, and RMB352 million, respectively, accounting for 28.0%, 35.7%, 53.9%, and 22.0% of current assets, respectively.

Time deposits with original maturity over three months amounted to approximately RMB180 million, RMB81 million, RMB252 million, and RMB1,223 million, respectively, accounting for 48.4%, 36.2%, 37.3%, and 76.3% of current assets, respectively.

Liquidity ratios (current assets divided by current liabilities) were 1.63, 0.06, 1.98, and 17.8, respectively.

Capital management

Baotou Mining Group's policy is to maintain a strong capital base so as to maintain investor, creditor and the market and to sustain future development of the business.

Baotou Mining Group manages the capital structure and makes adjustments to it in the light of changes in economic conditions and the risk characteristics of the underlying assets. In order to maintain or adjust the capital structure, Baotou Mining Group may adjust the amount of dividends paid to shareholders, return capital to shareholders or issue new shares to reduce debts. Baotou Mining Group monitors capital using a gearing ratio which is total liabilities divided by total assets. Baotou Mining Group aims to maintain the gearing ratio at a reasonable level.

Foreign exchange risks

As the principal business of Baotou Mining Group is domiciled in the PRC and denominated in RMB, Baotou Mining Group is not exposed to foreign exchange risks.

Segment information

The management of Baotou Mining Group assesses the performance and allocates the resources of Baotou Mining Group as a whole, therefore no segment information is presented.

As at 31 December 2022, 2023 and 2024 and as at 31 July 2025, substantially all of the non-current assets of Baotou Mining Group were located in the PRC.

Contingent liabilities

As at 31 December 2022, 2023 and 2024, and 31 July 2025, Baotou Mining Group had no significant contingent liabilities.

Capital commitments

As at 31 July 2025, Baotou Mining Group had no material capital commitments.

Charges on assets

As at 31 December 2022, 2023 and 2024 and as at 31 July 2025, Baotou Mining Group did not have any charge over its assets.

Material investment and material acquisitions and disposals

For the years ended 31 December 2022, 2023 and 2024 and seven months ended 31 July 2025, Baotou Mining Group did not have any material investment or material acquisition. In May 2024, Baotou Mining Group sold a coal exploration right through a public auction at a consideration of approximately RMB9,553 million. In April 2025, Baotou Mining Group entered into an equity transfer agreement to dispose of a 79% equity interest in one of its subsidiaries at a consideration of approximately RMB576 million.

Future plans for material investments or capital assets

As at the Latest Practicable Date, Baotou Mining Group had no plans in relation to significant investments or capital assets.

Employees and remuneration policy

As at 31 July 2025, the total number of employees of Baotou Mining Group was 112. Baotou Mining Group determines employee remuneration with reference to market level as well as personal qualifications, experience, skills, performance and contributions. Baotou Mining reviews the remuneration and benefits policies, and employee's personal performance on a regular basis to ensure employees are fairly rewarded.

In accordance with PRC regulations, Baotou Mining Group participates in various defined contribution retirement plans organized by municipal and provincial governments for its employees. Baotou Mining Group is required to make contributions to these plans based on a specified percentage of employees' salaries, bonuses and certain allowances. Additionally, with government approval, Baotou Mining Group contributes to a supplemental defined contribution pension plan, which is managed by a qualified fund manager. Beyond the required annual contributions, Baotou Mining Group has no further material obligations for pension benefit payments.

Baotou Mining Group's contributions to these retirement benefit plans were RMB5 million, RMB6 million and RMB5 million for the years ended 31 December 2022, 2023 and 2024 respectively, and RMB2 million and RMB2 million for the seven months ended 31 July 2024 and 2025 respectively.

J. MANAGEMENT DISCUSSION AND ANALYSIS ON SHIPPING COMPANY GROUP

The following performance discussion of China Energy Shipping Co., Ltd. and its subsidiaries (collectively, the "**Shipping Company Group**") should be read in conjunction with the historical financial information for the three financial years ended 31 December 2024 and for the seven months ended 31 July 2025 set forth in the accountants' report, the text of which is set out in Appendix II of this circular.

Business overview

China Energy Shipping Co., Ltd. is a company established in the PRC with limited liability in 2023. It operates in the water transportation industry and is mainly engaged in river shipping and coastal shipping.

Revenue

For the three years ended 31 December 2022, 2023 and 2024, the revenue of Shipping Company Group amounted to approximately RMB3,076 million, RMB2,466 million and RMB4,160 million, respectively. The decrease in revenue for 2023 was driven by a market-driven downturn in freight rates and an unfavorable change in the pricing model. The recovery in 2024 was fueled by the introduction of a revised, more favorable pricing formula and a significant expansion of the fleet's transport capacity.

For the seven months ended 31 July 2024 and 2025, the revenue of Shipping Company Group increased from approximately RMB2,257 million to RMB2,858 million, primarily driven by expanded transport capacity, coupled with market-driven price adjustments for chartered vessels.

Cost of sales

For the three years ended 31 December 2022, 2023 and 2024, the cost of sales of Shipping Company Group amounted to approximately RMB2,752 million, RMB2,375 million and RMB3,580 million, respectively. The decrease in cost of sales for 2023 was mainly due to lower fuel prices, reduced labor costs through optimized crew management, and a significant market-wide decline in vessel charter rates. The increase in cost of sales for 2024 was mainly due to the substantial increase in chartered cargo volume and corresponding vessel charter expenses.

For the seven months ended 31 July 2024 and 2025, the costs of sales of Shipping Company Group amounted to approximately RMB1,947 million and RMB2,439 million, respectively. The increase was mainly due to expanded route network and shipping capacity, which boosted cargo volume, coupled with tightened vessel supply in the market that led to elevated charter rates.

Gross profit and gross profit margin

For the three years ended 31 December 2022, 2023 and 2024, the gross profit generated from the operations of Shipping Company Group amounted to approximately RMB324 million, RMB91 million, and RMB580 million, respectively. The corresponding gross profit margins were 10.5%, 3.7% and 13.9%, respectively. The fluctuations in gross profit and gross profit margin was mainly due to the movements in revenue.

For the seven months ended 31 July 2024 and 2025, the gross profit generated from the operations of Shipping Company Group amounted to approximately RMB310 million and RMB419 million, respectively. The corresponding gross profit margins were 13.7% and 14.7%, respectively. The increase in gross profit and gross profit margin was mainly due to lower bunker fuel costs for owned vessels.

Total comprehensive income for the year/period

For the three years ended 31 December 2024, the total comprehensive income of Shipping Company Group amounted to approximately RMB197 million, RMB-76 million and RMB220 million, respectively. The fluctuations in total comprehensive income were mainly due to fluctuations in gross profit.

For the seven months ended 31 July 2024 and 2025, the total comprehensive income of Shipping Company Group increased from approximately RMB139 million to RMB183 million. The increase was mainly due to the increase in gross profit.

General Information of assets and liabilities

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the total assets of Shipping Company Group amounted to approximately RMB2,392 million, RMB2,448 million, RMB3,926 million and RMB5,339 million, respectively. The increase in total assets as at 2024 was mainly due to the increase in property, plant and equipment and other non-current assets. The increase in total assets as at 31 July 2025 was mainly due to the increase in property, plant and equipment and cash and cash equivalents.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the total liabilities of Shipping Company Group amounted to approximately RMB959 million, RMB1,056 million, RMB2,315 million and RMB3,061 million, respectively. The increase in total liabilities as at 31 December 2024 and 31 July 2025 was mainly due to increase in long-term liabilities.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the respective gearing ratios (calculated as total liability divided by total assets) of Shipping Company Group were: 40%, 43%, 59% and 57%.

Liquidity and capital resources

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the current assets of Shipping Company Group amounted to approximately RMB613 million, RMB688 million, RMB858 million and RMB1,804 million, respectively. Among which, cash and cash equivalents amounted to approximately RMB256 million, RMB366 million, RMB383 million and RMB1,096 million, respectively, accounting for 41.8%, 53.2%, 44.6% and 60.8% of current assets, respectively. Prepaid expenses and other current assets amounted to approximately RMB75 million, RMB104 million, RMB58 million and RMB60 million respectively, accounting for 12.2%, 15.1%, 6.8% and 3.3% of current assets, respectively. Contract assets amounted to approximately RMB56 million, RMB75 million, RMB144 million and RMB141 million respectively, accounting for 9.1%, 10.9%, 16.8% and 7.8% of current assets, respectively. Accounts and bills receivables amounted to approximately RMB152 million, RMB82 million, RMB225 million and RMB447 million respectively, accounting for 24.8%, 11.9%, 26.2% and 24.8% of current assets, respectively.

Liquidity ratios (current assets divided by current liabilities) were 0.6, 0.7, 1.0 and 1.8, respectively.

Capital management

Shipping Company Group's policy is to maintain a strong capital base so as to maintain investor, creditor and the market and to sustain future development of the business.

Shipping Company Group manages the capital structure and makes adjustments to it in the light of changes in economic conditions and the risk characteristics of the underlying assets. In order to maintain or adjust the capital structure, Shipping Company Group may adjust the amount of dividends paid to shareholders, return capital to shareholders or issue new shares to reduce debts. Shipping Company Group monitors capital using a gearing ratio which is total liabilities divided by total assets. Shipping Company Group aims to maintain the gearing ratio at a reasonable level.

Foreign exchange risks

As the principal business of Shipping Company Group is domiciled in the PRC and denominated in RMB, Shipping Company Group is not exposed to significant foreign exchange risks.

Segment information

The management of Shipping Company Group assesses the performance and allocates the resources of the Shipping Company Group as a whole, therefore no segment information is presented.

As at 31 December 2022, 2023 and 2024 and as at 31 July 2025, all of the non-current assets of Shipping Company Group were located in the PRC.

Contingent liabilities

As at 31 December 2022, 2023, 2024, and 31 July 2025, Shipping Company Group had no significant contingent liabilities. Shipping Company Group is involved in certain legal proceedings arising in the ordinary course of business; however, management believes that the outcomes will not have a material adverse effect on financial position or operating results.

Capital commitments

As at 31 July 2025, Shipping Company Group had capital commitments of RMB8 million contracted for but not provided in relation to equipment and others.

Charges on assets

As at 31 December 2022 and 2023, Shipping Company Group did not have any charge over its assets. As at 31 December 2024 and 31 July 2025, non current assets with carrying amount of RMB1,090 million and RMB1,969 million have been pledged to China Energy Group and fellow subsidiaries to secure the long-term liabilities granted to Shipping Company Group.

Material investment and material acquisitions and disposals

For the years ended 31 December 2022, 2023 and 2024 and the seven months ended 31 July 2025, the Shipping Company Group did not undertake any material investment, acquisition or disposal, other than the finance lease arrangements entered into in July 2024 for eleven vessels, which resulted in the recognition of corresponding fixed assets of RMB1,969 million as of 31 July 2025.

Future plans for material investments or capital assets

As at the Latest Practicable Date, Shipping Company Group has no plans in relation to significant investments or capital assets.

Employees and remuneration policy

As at 31 July 2025, the total number of employees of Shipping Company Group was 186. Shipping Company Group determines employee remuneration with reference to market level as well as personal qualifications, experience, skills, performance and contributions. Shipping Company Group reviews the remuneration and benefits policies, and employee's personal performance on a regular basis to ensure employees are fairly rewarded.

In accordance with PRC regulations, Shipping Company Group participates in various defined contribution retirement plans organized by municipal and provincial governments for its employees. Shipping Company Group is required to make contributions to these plans based on a specified percentage of employees' salaries, bonuses and certain allowances. The Group's contributions to these retirement benefit plans were RMB2 million, RMB8 million and RMB17 million for the years ended 31 December 2022, 2023 and 2024 respectively, and RMB7 million and RMB9 million for the seven months ended 31 July 2024 and 2025 respectively.

K. MANAGEMENT DISCUSSION AND ANALYSIS ON COAL TRADING COMPANY GROUP

The following performance discussion of Shenhua Coal Trading Co., Ltd. and its subsidiaries (collectively, the "**Coal Trading Company Group**") should be read in conjunction with the historical financial information for the three financial years ended 31 December 2024 and for the seven months ended 31 July 2025 set forth in the accountants' report, the text of which is set out in Appendix II of this circular.

Business overview

Shenhua Coal Trading Co., Ltd. is a company established in the PRC with limited liability in 1985. It operates in the wholesale industry and is mainly engaged in coal sales and import/export, comprehensive utilisation and deep processing of coal, etc.

Revenue

For the three years ended 31 December 2022, 2023 and 2024, the revenue of Coal Trading Company Group amounted to approximately RMB3,773 million, RMB5,433 million and RMB9,124 million, respectively. The increase in revenue was mainly due to the increase in sales volume of imported coal.

For the seven months ended 31 July 2024 and 2025, the revenue of Coal Trading Company Group decreased from approximately RMB4,833 million to RMB2,432 million, primarily due to a decrease in both the sales volume and selling price of coal compared to the prior period.

Cost of sales

For the three years ended 31 December 2022, 2023 and 2024, the cost of sales of Coal Trading Company Group amounted to approximately RMB3,650 million, RMB5,327 million and RMB8,969 million, respectively. The increase in cost of sales was mainly due to a higher sales volume of imported coal.

For the seven months ended 31 July 2024 and 2025, the costs of sales of Coal Trading Company Group amounted to approximately RMB4,759 million and RMB2,332 million, respectively. The decrease was mainly due to a decrease in both the sales volume and selling price of coal compared to the prior period.

Gross profit and gross profit margin

For the three years ended 31 December 2022, 2023 and 2024, the gross profit generated from the operations of Coal Trading Company Group amounted to approximately RMB123 million, RMB106 million, and RMB155 million, respectively. The corresponding gross profit margins were 3.3%, 2.0% and 1.7%, respectively.

For the seven months ended 31 July 2024 and 2025, the gross profit generated from the operations of Coal Trading Company Group amounted to approximately RMB74 million and RMB100 million, respectively. The corresponding gross profit margins were 1.5% and 4.1%, respectively. This improvement was mainly driven by a favorable shift in the business mix, as the proportion of higher-margin agency services increased in the seven months ended 31 July 2025 relative to the same period in 2024.

Total comprehensive income for the year/period

For the three years ended 31 December 2022, 2023 and 2024, the total comprehensive income of Coal Trading Company Group amounted to approximately RMB54 million, RMB40 million and RMB58 million, respectively. These fluctuations were primarily due to corresponding movements in gross profit.

For the seven months ended 31 July 2024 and 2025, the total comprehensive income of Coal Trading Company Group increased from approximately RMB21 to approximately RMB28 million. The increase was mainly due to the increase in gross profit.

General Information of assets and liabilities

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the total assets of Coal Trading Company Group amounted to approximately RMB830 million, RMB1,271 million, RMB2,161 million and RMB4,343 million, respectively. The increase in total assets as at 31 December 2023 was mainly due to the increase in cash and cash equivalents, accounts and bills receivables and prepaid expenses and other current assets. The further increase in 2024 was mainly due to the increase in cash and cash equivalents and inventories. The growth to RMB4,343 million as at 31 July 2025 was mainly driven by the increase in accounts and bills receivables, cash and cash equivalents and prepaid expenses and other current assets.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the total liabilities of Coal Trading Company Group amounted to approximately RMB378 million, RMB779 million, RMB1,396 million and RMB3,592 million, respectively. The increase in total liabilities as at 31 December 2023 was mainly due to increase in borrowings. The further increase in total liabilities as at 31 December 2024 was mainly due to increase in borrowings and accounts and bills payables. The growth to RMB3,592 million as at 31 July 2025 was mainly driven by the increase in accounts and bills payables.

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the respective gearing ratios (calculated as total liability divided by total assets) of Coal Trading Company Group were: 45.6%, 61.3%, 64.6% and 82.7%.

Liquidity and capital resources

As at 31 December 2022, 2023 and 2024, and 31 July 2025, the current assets of Coal Trading Company Group amounted to approximately RMB776 million, RMB1,228 million, RMB2,113 million and RMB4,300 million, respectively. Among which, cash and cash equivalents amounted to approximately RMB353 million, RMB506 million, RMB936 million and RMB1,330 million, respectively, accounting for 45.5%, 41.2%, 44.3% and 30.9% of current assets, respectively. Accounts and bills receivables amounted to approximately RMB320 million, RMB579 million, RMB590 million and RMB2,518 million respectively, accounting for 41.2%, 47.1%, 27.9% and 58.6% of current assets, respectively. Prepaid expenses and other current assets amounted to approximately RMB54 million, RMB134 million, RMB161 million and RMB359 million respectively, accounting for 7.0%, 10.9%, 7.6% and 8.3% of current assets, respectively.

Liquidity ratios (current assets divided by current liabilities) were 2.1, 1.6, 1.5 and 1.2, respectively.

Capital management

Coal Trading Company Group's policy is to maintain a strong capital base so as to maintain investor, creditor and the market and to sustain future development of the business.

Coal Trading Company Group manages the capital structure and makes adjustments to it in the light of changes in economic conditions and the risk characteristics of the underlying assets. In order to maintain or adjust the capital structure, Coal Trading Company Group may adjust the amount of dividends paid to shareholders, return capital to shareholders or issue new shares to reduce debts. Coal Trading Company Group monitors capital using a gearing ratio which is total liabilities divided by total assets. Coal Trading Company Group aims to maintain the gearing ratio at a reasonable level.

Foreign exchange risks

While the principal business of Coal Trading Company Group is domiciled in the PRC and predominantly denominated in RMB, Coal Trading Company Group is exposed to foreign exchange risk arising from certain USD-denominated monetary assets and liabilities. As of 31 July 2025, the Group had net USD-denominated liability exposure of RMB 197.2 million. A 10% fluctuation in the USD/RMB exchange rate would have an impact of approximately RMB 14.8 million on post-tax profit. Management considers the Coal Trading Company Group's overall foreign exchange risk exposure to be limited.

Segment information

The management of Coal Trading Company Group assesses the performance and allocates the resources of Coal Trading Company Group as a whole, therefore no segment information is presented.

As at 31 December 2022, 2023 and 2024 and as at 31 July 2025, all of the non-current assets of Coal Trading Company Group were located in the PRC.

Contingent liabilities

In October 2024, China Railway Materials Group East China Co., Ltd. ("**CRMGE**") filed a litigation with the Shanghai Putuo District People's Court, requesting the court to rule that Qinhuangdao Yuanhai Electric Power Energy Co., Ltd. ("**Yuanhai Electric Power**") repay a financing loan of RMB10.3 million and overdue loan interest of RMB18.5 million. Guoneng Guoyuan Power Fuel Co., Ltd. ("**Guoyuan Fuel**"), the subsidiary of Coal Trading Company Group is also named as a co-defendant in this litigation. CRMGE further requests the court to require Guoyuan Fuel to assume supplementary liability for any unpaid amounts by Yuanhai Electric Power within its scope of fault. The litigation is currently under first-instance trial and no judgment has been rendered. The Coal Trading Company Group will continue to monitor the latest progress of the litigation to assess any potential impact.

Capital commitments

As at 31 July 2025, Coal Trading Company Group had no material capital commitments.

Charges on assets

As at 31 December 2022, 2023 and 2024 and as at 31 July 2025, Coal Trading Company Group did not have any charge over its assets.

Material investment and material acquisitions and disposals

For the years ended 31 December 2022, 2023 and 2024 and seven months ended 31 July 2025, Coal Trading Company Group did not have any material investment or material acquisition and disposal.

Future plans for material investments or capital assets

As at the Latest Practicable Date, Coal Trading Company Group has no plans in relation to significant investments or capital assets.

Employees and remuneration policy

As at 31 July 2025, the total number of employees of Coal Trading Company Group was 62. Coal Trading Company Group determines employee remuneration with reference to market level as well as personal qualifications, experience, skills, performance and contributions. Coal Trading Company Group reviews the remuneration and benefits policies, and employee's personal performance on a regular basis to ensure employees are fairly rewarded.

In accordance with PRC regulations, Coal Trading Company Group participates in various defined contribution retirement plans organized by municipal and provincial governments for its employees. Coal Trading Company Group is required to make contributions to these plans based on a specified percentage of employees' salaries, bonuses and certain allowances. Additionally, with government approval, Coal Trading Company Group contributes to a supplemental defined contribution pension plan, which is managed by a qualified fund manager. Beyond the required annual contributions, Coal Trading Company Group has no further material obligations for pension benefit payments.

Coal Trading Company Group's contributions to these retirement benefit plans were RMB4.8 million, RMB3.9 million and RMB4.6 million for the years ended 31 December 2022, 2023 and 2024 respectively, and RMB2.6 million and RMB6.8 million for the seven months ended 31 July 2024 and 2025 respectively.

L. MANAGEMENT DISCUSSION AND ANALYSIS ON PORT COMPANY GROUP

The following performance discussion of China Energy Port Co., Ltd. and its subsidiaries (collectively, the "**Port Company Group**") should be read in conjunction with the historical financial information for the two financial years ended 31 December 2024 and for the seven months ended 31 July 2025 set forth in the accountants' report, the text of which is set out in Appendix II of this circular.

Business overview

China Energy Port Co., Ltd. is a company established in the PRC with limited liability in 2023. It operates in the cargo handling and warehousing industry and is mainly engaged in coal storage and transportation, port cargo handling, ship agency services, and supply chain management.

Revenue

For the two years ended 31 December 2023 and 2024, the revenue of Port Company Group amounted to approximately RMB76.8 million and RMB112.4 million, respectively. The significant increase in revenue for 2024 was primarily due to Port Company Group's operational ramp-up. Having only commenced operations in May 2023, the business was in its initial stage with a limited scale during that year.

For the seven months ended 31 July 2024 and 2025, the revenue of Port Company Group decreased from approximately RMB74.7 million to RMB64.6 million, primarily due to weaker market demand from key downstream industries such as power and steel, coupled with a structural shift in China's energy mix towards renewables like wind and photovoltaic power, which has reduced coal consumption and subsequently lowered demand for coal transportation and sampling services.

Cost of sales

For the two years ended 31 December 2023 and 2024, the cost of sales of Port Company Group amounted to approximately RMB1.9 million and RMB2.5 million, respectively.

For the seven months ended 31 July 2024 and 2025, the costs of sales of Port Company Group amounted to approximately RMB1.3 million and RMB1.4 million, respectively.

Gross profit and gross profit margin

For the two years ended 31 December 2023 and 2024, the gross profit generated from the operations of Port Company Group amounted to approximately RMB74.9 million, and RMB109.9 million, respectively. The corresponding gross profit margins were 97.5% and 97.8%, respectively. The increase in gross profit was primarily driven by sales revenue growth in 2024, underpinned by Port Company Group's stabilized operational performance.

For the seven months ended 31 July 2024 and 2025, the gross profit generated from the operations of Port Company Group amounted to approximately RMB73.4 million and RMB63.2 million, respectively. The corresponding gross profit margins were 98.3% and 97.8%, respectively. The decrease in gross profit margin was mainly due to lower operational volumes in transportation and sampling following the decline in sales demand.

Total comprehensive income for the year/period

For the two years ended 31 December 2023, 2024, the total comprehensive income of Port Company Group amounted to approximately RMB29.6 million and RMB42.1 million, respectively. The increase in total comprehensive income was mainly due to increase in gross profit.

For the seven months ended 31 July 2024 and 2025, the total comprehensive income of Port Company Group dropped from approximately RMB36.2 million to approximately RMB19.9 million. The decrease was mainly due to decrease in gross profit.

General Information of assets and liabilities

As at 31 December 2023 and 2024, and 31 July 2025, the total assets of Port Company Group amounted to approximately RMB173.9 million, RMB230.9 million and RMB254.2 million, respectively. The increase in total assets as at 31 December 2024 was mainly due to increase in cash and cash equivalents, The further increase as at 31 July 2025 was mainly due to the increase in property, plant and equipment and other non-current assets.

As at 31 December 2023 and 2024, and 31 July 2025, the total liabilities of Port Company Group amounted to approximately RMB44.2 million, RMB44.1 million and RMB47.5 million, respectively. The increase in total liabilities as at 31 July 2025 was mainly due to increase in accounts payable.

As at 31 December 2023 and 2024, and 31 July 2025, the respective gearing ratios (calculated as total liability divided by total assets) of Port Company Group were: 25.4%, 19.1% and 18.7%.

Liquidity and capital resources

As at 31 December 2023 and 2024, and 31 July 2025, the current assets of Port Company Group amounted to approximately RMB163.5 million, RMB214.8 million and RMB207.4 million, respectively. Among which, cash and cash equivalents amounted to approximately RMB103.5 million, RMB157.7 million and RMB159.5 million, respectively, accounting for 63.3%, 73.4% and 76.9% of current assets, respectively. Prepaid expenses and other current assets amounted to approximately RMB35.3 million, RMB33.9 million and RMB27.9 million respectively, accounting for 21.6%, 15.8% and 13.4% of current assets, respectively. Accounts receivable amounted to approximately RMB24.6 million, RMB23.2 million and RMB20.0 million respectively, accounting for 15.1%, 10.8% and 9.6% of current assets, respectively.

Liquidity ratios (current assets divided by current liabilities) were 3.8, 5.0 and 4.4, respectively.

Capital management

Port Company Group's policy is to maintain a strong capital base so as to maintain investor, creditor and the market and to sustain future development of the business.

Port Company Group manages the capital structure and makes adjustments to it in the light of changes in economic conditions and the risk characteristics of the underlying assets. In order to maintain or adjust the capital structure, Port Company Group may adjust the amount of dividends paid to shareholders, return capital to shareholders or issue new shares to reduce debts. Port Company Group monitors capital using a gearing ratio which is total liabilities divided by total assets. Port Company Group aims to maintain the gearing ratio at a reasonable level.

Foreign exchange risks

As the principal business of Port Company Group is domiciled in the PRC and denominated in RMB, Port Company Group is not exposed to foreign exchange risks.

Segment information

The management of Port Company Group assesses the performance and allocates the resources of Port Company Group as a whole, therefore no segment information is presented.

As at 31 December 2023 and 2024, and 31 July 2025, all of the non-current assets of Port Company Group were located in the PRC.

Contingent liabilities

As at 31 December 2023 and 2024, and 31 July 2025, Port Company Group had no significant contingent liabilities.

Capital commitments

As at 31 July 2025, Port Company Group had capital commitments of RMB191.9 million contracted for but not provided in relation to equipment and RMB35.0 million in remaining committed investment amount.

Charges on assets

As at 31 December 2023 and 2024, and 31 July 2025, Port Company Group did not have any charge over its assets.

Material investment and material acquisitions and disposals

For the years ended 31 December 2023 and 2024 and the seven months ended 31 July 2025, Port Company Group did not have any material investment or material acquisition and disposal, other than the construction contract entered into in April 2025 for the equipment of intelligent coal quality control system, which had a contract value of RMB199.6 million.

Future plans for material investments or capital assets

As at the Latest Practicable Date, Port Company Group has no plans in relation to significant investments or capital assets, other than those capital commitments disclosed above.

Employees and remuneration policy

As at 31 July 2025, the total number of employees of Port Company Group was 33. Port Company Group determines employee remuneration with reference to market level as well as personal qualifications, experience, skills, performance and contributions. Port Company Group reviews the remuneration and benefits policies, and employee's personal performance on a regular basis to ensure employees are fairly rewarded.

In accordance with PRC regulations, the Group participates in various defined contribution retirement plans organized by municipal and provincial governments for its employees. The Group is required to make contributions to these plans based on a specified percentage of employees' salaries, bonuses and certain allowances. Additionally, with government approval, the Group contributes to a supplemental defined contribution pension plan, which is managed by a qualified fund manager. Beyond the required annual contributions, the Group has no further material obligations for pension benefit payments.

The Group's contributions to these retirement benefit plans were RMB1.5 million and RMB2.9 million for the years ended 31 December 2023 and 2024 respectively, and RMB1.6 million and RMB2.0 million for the seven months ended 31 July 2024 and 2025 respectively.

A. Main Valuation Information from the Summaries of the Asset Valuation Reports of the Target Companies

The following information sets out the key valuation information extracted and summarised from the valuation report summaries included in Appendix V to this circular, such as major assumptions, methods and principal parameters. The information below has been prepared for disclosure purposes and should be read together with the valuation report summaries to obtain a complete understanding of the basis and results of the valuations.

A.1 Main Evaluation Materials of Guoyuan Power

I. SELECTION OF THE APPRAISAL APPROACHES

According to the "Appraisal Report," China United Assets Appraisal Group Co., Ltd (hereinafter "China United Assets") has considered the applicability of three asset appraisal approaches: the asset-based approach, the income approach, and the market approach.

China United Assets determined that, around the Appraisal Reference Date, as a large-scale integrated coal-thermal power generation enterprise, Guoyuan Power could not obtain recent transaction cases of similarly sized enterprises, and there were few comparable listed companies of similar scale and business structure in the market. Therefore, the market approach was not selected for the appraisal. Considering that the asset-based approach reflects the enterprise's value from the perspective of its construction and acquisition, provides a basis for the enterprise's operation, management, and performance appraisal after the completion of the economic act, and that Guoyuan Power can provide relatively complete data required for the appraisal of assets and liabilities; and considering that Guoyuan Power possesses the foundation and conditions for continuing operations, with predictable and quantifiable future earnings and risks, China United Assets determined that Guoyuan Power met the conditions for applying both the asset-based approach and the income approach. Therefore, both the asset-based approach and the income approach were used for the appraisal.

Using the asset-based approach, China United Assets calculated the total shareholders' equity of Guoyuan Power to be RMB4,458,199.29 ten thousand. Employing the income approach, the calculated the total shareholders' equity was RMB4,170,437.72 ten thousand.

Considering that (i) the income approach is significantly influenced by the enterprise's future profitability, asset quality, operational capability, and operational risks. The appraisal by the income approach involves the forecast of multiple factors, including future electricity prices, utilization hours, coal prices, and relevant national energy policies. In particular, the national policy on deepening the market-oriented reform of on-grid tariffs for coal-fired power generation is expected to have a material impact on the future operations of the enterprise. These key parameters have considerable uncertainties under the current market environment, and the accuracy of the earnings forecast is relatively low. (ii) The Asset-Based Approach reflects the fair market value of the assets from the perspective of asset replacement. Considering the circumstances of the appraisal, Guoyuan Power is a capital-intensive enterprise, and its asset structure in the power and energy industry is clear. Its core value is mainly embodied in its large-scale tangible assets, such as coal reserves, generating units, transmission networks, and land and buildings. The details of assets and liabilities have been provided by Guoyuan Power and necessary external information required for the Asset-Based Approach has also been collected by the valuer to conduct a comprehensive inventory and appraisal of Guoyuan Power's assets and liabilities. Compared to the income approach applied to the enterprise as a whole, the asset-based approach more objectively reflects the appraised value of the enterprise's net assets. Therefore, China United Assets ultimately selected the result from the asset-based approach as the final appraisal conclusion.

II. MAJOR APPRAISAL ASSUMPTIONS

(1) General Assumptions

1. It is assumed that all assets to be appraised are already in the process of a transaction, and the appraiser simulates the market to appraise said assets based on the transaction conditions;

2. It is assumed that the target company can freely trade in an open market, and for assets traded or intended to be traded on the market, both transacting parties have equal status and sufficient access

to market information and time, enabling them to make rational judgments regarding the asset's function, purpose, and transaction price;

3. It is assumed that the target company, as an operating entity, will continue its operations in accordance with its business objectives under the prevailing external environment. It is assumed that the company's management is responsible and competent in fulfilling their duties; the company operates in compliance with laws and regulations and is capable of generating adequate profits to maintain its going concern status. It is assumed that all categories of the company's operating assets can continue to be utilized in their current purpose, manner, scale, frequency, and environment, or can be used with appropriate modifications;

4. It is assumed that the external economic environment as of the Appraisal Reference Date remains unchanged, with no major changes occurring in current national laws, regulations, policies, the macroeconomic climate, or the political, economic, and social environments of the regions where the parties involved in the transaction are located;

5. It is assumed that no significant changes will occur in the socio-economic environment in which the target company operates, nor in relevant interest rates, exchange rates, tax bases and rates, or policy-related levies;

6. It is assumed that the target company's future management team will fulfill their duties diligently and will continue to maintain the existing management and operational model;

7. It is assumed that the appraisal is based solely on the operational capacity existing as of the Reference Date. Potential expansions of operational capacity resulting from future changes in management, business strategies, additional investments, etc., are not considered, nor are subsequent potential changes in production and operations;

8. It is assumed that all assets subject to this appraisal are valued based on their actual quantities existing as of the Appraisal Reference Date, and the current market prices of the relevant assets are determined according to the effective domestic prices as of the Appraisal Reference Date;

9. It is assumed that the foundational and financial information provided by the target company is true, accurate, and complete. The scope of the appraisal is strictly limited to the appraisal declaration forms submitted by the target company, and no potential contingent assets or liabilities not included in the list provided by the target company have been considered;

10. It is assumed that during the future forecast period, the types and proportions of period expenses for the subject entity will not undergo significant changes from the current basis and will continue to follow the trends observed in recent years, fluctuating in line with changes in the scale of operations;

11. Given that the company's monetary funds, such as cash and bank deposits, are subject to frequent or significant fluctuations during operations, the assessment of financial expenses in this report does not include interest income generated from such deposits, nor does it consider uncertain gains or losses such as those from foreign exchange fluctuations;

12. It is assumed that no other force majeure factors or unforeseeable events will have a material adverse impact on the company;

13. It is assumed that the cash inflows and outflows of the target company after the Appraisal Reference Date occur evenly over time.

(II) Special Assumptions

None.

III. ASSET-BASED APPROACH

(I) Long-Term Equity Investments

For long-term equity investments, verification procedures were first conducted to examine the cause of their formation, book value, actual status, and other relevant factors. Investment agreements, shareholder resolutions, articles of association, and relevant accounting records were reviewed to confirm the authenticity and completeness of the long-term investments.

For wholly-owned subsidiaries and those subsidiaries with over 50% ownership, a comprehensive asset appraisal of the invested entities was performed as of the Appraisal Reference Date. The appraised value was then determined by multiplying the appraised net asset value of the investee entity by the shareholding percentage of the subject entity as of the Appraisal Reference Date:

Appraised value of long-term equity investments = Appraised net asset value of the investee entity after a full appraisal × Shareholding percentage.

Where differences existed between the paid-in capital and the subscribed capital, the calculation was as follows:

Appraised value of long-term equity investments = (Total appraised shareholders' equity of the investee entity + Unpaid subscribed capital) × The shareholder's subscribed capital ratio - The shareholder's unpaid subscribed capital

In determining the appraised value of the long-term equity investments, the valuers did not consider any premium or discount arising from factors such as control premiums or minority discounts, nor did they consider the impact of equity marketability on the appraisal results.

No.	Name of Investee Entity	Shareholding Percentage	Appraisal Approach	Method for determining the conclusion value
1	CHN Energy Inner Mongolia Shanghaimiao Power Generation Co., Ltd.	50.00%	Asset-based Approach, Income Approach	Asset-based Approach
2	Guoneng Baoqing Bio-Technology Co., Ltd.	49.00%	Asset-based Approach	Asset-based Approach
3	Ningxia Ninglu Coal & Power Co., Ltd.	50.00%	Asset-based Approach, Income Approach	Asset-based Approach
4	Shanxi Hexin Electric Power Development Co., Ltd.	29.51%	Financial Statement Confirmation	Financial Statement Confirmation
5	Shaanxi Binchang Wenjialuo Power Generation Co., Ltd.	49.00%	Asset-based Approach, Income Approach	Asset-based Approach
6	Shaanxi Binchang Wenjialuo Mining Co., Ltd.	49.00%	Financial Statement Confirmation	Financial Statement Confirmation
7	Zhongneng Fuel Distribution Co., Ltd.	69.81%	Asset-based Approach	Asset-based Approach

8	Guoneng Energy Hami Coal & Power Co., Ltd.	100.00%	Asset-based Approach, Income Approach	Asset-based Approach
9	Guoneng Bozhou New Energy Co., Ltd.	100.00%	Asset-based Approach	Asset-based Approach
10	Guoneng Baoqing Coal, Power & Chemical Co., Ltd.	55.00%	Asset-based Approach, Income Approach	Asset-based Approach
11	Guoneng Shanxi Hequ Power Generation Co., Ltd.	60.00%	Asset-based Approach, Income Approach	Asset-based Approach

16	Shaanxi Deyuan Fugu Energy Co., Ltd.	70.00%	Asset-based Approach, Income Approach	Asset-based Approach

According to the calculation, the results for the long-term equity investment entities are as follows:

No.	**Name of Investee Enterprises**	**Shareholding Percentage**	**Book Value (RMB in ten thousand)**	**Appraised Value (RMB in ten thousand)**	**Appreciation Rate (%)**
1	CHN Energy Inner Mongolia Shanghaimiao Power Generation Co., Ltd.	50.00%	74,062.21	83,090.98	12.19
2	Guoneng Baoqing Bio-Technology Co., Ltd.	49.00%	5,880.00	5,879.24	-0.01
3	Ningxia Ninglu Coal & Power Co., Ltd.	50.00%	123,670.01	196,298.61	58.73
4	Shanxi Hexin Electric Power Development Co., Ltd.	29.51%	30,856.07	30,455.92	-1.30
5	Shaanxi Binchang Wenjialuo Power Generation Co., Ltd.	49.00%	46,835.66	41,999.36	-10.33
6	Shaanxi Binchang Wenjialuo Mining Co., Ltd.	49.00%	143,080.10	145,175.22	1.46
7	Zhongneng Fuel Distribution Co., Ltd.	69.81%	4,225.95	2,403.68	-43.12
8	Guoneng Energy Hami Coal & Power Co., Ltd.	100.00%	375,473.00	790,615.32	110.57
9	Guoneng Bozhou New Energy Co., Ltd.	100.00%	60,000.00	61,740.74	2.90
10	Guoneng Baoqing Coal, Power & Chemical Co., Ltd.	55.00%	229,984.33	245,047.93	6.55
11	Guoneng Shanxi Hequ Power Generation Co., Ltd.	60.00%	136,511.96	199,493.59	46.14
12	Guoneng (Tianjin) Dagang Power Plant Co., Ltd.	93.89%	103,414.89	224,153.26	116.75
13	Guangdong Jinma Tourism Group Co., Ltd.	99.78%	478,730.95	465,105.27	-2.85
14	Shenzhen Shandong Nuclear Power Engineering Co., Ltd.	70.00%		17,987.20	
15	Qinhuangdao Power Generation Co., Ltd.	50.00%	61,387.92	56,516.12	-7.94

16	Shaanxi Deyuan Fugu Energy Co., Ltd.	70.00%	129,549.89	1,412,254.14	990.12
Total			2,003,662.97	3,978,216.57	98.55

According to the calculation, as at the Appraisal Reference Date, the carrying original cost of the long-term equity investments included in the appraisal was RMB2,042,900.87 ten thousand, the provision for impairment was RMB39,237.90 ten thousand, and the book value was RMB2,003,662.97 ten thousand while the appraised value was RMB3,978,216.57 ten thousand, representing an assessed appreciation of RMB1,974,553.60 ten thousand or an appreciation rate of 98.55%. The primary reason for this increase is the assessed appreciation identified during the comprehensive asset appraisal of the controlling subsidiaries as of the Appraisal Reference Date, leading to a higher appraised value compared to the book value. The main reasons for the assessed appreciation are as follows:

1. The assessed appreciation of Inner Mongolia Shanghaimiao Power Generation Co., Ltd. is RMB9,028.77 ten thousand, representing an appreciation rate of 12.19%. The primary reason for the appreciation is that (1) the book value of long-term equity investments reflects historical investment costs, resulting from the company's accumulated historical operations up to the valuation date; (2) the company's accounting depreciation period for fixed assets is shorter than the economic life period adopted in the valuation.
2. The assessed value of Guoneng Baoqing Bio-Technology Co., Ltd. is basically equivalent to its book value, with no significant appreciation or depreciation.
3. The assessed appreciation of Ningxia Ninglu Coal & Power Co., Ltd. is RMB72,628.59 ten thousand, representing an appreciation rate of 58.73%. The primary reason for the appreciation is that the mining rights for the Renjiazhuang Coal Mine held by the enterprise.
4. The assessed impairment of Shanxi Hexin Electric Power Development Co., Ltd. Is RMB400.15 ten thousand, representing an impairment rate of 1.3%. Its assessed value is basically equivalent to the book value; the variance is mainly attributable to the differences between the consolidated financial statement data of Hexin Electric Power adopted in this assessment and the accounting costs recorded by Guoyuan Power.
5. The assessed impairment of Shaanxi Binchang Wenjialuo Power Generation Co., Ltd. is RMB4,836.30 ten thousand, representing an impairment rate of 10.33%. The impairment is caused by the book operating losses incurred by Wenjialuo Power Generation as a result of the policy impact of local deep peak regulation, coupled with the differences from Guoyuan Power's accounting investment costs.
6. The assessed appreciation of Shaanxi Binchang Wenjialuo Mining Co., Ltd. is RMB2,095.12 ten thousand, representing an appreciation rate of 1.46%. The appreciation stems from the book operating profits of Wenjialuo Power Generation and the variances from Guoyuan Power's accounting investment costs.
7. The assessed impairment of Zhongneng Fuel Distribution Co., Ltd. is RMB2,403.68 ten thousand, representing an impairment rate of 43.12%. The impairment is due to the fact that Zhongneng Fuel has no longer engaged in core business operations, combined with its historical book operating losses and the differences from Guoyuan Power's accounting investment costs.
8. The assessed appreciation of Guoneng Energy Hami Coal & Power Co., Ltd. is RMB 415,142.32 ten thousand, representing an appreciation rate of 110.57%. The primary reason for the appreciation is that the open-pit mining rights for the Xinjiang Da' nanhu No. 2 Mine are held by the enterprise.
9. The assessed appreciation of Guoneng Bozhou New Energy Co., Ltd. is RMB1,740.74 ten thousand, representing an appreciation rate of 2.90%. The appreciation is mainly because Bozhou New Energy is still under construction, and the capital cost of the enterprise's self-injected construction funds has been factored into this assessment.
10. The assessed appreciation of Guoneng Baoqing Coal, Power & Chemical Co., Ltd. is RMB15,063.60 ten thousand, representing an appreciation rate of 6.55%. The primary reason for the appreciation is that the mining rights held by the company for the Chaoyang Open-Pit Coal Mine.

11. The assessed appreciation of Guoneng Shanxi Hequ Power Generation Co., Ltd. is RMB62,981.63 ten thousand, representing an appreciation rate of 46.14%. The primary reason for the appreciation is that (1) the book value of long-term equity investments at RMB136,511.96 ten thousand represents historical investment costs. Through accumulated historical operations, Hequ Power Generation Company's net book value as of the Reference Date reached RMB261,731.51 ten thousand (equivalent to RMB157,038.91 ten thousand after conversion based on a 60% equity stake), reflecting a RMB20,526.95 ten thousand increases over the parent company's original investment; (2) due to land scarcity, land prices have surged significantly over the past two decades. The land use rights acquired by the enterprise in 2003 were revalued at RMB56,839.63 ten thousand (equivalent to RMB34,103.78 ten thousand after conversion based on a 60% equity stake).

12. The assessed appreciation of Guoneng (Tianjin) Dagang Power Plant Co., Ltd. is RMB120,738.36 ten thousand, representing an appreciation rate of 116.75%. The primary reason for the appreciation is that (1) the book value of long-term equity investments at RMB103,414.89 ten thousand represents historical investment costs. Dagang Power Generation Company incurred operating losses due to ageing generating units. Its net book value as of the Reference Date reached RMB66,277.65 ten thousand (equivalent to RMB62,228.09 ten thousand after conversion based on a 93.89% equity stake), reflecting an impairment loss of RMB41,186.80 ten thousand against the parent company's original investment; (2) the significant appreciation in land values over the past two decades. This resulted in an appraised value increase of RMB118,588.29 ten thousand for the land owned by Dagang Power - acquired through allocation without compensation between 1993 and 2016, as well as for the land acquired through transfer in earlier periods (equivalent to RMB111,342.55 ten thousand after conversion based on a 93.89% equity stake) ; (3) As the equipment of Dagang Power is aging and approaching the end of its service life, a total of RMB32,400 ten thousand in impairment provisions was accrued in previous years. In April 2025, the 2*660MW equal-capacity replacement project of Dagang Power Plant commenced construction. A large number of assets for which impairment was previously accrued have regained the value for continued use. Combined with the factor that the company’s accounting depreciation period is shorter than the economic service life adopted in the assessment, the fixed assets recorded an assessed appreciation of RMB52,989.93 ten thousand (equivalent to RMB49,752.25 ten thousand after conversion based on a 93.89% equity stake). These valuation adjustments, combined with minor fluctuations in items such as construction in progress, resulted in an assessed appreciation of RMB120,738.36 ten thousand for the long-term equity investment.

13. The assessed impairment of Guangdong Jinma Tourism Group Co., Ltd. is RMB13,625.68 ten thousand, representing an impairment rate of 2.85%. The main reason for the impairment is that Guoyuan Power’s book value reflects the historical acquisition cost and the costs incurred by Jinma Tourism Group Co., Ltd. for share repurchase upon its delisting. Although Jinma Tourism Group Co., Ltd. incurred historical book losses, the appreciation achieved in this assessment failed to cover the cumulative historical losses, resulting in a final assessed impairment.

14. The assessed appreciation of Shenzhen Shandong Nuclear Power Engineering Co., Ltd. is RMB17,987.20 ten thousand. The primary reason for the appreciation is that Shandong Nuclear Power Company has ceased operations and lacks primary business. Guoyuan Power had previously fully provisioned for impairment on this investment during the historical period. The significant appreciation stems from the current valuation of its investment property located in Shenzhen, held since 2003.

15. The assessed impairment of Qinhuangdao Power Generation Co., Ltd. is RMB4,871.81 ten thousand, representing an impairment rate of 7.94%. The primary cause of the impairment is that subsequent to theAppraisal Reference Date, the company received a notice from the National Development and Reform Commission requiring Units 1# and 2# to be withdrawn from standby service and shut down for demolition. In this assessment, these key equipment items were valued based on their scrap and recovery residual value, leading to the impairment.

16. The assessed appreciation of Shaanxi Deyuan Fugu Energy Co., Ltd. is RMB1,282,704.25 ten thousand, representing an appreciation rate of 990.12%. The primary reason for the appreciation is that (1) the book value of long-term equity investments, recorded at RMB129,549.89 ten thousand, represents historical investment costs. Through

accumulated historical operations, Deyuan Fugu Company's net asset book value as of the Reference Date reached RMB849,849.68 ten thousand (equivalent to RMB594,894.78 ten thousand after conversion based on a 70% equity stake), reflecting an increase of RMB465,344.89 ten thousand over the parent company's original investment; (2) the book value of the Fugu County Sandagao Coal Mine held by the enterprise was RMB72,547.84 ten thousand, with an appraised value of RMB1,094,329.48 ten thousand, representing an increase of RMB1,021,781.64 ten thousand (equivalent to RMB715,247.15 ten thousand after conversion based on a 70% equity stake).

(II) Fixed Assets - Buildings and Structures

Based on the structural characteristics and intended use of the property and building included in the appraisal, the valuer analyzed the applicability of different appraisal approaches and finally determined the appropriate appraisal method. In particular, the valuer analyzed the applicability of different appraisal methodologies, considering that the subject properties do not generate stable and predictable income, the income approach was not adopted for this appraisal. For the building assets self-constructed on industrial land among the subject properties, the replacement cost can be calculated based on the current cost of repurchasing or reconstructing a new asset under present conditions. Therefore, the cost approach was applicable for this valuation.; the Market Approach is appropriate for properties purchased externally or for real estate assets that can be transferred individually.

1. Cost Approach

The cost approach refers to the method of calculating the investment required to replace the subject building with a comparable one based on market conditions and the structural characteristics of the subject building as of the Appraisal Reference Date, multiplied by the comprehensively assessed remaining useful life rate of the building, to ultimately determine the value of the building. The calculation formula is as follows:

Appraised Value = Full Replacement Cost × Remaining Useful Life Rate

(1) Determination of Full Replacement Cost

Since the owner of the property rights is a general VAT taxpayer, the full replacement cost for the building assets in this appraisal is exclusive oftax.

The full replacement cost generally consists of four parts: construction and installation cost, pre-construction and other expenses, capital interest, and a reasonable profit. The calculation formula is:

Full Replacement Cost (excluding tax) = Construction & Installation Cost (excluding tax) + Pre-construction & Other Expenses (excluding tax) + Capital Cost+ Reasonable Profit

1) Determination of Construction and Installation Cost

For key projects with available budget and final account data, the final account adjustment method is used. Specifically, the valuers, based on the quantities from the final accounts and with reference to current standards such as the “Coal Construction Surface Engineering Consumption Quota (2015 Tax-Excluded Base Price)” the “Coal Construction Engineering Expense Quota and Cost Management Regulations (2015)”, and the “Supplementary Provisions for the Implementation of Coal Construction Project Cost Valuation Standards” (China Coal Construction Association, December 2016), calculate the construction

and installation cost of the project using market price information for civil engineering materials in the region where the owner is located as of the Reference Date. Relevant final account data were collected for the buildings within the scope of this appraisal; therefore, the final account adjustment method was applied this time.

2) Determination of Pre-construction and Other Expenses

The pre-construction expenses for the main representative assets are shown in the table below:

A. Pre-construction and Other Expenses Schedule (Baoqing Power Plant 2×600 MW)

No.	Expense Name	Basis of Charge	Total Pre-construction and Other Expenses		Basis of Charge Reference
			Including Tax	Excluding Tax	
1	Project Legal Person Management Fee	Engineering Cost (Including Tax)	3.25%	3.25%	Regulations for Compilation and Calculation of Thermal Power Engineering Construction (2018 Edition)
2	Bidding Fee	Engineering Cost (Including Tax)	0.37%	0.35%	Regulations for Compilation and Calculation of Thermal Power Engineering Construction (2018 Edition)
3	Project Supervision Fee	Engineering Cost (Including Tax)	0.95%	0.90%	Regulations for Compilation and Calculation of Thermal Power Engineering Construction (2018 Edition)
4	Construction Process Cost Consultation and Final Account Review Fee	Engineering Cost (Including Tax)	0.19%	0.18%	Regulations for Compilation and Calculation of Thermal Power Engineering Construction (2018 Edition)
5	Project Pre-construction Work Fee	Engineering Cost (Including Tax)	1.71%	1.61%	Regulations for Compilation and Calculation of Thermal Power Engineering Construction (2018 Edition)
6	Survey and Design Fee	Engineering Cost (Including Tax)	2.30%	2.17%	Ji Jia Ge [2002] No. 10
7	Design Document Review Fee	Engineering Cost (Including Tax)	0.10%	0.09%	Regulations for Compilation and Calculation of Thermal Power Engineering Construction (2018 Edition)
8	Power Engineering Technical and Economic Standardization Fee	Engineering Cost (Including Tax)	0.10%	0.09%	Regulations for Compilation and Calculation of Thermal Power Engineering Construction (2018 Edition)
	Subtotal		10.27%	9.86%	

B. Pre-construction and Other Expenses Schedule (Thermal Power - Huayuan Power Plant)

No.	Expense Name	Basis of Charge	Total Pre-construction and Other Expenses		Basis of Charge Reference
			Including Tax	Including Tax	

1	Project Legal Person Management Fee	Engineering Cost (Including Tax)	2.76%	2.76%	Regulations for Compilation and Calculation of Thermal Power Engineering Construction (2018 Edition)
2	Bidding Fee	Engineering Cost (Including Tax)	0.37%	0.35%	Regulations for Compilation and Calculation of Thermal Power Engineering Construction (2018 Edition)
3	Project Supervision Fee	Engineering Cost (Including Tax)	0.75%	0.71%	Regulations for Compilation and Calculation of Thermal Power Engineering Construction (2018 Edition)
4	Construction Process Cost Consultation and Final Account Review Fee	Engineering Cost (Including Tax)	0.19%	0.18%	Regulations for Compilation and Calculation of Thermal Power Engineering Construction (2018 Edition)
5	Project Pre-construction Work Fee	Engineering Cost (Including Tax)	1.71%	1.61%	Regulations for Compilation and Calculation of Thermal Power Engineering Construction (2018 Edition)
6	Survey and Design Fee	Engineering Cost (Including Tax)	2.30%	2.17%	Ji Jia Ge [2002] No. 10
7	Design Document Review Fee	Engineering Cost (Including Tax)	0.10%	0.09%	Regulations for Compilation and Calculation of Thermal Power Engineering Construction (2018 Edition)
8	Power Engineering Technical and Economic Standardization Fee	Engineering Cost (Including Tax)	0.10%	0.09%	Regulations for Compilation and Calculation of Thermal Power Engineering Construction (2018 Edition)
	Subtotal		8.28%	7.96%	

C. Pre-construction and Other Expenses Schedule (Coal Mine - Chaoyang Open-Pit Coal Mine)

No.	**Expense Name**	**Basis of Charge**	**Total Pre-construction and Other Expenses**		**Basis of Charge Reference**
			Including Tax	**Including Tax**	
1	Project Legal Entity Management Fee	Engineering Cost (Including Tax)	1.37%	1.37%	State Energy Administration Circular No. 81 [2019]
2	Survey Fee	Engineering Cost (Including Tax)	0.50%	0.47%	State Energy Administration Circular No. 81 [2019]
3	Design Fee	Engineering Cost (Including Tax)	2.17%	2.05%	State Energy Administration Circular No. 81 [2019]
4	Project Supervision Fee	Engineering Cost (Including Tax)	0.40%	0.38%	State Energy Administration Circular No. 81 [2019]
5	Bidding Fee	Engineering Cost (Including Tax)	0.37%	0.35%	State Energy Administration Circular No. 81 [2019]
6	Project Pre-construction Work Fee	Engineering Cost (Including Tax)	0.72%	0.68%	State Energy Administration Circular No. 81 [2019]
7	Construction Drawing Review Fee	Engineering Cost (Including Tax)	0.03%	0.03%	State Energy Administration Circular No. 81 [2019]
8	Post-Project Evaluation Fee	Engineering Cost (Including Tax)	0.05%	0.05%	State Energy Administration Circular No. 81 [2019]

9	Staff Training Fee and Advance Entry Fee	Engineering Cost (Including Tax)	0.73%	0.69%	State Energy Administration Circular No. 81 [2019]
10	Power Engineering Quality Inspection Fee	Engineering Cost (Including Tax)	0.07%	0.07%	State Energy Administration Circular No. 81 [2019]
11	Environmental Impact Assessment Fee	Engineering Cost (Including Tax)	0.03%	0.03%	State Energy Administration Circular No. 81 [2019]
12	Engineering Insurance Fee	Engineering Cost (Including Tax)	0.50%	0.47%	State Energy Administration Circular No. 81 [2019]
	Subtotal		6.94%	6.62%	

D. Pre-construction and Other Expenses Schedule (Coal - Da’nanhu No. 2 Mine)

No.	Expense Name	Basis of Charge	Total Pre-construction and Other Expenses		Basis of Charge Reference
			Including Tax	Including Tax	
1	Project Legal Entity Management Fee	Engineering Cost (Including Tax)	0.70%	0.70%	NB/T 51064-2016
2	Survey Fee	Engineering Cost (Including Tax)	0.50%	0.47%	Ministry of Construction [1991] No. 316
3	Design Fee	Engineering Cost (Including Tax)	2.26%	2.13%	NB/T 51064-2016
4	Project Supervision Fee	Engineering Cost (Including Tax)	1.39%	1.31%	NB/T 51064-2016
5	Engineering Bidding Agency Service Fee	Engineering Cost (Including Tax)	0.03%	0.03%	NB/T 51064-2016
6	Feasibility Study Fee	Engineering Cost (Including Tax)	0.02%	0.02%	NB/T 51064-2016
7	Environmental Impact Assessment Fee	Engineering Cost (Including Tax)	0.03%	0.03%	NB/T 51064-2016

9	Energy Conservation Assessment Fee	Engineering Cost (Including Tax)	0.00%	0.00%	NB/T 51064-2016
10	Engineering Quality Technical Service Fee	Engineering Cost (Including Tax)	0.38%	0.36%	NB/T 51064-2016
11	Labor Safety and Health Assessment Fee	Engineering Cost (Including Tax)	0.20%	0.19%	NB/T 51064-2016
12	Engineering Insurance Fee	Engineering Cost (Including Tax)	0.30%	0.28%	NB/T 51064-2016
	Subtotal		5.81%	5.52%	

3) Determination of Capital Cost

Capital cost is calculated based on the reasonable construction period determined by the owner of the property rights and the loan interest rate referenced from the Loan Prime Rate (LPR) published by the National Interbank Funding Center authorized by the People's Bank of China on July 21, 2025. The

calculation uses the sum of the construction and installation cost and pre-construction and other expenses as the base, assuming uniform capital input throughout the construction period. The calculation formula is as follows:

Capital Cost = [Construction & Installation Cost (incl. Tax) + Pre-construction & Other Expenses (incl. Tax)] × Reasonable Construction Period × Loan Interest Rate × 1/2

Additionally, for the thermal power sector, the determination of Capital Cost primarily refers to the "Thermal Power Engineering Limit Design Reference Cost Indicators (2024 Level)". For example: Capital Cost Calculation Table for Hami Huayuan Power Plant (4 × 660MW)

Item	Funds Invested in Year 1	Funds Invested in Year 2	Funds Invested in Year 3	Total
Period	1	1	1	3
Total Capital				
Capital Investment Ratio	0.4	0.5	0.1	
Interest Rate	3.00%	3.00%	3.00%	
Year 1 Interest	0.60%			
Year 2 Interest	1.20%	0.75%		
Year 3 Interest	1.20%	1.50%	0.15%	
Interest per Investment Period	3.00%	2.25%	0.15%	5.40%

(2) Determination of the Remaining Useful Life Rate

This appraisal references the economic life expectancy of the buildings. Through site inspections conducted by the valuers, various components of the structures were examined, including the foundations, load-bearing components (beams, slabs, columns), walls, floors, roofs, doors and windows, wall plastering, ceilings, as well as water supply and drainage systems, ventilation, and electrical lighting. Based on the "Standard for Assessment of Building Damage Grades" and the "Reference Basis for Appraising the Degree of Building Old and New" issued by the former Ministry of Urban and Rural Construction and Environmental Protection, and considering the usage status and maintenance conditions of the buildings, the remaining usable life for each type of building was individually assessed. The remaining useful life rate is then determined using the following formula:

Remaining Useful Life Rate = Remaining Usable Life / (Years Already Used + Remaining Usable Life) × 100%

(3) Determination of Appraised Value

Appraised Value = Full Replacement Cost (excluding tax) × Remaining Useful Life Rate

2. Market Approach

The market approach involves comparing the subject property with similar real estate that has been transacted recently around the Appraisal Reference Date. Appropriate adjustments are made to the known prices of these comparable properties to estimate the objective and reasonable price or appraisal of the subject property. The calculation formula is as follows:

P=P case*A*B*C*D*E

Where: P: Appraised value of the subject property; P case: Transaction price of the comparable instance;

A: Transaction circumstance adjustment factor; B: Transaction date adjustment factor;

C: Regional factor adjustment factor; D: Individual factor adjustment factor;

E：Equity status factor adjustment coefficient

Based on the calculations, as of the Appraisal Reference Date, the book value of the building and structure assets within the appraisal scope for CHN Energy Guoyuan Power Co., Ltd. was RMB9,791.46 ten thousand, with an appraised value of RMB98,673.77 ten thousand. This represents an assessed appreciation of RMB88,882.31 ten thousand and an appreciation rate of 907.75%. The main reasons are that: (1) the book value is the historical cost for the company to acquire the properties and buildings. As of the Appraisal Reference Date, the unit costs for labor, materials, and machinery have significantly increased compared to the original construction period, leading to a rise in the fundamental reconstruction cost of the buildings; (2) the continuous regional development of society and economy in recent years, combing with the continuous optimization of the investment environment and improvement of infrastructure in the region have led to an increase in the value of the real estate in the region, resulting in an assessed appreciation against the book value in the appraisal.

(III) Fixed Assets - Equipment

Based on the purpose of this appraisal and adhering to the principle of continuous use, the appraisal was conducted using market prices as the benchmark, considering the characteristics of the equipment to be appraised and the information collected. Different methods were applied to different types of equipment assets: the replacement cost method was primarily used for normally operating equipment, while the market approach was used for used equipment whose prices could be queried in the second-hand market. The calculation formula for the Replacement Cost Method is as follows:

Appraised Value = Full Replacement Cost × Remaining Useful Life Rate

Where:

1. Full replacement value of equipment assets

Full Replacement Cost = Equipment Purchase Price + Transportation & Miscellaneous Costs + Installation & Debugging Costs + Pre-operational & Other Costs (including tax) + Capital Cost - Deductible VAT

1) Purchase Price of Machinery and Equipment

The machinery and equipment subject to the appraisal are predominantly domestically manufactured. The purchase prices for standard domestic equipment were determined through a comprehensive assessment, including consulting the 2025 Electromechanical Product Price Information Query System (China Machinery Industry Information Institute), conducting online price inquiries, consulting manufacturers or trading companies regarding the latest market transaction prices, and reviewing the companies' recent purchase prices for similar equipment. For the few pieces of equipment where the purchase prices could not be ascertained, the purchase price was estimated by comparing the functionality and production capacity of similar equipment from the same era and applying price fluctuation rates.

2) Transportation & Miscellaneous Costs

Calculated based on the purchase price (including tax), these costs are determined according to the transportation and miscellaneous rates applicable to loading, unloading, transportation, storage, insurance, and other related costs incurred between the manufacturer and the equipment's destination. If transportation costs are already included within the purchase price, no additional transportation and miscellaneous costs shall be levied.

Equipment Transportation & Miscellaneous costs = Equipment Purchase Price × Transportation & miscellaneous Rate

3) Installation & Debugging Costs

The installation and debugging rate shall primarily reference the relevant equipment installation rates specified in the Handbook of Commonly Used Data and Parameters for Asset Valuation.

Installation & Debugging Costs = Equipment Purchase Price × Installation & Debugging Rate

4) Pre-operational & Other Costs, Capital Costs

Pre-operational and other costs, along with capital costs, shall be calculated using the same method as that outlined previously for buildings and structures.

2. Full Replacement Value of Transport Vehicles

Full Replacement Value (excluding tax) = Purchase Price + Vehicle Purchase Tax + License Plate and Other Incidental Fees - Deductible VAT

1) Purchase Price

The purchase price is determined by market quotation (excluding tax).

2) Vehicle Purchase Tax

Pursuant to the relevant provisions of the Law of the People's Republic of China on Vehicle Purchase Tax: Taxable amount for vehicle purchase tax = Taxable value × 10%. The 'taxable value for taxpayers purchasing vehicles for self-use shall exclude VAT'. Therefore: Additional tax = Purchase price / (1 + 13%) × 10%

3) License Plate and Other Incidental Fees

Determined based on the nature and amount of such fees applicable in the vehicle's location.

3. Full Replacement Cost of Electronic Equipment

Full Replacement Cost of Electronic Equipment (excluding tax) = Purchase Price - Deductible VAT

4. Newness Rate

1) Newness Rate of Machinery and Equipment

Newness rate of machinery and equipment ("N") is calculated based on the remaining service life of the equipment as determined based on its economic service life and the inspection conducted for each component thereof by on-site inspection of its current condition, and review of the information relating to its operation, repair and management records, which represents:

N = Remaining Usable Years / (Years Already Used + Remaining Usable Years)× 100%

2) Newness Rate for Transport Vehicles

Pursuant to the provisions of the Mandatory Motor Vehicle Scrapping Standards Regulation (Joint Order No. 12 of 2012 issued by the Ministry of Commerce, National Development and Reform Commission, Ministry of Public Security, and Ministry of Environmental Protection), the newness rate for vehicles shall be determined using the following methods, with the lower value adopted as the final newness rate:

Remaining Useful Life Rate = (1 - Years Already Used / Specified Useful Life or Economic Service Life) × 100%

Mileage-based Newness rate = (1 - Mileage travelled / Specified mileage) × 100%

Newness Rate = Min(Remaining Useful Life Rate, Mileage Newness rate)

Concurrently, conduct necessary inspections and appraisals of the vehicle under valuation. If the inspection findings significantly diverge from the Newness rate determined by the aforementioned method, appropriate adjustments shall be made. Where the two results are comparable, no adjustments shall be undertaken. That is:

Newness Rate = Min(Remaining Useful Life Rate, Mileage Newness Rate) + a

a: Adjustment factor for special vehicle circumstances.

3) Electronic Equipment Newness Rate

Newness Rate = Remaining Usable Years / (Years Already Used + Remaining Usable Years)]× 100%

Note: For electronic equipment valued directly at second-hand market prices, no Newness rate calculation is required.

According to the calculation, as at the Appraisal Reference Date, the book value of the equipment assets included in the appraisal was RMB1,008.29 ten thousand, while the appraised value was RMB1,267.67 ten thousand, representing an assessed appreciation of RMB259.38 ten thousand or an appreciation rate of 25.72%.

The main reason is that the depreciation period of the company is shorter than the economic useful life of the equipment, resulting in an assessed increment against the book value in the appraisal.

(IV) Mining rights (intangible assets)

There are five mining rights involved in the appraisal scope, namely, the Mining Rights for Da'nanhu No. 2 Open-pit Coal Mine of State Grid Energy Hami Coal and Electricity Co., Ltd., the Sandaogou Coal Mine in Fugu County of Shaanxi Deyuan Fugu Energy Co., Ltd., the Mining Rights for the Renjiazhuang Coal of Ningxia Ninglu Coal and Power Co., Ltd. under CHN Energy Group Ningxia Coal Industry Co., Ltd., the Mining Rights for the Chaoyang Open-pit Coal Mine of CHN Energy Baoqing Coal and Electricity Co., Ltd., and the Shangyuquan Coal Mine of Shanxi Luneng Hequ Coal Development Co., Ltd. The detailed parameters are as follows:

1. The Mining Rights for Da'nanhu No. 2 Open-pit Coal Mine of State Grid Energy Hami Coal and Electricity Co., Ltd.

The mine commissioned for appraisal is a large-scale operating coal mine. Relevant exploration and design work has been completed. Expected income and risks can be forecasted and measured in monetary terms, and the expected income period can be predicted, the Discounted Cash Flow (DCF) method is adopted for this appraisal in accordance with the "China Mineral Rights Appraisal Standards". The calculation formula is as follows:

$$P = \sum_{t=1}^{n} (CI - CO)_t \bullet \frac{1}{(1+i)^t}$$

Where: P— Mineral rights appraised value;

CI - Annual cash inflow;

CO - Annual cash outflow;

i - Discount rate;

t - Year Index;

n - Appraisal Calculation Period.

The main parameters are determined as follows:

The basis for determining the appraisal indicators and parameters primarily refers to: the Resource Reserve Verification Report for No. 2 Open-pit Minefield in Hami Da'nanhu Mining Area, Xinjiang (the "Reserve Verification Report") submitted by Shandong Taishan Geological Exploration Company in November 2016, the Opinion Letter on the Review of Mineral Resources Reserves for the Resource Reserve Verification Report for No. 2 Open-pit Minefield in Hami Da'nanhu Mining Area, Xinjiang (the "Review Opinion Letter") and the Filing Certificate for the Review of Mineral Resources Reserves for the Resource Reserve Verification Report for No. 2 Open-pit Minefield in Hami Da'nanhu Mining Area, Xinjiang (the "Review Filing Certificate"), the 2024 Annual Reserve Report for Hami Da'nanhu No. 2 Open-pit Coal Mine, Xinjiang (the "2024 Annual Reserve Report"), the Preliminary Design for Hami Da'nanhu No. 2 Open-pit Coal Mine (13Mt/a) of State Grid Energy Hami Coal and Electricity Co., Ltd. (the "Preliminary Design") submitted by Dadi Engineering Development (Group) Co., Ltd. in November 2023; relevant information provided by State Grid Energy Hami Coal and Electricity Co., Ltd. and other information obtained by the valuer.

Resources and Reserves as at the Appraisal Reference Date: According to the 2024 Annual Reserve Report, as at the reserve estimation date of 31 December 2024, the resources and reserves within the mining area were: total coal resources and reserves of 2,334.2115 million tonnes, including Proven Reserves (TM) of 806.0966 million tonnes, Indicated Reserves (KZ) of 754.9352 million tonnes, and Probable Reserves (TD) of 773.1797

million tonnes. Based on the data on depletion from January to July 2025 provided by the company, the depleted resources and reserves from the reserve estimation date to the Appraisal Reference Date amounted to 5.0065 million tonnes. Accordingly, the resources and reserves as at the Appraisal Reference Date amounted to 2,329.2050 million tonnes, including Proven Reserves (TM) of 801.9470 million tonnes, Indicated Reserves (KZ) of RMB754.9352 million tonnes, and Probable Reserves (TD) of RMB772.3228 million tonnes. Assessed usable resources:

Assessed usable resources: Assessed usable resources =∑ base reserves +∑ resources ×confidence coefficient for that resource level = 2,213.3565 million tonnes

Product plan: According to the Preliminary Design and the actual situation of the company, the designed product plan for the appraisal is coal.

Recovery rate: According to the Preliminary Design, the average mining recovery rate for the entire mining area is 91.54%, and the average waste rock mixing rate is 8.00%.

Recoverable reserves: 1,512.0575 million tonnes.

Production scale and service life: The production scale recorded on the mining permit for this mine is 13.00 million tonnes per year, and the approved production scale is also 13.00 million tonnes per year. Based on the Explanation on Production Scheduling and Cost Adjustment for Da'nanhu No. 2 Open-pit Coal Mine issued by the company, the capacity from August to December 2025 is 4.5705 million tonnes, 11.00 million tonnes in 2026, and 13.00 million tonnes per year in 2027 and thereafter. Therefore, the capacity determined for the appraisal is 4.5705 million tonnes from August to December 2025, 11.00 million tonnes in 2026, and 13.00 million tonnes per year in other normal production years. The service life calculated for the appraisal is 105.96 years, meaning the production period is from August 2025 to July 2131.

Coal product price and sales revenue: The equivalent coal price determined in the appraisal is RMB140.77/tonne (pithead price, excluding tax). Assuming all products produced by the mine are sold, the sales revenue in a normal year is RMB183,001.00 ten thousand.

Fixed assets investment: The original value of fixed assets investment determined in the appraisal is RMB224,384.71 ten thousand, with a net value of RMB155,795.33 ten thousand. Including: the original value of stripping engineering of RMB27,153.81 ten thousand, with a net value of RMB15,206.14 ten thousand, the original value of buildings and structures of RMB100,489.70 ten thousand, with a net value of RMB81,405.78 ten thousand, and the original value of equipment of RMB96,741.20 ten thousand, with a net value of RMB59,183.41 ten thousand.

Total costs and charges and operating costs:

Costs for purchased materials: With reference to the Explanation on Production Scheduling Plan, Capital Expenditure, and Cost Forecast of the company, the unit material cost for Da'nanhu No. 1 Mine Shaft in the year of full capacity is RMB1.65/tonne;

Costs for purchased fuel and power: With reference to the Explanation on Production Scheduling Plan, Capital Expenditure, and Cost Forecast provided by the subject company, the unit cost for purchased fuel and power for Da'nanhu No. 1 Mine Shaft in the year of full capacity is RMB1.07/tonne;

Staff remuneration: The unit staff remuneration is RMB9.58/tonne.

Depreciation charges: The unit depreciation charges are RMB8.34/tonne.

Simple reproduction and maintenance charges and roadway drivage work fund: According to the notice of Administrative Measures for the Extraction and Use of Coal Production Safety Costs and Several Provisions on the Standardization of Management Issues for Simple Reproduction and Maintenance Charges in Coal Mines (Cai Jian [2004]No. 119) and the Notice on Adjusting the Extraction Standard for Roadway Engineering Fund of Centrally-Managed Coal Mines (Cai Gong Zi [1989] No. 302) issued by the Ministry of Finance, the National Development and Reform Commission, and the State Administration of Coal Mine Safety, it is determined that the simple reproduction and maintenance charges of this project are RMB6.00/tonne, and the roadway drivage work fund is RMB2.50/tonne. Including: the simple reproduction and maintenance charges in depreciation nature are RMB3.00/tonne, and the simple reproduction and maintenance charges in renewal nature are RMB3.00/tonne.

Geological environment restoration and management fund: Upon calculation, the unit cost for environmental restoration and land reclamation is RMB0.07/tonne.

Safety costs: The safety costs for a normal year are RMB5.00/tonne.

Repair costs: The unit repair cost is RMB0.13/tonne.

External engagement stripping fees: RMB23.85/tonne.

Amortization fee: The unit amortization fee is RMB1.16/tonne.

Other expenses: The unit other expense is RMB19.57/tonne.

Finance costs: The calculation of finance cost is based on the Guidance on Determination of Parameters for the Valuation of Mining Rights (CMVS30800-2008) and the regulations on the Valuation of mining rights.

Research and development costs: The unit research and development cost is RMB1.43/tonne.

Sales expenses: The unit sales expense is RMB0.01/tonne.

Management fee: According to the Production Schedule and Capital Expenditure and Cost Forecast Statement provided by State Grid Energy Hami Coal and Electricity Co., Ltd., the unit management fee for the Da' nanhu No. 1 Mine in its full-capacity production year is RMB1.38/tonne.

Total costs and expenses for a normal production year = costs for purchased materials + costs for purchased fuel and power + staff remuneration + depreciation charges + simple reproduction and maintenance charges + roadway drivage work fund + safety costs + repair costs + mine environmental restoration deposit + amortization fee + other expenses + finance costs +management fee = RMB107,113.15 ten thousand, equivalent to the total costs and expenses of unit raw coal of RMB82.40/tonne.

Annual operating costs = total costs and expenses – depreciation charge – simple reproduction and maintenance charges in depreciation nature – roadway drivage work fund – amortization fee – finance costs = RMB86,768.47 (ten thousand), equivalent to a unit raw coal operating cost of RMB66.74/tonne.

The process of determining its discount rate was as follows:

In accordance with the Guidance on Determination of Parameters for the Valuation of Mining Rights (CMVS30800-2008), the discount rate was calculated as follows:

Discount rate＝risk-free return rate + risk return rate

Among them, the risk-free return rate can usually be determined by reference to the interest rate of long-term treasury bonds issued by the government or the bank deposit rate for the same period. In the appraisal, a risk-free return rate of 1.70%, was determined in accordance with the average interest rate of interest rate of long-term treasury bonds.

Risk return rate includes risk return rate in survey and development phase, industry risk return rate, financial operation risk return rate and other individual risk return rate. In accordance with the Guidance on Determination of Parameters for the Valuation of Mining Rights (CMVS402—2016) and considering the actual circumstances of this mine, the risk accumulation method was adopted for the appraisal, determining the risk return rate is 7.80%. On these grounds, the discount rate for the appraisal was determined to be 7.80%.

Upon calculation, as at the Appraisal Reference Date, the mining rights for the Da’nanhu No. 2 Open-Pit Coal Mine of State Grid Energy Hami Coal and Electricity Co., Ltd. (the service life calculated in the appraisal is 105.96 years and 1,521.0575 million tonnes of recoverable reserves to be utilized were disposed) had a value of RMB371,782.92 ten thousand on the Appraisal Reference Date, with a book value of RMB165,147.49 ten thousand, representing an appreciation rate of 125.12%. The appreciation was mainly attributable to the fact that the book value of mining rights (intangible assets) represents the original acquisition cost and exploration expenses of the enterprise in previous years, while the appraised value of the mining rights represents the value of the economic benefits that the enterprise can generate in future years. The scarcity of coal resources results in a relatively weak correlation between exploration costs and the value that can be realized in the future, therefore they are not comparable. Compared to surrounding coal mines, the open-pit mining operations at Dainanhu No. 2 Mine possess a cost advantage. The appraisal adopted the discounted cash flow method to reflect the future earnings of the mine, therefore there was a high appreciation.

2. Shaanxi Deyuan Fugu Energy Co., Ltd.'s Sandaogou Coal Mine in Fugu County

The mine under the entrusted appraisal is a large-scale coal mine for production, and related exploration and design has been completed. The expected revenue and risks can be predicted and measured in currency, and the expected revenue years can be predicted. According to the Guidelines on Mining Rights Valuation in China, the discounted cash flow method has been adopted for the Valuation.The calculation formula is as follows:

$$P = \sum_{t=1}^{n} (CI - CO)_t \bullet \frac{1}{(1+i)^t}$$

Where: *P*- Mineral rights appraised value;

CI - Annual cash inflow;

CO - Annual cash outflow;

i - Discount rate;

t - Year Index;

n - Appraisal Calculation Period.

The main parameters are determined as follows:

The values of the appraisal indicators and parameters were mainly by reference to: The Verification Report on Coal Reserves of the Shaanxi Deyuan Fugu Energy Co., Ltd.'s Sandaogou Coal Mine (hereinafter referred to as the "Verification Report on Reserves") and the Opinion on the Assessment of Mineral Reserves for the Verification Report on Coal Reserves of the Shaanxi Deyuan Fugu Energy Co., Ltd.'s Sandaogou Coal Mine (Shaanxi Land Resources Evaluation and Reserve Approval Document [2011] No. 127) (hereinafter referred to as the "Approval Opinion") submitted by the Shaanxi Geology and Mineral Exploration and Development Bureau and the Xi'an Institute of Geology and Mineral Exploration and Development in August 2011. The 2024 Annual Resource Reserve Report for Shaanxi Deyuan Fugu Energy Co., Ltd.'s Sandagou Coal Mine in Fugu County (hereinafter referred to as the "2024 Reserve Annual Report") submitted by Dongke Construction Co., Ltd. in January 2025, the Preliminary Design for the Construction Project of the Sandagao Coal Mine in the Shenfu Mining Area, Shaanxi Province, by Shaanxi Deyuan Fugu Energy Co., Ltd. (hereinafter referred to as the "Preliminary Design") and its approval documents submitted by CCTEG Beijing Huayu Engineering Co., Ltd. in March 2012, and other information owned by the valuers.

Retained resources as at the Appraisal Reference Date: According to the 2024 Reserve Annual Report and the resource reserve utilization data for January to July 2025 provided by the enterprise, the resource reserve utilization from the reserve Verification Reference Date of August 2011 to the Appraisal Reference Date was 160.11 million tonnes. Calculations indicate that the remaining resource reserves as at the Appraisal Reference Date are:

The retained resources of coal 1,382.00 million tonnes (with 483.83 million tonnes in the initial mining area and 898.17 million tonnes in the reserved area), including: Proven economic base reserves (111b): 72.95 million tonnes; Controlled economic base reserves (122b): 69.50 million tonnes; Proven marginal economic base reserves (2M21): 8.96 million tonnes; Proven sub-marginal economic resources (2S21): 31.40 million tonnes; Controlled sub-marginal economic resources (2S22): 17.83 million tonnes; Proven inferred economic resources (331): 121.57 million tonnes; Controlled inferred economic resources (332): 207.79 million tonnes; Inferred economic resources (333): 852.00 million tonnes.

Assessed usable resources: Assessed usable resources = ∑base reserves + ∑resources × confidence coefficient for that resource level = 1,240.4060 (million tonnes)

Product plan: Based on the Company's actual product plan, the product plan determined in the appraisal is raw coal.

Recovery rate: According to the Preliminary Design, the recovery rate of the mining areas of 3-1, 3-2, 4-3 and 4-4 coal seam is 85%, and the recovery rate of the mining areas of 3-3 and 5-2 upper coal seam is 80%, and 5-2 coal seam is 75%.

Recoverable reserves: 806.8716 million tonnes.

Production scale and service life: The approved production capacity of this mine is 9.00 million tonnes/year. The service life calculated for the appraisal is 67.74 years, with the production period spanning from August 2025 to April 2093.

Coal product price and revenue: The equivalent coal price determined in the appraisal s RMB441/tonne (pithead price, excluding tax), assuming that all products produced by the mine are sold, i.e. the sales revenue for a normal year amounted to RMB396,900.00 ten thousand.

Fixed assets investment: The original value of fixed assets investment determined in the appraisal is RMB445,335.18 ten thousand, with a net value of fixed assets is RMB253,568.66 ten thousand. Including: the original value of roadway drivage work is RMB115,606.89 ten thousand with a net value of roadway drivage work is RMB71,207.52 ten thousand, the original value of buildings and structures is RMB90,916.64

ten thousand with a net value of buildings and structures is RMB66,414.24 ten thousand, and the original value of equipment and installation projects is RMB238,811.65 ten thousand with a net value of equipment and installation projects is RMB115,946.90 ten thousand.

Total costs and charges and operating costs:

Costs for purchased materials: Based on the financial data provided by the enterprise and a comprehensive analysis of the cost data for the past three years and one period, the appraisal determines the unit material cost is RMB10.57/tonne.;

Costs for purchased fuel and power: Based on the financial data provided by the enterprise and a comprehensive analysis of the cost data for the past three years and one period, the appraisal determines the unit purchased fuel and power cost is RMB2.97/tonne.

Staff remuneration: The unit staff remuneration is RMB69.54/tonne.

Depreciation charges: The unit depreciation charge is RMB21.20/tonne.

Simple reproduction and maintenance charges and roadway drivage work fund: According to the notice of Administrative Measures for the Extraction and Use of Coal Production Safety Costs and Several Provisions on the Standardization of Management Issues for Simple Reproduction and Maintenance Charges in Coal Mines (Cai Jian [2004]No. 119) issued by the Ministry of Finance, the National Development and Reform Commission, and the National Coal Mine Safety Administration, it is determined that the simple reproduction and maintenance charges of this project are RMB8.00/tonne, and the roadway drivage work fund is RMB2.50/tonne. Including: the simple reproduction and maintenance charges in depreciation nature are RMB4.00/tonne, and the simple reproduction and maintenance charges in renewal nature are RMB4.00/tonne.

Mine Geological environment restoration and management fund: The estimated cost for environmental remediation and land reclamation is RMB2.89/tonne.

Safety costs: The safety costs for a normal year are RMB30.00/tonne.

Repair costs: The unit repair cost is RMB1.20/tonne.

Amortization fee: The unit amortization fee is RMB0.14/tonne.

Other expenses: Based on the financial data provided by the enterprise and a comprehensive analysis of the cost data for the past three years and one period, other expenses primarily include transportation fees to the station, land acquisition and compensation fees, water conservancy funds, and other expenditures. Specifically, transportation fees to the station amount to RMB46.70/tonne, standard compensation fee is RMB5.85/tonne, water conservancy fund is RMB0.22/tonne, and other expenditure is RMB14.19/tonne.

Sales expenses: Based on the Company's cost data for the most recent three fiscal years and combined with its projected sales expense figures, the appraisal determines the unit sales expense is RMB3.98/tonne.

Finance costs: The calculation of finance cost is based on the Guidance on Determination of Parameters for the Valuation of Mining Rights (CMVS30800-2008) and the regulations on the appraisal of mining rights.

Management fee: Based on calculations using the financial data provided by the enterprise, the unit management fee is RMB0.96/tonne.

Research and development costs: Based on the Company's cost data for the most recent three fiscal years and combined with its projected sales expense figures, the appraisal determines the unit research and development cost is RMB1.11/tonne.

Total costs and expenses for a normal production year = costs for purchased materials + costs for purchased fuel and power + staff remuneration + depreciation charges + simple reproduction and maintenance charges + roadway drivage work fund + safety costs + repair costs + mine environmental restoration deposit + amortization fee + other expenses + sale fee + finance costs +management fee + research and development cost= RMB171,134.97 ten thousand, equivalent to the total costs and expenses of unit raw coal of RMB246.40/tonne.

Annual operating costs = total costs and expenses – depreciation charge – simple reproduction and maintenance charges in depreciation nature – roadway drivage work fund – amortization fee – finance costs = RMB132,047.34 ten thousand, equivalent to a unit raw coal operating cost of RMB216.52/tonne.

The process of determining its discount rate was as follows:

In accordance with the Guidance on Determination of Parameters for the Valuation of Mining Rights (CMVS30800-2008), the discount rate was calculated as follows:

Discount rate＝risk-free return rate + risk return rate

Among them, the risk-free return rate can usually be determined by reference to the interest rate of long-term treasury bonds issued by the government or the bank deposit rate for the same period. In the appraisal, a risk-free return rate of 1.70%, was determined in accordance with the average interest rate of interest rate of long-term treasury bonds.

Risk return rate includes risk return rate in survey and development phase, industry risk return rate, financial operation risk return rate and other individual risk rate. The risk accumulation method was adopted for the appraisal, determining the risk return rate is 7.80%.

Upon calculation, as at the Appraisal Reference Date, the mining rights for the Shaanxi Deyuan Fugu Energy Co., Ltd.'s Sandaogou Coal Mine in Fugu County (the service life calculated in the appraisal is 67.74 years and 806.8716 million tonnes of recoverable reserves to be utilized were disposed) had a value of RMB1,094,329.48 ten thousand on the Appraisal Reference Date, with a book value of RMB58,740.34 ten thousand, representing an appreciation rate of 1,672.99%. The appreciation was mainly attributable to the fact that the book value of mining rights (intangible assets) represents the original acquisition cost and exploration expenses of the enterprise in previous years, while the appraised value of the mining rights represents the value of the economic benefits that the enterprise can generate in future years. The appraisal adopted the discounted cash flow method to reflect the future earnings of the mine, therefore there was a high appreciation.

3. Ningxia Ninglu Coal and Power Co., Ltd., a subsidiary of China Energy Ningxia Coal Industry Co., Ltd. - Renji Zhuang Coal Mining Right

The mine under the entrusted appraisal is a large-scale coal mine for production, and related exploration and design has been completed. The expected revenue and risks can be predicted and measured in currency, and the expected revenue years can be predicted. According to the Guidelines on Mining Rights Valuation in China, the discounted cash flow method has been adopted for the appraisal. The calculation formula is as follows:

$$P = \sum_{t=1}^{n} (CI - CO)_t \bullet \frac{1}{(1+i)^t}$$

Where: *P*- Mineral rights appraised value;

CI - Annual cash inflow;

CO - Annual cash outflow;

i - Discount rate;

t - Year Index;

n - Appraisal Calculation Period.

The main parameters are determined as follows:

The values of the appraisal indicators and parameters were mainly by reference to: The Report on Verification of Coal Resources Reserves of Renji Zhuang Coal Mine in Lingwu City, Ningxia Hui Autonomous Region (hereinafter referred to as the "Verification Report on Reserves") and the Review Opinion on Mineral Resources Reserves of the 'Report on Verification of Coal Resources Reserves of Renji Zhuang Coal Mine in Lingwu City, Ningxia Hui Autonomous Region' (Document No.: Ningkuangchu Pingzi [2021] No. 37) (hereinafter referred to as the "Review Opinion"), both submitted by No. 173 Exploration Team of China National Administration of Coal Geology in October 2021; the 2024 Annual Mine Reserves Report of Renji Zhuang Coal of Ningxia Ninglu Coal and Power Co., Ltd., a subsidiary of China Energy Ningxia Coal Industry Co., Ltd." (hereinafter referred to as the "2024 Reserve Annual Report") submitted by Ningxia Yiwei Mining Technology Service Co., Ltd. in January 2025; the Mineral Resources Development and Utilization Plan of Renji Zhuang Coal Mine of Shenhua Ningxia Coal Industry Group Co., Ltd. (hereinafter referred to as the "Development and Utilization Plan") submitted by CCTEG Beijing Huayu Engineering Co., Ltd. in June 2006 and its approval documents; as well as other information provided by Ningxia Ninglu Coal and Power Co., Ltd. and mastered by the valuers.

Retained resources as at the Appraisal Reference Date: According to the Reserves Annual Report and the resource reserve utilization data for January to July 2025 provided by the enterprise, the resource reserve utilization from the reserve Verification Reference Date of October 2021 to the Appraisal Reference Date was 14.0707 million tonnes. Calculations indicate that the remaining resource reserves as at the Appraisal Reference Date are:

The retained resources of coal 328.4343 million tonnes, including: 124.3508 million tonnes of proven resources, 34.2110 million tonnes of measured resources and 169.8725 million tonnes of inferred resources.

Assessed usable resources: Assessed usable resources = ∑base reserves + ∑resources × confidence coefficient for that resource level = 311.4471 (million tonnes)

Product plan: Based on the Preliminary Design and the Company's actual conditions, the product plan determined in the appraisal is raw coal.

Recovery rate: For the appraisal, in accordance with the Code for Design of Coal Industry Mines (GB 50215—2015) and the current Coal Mine Safety Regulations, the mining recovery rate of coal mine working areas (normal blocks and non-overlain areas) shall be determined in accordance with the following provisions: For thick coal seams (greater than 3.5 meters), the rate shall not be less than 75%; for medium-thick coal seams (1.3~3.5 meters), the rate shall not be less than 80%; for thin coal seams (less than 1.3 meters), the rate shall not be less than 85%.

Recoverable reserves: 169.7866 million tonnes.

Production scale and service life: For the appraisal, the production scale stated in the mining license is 2.40 million tonnes/year, and the approved production scale is also 4.00 million tonnes/year. The service life calculated in the appraisal is 30.32 years, i.e., the production period ranges from August 2025 to November 2055.

Coal product price and revenue: The equivalent coal price determined in the appraisal is RMB415/tonne (pithead price, excluding tax), assuming that all products produced by the mine are sold, i.e. the sales revenue for a normal year amounted to RMB166,000.00 ten thousand.

Fixed assets investment: The value of fixed assets investment determined in the appraisal is RMB263,323.86 ten thousand, with a net value of fixed assets is RMB166,658.46 ten thousand. Including: the original value of roadway drivage work is RMB77,410.48 ten thousand with a net value of roadway drivage work is RMB71,387.73 ten thousand, the original value of buildings and structures is RMB76,990.86 ten thousand with a net value of buildings and structures is RMB50,508.13 ten thousand, and the original value of equipment and installation projects is RMB108,922.53 ten thousand with a net value of equipment and installation projects is RMB44,762.61 ten thousand.

Total costs and charges and operating costs:

Costs for purchased materials: According to the Production Schedule and Capital Expenditure and Cost Forecast Statement provided by Target Company, the unit material fee for the Da’nanhu No. 1 Mine in its full-capacity production year is RMB30.01/tonne.

Costs for purchased fuel and power: According to the Production Schedule and Capital Expenditure and Cost Forecast Statement provided by Target Company, the unit purchased fuel and power cost for the Da’nanhu No. 1 Mine in its full-capacity production year is RMB7.92/tonne.

Staff remuneration: The unit staff remuneration is RMB117.50/tonne.

Depreciation charges: The unit depreciation charge is RMB23.34/tonne.

Simple reproduction and maintenance charges and roadway drivage work fund: According to the notice of Administrative Measures for the Extraction and Use of Coal Production Safety Costs and Several Provisions on the Standardization of Management Issues for Simple Reproduction and Maintenance Charges in Coal Mines (Cai Jian [2004]No. 119) issued by the Ministry of Finance, the National Development and Reform Commission, and the National Coal Mine Safety Administration, it is determined that the simple reproduction and maintenance charges of this project are RMB6.00/tonne, and the roadway drivage work fund is RMB2.50/tonne. Including: the simple reproduction and maintenance charges in depreciation nature are RMB3.00/tonne, and the simple reproduction and maintenance charges in renewal nature are RMB3.00/tonne.

Mine Geological environment restoration and management fund: The estimated cost for environmental remediation and land reclamation is RMB0.51/tonne.

Safety costs: The safety costs for a normal year are RMB15.00/tonne.

Repair costs: The unit repair cost is RMB13.84/tonne.

External engagement stripping fees: RMB7.36/tonne.

Amortization fee: The unit amortization fee is RMB0.66/tonne.

Other expenses: The unit other expense is RMB29.40/tonne.

Finance costs: The calculation of finance cost is based on the Guidance on Determination of Parameters for the Valuation of Mining Rights (CMVS30800-2008) and the regulations on the Valuation of mining rights.

Sales expenses: The unit sales expense is RMB3.13/tonne.

Management fee: According to the Production Schedule and Capital Expenditure and Cost Forecast Statement provided by State Grid Energy Hami Coal and Electricity Co., Ltd., the unit management fee for the Da' nanhu No. 1 Mine in its full-capacity production year is RMB25.13/tonne.

Total costs and expenses for a normal production year = costs for purchased materials + costs for purchased fuel and power + staff remuneration + depreciation charges + simple reproduction and maintenance charges + roadway drivage work fund + safety costs + repair costs + mine environmental restoration deposit + amortization fee + other expenses + finance costs + sale fee + management fee = RMB113,615.09 ten thousand, equivalent to the total costs and expenses of unit raw coal of RMB284.03/tonne.

Annual operating costs = total costs and expenses – depreciation charge – simple reproduction and maintenance charges in depreciation nature – roadway drivage work fund – amortization fee – finance costs = RMB101,177.68 ten thousand, equivalent to a unit raw coal operating cost of RMB252.94/tonne.

The process of determining its discount rate was as follows:

In accordance with the Guidance on Determination of Parameters for the Valuation of Mining Rights (CMVS30800-2008), the discount rate was calculated as follows:

Discount rate＝risk-free return rate + risk return rate

Among them, the risk-free return rate can usually be determined by reference to the interest rate of long-term treasury bonds issued by the government or the bank deposit rate for the same period. In the appraisal, a risk-free return rate of 1.70%, was determined in accordance with the average interest rate of interest rate of long-term treasury bonds.

Risk return rate includes risk return rate in survey and development phase, industry risk return rate, financial operation risk return rate and other individual risk return rate. In accordance with the Guidance on Determination of Parameters for the Valuation of Mining Rights (CMVS402—2016) and considering the actual circumstances of this mine, the risk accumulation method was adopted for the appraisal, determining the risk return rate is 6.10%.

On these grounds, the discount rate for the appraisal was determined to be 7.80%.

Upon calculation, as at the Appraisal Reference Date, the mining rights for the Ningxia Ninglu Coal and Power Co., Ltd.'s Renji Zhuang Coal Mining Right (the service life calculated in the appraisal is 30.32 years and 169.7867 million tonnes of recoverable reserves to be utilized were disposed) had a value of

RMB165,709.92 ten thousand on the Appraisal Reference Date, with a book value of RMB63,861.40 ten thousand, representing an appreciation rate of 159.48%. The appreciation was mainly attributable to the fact that the book value of mining rights (intangible assets) represents the original acquisition cost and exploration expenses of the enterprise in previous years, while the appraised value of the mining rights represents the value of the economic benefits that the enterprise can generate in future years. The appraisal adopted the discounted cash flow method to reflect the future earnings of the mine, therefore there was a high appreciation.

4. Mining Right of Chaoyang Open-Pit Coal Mine, Guoneng Baoqing Electrify Co., Ltd.

The mine under the entrusted appraisal is a large-scale coal mine for production, and related exploration and design has been completed. The expected revenue and risks can be predicted and measured in currency, and the expected revenue years can be predicted. According to the Guidelines on Mining Rights Valuation in China, the discounted cash flow method has been adopted for the appraisal. The calculation formula is as follows:

$$P = \sum_{t=1}^{n} (CI - CO)_t \bullet \frac{1}{(1+i)^t}$$

Where: *P*- Mineral rights appraised value;

CI - Annual cash inflow;

CO - Annual cash outflow;

i - Discount rate;

t - Year Index;

n - Appraisal Calculation Period.

The main parameters are determined as follows:

The values of the appraisal indicators and parameters were mainly by reference to: The Report on Verification of Resource Reserves of Chaoyang Open-Pit Coal Mine in Baoqing County, Heilongjiang Province (hereinafter referred to as the "Verification Report on Reserves"), the "Review Opinion on Mineral Resources Reserves of the 'Report on Verification of Resource Reserves of Chaoyang Open-Pit Coal Mine in Baoqing County, Heilongjiang Province' (hereinafter referred to as the "Review Opinion"), and the Certification of Review and Filing of Mineral Resources Reserves for the 'Report on Verification of Resource Reserves of Chaoyang Open-Pit Coal Mine in Baoqing County, Heilongjiang Province' (hereinafter referred to as the "Review and Filing Certification"), all submitted by No. 110 Exploration Team of Heilongjiang Provincial Coalfield Geology Bureau in April 2009; the Annual Reserves Report of Chaoyang Open-Pit Coal Mine of Guoneng Baoqing Coal, Electricity and Chemical Co., Ltd. in Baoqing County, Heilongjiang Province (2020~2024, hereinafter referred to as the "Annual Reserves Report"); the Preliminary Design (Amendment) of Chaoyang Open-Pit Coal Mine of Shenhua Guoneng Baoqing Electrify Co., Ltd. (hereinafter referred to as the "Preliminary Design") submitted by China Coal Technology and Engineering Group Shenyang Design and Research Institute Co., Ltd. in November 2018; relevant data provided by Guoneng Baoqing Electrify Co., Ltd., and other information owned by the valuers.

Retained resources as at the Appraisal Reference Date: Based on the Annual Reserves Report and the extraction volume data from January to July 2025 provided by the Company, the resource reserves of Chaoyang Open-Pit Coal Mine as at the Appraisal Reference Date are 1,005.9426 million tonnes, including: Proven economic demonstrated reserves (111b): 166.1426 million tonnes; Controlled economic demonstrated reserves (122b): 197.7600 million tonnes; Inferred internal economic resources (333): 469.1800 million tonnes; Predicted internal economic resources (334)? : 172.8600 million tonnes

Product plan: Based on the Preliminary Design and the Company's actual conditions, the product plan determined in the appraisal is raw coal.

Recoverable reserves: 934.9459 million tonnes.

Production scale and service life: The production scale stated in the license of Chaoyang Open-Pit Coal Mine is 11.00 million tonnes/year, and the approved production scale is also 11.00 million tonnes/year. Therefore, the production capacity determined for the appraisal is 11.00 million tonnes/year. The service life calculated for the appraisal is 78.87 years, with the production period spanning from August 2025 to June 2104.

Coal product price and sale revenue: The equivalent coal price determined in the appraisal is RMB150.54/tonne (pithead price, excluding tax), assuming that all products produced by the mine are sold, i.e. the sales revenue for a normal year amounted to RMB165,592.32 ten thousand.

Fixed assets investment: The value of fixed assets investment determined in the appraisal is RMB231,506.47 ten thousand with a net value of RMB163,682.05 ten thousand. the original value of roadway drivage work is RMB95,504.04 ten thousand with a net value of RMB59,284.31 ten thousand, the original value of buildings and structures is RMB73,353.61 ten thousand with a net value of RMB58,105.93 ten thousand, and the original value of equipment is RMB62,648.82 ten thousand with a net value of RMB46,291.81 ten thousand.

Total costs and charges and operating costs:

Costs for purchased materials: The unit materials cost is RMB4.98/tonne.

Costs for purchased fuel and power: The unit costs for purchased fuel and power is RMB0.70/tonne.

Staff remuneration: The unit staff remuneration is RMB11.08/tonne.

Depreciation charges: Upon calculation, the total depreciation expense in normal production years is RMB8,778.11 ten thousand, and the unit depreciation charges is RMB6.37/tonne

Simple reproduction and maintenance charges and roadway drivage work fund: According to the notice of Administrative Measures for the Extraction and Use of Coal Production Safety Costs and Several Provisions on the Standardization of Management Issues for Simple Reproduction and Maintenance Charges in Coal Mines (Cai Jian [2004]No. 119), it is determined that the simple reproduction and maintenance charges of this project are RMB6.20/tonne, and the roadway drivage work fund is RMB2.50/tonne. Including: the simple reproduction and maintenance charges in depreciation nature are RMB3.10/tonne, and the simple reproduction and maintenance charges in renewal nature are RMB3.10/tonne.

Safety costs: The safety costs determined in accordance with the relevant documents of the Ministry of Finance is RMB5.00/tonne

Repair costs: The unit repair cost is RMB0.54/tonne.

Amortization fee: For the appraisal, the determined unit amortization fee is RMB6.42/tonne.

Other expenses: The total of other expenses is RMB12.22/tonne

Finance costs: The calculation is based on the Guidance on Determination of Parameters for the Valuation of Mining Rights (CMVS30800-2008) and the regulations on the appraisal of mining rights.

Total costs and expenses for a normal production year = costs for purchased materials + costs for purchased fuel and power + salaries and benefits + depreciation charges + simple reproduction and maintenance charges + roadway drivage work fund + safety costs + repair costs + outsourcing expenses + amortization fee + finance costs + management fee +amortization fee + other expenses + finance costs= RMB109,686.56 (ten thousand), equivalent to the total costs and expenses of unit raw coal of RMB101.50/tonne.

Annual operating costs = total costs and expenses – depreciation charge – simple reproduction and maintenance charges in depreciation nature – roadway drivage work fund – amortization fee – finance costs = RMB83,633.69 (ten thousand), equivalent to a unit raw coal operating cost of RMB82.40/tonne.

The process of determining its discount rate was as follows:

In accordance with the Guidance on Determination of Parameters for the appraisal of Mining Rights (CMVS30800-2008), the discount rate was calculated as follows:

Discount rate＝risk-free return rate + risk return rate

Among them, the risk-free return rate can usually be determined by reference to the interest rate of long-term treasury bonds issued by the government or the bank deposit rate for the same period. In the appraisal, the approximate value of the risk-free rate of return is determined based on the average level of the 10-year government bond yield as of the Reference Date of August 31, 2024, which was announced by China Central Depository & Clearing Co., Ltd. (CCDC), i.e., the risk-free rate of return is 1.70%.

Risk return rate includes risk return rate in survey and development phase, industry risk return rate and financial operation risk return rate. In accordance with the actual circumstances of this mine, the risk accumulation method was adopted for the appraisal, determining the risk return rate is 6.15%.

On these grounds, the discount rate for the appraisal was determined to be 7.80%.

Upon calculation, as at the Appraisal Reference Date, the appraised value of mining rights of the Mining Right of Chaoyang Open-Pit Coal Mine of Guoneng Baoqing Electrify Co., Ltd. was RMB143,973.51 ten thousand and the book value of mining rights was RMB25,915.35 ten thousand, representing an appreciation rate of 455.55%, which was mainly attributable to the fact that the book value of mining rights (intangible assets) represents the original acquisition cost and exploration expenses of the enterprise in previous years, while the appraised value of the mining rights represents the value of the economic benefits that the enterprise can generate in future years. The appraisal adopted the discounted cash flow method to reflect the future earnings of the mine, therefore there was a high appreciation.

5. Shangyuquan Coal Mine of Shanxi Luneng Hequ Power & Coal Development Co., Ltd.

The mine commissioned for appraisal is a large-scale operating coal mine. Relevant exploration and design work has been completed. Expected income and risks can be forecasted and measured in monetary terms, and the expected income period can be predicted, the Discounted Cash Flow (DCF) method is adopted for this

appraisal in accordance with the "China Mineral Rights Appraisal Standards". The calculation formula is as follows:

$$P = \sum_{t=1}^{n} (CI - CO)_t \bullet \frac{1}{(1+i)^t}$$

Where: *P*- Mineral rights appraised value;

CI - Annual cash inflow;

CO - Annual cash outflow;

i - Discount rate;

t - Year Index;

n - Appraisal Calculation Period.

The main parameters are determined as follows:

The "Resource Reserve Volumes Verification Report for the Shangyuquan Coal Mine of Shanxi Luneng Hequ Power&Coal Development Co.,Ltd. in the Hedong Coalfield, Shanxi Province" (hereinafter referred to as the "Verification Report on Reserves") , the "Receipt of Review Opinion on the Resource Reserve Volumes Verification Report for the Shangyuquan Coal Mine of Shanxi Luneng Hequ Power&Coal Development Co.,Ltd. in the Hedong Coalfield, Shanxi Province" (hereinafter referred to as the "Receipt of Review Opinion"), and the "Certificate of Review and Filing for the Resource Reserve Volumes Verification Report for the Shangyuquan Coal Mine of Shanxi Luneng Hequ Power&Coal Development Co.,Ltd. in the Hedong Coalfield, Shanxi Province" (hereinafter referred to as the "Review and Filing Certificate") submitted by Shanxi Tongdiyuan Geological and Mineral Technology Co., Ltd. in April 2009, the "2024 Annual Reserve Report for the the Shangyuquan Coal Mine of Shanxi Luneng Hequ Power&Coal Development Co.,Ltd. in Hequ County, Shanxi Province" (hereinafter referred to as the "Annual Reserve Report") and the "Receipt of Review Opinion on the 2024 Annual Reserve Report for the Shangyuquan Coal Mine of Shanxi Luneng Hequ Power&Coal Development Co.,Ltd. in Hequ County, Shanxi Province" (Jingkuanlian Nianbao Shen Zi [2025] No. 173) (hereinafter referred to as the "Annual Reserve Report Review Opinion") submitted by Shanxi Team of Geological Survey Center of China Building Materials Industry in January 2025, the "Coal Resource Development and Utilization Plan, Mine Environmental Protection and Land Reclamation Plan for for Shangyuquan Coal Mine of Shanxi Luneng Hequ Power&Coal Development Co.,Ltd. in Hequ County, Shanxi Province" (hereinafter referred to as the "Three-in-One Plan") submitted by Coal Industry Taiyuan Design and Research Institute Group Co., Ltd. in March 2025, the "Project Adjustment Statement for the Coal Resource Development and Utilization, Mine Environmental Protection and Land Reclamation Plan for Shangyuquan Coal Mine of Shanxi Luneng Hequ Power&Coal Development Co.,Ltd. in Hequ County, Shanxi Province" (hereinafter referred to as the "Explanation of Adjustments to the Integrated Plan") submitted by Coal Industry Taiyuan Design and Research Institute Group Co., Ltd. on 2 September 2025, the "Feasibility Study Report on Gangue Backfilling for Shangyuquan Coal Mine of Shanxi Luneng Hequ Power&Coal Development Co.,Ltd. in Hequ County, Shanxi Province" (hereinafter referred to as the "Feasibility Study Report on Gangue Backfilling") submitted by Beijing Huayu Engineering Co., Ltd. in July 2024, information provided by Shanxi Luneng Hequ Power&Coal Development Co., Ltd. and other materials available to the evaluators.

Retained resources as at the Appraisal Reference Date: According to the Annual Reserve Report and the Annual Reserve Report Review Opinion, as of the reserve estimation date of 31 December 2024, the resource reserves within the mining rights area of Shangyuquan Coal Mine are as follows: coal reserves amount to 886.052 million tonnes, including: 636.884 million tonnes of proven resources, 105.306 million tonnes of measured resources and 143.862 million tonnes of inferred resources. Based on the utilization data provided by the enterprise for January to July 2025, the resource consumption at Shangyuquan Coal Mine from the estimated reserve date to the Appraisal Reference Date was 3.5322 million tonnes. Therefore, the resource reserves as at the Reference Date were 882.5198 million tonnes, comprising: 633.3518 million tonnes of proven resources, 105.306 million tonnes of measured resources and 143.862 million tonnes of inferred resources.

Assessed usable reserve resources: Assessed usable reserve resources = ∑base reserves + ∑resources × confidence coefficient for that resource level = 868.1336 (million tonnes)

Product plan: According to the Three-in-One Plan and the company's actual circumstances, the product solution determined in this assessment is washed coal.

Recovery rate: According to the Preliminary Design, the designed recovery rate for coal seams 3-1, 3-2, 4-3 and 4-4 are 85%, while those for coal seams 3-3 and 5-2 Upper are 80%, and the recovery rate for coal seam 5-2 is 75%.

Recoverable reserves: 467.728 million tonnes.

Production scale and service life: The production capacity stated on the mining license for this mine is 3.00 million tonnes per year, while the approved production capacity is 7.00 million tonnes per year. The service life calculated in the Valuation is 51.42 years, i.e. the production period is from August 2025 to January 2077.

Coal product price and sales revenue: The equivalent coal price determined in the valuation is RMB320/tonne (pithead price, excluding tax), assuming that all products produced by the mine are sold, i.e. the sales revenue for a normal production year amounted to RMB164,729.60 ten thousand.

Fixed assets investment:

① Fixed asset investment already committed: The original value of fixed assets investment determined in the Valuation is RMB217,310.30 ten thousand, with a net value of RMB118,615.96 ten thousand. Including: the original value of roadway drivage work is RMB35,497.74 ten thousand with a net value of RMB23,435.70 ten thousand, the original value of buildings and structures is RMB54,420.29 ten thousand with a net value of RMB32,071.53 ten thousand, and the original value of equipment is RMB117,747.32 ten thousand with a net value of RMB53,463.78 ten thousand and construction in progress of RMB9,644.95 ten thousand.

② Subsequent fixed asset investment: Based on the relevant contracts for construction in progress provided by Shangyuquan Coal Mine, a further fixed asset investment of RMB 15,698.29 ten thousand is required.

Intangible Asset Investments:

① Intangible assets - land use rights investment: The investment amount for land use rights stands at RMB 14,872.94 ten thousand.

② Other intangible asset investments: According to documentation provided by Shangyuquan Coal Mine, plans are in place for the relocation of four villages including Baijiaye in Lugu Township. The estimated relocation costs amount to RMB 45,014.81 ten thousand.

Total costs and charges and operating costs:

Costs for purchased materials: Based on the financial data provided by the enterprise, the unit purchased material cost for Shangyuquan Coal Mine is RMB7.35/tonne.

Costs for purchased fuel and power: Based on financial data provided by the enterprise, Shangyuquan Coal Mine's unit external fuel and power cost is RMB5.39/tonne. Shangyuquan Coal Mine will implement gangue backfilling starting in 2026. According to the Feasibility Study Report on Gangue Backfilling, the designed

unit cost for purchased fuel and power will increase by RMB1.71/tonne, resulting in a total cost of RMB5.39/tonne + RMB1.71/tonne = RMB7.10/tonne;

Staff remuneration: the designed unit staff remuneration is RMB87.31/tonne.

Depreciation charges: the unit depreciation charge is RMB16.35/tonne.

Simple reproduction and maintenance charges and roadway drivage work fund: In accordance with the "Notice of Administrative Measures for the Extraction and Use of Coal Production Safety Costs and Several Provisions on the Standardization of Management Issues for Simple Reproduction and Maintenance Charges in Coal Mines (Cai Jian [2004] No. 119) , and the Notice on Adjusting the Extraction Standards for the Shaft and Tunnel Engineering Fund of Unified Allocation Coal Mines (Cai Gong Zi [1989] No. 302) of the Ministry of Finance, the National Development and Reform Commission, the State Administration of Coal Mine Safety, it is determined that the simple reproduction and maintenance charges of this project are RMB7.50/tonne, and the roadway drivage work fund is RMB2.50/tonne. Including: the simple reproduction and maintenance charges in depreciation nature are RMB3.75/tonne, and the simple reproduction and maintenance charges in renewal nature are RMB3.75/tonne.

Mine Geological Environment Remediation Costs: Calculated unit costs for environmental restoration and land reclamation amount to RMB0.15/tonne.

Safety costs: The standard annual safety fee is RMB15.00/tonne.

Repair costs: the designed unit repair cost is RMB1.54/tonne.

Amortization fee: The unit amortization expense is RMB2.08/tonne.

Transportation fee: The unit transportation fee is RMB0.06/tonne.

Other expenses: Other charges per unit amount to RMB25.56/tonne.

Finance costs: The calculation is based on the Guidance on Determination of Parameters for the Valuation of Mining Rights (CMVS30800-2008) and the regulations on the Valuation of mining rights.

R&D expenses: Unit R&D expense of RMB2.44/tonne.

Sales Expenses: Unit sales expense of RMB0.01/tonne.

Management Expenses: Based on the financial data provided by the enterprise, the unit management expense is determined to be RMB0.67/tonne.

Total costs and expenses for a normal production year = costs for purchased materials + costs for purchased fuel and power + staff remuneration + depreciation charges + simple reproduction and maintenance charges + roadway drivage work fund + safety costs + repair costs + mine environmental restoration guarantee deposit + amortization fee + other expenses + finance costs + administrative expenses= RMB123,573.53 ten thousand, equivalent to the total costs and expenses of unit raw coal of RMB176.72/tonne.

Annual operating costs = total costs and expenses – depreciation charge – simple reproduction and maintenance charges in depreciation nature – roadway drivage work fund – amortization fee – finance costs = RMB105,652.33 ten thousand, equivalent to a unit raw coal operating cost of RMB150.93/tonne.

The process of determining its discount rate was as follows:

In accordance with the Guidance on Determination of Parameters for the Valuation of Mining Rights (CMVS30800-2008), the discount rate was calculated as follows:

Discount rate＝risk-free return rate + risk return rate

Among them, the risk-free return rate can usually be determined by reference to the interest rate of long-term treasury bonds issued by the government or the bank deposit rate for the same period. In the Valuation, the risk-free return rate was set at 1.70% based on the average interest rate of long-term treasury bonds.

Risk return rate includes risk return rate in survey and development phase, industry risk return rate and financial operation risk return rate and other individual risk premiums. In accordance with the Guidance on Determination of Parameters for the Valuation of Mining Rights (CMVS402-2016) and considering the actual circumstances of this mine, the risk premium was estimated using the risk accumulation method in this valuation, resulting in a risk premium of 6.10%. Accordingly, the discount rate for this valuation is determined to be 7.80%.

Upon calculation, as at the Appraisal Reference Date, the mining rights for the Shangyuquan Coal Mine of Shanxi Luneng Hequ Power&Coal Development Co.,Ltd. (with a service life of 51.42 years and proposed recoverable reserves of 467.728 million tonnes) had a value of RMB72,069.58 ten thousand and a book value of RMB18,601.36 ten thousand, with a value-added rate of 287.44%, which was mainly attributable to the fact that the book value of mining rights (intangible assets) represents the original acquisition cost and exploration expenses of the enterprise in previous years, while the appraised value of the mining rights represents the value of the economic benefits that the enterprise can generate in future years. The scarcity of coal resources results in a relatively weak correlation between exploration costs and the value that can be realized in the future, therefore they are not comparable. The Valuation adopted the discounted cash flow method to reflect the future earnings of the mine, therefore there was a high appreciation.

(V) Other Assets and Liabilities

The asset appraisal professionals verified the book values against the detailed item lists and relevant financial information provided by the subject entity. The appraised values were determined based on the verified book values, or the actual liabilities/equity interest of the subject entity.

Among them, as at the Appraisal Reference Date, the appraised value and book value of current assets were both RMB497,052.65 ten thousand; the appraised value of intangible assets was RMB1,474.27 ten thousand, with a book value of RMB2,328.74 ten thousand, representing an impairment rate of 36.69%; Other non-current assets had both an appraised value and a book value of RMB 267,125.52 ten thousand; current liabilities had both an appraised value and a book value of RMB385,683.34 ten thousand; and non-current liabilities had both an appraised value and a book value of RMB388.81 ten thousand.

Based on the calculations, as of the Appraisal Reference Date:

(A) The appraised value of all shareholders' equity value for Guoyuan Power= current assets + non-current assets (including long-term equity investments + buildings and structures fixed assets + equipment fixed assets + other intangible assets excluding mining rights + other non-current assets = RMB497,052.65 ten

thousand + RMB3,978,677.56 ten thousand + RMB98,673.77 ten thousand + RMB1,267.67 ten thousand+ RMB1,474.27 ten thousand+ RMB 267,125.52 ten thousand) －current liabilities (RMB385,683.34 ten thousand) －non-current liabilities (RMB388.81 ten thousand) = RMB4,458,199.29 ten thousand.

(B) The book value of all shareholders' equity value for Guoyuan Power = current assets + non-current assets (including long-term equity investments + buildings and structures fixed assets + equipment fixed assets + other intangible assets excluding mining rights + other non-current assets = RMB497,052.65 ten thousand + RMB2,003,662.96 ten thousand + RMB9,791.46 ten thousand + RMB1,008.29 ten thousand + RMB2,328.74 ten thousand + RMB 267,125.52 ten thousand) －current liabilities (RMB385,683.34 ten thousand) －non-current liabilities (RMB388.81 ten thousand) = RMB2,394,897.46 ten thousand.

IV. INCOME APPROACH

(I) Key Parameters and Assumptions

The key parameters and assumptions adopted by China United Assets in the income approach are as follows:

1. It is assumed that no major changes occurring in current national laws, regulations, policies, the macroeconomic climate, or the political, economic, and social environments of the regions where the parties involved in the transaction are located;

2. It is assumed that the enterprise will continue as a going concern;

3. It is assumed that the company's management is responsible and competent in fulfilling their duties;

4. It is assumed that no significant changes will occur in relevant interest rates, exchange rates, tax bases and rates, or policy-related levies;

5. It is assumed that the company's business scope and operational methods will remain consistent with the current direction, based on the existing management style and competency level;

6. It is assumed that during the future forecast period, the subject entity's core business, product mix, composition of revenue and costs, sales strategies, and cost control measures will remain largely unchanged from their post-commissioning and capacity-reaching state;

7. It is assumed that during the future forecast period, period expenses for the subject entity will not undergo significant changes from the current basis and will continue to follow the trends observed in recent years, fluctuating in line with changes in the scale of operations;

8. A discount rate of 7.58% is determined using the weighted average cost of capital assets (WACC) model;

9. This appraisal did not consider the impact of a marketability discount on the equity value of the enterprise.

(II) Appraisal Model

1. Basic Model

The basic model used in this appraisal is:

$$E = B - D \quad (1)$$

Where:

E： the value of all shareholders' equity (net assets) of the appraised entity, the final calculation of which amounted to RMB4,175,007.96 ten thousand;

B： the enterprise value of the appraised entity, which amounted to RMB4,355,373.53 ten thousand;

D： the value of interest-bearing debts of the appraised entity, which amounted to RMB180,365.57 ten thousand;

$$E = P + I + C \quad (2)$$

Where:

P: Value of the operating assets of the subject entity;

I: Value of the long-term investments held by the subject entity as of the Reference Date;

C: Value of surplus or non-operating assets (liabilities) existing as of the Reference Date of the subject entity.

$$P = \sum_{i=1}^{n} \frac{R_i}{(1+r)^i} + \frac{R_{n+1}}{r(1+r)^n} \quad (3)$$

Where:

R_i: The expected return (Free Cash Flow) of the subject entity for the i-th future year.

r： The discount rate is 7.58%;

n: The future operational period of the subject entity;

$$C = C1 + C2 \quad (4)$$

C1: The value of current surplus or non-operating assets (liabilities) as of the Reference Date;

C2: The value of non-current surplus or non-operating assets (liabilities) as of the Reference Date.

2. Income Indicator

For this appraisal, free cash flow to the firm is used as the income indicator for the operating assets of the subject entity. It is fundamentally defined as:

R = Net Profit + Depreciation & Amortization + After-tax Interest Expense - Additional Capital (5)

Based on the operating history of the subject entity and future market development, the free cash flow for its future operational period is estimated. The present value of the free cash flows throughout this future operational period is calculated and summed to determine the value of the enterprise's operating assets.

3. Discount Rate

This appraisal employs the Weighted Average Cost of Capital (WACC) model to determine the discount rate r

$r = r_d \times w_d + r_e \times w_e$ (6)

Where:

W_d ： the debt ratio of comparable companies, which was 48.98% in this case;

$$w_d = \frac{D}{(E+D)} \quad (7)$$

W_e ： the equity ratio of comparable companies, which was 51.02% in this case;

$$w_e = \frac{E}{(E+D)} \quad (8)$$

r_d: The after-tax interest rate on interest-bearing debt is 2.63% for this appraisal.

r_e ： the cost of equity capital, the cost of equity capital re was determined according to the Capital Asset Pricing Model (CAPM) for this Valuation, and the cost of equity capital after the comprehensive calculation was 12.33% ;

$r_e = r_f + \beta_e \times (r_m - r_f) + \varepsilon$ (9)

Where:

r_f: The risk-free rate, using the 10-year government bond yield, is 1.70%;

r_m: The expected market return rate is 9.37%;

ε ： the characteristic risk adjustment factor of the appraised entity, which was 3.50% in this case;

β_e : the expected market risk factor for the equity capital of the appraised entity, which was 0.9291 in this case;

$$\beta_e = \beta_u \times (1 + (1-t) \times \frac{D}{E}) \quad (10)$$

β_u: The expected unlevered market risk coefficient of comparable companies;

$$\beta_u = \frac{\beta_t}{1+(1-t)\frac{D_i}{E_i}} \quad (11)$$

β_t: The expected average market risk coefficient for the stocks (assets) of the comparable companies;

$$\beta_t = 34\%K + 66\%\beta_x \quad (12)$$

Where:

K: The average risk value for the stock market over a certain period, typically assumed to be K=1;

β_x: The historical average market risk coefficient of the comparable companies' stocks (assets);

D_i, E_i: Represent the interest-bearing debt and equity capital of the comparable companies, respectively.

A.2 Main Evaluation Materials of Xinjiang Energy

I. Selection of Appraisal Methods

The methods selected for this appraisal are the income approach and the asset-based approach.

Reason for selecting the asset-based approach: As of the valuation benchmark date, the book value of the assets and liabilities within the appraisal scope has already been audited. Each asset and liability of the appraised entity can be identified. The identifiable assets and liabilities can each be individually assessed using an appropriate appraisal method, thus meeting the conditions for applying the asset-based approach.

Reason for selecting the income approach: The appraised entity has the foundation and conditions for ongoing operations, with standardised accounting practices, clear management, stable and defined business sources. The management has detailed plans for the current operations and future development of the company. The future expected income and operational risks can be reasonably predicted, meeting the conditions for using the income approach for appraisal.

Reason for not selecting the market approach: The market approach relies on the existence of an active public market with sufficient market data and comparable transaction cases. The appraised entity is a non-listed company. Listed companies in the same industry differ significantly from the appraised enterprise in terms of business structure, corporate scale, asset allocation and utilisation, operational stage, growth potential, operational risks, financial risks, and others. Furthermore, there were few comparable transactions, mergers, or acquisitions within the same industry near the valuation benchmark date. Reliable operational and financial data from comparable transactions are difficult to obtain, making it impossible to calculate appropriate value ratios. Therefore, the market approach was not adopted for this appraisal.

The total shareholders' equity value appraised using the income approach is RMB12,049,738,200.00, while the total shareholders' equity value appraised using the asset-based approach is RMB12,121,427,600.00.

Unless otherwise stated, all amounts in this summary are expressed in Renminbi (RMB).

There is a certain discrepancy between the appraisal results of the income approach and the asset-based approach. The main reason for the discrepancy is the different perspectives considered by the two methods.

The income approach estimates the value of the subject asset by discounting the expected future earnings of the appraised entity from the perspective of the enterprise's future profitability. The asset-based approach, on the other hand, estimates the value of the subject asset based on a reasonable assessment of the enterprise's assets and liabilities, considering the method of asset replacement. The appraised entity's core business is coal mining and sales, and its key assets are mining rights. In this appraisal, the asset-based approach uses the discounted cash flow method to assess the mining rights, which aligns closely with the approach used in the income approach. Moreover, the appraisal of the mining rights is based on the coal market conditions, using objective market benchmarks. The results from the asset-based approach reflect the contribution of the mining rights to the company's future earnings, therefore the asset-based approach can more objectively reflect the market value of the appraised entity.

II. Major Appraisal Assumptions

1. It is assumed that all appraisal targets are in the process of being traded, and the appraisers simulate the market based on the transaction conditions of the appraised assets;

2. It is assumed that for assets traded in the market, or assets to be traded in the market, both parties in the transaction have equal standing and ample opportunity and time to access market information. The transactions are voluntary and rational, and the parties can make rational judgments about the asset's function, purpose, and transaction price;

3. It is assumed that the appraised assets will continue to be used for their current purposes and in their current manner;

4. It is assumed that there will be no significant changes to the relevant national laws, regulations, and policies or the macroeconomic situation, and that the political, economic, and social environment in the regions of the parties involved in the transaction will not change significantly;

5. Given the actual status of the assets on the valuation benchmark date, it is assumed that the company will continue operations;

6. It is assumed that there will be no significant changes in the interest rates, exchange rates, tax bases, tax rates, policy-based collection fees, or other related factors affecting the appraised entity after the valuation benchmark date;

7. It is assumed that the management of the appraised entity after the valuation benchmark date will remain responsible and stable, with the ability to perform their duties;

8. Unless otherwise stated, it is assumed that the company fully complies with all relevant laws and regulations;

9. It is assumed that after the valuation benchmark date, there will be no force majeure or unforeseen factors that cause significant adverse effects on the appraised entity;

10. It is assumed that after the valuation benchmark date, the accounting policies used by the appraised entity and those used to prepare this asset appraisal report will remain consistent in significant aspects;

11. It is assumed that after the valuation benchmark date, the scope and methods of the appraised entity's operations will remain the same, based on the current management practices and level;

12. It is assumed that after the valuation benchmark date, the appraised entity's cash inflows and cash outflows will be at an average rate;

13. As at the valuation benchmark date, the subsidiaries of the appraised entity enjoy preferential enterprise income tax policies under the Western Development Programme, with corporate income tax levied at a rate of 15% from 1 January 2021 to 31 December 2030. This appraisal assumes that after the preferential enterprise income tax policy for the Western Development expires, a 25% tax rate will be applied;

14. It is assumed that the mineral resources reserves reviewed within the mining licence will form the basis for the mining rights, and that the mining licence can be smoothly

renewed in the future;

15. It is assumed that after the valuation benchmark date and starting from 2034, Shenhua Xinjiang Energy Company Limited Wudong Coal Mine will begin to levy mining rights transfer income annually in accordance with the provisions of the Notice on Printing and Distributing the Mineral Rights Transfer Income Collection Method (C.Z. [2023] No. 10) issued by the Ministry of Finance, Ministry of Natural Resources, and State Taxation Administration;

It is assumed that starting from 2040, CHN Energy Xinjiang Energy Co., Ltd. Changji Tunbao Coal Mine will begin to pay mining rights transfer income annually in accordance with the provisions of the *Notice on Printing and Distributing the Mineral Rights Transfer Income Collection Method* (C.Z. [2023] No. 10) issued by the Ministry of Finance, Ministry of Natural Resources, and State Taxation Administration;

It is assumed that starting from 2036, CHN Energy Xinjiang Energy Chemical Co., Ltd. Toksun County Heishan Open-pit Coal Mine will begin to pay mining rights transfer income annually in accordance with the provisions of the *Notice on Printing and Distributing the Mineral Rights Transfer Income Collection Method* (C. Z. [2023] No. 10) issued by the Ministry of Finance, Ministry of Natural Resources, and State Taxation Administration;

It is assumed that starting from 2032, Xinjiang Shenhua Mining Co., Ltd Hongshaquan No.1 Open-pit Coal Mine will begin to pay mining rights transfer income annually in accordance with the provisions of the *Notice on Printing and Distributing the Mineral Rights Transfer Income Collection Method* (C.Z. [2023] No. 10) issued by the Ministry of Finance, Ministry of Natural Resources, and State Taxation Administration;

It is assumed that starting from 2028, Xinjiang Qitai County Xiheishan Mining Area Hongshaquan No.2 Open-pit Coal Mine will begin to pay mining rights transfer income annually in accordance with the provisions of the *Notice on Printing and Distributing the Mineral Rights Transfer Income Collection Method* (C. Z. [2023] No. 10) issued by the Ministry of Finance, Ministry of Natural Resources, and State Taxation Administration;

It is assumed that starting from 2041, Guoneng Xinjiang Zhundong Energy Co., Ltd. Zhundong Open-pit Coal Mine will begin to pay mining rights transfer income annually in accordance with the provisions of the Notice on Printing and Distributing the Mineral Rights Transfer Income Collection Method (C.Z. [2023] No. 10) issued by the Ministry of Finance, Ministry of Natural Resources, and State Taxation Administration;

16. It is assumed that CHN Energy Xinjiang Energy Chemical Co., Ltd. will continue to charge Guoneng Xinjiang Toksun Energy Co., Ltd. mining rights usage fees at the current level, and CHN Energy Xinjiang Mining Co., Ltd. will charge Guoneng Xinjiang Hongshaquan Energy Co., Ltd. and Guoneng Xinjiang Mining Hongshaquan No. 2 Coal Mine Co., Ltd. mining rights usage fees at the current level.

III. Asset-based Approach

1.**Long-term equity investments**

An overall appraisal was conducted for long-term equity investments in wholly-owned and controlling subsidiaries. The appraisers first appraise the entire shareholders' equity value of the investee, then multiply it by the shareholding percentage to determine the

value of the part of the shareholder's equity.

For non-controlling long-term equity investments, as there are no conditions for an overall appraisal, the appraised value was determined by the net assets as of the valuation benchmark date multiplied by the shareholding percentage.

No.	Name of Investee	Appraisal Method	Final Appraisal Method Adopted
1	Guoneng Xinjiang Zhundong Energy Co., Ltd.	Asset-Based Approach, Income Approach	Asset-Based Approach
2	CHN Energy Xinjiang Mining Co., Ltd.	Asset-Based Approach, Income Approach	Asset-Based Approach
3	Guoneng Xinjiang Toksun Energy Co., Ltd.	Asset-Based Approach, Income Approach	Asset-Based Approach
4	Guoneng Xinjiang Hongshaquan Energy Co., Ltd.	Asset-Based Approach, Income Approach	Asset-Based Approach

13	Xinjiang Jiuhuatian Logistics Co., Ltd.	8,256.96	9,220.26	11.67
14	Xinjiang Anshunda Mining Technology Engineering Co., Ltd.	2,188.12	2,187.84	-0.01
15	Wuzhun Railway Co., Ltd.	90,318.19	90,318.42	0.00
16	Xinjiang Zhongyou Guoneng Oil Products Sales Co., Ltd.	466.29	466.29	0.00

No.	Name of Investee	Book Value	Appraised Value	Appreciation Rate (%)
17	Guoneng Tuoli New Energy Co., Ltd.	0.00	0.00	/
18	Guoneng Xuefeng Shaya New Energy Co., Ltd.	0.00	0.00	/
Total		668,275.86	1,228,100.56	83.77

The primary reasons for the appraisal increases and decreases in the investee entities are as follows:

(1) Guoneng Xinjiang Zhundong Energy Co., Ltd. recorded an appraisal increase of RMB763,832,000. This increase stemmed from the fact that the carrying amount of the long-term equity investment represented historical investment costs. The investee entity holds mining rights acquired at an earlier stage with relatively low acquisition costs, resulting in an increase in value for the mining rights asset group during appraisal.

(2) CHN Energy Xinjiang Mining Co., Ltd. recorded an appraisal increase of RMB1,289,307,100. This increase stemmed from the investee holding two mining rights acquired at low cost, with the collection of mining rights usage fees from the mining rights operators contributing to the valuation appreciation.

(3) Guoneng Xinjiang Toksun Energy Co., Ltd. recorded an appraisal increase of RMB1,663,446,600. This increase stemmed from the fact that the carrying amount of the long-term equity investment represented historical investment costs. The investee operates mining rights held by Xinjiang Energy, with favourable projected future operational returns, leading to the appraisal increase in mining rights value.

(4) Guoneng Xinjiang Hongshaquan Energy Co., Ltd. recorded an appraisal increase of RMB1,510,666,700. This increase stemmed from the fact that the carrying amount of the long-term equity investment represented historical investment costs. The investee operates mining rights held by Xinjiang Mining, with favourable projected future operational returns, leading to an increase in the value of the mining rights asset group.

(5) The valuation increase of Guoneng Xinjiang Coal-to-Gas Co., Ltd. was RMB1,979,400. The reason for the increase was that the book value of the long-term equity investment was the historical investment cost, and the investee was constructing a coal-to-gas project, resulting in an increase in valuation due to the ongoing construction.

(6) The valuation decrease of Guoneng (Guazhou) Coal Trading Co., Ltd. was RMB10,800. The reason for the decrease was that the book value of the long-term equity investment was the historical investment cost, the investee had no actual business, and the accumulated historical operating benefits resulted in the net assets after the share conversion being lower than the book investment cost, resulting in a valuation decrease.

(7) The valuation increase of Xinjiang Tianshan Railway Co., Ltd. was RMB327,212,800. The reason for the increase was that the book value of the long-term equity investment was the historical investment cost, and the accumulated historical operating benefits resulted in the net assets after the share conversion being higher than the book investment cost.

(8) The valuation increase of Guoneng Xinjiang Yimian Supply Chain Co., Ltd. was RMB30,922,500. The reason for the increase was that the book value of the long-term equity investment was the historical investment cost, and the accumulated historical operating benefits resulted in the net assets after the share conversion being higher than the book investment cost.

(9) The appraised value of Guoneng Xinjiang Zhundong Economic and Technological Development Zone Logistics Co., Ltd. increased by RMB3,600. The reason for the increase is that the book value of the long-term equity investment is the historical investment cost. The investee has no actual business, and the accumulated historical operating benefits have resulted in the net assets after the share conversion being higher than the book investment cost, thus forming an appraised value increase.

(10) The appraised value of Xinjiang Shenxing Energy Co., Ltd. increased by RMB1,254,500. The reason for the increase is that the book value of the long-term equity investment is the historical investment cost. The investee has no actual business. During the capital increase process, the capital reserve injected by the minority shareholders resulted in the net assets after the share conversion being higher than the book investment cost, thus forming an appraised value increase.

(11) The appraised value of Xinjiang Jiuhuatian Logistics Co., Ltd. increased by RMB9,633,000. The reason for the increase is that the book value of the long-term equity investment is the historical investment cost. The accumulated historical operating benefits have resulted in the net assets after the share conversion being higher than the book investment cost.

(12) The valuation of Xinjiang Anshunda Mining Technology Engineering Co., Ltd. was reduced by RMB2,800. The reason for the reduction was that the book value of the long-term equity investment was calculated using the equity method. The valuation was determined by multiplying the net assets on the valuation date by the shareholding ratio, resulting in a valuation reduction.

(13) The valuation of Wuzhun Railway Co., Ltd. was increased by RMB2,300. The reason for the increase was that the book value of the long-term equity investment was calculated using the equity method. The valuation was determined by multiplying

the net assets on the valuation date by the shareholding ratio, resulting in a valuation increase.

2. **Fixed assets – buildings and structures**

Based on the characteristics of the various types of building and structure assets, the appraised value type, data collection conditions, and other related factors, the cost method is primarily used for appraisal, while the market approach is applied in certain cases.

Cost method

The calculation formula of cost method is expressed as:

Appraised value = Replacement cost × Composite depreciation rate

(1) Determination of replacement cost

Based on the characteristics, nature, and situation of the building and structure assets within the appraisal scope, the calculation formula for replacement cost in this appraisal is as follows:

Replacement cost = Construction and installation engineering cost + Pre-construction and other costs + Capital cost - Deductible VAT

① Construction and installation engineering costs

For large, valuable, and important buildings, the construction and installation engineering costs are determined using the preliminary and final budget adjustment method, which uses the quantities in the building's final budget as a basis and calculates the construction and installation engineering costs based on local standards and relevant fee documents.

For general buildings, or when final budget data is incomplete or the building's value is small and the structure is simple, the analogy method or unit cost method is used to determine the construction and installation engineering costs.

② Pre-construction and other costs

Pre-construction and other costs are calculated based on the engineering investment amount of the projects, in accordance with the fee standards set by the industry, national, or local government regulations. Specific rates and billing bases are presented below.

A. Wudong Coal Mine

a. Coal Preparation Plant

No.	Project Name	Billing Basis	Billing Standard	Input VAT Rate Included
1	Construction Unit Management Fee	Construction and installation cost	1.58%	/
2	Engineering Supervision Fee	Construction and installation cost	1.80%	6.00%
3	Engineering Quality Technical Service Fee	Construction and installation cost	0.35%	6.00%
4	Feasibility Study Fee	Construction and installation cost	0.29%	6.00%

No.	Project Name	Billing Basis	Billing Standard	Input VAT Rate Included
5	Environmental Impact Assessment Fee	Construction and installation cost	0.23%	6.00%
6	Surveying and design fees	Construction and installation cost	3.10%	6.00%
7	Tender Agency Service Fee	Construction and installation cost	0.10%	6.00%
8	Occupational Safety and Health Assessment Fee	Construction and installation cost	0.20%	6.00%
9	Engineering Insurance Fee	Construction and installation cost	0.30%	6.00%
10	Joint Commissioning Fee	Construction and installation cost	0.77%	/
11	Soil and Water Conservation Assessment Fee	Construction and installation cost	0.11%	6.00%
12	Geological disaster risk assessment fee	Construction and installation cost	0.03%	6.00%
13	Early entry fee for production personnel	Construction and installation cost	1.20%	/
	Total	/	10.06%	/

b. Buildings and structures assets other than coal preparation plants

No.	Project Name	Billing Basis	Billing Standard	Input VAT Rate Included
1	Construction Unit Management Fee	Construction and installation cost	2.50%	/
2	Engineering Supervision Fee	Construction and installation cost	1.30%	6.00%
3	Engineering Quality Technical Service Fee	Construction and installation cost	0.35%	6.00%
4	Feasibility Study Fee	Construction and installation cost	0.09%	6.00%
5	Environmental Impact Assessment Fee	Construction and installation cost	0.06%	6.00%
6	Surveying and design fees	Construction and installation cost	2.50%	6.00%
7	Tender Agency Service Fee	Construction and installation cost	0.02%	6.00%
8	Occupational Safety and Health Assessment Fee	Construction and installation cost	0.20%	6.00%
9	Engineering Insurance Fee	Construction and installation cost	0.30%	6.00%
10	Joint Commissioning Fee	Construction and installation cost	0.33%	/
11	Soil and Water Conservation Assessment Fee	Construction and installation cost	0.08%	6.00%
12	Geological disaster risk assessment fee	Construction and installation cost	0.01%	6.00%
13	Early entry fee for production personnel	Construction and installation cost	0.16%	/
	Total	/	7.90%	/

For properties located within urban administrative planning zones, urban infrastructure supporting fees shall be levied accordingly.

B. Changji Mining Branch

a. Coal Preparation Plant

No.	Project Name	Billing Basis	Billing Standard	Input VAT Rate Included

13	Early entry fee for production personnel	Construction and installation cost	1.20%	/
	Total	/	10.06%	/

For properties located within urban administrative planning zones, urban infrastructure supporting fees shall be levied accordingly.

D. Other Entities

Including Kashgar Sales Branch, Mechanical and Electrical Management Centre, Material Supply Centre, Accounting Service Centre, Production Preparation Centre, Logistics Service Centre, and Fukang Huangzhu Hotel.

N	Fee Name	Billing Basis	Billing Standard	Input VAT Rate Included
1	Preliminary Work Consulting Fee	Construction and installation cost	0.08%	6.00%
2	Tender agency fee	Construction and installation cost	0.04%	6.00%
3	Environmental Impact Assessment Fee	Construction and installation cost	0.02%	6.00%
4	Surveying and design fees	Construction and installation cost	2.14%	6.00%
5	Engineering Supervision Fee	Construction and installation cost	1.09%	Including VAT input tax
6	Project construction management fee	Construction and installation cost	0.68%	/
Total		/	4.05%	/

For properties located within urban administrative planning zones, urban infrastructure supporting fees shall be levied accordingly.

③ Capital costs

Capital costs are calculated based on the sum of construction and installation engineering costs, pre-construction and other costs, using uniform capital investment over the reasonable construction period. The calculation formula of capital costs is as follows:

Capital costs = (Construction and installation engineering costs + Pre-construction and other costs) × Reasonable construction period × Interest rate × 1/2

Based on the scale and nature of the construction project in which the appraised buildings and structures are located and the relevant construction period quotas, the reasonable construction period and interest rate for the subsidiaries of CHN Energy Xinjiang Energy Chemical Co., Ltd. were determined by referring to the effective Loan Prime Rate (LPR) on the Valuation benchmark date as published by the National Interbank Funding Centre authorised by the People's Bank of China, as presented in the following table:

No.	Entity	Reasonable Construction Period	Rate
1	Wudong Coal Mine	/	/
1.1	Coal Preparation Plant	2	3.13%
1.2	Mining and Ancillary Facilities	4	3.38%
2	Changji Mining Branch	/	/
2.1	Coal Preparation Plant	2	3.13%
2.2	Mining and Ancillary Facilities	3	3.25%
3	Washing and Selection Centre	2	3.13%
4	Other Entities	2	3.13%

④Deductible VAT

According to relevant VAT documents, for those that qualify for VAT deduction, the replacement cost is reduced by the corresponding VAT.

(2) Determination of composite depreciation rate

①For important buildings (and structures), the economic service life, used lifespan, and on-site inspection of the structure, decoration, and auxiliary equipment are considered to determine the remaining useful life, which is then used to calculate the composite depreciation rate.

Composite depreciation rate = Remaining service life / (Remaining service life + Used lifespan) × 100%

For mining enterprises, the remaining service life of buildings is closely related to the mine's remaining service life. The remaining service life is determined based on the lower of the mine's remaining service life and the building's remaining economic service life.

②For low-value buildings (and structures), the composite depreciation rate is mainly determined based on the economic service life. The calculation formula is as follows:

Composite depreciation rate = (Economic service life - used lifespan) / Economic service life × 100%

For mining enterprises, the impact of the remaining service life of the mine should also be considered.

(3) Determination of appraised value

Appraised value= Replacement cost × Composite depreciation rate

Market Approach

Market approach can be used for estimating the objective and reasonable price or value of the appraisal subject by comparing it with similar real estate transactions that occurred recently around the valuation benchmark date, and applying appropriate adjustments to their known prices.

Appraisal based on the market approach should proceed according to the following steps:

(1) Collecting transaction instances;

(2) Selecting comparable instances;

(3) Establishing a comparable price basis;

(4) Making transaction condition adjustments;

(5) Making transaction date adjustments;

(6) Making regional factor adjustments;

(7) Making individual factor adjustments;

(8) Deriving the benchmark price.

The calculation formula for appraisal based on the market approach is expressed as follows:

Price of Real Estate Under Appraisal = Transaction Price of Comparable Instance × (Normal Transaction Conditions / Comparable Instance Transaction Conditions) × (Price Index of Real Estate Under Appraisal on Valuation benchmark date / Price Index of Comparable Instance Real Estate on Transaction Date) × (Regional Factor Value of Real Estate Under Appraisal / Regional Factor Value of Comparable Instance Real Estate) × (Individual Factor Value of Real Estate Under Appraisal / Individual Factor Value of Comparable Instance Real Estate)

Following appraisal, the original value of buildings and structures demonstrated an appraisal impairment of RMB502,019,400.00, representing an impairment rate of 16.37%; The Net value impairment was appraised to be RMB245,776,900.00, with an impairment rate of 12.72%. The primary reasons for this appraisal impairment are described as follows:

The primary reasons for the appraisal impairment of the original value of building (structure) assets are: firstly, a decline in real estate market prices in recent years resulted in appraisal impairment; secondly, certain structures were valued as part of buildings, also leading to appraisal impairment. The principal reasons for the

appreciation in net value result are: firstly, the enterprise had made impairment provisions in its accounting records, and this appraised value was calculated based on the actual condition of the building (structure) assets, leading to appraisal appreciation; secondly, the enterprise's depreciable life is shorter than the economic life span adopted in the appraisal.

The aforementioned appraised value incorporates the Wudong Coal Mine mining right with a negative appraised value. This value is presented separately under building (structure) assets and shaft engineering. Specifically, the appraised value of Wudong Coal Mine is RMB-1,446,225,400.00, with RMB-578,490,200.00 allocated to building (structure) assets and RMB-867,735,200.00 to shaft engineering.

3. **Fixed assets – shaft engineering**

Based on the characteristics of various shaft engineering projects, the appraised value type, data collection conditions, and other related factors, the cost method is primarily used for appraising shaft engineering projects.

Appraised value = Full replacement value × Composite depreciation rate

(1) Determination of full replacement value

Replacement cost = Engineering cost + Pre-construction and other costs + Capital costs - Deductible input tax

①Comprehensive cost

The comprehensive cost is calculated based on physical engineering quantities and the current coal mining quotas and fee standards.

For large-scale, high-value, and critical shaft engineering project, the comprehensive cost is calculated based on physical engineering quantities and the current coal mining quotas and fee standards.

Engineering cost = Base price of engineering quotas + Measure fees + Company management fees + Profits + Regulatory fees + Other project fees + Regional price differences

Where:

Base price of engineering quotas - The base price is calculated based on the shaft engineering's lifting method, lifting depth, tunnel cross-section, support method, materials, and thickness. *The Consumption Quotas for Coal Mining Shaft Engineering (2015, After-tax Base Price)* and *Comprehensive Quotas for Auxiliary Costs in Coal Mining Shaft Engineering (2015, After-tax Base Price)* are applied. This includes wages, material consumption, machine usage fees, etc., with adjustments made according to relevant regulations;

Other fees — determined in accordance with the Notice issued by the China Coal Construction Association on Adjustment of Pricing Basis for Coal Construction Projects under the VAT Reform for the Construction Industry ((ZH.M.J.X.Z.

[2016] No. 46) and the Notice on Adjusting the Value-Added Tax Rate for Coal Construction Engineering Pricing Basis (ZH.M.J.X.Z. [2019] No. 37), together with the Notification on Release of the Consumption Quotas for Coal Mining Shaft Engineering (2015, After-tax Base Price) (ZH.M.J.X.Z. [2016] *No.* 115) and the Supplementary Provisions on the Implementation of the Valuation Standards for Coal-Construction Projects (ZH.M.J.X.Z. [2016] No. 116), and calculated in combination with the actual construction conditions of the mine.

Labour, *materials, and e*quipment price d*ifferences – Adjusted according to the* Notice on Adjusting Coal Construction Engineering Quotation Standards (2015 Base Price) for Labour Unit Prices and Related Regulations (ZH.M.J.X.Z. [2021] No. 125), Urumqi City Construction Engineering Material Information Price List (Q2 2025), and materials price information provided by the enterprise for the valuation benchmark date.

For general shaft engineering projects, or when final settlement data is incomplete, or when the value is small and the structure is simple, the Analogy Method is used to determine the construction cost.

②Preliminary and Other Costs:

Preliminary and other costs include construction unit management fees, engineering supervision fees, surveying and design fees, environmental evaluation fees, and soil and water conservation consulting service fees. These costs are calculated based on the engineering construction investment amount, according to industry, national, or local government fee standards. Preliminary and Other Costs Calculation Formula:

Preliminary and other costs = Engineering cost × Fee rate

Calculation Sheet of Preliminary and Other Costs of Wudong Coal Mine

No.	Project Name	Billing Basis	Billing Standard	Deductible VAT Rate

	Total	/	8.42%	/

③Capital costs

Financing costs are calculated based on the appraised entity's reasonable construction period, referencing the Loan Prime Rate (LPR) published by the People's Bank of China on the valuation benchmark date, and considering the appraised entity's loan interest rate adjustments. The total sum of engineering costs, preliminary and other fees, etc., is used as the base for calculating the financing costs over the uniform capital investment. The reasonable construction period for Wudong Coal Mine is 4 years, and the reasonable construction period for Tunbao Coal Mine (Changji Branch) is 3 years.

The calculation formula of capital costs is as follows:

Financing cost = (Engineering cost + Preliminary and other fees) × Reasonable construction period × Interest rate / 2

④Deductible input tax

According to relevant VAT documents, for those that qualify for VAT deduction, the replacement cost is reduced by the corresponding VAT.

(2) Determination of composite depreciation rate

Shaft engineering in coal mines differs from surface buildings in that it is a special structure attached to coal resources. Its economic lifespan is closely linked to the coal reserves that can be mined. As coal resources are depleted, the economic lifespan shortens, and when coal resources are exhausted, the economic lifespan ends.

Underground engineering has a complex geological structure, many unpredictable factors, and poor construction conditions. The stability of the tunnels depends on their location, rock layer properties, and mining methods. The service life of each type of tunnel is determined by the coal reserves in the service area.

Therefore, before determining the depreciation rate, the appraisers first reviewed geological reports, mine design data, and understood the position, rock properties, support methods, geological structures, and the impact of mining on the tunnels. They then visited representative tunnels underground to inspect the support conditions and maintenance status and consulted with on-site engineering personnel to verify and review the maintenance records and methods. Finally, based on the coal reserves, remaining reserves, recoverable reserves, and production capacity provided by the geological survey department, the remaining service life of each tunnel was calculated, and the composite depreciation rate was determined. The calculation formula is as follows:

Composite depreciation rate = Remaining service life / (Service life + Remaining service life) × 100%

(3) Appraised value

Appraised value = Full replacement value × Composite depreciation rate

According to the appraisal, the original value of the shaft engineering incurred an appraisal impairment of RMB846,371,600.00, representing an impairment rate of 84.61%; The net value impairment was appraised to be RMB505,068,400.00, with an impairment rate of 96.11%. The primary reasons for the appraisal appreciation or depreciation are presented below: the continuous increase in labor, material, and machinery costs in recent years has resulted in an appreciation of the original value. The main reason for the appraisal appreciation in the net value lied in that while the book value depreciation was calculated using the production and reserves method, this appraisal determined the newness rate based on the remaining service life, leading to an appreciation in the appraised net value. The aforementioned appraised value

incorporates the Wudong Coal Mine Mining Right with a negative appraised value, which was separately presented under buildings (structures) and shaft engineering, the appraised value of the Wudong Coal Mine stands at RMB-1,446,225,400.00, with RMB-578,490,200.00 recorded under buildings (structures) and RMB-867,735,200.00 under shaft engineering.

4. **Fixed assets – equipment**

Equipment assets include machinery, vehicles, and electronic devices. Based on the nature of this project and the characteristics of the equipment assets within the appraisal scope, for some older electronic devices (e.g., computers) and vehicles, where there is an active second-hand market, the appraised value is based on the second-hand or scrap value of similar equipment. For other equipment, which does not have independent profit-generating ability and where there are very few similar transaction examples, it is not suitable to apply the income approach or market approach for appraisal. Therefore, the cost method is used for these equipment appraisals. The cost method calculation formula is as follows:

Appraised value= Replacement cost × Depreciation rate

(1) Replacement cost

Based on the characteristics and nature of the equipment within this appraisal scope, as well as the circumstances of the appraised entity, the calculation methods for the replacement costs of various types of equipment in this appraisal are as follows.

①Machinery and equipment

For equipment that requires installation, the replacement cost generally includes: Equipment purchase price, transport and handling fees, installation engineering fees, pre-construction and other costs, and the capital cost. For equipment that does not require installation, the replacement cost generally includes: Equipment purchase price and transport and handling fees. The calculation formula is as follows:

Equipment requiring installation replacement cost = Equipment purchase price + Transport and handling fees + Installation engineering fees + Pre-construction and other costs + Capital costs - Deductible VAT

Equipment not requiring installation replacement cost = Equipment purchase price + Transport and handling costs - Deductible VAT

A. Equipment purchase price

For major process equipment, the purchase price is primarily determined by consulting the market price as at the Valuation benchmark date or referencing the contract price of similar equipment at the valuation benchmark date. For small equipment, the purchase price is determined by checking the market price information for the valuation benchmark date. For equipment with no market price information, the purchase price is determined by referencing the purchase price for similar equipment.

B. Transport and handling fees

If transport and handling fees are not included in the equipment purchase price, they are determined by referring to standard cost indicators from resources like the *Asset Appraisal Common Data and Parameters Handbook* and the *Mechanical Industry Construction Project Budgeting Method and Indices*, taking into account factors such as transportation distance, weight, and volume.

C. Installation engineering fees

For equipment that requires installation, the installation engineering fees are estimated using the unit price method, referring to similar equipment installation project budgets (preliminary or final) and other engineering documents, including the *Coal Mining Construction Project Cost Quotas* (NB/T 51063-2016) and other relevant standards, as well as recent local pricing information. Alternatively, the *Asset Appraisal Common Methods and Parameters Handbook* and the *Mechanical Industry Construction Project Budgeting Method and Indices* are used, combined with the scale and nature of the equipment installation work to determine the installation fee rate. The installation engineering fee calculation formula is as follows:

Installation engineering fee = Equipment purchase price × Installation engineering fee rate

For equipment where the purchase price includes installation engineering costs, or for equipment that does not require installation, installation engineering fees are not included.

For equipment foundations that are inseparable from buildings or separately listed as independent foundations, these are appraised within the corresponding buildings and structures, and installation engineering fees are not recalculated.

D. Pre-construction and other costs

Pre-construction and other costs include project construction management fees, bidding agency fees, environmental impact assessment fees, surveying and design fees, engineering supervision fees, joint trial operation fees, and others. The rates for these expenses are determined by investigating the average cost levels of similar projects and referring to the *Standards for Other Expenses of Coal Mining Construction Project* (NBT 51064-2016) and other related standards, as well as the specific conditions of this project. Specific rates and billing bases are presented below:

Wudong Coal Mine

a. Coal Preparation Plant

No.	Project Name	Billing Basis	Billing Standard	Input VAT Rate Included

E．Capital costs

Capital costs are calculated based on the normal construction period of the project where the equipment is located, using the Loan Prime Rate (LPR) in effect on the valuation benchmark date. The total of the equipment purchase costs, transport and handling fees, installation fees, pre-construction and other costs is used as the base, with the capital costs calculated based on uniform capital investment. The reasonable construction periods and annual loan interest rates for each subsidiary and other units are as shown in the following table.

No.	Entity	Reasonable Construction Period	Rate
1	Wudong Coal Mine	/	/
1.1	Coal Preparation Plant	2	3.13%
1.2	Other Buildings and Structures	4	3.38%
2	Mining and Ancillary Facilities	/	/
2.1	Coal Preparation Plant	2	3.13%
2.2	Other Buildings and Structures	3	3.25%
3	Washing and Selection Center	2	3.13%
4	Other Entities	2	3.13%

The calculation formula of capital costs is as follows:

Capital costs = (Equipment purchase price + Transport and handling costs + Installation engineering fees + Pre-construction and other costs) × Reasonable construction period × Annual loan interest rate / 2

F．Deductible VAT

According to the regulations in "C.SH [2008] No. 170", "C.SH. [2016] No. 36", "C.SH. [2018] No. 32", and the "Announcement No. 39 in 2019 of the Ministry of Finance, the State Taxation Administration and the General Administration of Customs", the input VAT includes VAT on the equipment purchase price (tax rate 13%), VAT on transport and handling fees (tax rate 9%), and VAT on pre-construction and other costs (tax rate 6%).

②Vehicles

For vehicles, the replacement cost is determined by the market price on the valuation benchmark date, adding the vehicle purchase tax and other reasonable costs (such as licence fees). The calculation formula is as follows:

Replacement cost = Vehicle purchase price + Vehicle purchase tax + Licence fees and other costs - Deductible VAT

Where:

Vehicle purchase tax = Vehicle purchase cost / (1 + 13%) × 10%.

The vehicle purchase price is mainly determined by consulting local dealers or checking online for market prices; vehicle purchase tax is determined according to the *Vehicle Purchase Tax Law of the People's Republic of China*; licence fees and other costs are determined based on local administrative fee standards and actual vehicle expenses.

③Electronic equipment

For electronic equipment that requires installation, the appraisal is conducted using the same method as for machinery. For other electronic equipment that does not require installation, the replacement cost is determined based on the market purchase price on the valuation benchmark date.

(2) Determination of composite depreciation rate

① For specialised and general machinery, the depreciation rate is primarily determined based on the equipment's economic service life, used lifespan, and on-site inspections of the equipment's condition and technical status. The remaining service life is then calculated, and the composite depreciation rate is determined using the following formula:

Composite depreciation rate = Remaining service life / (Remaining service life + Used lifespan) × 100%

②For electronic equipment, office furniture, and other devices, the composite depreciation rate was mainly determined based on their economic service life and the results of on-site inspections. The calculation formula is as follows:

Age-based depreciation rate = (Economic service life - used lifespan) / Economic service life × 100%

Composite depreciation rate = Age-based depreciation rate × Adjustment coefficient

③For vehicles, according to the Standard for Mandatory Scrapping of Motor Vehicles (Order No. 12 of 2012 of Ministry of Commerce, National Development and Reform Commission, Ministry of Public Security, Ministry of Environmental Protection), the theoretical depreciation rate was determined using either vehicle mileage or service life, based on the lower of the two methods. For vehicles without a prescribed service life, the remaining service life method was used. Adjustments were made based on on-site inspection results. The calculation formula is as follows:

Composite depreciation rate = Depreciation rate × Adjustment coefficient

(4) Determination of the appraised value

Appraised value= Replacement cost × Composite depreciation rate

The original value of machinery and equipment experienced an appraisal impairment of RMB370,697,700.00, representing an impairment rate of 12.23%; The net value showed an appraisal appreciation of RMB126,645,300.00, with an appreciation rate of 13.83%. The primary reasons for this appraisal appreciation or impairment are given below:

The principal reason for the appraisal impairment in the original value was attributable to the decrease in the acquisition price of the equipment. The main reason for the appraisal appreciation in the net value was attributable to the impairment provisions already recognized for the book value of the equipment, and the depreciable life adopted by the appraised entity being shorter than the economic useful life of the equipment.

5. **Construction in progress**

Based on the characteristics of construction in progress, the appraised value type, and data collection, the cost method was adopted for the appraisal.

(1)Completed projects

For projects where the main structure is already listed as fixed assets, they are incorporated into the main appraisal. Other completed projects are appraised according to the fixed asset appraisal method.

(2)Unfinished projects

For ongoing projects that started within six months of the valuation benchmark date, due to minor price changes, the appraisal is based on the book value of the ongoing construction after verification, and the residual value after deducting unreasonable expenses is used as the appraised value.

For ongoing projects that started more than six months before the valuation benchmark date, if the book value does not include capital costs, the capital costs are added based on the reasonable construction period. If the book value differs significantly from the price level on the valuation benchmark date, the construction costs are adjusted to the Valuation benchmark date price level.

(3)Pure expense type ongoing projects

Pure expense type ongoing projects have no physical entity. After verifying that the payments made are necessary for future projects or have actual value to the future owners, and confirming that there is no duplicate valuation with related asset projects, the book value after verification is used as the appraised value. Otherwise, the value is treated as zero.

The appraisal impairment for construction in progress amounted to RMB6,360,600.00, representing an impairment rate of 2.10%. The primary reasons for

the appraisal impairment of construction in progress were described as follows: certain construction in progress with major components in fixed asset were integrated into the fixed assets appraisal, thereby leading to the impairment. The Xinjiang Heishan Coal Mine New Intelligent Overhead Rail Transport System Project has entered its termination phase, resulting in a zero value in this appraisal and consequently leading to appraisal impairment.

6. **Land use rights**

According to the requirements of the *Asset Appraisal Practice Standards - Real Estate*, the main appraisal methods for land use rights include the market approach, income approach, hypothetical development method, cost method, and benchmark land price method. The appropriate appraisal method is selected based on the appraisal purpose, subject asset, value type, data collection conditions, and the applicability of the above basic appraisal methods.

This appraisal uses the market comparison method, cost method, and benchmark land price method to appraise the value of the land use rights.

Intangible Assets - Land Use Rights had a book value of RMB84,683,500.00, an appraised value of RMB1,740,334,400.00, resulting in an appraisal appreciation of RMB1,655,650,900.00, and an appreciation rate of 1,955.10%. Reasons for appraisal appreciation: The book value of the land use rights represents their amortized value, whereas the appraised value reflects their market value as of the valuation benchmark date. Additionally, among the 37 land parcels under appraisal, 19 were acquired at zero cost through allocation or authorized operation, which significantly contributed to the appraisal appreciation of the land use rights.

7. **Mining rights**

(1)Mining rights

Based on the purpose of this project appraisal and specific characteristics of mining rights, commissioned mining rights have a certain scale, possesses independent profit-making capabilities that can be measured, and its future returns and risks can be quantified in monetary terms. With a relatively high degree of geological research and generally complete and reliable data, reports and relevant information largely meet the requirements for applying the discounted cash flow method for appraisal. In accordance with the *Basic Guidelines for Mining Rights Appraisal Technology and the Standard for Income Approach Appraisal Methods*, the discounted cash flow method has been selected for this project appraisal.

The calculation formula is as follows:

$$P = \sum_{t=1}^{n} (CI - CO)_t \bullet \frac{1}{(1+i)^t}$$

Where: P —Mining rights appraisal value;

CI—Annual cash inflow;

CO—Annual cash outflow;

i—Discount rate;

t—Year index (t = 1, 2, 3, …, n);

n—Calculation period.

Specific Appraisal Indicators and Parameters

A. Wudong Coal Mine

Wudong Coal Mine is currently in normal production. Resource reserves and recoverable reserves utilized in this Appraisal are primarily based on the following documents:

Reserve Verification Report of Wudong Coal Mine in Urumqi Mining Area, Zhunnan Coalfield, Xinjiang (hereinafter referred to as Reserve Verification Report), prepared by the Ninth Geological Team of the Xinjiang Geology and Mineral Bureau in February 2010, along with its Mineral Resource Reserve Review Opinion (No. 7 [2009] of the Ministry of Land and Resources (Mineral Reserve Appraisal)) and Filing Certificate (No. 29 [2009] of the Ministry of Land and Resources (Reserve Filing)); 2024 Reserve Annual Report of Wudong Coal Mine in Urumqi City, Xinjiang (hereinafter referred to as 2024 Reserve Annual Report), prepared by Henan Hongcheng Mining Survey and Design Co., Ltd. in January 2025, along with its Review Opinion (No. 261 [2025] of Urumqi Natural Resources Bureau); Preliminary Design of Wudong Coal Mine of Shenhua Xinjiang Energy Co., Ltd. (hereinafter referred to as Preliminary Design), prepared by China Coal Technology and Engineering Group Beijing Huayu Engineering Co., Ltd. in August 2016, along with its Review Opinion (No. 217 [2016] of Xinjiang Coal Industry Administration); technical parameters are primarily determined based on the Reserve Verification Report, 2024 Reserve Annual Report, Preliminary Design, and actual production and operational data from Wudong Coal Mine. Key economic parameters are determined based on the actual financial data of enterprise. Refer to China Mineral Rights Appraisal Guidelines, other relevant policies and regulations, technical economic standards, and data available to the appraisers for selection of other major technical and economic indicators.

Determination of each parameter is explained as follows:

Reserve Resources as of the Valuation benchmark date: based on the Reserve Verification Report, 2024 Reserve Annual Report, and statistical table of extraction consumption, reserve resources amount to 1.1718507 billion tons, including 490.6193 million tons of measured resources, 412.7885 million tons of indicated resources, and 268.4429 million tons of inferred resources.

Mineral Resource Reserves Utilized for Appraisal: Mineral Resource Reserves Utilized for Appraisal = Σ (Base Reserves Involved in the Appraisal + Resource Quantity × Corresponding Credibility Coefficient) = 1.1181621 billion tons.

Product Scheme: based on the actual situation of mine, product scheme is set as processed coal, selling commercial coal such as lump coal, fine coal, or mixed coal according to different customer requirements.

Recovery Rate in Mining Areas: according to the Preliminary Design, recovery rate is 75% for thin coal seams, 80% for medium-thick coal seams, and 85% for thick coal seams.

Recoverable Reserves Utilized for Appraisal: = (Mineral Resource Reserves Utilized for Appraisal-Design Losses) × Mining Recovery Rate = 614.6163 million tons.

Production Capacity and Service Life: based on the mine's mining succession plan, production capacity during stable period is 4 million tons per year. Appraisal calculation period is 110.65 years, from August 2025 to March 2136.

Product Sales Price and Sales Revenue: for this Appraisal, sales price is set at RMB216.00 per ton for August-December 2025 and for 2026, RMB267.00 per ton for 2027, RMB318.00 per ton for 2028, and RMB368.00 per ton for 2029 and subsequent years. Assuming all processed coal produced is sold within the period, annual sales revenue during normal production years is RMB1.472 billion.

Fixed Asset Investment: for this Appraisal, original value of fixed assets (after consolidation with construction in progress) is RMB2.6950753 billion (including: RMB779.4016 million for shaft and tunneling engineering, RMB1.2011877 billion for buildings and structures, and RMB714.4861 million for machinery and equipment). Net value is RMB1.8159920 billion (including: RMB738.9934 million for shaft and tunneling engineering, RMB740.5483 million for buildings and structures, and RMB336.4504 million for machinery and equipment). Subsequent investment for construction in progress is RMB213.1849 million (all for buildings and structures, excluding tax).

Total Cost and Operating Cost:

Cost of External Materials: based on the mine's financial statements, unit cost of

external materials is set at RMB12.94 per ton.

Cost of External Fuel and Power: based on the mine's financial statements, unit cost of external fuel and power is set at RMB7.56 per ton.

Employee Compensation: based on the financial statements, unit employee compensation is set at RMB78.60 per ton.

Depreciation Expense: based on calculations, annual depreciation expense is RMB101.3519 million, and unit depreciation expense is RMB25.34 per ton.

Maintenance and Upkeep Fee and Shaft & Tunneling Engineering Fund: according to the notice of Measures for Withdrawal and Use of Coal Production Safety Funds and Several Provisions on Regulating the Management of Coal Mine Maintenance and Upkeep Fees (C.J. [2004] No. 119), maintenance and upkeep fee for this project is RMB6.00 per ton, and shaft & tunneling engineering fund is RMB2.5 per ton. This includes a renewal-type maintenance fee of RMB3.00 per ton and a depreciation-type maintenance fee of RMB3.00 per ton.

Safety Expenses: according to the notice of Measures for Withdrawal and Use of Enterprise Work Safety Funds (C.Z. [2022] No. 136), unit safety expense for this Appraisal is set at RMB50.00 per ton.

Repair Expense: based on the enterprise's financial statements, unit repair expense is RMB2.44 per ton.

Transportation Expense: based on the enterprise's financial statements, unit transportation expense is RMB0.74 per ton.

Environmental Management and Land Reclamation Expense: based on the Mine Geological Environmental Protection and Land Reclamation Plan for Wudong Coal Mine of CHN Energy Xinjiang Energy Co., Ltd., and after calculation, unit environmental management and land reclamation expense for this Appraisal is RMB9.19 per ton.

Other Manufacturing Expenses: based on the enterprise's financial statements, unit other manufacturing expenses are set at RMB79.51 per ton.

Management Expenses: based on the enterprise's financial statements, unit management expenses are RMB2.06 per ton.

Research and Development Expenses: based on the enterprise's financial data, unit R&D expense for this Appraisal is set at RMB4.15 per ton.

Financial Expenses: according to Guidance on Determining Parameters for Mining Rights Appraisal, and after calculation, unit financial expense for this Appraisal is RMB1.70 per ton.

Total Cost refers to the sum of all cost items. Operating Cost refers to the total cost after deducting depreciation expense, depreciation-type maintenance fee, shaft & tunneling engineering fund, amortization expense, and financial expenses.

Taking the year 2030 as an example, unit total cost for the Appraised Entity is RMB282.72 per ton, and unit operating cost is RMB248.12 per ton. Annual total cost is RMB1.1308718 billion, and annual operating cost is RMB992.4979 million.

Discount Rate: according to Guidance on Determining Parameters for Mining Rights Appraisal, basic composition of Discount Rate is: Discount Rate = Risk-free Rate + Risk Premium Rate.

Risk-free Rate is determined as 1.70%, referencing the 10-year government bond yield to maturity disclosed by WIND information system as of the valuation benchmark date.

Risk Premium Rate is estimated using "risk addition method". Main risks include: exploration and development stage risk, industry risk, financial operation risk, and other specific risks. As this is an operating mine, exploration and development stage Risk Premium Rate is set at 0.60%, industry Risk Premium Rate at 2.00%, financial operation Risk Premium Rate at 1.50%. Considering the actual situation of the mine, other specific Risk Premium Rate is set at 2.00%. Total Risk Premium Rate for this Appraisal is determined to be 6.10%.

Based on the comprehensive discount rate range and mine's development status, Discount Rate for this project is determined to be 7.80%.

After estimation, cumulative present value of net cash flows for Wudong Coal Mine Mining Rights of Shenhua Xinjiang Energy Co., Ltd. as of July 31, 2025, is RMB-1,446,225,400.00, resulting in the mining rights appraisal value of 0.

B．Tunbao Coal Mine

Calculation of resource reserves and recoverable reserves utilized in this Appraisal is primarily based on the following documents: Xinjiang Changji Liuhuanggou Mining Area Tunbao Coal Mine Newly Proposed Consolidation Area Resource Reserve Verification Report (hereinafter referred to as Reserve Verification Report) prepared in May 2022; Guoneng Xinjiang Energy Co., Ltd. Changji Tunbao Coal Mine 2024 Reserve Annual Report (hereinafter referred to as 2024 Reserve Annual Report); CHN Energy Xinjiang Energy Co., Ltd. Tunbao Coal Mine Preliminary Design Change Description (hereinafter referred to as Preliminary Design Change) from 2024; Technical and economic parameters are mainly based on Preliminary Design Change and financial forecast data of Tunbao Coal Mine for periods following the base date.

Refer to China Mineral Rights Appraisal Guidelines, relevant policies and regulations, technical economic standards, and data available to the appraisers for selection of other relevant technical and economic indicators.

Determination of each parameter is explained as follows:

Reserve Resources as of the Valuation benchmark date: based on the Reserve Verification Report, 2024 Reserve Annual Report, and statistical table of extraction consumption, reserve resources amount to 302.331 million tons, including 198.554 million tons of measured resources, 81.869 million tons of indicated resources, and 21.908 million tons of inferred resources.

Mineral Resource Reserves Utilized for Appraisal: Mineral Resource Reserves Utilized for Appraisal = Σ (Base Reserves Involved in the Appraisal + Resource Quantity × Corresponding Credibility Coefficient) = 294.658 million tons.

Product Scheme: based on the actual situation of mine, raw coal is dry-processed to obtain commercial coal products such as lump coal and fine coal, primarily used as thermal coal according to different customer requirements. Therefore, product scheme for this Appraisal is determined to be lump coal and fine coal or mixed coal after dry processing.

Recovery Rate in Mining Areas: according to *Code for Design of Coal Mine Shafts* (GB 50215-2015) and Preliminary Design Change, based on the analysis of coal seam thickness, seams #5, #10, #14-2, #15-1, and #15-2 are thick coal seams with designed mining area recovery rate of 75%; seams #4, #7, #9, and #14-1 are medium-thick coal seams with designed mining area recovery rate of 80%. Designed recovery rates are adopted for the Appraisal.

Recoverable Reserves Utilized for Appraisal: Recoverable Reserves Utilized for Appraisal = (Mineral Resource Reserves Utilized for Appraisal-Design Losses) × Mining Recovery Rate = 195.8558 million tons.

Production Capacity and Service Life: based on the mine's mining succession plan, production capacity during table period is 2.7 million tons per year. Appraisal calculation period is 54.25 years, from August 2025 to October 2079.

Product Sales Price and Sales Revenue: for this Appraisal, sales price is set at RMB189.00 per ton for August-December 2025 and for 2026, RMB234.00 per ton for 2027, RMB279.00 per ton for 2028, and RMB323.00 per ton for 2029 and subsequent years. Assuming all processed coal produced is sold within the period, annual sales revenue during normal production years is RMB484.5000 million.

Fixed Asset Investment: for this Appraisal, original value of fixed assets (after

consolidation with construction in progress) is RMB991,427,400.00 (including: RMB293,162,500.00 for shaft and tunneling engineering, RMB363,608,700.00 for buildings and structures, and RMB334,656,200.00 for machinery and equipment). Net value is RMB590,059,900.00 (including: RMB200,016,300.00 for shaft and tunneling engineering, RMB227,226,900.00 for buildings and structures, and RMB162,816,700.00 for machinery and equipment). Subsequent investment for construction in progress is RMB613,414,000.00 (including: RMB488,036,900.00 for shaft and tunneling engineering, RMB28,268,300.00 for buildings and structures, and RMB97,108,800.00 for machinery and equipment; amounts include tax).

Total Cost and Operating Cost:

Cost of External Materials: based on the mine's financial statements, unit cost of external materials is set at RMB13.94 per ton.

Cost of External Fuel and Power: based on the mine's financial statements, unit cost of external fuel and power is set at RMB14.05 per ton.

Employee Compensation: based on the financial statements, unit employee compensation is set at RMB65.33 per ton.

Depreciation Expense: based on calculations, annual depreciation expense is RMB45.6325 million, and unit depreciation expense is RMB16.90 per ton.

Maintenance and Upkeep Fee and Shaft & Tunneling Engineering Fund: according to the notice of Measures for Withdrawal and Use of Coal Production Safety Funds and Several Provisions on Regulating the Management of Coal Mine Maintenance and Upkeep Fees (Cai Jian [2004] No. 119), maintenance and upkeep fee for this project is RMB6.00 per ton, and shaft & tunneling engineering fund is RMB2.5 per ton. This includes a renewal-type maintenance fee of RMB3.00 per ton and a depreciation-type maintenance fee of RMB3.00 per ton.

Safety Expenses: according to the notice of Measures for Withdrawal and Use of Enterprise Work Safety Funds (C.Z. [2022] No. 136), unit safety expense for this Appraisal is set at RMB50.00 per ton.

Repair Expense: based on the enterprise's financial statements, unit repair expense is RMB4.85 per ton.

Environmental Management and Land Reclamation Expense: based on the Mine Geological Environmental Protection and Land Reclamation Plan for Wudong Coal Mine of CHN Energy Xinjiang Energy Co., Ltd., and after calculation, unit environmental management and land reclamation expense for this Appraisal is RMB1.15 per ton.

Transportation Expense, Loading/Unloading Fees, Specialized Services, Outsourced Services, and Equipment Rental Fees: based on the enterprise's financial statements, unit transportation expense is RMB23.74 per ton.

Other Manufacturing Expenses: based on the enterprise's financial statements, unit other manufacturing expenses are set at RMB3.76 per ton.

Management Expenses: based on the enterprise's financial statements, unit management expenses are RMB7.38 per ton.

Research and Development Expenses: based on the enterprise's financial data, unit R&D expense for this Appraisal is set at RMB2.59 per ton.

Financial Expenses: according to Guidance on Determining Parameters for Mining Rights Appraisal, and after calculation, unit financial expense for this Appraisal is RMB1.49 per ton.

Total Cost refers to the sum of all cost items. Operating Cost refers to the total cost after deducting depreciation expense, depreciation-type maintenance fee, shaft & tunneling engineering fund, amortization expense, and financial expenses.

Taking the year 2030 as an example, unit total cost for the Appraised Entity is RMB213.69 per ton, and unit operating cost is RMB189.52 per ton. Annual total cost is RMB576.9523 million, and annual operating cost is RMB511.7030 million.

Discount Rate: according to Guidance on Determining Parameters for Mining Rights Appraisal, basic composition of Discount Rate is: Discount Rate = Risk-free Rate + Risk Premium Rate.

Risk-free Rate is determined as 1.70%, referencing the 10-year government bond yield to maturity disclosed by WIND information system as of the valuation benchmark date.

Risk Premium Rate is estimated using "risk addition method". Main risks include: exploration and development stage risk, industry risk, financial operation risk, and other specific risks. As this is an operating mine, exploration and development stage Risk Premium Rate is set at 0.60%, industry Risk Premium Rate at 2.00%, financial operation Risk Premium Rate at 1.50%. Considering the actual situation of the mine, other specific Risk Premium Rate is set at 2.00%. Total Risk Premium Rate for this Appraisal is determined to be 6.10%.

Based on the comprehensive discount rate range and mine's development status, Discount Rate for this project is determined to be 7.80%.

After estimation, cumulative present value of net cash flows for CHN Energy Xinjiang Energy Co., Ltd. Changji Tunbao Coal Mine Mining Rights as of July 31,

2025, is RMB148,687,700.00, resulting in the mining rights appraisal value of RMB148,687,700.00.

(2) For Exploration Rights, due to the inability to obtain information such as geological surveys, preliminary designs, general mine plans, and formal feasibility study reports that meet the requirements for mining rights appraisal, it is not possible to model and calculate the market value of these exploration rights as of the Valuation benchmark date in accordance with mining rights appraisal standard system and theory. Therefore, for this appraisal, relevant costs associated with exploration rights are retained at their audited book value. Book value of the exploration rights is RMB98.2562 million, and appraised value is also RMB98.2562 million.

(3) Mining Rights Usage Fee

Certain individual mining right owners authorize their subsidiaries to extract and operate the mining rights by charging Mining Rights Usage Fee. For this Appraisal, mining rights held by the owner are valued by calculating the usage fee based on the per-ton fee and expected production volume. After deducting income tax expense, the resulting amount is discounted to its present value using the discount rate applied in the mining rights appraisal to determine the appraised value. Operator retains the operating income; therefore, in the Asset-based Approach Appraisal of this subsidiary, summarized mining rights appraisal value is included, and net value of payable Mining Right Usage Fee is added and listed as the appraised value. The appraised value of Mining Rights Usage Fee is RMB901.7375 million.

As of the valuation benchmark date, total mining rights appraisal result is RMB1.1486814 billion, comprising a mining rights value of RMB148.6877 million, an exploration rights value of RMB98.2562 million, and a mining rights usage fee value of RMB901.7375 million. This represents an appraised decrease of RMB504.3339 million. Reason for the decrease is as follows: the operator of CHN Energy Xinjiang Energy Chemical Co., Ltd. Tuokexian Heishan Open-pit Coal Mine is the subsidiary Guoneng Xinjiang Tuokexun Energy Co., Ltd. Appraised mining rights value is reflected in the appraisal schedule of the operator, while only the Mining Rights Usage Fee is listed in the appraisal schedule of the Appraised Entity, leading to a decrease compared to the book value.

8. **Other assets and liabilities**

Asset appraiser verified the book values of various itemized statements and related materials provided by the Appraised Entity. Appraised values were determined based on audited book values or actual liabilities borne/entitlements held by the entity.

Where: book value of current assets was RMB6.6928134 billion, with an appraised value of RMB6.6928134 billion, representing no change in value. Book value of other non-current assets was RMB357.6273 million, with an appraised value of RMB375.1271 million, representing an increase of 4.89%. Book value of current liabilities was RMB10.1445244 billion, with appraised value of RMB10.1445244 billion, showing no change. Book value of non-current liabilities was RMB3.1345043 billion, with an appraised value of RMB3.0171186 billion, representing a decrease of 3.74%.

Based on the calculations, as of the valuation benchmark date:

(A) Appraised Total Equity of Xinjiang Energy's Shareholders= Current Assets (RMB6.6928134 billion) + Non-Current Assets (including Long-term equity investments + building and structure fixed assets + shaft and tunneling engineering + equipment fixed assets + construction in progress + land use rights + mining rights + other non-current assets) (RMB12,281,005,600 + RMB1,685,774,000 + RMB20,439,200 + RMB1,042,669,700 + RMB296.2258 million + RMB1.7403344 billion + RMB1,148,681,400 + RMB375,127,100) - Current Liabilities (RMB10.1445244 billion) - Non-Current Liabilities (RMB3.0171186 billion) = RMB12,121,427,600.

(B) Book Value of Total Equity of Xinjiang Energy's Shareholders= Current Assets (RMB6,692,813,400) + Non-Current Assets (including long-term equity investments + building and structure fixed assets + shaft and tunneling engineering + equipment fixed assets + construction in progress + land use rights + mining rights + other non-current assets) (RMB6.6827586 billion + RMB1.9315509 billion + RMB525.5075 million + RMB916.0244 million + RMB302.5864 million + RMB84.6835 million + RMB1.6530153 billion + RMB357.6273 million) - Current Liabilities (RMB10.1445244 billion) - Non-Current Liabilities (RMB3.1345043 billion) = RMB5,867,538,600.

IV. Income Approach

(I) Key Assumptions

1. It is assumed that all appraisal targets are in the process of being traded, and the appraisers simulate the market based on the transaction conditions of the appraised assets;

2. It is assumed that for assets traded in the market, or assets to be traded in the market, both parties in the transaction have equal standing and ample opportunity and time to access market information. The transactions are voluntary and rational, and the parties can make rational judgments about the asset’s function, purpose, and transaction

price;

3. It is assumed that the appraised assets will continue to be used for their current purposes and in their current manner;

4. It is assumed that there will be no significant changes to the relevant national laws, regulations, and policies or the macroeconomic situation, and that the political, economic, and social environment in the regions of the parties involved in the transaction will not change significantly;

5. Given the actual status of the assets on the valuation benchmark date, it is assumed that the company will continue operations;

6. It is assumed that there will be no significant changes in the interest rates, exchange rates, tax bases, tax rates, policy-based collection fees, or other related factors affecting the appraised entity after the valuation benchmark date;

7. It is assumed that the management of the appraised entity after the valuation benchmark date will remain responsible and stable, with the ability to perform their duties;

8. Unless otherwise stated, it is assumed that the company fully complies with all relevant laws and regulations;

9. It is assumed that after the valuation benchmark date, there will be no force majeure or unforeseen factors that cause significant adverse effects on the appraised entity;

10. It is assumed that after the valuation benchmark date, the accounting policies used by the appraised entity and those used to prepare this asset appraisal report will remain consistent in significant aspects;

11. It is assumed that after the valuation benchmark date, the scope and methods of the appraised entity's operations will remain the same, based on the current management practices and level;

12. It is assumed that after the valuation benchmark date, the appraised entity's cash inflows and cash outflows will be at an average rate;

13. It is assumed that after the valuation benchmark date, the appraised entity's products or services will maintain their current market competitiveness;

14. It is assumed that the mineral resources reserves reviewed within the mining licence will form the basis for the mining rights, and that the mining licence can be smoothly renewed in the future;

15. It was assumed that the production and sales of commercial coal in future years would achieve a balance between production and sales;

16. It was assumed that during the appraisal calculation period, the unit cost for environmental restoration and land reclamation would be equal to the extracted and spent amounts;

17. It is assumed that starting from 2034, Shenhua Xinjiang Energy Company Limited Wudong Coal Mine will begin to pay mining rights transfer income annually in accordance with the provisions of the Notice on Printing and Distributing the Mineral Rights Transfer Income Collection Method (C.Z. [2023] No. 10) issued by the Ministry of Finance, Ministry of Natural Resources, and State Taxation Administration;

It is assumed that starting from 2040, CHN Energy Xinjiang Energy Co., Ltd. Changji Tunbao Coal Mine will begin to pay mining rights transfer income annually in accordance with the provisions of the Notice on Printing and Distributing the Mineral Rights Transfer Income Collection Method (C.Z. [2023] No. 10) issued by the Ministry of Finance, Ministry of Natural Resources, and State Taxation Administration;

18. It is assumed that CHN Energy Xinjiang Energy Chemical Co., Ltd. will continue to charge Guoneng Xinjiang Toksun Energy Co., Ltd. mining rights usage fees at the current level, and CHN Energy Xinjiang Mining Co., Ltd. will charge Guoneng Xinjiang Hongshaquan Energy Co., Ltd. and Guoneng Xinjiang Mining Hongshaquan No. 2 Coal Mine Co., Ltd. mining rights usage fees at the current level.

(II) Appraisal Model

1. Basic model

This Appraisal employs the Discounted Cash Flow (DCF) method under the Income Approach to indirectly determine the total equity value of shareholders by appraising the business enterprise value. Business enterprise value comprises the value of operating assets generated from normal business activities and value of non-operating assets unrelated to normal business activities. Value of operating assets is determined using the Free Cash Flow to the Firm (FCFF) model, which discounts and sums the projected annual free cash flows to the firm over a specified future period using an appropriate discount rate. The calculation model is as follows:

Total Shareholders' Equity Value = Business Enterprise Value - Interest-Bearing Debt Value

RMB12,049,738,200 = RMB15,330,818,100 - RMB3,281,079,900

(1) Business Enterprise Value

Business enterprise value refers to the sum of total shareholders' equity value and interest-bearing debt value. Based on the asset allocation and usage of the Appraised Entity, the calculation formula for business enterprise value is as follows:

Business Enterprise Value = Value of Operating Assets + Value of Redundant Assets + Value of Non-Operating Assets - Value of Non-Operating Liabilities + Value of Long-term Equity Investments

Business enterprise value for Xinjiang Energy is calculated as: RMB3,182,692,600 + RMB1,223,293,400 + RMB5,011,942,000 – RMB6,368,115,500 + RMB12,281,005,600

= RMB15,330,818,100

①Value of Operating Assets

Operating Assets refer to the assets and liabilities related to the production and operation of the Appraised Entity and involved in the projection of post-Valuation benchmark date free cash flows to the firm.

②Value of Redundant Assets

Redundant Assets refer to those assets in excess of the requirements for production and operation as of the valuation benchmark date, not involved in the projection of post-Valuation benchmark date free cash flows to the firm. The redundant assets of the Appraised Entity include monetary funds. Cost approach was used for their appraisal.

③Value of Non-operating Assets and Liabilities

Non-operating Assets and Liabilities refer to those assets and liabilities unrelated to the production and operation of the Appraised Entity and not involved in the projection of post- Valuation benchmark date free cash flows to the firm. For the Appraised Entity, these include accounts receivable, other receivables, inventory and fixed assets in abnormal status, accounts payable, other payables, etc. Cost approach was used for their appraisal.

④Value of Long-term Equity Investments

Long-term Equity Investments refer to external equity investments held by the enterprise as of the valuation benchmark date. Their value is determined by multiplying the total equity value of the invested entity, confirmed through an appropriate appraisal method, by the ownership percentage.

(2) Interest-bearing Debt Value

Interest-bearing Debt refers to liabilities requiring interest payments by the Appraised Entity as of the valuation benchmark date. This includes short-term loans, long-term loans due within one year, and long-term loans. Verified book value is RMB3.2810799 billion.

2. Income indicators

For this Appraisal, value of operating assets is calculated using the following formula:

$$P = \sum_{i=1}^{n} \frac{F_i}{(1+r)^i} + \frac{F_n}{r \times (1+r)^n}$$

Where: P: Value of operating assets of the enterprise as of the valuation benchmark date;

Fi: Expected free cash flow to the firm in the i-th year after the valuation benchmark date;

Fn: Expected free cash flow to the firm in the final year of the detailed forecast period;

r: Discount rate (Weighted Average Cost of Capital, WACC) of 8.09%;

n: Detailed forecast period;

i: The i-th year within the detailed forecast period.

Among these, free cash flow to the firm is calculated as follows:

Free Cash Flow to the Firm = Earnings before Interest after Taxes + Depreciation & Amortization - Capital Expenditures - Increase in Working Capital

3. Discount rate

Discount rate used is the Weighted Average Cost of Capital (WACC), calculated as follows:

$$WACC = K_e \times \frac{E}{E + D} + K_d \times (1 - t) \times \frac{D}{E + D}$$

Where: ke: Cost of equity capital, calculated as 11.87%;

kd: Cost of interest-bearing debt capital, calculated as 2.05%;

E: Market value of equity;

D: Market value of interest-bearing debt;

t: Income tax rate of 25%.

Where, the cost of equity capital is calculated using the Capital Asset Pricing Model (CAPM). The formula is as follows:

$$K_e = r_f + MRP \times \beta_L + r_c$$

Where: rf: As the possibility of not being redeemable upon maturity is minimal and can be omitted, yield of state bond is usually considered as risk-free. According to information disclosed by the WIND Information System, the yield of to maturity of 10-year government bonds as at the Valuation benchmark date is 1.7044%, this valuation report adopted 1.7044% as the risk-free yield;

MRP: Market risk premium is the difference between the market rate of return on investment and the risk-free rate of return. In particular, the market rate of return on investment is determined by comprehensively analysing the weighted average of the annualised weekly returns from 1992 to the Valuation benchmark date selected on the basis of the stock trading price indices of the Shanghai Stock Exchange and Shenzhen Stock Exchange. As calculated, the market rate of return on investment is 8.36%. The yield to maturity on 10-year treasury bonds of 1.70% on the Valuation benchmark date has been taken as the risk-free rate of return. The market risk premium is 6.66%;

βL: Levered beta coefficient, measuring systematic risk of equity, determined as 1.0766;

rc: Company-specific risk adjustment factor of 3.00%.

A3. Main Evaluation Materials of Chemical Company

I. SELECTION OF THE APPRAISAL APPROACHES

According to the "Appraisal Report," China United Assets Appraisal Group Co., Ltd (hereinafter "China United Assets") has considered the applicability of three asset appraisal approaches: the asset-based approach, the income approach, and the market approach.

China United Assets determined that, around the Appraisal Reference Date, as a large-scale coal chemical enterprise, Chemical Co. could not obtain recent transaction cases of similarly sized coal chemical enterprises, and there were few comparable listed companies of similar scale and business structure in the market. Therefore, the market approach was not selected for the appraisal. Considering that the asset-based approach reflects the enterprise's value from the perspective of its construction and acquisition, provides a basis for the enterprise's operation, management, and performance appraisal after the completion of the economic act, and that Chemical Co. can provide relatively complete data required for the appraisal of assets and liabilities; at the same time, considering that Chemical Co. possesses the foundation and conditions for continuing operations, with predictable and quantifiable future earnings and risks, China United Assets determined that Chemical Co. meets the conditions for applying both the asset-based approach and the income approach. Therefore, both the asset-based approach and the income approach were used for the appraisal.

The value of all shareholders' equity of Chemical Co., as calculated by China United Assets using the asset-based approach, is RMB2,495,053.41 ten thousand, and the value calculated using the income approach is RMB2,207,287.02 ten thousand.

Considering that (i) the income approach is significantly influenced by the enterprise's future profitability, asset quality, operational capability, and operational risks. Chemical Co.'s historical operating conditions have been relatively unstable, with instances of production line shutdowns, idle assets, or assets pending scrappage. Furthermore, the chemical industry is susceptible to environmental impacts, and the prices of its products and raw materials fluctuate significantly, leading to a lower accuracy of profit forecasts; (ii) the asset-based approach reflects the fair market value of the assets from the perspective of asset replacement. In the context of this appraisal, Chemical Co. is a heavy-asset enterprise. Chemical Co. has provided detailed information on its assets and liabilities, and the valuers have also collected the necessary data from external sources to satisfy the requirements of the asset-based approach, allowing for a comprehensive inspection and appraisal of Chemical Co.'s assets and liabilities. Compared to the income approach applied to the enterprise as a whole, the asset-based approach more objectively reflects the appraised value of the enterprise's net assets. Therefore, China United Assets ultimately selected the result from the asset-based approach as the final appraisal conclusion.

II. MAJOR APPRAISAL ASSUMPTIONS

(1) General Assumptions

1. It is assumed that all assets to be appraised are already in the process of a transaction, and the appraiser simulates the market to appraise said assets based on the transaction conditions ;
2. It is assumed that the target company can freely trade in an open market, and for assets traded or intended to be traded on the market, both transacting parties have equal status and sufficient access to market information and time, enabling them to make rational judgments regarding the asset's function, purpose, and transaction price;
3. It is assumed that the target company, as an operating entity, will continue its operations in accordance with its business objectives under the prevailing external environment. It is assumed that the company's management is responsible and competent in fulfilling their duties; the company operates in compliance with laws and regulations and is capable of generating proper profits to

maintain its going concern status. It is assumed that all categories of the company's operating assets can continue to be utilized in their current purpose, manner, scale, frequency, and environment, or can be used with appropriate modifications;

4. It is assumed that the external economic environment as of the Appraisal Reference Date remains unchanged, with no major changes occurring in current national laws, regulations, policies, the macroeconomic climate, or the political, economic, and social situation of the regions where the parties involved in the transaction are located;

5. It is assumed that no significant changes will occur in the socio-economic environment in which the target company operates, nor in relevant interest rates, exchange rates, tax bases and rates, or policy-related levies;

6. It is assumed that the target company's future management team will fulfill their duties diligently and will continue to maintain the existing management and operational model;

7. It is assumed that the appraisal is based solely on the operational capacity existing as of the Reference Date. Potential expansions of operational capacity resulting from future changes in management, business strategies, additional investments, etc., are not considered, nor are subsequent potential changes in production and operations;

8. It is assumed that all assets subject to this appraisal are valued based on their actual quantities existing as of the Appraisal Reference Date, and the current market prices of the relevant assets are determined according to the effective domestic prices as of the Appraisal Reference Date;

9. It is assumed that the foundational and financial information provided by the target company is true, accurate, and complete. The scope of the appraisal is strictly limited to the appraisal declaration forms submitted by the target company, and no potential contingent assets or contingent liabilities not included in the list provided by the target company have been considered;

10. It is assumed that during the future forecast period, the types and proportions of period expenses for the subject entity will not undergo significant changes from the current basis and will continue to follow the trends observed in recent years, fluctuating in line with changes in the scale of operations;

11. Given that the company's monetary funds or bank deposits, are subject to frequent or significant fluctuations during operations, the assessment of financial expenses in this report does not include interest income generated from such deposits, nor does it consider uncertain gains or losses such as those from foreign exchange fluctuations;

12. It is assumed that no other force majeure factors or unforeseeable events will have a material adverse impact on the company;

13. It is assumed that the cash inflows and outflows of the target company after the Appraisal Reference Date occur evenly over time.

(II) Special Assumptions

None.

III. ASSET-BASED APPROACH

(I) Long-Term Equity Investments

For long-term equity investments, verification procedures were first conducted to examine the cause of their formation, book value, actual status, and other relevant factors. Investment agreements, shareholder resolutions, articles of association, and relevant accounting records were reviewed to confirm the authenticity and completeness of the long-term investments.

For wholly-owned subsidiaries and those subsidiaries with over 50% ownership, a comprehensive asset appraisal of the investee entities was performed as of the Appraisal Reference Date. The appraised value was then determined by multiplying the appraised net asset value of the investee entity by the shareholding percentage of the investee entity as of the Appraisal Reference Date:

Appraised value of long-term equity investments = Appraised net asset value of the investee entity after a full appraisal × Shareholding percentage

Where differences existed between the paid-in capital and the subscribed capital, the calculation was as follows:

Appraised value of long-term equity investments = (Total appraised shareholders' equity of the investee entity + Unpaid subscribed capital) × The shareholder's subscribed capital ratio - The shareholder's unpaid subscribed capital

In determining the appraised value of the long-term equity investments, the valuers did not consider any premium or discount arising from factors such as control premiums or minority discounts, nor did they consider the impact of equity marketability on the appraisal results.

No.	Name of Investee Entity	Shareholding Percentage	Appraisal Approach	Method for determining the conclusion value
1	Shaanxi Xianyang Chemical Industry Co., Ltd.	65.00%	Asset-based Approach	Asset-based Approach
2	Shenhua Coal to Liquid Research Center Co., Ltd.	80.00%	Asset-based Approach	Asset-based Approach
3	Guoneng Yulin Chemical Co., Ltd.	100.00%	Asset-based Approach, Income Approach	Asset-based Approach
4	Guoneng Xinjiang Chemical Co., Ltd.	100.00%	Asset-based Approach, Income Approach	Asset-based Approach
5	Shenhua Engineering Technology Co., Ltd.	100.00%	Asset-based Approach, Income Approach	Asset-based Approach
6	Guoneng Jishi Chemical Technology (Shanghai) Co., Ltd.	100.00%	Asset-based Approach	Asset-based Approach
7	Shaanxi Yushen Energy Thermal Power Co., Ltd.	65.00%	Asset-based Approach	Asset-based Approach
8	Guoneng Baoqing Biotechnology Co., Ltd.	51.00%	Asset-based Approach	Asset-based Approach
9	Guoneng Baoqing Coal, Power & Chemical Co., Ltd.	35.00%	Asset-based Approach, Income Approach	Asset-based Approach
10	Shaanxi Energy Liangshuijing Mining Co., Ltd.	30.00%	Income Approach	Income Approach
11	Shanghai Pujing Chemical Technology Co., Ltd.	33.36%	Financial Statement Confirmation	Financial Statement Confirmation
12	Shaanxi Shenmu Chemical Industry Co., Ltd.	62.32%	Asset-based Approach, Income Approach	Asset-based Approach

Upon completion of the appraisal, the results for the long-term equity investment entities are as follows:

No.	Name of Investee Entity	Book Value (ten thousand RMB)	Appraised Value (RMB in ten thousand)	Appreciation Rate (%)
1	Shaanxi Xianyang Chemical Industry Co., Ltd.	0.00	17,434.87	100
2	Shenhua Coal to Liquid Research Center Co., Ltd.	4,000.00	5,517.19	37.93
3	Guoneng Yulin Chemical Co., Ltd.	659,070.35	702,328.47	6.56
4	Guoneng Xinjiang Chemical Co., Ltd.	377,543.83	775,611.84	105.44
5	Shenhua Engineering Technology Co., Ltd.	26,092.30	26,111.30	0.07
6	Guoneng Jishi Chemical Technology (Shanghai) Co., Ltd.	16,596.97	19,172.39	15.52
7	Shaanxi Yushen Energy Thermal Power Co., Ltd.	16,945.14	17,039.44	0.56
8	Guoneng Baoqing Biotechnology Co., Ltd.	6,120.00	6,119.21	-0.01
9	Guoneng Baoqing Coal, Power & Chemical Co., Ltd.	88,580.05	155,939.59	76.04
10	Shaanxi Energy Liangshuijing Mining Co., Ltd.	139,020.09	392,386.98	182.25
11	Shanghai Pujing Chemical Technology Co., Ltd.	18,613.25	10,719.58	-42.41
12	Shaanxi Shenmu Chemical Industry Co., Ltd.	0.00	0.00	0.00
	Total	1,352,581.99	2,128,380.86	57.36

As calculated, as of the Appraisal Reference Date, the long-term equity investments included in the scope of this appraisal have an original book value of RMB2,267,883.78 ten thousand, an impairment provision of RMB915,301.79 ten thousand, and a book value of RMB1,352,581.99 ten thousand. The appraised value is RMB2,128,380.86 ten thousand, representing an assessed appreciation of RMB775,798.87 ten thousand, or an appreciation rate of 57.36%. The primary reason for this increase is the assessed appreciation identified during the comprehensive asset appraisal of the controlling subsidiaries as of the Appraisal Reference Date, leading to a higher appraised value compared to the book value. The main reasons for the assessed appreciation are as follows:

1. The assessed appreciation of Shaanxi Xianyang Chemical Industry Co., Ltd. is RMB17,434.87 ten thousand, representing an appreciation rate of 100%. The primary reason for the appreciation is that the company has ceased production, and its production facilities have been dismantled. The Coal to Liquid Chemical Company has fully provided for the impairment of this long-term equity investment. During this appraisal, the continuing utility value of its land use rights, ground-level office buildings, and substation facilities has been taken into account, and thus their value has been reflected;

2. The assessed appreciation of Shenhua Coal to Liquid Research Center Co., Ltd. is RMB1,517.19 ten thousand, representing an appreciation rate of 37.93%. The primary reason for the appreciation is that the depreciation period applied by the company for fixed assets under accounting standards is shorter than the economic life period adopted during this appraisal.

3. The assessed appreciation of Guoneng Yulin Chemical Co., Ltd. is RMB43,258.12 ten thousand. The main reason for the appreciation is that, in previous years, due to persistently low international oil prices, the company's main olefin products in the coal chemical industry lacked competitiveness, and the utilization rate of chemical equipment was insufficient, leading to impairment provisions for long-term assets. After years of research, development and upgrades by the company, the equipment utilization rate at the time of this appraisal has significantly improved, and the original reasons for impairment have shown evident changes. As a result, this appraisal reflects the value of the long-term assets.

4. The assessed appreciation of Guoneng Xinjiang Chemical Co., Ltd. is RMB 398,068.01 ten thousand. The primary reason for the appreciation is that, in previous years, due to persistently low international oil prices, the company's main olefin products in the coal chemical industry lacked competitiveness, and the utilization rate of chemical equipment was insufficient, leading to impairment provisions for long-term assets. After years of research, development and upgrades by the company, the equipment utilization rate at the time of

this appraisal has significantly improved, and the original reasons for impairment have shown evident changes. As a result, this appraisal reflects the value of the long-term assets.

5. The assessed appreciation of Shenhua Engineering Technology Co., Ltd. is RMB 19.00 ten thousand, representing an appreciation rate of 0.07%. The appraised value is basically equivalent to its book value.

6. The assessed appreciation of Guoneng Jishi Chemical Technology (Shanghai) Co., Ltd. is RMB 2,575.42 ten thousand, representing an appreciation rate of 15.52%. The primary reason for the appreciation is that the depreciation period applied by the company for fixed assets under accounting standards is shorter than the economic life period adopted during this appraisal.

7. The assessed appreciation of Shaanxi Yushen Energy Thermal Power Co., Ltd. is RMB 94.30, representing an appreciation rate of 0.56%. The appraised value is basically equivalent to its book value.

8. The assessed impairment of Guoneng Baoqing Biotechnology Co., Ltd. is RMB 0.79, representing an impairment rate of 0.01%. The appraised value is basically equivalent to its book value.

9. The assessed appreciation of Guoneng Baoqing Coal, Power & Chemical Co., Ltd. is RMB67,359.54 ten thousand, representing an impairment rate of 76.04%. The main reason for the appreciation is the assessed appreciation in the mining rights of Chaoyang Open-Pit Coal Mine held by the company.

10. The assessed appreciation of Shaanxi Energy Liangshuijing Mining Co., Ltd. is RMB253,366.89 ten thousand. The primary reason for the appreciation is the favorable performance and stable dividends of the Liangshuijing Coal Mine, leading to the assessed appreciation of this coal mining company.

11. The assessed impairment of Shanghai Pujing Chemical Technology Co., Ltd. is RMB 7,893.67 ten thousand, representing an impairment rate of 42.41%. As the Coal to Liquid Chemical Company holds only a 33.36% equity interest in Pujing Chemical, which does not meet the criteria for conducting a full asset appraisal, the appraisal was determined by multiplying the company's consolidated net assets as of the Appraisal Reference Date by the shareholding percentage. The book value represents the historical investment cost of the Coal to Liquid Chemical Company, resulting in the discrepancy.

12. Shaanxi Shenmu Chemical Industry Co., Ltd. showed no increase or decrease in value. The reason is that the company's net assets in its financial statements were RMB -20,439.35 ten thousand, while the appraised value was RMB -5,198.17 ten thousand. Pursuant to the Company Law, which stipulates that that a parent company bears limited liability within the scope of its capital contribution, the long-term equity investment value of the Coal to Liquid Chemical Company in the entity is valued at 0.

(II) Fixed Assets - Buildings and Structures

Based on the structural characteristics, usage nature, and other factors of the buildings and structures included in the scope of the appraisal, the valuers analyzed the applicability of different appraisal methods and ultimately determined the reasonable appraisal method for each type of asset, as follows:

① For buildings and structures self-constructed by the enterprise, the cost approach is used for appraisal;

② For commercially purchased properties or real estate with the potential for separate transfer, the market approach is used for appraisal.

1. Cost Approach

The cost approach is a method of determining the value of a building by calculating the investment required to replace a similar property under market conditions as of the Appraisal Reference Date and based on the structural characteristics of the subject building, then multiplying this by the building's remaining useful life rate determined after a comprehensive evaluation. The calculation formula is as follows:

Appraised Value = Full Replacement Cost × Remaining Useful Life Rate

①Determination of Full Replacement Cost

As the appraised entity is a general VAT taxpayer, the full replacement cost for buildings and structures in this appraisal is exclusive of tax.

The full replacement cost generally consists of three parts: construction and installation engineering cost, pre-construction and other fees, and capital cost. The calculation formula is as follows:

Full Replacement Cost (excluding tax) = Construction and Installation Engineering Cost (excluding tax) + Pre-construction and Other Fees (excluding tax) + Capital Cost

A. Determination of Construction and Installation Engineering Cost

For key projects with budget or final account data, the budget/final account adjustment method is used. The appraiser calculates the construction and installation engineering cost based on the project quantities from the budget/final account, referencing the current "Inner Mongolia Housing Construction and Decoration Engineering Budget Quota" (2017), "Inner Mongolia General Installation Engineering Budget Quota" (2017), and "Inner Mongolia Municipal Engineering Budget Quota" (2017), and using market price information for construction materials in the appraised entity's region as of the Reference Date;

For key projects without budget, estimate, or final account data, the appraiser uses the budget quota of similar projects, recompiles simulated project quantities, and calculates the construction and installation engineering cost of the subject project based on relevant quotas and price documents applicable as of the Appraisal Reference Date;

For general construction projects of smaller value, the appraiser refers to the budget quotas, construction quotas, or estimate indices of similar construction and installation projects, and adjusts for differences in factors such as floor height, column spacing, span, finishing standards, and water and electricity facilities to derive the construction and installation engineering cost of the subject project.

B. Determination of Pre-construction and Other Fees

Pre-construction and other fees are determined based on the fee rate standards specified in national standards, industry regulations, and local construction management department policies, as well as administrative fee policy documents. The specific details are as follows:

No.	Fees	Rate (incl. tax)	Rate (excl. tax)	Calculation Base	Basis for Calculation
1	Project Legal Entity Management Fee	1.52%	1.49%	Engineering Cost	2025 Petrochemical Engineering Construction Quota
2	Supervision Fee	0.19%	0.18%	Engineering Cost	2025 Petrochemical Engineering Construction Quota
3	Engineering Supervision Fee	0.68%	0.64%	Engineering Cost	2025 Petrochemical Engineering Construction Quota
4	Engineering Cost Consulting Fee	0.27%	0.25%	Engineering Cost	2025 Petrochemical Engineering Construction Quota
5	Technical Service Fee	0.07%	0.07%	Engineering Cost	2025 Petrochemical Engineering Construction Quota
6	Temporary Facilities Fee	0.58%	0.53%	Engineering Cost	2025 Petrochemical Engineering Construction Quota
7	Pre-construction Work Fee	0.05%	0.05%	Engineering Cost	2025 Petrochemical Engineering Construction Quota
8	Special Demonstration, Evaluation, and Acceptance Fee	0.14%	0.13%	Engineering Cost	2025 Petrochemical Engineering Construction Quota

9	Survey and Design Fee	1.68%	1.58%	Engineering Cost	2025 Petrochemical Engineering Construction Quota
10	Digital Delivery Fee	0.21%	0.20%	Engineering Cost	2025 Petrochemical Engineering Construction Quota
11	Special Measures Fee for Over-dimensional Equipment Transportation	0.150%	0.14%	Engineering Cost	2025 Petrochemical Engineering Construction Quota
12	Engineering Insurance Fee	0.30%	0.28%	Engineering Cost	2025 Petrochemical Engineering Construction Quota
13	Equipment, Materials, and Facilities Inspection and Testing Fee	0.13%	0.12%	Engineering Cost	2025 Petrochemical Engineering Construction Quota
14	Equipment and Materials Supervision and Inspection Fee	0.04%	0.04%	Engineering Cost	2025 Petrochemical Engineering Construction Quota
15	Solid Waste and Hazardous Waste Disposal Fee	0.06%	0.06%	Engineering Cost	2025 Petrochemical Engineering Construction Quota
16	Commissioning and Startup Fee	1.08%	0.99%	Engineering Cost	2025 Petrochemical Engineering Construction Quota
17	Other Special Costs	0.50%	0.46%	Engineering Cost	2025 Petrochemical Engineering Construction Quota
	Total	7.65%	7.21%		

C. Determination of Capital Cost

The capital cost is calculated based on the appraised entity's reasonable construction period and the loan rate determined by reference to the Loan Prime Rate (LPR) published by the National Interbank Funding Center, authorized by the People's Bank of China, on July 21, 2025. The calculation base is the sum of the construction and installation engineering cost and the pre-construction and other fees, assuming an even input of funds. The calculation formula is as follows:

Capital Cost = [Construction and Installation Engineering Cost (incl. tax) + Pre-construction and Other Fees (incl. tax)] × Reasonable Construction Period × Loan Rate × 1/2

② Determination of Remaining Useful Life Rate

For this appraisal, reference was made to the economic life of buildings with different structures. Through on-site inspection of each type of building, the valuers examined the foundation, load-bearing components (beams, slabs, columns), walls, floors, roofs, doors, windows, plastering, ceilings, and utilities (plumbing, ventilation, electrical). Based on the "Standard for Assessing the Condition of Buildings" and "Reference for Appraising the Age of Buildings" issued by the former Ministry of Urban and Rural Construction and Environmental Protection, combined with the building's usage status and maintenance condition, the remaining service life for each type of building was determined. The remaining useful life rate was then calculated using the following formula:

Remaining Useful Life Rate = Remaining Usable Life / (Years Already Used + Remaining Usable Life) × 100%

③ Determination of Appraised Value

Appraised Value = Full Replacement Cost (excluding tax) × Remaining Useful Life Rate

2. Market Approach

The market approach involves comparing the subject property with similar real estate that has been transacted recently around the Appraisal Reference Date. Appropriate adjustments are made to the known prices of these comparable properties to estimate the objective and reasonable price or appraisal of the subject property. The calculation formula is as follows:

P=P case*A*B*C*D*E

Where: P: Appraised value of the subject property; P case: Transaction price of the comparable instance;

A: Transaction circumstance adjustment factor; B: Transaction date adjustment factor;

C: Regional factor adjustment factor; D: Individual factor adjustment factor;

E： Equity status factor adjustment coefficient

As calculated, as of the Appraisal Reference Date, the buildings and structures included in the scope of this appraisal have a book value of RMB53,535.68 ten thousand and an appraised value of RMB133,128.73 ten thousand, representing an assessed appreciation of RMB79,593.05 ten thousand, or an appreciation rate of 148.67%. The main reasons for this are (i) the commercially purchased properties or properties acquired through debt settlement were mainly acquired in 2007, and by the Appraisal Reference Date, land and housing prices had risen significantly with the economic development of the local area, and (ii) the self-constructed buildings and structures were mainly built between 2006 and 2025, and by the Appraisal Reference Date, the costs of labor, materials, and machinery had increased substantially, leading to an increase in the appraised original value. The significant increase in the appraised net value is mainly because the economic life of the buildings and structures is longer than the accounting depreciation period, resulting in a higher appraised value compared to the book value.

(III) Construction in Progress

Based on the characteristics of construction in progress, the type of value being appraised, the availability of data, and other relevant conditions, the cost approach is used for the appraisal.

(1) Completed Projects

For projects that were completed as of the Appraisal Reference Date and for which the project costs have been settled or the payable amount has been confirmed, the appraisal is conducted using the same method as for fixed assets. If the project is an ancillary part of another main project, it is considered during the appraisal of that main project and is not appraised separately under this category.

(2) Uncompleted Projects

For projects that started within six months of the Appraisal Reference Date, the verified book value is taken as the appraised value. For projects that started more than six months before the Appraisal Reference Date, if the book value does not include capital costs, capital costs are added based on a reasonable construction period. If the book value already includes capital costs, the existing capital costs are valued at zero, and a new capital cost is calculated.

As calculated, as of the Appraisal Reference Date, the construction in progress included in the scope of this appraisal has a book value of RMB107,605.97 ten thousand and an appraised value of RMB109,077.00 ten thousand, representing an assessed appreciation of RMB1,471.03 ten thousand, or an appreciation rate of 1.37%. The primary reason for this is that for projects under construction for more than six months, capital costs were included, leading to a higher appraised value compared to the book value.

(IV) Fixed Assets - Equipment

Based on the purpose of this appraisal and adhering to the principle of continuous use, the appraisal was conducted using market prices as the benchmark, considering the characteristics of the equipment to be appraised and the information collected. Different methods were applied to different types of equipment assets: the replacement cost method was primarily used for normally operating equipment, while the market approach was used for used equipment whose prices could be queried in the second-hand market. The calculation formula for the Replacement Cost Method is as follows:

Appraised Value = Full Replacement Cost × Remaining Useful Life Rate

Where: Full Replacement Cost = Equipment Purchase Price + Transportation & Miscellaneous Costs + Installation & Debugging Costs + Pre-operational & Other Costs (including tax) + Capital Cost - Deductible VAT

Remaining Useful Life Rate = Remaining Usable Years / (Years Already Used + Remaining Usable Years)× 100%

Based on the calculations, as of the Appraisal Reference Date, the book value of the equipment assets within the appraisal scope was RMB136,192.04 ten thousand, and the appraised value was RMB260,652.82 ten thousand. This represents an assessed appreciation of RMB124,460.78 ten thousand and an appreciation rate of 91.39%. The main reasons are as follows: (i) The replacement cycle for related production equipment has shortened due to overall advancements in national industrial technology. The continuous introduction of new equipment has led to the obsolescence of older equipment, causing a decrease in the appraised original value of the machinery. (ii) Due to insufficient domestic market demand and hindered export orientation in recent years, the industrial products market has generally experienced oversupply, leading to a continuous decline in industrial product prices. This has resulted in a decrease in the replacement cost of machinery and equipment, causing a decrease in the appraised original value of the equipment. (iii) The increase in labor costs has led to a rise in the installation costs within the full replacement cost of the equipment, creating a factor for an increase in the appraised original value of the equipment. (iv) A significant impairment provision had been made for the machinery and equipment, leading to a substantial increase in the appraised net value. (v) The decrease in the appraised original value of the equipment impacts the appraised net value, causing a decrease in the appraised net value. The combination of the above factors has resulted in an assessed appreciation of the appraised value relative to the book value.

(V) Intangible Assets - Land

(1) Selection of Appraisal Method

In accordance with the requirements of the "Asset Appraisal Practice Standards - Real Estate" and the "Regulations for Urban Land Valuation," and considering the location, land use nature, utilization conditions of the subject land, as well as the local land market conditions, the valuers analyzed the applicability of different appraisal methods and ultimately determined the reasonable appraisal methods.

1) Suitable Methods and Rationale

A. Market Comparison Approach: The subject property is located in Ordos City, where real estate transactions have been relatively active in recent years. Transaction prices are public and transparent, making it possible to obtain numerous transaction cases of land similar to the subject property in terms of conditions and use. The transaction dates, circumstances, and regional and individual factors of the comparable instances are clear, allowing for the reasonable determination of adjustment factors and the objective calculation of a comparable price. Therefore, the Market Comparison Approach is suitable for this appraisal.

B. Cost Approach: The subject land is for industrial use. In recent years, there have been many similar land acquisition cases in the area where the subject land is located, and there is a reliable basis for the various costs and expenses incurred in acquiring and developing the land. Therefore, it is appropriate to use the Cost Approach for this appraisal.

2) Unsuitable Methods and Rationale

A. Base Land Price Coefficient Adjustment Method: The base land price for the area where the subject property is located has not been publicly announced. The valuers were also unable to obtain the corresponding adjustment system for the local base land price through visits and research at the local land and resources department. The conditions for using the Base Land Price Coefficient Adjustment Method are not met; therefore, it is not suitable for this appraisal.

B. Income Capitalization Method: There are no comparable land rental cases in the area of the subject land that can be used to estimate potential rent. At the same time, the buildings on the subject land are currently for the enterprise's own use. Although this type of building has a certain degree of versatility, similar land uses in the subject land's area are predominantly for self-use, with very few rental cases. It is also difficult to accurately calculate the pure land income by separating it from the property rent. Therefore, the Income Capitalization Method is not suitable for this appraisal.

C. Hypothetical Development Method: The subject land is for industrial use. In the same supply-demand circle, similar recent real estate for industrial use is primarily self-built and self-used by enterprises after land purchase. There are few cases of mining plant rentals or sales, and a stable and public market for plant rental and sales

transactions has not been formed. Therefore, the Residual Method (Hypothetical Development Method) is not suitable for this appraisal.

In summary, based on the characteristics and actual situation of the subject land, the Market Comparison Approach and the Cost Approach were used for this appraisal.

For land for which property certificates cannot be obtained and whose book value represents compensation for the use of land belonging to others, the book value is listed as the appraised value.

(2) Description of Appraisal Methods

The Market Comparison Approach is a method of estimating the objective and reasonable price of a subject property by comparing it with similar, substitutable land use rights that have been transacted in the market recently around the Appraisal Reference Date, and making appropriate adjustments to the transaction prices of these similar land use rights.

The Cost Approach is an appraisal method that determines the price of granted land primarily based on the sum of all objective expenses incurred in developing the land, plus objective profit, interest, and taxes payable.

As calculated, as of the Appraisal Reference Date, the book value of the intangible assets - land use rights included in the scope of this appraisal is RMB36,493.00 ten thousand, and the appraised value is RMB163,319.92 ten thousand, representing an assessed appreciation of RMB126,826.92, or an appreciation rate of 347.54%. The primary reason for this is that the book value represents the historical cost at which the enterprise acquired the land use rights in previous years. With the continuous social and economic development of the region in recent years, improvements in the investment environment and infrastructure have driven up the value of land use rights in the area, leading to an assessed appreciation of the appraised value relative to the book value.**(VI) Other Assets and Liabilities**

The asset appraisal professionals verified the book values against the detailed item lists and relevant financial information provided by the subject entity. The appraised values were determined based on the verified book values, or the actual liabilities/equity interest of the subject entity.

Among them, as of the Appraisal Reference Date, the appraised value of current assets is RMB669, 365.06 ten thousand, with a book value of RMB665,974.18 ten thousand, representing an appreciation rate of 0.51%; the appraised value of intangible assets is RMB176,579.76 ten thousand, with a book value of RMB41,590.06 ten thousand, representing an appreciation rate of 324.57%; the appraised value and book value of other non-current assets are both RMB66,954.66 ten thousand; the appraised value and book value of current liabilities are both RMB864,773.73 ten thousand; and the appraised value and book value of non-current liabilities are both RMB184,311.75 ten thousand.

Based on the calculations, as of the Appraisal Reference Date:

(A) Appraised Value of All Shareholders' Equity of Chemical Co. = Current Assets + Non-current Assets (including Long-term Equity Investments + Fixed Assets - Buildings and Structures + Fixed Assets - Equipment + Construction in Progress + Intangible Assets + Other Non-current Assets = RMB669,365.06 ten thousand + RMB2,128,380.86 ten thousand + RMB133,128.73 ten thousand + RMB260,652.82 ten thousand + RMB109,077.00 ten thousand + RMB176,579.76 ten thousand + RMB66,954.66 ten thousand) - Current Liabilities (RMB864,773.73 ten thousand) - Non-current Liabilities (RMB184,311.75 ten thousand) = RMB2,495,053.41 ten thousand.

(B) Book Value of All Shareholders' Equity of Chemical Co. = Current Assets + Non-current Assets (including Long-term Equity Investments + Fixed Assets - Buildings and Structures + Fixed Assets - Equipment + Construction in Progress + Intangible Assets + Other Non-current Assets = RMB665,974.18 ten thousand + RMB1,352,581.99 ten thousand + RMB53,535.68 ten thousand + RMB136,192.04 ten thousand + RMB107,605.97 ten thousand + RMB41,590.06 ten thousand +

RMB66,954.66 ten thousand) - Current Liabilities (RMB864,773.73 ten thousand) - Non-current Liabilities (RMB184,311.75 ten thousand) = RMB1,375,349.10 ten thousand.

IV. INCOME APPROACH

(I) Key Parameters and Assumptions

The key parameters and assumptions adopted by China United Assets in the Income Approach are as follows:

1. It is assumed that no major changes occurring in current national laws, regulations, policies, the macroeconomic situation, or the political, economic, and social environments of the regions where the parties involved in the transaction are located;

2. It is assumed that the enterprise will continue as a going concern;

3. It is assumed that the company's management is responsible and competent in fulfilling their duties;

4. It is assumed that no significant changes will occur in relevant interest rates, exchange rates, tax bases and rates, or policy-related levies;

5. It is assumed that the company's business scope and operational methods will remain consistent with the current direction, based on the existing management style and competency level;

6. It is assumed that during the future forecast period, the subject entity's core business, product mix, composition of revenue and costs, sales strategies, and cost control measures will remain largely unchanged from their post-commissioning and capacity-reaching state;

7. It is assumed that during the future forecast period, period expenses for the subject entity will not undergo significant changes from the current basis and will continue to follow the trends observed in recent years, fluctuating in line with changes in the scale of operations;

8. The Weighted Average Cost of Capital (WACC) model was used to determine the discount rate, which is 9.51%;

9. This appraisal did not consider the impact of a marketability discount on the equity value of the enterprise.

(II) Appraisal Model

1. Basic Model

The basic model used in this appraisal is:

$$E = B - D \quad (1)$$

Where:

E: Appraised value of all shareholders' equity (net assets) of the subject entity, with the final calculated result being RMB2,046,343.89 ten thousand;

B: Enterprise value of the subject entity, which is RMB2,789,438.95 ten thousand;

D: Value of interest-bearing debt of the subject entity, which is RMB743,095.06 ten thousand;

$$E = P + I + C \quad (2)$$

Where:

P: Value of the operating assets of the subject entity;

I: Value of the long-term investments held by the subject entity as of the Reference Date;

C: Value of surplus or non-operating assets (liabilities) existing as of the Reference Date of the subject entity;

$$P = \sum_{i=1}^{n} \frac{R_i}{(1+r)^i} + \frac{R_{n+1}}{r(1+r)^n} \quad (3)$$

Where:

Ri: The expected return (Free Cash Flow) of the subject entity for the i-th future year;

r: Discount rate, which is 9.51%;

n: The future operational period of the subject entity;

$$C = C_1 + C_2 \quad (4)$$

C1: The value of current surplus or non-operating assets (liabilities) as of the Reference Date;

C2: The value of non-current surplus or non-operating assets (liabilities) as of the Reference Date.

2. Income Indicator

For this appraisal, free cash flow to the firm is used as the income indicator for the operating assets of the subject entity. It is fundamentally defined as:

R = Net Profit + Depreciation & Amortization + After-tax Interest Expense - Additional Capital (5)

Based on the operating history of the subject entity and future market development, the free cash flow for its future operational period is estimated. The present value of the free cash flows throughout this future operational period is calculated and summed to determine the value of the enterprise's operating assets.

3. Discount Rate

This appraisal employs the Weighted Average Cost of Capital (WACC) model to determine the discount rate r

$$r = r_d \times w_d + r_e \times w_e \quad (6)$$

Where:

W_d: The debt ratio of the comparable companies; the debt ratio in this appraisal is 14.81%;

$$w_d = \frac{D}{(E+D)} \quad (7)$$

W_e: The equity ratio of the comparable companies; the equity ratio in this appraisal is 85.19%;

$$w_e = \frac{E}{(E+D)} \quad (8)$$

r_d: The after-tax interest rate on interest-bearing debt; the after-tax interest rate on interest-bearing debt in this appraisal is 2.98%;

r_e: The cost of equity capital; for this appraisal, the cost of equity capital (r_e) is determined using the Capital Asset Pricing Model (CAPM), and after comprehensive calculation, the cost of equity capital is 10.65%;

$$r_e = r_f + \beta_e \times (r_m - r_f) + \varepsilon \quad (9)$$

Where:

r_f: The risk-free rate, using the 10-year government bond yield, is 1.70%;

r_m: The expected market return rate is 9.37%;

ε: The specific risk adjustment coefficient of the subject entity; the specific risk coefficient in this appraisal is 0.50%;

β_e: The expected market risk coefficient of the subject entity's equity capital; the market risk coefficient in this appraisal is 0.9597;

$$\beta_e = \beta_u \times (1 + (1-t) \times \frac{D}{E}) \quad (10)$$

βu: The expected unlevered market risk coefficient of comparable companies;

$$\beta_u = \frac{\beta_t}{1+(1-t)\frac{D_i}{E_i}} \quad (11)$$

β_t: The expected average market risk coefficient for the stocks (assets) of the comparable companies;

$$\beta_t = 34\%K + 66\%\beta_X \quad (12)$$

Where:

K: The average risk value for the stock market over a certain period, typically assumed to be K=1;

β_x: The historical average market risk coefficient of the comparable companies' stocks (assets);

D_i, E_i: Represent the interest-bearing debt and equity capital of the comparable companies, respectively.

A.4 Main Evaluation Materials of Wuhai Company

I.Selection of Appraisal Methods

The methods selected for this appraisal are the income approach and the asset-based approach.

Reason for selecting the asset-based approach: As of the valuation benchmark date, the book value of the assets and liabilities within the appraisal scope has already been audited. Each asset and liability of the appraised entity can be identified. The identifiable assets and liabilities can each be individually appraised using an appropriate appraisal method, thus meeting the conditions for applying the asset-based approach.

Reason for selecting the income approach: The appraised entity has the foundation and conditions for ongoing operations, with standardised accounting practices, clear management, stable and defined business sources. The management has detailed plans for the current operations and future development of the company. The future expected income and operational risks can be reasonably predicted, meeting the conditions for using the income approach for appraisal.

Reason for not selecting the market approach: The market approach relies on the existence of an active public market with sufficient market data and comparable transaction cases. The appraised entity is a non-listed company. Listed companies in the same industry differ significantly from the appraised enterprise in terms of business structure, corporate scale, asset allocation and utilisation, operational stage, growth potential, operational risks, financial risks, and others. Furthermore, there were few comparable transactions, mergers, or acquisitions within the same industry near the valuation benchmark date. Reliable operational and financial data from comparable transactions are difficult to obtain, making it impossible to calculate appropriate value ratios. Therefore, the market approach was not adopted for this appraisal.

Under the income approach, the value of entire shareholders' equity amounts to RMB12,557,566,000, while the value of the entire shareholders' equity after the asset-based approach appraisal is RMB14,214,293,300.

Unless otherwise stated, all amounts in this summary are expressed in Renminbi (RMB).

There is a certain discrepancy between the appraisal results of the income approach and the asset-based approach. The main reason for the discrepancy is the different perspectives considered by the two methods.

The income approach estimates the value of the subject asset by discounting the expected future earnings of the appraised entity from the perspective of the enterprise's future profitability. The asset-based approach, on the other hand, estimates the value of the subject asset based on a reasonable appraisal of the enterprise's assets and liabilities, considering the method of asset replacement. The appraised entity's core business is coal mining and sales, and its key assets are mining rights. In this appraisal, the asset-based approach uses the discounted cash flow method to appraise the mining rights, which aligns closely with the approach used in the income approach. Moreover, the appraisal of the mining rights is based on the coal market conditions, using objective market benchmarks. The results from the asset-based approach reflect the contribution of the mining rights to the company's future earnings, therefore the asset-based approach can more objectively reflect the market value of the appraised entity.

II. Key Appraisal Assumptions

1. It is assumed that all appraisal targets are in the process of being traded, and the appraisers simulate the market based on the transaction conditions of the appraised assets;

2. It is assumed that for assets traded in the market, or assets to be traded in the market, both parties in the transaction have equal standing and ample opportunity and time to access market information. The transactions are voluntary and rational, and the parties can make rational judgments about the asset's function, purpose, and transaction price;

3. It is assumed that the appraised assets will continue to be used for their current purposes and in their current manner throughout the remaining service life of the mines;

4. It is assumed that there will be no significant changes to the relevant national laws, regulations, and policies or the macroeconomic situation, and that the political, economic, and social environment in the regions of the parties involved in the transaction will not change significantly;

5. Given the actual status of the assets on the valuation benchmark date, it is assumed that the company will continue operation throughout the remaining service life of the mines;

6. It is assumed that there will be no significant changes in the interest rates, tax bases and rates, or policy-related levies related to the appraised entity after the valuation benchmark date;

7. It is assumed that the management of the appraised entity after the valuation benchmark date will remain responsible and stable, with the ability to perform their duties;

8. Unless otherwise stated, it is assumed that the company fully complies with all relevant laws and regulations;

9. It is assumed that after the valuation benchmark date, there will be no force majeure or unforeseen factors that cause significant adverse effects on the appraised entity;

10. It is assumed that after the valuation benchmark date, the accounting policies used by the appraised entity and those used to prepare this asset appraisal report will remain consistent in significant aspects;

11. It is assumed that after the valuation benchmark date, the scope and methods of the appraised entity's operations will remain the same, based on the current management practices and level;

12. It is assumed that after the valuation benchmark date, the appraised entity's cash inflows and cash outflows will be at an average rate;

13. As at the valuation benchmark date, the subsidiaries of the appraised entity enjoy preferential enterprise income tax policies under the Western Development Programme, with corporate income tax levied at a rate of 15% from 1 January 2021 to 31 December 2030. This appraisal assumes that after the preferential enterprise income tax policy for the Western Development expires, a 25% tax rate will be applied;

14. It is assumed that after the valuation benchmark date, the appraised entity's products or services will maintain their current market competitiveness;

15. It is assumed that the mineral resources reserves reviewed within the mining licence will form the basis for the mining rights, and that the mining licence can be smoothly renewed in the future;

16. It is assumed that the production and sales of commercial coal in future years would achieve a balance between production and sales;

17. It is assumed that during the appraisal calculation period, the unit cost for environmental restoration and land reclamation would be equal to the extracted and spent amounts;

18. It is assumed that CHN Energy Wuhai Energy Co., Ltd. will continue to charge coal resource usage fees to Wuhai Lutian Mining Co., Ltd., Guoneng Wuhai Energy Wuhushan Mining Co., Ltd., Guoneng Wuhai Energy Huangbaici Mining Co., Ltd., and Wuhai Gongwusu Coal Industry Co., Ltd. at the current level;

19. It is assumed that Shenhua Group Haibowan Mining Co., Ltd. Pinggou Coal Mine will complete the technological transformation and reach production capacity by 2030, and Shenhua Group Haibowan Mining Co., Ltd. Gongwusu Coal Mine Shaft No. 3 will complete the technological transformation and reach production capacity by 2029.

III. Asset-based Approach

1. **Long-term equity investments**

An overall appraisal was conducted for long-term equity investments in wholly-owned and controlling subsidiaries. The appraisers first appraise the entire shareholders' equity of the investee, then multiply it by the shareholding percentage to determine the value of the part of the shareholder's equity.

For non-controlling long-term equity investments, as there are no conditions for an overall appraisal, the appraised value was determined by the net assets as of the valuation benchmark date multiplied by the shareholding percentage. If the net assets of the affiliated company are negative on the valuation benchmark date or for the most recent financial statement, the appraisal value is zero.

No.	Name of investee	Appraisal methods	Conclusion appraisal method

Total		**125,990.36**	**396,045.89**	**214.35**

(1) Guoneng Wuhai Energy Mining Area Water and Electricity Management Co., Ltd. has incurred operating losses in historical years, and the audit has recognized a full impairment provision. Based on the assumption of the enterprise as a going concern and the aggregation of its negative net assets, an impairment of RMB31.8842 million is required against the carrying amount of the long-term equity investment.

(2) Inner Mongolia Limin Coal and Coking Co., Ltd. holds a mining right. The asset group corresponding to this mining right as a whole was appraised at a value increase of RMB325.2652 million.

(3) Guoneng Wuhai Energy Information Technology Co., Ltd. is engaged in information technology services. Due to accumulated undistributed profits from historical years, its value exceeds the carrying cost of the long-term equity investment, resulting in an appraisal increment of RMB17.9428 million.

(4) Wuhai Gongwusu Coal Industry Co., Ltd. operates a mining right. Although the asset group corresponding to this mining right showed an appraisal increment when valued using the income approach, the company's historically accumulated substantial losses could not be offset by this increment. Consequently, the appraised value of the long-term equity investment fell below its original investment cost, requiring an impairment of RMB115.2036 million.

(5) Wuhai Lutian Mining Co., Ltd. operates a mining right. The asset group corresponding to this mining right was appraised at a value increase. Combined with the operating profits accumulated by the enterprise in historical years, this results in a total appreciation of RMB589.8302 million relative to the carrying cost of the long-term equity investment.

(6) Wuhai Tianjie Power Co., Ltd. showed no appraisal increase or decrease.

(7) Guoneng Wuhai Energy Wuhushan Mining Co., Ltd. operates a mining right. Valued

using the income approach, this right shows an appraisal increment of RMB1,615.9198 million.

(8) Guoneng Wuhai Energy Huangbaici Mining Co., Ltd. operates a mining right. Valued using the income approach, this right shows an appraisal increment of RMB118.1044 million.

(9) Following the appraisal of the relevant assets and liabilities of Guoneng Wuhai Energy Wuda Coal Processing Co., Ltd., no significant value increase was identified. The appraised value shows an increment of RMB38.8896 million relative to the carrying investment cost, primarily attributable to undistributed profits accumulated from the enterprise's historical operating performance.

(10) Following the appraisal of the relevant assets and liabilities of Guoneng (Wuhai Hainan District) Coal Processing Co., Ltd. using the cost approach, a value increase was recorded. The primary reasons for this increment are the appraised original value is higher than the prices in labour, materials, and machinery in recent years compared to the acquisition and construction period; and the appraised net value increased because the economic useful lives of properties and equipment assumed for appraisal purposes are longer than the accounting depreciation periods used by the enterprise. Furthermore, the enterprise has accumulated a certain amount of undistributed profits from its historical operations, which contributed to the value relative to the original investment cost. In aggregate, these factors resulted in a total appraisal increment of RMB141.6911 million.

2. **Fixed assets - buildings and structures**

According to the characteristics of different types of building and structure assets, the type of appraisal value, and the data collection situation, the cost method is mainly used for appraisal, while the market approach is applied in certain cases.

Cost Method

The cost method calculation formula is as follows:

Appraised value= Replacement cost × Composite depreciation rate

(1) Determination of replacement cost

Based on the characteristics, nature, and situation of the building and structure assets within the appraisal scope, the calculation formula for replacement cost in this appraisal is as follows:

Replacement cost = Construction and installation engineering cost + Pre-construction and other costs + Capital cost - Deductible VAT

a) Construction and installation engineering costs

For large, valuable, and important buildings, the construction and installation engineering costs are determined using the preliminary and final budget adjustment method, which uses the quantities in the building’s final budget as a basis and calculates the construction and installation engineering costs based on local standards and relevant fee documents.

For general buildings, or when final budget data is incomplete or the building’s value is small and the structure is simple, the analogy method or unit cost method is used to determine the construction and installation engineering costs.

b) Pre-construction and other costs

Pre-construction and other costs are calculated based on the engineering investment amount of the projects, in accordance with the fee standards set by the industry, national, or local government regulations. The rates and bases for various costs are as follows:

A. Luotuoshan Coal Washing Plant

No.	Project	Fee Basis	Fee Rate	Input VAT Rate

No.	Cost name	Fee Base	Fee Rate	Input VAT Rate
2	Bidding agency fees	Construction and installation fees	0.07%	6%
3	Environmental impact assessment fees	Construction and installation fees	0.03%	6%
4	Surveying and design fees	Construction and installation fees	2.84%	6%
5	Project supervision fees	Construction and installation fees	1.48%	6%
6	Project construction management fees	Construction and installation fees	0.89%	/
7	Infrastructure support fee	Floor area	RMB40 per square metre	/
Total		/	5.46%	/

Note: The infrastructure support fee is calculated for properties within the urban area.

c) Capital costs

Capital costs are calculated based on the sum of construction and installation engineering costs, pre-construction and other costs, using uniform capital investment over the reasonable construction period. The calculation formula of capital costs is as follows:

Capital costs = (Construction and installation engineering costs + Pre-construction and other costs) × Reasonable construction period × Interest rate × 1 / 2

Based on the scale and nature of the construction project in which the appraised buildings and structures are located and the relevant construction period quotas, the reasonable construction period and interest rate for the subsidiaries of CHN Energy Wuhai Energy Co., Ltd. were determined by referring to the effective Loan Prime Rate (LPR) on the valuation benchmark date as published by the National Interbank Funding Centre authorised by the People's Bank of China.

No.	Unit	Reasonable Construction Period	Interest rate
1	Luotuoshan Coal Washing Plant	1.5	3.06%
2	Luotuoshan Coal Mine	3	3.25%
3	Laoshidan Coal Mine	3	3.25%
4	Pinggou Coal Mine	2	3.13%
5	Suhaitu Coal Mine	0.5	2.94%
6	Wuhai Energy Headquarters	2	3.13%

d) Deductible VAT

According to relevant VAT documents, for those that qualify for VAT deduction, the replacement cost is reduced by the corresponding VAT.

(2) Determination of composite depreciation rate

a) For important buildings and structures, the economic service life, used lifespan, and on-site inspection of the structure, decoration, and auxiliary equipment are considered to determine the remaining useful life, which is then used to calculate the composite depreciation rate.

Composite depreciation rate = Remaining service life / (Remaining service life + Used lifespan) × 100%

For mining enterprises, the remaining service life of buildings is closely related to the mine's remaining service life. The remaining service life is determined based on the lower of the mine's remaining service life and the building's remaining economic service life.

b) For low-value buildings and structures, the composite depreciation rate is mainly determined based on the economic service life. The calculation formula is as follows:

Composite depreciation rate = (Economic service life - used lifespan) / Economic service life × 100%

For mining enterprises, the impact of the remaining service life of the mine should also be considered.

(3) Determination of the appraised value

Appraised value = Replacement cost × Composite depreciation rate

Market approach

The market approach refers to comparing the subject asset with similar real estate that has recently been traded on the valuation benchmark date, adjusting the known prices of these comparable properties to estimate the objective and reasonable price or value of the subject asset.

Appraisal using the market approach should proceed as follows:

(1) Collect transaction examples;

(2) Select comparable examples;

(3) Establish a comparable price basis;

(4) Make adjustments for transaction conditions;

(5) Make adjustments for transaction dates;

(6) Conduct regional factor adjustments;

(7) Conduct individual factor adjustments;

(8) Determine the comparable price.

The market method appraisal formula is as follows:

The value of the subject real property = Comparable transaction price × Normal transaction conditions / Comparable transaction conditions × Real estate price index at valuation benchmark date / Price index at comparable real estate transaction date × Real estate regional factor at appraisal date / Comparable real estate regional factor × Real estate individual factors at appraisal date / Comparable real estate individual factors

For properties and buildings (and structures) that were demolished on the valuation benchmark date, idle properties and buildings (and structures) with no use value, or properties and buildings (and structures) pending scrapping or already scrapped, the appraisal amount is zero.

According to the appraisal, the original value of the properties and buildings (structures) recorded an impairment of RMB145,881,900, representing an impairment rate of 8.79%, while the net value recorded an impairment of RMB444,572,300, representing an impairment rate of 96.02%. The main reasons for the impairment arising from the appraisal are as follows:

The main reason for the impairment in the appraised original value of properties and buildings (structures) is that certain properties and buildings (structures) are pending scrapping and have no physical assets in place, and therefore are appraised at zero in this appraisal. The main reason for the impairment in the appraised net value is that the above appraised values include the negative appraised value of the mining right of the Laoshidan Coal Mine, which has, in this appraisal, been allocated separately under properties and buildings (structures), structures and shaft engineering. The appraised value of the mining right of the Laoshidan Coal Mine is RMB-1,257,884,100, of which RMB-498,138,900 is allocated under properties and buildings (structures), and RMB-325,796,600 is allocated under structures.

3. **Fixed assets - shaft engineering**

Based on the characteristics of various shaft engineering projects, the appraised value type, data collection conditions, and other related factors, the cost method is primarily used for appraising shaft engineering projects.

Appraised value = Full replacement value × Composite depreciation rate

(1) Determination of full replacement value

Replacement cost = Engineering cost + Pre-construction and other costs + Capital costs - Deductible input tax

a) Comprehensive cost

The comprehensive cost is calculated based on physical engineering quantities and the current coal mining quotas and fee standards.

The comprehensive cost is calculated based on physical engineering quantities and the current coal mining quotas and fee standards.

Engineering cost = Base price of engineering quotas + Measure fees + Company management fees + Profits + Regulatory fees + Other project fees + Regional price differences

Where:

Base price of engineering quotas - The base price is calculated based on the shaft engineering's lifting method, lifting depth, tunnel cross-section, support method, materials, and thickness. *The Consumption Quotas for Coal Mining Shaft Engineering (2015, After-tax Base Price)* and *Comprehensive Quotas for Auxiliary Costs in Coal Mining Shaft Engineering (2015, After-tax Base Price)* are applied. This includes wages, material consumption, machine usage fees, etc., with adjustments made according to relevant regulations;

Other fees — determined in accordance with the Notice issued by the China Coal

Construction Association on *Adjustment of Pricing Basis for Coal Construction Projects under the VAT Reform for the Construction Industry* ((ZH.M.J.X.Z. [2016] No. 46) and the Notice on *Adjusting the Value-Added Tax Rate for Coal Construction Engineering Pricing Basis* (ZH.M.J.X.Z. [2019] No. 37), together with the *Notification on Release of the Consumption Quotas for Coal Mining Shaft Engineering (2015, After-tax Base Price)* (ZH.M.J.X.Z. [2016] *No.* 115) and the *Supplementary Provisions on the Implementation of the Valuation Standards for Coal-Construction Projects* (ZH.M.J.X.Z. [2016] No. 116), and calculated in combination with the actual construction conditions of the mine.

Labour, materials, and equipment price differences – *Adjusted according to the Notice on Adjusting Coal Construction Engineering Quotation Standards* (2015 Base Price) for Labour Unit Prices and Related Regulations (ZH.M.J.X.Z. [2021] No. 125), *Urumqi City Construction Engineering Material Information Price List* (Q2 2025), and materials price information provided by the enterprise for the valuation benchmark date.

For general shaft engineering projects, or when final settlement data is incomplete, or when the value is small and the structure is simple, the Analogy Method is used to determine the construction cost.

b) Pre-construction and other costs:

Pre-construction and other costs include construction unit management fees, engineering supervision fees, surveying and design fees, environmental evaluation fees, and soil and water conservation consulting service fees. These costs are calculated based on the engineering construction investment amount, according to industry, national, or local government fee standards. Preliminary and Other Costs Calculation Formula:

Preliminary and other costs = Engineering cost × Fee rate

Schedule of Pre-Construction and Other Costs for the Laoshidan Coal Mine

No.	Project	Fee Basis	Fee Rate	Input VAT Rate
1	Construction unit management fees	Construction and installation fees	2.50%	/
2	Project supervision fees	Construction and installation fees	1.50%	6.00%
3	Engineering quality technical service fees	Construction and installation fees	0.35%	6.00%
4	Feasibility study fees	Construction and installation fees	0.20%	6.00%

11	Soil and water conservation assessment fees	Construction and installation fees	0.09%	6.00%
12	Geological hazard risk assessment fees	Construction and installation fees	0.10%	6.00%
13	Engineering insurance premium	Construction and installation fees	0.30%	6.00%
14	Early entry fees for production personnel	Construction and installation fees	0.27%	/
	Total	/	9.40%	/

c) Capital costs

Financing costs are calculated based on the appraised entity's reasonable construction period, referencing the Loan Prime Rate (LPR) published by the People's Bank of China on the valuation benchmark date, and considering the appraised entity's loan interest rate adjustments. The total sum of engineering costs, preliminary and other fees, etc., is used as the base for calculating the financing costs over the uniform capital investment. The reasonable construction period for Pinggou Coal Mine is two years, and the reasonable construction period for Laoshidan Coal Mine is three years. The calculation formula of capital costs is as follows:

Financing cost = (Engineering cost + Preliminary and other fees) × Reasonable construction period × Interest rate / 2

d) Deductible input tax

According to relevant VAT documents, for those that qualify for VAT deduction, the replacement cost is reduced by the corresponding VAT.

(2) Determination of composite depreciation rate

Shaft engineering in coal mines differs from surface buildings in that it is a special structure attached to coal resources. Its economic lifespan is closely linked to the coal reserves that can be mined. As coal resources are depleted, the economic lifespan shortens, and when coal resources are exhausted, the economic lifespan ends.

Underground engineering has a complex geological structure, many unpredictable factors, and poor construction conditions. The stability of the tunnels depends on their location, rock layer properties, and mining methods. The service life of each type of tunnel is determined by the coal reserves in the service area.

Therefore, before determining the depreciation rate, the appraisers first reviewed geological reports, mine design data, and understood the position, rock properties, support methods, geological structures, and the impact of mining on the tunnels. They then visited representative tunnels underground to inspect the support conditions and

maintenance status and consulted with on-site engineering personnel to verify and review the maintenance records and methods. Finally, based on the coal reserves, remaining reserves, recoverable reserves, and production capacity provided by the geological survey department, the remaining service life of each tunnel was calculated, and the composite depreciation rate was determined. The calculation formula is as follows:

Composite depreciation rate = Remaining service life / (Service life + Remaining service life) × 100%

(3) Appraisal value

Appraised value = Full replacement value × Composite depreciation rate

For shaft engineering pending scraping as of the valuation benchmark date, the appraised value is zero.

According to the appraisal, the original value of shaft engineering recorded an appreciation of RMB304,179,700, representing an appreciation rate of 546.11%, while the net value recorded an impairment of RMB881,400, representing an impairment rate of 100.00%. The main reasons for the appraisal appreciation or impairment are as follows: The primary reason for the appreciation in the appraised original value is that the book value of the shaft engineering pending conversion into fixed assets at the Laoshidan Coal Mine was previously included under structures, and the separate appraisal of the shaft engineering in this appraisal has resulted in the appreciation. The main reason for the impairment in the appraised net value is that the above appraised values include the negative appraised value of the mining right of the Laoshidan Coal Mine, which has, in this appraisal, been allocated separately under properties and buildings (structures) and shaft engineering, with RMB-234,971,800 allocated under the appraised value of shaft engineering.

4. **Fixed assets – equipment**

Equipment assets include machinery, vehicles, and electronic devices. Based on the nature of this project and the characteristics of the equipment assets within the the appraisal scope, for some older electronic devices (e.g., computers) and vehicles, where there is an active second-hand market, the appraised value is based on the second-hand or scrap value of similar equipment. For other equipment, which does not have independent profit-generating ability and where there are very few similar transaction examples, it is not suitable to apply the income approach or market approach for appraisal. Therefore, the cost method is used for these equipment appraisals. The cost method calculation formula is as follows:

Appraised value = Replacement cost × Depreciation rate

(1) Replacement cost

Based on the characteristics and nature of the equipment within this appraisal scope, as well as the circumstances of the appraised entity, the calculation methods for the replacement costs of various types of equipment in this appraisal are as follows.

a) Machinery

For equipment that requires installation, the replacement cost generally includes: equipment purchase price, transport and handling fees, installation engineering fees,

pre-construction and other costs, and the capital cost. For equipment that does not require installation, the replacement cost generally includes: equipment purchase price and transport and handling fees. The calculation formula is as follows:

Equipment requiring installation replacement cost = Equipment purchase price + Transport and handling fees + Installation engineering fees + Pre-construction and other costs + Capital costs - Deductible VAT

Equipment not requiring installation replacement cost = Equipment purchase price + Transport and handling costs - Deductible VAT

A. Equipment purchase price

For major process equipment, the purchase price is primarily determined by consulting the market price as at the valuation benchmark date or referencing the contract price of similar equipment at the valuation benchmark date. For small equipment, the purchase price is determined by checking the market price information for the valuation benchmark date. For equipment with no market price information, the purchase price is determined by referencing the purchase price for similar equipment.

B.Transport and handling fees

If transport and handling fees are not included in the equipment purchase price, they are determined by referring to standard cost indicators from resources like the *Asset Appraisal Common Data and Parameters Handbook* and the *Mechanical Industry Construction Project Budgeting Method and Indices*, taking into account factors such as transportation distance, weight, and volume.

C. Installation engineering fees

For equipment that requires installation, the installation engineering fees are estimated using the unit price method, referring to similar equipment installation project budgets (preliminary or final) and other engineering documents, including the *Coal Mining Construction Project Cost Quotas* (NB/T 51063-2016) and other relevant standards, as well as recent local pricing information. Alternatively, the *Asset Appraisal Common Methods and Parameters Handbook* and the *Mechanical Industry Construction Project Budgeting Method and Indices* are used, combined with the scale and nature of the equipment installation work to determine the installation fee rate. The installation engineering fee calculation formula is as follows:

Installation engineering fee = Equipment purchase price × Installation engineering fee rate

For equipment where the purchase price includes installation engineering costs, or for equipment that does not require installation, installation engineering fees are not included.

For equipment foundations that are inseparable from buildings or separately listed as independent foundations, these are appraised within the corresponding buildings and structures, and installation engineering fees are not recalculated.

D. Pre-construction and other costs

Pre-construction and other costs include project construction management fees, bidding agency fees, environmental impact assessment fees, surveying and design fees, engineering supervision fees, joint trial operation fees, and others. The rates for these expenses are determined by investigating the average cost levels of similar projects and

referring to the *Standards for Other Expenses of Coal Mining Construction Project* (NBT 51064-2016) and other related standards, as well as the specific conditions of this project. The fee rates, fee bases and corresponding calculations are set out in the table below:

a. Wuhai Energy Headquarters

No.	Project	Fee Basis	Fee Rate	Input VAT Rate
1	Preliminary work consultancy fees	Equipment costs	0.15%	6.00%
2	Bidding agency fees	Equipment costs	0.07%	6.00%
3	Environmental impact assessment fees	Equipment costs	0.03%	6.00%
4	Surveying and design fees	Equipment costs	2.84%	6.00%
5	Project supervision fees	Equipment costs	1.48%	6.00%
6	Project construction management fees	Equipment costs	0.89%	/
	Total	/	5.46%	/

b. Laoshidan Coal Mine

6	Project construction management fees	Equipment costs	1.19%	/
Total		/	7.07%	/

E. Capital costs

Capital costs are calculated based on the normal construction period of the project where the equipment is located, using the Loan Prime Rate (LPR) in effect on the valuation benchmark date. The total of the equipment purchase costs, transport and handling fees, installation fees, pre-construction and other costs is used as the base, with the capital costs calculated based on uniform capital investment. The reasonable construction periods and annual loan interest rates for each branch and other entities are set out in the table below.

No.	Unit	Reasonable Construction Period	Interest rate
1	Luotuoshan Coal Washing Plant	1.5	3.06%
2	Luotuoshan Coal Mine	3	3.25%
3	Laoshidan Coal Mine	3	3.25%
4	Pinggou Coal Mine	2	3.13%
5	Suhaitu Coal Mine	0.5	2.94%
6	Wuhai Energy Headquarters	2	3.13%

The calculation formula of capital costs is as follows:

Capital costs = (Equipment purchase price + Transport and handling costs + Installation engineering fees + Pre-construction and other costs) × Reasonable construction period × Annual loan interest rate / 2

F. Deductible VAT

According to the regulations in "C.SH [2008] No. 170", "C.SH. [2016] No. 36", "C.SH. [2018] No. 32", and the "Announcement No. 39 in 2019 of the Ministry of Finance, the State Taxation Administration and the General Administration of Customs", the input VAT includes VAT on the equipment purchase price (tax rate 13%), VAT on transport and handling fees (tax rate 9%), and VAT on pre-construction and other costs (tax rate 6%).

b) Vehicles

For vehicles, the replacement cost is determined by the market price on the valuation benchmark date, adding the vehicle purchase tax and other reasonable costs (such as licence fees). The calculation formula is as follows:

Replacement cost = Vehicle purchase price + Vehicle purchase tax + Licence fees and other costs - Deductible VAT

Where:

Vehicle purchase tax = Vehicle purchase cost / (1 + 13%) × 10%

The vehicle purchase price is mainly determined by consulting local dealers or checking online for market prices; vehicle purchase tax is determined according to the *Vehicle Purchase Tax Law of the People's Republic of China*; licence fees and other costs are determined based on local administrative fee standards and actual vehicle expenses.

c) Electric equipment

For electronic equipment that requires installation, the appraisal is conducted using the same method as for machinery. For other electronic equipment that does not require installation, the replacement cost is determined based on the market purchase price on the valuation benchmark date.

(2) Determination of composite depreciation rate

a) For specialised and general machinery, the depreciation rate is primarily determined based on the equipment's economic service life, used lifespan, and on-site inspections of the equipment's condition and technical status. The remaining service life is then calculated, and the composite depreciation rate is determined using the following formula:

Composite depreciation rate = Remaining service life / (Remaining service life + Used lifespan) × 100%

b) For electronic equipment, office furniture, and other devices, the composite depreciation rate was mainly determined based on their economic service life and the results of on-site inspections. The calculation formula is as follows:

Age-based depreciation rate = (Economic service life - used lifespan) / Economic service life × 100%

Composite depreciation rate = Age-based depreciation rate × Adjustment coefficient

c) For vehicles, according to the *Standard for Mandatory Scrapping of Motor Vehicles* (Order No. 12 of 2012 of Ministry of Commerce, National Development and Reform Commission, Ministry of Public Security, Ministry of Environmental Protection), the theoretical depreciation rate was determined using either vehicle mileage or service life, based on the lower of the two methods. For vehicles without a prescribed service life, the remaining service life method was used. Adjustments were made based on on-site inspection results. The calculation formula is as follows:

Composite depreciation rate = Depreciation rate × Adjustment coefficient

(3) Determination of the appraised value

Appraised value= Replacement cost × Composite depreciation rate

According to the appraisal, the original value of machinery and equipment recorded an appreciation of RMB182,547,200, representing an appreciation rate of 5.22%, while the net value recorded an impairment of RMB549,909,000, representing an impairment

rate of 50.49%. The main reasons for the impairment and appreciation arising from the appraisal are as follows:

The primary reason for the appreciation in the appraised original value of machinery and equipment is that certain machinery and equipment did not include equipment installation costs and preliminary costs in their book values, whereas such installation costs and preliminary costs have been included in this appraisal, resulting in an appreciation in the appraised original value. The main reason for the impairment in the appraised net value is that the above appraised values include the negative appraised values of the mining rights of the Laoshidan Coal Mine and the Luotuoshan Coal Mine, which have, in this appraisal, been allocated under machinery and equipment. The negative appraised value of the mining right of the Luotuoshan Coal Mine is RMB-1,073,945,500, which has been allocated under the appraised value of machinery and equipment; and RMB-198,976,800 of the negative value of the mining right of the Laoshidan Coal Mine has been allocated under the appraised value of machinery and equipment in this appraisal.

5. **Construction in progress**

Based on the characteristics of construction in progress, the appraised value type, and data collection, the cost method was adopted for the appraisal.

(1) Completed projects

For projects where the main structure is already listed as fixed assets, they are incorporated into the main appraisal. Other completed projects are appraised according to the fixed asset appraisal method.

(2) Unfinished projects

For ongoing projects that started within six months of the valuation benchmark date, due to minor price changes, the appraisal is based on the book value of the ongoing construction after verification, and the residual value after deducting unreasonable expenses is used as the appraised value.

For ongoing projects that started more than six months before the valuation benchmark date, if the book value does not include capital costs, the capital costs are added based on the reasonable construction period. Where the reasonable construction period is less than six months, capital costs shall not be calculated. If the book value differs significantly from the price level on the valuation benchmark date, the construction costs are adjusted to the valuation benchmark date price level.

(3) Pure expense type ongoing projects

Pure expense type ongoing projects have no physical entity. After verifying that the payments made are necessary for future projects or have actual value to the future owners, and confirming that there is no duplicate valuation with related asset projects, the book value after verification is used as the appraised value. Otherwise, the value is treated as zero.

(4) Completed but inactive and unfinished, suspended projects

For projects that have been completed but are inactive, or for unfinished projects that have been suspended, due to their long-term inactivity or suspension with no future construction or use, the appraisal is based on the recoverable realisable value as at the valuation benchmark date. If the expense incurred is a pre-operating cost, the appraisal amount will be zero.

(5) Construction materials

Since the construction materials were purchased to support construction in progress, for materials purchased recently with little change in market prices, the book value has been verified as accurate and reasonable. Therefore, the appraised value is based on the verified book value.

The appraisal appreciation in the value of construction in progress is RMB20,421,900, with an appreciation rate of 1.87%. The appreciation in the appraised value of construction in progress is mainly attributable to the consideration of financing costs for certain construction in progress.

6. **Land use right**

According to the requirements of the *Asset Appraisal Practice Standards - Real Estate*, the main appraisal methods for land use rights include the market approach, income approach, hypothetical development method, cost method, and benchmark land price method. The appropriate appraisal method is selected based on the appraisal purpose, subject asset, value type, data collection conditions, and the applicability of the above basic appraisal methods.

This appraisal uses both the benchmark land price adjustment approach and the market approach to appraise the value of the land use rights entrusted.

For land without certificates, the appraisal and calculation were based on the enterprise's declared rights. Where no actual land assets exist, the appraised value is determined as zero. For land previously subject to government expropriation but currently used by third parties, due to uncertainties relating to such matters and the fact that the appraised entity has not actually managed or used such land, the appraised value is determined as zero. For the land parcels relating to the Maintenance Centre Project and the Gongwusu Small Vehicle Team, which are actually managed by the appraised entity, the appraised value is determined based on the verified book value.

The intangible asset – land use rights recorded an appraisal impairment of RMB5,288,200, representing an impairment rate of 2.59%. The reasons for the impairment are as follows: On the one hand, as at the valuation benchmark date, certain land parcels no longer have any physical assets, and their appraised value has therefore been determined as zero, resulting in impairment of these land use rights. For land used by certain coal mines, the mine closure date was adopted as the end of the utilisation period, which is earlier than the expiry date shown on the land certificates, resulting in further impairment of land use rights. On the other hand, certain land use rights were acquired at an early stage and regional land prices have increased to a certain extent compared with the acquisition dates, resulting in an appreciation of such land use rights. Taking the above factors into consideration, the land use rights recorded a slight overall impairment in the appraisal.

7. **Mining rights**

(1) Mining rights

Based on the appraisal purpose of this project and the specific characteristics of the mining rights, the entrusted mining rights have a certain scale and an independent ability to generate profits that can be measured, and its future benefits and associated

risks can be quantified in monetary terms. In addition, the extent of geological exploration is high, and the relevant information is generally complete and reliable, which means the reports and relevant data essentially meet the requirements for adopting the discounted cash flow appraisal method. According to the *Fundamental Technical Principles for Mining Right Appraisal* and the *Standards for Appraisal Using the Income Approach*, the discounted cash flow method has been determined as the appraisal method for this project.

The calculation formula is as follows:

$$P = \sum_{t=1}^{n} (CI - CO)_t \bullet \frac{1}{(1+i)^t}$$

Where: P — Appraised value of the mining rights;

CI — Annual cash inflows;

CO — Annual cash outflows;

i — Discount rate;

t — Year number (t = 1, 2, 3, …, n);

n — Calculation period.

Specific appraisal indicators and parameters

A. Laoshidan Coal Mine

The resource reserves used in this appraisal are based on the *Verification Report on Coal Resources of the Laoshidan Coal Mine in the Zhuozishan Coalfield, Inner Mongolia Autonomous Region* submitted by new Shenhua Wuhai Energy Co., Ltd. in May 2019 (hereinafter referred to as the "Resource Reserve Verification Report") and its review opinion, as well as the *2024 Annual Resource Reserve Report of the Laoshidan Coal Mine of CHN Energy Wuhai Energy Co., Ltd., Inner Mongolia Autonomous Region* and the corresponding review opinion. The technical parameters are primarily determined with reference to the *Preliminary Design (Revised) for the Laoshidan Coal Mine of CHN Energy Wuhai Energy Co., Ltd.*, submitted by Inner Mongolia Coal Mine Design and Research Institute Limited Liability Company in July 2024 (hereinafter referred to as the "Preliminary Design") and the associated approvals, together with the company's projected costs and actual financial information. Other principal technical and economic indicator parameters have been selected with reference to the *Chinese Mineral Rights Appraisal Standards*, other relevant policies and regulations, technical and economic guidelines, and information available to the appraisers.

The explanation for the values of each parameter is as follows:

The resource reserves as of the valuation benchmark date are: according to the "Resource Verification Report" and review opinions, the 2024 annual reserve report, and the explanation of resource use from the mine from the resource verification date to the valuation benchmark date (31 July 2025), the remaining resource reserves are 51,304,700 tonnes (excluding forecasted resources). Among these, the measured resource is 16.93 million tonnes, indicated resources are 11,640,300 tonnes, and inferred resources are 22,734,400 tonnes. Additionally, 720,000 tonnes of oxidized coal

are held.

Mineral resource reserves adopted for appraisal: Mineral resource reserves adopted for appraisal = ∑ (basic reserves included in the appraisal + resources × corresponding reliability coefficient) = 39,591,800 tonnes.

Product Plan: Based on the actual production and sales of the mine, the product plan for Laoshidan Coal Mine is determined to be raw coal.

Recovery rate of the mining area: According to the "Preliminary Design", the designed recovery rate for the mining area is 80%. Given that the coal types at Laoshidan Coal Mine are coking coal and 1/3 coking coal, the recovery rate for the mining area in this appraisal is determined to be 88% for thin coal seams, 83% for medium-thick coal seams, and 78% for thick coal seams.

Appraised recoverable reserves: Appraised recoverable reserves = (Appraised resources - design losses) × Mining recovery rate = 18,773,400 tonnes.

Production capacity and service life: The mining licence for Laoshidan Coal Mine specifies a production scale of 1.50 million tonnes per year. The "Preliminary Design" specifies a production scale of 1.80 million tonnes per year. According to the Reply Regarding the Approval of Production Capacities for Two Coal Mines including Laoshidan Coal Mine of Wuhai Energy (K.A.Z.H. [2022] No. 32) from the National Mine Safety Inspection Bureau, the production capacity of Laoshidan Coal Mine has been approved for an increase from 1.50 million tonnes per year to 1.80 million tonnes per year. Therefore, the production scale for the mine in this appraisal is determined to be 1.80 million tonnes per year during its future production life. As the mine has entered the later stage of resource recovery and the resource reserves are near exhaustion, according to the Raw Coal Production Plan for 2025–2031 provided by Wuhai Energy, the production scale for Laoshidan Coal Mine is planned as follows: 800,000 tonnes per year in 2025–2026, 1.30 million tonnes per year in 2027–2028, and 1.00 million tonnes per year from 2029 onward. The appraisal calculation period is 14.19 years, from August 2025 to October 2039.

Product sales prices and revenue: For this project, the coal sales price from August 2025 to December 2026 is set at RMB228.00 per tonne, RMB302.00 per tonne in 2027, RMB376.00 per tonne in 2028, and RMB449.00 per tonne in 2029 and subsequent years. Assuming that all coal produced in the current period is sold, the normal production annual sales revenue is RMB449 million.

Fixed Asset Investment: For this project, the invested original value of fixed assets (including construction in progress) is RMB879,936,900 (including shaft engineering RMB346,656,800, properties and buildings RMB277,565,600, machinery and equipment RMB255,714,500), and the net value is RMB593,808,900 (including shaft engineering RMB225,326,900, properties and buildings RMB189,138,500, machinery and equipment RMB179,343,000). Subsequent investment in construction in progress is RMB54,811,100, including buildings and structures RMB10,791,100, and machinery and equipment RMB44.02 million.

Intangible Asset Investment: This project estimates an investment of RMB6,425,000 in land use rights in 2026. Other intangible assets (software, patents) are valued at RMB26,689,400.

Total costs and operating costs

Laoshidan Coal Mine is an operating mine with an actual production capacity of

1,892,400 tonnes in 2023, 1,600,700 tonnes in 2024, and 528,700 tonnes from January to July 2025. Since Laoshidan Coal Mine has entered the later stage of resource recovery, the mine's production scale will be approximately 800,000 to 1.30 million tonnes per year from 2025 to 2029, and will remain at 1.00 million tonnes per year from 2030 onwards. Given the instability of the mine's future production scale, the mine has prepared financial budget operating statements based on the current economic level. Therefore, this appraisal uses the production cost of raw coal based on the enterprise's financial budget operating statements. Individual parameters are determined according to the *Guidelines for Determining Mining Rights Appraisal Parameters* and relevant national financial and tax regulations, and used to calculate the mining costs after the valuation benchmark date during the future mining period. This appraisal uses the "Manufacturing Cost Method" to collect costs, consistent with the actual costs at the mine. The explanation for the values of each parameter is as follows:

Purchased Material Costs: According to the Financial Budget Operating Statement for Laoshidan Coal Mine, the raw coal production from August to December 2025 is 271,300 tonnes, with material costs of RMB8,154,600, corresponding to RMB30.06 per tonne of raw coal; in 2026, the raw coal production is 800,000 tonnes, with material costs of RMB21,488,000, corresponding to RMB26.86 per tonne of raw coal; in 2027, the raw coal production is 1.30 million tonnes, with material costs of RMB34,918,000, corresponding to RMB26.86 per tonne of raw coal; in 2028, the raw coal production is 1.30 million tonnes, with material costs of RMB34,918,000, corresponding to RMB26.86 per tonne of raw coal; in 2029, the raw coal production is 1.00 million tonnes, with material costs of RMB26.86 million, corresponding to RMB26.86 per tonne of raw coal; and in 2030, the raw coal production is 1.00 million tonnes, with material costs of RMB26.86 million, corresponding to RMB26.86 per tonne of raw coal.

Purchased fuel and power costs: For this appraisal, the unit cost of purchased material for normal production years is RMB49.01 per tonne of raw coal.

Employee compensation: For this appraisal, the total employee compensation for 2030 is RMB188.83 million, with unit compensation at RMB188.83 per tonne.

Depreciation costs: According to the calculations, the annual depreciation cost for 2030 is RMB32,431,100, with unit depreciation cost at RMB32.43 per tonne.

Maintenance and renovation fees and shaft engineering funds: According to the *Administrative Measures for the Extraction and Use of Coal Production Safety Expenses* and the Notice on *Certain Provisions for Regulating the Administration of Coal Mine Maintenance and Renovation Fees* (C.J. [2004] No. 119), this project has a maintenance and renovation fee of RMB7.00 per tonne of coal, with a shaft engineering fund of RMB2.50 per tonne. The updated maintenance and renovation fee is set at RMB3.50 per tonne, and the depreciation-related maintenance and renovation fee is also RMB3.50 per tonne.

Safety costs: According to the *Administrative Measures for the Collection and Utilization of Enterprise Work Safety Funds* (C.Z. [2022] No. 136), the safety costs for the appraised entity in this project is set at RMB30.00 per tonne.

Repair costs: The unit repair cost is RMB2.95 per tonne.

Transport costs: The unit transport cost is RMB0.72 per tonne, with annual transport costs of RMB721,100.

Equipment leasing costs: The equipment leasing cost is for the mining equipment leased by the mine from Wuhai Energy. The unit equipment leasing cost is RMB23.83 per tonne.

Public affairs costs: These are mainly used for property service fees at the mine. The unit public affairs cost is RMB4.56 per tonne.

Inspection and testing fees: These are mainly used for coal quality testing fees for raw coal. The unit inspection and testing fee is RMB1.50 per tonne.

Environmental protection and land reclamation costs: According to the *Mine Geological Environmental Protection and Land Reclamation Plan for Laoshidan Coal Mine of CHN Energy Wuhai Energy Co., Ltd.* and the review form compiled in November 2024, the environmental protection and reclamation cost is RMB1.14 per tonne.

Heating and water fees: The unit heating fee is RMB3.23 per tonne, and the water fee is RMB0.48 per tonne.

Specialised service fees: These are mainly for mine rescue services. The unit specialised service fee is RMB7.48 per tonne.

Technical service fees: These are mainly for preparing reports at the mine. The unit technical service fee is RMB1.06 per tonne.

Gangue disposal costs: These are mainly for transporting gangue from continuous mining and backfilling. The unit gangue disposal fee is RMB3.55 per tonne.

Other manufacturing expenses: The unit other expenses are RMB6.09 per tonne.

Management expenses: According to the enterprise financial statement, management expenses include salaries for management personnel, amortisation of intangible assets, soil and water conservation compensation, and other management costs. The unit management cost is RMB51.62 per tonne.

Sales expenses: According to the 2025 Supplementary Agreement to the Agency Sales Contract provided by the enterprise, raw coal from Laoshidan Coal Mine is uniformly sold by the Supply and Marketing Center of CHN Energy Wuhai Energy Co., Ltd.. Wuhai Energy collects an agency fee calculated as 1% of the actual settlement price of the product minus railway freight and miscellaneous charges (excluding tax). Therefore, the appraised sales expenses are calculated as 1% of sales revenue. For 2030, after calculation, the annual sales expense is RMB4.49 million, corresponding to a unit cost of RMB4.49 per tonne.

R&D Expenses: According to the Wuhai Energy Subsequent R&D Expense Forecast, the future R&D expenses of Wuhai Energy Co., Ltd. are estimated at 0.16% of sales revenue. Thus, for 2030, the annual R&D expense for this project is RMB718,400, with a unit R&D cost of RMB0.72 per tonne.

Financial Expenses: According to the *Guidelines on Determining Mining Rights Appraisal Parameters*, the financial expenses for this project are calculated at RMB2.07 per tonne in this appraisal according to the calculation.

Total costs refer to the sum of all cost expenses. Operating costs refer to the total costs excluding depreciation costs, depreciation-related maintenance and renovation fees, shaft engineering fund, amortization fees, and financial costs.

For 2030, the unit total cost is RMB452.12 per tonne, with the unit operating cost at

RMB408.19 per tonne; the annual total cost is RMB452,121,900, and the annual operating cost is RMB408,190,800.

Discount rate: According to the *Guidance on Determining Mining Rights Appraisal Parameters*, the basic composition of the discount rate is: Discount rate = risk-free rate of return + risk premium

The risk-free rate of return is determined as 1.70%, based on the yield to maturity of 10-year government bonds disclosed by the WIND Information System on the valuation benchmark date.

The risk premium is estimated using the "risk build-up method" and includes the following principal components: Exploration and development risk, industry risk, financial and operational risk, and other specific risks. As the mine is a production-stage mine, the exploration and development risk premium is determined as 0.60%, the industry risk premium as 2.00%, and the financial and operational risk premium as 1.50%. Taking into account the mine's specific circumstances, the other specific risk premium is determined as 2.00%.

Having regard to the discount rate range and the mine's development stage, the discount rate adopted for this appraisal is 7.80%.

After estimation, the net cash flow present value of the "CHN Energy Wuhai Energy Co., Ltd. Laoshidan Coal Mine Mining Rights" as of July 31, 2025, is RMB-1,257,884,100. Therefore, the appraised value of the "CHN Energy Wuhai Energy Co., Ltd. Laoshidan Coal Mine Mining Rights" as of July 31, 2025, is RMB0.00, written as RMB zero only.

B. Pinggou Coal Mine

The resource reserves and recoverable reserves used in this appraisal are mainly based on the *Verification Report on Coal Resource Reserves for Pinggou Coal Mine, Zhuozishan Coalfield, Inner Mongolia* compiled by Shenhua Geological Exploration Co., Ltd. in January 2019 (hereinafter referred to as the "Reserve Verification Report") and its mineral resource reserve review opinions (hereinafter referred to as the "Review Opinions") and filing certificates, and the *Feasibility Study Report for the Technical Transformation of Pinggou Coal Mine of CHN Energy Wuhai Energy Co., Ltd.* compiled by Inner Mongolia Coal Mine Design Institute Co., Ltd. in November 2024 (hereinafter referred to as the "Feasibility Report"). Technical and economic parameters are mainly determined based on the Feasibility Report. Other principal technical and economic indicator parameters have been selected with reference to the *Chinese Mineral Rights Appraisal Standards*, other relevant policies and regulations, technical and economic guidelines, and information available to the appraisers.

The explanation for the values of each parameter is as follows:

Resource reserves as of the appraisal date: According to the Reserve Verification Report and its review opinions, as of December 31, 2018, the cumulative identified coal resource reserves within the mining licence boundary of Pinggou Coal Mine are 162.76 million tonnes, with remaining reserves of 129.33 million tonnes. Since Pinggou Coal Mine is a suspended mine, it has remained in a suspended state from the resource verification base date to the current valuation benchmark date. Therefore, as of the current valuation benchmark date, the remaining resource reserves within the Pinggou Coal Mine mining rights boundary are 129.33 million tonnes.

Mineral resource reserves adopted for appraisal: Mineral resource reserves adopted for appraisal = ∑ (Basic reserves included in the appraisal + Resources × Corresponding reliability coefficient) = 126,759,000 tonnes.

Product Plan: According to the Feasibility Report, raw coal from Pinggou Coal Mine is sent to Luotuoshan Coal Washing Plant for washing. However, based on the enterprise's plan, in the future, it may be sent to several other washing plants. As the washing plan for future years is uncertain and the recovery rates for the washing plants cannot be determined, this appraisal confirms the product plan as raw coal.

Mining Area Recovery Rate: According to the Reserve Verification Report, the No. 9 coal seam, the 16-1 and 16-2 coal seams are medium-thick coal seams, while the No. 10 coal seam is a thin coal seam. According to the *Coal Mine Design Code*, the recovery rate for thin coal seams should not be less than 85%, for medium-thick coal seams not less than 80%, and for thick coal seams not less than 75%.

The No. 9 and 16-2 coal seams are 1/3 JM; the No. 10 and 16-1 coal seams are FM. According to the Interim Provisions on the *Development and Utilisation of Special and Rare Coal Types* (State Development and Reform Commission, Order No. 16 [2012]), and based on the Feasibility Report, the recovery rates for the mining areas in this appraisal are determined as follows: No. 9 coal seam recovery rate is 86.00%, No. 10 coal seam recovery rate is 90.00%, and the recovery rate for 16-1 and 16-2 coal seams is 85.00%.

Recoverable reserves adopted for appraisal: Recoverable reserves adopted for appraisal = (Resource reserves adopted for appraisal - Design losses) × Mining recovery rate = 89,034,100 tonnes.

Production Capacity and Service Life: The licensed production capacity for Pinggou Coal Mine is 1.80 million tonnes per year, and the Feasibility Report design production capacity is also 1.80 million tonnes per year. Therefore, this appraisal confirms that the future normal production capacity for Pinggou Coal Mine will be 1.80 million tonnes per year. The appraisal calculation period for this mine is 35.33 years. Considering that Pinggou Coal Mine is undergoing technical transformation, this appraisal assumes that from August 2025 to the end of 2026 will be the preparation period, from early 2027 to the end of 2029 will be the construction period, and production will commence in 2030, reaching full capacity of 1.80 million tonnes. Therefore, the appraisal confirms the service life for appraisal purposes as 39.75 years.

Product Sales Price and Sales Revenue: After calculation, considering the recoverable reserves of each coal seam, the weighted average coal price is RMB419.00 per tonne (rounded). Assuming all coal produced is sold in the period, the annual sales revenue for normal production is RMB754.2 million.

Fixed Asset Investment as of the appraisal date: As of the current valuation benchmark date, after excluding idle and scrapped assets, the fixed asset investment in the mine is RMB133,030,400, including shaft engineering RMB13,222,000, properties and buildings RMB78,581,300, and machinery and equipment RMB41,227,100. The net value of fixed asset investment is RMB77,426,400, including shaft engineering RMB9,644,900, properties and buildings RMB41,205,300, and machinery and equipment RMB26,576,100.

Subsequent Investment: According to the Feasibility Report, the additional investment for Pinggou Coal Mine is RMB1,287,565,900 (including tax). This includes shaft engineering investment of RMB542,600,100, buildings RMB107,589,400, machinery

and equipment RMB391,575,100, and other engineering construction costs RMB245,801,300 (including land use rights investment of RMB22,866,000). After excluding land use rights investment and apportioning other engineering construction costs across the three projects (shaft engineering, buildings, and machinery and equipment), the new investment totals RMB1,264,699,900, including shaft engineering RMB658,715,300, buildings RMB130,613,300, and machinery and equipment RMB475,371,300.

Intangible Asset Investment: According to the Feasibility Report, the subsequent investment for land use rights is RMB22,866,000, to be invested in 2026.

Total costs and operating costs

Since Pinggou Coal Mine is a suspended mine and has no recent financial data, the cost expenses for this appraisal mainly refer to the Feasibility Report, with individual parameters determined according to the *Guidelines on Determining Mining Rights Appraisal Parameters* and relevant national financial and tax regulations. These are used to estimate the mining and selection costs for the future production period after the valuation benchmark date. The cost accumulation for this appraisal uses the "Cost Element Method". The explanation for the values of each parameter is as follows:

Purchased Material Costs: According to the Feasibility Report, the design mining unit's purchased material cost is RMB13.17 per tonne (excluding tax). Therefore, this appraisal determines that the unit purchased material cost for future years will be RMB13.17 per tonne.

Purchased Fuel and Power Costs: According to the Feasibility Report, the unit purchased fuel and power cost for normal production years is RMB39.44 per tonne.

Employee Compensation: According to the Feasibility Report, the design staff quota is 373 persons, including 292 production staff and 81 management staff. According to the enterprise's forecast data, the average employee compensation for production staff in 2035 is RMB403,300 per year per person, and for management staff, it is RMB610,400 per year per person. Based on these figures, the annual employee compensation for normal production years is RMB167,192,700, with unit compensation at RMB92.88 per tonne.

Depreciation Costs: After calculations, the annual depreciation cost for 2035 is RMB42,850,800, with unit depreciation at RMB23.81 per tonne.

Maintenance and renovation fees and shaft engineering funds: According to the *Administrative Measures for the Extraction and Use of Coal Production Safety Expenses* and the Notice on *Certain Provisions for Regulating the Administration of Coal Mine Maintenance and Renovation Fees* (C.J. [2004] No. 119), this project has a maintenance and renovation fee of RMB7.00 per tonne of coal, with a shaft engineering fund of RMB2.50 per tonne. The updated maintenance and renovation fee is set at RMB3.50 per tonne, and the depreciation-related maintenance and renovation fee is also RMB3.50 per tonne.

Safety fees: According to the *Administrative Measures for the Collection and Utilization of Enterprise Work Safety Funds* (C.Z. [2022] No. 136), the safety fee for the appraised entity in this project is set at RMB50.00 per tonne.

Repair Costs: This appraisal estimates repair costs based on 3.00% of the original value of machinery and equipment. Thus, the normal year's repair cost is RMB13,857,300, with unit repair cost at RMB7.70 per tonne.

Equipment Leasing Fees: The Pinggou Coal Mine uses leased equipment for comprehensive mining faces, mining faces, and underground transport vehicles. According to the Feasibility Report, the design unit's leasing fee is RMB27.66 per tonne. Based on this, the unit leasing fee for future years is also determined to be RMB27.66 per tonne.

Environmental Management and Land Reclamation Fees: According to the *Geological Environmental Protection and Land Reclamation Plan for Pinggou Coal Mine of Shenhua Group Haibowan Mining Co., Ltd.* compiled by the China Coal Science and Technology Research Institute in January 2019, the design static investment for environmental restoration and management is RMB66,058,300, and the land reclamation static investment is RMB50,132,800, totaling RMB116,191,100. This investment corresponds to a recoverable coal amount of 12.60 million tonnes, with a unit cost for environmental restoration and land reclamation of RMB9.22 per tonne.

Amortization Costs: Amortization costs account for the amortization of land use rights. As mentioned above, the land use rights investment as of the valuation benchmark date is RMB1,424,000. Given that the remaining life is 8.57 years, which is shorter than the appraisal service life, the amortization is calculated over 8.57 years. Additionally, the future land use rights investment is RMB22,866,000, and the amortization will be calculated over the mine's remaining service life. The annual amortization cost is RMB813,300 (= RMB1,424,000 ÷ 8.57 + RMB22,866,000 ÷ 35.33), corresponding to a unit amortization cost of RMB0.45 per tonne.

Other Expenses: The unit other manufacturing expenses are determined to be RMB10.00 per tonne in this appraisal.

Financial Expenses: According to the *Guidance on Determining Mining Rights Appraisal Parameters*, the financial expenses for this project are calculated to be RMB1.94 per tonne in this appraisal according to the calculation.

Total costs refer to the sum of all cost expenses. Operating costs refer to the total costs excluding depreciation costs, depreciation-related maintenance and renovation fees, shaft engineering fund, amortization fees, and financial costs.

For 2035, the unit total cost is RMB285.77 per tonne, with the unit operating cost at RMB253.57 per tonne; the annual total cost is RMB514,380,500, and the annual operating cost is RMB456,432,000.

Discount rate: According to the *Guidance on Determining Mining Rights Appraisal Parameters*, the basic composition of the discount rate is: Discount rate = risk-free rate of return + risk premium

The risk-free rate of return is determined as 1.70%, based on the yield to maturity of 10-year government bonds disclosed by the WIND Information System on the valuation benchmark date.

According to the *Guidance on Determining Mining Rights Appraisal Parameters*, the risk premium rate is the sum of the exploration and development stage risk premium rate, industry risk premium rate, and financial and operational risk premium rate.

Pinggou is a technically transformed and suspended mine, with only part of the original assets in use, most of which are new constructions. Considering these factors, the risk premium rate for the exploration and development stage is set at 1.00%. The range for the industry risk premium rate is between 1.00% and 2.00%, and in this appraisal, the industry risk premium rate is set at 2.00%. The range for the financial and operational

risk premium rate is 1.00% to 1.50%. In this appraisal, the financial and operational risk premium rate is set at 1.50%, and the other risk premium rate is set at 2.00%.

Having regard to the discount rate range and the mine's development stage, the discount rate adopted for this appraisal is 8.20%.

After due diligence and an analysis of the local coal market, the appraisers selected appropriate appraisal methods and parameters based on the principles and procedures for mining rights appraisal. The appraised value of the "Shenhua Group Haibowan Mining Co., Ltd. Pinggou Coal Mine Mining Rights" as of July 31, 2025, is estimated to be RMB152,008,800.

(2) Exploration rights

Due to the inability to obtain the necessary geological survey, preliminary design, mine area general plan, formal feasibility report, and other documents required for mining rights appraisal, it is not possible to model and calculate the market value of the exploration rights as of the valuation benchmark date according to mining rights appraisal standards and theories. Therefore, the related costs for exploration rights are retained based on the audited book value. The book value of the exploration rights is RMB0.00, and the appraised value is RMB0.00.

(3) Mining rights usage fees

Some mining rights holders collect "mining rights usage fees" by granting mining rights to subsidiaries for extraction and operation. This appraisal does not consider projected future cash flows from mining rights at the rights holders' level, assigning a valuation of zero. Instead, it calculates the mining rights usage fee income solely based on the unit tonnage fee charged and expected production volume. After deducting applicable income tax expenses, the appraisal value of the "mining rights usage fees" is calculated by discounting using the discount rate adopted for the mining rights appraisal. The appraised value of the mining rights usage fee is RMB1,957,695,200.

(4) Hazardous area treatment projects

The environmental hazard management projects included in this appraisal scope include the Comprehensive Disaster Management Project for the Goaf Area at Suhaitu Coal Mine and the Hazard Management Project of Eastern Part of Pingou Coal Mine Section III. According to the *Preliminary Design Optimization of Comprehensive Disaster Management Project for the Goaf Area at Suhaitu Coal Mine* and the *Implementation Plan for Hazard Management Project of Eastern Part of Pingou Coal Mine Section III of CHN Energy Wuhai Energy Co., Ltd.*, the future benefits and risks of the hazard management projects can be quantified in monetary terms, meeting the technical and economic parameters required for the income approach appraisal method—discounted cash flow method. Thus, this appraisal adopts the discounted cash flow method. The calculation formula is as follows:

$$P = \sum_{t=1}^{n} (CI - CO)_t \bullet \frac{1}{(1+i)^t}$$

Where: P — Hazard management project appraisal;

CI — Annual cash inflows;

CO — Annual cash outflows;

i — Discount rate;

t — Year number (t = 1, 2, 3, …, n);

n — Appraisal calculation period.

Specific appraisal indicators and parameters

Comprehensive Disaster Management Project for the Goaf Area at Suhaitu Coal Mine

Appraisal indicators and parameters

The recoverable coal volume and technical parameters for the treatment area used in this appraisal are based on the *Preliminary Design Optimization of Comprehensive Disaster Management Project for the Goaf Area at Suhaitu Coal Mine of Shenhua Wuhai Energy* (hereinafter referred to as the "Preliminary Design Optimization") issued by Inner Mongolia Coal Mine Design Institute Co., Ltd., among others. Financial data are mainly based on the cost forecasts and actual financial data provided by Suhaitu Coal Mine.

Treatment plan and forecast period

According to the *Notice on Issuing the Implementation Plan for Delayed and Proposed Open-pit Coal Mine Goaf Area Disaster Treatment Projects in Inner Mongolia* (N.N.Y.M.K.Z.[2025] No. 617), the Suhaitu Coal Mine goaf area project cannot be completed on schedule due to the late start, suspension for fossil protection, and other reasons. The project has been appropriately extended until the end of 2026 to complete backfilling, reclamation, and acceptance. The project forecast period extends until the end of 2026.

Recoverable Coal Volume and Raw Coal Production

According to the optimised preliminary design, the estimated stripping volume in the treatment area for 2025 is 94.8 million cubic meters, with an estimated recovery of 7.50 million tonnes of residual coal. According to Suhaitu Coal Mine's 2026 production schedule, the estimated stripping volume for 2026 is 47 million cubic meters, with an estimated recovery of 4.70 million tonnes of residual coal. Thus, the estimated raw coal production from August to December 2025 is 2,826,400 tonnes, and the estimated raw coal production for 2026 is 4.70 million tonnes.

Raw coal sales price

Considering national policy requirements, the scarcity of coking coal, coal price trends, and the estimated service life of the coal mine in Wuhai, the long-term coal price for future years in this appraisal is forecasted using the average historical price for the first three years prior to the valuation benchmark date. Given the differences in long-term coal price forecasts and current market performance, this appraisal uses a transitional price to smooth the coal price to a long-term stable price, with the forecasted price for August–December 2025 and 2026 set at the average achieved price of RMB441 per tonne from January to July of the same years.

Existing Fixed Assets

According to the *Guidance on Determining Mining Rights Appraisal Parameters*, fixed asset investment for this project is mainly based on the "Non-Current Asset Appraisal Summary," "Fixed Asset Appraisal Summary," and "Construction in Progress Appraisal Summary" in the Assets Appraisal Detail Sheet for Suhaitu Coal Mine.

Fixed Asset Investment: The fixed asset investment (including construction in progress)

for this project is RMB144,695,300 (including buildings RMB100,902,900, machinery and equipment RMB43,792,500), with a net value of RMB91,396,900 (including buildings RMB65,817,400, machinery and equipment RMB25,579,500). The subsequent investment in construction in progress is RMB71,728,900, including buildings and structures of RMB40,486,400, and machinery and equipment of RMB31,242,500.

Intangible Asset Investment: The land use rights for Suhaitu Coal Mine are valued at RMB1,232,700.

Total costs and operating costs

For employee compensation, analysis and forecasts are mainly based on the future number of employees and average compensation levels provided by the appraised entity.

For materials, repair costs, transport, water, utilities, site rental, specialised services, and environmental management costs, the analysis and forecast are mainly based on historical annual levels, combined with expected future production changes.

Safety fees, maintenance and renovation fees, and shaft engineering funds are forecasted according to document standards.

Mining engineering fees, outsourced business fees, open-pit engineering fees, and stripping costs are mainly blasting and stripping fees, which will be forecasted based on the expected raw coal output and historical unit costs.

Depreciation and amortisation fees, based on the *Guidance on Determining Mining Rights Appraisal Parameters*, suggest using the straight-line depreciation method over the estimated asset life. The depreciation period should not be shorter than the minimum depreciation period stated, and it can be determined based on properties and buildings and machinery and equipment.

Management expenses

Management expenses mainly include employee compensation, amortisation of intangible assets, soil and water conservation compensation, and other costs.

Employee compensation is forecasted based on the future number of management personnel and their average compensation levels.

Amortisation of intangible assets is mainly for land use rights, with reference to the *Guidelines for Appraisal Methods Based on Income Approach* and the *Guidance on Determining Mining Rights Appraisal Parameters*, and the amortisation period should be based on the remaining life of the land use rights. If the remaining life of the land use rights is greater than the appraisal period, the appraisal period will be used as the amortisation period. Other intangible assets can be amortised over 10 years or the mine's service life (the appraised service life). Therefore, land use rights are amortised based on the appraisal period.

Soil and water conservation compensation is calculated according to the Notice on *Implementation Measures for the Collection and Use of Soil and Water Conservation Compensation Fees in Inner Mongolia* (N.C.F.S.G. [2015] No. 18), with a fee of RMB2.00 per tonne of non-petroleum and non-natural gas mineral resources extracted.

Selling expenses

According to the supplementary agreement of the "2025 Agency Sales Contract," raw

coal from Suhaitu Coal Mine will be sold by the CHN Energy Wuhai Energy Co., Ltd. sales centre, and the sales agency fee is 1% of the actual settlement price, excluding railway handling charges (excluding tax). Therefore, the sales expenses in this appraisal are calculated at 1% of the sales revenue.

R&D expense

According to the "Expected Subsequent R&D Expenses for Wuhai Energy Co., Ltd.," future R&D expenses are estimated to be 0.16% of sales revenue.

Financial expenses

Based on the *Chinese Mineral Rights Appraisal Standards*, financial expenses are recalculated according to relevant regulations. According to the *Guidance on Determining Mining Rights Appraisal Parameters*, financial expenses are calculated based on the interest on working capital loans. Assuming that 70% of the working capital in future production years is bank loans, the loan interest rate is based on the one-year loan market quoted rate (LPR) of 3.00%, with simple interest applied.

Discount rate

According to the *Guidance on Determining Mining Rights Appraisal Parameters*, the basic composition of the discount rate is: Discount rate = risk-free rate of return + risk premium

The risk-free rate of return is determined as 1.70%, based on the yield to maturity of 10-year government bonds disclosed by the WIND Information System on the valuation benchmark date.

The risk premium rate is estimated using the "Risk Accumulation Method" as outlined in the *Guidance on Determining Mining Rights Appraisal Parameters*. The "Risk Accumulation Method" quantifies and accumulates the risk premium rate requirements for various risks. The main risks faced in mineral exploration and development include exploration and development stage risks, industry risks, financial and operational risks, and social risks. This mine is an operating mine, and the exploration and development stage risk premium rate is between 0.15% and 0.65%. In this appraisal, the risk premium rate for the exploration and development stage is set at 0.60%. The industry risk premium rate is between 1.00% and 2.00%. In this appraisal, the industry risk premium rate is set at 2.00%. The financial and operational risk premium rate ranges from 1.00% to 1.50%, and in this appraisal, it is set at 1.50%. This appraisal considers other individual risks, and based on the actual situation of the mine, the individual risk premium rate is set at 2.00%.

Having regard to the discount rate range and the mine's development stage, the discount rate adopted for this appraisal is 7.80%.

It is estimated that the present value of the net cash flow for the Suhaitu Coal Mine Goaf Area Disaster Comprehensive Treatment Project as of July 31, 2025, is RMB1,472,325,200. Therefore, the appraised value of the Suhaitu Coal Mine Goaf Area Disaster Comprehensive Treatment Project as of July 31, 2025, is RMB1,472,325,200.

As of the valuation benchmark date, the mining rights appraisal results are RMB4,270,470,100, of which the mining rights amount to RMB185,920,800, exploration rights are RMB0.00 million, the mining rights usage fee is RMB1,957,695,200, and the hazard management project is RMB2,126,854,000. The

appraisal increment is RMB2,171,744,400. Reason for the appraisal increment: The book value primarily reflects the amortised value of the mining rights and includes provisions for impairment. In this appraisal, the appraised value of the mining rights held by the property owner is zero. Additionally, the coal resource usage fee is calculated based on the unit fee per tonne and the expected production volume, with income tax expenses deducted. The "coal resource usage fee" appraisal value is then discounted using the discount rate applied in the mining rights appraisal, resulting in an appraisal increment.

8. **Other assets and liabilities**

The asset appraisal personnel verified the detailed lists and relevant materials provided by the appraised entity, cross-checking the book values. The appraisal values were determined based on the audited book values or the actual liabilities or equity that the appraised entity is responsible for or entitled to.

Of which: The book value of current assets is RMB15,647,209,700, with an appraised value of RMB15,646,138,400, reflecting an impairment rate of 0.01%; the book value of other non-current assets is RMB178,720,500, with an appraised value of RMB193,011,900, reflecting an appreciation rate of 8.00%. The appreciation is due to patent assets being off-balance-sheet assets with no book value, and the book value of software being amortised value, with no amortisation considered in the appraisal; the book value of current liabilities is RMB6,962,592,200, with an appraised value of RMB6,962,592,200; the book value of non-current liabilities is RMB4,833,919,900, with an appraised value of RMB4,762,021,000, reflecting an impairment rate of 1.49%. The impairment is due to the appraisal of liabilities based on actual obligations of the enterprise.

After calculation, as of the valuation benchmark date:

(A) The total equity appraisal value of Wuhai Energy shareholders = current assets (RMB15,646,138,400) + non-current assets (including long-term equity investments + other equity instrument investments + buildings and structures as fixed assets + shaft engineering + equipment as fixed assets + construction in progress + usage rights assets + land use rights + mining rights + long-term prepaid expenses + other non-current assets) = (RMB3,960,458,900 + RMB1,474,600 + RMB18,448,500 + RMB0.00 + RMB539,277,400 + RMB1,111,896,200 + RMB18,728,500 + RMB199,205,300 + RMB4,270,470,100 + RMB30,000 + RMB172,778,800) - current liabilities (RMB6,962,592,200) - non-current liabilities (RMB4,762,021,000) = RMB14,214,293,300.

(B) The book value of Wuhai Energy shareholders' total equity = current assets (RMB15,647,209,700) + non-current assets (including long-term equity investments + other equity instrument investments + buildings and structures as fixed assets + shaft engineering + equipment as fixed assets + construction in progress + usage rights assets + land use rights + mining rights + long-term prepaid expenses + other non-current assets) = (RMB1,259,903,600 + RMB871,700 + RMB463,020,800 + RMB881,400 + RMB1,089,186,300 + RMB1,091,474,300 + RMB18,728,500 + RMB204,493,400 + RMB2,098,725,600 + RMB511,800 + RMB158,608,600) - current liabilities (RMB6,962,592,200) - non-current liabilities (RMB4,833,919,900) = RMB10,237,103,600.

IV. Income Approach

i. Key assumptions

1. It is assumed that all appraisal targets are in the process of being traded, and the appraisers simulate the market based on the transaction conditions of the appraised assets;

2. It is assumed that for assets traded in the market, or assets to be traded in the market, both parties in the transaction have equal standing and ample opportunity and time to access market information. The transactions are voluntary and rational, and the parties can make rational judgments about the asset's function, purpose, and transaction price;

3. It is assumed that the appraised assets will continue to be used for their current purposes and in their current manner;

4. It is assumed that there will be no significant changes to the relevant national laws, regulations, and policies or the macroeconomic situation, and that the political, economic, and social environment in the regions of the parties involved in the transaction will not change significantly;

5. Given the actual status of the assets on the valuation benchmark date, it is assumed that the company will continue operations;

6. It is assumed that there will be no significant changes in the interest rates, exchange rates, tax bases, tax rates, policy-based collection fees, or other related factors affecting the appraised entity after the valuation benchmark date;

7. It is assumed that the management of the appraised entity after the valuation benchmark date will remain responsible and stable, with the ability to perform their duties;

8. Unless otherwise stated, it is assumed that the company fully complies with all relevant laws and regulations;

9. It is assumed that after the valuation benchmark date, there will be no force majeure or unforeseen factors that cause significant adverse effects on the appraised entity;

10. It is assumed that after the valuation benchmark date, the accounting policies used by the appraised entity and those used to prepare this asset appraisal report will remain consistent in significant aspects;

11. It is assumed that after the valuation benchmark date, the scope and methods of the appraised entity's operations will remain the same, based on the current management practices and level;

12. It is assumed that after the valuation benchmark date, the appraised entity's cash inflows and cash outflows will be at an average rate;

13. It is assumed that after the valuation benchmark date, the appraised entity's products or services will maintain their current market competitiveness;

14. It is assumed that the production and sales of commercial coal in future years would achieve a balance between production and sales;

15. It is assumed that during the appraisal calculation period, the unit cost for environmental restoration and land reclamation would be equal to the extracted and spent amounts.

16. It is assumed that the mineral resources reserves reviewed within the mining licence will form the basis for the mining rights, and that the mining licence can be smoothly renewed in the future;

17. As of the valuation benchmark date, the appraised entity enjoys the preferential enterprise income tax policy for the Western Development, with enterprise income tax levied at a rate of 15% from 1 January 2021 to 31 December 2030. This appraisal assumes that after the preferential enterprise income tax policy for the Western Development expires, a 25% tax rate will be applied;

18. It is assumed that CHN Energy Wuhai Energy Co., Ltd. will continue to charge coal resource usage fees to Wuhai Lutian Mining Co., Ltd., Guoneng Wuhai Energy Wuhushan Mining Co., Ltd., Guoneng Wuhai Energy Huangbaici Mining Co., Ltd., and Wuhai Gongwusu Coal Industry Co., Ltd. at the current level;

19. It is assumed that Shenhua Group Haibowan Mining Co., Ltd. Pinggou Coal Mine will complete the technological transformation and reach production capacity by 2030, and Shenhua Group Haibowan Mining Co., Ltd. Gongwusu Coal Mine Shaft No. 3 will complete the technological transformation and reach production capacity by 2029.

ii. Appraisal model

1. Basic model

The income approach used in this appraisal is the discounted cash flow (DCF) method to indirectly determine the entire shareholders' equity by appraising the overall value of the enterprise. The overall value of the enterprise consists of the value of operating assets generated from normal business activities and the value of non-operational assets unrelated to normal business activities. For the determination of the value of operational assets, the Free Cash Flow Discount Model is employed, which uses the future free cash flows of the enterprise for several years as a basis, discounted at an appropriate discount rate and then summed up. The calculation model is as follows:

Entire shareholders' equity value = Enterprise overall value - Interest-bearing debt value

RMB12,557,566,000 = RMB12,557,566,000 - RMB0.00 million

(1) Enterprise overall value

The enterprise overall value refers to the sum of the entire shareholders' equity and the interest-bearing debt value. According to the asset allocation and usage situation of the appraised entity, the formula for calculating the enterprise overall value is as follows:

Enterprise overall value = Operating asset value + Surplus asset value + Non-operating asset value - Non-operating liability value + Long-term equity investment value

The total enterprise value of Wuhai Energy is RMB-2,095,443,100 + RMB2,810,742,600 + RMB11,222,387,100 - RMB3,067,661,100 + RMB3,961,933,500

= RMB12,557,566,000

a) Operating asset value

Operating assets are those related to the appraised entity's production and business operations, which are involved in the forecast of the enterprise free cash flow after the valuation benchmark date.

b) Surplus asset value

Surplus assets are those that exceed the enterprise's operational needs as of the valuation benchmark date, and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The appraised entity's surplus assets include cash. The surplus assets in this appraisal are appraised using the cost method.

c) Value of non-operating asset and liabilities

Non-operating assets and liabilities are those that are unrelated to the appraised entity's business operations and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The non-operational assets and liabilities of the appraised entity include accounts receivable, other receivables, inventories and fixed assets in abnormal condition, accounts payable, and other payables. The cost method was adopted for this appraisal.

d) Long-term equity investment value

Long-term equity investments refer to the external equity investments made by the enterprise as of the valuation benchmark date. The entire shareholders' equity of the invested entity, as confirmed using an appropriate appraisal method, is multiplied by the shareholding percentage to determine the long-term equity investment value.

(2) Interest-bearing debt value

Interest-bearing debt refers to liabilities that the appraised entity must pay interest on as of the valuation benchmark date . As of the valuation benchmark date, the appraised entity has no interest-bearing debt.

2. Income indicators

In this appraisal, the formula for calculating the value of operating assets is as follows:

$$P = \sum_{i=1}^{n} \frac{F_i}{(1+r)^i} + \frac{F_n}{r \times (1+r)^n}$$

Wherein: P: The value of the enterprise's operating assets as of the valuation benchmark date;

F_i: The expected free cash flow of the enterprise in the i-th year after the valuation benchmark date;

F_n: The expected free cash flow of the enterprise at the end of the detailed forecast period;

r: The discount rate (weighted average cost of capital, WACC) is 8.49%;

n: The detailed forecast period;

i: The i-th year of the detailed forecast period.

The free cash flow of the enterprise is calculated as follows:

Enterprise free cash flow = Earnings before interest and taxes (EBIT) - Depreciation and amortisation - capital expenditures - Increase in working capital

3. Discount rate

Among them, the discount rate (weighted average cost of capital, WACC)

The calculation formula is as follows:

$$WACC = K_e \times \frac{E}{E + D} + K_d \times (1 - t) \times \frac{D}{E + D}$$

Where: ke: Cost of equity capital is 11.87%;

kd: The cost of debt capital (interest-bearing debt) is 3.50%.

E: Market value of equity;

D: Market value of debt;

t: Corporate income tax rate is 25%.

The cost of equity capital is calculated using the Capital Asset Pricing Model (CAPM). The calculation formula is as follows:

$$K_e = r_f + MRP \times \beta_L + r_c$$

Where: rf: As the possibility of not being redeemable upon maturity is minimal and can be omitted, yield of state bond is usually considered as risk-free. According to information disclosed by the WIND Information System, the yield of to maturity of 10-year government bonds as at the valuation benchmark date is 1.7044%, this valuation report adopted 1.7044% as the risk-free yield;

MRP: Market risk premium is the difference between the market rate of return on investment and the risk-free rate of return. In particular, the market rate of return on investment is determined by comprehensively analysing the weighted average of the annualised weekly returns from 1992 to the valuation benchmark date selected on the basis of the stock trading price indices of the Shanghai Stock Exchange and Shenzhen Stock Exchange. As calculated, the market rate of return on investment is 8.36%. The yield to maturity on 10-year treasury bonds of 1.70% on the valuation benchmark date has been taken as the risk-free rate of return. The market risk premium is 6.66%;

β_L: The system risk coefficient of equity is 1.1199;

r_c: Company-specific risk adjustment coefficient is 3.00%.

A.5 Main Evaluation Materials of Pingzhuang Coal

I. Selection of Appraisal Methods

The methods selected for this appraisal are the income approach and the asset-based approach.

Reason for selecting the asset-based approach: As of the valuation benchmark date, the book value of the assets and liabilities within the appraisal scope has already been audited. Each asset and liability of the appraised entity can be identified. The identifiable assets and liabilities can each be individually assessed using an appropriate appraisal method, thus meeting the conditions for applying the asset-based approach.

Reason for selecting the income approach: The appraised entity has the foundation and conditions for ongoing operations, with standardised accounting practices, clear management, stable and defined business sources. The management has detailed plans for the current operations and future development of the company. The future expected income and operational risks can be reasonably predicted, meeting the conditions for using the income approach for appraisal.

Reason for not selecting the market approach: The market approach relies on the existence of an active public market with sufficient market data and comparable transaction cases. The appraised entity is a non-listed company. Listed companies in the same industry differ significantly from the appraised enterprise in terms of business structure, corporate scale, asset allocation and utilisation, operational stage, growth potential, operational risks, financial risks, and others. Furthermore, there were few comparable transactions, mergers, or acquisitions within the same industry near the valuation benchmark date. Reliable operational and financial data from comparable transactions are difficult to obtain, making it impossible to calculate appropriate value ratios. Therefore, the market approach was not adopted for this appraisal.

After applying the income approach, the value of the entire shareholders' equity was RMB 5,088,077,400, and after applying the asset-based approach, the value of the entire shareholders' equity was RMB5,583,809,300.

Unless otherwise stated, all amounts in this summary are expressed in Renminbi (RMB).

There is a certain discrepancy between the appraisal results of the income approach and the asset-based approach. The main reason for the discrepancy is the different perspectives considered by the two methods.

The income approach is an appraisal methodology that determines the value of the subject by discounting the anticipated future earnings of the entity being appraised, thereby evaluating it from the prospective of future profitability. Conversely, the asset-based approach is an appraisal methodology that determines the value of the subject by reasonably appraising the company's various assets and liabilities, thus considering it from the perspective of asset replacement or reacquisition. The appraised entity's core business is coal mining and sales, and its key assets are mining rights. In this appraisal, the asset-based approach uses the discounted cash flow method to assess the mining rights, which aligns closely with the approach used in the income approach. Moreover, the appraisal of the mining rights is based on the coal market conditions, using objective market benchmarks. The results from the asset-based approach reflect the contribution

of the mining rights to the company's future earnings, therefore the asset-based approach can more objectively reflect the market value of the appraised entity.

II. Key Appraisal Assumptions

The assumptions for the analysis and estimates in this asset appraisal report are as follows:

1. It is assumed that all appraisal targets are in the process of being traded, and the appraisers simulate the market based on the transaction conditions of the appraised assets;
2. It is assumed that for assets traded in the market, or assets to be traded in the market, both parties in the transaction have equal standing and ample opportunity and time to access market information. The transactions are voluntary and rational, and the parties can make rational judgments about the asset's function, purpose, and transaction price;
3. It is assumed that the appraised assets will continue to be used for their current purposes and in their current manner during the service lives of the mines;
4. It is assumed that there will be no significant changes to the relevant national laws, regulations, and policies or the macroeconomic situation, and that the political, economic, and social environment in the regions of the parties involved in the transaction will not change significantly;
5. Given the actual status of the assets on the valuation benchmark date, it is assumed that the company will continue operations during the service lives of the mines;
6. It is assumed that there will be no significant changes in the interest rates, exchange rates, tax bases, tax rates, policy-based collection fees, or other related factors affecting the appraised entity after the valuation benchmark date;
7. It is assumed that the management of the appraised entity after the Valuation benchmark date will remain responsible and stable, with the ability to perform their duties;
8. Unless otherwise stated, it is assumed that the company fully complies with all relevant laws and regulations;
9. It is assumed that after the valuation benchmark date, there will be no force majeure or unforeseen factors that cause significant adverse effects on the appraised entity;
10. It is assumed that after the valuation benchmark date , the accounting policies used by the appraised entity and those used to prepare this asset appraisal report will remain consistent in significant aspects;
11. It is assumed that after the valuation benchmark date, the scope and methods of the appraised entity's operations will remain the same, based on the current management practices and level;
12. It is assumed that after the valuation benchmark date, the appraised entity's cash inflows and cash outflows will be at an average rate;
13. It is assumed that the mineral resources reserves reviewed within the mining licence will form the basis for the mining rights, and that the mining licence can be smoothly renewed in the future;
14. It is assumed that the production and sales of commercial coal in future years would

achieve a balance between production and sales;

15. It is assumed that during the appraisal calculation period, the unit cost for environmental restoration and land reclamation would be equal to the extracted and spent amounts;

16. As of the valuation benchmark date, Inner Mongolia Pingxi Baiyinhua Coal Industry Co., Ltd. enjoys the preferential enterprise income tax policy for the Western Development, with enterprise income tax levied at a rate of 15% from 1 January 2021 to 31 December 2030. This appraisal assumes that after the preferential enterprise income tax policy for the Western Development expires, a 25% tax rate will be applied;

17. It is assumed that starting from 2067, Inner Mongolia Pingxi Baiyinhua Coal Industry Co., Ltd. will begin to pay mining rights transfer income annually in accordance with the provisions of the Notice on Printing and Distributing the Mineral Rights Transfer Income Collection Method (C.Z. [2023] No. 10) issued by the Ministry of Finance, Ministry of Natural Resources, and State Taxation Administration;

18. The mining right for Baiyinhua No. 1 Coal Mine within this appraisal scope currently has a production capacity indicator gap of five million tonnes per year. It is assumed in this appraisal that the enterprise will acquire the corresponding production capacity indicators on a compensatory basis, with a cash outflow of RMB140 per tonne (inclusive of tax) considered in Phase I.

III. Asset-based Approach

1. Long-term equity investments

An overall appraisal was conducted for long-term equity investments in wholly-owned and controlling subsidiaries. The appraisers first appraise the entire shareholders' equity value of the investee, then multiply it by the shareholding percentage to determine the value of the part of the shareholder's equity.

No.	Name of investee	Appraisal methods	Methods for determining conclusions
1	Inner Mongolia Pingxi Baiyinhu Coal Industry Co., Ltd.	Asset-based approach, income approach	Asset-based approach
2	Guodian Pingmei Nieleke Energy and Chemical Co., Ltd.	Asset-based approach	Asset-based approach
3	Guoneng Mengxi Mining Co., Ltd.	Asset-based approach, income approach	Asset-based approach
4	Pingneng (Xilin Gol) Coal Sales Co., Ltd.	Asset-based approach, income approach	Asset-based approach
5	Inner Mongolia Xilinhe Coal Chemical Co., Ltd.	Asset-based approach, income approach	Asset-based approach
6	Chifeng Mine Safety Inspection and Testing Co., Ltd.	Asset-based approach, income approach	Asset-based approach

After appraisal, the appraisal results and changes in value for long-term equity investments are as follows:

No.	Name of investee	Book value	Appraisal value	Appreciation rate (%)
1	Inner Mongolia Pingxi Baiyinhu Coal Industry Co., Ltd.	57,990.41	395,505.15	582.02
2	Guodian Pingmei Nieleke Energy and Chemical Co., Ltd.	19,687.64	19,687.65	0.00
3	Guoneng Mengxi Mining Co., Ltd.	23,064.95	23,417.40	1.53
4	Pingneng (Xilin Gol) Coal Sales Co., Ltd.	1,300.00	1,290.71	-0.71

No.	Name of investee	Book value	Appraisal value	Appreciation rate (%)
5	Inner Mongolia Xilinhe Coal Chemical Co., Ltd.	178,092.00	364,977.95	104.94
6	Chifeng Mine Safety Inspection and Testing Co., Ltd.	150.00	320.58	113.72
Total		**280,285.01**	**805,199.44**	**187.28.44**

(1) Inner Mongolia Pingxi Baiyinhua Coal Industry Co., Ltd. operates a mining right. The mining right asset group has appreciated in value, and the company's historical accumulated operating profits have increased the book value of the long-term equity investment by RMB 337,514,740.

(2) Guodian Pingmei Nieleke Energy and Chemical Co., Ltd. did not record an appraised appreciation or depreciation.

(3) Guoneng Mengxi Mining Co., Ltd. recorded an appraised appreciation of RMB3,524,500, which was due to the appreciation resulting from the reassessment of capital costs for construction in progress in the course of target company being under construction.

(4) Pingneng (Xilin Gol) Coal Sales Co., Ltd. recorded an appraised depreciation of RMB92,900, which was primarily due to the accumulated operating losses in historical years.

(5) Inner Mongolia Xilinhe Coal Chemical Co., Ltd. operates a mining right, which, after being appraised using the income approach, has an appreciation of RMB 1,868,859,500.

(6) Chifeng Mine Safety Inspection and Testing Co., Ltd. recorded an assessed appreciation of RMB1,705,800, which was primarily due to the book value of long-term equity investments being the historical investment cost, coupled with the company's accumulated historical operation as of the base date.

2. Fixed assets – buildings and structures

Based on the characteristics of the various types of building and structure assets, the appraised value type, data collection conditions, and other related factors, the cost method is primarily used for appraisal.

The cost method calculation formula is as follows:

Appraised value = Replacement cost × Composite depreciation rate

(1) Determination of replacement cost

Based on the characteristics, nature, and situation of the building and structure assets within the appraisal scope, the calculation formula for replacement cost in this appraisal is as follows:

Replacement cost = Construction and installation engineering cost + Pre-construction and other costs + Capital cost - Deductible VAT

① Construction and installation engineering costs

For large, valuable, and important buildings, the construction and installation engineering costs are determined using the preliminary and final budget adjustment method, which uses the quantities in the building's final budget as a basis and calculates the construction and installation engineering costs based on local standards and relevant fee documents.

For general buildings, or when final budget data is incomplete or the building's value is small and the structure is simple, the analogy method or unit cost method is used to determine the construction and installation engineering costs.

② Pre-construction and other costs

Pre-construction and other costs are calculated based on the engineering investment amount of the projects, in accordance with the fee standards set by the industry, national, or local government regulations. The rates and billing bases for various fees are as follows.

Calculation Table of Pre-construction and Other Costs for a Coal Preparation Plant (Exemplified by Yuanbaoshan Open-Pit Coal Mine)

No.	Cost name	Calculation basis	Rate%	VAT Input tax rate
1	Construction unit management fee	Construction and installation engineering costs	0.41%	/
2	Construction supervision fee	Construction and installation engineering costs	1.70%	6.00%
3	Engineering quality technical service fee	Construction and installation engineering costs	0.35%	6.00%
4	Feasibility study fee	Construction and installation engineering costs	0.25%	6.00%
5	Environmental impact assessment fee	Construction and installation engineering costs	0.18%	6.00%
6	Survey and design fee	Construction and installation engineering costs	2.90%	6.00%
7	Bidding agency service fee	Construction and installation engineering costs	0.07%	6.00%
8	Occupational health and safety assessment fee	Construction and installation engineering costs	0.20%	6.00%
9	Project insurance fee	Construction and installation engineering costs	0.30%	6.00%
10	Mine shaft location determination fee	Construction and installation engineering costs	/	6.00%
11	Joint trial operation fee	Construction and installation engineering costs	0.33%	/
12	Soil and water conservation evaluation fee	Construction and installation engineering costs	0.09%	6.00%
13	Geological disaster risk assessment fee	Construction and installation engineering costs	0.02%	6.00%
14	Pre-entry fee for production personnel	Construction and installation engineering costs	0.16%	/
Total		/	6.96%	/

Note: The total rate of the above-mentioned fees including VAT input tax amounts to 6.06%; for properties situated within the urban administrative planning zone, urban infrastructure supporting fees shall be calculated accordingly.

Calculation Table of Pre-construction and Other Costs for a Mining Enterprise (Exemplified by Yuanbaoshan Open-Pit Coal Mine)

No.	Cost name	Calculation basis	Rate%	VAT Input tax rate
1	Construction unit management fee	Construction and installation engineering costs	1.37%	/
2	Construction supervision fee	Construction and installation engineering costs	1.20%	6.00%
3	Engineering quality technical service fee	Construction and installation engineering costs	0.35%	6.00%
4	Feasibility study fee	Construction and installation engineering costs	0.07%	6.00%
5	Environmental impact assessment fee	Construction and installation engineering costs	0.05%	6.00%
6	Survey and design fee	Construction and installation engineering costs	2.40%	6.00%
7	Bidding agency service fee	Construction and installation engineering costs	0.02%	6.00%
8	Occupational health and safety assessment fee	Construction and installation engineering costs	0.20%	6.00%
9	Project insurance fee	Construction and installation engineering costs	0.30%	6.00%
10	Mine shaft location determination fee	Construction and installation engineering costs	0.00%	6.00%
11	Joint trial operation fee	Construction and installation engineering costs	0.21%	/
12	Soil and water conservation evaluation fee	Construction and installation engineering costs	0.08%	6.00%
13	Geological disaster risk assessment fee	Construction and installation engineering costs	0.01%	6.00%
14	Pre-entry fee for production personnel	Construction and installation engineering costs	0.18%	/
Total		/	6.44%	/

Note: The total rate of the above-mentioned fees including VAT input tax amounts to 4.68%; for properties situated within the urban administrative planning zone, urban infrastructure supporting fees shall be calculated accordingly.

Calculation Table of Pre-construction and Other Costs for a Non-mining Enterprise (Exemplified by Financial Department)

No.	Cost name	Calculation basis	Rate%	VAT Input tax rate
1	Consulting fee for early work	Construction and Installation Engineering Costs	0.18%	6.00%
2	Bidding agency service fee	Construction and installation engineering costs	0.08%	6.00%
3	Environmental impact assessment fee	Construction and installation engineering costs	0.04%	6.00%
4	Survey and design fee	Construction and Installation Engineering Costs	2.46%	6.00%
5	Project supervision fee	Construction and installation engineering costs	1.36%	6.00%
6	Project construction management fee	Construction and installation engineering costs	1.08%	/
Total		/	5.20%	/

Note: The total rate of the above-mentioned fees including VAT input tax amounts to 4.12%; for properties situated within the urban administrative planning zone, urban infrastructure supporting fees shall be calculated accordingly.

③ Capital costs

Capital costs are calculated based on the sum of construction and installation engineering costs, pre-construction and other costs, using uniform capital investment over the reasonable construction period. The calculation formula of capital costs is as follows:

Capital costs = (Construction and installation engineering costs + Pre-construction and other costs) × Reasonable construction period × Interest rate × 1/ 2

Based on the scale and nature of the construction project in which the appraised buildings and structures are located and the relevant construction period quotas, the reasonable construction period and interest rate for the subsidiaries of Inner Mongolia Pingzhuang Coal Group Co., Ltd. were determined by referring to the effective Loan Prime Rate (LPR) on the valuation benchmark date as published by the National Interbank Funding Centre authorised by the People's Bank of China, as detailed below:

No.	Company name	Reasonable construction period (year)	Interest rate
1	Railway Transport Branch of Inner Mongolia Pingzhuang Coal (Group) Co., Ltd.	2.5	3.19%
2	Hongmiao Coal Mine of Inner Mongolia Pingzhuang Coal (Group) Co., Ltd.	0.5	2.94%
3	Yuanbaoshan Open-cut Coal Mine of Inner Mongolia Pingzhuang Coal (Group) Co., Ltd.	2.0	3.13%
4	Gushan Coal Mine of Inner Mongolia Pingzhuang Coal Group Co., Ltd.	1.0	3.00%
5	Material Supply Branch of Inner Mongolia Pingzhuang Coal Group Co., Ltd.	0.5	2.94%
6	Hydro-power and Heat Supply Branch of Inner Mongolia Pingzhuang Coal (Group) Co., Ltd.	1.5	3.06%
7	Mining Engineering Branch of Inner Mongolia Pingzhuang Coal (Group) Co., Ltd.	1.5	3.06%
8	Financial Department of Inner Mongolia Pingzhuang Coal (Group) Co., Ltd.	2.0	3.13%
9	Senior Technical School of Inner Mongolia Pingzhuang Coal (Group) Co., Ltd.	1.0	3.00%
10	Rescue Team of Inner Mongolia Pingzhuang Coal (Group) Co., Ltd.	1.0	3.00%
11	Information Centre of Inner Mongolia Pingzhuang Coal (Group) Co., Ltd.	0.5	2.94%

④ Deductible VAT

According to relevant VAT documents, for those that qualify for VAT deduction, the replacement cost is reduced by the corresponding VAT.

(2) Determination of composite depreciation rate

① For important buildings (and structures), the economic service life, used lifespan, and on-site inspection of the structure, decoration, and auxiliary equipment are considered to determine the remaining useful life, which is then used to calculate the composite depreciation rate.

Composite depreciation rate = Remaining service life / (Remaining service life + Used lifespan) × 100%

For mining enterprises, the remaining service life of buildings is closely related to the mine's remaining service life. The remaining service life is determined based on the lower of the mine's remaining service life and the building's remaining economic service life.

② For low-value buildings (and structures), the composite depreciation rate is mainly determined based on the economic service life. The calculation formula is as follows:

Composite depreciation rate = (Economic service life - used lifespan) / Economic service life × 100%

For mining enterprises, the impact of the remaining service life of the mine should also be considered.

(3) Determination of appraised value

Appraised value = Replacement cost × Composite depreciation rate

Through appraisal, the appraised value for buildings and structures was RMB1,290,907,200, reflecting an appreciation of RMB60,434,200 compared to the book value of RMB230,473,000, resulting in an appreciation rate of 4.91%. The primary reasons for this appreciation are as follows:

The appreciation stems from the earlier construction period of buildings and structures, during which continuous increases in labor, material, and machinery costs contributed to the appreciation of the original appraised value.

The abovementioned appraised value includes the negative value of the mining rights for the Yuanbaoshan open-pit coal mine (specifically RMB-380,341,600), which has been listed under buildings and structures.

3. Fixed assets – equipment

Equipment assets include machinery, vehicles, and electronic devices. Based on the nature of this project and the characteristics of the equipment assets within the appraisal scope, for some older electronic devices (e.g., computers) and vehicles, where there is an active second-hand market, the appraised value is based on the second-hand or scrap value of similar equipment. For other equipment, which does not have independent profit-generating ability and where there are very few similar transaction examples, it is not suitable to apply the income approach or market approach for appraisal. Therefore, the cost method is used for these equipment appraisals. The cost method calculation formula is as follows:

Appraised value = Replacement cost × Depreciation rate

(1) Replacement cost

Based on the characteristics and nature of the equipment within this appraisal scope, as

well as the circumstances of the appraised entity, the calculation methods for the replacement costs of various types of equipment in this appraisal are as follows.

① Machinery and equipment

For equipment that requires installation, the replacement cost generally includes: Equipment purchase price, transport and handling fees, installation engineering fees, pre-construction and other costs, and the capital cost. For equipment that does not require installation, the replacement cost generally includes: Equipment purchase price and transport and handling fees. The calculation formula is as follows:

Equipment requiring installation replacement cost = Equipment purchase price + Transport and handling fees + Installation engineering fees + Pre-construction and other costs + Capital costs - Deductible VAT

Equipment not requiring installation replacement cost = Equipment purchase price + Transport and handling costs - Deductible VAT

A. Equipment purchase price

For major process equipment, the purchase price is primarily determined by consulting the market price as at the valuation benchmark date or referencing the contract price of similar equipment at the valuation benchmark date. For small equipment, the purchase price is determined by checking the market price information for the valuation benchmark date. For equipment with no market price information, the purchase price is determined by referencing the purchase price for similar equipment.

B. Transport and handling fees

If transport and handling fees are not included in the equipment purchase price, they are determined by referring to standard cost indicators from resources like the *Asset Appraisal Common Data and Parameters Handbook* and the *Mechanical Industry Construction Project Budgeting Method and Indices*, taking into account factors such as transportation distance, weight, and volume.

C. Installation engineering fees

For equipment that requires installation, the installation engineering fees are estimated using the unit price method, referring to similar equipment installation project budgets (preliminary or final) and other engineering documents, including the *Coal Mining Construction Project Cost Quotas* (NB/T 51063-2016) and other relevant standards, as well as recent local pricing information. Alternatively, the *Asset Appraisal Common Methods and Parameters Handbook* and the *Mechanical Industry Construction Project Budgeting Method and Indices* are used, combined with the scale and nature of the equipment installation work to determine the installation fee rate. The installation engineering fee calculation formula is as follows:

Installation engineering fee = Equipment purchase price × Installation engineering fee rate

For equipment where the purchase price includes installation engineering costs, or for equipment that does not require installation, installation engineering fees are not included.

D. Pre-construction and other costs

Pre-construction and other expenses shall be calculated based on the construction investment amount of the appraised entity, in accordance with the fee standards stipulated by the industry, national, or local government. The names, calculation bases, fee standards, and calculation grounds for pre-construction and other expenses are as follows:

Calculation Table of Pre-construction and Other Costs for a Coal Preparation Plant (Exemplified by Yuanbaoshan Open-Pit Coal Mine)

No.	Cost name	Calculation basis	Rate%
1	Construction unit management fee	Equipment Fee	0.41%
2	Construction supervision fee	Equipment Fee	1.70%
3	Engineering quality technical service fee	Equipment Fee	0.35%
4	Feasibility study fee	Equipment Fee	0.25%
5	Environmental impact assessment fee	Equipment Fee	0.18%
6	Survey and design fee	Equipment Fee	2.90%
7	Bidding agency service fee	Equipment Fee	0.07%
8	Occupational health and safety assessment fee	Equipment Fee	0.20%
9	Project insurance fee	Equipment Fee	0.30%
10	Mine shaft location determination fee	Equipment Fee	/
11	Joint trial operation fee	Equipment Fee	0.33%
12	Soil and water conservation evaluation fee	Equipment Fee	0.09%
13	Geological disaster risk assessment fee	Equipment Fee	0.02%
14	Pre-entry fee for production personnel	Equipment Fee	0.16%
Total			6.96%

(Pre-construction and other costs include VAT Input at a rate of 6.06%)

Calculation Table of Pre-construction and Other Costs for for a Mining Enterprise (Exemplified by Yuanbaoshan Open-Pit Coal Mine)

No.	Cost name	Calculation basis	Rate%
1	Construction unit management fee	Equipment Fee	1.37%
2	Construction supervision fee	Equipment Fee	1.20%
3	Engineering quality technical service fee	Equipment Fee	0.35%
4	Feasibility study fee	Equipment Fee	0.07%

4	Survey and design fee	Equipment fee	2.46%
5	Project supervision fee	Equipment fee	1.36%
6	Project construction management fee	Equipment fee	1.08%
7	Joint trial operation fee	Equipment fee	0.50%
Total		/	5.70%

(Pre-construction and other costs include VAT Input at a rate of 4.12%)

E. Capital costs

The capital costs are calculated based on the reasonable construction period of the engineering projects of the unit being appraised, using the Loan Prime Rate (LPR) for the corresponding period published by the National Interbank Funding Center on the valuation benchmark date. The total of the equipment purchase costs, transport and handling fees, installation fees, pre-construction and other costs is used as the base, with assumption that the capital costs calculated based on uniform capital investment. The calculation formula of capital costs is as follows:

Capital costs = (Equipment purchase price + Transport and handling costs + Installation engineering fees + Pre-construction and other costs) × Reasonable construction period × Annual loan interest rate / 2

The capital costs for each branch are as follows:

No.	Company name	Reasonable construction period (year)	Interest rate
1	Railway Transport Branch of Inner Mongolia Pingzhuang Coal (Group) Co., Ltd.	2.5	3.19%
2	Yuanbaoshan Open-cut Coal Mine of Inner Mongolia Pingzhuang Coal (Group) Co., Ltd.	2	3.13%
3	Hydro-power and Heat Supply Branch of Inner Mongolia Pingzhuang Coal (Group) Co., Ltd.	1.5	3.06%
4	Mining Engineering Branch of Inner Mongolia Pingzhuang Coal (Group) Co., Ltd.	1.5	3.06%
5	Financial Department of Inner Mongolia Pingzhuang Coal (Group) Co., Ltd.	2	3.13%
6	Senior Technical School of Inner Mongolia Pingzhuang Coal (Group) Co., Ltd.	1	3.00%
7	Rescue Team of Inner Mongolia Pingzhuang Coal (Group) Co., Ltd.	1	3.00%

F. Deductible VAT

According to the regulations in "C.SH [2008] No. 170", "C.SH. [2016] No. 36", "C.SH. [2018] No. 32", and the "Announcement No. 39 in 2019 of the Ministry of Finance, the State Taxation Administration and the General Administration of Customs", the input VAT includes VAT on the equipment purchase price (tax rate 13%), VAT on transport and handling fees (tax rate 9%), and VAT on pre-construction and other costs (tax rate of 6%).

② Vehicles

For vehicles, the replacement cost is determined by the market price on the valuation benchmark date, adding the vehicle purchase tax and other reasonable costs (such as licence fees). The calculation formula is as follows:

Replacement cost = Vehicle purchase price + Vehicle purchase tax + Licence fees and other costs - Deductible VAT

Where:

Vehicle purchase tax = vehicle purchase cost / (1 + 13%) × 10%

The vehicle purchase price is mainly determined by consulting local dealers or checking online for market prices; vehicle purchase tax is determined according to the *Vehicle Purchase Tax Law of the People's Republic of China*; licence fees and other costs are

determined based on local administrative fee standards and actual vehicle expenses.

③ Electronic equipment

For electronic equipment, the replacement cost is determined based on the market purchase price on the valuation benchmark date.

Replacement cost = Electronic equipment purchase price/1.13

(2) Determination of composite depreciation rate

① For specialised and general machinery, the depreciation rate is primarily determined based on the equipment's economic service life, used lifespan, and on-site inspections of the equipment's condition and technical status. The remaining service life is then calculated, and the composite depreciation rate is determined using the following formula:

Composite depreciation rate = Remaining service life / (Remaining service life + Used lifespan) × 100%

② For electronic equipment, office furniture, and other devices, the composite depreciation rate was mainly determined based on their economic service life and the results of on-site inspections. The calculation formula is as follows:

Age-based newness rate = (Economic lifespan - Years of use) / Economic lifespan × 100%

Composite depreciation rate = Age-based depreciation rate × Adjustment coefficient

③ For vehicles, according to the *Standard for Mandatory Scrapping of Motor Vehicles* (Order No. 12 of 2012 of Ministry of Commerce, National Development and Reform Commission, Ministry of Public Security, Ministry of Environmental Protection), the theoretical depreciation rate was determined using either vehicle mileage or service life, based on the lower of the two methods. For vehicles without a prescribed service life, the remaining service life method was used. Adjustments were made based on on-site inspection results. The calculation formula is as follows:

Composite depreciation rate = Depreciation rate × Adjustment coefficient

(3) Determination of the appraised value

Appraised value = Replacement cost × Composite depreciation rate

The appraised value of equipment-type assets was RMB984,789,600, representing an appreciation of RMB345,359,200 (or 54.01%) compared to its book value of RMB639,430,400. The primary reason for the appreciation is that the mines of the unit being appraised was established earlier, and the depreciation period recognized for the purchased equipment on the books is shorter than the economic useful life of the machinery and equipment.

4. Construction in progress

Based on the characteristics of construction in progress, the appraised value type, and data collection, the cost method was adopted for the appraisal.

(1) Completed projects

For projects where the main structure is already listed as fixed assets, they are incorporated into the main appraisal. Other completed projects are appraised according to the fixed asset appraisal method.

(2) Incomplete projects

For ongoing projects that started within six months of the valuation benchmark date, due to minor price changes, the appraisal is based on the book value of the ongoing construction after verification, and the residual value after deducting unreasonable expenses is used as the appraised value.

For ongoing projects that started more than six months before the valuation benchmark date, if the book value does not include capital costs, the capital costs are added based on the reasonable construction period. If the book value differs significantly from the price level on the valuation benchmark date, the construction costs are adjusted to the valuation benchmark date price level.

(3) Pure expense-based construction projects

Pure expense type ongoing projects have no physical entity. After verifying that the payments made are necessary for future projects or have actual value to the future owners, and confirming that there is no duplicate valuation with related asset projects, the book value after verification is used as the appraised value. Otherwise, the value is treated as zero.

The appraised value of construction in progress was RMB271,283,100, representing an impairment of RMB542,100 compared to its book value of RMB271,825,300, with an impairment rate of 0.20%. The primary reason for the impairment is attributed to the relocation and dismantling project of the diversion station, specifically, the demolition cost for the diversion station removal project was assessed as 0 in this appraisal.

5. Land use rights

According to the requirements of the *Asset Appraisal Practice Standards - Real Estate*, the main appraisal methods for land use rights include the market approach, income approach, hypothetical development method, cost method, and benchmark land price method. The appropriate appraisal method is selected based on the appraisal purpose, subject asset, value type, data collection conditions, and the applicability of the above basic appraisal methods.

In accordance with the characteristics of the land under valuation, the cost approaching method is adopted for the allocated land, while the benchmark land price coefficient correction method is adopted for the land transfer. The appraised value of intangible assets—land use rights—was RMB1,288,031,200, representing an appreciation of RMB1,226,662,000 compared to its book value of RMB61,369,200, resulting in an appreciation rate of 1,998.82%. The reason for the appreciation is primarily that the land use rights within the scope of this appraisal are predominantly allocated land, which carries no book value, thereby leading to the appreciation in land appraisal.

6. Mining rights

(1) Mining rights

Based on the appraisal objective of this project and the specific characteristics of the mining rights, the entrusted mining rights for appraisal exhibit a certain scale and independent profitability that can be quantified. Its future earnings and associated risks are measurable in monetary terms, and the geological research is highly advanced, with largely complete and reliable data. These reports and relevant data generally satisfy the requirements for applying the discounted cash flow method. In accordance with the

Basic Guidelines for Mining Rights Appraisal and the *Standards for Income Approach Appraisal Methods*, the discounted cash flow method is adopted for this appraisal project.

The calculation formula is as follows:

$$P = \sum_{t=1}^{n} (CI - CO)_t \bullet \frac{1}{(1+i)^t}$$

Where: P —Appraised value of mining rights;

CI—Annual cash inflow;
CO—Annual cash outflow;
i—Discount rate;

t—Year serial number (t=1, 2, 3, …, n);

n—Calculation period (in years).

Specific Appraisal Indicators and Parameters

A. Yuanbaoshan Open-Pit Coal Mine

Yuanbaoshan Open-Pit Coal Mine is currently in normal production. The resource reserves utilized in this appraisal are based on the *Verification Report on Coal Resource Reserves of Yuanbaoshan Open-Pit Coal Mine in Yuanbaoshan Coalfield, Chifeng City, Inner Mongolia Autonomous Region* (hereinafter referred to as the "Resource Reserve Verification Report") prepared by Exploration Team 104 of the Inner Mongolia Autonomous Region Coalfield Geological Bureau in February 2014, along with its *Mineral Resource Reserve Review Opinion* (hereinafter referred to as the "Review Opinion"), as well as the *2024 Annual Reserve Report of the Yuanbaoshan Open-Pit Coal Mine in Yuanbaoshan District, Chifeng City, Inner Mongolia Autonomous Region*, prepared by Exploration Team 129 of the China Coal Geology Bureau in January 2025 (hereinafter referred to as the "2024 Annual Reserve Report"). Other technical parameters are primarily based on the *Revised Preliminary Design Specification for Yuanbaoshan Open-Pit Coal Mine of Inner Mongolia Pingzhuang Coal Industry (Group) Co., Ltd.*, prepared by Shenyang Design and Research Institute Co., Ltd. of China Coal Technology and Engineering Group in June 2023 (hereinafter referred to as the "Preliminary Design"), and determined based on the company's actual data. The selection of other key technical and economic indicators and parameters is determined based on the *China Mining Rights Appraisal Standards*, other pertinent policies and regulations, technical and economic norms, and data available to the appraisers.

Explanations for the selection of each parameter:

Retained resource reserves as of the valuation benchmark date: Based on the Resource Reserves Verification Report and corresponding review opinions, as of December 31, 2013, the cumulative identified resource reserve of Yuanbaoshan Open-pit Coal Mine was 486.90 million tons, with the retained resource reserve totaling 415.60 million tons. Among the retained resource reserve, 410.07 million tons are for open-pit mining, and

5.53 million tons are for underground mining.

Based on the Resource Reserves Verification Report, annual mineral reserve reports have been developed for years. According to the 2024 Annual Mineral Reserve Report, as of December 31, 2024, the cumulative identified resource reserve of the mine was 486.90 million tons, and the retained resource reserve was 312.524 million tons. Specifically, the proven resource reserve (TM) is 139.5890 million tons, the controlled resource reserve (KZ) is 60.663 million tons, and the inferred resource reserve (TD) is 112.272 million tons.

In addition, according to the "Dynamic Basic Table of Reserves for Operating Mines (January-July 2025)" provided by the mining right holder, the mined resource quantity from open-pit mining during January-July 2025 was 7.4264 million tons. Therefore, as of the valuation benchmark date, the retained resource reserve was 305.0976 million tons, including 299.5676 million tons for open-pit mining and 5.53 million tons for underground mining.

Mineable reserves utilized in the appraisal: Based on the Preliminary Design, a geological model of the deposit was established using computer technology, and the coal quantity and stripping volume were calculated based on the designed open-pit mining boundary and the final slope angle of each slope. As calculated, as of the end of 2021, the geological coal resource reserve within the open-pit mining boundary was 212.7981 million tons, the mineable raw coal reserve was 208.3639 million tons, and the stripping volume was 985.40 million cubic meters. Specifically, 13.02 million tons of coal and 70.05 million cubic meters of stripping volume were affected by the villages on the west slope. The designed mineable raw coal reserve is 195.34 million tons, with a stripping volume of 915.35 million cubic meters.

According to the production and stripping statistics provided by the mining enterprise, the cumulative raw coal output from 2022 to July 2025 was 34.3874 million tons, and the cumulative stripping volume was 130.9771 million cubic meters. So, as of the valuation benchmark date, the remaining mineable raw coal reserve was 160.9565 million tons, and the remaining stripping volume was 774.5336 million cubic meters.

The Development Plan offers an estimation of the mineable reserves in Nos. 9, 10, and 11 coal seams intended for underground mining, as well as development and mining schemes, but provides no economic evaluation. Additionally, the mining enterprise has no specific mining plans for these seams. Therefore, the deep resource reserve is not included in this appraisal.

Product plan: The coal mined from this mine meets customer requirements after simple crushing and screening. So, the product plan for this appraisal is about raw coal.

Production capacity and service life: In accordance with the mine's mining succession plan, the stable production capacity adopted for the appraisal is 12.00 million tons per year. The appraisal period is 12.21 years, lasting from August 2025 to October 2037.

Product sales price and sales revenue: The price in August-December 2025 will be selected with reference to that of January-July 2025, the price in 2026 will be selected with reference to that of mining enterprises' forecasts, and the prices in 2027, 2028 and 2029 will gradually adjust to the long-term stable level: RMB270.00 per ton in August-December 2025, RMB255 per ton in 2026, RMB258.00 per ton in 2027, RMB262.00

per ton in 2028, and will remain at RMB265 per ton starting from 2029.

Fixed asset investment: For this appraisal, the original value of fixed asset investment is determined at RMB4,888.7537 million (including: RMB1,284.1359 million for stripping engineering, RMB980.2093 million for buildings and structures, and RMB2,624.4085 million for machinery and equipment), with a net value of RMB1,871.4639 million (including: RMB385.2408 million for stripping engineering, RMB639.6658 million for buildings and structures, and RMB846.5573 million for machinery and equipment). The construction in process is RMB9.4324 million, with subsequent investment estimated at RMB92.3605 million.

Total Cost and Operating Cost

Purchased materials cost: Based on the mine's financial statements, the unit cost of purchased materials is set at RMB19.21 per ton.

Purchased power cost: Based on the mine's financial statements, the unit cost of purchased power is set at RMB6.24 per ton.

Employee remuneration: Based on the financial statements, the unit employee remuneration is set at RMB39.97 per ton.

Depreciation expense: As calculated, the annual depreciation expense is RMB241.7876 million, with a unit depreciation expense of RMB20.15 per ton.

Mine maintenance fee and mine shaft engineering fund: In accordance with the circular on the *Management Measures for the Provision and Use of Coal Production Safety Expenses* and *Several Provisions for Regulating the Management of Coal Mine Maintenance Fees* (CAIJIAN [2004] No. 119), the unit mine maintenance fee for this project is RMB7.00 per ton, and the unit mine shaft engineering fund is RMB2.50 per ton. Among the mine maintenance fee, RMB3.50 per ton is allocated for renewal-oriented maintenance, and RMB3.50 per ton for depreciation-oriented maintenance.

Safety expense: According to the circular on the *Management Measures for the Provision and Use of Enterprise Work Safety Expenses* (CAIZI [2022] No. 136), the unit safety expense for this project is set at RMB5.00 per ton.

River course operation fee: Based on the *Preliminary Design Report for the Yingjin River Diversion Project of Yuanbaoshan Open-pit Coal Mine*, after the river course is built, daily maintenance and management will be needed, estimated at 1.7% of the original value of the project investment per year.

Subsidence compensation fee: Based on the enterprise's financial statements, the unit subsidence compensation fee is RMB2.67 per ton.

Outsourcing fee: Based on the enterprise's financial statements, the unit outsourcing fee is RMB49.0749.07 per ton.

Other manufacturing expenses: Based on the enterprise's financial statements, the unit other manufacturing expenses are set at RMB4.03 per ton.

Administrative expenses: Based on the enterprise's financial statements, the unit administrative expenses are RMB31.06 per ton.

Selling expenses: Based on the enterprise's financial statements, the unit selling expenses are RMB1.01 per ton.

R&D expenses: Based on the enterprise's financial data, the unit R&D expenses for this appraisal are set at RMB0.28 per ton.

Financial Expenses: In accordance with the provisions of the *Guiding Opinions on the Determination of Mining Rights Appraisal Parameters*, as calculated, the unit financial expenses for this appraisal are RMB1.28 per ton.

Total cost refers to the sum of all the aforementioned cost items. Operating cost refers to the total cost minus depreciation expenses, depreciation-oriented mine maintenance fees, mine shaft engineering fund, amortization expenses, and financial expenses.

In 2028, for example, the unit total cost of the appraised project is RMB190.30 per ton, and the unit operating cost is RMB145.26 per ton; the annual total cost is RMB2,283.5346 million, and the annual operating cost is RMB1,743.1249 million.

Discount rate: In accordance with the *Guiding Opinions on the Determination of Mining Right Appraisal Parameters*, the basic composition of the discount rate is: discount rate = risk-free rate of return + risk premium rate

Specifically, the risk-free rate of return is set at 1.70%, with reference to the 10-year government bond yield to maturity disclosed by the WIND Information System as of the valuation benchmark date.

The risk premium rate is estimated using the "risk accumulation method", with the main risks including exploration and development stage risk, industry risk, financial and operational risk, and other specific risks. As the mine is in operation, the risk premium rate at the exploration and development stage is set at 0.60%, the industry risk premium rate at 2.00%, and the financial and operational risk premium rate at 1.50%. With consideration of the actual conditions of the mine, other specific risk premium rate is set at 2.00%. Therefore, the total risk premium rate for this appraisal is set at 6.10%.

With consideration of the value range of the comprehensive discount rate and the development stage of the mine, the discount rate for this appraisal is set at 7.80%.

As estimated, as of July 31, 2025, the cumulative present value of net cash flows of the "mining rights of Yuanbaoshan Open-pit Coal Mine of Pingzhuang Coal Group Co., Ltd." was RMB-380.3416 million. So, the appraised value of mining rights was RMB0.

B. **Boligou Coal Mine in Jungar Coalfield, Inner Mongolia Autonomous Region**

Boligou Coal Mine in Jungar Coalfield, Inner Mongolia Autonomous Region is currently in the infrastructure construction period. The resource reserves used for this appraisal are based on the *Supplementary Exploration Geological Report of Coal Resources in Boligou Mine of Inner Mongolia Pingzhuang Coal Group Co., Ltd.* (hereinafter referred to as the "Supplementary Exploration Report"), developed by Shaanxi No.185 Coalfield Geology Co., Ltd. in April 2024.

The main technical and economic parameters for this assessment are primarily referenced from the *Revised Specifications for Preliminary Design of Boligou Coal Mine in Jungar Coalfield, Inner Mongolia Autonomous Region* (hereinafter referred to as the "Preliminary Mine Design") developed by Dadi Engineering Development (Group) Co., Ltd. in February 2025, the *Specifications for Preliminary Design of Coal Preparation Plant of Boligou Mine of Inner Mongolia Pingzhuang Coal Group Co., Ltd.*(hereinafter referred to as the "Preliminary Design of Coal Preparation Plant") developed in August 2023, and its approval document (ENENGJU SHENPIFA [2025] No.10). Since the Preliminary Design does not include cost parameters, the *Feasibility*

Study Report (Revised Edition) of Boligou Mine and Coal Preparation Plant of Inner Mongolia Pingzhuang Coal Group Co., Ltd. (hereinafter referred to as the "Feasibility Study Report") developed by Dadi Engineering Development (Group) Co., Ltd. in July 2020 is adopted. As the development plan and mining-preparation methods in this report are basically consistent with those in the Preliminary Design, the cost parameters for this appraisal are determined with reference to the Feasibility Study Report. The selection of other major technical and economic indicators is based on the *China Mining Rights Appraisal Standards*, other relevant policies and regulations, technical and economic specifications, and data available to the appraisal team.

The explanations for the selection of each parameter are as follows:

Proven resource reserves as of the valuation benchmark date: According to the Supplementary Exploration Report, as of December 31, 2023, the total identified resource reserve of the entire mining area was 469.086 million tons. Specifically, proven resource reserve (TM) was 245.763 million tons, controlled resource reserve (KZ) was 82.697 million tons, and inferred resource quantity (TD) was 140.626 million tons.

As of the valuation benchmark date, as the mine was still under construction and no ore was mined, the aforementioned 469.086 million tons of resource reserves were the retained resource reserves within the appraisal scope.

Mineral resource reserves utilized in the appraisal: mineral resource reserves utilized in the appraisal = Σ (basic reserves included in the appraisal + resource quantity × corresponding type credibility coefficient) = 436.0301 million tons.

Product plan: According to the product balance sheet of the coal preparation plant, the product plan covers clean coal and blended coal. Therefore, the product plan for this appraisal covers clean coal and blended coal with reference to the Preliminary Design of Coal Preparation Plant.

Mining area recovery rate: In accordance with the *Guiding Opinions on the Determination of Mining Rights Appraisal Parameters* and the *Code for Design of Mine of Coal Industry* (GB 50215-2015), the recovery rate shall be no less than 85% for thin coal seams, no less than 80% for medium-thick coal seams, and no less than 75% for thick coal seams. However, for thick coal seams mined using the single-pass full-height method, the recovery rate should not be less than 80%.

Among the coal seams designed for mining in the mine, No. 6 coal seam is a thick coal seam, and the rest are medium-thick coal seams. Therefore, in this appraisal, the mining area recovery rate is set at 75% for No. 6 coal seam, and 75% for other coal seams.

Mineable reserves utilized in the appraisal: mineable reserves utilized in the appraisal = (resource reserves utilized in the appraisal - designed losses) × mining recovery rate = 231.1164 million tons.

Production capacity and service life: Both the designed production capacity specified in the Preliminary Design and the registered production capacity stated in the mining license are 4 million tons per year. Therefore, the production capacity of the mine during the future service life is set be 4.00 million tons per year in this appraisal. The appraisal period is 45.22 years, with the infrastructure construction period lasting from August 2025 to December 2027, and the normal production period from January 2028 to

October 2070.

Product sales price and sales revenue: As mining and sales haven't been started, there are no actual sales prices available. Therefore, for this appraisal, the sales prices of commercial coal are determined by referring to the 5-year Phase I sales prices of Jungar Banner thermal coal (sourced from www.10jqka.com.cn) and adjusting for calorific value: Thermal Coal 5# (Q4200) at RMB415.86 per ton, Thermal Coal 4# (Q4500) at RMB448.06 per ton, and Thermal Coal 3# (Q5000) at RMB516.08 per ton. The sales prices for future years are set as follows: for the No. 5 coal seam of Boligou Coal Mine, clean coal is set at RMB459.00 per ton (rounded) and blended coal at RMB378.00 per ton (rounded); for the No. 6 coal seam, clean coal is RMB482.00 per ton (rounded) and blended coal at RMB403.00 per ton (rounded); for other coal seams, clean coal is RMB471.00 per ton (rounded) and blended coal at RMB391.00 per ton (rounded).

Fixed asset investment: The original value of the mine's existing fixed assets as of the valuation benchmark date is RMB249.3811 million, with a net value of RMB248.8488 million. Specifically, the original value of mine shaft engineering is RMB183.4529 million (net value: RMB183.4529 million), building and structure assets are RMB56.6844 million (net value: RMB56.6844 million), and machinery and equipment are RMB9.2438 million (net value: RMB8.7115 million). The additional fixed asset investment after the valuation benchmark date is RMB2,463.6147 million (including tax), consisting of RMB542.3492 million for mine shaft engineering, RMB718.5147 million for buildings and structures, and RMB1,202.7508 million for machinery and equipment.

Total Cost and Operating Cost

Purchased materials cost: Based on the Feasibility Study Report and adjusted by price indices, the unit cost of purchased materials is set at RMB7.11 per ton.

Purchased fuel and power cost: Based on the Feasibility Study Report and adjusted by price indices, the unit cost of purchased fuel and power is set at RMB11.25 per ton.

Employee remuneration: According to the Preliminary Mine Design and the actual unit costs of surrounding mines, the unit employee remuneration is set at RMB56.95 per ton.

Depreciation expense: As calculated, the annual depreciation expense is RMB107.6646 million, with a unit depreciation expense of RMB 26.92 per ton.

Mine maintenance fee and mine shaft engineering fund: In accordance with the circular on the *Management Measures for the Provision and Use of Coal Production Safety Expenses* and *Several Provisions for Regulating the Management of Coal Mine Maintenance Fees* (CAIJIAN [2004] No. 119), the unit mine maintenance fee for this project is RMB7.00 per ton, and the unit mine shaft engineering fund is RMB2.50 per ton. Among the mine maintenance fee, RMB3.50 per ton is allocated for renewal-oriented maintenance, and RMB3.50 per ton for depreciation-oriented maintenance.

Safety expense: According to the circular on the *Management Measures for the Provision and Use of Enterprise Work Safety Expenses* (CAIZI [2022] No. 136), the unit safety expense for this project is set at RMB15.00 per ton.

Repair fee: Based on the Feasibility Study Report, the unit repair fee is RMB8.05 per ton.

Environmental governance and land reclamation fee: In accordance with the *Mine*

Geological Environment Protection and Land Reclamation Plan for Boligou Coal Mine in Jungar Coalfield, Inner Mongolia Autonomous Region and its review opinions, the unit environmental governance and land reclamation fee is set at RMB0.18 per ton.

Surface subsidence compensation fee: Based on the Feasibility Study Report, the unit surface subsidence compensation fee is RMB1.50 per ton.

Soil and water conservation compensation fee: In accordance with the Circular on the *Implementation Measures for the Collection and Use of Soil and Water Conservation Compensation Fees in Inner Mongolia* jointly issued by the Department of Finance, Development and Reform Commission and Department of Water Resources of Inner Mongolia Autonomous Region, and Hohhot Central Sub-branch of the People's Bank of China (NEICAIFEISHUIGUI [2015] No. 18), the unit soil and water conservation compensation fee is RMB2.00 per ton.

Other manufacturing expenses: Based on the Feasibility Study Report, the unit other manufacturing expenses are set at RMB3.65 per ton.

Financial expenses: In accordance with the provisions of the *Guiding Opinions on the Determination of Mining Rights Appraisal Parameters*, the unit financial expenses for this appraisal are set at RMB1.63 per ton.

Total cost refers to the sum of all the aforementioned cost items. Operating cost refers to the total cost minus depreciation expenses, depreciation-oriented mine maintenance fees, mine shaft engineering fund, amortization expenses, and financial expenses.

In 2035, for example, the unit total cost of the appraised project is RMB145.79 per ton, and the unit operating cost is RMB109.20 per ton; the annual total cost is RMB583.1570 million, and the annual operating cost is RMB436.7626 million.

Discount rate: In accordance with the *Guiding Opinions on the Determination of Mining Right Appraisal Parameters*, the basic composition of the discount rate is: discount rate = risk-free rate of return + risk premium rate

Specifically, the risk-free rate of return is set at 1.70%, with reference to the 10-year government bond yield to maturity disclosed by the WIND Information System as of the valuation benchmark date.

The risk premium rate is estimated using the "risk accumulation method", with the main risks including exploration and development stage risk, industry risk, financial and operational risk, and other specific risks. As Boligou Coal Mine is currently under construction and is expected to be completed and put into production in early 2028, the exploration and development stage risk is set at 1.00%. As the coal mining industry is generally classified as a high-risk industry, the industry risk is set at 2.00%. Boligou Coal Mine covers a large mining area, and subsequent village relocation expenses will be required, resulting in certain financial and operational risk, which is thus set at 1.50%. The specific risk is set at 2.00%. Therefore, the total risk premium rate for this appraisal is set at 6.50%.

With consideration of the value range of the comprehensive discount rate and the development stage of the mine, the discount rate for this appraisal is set at 8.20%.

As estimated, as of July 31, 2025, the cumulative present value of net cash flows of the "mining rights of Boligou Coal Mine in Jungar Coalfield, Inner Mongolia Autonomous Region" was RMB2,578,282,000. So, the appraised value was RMB 2,578,282,000.

(2) For the exploration rights, due to the unavailability of geological survey data, preliminary design documents, overall mining area plan, and formal feasibility study report required for mineral rights valuation, it was impossible to model and calculate the market value of the exploration rights as of the valuation benchmark date according to the mineral rights appraisal criteria and theories. Therefore, the relevant costs of the exploration rights are retained at their audited book value in this valuation.The book value of the exploration rights is RMB2,500,721,300, and the appraised value was also RMB2,500,721,300.

As of the valuation benchmark date, the appraised value of the mining rights was RMB5,079,003,300, representing a decrease of RMB285,412,900 from the book value of RMB5,364,416,200. Reasons for the impairment: For Yuanbaoshan Open-pit Coal Mine, the investment as of the valuation benchmark date increased from that on the initial recording date, leading to a rise in fixed asset investment per ton of coal. Meanwhile, the intangible asset investment (mainly land use rights) appreciated significantly as of the base date. With the advancement of production, substantial additional land acquisition is required, resulting in large subsequent land acquisition compensation expenses. Consequently, the mining right of Yuanbaoshan Open-pit Coal Mine was impaired. The mining rights were aggregated at a zero value in this appraisal, with the corresponding negative value included in the valuation of the stripping pit.

7. Other assets and liabilities

The asset appraisers verified the book values by examining the detailed item statements and relevant materials provided by the appraised entity. The appraised values are determined based on the audited book values, or the actual liabilities to be borne or equity to be entitled by the appraised entity.

Specifically, the book value of current assets was RMB1,607,224,500, and appraised value RMB1,607,591,900, with an appreciation rate of 0.02%; the book value of other non-current assets was RMB16,564,009,400, and appraised value RMB23,048,530,900, with an appreciation rate of 39.15%; the book value of current liabilities was RMB 14,942,313,000, and appraised value RMB149,423,130,000, with no change; the book value of non-current liabilities was RMB 4,182,701,300, and appraised value RMB 4,130,000,500, with a depreciation rate of 1.26%.

After calculation, as of the valuation benchmark date:

(A) For Pingzhuang Coal, the value of the entire shareholders' equity = current assets (RMB1,607,591,900) + Non-current assets [including long-term equity investments (RMB8,051,994,400) + fixed assets (buildings) (RMB1,290,907,200) + fixed assets (equipment) (RMB979,133,600) + construction in progress (RMB271,283,100) + land use rights (RMB1,288,031,200) + mining rights (RMB5,079,003,300) + other non-current assets (RMB6,088,178,100)] - current liabilities (RMB14,942,313,000) - non-current liabilities (RMB4,130,000,500) = RMB5,583,809,300 (minor rounding

differences may occur due to decimal retention).

(B) For Pingzhuang Coal, the value of all shareholders' equity= Current assets (RMB1,607,224,500) + Non-current assets (including long-term equity investments + fixed assets such as buildings and structures + fixed assets such as equipment + construction in progress + land use rights + mining rights + other non-current assets) (RMB2,802,850,100 + RMB1,230,473,000 + RMB643,347,300 + RMB271,825,300 + RMB61,369,200 + RMB5,364,416,200 + RMB6,189,728,300) - Current liabilities (RMB14,942,313,000)-Non-current liabilities (RMB4,182,701,300)= RMB953,780,400 (minor rounding differences may occur due to decimal retention).

IX. Income Approach

i. Main assumptions

1.It is assumed that all appraisal targets are in the process of being traded, and the appraisers simulate the market based on the transaction conditions of the appraised assets;

2. It is assumed that for assets traded in the market, or assets to be traded in the market, both parties in the transaction have equal standing and ample opportunity and time to access market information. The transactions are voluntary and rational, and the parties can make rational judgments about the asset's function, purpose, and transaction price;

3.It is assumed that the appraised assets will continue to be used for their current purposes and in their current manner during the service lives of the mines;

4.It is assumed that there will be no significant changes to the relevant national laws, regulations, and policies or the macroeconomic situation, and that the political, economic, and social environment in the regions of the parties involved in the transaction will not change significantly;

5.Given the actual status of the assets on the valuation benchmark date, it is assumed that the company will continue operations during the service lives of the mines;

6.It is assumed that there will be no significant changes in the interest rates, tax bases, tax rates, policy-based collection fees, or other related factors affecting the appraised entity after the valuation benchmark date;

7.It is assumed that the management of the appraised entity after the valuation benchmark date will remain responsible and stable, with the ability to perform their duties;

8.Unless otherwise stated, it is assumed that the company fully complies with all relevant laws and regulations;

9.It is assumed that after the valuation benchmark date, there will be no force majeure or unforeseen factors that cause significant adverse effects on the appraised entity;

10.It is assumed that after the valuation benchmark date, the accounting policies used by the appraised entity and those used to prepare this asset appraisal report will remain consistent in significant aspects;

11.It is assumed that after the valuation benchmark date, the scope and methods of the appraised entity's operations will remain the same, based on the current management practices and level;

12.It is assumed that after the valuation benchmark date, the appraised entity's cash inflows and cash outflows will be at an average rate;
13.The validity period of the mining right license for Yuanbaoshan Open-cut Coal Mine expires in July 2031. Since the evaluation period exceeds the validity term of the mining right license, in this appraisal, it is assumed that the mining right holder will, in accordance with the Measures for the Administration of Registration of Mineral Resources Exploitation (Decree No. 241 of the State Council of the People's Republic of China, 1998), apply to the registration authority for renewal registration 30 days prior to the expiration of the existing mining right license and successfully obtain a renewed mining right license;
14.It is assumed that during the appraisal calculation period, the unit cost for environmental restoration and land reclamation would be equal to the extracted and spent amounts.

ii. Appraisal model

1. Basic model

The income approach used in this appraisal is the discounted cash flow (DCF) method to indirectly determine the entire shareholders' equity by evaluating the overall value of the enterprise. The overall value of the enterprise consists of the value of operating assets generated from normal business activities and the value of non-operational assets unrelated to normal business activities. For the determination of the value of operational assets, the Free Cash Flow Discount Model is employed, which uses the future free cash flows of the enterprise for several years as a basis, discounted at an appropriate discount rate and then summed up. The calculation model is as follows:
Entire shareholders' equity value = Enterprise overall value - Interest-bearing debt value
= RMB5,088,077,400

(1) Enterprise overall value

The enterprise overall value refers to the sum of the entire shareholders' equity and the interest-bearing debt value. According to the asset allocation and usage situation of the appraised entity, the formula for calculating the enterprise overall value is as follows:
Enterprise overall value = Operating asset value + Non-operating asset value - Non-operating liability value + Surplus asset value + Long-term equity investment value
The enterprise overall value of Pingzhuang Coal: RMB3,651,859,900+ RMB4,617,570,100-RMB8,793,086,600+RMB246,655,600+ RMB14,164,707,100
=RMB13,887,706,100

① Operating asset value

Operating assets are those related to the appraised entity's production and business operations, which are involved in the forecast of the enterprise free cash flow after the valuation benchmark date.

②Surplus asset value

Surplus assets are those that exceed the enterprise's operational needs as of the valuation benchmark date, and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The appraised entity's surplus assets include cash. The surplus assets in this appraisal are appraised using the cost method.

③Value of non-operating asset and labilities

Non-operating assets and liabilities are those that are unrelated to the appraised entity's business operations and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The non-operating assets and liabilities of the appraised entity include other receivables, inventories and fixed assets in abnormal condition, accounts payable, other payables, and similar items. The cost approach was adopted for this appraisal.

④Long-term equity investment value

Long-term equity investments refer to the external equity investments made by the enterprise as of the valuation benchmark date. The entire shareholders' equity of the invested entity, as confirmed using an appropriate appraisal method, is multiplied by the shareholding percentage to determine the long-term equity investment value.

(2) Interest-bearing debt value

Interest-bearing debt refers to liabilities that the appraised entity must pay interest on as of the valuation benchmark date, including short-term borrowings, long-term borrowings due within one year, and long-term borrowings, with the verified book value amounting to RMB8,799,628,700.

2. Income indicators

The calculation formula for operating asset value is as follows:

$$P = \sum_{i=1}^{n} \frac{F_i}{(1+r)^i} + \frac{F_n}{r \times (1+r)^n}$$

Wherein: P: The value of the enterprise's operating assets as of the valuation benchmark date;

F_i: The expected free cash flow of the enterprise in the i-th year after the valuation benchmark date;

F_n: The expected free cash flow of the enterprise at the end of the detailed forecast period;

r: The discount rate (weighted average cost of capital, WACC), which is 8.12%;

n: The detailed forecast period;

i: The i-th year of the detailed forecast period.

The free cash flow of the enterprise is calculated as follows:

Enterprise free cash flow = Earnings before interest and taxes (EBIT) - Depreciation and amortisation - capital expenditures - Increase in working capital

3. Discount rate

The discount rate (WACC) is calculated as follows:

$$\mathrm{WACC} = \mathrm{K_e} \times \frac{\mathrm{E}}{\mathrm{E}+\mathrm{D}} + \mathrm{K_d} \times (1-\mathrm{t}) \times \frac{\mathrm{D}}{\mathrm{E}+\mathrm{D}}$$

Wherein: k_e: Cost of equity capital, which is 11.87%;

k_d: Cost of debt capital, which is 2.17%;

E: Market value of equity;

D: Market value of debt;

t: Tax rate, which is 25%.

The cost of equity capital is calculated using the Capital Asset Pricing Model (CAPM). The calculation formula is as follows:

$$K_e = r_f + MRP \times \beta_L + r_c$$

Where: r_f: Government bond yields are generally considered risk-free because the risk of default on the bond at maturity is negligible and can be ignored. According to information disclosed by the WIND Information System, the yield to maturity of the 10-year government bond as of the valuation benchmark date was 1.7044%, which is selected as the risk-free rate of return for the asset valuation report;

MRP: Market risk premium refers to the difference between the market investment return yield and the risk-free return yield. In particular, the market investment return yield is calculated based on the price indices of the Shanghai and Shenzhen Stock Exchange, using the weighted average of annualised weekly returns from 1992 to the valuation benchmark date. Upon calculation, the market investment return yield is 8.36%, the risk-free return yield is selected as the yield to maturity of the 10-year government bond on the valuation benchmark date, amounting to 1.70% , being MRP of 6.66%;

β_L: Systematic risk coefficient of equity, which is 1.0766;

r_c: Company-specific risk adjustment coefficient, which is 3.00%.

A.6 Main Evaluation Materials of Inner Mongolia Construction Investment

I. Selection of Appraisal Methods

The methods selected for this appraisal are the income approach and the asset-based approach.

Reason for selecting the asset-based approach: As of the valuation benchmark date, the book value of the assets and liabilities within the appraisal scope has already been audited. Each asset and liability of the appraised entity can be identified. The identifiable assets and liabilities can each be individually assessed using an appropriate appraisal method, thus meeting the conditions for applying the asset-based approach.

Reason for selecting the income approach: The appraised entity has the foundation and conditions for ongoing operations, with standardised accounting practices, clear management, stable and defined business sources. The management has detailed plans for the current operations and future development of the company. The future expected income and operational risks can be reasonably predicted, meeting the conditions for using the income approach for appraisal.

Reason for not selecting the market approach: The market approach relies on the existence of an active public market with sufficient market data and comparable transaction cases. The appraised entity is a non-listed company. Listed companies in the same industry differ significantly from the appraised enterprise in terms of business structure, corporate scale, asset allocation and utilisation, operational stage, growth potential, operational risks, financial risks, and others. Furthermore, there were few comparable transactions, mergers, or acquisitions within the same industry near the valuation benchmark date. Reliable operational and financial data from comparable transactions are difficult to obtain, making it impossible to calculate appropriate value ratios. Therefore, the market approach was not adopted for this appraisal.

The total shareholders' equity value appraised using the income approach is RMB7,861,498,800.00, while the total shareholders' equity value appraised using the asset-based approach is RMB7,727,627,800.00.

Unless otherwise stated, all amounts in this summary are expressed in Renminbi (RMB).

There is a certain discrepancy between the appraisal results of the income approach and the asset-based approach. The main reason for the discrepancy is the different perspectives considered by the two methods.

The asset-based approach, on the other hand, estimates the value of the subject asset based on a reasonable assessment of the enterprise's assets and liabilities, considering the method of asset replacement. The income approach determines the value of the subject asset by discounting the anticipated earnings of the entity, focusing on the company's future earning capacity, and reflecting the comprehensive profitability of the company's assets.

The appraised entity is a coal-power integrated enterprise, with a high proportion of coal sales, and coal prices are significantly affected by national economic policies, coal supply and demand relations, and other factors. Moreover, with the progress of the "carbon peak and carbon neutrality" goals, the thermal power industry faces pressure to reduce energy consumption, cut emissions, and undergo transformation and upgrading. The energy transition strategy sets new positioning requirements for the

thermal power sector, pushing thermal power companies to shift from being mere electricity producers to becoming "stabilisers" and "regulators" in the power system. While ensuring the safety of power supply, they also provide support for the large-scale development of renewable energy. These factors introduce considerable uncertainty in predicting future earnings. The coal mining industry is a capital-intensive sector, and the main operating assets of the enterprise are largely dependent on the mineable reserves. The initial investment in fixed assets is significant, and the value of the mining rights has already been appraised by a professional appraisal agency. Therefore, the Asset-based Approach better reflects the value of the enterprise. The conclusion of this appraisal adopts the results from the asset-based approach.

II. Major Appraisal Assumptions

1. It is assumed that all appraisal targets are in the process of being traded, and the appraisers simulate the market based on the transaction conditions of the appraised assets;

2. It is assumed that for assets traded in the market, or assets to be traded in the market, both parties in the transaction have equal standing and ample opportunity and time to access market information. The transactions are voluntary and rational, and the parties can make rational judgments about the asset's function, purpose, and transaction price;

3. It is assumed that the appraised assets will continue to be used for their current purposes and in their current manner;

4. It is assumed that there will be no significant changes to the relevant national laws, regulations, and policies or the macroeconomic situation, and that the political, economic, and social environment in the regions of the parties involved in the transaction will not change significantly;

5. Given the actual status of the assets on the valuation benchmark date, it is assumed that the company will continue operations;

6. It is assumed that there will be no significant changes in the interest rates, tax bases, tax rates, policy-based collection fees, or other related factors affecting the appraised entity after the valuation benchmark date;

7. It is assumed that the management of the appraised entity after the valuation benchmark date will remain responsible and stable, with the ability to perform their duties;

8. Unless otherwise stated, it is assumed that the company fully complies with all relevant laws and regulations;

9. It is assumed that after the valuation benchmark date, there will be no force majeure or unforeseen factors that cause significant adverse effects on the appraised entity;

10. It is assumed that after the valuation benchmark date, the accounting policies used by the appraised entity and those used to prepare this asset appraisal report will remain consistent in significant aspects;

11. It is assumed that after the valuation benchmark date, the scope and methods of the appraised entity's operations will remain the same, based on the current management practices and level;

12. It is assumed that after the valuation benchmark date, the appraised entity's cash inflows and cash outflows will be at an average rate;

13. It is assumed that the market competition conditions for the products or services of the appraised entity will remain the same as at present after the valuation benchmark date;

14. It is assumed that the mineral resource reserves reviewed within the mining licence will form the basis for the mining rights, and that the mining licence can be smoothly renewed in the future;

15. It is assumed that there will be no significant changes in the mining technology used by the appraised entity in the future;

16. It is assumed that in the future, the production and sales of commodity coal will achieve a balance between output and sales;

17. It is assumed that the construction projects under development will be completed and connected to the grid on time, and that they will be eligible for relevant tax incentives after the valuation benchmark date;

18. It is assumed that during the appraisal calculation period, the unit cost for environmental restoration and land reclamation will be equal to the extracted and spent amounts;

19. As at the valuation benchmark date, the appraised entity enjoys preferential enterprise income tax policies under the Western Development Programme, with corporate income tax levied at a rate of 15% from 1 January 2021 to 31 December 2030.

III. Asset-based Approach

1. Equity investments (long-term equity investments and investments in other equity instruments)

(1) Long-term equity investments

An overall appraisal was conducted for long-term equity investments. The appraisers first appraise the entire shareholders' equity value of the investee, then multiply it by the shareholding percentage to determine the value of the part of the shareholder's equity.

No.	Name of Investee	Appraisal Method	Final Appraisal Method Adopted
1	Ordos Southern Railway Co., Ltd.	Asset-based Approach	Asset-based Approach
2	Inner Mongolia Huaxin Guodian Construction Investment Logistics Co., Ltd.	Asset-based Approach	Asset-based Approach

Following the appraisal, the appraisal results and appreciation/depreciation for the long-term equity investment units are presented as follows:

Unit: RMB'0,000

No.	Name of investee	Book Value	Appraised Value	Appreciation Rate (%)
1	Ordos Southern Railway Co., Ltd.	27,615.32	27,615.32	0.00
2	Inner Mongolia Huaxin Guodian Construction Investment Logistics Co., Ltd.	3,430.00	4,087.60	19.17

No.	Name of investee	Book Value	Appraised Value	Appreciation Rate (%)
Total		31,045.32	31,702.92	2.12

The primary reason for the valuation appreciation is that the civil engineering projects under construction, invested by Huaxin Logistics, commenced earlier. Following the recalculation of the construction and installation costs, preliminary and other expenses, and capital cost based on the construction and installation cost index in the related region as the appraised value, the valuation of the long-term equity investment is higher than its book value.

(2) Investments in other equity instruments

The other equity instrument investments of the appraised entity are measured at fair value, and the book value reflects this fair value. For this appraised value, the book value is used to determine the appraised value.

Unit: RMB'0,000

No.	Name of Invested Entity	Book Value	Appraised Value	Appreciation/Depreciation	Appreciation Rate %
1	Ordos Southern Railway Co., Ltd.	29,484.34	29,484.34	0.00	0.00
Total		29,484.34	29,484.34	0.00	0.00

The total book value for equity investments is RMB605,296,600.00, and the appraised value is RMB611,872,600.00, resulting in an appreciation rate of 1.09%.

2. Fixed assets like buildings and structures

Based on the characteristics of the various types of building and structure assets, the appraised value type, data collection conditions, and other related factors, the cost method is used for appraisal.

The calculation formula of cost method is expressed as:

Appraised value = Replacement cost × Composite depreciation rate

(1) Determination of replacement cost

The replacement cost of the buildings and structures usually includes the construction and installation engineering cost, pre-construction and other costs and capital costs. The calculation formula for replacement cost of buildings and structures is as follows:

Replacement cost = Construction and installation engineering cost + Pre-construction and other costs + Capital cost - Deductible VAT

① Construction and installation engineering costs

For large, valuable, and important buildings, the construction and installation engineering costs are determined using the engineering-specific preliminary and final budget adjustment method, which uses or refer to the quantities in the building's preliminary and final budget as a basis and calculates the construction and installation costs on the basis of the construction engineering costs, decoration costs and installation engineering costs based on local standards and relevant fee documents.

For general buildings, or when final budget data is incomplete or the building's value is

small and the structure is simple, the analogy method or unit cost method is used to determine the construction and installation engineering costs.

② Pre-construction and other costs

Pre-construction and other costs are calculated based on the engineering investment amount of the projects, in accordance with the fee standards set by the industry, national, or local government regulations. The names, billing bases, billing standards, and billing justifications are presented below.

Pre-construction and Other Costs (Bulian Power Plant)

No.	Expense Item	Calculation Basis	Calculation Standard	Input VAT Rate
I	Project construction management fees			
1	Project legal entity management fees	Construction and installation cost	3.25%	/
2	Bidding fees	Construction and installation cost	0.37%	6%
3	Engineering supervision fees	Construction and installation cost	0.95%	6%
4	Engineering settlement audit fees	Construction and installation cost	0.19%	6%
5	Construction insurance fees	Construction and installation cost	0.40%	6%
II	Technical service fees for project construction			
1	Project early-stage work fees	Construction and installation cost	1.71%	6%
2	Survey and design fees			
(1)	Survey fees	Construction and installation cost	0.20%	6%
(2)	Basic design fee	Construction and installation cost	2.05%	6%

3	Design document review fees			
(1)	Feasibility study document review fees	Construction and installation cost	0.01%	6%
(2)	Preliminary design document review fees	Construction and installation cost	0.04%	6%
(3)	Construction drawing document review fee	Construction and installation cost	1.50%	6%
4	Post-project appraisal work fee	Construction and installation cost	0.11%	6%
5	Engineering construction inspection fee			
(1)	Power engineering quality inspection fee	Construction and installation cost	0.17%	6%
6	Technical economic standards compilation fee for power engineering projects	Construction and installation cost	0.10%	6%
III	Production preparation fee			
1	Production staff training and early entry fee	Construction and installation cost	1.74%	6%
Total		/		12.79%

Pre-construction and Other Costs (Chahasu Coal Mine Shafts Engineering)

No.	Item Name	Calculation Basis	Calculation Standard	Input VAT Rate
1	Construction Unit Management Fee	Construction and installation cost	1.24%	/
2	Engineering Supervision Fee	Construction and installation cost	1.20%	6%
3	Engineering Quality Technical Service Fee	Construction and installation cost	0.35%	6%
4	Feasibility Study Fee	Construction and installation cost	0.07%	6%
5	Environmental Impact Assessment Fee	Construction and installation cost	0.05%	6%
6	Surveying and Design Fees	Construction and installation cost	2.40%	6%

12	Geological Disaster Risk Assessment fee	Construction and installation cost	0.05%	6%
13	Engineering Insurance Fee	Construction and installation cost	0.30%	6%
14	Early Entry Fee for Production Personnel	Construction and installation cost	0.23%	/
Total		/	7.06%	/

③ Capital costs

The capital cost is determined based on the project's reasonable construction period. The benchmark cost of funds is calculated using the LPR for RMB loans published by the National Interbank Funding Center on the valuation benchmark date, applied to the sum of the equipment purchase price, installation engineering costs, and other expenses. The interest on construction period loans is calculated based on the method of settlement for individual power generation units at the time of completion. For the appraised entity Bulian Power Plant, the reasonable construction period is 4 years and the interest rate is set as 5.38%; for Chahasu Coal Mine, the reasonable construction period is 4.25 years and the interest rate is set as 3.41%; for Chahasu Coal Washing Plant, the reasonable construction period is 2.00 years and the interest rate is set as 3.13%. The formula for calculating the capital cost is as follows:

Capital costs = (Construction and installation engineering costs + Pre-construction and other costs) × Reasonable construction period × Interest rate × 1/2

④ Deductible VAT

According to relevant VAT documents, for those that qualify for VAT deduction, the replacement cost is reduced by the corresponding VAT.

(2) Determination of composite depreciation rate

① For important buildings, the economic service life, used lifespan, and on-site inspection of the structure, decoration, and auxiliary equipment are considered to determine the remaining useful life, which is then used to calculate the composite depreciation rate.

Composite depreciation rate = Remaining service life / (Remaining service life + Used lifespan) × 100%

② For low-value buildings, the composite depreciation rate is mainly determined based on the economic service life. The calculation formula is as follows:

Composite depreciation rate = (Economic service life - used lifespan) / Economic service life × 100%

For mining enterprises, the impact of the remaining service life of the mine should also be considered.

(3) Determination of appraised value

Appraised value = Replacement cost × Composite depreciation rate

Following appraisal, the original value of buildings (excluding shafts) demonstrated an appraisal appreciation of RMB135,753,400.00, representing an appreciation rate of 3.99%; the net value appreciation was appraised to be RMB110,480,900.00, with an appreciation rate of 4.70%. The primary reasons for this appraisal appreciation are described as follows:

The primary reason for the appraisal appreciation of the original value of building assets is the increase in labor, material, and machinery costs as of the valuation benchmark date compared to the project construction period. The principal reasons for the appreciation in net value result are the appreciation of the original value and that the depreciation period for the company's building assets for accounting purposes is shorter than their actual economic useful life.

3. Fixed assets – shaft engineering

Based on the characteristics of various shaft engineering projects, the appraised value type, data collection conditions, and other related factors, the cost method is primarily used for appraising shaft engineering projects. The calculation formula of the cost method is as follows:

Appraised value = Full replacement value × Composite depreciation rate

① Determination of full replacement value

Replacement cost = Engineering cost + Pre-construction and other costs + Capital costs - Deductible input tax

(1) Engineering cost

The comprehensive cost is calculated based on physical engineering quantities and the current coal mining quotas and fee standards.

For large-scale, high-value, and critical shaft engineering project, the comprehensive cost is calculated based on physical engineering quantities and the current coal mining quotas and fee standards.

Engineering cost = Base price of engineering quotas + Measure fees + Company

management fees + Profits + Regulatory fees + Other project fees + Regional price differences

Where:

Base price of engineering quotas - The base price is calculated based on the shaft engineering's lifting method, lifting depth, tunnel cross-section, support method, materials, and thickness. *The Consumption Quotas for Coal Mining Shaft Engineering (2015, After-tax Base Price)* and *Comprehensive Quotas for Auxiliary Costs in Coal Mining Shaft Engineering (2015, After-tax Base Price)* are applied. This includes wages, material consumption, machine usage fees, etc., with adjustments made according to relevant regulations

Other fees — determined in accordance with the Notice issued by the China Coal Construction Association on Adjustment of Pricing Basis for Coal Construction Projects under the VAT Reform for the Construction Industry ((ZH.M.J.X.Z. [2016] No. 46) and the Notice on Adjusting the Value-Added Tax Rate for Coal Construction Engineering Pricing Basis (ZH.M.J.X.Z. [2019] No. 37), together with the Notification on Release of the Consumption Quotas for Coal Mining Shaft Engineering (2015, After-tax Base Price) (ZH.M.J.X.Z. [2016] No. 115) and the Supplementary Provisions on the Implementation of the Valuation Standards for Coal-Construction Projects (ZH.M.J.X.Z. [2016] No. 116), and calculated in combination with the actual construction conditions of the mine.

Labour, materials, and equipment price differences – Adjusted according to the Notice on Adjusting Coal Construction Engineering Quotation Standards (2015 Base Price) for Labour Unit Prices and Related Regulations (ZH.M.J.X.Z. [2021] No. 125), Urumqi City Construction Engineering Material Information Price List (Q2 2025), and materials price information provided by the enterprise for the valuation benchmark date.

For general shaft engineering projects, or when final settlement data is incomplete, or when the value is small and the structure is simple, the Analogy Method is used to determine the construction cost.

(2) Preliminary and other costs

Preliminary and other costs include construction unit management fees, engineering supervision fees, surveying and design fees, environmental evaluation fees, and soil and water conservation consulting service fees. These costs are calculated based on the engineering construction investment amount, according to industry, national, or local government fee standards. Preliminary and Other Costs Calculation Formula:

Preliminary and other costs = Engineering cost × Fee rate

(3) Capital costs

Financing costs are calculated based on the appraised entity’s reasonable construction period, referencing the Loan Prime Rate (LPR) published by the People’s Bank of China on the valuation benchmark date, and considering the appraised entity’s loan interest rate adjustments. The total sum of engineering costs, preliminary and other fees, etc., is used as the base for calculating the financing costs over the uniform capital investment. The calculation formula of capital costs is as follows:

Financing cost = (Engineering cost + Preliminary and other fees) × Reasonable construction period × Interest rate / 2

(4) Deductible input tax

According to relevant VAT documents, for those that qualify for VAT deduction, the replacement cost is reduced by the corresponding VAT.

② Determination of composite depreciation rate

Shaft engineering in coal mines differs from surface buildings in that it is a special structure attached to coal resources. Its economic lifespan is closely linked to the coal reserves that can be mined. As coal resources are depleted, the economic lifespan shortens, and when coal resources are exhausted, the economic lifespan ends.

Underground engineering has a complex geological structure, many unpredictable factors, and poor construction conditions. The stability of the tunnels depends on their location, rock layer properties, and mining methods. The service life of each type of tunnel is determined by the coal reserves in the service area.

Therefore, before determining the depreciation rate, the appraisers first reviewed geological reports, mine design data, and understood the position, rock properties, support methods, geological structures, and the impact of mining on the tunnels. They then visited representative tunnels underground to inspect the support conditions and maintenance status and consulted with on-site engineering personnel to verify and review the maintenance records and methods. Finally, based on the coal reserves, remaining reserves, recoverable reserves, and production capacity provided by the geological survey department, the remaining service life of each tunnel was calculated, and the composite depreciation rate was determined. The calculation formula is as follows:

Composite depreciation rate = Remaining service life / (Service life + Remaining service life) × 100%

③ Appraised value

Appraised value = Full replacement value × Composite depreciation rate

According to the appraisal, the original value of the shaft engineering incurred an appraisal appreciation of RMB316,325,400.00, representing an appreciation rate of 24.98%; the net value appreciation was appraised to be RMB328,727,200.00, with an appreciation rate of 30.33%. The primary reason for the appraisal appreciation is the increase in labor, material, and machinery costs compared with those in the construction period. The main reason for the appraisal appreciation in the net value lied in the appreciation of the original value and that the book value depreciation was calculated using the production and reserves method while this appraisal determined the newness rate based on the remaining service life.

4. Fixed assets – equipment

Equipment assets include machinery, vehicles, and electronic devices. Based on the nature of this project and the characteristics of the equipment assets within the appraisal scope, for some older electronic devices (e.g., computers) and vehicles, where there is an active second-hand market, the appraised value is based on the second-hand or scrap value of similar equipment. For other equipment, which does not have independent profit-generating ability and where there are very few similar transaction examples, it is not suitable to apply the income approach or market approach for appraisal. Therefore, the cost method is used for these equipment appraisals. The cost method calculation formula is as follows:

Appraised value = Replacement cost × Depreciation rate

(1) Replacement cost

A. Machinery and equipment

For equipment that requires installation, the replacement cost generally includes: Equipment purchase price, transport and handling fees, installation engineering fees, pre-construction and other costs, and the capital cost. For equipment that does not require installation, the replacement cost generally includes: Equipment purchase price and transport and handling fees. The calculation formula is as follows:

Equipment requiring installation replacement cost = Equipment purchase price + Transport and handling fees + Installation engineering fees + Pre-construction and other costs + Capital costs - Deductible VAT

Equipment not requiring installation replacement cost = Equipment purchase price + Transport and handling costs - Deductible VAT

If the equipment foundation is independent or inseparable from the building, the equipment foundation cost is considered within the appraisal of the building and structure assets; otherwise, it is included in the installation engineering costs.

① Equipment purchase price

The equipment purchase price is primarily determined by consulting the market price on the valuation benchmark date with the manufacturer or by checking relevant quotation information, such as the current market price or the contract prices of recently purchased similar equipment, as well as the *Thermal Power Engineering Limit Design Reference Cost Index (2024 Level)* published by the China Electric Power Planning & Engineering Institute and the Electric Engineering Cost Information Network. For equipment where the purchase price cannot be found, the price change coefficient of equipment from the same era and category is used to calculate the purchase price.

② Transport and handling fees

Transport and handling fees refer to the transportation costs, loading and unloading fees, and other associated costs incurred during the equipment's transportation.

If transport and handling fees are not included in the equipment purchase price, they are determined by referring to standard cost indicators from resources like the *Asset Appraisal Common Data and Parameters Handbook* and the *Mechanical Industry Construction Project Budgeting Method and Indices*, taking into account factors such as transportation distance, weight, and volume.

For thermal power equipment, transport and handling fees are determined according to the *Thermal Power Plant Engineering Construction Budget Preparation and Calculation Regulations* (2018 version) published by the National Energy Administration.

If the equipment quotation includes the delivered price, transport and handling fees are not calculated separately.

③ Installation engineering fees

Installation engineering costs refer to all expenses incurred after the equipment arrives at the construction site, including assembly, positioning, connection, fixing, inspection, testing, and trial operation, until the equipment is in a usable state.

For coal mine and coal washing plant equipment, installation engineering costs are mainly based on the reference rates for installation provided in the *Manual of Commonly Used Data and Parameters for Asset Appraisal*, while also considering the difficulty of installation and the historical expenditure of the appraised entity on equipment installation. After determining the installation engineering rate, the costs are calculated. If the seller's quotation includes installation engineering costs, these are not recalculated.

For power plant equipment, installation engineering costs are primarily determined by referring to preliminary design specifications, relevant technical agreements, and other documentation, to establish the equipment installation quantity and other parameters. The relevant costs are calculated according to the *Thermal Power Plant Engineering Construction Budget Preparation and Calculation Regulations (2018 version), the Power Construction Engineering Quotation Norms (2018 version), and the Notice on the Adjustment of the Price Level for the 2018 Edition of Power Construction Engineering Budget Norms for the First Half of 2025* (D.E. [2025] No. 34) and Notice on Adjusting the Safety and Civilised Construction Fees (D.E. [2023] No. 9). The direct engineering costs, additional measures, indirect costs, profits, and taxes are then calculated to determine the installation engineering costs. The installation engineering fee calculation formula is as follows:

Installation engineering fee = Equipment purchase price × Installation engineering fee rate

④ Pre-construction and other costs

The preliminary and other costs are calculated based on the construction investment amount provided by the appraised entity, according to industry, national, or local government prescribed fee standards. Specific rates and billing bases are presented below:

Calculation of Preliminary and Other Fees for Thermal Power Plants

No.	Project or Expense Name	Calculation Basis	Rate	Input VAT Rate
I	Project construction management fees			
1	Project legal entity management fees	Installation engineering costs	3.25%	/
2	Bidding fees	Installation engineering costs+ equipment costs	0.37%	6%

⑤ Capital costs

For thermal power companies, the cost of capital is determined based on the project's reasonable construction period. The benchmark cost of funds is calculated using the LPR for RMB loans published by the People's Bank of China on the valuation benchmark date, applied to the sum of the equipment purchase price, installation engineering costs, and other expenses. The interest on construction period loans is calculated based on the method of settlement for individual power generation units at the time of completion. The interest calculation formula is as follows:

Construction period loan interest = Interest on construction period loan before first unit starts generation + Interest on construction period loan after first unit starts generation

Wherein: Interest on construction period loan before first unit starts generation = Σ[(Year-beginning loan principal and interest + This year's loan / 2) × Annual interest rate]

Interest on construction period loan after first unit starts generation = Σ[(This year's loan / 2) × Annual interest rate]

The cost of capital is calculated based on compound interest as stipulated in the *Thermal Power Plant Engineering Construction Budget Preparation and Calculation Regulations*, specifically as follows:

Year	Year 1	Year 2	Year 3	Year 4	Total
Investment proportion	25.00%	40.00%	25.00%	10.00%	100.00%
Nominal annual interest rate	3.25%	3.25%	3.25%	3.25%	/
Effective annual interest rate	3.29%	3.29%	3.29%	3.29%	/
Interest factor before the first unit commences operation	0.41%	1.49%	2.61%	0.41%	4.93%
Interest factor before the second unit commences operation	/	/	/	0.45%	0.45%
Total interest factor	0.41%	1.49%	2.61%	0.86%	5.38%

The calculation formula of capital costs is as follows:

Capital costs = (Equipment purchase price + Transport and handling costs + Installation engineering fees + Pre-construction and other costs) × Total interest factor

For coal mines and coal washing plants, the cost of capital is determined based on the reasonable construction period of the appraised entity, with reference to the LPR for

RMB loans published by the People's Bank of China on the valuation benchmark date. The cost of capital is calculated by taking the sum of the equipment purchase price, transport and handling fees, installation engineering costs, and preliminary costs, applying an even distribution of funds over the construction period.

The reasonable construction period for the coal mine project is 4.25 years, and the 4.25-year LPR published by the National Interbank Funding Center on the valuation benchmark date is 3.41%. The reasonable construction period for the coal washing plant project is 2 years, and the 2-year LPR published by the National Interbank Funding Center on the valuation benchmark date is 3.13%.

The formula for calculating the capital cost is as follows:

Capital cost = (Equipment purchase price + Transport and handling costs + Foundation costs + Installation engineering costs + preliminary expenses) × Reasonable construction period × Interest rate × 1/2

⑥ Deductible VAT

According to the regulations in "C.SH. [2016] No. 36", "C.SH. [2018] No. 32", and the "Announcement No. 39 in 2019 of the Ministry of Finance, the State Taxation Administration and the General Administration of Customs", the eligible VAT can be credited, including VAT on the equipment purchase price (tax rate 13%), VAT on transport and handling fees (tax rate 9%), and VAT on pre-construction and other costs (tax rate 6%).

B. Vehicles

For vehicles, the replacement cost is determined by the market price on the valuation benchmark date, adding the vehicle purchase tax and other reasonable costs (such as licence fees). The calculation formula is as follows:

Replacement cost = Vehicle purchase price + Vehicle purchase tax + Licence fees and other costs - Deductible VAT

Where:

Vehicle purchase tax = Vehicle purchase cost / (1 + 13%) × 10%.

The vehicle purchase price is mainly determined by consulting local dealers or checking online for market prices; vehicle purchase tax is determined according to the *Vehicle Purchase Tax Law of the People's Republic of China*; licence fees and other costs are determined based on local administrative fee standards and actual vehicle expenses.

C. Electronic equipment

For electronic equipment, the replacement cost is determined based on the market purchase price on the valuation benchmark date.

(2) Determination of composite depreciation rate

① For specialised and general machinery, the depreciation rate is primarily determined

based on the equipment's economic service life, used lifespan, and on-site inspections of the equipment's condition and technical status. The remaining service life is then calculated, and the composite depreciation rate is determined using the following formula:

Composite depreciation rate = Remaining service life / (Remaining service life + Used lifespan) × 100%

② For small devices including electronic equipment and air conditioners, the composite depreciation rate was mainly determined based on their economic service life. For large ones, the composite depreciation rate was mainly based on the working environment and the operational status, among others. The calculation formula is as follows:

Age-based depreciation rate = (Economic service life - used lifespan) / Economic service life × 100%

Composite depreciation rate = Age-based depreciation rate × Adjustment coefficient

③ For vehicles, according to the Standard for Mandatory Scrapping of Motor Vehicles (Order No. 12 of 2012 of Ministry of Commerce, National Development and Reform Commission, Ministry of Public Security, Ministry of Environmental Protection), the theoretical depreciation rate was determined using either vehicle mileage or service life, based on the lower of the two methods. For vehicles without a prescribed service life, the remaining service life method was used. Finally, the lower of the age-based newness rate and mileage-based newness rate is adjusted based on the observation-based newness rate, forming the composite depreciation rate. The calculation formulas are as follows:

Age-based newness rate (no mandatory scrapping age) = Remaining useful life / (Years of use + Remaining useful life) × 100%

Age-based newness rate (with mandatory scrapping age) = (Prescribed service life - Years of use) / Prescribed service life × 100%

Mileage-based newness rate = (Prescribed mileage - Mileage run) / Prescribed mileage × 100%

Composite depreciation rate = Depreciation rate × Adjustment coefficient

(3) Determination of the appraised value

Appraised value = Replacement cost × Composite depreciation rate

The original value of machinery and equipment experienced an appraisal depreciation of RMB115,227,300.00, representing a depreciation rate of 1.49%; the net value showed an appraisal appreciation of RMB369,438,800.00, with an appreciation rate of 11.97%. The primary reasons for this appraisal appreciation or impairment are given below:

The principal reason for the appraisal impairment in the original value was attributable to the decrease in the acquisition price of the equipment and the market

approach used to appraise some assets. The main reason for the appraisal appreciation in the net value was attributable to the depreciable life adopted by the appraised entity being shorter than the economic useful life of the equipment.

5. Construction in progress

Based on the characteristics of construction in progress, the appraised value type, and data collection, the cost method was adopted for the appraisal.

(1) Completed projects

For projects where the main structure is already listed as fixed assets, they are incorporated into the main appraisal. Other completed projects are appraised according to the fixed asset appraisal method.

(2) Unfinished projects

For ongoing projects that started within six months of the valuation benchmark date, due to minor price changes, the appraisal is based on the book value of the ongoing construction after verification, and the residual value after deducting unreasonable expenses is used as the appraised value.

For ongoing projects that started more than six months before the valuation benchmark date, if the book value does not include capital costs, the capital costs are added based on the reasonable construction period. If the book value differs significantly from the price level on the valuation benchmark date, the construction costs are adjusted to the valuation benchmark date price level.

(3) Pure expense type ongoing projects

Pure expense type ongoing projects have no physical entity. After verifying that the payments made are necessary for future projects or have actual value to the future owners, and confirming that there is no duplicate valuation with related asset projects, the book value after verification is used as the appraised value. Otherwise, the value is treated as zero.

The valuation of construction in progress appreciates by RMB64,961,600.00 or 4.37%. To be specific, the appreciation of the civil engineering project is attributable to two main factors: the first is the increase in the cost of labor, materials, and machinery for the railway line on the valuation benchmark date compared to the project construction period; the second lies in that the some of the equipment installation engineering works are included into the civil engineering project. The impairment of the equipment installation engineering attributes to several reasons: first, completed equipment is valued as fixed assets, taking into account the comprehensive newness rate; second, certain assets are valued under the civil engineering of construction in progress ; third, the preliminary expenses for some completed fixed assets are valued

as part of the fixed asset valuation, but are assigned a zero value in this specific assessment. Collectively, these factors result in an impairment of the equipment installation engineering of the construction in progress, while the valuation of the overall construction in progress appreciates.

6. Land use rights

According to the requirements of the *Asset Appraisal Practice Standards - Real Estate*, the main appraisal methods for land use rights include the market approach, income approach, hypothetical development method, cost method, and benchmark land price method. The appropriate appraisal method is selected based on the appraisal purpose, subject asset, value type, data collection conditions, and the applicability of the above basic appraisal methods.

This appraisal uses the market comparison method and benchmark land price method to appraise the value of the land use rights.

Intangible Assets - Land Use Rights had a book value of RMB728,380,200.00, an appraised value of RMB737,554,700.00, resulting in an appraisal appreciation of RMB9,174,500.00, and an appreciation rate of 1.26%. It is the significant increase of the land price in the region over the acquisition cost that leads to the appreciation.

7. Mining rights

(1) Mining rights

Based on the purpose of this project appraisal and specific characteristics of mining rights, commissioned mining rights have a certain scale, possesses independent profit-making capabilities that can be measured, and its future returns and risks can be quantified in monetary terms. The key technical and economic parameters for its resource development and utilization can be determined with reference to the "Mine Volume Specification for Preliminary Design (Version 2) of Chahasu Mine and Coal Washing Plant of Guodian Construction Investment Inner Mongolia Energy Co., Ltd." and the company's actual operational data. Therefore, in the viewpoints of the appraisers, with a relatively high degree of geological research and generally complete and reliable data, reports and relevant information largely meet the requirements for applying the discounted cash flow method for appraisal. In accordance with the *Basic Guidelines for Mining Rights Appraisal Technology and the Standard* (CMVS00001-2008) *for Income Approach Appraisal Methods* (CMVS12100-2008), the discounted cash flow method has been selected for this project appraisal.

The calculation formula is as follows:

$$P = \sum_{t=1}^{n} (CI - CO)_t \bullet \frac{1}{(1+i)^t}$$

Where: P —Mining rights appraisal value;

CI—Annual cash inflow;

CO—Annual cash outflow;

i—Discount rate;

t—Year index (t = 1, 2, 3, …, n);

n—Calculation period.

Specific Appraisal Indicators and Parameters

The Chahasu Coal Mine is currently operating normally. The resource reserves used for this appraisal are based on the "Verification Report on Coal Resource Reserves of Chahasu Field in Xinjie Mining Area, Dongsheng Coalfield, Inner Mongolia Autonomous Region" (hereinafter referred to as the "Reserve Verification Report") and its review opinions, the "2024 Annual Reserve Report of Chahasu Coal Mine, Dongsheng Coalfield, Inner Mongolia Autonomous Region" (hereinafter referred to as the "2024 Annual Reserve Report") prepared by Inner Mongolia Jiuwei Surveying and Mapping Technology Co., Ltd. in January 2025, and the "Mine Volume Specification for Preliminary Design (Version 2) of Chahasu Mine and Coal Washing Plant of Guodian Construction Investment Inner Mongolia Energy Co., Ltd. (hereinafter referred to as the "Preliminary Design") prepared by CCTEG Nanjing Design & Research Institute in August 2024, along with its approval. The actual information of the enterprise is subject to updates. Other key economic parameters are determined based on the actual financial data of enterprise. Refer to China Mineral Rights Appraisal Guidelines, other relevant policies and regulations, technical economic standards, and data available to the appraisers for selection of other major technical and economic indicators.

Determination of each parameter is explained as follows:

Reserve Resources as of the valuation benchmark date: based on the Reserve Verification Report and its review opinions, 2024 Reserve Annual Report, and statistical table of extraction consumption of Chahasu Coal Mine in January-July 2025, as of the valuation benchmark date, reserve resources amount to 1,188,515,600.00 tons, including 462,365,000.00 tons of measured resources, 491,235,600.00 tons of indicated resources, and 234,915,000.00 tons of inferred resources.

Mineral Resource Reserves Utilized for Appraisal: Mineral Resource Reserves Utilized for Appraisal = Σ (Base Reserves Involved in the Appraisal + Resource

Quantity × Corresponding Credibility Coefficient) = 1,149,729,400.00 tons.

Product Scheme: based on the actual production and sales of mine, product scheme is set as Shenye Shenyou Coal and Shenhun Blended Coal.

Recovery Rate in Mining Areas: according to the Preliminary Design, recovery rate should not be less than 85% for thin coal seams, 80% for medium-thick coal seams, and 75% for thick coal seams. Specifically, for thick coal seams mined by the full-seam mining method, the recovery rate shall not be less than 80%.

Recoverable Reserves Utilized for Appraisal: = (Mineral Resource Reserves Utilized for Appraisal-Design Losses) – mining loss. As of the valuation benchmark date, it is 797,581,800.00 tons.

Production capacity and service life: Both the designed production capacity in the "Preliminary Design" and the licensed production capacity specified in the Mining License are 8million tons. The mine's actual raw coal production in recent years has also consistently exceeded 8million tons per year. Therefore, for this appraisal, the mine's future production throughout its service life is determined as 8.00 million tons per year, with the service life used by the appraisal being 71.21 years spanning from August 2025 to October 2096.

Sales price and revenue of products: Regarding the Shenhun Blended Coal for the purpose of this appraisal, the sales price for the period in August-December 2025 and the full 2026 is set at RMB388.00 per ton, the sales price in 2027 and 2028 is set at RMB386.00 per ton and RMB384.00 per ton respectively, compared with RMB382.00 in 2029 and beyond; for the Shenye Shenyou Coal, the sales price for the period in August-December 2025 and the full 2026 is set at RMB473.00 per ton, the sales price in 2027 and 2028 is set at RMB516.00 per ton and RMB569.00 per ton respectively, compared with RMB602.00 in 2029 and beyond. Assuming all produced raw coal is sold in the respective period, the annual sales revenue during a normal production year will be RMB3,809,577,400.00.

Fixed Asset Investment: for this Appraisal, after the adjustment for production scale, the original value of fixed assets (after consolidation with construction in progress) is RMB5,697,610,900.00 (including: RMB1,266,199,600.00 for shaft and tunneling engineering, RMB1,515,968,700.00 for buildings and structures, and RMB2,915,442,600.00 for machinery and equipment). Net value is RMB3,329,782,000.00 (including: RMB1,129,917,400.00 for shaft and tunneling engineering, RMB1,048,319,000.00 for buildings and structures, and

RMB1,151,545,600.00 for machinery and equipment). Subsequent investment for construction in progress is RMB10,507,900.00 (including tax).

Investments in intangible assets: Based on the production scale index adjustment, the land use rights of the mine as of the valuation benchmark date is valued at RMB540,481,900.00. Given that the assessed service life of the mine is 71.21 years, which exceeds the grant term for industrial land, a reinvestment in the intangible asset, i.e., land use rights valued at RMB339,731,500.00 will be required in 2069. According to the "Intangible Assets - Breakdown of Appraisal for Other Intangible Assets", other intangible assets primarily consist of software for mining operations and are valued at RMB11,276,900.00 as of the valuation benchmark date.

Long-term deferred expenses and development expenditure: Long-term deferred expenses primarily consist of the amortized balance of resettlement compensation fees and coal mine geological restoration projects, totaling RMB563,357,000.00. Based on the "Breakdown of Appraisal for Development Expenditures", development expenditures related to the coal mine amount to RMB169,298,700.00.

Working capital investment: According to the *Guidance on Determining Mining Rights Appraisal Parameters,* working capital can be estimated using the extended indicator method, with a sales revenue capital ratio for coal mines ranging from 20% to 25%. For this project, working capital is calculated at 22% of sales revenue. The total working capital required for this project is RMB838,107,000.00.

Total Cost and Operating Cost:

Cost of External Materials: based on the mine's financial statements, unit cost of external materials is set at RMB11.86 per ton.

Cost of External Fuel and Power: based on the mine's financial statements, unit cost of external fuel and power is set at RMB13.41 per ton.

Employee Compensation: based on the financial statements, unit employee compensation is set at RMB76.71 per ton.

Depreciation Expense: based on calculations, annual depreciation expense is RMB279,116,800.00, and unit depreciation expense is RMB34.89 per ton.

Maintenance and Upkeep Fee and Shaft & Tunneling Engineering Fund: according to the notice of Measures for Withdrawal and Use of Coal Production Safety Funds and Several Provisions on Regulating the Management of Coal Mine Maintenance and Upkeep Fees (C.J. [2004] No. 119), maintenance and upkeep fee for this project is RMB9.50 per ton, and shaft & tunneling engineering fund is RMB2.5 per ton. This includes a renewal-type maintenance fee of RMB7.00 per ton and a depreciation-type maintenance fee of RMB3.50 per ton.

Safety Expenses: Pursuant to the "Notice on Issuing the 'Measures for the

Withdrawal and Use of Coal Production Safety Funds'" (Cai Qi [2012] No. 16) issued by the Ministry of Finance and the National Mine Safety Administration, the safety cost for this project assessment is set at RMB30.00 per ton unit safety expense for this Appraisal is set at RMB30.00 per ton.

Repair Expense: based on the enterprise's financial statements, unit repair expense is RMB10.93 per ton.

Outsourced service fees: This appraisal accordingly determines the outsourced service fees are RMB22.76 per ton.

Ground subsidence compensation and relocation compensation fees: According to the company's forecasts, approximately RMB1.13 billion will be required for the resettlement compensation payments to the three aforementioned villages from 2025 to 2029. Additionally, other compensation fees during the same period are projected to be around RMB335 million. After this five-year period, the future costs for ground subsidence compensation and relocation will be determined on the basis of RMB4.58 per ton, pegged to the company's ground subsidence compensation expenses in 2022.

Face relocation costs: Based on on-site observations, face relocation occurs approximately once every 1.5 years. For this appraisal, future annual face relocation costs are determined to be RMB2.35 per ton, based on the face relocation costs incurred in 2022.

Water and soil conservation compensation fees: The compensation fees are set at RMB2.00 per ton of raw coal, as stipulated in the "Implementation Measures for the Collection and Use of Soil and Water Conservation Compensation Fees in Inner Mongolia" (Nei Cai Fei Shui Gui [2015] No. 18), jointly issued by the Inner Mongolia Department of Finance, Development and Reform Commission, Water Resources Department, and Hohhot Central Sub-branch of the People's Bank of China.

Other expenses: Based on the company’s financial statements, the other expenses for future years are determined to be RMB2.69 per ton.

Administrative expenses:

Technical service fees: The unit technical service fee is determined to be RMB0.20 per ton, based on the average technical service fees from the preceding three years.

Amortization of intangible assets: According to the company’s financial statements, the unit amortization expense is recognized as RMB2.85 per ton.

Mine environmental restoration and remediation costs: According to the "Geological Environmental Protection and Land Reclamation Plan for Chahasu Coal Mine of Guodian Construction Investment Inner Mongolia Energy" prepared by

prepared by CCTEG Nanjing Design & Research Institute in April 2024, the unit cost for environmental restoration, remediation and land reclamation is RMB1.35 per ton.

Other administrative expenses: The future annual unit cost for other administrative expenses is determined at RMB1.29 per ton, based on the average of the three years preceding the valuation benchmark date.

Research and Development Expenses: based on the enterprise's financial data, unit R&D expense for this Appraisal is set at RMB2.17 per ton.

Selling expenses: Based on the company's financial information, laboratory testing fees and other selling expenses are relatively minor, aggregating to a unit cost of RMB0.22 per ton.

Financial Expenses: according to Guidance on Determining Parameters for Mining Rights Appraisal, and after calculation, unit financial expense for this Appraisal is RMB2.20 per ton.

Total Cost refers to the sum of all cost items. Operating Cost refers to the total cost after deducting depreciation expense, depreciation-type maintenance fee, shaft & tunneling engineering fund, amortization expense, and financial expenses.

Taking the year 2030 as an example, unit total cost for the Appraised Entity is RMB231.96 per ton, and unit operating cost is RMB186.02 per ton. Annual total cost is RMB2,043,954,000.00, and annual operating cost is RMB1,676,436,700.00.

Taxes and Surcharges:

Value-added tax and related surcharges: In accordance with relevant tax policies, the output VAT rate is 13%. To streamline calculations, the input tax amount is determined based on the aggregate of purchased material costs, purchased fuel and power costs, repair expenses, outsourced service fees, relocation and site change costs, information service fees, technical service fees, and laboratory testing fees. Specifically, the tax rate for outsourced service fees and relocation and site change costs is 9%; for information service fees, technical service fees, and laboratory testing fees, it is 6%; and for all other items, it is 13%. Input VAT rates are calculated at 13% for machinery and equipment, and 9% for buildings and structures. The urban maintenance and construction tax rate is 5%, while the education surcharge and local education surcharge are 3% and 2%, respectively.

Resource tax: Pursuant to the "Decision of the Inner Mongolia Autonomous Region on Authorization Matters of Tax Laws including Applicable Tax Rates" issued by the Standing Committee of the People's Congress of the Inner Mongolia

Autonomous Region (Adopted at the 21st Session of the 13th Standing Committee of the Inner Mongolia Autonomous Region on 23 July 2020), the applicable resource tax rate for coal milling in the Inner Mongolia Autonomous Region is set at 9%.

Water resource tax: Based on the "Notice on Issuing the Implementation Measures for the Pilot Reform of Water Resource Tax in Inner Mongolia Autonomous Region" (Nei Zheng Fa [2017] No. 157) published by the People's Government of Inner Mongolia Autonomous Region, as well as the company's financial information, the water resource tax is determined as RMB0.71 per ton of ore.

Water conservancy construction fund: In accordance with the "Notice on Issuing the Implementation Rules for Managing the Financing and Use of the Inner Mongolia Autonomous Region Water Conservancy Construction Fund" (Nei Cai Shui [2021] No. 1055) jointly issued by the Department of Finance, Taxation Bureau, and Department of Water Resources of Inner Mongolia Autonomous Region, the Water Conservancy Construction Fund is calculated at 0.5% of the value-added tax.

Other taxes: According to the company's financial records, the average unit other tax fee is RMB1.95 per ton.

Income tax: Based on the "Enterprise Income Tax Law of the People's Republic of China" promulgated on 16 March 2007, and the "Announcement on Extending the Enterprise Income Tax Policy for Western Development" (Announcement No. 23 of 2020) issued by the Ministry of Finance, the State Taxation Administration, and the National Development and Reform Commission, the income tax rate for the purpose of this appraisal is determined to be 15% before 2030 and 25% after 2031. According to the "Announcement of the Ministry of Finance and the State Taxation Administration on Further Improving the Policy for Additional Deduction of Research and Development Expenses Before Income Tax" (Announcement No. 7 of 2023 by the Ministry of Finance and the State Taxation Administration) and the company's financial information, the additional deduction rate for research and development expenses before income tax is 30%.

Discount rate: according to Guidance on Determining Parameters for Mining Rights Appraisal, basic composition of Discount Rate is: Discount Rate = Risk-free Rate + Risk Premium Rate

Risk-free Rate is determined as 1.70%, referencing the 10-year government bond yield to maturity disclosed by WIND information system as of the valuation benchmark date.

Risk Premium Rate is estimated using "risk addition method". Main risks include:

exploration and development stage risk, industry risk, financial operation risk, and other specific risks. As this is an operating mine, exploration and development stage Risk Premium Rate is set at 0.60%, industry Risk Premium Rate at 2.00%, financial operation Risk Premium Rate at 1.50%. Considering the actual situation of the mine, other specific Risk Premium Rate is set at 2.00%. Total Risk Premium Rate for this Appraisal is determined to be 6.10%.

Based on the comprehensive discount rate range and mine's development status, Discount Rate for this project is determined to be 7.80%.

After estimation, appraised value of mining rights of Chahasu, Dongsheng Coalfield, Ordos City, Inner Mongolia Autonomous Region as of 31 July 2025 is RMB9,405,929,300.00.

8. Other assets and liabilities

Asset appraiser verified the book values of various itemized statements and related materials provided by the Appraised Entity. Appraised values were determined based on audited book values or actual liabilities borne/entitlements held by the entity.

Where: book value of current assets was RMB1,182,753,000.00, with an appraised value of RMB1,194,848,000.00, representing an increase of 1.02%. Book value of other non-current assets (Development expenditure + Long-term prepaid expenses + Deferred tax assets + Intangible assets - Patents and software copyrights + Other intangible assets + Other non-current assets) was RMB3,078,951,000.00, with an appraised value of RMB3,095,254,800.00, representing an increase of 0.53%. Book value of current liabilities was RMB9,411,223,300.00, with appraised value of RMB9,411,223,300.00, showing no change. Book value of non-current liabilities was RMB6,790,583,700.00, with an appraised value of RMB6,788,333,700.00, representing a decrease of 0.03%.

Based on the calculations, as of the valuation benchmark date:

(A) Appraised Value of Total Shareholders' Equity of Guodian Construction Investment Inner Mongolia Energy Co., Ltd.= Current Assets (RMB1,194,848,000.00) + Non-Current Assets (including equity investments + building and structure fixed assets (excluding shaft) + shaft engineering + equipment fixed assets + construction in progress + land use rights + mining rights + other non-current assets) (RMB611,872,600.00 + RMB2,461,923,500.00 + RMB1,412,396,800.00 + RMB3,455,076,200.00 + RMB1,552,328,900.00 + RMB737,554,700.00 + RMB9,405,929,300.00 + RMB3,095,254,800.00) - Current Liabilities

(RMB9,411,223,300.00) - Non-Current Liabilities (RMB6,788,333,700.00) = RMB7,727,627,900.00.

(B) Book Value of Total Shareholders' Equity of Guodian Construction Investment Inner Mongolia Energy Co., Ltd. = Current Assets (RMB1,182,753,000.00) + Non-Current Assets (including equity investments + building and structure fixed assets (excluding shaft) + shaft engineering + equipment fixed assets + construction in progress + land use rights + mining rights + other non-current assets) (RMB605,296,600.00 + RMB2,351,442,500.00 + RMB1,083,669,600.00 + RMB3,085,637,400.00 + RMB1,487,367,300.00 + RMB728,380,200.00 + RMB1,435,945,900.00 + RMB3,078,951,000.00) - Current Liabilities (RMB9,411,223,300.00) - Non-current Liabilities (RMB6,790,583,700.00) = RMB1,162,363,400.00.

IV. Income Approach

(i) Primary Assumptions

1. It is assumed that all appraisal targets are in the process of being traded, and the appraisers simulate the market based on the transaction conditions of the appraised assets;

2. It is assumed that for assets traded in the market, or assets to be traded in the market, both parties in the transaction have equal standing and ample opportunity and time to access market information. The transactions are voluntary and rational, and the parties can make rational judgments about the asset's function, purpose, and transaction price;

3. It is assumed that the appraised assets will continue to be used for their current purposes and in their current manner throughout the remaining service life of the mine;

4. It is assumed that there will be no significant changes to the relevant national laws, regulations, and policies or the macroeconomic situation, and that the political, economic, and social environment in the regions of the parties involved in the transaction will not change significantly;

5. Given the actual status of the assets on the valuation benchmark date, it is assumed that the company will continue operations throughout the remaining service life of the mines;

6. It is assumed that there will be no significant changes in the interest rates, tax bases, tax rates, policy-based collection fees, or other related factors affecting the appraised entity after the valuation benchmark date;

7. It is assumed that the management of the appraised entity after the Valuation

benchmark date will remain responsible and stable, with the ability to perform their duties;

8. Unless otherwise stated, it is assumed that the company fully complies with all relevant laws and regulations;

9. It is assumed that after the valuation benchmark date, there will be no force majeure or unforeseen factors that cause significant adverse effects on the appraised entity;

10. It is assumed that after the valuation benchmark date, the accounting policies used by the appraised entity and those used to prepare this asset appraisal report will remain consistent in significant aspects;

11. It is assumed that after the valuation benchmark date, the scope and methods of the appraised entity's operations will remain the same, based on the current management practices and level;

12. It is assumed that after the valuation benchmark date, the appraised entity's cash inflows and cash outflows will be at an average rate;

13. It is assumed that after the valuation benchmark date, the appraised entity's products or services will maintain their current market competitiveness;

14. It is assumed that the mineral resources reserves reviewed within the mining licence will form the basis for the mining rights, and that the mining licence can be smoothly renewed in the future;

15. It was assumed that no significant changes occur in the future mining techniques employed by the appraisal entity;

16.It was assumed that the production and sales of commercial coal in future years would achieve a balance between production and sales;

17. It was assumed that ongoing projects can be connected to the grid and reach production as scheduled after the valuation benchmark date, and will be eligible for relevant tax incentives;

18. It was assumed that the unit cost of environmental restoration and land reclamation remains constant during the future appraisal period;

19. As of the valuation benchmark date, the appraised entity can enjoy the Western Development Enterprise Income Tax preferential policy, with a 15% tax rate from 1 January 2021, to 31 December 2030.

(ii) Appraisal Model

1. Basic model

This Appraisal employs the Discounted Cash Flow (DCF) method under the Income Approach to indirectly determine the total equity value of shareholders by appraising the business enterprise value. Business enterprise value comprises the value of operating assets generated from normal business activities and value of non-operating assets unrelated to normal business activities. Value of operating assets is determined using the Free Cash Flow to the Firm (FCFF) model, which discounts and sums the projected annual free cash flows to the firm over a specified future period using an appropriate discount rate. The calculation model is as follows:

Total Shareholders' Equity Value = Business Enterprise Value - Interest-bearing Debt Value

RMB7,861,498,800.00 = RMB19,080,111,200.00 - RMB11,218,612,400.00

(1) Business Enterprise Value

Business enterprise value refers to the sum of total shareholders' equity value and interest-bearing debt value. Based on the asset allocation and usage of the Appraised Entity, the calculation formula for business enterprise value is as follows:

Business Enterprise Value = Value of Operating Assets + Value of Redundant Assets + Value of Non-operating Assets - Value of Non-operating Liabilities + Value of Long-term Equity Investments

Business enterprise value for Guodian Construction Investment Inner Mongolia Energy Co., Ltd. is calculated as: RMB18,807,276,000.00 + RMB210,165,100.00 + RMB3,635,422,200.00 – RMB4,184,624,700.00 + RMB611,872,600.00

= RMB19,080,111,200.00

① Value of Operating Assets

Operating Assets refer to the assets and liabilities related to the production and operation of the Appraised Entity and involved in the projection of free cash flows to the firm after the valuation benchmark date.

② Value of Redundant Assets

Redundant Assets refer to those assets in excess of the requirements for production and operation as of the valuation benchmark date, not involved in the projection of post-Valuation benchmark date free cash flows to the firm. The redundant assets of the Appraised Entity include monetary funds. Cost approach was used for their appraisal.

③ Value of Non-operating Assets and Liabilities

Non-operating Assets and Liabilities refer to those assets and liabilities unrelated to the production and operation of the Appraised Entity and not involved in the projection of free cash flows to the firm after the valuation benchmark date. For the Appraised Entity, these include accounts receivable, other receivables, inventory and fixed assets in abnormal status, accounts payable, other payables, etc. Cost approach was used for their appraisal.

④ Value of Equity Investments

Equity Investments refer to external equity investments held by the enterprise as of the valuation benchmark date. Their value is determined by multiplying the total equity value of the invested entity, confirmed through an appropriate appraisal method, by the ownership percentage.

(2) Interest-bearing Debt Value

Interest-bearing debt refers to liabilities requiring interest payments by the Appraised Entity as of the valuation benchmark date. This includes short-term loans, long-term loans due within one year, and long-term loans. Verified book value is RMB11,218,612,400.00.

2. Income indicators

For this Appraisal, value of operating assets is calculated using the following formula:

$$P = \sum_{i=1}^{n} \frac{F_i}{(1+r)^i} + \frac{F_n}{r \times (1+r)^n}$$

Where: P: Value of operating assets of the enterprise as of the valuation benchmark date;

Fi: Expected free cash flow to the firm in the i-th year after the valuation benchmark date;

Fn: Expected free cash flow to the firm in the final year of the detailed forecast period;

r: Discount rate (Weighted Average Cost of Capital, WACC) of 7.83%-7.55%;

n: Detailed forecast period;

i: The i-th year within the detailed forecast period.

Among these, free cash flow to the firm is calculated as follows:

Free Cash Flow to the Firm = Earnings before Interest after Taxes + Depreciation & Amortization - Capital Expenditures - Increase in Working Capital

3. Discount rate

Discount rate used is the Weighted Average Cost of Capital (WACC), calculated as follows:

$$\mathrm{WACC} = \mathrm{K_e} \times \frac{\mathrm{E}}{\mathrm{E}+\mathrm{D}} + \mathrm{K_d} \times (1-\mathrm{t}) \times \frac{\mathrm{D}}{\mathrm{E}+\mathrm{D}}$$

Where: ke: Cost of equity capital, calculated as 11.17%-10.87%;

kd: Cost of interest-bearing debt capital, calculated as 2.38%;

E: Market value of equity;

D: Market value of interest-bearing debt;

t: Income tax rate of 14.72%-25%.

Where, the cost of equity capital is calculated using the Capital Asset Pricing Model (CAPM). The formula is as follows:

$$K_e = r_f + MRP \times \beta_L + r_c$$

Where: rf: As the possibility of not being redeemable upon maturity is minimal and can be omitted, yield of state bond is usually considered as risk-free. According to information disclosed by the WIND Information System, the yield of to maturity of 10-year government bonds as at the valuation benchmark date is 1.7044%, this valuation report adopted 1.7044% as the risk-free yield;

MRP: Market risk premium is the difference between the market rate of return on investment and the risk-free rate of return. In particular, the market rate of return on investment is determined by comprehensively analysing the weighted average of the annualised weekly returns from 1992 to the valuation benchmark date selected on the basis of the stock trading price indices of the Shanghai Stock Exchange and Shenzhen Stock Exchange. As calculated, the market rate of return on investment is 8.36%. The yield to maturity on 10-year treasury bonds of 1.70% on the valuation benchmark date has been taken as the risk-free rate of return. The market risk premium is 6.66%;

βL: Levered beta coefficient, measuring systematic risk of equity, determined as 1.1205-1.1200;

rc: Company-specific risk adjustment factor of 2.00%.

A.7 Main Evaluation Materials of Shenyan Coal

I. Selection of Appraisal Methods

The methods selected for this appraisal are the income approach and the asset-based approach.

Reason for selecting the asset-based approach: As of the valuation benchmark date, the book value of the assets and liabilities within the appraisal scope has already been audited. Each asset and liability of the appraised entity can be identified. The identifiable assets and liabilities can each be individually appraised using an appropriate appraisal method, thus meeting the conditions for applying the asset-based approach.

Reason for selecting the income approach: The appraised entity has the foundation and conditions for ongoing operations, with standardised accounting practices, clear management, stable and defined business sources. The management has detailed plans for the current operations and future development of the company. The future expected income and operational risks can be reasonably predicted, meeting the conditions for using the income approach for appraisal.

Reason for not selecting the market approach: The market approach relies on the existence of an active public market with sufficient market data and comparable transaction cases. The appraised entity is a non-listed company. Listed companies in the same industry differ significantly from the valued enterprise in terms of business structure, corporate scale, asset allocation and utilisation, operational stage, growth potential, operational risks, financial risks, and others. Furthermore, near the valuation benchmark date, there were few comparable transactions such as purchases or mergers involving companies in the same industry in China. Reliable operational and financial data from comparable transactions are difficult to obtain, making it impossible to calculate appropriate value ratios. Therefore, the market approach is not adopted for this appraisal.

Under the income approach, the value of the entire shareholders' equity amounted toRMB18,453,997,800, while under the asset-based approach, the value of the entire shareholders' equity is RMB18,760,260,100.

Unless otherwise stated, all amounts in this summary are expressed in Renminbi (RMB).

There is a certain discrepancy between the appraisal results of the income approach and the asset-based approach. The main reason for the discrepancy is the different perspectives considered by the two methods.

The income approach estimates the value of the subject asset by discounting the expected future earnings of the appraised entity from the perspective of the enterprise's future profitability. The asset-based approach, on the other hand, estimates the value of the subject asset based on a reasonable appraisal of the enterprise's assets and liabilities, considering the method of asset replacement. The appraised entity's core business is coal mining and sales, and its key assets are mining rights. In this appraisal, the asset-based approach uses the discounted cash flow method to appraise the mining rights, which aligns closely with the approach used in the income approach. Moreover, the appraisal of the mining rights is based on the coal market conditions, using objective market benchmarks. The results from the asset-based approach reflect the contribution of the mining rights to the company's future earnings, therefore the asset-based approach can more objectively reflect the market value of the appraised entity.

II. Key Appraisal Assumptions

1. It is assumed that all appraisal targets are in the process of being traded, and the appraisers simulate the market based on the transaction conditions of the appraised assets;

2. It is assumed that for assets traded in the market, or assets to be traded in the market, both parties in the transaction have equal standing and ample opportunity and time to access market information. The transactions are voluntary and rational, and the parties can make rational judgments about the asset's function, purpose, and transaction price;

3. It is assumed that the appraised assets will continue to be used for their current purposes and in their current manner throughout the remaining service life of the mine;

4. It is assumed that there will be no significant changes to the relevant national laws, regulations, and policies or the macroeconomic situation, and that the political, economic, and social environment in the regions of the parties involved in the transaction will not change significantly;

5. Given the actual status of the assets on the valuation benchmark date, it is assumed that the company will continue operations throughout the remaining service life of the mine;

6. It is assumed that there will be no significant changes in the interest rates, tax bases, tax rates, policy-based collection fees, or other related factors affecting the appraised entity after the valuation benchmark date;

7. It is assumed that the management of the appraised entity after the Valuation benchmark date will remain responsible and stable, with the ability to perform their duties;

8. Unless otherwise stated, it is assumed that the company fully complies with all relevant laws and regulations;

9. It is assumed that after the valuation benchmark date, there will be no force majeure or unforeseen factors that cause significant adverse effects on the appraised entity;

10. It is assumed that after the valuation benchmark date, the accounting policies used by the appraised entity and those used to prepare this asset appraisal report will remain consistent in significant aspects;

11. It is assumed that after the valuation benchmark date, the scope and methods of the appraised entity's operations will remain the same, based on the current management practices and level;

12. It is assumed that after the valuation benchmark date, the appraised entity's cash inflows and cash outflows will be at an average rate;

13. According to the *Announcement of the Ministry of Finance, the State Taxation Administration and the National Development and Reform Commission on Continuing the Enterprise Income Tax Policy for the Western Development* (Announcement [2020] No. 23 of the Ministry of Finance), enterprises meeting the conditions in western China can pay corporate income tax at a reduced rate of 15% from 1 January 2021 to 31 December 2030. Therefore, this appraisal assumed that from August 2025 to 2030, the statutory income tax rate under the income approach would be 15%, and from 2031 onwards, the statutory income tax rate would be 25%;

14. It was assumed that starting from 2047, the appraised entity would begin to levy mining rights transfer income annually in accordance with the provisions of the Notice on Printing and Distributing the Mineral Rights Transfer Income Collection Method Issued by the Ministry of Finance, Ministry of Natural Resources, and State Taxation Administration (Cai Zong [2023] No. 10);

15. It was assumed that during the appraisal calculation period, the unit cost for environmental restoration and land reclamation would be equal to the extracted and spent amounts;

16. It was assumed that the appraisal was based on the resource reserves within the scope of the mining licence for Xiwan Open-cut Coal Mine that have been reviewed and filed, and that the said mining licence could be successfully renewed upon expiration;

17. It was assumed that the production and sales of commercial coal in future years would achieve a balance between production and sales;

18. The mining right for Xiwan Open-cut Coal Mine within this appraisal scope currently has a production capacity indicator gap of 3 million metric tons per year. It was assumed in this appraisal that the enterprise would acquire the corresponding production capacity indicators on a compensatory basis, with a cash outflow of RMB140 per metric ton (inclusive of tax) considered in Phase I;

19. In March 2024, the appraised entity signed a land lease agreement with its subsidiary, Hongqi Shenyan, for a lease term from 15 March 2024 to 14 March 2029. It was assumed that the lease agreement would be renewed under the same terms upon its expiry, extending through to the end of the forecast period;

20. It was assumed that the High-tech Enterprise Certificate of Shaanxi Hongqi Shenyan Chemical Engineering Co., Ltd., a subsidiary of the appraised entity, would remain valid until the end of the forecast period following its expiry in December 2027;

21. Shaanxi Hongqi Industrial Explosive Group Co., Ltd., shareholder of Shaanxi Hongqi Shenyan Chemical Engineering Co., Ltd., a subsidiary of the appraised entity, has obtained a Safe Production Licence for Civil Explosive Materials, valid until 5 May 2028. Shaanxi Hongqi Industrial Explosive Group Co., Ltd. has authorised Shaanxi Hongqi Shenyan Chemical Engineering Co., Ltd. to produce civil explosive materials - emulsion explosives (gelatinous) (bulk-loaded), with this authorisation valid until 5 May 2028. In this appraisal, it was assumed that the aforementioned Safety Production Licence for Civil Explosive Materials, upon its expiry, could be extended until the end of the forecast period. It is assumed that after the valuation benchmark date, the appraised entity's products or services will maintain their current market competitiveness;

III. Asset-based Approach

1. **Long-term equity investments**

Long-term equity investments refer to the external equity investments made by the enterprise as of the valuation benchmark date. The entire shareholders' equity of the invested entity, as confirmed using an appropriate appraisal method, is multiplied by the shareholding percentage to determine the long-term equity investment value.

No.	Name of investee	Appraisal methods	Conclusion appraisal method
1	Shaanxi Hongqi Shenyan Chemical Engineering Co., Ltd.	Income approach, market approach	Income approach

After appraisal, the results for long-term equity investments are as follows:

No.	Name of investee	Book value	Appraised value	Appreciation rate %
1	Shaanxi Hongqi Shenyan Chemical Engineering Co., Ltd.	3,382.89	4,516.50	33.51
Total		3,382.89	4,516.50	33.51

The appraisal increase amounts to RMB11.3361 million, mainly due to: Hongqi Shenyan is a civil explosive enterprise integrating research, production and sales, with its primary products serving the Xiwan Open-cut Coal Mine operated by shareholder CHN Energy Shaanxi Shenyan Coal Co., Ltd. The industry in which Hongqi Shenyan operates is subject to policy regulation, resulting in high entry barriers due to policy influences. The company faces a favourable industry outlook, with projected future earnings deemed achievable. In summary, the income approach assessment yields a value increase. The long-term equity investment valuation result, aggregated according to the income approach outcome, exceeds the book investment cost.

2. **Fixed assets - properties and buildings (structures)**

According to the characteristics of different types of building and structure assets, the type of appraisal value, the data collection situation, and the applicability of appraisal methods, the following analysis is conducted:

As the subject property comprises self-constructed industrial buildings and ancillary facilities with relatively comprehensive accounting records, enabling full measurement of physical costs, the cost method is applicable. Given the absence of recent comparable property leasing transactions in the subject property's vicinity, the income method cannot be adopted. Furthermore, the lack of recent comparable property sales transactions in the area precludes the collection of sufficient comparable evidence, rendering the market method unsuitable. In summary, the cost method shall be adopted for the appraisal of the buildings.

The cost method calculation formula is as follows:

Appraised value = Replacement cost × Composite depreciation rate

(1) Determination of replacement cost

a) The replacement cost of general buildings (structures) generally includes construction and installation engineering fees, pre-construction and other costs, and capital costs. The calculation formula is as follows:

Replacement cost = Construction and installation engineering cost + Pre-construction and other costs + Capital cost - Deductible VAT

A. Construction and installation engineering costs

For large, valuable, and important buildings, the construction and installation engineering costs are determined using the preliminary and final budget adjustment method, which uses the quantities in the building's final budget as a basis and calculates the construction and installation engineering costs based on local standards and relevant fee documents.

For general buildings, or when final budget data is incomplete or the building's value is small and the structure is simple, the analogy method or unit cost method is used to determine the construction and installation engineering costs.

B. Pre-construction and other costs

Pre-construction and other costs are calculated based on the engineering investment amount of the projects, in accordance with the fee standards set by the industry, national, or local government regulations. The rates and bases for various costs are as follows:

No.	Cost name	Rate (inclusive of tax)	Basis for fee calculation
1	Construction unit management fees	1.70%	Construction and installation engineering costs
2	Project supervision fees	1.20%	Construction and installation engineering costs
3	Engineering quality technical service fees	0.35%	Construction and installation engineering costs
4	Feasibility study fees	0.08%	Construction and installation engineering costs
5	Environmental impact assessment fees	0.06%	Construction and installation engineering costs
6	Surveying and design fees	2.50%	Construction and installation engineering costs
7	Bidding agency service fees	0.02%	Construction and installation engineering costs
8	Occupational safety and hygiene assessment fees	0.20%	Construction and installation engineering costs
9	Engineering insurance premium	0.30%	Construction and installation engineering costs
10	Joint trial operation fees	0.78%	Construction and installation engineering costs
11	Soil and water conservation assessment fees	0.08%	Construction and installation engineering costs
12	Geological hazard risk assessment fees	0.01%	Construction and installation engineering costs
13	Early entry fees for production	0.05%	Construction and installation

No.	Cost name	Rate (inclusive of tax)	Basis for fee calculation
	personnel		engineering costs
Total		7.33%	/

C. Capital costs

Capital costs are calculated based on the appraised entity's reasonable construction period, referencing the Loan Prime Rate (LPR) (3.19%) published by the People's Bank of China on the valuation benchmark date. The total sum of construction and installation project costs, pre-construction and other costs, etc., is used as the base for calculating the financing costs over the uniform capital investment. The reasonable construction period for the appraised entity is 2.5 years. The calculation formula of capital costs is as follows:

Capital cost = (Construction and installation project cost + Pre-construction and other costs) × Reasonable construction period × Interest rate × 1/2

D. Deductible VAT

According to relevant VAT documents, for those that qualify for VAT deduction, the replacement cost is reduced by the corresponding VAT.

b) The replacement cost of the first mining pit in the mining area includes construction and installation comprehensive costs, pre-construction and other costs, and capital costs. The calculation formula is as follows:

Replacement cost = Construction and installation comprehensive cost + Pre-construction and other costs + Capital costs-Deductible VAT

A. Construction and installation comprehensive costs

The construction and installation project cost was determined based on the physical quantities of work and the latest winning contract price for the enterprise's earth and stone works.

Construction and installation project cost = Earth work cost + Rock blasting cost + Rock transportation cost

B. Pre-construction and other costs

Pre-construction and other costs were calculated based on the engineering investment amount of the appraised entity, in accordance with the fee standards set by the industry, national, or local government regulations.

The names, bases, and standards for pre-construction and other costs are as follows:

No.	Cost name	Rate (inclusive of tax)	Basis for fee calculation
1	Construction unit management fees	1.70%	Construction and installation engineering costs
2	Project supervision fees	1.20%	Construction and installation engineering costs
3	Engineering quality technical	0.35%	Construction and installation

No.	Cost name	Rate (inclusive of tax)	Basis for fee calculation
	service fees		engineering costs
4	Feasibility study fees	0.08%	Construction and installation engineering costs
5	Environmental impact assessment fees	0.06%	Construction and installation engineering costs
6	Surveying and design fees	2.50%	Construction and installation engineering costs
7	Bidding agency service fees	0.02%	Construction and installation engineering costs
8	Occupational safety and hygiene assessment fees	0.20%	Construction and installation engineering costs
9	Engineering insurance premium	0.30%	Construction and installation engineering costs
10	Joint trial operation fees	0.78%	Construction and installation engineering costs
11	Soil and water conservation assessment fees	0.08%	Construction and installation engineering costs
12	Geological hazard risk assessment fees	0.01%	Construction and installation engineering costs
13	Early entry fees for production personnel	0.05%	Construction and installation engineering costs
Total		7.33%	/

C. Capital costs

The reasonable construction period for the appraised entity is 2.5 years, and the corresponding loan interest rate is 3.19%. The capital cost for the construction period of the first mining pit in the mining area was calculated accordingly.

D. Deductible VAT

In accordance with relevant VAT documentation, where conditions for VAT deduction are met, the corresponding VAT shall be deducted from the replacement cost.

(2) Determination of composite depreciation rate

a) For important buildings (structures), the economic service life, used lifespan, and on-site inspection of the structure, decoration, and auxiliary equipment are considered to determine the remaining useful life, which is then used to calculate the composite depreciation rate.

Composite depreciation rate = Remaining service life / (Remaining service life + Used lifespan) × 100%

For mining enterprises, the remaining service life of buildings is closely related to the

mine's remaining service life. The remaining service life is determined based on the lower of the mine's remaining service life and the building's remaining economic service life.

b) For low-value buildings (structures), the composite depreciation rate is mainly determined based on the economic service life. The calculation formula is as follows:

Composite depreciation rate = (Economic service life - used lifespan) / Economic service life × 100%

For mining enterprises, the impact of the remaining service life of the mine should also be considered.

c) For the first mining pit in the mining area, it differs from above-ground buildings (structures) in that it is a special structure attached to coal resources, closely related to the coal reserves being mined at the coal mine. As the coal resources are extracted, its economic lifespan shortens accordingly. When the coal resources are depleted, its economic lifespan ends.

The underground engineering geological structure is complex, with many unpredictable factors and poor construction conditions. The stability of underground engineering is closely related to its location, the nature of the rock layers, and geological conditions. The service life of underground engineering is determined by the reserves in its service area. Therefore, before determining the composite depreciation rate, the valuers first reviewed the geological reports and coal mine design materials to understand the impact of the position, rock properties, and geological structure of the underground engineering on the project. Second, they conducted on-site inspections of the condition of the first mining pit in the mining area and its maintenance status, and consulted with on-site engineering technicians to check and verify maintenance records and methods. Third, the valuers calculated the years of service based on the completion date of the first mining pit and, using the coal mine's geological reserves, industrial reserves, and recoverable reserves provided by the geological survey department, calculated the remaining service life of the first mining pit in the mining area by level, coal seam, and mining area. Finally, they determined the composite depreciation rate for the first mining pit in the mining area.

(3) Determination of the appraised value

Appraised value = Replacement cost × Composite depreciation rate

After appraisal, the original value of the buildings (structures) is RMB2,340,343,000, with an appraisal appreciation of RMB301,106,400, an appreciation rate of 14.77%. The net appraisal value is RMB1,639,175,500, with a net appraisal appreciation of RMB583,897,000, an appreciation rate of 55.33%. The main reasons for the appraisal appreciation are as follows:

Reasons for the appreciation in the original value appraisal: The buildings (structures) included in this appraisal are mainly self-constructed, and the pre-construction and other costs allocated in the book value are higher than those included in this appraisal, resulting in a depreciation in the original value. The unit price of earth and stone work increased, leading to an appreciation in the original value appraisal of the first mining pit in the mining area. The appreciation in the original value appraisal of the first mining pit in the mining area exceeds the depreciation in the original value appraisal of the general buildings (structures), resulting in an overall appreciation in appraisal value.

Reasons for the appreciation in the net appraisal value: First, the appreciation in the

original value appraisal; second, the difference between the accounting depreciation period and the economic service life used in the appraisal.

3. **Fixed assets – equipment**

Equipment assets include machinery, vehicles, and electronic devices. Based on the nature of this project and the characteristics of the equipment assets within the scope of the appraisal, for some older electronic devices (e.g., computers) and vehicles, where there is an active second-hand market, the appraised value is based on the second-hand or scrap value of similar equipment. For other equipment, which does not have independent profit-generating ability and where there are very few similar transaction examples, it is not suitable to apply the income approach or market approach for appraisal. Therefore, the cost approach is used for these equipment appraisals. The cost method calculation formula is as follows:

Appraised value = Replacement cost × Depreciation rate

(1) Replacement cost

Based on the characteristics and nature of the equipment within this appraisal scope, as well as the circumstances of the appraised entity, the calculation methods for the replacement costs of various types of equipment in this appraisal are as follows.

a) Machinery

For equipment that requires installation, the replacement cost generally includes: Equipment purchase price, transport and handling fees, installation engineering fees, pre-construction and other costs, and the capital cost. For equipment that does not require installation, the replacement cost generally includes: Equipment purchase price and transport and handling fees. The calculation formula is as follows:

Equipment requiring installation replacement cost = Equipment purchase price + Transport and handling fees + Installation engineering fees + Pre-construction and other costs + Capital costs - Deductible VAT

Equipment not requiring installation replacement cost = Equipment purchase price + Transport and handling costs - Deductible VAT

A.Equipment purchase price

For major process equipment, the purchase price is primarily determined by consulting the market price as at the valuation benchmark date or referencing the contract price of similar equipment at the valuation benchmark date. For small equipment, the purchase price is determined by checking the market price information for the valuation benchmark date. For equipment with no market price information, the purchase price is determined by referencing the purchase price for similar equipment.

B.Transport and handling fees

If transport and handling fees are not included in the equipment purchase price, they are determined by referring to standard cost indicators from resources like the *Asset Appraisal Common Data and Parameters Handbook* and the *Mechanical Industry Construction Project Budgeting Method and Indices*, taking into account factors such as transportation distance, weight, and volume.

C.Installation engineering fees

For equipment that requires installation, the installation engineering fees are estimated using the unit price method, referring to similar equipment installation project budgets (preliminary or final) and other engineering documents, including the *Coal Mining Construction Project Cost Quotas* (NB/T 51063-2016) and other relevant standards, as well as recent local pricing information. Alternatively, the *Asset Appraisal Common Methods and Parameters Handbook* and the *Mechanical Industry Construction Project Budgeting Method and Indices* are used, combined with the scale and nature of the equipment installation work to determine the installation fee rate. The installation engineering fee calculation formula is as follows:

Installation engineering fee = Equipment purchase price × Installation engineering fee rate

For equipment where the purchase price includes installation engineering costs, or for equipment that does not require installation, installation engineering fees are not included.

For equipment foundations that are inseparable from buildings or separately listed as independent foundations, these are appraised within the corresponding buildings and structures, and installation engineering fees are not recalculated.

D.Pre-construction and other costs

The pre-construction and other costs are calculated based on the construction investment amount provided by the appraised entity, according to industry, national, or local government prescribed fee standards.

The names, bases, and standards for pre-construction and other costs are as follows:

No.	Cost name	Rate (inclusive of tax)	Basis for fee calculation
1	Construction unit management fees	1.70%	Construction and installation engineering costs
2	Project supervision fees	1.20%	Construction and installation engineering costs
3	Engineering quality technical service fees	0.35%	Construction and installation engineering costs
4	Feasibility study fees	0.08%	Construction and installation engineering costs
5	Environmental impact assessment fees	0.06%	Construction and installation engineering costs
6	Surveying and design fees	2.50%	Construction and installation engineering costs
7	Bidding agency service fees	0.02%	Construction and installation engineering costs
8	Occupational safety and hygiene assessment fees	0.20%	Construction and installation engineering costs
9	Engineering insurance premium	0.30%	Construction and installation

No.	Cost name	Rate (inclusive of tax)	Basis for fee calculation
			engineering costs
10	Joint trial operation fees	0.78%	Construction and installation engineering costs
11	Soil and water conservation assessment fees	0.08%	Construction and installation engineering costs
12	Geological hazard risk assessment fees	0.01%	Construction and installation engineering costs
13	Early entry fees for production personnel	0.05%	Construction and installation engineering costs
Total		7.33%	/

E.Capital costs

Capital costs are calculated based on the reasonable construction period of the appraised entity's project, referring to the LPR (3.19%) published by the National Interbank Funding Centre on the valuation benchmark date. The total cost, including equipment purchase price, transport and handling fees, installation engineering fees, pre-construction and other costs, is used as the basis, assuming that the funds are evenly invested. The reasonable construction period for the appraised entity is 2.5 years. The calculation formula of capital costs is as follows:

Capital costs = (Equipment purchase price + Transport and handling costs + Installation engineering fees + Pre-construction and other costs) × Reasonable construction period × Loan interest rate × 1/2

F.Deductible VAT

VAT was calculated based on the relevant documents, such as "C.S. [2008] No. 170", "C.S. [2016] No. 36", "C.S. [2018] No. 32", "Announcement [2019] No. 39 of the Ministry of Finance, State Taxation Administration, and General Administration of Customs", and the relevant local and industry pricing adjustment documents for deductible VAT. The specific calculation method is as follows:

Deductible VAT = Equipment purchase price / 1.13 × 13% + (Transport and handling fees + Installation engineering fees) / 1.09 × 9% + VAT deductible from pre-construction and other costs

b) Vehicles

For vehicles, the replacement cost is determined by the market price on the valuation benchmark date, adding the vehicle purchase tax and other reasonable costs (such as licence fees). The calculation formula is as follows:

Replacement cost = Vehicle purchase price + Vehicle purchase tax + Licence fees and other costs - Deductible VAT

Where:

Vehicle purchase tax = Vehicle purchase cost / (1 + 13%) × 10%.

The vehicle purchase price is mainly determined by consulting local dealers or checking

online for market prices; vehicle purchase tax is determined according to the *Vehicle Purchase Tax Law of the People's Republic of China*; licence fees and other costs are determined based on local administrative fee standards and actual vehicle expenses.

c) Electric equipment

For electronic equipment that requires installation, the appraisal is conducted using the same method as for machinery. For other electronic equipment that does not require installation, the replacement cost is determined based on the market purchase price on the valuation benchmark date.

Replacement cost = Electronic equipment purchase price / 1.13

(2)Determination of composite depreciation rate

a) For specialised and general machinery, the depreciation rate is primarily determined based on the equipment's economic service life, used lifespan, and on-site inspections of the equipment's condition and technical status. The remaining service life is then calculated, and the composite depreciation rate is determined using the following formula:

Composite depreciation rate = Remaining service life / (Remaining service life + Used lifespan) × 100%

b) For electronic equipment, office furniture, and other devices, the composite depreciation rate was mainly determined based on their economic service life and the results of on-site inspections. The calculation formula is as follows:

Age-based depreciation rate = (Economic service life - used lifespan) / Economic service life × 100%

Composite depreciation rate = Age-based depreciation rate × Adjustment coefficient

c) For vehicles, according to the *Compulsory Motor Vehicle Scrap Standards* (Order [2012] No.12 of the Ministry of Commerce, National Development and Reform Committee, the Ministry of Public Security, and Environmental Protection Department), the theoretical newness rate is determined using vehicle mileage and usage years, based on the lower of the two. For vehicles without a mandatory scrapping period, the remaining useful life method is used. Finally, a weighted average is calculated between the lower of the age-based newness rate and the mileage-based newness rate, and the observation-based newness rate, to determine the composite depreciation rate. The calculation formula is as follows:

Age-based depreciation rate (no required useful life) = Remaining useful life / (Years of use + Remaining useful life) × 100%

Age-based depreciation rate (with required useful life) = (Required useful life - Years of use) / Required useful life × 100%

Mileage-based depreciation rate = (Standard retirement mileage - Accumulated mileage) / Standard retirement mileage × 100%

Composite depreciation rate = MIN (age-based depreciation rate, mileage-based depreciation rate) × 40% + Observation-based depreciation rate × 60%

(3) Determination of the appraised value

Appraised value = Replacement cost × Composite depreciation rate

The original value of equipment is RMB1,736,166,400, with an original value

depreciation of RMB122,131,600, a depreciation rate of 6.57%. The net appraisal value is RMB1,257,920,600, with a net appraisal appreciation of RMB172,647,600, an appreciation rate of 15.91%. The reasons for the decrease in the original appraisal value are that the reduction in the original value of most major equipment is due to the decrease in purchase price, while a small portion of equipment has a second-hand price higher than the company's book value. The net appraisal appreciation is mainly due to the depreciation period of the appraised entity being shorter than the economic service life of the equipment.

4. **Construction in progress**

Construction in progress includes civil works and construction materials. For civil works with a start time more than six months before the valuation benchmark date, if there is little change in the construction and installation project cost during the construction period, the appraisal will be based on the book value, excluding unreasonable costs, plus the capital costs. For construction materials, the appraisal will be confirmed based on the book value.

The appraisal value of construction in progress is RMB29,747,400, with an appraisal appreciation of RMB212,500, an appreciation rate of 0.72%. The appreciation is mainly due to the fact that the book value of construction in progress did not include capital costs, while this appraisal includes reasonable capital costs, leading to an appreciation in the appraisal value.

5. **Land use right**

According to the *Asset Appraisal Practice Standards– Real Estate*, the main appraisal methods for land use rights include the market approach, cost method, income approach, hypothetical development method, and benchmark land price method. The choice of appraisal method should be based on the local real estate market development conditions, as well as the specific characteristics of the project and the purpose of the appraisal, to select the appropriate appraisal method. The market approach is selected for this appraisal, based on the appraisal purpose, subject asset, value type, data collection conditions, and the applicability of the appraisal methods.

The appraisal value of land use rights is RMB167,647,800, with an appraisal appreciation of RMB16,594,400, an appreciation rate of 10.99%. The appreciation is mainly due to the difference between the accounting depreciation method and the land's remaining usable life adjustment method, specifically, intangible assets—land use rights—are amortised using the straight-line method, whereas this appraisal incorporates land restoration rates to adjust the land's useful life, thereby leading to an appraisal appreciation.

6. **Mining rights**

Based on the appraisal purpose of this project and the specific characteristics of the mining rights, the entrusted mining rights have a certain scale and an independent ability to generate profits that can be measured, and its future benefits and associated risks can be quantified in monetary terms. In addition, the extent of geological

exploration is high, and the relevant information is generally complete and reliable, which means the reports and relevant data essentially meet the requirements for adopting the discounted cash flow appraisal method. According to the *Fundamental Technical Principles for Mining Right Appraisal* and the *Standards for Appraisal Using the Income Approach*, the discounted cash flow method has been determined as the appraisal method for this project.

The calculation formula is as follows:

$$P = \sum_{t=1}^{n} (CI - CO)_t \bullet \frac{1}{(1+i)^t}$$

Where: P — Appraised value of the mining rights;

CI — Annual cash inflows;

CO — Annual cash outflows;

i — Discount rate;

t — Year number (t = 1, 2, 3, …, n);

n — Calculation period.

Specific appraisal indicators and parameters

Xiwan Coal Mine is currently in normal production. The resource reserves for this appraisal are based on the *Resource Reserve Verification Report for Xiwan Open-cut Coal Mine of Yushen Mining Area of Shaanxi Shenyan Coal Co., Ltd*. and its review opinions (hereinafter referred to as the "Resource Reserve Verification Report") and the 2023 Annual Coal Resource Reserves and Recovery Rate Self-inspection Report (hereinafter referred to as the "Annual Reserve Report"). The available reserves are based on the *Preliminary Design (Amendment) Manual for Xiwan Open-cut Coal Mine (13.00Mt/a) of CHN Energy Shaanxi Shenyan Coal Co., Ltd.* (hereinafter referred to as the "Preliminary Design Amendment"). The economic parameters are mainly based on the mining financial data and the Shenyan Coal Mine 5-Year Operating Budget (hereinafter referred to as the "Operating Budget"). Other principal technical and economic indicator parameters have been selected with reference to the *Chinese Mineral Rights Appraisal Standards*, other relevant policies and regulations, technical and economic guidelines, and information available to the appraisers.

The explanation for the values of each parameter is as follows:

On the valuation benchmark date, the resource reserves in the open-pit boundary are 524,088,600 tons, based on the 2023 Annual Reserve Report, the "Preliminary Design Amendment", the 2024 Annual Reserve Report, the mining recovery rate calculation table, and the extraction volume statistics table.

Product scheme: Based on the "Preliminary Design Amendment" and current production conditions, the coal extracted from the pit of the Xiwan Open-cut Coal Mine is directly sold as commercial coal after simple screening and crushing, with the product being raw coal.

The recovery rate of the mining area: The recovery rate of the mining area during this appraisal is determined to be 97.27% based on the "Preliminary Design Amendment". The average stripping ratio for the design open-cut mining service period is 9.4

(corresponding to recoverable reserves), and the average stripping ratio for the calculation period is 10.34 (corresponding to the production volume).

Recoverable reserves adopted for appraisal = Mineral resource reserves adopted for appraisal – design losses – mining losses

Thus, the remaining recoverable reserves on the valuation benchmark date in the open-pit boundary are 509,781,000 tons (= 524,088,600 × 97.27%) after substituting the aforementioned recovery rate and loss indicators of the mining area (when determining the design utilization amount of the open-cut mining area, the resources have already been deducted and will not be deducted again) into the above equation.

Production capacity and service life: The mining licence for Xiwan Open-cut Coal Mine has an approved production capacity of 13 million tons per year, and the assessed production capacity is also 13 million tonnes per year. The actual production of raw coal in 2023 and 2024 was 13,006,700 tons and 13.63 million tons, respectively, reaching the approved production capacity. Therefore, the production capacity in this appraisal is determined to be 13 million tons per year, and the service life of the mine is 35.67 years, with the appraisal calculation period from August 2025 to March 2061.

Product sales price and revenue: The sales price for 2025 (August to December) and 2026 is determined to be RMB447.00 per ton, based on the actual price from January to July 2025. The sales price for 2027 is determined to be RMB455.00 (=RMB447.00 + (RMB470 - RMB447) ÷ 3) per ton. The sales price for 2028 is determined to be RMB463.00 per ton, and the sales price for 2029 and subsequent years is determined to be RMB470.00 per ton. Assuming that all produced coal is sold in the current period, the normal annual sales revenue is RMB6,110 million.

Fixed-asset investment: According to the detailed list of the mine's fixed assets, excluding assets awaiting scrapping and idle assets, the appraised value of the mine's existing fixed-asset investments is 3,435,140,900 tons, with a net value of RMB2,645,354,400. This includes an original value of RMB961,532,600 for stripping works, with a net value of RMB788,456,700; an original value of RMB737,471,400 for buildings, with a net value of RMB599,006,700; an original value of RMB1,736,136,900 for machinery and equipment, with a net value of RMB1,257,891,100.

The appraised value of construction in progress is RMB29,747,400, with RMB28,134,700 for buildings and RMB1,612,800 for machinery and equipment assets for construction in progress. Additionally, according to the detailed list of construction in progress, the construction projects still require an additional investment of RMB271,564,800 (inclusive of tax) for buildings. According to the construction progress, this subsequent investment will be completed and put into use by February 2026.

Moreover, according to the mine's procurement plan, the budgeted expenditure for stripping equipment from 2025 to 2029 is RMB1,036,180,000. This includes RMB72.18 million in 2025 (equipment has arrived, awaiting payment), RMB30 million in 2026, RMB876 million in 2027, and RBM58 million in 2028. This appraisal is based on the company's procurement plan.

Intangible asset investment: The appraised value of the mine's land use rights on the valuation benchmark date is RMB167,647,800, so the land use rights for this appraisal are determined to be RMB167,647,800. Subsequent to this, the mine's raw coal production system extension project requires an additional land transfer of 23.4966

hectares for RMB48,950,900. Therefore, the total investment in land use rights for this appraisal is RMB216,598,700.

Long-term deferred expenses and other intangible assets: On the valuation benchmark date, long-term deferred expenses and other intangible assets are determined to be RMB766,692,200 and RMB72,690,400, respectively.

Additionally, the mine has been approved for a production capacity of 13 million tons. The additional 3 million tons of production capacity requires acquisition. According to the "Coal Capacity Adjustment Agreement" signed between the mine and Shenhua Xinjie Energy Co., Ltd., Xinjie Energy will adjust the corresponding capacity to Shenyan Co., Ltd. at a conversion price of RMB140 per ton, to resolve the capacity issue at Xiwan Open-cut Coal Mine. The purchase cost of the 3 million tons of additional capacity is calculated based on this unit price in this appraisal, amounting to RMB420 million (excluding tax). This cost is included in other intangible assets and will be expensed in 2025.

According to the "Preliminary Design Amendment", the third mining area of the open-cut coal mine is located along the Baiyaoze Gully, which requires river diversion. The estimated cost of the river diversion project is approximately RBM2,500 million, with the expenditure scheduled for 2031. This appraisal considers the river diversion costs based on this timing and amount.

Working capital investment: According to the *Guidance on Determining Mining Rights Appraisal Parameters*, working capital can be estimated using the expanded indicator method. The working capital for this project is calculated as 22% of sales revenue, meaning the required working capital once production reaches full capacity will be RMB344.2 million.

Total costs and operating costs

Cost of purchased materials: Based on the Enterprise Operating Condition Forecast Table, taking the full operation of new equipment by 2030 as an example, the cost of purchased materials for raw coal is RMB227,142,900, with a unit cost of such materials RMB17.47 per ton.

Cost of purchased fuel and power : According to the Enterprise Operating Condition Forecast Table, the unit cost of purchased fuel and power for the future normal production years is determined to be RMB25.45 per ton.

Payroll: According to the Enterprise Operating Condition Forecast Table, the unit payroll cost for the future normal production years is determined to be RMB63.96 per ton.

Depreciation costs: Based on calculations, for the year 2030, the annual depreciation cost is RMB242,299,300, with a unit depreciation cost of RMB18.64 per ton.

Maintenance and renovation fees and shaft engineering funds: According to the *Administrative Measures for the Extraction and Use of Coal Production Safety Expenses* and the *Notice on Certain Provisions for Regulating the Administration of Coal Mine Maintenance and Renovation Fees* (C.J. [2004] No. 119), this project has a maintenance and renovation fee of RMB8.00 per ton of coal, with a shaft engineering fund of RMB2.50 per ton. The updated maintenance and renovation fee is set at RMB3.00 per ton, and the depreciation-related maintenance and renovation fee is also RMB3.00 per ton.

Safety fees: According to the *Administrative Measures for the Collection and Utilization of Enterprise Work Safety Funds* (C.Z. [2022] No. 136), the safety fee for the appraised entity in this project is set at RMB5.00 per ton.

Repair costs: According to the Enterprise Operating Condition Forecast Table, the unit repair cost is RMB4.55 per ton.

Environmental governance and land reclamation costs: According to the *Implementation Measures for Geological Environmental Governance and Land Reclamation Fund in Shaanxi Province* (SH.Z.R.Z.G. [2024] No. 1757), the environmental governance and land reclamation costs for this project are determined to be RMB13.03 per ton according to the calculation.

Land rent (including compensation fees): According to the enterprise's calculated long-term land rent (including compensation fees) expenditures, the unit land rent (including compensation fees) in this appraisal for future normal production years is determined to be RMB15.33 per tonne.

Outsourced stripping costs: According to the Enterprise Operating Condition Forecast Table, based on the forecast for 2030, the stripping ratio is 10.18, with an in-house stripping ratio of 2.92. The unit stripping cost for raw coal is RMB90.57 per ton (including drilling, blasting, and labor costs, with stripping corresponding to the outsourced stripping ratio, and drilling and blasting corresponding to the full stripping ratio). Therefore, the unit outsourced stripping cost for future normal production years is determined to be RMB90.57 per tonne in this appraisal.

Mining engineering costs, outsourced service fees, and other manufacturing costs: According to the Enterprise Operating Condition Forecast Table, the unit mining engineering cost and outsourced service fee are determined to be RMB0.45 per ton and RMB7.22 per ton, respectively. The unit other coal mining manufacturing costs for future normal production years are determined to be RMB3.13 per tonne.

Administrative fees: Amortization costs mainly include annual land amortization, long-term deferred expenses and other intangible assets annual amortization, capacity indicator acquisition, and other intangible assets annual amortization. In 2030, the annual amortization costs for land use rights, long-term deferred expenses, capacity indicator acquisition, and other intangible assets total RMB99,866,500. Based on the Enterprise Operating Condition Forecast Table, the unit other administrative fees for this appraisal are determined to be RMB8.25 per tonne.

R&D costs: According to the Enterprise Operating Condition Forecast Table, the unit R&D costs for future normal production years are determined to be RMB0.77 per ton in this appraisal.

Financial costs: According to the *Guidance on Determining Mining Rights Appraisal Parameters*, financial costs for this project are calculated to be RMB2.17 per ton in this appraisal according to the calculation.

Total costs refer to the sum of all cost expenses. Operating costs refer to the total costs excluding depreciation costs, depreciation-related maintenance and renovation fees, shaft engineering fund, amortization fees, and financial costs.

For the year 2030, the unit total cost of the subject asset is RMB291.39 per ton, and the unit operating cost is RMB256.40 per ton. The total annual cost is RMB3,788,071,400, and the total annual operating cost is RMB3,333,177,400.

Discount rate: According to the *Guidance on Determining Mining Rights Appraisal Parameters*, the basic composition of the discount rate is: Discount rate = risk-free rate of return + risk premium

The risk-free rate of return is determined as 1.70%, based on the yield to maturity of 10-year government bonds disclosed by the WIND Information System on the valuation benchmark date.

The risk premium is estimated using the "risk build-up method" and includes the following principal components: Exploration and development risk, industry risk, financial and operational risk, and other specific risks. As the mine is a production-stage mine, the exploration and development risk premium is determined as 0.60%, the industry risk premium as 2.00%, and the financial and operational risk premium as 1.50%. Taking into account the mine's specific circumstances, the other specific risk premium is determined as 2.00%. The total risk premium adopted for this appraisal is therefore 6.10%.

Having regard to the discount rate range and the mine's development stage, the discount rate adopted for this appraisal is 7.80%.

The mining rights appraisal value is RMB9,612,813,800, with an appraisal appreciation of RMB7,219,963,800, an appreciation rate of 301.73%. The main reason for appraisal appreciation is that the book value mainly reflects the amortized value of the mining rights. Mining rights payment is a special concept determined by the mining rights management authority, which at present refers to the equity value of exploration investments funded by the state and the equity value shared by the state as the owner of mineral resources. The mining rights payment is appraised under non-market conditions according to specific standards or appraisal methods, or based on administrative measures such as the social average return level. This appraisal uses a discounted cash flow method under market conditions, discounting the annual net cash flows over the appraisal period to their present value as of the valuation benchmark date, using a discount rate consistent with the standard of the net cash flows. Thus, the appraisal under market and non-market conditions differs. When the mining resources are in good condition, the present value discounted to the valuation benchmark date is generally higher than the amortized value of the mining rights payment.

7. **Other assets and liabilities**

The asset appraisal personnel verified the detailed lists and relevant materials provided by the appraised entity, cross-checking the book values. The appraisal values were determined based on the audited book values or the actual liabilities or equity that the appraised entity is responsible for or entitled to.

Including: the book value of current assets is RMB6,494,145,700, with an appraisal value of RMB6,495,433,500, showing an appreciation rate of 0.02%. The appraisal appreciation is due to the consideration of appropriate profits for finished products at the time of appraisal.

The book value of other non-current assets is RMB1,298,206,000, with an appraisal value of RMB1,309,954,400, showing a depreciation rate of 20.56%. The depreciation is due to the consideration of the exploration rights interest for the Xiwan Coal Mine, which has been included in the intangible assets – mining rights appraisal, and this is zero in this appraisal, leading to an appraisal depreciation.

The book value of current liabilities is RMB1,696,652,700, with an appraisal value of RMB1,696,652,700, showing no value change.

The book value of non-current liabilities is RMB100,945,200, with an appraisal value of RMB100,945,200, showing no value change.

After calculation, as of the valuation benchmark date:

(A) The appraisal value for the entire shareholders' equity of Shenyan Coal is: Current assets (RMB6,495,433,500) + Non-current assets (including long-term equity investments + fixed assets such as buildings+ fixed assets such as equipment + construction in progress + land use rights, + mining rights + other non-current assets) = (RMB45,165,000 + RMB1,639,175,500 + RMB1,257,920,600 + RMB29,747,400 + RMB167,647,800 + RMB9,612,813,800 + RMB1,309,954,400) - Current liabilities (RMB1,696,652,700) - Non-current liabilities (RMB100,945,200) = RMB18,760,260,100.

(B) The book value for the entire shareholders′ equity of Shenyan Coal is: Current assets (RMB6,494,145,700) + Non-current assets (including long-term equity investments + fixed assets such as buildings+ fixed assets such as equipment + construction in progress + land use rights, + mining rights + other non-current assets) = (RMB33,828,900 + RMB1,055,278,400 + RMB1,085,273,000 + RMB29,534,900 + RMB151,053,400 + RMB2,392,850,000 + RMB1,305,557,700) - Current liabilities (RMB1,696,652,700) - Non-current liabilities (RMB100,945,200) = RMB10,749,924,100.

IV. Income Approach

i. Key assumptions

1. It is assumed that all appraisal targets are in the process of being traded, and the appraisers simulate the market based on the transaction conditions of the appraised assets;

2. It is assumed that for assets traded in the market, or assets to be traded in the market, both parties in the transaction have equal standing and ample opportunity and time to access market information. The transactions are voluntary and rational, and the parties can make rational judgments about the asset's function, purpose, and transaction price;

3. It is assumed that the appraised assets will continue to be used for their current purposes and in their current manner throughout the remaining service life of the mine;

4. It is assumed that there will be no significant changes to the relevant national laws, regulations, and policies or the macroeconomic situation, and that the political, economic, and social environment in the regions of the parties involved in the transaction will not change significantly;

5. Given the actual status of the assets on the valuation benchmark date, it is assumed that the company will continue operations throughout the remaining service life of the mine;

6. It is assumed that there will be no significant changes in the interest rates, tax bases, tax rates, policy-based collection fees, or other related factors affecting the appraised entity after the valuation benchmark date;

7. It is assumed that the management of the appraised entity after the valuation benchmark date will remain responsible and stable, with the ability to perform their duties;

8. Unless otherwise stated, it is assumed that the company fully complies with all relevant laws and regulations;

9. It is assumed that after the valuation benchmark date, there will be no force majeure or unforeseen factors that cause significant adverse effects on the appraised entity;

10. It is assumed that after the valuation benchmark date, the accounting policies used by the appraised entity and those used to prepare this asset appraisal report will remain consistent in significant aspects;

11. It is assumed that after the valuation benchmark date, the scope and methods of the appraised entity's operations will remain the same, based on the current management practices and level;

12. It is assumed that after the valuation benchmark date, the appraised entity's cash inflows and cash outflows will be at an average rate;

13. It is assumed that after the valuation benchmark date, the appraised entity's products or services will maintain their current market competitiveness;

14. According to the *Announcement of the Ministry of Finance, the State Taxation Administration and the National Development and Reform Commission on Continuing the Enterprise Income Tax Policy for the Western Development* (Announcement [2020] No. 23 of the Ministry of Finance), enterprises meeting the conditions in western China can pay corporate income tax at a reduced rate of 15% from 1 January 2021 to 31 December 2030. Therefore, this appraisal assumed that from August 2025 to 2030, the statutory income tax rate under the income approach would be 15%, and from 2031 onwards, the statutory income tax rate would be 25%;

15. It is assumed that starting from 2047, the appraised entity would begin to levy mining rights transfer income annually in accordance with the provisions of the *Notice on Printing and Distributing the Mineral Rights Transfer Income Collection Method* (C.Z. [2023] No. 10) issued by the Ministry of Finance, Ministry of Natural Resources, and State Taxation Administration;

16. It is assumed that during the appraisal calculation period, the unit cost for environmental restoration and land reclamation would be equal to the extracted and spent amounts;

17. It is assumed that the appraisal was based on the resource reserves within the scope of the mining licence for Xiwan Open-cut Coal Mine that have been reviewed and filed, and that the said mining licence could be successfully renewed upon expiration;

18. It is assumed that the production and sales of commercial coal in future years would achieve a balance between production and sales;

19. The mining right for Xiwan Open-cut Coal Mine within this appraisal scope currently has a production capacity indicator gap of 3 million metric tons per year. It was assumed in this appraisal that the enterprise would acquire the corresponding production capacity indicators on a compensatory basis, with a cash outflow of RMB140 per metric ton (inclusive of tax) considered in Phase I;

20. In March 2024, the appraised entity signed a land lease agreement with its

subsidiary, Hongqi Shenyan, with a lease term from 15 March 2024 to 14 March 2029. It is assumed that the lease agreement can be renewed at the original terms after the expiration of the agreement until the end of the forecast period.

ii. Appraisal model

1.Basic model

The income approach used in this appraisal is the discounted cash flow (DCF) method to indirectly determine the entire shareholders' equity by appraising the overall value of the enterprise. The overall value of the enterprise consists of the value of operating assets generated from normal business activities and the value of non-operational assets unrelated to normal business activities. For the determination of the value of operational assets, the Free Cash Flow Discount Model is employed, which uses the future free cash flows of the enterprise for several years as a basis, discounted at an appropriate discount rate and then summed up. The calculation model is as follows:

Entire shareholders' equity value = Enterprise overall value - Interest-bearing debt value

RMB18,453,997,800 = RMB18,453,997,800 - RMB0

(1)Enterprise overall value

The enterprise overall value refers to the sum of the entire shareholders' equity and the interest-bearing debt value. According to the asset allocation and usage situation of the appraised entity, the formula for calculating the enterprise overall value is as follows:

Enterprise overall value = Operating asset value + Surplus asset value + Non-operating asset value - Non-operating liability value + Long-term equity investment value

The enterprise overall value of Shenyan Coal is RMB13,594,312,800 + RMB5,331,553,500 + RMB743,624,100 - RMB1,260,657,700 + RMB45,165,000

= RMB18,453,997,800

a) Operating asset value

Operating assets are those related to the appraised entity's production and business operations, which are involved in the forecast of the enterprise free cash flow after the valuation benchmark date.

b) Surplus asset value

Surplus assets are those that exceed the enterprise's operational needs as of the valuation benchmark date, and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The appraised entity's surplus assets include cash. The surplus assets in this appraisal are appraised using the cost method.

c) Value of non-operating asset and liabilities

Non-operating assets and liabilities are those that are unrelated to the appraised entity's business operations and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The non-operational assets and non-operational liabilities of the appraised entity include other receivables, deferred tax assets, fixed assets, accounts payable, other payables, non-current liabilities due within one year, and provisions. This appraisal uses the cost method.

d) Long-term equity investment value

Long-term equity investments refer to the external equity investments made by the enterprise as of the valuation benchmark date. The entire shareholders' equity of the invested entity, as confirmed using an appropriate appraisal method, is multiplied by the shareholding percentage to determine the long-term equity investment value.

(2)Interest-bearing debt value

As of the valuation benchmark date, the appraised entity has no interest-bearing debt.

2. Income indicators

In this appraisal, the formula for calculating the value of operating assets is as follows:

$$P = \sum_{i=1}^{n} \frac{F_i}{(1+r)^i} + \frac{F_n}{r \times (1+r)^n}$$

Wherein: P: The value of the enterprise's operating assets as of the valuation benchmark date;

F_i: The expected free cash flow of the enterprise in the i-th year after the valuation benchmark date;

F_n: The expected free cash flow of the enterprise at the end of the detailed forecast period;

r: Discount rate (weighted average cost of capital, WACC) from August to December 2025 to 2030 is 8.80%, and after 2031, it is 8.49%.;

n: The detailed forecast period;

i: The i-th year of the detailed forecast period.

The free cash flow of the enterprise is calculated as follows:

Enterprise free cash flow = Earnings before interest and taxes (EBIT) - Depreciation and amortisation - Capital expenditures - Increase in working capital

3. Discount rate

Among them, the discount rate (weighted average cost of capital, WACC)

The calculation formula is as follows:

$$WACC = K_e \times \frac{E}{E+D} + K_d \times (1-t) \times \frac{D}{E+D}$$

Wherein: ke: Cost of equity capital is 12.16% from August to December 2025 to 2030, and 11.87% after 2031;

kd: The cost of debt capital (interest-bearing debt) is 3.50%.

E: Market value of equity;

D: Market value of debt;

t: Tax rate from August to December 2025 to 2030 is 15.00%, and 25% after 2031.

The cost of equity capital is calculated using the Capital Asset Pricing Model (CAPM). The calculation formula is as follows:

$$K_e = r_f + MRP \times \beta_L + r_c$$

Where: rf: As the possibility of not being redeemable upon maturity is minimal and can be omitted, yield of state bond is usually considered as risk-free. According to information disclosed by the WIND Information System, the yield of to maturity of 10-year government bonds as at the valuation benchmark date is 1.7044%, this valuation report adopted 1.7044% as the risk-free yield;

MRP: Market risk premium is the difference between the market rate of return on investment and the risk-free rate of return. In particular, the market rate of return on investment is determined by comprehensively analysing the weighted average of the annualised weekly returns from 1992 to the valuation benchmark date selected on the basis of the stock trading price indices of the Shanghai Stock Exchange and Shenzhen Stock Exchange. As calculated, the market rate of return on investment is 8.36%. The yield to maturity on 10-year treasury bonds of 1.70% on the valuation benchmark date has been taken as the risk-free rate of return. The market risk premium is 6.66%;

βL: Systematic risk coefficient of equity is 1.1199 from August to December 2025 to 2030, and 1.0766 after 2031;

rc: Company-specific risk adjustment coefficient is 3.00%.

A.8 Main Evaluation Materials of Jinshen Energy

I. Selection of Appraisal Methods

The methods selected for this appraisal are the income approach and the asset-based approach.

Reason for selecting the asset-based approach: As of the valuation benchmark date, the book value of the assets and liabilities within the appraisal scope has already been audited. Each asset and liability of the appraised entity can be identified. The identifiable assets and liabilities can each be individually assessed using an appropriate appraisal method, thus meeting the conditions for applying the asset-based approach.

Reason for selecting the income approach: The appraised entity has the foundation and conditions for ongoing operations, with standardised accounting practices, clear management, stable and defined business sources. The management has detailed plans for the current operations and future development of the company. The future expected income and operational risks can be reasonably predicted, meeting the conditions for using the income approach for appraisal.

Reason for not selecting the market approach: The market approach relies on the existence of an active public market with sufficient market data and comparable transaction cases. The appraised entity is a non-listed company. Listed companies in the same industry differ significantly from the appraised enterprise in terms of business structure, corporate scale, asset allocation and utilisation, operational stage, growth potential, operational risks, financial risks, and others. Furthermore, there were few comparable transactions, mergers, or acquisitions within the same industry near the valuation benchmark date. Reliable operational and financial data from comparable transactions are difficult to obtain, making it impossible to calculate appropriate value ratios. Therefore, the market approach was not adopted for this appraisal.

The value of the entire shareholders' equity after the income approach appraisal is RMB7,648,368,400, while the value of the entire shareholders' equity after the asset-based approach appraisal is RMB7,715,759,700.

Unless otherwise stated, all amounts in this summary are expressed in Renminbi (RMB).

There is a certain discrepancy between the appraisal results of the income approach and the asset-based approach. The main reason for the discrepancy is the different perspectives considered by the two methods.

The income approach estimates the value of the subject asset by discounting the expected future earnings of the appraised entity from the perspective of the enterprise's future profitability. The asset-based approach, on the other hand, estimates the value of the subject asset based on a reasonable assessment of the enterprise's assets and liabilities, considering the method of asset replacement. The appraised entity is a platform company engaged in unified management. The coal purchase and sales business it operates is primarily aimed at maintaining the normal operation of the

platform company and is not for profit purposes. Therefore, the result from the income approach is not adopted as the appraisal conclusion. Under the asset-based approach, all assets and liabilities within the appraisal scope as of the valuation benchmark date have been appraised using appropriate methods. The appraisal results can objectively reflect the market value of the appraised entity's net assets, so the result from the asset-based approach is adopted as the appraisal conclusion.

II. Key Appraisal Assumptions

1.It is assumed that all appraisal targets are in the process of being traded, and the appraisers simulate the market based on the transaction conditions of the appraised assets;

2.It is assumed that for assets traded in the market, or assets to be traded in the market, both parties in the transaction have equal standing and ample opportunity and time to access market information. The transactions are voluntary and rational, and the parties can make rational judgments about the asset's function, purpose, and transaction price;

3.It is assumed that the appraised assets will continue to be used for their current purposes and in their current manner;

4.It is assumed that there will be no significant changes to the relevant national laws, regulations, and policies or the macroeconomic situation, and that the political, economic, and social environment in the regions of the parties involved in the transaction will not change significantly;

5.Given the actual status of the assets on the valuation benchmark date, it is assumed that the company will continue operations;

6.It is assumed that there will be no significant changes in the interest rates, exchange rates, tax bases, tax rates, policy-based collection fees, or other related factors affecting the appraised entity after the valuation benchmark date;

7.It is assumed that the management of the appraised entity after the valuation benchmark date will remain responsible and stable, with the ability to perform their duties;

8.Unless otherwise stated, it is assumed that the company fully complies with all relevant laws and regulations;

9.It is assumed that after the valuation benchmark date, there will be no force majeure or unforeseen factors that cause significant adverse effects on the appraised entity;

10.It is assumed that after the valuation benchmark date, the accounting policies used by the appraised entity and those used to prepare this asset appraisal report will remain consistent in significant aspects;

11.It is assumed that after the valuation benchmark date, the scope and methods of the appraised entity's operations will remain the same, based on the current management practices and level;

12.It is assumed that after the valuation benchmark date, the appraised entity's cash inflows and cash outflows will be at an average rate;

13.It is assumed that during the appraisal calculation period, the unit cost for environmental restoration and land reclamation would be equal to the extracted and spent amounts;

14.It is assumed that the mineral resources reserves reviewed within the mining licence

will form the basis for the mining rights, and that the mining licence can be smoothly renewed in the future;
15.It is assumed that the production and sales of commercial coal in future years would achieve a balance between production and sales;
16.It is assumed that after the expiry of the lease agreements for the operations required by the appraised entity and its subsidiaries within the appraisal scope, these agreements can be renewed until the end of the forecast period in accordance with the terms of the original agreements;
17.Within the scope of this appraisal, mining rights of Ciyaogou Coal Mine of Shanxi Hequ Jinshen Ciyaogou Coal Industry Co., Ltd. still have a capacity gap of 2.6 million tonnes per year; mining rights of Shaping Coal Mine of Shanxi Jinshen Shaping Coal Industry Co., Ltd. still have a capacity gap of 4 million tonnes per year. It is assumed that the company will acquire the corresponding capacity rights on a paid basis, with a cash outflow of RMB140 per tonne (inclusive of tax) considered in the first period;
18.According to the *Notice Issued by the Office of the Hequ County Committee for Ecological and Environmental Protection*, existing "high energy consumption, high emissions and high resource-dependency" projects within one kilometre of the Yellow River shoreline are required to exit in an orderly manner. Accordingly, the Shaping Coal Washing Plant shall be closed and withdrawn. Shaping Coal Industry is currently relocating and reconstructing the coal washing plant. Based on information provided by the enterprise, it is assumed that the above matters will be completed by the end of 2027. Therefore, from August 2025 to December 2027, the enterprise will outsource its coal-washing operations, after which it will begin to use its own coal washing plant.

III.Asset-based approach

1.Long-term equity investments

An overall appraisal was conducted for long-term equity investments in wholly-owned and controlling subsidiaries. The appraisers first appraise the entire shareholder's equity of the investee, then multiply it by the shareholding percentage to determine the value of the part of the shareholder's equity.

For non-controlling long-term equity investments, as there are no conditions for an overall appraisal, the appraised value was determined by the net assets as of the valuation benchmark date multiplied by the shareholding percentage.

No.	Name of investee	Appraisal methods	Conclusion valuation method
1	Shanxi Jinshen Hequ Coal Development Co., Ltd.	Asset-based approach and income approach	Asset-based approach
2	Shanxi Jinshen Railway Co., Ltd.	Asset-based approach and income approach	Asset-based approach
3	Shanxi Hequ Jinshen Ciyaogou Coal Industry Co., Ltd.	Asset-based approach and income approach	Asset-based approach

No.	Name of investee	Appraisal methods	Conclusion valuation method
4	Shanxi Xinzhou Jinshen Coal Sales Co., Ltd.	Asset-based approach and income approach	Asset-based approach
5	Shanxi Jinshen Shaping Coal Industry Co., Ltd.	Asset-based approach and income approach	Asset-based approach
6	Shanxi Xinzhou Local Railway Co., Ltd.	Asset-based approach and income approach	Asset-based approach
7	Jinshen Coal Operations Co., Ltd. under Shanxi Coal Sales Group	Net assets as of the valuation benchmark date multiplied by the shareholding percentage	Net assets as of the valuation benchmark date multiplied by the shareholding percentage

The appraisal method for the mining rights held by the wholly-owned subsidiary, Shanxi Jinshen Shaping Coal Industry Co., Ltd., is as follows:

Based on the appraisal purpose of this project and the specific characteristics of the mining rights, the entrusted mining rights have a certain scale and an independent ability to generate profits that can be measured, and their future benefits and associated risks can be quantified in monetary terms. In addition, the extent of geological exploration is high, and the relevant information is generally complete and reliable, which means the reports and relevant data essentially meet the requirements for adopting the discounted cash flow appraisal method. According to the *Fundamental Technical Principles for Mining Right Appraisal* and the *Standards for Appraisal Using the Income Approach*, the discounted cash flow method has been determined as the appraisal method for this project.

The calculation formula is as follows:

$$P = \sum_{t=1}^{n} (CI - CO)_t \bullet \frac{1}{(1+i)^t}$$

Where: P — Appraised value of the mining rights;

CI — Annual cash inflows;

CO — Annual cash outflows;

i — Discount rate;

t — Year number (t = 1, 2, 3, …, n);

n — Calculation period.

Specific appraisal indicators and parameters

Shaping Coal Mine is currently operating normally. The resource reserves and recoverable reserves used in this appraisal are mainly based on the *Coal Resource Reserve Verification Report for Shanxi Jinshen Shaping Coal Industry Co., Ltd. in Hequ County, Hedong Coalfield, Shanxi Province* (for merger and restructuring purposes), prepared by Shanxi Geological Survey Co., Ltd. in July 2012 (hereinafter referred to as the "Resource Reserve Verification Report"), together with its Evaluation Opinion on Mineral Resource Reserves (hereinafter referred to as the "Evaluation Opinion") and filing certificate; the *2024 Annual Reserve Report of Shanxi Jinshen Shaping Coal Industry Co., Ltd. Coal Mine in Hequ County, Shanxi Province* prepared by Shanxi Guangyuda Technology Co., Ltd. in January 2025 (hereinafter the "2024 Annual Reserve Report"); and the *Plan for Coal Resource Exploitation, Mine Environmental Protection and Land Reclamation for Shanxi Jinshen Shaping Coal Industry Co., Ltd. in Hequ County, Shanxi Province* prepared by Shanxi Hancheng Geological Technology Co., Ltd. in October 2025 (hereinafter the "Four-in-One Plan"). The technical parameters mainly refer to the "Four-in-One Plan", the *Feasibility Study Report for the Relocation and Reconstruction of the Coal Washing Plant of Shanxi Jinshen Shaping Coal Industry Co., Ltd.* prepared by Coal Industry Taiyuan Design Institute Group Co., Ltd. in April 2025, as well as information provided by the enterprise. The key economic parameters are determined based on the enterprise's actual financial data. Other principal technical and economic indicator parameters have been selected with reference to the *Chinese Mineral Rights Appraisal Standards*, other relevant policies and regulations, technical and economic guidelines, and information available to the appraisers.

The explanation for the values of each parameter is as follows:

Retained resource reserves as of the valuation benchmark date: According to the "Resource Reserve Verification Report", "2024 Annual Reserve Report", and the extraction volume statistics table, the retained resource amounted to 636,886,500 tonnes, of which measured resource amounted to 441,671,500 tonnes and inferred resource amounted to 195,215,000 tonnes.

Mineral resource reserves adopted for appraisal: Mineral resource reserves adopted for appraisal = ∑ (basic reserves included in the appraisal + resources × corresponding reliability coefficient) = 617,365,000 tonnes.

Product plan: Based on the actual situation of the mine, the product plan is determined as washed mixed coal and coal slurry.

Recovery rate of the mining areas: Based on the "Four-in-One Plan", the recovery rate for Coal Seams Nos. 9, 10, 11 and 12 is determined at 83%, and for Coal Seam No. 13 (Upper) and No. 13 at 78%.

Recoverable reserves adopted for appraisal: Recoverable reserves adopted for appraisal = (resource reserves adopted for appraisal – design losses) × mining recovery rate = 271,546,500 tonnes.

Production capacity and service life: Based on the production capacity design in the

"Four-in-One Plan" and the Approval of Production Capacity (J.N.Y.M.J.F. [2021] No. 410) by the Shanxi Energy Regulatory Office of National Energy Administration, the production capacity adopted is eight million tonnes per year. The calculation period used in the appraisal is 24.25 years, from August 2025 to October 2049.

Product selling prices and sales revenue: The selling prices of commercial coal adopted for this appraisal are as follows: RMB260.00 per tonne for August–December 2025 and for 2026, based on the actual prices for January–July 2025; RMB303.00 per tonne in 2027 (= 260.00 + (389.00 – 260.00) ÷ 3); RMB346.00 per tonne in 2028; and RMB389.00 per tonne for 2029 and subsequent years. The selling prices of coal slurry adopted for this appraisal are as follows: RMB20.00 per tonne for August–December 2025 and for 2026, based on the actual prices for January–July 2025; RMB52.00 per tonne in 2027 (= 20.00 + (115.00 – 20.00) ÷ 3), rounded; RMB84.00 per tonne in 2028; and RMB115.00 per tonne for 2029 and subsequent years. Assuming that all the produced commercial coal is sold during the period, the annual sales revenue from regular production is RMB2,329,255,200.

Fixed asset investment: The original cost of fixed assets (including construction in progress) adopted for this appraisal is RMB2,340,724,800, comprising RMB572,968,200 for shaft engineering, RMB369,640,600 for properties and buildings, and RMB1,398,116,000 for machinery and equipment. The net value of fixed assets adopted is RMB1,727,188,400, comprising RMB482,379,800 for shaft engineering, RMB255,785,800 for properties and buildings, and RMB989,022,800 for machinery and equipment. The subsequent investment relating to construction-in-progress and the relocation and reconstruction of the coal washing plant is RMB516,259,400, including RMB293,250,500 for properties and buildings and RMB223,008,900 for machinery and equipment (tax inclusive).

Total costs and operating costs

Based on the mine's financial statements, the *Guidance on Determining Mining Rights Appraisal Parameters*, the *Feasibility Study Report for the Relocation and Reconstruction of the Coal Washing Plant*, the *Notice on the Measures for the Administration of Mine Environment Treatment and Restoration Funds in Shanxi Province* (J.Z.F. [2019] No. 3), the *Administrative Measures for the Collection and Utilization of Enterprise Work Safety Funds* (C.Z. [2022] No. 136), the *Administrative Measures for the Extraction and Use of Coal Production Safety Expenses* and the *Notice on Certain Provisions for Regulating the Administration of Coal Mine Maintenance and Renovation Fees* (C.J. [2004] No. 119), and taking the year 2030 as an example, the total unit cost of the subject asset is RMB174.33 per tonne and the unit operating cost is RMB145.15 per tonne; the total annual cost is RMB1,394,626,300 and the annual operating cost is RMB1,161,194,700. (Total costs refer to the sum of all cost expenses; operating costs refer to the total costs minus depreciation, depreciation-related maintenance and renovation costs, shaft engineering fund, amortisation, and financial expenses.)

Discount rate: According to the *Guidance on Determining Mining Rights Appraisal*

Parameters, the basic composition of the discount rate is: Discount rate = risk-free rate of return + risk premium

The risk-free rate of return is determined as 1.70%, based on the yield to maturity of 10-year government bonds disclosed by the WIND Information System on the valuation benchmark date.

The risk premium is estimated using the "risk build-up method" and includes the following principal components: Exploration and development risk, industry risk, financial and operational risk, and other specific risks. As the mine is a production-stage mine, the exploration and development risk premium is determined as 0.60%, the industry risk premium as 2.00%, and the financial and operational risk premium as 1.50%. Taking into account the mine's specific circumstances, the other specific risk premium is determined as 2.00%. The total risk premium adopted for this appraisal is therefore 6.10%.

Having regard to the discount rate range and the mine's development stage, the discount rate adopted for this appraisal is 7.80%.

Based on the appraisal, the appraised value of the mining rights of Shanxi Jinshen Shaping Coal Industry Co., Ltd. as of 31 July 2025 is RMB1,678,593,100.

As of the valuation benchmark date, the book value of the mining rights is RMB255,030,100, and the appraised value is RMB1,678,593,100, representing an appreciation of RMB1,423,563,000. The appreciation is mainly attributable to the following factors: The book value of the mining rights primarily reflects the resource compensation fees paid, which were determined with reference to the appraised value of the resource reserves at the time of transfer. As of the valuation benchmark date, coal resource prices have increased compared with the time of acquisition of the mining rights and the appraisal also reflects expected future price movements. In addition, the resource reserves adopted in this appraisal are based on the remaining recoverable resources for the appraisal as determined according to the latest reserve verification report, annual reserve report and historical mined-out quantities within the scope of the mining licence, and are higher than the reserves used in calculating the initial compensation payment. The appraisal also reflects the mining right transfer proceeds payable in respect of the newly identified resource reserves.

After appraisal, the appraisal results of the entities in which long-term equity investments are held are as follows:

No.	**Name of investee**	**Book value**	**Appraised value**	**Appreciation rate %**
1	Shanxi Jinshen Hequ Coal Development Co., Ltd.	1,492.50	33,204.23	2,124.74
2	Shanxi Jinshen Railway Co., Ltd.	1,900.00	24,071.88	1,166.94
3	Shanxi Hequ Jinshen Ciyaogou Coal Industry Co., Ltd.	14,400.00	260,995.86	1,712.47

No.	Name of investee	Book value	Appraised value	Appreciation rate %
4	Shanxi Xinzhou Jinshen Coal Sales Co., Ltd.	1,000.00	3,188.81	218.88
5	Shanxi Jinshen Shaping Coal Industry Co., Ltd.	8,000.00	431,692.18	5,296.15
6	Shanxi Xinzhou Local Railway Co., Ltd.	50,000.00	-2,115.81	-104.23
7	Jinshen Coal Operations Co., Ltd. under Shanxi Coal Sales Group	5,062.31	5,062.31	0.00
Total		**81,854.81**	**756,099.46**	**823.71**

The appreciation of long-term equity investments is RMB6,742,446,500, mainly attributable to the following factors:

(1) Shanxi Jinshen Hequ Coal Development Co., Ltd. and Shanxi Xinzhou Jinshen Coal Sales Co., Ltd. are enterprises that provide sales services and coal-based testing services to mining companies. Their undistributed profits have increased since the initial investment, resulting in an increase in the original investment cost compared to the long-term equity investment. Furthermore, the construction costs of their main assets have increased since the acquisition date, leading to an increase in valuation value compared to the book value after valuation using the cost method. The appraised value of Shanxi Jinshen Hequ Coal Development Co., Ltd. increased by RMB317,117,300, and the appraised value of Shanxi Xinzhou Jinshen Coal Sales Co., Ltd. increased by RMB21,888,100.

(2) Shanxi Jinshen Railway Co., Ltd. undertakes the railway line and supporting assets of Xinzhou Railway, mainly engaged in the transportation of coal mine products and coal mine products from external units. The construction costs of its main assets have increased, resulting in an appreciation of RMB221,718,800.

(3) Shanxi Hequ Jinshen Ciyaogou Coal Industry Co., Ltd. and Shanxi Jinshen Shaping Coal Industry Co., Ltd. are companies with mining rights. Due to the early investment time and lower acquisition cost of the mining rights, the mining rights assets are valued using the income approach. After valuation, the company's net assets are higher than the original investment cost. The valuation appreciation of Shanxi Hequ Jinshen Ciyaogou Coal Industry Co., Ltd. was RMB2,465,958,600, and the valuation appreciation of Shanxi Jinshen Shaping Coal Industry Co., Ltd. was RMB4,236,921,800.

(4) Shanxi Xinzhou Local Railway Co., Ltd. was acquired through purchase. Its main assets were subsequently transferred internally. After valuation using the cost method, the original investment cost of the long-term equity investment was impaired, with an appraised impairment of RMB521,158,100.

2.Fixed assets – Buildings and structures

According to the characteristics of different types of building and structure assets, the type of appraisal value, and the data collection situation, the cost method is mainly used for appraisal, with some market approach used for certain cases.

Cost Method

The cost method calculation formula is as follows:

Appraised value = Replacement cost × Composite depreciation rate

(1) Determination of replacement cost

Based on the characteristics, nature, and situation of the building and structure assets within the appraisal scope, the calculation formula for replacement cost in this appraisal is as follows:

Replacement cost = Construction and installation engineering cost + Pre-construction and other costs + Capital cost - Deductible VAT

a) Construction and installation engineering costs

For large, valuable, and important buildings, the construction and installation engineering costs are determined using the preliminary and final budget adjustment method, which uses the quantities in the building's final budget as a basis and calculates the construction and installation engineering costs based on local standards and relevant fee documents.

For general buildings, or when final budget data is incomplete, or the building's value is small and the structure is simple, the analogy method or unit cost method is used to determine the construction and installation engineering costs.

b) Pre-construction and other costs

The pre-construction and other costs are calculated based on the construction investment amount provided by the appraised entity, according to industry, national, or local government-prescribed fee standards. Since the number of self-built buildings included in the appraisal scope is small and their value is low, no preliminary fees are calculated in this appraisal.

c) Capital costs

Capital costs are calculated based on the appraised entity's reasonable construction period, referencing the Loan Prime Rate (LPR) published by the People’s Bank of China on the valuation benchmark date. The total sum of construction and installation project costs, preliminary and other fees, etc., is used as the base for calculating the financing costs over the uniform capital investment. Since the number of self-built buildings included in the appraisal scope is small, with a low value and an insufficient construction period of less than six months, no capital costs are calculated.

d) Deductible VAT

According to relevant VAT documents, for those that qualify for VAT deduction, the replacement cost is reduced by the corresponding VAT.

(2) Determination of composite depreciation rate

a) For important buildings and structures, the economic service life, used lifespan, and on-site inspection of the structure, decoration, and auxiliary equipment are considered to determine the remaining useful life, which is then used to calculate the composite depreciation rate.

Composite depreciation rate = Remaining service life / (Remaining service life + Used lifespan) × 100%

For mining enterprises, the remaining service life of buildings is closely related to the mine's remaining service life. The remaining service life is determined based on the lower of the mine's remaining service life and the building's remaining economic service life.

b) For low-value buildings and structures, the composite depreciation rate is mainly determined based on the economic service life. The calculation formula is as follows:

Composite depreciation rate = (Economic service life - used lifespan) / Economic service life × 100%

For mining enterprises, the impact of the remaining service life of the mine should also be considered.

(3) Determination of the appraised value

Appraised value = Replacement cost × Composite depreciation rate

Market approach

The market approach refers to comparing the subject asset with similar real estate that has recently been traded on the valuation benchmark date, adjusting the known prices of these comparable properties to estimate the objective and reasonable price or value of the subject asset.

Appraisal using the market approach should proceed as follows:

(1) Collect transaction examples;

(2) Select comparable examples;

(3) Establish a comparable price basis;

(4) Make adjustments for transaction conditions;

(5) Make adjustments for transaction dates;

(6) Conduct regional factor adjustments;

(7) Conduct individual factor adjustments;

(8) Determine the comparable price.

The market method appraisal formula is as follows:

The value of the subject real property = Comparable transaction price × Normal transaction conditions / Comparable transaction conditions × Real estate price index at valuation benchmark date / Price index at comparable real estate transaction date × Real estate regional factor at appraisal date / Comparable real estate regional factor × Real estate individual factors at appraisal date / Comparable real estate individual factors

The appraisal results and changes in value for buildings are as follows:

Item	Book value (RMB0'000)		Appraised value (RMB0'000)	
	Original value	Net value	Original value	Net value
Total	2,734.51	1,695.59	2,581.08	2,162.01

The appraisal resulted in an impairment of RMB1,534,300 (impairment rate: 5.61%) to the original value of buildings and structures, and an appreciation of RMB4,664,200 (appreciation rate: 27.51%) to their net value. The main reasons for the impairment and appreciation arising from the appraisal are as follows:

The reason for the impairment of the original value in this appraisal is that the buildings and structures to be scrapped are appraised at zero. The appreciation in the appraised net value is mainly due to two factors: First, the economic service lives adopted in calculating the appraised net value are longer than the depreciation lives used for the accounting net book value. Second, for commercial properties, the appraisal was based on the market prices, and the prevailing market prices as of the valuation benchmark date were higher than the carrying amounts (i.e. amortised cost).

3.Fixed assets – Equipment

Equipment assets include machinery, vehicles, and electronic devices. Based on the nature of this project and the characteristics of the equipment assets within the appraisal scope, for some older electronic devices (e.g., computers) and vehicles, where there is an active second-hand market, the appraised value is based on the second-hand or scrap value of similar equipment. For other equipment, which does not have independent profit-generating ability and where there are very few similar transaction examples, it is not suitable to apply the income approach or market approach for appraisal. Therefore, the cost method is used for these equipment appraisals. The cost method calculation formula is as follows:

Appraised value = Replacement cost × Depreciation rate

(1)Replacement cost

Based on the characteristics and nature of the equipment within this appraisal scope, as well as the circumstances of the appraised entity, the calculation methods for the replacement costs of various types of equipment in this appraisal are as follows.

① Machinery

For equipment that requires installation, the replacement cost generally includes: Equipment purchase price, transport and handling fees, installation engineering fees, pre-construction and other costs, and the capital cost. For equipment that does not

require installation, the replacement cost generally includes: Equipment purchase price and transport and handling fees. The calculation formula is as follows:

Equipment requiring installation replacement cost = Equipment purchase price + Transport and handling fees + Installation engineering fees + Pre-construction and other costs + Capital costs - Deductible VAT

Equipment not requiring installation replacement cost = Equipment purchase price + Transport and handling costs - Deductible VAT

A. Equipment purchase price

For major process equipment, the purchase price is primarily determined by consulting the market price as at the valuation benchmark date or referencing the contract price of similar equipment at the valuation benchmark date. For small equipment, the purchase price is determined by checking the market price information for the valuation benchmark date. For equipment with no market price information, the purchase price is determined by referencing the purchase price for similar equipment.

B. Transport and handling fees

If transport and handling fees are not included in the equipment purchase price, they are determined by referring to standard cost indicators from resources like the *Asset Appraisal Common Data and Parameters Handbook* and the *Mechanical Industry Construction Project Budgeting Method and Indices*, taking into account factors such as transportation distance, weight, and volume.

C. Installation engineering fees

For equipment that requires installation, the installation engineering fees are determined with reference to the budgeted (or final) installation costs of similar equipment and other relevant project documentation. With reference to the budgetary indicators set out in the *Handbook of Commonly Used Methods and Parameters for Asset Appraisal* and the *Mechanical Industry Construction Project Budgeting Methods and Various Budgeting Indicators*, and taking into account the scale and nature of the installation works, a comprehensive installation rate has been adopted. The installation engineering fee calculation formula is as follows:

Installation engineering fee = Equipment purchase price × Installation engineering fee rate

For equipment where the purchase price includes installation engineering costs, or for equipment that does not require installation, installation engineering fees are not included.

For equipment foundations that are inseparable from buildings or separately listed as independent foundations, these are appraised within the corresponding buildings and structures, and installation engineering fees are not recalculated.

D. Pre-construction and other costs

The pre-construction and other costs are calculated based on the construction investment amount provided by the appraised entity, according to industry, national, or local government-prescribed fee standards. The equipment that requires installation within the appraisal scope is limited, with a low value, so no preliminary costs are calculated in this appraisal.

E. Capital costs

Capital costs are calculated based on the reasonable construction period of the appraised entity's project, referring to the loan market quotation rate (LPR) published by the National Interbank Funding Centre on the valuation benchmark date. The total cost, including equipment purchase price, transport and handling fees, installation engineering fees, pre-construction and other costs, is used as the basis, assuming that the funds are evenly invested. The equipment that requires installation within the appraisal scope is limited, with a low value and a reasonable construction period of less than six months, so financing costs are not calculated in this appraisal.

F. Deductible VAT

According to the regulations in "C.SH [2008] No. 170", "C.SH. [2016] No. 36", "C.SH. [2018] No. 32", and the "Announcement No. 39 in 2019 of the Ministry of Finance, the State Taxation Administration and the General Administration of Customs", the input VAT includes VAT on the equipment purchase price (tax rate 13%) and VAT on transport and handling fees (tax rate 9%).

② Vehicles

For vehicles, the replacement cost is determined by the market price on the valuation benchmark date, adding the vehicle purchase tax and other reasonable costs (such as licence fees). The calculation formula is as follows:

Replacement cost = Vehicle purchase price + Vehicle purchase tax + Licence fees and other costs - Deductible VAT

Where:

Vehicle purchase tax = Vehicle purchase cost / (1 + 13%) × 10%.

The vehicle purchase price is mainly determined by consulting local dealers or checking online for market prices; vehicle purchase tax is determined according to the *Vehicle Purchase Tax Law of the People's Republic of China*; licence fees and other costs are determined based on local administrative fee standards and actual vehicle expenses.

③ Electric equipment

For electric equipment that requires installation, the appraisal is conducted using the same method as for machinery. For other electric equipment that does not require installation, the replacement cost is determined based on the market purchase price on the valuation benchmark date.

(2) Determination of composite depreciation rate

① For specialised and general machinery, the depreciation rate is primarily determined based on the equipment's economic service life, used lifespan, and on-site inspections of the equipment's condition and technical status. The remaining service life is then calculated, and the composite depreciation rate is determined using the following formula:

Composite depreciation rate = Remaining service life / (Remaining service life + Used lifespan) × 100%

② For electronic equipment, office furniture, and other devices, the composite depreciation rate was mainly determined based on their economic service life and the results of on-site inspections. The calculation formula is as follows:

Age-based depreciation rate = (Economic service life - used lifespan) / Economic service life × 100%

Composite depreciation rate = Age-based depreciation rate × Adjustment coefficient

③ For vehicles, according to the *Standard for Mandatory Scrapping of Motor Vehicles* (Order No. 12 of 2012 of Ministry of Commerce, National Development and Reform Commission, Ministry of Public Security, Ministry of Environmental Protection), the theoretical depreciation rate was determined using either vehicle mileage or service life, based on the lower of the two methods. For vehicles without a prescribed service life, the remaining service life method was used. Adjustments were made based on on-site inspection results. The calculation formula is as follows:

Composite depreciation rate = Depreciation rate × Adjustment coefficient

(3) Determination of the appraised value

Appraised value = Replacement cost × Composite depreciation rate

The appraisal results and changes in value for equipment assets are as follows:

Item	Book value (RMB0'000)		Appraised value (RMB0'000)	
	Original value	Net value	Original value	Net value
Equipment assets	1,314.26	178.70	333.24	64.98

The original value of equipment assets recorded an appraised impairment of RMB9,810,200, representing an impairment rate of 74.64%. The appraised net value recorded an impairment of RMB1,137,200, representing an impairment rate of 63.64%. The reasons for the impairment are mainly as follows:

First, a significant portion of the equipment assets is scheduled for scrapping and has been appraised based on their recoverable value. Second, there are a number of assets without physical equipment, which have been appraised at nil value.

4.Other assets and liabilities

The asset appraisers verify the detailed schedules, supporting documents and book value provided by the appraised entity. The appraised values were determined based on the audited book value or, where applicable, the actual liabilities to be borne or rights

to be enjoyed by the entity.

Among them, the book value of current assets was RMB2,511,762,700 and the appraised value was RMB2,511,590,800, representing a depreciation of RMB171,900 (depreciation rate: 0.01%), due to the fact that, for inventories awaiting disposal, the appraised value was determined based on the recoverable value of the inventories; for inventories without physical existence, the appraised value was recorded as zero. The book value of other non-current assets was RMB180,900 and the appraised value was RMB303,300, representing an appreciation of RMB122,400 (appreciation rate: 67.64%), mainly due to the fact that the book value of intangible assets – software was based on its amortised cost. In this appraisal, the software's market value at the time of acquisition as at the valuation benchmark date was used as the appraised value. The book value of current liabilities was RMB2,379,398,900, with an appraised value of RMB2,379,398,900 and no change in value.

After calculation, as of the valuation benchmark date:

(A)The appraised value of the entire shareholders' equity of Jinshen Energy = Current assets (RMB2,511,590,800) + non-current assets (including long-term equity investments + fixed assets in buildings and structures + fixed assets in equipment + other non-current assets) = (RMB7,560,994,600 + RMB21,620,100 + RMB649,800 + RMB303,300) – current liabilities (RMB2,379,398,900) = RMB7,715,759,700.
(B)The book value of the entire shareholders' equity of Jinshen Energy = Current assets (RMB2,511,762,700) + non-current assets (including long-term equity investments + fixed assets in buildings and structures + fixed assets in equipment + other non-current assets) = (RMB818,548,100 + RMB16,955,900 + RMB1,787,000 + RMB180,900) – current liabilities (RMB2,379,398,900) = RMB969,835,700.

IV.Income approach

(i) Key assumptions

1.It is assumed that all appraisal targets are in the process of being traded, and the appraisers simulate the market based on the transaction conditions of the appraised assets;
2.It is assumed that for assets traded in the market, or assets to be traded in the market, both parties in the transaction have equal standing and ample opportunity and time to access market information. The transactions are voluntary and rational, and the parties can make rational judgments about the asset’s function, purpose, and transaction price;
3.It is assumed that the appraised assets will continue to be used for their current purposes and in their current manner;
4.It is assumed that there will be no significant changes to the relevant national laws, regulations, and policies or the macroeconomic situation, and that the political, economic, and social environment in the regions of the parties involved in the transaction will not change significantly;
5.Given the actual status of the assets on the valuation benchmark date, it is assumed that the company will continue operations;
6.It is assumed that there will be no significant changes in the interest rates, exchange

rates, tax bases, tax rates, policy-based collection fees, or other related factors affecting the appraised entity after the valuation benchmark date;

7.It is assumed that the management of the appraised entity after the valuation benchmark date will remain responsible and stable, with the ability to perform their duties;

8.Unless otherwise stated, it is assumed that the company fully complies with all relevant laws and regulations;

9.It is assumed that after the valuation benchmark date, there will be no force majeure or unforeseen factors that cause significant adverse effects on the appraised entity;

10.It is assumed that after the valuation benchmark date , the accounting policies used by the appraised entity and those used to prepare this asset appraisal report will remain consistent in significant aspects;

11.It is assumed that after the valuation benchmark date, the scope and methods of the appraised entity's operations will remain the same, based on the current management practices and level;

12.It is assumed that the cash inflows of the appraised entity after the valuation benchmark date will be average inflows, and the cash outflows will be average outflows.

(ii) Appraisal model

1. Basic model

The income approach used in this appraisal is the discounted cash flow (DCF) method to indirectly determine the entire shareholders' equity by evaluating the overall value of the enterprise. The overall value of the enterprise consists of the value of operating assets generated from normal business activities and the value of non-operational assets unrelated to normal business activities. For the determination of the value of operational assets, the Free Cash Flow Discount Model is employed, which uses the future free cash flows of the enterprise for several years as a basis, discounted at an appropriate discount rate and then summed up. The calculation model is as follows:

Entire shareholders' equity value = Enterprise overall value - Interest-bearing debt value

RMB7,648,368,400 = RMB7,648,368,400 − RMB0

(1) Enterprise overall value

The enterprise overall value refers to the sum of the entire shareholders' equity and the interest-bearing debt value. According to the asset allocation and usage situation of the appraised entity, the formula for calculating the enterprise overall value is as follows:

Enterprise overall value = Operating asset value + non-operating asset value - non-operating liabilities value + surplus asset value + value of long-term equity investments

The enterprise overall value of Jinshen Energy is RMB-89,754,000 + RMB973,400,900 – RMB2,068,254,100 + RMB1,271,981,000 + RMB7,560,994,600

= RMB7,648,368,400

1) Operating asset value

Operating assets are those related to the appraised entity's production and business operations, which are involved in the forecast of the enterprise free cash flow after the valuation benchmark date.

2) Surplus asset value

Surplus assets are those that exceed the enterprise's operational needs as of the valuation benchmark date, and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The appraised entity's surplus assets include cash. The surplus assets in this appraisal are appraised using the cost method.

3) Value of non-operating assets and liabilities

Non-operating assets and liabilities are those that are unrelated to the appraised entity's business operations and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date . The non-operating assets and liabilities of the appraised entity include other receivables, inventories and fixed assets in abnormal condition, accounts payable, other payables, and similar items. The cost approach or recoverable amount was adopted for this appraisal.

4) Long-term equity investment value

Long-term equity investments refer to the external equity investments made by the enterprise as of the valuation benchmark date. The entire shareholders' equity of the invested entity, as confirmed using an appropriate appraisal method, is multiplied by the shareholding percentage to determine the long-term equity investment value.

(2)Interest-bearing debt value

Interest-bearing debt refers to liabilities that the appraised entity must pay interest on as of the valuation benchmark date. As of the valuation benchmark date, the appraised entity has no interest-bearing debt.

2. Income indicators

In this appraisal, the formula for calculating the operating asset value is as follows:

$$P = \sum_{i=1}^{n} \frac{F_i}{(1+r)^i} + \frac{F_n}{r \times (1+r)^n}$$

Wherein: P: The value of the enterprise's operating assets as of the valuation benchmark date;

F_i: The expected free cash flow of the enterprise in the i-th year after the valuation benchmark date;

F_n: The expected free cash flow of the enterprise at the end of the detailed forecast period;

r: The discount rate (weighted average cost of capital, WACC) is 8.49%;

n: The detailed forecast period;

i: The i-th year of the detailed forecast period.

The free cash flow of the enterprise is calculated as follows:

Enterprise free cash flow = Earnings before interest and taxes (EBIT) - Depreciation and amortisation - capital expenditures - Increase in working capital

3. Discount rate

Where: Discount rate (weighted average cost of capital, WACC)

The calculation formula is as follows:

$$WACC = K_e \times \frac{E}{E + D} + K_d \times (1 - t) \times \frac{D}{E + D}$$

Where: ke: Cost of equity capital is 11.87%;

kd: Cost of interest-bearing debt capital is 3.5%;

E: Market value of equity;

D: Market value of debt;

t: Income tax rate is 25%.

The cost of equity capital is calculated using the Capital Asset Pricing Model (CAPM). The calculation formula is as follows:

$$K_e = r_f + MRP \times \beta_L + r_c$$

Where: rf: As the possibility of not being redeemable upon maturity is minimal and can be omitted, yield of state bond is usually considered as risk-free. According to information disclosed by the WIND Information System, the yield of to maturity of 10-year government bonds as at the valuation benchmark date is 1.7044%, this valuation report adopted 1.7044% as the risk-free yield.;

MRP: Market risk premium is the difference between the market rate of return on investment and the risk-free rate of return. In particular, the market rate of return on investment is determined by comprehensively analysing the weighted average of the annualised weekly returns from 1992 to the valuation benchmark date selected on the basis of the stock trading price indices of the Shanghai Stock Exchange and Shenzhen Stock Exchange. As calculated, the market rate of return on investment is 8.36%. The yield to maturity on 10-year treasury bonds of 1.70% on the valuation benchmark date has been taken as the risk-free rate of return. The market risk premium is 6.66%;

βL: Systematic risk coefficient of equity is 1.0766;

rc: Company-specific risk adjustment coefficient is 3.00%.

A.9 Main Evaluation Materials of Baotou Mining

I. Selection of Appraisal Methods

The methods selected for this appraisal are the income approach and the asset-based approach.

Reasons for the selection of appraisal methods

Reason for selecting the asset-based approach: As of the valuation benchmark date, the book value of the assets and liabilities within the appraisal scope has already been audited. Each asset and liability of the appraised entity can be identified. The identifiable assets and liabilities can each be individually assessed using an appropriate appraisal method, thus meeting the conditions for applying the asset-based approach.

Reason for selecting the income approach: The appraised entity has the foundation and conditions for ongoing operations, with standardised accounting practices, clear management, stable and defined business sources. The management has detailed plans for the current operations and future development of the company. The future expected income and operational risks can be reasonably predicted, meeting the conditions for using the income approach for appraisal.

Reason for not selecting the market approach: The market approach relies on the existence of an active public market with sufficient market data and comparable transaction cases. The appraised entity is a non-listed company. Listed companies in the same industry differ significantly from the valued enterprise in terms of business structure, corporate scale, asset allocation and utilisation, operational stage, growth potential, operational risks, financial risks, and others. Furthermore, as of the valuation benchmark date, there were few transactions involving comparable companies in the same industry in China. Reliable operational and financial data from comparable transactions are difficult to obtain, making it impossible to calculate appropriate value ratios. Therefore, the market approach was not adopted for this appraisal.

The appraised value of the entire shareholders' equity using the income approach is RMB4,542.6128 million, while the appraised value of the entire shareholders' equity using the asset-based approach is RMB4,536.3122 million.

Unless otherwise stated, all amounts in this summary are expressed in Renminbi (RMB).

There is a certain discrepancy between the appraisal results of the income approach and the asset-based approach. The main reason for the discrepancy is the different perspectives considered by the two methods.

The asset-based approach appraises the value of the appraised entity from the perspective of asset replacement as of the valuation benchmark date, with core assets appraised using the income approach. The income approach capitalises or discounts the expected income of the appraised enterprise to determine the value of the subject asset. In this appraisal, since the core assets under the asset-based approach were also assessed using the income approach, the final results from the income approach and the asset-based approach show minimal differences. Given that the income approach assesses value based on the company’s future profitability, which more intuitively reflects the enterprise value, the income approach appraisal result of RMB4,542.6128 million is adopted as the final appraisal conclusion.

II. Key assumptions

1. It is assumed that all appraisal targets are in the process of being traded, and the appraisers simulate the market based on the transaction conditions of the appraised assets;
2. It is assumed that for assets traded in the market, or assets to be traded in the market, both parties in the transaction have equal standing and ample opportunity and time to access market information. The transactions are voluntary and rational, and the parties can make rational judgments about the asset's function, purpose, and transaction price;
3. It is assumed that the appraised assets will continue to be used for their current purposes and in their current manner;
4. It is assumed that there will be no significant changes to the relevant national laws, regulations, and policies or the macroeconomic situation, and that the political, economic, and social environment in the regions of the parties involved in the transaction will not change significantly;
5. Given the actual status of the assets on the valuation benchmark date, it is assumed that the company will continue operations;
6. It is assumed that there will be no significant changes in the interest rates, exchange rates, tax bases, tax rates, policy-based collection fees, or other related factors affecting the appraised entity after the valuation benchmark date;
7. It is assumed that the management of the appraised entity after the Valuation benchmark date will remain responsible and stable, with the ability to perform their duties;
8. Unless otherwise stated, it is assumed that the company fully complies with all relevant laws and regulations;
9.It is assumed that after the valuation benchmark date, there will be no force majeure or unforeseen factors that cause significant adverse effects on the appraised entity;
10. It is assumed that after the valuation benchmark date , the accounting policies used by the appraised entity and those used to prepare this asset appraisal report will remain consistent in significant aspects;
11. It is assumed that after the valuation benchmark date, the scope and methods of the appraised entity's operations will remain the same, based on the current management practices and level;
12. It is assumed that after the valuation benchmark date, the appraised entity's cash inflows and cash outflows will be at an average rate;
13. It is assumed that after the valuation benchmark date, the appraised entity's products or services will maintain their current market competitiveness;
14. It is assumed that the highway toll collection model during the forecast period will remain unchanged.

III. Income approach

(i) Appraisal model

1. Basic model

The income approach used in this appraisal is the discounted cash flow (DCF) method to indirectly determine the entire shareholders' equity by evaluating the overall value of the enterprise. The overall value of the enterprise consists of the value of operating assets generated from normal business activities and the value of non-operational assets

unrelated to normal business activities. For the determination of the value of operational assets, the Free Cash Flow Discount Model is employed, which uses the future free cash flows of the enterprise for several years as a basis, discounted at an appropriate discount rate and then summed up.

The appraised value of the entire shareholders' equity using the income approach is RMB4,542.6128 million, with the book value of net assets amounting to RMB4,387.6157 million. The increment in value is RMB154.9971 million, representing an increase rate of 3.53%.

The calculation model is as follows:

Entire shareholders' equity value = Enterprise overall value - Interest-bearing debt value

RMB4,542.6128 million = RMB4,542.6128 million - RMB0.00 million

(1) Enterprise overall value

The enterprise overall value refers to the sum of the entire shareholders' equity and the interest-bearing debt value. According to the asset allocation and usage situation of the appraised entity, the formula for calculating the enterprise overall value is as follows:

Enterprise overall value = Operating asset value + Surplus asset value + Non-operating asset value - Non-operating liability value + Long-term equity investment value

The overall enterprise value of Baotou Mining is calculated as follows: RMB529.6687 million + RMB1,560.0365 million + RMB2,541.0196 million - RMB130.5882 million + RMB42.1763 million

= RMB4,542.6128 million

1) Operating asset value

Operating assets are those related to the appraised entity's production and business operations, which are involved in the forecast of the enterprise free cash flow after the valuation benchmark date.

2) Surplus asset value

Surplus assets are those that exceed the enterprise's operational needs as of the valuation benchmark date, and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The surplus assets of the appraised entity are entirely cash. The cost method is used for the appraisal of surplus assets.

3) Value of non-operating asset and liabilities

Non-operating assets and liabilities are those that are unrelated to the appraised entity's business operations and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The non-operating assets of the appraised entity include other receivables, intangible assets, deferred tax assets, and other non-current assets. Non-operating liabilities include accounts payable, other payables, provisions for liabilities, long-term payables, etc. The cost approach is used for the appraisal of these non-operating assets and liabilities.

4) Long-term equity investment value

Long-term equity investments refer to the external equity investments made by the enterprise as of the valuation benchmark date. The entire shareholders' equity of the invested entity, as confirmed using an appropriate appraisal method, is multiplied by the shareholding percentage to determine the long-term equity investment value.

(2) Interest-bearing debt value

Interest-bearing debt refers to liabilities that the appraised entity must pay interest on as of the valuation benchmark date. As of the valuation benchmark date, the appraised entity has no interest-bearing debt.

(ii) Income indicators

In this appraisal, the formula for calculating the value of operating assets is as follows:

$$P=\sum_{i=1}^{n}\frac{F_i}{(1+r)^i}+\frac{F_n}{r\times(1+r)^n}$$

Wherein: P: The value of the enterprise's operating assets as of the valuation benchmark date;

F_i: The expected free cash flow of the enterprise in the i-th year after the valuation benchmark date;

F_n: The expected free cash flow of the enterprise at the end of the detailed forecast period;

r: Discount rate (in this case, the Weighted Average Cost of Capital, WACC) is 9.51%.

n: The detailed forecast period;

i: The i-th year of the detailed forecast period.

The free cash flow of the enterprise is calculated as follows:

Enterprise free cash flow = Earnings before interest and taxes (EBIT) - Depreciation and amortisation - capital expenditures - Increase in working capital

(iii) Specific Appraisal Parameters

1 、Income Period and Forecast Period

The main business of the appraised entity is highway operation and container station leasing.

The highway operated by the company is the G338 road from Lanjialiang to Galutu Town, which is a first-class road. It was built using the BOT model in July 2009 and completed in June 2012. The project passed the completion inspection by the Ordos City Department of Transportation in December 2015 and officially began operation. According to the "Approval of the Inner Mongolia Autonomous Region People's Government for the Establishment of a Toll Station on Provincial Road 313 from Lanjialiang to Galutu Town" (Nei Zheng Zi [2012] No. 120), the tolling period began after the project's completion inspection was passed, with a toll duration of 28 years. Therefore, the income period for the highway toll business is from December 2015 to December 2043.

The container station construction began in September 2008 and was completed and opened on March 2, 2010. Since its commencement, the self-operated portion has long been out of production, and in recent years, it has mainly been leased to external parties. Based on the design life of its main assets, which is 45 years, the income period is considered from March 2010 to March 2055.

Forecast Period Determination: Based on the above analysis of the income period, the forecast period for the highway toll business is from the valuation benchmark date to December 2043. The forecast period for the container station leasing business is from the valuation benchmark date to March 2055.

2. Key Parameters for Operating Income

(1) Highway Toll Revenue

Toll standards: According to the "Notice on the Recalculation of Vehicle Toll Standards in the Autonomous Region" issued by the Development and Reform Commission of Inner Mongolia Autonomous Region, the Department of Finance of Inner Mongolia Autonomous Region, and the Department of Transportation of Inner Mongolia Autonomous Region (Nei Fa Gai Fei Zi [2017] No. 816), the toll standards for passenger vehicles on first-class toll roads in Inner Mongolia Autonomous Region are as follows: Passenger vehicles of types 1-4: RMB15, RMB15, RMB20, RMB25 per vehicle trip (inclusive of tax);Toll standards for freight vehicles on open first-class toll roads: RMB3 per tonne per vehicle trip (inclusive of tax).

Traffic flow forecast: According to information obtained from the company, the G338 highway section from Lanjialiang to Galutu Town, specifically the Taige toll station, is expected to be impacted by the diversion of traffic to a newly constructed road. It is understood that the Chaideng to Tuke first-class road project will commence at the end of 2023 and is planned to open by the end of 2026. The project begins at Chaideng Village, Bojiang Haizi Town, Dongsheng District, and ends at Tuke Town, Wushen Banner. In this forecast, the traffic flow at the Galutu toll station is projected based on historical annual levels. The Taige toll station, taking into account the impact of the new road, is expected to see a decrease in traffic flow between 2026 and 2028, with traffic volumes returning to the 2028 levels in subsequent years.

The forecasted toll revenue for the period from August to December 2025 and for the years 2026 to 2028 is as follows: 2025 (August-December): RMB50.7682 million; 2026: RMB136.8122 million; 2027: RMB132.6436 million; 2028: RMB130.2467 million. From 2029 onwards, toll revenue will remain the same as in 2028.

(2) Station Lease Income

This appraisal has forecast future lease income based on the company’s current lease agreements, considering a certain growth rate in rental income for the coming years.

The forecasted lease income for the period from August to December 2025 is RMB6.255 million. In 2026, lease income is expected to be RMB10.1301 million, with a gradual increase in subsequent years, reaching RMB23.5892 million by 2054. The forecast for the first quarter of 2055 is RMB4.0495 million.

3. Operating Costs and Expenses

Employee Compensation: Employee compensation primarily refers to the salaries, social security, and other related expenses for the staff of the highway branch and the

container station company. The forecast for employee compensation is based on the company's wage standards and staffing levels. Historical per capita wages are used as a reference, with an assumed growth rate. For the first full forecast year in 2026, employee compensation is projected to be RMB32.282 million, with annual increases until 2043, when it is expected to reach RMB53.3572 million. As the highway operations are scheduled to end in 2043, while the container station's operational period will not have concluded, starting from 2044, employee compensation will solely relate to the container station. It will grow from RMB2.7676 million in 2044 to RMB3.7194 million in 2054, with the first quarter of 2055 forecasted at RMB0.6385 million.

Depreciation and Amortisation: Depreciation and amortisation expenses are mainly determined based on the company's current asset base, combined with forecasted capital expenditures during the forecast period. These expenses are calculated in line with the company's fixed asset depreciation policy. The forecast for amortisation expenses primarily includes the amortisation of intangible assets—land use rights and other intangible assets. These are projected based on the original value of the respective assets and their amortisation periods. For the first complete forecast year, 2026, the amortisation expenses are projected to be RMB31.0062 million. As the amortisation periods progress, these expenses are expected to decrease gradually, reaching RMB0.8961 million by the end of the forecast period.

Labour Costs: Labour costs are forecasted based on the historical per capita labour cost levels, combined with the number of labourers employed. Labour costs will be borne entirely by the highway branch. In the first complete forecast year in 2026, the labour costs are expected to be RMB5.4534 million, with an annual increase until 2043, when they will reach RMB9.0137 million.

Service Area Management Fees: The Tuke service area built by the appraised entity is currently managed by an external party. The management fees are forecasted based on the agreed contract amount for the current management arrangement, which is RMB0.7765 million per year.

Other Operating Costs: Other operating costs, including major repair expenses, electricity costs, routine repair expenses, road maintenance fees, and other costs, are forecasted primarily by referencing signed contracts and historical annual averages. The forecast for other operating costs is as follows: from the first complete forecast year in 2026, through to 2043, it is projected at RMB32.282 million per year. As highway operations are scheduled to end in 2043 and the container station has not yet reached its operational end, the forecast for 2044 to 2054 is RMB15.4154 million per year. For the first quarter of 2055, the forecasted operating costs are RMB0.2664 million.

The main components of administrative expenses include litigation costs, fees for engaging intermediary agencies, consulting fees, and other related expenses. These expenses are forecasted by analysing the causes of expenses in historical years and taking into account the company's future business plans. For the forecast period, administrative expenses are projected to be RMB0.6345 million per year from 2026 to 2043. After the highway operations conclude in 2043, and with the container station still in operation, the forecast for 2044 to 2054 is RMB0.096 million per year. For the first quarter of 2055, the forecast is RMB0.016 million.

Taxes and surcharges primarily include urban construction tax, educational surcharge, local education surcharge, stamp duty, property tax, land use tax, vehicle and vessel usage tax, and stamp duties, among others. The average annual taxes and surcharges

for the entire forecast period are projected to be RMB3.4539 million per year.

(1) Discount rate

Among them, the discount rate (weighted average cost of capital, WACC)

The calculation formula is as follows:

$$WACC = K_e \times \frac{E}{E + D} + K_d \times (1 - t) \times \frac{D}{E + D}$$

Where: ke: The cost of equity capital is 9.51%.

kd: The cost of debt capital (interest-bearing debt) is 3.50%.

E: Market value of equity;

D: Market value of debt;

t: Corporate income tax rate is 25%.

The cost of equity capital is calculated using the Capital Asset Pricing Model (CAPM). The calculation formula is as follows:

$$K_e = r_f + MRP \times \beta_L + r_c$$

Where: rf: As the possibility of not being redeemable upon maturity is minimal and can be omitted, yield of state bond is usually considered as risk-free. According to information disclosed by the WIND Information System, the yield of to maturity of 10-year government bonds as at the valuation benchmark date is 1.7044%, this valuation report adopted 1.7044% as the risk-free yield.;

MRP: Market risk premium is the difference between the market rate of return on investment and the risk-free rate of return. In particular, the market rate of return on investment is determined by comprehensively analysing the weighted average of the annualised weekly returns from 1992 to the valuation benchmark date selected on the basis of the stock trading price indices of the Shanghai Stock Exchange and Shenzhen Stock Exchange. As calculated, the market rate of return on investment is 8.36%. The yield to maturity on 10-year treasury bonds of 1.70% on the valuation benchmark date has been taken as the risk-free rate of return. The market risk premium is 6.66%;

βL: Systematic risk coefficient of equity is 0.6458.

rc: The company-specific risk adjustment coefficient is 3.50%.

IV. Asset-based approach

1. Long-term equity investments

An overall appraisal was conducted for long-term equity investments in wholly-owned and controlling subsidiaries. The appraisers first appraise the entire shareholders' equity value of the investee, then multiply it by the shareholding percentage to determine the value of the part of the shareholder's equity. For long-term equity investments in wholly-owned and controlling subsidiaries, the appraisal methods used and the reasons

for selecting such methods are as follows:

Jian'an Company's main business is contracting internal projects for Baotou Energy. Since August 2020, no new construction projects have been undertaken, and the income after 2020 mainly comes from the settlement of previous years' projects. The main task of the Shantytown Company is to undertake the relocation and renovation project of the Shiguai Shantytown in Baotou, which is a welfare project not aimed at profit, intended to house residents of the Shiguai Shantytown.

Based on the analysis of the operational situation of the investees, since the asset-based approach can reflect the replacement cost of the appraised enterprise as of the valuation benchmark date, and the relevant data for the assets and liabilities of the investees are easily obtainable, the conditions for applying the asset-based approach are met.

Since Jian'an Company has suspended operations and has not undertaken new projects for many years, it is impossible to predict its future income, costs, and other operating data, making the income approach unsuitable for its appraisal. Since the main business of Shantytown Company is a welfare project not aimed at profit, the income approach is not suitable for its appraisal.

Due to the difficulty in finding comparable listed companies or merger cases for the investees, the market approach is not suitable for the appraisal of the investees.

Therefore, the asset-based approach is used to appraise the investees.

No.	**Name of investee**	**Appraisal methods**	**Conclusion appraisal method**
1	Baotou Mining Bureau Construction and Installation Co., Ltd.	Asset-based approach	Asset-based approach
2	Baotou Shiguai Shantytown Relocation Construction Co., Ltd.	Asset-based approach	Asset-based approach

After appraisal, the results for long-term equity investments are as follows:

No.	**Name of investee**	**Book value (RMB 10,000)**	**Appraisal value (RMB 10,000)**	**Appreciation rate %**
1	Baotou Mining Bureau Construction and Installation Co., Ltd.	2,500.00	4,217.63	68.71
2	Baotou Shiguai Shantytown Relocation Construction Co., Ltd.	0.00	0.00	/
Total		2,500.00	4,217.63	68.71

The appraisal increment of RMB17.1763 million is primarily due to the fact that Baotou Mining's long-term equity investment in Jian'an Company is recorded at its initial

investment cost, which is lower than Jian'an Company's net assets. After the net assets of Jian'an Company were assessed using the asset-based approach, a appraisal increment was formed at the level of long-term equity investment.

2. Buildings and structures fixed assets

The main assets of the appraised entity, Baotou Mining, come from its two subsidiaries: the Highway Branch of China Energy Group Baotou Mining Co., Ltd. and the Container Station of China Energy Group Baotou Mining Co., Ltd. Highway Branch's main business is highway operation, and its main income is from tolls, with a toll period of 28 years. Container Station has mainly been in an external leasing status in recent years, with no plans for self-use. The properties and buildings assets within the appraisal scope mainly include the container station assets and highway assets.

Since the future income from the container station asset group and highway asset group can be reasonably predicted, and the discount rate corresponding to the income risk level can also be reasonably estimated. The income approach is used for the appraisal based on the object, appraisal purpose, and collected data.

◆ Income approach

The income approach is a method for assessing asset value by estimating the present value of expected future income from the appraised asset.

For the appraisal of the container station and road asset groups, the pre-tax cash flow discount model is used for the appraisal, and the specific formula is as follows:

$$P = \sum_{i=1}^{n} \frac{F_i}{(1 + r)^i}$$

Wherein: P: Present value of cash flow from the operating asset group;

Fi: Expected pre-tax cash flow for the year i after the valuation benchmark date;

r: Discount rate (here it is the WACCBT);

n: Duration of existing asset income;

The pre-tax cash flow for the asset group is calculated as follows:

Pre-tax cash flow = EBITDA - Capital expenditure - Increase in working capital + Asset recovery value

This appraisal uses a univariate solution to determine the pre-tax discount rate (WACCBT). The calculation formula is as follows:

$$\sum_{i=1}^{n} \frac{R_i}{(1+r)^i} + \frac{R_{n+1}}{r(1+r)^n} = \sum_{i=1}^{n} \frac{Ra_i}{(1+r_a)^i} + \frac{Ra_{n+1}}{r_a(1+r_a)^n}$$

Wherein: Ri: Expected income (pre-tax cash flow) for year i in the future;

Rai: Expected income (post-tax cash flow) for year i in the future;

n: Forecasted period for future income;

r: Pre-tax discount rate;

ra: Post-tax discount rate.

The original value of the buildings and structures has been impaired by RMB278.9513 million, representing an impairment rate of 80.93%. The assessed net value has increased by RMB21.8366 million, reflecting an appreciation rate of 49.75%. The reasons for the increase or decrease in value are primarily as follows: The highway asset group as a whole was assessed using the income approach, with the appraisal of buildings and structures related to the highway reflected in the intangible assets under "Other - Highway Toll Rights," which led to a decrease in the original value of the buildings and structures. Due to the container station asset group being assessed using the income approach, the appraisal results for buildings and structures include the values of the container station equipment assets and land, leading to an increase in the net value of the buildings and structures. The company had made impairment provisions for some of the container station's fixed assets in historical years. This reappraisal, based on the current condition of the assets, resulted in an increase in the net value.

3. Fixed assets – equipment

The main assets of the appraised entity, Baotou Mining, come from its two subsidiaries: the Highway Branch of China Energy Group Baotou Mining Co., Ltd. and the Container Station of China Energy Group Baotou Mining Co., Ltd. Highway Branch's main business is highway operation, and its main income is from tolls, with a toll period of 28 years. Container Station has mainly been in an external leasing status in recent years, with no plans for self-use. The equipment assets within the appraisal scope mainly consist of container station assets and highway assets.

Since the future income from the container station asset group and highway asset group can be reasonably predicted, and the discount rate corresponding to the income risk level can also be reasonably estimated. The income approach is used for the appraisal based on the object, appraisal purpose, and collected data.

The original value of machinery and equipment has been impaired by RMB47.7776 million, representing a 100% impairment rate. The assessed net value has been impaired by RMB10.4066 million, also representing a 100% impairment rate. The primary reason for the impairment in appraisal is as follows: The equipment assets mainly include the assets of the container station and highway. The assessed value of the container station's equipment is included in the summary table for buildings and structures, while the assessed value of highway equipment is reflected in the intangible assets under "Other - Highway Toll Rights". This led to the impairment in the appraisal of these assets.

4. Land use right

The main assets of the appraised entity, Baotou Mining, come from its two subsidiaries: the Highway Branch of China Energy Group Baotou Mining Co., Ltd. and the Container Station of China Energy Group Baotou Mining Co., Ltd. Highway Branch's main business is highway operation, and its main income is from tolls, with a toll period of 28 years. Container Station has mainly been in an external leasing status in recent years, with no plans for self-use. The land use rights within the appraisal scope are for the container station land and the highway company's land.

As the future income generated by the container station and highway asset groups can

be reasonably forecast, and the discount rate corresponding to the income risk level can also be reasonably estimated, the income approach was used for the appraisal of these assets.

The impairment of intangible assets, specifically land use rights, is RMB41.953 million. The primary reason for the impairment in appraisal is that the income approach was used for both the container station and highway asset groups. The assessed value of the container station assets is included in the buildings and structures appraisal, while the highway assets are reflected in the intangible assets under "Other - Highway Toll Rights." As a result, this caused the impairment in the appraisal.

5. Other intangible assets

The other intangible assets included in the appraisal scope are the highway toll rights, which were assessed using the income approach. The income approach is a method for assessing asset value by estimating the present value of expected future income from the appraised asset. As a franchise right, the future income from the highway toll rights can be reasonably predicted, and the discount rate corresponding to the income risk level can also be reasonably estimated. The income approach is used for the appraisal based on the object, appraisal purpose, and collected data.

For the appraisal of the highway toll rights-related asset group, the pre-tax cash flow discount model is used for the appraisal, and the specific formula is as follows:

$$P = \sum_{i=1}^{n} \frac{F_i}{(1 + r)^i}$$

Wherein: P: Present value of cash flow from the operating asset group;

Fi: Expected pre-tax cash flow for the year i after the valuation benchmark date;

r: Discount rate (here it is the WACCBT);

n: Duration of existing asset income;

The pre-tax cash flow for the asset group is calculated as follows:

Pre-tax cash flow = EBITDA - Capital expenditure - Increase in working capital + Asset recovery value

This appraisal uses a univariate solution to determine the pre-tax discount rate (WACCBT). The calculation formula is as follows:

$$\sum_{i=1}^{n} \frac{R_i}{(1+r)^i} + \frac{R_{n+1}}{r(1+r)^n} = \sum_{i=1}^{n} \frac{Ra_i}{(1+r_a)^i} + \frac{Ra_{n+1}}{r_a(1+r_a)^n}$$

Wherein: Ri: Expected income (pre-tax cash flow) for year i in the future;

Rai: Expected income (post-tax cash flow) for year i in the future;

n: Forecasted period for future income;

r: Pre-tax discount rate;

ra: Post-tax discount rate.

The assessed value of other intangible assets is RMB490.8345 million, with an appraisal increment of RMB146.4082 million, reflecting an appreciation rate of 42.51%. The reasons for the appraisal increment are as follows: In the company's historical years, an impairment provision was made for the intangible asset "highway toll rights." This reappraisal, based on the current condition of the asset, resulted in an increase in value when compared to the net book value after the impairment provision.

6. Mining rights

For exploration rights, due to the inability to obtain the necessary geological survey, preliminary design, mine area general plan, formal feasibility report, and other documents required for mining rights appraisal, it is not possible to model and calculate the market value of the exploration rights as of the valuation benchmark date according to mining rights appraisal standards and theories. Therefore, the related costs for exploration rights are retained based on the audited book value. The assessed value of mining rights is RMB41.4452 million, with no change in value (no increase or decrease).

7. Other assets and liabilities

The asset appraisal personnel verified the detailed lists and relevant materials provided by the assessed entity, cross-checking the book values. The appraisal values were determined based on the audited book values or the actual liabilities or equity that the assessed entity is responsible for or entitled to.

The book value of current assets is RMB1,577.9064 million, with the assessed value also being RMB1,577.9064 million, showing no increase or decrease in value. The book value of other non-current assets is RMB2,489.7375 million, with the assessed value remaining the same at RMB2,489.7375 million, showing no increase or decrease in value. The book value of current liabilities is RMB107.6945 million, with the assessed value being RMB97.7195 million, showing a reduction of RMB9.975 million, representing an impairment rate of 9.26%. The book value of non-current liabilities is RMB79.4602 million, with the assessed value being RMB73.8002 million, showing a reduction of RMB5.66 million, representing an impairment rate of 7.12%.

After calculation, as of the valuation benchmark date:

(A) Baotou Mining's entire shareholders' equity appraisal value = Current assets (RMB1,577.9064 million) + Non-current assets (including long-term equity investments + fixed assets of properties and buildings + fixed assets of equipment + land use rights + other intangible assets + mining rights + other non-current assets) = (RMB42.1763 million + RMB65.7319 million + RMB0.00 million + RMB0.00 million + RMB490.8345 million + RMB41.4452 million + RMB2,489.7375 million) - Current liabilities (RMB97.7195 million) - Non-current liabilities (RMB73.8002 million) = RMB4,536.3122 million.

(B) Baotou Mining's entire shareholders' equity book value = Current assets (RMB1,577.9064 million) + Non-current assets (including long-term equity investments + fixed assets of properties and buildings + fixed assets of equipment + land use rights + other intangible assets + mining rights + other non-current assets) = (RMB25.00 million + RMB43.8953 million + RMB10.4066 million + RMB41.9530 million + RMB41.4452 million + RMB344.4263 million + RMB2,489.7375 million) - Current liabilities (RMB107.6945 million) - Non-

current liabilities (RMB79.4602 million) = RMB4,387.6157 million (Rounding may result in minor discrepancies).

A.10 Main Evaluation Materials of Shipping Company

I. SELECTION OF THE APPRAISAL APPROACHES

According to the "Appraisal Report," China United Assets Appraisal Group Co., Ltd (hereinafter "China United Assets") has considered the applicability of three asset appraisal approaches: the asset-based approach, the income approach, and the market approach.

China United Assets determined that, around the Appraisal Reference Date, as a coal shipping enterprise, CHN Energy Shipping could not obtain recent transaction cases of similarly sized enterprises, and there were few comparable listed companies of similar scale and business structure in the market. Therefore, the market approach was not selected for the appraisal. Considering that the asset-based approach reflects the enterprise's value from the perspective of its construction and acquisition, provides a basis for the enterprise's operation, management, and performance appraisal after the completion of the economic act, and that CHN Energy Shipping can provide relatively complete data required for the appraisal of assets and liabilities; and considering that CHN Energy Shipping possesses the foundation and conditions for continuing operations, with predictable and quantifiable future earnings and risks, China United Assets determined that CHN Energy Shipping meets the conditions for applying both the asset-based approach and the income approach. Therefore, both the asset-based approach and the income approach were used for the appraisal.

Using the asset-based approach, China United Assets calculated the total shareholders' equity of CHN Energy Shipping to be RMB214,179.65 ten thousand. Employing the income approach, the calculated total shareholders' equity was RMB152,508.05 ten thousand.

Considering that (i) CHN Energy Shipping is an asset management and operation platform established following the optimization of the shipping industry management and control by the CHN Energy at the end of 2022. It was incorporated on March 22, 2023. As a newly established management and operation platform, key parameters for the income approach, such as shipping volume, are significantly influenced by the Group's integrated operations, while freight rates are subject to substantial market fluctuations. (ii) The asset-based approach reflects the fair market value of assets from the perspective of asset replacement. Taking into account the specifics of this appraisal, CHN Energy Shipping provided detailed information on its assets and liabilities, and the valuers also collected sufficient external data required for the asset-based approach, enabling a comprehensive review and assessment of CHN Energy Shipping's assets and liabilities. Compared to the income approach applied to the enterprise as a whole, the asset-based approach more objectively reflects the appraised value of the enterprise's net assets. Therefore, China United Assets ultimately selected the result from the asset-based approach as the final appraisal conclusion.

II. MAJOR APPRAISAL ASSUMPTIONS

(1) General Assumptions

1. It is assumed that all assets to be appraised are already in the process of a transaction, and the appraiser simulates the market to ap-A.10-praise said assets based on the transaction conditions;

2. It is assumed that the target company can freely trade in an open market, and for assets traded or intended to be traded on the market, both transacting parties have equal status and sufficient access to market information and time, enabling them to make rational judgments regarding the asset's function, purpose, and transaction price;

3. It is assumed that the target company, as an operating entity, will continue its operations in accordance with its business objectives under the prevailing external environment. It is assumed that the company's management is responsible and competent in fulfilling their duties; the company operates in compliance with laws and regulations and is capable of generating proper profits to maintain its

going concern status. It is assumed that all categories of the company's operating assets can continue to be utilized in their current purpose, manner, scale, frequency, and environment, or can be used with appropriate modifications;

4. It is assumed that the external economic environment as of the Appraisal Reference Date remains unchanged, with no major changes occurring in current national laws, regulations, policies, the macroeconomic situation, or the political, economic, and social environments of the regions where the parties involved in the transaction are located;

5. It is assumed that no significant changes will occur in the socio-economic environment in which the target company operates, nor in relevant interest rates, exchange rates, tax bases and rates, or policy-related levies;

6. It is assumed that the target company's future management team will fulfill their duties diligently and will continue to maintain the existing management and operational model;

7. It is assumed that the appraisal is based solely on the operational capacity existing as of the Reference Date. Potential expansions of operational capacity resulting from future changes in management, business strategies, additional investments, etc., are not considered, nor are subsequent potential changes in production and operations;

8. It is assumed that all assets subject to this appraisal are valued based on their actual quantities existing as of the Appraisal Reference Date, and the current market prices of the relevant assets are determined according to the effective domestic prices as of the Appraisal Reference Date;

9. It is assumed that the foundational and financial information provided by the target company is true, accurate, and complete. The scope of the appraisal is strictly limited to the appraisal declaration forms submitted by the target company, and no potential contingent assets or contingent liabilities not included in the list provided by the target company have been considered;

10. It is assumed that during the future forecast period, the types and proportions of period expenses for the subject entity will not undergo significant changes from the current basis and will continue to follow the trends observed in recent years, fluctuating in line with changes in the scale of operations;

11. Given that the company's monetary funds or bank deposits, are subject to frequent or significant fluctuations during operations, the assessment of financial expenses in this report does not include interest income generated from such deposits, nor does it consider uncertain gains or losses such as those from foreign exchange fluctuations;

12. The parameters measured in this appraisal have not taken into account the impact of inflation.

13. It is assumed that no other force majeure factors or unforeseeable events will have a material adverse impact on the company;

14. It is assumed that the cash inflows and outflows of the target company after the Appraisal Reference Date occur evenly over time.

(II) Special Assumptions

None.

III. ASSET-BASED APPROACH

(I) Long-Term Equity Investments

For long-term equity investments, verification procedures were first conducted to examine the cause of their formation, book value, actual status, and other relevant factors. Investment agreements, shareholder resolutions, articles of association, and relevant accounting records were reviewed to confirm the authenticity and completeness of the long-term investments.

For wholly-owned subsidiaries and those subsidiaries with over 50% ownership, a comprehensive asset appraisal of the investee entities was performed as of the Appraisal Reference Date. The appraised value was then determined by multiplying the appraised net asset value of the investee entity by the shareholding percentage of the subject entity as of the Appraisal Reference Date:

Appraised value of long-term equity investments = Appraised net asset value of the investee entity after a full appraisal × Shareholding percentage

Where differences existed between the paid-in capital and the subscribed capital, the calculation was as follows:

Appraised value of long-term equity investments = (Total appraised shareholders' equity of the investee entity + Unpaid subscribed capital) × The shareholder's subscribed capital ratio - The shareholder's unpaid subscribed capital

In determining the appraised value of the long-term equity investments, the valuers did not consider any premium or discount arising from factors such as control premiums or minority discounts, nor did they consider the impact of equity marketability on the appraisal results.

No.	Name of Investee Entity	Shareholding Percentage	Appraisal Approach	Method for determining the conclusion value
1	Tianjin Guoneng Shipping Co., Ltd.	60.00%	Asset-based Approach, Income Approach	Asset-based Approach
2	Guoneng (Wuhan) Shipping Co., Ltd.	100.00%	Asset-based Approach, Income Approach	Asset-based Approach
3	Guoneng (Tianjin) Shipping Co., Ltd.	100.00%	Asset-based Approach, Income Approach	Asset-based Approach
4	CHN Energy Ocean Shipping (HK) Co., Ltd.	100.00%	Asset-based Approach, Income Approach	Asset-based Approach

Upon completion of the appraisal, the results for the long-term equity investment entities are as follows:

No.	Name of Investee Entity	Book Value (ten thousand)	Appraised Value (ten thousand)	Appreciation Rate (%)
1	Tianjin Guoneng Shipping Co., Ltd.	77,646.68	69,626.82	-10.33
2	Guoneng (Wuhan) Shipping Co., Ltd.	12,178.01	15,798.00	29.73
3	Guoneng (Tianjin) Shipping Co., Ltd.	46,290.90	68,664.96	48.33
4	CHN Energy Ocean Shipping (HK) Co., Ltd.	680.00	683.77	0.55
	Total	136,795.59	154,773.55	13.14

Based on the calculations, as of the Appraisal Reference Date the book value of the long-term equity investments within the appraisal scope was RMB136,795.59 ten thousand, with no provision for impairment made. The appraised value was RMB154,773.55 ten thousand, resulting in an assessed appreciation of RMB17,977.96 ten thousand and an appreciation rate of 13.14%. The primary reasons for the appreciation are as follows:

1. The assessed impairment of Tianjin Guoneng Shipping Co., Ltd. is RMB 8,019.86 ten thousand, representing an impairment rate of 10.33%. The primary reason for the impairment was that the net assets of Tianjin Guoneng Shipping Co., Ltd. as per its financial statements on the Reference Date amounted to RMB 114,692.60 ten thousand (equivalent to RMB 68,815.56 ten thousand based on the 60% equity interest held), representing a decrease of RMB 8,831.12 ten thousand compared to Guoneng Shipping Co., Ltd.'s historical investment cost of RMB 77,646.68 ten thousand in the company. The operating loss reflected in the company's financial statements are the main driver of the assessed impairment .

2. The assessed appreciation of Guoneng (Wuhan) Shipping Co., Ltd. is RMB3,619.99 ten thousand. The appraised value of the subsidiary was basically the same as its book value. The appreciation compared to the book value of the parent company's equity investment was due to the enterprise's accumulated operating results over its history.

3. The assessed appreciation of Guoneng (Tianjin) Shipping Co., Ltd. is RMB22,374.06 ten thousand. The appraised value has increased relative to the book value due to the historical operating accumulation of equity investments and the favorable market conditions for the vessels held.

4. The assessed appreciation of CHN Energy Ocean Shipping (HK) Co., Ltd. is RMB3.77 ten thousand, representing an appreciation rate of 0.55%. The appraised value is basically equivalent to its book value.

(II) Fixed Assets - Equipment

Based on the purpose of this appraisal and adhering to the principle of continuous use, the valuation was conducted using market prices as the benchmark, considering the characteristics of the equipment submitted for appraisal and the information collected. For ships, the market approach was applied; for electronic equipment, the replacement cost method was used.

1. Market Approach

For ship assets, the market approach involves collecting transaction cases from the second-hand ship market. Several second-hand ships of the same type, with similar deadweight tonnage, comparable usage periods, and transaction dates close to the appraisal reference date are selected as comparable instances. Through analysis and comparison between the subject ship and each comparable instance, adjustment or correction factors are determined for deadweight tonnage, usage period, transaction date, transaction conditions, country of build, and other relevant factors. Finally, the arithmetic mean of the adjusted prices from several comparable instances is calculated to determine the appraised value of the subject ship.

The calculation is expressed by the following formula:

$P=\sum(Pi\times Ai\times Bi\times Ci\times Di\times Ei\times Fi)/n$

P: Appraised value of the subject ship;

Pi: Transaction price of the i-th comparable instance;

Ai: Deadweight tonnage adjustment coefficient for the i-th comparable instance;

Bi: Transaction date adjustment coefficient for the i-th comparable instance;

Ci: Transaction circumstance adjustment coefficient for the i-th comparable instance;

Di: Vessel age adjustment coefficient for the i-th comparable instance;

Ei: Country of build adjustment coefficient for the i-th comparable instance;

Fi: Other factor adjustment coefficient(s) for the i-th comparable instance

n: Number of comparable instances

(1) Determination of Comparable Instances and Prices in the Ship Market:

Through market research, select ships identical or similar to the subject vessel from the current transaction market as comparable instances. When selecting comparable instances, primary consideration is given to basic performance elements such as the type and deadweight tonnage of the transacted ship, while also considering the ship's build year, country of build, and the transaction date of already concluded similar ships.

(2) Determination of Adjustment Factors:

Ship Type: The ship type here refers to the classification by tonnage for bulk carriers, mainly including: Handymax, Supramax, Panamax, Kamsarmax, Capesize, etc. Comparable instances must be selected from cases of the same or similar type as the subject vessel.

Deadweight Tonnage Adjustment Factor: This factor reflects the influence of the ship's cargo capacity on its transaction price. Based on statistics of second-hand ship price levels in the international and domestic ship markets, the price per unit ton for similar ships of close age is generally comparable within a certain deadweight range. This appraisal determines the deadweight adjustment factor based on the ratio of deadweight tonnages.

Transaction Date Adjustment Factor: The transaction date adjustment factor is determined based on the price index ratio. For this appraisal, the Shanghai Ship Price Index (SPI) is used to determine the transaction date adjustment factor.

Transaction Circumstance Adjustment Factor: Transaction circumstances primarily refer to the influence on the ship's price from factors such as transaction volume, transaction motivation, delivery location, payment method, the presence of other additional transaction conditions, and the actual condition of the ship at the time of transaction. These factors are used to determine the transaction circumstances adjustment factor.

Vessel Age Adjustment Factor: The statutory scrapping age for bulk carriers in China is 33 years. The vessel's age affects its price. This appraisal determines the age adjustment factor based on the proportion of the age difference relative to the statutory scrapping age.

Country of Build Adjustment Factor: Differences in the technical advancement level and construction costs of the shipbuilding country affect the vessel's service life, thereby influencing the transaction price of the second-hand ship. The country of build adjustment factor is determined based on an analysis of international ship market conditions and ship prices from various countries.

Other Factors Adjustment Factor: Other factors primarily refer to differences in the vessel's navigable area, technical condition, and main equipment. The technical condition includes whether the ship has experienced marine damage, as well as the status of its daily upkeep and maintenance.

(3) Determination of Appraised Value:

Based on the specific characteristics of each comparable instance, the respective adjustment factors are determined and used to calculate the adjusted price. After analyzing the reasonableness of the adjusted prices, the final appraised value is determined by taking the arithmetic mean.

2. Replacement Cost Method

(1) Full Replacement Cost of Electronic Equipment

Based on local market information and recent price data from sources such as "ZOL.com.cn" and "PConline," the prices of electronic equipment as of the Appraisal Reference Date were determined. Since manufacturers or agents typically provide free delivery, installation, and debugging, the full replacement cost is established based on the purchase price excluding tax:

Full Replacement Cost (excluding tax) = Purchase Price - Deductible VAT

Deductible VAT Amount = (Purchase Price / 1.13) × 13%

For older electronic equipment for which relevant models are no longer available on the market but which remain functional, the full replacement cost is determined by referencing the second-hand equipment market prices, including tax.

(2) Remaining Useful Life Rate of Electronic Equipment

Remaining Useful Life Rate = [Remaining Usable Years / (Years Already Used + Remaining Usable Years)] × 100%

Note: For electronic equipment appraised directly based on second-hand market prices, the calculation of the Remaining Useful Life Rate is not required.

(3) Determination of Appraised Value

Appraised Value = Full Replacement Cost × Remaining Useful Life Rate

Based on the calculations, as of the Appraisal Reference Date, the book value of the equipment assets within the appraisal scope was RMB97,760.51 ten thousand, and the appraised value was RMB114,221.13 ten thousand. This represents an assessed appreciation of RMB16,460.62 ten thousand and an appreciation rate of 16.84%. The primary reason for this increase is the favorable market conditions for ships in recent years, leading to rising transaction prices, which resulted in a higher appraised value compared to the book value.

(3) Other Assets and Liabilities

The asset appraisal professionals verified the book values against the detailed item lists and relevant financial information provided by the subject entity. The appraised values were determined based on the verified book values, or the actual liabilities/equity interest of the subject entity.

Among these, as of the Appraisal Reference Date, the book value of current assets was RMB85,751.91 ten thousand, and the appraised value was RMB85,780.07 ten thousand, resulting in an appreciation rate of 0.03%; the book value of intangible assets was RMB874.52 ten thousand, and the appraised value was RMB965.59 ten thousand, resulting in an appreciation rate of 10.41%; the appraised value and book value of other non-current assets were both RMB13,991.73 ten thousand; the appraised value and book value of current liabilities were both RMB48,195.42 ten thousand; and the appraised value and book value of non-current liabilities were both RMB107,357.00 ten thousand.

Based on the calculations, as of the Appraisal Reference Date:

(A) The appraised value of the total shareholders' equity of CHN Energy Shipping = Current Assets + Non-Current Assets (including Long-term Equity Investments + Fixed Assets - Equipment + Intangible Assets + Other Non-Current Assets = RMB85,780.07 ten thousand + RMB154,773.55 ten thousand + RMB114,221.13 ten thousand + RMB965.59 ten thousand + RMB13,991.73 ten thousand) - Current Liabilities (RMB48,195.42 ten thousand) - Non-Current Liabilities (RMB107,357.00 ten thousand) = RMB214,179.65 ten thousand.

(B) The book value of the total shareholders' equity of CHN Energy Shipping = Current Assets + Non-Current Assets (including Long-term Equity Investments + Fixed Assets - Equipment + Intangible Assets + Other Non-Current Assets = RMB85,751.91 ten thousand + RMB136,795.59 ten thousand + RMB97,760.51 ten thousand + RMB874.52 ten thousand + RMB13,991.73 ten thousand) - Current Liabilities (RMB48,195.42 ten thousand) - Non-Current Liabilities (RMB107,357.00 ten thousand) = RMB179,621.84 ten thousand.

IV. INCOME APPROACH

(I) Key Parameters and Assumptions

The key parameters and assumptions adopted by China United Assets in the Income Approach are as follows:

1. It is assumed that no major changes occurring in current national laws, regulations, policies, the macroeconomic situation, or the political, economic, and social environments of the regions where the parties involved in the transaction are located;

2. It is assumed that the enterprise will continue as a going concern;

3. It is assumed that the company's management is responsible and competent in fulfilling their duties;

4. It is assumed that no significant changes will occur in relevant interest rates, exchange rates, tax bases and rates, or policy-related levies;

5. It is assumed that the company's business scope and operational methods will remain consistent with the current direction, based on the existing management style and competency level;

6. It is assumed that during the future forecast period, the subject entity's core business, product mix, composition of revenue and costs, sales strategies, and cost control measures will remain largely unchanged from their post-commissioning and capacity-reaching state;

7. It is assumed that during the future forecast period, period expenses for the subject entity will not undergo significant changes from the current basis and will continue to follow the trends observed in recent years, fluctuating in line with changes in the scale of operations;

8. The Weighted Average Cost of Capital (WACC) model was used to determine a discount rate of 9.10%;

9. This appraisal did not consider the impact of a marketability discount on the equity value of the enterprise.

(II) Appraisal Model

1. Basic Model

The basic model used in this appraisal is:

$$E = B - D \quad (1)$$

Where:

E: Total shareholder equity (net asset) value of the subject entity; the final calculated result is RMB152,508.05 ten thousand;

B: Enterprise value of the subject entity, calculated as RMB259,865.05 ten thousand;

D: The value of the interest-bearing debt of the subject entity is RMB107,357.00 ten thousand;

$$E = P + I + C \quad (2)$$

Where:

P: Value of the operating assets of the subject entity;

I: Value of the long-term investments held by the subject entity as of the Reference Date;

C: Value of surplus or non-operating assets (liabilities) existing as of the Reference Date of the subject entity;

$$P = \sum_{i=1}^{n} \frac{R_i}{(1+r)^i} + \frac{R_{n+1}}{r(1+r)^n} \quad (3)$$

Where:

R_i: The expected return (Free Cash Flow) of the subject entity for the i-th future year;

r: The discount rate, which is 9.10%;

n: The future operational period of the subject entity;

$$C = C_1 + C_2 \quad (4)$$

C_1: The value of current surplus or non-operating assets (liabilities) as of the Reference Date;

C_2: The value of non-current surplus or non-operating assets (liabilities) as of the Reference Date.

2. Income Indicator

For this appraisal, free cash flow to the firm is used as the income indicator for the operating assets of the subject entity. It is fundamentally defined as:

R = Net Profit + Depreciation & Amortization + After-tax Interest Expense - Additional Capital (5)

Based on the operating history of the subject entity and future market development, the free cash flow for its future operational period is estimated. The present value of the free cash flows throughout this future operational period is calculated and summed to determine the value of the enterprise's operating assets.

3. Discount Rate

This appraisal employs the Weighted Average Cost of Capital (WACC) model to determine the discount rate r

$$r = r_d \times w_d + r_e \times w_e \quad (6)$$

Where:

W_d: The debt ratio, based on comparable companies, is 21.46%

$$w_d = \frac{D}{(E+D)} \quad (7)$$

W_e: The equity ratio, based on comparable companies, is 78.54%;

$$w_e = \frac{E}{(E+D)} \quad (8)$$

r_d: The after-tax interest rate on interest-bearing debt is 2.63% for this appraisal;

r_e: The cost of equity capital, determined using the Capital Asset Pricing Model (CAPM), is calculated comprehensively as 10.87%;

$$r_e = r_f + \beta_e \times (r_m - r_f) + \varepsilon \quad (9)$$

Where:

r_f: The risk-free rate, using the 10-year government bond yield, is 1.70%;

r_m: The expected market return rate is 9.37%;

ε: The specific company risk adjustment coefficient for the subject entity is 1.50%;

β_e: The expected market risk coefficient for the equity capital of the subject entity is 1.0002;

$$\beta_e = \beta_u \times (1 + (1-t) \times \frac{D}{E}) \quad (10)$$

βu: The expected unlevered market risk coefficient of comparable companies;

$$\beta_u = \frac{\beta_t}{1+(1-t)\frac{D_i}{E_i}} \quad (11)$$

β_t: The expected average market risk coefficient for the stocks (assets) of the comparable companies;

$$\beta_t = 34\%K + 66\%\beta_X \quad (12)$$

Where:

K: The average risk value for the stock market over a certain period, typically assumed to be K=1;

β_x: The historical average market risk coefficient of the comparable companies' stocks (assets);

D_i, E_i: Represent the interest-bearing debt and equity capital of the comparable companies, respectively.

A.11 Main Evaluation Materials of Coal Trading Company

I. SELECTION OF THE APPRAISAL APPROACHES

According to the "Appraisal Report," China United Assets Appraisal Group Co., Ltd (hereinafter "China United Assets") has considered the applicability of three asset appraisal approaches: the asset-based approach, the income approach, and the market approach.

China United Assets determined that, around the Appraisal Reference Date, as a coal trading enterprise, Coal Transport & Marketing could not obtain recent transaction cases of similarly sized enterprises, and there were few comparable listed companies of similar scale and business structure in the market. Therefore, the market approach was not selected for the appraisal. Considering that the asset-based approach reflects the enterprise's value from the perspective of its construction and acquisition, provides a basis for the enterprise's operation, management, and performance appraisal after the completion of the economic act, and that Coal Transport & Marketing can provide relatively complete data required for the appraisal of assets and liabilities; and considering that Coal Transport & Marketing possesses the foundation and conditions for continuing operations, with predictable and quantifiable future earnings and risks, China United Assets determined that Coal Transport & Marketing meets the conditions for applying both the asset-based approach and the income approach. Therefore, both the asset-based approach and the income approach were used for the appraisal.

Using the asset-based approach, China United Assets calculated the total shareholders' equity of Coal Transport & Marketing to be RMB86,102.61 ten thousand. Employing the income approach, the calculated total shareholders' equity was RMB72,955.50 ten thousand.

Considering that (i) Coal Transport & Marketing is a trading company focused on import and export business, making its income approach significantly influenced by national policies and group planning, and (ii) the asset-based approach reflects the fair market value of assets from the perspective of asset replacement. Taking into account the specifics of this appraisal, Coal Transport & Marketing provided detailed information on its assets and liabilities, and the appraisers also collected sufficient external data required for the asset-based approach, enabling a comprehensive review and appraisal of Coal Transport & Marketing' assets and liabilities. Compared to the income approach applied to the enterprise as a whole, the asset-based approach more objectively reflects the appraised value of the enterprise's net assets. Therefore, China United Assets ultimately selected the result from the asset-based approach as the final appraisal conclusion.

II. MAJOR APPRAISAL ASSUMPTIONS

(1) General Assumptions

1. It is assumed that all assets to be appraised are already in the process of a transaction, and the appraiser simulates the market to appraise said assets based on the transaction conditions;

2. It is assumed that the target company can freely trade in an open market, and for assets traded or intended to be traded on the market, both transacting parties have equal status and sufficient access to market information and time, enabling them to make rational judgments regarding the asset's function, purpose, and transaction price;

3. It is assumed that the target company, as an operating entity, will continue its operations in accordance with its business objectives under the prevailing external environment. It is assumed that the company's management is responsible and competent in fulfilling their duties; the company operates in compliance with laws and regulations and is capable of generating proper profits to maintain its going concern status. It is assumed that all categories of the company's

operating assets can continue to be utilized in their current purpose, manner, scale, frequency, and environment, or can be used with appropriate modifications;

4. It is assumed that the external economic environment as of the Appraisal Reference Date remains unchanged, with no major changes occurring in current national laws, regulations, policies, the macroeconomic situation, or the political, economic, and social environments of the regions where the parties involved in the transaction are located;

5. It is assumed that no significant changes will occur in the socio-economic environment in which the target company operates, nor in relevant interest rates, exchange rates, tax bases and rates, or policy-related levies;

6. It is assumed that the target company's future management team will fulfill their duties diligently and will continue to maintain the existing management and operational model;

7. It is assumed that the appraisal is based solely on the operational capacity existing as of the Reference Date. Potential expansions of operational capacity resulting from future changes in management, business strategies, additional investments, etc., are not considered, nor are subsequent potential changes in production and operations;

8. It is assumed that all assets subject to this appraisal are valued based on their actual quantities existing as of the Appraisal Reference Date, and the current market prices of the relevant assets are determined according to the effective domestic prices as of the Appraisal Reference Date;

9. It is assumed that the foundational and financial information provided by the target company is true, accurate, and complete. The scope of the appraisal is strictly limited to the appraisal declaration forms submitted by the target company, and no potential contingent assets or contingent liabilities not included in the list provided by the target company have been considered;

10. It is assumed that during the future forecast period, the types and proportions of period expenses for the subject entity will not undergo significant changes from the current basis and will continue to follow the trends observed in recent years, fluctuating in line with changes in the scale of operations;

11. Given that the company's monetary funds or bank deposits, are subject to frequent or significant fluctuations during operations, the assessment of financial expenses in this report does not include interest income generated from such deposits, nor does it consider uncertain gains or losses such as those from foreign exchange fluctuations;

12. The parameters measured in this appraisal have not taken into account the impact of inflation.

13. It is assumed that no other force majeure factors or unforeseeable events will have a material adverse impact on the company;

14. It is assumed that the cash inflows and outflows of the target company after the Appraisal Reference Date occur evenly over time.

(II) Special Assumptions

None.

III. ASSET-BASED APPROACH

(I) Long-Term Equity Investments

For long-term equity investments, verification procedures were first conducted to examine the cause of their formation, book value, actual status, and other relevant factors. Investment agreements, shareholder resolutions, articles of association, and relevant accounting records were reviewed to confirm the authenticity and completeness of the long-term investments.

For wholly-owned subsidiaries and those subsidiaries with over 50% ownership, a comprehensive asset appraisal of the investee entities was performed as of the Appraisal Reference Date. The appraised value was then determined by multiplying the appraised net asset value of the investee entity by the shareholding percentage of the subject investee entity as of the Appraisal Reference Date:

Appraised value of long-term equity investments = Appraised net asset value of the investee entity after a full appraisal × Shareholding percentage

Where differences existed between the paid-in capital and the subscribed capital, the calculation was as follows:

Appraised value of long-term equity investments = (Total appraised shareholders' equity of the investee entity + Unpaid subscribed capital) × The shareholder's subscribed capital ratio - The shareholder's unpaid subscribed capital

In determining the appraised value of the long-term equity investments, the appraisers did not consider any premium or discount arising from factors such as control premiums or minority discounts, nor did they consider the impact of equity marketability on the appraisal results.

No.	Name of Investee Entity	Shareholding Percentage	Appraisal Approach	Method for determining the conclusion value
1	Guoneng Guoyuan Power Fuel Co., Ltd.	100.00%	Asset-based Approach	Asset-based Approach
2	Guoneng Coking Coal (Tianjin) Co., Ltd.	100.00%	Asset-based Approach	Asset-based Approach
3	Guoneng Sales (Hainan) Supply Chain Co., Ltd.	100.00%	Asset-based Approach, Income Approach	Asset-based Approach

Upon completion of the appraisal, the results for the long-term equity investment entities are as follows:

No.	Name of Investee Entity	Book Value (ten thousand)	Appraised Value (ten thousand)	Appreciation Rate (%)
1	Guoneng Guoyuan Power Fuel Co., Ltd.	18,899.80	21,797.08	15.33
2	Guoneng Coking Coal (Tianjin) Co., Ltd.	15,000.00	17,177.46	14.52
3	Guoneng Sales (Hainan) Supply Chain Co., Ltd.	5,000.00	5,229.48	4.59
	Total	38,899.80	44,204.01	13.64

Based on the calculations, as of the Appraisal Reference Date the book value of the long-term equity investments within the appraisal scope was RMB38,899.80 ten thousand, with no provision for impairment made. The appraised value was RMB44,204.01 ten thousand, resulting in an assessed appreciation of RMB5,304.21 ten thousand and an appreciation rate of 13.64%. The primary reasons for the appreciation are as follows:

1. The assessed appreciation of Guoneng Guoyuan Power Fuel Co., Ltd. is RMB2,897.28 ten thousand. This is mainly due to the appreciation accumulated from the historical operations of Zhongneng United Power Fuel Co., Ltd. and Ningbo Fuxing Power Fuel Co., Ltd., which were invested in 2001 as other equity investments.

2. The assessed appreciation of Guoneng Coking Coal (Tianjin) Co., Ltd. is RMB2,177.46 ten thousand. The appreciation compared to the book value of the parent company's equity investment was due to the enterprise's accumulated operating results over its history.

3. The assessed appreciation of Guoneng Sales (Hainan) Supply Chain Co., Ltd. is RMB229.48 ten thousand. The appreciation compared to the book value of the parent company's equity investment was due to the enterprise's accumulated operating results over its history.

(II) Fixed Assets - Buildings and Structures

Based on the purpose of this appraisal and considering the structural characteristics and usage nature of the building and structure assets included in the scope, the appropriate appraisal approaches for each category of buildings and structures were determined as follows:

1. For commercial properties purchased by the enterprise or real estate with the potential for individual transfer, the market approach was used for appraisal.

The market approach involves comparing the subject property with similar real estate that has been transacted recently around the Appraisal Reference Date. Appropriate adjustments are made to the known prices of these comparable properties to estimate the objective and reasonable price or appraisal of the subject property. The calculation formula is as follows:

P=P case*A*B*C*D*E

Where: P: Appraised value of the subject property; P case: Transaction price of the comparable instance;

A: Transaction circumstance adjustment factor; B: Transaction date adjustment factor;

C: Regional factor adjustment factor; D: Individual factor adjustment factor;

E: Equity status factor adjustment coefficient

2. For the Datong-Qinhuangdao Railway Line: On December 1, 2025, Shenhua Group conducted a technical appraisal of this asset and determined it no longer holds any use or utilization value. In this appraisal, the value of this asset is recorded at its book value.

3. For Room 1803, Building 4, Capital Normal University (Beijing): This property is a jointly constructed residential unit purchased by Beijing Shenhua Changyun High-Tech Coal Blending Co., Ltd. (hereinafter referred to as "Changyun Company") from Capital Normal University (hereinafter

referred to as "CNU") in February 2000. The purchase application was submitted under an individual's name, but the actual payment of RMB 349,535 (floor area: 65.95 sq m, price: RMB 5,300/sq m) was made by Changyun Company. This property has always been classified as university-owned housing, lacks a property ownership certificate, and its accounting records were transferred to Shenhua Coal Transport & Marketing Company during the asset spin-off of Changyun Company in October 2005. In February 2025, Changyun Company confirmed with the State-owned Assets Management Office of CNU that the property rights for this asset cannot be transferred. In this appraisal, the value of this asset is recorded at its book value.

4. For the Beijing parking spaces, verification confirmed the absence of relevant ownership certificates. Due to the significant time elapsed, the finance and management departments jointly reviewed historical records, but the information obtained was insufficient to support valuation. Furthermore, management restructuring and personnel changes resulted in a lack of individuals familiar with the specifics. Consequently, these assets are appraised at their book value.

Based on the calculations, as of the Appraisal Reference Date, the book value of the building and structure assets within the appraisal scope was RMB2,328.12 ten thousand, with an appraised value of RMB11,697.63 ten thousand. This represents an assessed appreciation of RMB9,369.51 ten thousand and an appreciation rate of 402.45%. The primary reason for this increase is that the commercial properties acquired externally or through debt settlement were primarily purchased between 1994 and 2024. By the Appraisal Reference Date, land and property prices in the respective regions had risen significantly due to local economic development, leading to a higher appraised value compared to the book value.

(3) Other Assets and Liabilities

The asset appraisal professionals verified the book values against the detailed item lists and relevant financial information provided by the subject entity. The appraised values were determined based on the verified book values, or the actual liabilities/equity interest of the subject entity.

Specifically, as of the Appraisal Reference Date, the appraised value of current assets was RMB342,243.37 ten thousand, compared to a book value of RMB342,342.97 ten thousand, resulting in an appreciation rate of -0.03%. The appraised value and book value of other non-current assets were both RMB158.84 ten thousand. The appraised value and book value of current liabilities were both RMB312,202.72 ten thousand.

Based on the calculations, as of the Appraisal Reference Date:

(A) The appraised value of the total shareholders' equity of Coal Transport & Marketing = Current Assets + Non-Current Assets (including Long-term Equity Investments + Fixed Assets - Buildings and Structures + Other Non-Current Assets = RMB342,243.37 ten thousand + RMB44,204.02 ten thousand + RMB11,697.63 ten thousand + RMB158.84 ten thousand) - Current Liabilities (RMB312,202.72 ten thousand) - Non-Current Liabilities (None) = RMB86,102.61 ten thousand.

(B) The book value of the total shareholders' equity of Coal Transport & Marketing = Current Assets + Non-Current Assets (including Long-term Equity Investments + Fixed Assets - Buildings and Structures + Other Non-Current Assets = RMB342,342.97 ten thousand + RMB38,899.80 ten thousand + RMB2,328.12 ten thousand + RMB158.84 ten thousand) - Current Liabilities (RMB312,202.72 ten thousand) - Non-Current Liabilities (None) = RMB71,527.01 ten thousand.

IV. INCOME APPROACH

(I) Key Parameters and Assumptions

The key parameters and assumptions adopted by China United Assets in the Income Approach are as follows:

1. It is assumed that no major changes occur in current national laws, regulations, policies, the macroeconomic situation, or the political, economic, and social environments of the regions where the parties involved in the transaction are located;

2. It is assumed that the enterprise will continue as a going concern;

3. It is assumed that the company's management is responsible and competent in fulfilling their duties;

4. It is assumed that no significant changes will occur in relevant interest rates, exchange rates, tax bases and rates, or policy-related levies;

5. It is assumed that the company's business scope and operational methods will remain consistent with the current direction, based on the existing management style and competency level;

6. It is assumed that during the future forecast period, the subject entity's core business, product mix, composition of revenue and costs, sales strategies, and cost control measures will remain largely unchanged from their post-commissioning and capacity-reaching state;

7. It is assumed that during the future forecast period, period expenses for the subject entity will not undergo significant changes from the current basis and will continue to follow the trends observed in recent years, fluctuating in line with changes in the scale of operations;

8. The Weighted Average Cost of Capital (WACC) model was used to determine a discount rate of 9.65%;

9. This appraisal did not consider the impact of a marketability discount on the equity value of the enterprise.

(II) Appraisal Model

1. Basic Model

The basic model used in this appraisal is:

$$E = B - D \quad (1)$$

Where:

E: Total shareholder equity (net asset) value of the subject entity; the final calculated result is RMB72,955.50 ten thousand;

B: Enterprise value of the subject entity, calculated as RMB72,955.50 ten thousand;

D: Value of the interest-bearing debt of the subject entity, none;

$$E = P + I + C \quad (2)$$

Where:

P: Value of the operating assets of the subject entity;

I: Value of the long-term investments held by the subject entity as of the Reference Date;

C: Value of surplus or non-operating assets (liabilities) existing as of the Reference Date of the subject entity;

$$P = \sum_{i=1}^{n} \frac{R_i}{(1+r)^i} + \frac{R_{n+1}}{r(1+r)^n} \quad (3)$$

Where:

R_i: The expected return (Free Cash Flow) of the subject entity for the i-th future year;

r: The discount rate, which is 9.65%;

n: The future operational period of the subject entity;

$$C = C_1 + C_2 \quad (4)$$

C_1: The value of current surplus or non-operating assets (liabilities) as of the Reference Date;

C_2: The value of non-current surplus or non-operating assets (liabilities) as of the Reference Date.

2. Income Indicator

For this appraisal, free cash flow to the firm is used as the income indicator for the operating assets of the subject entity. It is fundamentally defined as:

R = Net Profit + Depreciation & Amortization + After-tax Interest Expense - Additional Capital (5)

Based on the operating history of the subject entity and future market development, the free cash flow for its future operational period is estimated. The present value of the free cash flows throughout this future operational period is calculated and summed to determine the value of the enterprise's operating assets.

3. Discount Rate

This appraisal employs the Weighted Average Cost of Capital (WACC) model to determine the discount rate r

$$r = r_d \times w_d + r_e \times w_e \quad (6)$$

Where:

W_d: The debt ratio, based on comparable companies, is 12.74%

$$w_d = \frac{D}{(E+D)} \quad (7)$$

W_e: The equity ratio, based on comparable companies, is 87.26%;

$$w_e = \frac{E}{(E+D)} \quad (8)$$

r_d: The after-tax interest rate on interest-bearing debt is 2.63% for this appraisal;

r_e: The cost of equity capital, determined using the Capital Asset Pricing Model (CAPM), is calculated comprehensively as 10.68%;

$$r_e = r_f + \beta_e \times (r_m - r_f) + \varepsilon \quad (9)$$

Where:

r_f: The risk-free rate, using the 10-year government bond yield, is 1.70%;

r_m: The expected market return rate is 9.37%;

ε: The specific company risk adjustment coefficient for the subject entity is 1.50%;

β_e: The expected market risk coefficient for the equity capital of the subject entity is 0.9752;

$$\beta_e = \beta_u \times (1 + (1-t) \times \frac{D}{E}) \quad (10)$$

β_u: The expected unlevered market risk coefficient of comparable companies;

$$\beta_u = \frac{\beta_t}{1+(1-t)\frac{D_i}{E_i}} \quad (11)$$

β_t: The expected average market risk coefficient for the stocks (assets) of the comparable companies;

$$\beta_t = 34\%K + 66\%\beta_X \quad (12)$$

Where:

K: The average risk value for the stock market over a certain period, typically assumed to be K=1;

β_x: The historical average market risk coefficient of the comparable companies' stocks (assets);

D_i, E_i: Represent the interest-bearing debt and equity capital of the comparable companies, respectively.

A.12 Main Evaluation Materials of Port Company

I. SELECTION OF THE APPRAISAL APPROACHES

According to the "Appraisal Report," China United Assets Appraisal Group Co., Ltd (hereinafter "China United Assets") has considered the applicability of three asset appraisal approaches: the asset-based approach, the income approach, and the market approach.

China United Assets determined that, around the Appraisal Reference Date, the core business of China Energy Port was cleaning the coal from the bottom holds of coal transport vessels. Since recent transaction cases involving enterprises of comparable business and scale were unavailable, and there were few comparable listed companies of similar scale and business structure in the market. Therefore, the market approach was not selected for the appraisal. Considering that the asset-based approach reflects the enterprise's value from the perspective of its construction and acquisition, provides a basis for the enterprise's operation, management, and performance appraisal after the completion of the economic act; and considering that China Energy Port possesses the foundation and conditions for continuing operations, with predictable and quantifiable future earnings and risks, China United Assets determined that CHN Energy Shipping meets the conditions for applying both the asset-based approach and the income approach. Therefore, both the asset-based approach and the income approach were used for the appraisal.

Using the asset-based approach, China United Assets calculated the total shareholders' equity of China Energy Port to be RMB19,209.16 ten thousand. Employing the income approach, the calculated total shareholders' equity was RMB47,359.85 ten thousand.

Considering that (i) China Energy Port's primary business involves coal unloading, mechanical sampling, and rapid coal quality inspection services at Huanghua Port and Tianjin Port, with stable operations. Overall, Guoneng Port has established a "dual-port" operational structure with Huanghua Port as the core and Tianjin Port as a supplement. The high-margin mechanical sampling business and the large-scale coal unloading operations collectively support the company's strong performance, providing a relatively stable revenue base for the future. Additionally, future earnings and risks are measurable. Beyond the value generated by individual assets, the company possesses intangible assets—such as management expertise, market channels, and customer relationships—formed by comprehensive factors that cannot be captured under the asset-based approach. Therefore, the income approach more effectively reflects the company's overall value. Consequently, China United Assets ultimately selected the result of the income approach as the final appraisal conclusion.

II. MAJOR APPRAISAL ASSUMPTIONS

(1) General Assumptions

1. It is assumed that all assets to be appraised are already in the process of a transaction, and the valuers simulate the market to appraise said assets based on the transaction conditions;

2. It is assumed that the target company can freely trade in an open market, and for assets traded or intended to be traded on the market, both transacting parties have equal status and sufficient access to market information and time, enabling them to make rational judgments regarding the asset's function, purpose, and transaction price;

3. It is assumed that the target company, as an operating entity, will continue its operations in accordance with its business objectives under the prevailing external environment. It is assumed that the company's management is responsible and competent in fulfilling their duties; the company operates in compliance with laws and regulations and is capable of generating proper profits to maintain its going concern status. It is assumed that all categories of the company's operating assets can continue to be utilized in their

current purpose, manner, scale, frequency, and environment, or can be used with appropriate modifications;

4. It is assumed that the external economic environment as of the Appraisal Reference Date remains unchanged, with no major changes occurring in current national laws, regulations, policies, the macroeconomic situation, or the political, economic, and social environments of the regions where the parties involved in the transaction are located;

5. It is assumed that no significant changes will occur in the socio-economic environment in which the target company operates, nor in relevant interest rates, exchange rates, tax bases and rates, or policy-related levies;

6. It is assumed that the target company's future management team will fulfill their duties diligently and will continue to maintain the existing management and operational model;

7. It is assumed that the appraisal is based solely on the operational capacity existing as of the Reference Date. Potential expansions of operational capacity resulting from future changes in management, business strategies, additional investments, etc., are not considered, nor are subsequent potential changes in production and operations;

8. It is assumed that all assets subject to this appraisal are valued based on their actual quantities existing as of the Appraisal Reference Date, and the current market prices of the relevant assets are determined according to the effective domestic prices as of the Appraisal Reference Date;

9. It is assumed that the foundational and financial information provided by the target company is true, accurate, and complete. The scope of the appraisal is strictly limited to the appraisal declaration forms submitted by the target company, and no potential contingent assets or contingent liabilities not included in the list provided by the target company have been considered;

10. It is assumed that during the future forecast period, the types and proportions of period expenses for the subject entity will not undergo significant changes from the current basis and will continue to follow the trends observed in recent years, fluctuating in line with changes in the scale of operations;

11. Given that the company's monetary funds or bank deposits, are subject to frequent or significant fluctuations during operations, the assessment of financial expenses in this report does not include interest income generated from such deposits, nor does it consider uncertain gains or losses such as those from foreign exchange fluctuations;

12. It is assumed that no other force majeure factors or unforeseeable events will have a material adverse impact on the company;

13. It is assumed that the cash inflows and outflows of the target company after the Appraisal Reference Date occur evenly over time.

(II) Special Assumptions

None.

III. ASSET-BASED APPROACH

(I) Long-Term Equity Investments

For long-term equity investments, verification procedures were first conducted to examine the cause of their formation, book value, actual status, and other relevant factors. Investment agreements, shareholder resolutions, articles of association, and relevant accounting records were reviewed to confirm the authenticity and completeness of the long-term investments.

For subsidiaries with over 50% ownership, a comprehensive asset appraisal of the invested entities was performed as of the Appraisal Reference Date. The appraised value was then determined by multiplying the appraised net asset value of the invested entity by the ownership percentage of the invested entity as of the Appraisal Reference Date:

Appraised value of long-term equity investments = Appraised net asset value of the invested entity after a full appraisal × Ownership percentage

In determining the appraised value of the long-term equity investments, the valuers did not consider any premium or discount arising from factors such as control premiums or minority discounts, nor did they consider the impact of equity marketability on the appraisal results.

Based on the calculations, as of the Appraisal Reference Date the book value of the long-term equity investments within the appraisal scope was RMB 3,500.00 ten thousand, with no provision for impairment made. The appraised value was RMB 3,502.67 ten thousand, resulting in an assessed appreciation of RMB 2.67 ten thousand and an appreciation rate of 0.08%. The primary reason for this increase is that the net book value of the controlled subsidiary on the Reference Date increased compared to its initial investment cost, which directly led to the overall appraised value being higher than the book value.

(II) Fixed Assets - Equipment

Based on the purpose of this appraisal and adhering to the principle of continuous use, the valuation was conducted using market prices as the benchmark, considering the characteristics of the equipment submitted for appraisal and the information collected. For electronic equipment, the replacement cost method was used.

1. Replacement Cost Method

(1) Full Replacement Cost of Electronic Equipment

Based on local market information and recent price data from sources such as "ZOL.com.cn" and "PConline," the prices of electronic equipment as of the Appraisal Reference Date were determined. Since manufacturers or agents typically provide free delivery, installation, and debugging, the full replacement cost is established based on the purchase price excluding tax:

Full Replacement Cost (excluding tax) = Purchase Price - Deductible VAT

Deductible VAT Amount = (Purchase Price / 1.13) × 13%

For older electronic equipment for which relevant models are no longer available on the market but which remain functional, the full replacement cost is determined by referencing the second-hand equipment market prices, including tax.

(2) Remaining Useful Life Rate of Electronic Equipment

Remaining Useful Life Rate = [Remaining Usable Years / (Years Already Used + Remaining Usable Years)] × 100%

Note: For electronic equipment appraised directly based on second-hand market prices, the calculation of the Remaining Useful Life Rate is not required.

(3) Determination of Appraised Value

Appraised Value = Full Replacement Cost × Remaining Useful Life Rate

Based on the calculations, as of the Appraisal Reference Date, the book value of the equipment assets within the appraisal scope was RMB 1,249.81 ten thousand, and the appraised value was RMB 1,252.42 ten thousand. This represents an assessed appreciation of RMB 2.61 ten thousand and an appreciation rate of 0.21%. The primary reason is that the company's depreciation period is shorter than the economically applicable life used in the appraisal.

(III) Construction in Progress

The construction in progress includes unfinished engineering projects and projects such as the coal quality intelligent management and control system construction. As of the appraisal reference date, the book value of the construction in progress within the appraisal scope was RMB 970.73 ten thousand, with no provision for impairment made. The appraised value was RMB 983.41 ten thousand, resulting in an assessed appreciation of RMB 12.68 ten thousand and an appreciation rate of 1.31%. The primary reason for this increase is the inclusion of capital interest incurred during the construction period for the projects under construction.

(IV) Other Assets and Liabilities

The asset appraisal professionals verified the book values against the detailed item lists and relevant financial information provided by the subject entity. The appraised values were determined based on the verified book values, or the actual liabilities/equity interest of the subject entity.

Among these, as of the Appraisal Reference Date, the appraised value and book value of current assets were both RMB15,733.00 ten thousand; the book value of intangible assets was RMB315.65 ten thousand, with an appraised value of RMB339.63 ten thousand, resulting in an appreciation rate of 7.60%; the appraised value and book value of other non-current assets were both RMB2,149.64 ten thousand; the appraised value and book value of current liabilities were both RMB4,713.28 ten thousand; and the appraised value and book value of non-current liabilities were both RMB38.33 ten thousand.

Based on the calculations, as of the Appraisal Reference Date:

(A) The appraised value of the total shareholders' equity of China Energy Port = Current Assets + Non-Current Assets (including Long-term Equity Investments + Fixed Assets - Equipment + Construction in Progress + Intangible Assets + Other Non-Current Assets = RMB15,733.00 ten thousand + RMB3,502.67 ten thousand + RMB1,252.42 ten thousand + RMB983.41 ten thousand + RMB339.63 ten thousand + RMB2,149.64 ten thousand)- Current Liabilities (RMB4,713.28 ten thousand) - Non-Current Liabilities (RMB38.33 ten thousand) = RMB19,209.16 ten thousand.

(B) The book value of the total shareholders' equity of China Energy Port = Current Assets + Non-Current Assets (including Long-term Equity Investments + Fixed Assets - Equipment + Construction in Progress + Intangible Assets + Other Non-Current Assets = RMB15,733.00 ten thousand + RMB3,500.01 ten thousand + RMB1,249.81 ten thousand + RMB970.73 ten thousand + RMB315.65 ten thousand + RMB2,149.64 ten thousand)- Current Liabilities (RMB4,713.28 ten thousand) - Non-Current Liabilities (RMB38.33 ten thousand) = RMB19,167.23 ten thousand.

IV. INCOME APPROACH

(I) Appraisal Model

1. Basic Model

The basic model used in this appraisal is:

$$E = B - D \quad (1)$$

Where:

E: Total shareholder equity (net asset) value of the subject entity; the final calculated result is RMB47,359.85 ten thousand;

B: Enterprise value of the subject entity, calculated as RMB47,359.85 ten thousand;

D: The value of the interest-bearing debt of the subject entity is RMB0 ten thousand.

$$E = P + I + C \quad (2)$$

Where:

P: Value of the operating assets of the subject entity;

I: Value of the long-term investments held by the subject entity as of the Reference Date;

C: Value of surplus or non-operating assets (liabilities) existing as of the Reference Date of the subject entity;

$$P = \sum_{i=1}^{n} \frac{R_i}{(1+r)^i} + \frac{R_{n+1}}{r(1+r)^n} \quad (3)$$

Where:

R_i: The expected return (Free Cash Flow) of the subject entity for the i-th future year;

r: The discount rate, which is 10.21%;

n: The future operational period of the subject entity;

$$C = C1 + C2 \quad (4)$$

C1: The value of current surplus or non-operating assets (liabilities) as of the Reference Date;

C2: The value of non-current surplus or non-operating assets (liabilities) as of the Reference Date.

2. Income Indicator

For this appraisal, free cash flow to the firm is used as the income indicator for the operating assets of the subject entity. It is fundamentally defined as:

R = Net Profit + Depreciation & Amortization + After-tax Interest Expense - Additional Capital (5)

Based on the operating history of the subject entity and future market development, the free cash flow for its future operational period is estimated. The present value of the free cash flows throughout this future operational period is calculated and summed to determine the value of the enterprise's operating assets.

3. Discount Rate

This appraisal employs the Weighted Average Cost of Capital (WACC) model to determine the discount rate r

$$r = r_d \times w_d + r_e \times w_e \quad (6)$$

Where:

W_d: The debt ratio, based on comparable companies, is 26.99%

$$w_d = \frac{D}{(E+D)} \quad (7)$$

W_e: The equity ratio, based on comparable companies, is 73.01%;

$$w_e = \frac{E}{(E+D)} \quad (8)$$

r_d: The after-tax interest rate on interest-bearing debt is 2.63% for this appraisal;

r_e: The cost of equity capital, determined using the Capital Asset Pricing Model (CAPM), is calculated comprehensively as 13.01%;

$$r_e = r_f + \beta_e \times (r_m - r_f) + \varepsilon \quad (9)$$

Where:

r_f: The risk-free rate, using the 10-year government bond yield, is 1.70%;

r_m: The expected market return rate is 9.37%;

ε: The specific company risk adjustment coefficient for the subject entity is 5.00%;

β_e: The expected market risk coefficient for the equity capital of the subject entity is 0.8224;

$$\beta_e = \beta_u \times (1 + (1-t) \times \frac{D}{E}) \quad (10)$$

β_u: The expected unlevered market risk coefficient of comparable companies;

$$\beta_u = \frac{\beta_t}{1+(1-t)\frac{D_i}{E_i}} \quad (11)$$

β_t: The expected average market risk coefficient for the stocks (assets) of the comparable companies;

$$\beta_t = 34\%K + 66\%\beta_X \quad (12)$$

Where:

K: The average risk value for the stock market over a certain period, typically assumed to be K=1;

β_x: The historical average market risk coefficient of the comparable companies' stocks (assets);

D_i, E_i: Represent the interest-bearing debt and equity capital of the comparable companies, respectively.

(II) Key Parameters and Assumptions

The key parameters and assumptions adopted by China United Assets in the Income Approach are as follows:

1. It is assumed that no major changes occurring in current national laws, regulations, policies, the macroeconomic situation, or the political, economic, and social environments of the regions where the parties involved in the transaction are located;

2. It is assumed that the enterprise will continue as a going concern;

3. It is assumed that the company's management is responsible and competent in fulfilling their duties;

4. It is assumed that no significant changes will occur in relevant interest rates, exchange rates, tax bases and rates, or policy-related levies;

5. It is assumed that the company's business scope and operational methods will remain consistent with the current direction, based on the existing management style and competency level;

6. It is assumed that during the future forecast period, the subject entity's core business, product mix, composition of revenue and costs, sales strategies, and cost control measures will remain largely unchanged from their post-commissioning and capacity-reaching state;

7. It is assumed that during the future forecast period, period expenses for the subject entity will not undergo significant changes from the current basis and will continue to follow the trends observed in recent years, fluctuating in line with changes in the scale of operations;

8. This appraisal did not consider the impact of a marketability discount on the equity value of the enterprise.

2. Key Parameters:

(1) Determination of Income Period

This appraisal assumes the subject entity will operate perpetually beyond the Appraisal Reference Date, with the corresponding income period being indefinite.

(2) Determination of Future Income

1) Estimation of Main Business Revenue

Guoneng Port's main business comprises coal unloading services, mechanized sampling services, and rapid coal quality testing at Huanghua Port and Tianjin Port, which operate steadily.

Main Business Revenue = Σ(Price × Business Volume)

① Price: For the three business lines—coal unloading services, mechanized sampling services, and rapid coal quality testing services—the enterprise employs the net method to recognize revenue based on the income and costs from upstream and downstream business contracts. Therefore, this appraisal utilizes the net method to calculate future unit prices for each business line based on existing upstream and downstream contracts.

② Business Volume: Guoneng Port's main business comprises coal unloading services, mechanized sampling services, and rapid coal quality testing services at Huanghua Port and Tianjin Port, which operate smoothly. Forecasts for coal unloading services are based on historical throughput data, while mechanized sampling and rapid coal quality testing volumes are projected using The enterprise's 2025 budget and historical coal handling volumes at Huanghua Port and Tianjin Port.

2) Estimation of Main Operating Costs

The enterprise's main operating costs comprise entirely of employee remuneration, specifically labor costs for the Production Safety and Transportation Department. For this appraisal, such remuneration is uniformly projected under administrative expenses. The determination is based on historical employee remuneration structures and levels.

3) Forecast of Taxes and Surcharges

The taxes and surcharges payable by the subject entity comprise Urban Maintenance and Construction Tax, Education Surcharge, Local Education Surcharge, and Stamp Duty. The Urban Maintenance and

Construction Tax, Education Surcharge, and Local Education Surcharge are all calculated based on the amount of VAT paid, with applicable rates of 7%, 3%, and 2% respectively. Stamp Duty is forecasted based on the historical ratio of annual expenditure to revenue.

4) Forecast of Period Expenses

All historical period expenses incurred by the enterprise constituted administrative expenses.

The enterprise's administrative expenses primarily comprise employee remuneration, depreciation and amortisation, rental charges, intermediary fees, safety production expenses, and office expenses. Employee remuneration is projected based on future staffing plans and the enterprise's wage payment standards; depreciation and amortisation are projected according to the original value of the enterprise's fixed assets (intangible assets) and depreciation (amortisation) accrual standards; Safety production expenses are forecasted based on nationally prescribed accrual standards; expenses with significant correlation to enterprise revenue are forecasted using the historical ratio of annual expenses to revenue; other expenses are forecasted by reference to historical period levels.

5) Income Tax Forecast

The income tax rate for the subject entity is 25%.

(3) Discount Rate

The discount rate is determined using the Weighted Average Cost of Capital (WACC) model at 10.21%.

Asset Appraisal Report

Regarding China Shenhua Energy Company Limited's Proposed Acquisition of 100% Equity in CHN Energy Guoyuan Power Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. by Issuing Shares and Paying Cash

ZLPBZ [2025] No. 5356

China United Assets Appraisal Group Co., Ltd.
December 16, 2025

STATEMENT

I. This Asset Appraisal Report is prepared in accordance with the Basic Standards for Asset Appraisal issued by the Ministry of Finance of the People's Republic of China, and the Practice Standards and Professional Ethics Standards for Asset Appraisal issued by the China Appraisal Society.

II. The Clients or other users of the Asset Appraisal Report shall use the Report in accordance with applicable laws and regulations, and within the scope of use specified herein. Should the Client or other users of the Asset Appraisal Report fail to do so, the Asset Appraisal Institution and its professional asset appraisers shall not be liable for any consequences arising therefrom.

The Asset Appraisal Report is exclusively used by the Client, and users mandated by applicable laws and regulations. In addition, no other institution or individual is authorized to be a user of the Asset Appraisal Report.

The Asset Appraisal Institution and its asset appraisers advise users of this Asset Appraisal Report to accurately comprehend and use the appraisal conclusion. The appraisal conclusion should not be deemed as the realizable price of the appraisal object, nor should it be interpreted as a guarantee of the appraisal object's realizable price.

III. The truthfulness, legality, completeness, and validity of the information provided by the Clients and other relevant parties are prerequisites for the appraisal conclusion to be valid. The list of assets and liabilities included in the appraisal scope, as well as the prospective financial information, ownership certificates, and other data required for the appraisal, have been declared and confirmed by the Clients and the Appraised Entity through official seals or other means.

IV. The Asset Appraisal Institution and its asset appraisers have no existing or prospective interests in the Appraisal Object presented in the Asset Appraisal Report; and have no existing or prospective interests in the

related parties, and are not biased towards them.

V. The asset appraisers have conducted field surveys of the Appraisal Object and the assets involved in the Asset Appraisal Report; has given due attention to the legal ownership status of the Appraisal Object and its related assets, inspected the legal ownership documentation for the Appraisal Object and its related assets, truthfully disclosed any issues identified, and requested the Clients and other relevant parties to optimize the property rights to satisfy the requirements for issuing the Asset Appraisal Report.

VI. The analyses, judgments, and results presented in the Asset Appraisal Report issued by the Asset Appraisal Institution are subject to the assumptions and limiting conditions stipulated therein. Users of the Asset Appraisal Report should thoroughly consider the assumptions, limiting conditions, instructions on special matters, and their impacts on the appraisal conclusion as specified within the Report.

VII. The Asset Appraisal Institution and its asset appraisers comply with applicable laws, regulations, and asset appraisal standards, adhere to the principles of independence, objectivity, and impartiality, and are legally responsible for the Asset Appraisal Report issued.

Asset Appraisal Report

Regarding China Shenhua Energy Company Limited's Proposed Acquisition of 100% Equity in CHN Energy Guoyuan Power Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. by Issuing Shares and Paying Cash

ZLPBZ [2025] No. 5356*

ABSTRACT

China United Assets Appraisal Group Co., Ltd. was engaged by China Shenhua Energy Company Limited and China Energy Investment Corporation Co., Ltd. to assess the market value of the total Shareholders' Equity of CHN Energy Guoyuan Power Co., Ltd. as of the Appraisal Reference Date. This appraisal pertains to the economic activity involving China Shenhua Energy Company Limited's proposed acquisition of 100% equity in CHN Energy Guoyuan Power Co., Ltd. held by China Energy Investment Corporation Co., Ltd. by issuing shares and paying cash.

The Appraisal Object is the total Shareholders' Equity of CHN Energy Guoyuan Power Co., Ltd. The appraisal scope encompasses all assets and related liabilities of CHN Energy Guoyuan Power Co., Ltd. , including current assets, non-current assets, and their corresponding liabilities.

The Appraisal Reference Date is July 31, 2025.

The value type for this appraisal is market value.

This appraisal is performed based on the assumptions of continued use and an open market. Considering the specific circumstances of the Appraisal Object and various influencing factors, both the income approach and asset-

based approach were employed for the overall appraisal of CHN Energy Guoyuan Power Co., Ltd., followed by verification and comparison. Taking into account the applicability conditions of the appraisal methods and the achievement of the appraisal goals, the appraisal result derived from the asset-based approach was chosen as the final Appraisal Conclusion.

Based on the judgments on future development trends and business plans by the Clients and the management, and following appraisal procedures including inventory verification, field survey, market research and inquiry, and assessment and estimation, the Appraisal Conclusion for the total Shareholders' Equity of CHN Energy Guoyuan Power Co., Ltd. as of the Appraisal Reference Date of July 31, 2025, is described below:

Pro forma book value of total shareholders' equity on a parent-company basis for CHN Energy Guoyuan Power Co., Ltd. is RMB2,394,897.46 ten thousand, while the pro forma appraised value of total shareholders' equity is RMB4,458,199.29 ten thousand, resulting in an appraisal increment of RMB2,063,301.83 ten thousand and an appreciation rate of 86.15%.

When utilizing this Appraisal Conclusion, report users are specifically reminded to pay attention to the special matters and significant subsequent events stipulated within the report.

According to applicable laws and regulations on asset appraisal, the Asset Appraisal Report involving statutory appraisal business should be used by the Clients after fulfilling relevant asset appraisal supervision and administration procedures. The Appraisal Conclusion is valid for one year, specifically from July 31, 2025 to July 30, 2026.

The above contents are extracted from the main body of the Asset Appraisal Report. To obtain more details of this appraisal engagement and correctly comprehend the Appraisal Conclusion, please carefully read the main body of the Asset Appraisal Report.

Asset Appraisal Report

Regarding China Shenhua Energy Company Limited's Proposed Acquisition of 100% Equity in CHN Energy Guoyuan Power Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. by Issuing Shares and Paying Cash

ZLPBZ [2025] No. 5356

Esteemed China Energy Investment Corporation Co., Ltd. and China Shenhua Energy Company Limited,

Upon the acceptance of your commission, by adhering to applicable laws, regulations, and asset appraisal standards, and upholding the principles of independence, objectivity, and impartiality, China United Assets Appraisal Group Co., Ltd. utilized both the income approach and asset-based approach to appraise the market value of the total Shareholders' Equity of CHN Energy Guoyuan Power Co., Ltd. as of the Appraisal Reference Date of July 31, 2025 in accordance with the requisite appraisal procedures. This appraisal pertains to the economic activity involving China Shenhua Energy Company Limited's proposed acquisition of 100% equity in CHN Energy Guoyuan Power Co., Ltd. held by China Energy Investment Corporation Co., Ltd. by issuing shares and paying cash. The Asset Appraisal Report is hereby presented as follows:

I. Clients, Appraised Entity, and Other Users of the Asset Appraisal Report

The Clients for this asset appraisal are China Energy Investment

Corporation Co., Ltd. (hereinafter referred to as "CHN Energy") and China Shenhua Energy Company Limited (hereinafter referred to as "China Shenhua"); and the Appraised Entity is CHN Energy Guoyuan Power Co., Ltd (hereinafter referred to as "Guoyuan Power").

(I) Overview of Client 1

Enterprise name: China Energy Investment Corporation Co., Ltd. (CHN Energy)

Enterprise Nature: Limited liability company (state-owned sole proprietorship)

Enterprise type: Limited Liability Company (state-owned sole proprietorship)

Registered address: No. 22 West Binhe Road, Andingmen, Dongcheng District, Beijing

Legal representative: Zou Lei

Registered capital: RMB13209466.11498 ten thousand

Date of establishment: October 23, 1995

Term of operation: from October 23, 1995 to indefinite term

Unified social credit code: 91110000100018267J

Business scope: operate state-owned assets within the scope authorized by the State Council; engage in investment and management across industries including coal and other resource products, coal-to-oil, coal chemicals, electricity, heating, ports, transportation, finance, domestic and foreign trade and logistics, real estate, high-tech, and information consulting; Plan, organize, coordinate, and manage the production and operating activities of enterprises affiliated with the Group in the aforementioned industry sectors; sell chemical materials and chemical products (excluding dangerous chemicals), textiles, building materials, machinery, electronic equipment, and office equipment (market entities shall independently select business projects

and conduct operating activities in accordance with the law; for projects subject to approval in accordance with the law, operating activities shall be carried out according to the approved scope after obtaining approval from the relevant authorities; engagement in operating activities prohibited or restricted by national and municipal industrial policies is banned.)

(II) Overview of Client 2

Enterprise name: China Shenhua Energy Company Limited

Enterprise type: other Joint-Stock Limited Company (listed)

Registered address: No. 22 West Binhe Road, Andingmen, Dongcheng District, Beijing

Legal representative: Lv Zhiren

Registered capital: RMB1986851.9955 ten thousand

Date of establishment: November 8, 2004

Term of operation: from November 8, 2004 to indefinite term

Unified social credit code: 91110000710933024J

Business scope: coal mining (validity period is subject to relevant permits for each coal mine); wholesale operations of coal; project investment; coal washing and processing; development and operation of mineral products; internal transportation by proprietary railways; power generation; provision of supporting services for coal, railway, and power operations; vessel repair; energy and environmental technology development and utilization, technology transfer, technical consultation, technical services; import and export business; sales of chemical products, chemical materials, building materials, and mechanical equipment (excluding dangerous chemicals); property management (market entities shall independently select business projects and conduct operating activities in accordance with the law; for projects subject to approval in accordance with the law, operating activities shall be carried out according to the approved scope after obtaining approval

from the relevant authorities; Engagement in operating activities prohibited or restricted by national and municipal industrial policies is banned.)

(III) Overview of Appraised Entity

1. Basic Information about the Enterprise

Enterprise name: CHN Energy Guoyuan Power Co., Ltd.

Enterprise type: Limited Liability Company (Legal Person Solely Owned)

Registered address: No. B26 Financial Street, Xicheng District, Beijing

Legal representative: Chen Ai

Registered capital: RMB 4726135.91158 ten thousand

Date of establishment: April 29, 2008

Term of operation: from April 29, 2008 to indefinite term

Unified social credit code: 911100007109354170

Business scope: permitted items: power generation business; power transmission business; power supply (distribution) business; construction project execution; installation, maintenance, and testing of power transmission, supply, and receiving facilities (items subject to approval by law can only be carried out after approval by the relevant authorities, and specific business items are subject to the approval documents or permits of the relevant authorities.) (The Company shall not engage in business activities that are prohibited or

restricted by the national and municipal industrial policies.)

2. Historical Evolution and Shareholder Structure

(1) Establishment

On April 21, 2008, the State Administration for Industry and Commerce issued the "Pre-approval Notice of Enterprise Name" ((Guo) Deng Ji Nei Ming Yu He Zi [2018] No. 570), approving the enterprise name as "State Grid Energy Development Co., Ltd."

On April 22, 2008, State Grid Corporation of China issued the "Reply on the Establishment Plan and Articles of Association for State Grid Energy Development Co., Ltd." (State Grid Ren Zi [2008] No. 374), approving the establishment plan and articles of association for State Grid Energy Development Co., Ltd. The registered capital was set at RMB 120 million, to be contributed in monetary form by State Grid Corporation of China.

On April 24, 2008, Zhongrui Yuehua Certified Public Accountants Co., Ltd. issued the "Capital Verification Report" (Zhongrui Yuehua Yan Zi [2008] No. 2051), stating that, upon review, as of April 24, 2008, State Grid Energy Development Co., Ltd. (in preparation) had received RMB 120 million in registered capital paid in monetary form by the shareholder.

On April 29, 2008, State Grid Energy Development Co., Ltd. completed its establishment registration with the State Administration for Industry and Commerce. At the time of its establishment, State Grid Energy Development Co., Ltd. was a wholly-owned subsidiary of State Grid Corporation of China, with both its registered capital and paid-in capital being RMB 120 million.

(2) First Capital Increase

On January 19, 2009, Zhongrui Yuehua Certified Public Accountants Co., Ltd. issued the "Capital Verification Report" (Zhongrui Yuehua Yan Zi [2009] No. 005), stating that, in accordance with the State Grid Corporation's " Reply on the Increase in Registered Capital of State Grid Energy Development Co., Ltd." (State Grid Industry [2008] No. 1364), State Grid Energy Development

Co., Ltd. increased its registered capital by RMB 280 million, converted from capital reserve to paid-in capital. As verified, as of January 12, 2009, State Grid Energy Development Co., Ltd. had converted RMB 280 million from capital reserve to paid-in capital.

On February 1, 2009, State Grid Energy Development Co., Ltd. issued the Articles of Association Amendment, revising the registered capital to RMB 400 million, with the contribution methods being RMB 120 million in monetary contributions and RMB 280 million converted from capital reserve to registered capital.

On February 1, 2009, the State Administration for Industry and Commerce reissued a Business License with the registration number of 100000000041601 to State Grid Energy Development Co., Ltd. The registered capital and paid-in capital of State Grid Energy Development Co., Ltd. were changed to RMB 400 million, and it remained a wholly-owned subsidiary of State Grid Corporation of China.

(3) Second Capital Increase

On March 16, 2010, State Grid Corporation of China issued the " Reply on State Grid Energy Development Co., Ltd. Converting Capital Reserve into Paid-in Capital" (State Grid Finance [2010] No. 332), approving the conversion of RMB 1.4 billion from capital reserve into paid-in capital by State Grid Energy Development Co., Ltd., thereby increasing the paid-in capital to RMB 2 billion and correspondingly amending the registered capital.

On March 30, 2010, State Grid Energy Development Co., Ltd. issued the Articles of Association Amendment, revising the registered capital to RMB 2 billion. The contribution methods consisted of a total monetary contribution of RMB 320 million and a total conversion of capital reserve to registered capital of RMB 1.68 billion.

On March 31, 2010, Zhongcheng Xinanrui (Beijing) Certified Public Accountants Co., Ltd. issued the "Capital Verification Report" (Zhongcheng

Xinanrui Yan Zi [2010] No. 1025), stating that, upon verification, as of March 30, 2010, State Grid Energy Development Co., Ltd. had received an additional registered capital of RMB 1.6 billion paid by State Grid Corporation. This comprised RMB 1.4 billion converted from capital reserve to paid-in capital and a monetary contribution of RMB 200 million.

On April 8, 2010, the State Administration for Industry and Commerce reissued an "Enterprise Legal Person Business License" with the registration number of 100000000041601 to State Grid Energy Development Co., Ltd. The registered capital and paid-in capital of State Grid Energy Development Co., Ltd. were changed to RMB 2 billion, and it remained a wholly-owned subsidiary of State Grid Corporation.

(4) Third Capital Increase

On December 17, 2010, State Grid Corporation issued the "Notice on Capital Injection to State Grid Energy Development Co., Ltd." (State Grid Finance [2010] No. 1689), deciding to inject RMB 500 million into State Grid Energy Development Co., Ltd.

On March 25, 2011, Zhongrui Yuehua Certified Public Accountants Co., Ltd. issued the "Capital Verification Report" (Zhongrui Yuehua Yan Zi [2011] No. 057), stating that, upon verification, as of December 16, 2010, State Grid Energy Development Co., Ltd. had received an additional registered capital of RMB 500 million paid by State Grid Corporation of China, all of which was in the form of monetary contribution.

On May 20, 2011, State Grid Energy Development Co., Ltd. issued the Articles of Association Amendment, revising the registered capital to RMB 2.5 billion. The contribution methods consisted of a total monetary contribution of RMB 820 million and a total conversion of capital reserve to registered capital of RMB 1.68 billion.

On May 26, 2011, the State Administration for Industry and Commerce reissued an "Enterprise Legal Person Business License" with the registration

number of 100000000041601 to State Grid Energy Development Co., Ltd. The registered capital and paid-in capital of State Grid Energy Development Co., Ltd. were changed to RMB 2.5 billion, and it remained a wholly-owned subsidiary of State Grid Corporation of China.

(5) Fourth Capital Increase

On March 25, 2011, State Grid Corporation of China issued the "Notice on Capital Injection into State Grid Energy Development Co., Ltd." (State Grid Finance [2011] No. 378), deciding to inject RMB 1 billion into State Grid Energy Development Co., Ltd.

On March 25, 2011, Zhongrui Yuehua Certified Public Accountants Co., Ltd. issued the "Capital Verification Report" (Zhongrui Yuehua Yan Zi [2011] No. 058), stating that, upon review, as of March 25, 2011, State Grid Energy Development Co., Ltd. had received an additional registered capital of RMB 1 billion paid by State Grid Corporation of China, all of which was in the form of monetary contribution.

In May 2011, State Grid Energy Development Co., Ltd. issued the Articles of Association Amendment, revising the registered capital to RMB 3.5 billion. The forms of contribution were specified as a total of RMB 1.82 billion in monetary contributions and a total of RMB 1.68 billion in capital reserve converted into registered capital.

On June 2, 2011, the State Administration for Industry and Commerce reissued an "Enterprise Legal Person Business License" with the registration number of 100000000041601 to State Grid Energy Development Co., Ltd. The registered capital and paid-in capital of State Grid Energy Development Co., Ltd. were changed to RMB 3.5 billion, and it remained a wholly-owned subsidiary of State Grid Corporation of China.

(6) Fifth Capital Increase

On December 16, 2011, State Grid Corporation of China issued the "Notice on Capital Injection into State Grid Energy Development Co., Ltd."

(State Grid Finance [2011] No. 1888), deciding to inject RMB 3.5 billion into State Grid Energy Development Co., Ltd.

On March 10, 2012, Zhongrui Yuehua Certified Public Accountants Co., Ltd. issued the "Capital Verification Report" (Zhongrui Yuehua Yan Zi [2012] No. 0044), stating that, upon review, as of December 29, 2011, State Grid Energy Development Co., Ltd. had received an additional registered capital of RMB 3.5 billion paid by State Grid Corporation of China, all of which was in the form of monetary contribution.

On March 10, 2012, State Grid Energy Development Co., Ltd. issued the Articles of Amendment, revising the registered capital to RMB 7 billion, with the form of contribution being a total of RMB 5.32 billion in monetary contributions and a total of RMB 1.68 billion in capital reserve converted into registered capital.

On March 20, 2012, the State Administration for Industry and Commerce reissued an "Enterprise Legal Person Business License" with registration number 100000000041601 to State Grid Energy Development Co., Ltd. The registered capital and paid-in capital of State Grid Energy Development Co., Ltd. were changed to RMB 7 billion, and it remained a wholly-owned subsidiary of State Grid Corporation of China.

(7) First Equity Transfer

On August 15, 2012, State Grid Corporation of China and the former Shenhua Group signed the "Equity Transfer Agreement for State Grid Energy Development Co., Ltd.", stipulating that the State Grid Corporation of China would transfer its 100% equity stake in State Grid Energy Development Co., Ltd. to the former Shenhua Group for RMB 51.6 billion, with reference to the asset appraisal results.

On August 29, 2012, the former Shenhua Group issued the "Reply on the Change of Name of State Grid Energy Development Co., Ltd."(Shenhua Fa [2012] No. 513), agreeing to change the company name to "Shenhua Guoneng

Group Co., Ltd.".

On September 5, 2012, the State-owned Assets Supervision and Administration Commission of the State Council (SASAC) issued the "Reply on Issues Related to the Agreement-based Transfer of State-owned Equity in State Grid Energy Development Co., Ltd." (Guo Zi Chan Quan [2012] No. 789), approving the transfer of 100% equity in State Grid Energy Development Co., Ltd. by State Grid Corporation of China to the former Shenhua Group. The transfer price was to be determined based on the net asset appraised value stated in the appraisal report filed with SASAC. According to the filed appraisal report (filing number: 20120052), the net asset appraised value of State Grid Energy Development Co., Ltd. involved in this transfer was RMB 51.543 billion, and the transfer price was to be reasonably determined accordingly.

On October 17, 2012, the former Shenhua Group issued the "Reply on Revising the Articles of Association of State Grid Energy Development Co., Ltd."(Shenhua Qi [2012] No. 608), approving the "Articles of Association of Shenhua Guoneng Group Co., Ltd."

On October 30, 2012, the State Administration for Industry and Commerce reissued an "Enterprise Legal Person Business License" with registration number 100000000041601 to the former Shenhua Guoneng Group. The registered capital and paid-in capital of the former Shenhua Guoneng Group were changed to RMB 7 billion, and it became a wholly-owned subsidiary of the former Shenhua Group.

(8) Sixth Capital Increase

On April 3, 2013, the former Shenhua Group issued the "Reply on Converting Entrusted Loans into Capital Funds" (Shenhua Cai [2013] No. 207), approving the conversion of RMB 10 billion entrusted loan issued by the former Shenhua Group to the former Shenhua Guoneng Group into capital funds.

On July 15, 2013, BDO China Shu Lun Pan Certified Public Accountants LLP issued the "Capital Verification Report"(Xin Hui Shi Bao Zi [2013] No. 223718), stating that, upon review, as of May 30, 2013, the former Shenhua Guoneng Group had received an additional registered capital of RMB 10 billion contributed by the former Shenhua Group, in the form of the creditor's rights held by the former Shenhua Group against the former Shenhua Guoneng Group.

On August 7, 2013, the former Shenhua Group issued the "Reply on Revising the Articles of Association of Shenhua Guoneng Group Co., Ltd." (Shenhua Qi [2013] No. 467), approving the change in the registered capital of the former Shenhua Guoneng Group from RMB 7 billion to RMB 17 billion, along with corresponding revisions to the company's articles of association.

On December 3, 2013, the State Administration for Industry and Commerce reissued an "Enterprise Legal Person Business License" with the registration number of 100000000041601 to the former Shenhua Guoneng Group. The registered capital and paid-in capital of former Shenhua Guoneng Group were changed to RMB 17 billion, and it remained a wholly-owned subsidiary of the former Shenhua Group.

(9) Change of Company Name

On August 26, 2020, the CHN Energy issued the "Reply on Matters Related to the Change of Company Name of Shenhua Guoneng Group Co., Ltd." (National Energy Organization Letter [2020] No. 415), approving the change of the former Shenhua Guoneng Group's name to " CHN Energy Guoyuan Power Co., Ltd." and agreeing to revise the relevant content in the company's articles of association related to the company name.

On the same day, the CHN Energy signed the revised articles of association of the former Shenhua Guoneng Group.

On September 10, 2020, Beijing Municipal Administration for Market Supervision reissued a "Business License" with the unified social credit code

of 911100007109354170 to the former Shenhua Guoneng Group, and the company name was changed to " CHN Energy Guoyuan Power Co., Ltd."

(10) Seventh Capital Increase

On November 23, 2022, the CHN Energy issued the "Shareholder Resolution," approving the increase of Guoyuan Power's registered capital and paid-in capital from RMB 17 billion to RMB 47.2613591158 billion, and agreeing to amend the relevant clauses of company's articles of association in connection with aforementioned changes.

According to the bank receipts provided by Guoyuan Power, the aforementioned additional registered capital has been fully paid in.

On March 5, 2024, Beijing Municipal Administration for Market Supervision reissued a "Business License" with the unified social credit code of 911100007109354170 to Guoyuan Power. The registered capital of Guoyuan Power was changed to RMB4,726,135.91158 ten thousand, and it remained a wholly-owned subsidiary of the CHN Energy.

As of the Appraisal Reference Date, the names of Shareholders, contribution amount, and contribution ratio of CHN Energy Guoyuan Power Co., Ltd. are as follows:

Table 1-1 Names of Shareholders and Percentages of Capital Contribution

Names of Shareholders	Subscribed Capital (RMB in ten thousand)	Subscribed shareholding Percentage (%)	Paid-in Capital (RMB in ten thousand)	Paid-in shareholding Percentage (%)
China Energy Investment Group Co., Ltd.	4726135.91158	100.00	4726135.91158	100.00
Total	4726135.91158	100.00	4726135.91158	100.00

3. Assets, Financial and Operating Conditions

As of the Appraisal Reference Date, July 31, 2025, the audited consolidated pro forma statements of CHN Energy Guoyuan Power Co., Ltd. showed total assets of RMB6,066,836.04 ten thousand, liabilities of RMB2,801,736.96 ten thousand, owner's equity of RMB3,265,099.08ten

thousand, and owner's equity attributable to the parent company of RMB 2,756,828.35 ten thousand. Among these, current assets amounted to RMB1,303,246.50 ten thousand, non-current assets to RMB4,763,589.53 ten thousand, current liabilities to RMB1,571,464.88 ten thousand, and non-current liabilities to RMB1,230,272.08 ten thousand. The audited parent-company pro forma statements showed total assets of RMB 2,780,969.62 ten thousand, liabilities of RMB 386,072.16 ten thousand, and owner's equity of RMB2,394,897.46 ten thousand. Among these, current assets amounted to RMB497,052.65 ten thousand, non-current assets to RMB2,283,916.96 ten thousand, current liabilities to RMB385,683.34 ten thousand, and non-current liabilities to RMB388.81 ten thousand.

Assets, financial and operating conditions in recent years are as follows:

Audit Firm	Ernst & Young Hua Ming LLP	Ernst & Young Hua Ming LLP	Ernst & Young Hua Ming LLP

(V) Relationship between the Client and the Appraised Entity

The primary client for this asset appraisal is China Energy Investment Group Co., Ltd. The secondary client, China Shenhua Energy Co., Ltd., and the Appraised Entity, CHN Energy Guoyuan Power Co., Ltd, are all related

parties controlled by China Energy Investment Group Co., Ltd. China Shenhua Energy Co., Ltd. plans to issue shares and pay cash to acquire the 100% equity stake in CHN Energy Guoyuan Power Co., Ltd held by China Energy Investment Group Co., Ltd.

(VI) Other Users of Asset Appraisal Report

The asset appraisal engagement contract does not stipulate any other report users.

Unless otherwise provided by national laws and regulations, any institution or individual not confirmed by the appraisal firm and the client shall not become a user of the appraisal report by virtue of obtaining it.

II. Appraisal Purpose

'According to the 18th Minutes of the Chairman's Special Meeting of China Energy Investment Corporation Limited (August 8, 2025), China Shenhua Energy Company Limited plans to issue shares and pay cash to acquire coal, pitheads, coal power and other related assets held by China Energy Investment Corporation Limited. For this purpose, it is necessary to assess the market value of the entire equity interests of China Energy Group Guoyuan Power Co., Ltd. held by China Energy Investment Corporation Limited as of the Appraisal Reference Date.

Purpose of this asset appraisal is to reflect the market value of total shareholders' equity of CHN Energy Guoyuan Power Co., Ltd. as of the Appraisal Reference Date, providing a value reference for the aforementioned economic activity.

III. Appraisal Object and Scope

Appraisal object is the total shareholders' equity value of CHN Energy Guoyuan Power Co., Ltd. Appraisal scope encompasses all assets and related

liabilities of CHN Energy Guoyuan Power Co., Ltd.

As of the Appraisal Reference Date, the audited consolidated pro forma statements showed total assets of RMB 6,066,836.04ten thousand, liabilities of RMB 2,801,736.96 ten thousand, owners' equity of RMB3,265,099.08 ten thousand, and owners' equity attributable to the parent company of RMB 2,756,828.35 ten thousand. This included current assets of RMB1,303,246.50 ten thousand, non-current assets of RMB4,763,589.53 ten thousand, current liabilities of RMB 1,571,464.88 ten thousand, and non-current liabilities of RMB 1,230,272.08 ten thousand.

The audited parent company's pro forma statements showed total assets of RMB 2,780,969.61 ten thousand, liabilities of RMB 386,072.15 ten thousand, and owners' equity of RMB 2,394,897.46 ten thousand. This included current assets of RMB 497,052.65 ten thousand, non-current assets of RMB 2,283,916.96 ten thousand, current liabilities of RMB 385,683.34 ten thousand, and non-current liabilities of RMB 388.81 ten thousand.

The aforementioned asset and liability data are extracted from the pro forma financial statements of Guoyuan Power as of July 31, 2025, audited by Ernst & Young Hua Ming Certified Public Accountants (special general partnership) [Ernst & Young Hua Ming (2025) Zhuanzi No. 80021398 A01]. The appraisal is conducted based on the audited figures.

The entrusted appraisal object and scope are consistent with those involved in the economic activity.

(I) Distribution and Characteristics of Physical Assets

As of the Appraisal Reference Date, book value of physical assets of CHN Energy Guoyuan Power Co., Ltd was RMB10,801.19 ten thousand, accounting for 0.39% of the total assets within the consolidation scope. These primarily include inventory, building assets, and equipment assets. These assets have the following characteristics:

1. Distribution and Location of Physical Assets

Physical assets are mainly distributed in the office areas of Guoyuan Electric Power's headquarters and its branches.

2. Usage Status, Technical Characteristics, Overhauls, and Expansion/Retrofitting of Physical Assets:

(1) Inventory

Inventory primarily consists of circulating materials, mainly office supplies required for daily operations. As of the Appraisal Reference Date, they are in good condition.

(2) Buildings and Structures

There are 4 building assets, primarily reinforced concrete structures. These mainly include Huashi Building office space and residential properties, which are office buildings and dormitories for the entity's own use. The certificate holder is the Appraised Entity. As of the Appraisal Reference Date, the buildings are in good physical condition and are in normal use.

(3) Equipment Assets

Equipment assets include machinery, vehicles, and electronic equipment. There are 24 machinery items, purchased between 2017 and 2020, mainly including switchgear, double-cooking single-temperature stoves, etc. There are 18 vehicles, purchased between 2008 and 2023, all used for the entity's daily operations; the certificate holder for all vehicles is the Appraised Entity. There are 1,057 electronic equipment items, purchased between 2008 and 2025, mainly including laptops, multi-function printer/copier/scanners, switches, etc. As of the Appraisal Reference Date, the equipment assets are in good physical condition and are in normal use.

(II) Intangible Assets Recorded or Unrecorded in the Books as Declared by the Enterprise

As of the Appraisal Reference Date, intangible assets recorded in the

books declared by the appraised entity within the consolidated scope primarily include land use rights and software. Unrecorded intangible assets include patents and copyrights. Details are as follows.

1. Intangible Assets Recorded in the Books:

(1) Intangible Assets - Land

Land use right is one parcel of land use rights recorded under the intangible assets-land account. This land is used for the entity's daily operational sites. Key details are shown in the table below:

Table 10-1 Land Use Rights

No.	Land certificate No.	Parcel name	Land location	Expiry date	Land nature	Land use	Approved Term	Area (m²)
1	Jing Yang (2021) Shi Bu Dong Chan Quan No. 0001141	Office land	No. B 26, Financial Street, Xicheng District (Units/Buildings: 1, 2, 8, 9, 12, 13, 15, 16, 22, 26, 29, 32, 35, 38, 40, 42, 44)	2052/12/25	Grant	Commercial land	50	1644.89

(2) Intangible Assets - Other

Included in this appraisal scope are 46 assets recorded under the intangible assets - other account, primarily comprising purchased and self-developed software, including the Coal Production Dispatch Information System (Integrated Monitoring System), Guoshen Group ERP Project Interface, and Operational Indicator Competition Information System, etc. Specific details are as follows:

2. Unrecorded Intangible Assets

As of the Appraisal Reference Date of July 31, 2025, the enterprise declared a total of 850 unrecorded intangible assets within the appraisal scope, comprising relevant patents and software copyrights. Specifically, these include 105 invention patents, 736 utility model patents, 2 Appearance design patents and 7 software copyrights.

(III) **Types and Quantities of Off-Balance-Sheet Assets Declared by the Appraised Entity**

As of the Appraisal Reference Date of July 31, 2025, there were no off-balance-sheet assets within the scope declared by the appraised entity.

(IV) **Asset Types, Quantities, and Book Amounts Related to Conclusions Cited (or Utilized) from Reports Issued by Other**

Organizations

Book values of various assets and liabilities as of the Reference Date in this appraisal report are based on the audit results from the unmodified opinion Audit Report [Ernst & Young Hua Ming (2025) Zhuanzi No. 80021398_A01] issued by Ernst & Young Hua Ming Certified Public Accountants (special general partnership) on December 16, 2025. The appraisal was conducted based on the audited figures.

Apart from this, no content from reports of other organizations was cited or utilized.

IV. Value Type

In accordance with the purpose of this appraisal, the value type for this appraisal is determined to be market value.

Market value refers to the estimated value of the Appraisal Object in a normal, arm's-length transaction on the Appraisal Reference Date, assuming buyers and sellers acting rationally and voluntarily and without any compulsion.

V. Appraisal Reference Date

The Appraisal Reference Date for this asset appraisal is July 31, 2025.

The Appraisal Reference Date is determined by the Clients after a comprehensive consideration of factors such as the Appraised Entity's asset scale, workload, estimated time required, and compliance requirements.

VI. Basis of Appraisal

The appraisal basis followed for this asset appraisal primarily includes the economic activity basis, legal and regulatory basis, appraisal standards basis, asset ownership basis, as well as pricing basis and other references used during appraisal and estimation, specifically as follows:

(I) Basis for Economic Behavior

1. Minutes of the 18th Chairman's Special Meeting of China Energy Investment Corporation Co., Ltd. for 2025 (August 8, 2025)

(II) Legal and Regulatory Basis

1. Asset Appraisal Law of the People's Republic of China (Promulgated at the Twenty-first Session of the Standing Committee of the Twelfth National People's Congress on July 2, 2016);
2. Company Law of the People's Republic of China (Second Revision, adopted at the Seventh Session of the Standing Committee of the Fourteenth National People's Congress on December 29, 2023);
3. Civil Code of the People's Republic of China (Adopted at the Third Session of the Standing Committee of the Thirteenth National People's Congress on May 28, 2020);
4. Energy Law of the People's Republic of China (passed by the 12th Meeting of the Standing Committee of the 14th National People's Congress on November 8, 2024);
5. Enterprise Income Tax Law of the People's Republic of China (Amended and adopted at the Seventh Session of the Standing Committee of the Thirteenth National People's Congress on December 29, 2018);
6. Regulations on the Implementation of the Enterprise Income Tax Law of the People's Republic of China (First revision of the Decision of the State Council on Amending Certain Administrative Regulations promulgated by Decree of the State Council No. 714 of the People's Republic of China on April 23, 2019);
7. Provisional Regulations of the People's Republic of China on Value-added Tax (Decree of the State Council No. 691);
8. Implementation Rules for the Provisional Regulations of the People's Republic of China on Value-added Tax (Decree of the Ministry of Finance

and the State Taxation Administration No. 50);

9. Stamp Tax Law of the People's Republic of China (Adopted at the Third Session of the Standing Committee of the Fourteenth National People's Congress on June 29, 2023);

10. Urban Real Estate Administration Law of the People's Republic of China (Adopted at the Twelfth Session of the Standing Committee of the Thirteenth National People's Congress on August 26, 2019);

11. Land Administration Law of the People's Republic of China (Adopted at the Twelfth Session of the Standing Committee of the Thirteenth National People's Congress on August 26, 2019);

12. Provisional Regulations of the People's Republic of China on Urban Land Use Tax (December 31, 2006, Decree of the State Council No. 483);

13. Opinions of the Ministry of Finance of the People's Republic of China on Reforming the Administrative Management Method of State-owned Asset Appraisal and Strengthening the Supervision and Administration of Asset Appraisal (GBF [2001] No. 102);

14. Notice on Issues Concerning Strengthening the Administration of State-owned Enterprise Asset Appraisal (GZWCQ [2006] No. 274);

15. Notice on Matters Concerning the Review and Approval of State-owned Enterprise Asset Appraisal Reports (GZCQ [2009] No. 941);

16. Administrative Measures for State-owned Asset Appraisal (Decree of the State Council No. 91);

17. Implementation Rules for the Administrative Measures for State-owned Asset Appraisal (GZBF [1992] No. 36);

18. Provisional Regulations on the Supervision and Administration of State-owned Enterprise Assets (Decree of the State Council No. 378, revised by Decree of the State Council No. 588);

19. Administrative Measures for the Supervision and Administration of State-owned Enterprise Property Rights Transactions (Decree of the State-

owned Assets Supervision and Administration Commission No. 32);

20. Provisional Measures for the Administration of State-owned Enterprise Asset Appraisal (Decree of the State-owned Assets Supervision and Administration Commission of the State Council No. 12);

21. Guiding Opinions on the Filing Work for State-owned Enterprise Asset Appraisal Projects (GZFCQ [2013] No. 64);

22. Law of the People's Republic of China on State-owned Enterprise Assets (Adopted at the Fifth Session of the Standing Committee of the Eleventh National People's Congress on October 28, 2008);

23. Administrative Measures for the Financial Supervision and Administration of the Asset Appraisal Industry (Decree of the Ministry of Finance of the People's Republic of China No. 86);

24. Notice on Matters Concerning the Agreement Transfer of State-owned Property Rights of Central Enterprises (GZFCQ [2010] No. 11);

25. Notice on Optimizing the Asset Appraisal Management of Central Enterprises (GZFCQG [2024] No. 8);

26. Administrative Measures for the Major Asset Reorganization of Listed Companies (CSRC Order No. 166, revised on March 20, 2020);

27. Implementation Rules for Non-public Issuance of Shares by Listed Companies (CSRC Order No. 73, revised on February 14, 2020);

28. Operational Rules for Transactions of State-owned Enterprise Assets (GZFCQG [2025] No. 17);

29. Other laws, regulations, and rules related to the appraisal work.

(III) Basis of Appraisal Standards

1. Asset Appraisal Standards - Basic Standards (CQ [2017] No. 43);

2. Professional Ethics Standards for Asset Appraisal (CAS [2017] No. 30);

3. Professional Standards for Asset Appraisal - Asset Appraisal Procedures (CAS [2018] No. 36);

4. Professional Standards for Asset Appraisal - Asset Appraisal Report (CAS [2018] No. 35);

5. Professional Standards for Asset Appraisal - Asset Appraisal Engagement Contract (CAS [2017] No. 33);

6. Professional Standards for Asset Appraisal - Asset Appraisal Files (CAS [2018] No. 37);

7. Professional Standards for Asset Appraisal - Utilizing Expert Work and Related Reports (CAS [2017] No. 35);

8. Professional Standards for Asset Appraisal - Enterprise Value (CAS [2018] No. 38);

9. Professional Standards for Asset Appraisal - Appraisal Methods (CAS [2019] No. 35);

10. Guidelines for Business Quality Control of Asset Appraisal Institution (CAS [2017] No. 46);

11. Guiding Opinions on Asset Appraised value Types (CAS [2017] No. 47);

12. Guiding Opinions on Legal Ownership of Asset Appraisal Object (CAS [2017] No. 48);

13. Guidelines for State-owned Enterprise Asset Appraisal Reports (CAS [2017] No. 42).

(IV) Basis for Asset Ownership

1. Vehicle Licenses;

2. Real Property Certificates, Patent Certificates, and related ownership declarations;

3. Contracts or vouchers for the acquisition of significant assets;

4. Other reference documents.

(V) Pricing Basis

1. Notice of the Ministry of Finance and the State Taxation Administration on Comprehensively Launching the Pilot Program for

Replacing Business Tax with Value-added Tax (CS [2016] No. 36);

2. Announcement of the Ministry of Finance, the State Taxation Administration, and the General Administration of Customs on Policies Regarding Deepening Value-added Tax Reform (Ministry of Finance, State Taxation Administration, General Administration of Customs Announcement 2019 No. 39);

3. Announcement on the Loan Prime Rate (LPR) Appraisal Reference Date Authorized by the National Interbank Funding Center;

4. 2025 Mechanical and Electrical Products Price Information Inquiry System;

5. Price information database of China United Assets Appraisal Group Co., Ltd.;

6. Future earnings forecast data provided by the Clients and other relevant parties in accordance with the law;

7. Other reference documents.

(VI) Other Reference Documents

1. Audit Report issued by Ernst & Young Hua Ming LLP (Special General Partnership) [Ernst & Young Hua Ming (2025) Zhuanzi No. 80021398_A01];

2. Enterprise Accounting Standards - Basic Standards (Ministry of Finance Order No. 33);

3. Enterprise Accounting Standards - Application Guide (CK [2006] No.18);

4. Enterprise Accounting Standard No. 1 - Inventories and 40 other specific standards (CK [2006] No. 3);

11. Expert Guidance for Asset Appraisal No. 12 - Measurement of Discount Rate in Enterprise Value Assessment Using the Income Approach (CAS [2020] No. 38);

12. Relevant information on property rights transactions from the official websites of the China Securities Regulatory Commission, Shanghai Stock Exchange, Shenzhen Stock Exchange, and other related bodies;

13. Other reference documents.

VII. Appraisal Methodology

(I) Introduction to Appraisal Methods

In accordance with the Professional Standards for Asset Appraisal - Enterprise Value (CAS [2018] No. 38) and Professional Standards for Asset Appraisal - Asset Appraisal Methods (CAS [2019] No. 35), when engaging in enterprise value appraisal, the applicability of three basic methods, namely, Income Approach, Market Approach, and Asset-based Approach, shall be analyzed, and the appropriate appraisal method is selected based on factors such as the purpose of appraisal, appraisal object, value type, conditions for the application of appraisal methods, and the quality and quantity of data underlying the application of appraisal methods.

The Income Approach in enterprise value appraisal involves determining the value of the appraisal object by capitalizing or discounting expected

returns. Asset appraisers should appropriately assess the applicability of the Income Approach by considering the enterprise nature, asset scale, historical operating performance, predictability of future earnings, and the sufficiency of the appraisal data obtained.

The Market Approach in enterprise value appraisal involves determining the value of the appraisal object by comparing it with comparable listed companies or comparable transaction cases. Asset appraisers should consider the applicability of the Market Approach based on the sufficiency and reliability of the comparable enterprises' operating and financial data obtained, and the number of comparable enterprises available for collection.

The Asset-based Approach in enterprise value appraisal involves determining the value of the appraisal object by appraising the value of identifiable on-balance sheet and off-balance sheet assets and liabilities, based on the Balance Sheet of the Appraised Entity on the Appraisal Reference Date.

(II) Selection of Appraisal Methods

The Purpose of Appraisal can be described as China Shenhua Energy Company Limited's proposed acquisition of 100% equity in CHN Energy Guoyuan Power Co., Ltd held by China Energy Investment Group Co., Ltd. by issuing shares and paying cash.

The Asset-based Approach reflects the enterprise value from a construction perspective, providing a basis for enterprise operation, management, and assessment after the economic activity is realized. Therefore, the Asset-based Approach is selected for this appraisal.

The Appraised Entity possesses the foundation and conditions for going concern, and its future earnings and risks can be predicted and quantified. Therefore, the Income Approach can be adopted for this appraisal.

Before and after the Appraisal Reference Date, as recent transaction cases involving enterprises of comparable scale are unavailable, and there are

few comparable listed companies with similar scale and business structure in the market, the Market Approach was not selected for this appraisal.

In summary, it is determined to adopt the Asset-based Approach and Income Approach for this appraisal.

(III) Asset-based Approach

The Asset-based Approach involves determining the value of the appraisal object by appraising the value of identifiable assets and liabilities, both on and off the Balance Sheet of the Appraised Entity or operating unit as of the Appraisal Reference Date. Specifically, it involves calculating the enterprise value by summing the appraised value of various constituent assets and subtracting the appraised value of the liabilities.

The appraisal methods for assets and liabilities are presented below:

1. Current Assets

(1) Monetary Assets

Monetary assets primarily consist of bank deposits.

Confirmation letters were sent for bank deposit accounts to verify the actual existence of bank deposits, and to check for any unrecorded bank deposits, examining the authenticity of outstanding items in the Bank Reconciliation Statement, and reviewing inflows after the Appraisal Reference Date. For monetary assets denominated in RMB, the Appraised Value is determined based on the verified book value. For foreign currency-based monetary assets, the Appraised Value is determined by multiplying the verified original currency amount by the exchange rate on the Appraisal Reference Date.

(2) Accounts Receivable

For the appraisal of accounts receivable, the appraisers should verify the bookkeeping records, and sample a portion of original vouchers, and other relevant documents. They should confirm the authenticity of transactions, the

age of accounts, business contents and business amounts, and performed confirmations to ensure consistent verification results across the ledger, statements, and detailed list. Based on the verification of accounts receivable, the appraisers should engage in specific analyses on the amount, duration, and reasons for outstanding debts, collection status, debtor's funds, creditworthiness, and operational management status by leveraging historical data and current investigative findings. The appraisal risk loss is then estimated based on the specific circumstances of the Appraised Entity.

For receivables and other amounts from/to related parties where there is sufficient reason to believe they are fully recoverable, the probability of appraisal risk loss is determined to be 0%;

For individually significant accounts receivable where the Appraised Entity and the debtor have agreed upon a repayment plan, the appraisal risk loss is determined by the difference when the present value of future estimated cash flows is lower than the book value. For individually non-significant accounts receivable where the Appraised Entity and the debtor have not determined a repayment plan, the appraisal risk loss is estimated by referencing the method used in corporate accounting for calculating provision for bad debts.

The Appraised Value of accounts receivable is determined by deducting the appraisal risk loss from the verified book value of accounts receivable.

(3) Prepayments

For the appraisal of prepayments, the appraisers should verify bookkeeping records, examine original vouchers and relevant contracts, confirm the authenticity of transactions, the age of accounts, business contents, and business amounts. Confirmations should be obtained to prove that there is no anomaly. Based on the accurate verification of prepayments, and utilizing historical data and insights gathered from field surveys, the appraisers should specifically analyze the amounts, outstanding periods and

reasons, collection status of payments, and the financial, credit, and operational management status of the debtors.

Upon verification, the amounts in the prepayment accounts, statements, and invoices are consistent. No instances were found where suppliers were bankrupt, dissolved, or unable to provide goods on time as per contract. Based on the accurate verification of prepayments, the appraisers determined the Appraised Value using the verified book value.

(4) Dividends Receivable

For appraisal of dividends receivable, appraisers verified the ledger records, checked original vouchers and the dividend distribution documents of the investee enterprise, to verify the authenticity of the matter and the accuracy of the amount. The verification results showed that the ledger, statements, and supporting documents amounts matched. The Appraised value is determined based on the verified book value.

(5) Other Receivables

For appraisal of other receivables, appraisers verified the ledger records, sampled part of original vouchers and other relevant documents, verified the authenticity of transactions, aging, business content, amounts, and performed confirmations. Verification results showed that ledger, statements, and supporting documents amounts matched. Based on the correct verification of other receivables, and utilizing historical data and current investigation, specific analyses were conducted on the amount, aging and reason for the debt, collection status, and the debtor's financial status, credit, and current management status. Based on the specific circumstances of the entity, specific identification method and aging analysis method were used to estimate the appraisal risk loss.

For intercompany balances and other receivables where there is sufficient reason to believe full recovery is assured, the possibility of appraisal risk loss is 0%.

For individually significant other receivables where the Appraised Entity and the debtor have agreed on a repayment plan, appraisal risk loss is determined by the difference between the present value of the expected future cash flows and the book value. For other receivables that are not individually significant and where no repayment plan has been agreed upon, the method used by the enterprise for calculating bad debt provision is referenced to estimate the appraisal risk loss.

Appraised Value of other receivables is determined by subtracting the estimated appraisal risk loss from the verified book amount of other receivables.

(6) Inventory

The inventory consists of circulating materials in use.

Appraisers tested the internal control system for inventory, sampled high-value transactions and original vouchers, purchase and sales contracts with major customers, records of receipts and shipments, and daily production reports to verify authenticity and completeness of book value composition and cost accounting methods. They obtained an understanding of accounting system for inventory receipt, issuance, and storage, and performed physical inventory counting. They inspected the inventory for defects, damage, obsolescence, and scrapping. Market reference prices for inventory and product selling price information were collected to serve as a pricing reference. Appraised value was determined through comprehensive analysis combined with market inquiry data. Quantity is based on the actual quantity as of the Appraisal Reference Date. Specific appraisal methods and process for inventory are as follows:

1) Circulating Materials in Stock

Circulating materials in stock are primarily low-value consumables required for enterprise's daily operations, including items such as keyboards and mice. Turnover is normal, with no instances of overstocking or damage.

For this appraisal, supporting documents such as vouchers and invoices were sampled and compared with their book values, revealing minor discrepancies. Book value essentially reflects the current market value of circulating materials in stock. Therefore, the Appraised value for this portion of circulating materials in stock is determined based on the verified book value.

(7) Other Current Assets

For the appraisal of other current assets, the asset appraisers verified the consistency of the subsidiary ledger with the general ledger and balance sheet balances, checked for consistency with the detailed list of assets to be appraised, reviewed accounting records including transaction amounts, occurrence dates, and business content, and spot-checked original booking vouchers, relevant payment vouchers, and contracts to ascertain the authenticity and completeness of their accounting content. The asset appraisers ascertained the types of taxes, tax rates, payment systems, and other tax policies and expense conditions that the Appraised Entity was obligated to bear as of the Appraisal Reference Date. Based on verified accuracy, the Appraised Value was determined using the verified book value.

2. Long-term Equity Investments

For long-term equity investments, we first gathered evidence and verified the reasons for their formation, their book value, and actual status. We also reviewed investment agreements, resolutions of shareholders' meetings, articles of association, and relevant accounting records to ascertain the authenticity and completeness of these long-term investments.

For wholly-owned subsidiaries and controlled subsidiaries with a shareholding percentage of 50% or more, the overall assets of the investee entity at the Appraisal Reference Date were subjected to appraisal. The Appraised Value was then determined by multiplying the Appraised Value of the investee entity's net assets at the Appraisal Reference Date by the Appraised Entity's shareholding percentage:

Appraised Value of Long-term Equity Investments = Appraised Value of Net Assets after Overall Appraisal of the Investee Entity × Shareholding Percentage

Specifically, if there is a discrepancy between paid-in capital and subscribed capital, then:

Appraised Value of Long-term Equity Investments = (Appraised Value of Shareholders' Equity of the Investee Entity + Unpaid Subscribed Capital Contribution Amount) × Subscribed Capital Contribution Ratio of the Shareholder - Unpaid Subscribed Capital Contribution Amount of the Shareholder

For equity-invested companies, analysis is conducted based on the specific circumstances of the investee. Pursuant to the provisions of the Articles of Association, the appraised entity does not participate in the management affairs of equity-invested companies. Therefore, the appraisal procedures for this engagement are subject to certain limitations.

For subsidiaries where the investor holds a stake but meets the conditions for a comprehensive valuation—such as Shaanxi Binchang Wenjiapo Power Generation Co., Ltd.—the valuation method employed is identical to that used for the controlling shareholder. The total assets of the investee company are valued as of the valuation date, and the appraised value is then calculated by multiplying the net asset value of the investee company as of the valuation date by the investor's equity interest ratio.

For investee enterprises that find it difficult to cooperate in carrying out the work, the Appraised Value was determined by multiplying the net assets shown in the financial statements as of the Appraisal Reference Date by the equity ratio.

In determining the Appraised Value of long-term equity investments, the appraisers did not account for premiums or discounts resulting from factors

such as controlling interest and minority equity, nor did they consider the impact of equity liquidity on the appraisal results.

3. Fixed Assets - Building Assets

(1) According to the requirements of Asset Appraisal Practice Standards-Real Estate, when performing real estate appraisal business, applicability of three basic asset appraisal methods-Market Approach, Income Approach, and cost approach-as well as derived methods such as hypothetical development method and benchmark land price correction method, shall be analyzed based on appraisal purpose, object, value type, data collection, etc., to select the appraisal method.

Based on the structural characteristics and usage nature of the building assets included in the appraisal scope, the appraisers analyzed the applicability of different appraisal methods and ultimately determined the appropriate appraisal methods, as follows: the appraisers analyzed the applicability of different appraisal methods. Considering that the real properties held by the enterprise, in particular the self-use office building of Guoyuan Power, comprise an entire building located in the core area of Beijing Financial Street, where the symbolic significance of this special location has resulted in an imbalance between rental and sales ratios in the area, coupled with the economic downturn in recent years and the cooling of the office leasing market, the future rental growth level in this area is difficult to reasonably estimate; therefore, the Income Approach was not adopted for the appraisal. Similarly, as the Cost Approach cannot reflect the scarcity of real estate in this area, it is also not suitable to adopt the Cost Approach for the appraisal. For commodity residential properties purchased by the enterprise or real estate with the potential for separate transfer, the Market Approach is appropriate for the appraisal.

(2) Introduction to Appraisal Method

Market Approach is a method that estimates the objective reasonable

price or value of the appraisal object by comparing it with similar real estate that has been transacted recently or is being transacted near the Appraisal Reference Date, and making appropriate adjustments to the known prices of these similar real estate. Calculation formula is as follows:

P = P case × A × B × C × D × E

Wherein:

P: Appraised Value of the property under appraisal;

P case: Price of comparable transaction;

A: Transaction condition adjustment coefficient;

B: Transaction date adjustment coefficient;

C: Regional factor adjustment coefficient;

D: Individual factor adjustment coefficient;

E: Equity status factor adjustment coefficient.

4. Fixed Assets-Equipment Assets

According to the purpose of this appraisal and principle of continued use, based on market prices and considering the characteristics of the equipment to be appraised and the data collected, different methods were used to appraise different types of equipment assets:

For equipment in normal operation, replacement cost method was primarily used.

For used equipment whose price could be queried in the second-hand market, Market Approach was used.

(1) Replacement Cost Method

Appraised Value = Full Replacement Cost × Newness Rate

1) Determination of full replacement cost

A. Machinery & equipment full replacement cost

Full replacement cost for domestic machinery and equipment generally includes: equipment purchase price, transportation and miscellaneous costs,

installation and debugging costs, pre-operational and other costs, and capital cost.

Calculation formula for full replacement cost is as follows:

Full Replacement Cost = Equipment Purchase Price + Transportation & Miscellaneous Costs + Installation & Debugging Costs + Pre-operational & Other CostsPre-operational & Other Costs (including tax) + Capital Cost - Deductible VAT

①Purchase Price

For equipment still in production and sale, purchase price was determined mainly by consulting manufacturers for market prices on the Appraisal Reference Date, online searches, referencing recent contract prices for similar equipment near the Appraisal Reference Date, and querying the 2025 Electromechanical Product Quotation Information System.

For equipment being appraised for which current prices could not be obtained, if comparables could be found, the analogy method was used, adjusting the price of similar equipment to determine its purchase price based on the adjusted price.

If neither the current price nor comparables could be obtained, price index method was used, based on the original purchase price of equipment and the price increase index for similar equipment to determine the machinery purchase price. The calculation formula is:

Equipment Purchase Price = Original Cost t_0 × Fixed-base Price Index/ Fixed-base Price Index t_0

Where:

t_0: Equipment Acquisition Time

t: Appraisal Reference Date

②Transportation & Miscellaneous Costs

Based on the tax-inclusive purchase price, these costs were determined with reference to loading, unloading, transportation, storage, insurance, and

other related costs incurred between the manufacturer and the equipment location, referring to the Asset Appraisal Common Data and Parameters Handbook and considering actual situation of the enterprise, applying different rates. The calculation formula is:

Transportation & Miscellaneous Costs for Imported Equipment = CIF Price × Domestic Transportation & Miscellaneous Rate for Imported Equipment

Transportation & Miscellaneous Costs for Domestic Equipment = Domestic Equipment Original Price × Domestic Equipment Transportation & Miscellaneous Rate

As transportation costs for equipment within the scope of this preliminary appraisal were either included in the purchase price or borne by the seller, transportation & miscellaneous costs were not considered in this preliminary appraisal.

③Installation & Debugging Costs

Installation costs were estimated based on equipment characteristics, weight, and installation complexity, using the tax-inclusive purchase price as a base, referring to relevant equipment installation rates in Asset Preliminary Appraisal Common Data and Parameters Handbook, and considering actual situation of the enterprise. Different installation rates were applied.

The calculation formula is:

Installation Cost for Domestic Equipment = Equipment Purchase Cost × Domestic Equipment Installation Rate

Installation Cost for Imported Equipment = CIF Price × Imported Equipment Installation Rate

If installation was the responsibility of supplier (this cost was included in the purchase price), Installation and Debugging Costs were not added separately.

④Pre-operational & Other Costs

Other expenses include construction unit management fees, feasibility study report and appraisal fees, design fees, engineering supervision fees, etc. These were calculated based on the standard for other expenses in construction projects at the equipment's location, combined with the characteristics of the equipment itself.

Pre-operational & Other CostsPre-operational & Other Costs (including tax) = (Equipment Purchase Price + Transportation & Miscellaneous Costs + Installation & Debugging Costs + Foundation Costs) × Inclusive Tax Rate

Pre-operational & Other Costs (excluding tax) = (Equipment Purchase Price + Transportation & Miscellaneous Costs + Installation & Debugging Costs + Foundation Costs) × Exclusive Tax Rate

⑤Capital Cost

Capital cost was calculated based on a reasonable construction period for the entity being appraised, with the loan interest rate determined by reference to the Loan Prime Rate published by the National Interbank Funding Center under the authorization of the People's Bank of China on July 21, 2025. It was calculated based on the total of construction and installation project cost and pre-operational and other costs, assuming uniform fund input. The calculation formula is as follows:

Capital Cost = [Construction and Installation Project Cost (including tax) + Pre-operational and Other Costs (including tax)] ×Reasonable Construction Period ×Loan Interest Rate ×1/2

⑥Deductible VAT

According to provisions of CS [2008] No. 170, CS [2016] No. 36, and State Taxation Administration Announcement [2019] No. 14, for those meeting the conditions for VAT deduction, corresponding VAT was deducted from the replacement cost.

Recoverable Input VAT for Equipment = Equipment Purchase Price / (1+13%) × 13% + (Transportation & Miscellaneous Costs + Installation &

Debugging Costs) / (1+9%) × 9% + Deductible VAT in Other Expenses

B. Vehicle Full Replacement Cost

Based on local automotive market sales information and recent vehicle market price data, current tax-inclusive purchase price of vehicle was determined. Based on this, vehicle purchase tax and license plate fees were added according to the Interim Regulations of the People's Republic of China on Vehicle Purchase Tax.

According to Notice of the Ministry of Finance and the State Taxation Administration on Comprehensively Launching the Pilot Program for Replacing Business Tax with Value-added Tax (CS [2016] No. 36), the Notice of the Ministry of Finance and State Administration of Taxation on Adjusting VAT Rates (CS [2018] No. 32), and the Ministry of Finance, State Taxation Administration, General Administration of Customs Announcement [2019] No. 39, for enterprises eligible for VAT deduction, full replacement cost of the vehicle is:

Full Replacement Cost = Purchase Price + Vehicle Purchase Tax + Miscellaneous Fees (including license registration fee) - Deductible VAT

Deductible VAT = Purchase Price / 1.13 × 13%

① Vehicle Purchase Price

Purchase price for vehicles being appraised was determined based on vehicle market information and recent vehicle market price data from sources such as Pacific Auto Network Car Quotation Database and BitAuto, referencing the latest market transaction prices for similar models in the vehicle's location. For older vehicles where original model specification price could not be found, prices of similar vehicles with the same displacement were referenced as a guide for the appraised vehicle purchase price.

②Vehicle Purchase Tax

According to the relevant provisions of the Vehicle Purchase Tax Law of the People's Republic of China: Vehicle Purchase Tax Payable = Taxable Price

×10%. This "taxable price for taxpayers purchasing vehicles for self-use shall exclude VAT"; therefore: Purchase Tax = Purchase Price ÷(1 + VAT rate) ×10%.

③New Vehicle Registration & License Plate Fees

Determined based on the content and amount of such fees in the vehicle's location.

C. Electronic Equipment Full Replacement Cost

Based on local market information and recent market price data from sources such as ZOL.com.cn and PConline, price of electronic equipment on the Appraisal Reference Date was determined. Generally, manufacturers or distributors provide free transportation, installation, and commissioning. Full replacement cost was determined based on tax-exclusive purchase price.

Full Replacement Cost (excluding tax) = Purchase Price - Deductible VAT

Deductible VAT = Purchase Price/1.13 × 13%

Notes: some electronic equipment was appraised using second-hand market prices.

2) Determination of Newness Rate

A. Machinery & Equipment Newness Rate

For newness rate of machinery and equipment, reference was made to the economic life of equipment. Through site inspection of current condition of equipment and review of relevant equipment operation, repair, and equipment management records, various components of equipment were inspected to comprehensively determine its remaining useful life. Newness rate (N) was calculated based on this:

N = Remaining Useful Life / (Years Already Used + Remaining Useful Life) × 100%

B. Vehicle Newness Rate

According to relevant provisions of Compulsory Vehicle Scrapping

Standards of the Ministry of Commerce, National Development and Reform Commission, Ministry of Public Security, Ministry of Environmental Protection (Decree [2012] No. 12), newness rate for vehicles is determined by the following methods, taking the smaller value as the final Newness Rate:

Age-based Newness Rate = (1 - Years in Use / Regulatory or Economic Service Life) × 100%

Mileage-based Newness Rate = (1 - Miles Driven / Regulatory Mileage Limit) × 100%

Newness Rate = Min (Age-based Newness Rate, Mileage-based Newness Rate)

Simultaneously, necessary inspection and identification were performed on the vehicle being appraised. If inspection results differed significantly from the newness rate determined by the above method, appropriate adjustments were made. If the results were similar, no adjustment was made. That is:

Newness Rate = Min (Age-based Newness Rate, Mileage-based Newness Rate) + a

a: Special vehicle condition adjustment coefficient

C. Electronic Equipment Newness Rate

For electronic equipment, newness rate was comprehensively determined primarily through site inspection of equipment's usage condition and reference to the economic life of various types of equipment.

Newness Rate = [Remaining Useful Life ÷ (Years Already Used + Remaining Useful Life)] × 100%

Notes: For electronic equipment appraised directly based on second-hand market prices, no newness rate calculation was required.

3) Determination of Appraised Value

Appraised Value is obtained by multiplying the full replacement cost by the newness rate.

Appraised Value = Full Replacement Cost × Newness Rate

5. Right-of-Use Assets

Right-of-use assets primarily represent the right of the Appraised Entity to use related leased assets during the lease term. Book cost of right-of-use assets is mainly composed of the initial measurement amount of the lease liability and direct costs incurred at the commencement of the lease.

Right-of-use asset is the right of a lessee to use an underlying asset during the lease term. The enterprise accounts for it according to the provisions of Accounting Standards for Business Enterprises No. 21-Leases (Revised), recognizing both a right-of-use asset and a lease liability.

Appraisers investigated and obtained the understanding of the relevant leased items, reviewed relevant lease contracts, verified the lease term, remaining lease period, rental level, and unpaid lease payments, and obtained the understanding of the existence of purchase options, renewal rights, and early termination rights. Upon verification, initial cost measurement of right-of-use assets was accurate, and depreciation was reasonably accrued. For this appraisal, the Appraised Value of right-of-use assets is determined based on the verified book value.

6. Intangible Assets-Other

(1) Purchased Software

For purchased software, appraisers reviewed relevant supporting documents, obtained the understanding of composition of original entry value, amortization method and period, and reviewed original contracts, invoices, and payment vouchers. Verification indicated that the ledger and statement amounts matched. Based on the characteristics of other intangible assets, appraised value type, data collection status, and other relevant conditions, Market Approach was used for the appraisal, as follows:

1) For purchased software available on the market as of the Appraisal Reference Date, market price as of the Appraisal Reference Date is used as the Appraised Value.

2) For custom-developed software, quotations from the software developer are used as the Appraised Value.

(2) Technology-based Intangible Assets

Common appraisal methods for technology-based intangible assets include Market Approach, Income Approach, and cost approach.

As the market for technology-based intangible assets in China is still in its early stages, obtaining relevant fair transaction data is relatively difficult. Therefore, Market Approach is not applicable for appraising these technology-based intangible assets.

The Appraised Entity is a thermal power generation enterprise. Its core earnings primarily depend on external macro factors such as feed-in tariff policies of national and local governments, market price of major fuels like coal, and dispatch plans of power grid. A stable and identifiable correlation between specific patent assets and future cash flows cannot be established for the technology-based intangible assets within the scope of this appraisal, nor has a direct relationship with the earnings of the Appraised Entity been formed; income split situation is uncertain. Therefore, Income Approach is not applicable for appraising these technology-based intangible assets.

Consequently, cost approach was used to appraise the technology-based intangible assets in this appraisal.

Appraised Value of Technology-based Intangible Assets = Replacement Cost × Newness Rate

Replacement Cost = Labor Cost + Other Shared Costs + Opportunity Cost + Registration Cost

Opportunity Cost = (Labor Cost + Other Shared Costs) × Opportunity Cost Rate + Registration Fees

Opportunity Cost Rate = Return on Invested Capital (ROIC)

Newness Rate = Remaining Useful Life / (Years in Use + Remaining Useful Life) × 100%

7. Development Expenditure

Development expenditure primarily relates to projects such as core switch upgrade project, real-time monitoring of coal mine slopes, vehicle operation real-time monitoring system construction project, and coal mine integrated monitoring system upgrade project. As of the Appraisal Reference Date, these projects were still in subsequent development and testing phases.

Development expenditure is appraised at the verified book value.

8. Other Non-current Assets

For appraisal of other non-current assets, appraisers checked whether the subsidiary ledger balances matched the general ledger and statement balances, and verified consistency with the provided detailed list. They reviewed accounting records including amounts, transaction dates, and business content, and sampled original entry vouchers, contracts, agreements, and other documents to confirm the authenticity and completeness of other non-current assets. Based on correct verification, the Appraised Value is determined based on the verified book value.

9. Liabilities

Each liability item was examined and verified to identify actual obligor and liability amount after appraisal purpose is realized. The Appraised Value is determined based on the liability items and amounts that the actual owner of property rights would need to bear after appraisal purpose is realized.

(IV) Income Approach

1. Overview

According to the Professional Standards for Asset Appraisal - Enterprise Value, the Income Approach in enterprise value appraisal, also known as the discounted cash flow method, involves forecasting the future cash flows and their associated risks for an enterprise or a revenue-generating unit, selecting a corresponding discount rate, and then discounting and summing these future

cash flows. The fundamental principle of the Income Approach is to estimate the future anticipated net cash flow of the assets and convert them into present value using an appropriate discount rate to derive the Appraised Value. The fundamental conditions for applying the Income Approach are described below: the enterprise possesses the basis and conditions for going concern; there is a relatively stable correlation between its operations and earnings; its future earnings and risks can be predicted and quantified. The primary challenge in utilizing the discounted cash flow method lies in forecasting future expected cash flows, as well as ensuring the objectivity and reliability of data collection and processing. When the forecast of future expected cash flows is relatively objective and fair, and an appropriate discount rate is adopted, the appraisal result will demonstrate strong objectivity.

2. Appraisal Ideas

Based on the findings of this due diligence and the asset composition and principal business characteristics of the Appraised Entity, the equity capital value of the Appraised Entity is appraised based on the audited financial statements of the Appraised Entity. The fundamental appraisal approach for this appraisal is described as follows:

(1) For assets and principal businesses within the scope of the report, expected returns (net cash flow) are projected based on historical operating trends and business types, then discounted to derive the value of the operating assets;

(2) Current assets (liabilities) such as monetary assets, and dividends receivable (payable) existing on the Appraisal Reference Date, which are within the scope of the report but not included in the expected returns (net cash flow) forecast, as well as non-current assets (liabilities), and construction in progress not recognized in profit and loss, are defined as redundant or non-operating assets (liabilities) existing on the Appraisal Reference Date, and their value is estimated separately;

(3) The value of long-term equity investments that are included within the scope of the financial statements but are not factored into the estimation of expected returns are separately calculated;

(4) Summing the values of the aforementioned assets and liabilities yields the enterprise value of the Appraised Entity. After deducting the value of interest-bearing debt as of the Appraisal Reference Date, the equity capital (Shareholders' Equity) value of the Appraised Entity is obtained.

In determining the value of Shareholders' Equity, the appraisers have not considered premiums or discounts arising from factors such as controlling interest and minority equity, nor has the appraisers considered the impact of equity liquidity on the appraisal results.

3. Appraisal Model

(1) Basic Model

The basic model for this appraisal is:

$$E = B - D \quad (1)$$

Wherein:

E: Shareholders' Equity (Net Assets) Value of the Appraised Entity;

B: Enterprise Value of the Appraised Entity;

D: Interest-Bearing Debt Value of the Appraised Entity;

$$B = P + C \quad (2)$$

Wherein:

P: Operating Assets Value of the Appraised Entity;

C: Value of Surplus or Non-Operating Assets (Liabilities) of the Appraised Entity on the Appraisal Reference Date;

$$P = \sum_{i=1}^{n} [R_i \times (1+r)^{-i}] + p_n \times (1+r)^{-n} \quad (3)$$

Wherein:

Ri: Expected returns (Free Cash Flow) of the Appraised Entity in the i-th future year;

Pn: Terminal value, net of the recoverable value of working capital, fixed assets, intangible assets, and other relevant assets;

r：Discount rate;

n：The future operating period of the Appraised Entity;

$$C = C_1 + C_2 \quad (4)$$

C_1: The value of surplus or non-operating assets (liabilities) classified as current at the Appraisal Reference Date;

C_2: The value of surplus or non-operating assets (liabilities) classified as non-current at the Appraisal Reference Date.

(2) Income Indicator

The enterprise's free cash flow is adopted as the income indicator for the Appraised Entity's operating assets, which is fundamentally defined as:

R = Net Profit + Depreciation & Amortization + After-Tax Interest - Additional Capital + Terminal Asset Recovery (5)

Based on the Appraised Entity's operating history and future market development, its free cash flow for the future operating period is estimated. The value of the enterprise's operating assets is obtained by discounting and summing the free cash flow over the future operating period.

(3) Discount Rate

This appraisal adopts the weighted average cost of capital (WACC) model to determine the discount rate r.

$$r = r_d \times w_d + r_e \times w_e \quad (6)$$

Wherein:

W_d: The debt ratio of the comparable company;

$$w_d = \frac{D}{(E+D)} \quad (7)$$

W_e: the equity ratio of the comparable company;

$$w_e = \frac{E}{(E+D)} \quad (8)$$

r_d: The after-tax interest rate on interest-bearing debt;

r_e: Cost of equity capital; this appraisal determines the cost of equity capital re according to the Capital Asset Pricing Model (CAPM);

$$r_e = r_f + \beta_e \times (r_m - r_f) + \varepsilon \quad (9)$$

Wherein:

r_f: Risk-free rate of return;

r_m: Market expected rate of return;

ε: The specific risk adjustment coefficient of the Appraised Entity;

β_e: The expected market risk coefficient for the equity capital of the Appraised Entity;

$$\beta_e = \beta_u \times (1 + (1 - t) \times \frac{D}{E}) \quad (10)$$

β_u: The expected unlevered market risk coefficient for comparable companies;

$$\beta_u = \frac{\beta_t}{1+(1-t)\frac{D_i}{E_i}} \quad (11)$$

β_t: The expected average market risk coefficient for the stock (assets) of comparable companies;

$$\beta_t = 1/3K + 2/3\beta_x \quad (12)$$

Wherein:

K: The average risk value of the stock market over a certain period, usually assumed K=1;

β_x: The historical average market risk coefficient for the stock (assets) of comparable companies;

D_i, E_i: The interest-bearing debt and equity capital of comparable companies, respectively.

4. Earnings Period

According to the Appraised Entity's Articles of Association, the business term of the enterprise is long-term. As the Appraised Entity was operating

normally on the Appraisal Reference Date, there are no restrictions on the useful life of core assets affecting the enterprise's continued operation, nor on the enterprise's production and operation term or the investors' ownership term. Alternatively, such restrictions can be lifted, and the enterprise can operate in perpetuity through extensions. Therefore, it is assumed that the Appraised Entity will operate as a going concern beyond the Appraisal Reference Date, with a corresponding indefinite earnings period.

VIII. Implementation Process and Status of Appraisal Procedures

The entire appraisal work is divided into four stages:

(I) Appraisal Preparation Stage

Appraisal Preparation Stage was in early September 2025, and the main tasks of this stage are described below:

1. Project Negotiation and Acceptance of Project Engagement

In this stage, we understand the basic information of the Appraised Entity and the Appraisal Object involved in the proposed engagement, and clarify the Purpose of Appraisal, Appraisal Object, Scope of Appraisal, and Appraisal Reference Date; Based on specific circumstances, including the purpose of appraisal and the transaction background, a comprehensive analysis and appraisal of professional competence, independence, and business risks are conducted, leading to the signing of an asset appraisal engagement contract.

2. Determination of the Appraisal Plan and Preparation of the Work Schedule

After thorough communication with the Clients and all relevant intermediaries for the project, and further confirming the fundamental aspects of the asset appraisal, as well as the Appraised Entity's assets and operating status, basic policies, laws, and regulations pertinent to the Appraised Entity's industry are collected, along with market operating conditions. Building upon

this, a preliminary work plan is drafted, and an appraisal plan is formulated.

3. Submittal of the Document Checklist and Interview Outline

Based on the characteristics of the assets to be appraised, a targeted due diligence document checklist is submitted, including sample forms for asset lists and profit forecasts, requiring the Appraised Entity to undertake appraisal preparation work.

4. Guidance on Form Completion and Appraisal Data Preparation

We liaise with relevant staff of the Appraised Entity to guide them in preparing the necessary data and completing the relevant forms in accordance with asset appraisal requirements.

(II) On-site Appraisal Stage

The project team's on-site work period is scheduled for mid-September 2025, with the following main tasks during this stage:

1. Preliminary Understanding of the Overall Situation

We receive briefings from the Clients and relevant personnel of the Appraised Entity regarding the Appraised Entity's overall situation and the history and current status of the assets to be valued. This includes understanding the Appraised Entity's historical evolution, financial system, operating status, and technical conditions of its fixed assets.

2. Reviewing and Verifying Materials

The declaration materials provided by the Appraised Entity are reviewed and authenticated. Property rights certificates for the assets to be valued are thoroughly collected and verified, and cross-referenced with the enterprise's relevant financial records. Any discrepancies identified are addressed and adjusted in coordination with the enterprise.

3. Key Inventory Check

Based on the declared materials, comprehensive inventory check and verification are conducted for the primary assets and operational and office

premises. For the reported bank deposits and intercompany balances, bank statements and various business contracts are verified to confirm their authenticity and analyze associated risks. On-site inspections are performed for the declared physical assets. Physical inventory of electronic equipment and machinery was conducted on a sampling basis, while a thorough on-site inventory and inspection was performed for the buildings. Furthermore, for the buildings, we gained an understanding of the management systems, maintenance, and renovation/expansion activities, and collected relevant documentation. For specialized equipment, we reviewed technical data. For leased premises, we examined the lease agreements.

4. Due Diligence Interview

Through due diligence and interviews with senior executives, we gain an understanding of the enterprise's cost and expense, and its future development trends are analyzed. For the profit forecast data declared by the enterprise, discussions are held with enterprise management personnel to reach a consensus on future development trends as much as possible. This is then verified and checked by inquiring about the principal business, gross profit situation, and other relevant aspects of enterprises in the same industry and field.

5. Determining Appraisal Methods

Based on the actual conditions and characteristics of the assets to be valued, the specific asset appraisal model and methods are determined.

6. Estimation and Appraisal

Based on the agreed-upon understanding, the appraisal model is determined, the appraisal results are calculated, and relevant written explanations are drafted.

(III) Appraisal Summary Stage

We analyze and summarize the preliminary appraisal results for various

assets and liabilities, and implement necessary adjustments, modifications, and improvements to the appraisal results.

(IV) Report Submission Stage

Based on the foregoing work, a preliminary asset appraisal report is drafted; following an initial review, opinions on the appraisal results are exchanged with the Clients. After an independent analysis of relevant opinions, revisions and adjustments are made in accordance with the Appraisal Institution's internal asset appraisal report review system and procedures, culminating in the issuance of the official asset appraisal report.

IX. Appraisal Assumptions

In this appraisal, the appraisers adhered to the following appraisal assumptions:

(I) General Assumptions

1. Transaction Assumption

The transaction assumption posits that all assets to be valued are already in the process of transaction, and the appraiser performs appraisal based on Pro forma market conditions, including the transaction terms of the assets to be valued. The transaction assumption is one of the most fundamental prerequisite assumptions for asset appraisal.

2. Open Market Assumption

The open market assumption posits that for assets traded or intended to be traded in the market, both parties to the asset transaction are in equal positions and have the opportunity and time to obtain sufficient market information to make rational judgments regarding the asset's function, intended use, and transaction price. The open market assumption is predicated on the basis that assets can be openly bought and sold in the market.

3. Going Concern Assumption of the Enterprise

The going concern assumption for an enterprise is an appraisal premise made by treating the enterprise's entire assets as the appraisal object. This implies that the enterprise, as an operating entity, will continue its operations within its external environment in accordance with its business objectives. Enterprise management is responsible for and capable of fulfilling its duties; The enterprise operates lawfully and is able to generate appropriate profits to sustain its ongoing operational capability. Regarding the various operating assets of the enterprise, they are assumed to continue to be used in their current purpose, manner, scale, frequency, and environment, or to be utilized following certain modifications.

(II) Special Assumptions

1. There are no significant changes in the current relevant laws, regulations, and policies, nor in the national macroeconomic situation; there are no significant changes in the political, economic, and social environment of the regions where all parties to this transaction are located;

2. There are no significant changes in the socio-economic environment in which the enterprise operates, nor in relevant interest rates, exchange rates, tax bases and tax rates, or policy-related levies;

3. The enterprise's future operational management team performs its duties diligently and maintains its existing operational management model;

4. The appraisal is based solely on the existing operational capacity as of the Appraisal Reference Date. No consideration is given to potential future expansions in operational capacity resulting from changes in management, operational strategies, or additional investments, nor to subsequent changes in production and operations that may occur;

5. All assets in this appraisal are predicated on their actual inventory as of the Appraisal Reference Date, with the current market prices of relevant assets based on prevailing domestic prices as of the Appraisal Reference Date;

6. This appraisal assumes that the fundamental and financial data provided by the Clients and the Appraised Entity are true, accurate, and complete;

7. The appraisal scope is strictly limited to the appraisal declaration forms furnished by the Clients and the Appraised Entity; it does not account for any potential contingent assets or contingent liabilities beyond the lists provided by the Clients and the Appraised Entity;

8. This appraisal assumes that, throughout the prospective forecast period, the categories and proportions of the Appraisal Object's various period expenses will not deviate significantly from their current structure but will maintain their recent trends, adjusting proportionally with shifts in operational scale;

9. Given the frequent and significant fluctuations in the enterprise's monetary assets, including bank deposits, during its operations, the appraisal of financial expenses in this report does not account for interest income from deposits or uncertain gains and losses such as exchange differences;

10. There are no other force majeure or unforeseen factors that would have a significant adverse impact on the enterprise;

11. It is assumed that, subsequent to the appraisal Reference Date, the Appraised Entity's cash inflows and outflows occur at an average rate.

Should the aforementioned conditions change, the appraisal results would generally become invalid.

X. Appraisal Conclusion

Based on the assessment of future development trends and business plans by the Clients and the enterprise's management, and in accordance with relevant laws, regulations, and asset appraisal standards, the total shareholders' equity of CHN Energy Guoyuan Power Co., Ltd. was valued as of the Appraisal Reference Date of July 31, 2025, using both the Asset-based Approach and the Income Approach. This appraisal followed established

procedures, including inventory checks, on-site inspections, market surveys and confirmations, and assessment and estimation.

(I) Appraisal Conclusion from Asset-based Approach

Using the Asset-based Approach, Appraisal Conclusions for Appraised Entity as of Appraisal Reference Date are as follows:

Pro forma total assets have a book value of RMB 2,780,969.61 ten thousand, an appraised value of RMB 4,844,271.44 ten thousand, an appraisal increment of RMB 2,063,301.83 ten thousand, and an appreciation rate of 74.19%.

Pro forma liabilities have a book value of RMB 386,072.15 ten thousand, an appraised value of RMB 386,072.15 ten thousand, with no change in value.

Pro forma total shareholders' equity has a book value of RMB 2,394,897.46 ten thousand, an appraised value of RMB 4,458,199.29 ten thousand, an appraisal increment of RMB 2,063,301.83 ten thousand, and an appreciation rate of 86.15%. For details, see the table below:

Table 10-1 Asset Appraisal Results

Unit: RMB in ten thousand

Items		Book value	Appraised value	Increase/decrease in value	Appreciation rate %
		A	B	C=B-A	D=C/A×100
1	Current assets	497,052.65	497,052.65	-	-
2	Non-current assets	2,283,916.96	4,347,218.79	2,063,301.83	90.34
3	Including: long-term equity investments	2,003,662.96	3,978,677.56	1,975,014.60	98.57
5	Fixed assets	10,799.74	99,941.44	89,141.70	825.41
7	Intangible assets	2,328.74	1,474.27	-854.47	-36.69
7-1	Including: land use rights	927.29	-	-927.29	-100.00
8	Other non-current assets	267,125.52	267,125.52	-	-
9	**Total assets**	**2,780,969.61**	**4,844,271.44**	**2,063,301.83**	**74.19**
10	Current liabilities	385,683.34	385,683.34	-	-
11	Non-current liabilities	388.81	388.81	-	-
12	**Total liabilities**	**386,072.15**	**386,072.15**	**-**	**-**
13	**Net assets (owner's equity)**	**2,394,897.46**	**4,458,199.29**	**2,063,301.83**	**86.15**

(II)Appraisal Conclusion from Income Approach

Using the Income Approach, Appraisal Conclusions for Appraised Entity as of Appraisal Reference Date of July 31, 2025, are as follows:

Pro forma book value of total shareholders' equity on a parent-company basis for CHN Energy Guoyuan Power Co., Ltd. is RMB 2,394,897.46 ten thousand, while the appraised value of total shareholders' equity is RMB 4,170,437.72ten thousand, resulting in an appraisal increment of RMB1,775,540.26 ten thousand and an appreciation rate of 74.14 %.

(III) Analysis of Differences in Appraisal Results

Pro forma total shareholders' equity value calculated using the Income Approach in this appraisal is RMB 4,170,437.72 ten thousand, which is RMB 287,761.57ten thousand lower than the pro forma total shareholders' equity value of RMB 4,458,199.29 ten thousand calculated using the Asset-based Approach, representing a difference rate of 6.45%. Main reasons for differences between the two appraisal methods are as follows:

1. The Asset-based Approach Appraisal uses the replacement cost of assets as the value standard, reflecting the socially necessary labor consumed by asset investment (construction cost). This construction cost typically fluctuates with changes in the national economy;

2. The Income Approach Appraisal uses the expected returns of assets as the value standard, reflecting the operating capacity (profitability) of the assets. This profitability is typically influenced by various factors such as the macro economy, government control, and the effective utilization of assets.

In summary, this leads to a discrepancy between the two appraisal methods.

(IV) Selection of Appraisal Results

Income Approach employs the method of discounting expected future returns to appraise enterprise value. This Approach is significantly influenced

by company's future profitability, asset quality, operational capability, and operational risks. The Appraisal using Income Approach involves forecasting multiple factors such as future electricity prices, utilization hours, coal prices, and national energy policies. These key parameters carry considerable uncertainty in the current market environment, leading to relatively low accuracy in profit forecasts.

Asset-based Approach reflects the fair market value of assets from the perspective of replacement cost. Given the circumstances of this Appraisal, the Appraised Entity is a capital-intensive enterprise. Its industry, power and energy sector, has a clear asset structure, and its core value is primarily embodied in tangible assets such as large-scale power generation units, transmission networks, and land and buildings. The enterprise provided detailed information on its assets and liabilities, and the appraiser also collected sufficient external data required for the Asset-based Approach. We conducted a comprehensive inventory and appraiser of the Appraised Entity's assets and liabilities. Therefore, comparatively, the appraisal result derived from Asset-based Approach is more reliable. Consequently, the result from the Asset-based Approach is adopted as the final appraisal conclusion in this Appraisal.

Based on the above analysis, value of total equity of Guoyuan Power as of the Reference Date is determined to be RMB4,458,199.29 ten thousand.

XI. Instructions on Special Matters

(I) Circumstances Involving Citation of Conclusions from Reports Issued by Other Institutions.

None.

(II) Incomplete Property Rights Documentation or Property Rights Deficiencies

Among the assets declared for appraisal by the Appraised Entity, certain buildings and land use rights either lack property ownership certificates or have certificates not registered under the current owner's name. The enterprise has warranted that it owns these assets and assumes that any disputes arising from the ownership of these assets are unrelated to the appraisal agency. Property rights deficiencies for Guoyuan Power and its subsidiaries/branches are as follows:

Table 10-2 House Deficiencies

No.	Subject Company	Area of buildings without certificates（㎡）
1	CHN Energy Guoyuan Power Co., Ltd. Beijing Materials Branch	211.41
2	Guoneng Energy Hami Coal & Power Co., Ltd.	272,895.57
3	Guoneng Baoqing Coal, Power & Chemical Co., Ltd.	70,129.18
4	Shaanxi Deyuan Fugu Energy Co., Ltd.	104,919.28
5	Qinhuangdao Power Generation Co., Ltd.	367,00.60
6	Guoneng Shanxi Hequ Power Generation Co., Ltd	6,600.25
7	Guoneng (Tianjin) Dagang Power Plant Co., Ltd	177,288.14

Table 10-3 Land Deficiencies

No.	Subject Company	Area of land plots without certificates（㎡）
1	Guoneng Baoqing Coal, Power & Chemical Co., Ltd.	94,570.56
2	Guoneng Bozhou New Energy Co., Ltd.	632,312.33
3	Guoneng (Tianjin) Dagang Power Plant Co., Ltd.	252,967

(III) Circumstances where Appraisal Procedures are Restricted or Appraisal Data is Incomplete

There were no restrictions in appraisal procedures or incompleteness of appraisal data for this Appraisal.

(IV) Outstanding Legal and Economic Matters Existing on the Appraisal Reference Date

1. As of the Appraisal Reference Date, major litigation involving subsidiary Guoneng Energy Hami Coal & Power Co., Ltd. is listed below:

No.	Phase	Plaintiff	Defendant	Amount involved	Claims

Asset Appraisal Report Regarding China Shenhua Energy Company Limited's Proposed Acquisition of 100% Equity in CHN Energy Guoyuan Power Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. by Issuing Shares and Paying Cash

				(in ten thousand)	
1	First instance	Zhongheng Construction Group Co., Ltd.	Guoneng Energy Hami Coal & Power Co., Ltd.	570.50	Zhongheng Construction Group Co., Ltd. filed a lawsuit with Hami Yizhou People's Court, demanding that Guoneng Energy Hami Coal & Power Co., Ltd. pay RMB219.99 ten thousand plus interest for material, labor, and machinery cost adjustments, and RMB5.299 ten thousand plus interest for epidemic prevention and control costs. Subsequently, after the case was accepted on November 1, 2024, Guoneng Energy Hami Coal & Power Co., Ltd. filed a counterclaim, demanding that Zhongheng Construction Group Co., Ltd. pay liquidated damages for project delay and court acceptance fees. Claims of Zhongheng Construction Group Co., Ltd.: 1. To order the Defendant to pay the Plaintiff RMB 2.19992582 million for cost adjustments, plus interest (interest to be calculated from the completion date of each respective project until the date of full payment, based on the benchmark interest rate for similar loans published by the People's Bank of China). 2. To order the Defendant to pay the Plaintiff RMB 52,990.43 for epidemic prevention and control costs, plus interest (interest to be calculated from the completion date of each respective project until the date of full payment, based on the benchmark interest rate for similar loans published by the People's Bank of China). 3. To order the Defendant to bear the litigation costs of this case. Claims of Guoneng Energy Hami Coal & Power Co., Ltd. (Counterclaim): 1. To order Zhongheng Construction Group Co., Ltd. to pay Guoneng Energy Hami Coal & Power Co., Ltd. RMB 2.080261.4 million in liquidated damages for project delay. 2. To order that the court acceptance fees be borne by Zhongheng Construction Group Co., Ltd.
4	First instance	Liu Hui	Guoneng Energy Hami Coal & Power Co., Ltd., China Railway 12th Bureau Group Co., Ltd., Gan Lu, Hami Kangjian Engineering Construction Co., Ltd., Xinjiang Yihang Construction Engineering Co., Ltd.	1000	Claims: 1. To order the Defendant China Railway 12th Bureau Group Co., Ltd. to pay the Plaintiff RMB1,000 ten thousand in construction project payments, plus interest (this claimed amount is provisional; final amount will be determined after judicial appraisal commissioned by the court determines the project value involved in the case; interest shall be calculated on the base amount of the project payment, from February 1, 2024, until the date of full payment, based on the one-year Loan Prime Rate). 2. To order the Defendant Guoneng Energy Hami Coal & Power Co., Ltd. to bear payment liability to the Plaintiff within the scope of any unpaid project payments it owes to the Defendant China Railway 12th Bureau Group Co., Ltd. To order the Defendants to bear the litigation costs, preservation fees, preservation insurance fees, and service fees of this case.

(V) Nature, Amount, and Relationship with the Appraisal Object Regarding Guarantees, Leasing, Contingent Liabilities (Contingent Assets), and Other Related Matters

As of the Appraisal Reference Date, part of the office premises currently used by the Appraised Entity are leased. Details of the right-of-use assets are presented in the table below:

Table 10-4 List of Right-of-Use Assets

No.	Asset name	Commencement date	Expiry date	Lease term	Periodic Rent (Yuan)
1	9th Floor, Jiangong Office Area (leased)	2024/9/1	2026/9/30	2 years	5,408,937.14

(VI) Significant Subsequent Events

Subsequent events refer to significant matters occurring after the Appraisal Reference Date but prior to the issuance of the Appraisal Report.

No significant subsequent events of the company were identified.

(VII) Defects in the Economic Activity Corresponding to This Appraisal that May Significantly Impact the Appraisal Conclusion

1. For the exploration rights included within the scope of this Appraisal, as geological exploration data, preliminary design documents, overall mine area plans, formal feasibility study reports, and other information required for mining right valuation could not be obtained, it was impossible to model and calculate the market value of these exploration rights as demonstrated on the Appraisal Reference Date in accordance with mining right valuation standards system and mining right valuation theory. This appraisal covers the coal exploration rights for the No. 3 Coalfield in the West District of the Dananhu Mining Area of State Grid Energy Hami Coal Power Co., Ltd., the coal exploration rights for the East Exploration Area of the No. 1 Coalfield in the West District of the Dananhu Mining Area, and the coal exploration rights for the F1 South Coalfield in the West District of the Dananhu Mining Area. It also includes the coal exploration (reserved) prospecting rights for the Data Mining Area of Shanxi Luneng Hequ Thermal Coal Development Co., Ltd., and the coal exploration (reserved) prospecting rights for the Huangbo Mining Area, totaling five prospecting rights, shall retain their costs based on the audited book value.

(VIII) **Other Matters Requiring Disclosure**

1. This assessment includes five mining rights in the valuation calculations.four of which have not yet been fully disposed of for consideration. These are: the mining right for the Sandagao Coal Mine in Fugu County held by Shaanxi Deyuan Fugu Energy Co., Ltd.; the mining right for the Dananhu No. 2 Open-Pit Coal Mine held by State Grid Energy Hami Coal & Power Co., Ltd.; the mining right for the Shangyuquan Coal Mine held by Shanxi Luneng Hequ Thermal Coal Development Co., Ltd.; and the mining right for the Renjiazhuang Coal Mine held by Ningxia Ninglu Coal & Power Co., Ltd., a subsidiary of State Energy Group Ningxia Coal Industry Co., Ltd. According to Article 15 of the Notice of the Ministry of Finance, Ministry of Natural Resources, and State Taxation Administration on Issuing the Measures for the Collection of Mining Rights Transfer Revenue (Cai Zong [2023] No. 10), "For mining rights that have been established and have undergone compensated disposal, when utilizing resource reserves within the mining rights area that have not been compensated, mining rights transfer revenue shall be collected by analogy with the agreement transfer method according to the following principles: For mineral types listed in the Catalogue of Mineral Types, mining rights transfer revenue shall be levied annually based on the mining rights transfer revenue rate applicable at the time of mineral product sales." This assessment calculates the mining rights transfer revenue for the undistributed resource reserves using coal's transfer revenue rate of 2.4% and records it as a cash outflow. As of the valuation benchmark date, the undistributed extracted volumes for the four mining rights are as follows:

No.	Mining Right Name	Extracted Volume (10,000 tons)	Uncompensated Extraction Volume (10,000 tons)
1	Shaanxi Deyuan Fugu Energy Co., Ltd. Fugu County Sandagao Coal Mine Mining Rights	59,768.27	45,784.24
2	State Grid Energy Hami Coal Power Co., Ltd. Dananhu No. 2 Open-Pit Coal Mine Mining Rights	137,459.77	101,019.39
	Shanxi Luneng Hequ Thermal Coal	35,979.08	815.70

3	Development Co., Ltd. Shangyuquan Coal Mine Mining Rights		
4	State Energy Group Ningxia Coal Industry Co., Ltd. Ningxia Ninglu Coal & Power Co., Ltd. Renjiazhuang Coal Mine Mining Rights	12,127.62	3,685.58

3. The mining rights conclusion in this appraisal report is based on the mining rights appraisal report issued by Zhonglian Asset Appraisal Group Co., Ltd. The valuation purpose and valuation benchmark date stated in the mining rights appraisal report are consistent with those of this asset valuation. As the mining rights valuation is consolidated into the asset appraisal report issued by our company, we have verified the ownership of the mining rights and related assets. Concurrently, we have performed necessary review procedures regarding the valuation procedures, methods, assumptions, and selection of key parameters adopted in the mining rights appraisal report. The specific details of the report reference are as follows:

	Project	Report Reference Number
1	State Grid Energy Hami Coal Power Co., Ltd. Dananhu No. 2 Open-Pit Coal Mine Mining Rights	Zhonglian Mining Evaluation Report No. [2025] 5364
2	Shaanxi Deyuan Fugu Energy Co., Ltd. Fugu County Sandagao Coal Mine	Zhonglian Mining Evaluation Report No. [2025] 5366
3	State Energy Group Ningxia Coal Industry Co., Ltd. Ningxia Ninglu Coal Power Co., Ltd. Renjiazhuang Coal Mining Rights	Zhonglian Mining Evaluation Report No. [2025] 5367
4	State Energy Baoqing Coal-Electricity-Chemical Co., Ltd. Chaoyang Open-Pit Coal Mine Mining Rights	Zhonglian Mining Evaluation Report No. [2025] 5368
5	Shanxi Luneng Hequ Thermal Coal Development Co., Ltd. Shangyuquan Coal Mine	Zhonglian Mining Evaluation Report No. [2025] 5363

4. The legal liability of the appraiser and Appraisal Institution is to render professional judgments on the asset Value for the Purpose of Appraisal as described in this report, and does not extend to the appraiser and Appraisal Institution making any judgments regarding the economic activity corresponding to this Purpose of Appraisal. The asset appraisal process is, to

a significant extent, dependent on the relevant information provided by the Clients and the Appraised Entity. Therefore, the appraisal work is predicated on the authenticity and legality of the economic activity documents, asset ownership documents, certificates, accounting vouchers, and legal documents provided by the Clients and the Appraised Entity.

5. During the appraisal process, the appraisers observed the exterior of the valued buildings and structures and, where feasible, inspected their interior finishes and usage, without conducting any structural or material tests. During physical inspection of equipment, due to limitations in testing methods and the fact that some equipment was in operation, the appraisal of equipment conditions primarily relied on the appraiser' visual observations, recent inspection data provided by the Appraised Entity, and inquiries made to relevant equipment operators.

6. The objective of the appraisers in performing asset appraisal services is to estimate the value of the Appraisal Object and render a professional opinion, without assuming responsibility for the decisions made by the relevant parties. The Appraisal Conclusion should not be considered a guarantee of the Realizable Price of the Appraisal Object.

7. The profit forecast of the Appraised Entity obtained by the Appraisal Institution forms the basis for the Income Approach Appraisal in this Appraisal Report. Regarding the profit forecast provided by the Appraised Entity, the appraisers conducted necessary investigations, demonstrations, analyses, and judgments, considering the outstanding orders as of the Appraisal Reference Date, as well as other supporting materials furnished by the Appraised Entity's business and financial departments. After multiple discussions with the Appraised Entity's Management and its major shareholders, and subsequent revisions and refinements by the Valued Entity, the Appraisal Institution accepted the relevant data from the Appraised Entity's profit forecast. The Appraisal Institution's use of the Appraised

Entity's profit forecast does not constitute a guarantee of the Appraised Entity's future profitability.

8. This Appraisal Conclusion represents the value of the total Shareholders' Equity of the Appraised Entity. The Valuer has not considered the impact of factors such as equity liquidity, controlling interest, and minority equity.

9. The Clients and the Appraised Entity are responsible for the authenticity and completeness of the data, statements, and relevant information provided by the Appraised Entity, which fall within the scope of this appraisal.

10. The certificates of ownership and related information referenced in the Appraisal Report are provided by the Appraised Entity. The Clients and the Appraised Entity shall bear legal liability for their authenticity and legality.

11. Should the number of assets and pricing standards change during the validity period after the Appraisal Reference Date, the following principles shall apply:

(1) When the number of assets changes, the amount of assets shall be adjusted accordingly based on the original appraisal methods;

(2) When asset pricing standards change and materially affect the asset appraisal results, the Clients shall promptly engage a qualified asset appraisal institution to re-determine the Appraised Value.

(3) After the Appraisal Reference Date, the Clients shall give full consideration to and make corresponding adjustments for changes in the number of assets and pricing standards when establishing the actual pricing of the assets.

12. The Appraisal Scope is limited to the asset appraisal detailed schedule provided by the Clients and the Appraised Entity, and does not encompass potential contingent assets and contingent liabilities beyond the lists provided by the Clients and the Appraised Entity.

XII. Instructions on Usage Restrictions of the Appraisal Report

(I)This Appraisal Report shall only be used for the specific purpose and uses stipulated within this report. Concurrently, the appraisal conclusion of this appraisal reflects the current fair market price, determined according to open market principles for the valued entity under the purpose of this appraisal. It does not account for the impact on the appraisal price from potential future mortgages, guarantees, or additional payments that may be made by specific transacting parties. Furthermore, this report does not consider the impact on asset prices resulting from changes in national macroeconomic policies, natural forces, or other force majeure events. The appraisal conclusion will generally become invalid if the aforementioned conditions, the going concern principle followed in the appraisal, or other circumstances change. The Appraisal Institution shall not bear relevant legal liability for any invalidation of the Appraisal Results caused by changes in these conditions.

(II) The precondition for the validity of this Appraisal Report is that this economic activity complies with the relevant provisions of national laws and regulations and has obtained approval from the relevant departments.

(III) This Appraisal Report may only be used by designated users specified therein. The right to use this Appraisal Report belongs to the Clients. Without the Clients' permission, this Asset Appraisal Institution will not disclose it to others.

(IV) The Asset Appraisal Institution and its appraisers shall not be held liable if the Clients or other users of the Asset Appraisal Report fail to use it within the scope specified by laws, administrative regulations, and the Asset Appraisal Report itself.

(V) No entities or individuals other than the Clients, the other users of

the Asset Appraisal Report as stipulated in the Asset Appraisal Engagement Contract, and the users of the Asset Appraisal Report as prescribed by laws and administrative regulations, shall be permitted to use the Asset Appraisal Report.

(VI) Without the consent and review of this Appraisal Institution, no part or all of the Appraisal Report may be excerpted, cited, or disclosed in public media, except where otherwise stipulated by laws and regulations or agreed upon by the relevant parties.

(VII) Users of the Asset Appraisal Report shall correctly understand and utilize the Appraisal Conclusion. The Appraisal Conclusion is not equivalent to the realizable price of the Appraisal Object, and the Appraisal Conclusion shall not be construed as a guarantee of the realizable price of the Appraisal Object.

(VIII) Validity Period of the Appraisal Conclusion: In accordance with relevant asset appraisal laws and regulations, for asset appraisal reports pertaining to statutory appraisal engagements, the Clients must utilize the report only after completing the asset appraisal supervision and administration procedures as mandated by laws and regulations. The appraisal results are valid for one year, calculated from the Appraisal Reference Date of July 31, 2025 until July 30, 2026. If this period is exceeded, a new asset appraisal will be required.

XIII. Date of the Appraisal Report

Date of Appraisal Report is December 16, 2025.

This report is prepared in accordance with the Chinese Asset Appraisal Standards

Asset Appraisal Report on the Entire Shareholders' Equity of CHN Energy Xinjiang Energy Chemical Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

ZH.Q.H.P.B.Z. (2025) No. 6665

(Volume 1 of 1)

China Enterprise Appraisals Co., Ltd.

16 December 2025

Declaration

I. This asset appraisal report is prepared based on the Basic Rules for Asset Appraisal issued by the Ministry of Finance and the Asset Appraisal Practice Standards and Code of Professional Ethics issued by the China Appraisal Society.

II. The asset appraisal agency and its professional appraisers comply with laws, administrative regulations, and asset appraisal standards, adhere to the principles of independence, objectivity, and fairness, and bear legal responsibility for the asset appraisal report they issue.

III. The client or other users of the asset appraisal report shall use the report in accordance with the laws, administrative regulations, and the scope of use stated in the asset appraisal report. If the client or other users of the report misuse the report in violation of the foregoing regulations, the asset appraisal agency and its appraisers shall not bear any responsibility.

This asset appraisal report is only for use by the client, other users of the asset appraisal report as specified in the asset appraisal engagement contract, and users defined by laws or administrative regulations. Other institutions or individuals shall not use this asset appraisal report.

The asset appraisal agency and the appraisers remind the users of the asset appraisal report to correctly understand and use the appraisal conclusion. The appraisal conclusion is not equivalent to the realisable price of the subject asset and shall not be considered a guarantee of the realisable price.

IV. The asset and liability lists, and business forecasts related to the subject asset are provided by the client and the appraised entity, and confirmed through their signatures, seals, or other legally permitted means. The client and other relevant parties are legally responsible for the authenticity, completeness, and legality of the information provided.

V. The asset appraisers have conducted on-site investigations of the subject asset and the assets involved. They have paid necessary attention to the legal ownership status of the subject asset and its assets, verified the ownership documents, disclosed any discovered issues truthfully, and urged the client and other relevant parties to rectify any property right issues to meet the requirements for issuing the asset appraisal report.

VI. The asset appraisal agency and its appraisers have no current or anticipated interests in the subject asset in the asset appraisal report, nor any current or anticipated interests with the relevant parties, and are unbiased towards the relevant parties.

VII. The analysis, judgment, and results in the asset appraisal report issued by the asset appraisal agency are subject to the assumptions and limitations specified in the report. Users of the asset appraisal report shall fully consider the assumptions, limitations, special notes, and their impact on the appraisal conclusion.

VIII. The asset appraisers' investigation of physical assets such as buildings and structures, equipment, construction in progress, and inventories is generally limited to observation of use and maintenance conditions. Internal, hidden, or difficult-to-access parts are not inspected. We do not possess professional qualifications nor have we been engaged to conduct technical inspections or appraisals of the internal quality of these assets. Our appraisal is based on the information provided by the client and other relevant parties. If there are defects in the internal quality of these assets, the appraisal conclusions may be affected to varying degrees.

Summary of the Asset Appraisal Report

Important Notice

This summary is extracted from the main text of the asset appraisal report. To understand the details of the appraisal project and properly interpret and use the appraisal conclusion, the full text of the asset appraisal report shall be read carefully.

China Energy Investment Corporation Co., Ltd. and China Shenhua Energy Company Limited:

In accordance with the laws, administrative regulations, and asset appraisal standards, China Enterprise Appraisals Co., Ltd. has accepted your engagement to appraise the entire shareholders' equity of CHN Energy Xinjiang Energy Chemical Co., Ltd., while adhering to the principles of independence, objectivity, and fairness, and following the necessary appraisal procedures. The summary of the asset appraisal report is hereby presented as follows:

Appraisal purpose: China Shenhua Energy Company Limited intends to issue shares and pay cash to acquire assets related to coal, pithead coal power, and other assets held by China Energy Investment Corporation Co., Ltd. To this end, the market value of the entire shareholders' equity held by China Energy Investment Corporation Co., Ltd. in CHN Energy Xinjiang Energy Chemical Co., Ltd. on the valuation benchmark date is appraised, providing a value reference for the above economic activities.

Subject asset: The entire shareholders' equity value of the shareholders in CHN Energy Xinjiang Energy Chemical Co., Ltd.

Appraisal scope: The total assets and liabilities of CHN Energy Xinjiang Energy Chemical Co., Ltd.

As at the valuation benchmark date, assets within the appraisal scope included current assets, long-term equity investments, fixed assets, construction in progress, intangible assets, long-term prepaid expenses, deferred tax assets, etc. The book value of total assets under the parent company's standard was RMB19,146,567,300; liabilities comprised current liabilities and non-current liabilities, with total liabilities having a book value of RMB13,279,028,700; the book value of net assets was RMB5,867,538,600.

The consolidated book value of total assets was RMB30,245,781,100, the book value of total liabilities was RMB19,260,165,300., and the book value of shareholders' equity was RMB10,985,615,800, of which RMB9,491,294,800 represented the shareholders' equity attributable to the parent company.

Valuation benchmark date: 31 July 2025

Value type: Market value

Appraisal methods: Asset-based approach and income approach

Appraisal conclusion: This asset appraisal report adopts the results from the asset-based approach as the appraisal conclusion. The specific appraisal conclusion is as follows:

As at the valuation benchmark date, the book value of the total assets of CHN Energy Xinjiang Energy Chemical Co., Ltd. under the parent company's standard was RMB19,146,567,300, with an appraised value of RMB25,283,070,600, an increase of

RMB6,136,503,300, and an appreciation rate of 32.05%. The book value of total liabilities was RMB13,279,028,700, with an appraised value of RMB13,161,643,000, a decrease of RMB117,385,700, and a depreciation rate of 0.88%. The book value of net assets was RMB5,867,538,600, with an appraised value of RMB12,121,427,600, an increase of RMB6,253,889,000, and an appreciation rate of 106.58%.

The detailed results of the asset-based approach are shown in the following summary table:

Summary of Appraisal Results from Asset-Based Approach

Valuation benchmark date: 31 July 2025 Currency unit: RMB'0,000

Item		Book value	Appraised value	Increase or decrease	Appreciation rate %
		A	B	C = B - A	D = C/A × 100%

iii. Profile of the appraised entity

1. Company overview

Name: CHN Energy Xinjiang Energy Chemical Co., Ltd. (hereinafter referred to as "Xinjiang Energy")

Address: 518 Mid Midong Road, Midong District, Urumqi, Xinjiang

Legal representative: Yang Shuan

Registered capital: RMB9,124,881,990

Type: Limited liability company (wholly owned by a legal person, not invested in or controlled by natural persons)

Unified social credit code: 91650000228860955P

Date of incorporation: 29 December 2000

Business term: 29 December 2000 to indefinite period

Business scope: Coal mining and sales; power generation; catering services; accommodation (limited to branch operations); production and sales of chemical products; import and export of general goods and technologies; general contracting for mining engineering construction; machinery manufacturing and maintenance; agricultural and forestry development; sales of mining products, hardware, electrical appliances, and construction materials; airline ticket sales agency; leasing of buildings, premises, and equipment; labour dispatch; mining consulting services; loading and unloading; transportation agency; general freight road transportation (excluding hazardous goods); road freight terminal operations; railway freight transportation; other auxiliary railway transportation activities; general freight storage; wholesale of petroleum and petroleum products; wholesale of non-metallic minerals and products; sales of steel and non-ferrous metals; general contracting for construction projects; property management services; staff training; healthcare services; heating services; (for projects requiring approval in accordance with the law, operations can only commence after approval from relevant authorities).

2. Shareholders, their shareholding ratios and equity changes

Xinjiang Energy's coal mining began with the Liudaowan Coal Mine in 1951. In 1979, based on six former state-owned local coal mines and small coal mines operated by the Xinjiang Production and Construction Corps, the Urumqi Mining Bureau was established.

On 24 February 2001, Urumqi Mining Bureau was restructured and reorganised into Xinjiang Urumqi Mining Group Co., Ltd.

On 4 August 2005, Shenhua Group restructured Xinjiang Urumqi Mining Group Co., Ltd. and established Shenhua Xinjiang Energy Co., Ltd.

On 28 November 2019, CHN Energy restructured and integrated Shenhua Xinjiang Energy Co., Ltd. and State Grid Xinjiang Electric Power Co., Ltd. to form CHN Energy Xinjiang Energy Co., Ltd.

On 26 August 2024, the company underwent a reform and restructuring into the CHN Energy Xinjiang Energy and Chemical Co., Ltd. (referred to as Xinjiang Energy) and Guoneng Xinjiang Electric Power New Energy Co., Ltd. (referred to as Xinjiang Electric Power). After this restructuring, the company's shareholding structure is as follows:

No.	Name of shareholder	Contribution amount (in RMB'0,000)	Shareholding (%)	Method of capital contribution
1	China Energy Investment Corporation Co., Ltd.	921,269.20	100.00	Currency
Total		921,269.20	100.00	/

As at the valuation benchmark date, Xinjiang Energy's shareholding structure has remained unchanged.

3.Ownership and management structure of the company

(1) Ownership structure

Xinjiang Energy has 18 subsidiaries, including 11 wholly-owned and controlled subsidiaries, and 7 equity-participation companies. Specific details are shown in the table below:

Unit: RMB'0,000

Total profits	139,953.60	80,289.53	17,077.13
Net profit	139,953.60	80,289.53	17,077.13

The financial statements of the appraised entity as of the valuation benchmark date and for the years 2024 and 2023 have been audited by Ernst & Young Hua Ming LLP , which expressed unqualified audit opinions.

5.Relationship between the client and the appraised entity

The clients for this appraisal are China Energy Investment Corporation Co., Ltd. and China Shenhua Energy Company Limited. The appraised entity, CHN Energy Xinjiang Energy Chemical Co., Ltd., is a wholly-owned subsidiary of China Energy Investment Corporation Co., Ltd., one of the clients. The second client is the intended purchaser of the appraised entity.

iv. Other users of the asset appraisal report as stipulated in the asset appraisal engagement contract

This asset appraisal report is only for use by the client, other users of the asset appraisal report as specified in the asset appraisal engagement contract, and users defined by national laws and regulations. It shall not be used or relied upon by any third party.

II. Appraisal Purpose

China Shenhua Energy Company Limited intends to issue shares and pay cash to acquire assets related to coal, pithead coal power, and other assets held by China Energy Investment Corporation Co., Ltd. To this end, the market value of the entire shareholders' equity held by China Energy Investment Corporation Co., Ltd. in CHN Energy Xinjiang Energy Chemical Co., Ltd. on the valuation benchmark date is appraised, providing a value reference for the above economic activities.

On 1 August 2025, China Energy Investment Corporation Limited convened the 18th Chairman's Special Meeting of 2025. The meeting reviewed and approved the

aforementioned matters, mandated the initiation of an assessment, and produced the "Minutes of the Chairman's Special Meeting."

III. Subject Asset and Appraisal Scope

i. Subject asset

The subject asset is the entire shareholders' equity value of the shareholders in CHN Energy Xinjiang Energy Chemical Co., Ltd.

ii. Appraisal scope

The appraisal scope includes all assets and liabilities of CHN Energy Xinjiang Energy Chemical Co., Ltd. As at the valuation benchmark date, the assets under the parent company's standard within the appraisal scope included current assets, long-term equity investments, fixed assets, construction in progress, intangible assets, long-term prepaid expenses, deferred tax assets, etc. The book value of total assets was RMB19,146,567,300; liabilities comprised current liabilities and non-current liabilities, with total liabilities having a book value of RMB13,279,028,700; the book value of net assets was RMB5,867,538,600. As of the valuation benchmark date, the appraisal scope is as follows:

Unit: RMB'0,000

Item		Book value
Current assets	1	669,281.34
Non-current assets	2	1,245,375.40
Of which: Long-term equity investments	3	668,275.86
Investment properties	4	0.00
Fixed assets	5	337,308.28
Construction in progress	6	30,258.64
Oil and gas assets	7	0.00
Intangible assets	8	181,541.12
Including: Land use right	9	8,468.35
Other non-current assets	10	27,991.49
Total assets	11	1,914,656.73
Current liabilities	12	1,014,452.44
Non-current liabilities	13	313,450.43
Total liabilities	14	1,327,902.87
Net assets	15	586,753.86

As at the valuation benchmark date, the consolidated book value of total assets was RMB30,245,781,100, the book value of total liabilities was RMB19,260,165,300, and the book value of shareholders' equity was RMB10,985,615,800, of which RMB9,491,294,800 represented the shareholders' equity attributable to the parent company.

The subject and scope of the engaged appraisal align with the subject asset and scope involved in the economic activities. As of the valuation benchmark date, the book value of the assets and liabilities within the appraisal scope has been audited by Ernst & Young Hua Ming LLP , which expressed an unqualified audit opinion.

iii. Main assets within the appraisal scope

1. Inventories

The inventories declared by the enterprise to be included in this appraisal scope consist of raw materials and finished products.

The raw materials mainly consist of production-related raw materials, spare parts, and cafeteria supplies, including A-grade coal - Xinneng purchased No. 4, chutes (1,200 × 1,200mm, Q235), general trough rollers (GP159-700-6306), etc.

2. Buildings and structures

The assets related to buildings and structures within the appraisal scope include the buildings, structures, and other auxiliary facilities held by subsidiaries of CHN Energy Xinjiang Energy Chemical Co., Ltd., including Wudong Coal Mine, Changji Mining Branch, Kashgar Sales Branch, Mechanical and Electrical Management Centre, Washing and Selection Centre, Material Supply Centre, Accounting Service Centre, Production Preparation Centre, Logistics Service Centre, and Fukang Huangzhu Hotel. The aforementioned buildings and structures were constructed between 1977 and 2025, with the main types of buildings and structures being frame-shear wall, frame, bent-frame, steel, brick-concrete, and mixed structures.

As at the valuation benchmark date, except for some buildings that have been demolished, await scrapping, have been disposed of, or have been handed over, the buildings and structures of various subsidiary units were under generally in normal condition with routine maintenance and management in place. The foundations of the principal buildings were stable, with no significant uneven settlement observed, and the joints of the main load-bearing components were secure, showing no signs of tilting, deformation, or cracking. The associated auxiliary facilities and equipment were functioning normally, with no abnormal damage detected.

3. Equipment assets

The equipment assets declared by the enterprise within the appraisal scope include machinery, vehicles, and electronic devices owned by subsidiaries of CHN Energy Xinjiang Energy Chemical Co., Ltd., including Wudong Coal Mine, Changji Mining Branch, Kashgar Sales Branch, Mechanical and Electrical Management Centre, Washing and Selection Centre, Material Supply Centre, Accounting Service Centre, Production Preparation Centre, Logistics Service Centre, and Fukang Huangzhu Hotel. The basic overview of the equipment assets is as follows:

The enterprise declared a total of 10,774 items of machinery and equipment purchased and put into use from 2005 to 2025 within the appraisal scope, including belt conveyors, scraper conveyors, box transformers, tunneling machines, hoists, crushers, and other coal mining and supporting equipment. As at the valuation benchmark date, except for some equipment awaiting scrapping or being idle, all equipment was in normal use.

The enterprise declared a total of 738 vehicles purchased and put into use from 2005 to 2025 within the appraisal scope, including buses, water trucks, mining flatbed trucks, and cargo trucks. As at the valuation benchmark date, except for some vehicles awaiting scrapping, all vehicles were in normal use.

The enterprise declared a total of 6,307 items of electronic equipment purchased and put into use from 2005 to 2025 within the appraisal scope, including various types of computers, printers, air conditioners, cameras, servers, etc. As at the valuation benchmark date, except for some equipment awaiting scrapping and being idle, all equipment was in normal use.

4. Construction in progress

The construction in progress within the appraisal scope includes civil engineering, equipment installation works, and capital investments under construction by the subsidiaries of CHN Energy Xinjiang Energy Chemical Co., Ltd., including Wudong Coal Mine, Changji Mining Branch, Tashkurgan Branch, Yarkant Branch, Mechanical and Electrical Management Centre, Washing and Selection Centre, Material Supply Centre, Accounting Service Centre, Production Preparation Centre, Logistics Service Centre, and Fukang Huangzhu Hotel.

The construction in progress consists of 48 items, with a book value of RMB257,592,136.94, impairment provision of RMB23,459.34, and a net book value of RMB257,568,677.60. The project contents mainly include raw coal feed yards and supporting projects, Wudong Coal Mine second-level extension project, ecological and environmental comprehensive governance project, Wudong Coal Mine + 300m level development extension project (Phase I), 200,000-ton coal storage and transportation base project in Yarkant County, and other ongoing projects in subsidiary companies. The progress of these construction projects is on track.

The construction of equipment includes eight items, with a book value of RMB44,124,943.57, and no impairment provision. The project contents mainly include key information infrastructure network security construction projects, Xinjiang Company washing and selection centre unmanned loading intelligent loading station service projects, and the intelligent mining project for Tunbao Coal Mine's integrated intelligent platform. The progress of the construction of the above equipment is on track.

The construction of pending investment projects includes two items, with a book value of RMB892,829.51. The expenses mainly include feasibility studies, design fees, and other preliminary costs.

5. Long-term equity investments

As at the valuation benchmark date, the company had 18 long-term equity investments, including those in 11 wholly-owned and controlled subsidiaries, and seven equity-participation companies. The details of the long-term equity investments are shown in the table below:

Unit: RMB'0,000

No.	Investee	Shareholding percentage	Investment amount	Book value	Status

7. Mining rights

The enterprise declared a total of 11 mining rights within the appraisal scope, including 6 mining rights and 5 exploration rights. Specific details are shown in the table below:

(1) Mining rights

Asset Appraisal Report on the Entire Shareholders' Equity of CHN Energy Xinjiang Energy Chemical Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

No.	Name of mining rights	Licence number	Mining right holder	Mining type	Production scale
1	Shenhua Xinjiang Energy Co., Ltd. Wudong Coal Mine	C1000002012051120124915	Shenhua Xinjiang Energy Company Limited	Coal	6 million tonnes per year
2	CHN Energy Xinjiang Energy Co., Ltd. Changji Tunbao Coal Mine	C6500002009121120054802	CHN Energy Xinjiang Energy Co., Ltd.	Coal	2.7 million tonnes per year
3	CHN Energy Xinjiang Energy Chemical Co., Ltd. Toksun County Heishan Open-pit Coal Mine	C650000201711111010145786	CHN Energy Xinjiang Energy Chemical Co., Ltd.	Coal	16 million tonnes per year
4	Xinjiang Shenhua Mining Co., Ltd. Hongshaquan No.1 Open-pit Coal Mine	C650000201711111010145789	CHN Energy Xinjiang Mining Co., Ltd.	Coal	30 million tonnes per year
5	Xinjiang Qitai County Xiheishan Mining Area Hongshaquan No.2 Open-pit Coal Mine	C650000202311111010156003	CHN Energy Xinjiang Mining Co., Ltd.	Coal	10 million tonnes per year
6	Guoneng Xinjiang Zhundong Energy Co., Ltd. Zhundong Open-pit Coal Mine	C650000201801111010145785	Guoneng Xinjiang Zhundong Energy Co., Ltd.	Coal	35 million tonnes per year

(2) Exploration rights

No.	Exploration right name	Licence number	Exploration right holder	Acquisition date	Expiration date
1	Exploration of Open Pit Mine No. 5 in Wucaiwan Mining Area, Zhundong, Xinjiang	Being renewed	CHN Energy Xinjiang Energy Chemical Co., Ltd.	Being renewed	Being renewed
2	Exploration of No. 4 Coalfield in Liuhuanggou Coal Mining Area, Changji City, Xinjiang	T650000200901101002431 1	CHN Energy Xinjiang Energy Co., Ltd.	2024/05	2026/05
3	Exploration of Jiangjunmiao Coal Mine in Qitai County, Xinjiang	T650000200907101003189 2	CHN Energy Xinjiang Mining Co., Ltd.	2023/11	2028/11
4	Exploration of No. 3 Mine in Wucaiwan Mining Area, Jimsar County, Zhundong Coalfield, Xinjiang	T650000200908101003351 7	Guoneng Xinjiang Zhundong Energy Co., Ltd.	2023/05	2026/07
5	Exploration of No. 2 Mine in Wucaiwan Mining Area, Jimsar County, Zhundong	T650000200908101003344 0	Guoneng Xinjiang Zhundong Energy Co., Ltd.	2023/05	2026/07

Asset Appraisal Report on the Entire Shareholders' Equity of CHN Energy Xinjiang Energy Chemical Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

No.	Exploration right name	Licence number	Exploration right holder	Acquisition date	Expiration date
	Coalfield, Xinjiang				

8. Patents and proprietary technologies

The enterprise declared a total of 531 patents and proprietary technologies within the appraisal scope, including 216 invention patents and 315 utility model patents. These include items such as safety flat car frames, devices for overhead personnel car steel rope replacement, and methods for point vertical water-conducting passage curtain interception in submerged aquifers. All of these patents were independently developed and have been applied in practice, and their annual patent fees have been paid on time. Detailed information can be found in the "Asset-based Approach Appraisal Details Table".

Regarding the jointly owned patents and patents whose registered owner's name has not yet been changed, the appraised entity has provided a statement and guarantees that these patents are either solely owned or co-owned with other companies, and there are no ownership disputes or potential disputes. For jointly owned patents, all parties have the right to apply them in their own production and operations. Therefore, the resulting income and costs are enjoyed and borne by each party.

9. Other intangible assets

(1) Externally purchased software

There are 45 items of externally purchased software, including UMC Unified Management Software (sw-umc-plat), ZW CAD Software V2017, Artificial Intelligence Middleware Software, and the Xinjiang Company Team Building Information Management System, among others. All of the above software has been purchased by the appraised entity and is in normal use.

(2) Software copyrights

The enterprise declared a total of 10 software copyrights within the appraisal scope, all of which have obtained certificates of rights. These copyrights are solely owned by the appraised entity, with the registered owner being CHN Energy Xinjiang Energy Co., Ltd. The software copyrights were all developed and obtained through self-development or outsourced engagement by the appraised entity. For detailed information, refer to the Asset-based Appraisal Details Sheet.

iv. Off-balance-sheet assets declared by the company

Except for software copyrights and patent assets, the enterprise has not declared any other off-balance-sheet assets.

v. Relevant assets referenced from other reports

The appraised value of the mining rights in this asset appraisal report was determined with refer-ence to the mining rights appraisal conclusion issued by China Enterprise Appraisals Co., Ltd. The referenced appraisal report is summarised as follows:

1) Shenhua Xinjiang Energy Co., Ltd. Wudong Coal Mine

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1060
Subject asset	Mining rights for Shenhua Xinjiang Energy Co., Ltd. Wudong Coal Mine
Valuation benchmark date	31 July 2025
Appraisal scope	The mining area and resource quantities within the scope of the mining rights as indicated

	in the mining licence
Appraisal methods	Discounted cash flow method

2) CHN Energy Xinjiang Energy Co., Ltd. Changji Tunbao Coal Mine

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1061
Subject asset	Mining rights for National Energy Group Xinjiang Energy Co., Ltd. Changji Tunbao Coal Mine
Valuation benchmark date	31 July 2025
Appraisal scope	The mining area and resource quantities within the scope of the mining rights as indicated in the mining licence
Appraisal methods	Discounted cash flow method

3) Guoneng Xinjiang Zhundong Energy Co., Ltd. Zhundong Open-pit Coal Mine

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1062
Subject asset	Mining rights for Guoneng Xinjiang Zhundong Energy Co., Ltd. Zhundong Open-pit Coal Mine
Valuation benchmark date	31 July 2025
Appraisal scope	The mining area and resource quantities within the scope of the mining rights as indicated in the mining licence
Appraisal methods	Discounted cash flow method

4) Xinjiang Shenhua Mining Co., Ltd. Hongshaquan No.1 Open-pit Coal Mine

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1063
Subject asset	Mining rights for CHN Energy Xinjiang Mining Co., Ltd. Hongshaquan No.1 Open-pit Coal Mine
Valuation benchmark date	31 July 2025
Appraisal scope	The mining area and resource quantities within the scope of the mining rights as indicated in the mining licence
Appraisal methods	Discounted cash flow method

5) Xinjiang Qitai County Xiheishan Mining Area Hongshaquan No.2 Open-pit Coal Mine

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1064
Subject asset	Mining rights for Xinjiang Qitai County Xiheishan Mining Area Hongshaquan No.2 Open-pit Coal Mine
Valuation benchmark date	31 July 2025
Appraisal scope	The mining area and resource quantities within the scope of the mining rights as indicated in the mining licence
Appraisal methods	Discounted cash flow method

6) CHN Energy Xinjiang Energy Chemical Co., Ltd. Toksun County Heishan Open-pit Coal Mine

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1065
Subject asset	Mining rights for CHN Energy Xinjiang Energy Chemical Co., Ltd. Toksun County Heishan Open-pit Coal Mine
Valuation benchmark date	31 July 2025
Appraisal scope	The mining area and resource quantities within the scope of the mining rights as indicated in the mining licence
Appraisal methods	Discounted cash flow method

IV. Value Type

Based on the appraisal purpose, market conditions, and the specific conditions of the subject asset, the value type of the subject asset is determined to be market value.

Market value refers to the estimated value of the subject asset in normal and fair transactions as of the valuation benchmark date, between a willing buyer and a willing seller, each acting rationally and without coercion.

V. Valuation benchmark date

The Valuation benchmark date for this report is 31 July 2025.

The Valuation benchmark date is determined by the client. The selection of the Valuation benchmark date mainly considers the realisation of economic activities and end-of-accounting-period factors. Asset appraisal provides a value reference for assets at a specific point in time. By choosing the end of the accounting period as the valuation benchmark date, it can comprehensively reflect the overall status of the subject assets. At the same time, adhering to the principles of ensuring the appraisal results effectively serve the appraisal purpose, accurately delineating the appraisal scope, conducting precise and efficient verification of assets, and rationally selecting the basis for appraisal, this date was selected as the valuation benchmark date.

VI. Appraisal Basis

i. Basis for economic activities

Minutes of the 18th Chairman’s Special Meeting of China Energy Investment Corporation Limited in 2025 (1 August 2025)

ii. Legal and regulatory basis

1. *Asset Appraisal Law of the People's Republic of China* (adopted at the 21st Session of the Standing Committee of the 12th National People's Congress on 2 July 2016);

2. *Company Law of the People's Republic of China* (second amendment at the 7th Session of the Standing Committee of the 14th National People's Congress on 29 December 2023);

3. *Civil Code of the People's Republic of China* (adopted at the 3rd Session of the 13th National People's Congress on 28 May 2020)

4.*Securities Law of the People's Republic of China* (second amendment at the 15th Session of the Standing Committee of the 13th National People's Congress on 28 December 2019)

5. *Law of the People's Republic of China on State-Owned Enterprise Assets* (adopted on 28 October 2008 at the 5th Session of the Standing Committee of the 11th National People's Congress);

6. *Vehicle Purchase Tax Law of the People's Republic of China* (approved at the 7th Session of the Standing Committee of the 13th National People's Congress on 29 December 2018);

7. *Law of the People’s Republic of China on Enterprise Income Tax* (second amendment at the 7th Session of the Standing Committee of the 13th National People's Congress on 29 December 2018);

8. *Law of the People's Republic of China on the Administration of Urban Real Estate* (third amendment at the 12th Session of the Standing Committee of the 13th National People's Congress on 26 August 2019);

9. *Land Administration Law of the People's Republic of China* (third amendment at the 12th Session of the Standing Committee of the 13th National People's Congress on 26 August 2019);

10. *Resource Tax Law of the People's Republic of China* (adopted at the 12th Session of the Standing Committee of the 13th National People's Congress on 26 August 2019)

11. *Patent Law of the People's Republic of China* (fourth amendment at the 22nd Session of the Standing Committee of the 13th National People's Congress on 17 October 2020);

12. *Copyright Law of the People's Republic of China* (third amendment at the 23rd Session of the Standing Committee of the 13th National People's Congress on 11 November 2020);

13. *Energy Law of the People's Republic of China* (adopted at the 12th Session of the Standing Committee of the 14th National People's Congress on 8 November 2024, effective from 1 January 2025)

14. *Mineral Resources Law of the People's Republic of China* (revised and promulgated on 8 November 2024);

15. *Implementation Regulations of the Enterprise Income Tax Law of the People's Republic of China* (amended by State Council Order No. 714 on 23 April 2019);

16. *Interim Regulations on the Supervision and Administration of State-owned Assets of Enterprises (*second amendment by State Council Order No. 378 on 2 March 2019);

17. *Interim Regulations of the People's Republic of China on City and Town Land Use Tax* (fourth amendment by State Council Order No. 17 on 2 March 2019);

18. *Interim Regulations on Value-Added Tax of the People's Republic of China* (second amendment by State Council Order No. 134 on 19 November 2017);

19. *Regulations on the Assets Appraisal and Management of State-owned Assets (*amended by State Council Order No. 91 on 29 November 2020);

20. I*nterim Measures for the Assessment and Management of Enterprises* (Order No. 12 of the SASAC);

21. *Measures for Supervision and Administration of State-owned Assets of Enterprises* (Order No. 32 of the SASAC and the Ministry of Finance);

VII. Appraisal methods

Income approach refers to various appraisal methods that capitalise or discount the expected income of the subject asset to determine its value.

Market approach refers to various appraisal methods that compare the subject asset with comparable references, using the market price of the comparable references as a basis to determine the value of the subject asset.

Asset-based approach refers to an appraisal method where the value of the subject asset is determined based on the balance sheet of the appraised entity or business on the valuation benchmark date, assessing the value of identifiable on-balance-sheet and off-balance-sheet assets and liabilities.

The methods selected for this appraisal are income approach and asset-based approach.

i. Reasons for the selection of appraisal methods

Reason for selecting the asset-based approach: As of the valuation benchmark date, the book value of the assets and liabilities within the appraisal scope has already been audited. Each asset and liability of the appraised entity can be identified. The identifiable assets and liabilities can each be individually assessed using an appropriate appraisal method, thus meeting the conditions for applying the asset-based approach.

Reason for selecting the income approach: The appraised entity has the foundation and conditions for ongoing operations, with standardised accounting practices, clear management, stable and defined business sources. The management has detailed plans for the current operations and future development of the company. The future expected income and operational risks can be reasonably predicted, meeting the conditions for using the income approach for appraisal.

Reason for not selecting the market approach: The market approach relies on the existence of an active public market with sufficient market data and comparable transaction cases. The appraised entity is a non-listed company. Listed companies in the same industry differ significantly from the appraised enterprise in terms of business structure, corporate scale, asset allocation and utilisation, operational stage, growth potential, operational risks, financial risks, and others. Furthermore, there were few comparable transactions, mergers, or acquisitions within the same industry near the valuation benchmark date. Reliable operational and financial data from comparable transactions are difficult to obtain, making it impossible to calculate appropriate value ratios. Therefore, the market approach was not adopted for this appraisal.

ii. Introduction to the appraisal methods

1. Income approach

The income approach used in this appraisal is the discounted cash flow (DCF) method to indirectly determine the entire shareholders' equity by evaluating the overall value of the enterprise. The overall value of the enterprise consists of the value of operating assets generated from normal business activities and the value of non-operational assets unrelated to normal business activities. For the determination of the value of operational assets, the Free Cash Flow Discount Model is employed, which uses the future free cash flows of the enterprise for several years as a basis, discounted at an appropriate discount rate and then summed up. The calculation model is as follows:

Entire shareholders' equity value = Enterprise overall value - Interest-bearing debt value

(1) Enterprise overall value

The enterprise overall value refers to the sum of the entire shareholders' equity and the interest-bearing debt value. According to the asset allocation and usage situation of the appraised entity, the formula for calculating the enterprise overall value is as follows:

Enterprise overall value = Operating asset value + Surplus asset value + Non-operating asset value - Non-operating liability value + Long-term equity investment value

1) Operating asset value

Operating assets are those related to the appraised entity's production and business operations, which are involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The calculation formula for operating asset value is as follows:

$$P = \sum_{i=1}^{n} \frac{F_i}{(1+r)^i} + \frac{F_n}{r \times (1+r)^n}$$

Wherein: P: The value of the enterprise's operating assets as of the valuation benchmark date;

F_i: The expected free cash flow of the enterprise in the i-th year after the valuation benchmark date;

F_n: The expected free cash flow of the enterprise at the end of the detailed forecast period;

r: The discount rate (weighted average cost of capital, WACC);

n: The detailed forecast period;

i: The i-th year of the detailed forecast period.

The free cash flow of the enterprise is calculated as follows:

Enterprise free cash flow = Earnings before interest and taxes (EBIT) + Depreciation and amortisation - capital expenditures - Increase in working capital

Of which, the discount rate (WACC) is calculated as follows:

$$WACC = K_e \times \frac{E}{E + D} + K_d \times (1 - t) \times \frac{D}{E + D}$$

Wherein: K_e: Cost of equity capital;

K_d: Cost of debt capital;

E: Market value of equity;

D: Market value of debt;

t: Tax rate.

The cost of equity capital is calculated using the Capital Asset Pricing Model (CAPM). Of which, the calculation formula is as follows:

$$K_e = r_f + MRP \times \beta_L + r_c$$

Where: r_f: Risk-free rate of return;

MRP: Market risk premium;

β_L: Systematic risk coefficient of equity;

r_c: Company-specific risk adjustment coefficient.

2) Surplus asset value

Surplus assets are those that exceed the enterprise's operational needs as of the valuation benchmark date, and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The appraised entity's surplus assets include cash. The surplus assets in this appraisal are appraised using the cost method.

3) Value of non-operating asset and liabilities

Non-operating assets and liabilities are those that are unrelated to the appraised entity's business operations and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The non-operational assets and liabilities of the appraised entity include accounts receivable, other receivables, inventories and fixed assets in abnormal condition, accounts payable, and other payables. The cost method was adopted for this appraisal.

4) Long-term equity investment value

Long-term equity investments refer to the external equity investments made by the enterprise as of the valuation benchmark date. The entire shareholders' equity of the invested entity, as confirmed using an appropriate appraisal method, is multiplied by the shareholding percentage to determine the long-term equity investment value.

(2) Interest-bearing debt value

Interest-bearing debt refers to liabilities that the appraised entity must pay interest on as of the valuation benchmark date.

2. Asset-based approach

(1) Current assets

1) Monetary funds, including bank deposits and other cash funds, were appraised at their verified book value through verification of bank statements, and bank confirmations.

2) For notes receivable, the appraisers reviewed the appraised entity's reference ledger for notes receivable, verifying each entry's details including the type, serial number, issuance date, face value, transaction contract number, and the names or entity designations of the payer, acceptor, and endorser, as well as maturity date. The verified book value was used as the appraised value.

3) For accounts receivable and other receivables, the appraisers conducted inquiries with the appraised entity regarding its sales credit policies, customer composition and creditworthiness, as well as the historical recovery of accounts receivable. Following the principle of materiality, the appraisers conducted confirmations for some of the accounts receivable and reviewed relevant contracts. Based on the verification of accounts receivable, the appraisers determined the appraised value based on the amount that is likely to be collected for each item. For amounts believed to be fully recoverable, the total receivables are used to calculate the appraised value. For amounts that are likely to be unrecoverable, the appraisers estimated the amount based on historical data and on-site investigations, considering factors such as the amount, overdue time, reasons for non-payment, the debtor's financial status, creditworthiness, and operational management. The appraisal value is then calculated after deducting the estimated risk loss. Simultaneously, the "Provision for Bad Debts" item on the balance sheet is considered as zero.

4) For prepayments, the appraisers conducted inquiries with the relevant personnel of the appraised entity to understand the reasons for the formation of the prepayments and the creditworthiness of the counterparties. Following the principle of materiality, the appraisers conducted confirmations for some of the prepayments and reviewed relevant contracts. Based on the verification of prepayments, the appraisers determined the value based on the goods or relevant rights that are likely to be collected for each item. For amounts believed to be fully recoverable, the total prepaid amounts are used to calculate the appraised value. For amounts that are likely to be unrecoverable, the appraisers estimated the goods or related rights that may not be recovered using historical data and on-site investigations. The appraised value is then calculated after deducting the estimated risk loss. Simultaneously, the "Provision for Bad Debts" item on the balance sheet is considered as zero.

5) Inventories

For raw materials, most of the raw materials were purchased close to the valuation benchmark date, and the book value mainly consists of material purchase costs, transportation, and miscellaneous expenses. The appraised value is determined by verifying the quantity of each type of raw material and the market price as of the valuation benchmark date, considering reasonable transportation costs and reasonable losses.

For finished products, the appraised entity uses actual cost accounting, including purchase costs, processing costs, and other costs. As of the valuation benchmark date , the finished products are normal sales items. The appraised value is determined based on the sales price at the valuation benchmark date, minus sales expenses, taxes and surcharges, and an appropriate amount of after-tax net profit. The specific appraisal calculation formula is as follows:

The appraised value of finished goods for normal sales = Quantity of finished goods × After-tax unit selling price × (1 - Sales tax and surcharge rate - Selling expense rate - Income tax rate - Net profit margin).

Under normal circumstances, a reasonable profit deduction rate of 0.5 is applied for normal sales finished products. The sales price for finished products is taken as the average recent sales price of the appraised entity as of the valuation benchmark date.

6) Other current assets. The appraisers investigated and understood the formation reasons of other current assets and reviewed the relevant evidence, contracts, and books. After verification, the book values of other current assets are used as the appraised values.

(2) Long-term equity investments

An overall appraisal was conducted for long-term equity investments in wholly-owned and controlling subsidiaries. The appraisers first appraise the entire shareholders' equity value of the investee, then multiply it by the shareholding percentage to determine the value of the part of the shareholder's equity. The appraisal methods used for the investees and the reasons for selecting the appraisal methods are detailed in the corresponding technical appraisal notes.

For non-controlling long-term equity investments, as there are no conditions for an overall appraisal, the appraised value was determined by the net assets as of the valuation benchmark date multiplied by the shareholding percentage.

(3) Buildings and structures assets

Based on the characteristics of the various types of building and structure assets, the appraised value type, data collection conditions, and other related factors, the cost method is primarily used for appraisal. The cost method calculation formula is as follows:

Appraised value= Replacement cost × Composite depreciation rate

A. Determination of replacement cost

Based on the characteristics, nature, and situation of the building and structure assets within the appraisal scope, the calculation formula for replacement cost in this appraisal is as follows:

Replacement cost = Construction and installation engineering cost + Pre-construction and other costs + Capital cost - Deductible VAT

a. Construction and installation engineering costs

For large, valuable, and important buildings, the construction and installation engineering costs are determined using the preliminary and final budget adjustment method, which uses the quantities in the building's final budget as a basis and calculates the construction and installation engineering costs based on local standards and relevant fee documents.

For general buildings, or when final budget data is incomplete or the building's value is small and the structure is simple, the analogy method or unit cost method is used to determine the construction and installation engineering costs.

b. Pre-construction and other costs

Pre-construction and other costs are calculated based on the engineering investment amount of the projects, in accordance with the fee standards set by the industry, national, or local government regulations.

c. Capital costs

Capital costs are calculated based on the sum of construction and installation engineering costs, pre-construction and other costs, using uniform capital investment over the reasonable construction period. The calculation formula of capital costs is as follows:

Capital costs = (Construction and installation engineering costs + Pre-construction and other costs) × Reasonable construction period × Interest rate × 1 / 2

Based on the scale and nature of the construction project in which the appraised buildings and structures are located and the relevant construction period quotas, the reasonable construction period and interest rate for the subsidiaries of CHN Energy Xinjiang Energy Chemical Co., Ltd. were determined by referring to the effective Loan Prime Rate (LPR) on the valuation benchmark date as published by the National Interbank Funding Centre authorised by the People's Bank of China.

d. Deductible VAT

According to relevant VAT documents, for those that qualify for VAT deduction, the replacement cost is reduced by the corresponding VAT.

2) Determination of composite depreciation rate

A. For important buildings (and structures), the economic service life, used lifespan, and on-site inspection of the structure, decoration, and auxiliary equipment are considered to determine the remaining useful life, which is then used to calculate the composite depreciation rate.

Composite depreciation rate = Remaining service life / (Remaining service life + Used lifespan) × 100%

For mining enterprises, the remaining service life of buildings is closely related to the mine's remaining service life. The remaining service life is determined based on the lower of the mine's remaining service life and the building's remaining economic service life.

B. For low-value buildings (and structures), the composite depreciation rate is mainly determined based on the economic service life. The calculation formula is as follows:

Composite depreciation rate = (Economic service life - used lifespan) / Economic

service life × 100%

For mining enterprises, the impact of the remaining service life of the mine should also be considered.

3) Determination of appraised value

Appraised value= Replacement cost × Composite depreciation rate

(4)Shaft engineering

Based on the characteristics of various shaft engineering projects, the appraised value type, data collection conditions, and other related factors, the cost method is primarily used for appraising shaft engineering projects. The cost method calculation formula is as follows:

Appraised value = Full replacement value × Composite depreciation rate

A. Determination of full replacement value

Replacement cost = Engineering cost + Pre-construction and other costs + Capital costs - Deductible input tax

a. Engineering cost

The comprehensive cost is calculated based on physical engineering quantities and the current coal mining quotas and fee standards.

For large-scale, high-value, and critical shaft engineering project, the comprehensive cost is calculated based on physical engineering quantities and the current coal mining quotas and fee standards.

Engineering cost = Base price of engineering quotas + Measure fees + Company management fees + Profits + Regulatory fees + Other project fees + Regional price differences

Where:

Base price of engineering quotas - The base price is calculated based on the shaft engineering's lifting method, lifting depth, tunnel cross-section, support method, materials, and thickness. *The Consumption Quotas for Coal Mining Shaft Engineering (2015, After-tax Base Price)* and *Comprehensive Quotas for Auxiliary Costs in Coal Mining Shaft Engineering (2015, After-tax Base Price)* are applied. This includes wages, material consumption, machine usage fees, etc., with adjustments made according to relevant regulations;

Other fees — determined in accordance with the Notice issued by the China Coal Construction Association on *Adjustment of Pricing Basis for Coal Construction Projects under the VAT Reform for the Construction Industry* (ZH.M.J.X.Z. [2016] No. 46) and the *Notice on Adjusting the Value-Added Tax Rate for Coal Construction Engineering Pricing Basis* (ZH.M.J.X.Z. [2019] No. 37), together with the *Notification on Release of the Consumption Quotas for Coal Mining Shaft Engineering (2015, After-tax Base Price)* (ZH.M.J.X.Z. [2016] *No.* 115) and the *Supplementary Provisions on the Implementation of the Valuation Standards for Coal-Construction Projects* (ZH.M.J.X.Z. [2016] No. 116), and calculated in combination with the actual construction conditions of the mine.

Labour, materials, and equipment price differences – Adjusted according to the *Notice on Adjusting Coal Construction Engineering Quotation Standards (2015 Base Price)*

for Labour Unit Prices and Related Regulations (ZH.M.J.X.Z. [2021] No. 125), *Urumqi City Construction Engineering Material Information Price List* (Q2 2025), and materials price information provided by the enterprise for the valuation benchmark date.

For general shaft engineering projects, or when final settlement data is incomplete, or when the value is small and the structure is simple, the Analogy Method is used to determine the construction cost.

b. Preliminary and Other Costs

Preliminary and other costs include construction unit management fees, engineering supervision fees, surveying and design fees, environmental evaluation fees, and soil and water conservation consulting service fees. These costs are calculated based on the engineering construction investment amount, according to industry, national, or local government fee standards. Preliminary and Other Costs Calculation Formula:

Preliminary and other costs = Engineering cost × Fee rate

c. Capital costs

Financing costs are calculated based on the appraised entity's reasonable construction period, referencing the LPR published by the People's Bank of China on the valuation benchmark date, and considering the appraised entity's loan interest rate adjustments. The total sum of engineering costs, preliminary and other fees, etc., is used as the base for calculating the financing costs over the uniform capital investment. The reasonable construction period for Wudong Coal Mine is 4 years, and the reasonable construction period for Tunbao Coal Mine (Changji Branch) is 3 years. The calculation formula of capital costs is as follows:

Financing cost = (Engineering cost + Preliminary and other fees) × Reasonable construction period × Interest rate / 2

d. Deductible input tax

According to relevant VAT documents, for those that qualify for VAT deduction, the replacement cost is reduced by the corresponding VAT.

B. Determination of composite depreciation rate

Shaft engineering in coal mines differs from surface buildings in that it is a special structure attached to coal resources. Its economic lifespan is closely linked to the coal reserves that can be mined. As coal resources are depleted, the economic lifespan shortens, and when coal resources are exhausted, the economic lifespan ends.

Underground engineering has a complex geological structure, many unpredictable factors, and poor construction conditions. The stability of the tunnels depends on their location, rock layer properties, and mining methods. The service life of each type of tunnel is determined by the coal reserves in the service area.

Therefore, before determining the depreciation rate, the appraisers first reviewed geological reports, mine design data, and understood the position, rock properties, support methods, geological structures, and the impact of mining on the tunnels. They then visited representative tunnels underground to inspect the support conditions and maintenance status and consulted with on-site engineering personnel to verify and review the maintenance records and methods. Finally, based on the coal reserves, remaining reserves, recoverable reserves, and production capacity provided by the geological survey department, the remaining service life of each tunnel was calculated,

and the composite depreciation rate was determined. The calculation formula is as follows:

Composite depreciation rate = Remaining service life / (Service life + Remaining service life) × 100%

C. Appraised value

Appraised value = Full replacement value × Composite depreciation rate

(5) Equipment assets

Equipment assets include machinery, vehicles, and electronic devices. Based on the nature of this project and the characteristics of the equipment assets within the appraisal scope, for some older electronic devices (e.g., computers) and vehicles, where there is an active second-hand market, the appraised value is based on the second-hand or scrap value of similar equipment. For other equipment, which does not have independent profit-generating ability and where there are very few similar transaction examples, it is not suitable to apply the income approach or market approach for appraisal. Therefore, the cost method is used for these equipment appraisals. The cost method calculation formula is as follows:

Appraised value= Replacement cost × Depreciation rate

A. Replacement cost

Based on the characteristics and nature of the equipment within this appraisal scope, as well as the circumstances of the appraised entity, the calculation methods for the replacement costs of various types of equipment in this appraisal are as follows.

a. Machinery and equipment

For equipment that requires installation, the replacement cost generally includes: Equipment purchase price, transport and handling fees, installation engineering fees, pre-construction and other costs, and the capital cost. For equipment that does not require installation, the replacement cost generally includes: Equipment purchase price and transport and handling fees. The calculation formula is as follows:

Equipment requiring installation replacement cost = Equipment purchase price + Transport and handling fees + Installation engineering fees + Pre-construction and other costs + Capital costs - Deductible VAT

Equipment not requiring installation replacement cost = Equipment purchase price + Transport and handling costs - Deductible VAT

I. Equipment purchase price

For major process equipment, the purchase price is primarily determined by consulting the market price as at the Valuation benchmark date or referencing the contract price of similar equipment at the valuation benchmark date. For small equipment, the purchase price is determined by checking the market price information for the valuation benchmark date. For equipment with no market price information, the purchase price is determined by referencing the purchase price for similar equipment.

II. Transport and handling fees

If transport and handling fees are not included in the equipment purchase price, they are determined by referring to standard cost indicators from resources like the *Asset Appraisal Common Data and Parameters Handbook* and the *Mechanical Industry*

Construction Project Budgeting Method and Indices, taking into account factors such as transportation distance, weight, and volume.

III. Installation engineering fees

For equipment that requires installation, the installation engineering fees are estimated using the unit price method, referring to similar equipment installation project budgets (preliminary or final) and other engineering documents, including the *Coal Mining Construction Project Cost Quotas* (NB/T 51063-2016) and other relevant standards, as well as recent local pricing information. Alternatively, the *Asset Appraisal Common Methods and Parameters Handbook* and the *Mechanical Industry Construction Project Budgeting Method and Indices* are used, combined with the scale and nature of the equipment installation work to determine the installation fee rate. The installation engineering fee calculation formula is as follows:

Installation engineering fee = Equipment purchase price × Installation engineering fee rate

For equipment where the purchase price includes installation engineering costs, or for equipment that does not require installation, installation engineering fees are not included.

For equipment foundations that are inseparable from buildings or separately listed as independent foundations, these are appraised within the corresponding buildings and structures, and installation engineering fees are not recalculated.

IV. Pre-construction and other costs

Pre-construction and other costs include project construction management fees, bidding agency fees, environmental impact assessment fees, surveying and design fees, engineering supervision fees, joint trial operation fees, and others. The rates for these expenses are determined by investigating the average cost levels of similar projects and referring to the *Standards for Other Expenses of Coal Mining Construction Project* (NBT 51064-2016) and other related standards, as well as the specific conditions of this project.

V. Capital costs

Capital costs are calculated based on the normal construction period of the project where the equipment is located, using the Loan Prime Rate (LPR) in effect on the valuation benchmark date. The total of the equipment purchase costs, transport and handling fees, installation fees, pre-construction and other costs is used as the base, with the capital costs calculated based on uniform capital investment. The calculation formula of capital costs is as follows:

Capital costs = (Equipment purchase price + Transport and handling costs + Installation engineering fees + Pre-construction and other costs) × Reasonable construction period × Annual loan interest rate / 2

VI. Deductible VAT

According to the regulations in "C.SH [2008] No. 170", "C.SH. [2016] No. 36", "C.SH. [2018] No. 32", and the "Announcement No. 39 in 2019 of the Ministry of Finance, the State Taxation Administration and the General Administration of Customs", the input VAT includes VAT on the equipment purchase price (tax rate 13%), VAT on transport and handling fees (tax rate 9%), and VAT on pre-construction and other costs (tax rate 6%).

b. Vehicles

For vehicles, the replacement cost is determined by the market price on the valuation benchmark date, adding the vehicle purchase tax and other reasonable costs (such as licence fees). The calculation formula is as follows:

Replacement cost = Vehicle purchase price + Vehicle purchase tax + Licence fees and other costs - Deductible VAT

Where:

Vehicle purchase tax = Vehicle purchase cost / (1 + 13%) × 10%.

The vehicle purchase price is mainly determined by consulting local dealers or checking online for market prices; vehicle purchase tax is determined according to the *Vehicle Purchase Tax Law of the People's Republic of China*; licence fees and other costs are determined based on local administrative fee standards and actual vehicle expenses.

c. Electronic equipment

For electronic equipment that requires installation, the appraisal is conducted using the same method as for machinery. For other electronic equipment that does not require installation, the replacement cost is determined based on the market purchase price on the valuation benchmark date.

2) Determination of composite depreciation rate

A. For specialised and general machinery, the depreciation rate is primarily determined based on the equipment’s economic service life, used lifespan, and on-site inspections of the equipment’s condition and technical status. The remaining service life is then calculated, and the composite depreciation rate is determined using the following formula:

Composite depreciation rate = Remaining service life / (Remaining service life + Used lifespan) × 100%

B. For electronic equipment, office furniture, and other devices, the composite depreciation rate was mainly determined based on their economic service life and the results of on-site inspections. The calculation formula is as follows:

Age-based depreciation rate = (Economic service life - used lifespan) / Economic service life × 100%

Composite depreciation rate = Age-based depreciation rate × Adjustment coefficient

C. For vehicles, according to the *Standard for Mandatory Scrapping of Motor Vehicles* (Order No. 12 of 2012 of Ministry of Commerce, National Development and Reform Commission, Ministry of Public Security, Ministry of Environmental Protection), the theoretical depreciation rate was determined using either vehicle mileage or service life, based on the lower of the two methods. For vehicles without a prescribed service life, the remaining service life method was used. Adjustments were made based on on-site inspection results. The calculation formula is as follows:

Composite depreciation rate = Depreciation rate × Adjustment coefficient

3) Determination of the appraised value

Appraised value= Replacement cost × Composite depreciation rate

(6) Construction in progress

Based on the characteristics of construction in progress, the appraised value type, and data collection, the cost method was adopted for the appraisal.

1) Completed projects

For projects where the main structure is already listed as fixed assets, they are incorporated into the main appraisal. Other completed projects are appraised according to the fixed asset appraisal method.

2) Unfinished projects

For ongoing projects that started within six months of the valuation benchmark date, due to minor price changes, the appraisal is based on the book value of the ongoing construction after verification, and the residual value after deducting unreasonable expenses is used as the appraised value.

For ongoing projects that started more than six months before the valuation benchmark date, if the book value does not include capital costs, the capital costs are added based on the reasonable construction period. If the book value differs significantly from the price level on the valuation benchmark date, the construction costs are adjusted to the Valuation benchmark date price level.

3) Pure expense type ongoing projects

Pure expense type ongoing projects have no physical entity. After verifying that the payments made are necessary for future projects or have actual value to the future owners, and confirming that there is no duplicate valuation with related asset projects, the book value after verification is used as the appraised value. Otherwise, the value is treated as zero.

(7) Land use rights assets

According to the requirements of the *Asset Appraisal Practice Standards - Real Estate*, the main appraisal methods for land use rights include the market approach, income approach, hypothetical development method, cost method, and benchmark land price method. The appropriate appraisal method is selected based on the appraisal purpose, subject asset, value type, data collection conditions, and the applicability of the above basic appraisal methods.

This appraisal uses the market comparison method, cost method, and benchmark land price method to appraise the value of the land use rights.

1) Market comparison method

The market comparison method refers to the comparison of the subject asset with similar land transaction examples under the same market conditions, using the substitution principle. Adjustments are made for differences in transaction conditions, transaction dates, regional factors, individual factors, floor area ratio, remaining useful life, and other relevant aspects between the two. The method used to determine the price of the subject asset on the valuation benchmark date. The basic formula for the Market Comparison Method is as follows:

$P = PB \times A \times B \times C \times D \times E$

Wherein: P: appraised value of the subject asset;

PB: Price of the comparable transaction;

A: Transaction situation index for the appraised land parcel / transaction situation index

for comparative example land parcels;

B: Land price index on the Valuation benchmark date for the appraised land parcel / land price index on the transaction date for comparative example land parcels;

C: Regional factors condition index for the appraised land parcel / regional factors condition index for comparative example land parcels;

D: Individual factors condition index for the appraised land parcel / individual factors condition index for comparative example land parcels;

E: Duration adjustment index of the subject asset / Duration adjustment index of the comparable

2) Cost approaching method

The basic idea of the cost approaching method is to treat all investments in land, including land acquisition costs and infrastructure development costs, as the "basic cost." Using economic principles and the investment theory of equal return on equal investment, the "basic cost" is added to the profit and interest that should be generated by such an investment, forming the base part of the land price. Additionally, the required return on land ownership is included, and the land price is derived. The basic formula for the cost approaching method is:

Basic formula: $V = (E_a+E_d + T+R_1 + R_2+R_3)x(1+K_1)$

Where: V = Land price

E_a = Land acquisition cost

E_d = Land development cost

T = Taxes

R_1 = Interest

R_2 = Profit

R_3 = Land appreciation

K_1 = Regional and individual factors adjustment

3) Benchmark land price method

The benchmark land price adjustment method uses urban benchmark land prices and benchmark land price adjustment tables to assess the value of land. According to the principle of substitution, the regional and individual conditions of the subject asset are compared with the average conditions of the region, and the corresponding adjustment coefficients are selected from the coefficient adjustment table to modify the benchmark land price. This method determines the value of the subject asset on the valuation benchmark date.

The calculation formula for the Benchmark Land Price Adjustment Method is as follows:

$V = V1 \times (1 \pm \sum K) \times Kr \times Km \times Kq \times Kk$

The formula is:

V — The adjusted land price of the appraised land;

V1 — The benchmark land price of land with the same usage in the region where the appraised land is located;

∑K — The sum of the regional factors and individual factors adjustment coefficients for the appraised land;

Km — The usage period adjustment coefficient;

Kq — The date adjustment coefficient;

Kr — The floor area ratio adjustment coefficient;

Kk — The land development degree adjustment coefficient.

(8) Mining rights

1) For mining rights, China Energy Investment Corporation Co., Ltd. and China Shenhua Energy Company Limited entrusted China Enterprise Appraisals Co., Ltd. to conduct independent appraisals; the mining rights appraisals in this asset appraisal report reference the appraisal conclusions issued by China Enterprise Appraisals Co., Ltd.

2) For exploration rights, due to the inability to obtain geological survey, preliminary design, mine area general plan, formal feasibility report, and other documents required for mining rights appraisal, it is not possible to model and calculate the market value of the exploration rights as of the Valuation benchmark date according to mining rights appraisal standards and theories. Therefore, the related costs for exploration rights are retained based on the audited book value.

3) Mining rights usage fees

Some mining rights holders collect “mining rights usage fees” by granting mining rights to subsidiaries for extraction and operation.

This appraisal does not consider projected future cash flows from mining rights at the rights holders’ level, assigning a valuation of zero. Instead, it calculates the mining rights usage fee income solely based on the unit tonnage fee charged and expected production volume. After deducting applicable income tax expenses, the appraisal value of the “mining rights usage fees” is calculated by discounting using the discount rate adopted for the mining rights appraisal.

The operating rights holder enjoys the mining and operating income. Therefore, when considering the projected future cash flows derived from mining rights at the level of the actual operator, the intangible asset - mining rights appraisal for the target company is summarised using the mining rights appraisal report’s appraisal conclusion. Concurrently, the net value (negative value) of the “mining rights usage fees” payable by the actual operator is listed.

(9) Patent rights assets

As the market for technical intangible assets in China is still in its early stages, collecting relevant fair transaction data is relatively difficult. Therefore, the market approach is not operable for this appraisal;

As the patent rights owned by the appraised entity were verified as being developed in the production process, and some patent rights have been held for a long time without being used in relevant production operations, the income approach is not operable in this appraisal;

As a result, the cost method was considered in this appraisal. The appraisal mainly considered the patent replacement cost, which includes application fees, printing fees, patent registration, printing, and substantial review fees, etc.

(10) Other intangible assets

Based on the characteristics of other intangible assets, the appraised value type, data collection conditions, and other related factors, the market approach is used for appraisal as follows: 1) For software in normal use, since most software was not recently purchased, this market inquiry serves as the software's appraisal; 2) For software that has stopped being used, after verifying with the enterprise that the software has no use value, the appraised value is zero; 3) For software copyrights, the appraisal is based on the related agency fees and registration fees incurred during the software copyright application process; 4) For purchased capacity indicators that have already been appraised within mining rights, the appraised value is confirmed as zero in this appraisal.

(11) Long-term deferred expenses

The appraisers investigated the reasons for the long-term deferred expenses and reviewed the accounting vouchers for the long-term deferred expenses. After verification, the original amount of the long-term deferred expenses was found to be true and accurate, and the amortisation balance was correct. The long-term deferred expenses can still provide corresponding rights or assets during the remaining benefit period, and the appraisal value is determined based on the remaining balance to be amortised over the remaining benefit period.

(12) Other non-current assets

The appraisers investigated the reasons for the occurrence of other non-current assets and reviewed the relevant contracts and accounting vouchers. Other non-current assets are valued at the verified book value.

(13) Liabilities

The liabilities of CHN Energy Xinjiang Energy Chemical Co., Ltd. include accounts payable, advance receipts, contract liabilities, taxes payable, other payables, non-current liabilities, other current liabilities, and non-current liabilities. The appraisers first checked the consistency between the subsidiary accounts and the general ledger, and examined the detailed items. They also sampled relevant accounting vouchers and documents to confirm the accuracy of the debt book values. For current and non-current liabilities, the appraised values are determined based on the actual liabilities borne by the company as verified.

VIII. Implementation Process and Information of the Appraisal Procedure

The appraisers carried out the appraisal of the assets involved in the subject asset from 9 August 2025 to 16 December 2025. The main appraisal procedures and process are as follows:

i. Acceptance of engagement

On 9 August 2025, the client and us reached an agreement on the basic matters of the appraisal, including the appraisal purpose, the subject asset, the appraisal scope, the valuation benchmark date, and the rights and obligations of each party. We then negotiated with the client and developed the corresponding appraisal plan.

ii. Preliminary preparation

After accepting the engagement, the project team, based on the appraisal purpose, the characteristics of the subject asset, and the time plan, formulated a specific appraisal work plan and formed the appraisal team. Simultaneously, the team drafted a list of required materials and appraisal forms based on the actual needs of the project.

iii. On-site investigation

The appraisers conducted the necessary asset and liability verification of the subject asset from 15 August 2025, to 31 October 2025, and conducted the necessary investigation into the operating and management conditions of the appraised entity.

1. Asset verification

(1) Guiding the appraised entity to complete forms and prepare materials to be provided to the asset appraisal institution

The appraisers guided the financial and asset management personnel of the appraised entity to carefully and accurately complete the asset information based on the "Assets Appraisal Details Sheet" and its requirements, the material checklist, etc., after their own inventory. They also collected and prepared property ownership certificates and documents reflecting performance, condition, economic, and technical indicators of the assets.

(2) Preliminary review and improvement of the Assets Appraisal Details Sheet submitted by the appraised entity

The appraisers reviewed the relevant documents, understood the detailed status of the assets included in the appraisal scope, and then carefully reviewed the "Assets Appraisal Details Sheet" to check for incomplete or incorrect entries, unclear asset items, and other issues. Based on experience and the gathered information, the appraisers ensured the accuracy of the sheet and provided feedback to the appraised entity to improve them.

(3) On-site inspection

Based on the type, quantity, and distribution of assets included in the appraisal scope, the appraisers, with the cooperation of the relevant personnel of the appraised entity, conducted on-site inspections in accordance with the relevant provisions of the asset appraisal standards. Different inspection methods were applied depending on the nature and characteristics of the various assets.

(4) Supplementing, modifying, and improving the Assets Appraisal Details Sheet

Based on the results of the on-site inspection and after thorough communication with the relevant personnel of the appraised entity, the appraisers further refined the "Assets Appraisal Details Sheet" to ensure consistency between the accounts, sheet, and actual assets.

(5) Verification of ownership certificate documents

The appraisers verified the ownership proof documents for the assets within the appraisal scope, including buildings, vehicles, land use rights, mining rights, and other intangible assets. In cases where ownership information was incomplete or unclear, the appraisers requested the enterprise to verify or provide relevant ownership clarification documents.

2. Due diligence

To fully understand the operational and management status of the appraised entity and the risks it faces, the appraisers conducted necessary due diligence. The main contents of the due diligence were as follows:

(1) The history of the appraised entity, its major shareholders and their shareholding ratios, and the necessary ownership and management structure;

(2) The asset, financial, and operational management status of the appraised entity;

(3) The business plan, development plan, and financial forecast information of the appraised entity;

(4) Previous appraisals and transactions related to the subject asset and appraised entity;

(5) Macro and regional economic factors affecting the production and operation of the appraised entity;

(6) The development status and prospects of the industry in which the appraised entity operates;

(7) Other relevant information.

iv. Data collection

The appraisers collected appraisal materials according to the specifics of the appraisal project, including data independently obtained from markets and other channels, data acquired from the client and other relevant parties, and data from government departments, professional institutions, and other relevant bodies. They then analysed, summarised, and organised the collected materials to form the basis for estimation.

v. Preliminary estimation

Based on the specific conditions of the various assets, the appraisers selected the appropriate formulas and parameters according to the chosen appraisal methods, performing analysis, calculations, and judgments to form preliminary appraisal conclusions. The project leader summarised the preliminary conclusions for each asset appraisal and drafted the preliminary asset appraisal report.

vi. Internal review

According to our company’s appraisal business process management regulations, the project leader submitted the preliminary asset appraisal report for internal review after completion. After the internal review, the appraisers communicated with the client or other relevant parties, as agreed, on the contents of the asset appraisal report, ensuring that the independence of the appraisal conclusions was maintained. After completing the above appraisal procedures, the formal asset appraisal report was issued and submitted.

IX. Appraisal Assumptions

The assumptions for the analysis and estimates in this asset appraisal report are as follows:

i. It is assumed that all appraisal targets are in the process of being traded, and the appraisers simulate the market based on the transaction conditions of the appraised assets;

ii. It is assumed that for assets traded in the market, or assets to be traded in the market, both parties in the transaction have equal standing and ample opportunity and time to access market information. The transactions are voluntary and rational, and the parties can make rational judgments about the asset's function, purpose, and transaction price;

iii. It is assumed that the appraised assets will continue to be used for their current purposes and in their current manner throughout the remaining useful life of the mine;

iv. It is assumed that there will be no significant changes to the relevant national laws, regulations, and policies or the macroeconomic situation, and that the political, economic, and social environment in the regions of the parties involved in the transaction will not change significantly;

v. Given the actual status of the assets on the valuation benchmark date, it is assumed that the company will continue operations throughout the remaining useful life of the mine;

vi. It is assumed that there will be no significant changes in the interest rates, tax bases, tax rates, policy-based collection fees, or other related factors affecting the appraised entity after the valuation benchmark date;

vii. It is assumed that the management of the appraised entity after the Valuation benchmark date will remain responsible and stable, with the ability to perform their duties;

viii. Unless otherwise stated, it is assumed that the company fully complies with all relevant laws and regulations;

ix. It is assumed that after the valuation benchmark date , there will be no force majeure or unforeseen factors that cause significant adverse effects on the appraised entity;

x.It is assumed that after the valuation benchmark date, the accounting policies used by the appraised entity and those used to prepare this asset appraisal report will remain consistent in significant aspects;

xi. It is assumed that after the valuation benchmark date , the scope and methods of the appraised entity's operations will remain the same, based on the current management practices and level;

xii. It is assumed that after the valuation benchmark date, the appraised entity's cash inflows and cash outflows will be at an average rate;

xiii. As at the valuation benchmark date, the subsidiaries of the appraised entity enjoy preferential enterprise income tax policies under the Western Development Programme, with corporate income tax levied at a rate of 15% from 1 January 2021 to 31 December 2030. This appraisal assumes that after the preferential enterprise income tax policy for the Western Development expires, a 25% tax rate will be applied;

xiv. It is assumed that after the valuation benchmark date, the appraised entity's products or services will maintain their current market competitiveness;

xv. It is assumed that the mineral resources reserves reviewed within the mining licence will form the basis for the mining rights, and that the mining licence can be smoothly renewed in the future;

xvi. It was assumed that the production and sales of commercial coal in future years would achieve a balance between production and sales;

xvii. It was assumed that during the appraisal calculation period, the unit cost for environmental restoration and land reclamation would be equal to the extracted and spent amounts.

xviii. It is assumed that starting from 2034, Shenhua Xinjiang Energy Company Limited Wudong Coal Mine will begin to pay mining rights transfer income annually in accordance with the provisions of the *Notice on Printing and Distributing the Mineral Rights Transfer Income Collection Method* (C.Z. [2023] No. 10) issued by the Ministry of Finance, Ministry of Natural Resources, and State Taxation Administration.

It is assumed that starting from 2040, CHN Energy Xinjiang Energy Co., Ltd. Changji Tunbao Coal Mine will begin to pay mining rights transfer income annually in accordance with the provisions of the *Notice on Printing and Distributing the Mineral Rights Transfer Income Collection Method* (C.Z. [2023] No. 10) issued by the Ministry of Finance, Ministry of Natural Resources, and State Taxation Administration.

It is assumed that starting from 2036, CHN Energy Xinjiang Energy Chemical Co., Ltd. Toksun County Heishan Open-pit Coal Mine will begin to pay mining rights transfer income annually in accordance with the provisions of the *Notice on Printing and Distributing the Mineral Rights Transfer Income Collection Method* (C. Z. [2023] No. 10) issued by the Ministry of Finance, Ministry of Natural Resources, and State Taxation Administration.

It is assumed that starting from 2032, Xinjiang Shenhua Mining Co., Ltd Hongshaquan No.1 Open-pit Coal Mine will begin to pay mining rights transfer income annually in accordance with the provisions of the *Notice on Printing and Distributing the Mineral Rights Transfer Income Collection Method* (C.Z. [2023] No. 10) issued by the Ministry of Finance, Ministry of Natural Resources, and State Taxation Administration.

It is assumed that starting from 2028, Xinjiang Qitai County Xiheishan Mining Area Hongshaquan No.2 Open-pit Coal Mine will begin to pay mining rights transfer income annually in accordance with the provisions of the *Notice on Printing and Distributing the Mineral Rights Transfer Income Collection Method* (C. Z. [2023] No. 10) issued by the Ministry of Finance, Ministry of Natural Resources, and State Taxation Administration.

It is assumed that starting from 2041, Guoneng Xinjiang Zhundong Energy Co., Ltd. Zhundong Open-pit Coal Mine will begin to pay mining rights transfer income annually in accordance with the provisions of the Notice on Printing and Distributing the Mineral Rights Transfer Income Collection Method (C.Z. [2023] No. 10) issued by the Ministry of Finance, Ministry of Natural Resources, and State Taxation Administration.

xix. It is assumed that the Xinjiang Shenhua Mining Company Limited Hongshaquan No. 1 Open-Pit Coal Mine held by the subsidiary CHN Energy Xinjiang Mining Co., Ltd., will obtain approval for the capacity expansion in 2026 and will commence production at an annual capacity of 31 million tonnes from 2027.

xx. It is assumed that the Zhundong Open-pit Coal Mine held by the subsidiary Guoneng Xinjiang Zhundong Energy Co., Ltd. will obtain approval for the expansion and capacity increase of the Zhundong Open-Pit Coal Mine in 2027, and will commence production at an annual capacity of 35 million tonnes in the future.

xxi. It is assumed that CHN Energy Xinjiang Energy Chemical Co., Ltd. will continue to charge Guoneng Xinjiang Toksun Energy Co., Ltd. mining rights usage fees at the current level, and CHN Energy Xinjiang Mining Co., Ltd. will charge Guoneng

Xinjiang Hongshaquan Energy Co., Ltd. and Guoneng Xinjiang Mining Hongshaquan No. 2 Coal Mine Co., Ltd. mining rights usage fees at the current level.

The conclusions of this asset appraisal report are valid under the above assumptions as of the valuation benchmark date. If there are significant changes in these assumptions, the signing asset appraisers and this asset appraisal agency will not bear responsibility for deriving different appraisal conclusions due to changes in assumptions.

X. Appraisal conclusion

i. Income approach appraisal results

As at the valuation benchmark date, the book value of total assets under the parent company's standard of CHN Energy Xinjiang Energy Chemical Co., Ltd. was RMB19,146,567,300, with total liabilities having a book value of RMB13,279,028,700, and book value of net assets was RMB5,867,538,600. Under the income approach, the entire shareholders' equity value of shareholders was RMB12,049,738,200, with an increase of RMB6,182,199,600, resulting in an increase rate of 105.36%.

As at the valuation benchmark date, the consolidated book value of total assets of CHN Energy Xinjiang Energy Chemical Co., Ltd. was RMB30,245,781,100, the book value of total liabilities was RMB19,260,165,300, and the book value of shareholders' equity was RMB10,985,615,800, of which RMB9,491,294,800 represented the shareholders' equity attributable to the parent company, with an appraised value of RMB12,049,738,200. The increase in value amounted to RMB2,558,443,400, with an appreciation rate of 26.96%.

ii. Asset-Based Approach Appraisal Results

As at the valuation benchmark date, the book value of the total assets of CHN Energy Xinjiang Energy Chemical Co., Ltd. under the parent company's standard was RMB19,146,567,300, with an appraised value of RMB25,283,070,600, an increase of RMB6,136,503,300, and an appreciation rate of 32.05%. The book value of total liabilities was RMB13,279,028,700, with an appraised value of RMB13,161,643,000, a decrease of RMB117,385,700, and a depreciation rate of 0.88%. The book value of net assets was RMB5,867,538,600, with an appraised value of RMB12,121,427,600, an increase of RMB6,253,889,000, and an appreciation rate of 106.58%.

The detailed results of the asset-based approach are shown in the following summary table:

Summary of Appraisal Results from Asset-Based Approach

Valuation benchmark date: 31 July 2025 Currency unit: RMB'0,000

Item		Book value	Appraised value	Increase or decrease	Appreciation rate %
		A	B	C = B - A	D = C/A × 100%

Asset Appraisal Report on the Entire Shareholders' Equity of CHN Energy Xinjiang Energy Chemical Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

Item		Book value	Appraised value	Increase or decrease	Appreciation rate %
		A	B	C = B - A	D = C/A × 100%
Total assets	**11**	**1,914,656.73**	**2,528,307.06**	**613,650.33**	**32.05**
Current liabilities	12	1,014,452.44	1,014,452.44	0.00	0.00
Non-current liabilities	13	313,450.43	301,711.86	-11,738.57	-3.74
Total liabilities	**14**	**1,327,902.87**	**1,316,164.30**	**-11,738.57**	**-0.88**
Net assets	**15**	**586,753.86**	**1,212,142.76**	**625,388.90**	**106.58**

As of the valuation benchmark date, the book value of consolidated total assets for CHN Energy Xinjiang Energy and Chemical Co., Ltd. was RMB30,245,781,100, the book value of total liabilities was RMB19,260,165,300, and the book value of shareholders' equity was RMB10,985,615,800, of which RMB9,491,294,800 represented the shareholders' equity attributable to the parent company, with an appraised value of RMB12,121,427,600, an increase of RMB2, 630,132,800, with an appreciation rate of 27.71%.

iii. Appraisal conclusion

Under the income approach, the entire shareholders' equity value of shareholders was RMB12,049,738,200, under the asset-based approach, the total equity value of shareholders was RMB12,121,427,600, with a difference of RMB71,689,400, representing a variance rate of 0.59%.

There is a certain discrepancy between the appraisal results of the income approach and the asset-based approach. The main reason for the discrepancy is the different perspectives considered by the two methods.

The income approach estimates the value of the subject asset by discounting the expected future earnings of the appraised entity from the perspective of the enterprise's future profitability. The asset-based approach, on the other hand, estimates the value of the subject asset based on a reasonable assessment of the enterprise's assets and liabilities, considering the method of asset replacement. The appraised entity's core business is coal mining and sales, and its key assets are mining rights. In this appraisal, the asset-based approach uses the discounted cash flow method to assess the mining rights, which aligns closely with the approach used in the income approach. Moreover, the appraisal of the mining rights is based on the coal market conditions, using objective market benchmarks. The results from the asset-based approach reflect the contribution of the mining rights to the company's future earnings, therefore the asset-based approach can more objectively reflect the market value of the appraised entity.

Based on the above analysis, the conclusion of this asset appraisal report adopts the result of the asset-based approach, i.e., the entire shareholders' equity value of shareholders of CHN Energy Xinjiang Energy Chemical Co., Ltd. was RMB12,121,427,600.

Due to objective limitations, this asset appraisal report does not take into account any premium or discount that may arise due to control or lack of control, nor does it consider the impact of liquidity on the value of the subject asset.

XI. Special Notes

The following matters were identified during the appraisal process that may affect the appraisal conclusion but cannot be assessed or estimated by the professional expertise and ability of the appraisers:

i. In this asset appraisal report, if there is a discrepancy between the total values and the sum of the individual items in any tables or written statements (expressed in RMB10,000), it is due to rounding.

ii. This appraisal refers to the Audit Report EY Hua Ming (2025) Special Letter No. 80028121_A01 issued by Ernst & Young Hua Ming LLP on 16 December 2025. We obtained the audit report through legal channels, and after analyzing and reviewing the contents of the audit report in accordance with the relevant asset appraisal standards, we have prudently used the relevant contents of the audit report. The audited financial data in the audit report forms the basis for the asset appraisal. If this financial data changes, the conclusions of this appraisal may become invalid. According to Article 12 of the *Asset Appraisal Practice Standards – Enterprise Value*: Asset appraisers analyse and assess the use of financial statements based on the chosen appraisal methods. However, it is not the responsibility of the asset appraisers to offer professional opinions on whether the financial statements fairly reflect the financial status, operating results, or cash flow of the appraised entity as at the valuation benchmark date. We only bear responsibility for improper referencing that may arise in the use of the audit report during the appraisal process.

iii. The appraisal of intangible assets—mining rights within the scope of this appraisal refers to the appraisal conclusions from China Enterprise Appraisals Co., Ltd. on 16 December 2025, including the *Report on the Mining Rights for Shenhua Xinjiang Energy Company Limited Wudong Coal Mine* (ZH.Q.H.K.P.B.Z. [2025] No. 1060), the *Report on Mining Rights for CHN Energy Xinjiang Energy Co., Ltd. Changji Tunbao Coal Mine* (ZH.Q.H.K.P.B.Z. [2025] No. 1061), the *Report on Mining Rights for Guoneng Xinjiang Zhundong Energy Co., Ltd. Zhundong Open-pit Coal Mine* (ZH.Q.H.K.P.B.Z. [2025] No. 1062), the *Report on Mining Rights for CHN Energy Xinjiang Mining Co., Ltd. Hongshaquan No.1 Open-pit Coal Mine* (ZH.Q.H.K.P.B.Z. [2025] No. 1063), the *Report on Mining Rights for Xinjiang Qitai County Xiheishan Mining Area Hongshaquan No.2 Open-pit Coal Mine* (ZH.Q.H.K.P.B.Z. [2025] No. 1064), and the *Report on Mining Rights for CHN Energy Xinjiang Energy Chemical Co., Ltd. Tuokexun County Heishan Open-pit Coal Mine* (ZH.Q.H.K.P.B.Z. [2025] No. 1065).

During this appraisal process, the appraisers communicated and coordinated with mining rights appraisers, who adopted the discounted cash flow method for the appraisal of the mining right. After verifying that the mining rights appraisal report's subject asset, scope, purpose, base date, value type, and other aspects were consistent with this asset appraisal report and in line with the requirements of the economic transaction, the mining rights value involved in this appraisal report directly references the appraisal conclusion issued by China Enterprise Appraisals Co., Ltd. For details on the calculation process and results of the mining rights appraisal, please refer to the mining rights report issued by China Enterprise Appraisals Co., Ltd.

iv. According to the *Asset Appraisal Law* and the *Guidance on Legal Ownership of Subject Asset*, the client and relevant parties engaging the asset appraisal are responsible for the authenticity, completeness, and legality of the ownership certificates, financial accounting information, and other materials they provide. The purpose of conducting asset appraisal is to estimate the value of the subject asset and provide professional opinions. Confirming the legal ownership or providing opinions on the legal status of the assets goes beyond the scope of professional asset appraisal. Asset appraisers do not provide guarantees on the legal ownership of the subject asset.

v. Explanation regarding ownership defects

1. The appraised entity owns 37 land use rights, which are registered under the name of CHN Energy Xinjiang Energy Co., Ltd., Shenhua Xinjiang Energy Company Limited, Xinjiang Urumqi Mining (Group) Co., Ltd., CHN Energy Xinjiang Energy Co., Ltd. Wudong Coal Mine, Shenhua Xinjiang Energy Company Limited Kashgar Sales Branch, Xinjiang Changji Tunbao Mining Co., Ltd. and CHN Energy Xinjiang Energy Chemical Co., Ltd. Tashkurgan Branch (formerly used name or branch). These have not been processed for changes, and the company assures that the above lands are actually owned by the company, with no disputes over ownership.

There are 350 buildings and structures included in the appraisal scope, of which 156 have not been registered for property ownership, with a total building area of 137,852.33 square metres; 78 properties have been demolished or disposed of, and 1 is an underground parking garage; 111 properties are registered under the name of CHN Energy Xinjiang Energy Co., Ltd., Urumqi Mining Bureau's Multiple Operations Bureau, Shenhua Xinjiang Energy Company Limited (the former or previous name), and have not been processed for change procedures. The company assures that these properties are actually owned by the company, with no disputes over ownership. There are 735 vehicles within the appraisal scope, 549 of which are factory vehicles without vehicle registration certificates; 22 vehicles have registered owners' names that do not match the company's name and have not been processed for changes. The company assures that these vehicles are actually owned by the company, with no disputes over ownership.

2. The subsidiary Guoneng Xinjiang Zhundong Energy Co., Ltd. declared 3 land use rights within the appraisal scope, for which state-owned construction land transfer contracts or allocation decisions have been obtained but the certificates of land use rights have not yet been issued. This will be appraised based on the transferred or allocated land use rights.

Guoneng Xinjiang Zhundong Energy Co., Ltd. owns 20 land use rights, of which 3 have not been processed for certificates of land use rights, and 8 are registered under the name of Shenhua Xinjiang Energy Company Limited and Shenhua Jimsar Energy Co., Ltd. (the former or parent company). These have not been processed for changes, and the company assures that the above lands are actually owned by the company, with no disputes over ownership. There are 77 buildings and structures included in the appraisal scope, all of which have not been registered for property ownership, with a total building area of 124,413.14 square metres. The company assures that these properties are actually owned by the company, with no disputes over ownership. There are 99 vehicles within the appraisal scope, 40 of which are factory vehicles without vehicle registration certificates. The company assures that these vehicles are actually owned by the company, with no disputes over ownership.

3. The subsidiary Guoneng Xinjiang Toksun Energy Co., Ltd. declared 36 properties within the appraisal scope, all of which have not been registered for property ownership, with a total building area of 67,617.24 square metres. The company assures that these properties are actually owned by the company, with no disputes over ownership. There are 69 vehicles within the appraisal scope, 23 of which are factory vehicles without vehicle registration certificates. The company assures that these vehicles are actually owned by the company, with no disputes over ownership.

4. The subsidiary Guoneng Xinjiang Hongshaquan Energy Co., Ltd. declared seven

land use rights within the scope of the assessment, for which state-owned construction land transfer contracts or allocation decisions have been obtained but the land use rights certificates have not yet been issued. This will be appraised based on the transferred or allocated land use rights.

Guoneng Xinjiang Hongshaquan Energy Co., Ltd. owns nine land use rights, of which two have not been processed for certificates of land use rights. The company assures that these lands are actually owned by the company, with no disputes over ownership. There are 50 properties included in the appraisal scope, all of which have not been registered for property ownership, with a total building area of 65,396.51 square metres. The company assures that these properties are actually owned by the company, with no disputes over ownership. There are 74 vehicles within the appraisal scope, 14 of which are factory vehicles without vehicle registration certificates; 3 vehicles have registered owners' names that do not match the company's name and have not been processed for changes. The company assures that these vehicles are actually owned by the company, with no disputes over ownership.

5. The subsidiary Xinjiang Tianshan Railway Co., Ltd. declared one land use right within the appraisal scope, for which a state-owned construction land transfer contract has been obtained but the certificate of land use rights has not yet been issued. This will be appraised based on the transferred land use rights. The company confirms that the above land is actually owned by it, with no ownership disputes. There are eight buildings and structures included in the appraisal scope, none of which have been registered for property ownership. The total building area is 1,408.20 square metres. The company assures that these properties are actually owned by the company, with no disputes over ownership. There are 11 vehicles within the appraisal scope, 2 of which have registered owners' names that do not match the company name and have not been processed for changes. The company assures that these vehicles are actually owned by the company, with no disputes over ownership.

6. The subsidiary Guoneng Xinjiang Yimian Supply Chain Co., Ltd. declared seven buildings within the scope of the assessment, four of which have not been registered for property ownership. The total building area is 2,907.00 square metres. The company assures that these properties are actually owned by the company, with no disputes over ownership. There are four vehicles within the scope of the assessment, one of which is a factory vehicle without a vehicle registration certificate. The company assures that these vehicles are actually owned by the company, with no disputes over ownership.

vi. Explanation regarding assets in an abnormal use state

Some assets within the appraisal scope declared by the appraised entity are lack physical presence, or are awaiting scrapping. The details are as follows:

1. The appraised entity, CHN Energy Xinjiang Energy Chemical Co., Ltd., declared 84 buildings and structures, with a book value of RMB4,094,500, 69 structures with a book value of RMB1,121,600, 927 machinery and equipment items with a book value of RMB1,651,200, 12 vehicles with a book value of RMB265,600, and 230 electronic devices with a book value of RMB1,400. For the aforementioned assets awaiting scrapping, the appraisal is based on their recoverable value. For assets without physical presence, the appraised value is zero. For idle assets, normal appraisal procedures are applied.

2. The subsidiary Guoneng Xinjiang Toksun Energy Co., Ltd. declared 7 buildings and structures, with a book value of RMB7,783,400, 5 machinery and equipment items with

a book value of RMB2,068,700. For the aforementioned assets awaiting scrapping, the appraisal is based on their recoverable value. For assets without physical presence, the appraised value is zero. For idle assets, normal appraisal procedures are applied.

3. The Xinjiang Energy's subsidiary Guoneng Xinjiang Zhundong Energy Co., Ltd. declared 241 machinery and equipment items with a book value of RMB6,780,900. For the aforementioned assets awaiting scrapping, the appraisal is based on their recoverable value. For assets without physical presence, the appraised value is zero. For idle assets, normal appraisal procedures are applied.

4. The subsidiary Guoneng Xinjiang Hongshaquan Energy Co., Ltd. declared 1 building and structure, with a book value of RMB1,437,300, and 159 machinery and equipment items with a book value of RMB9,921,100. For the aforementioned assets awaiting scrapping, the appraisal is based on their recoverable value. For assets without physical presence, the appraised value is zero. For idle assets, normal appraisal procedures are applied.

5. The subsidiary Xinjiang Jiuhuatian Logistics Co., Ltd. declared 12 machinery and equipment items, with a book value of RMB4,321,600, and 15 electronic devices with a book value of RMB2,900. For the aforementioned assets awaiting scrapping, the appraisal is based on their recoverable value. For assets without physical presence, the appraised value is zero. For idle assets, normal appraisal procedures are applied.

vii. Explanation regarding mining rights capacity indicators

The mining rights held by the subsidiary CHN Energy Xinjiang Mining Co., Ltd. at Xinjiang Shenhua Mining Company Limited Hongshaquan No.1 Open-pit Coal Mine had its approved capacity changed to 30 million tonnes per year in 2023, with 20 million tonnes per year of the increased capacity still awaiting capacity indicators.

The mining rights held by the subsidiary Guoneng Xinjiang Zhundong Energy Co., Ltd. at Zhundong Open-pit Coal Mine had its approved capacity changed to 35 million tonnes per year in 2023, with 15 million tonnes per year of the increased capacity still awaiting capacity indicators.

According to confirmation by the appraised entity, Xinjiang Shenhua Mining Company Limited Hongshaquan No.1 Open-pit Coal Mine plans to resolve the capacity indicator gap by "reconstruction and expansion to increase production scale". Specifically, the production capacity will be increased to 40 million tonnes per year through reconstruction, but 30% of the production capacity will be reserved. Relevant materials for the reconstruction and expansion were submitted to the National Energy Administration for review in October 2025. This appraisal assumes that the mine will complete capacity expansion by 2026, and production will be organised at 31 million tonnes per year from 2027.

Guoneng Xinjiang Zhundong Energy Co., Ltd. Zhundong Open-pit Coal Mine also plans to resolve the capacity indicator gap by "reconstruction and expansion to increase production scale". Specifically, the production capacity will be increased to 45 million tonnes per year through reconstruction, although relevant materials have not yet been submitted to the National Energy Administration. This appraisal assumes that the mine will complete capacity expansion by 2028, and production will be organised at 35 million tonnes per year in the future.

viii.Explanation regarding discrepancies between mining rights holders and operators

Within the appraisal scope, CHN Energy Xinjiang Energy Chemical Co., Ltd. has 6 mining rights, three of which have discrepancies between the mining rights holder and the operator. Specifically, the mining rights holders transfer the mining rights to subsidiaries or affiliated units for extraction and operation by collecting "mining rights usage fees." The specific details are as follows:

No.	Mineral rights name	Mining rights holder	Operator
1	CHN Energy Xinjiang Energy Chemical Co., Ltd. Toksun County Heishan Open-pit Coal Mine	CHN Energy Xinjiang Energy Chemical Co., Ltd.	Guoneng Xinjiang Toksun Energy Co., Ltd.
2	Xinjiang Shenhua Mining Co., Ltd. Hongshaquan No.1 Open-pit Coal Mine	CHN Energy Xinjiang Mining Co., Ltd.	Guoneng Xinjiang Hongshaquan Energy Co., Ltd.
3	Xinjiang Qitai County Xiheishan Mining Area Hongshaquan No.2 Open-pit Coal Mine	CHN Energy Xinjiang Mining Co., Ltd.	Guoneng Xinjiang Mining Hongshaquan No. 2 Coal Mine Co., Ltd.

For the above-mentioned cases, the appraisal, assessed the book value of the mining rights held by the rights holders as zero on the Valuation benchmark date and was conducted separately for the mining rights holder and operator based on the "mining rights sage fee" at the same time, as detailed in the appraisal method.

ix. Explanation regarding non-compensatory transfer of assets and subsidiaries

According to the project arrangement, after the valuation benchmark date, CHN Energy Xinjiang Energy Chemical Co., Ltd. plans to transfer equity of 12 subsidiaries, 1 exploration right, 1 mining right, and 2 asset groups to other parties for free. The specific details are as follows:

No.	Name	Type
1	Guoneng Xinjiang Kuan'gou Mining Co., Ltd.	Equity
2	Guoneng Urumqi New Energy Development Co., Ltd.	Equity
3	Guoneng Zhongji Qitai New Energy Co., Ltd.	Equity
4	Guoneng Xinjiang Wenquan Power Co., Ltd.	Equity
5	Guoneng Urumqi Photovoltaic Power Co., Ltd.	Equity
6	Guoneng Kuitun New Energy Development Co., Ltd.	Equity
7	Guoneng Qira Energy Co., Ltd.	Equity
8	Guoneng Lop Energy Co., Ltd.	Equity
9	Guoneng Karakax Energy Co., Ltd.	Equity
10	Guoneng Bole Energy Co., Ltd.	Equity
11	Guoneng Xinjiang Ganquanbu Comprehensive Energy Co., Ltd.	Equity
12	CHN Energy Xinjiang Energy Chemical Co., Ltd. Manasi County Laobawan Coal Mine Branch	Asset group
13	CHN Energy Xinjiang Energy Chemical Co., Ltd. Activated Carbon Branch	Asset group
14	Kuangou mining rights	Mining rights
15	Laobawan exploration rights	Exploration rights

The audit report used in this appraisal has simulated the stripping of the above assets through non-compensatory transfers.

x. Explanation regarding discrepancies between subscribed and paid-in capital ratios of subsidiaries

CHN Energy Xinjiang Energy Chemical Co., Ltd. and CHN Energy Western Energy Investment Co., Ltd. each hold 50% equity in Guoneng Xinjiang Coal-to-Gas Co., Ltd. As at the valuation benchmark date, the subscribed capital by both shareholders has not been fully paid, and the paid-in ratio differs from the subscribed ratio. This appraisal adjusts the net asset value by assuming that both shareholders have fully contributed capital, and the adjusted appraised value is calculated based on the subscribed equity ratio of Xinjiang Energy, deducting the unpaid amount to confirm the final appraised

value of this long-term equity investment. The calculation formula is as follows:

Appraised value of long-term equity investment = (Guoneng Xinjiang Coal-to-Gas Co., Ltd.'s net asset appraisal + All shareholders' unpaid capital) × Xinjiang Energy's subscribed equity ratio - Xinjiang Energy's unpaid capital

Users of the asset appraisal report should pay attention to the impact of the above special matters on the appraisal conclusion.

XII. Statement of the Limitations on the Use of the Asset Appraisal Report

i. Scope of use of the asset appraisal report

1. The users of the asset appraisal report are the client and those specified by national laws and administrative regulations.

2. The appraisal conclusion in the asset appraisal report is only valid for the economic activities related to this project.

3. The validity period of the conclusion in the asset appraisal report is one year from the valuation benchmark date. The client or other users of the asset appraisal report should use the report within the stated validity period of the appraisal conclusions.

4. Without the written consent of the client, the asset appraisal agency and its professionals shall not provide or disclose the contents of the asset appraisal report to any third parties, except as required by laws or administrative regulations.

5. Without the consent of the asset appraisal agency, the contents of the asset appraisal report shall not be copied, quoted, or disclosed in public media, except as required by laws, administrative regulations, or as agreed by the relevant parties.

ii. If the client or other users of the asset appraisal report do not use the asset appraisal report in accordance with the laws, administrative regulations, and the use scope outlined in the asset appraisal report, the asset appraisal agency and its professionals shall not bear any responsibility.

iii. Except for the client, other users of the asset appraisal report as specified in the asset appraisal engagement contract, and those specified by laws or administrative regulations, no other institution or individual may become a user of the asset appraisal report. This asset appraisal report contains several appendices and appraisal detail forms, all of which are an integral part of this report. However, they are only valid when used together with the main body of the report.

iv. The asset appraisal agency and asset appraisers shall not bear any obligations or responsibilities to users of this report who are not authorised, such as those who obtain the report through presentation or other means, outside the scope of its intended use. They will not provide further consultancy based on this report, nor will they provide testimony or attend hearings in court or other legal proceedings, and they reserve the right to hold non-authorised users liable for any losses incurred as a result.

v. Users of the asset appraisal report shall correctly understand and use the appraisal conclusion. The appraisal conclusion is not equivalent to the realisable price of the subject asset and shall not be considered a guarantee of the realisable price.

vi. An asset appraisal report refers to a professional report issued by the asset appraisal agency, based on the law, administrative regulations, and asset appraisal standard requirements, after carrying out the necessary appraisal procedures as entrusted. It reflects the value of the subject asset for a specific purpose on the valuation benchmark

date. This report must be signed by the appraisers responsible for the appraisal and stamped with the asset appraisal agency's official seal. It can only be formally used after being filed with the state-owned asset supervision and management authority or the enterprise that provided funding.

Project Regarding Proposed Issuance of Shares and Payment of Cash by China Shenhua Energy Company Limited to Acquire the 100% Equity Interests in China Shenhua Coal to Liquid and Chemical Co., Ltd. held by China Energy Investment Group Co., Ltd.

Asset Appraisal Report

ZLPBZ No. [2025] 5357

China United Assets Appraisal Group Co., Ltd.

December 16, 2025

Statement

I. This Asset Appraisal Report is prepared in accordance with the Basic Standards for Asset Appraisal issued by the Ministry of Finance of the People's Republic of China, and the Practice Standards and Professional Ethics Standards for Asset Appraisal issued by the China Appraisal Society.

II. The Clients or other users of the Asset Appraisal Report shall use the Report in accordance with applicable laws and regulations, and within the scope of use specified herein. Should the Client or other users of the Asset Appraisal Report fail to do so, the Asset Appraisal Institution and its professional asset appraisers shall not be liable for any consequences arising therefrom.

The Asset Appraisal Report is exclusively used by the Clients, other designated users as stipulated in the asset appraisal engagement contract, and users mandated by applicable laws and regulations. In addition, no other institution or individual is authorized to be a user of the Asset Appraisal Report.

The Asset Appraisal Institution and its asset appraisers advise users of this Asset Appraisal Report to accurately comprehend and use the appraisal conclusion. The appraisal conclusion should not be deemed as the realizable price of the appraisal object, nor should it be interpreted as a guarantee of the appraisal object's realizable price.

III. The truthfulness, legality, and completeness of the information provided by the Clients and other relevant parties are prerequisites for the appraisal conclusion to be valid. The list of assets and liabilities included in the appraisal scope, as well as the prospective financial information, ownership certificates, and other data required for the appraisal, have been declared and confirmed by the Clients and the Appraised Entity through official seals or other means.

IV. The Asset Appraisal Institution and its asset appraisers have no existing or prospective interests in the Appraisal Object presented in the Asset Appraisal Report; and have no existing or prospective interests in the related parties, and are not biased towards them.

V. The asset appraisers have conducted field surveys of the Appraisal Object and the assets involved in the Asset Appraisal Report; has given due attention to the legal ownership status of the Appraisal Object and its related assets, inspected the legal ownership documentation for the Appraisal Object and its related assets, truthfully disclosed any issues identified, and requested the Clients and other relevant parties to optimize the property rights to satisfy the requirements for issuing the Asset Appraisal Report.

VI. The analyses, judgments, and results presented in the Asset Appraisal Report issued by the Asset Appraisal Institution are subject to the assumptions and limiting conditions stipulated therein. Users of the Asset Appraisal Report should thoroughly consider the assumptions, limiting conditions, instructions on special matters, and their impacts on the appraisal conclusion as specified within the Report.

VII. The Asset Appraisal Institution and its asset appraisers comply with applicable laws, regulations, and asset appraisal standards, adhere to the principles of independence, objectivity, and impartiality, and are legally responsible for the Asset Appraisal Report issued.

Project Regarding Proposed Issuance of Shares and Payment of Cash by China Shenhua Energy Company Limited to Acquire the 100% Equity Interests in China Shenhua Coal to Liquid and Chemical Co., Ltd. held by China Energy Investment Group Co., Ltd.

Asset Appraisal Report

ZLPBZ No. [2025] 5357

ABSTRACT

China United Assets Appraisal Group Co., Ltd. has accepted the entrustment from China Shenhua Energy Company Limited and China Energy Investment Group Co., Ltd. in connection with the economic activity of the project regarding the proposed issuance of shares and payment of cash by China Shenhua Energy Company Limited to acquire the 100% equity interests in China Shenhua Coal to Liquid and Chemical Co., Ltd. held by China Energy Investment Group Co., Ltd., and has assessed the market value of the total interests of shareholders in China Shenhua Coal to Liquid and Chemical Co., Ltd. involved as of the Appraisal Reference Date.

The appraisal object is the value of the total interests of shareholders in China Shenhua Coal to Liquid and Chemical Co., Ltd. The scope of the appraisal covers all assets and related liabilities of China Shenhua Coal to Liquid and Chemical Co., Ltd., including current assets, non-current assets and corresponding liabilities.

The Appraisal Reference Date is July 31, 2025.

The appraisal type for this appraisal is market value.

This appraisal is conducted on the premise of continuous use and open

market. In combination of the actual situation of the entrusted appraisal object and comprehensively taking into account various influencing factors, the income approach and Asset-based Approach are adopted for the overall appraisal of China Shenhua Coal to Liquid and Chemical Co., Ltd., followed by verification and comparison. Taking into account the applicable premises of the appraisal methods and the satisfaction of the appraisal purpose, the appraisal result of the Asset-based Approach is selected as the final appraisal conclusion.

Based on the judgments on future development trends and operating plans made by the Client and the enterprise's management, after conducting appraisal procedures such as inventory verification, on-site inspection, market research and confirmation and evaluation and estimation, the appraisal conclusion on the total interests of shareholders of China Shenhua Coal to Liquid and Chemical Co., Ltd. as of the Appraisal Reference Date of July 31, 2025 is as follows:

The book value of total shareholders' equity of China Shenhua Coal to Liquid and Chemical Co., Ltd. on a parent company basis is RMB 1,375,349.10 ten thousand, the appraised value is RMB 2,495,053.41 ten thousand, the appraisal appreciation is RMB 1,119,704.31 ten thousand, and the appreciation rate is 81.41%.

When using this appraisal conclusion, we specifically remind the report users to pay attention to the special matters stated in this report and the material subsequent events.

Special matters reminder:

Pursuant to the relevant laws and regulations on assets appraisal, the assets appraisal report involving statutory appraisal business may only be used by the Client after performing the assets appraisal supervision and administration procedures in accordance with the requirements of laws and regulations. The validity period for the use of the appraisal result is one year,

i.e., being valid from July 31, 2025 to July 30, 2026.

The above content is extracted from the main text of the assets appraisal report. To understand the detailed information of this appraisal deal and correctly interpret the appraisal conclusion, the main text of the assets appraisal report shall be read.

Project Regarding Proposed Issuance of Shares and Payment of Cash by China Shenhua Energy Company Limited to Acquire the 100% Equity Interests in China Shenhua Coal to Liquid and Chemical Co., Ltd. held by China Energy Investment Group Co., Ltd.

Asset Appraisal Report

ZLPBZ No. [2025] 5357

China Energy Investment Group Co., Ltd. and China Shenhua Energy Company Limited:

China United Assets Appraisal Group Co., Ltd. has accepted the entrustment from the Company. In accordance with the provisions of relevant laws, administrative regulations and asset valuation standards, adhering to the principles of independence, objectivity and impartiality, China United Assets Appraisal Group Co., Ltd. has adopted the income approach and Asset-based Approach and followed the necessary appraisal procedures in connection with the economic activity of the project regarding the proposed issuance of shares and payment of cash by China Shenhua Energy Company Limited to acquire the 100% equity interests in China Shenhua Coal to Liquid and Chemical Co., Ltd. held by China Energy Investment Group Co., Ltd., and has assessed the market value of the total interests of shareholders in China Shenhua Coal to Liquid and Chemical Co., Ltd. involved as of the Appraisal Reference Date of July 31, 2025. The relevant assets appraisal is hereby reported as follows:

I. Clients, Appraised Entity and Other Users of the Assets Appraisal

Report

The clients of this assets appraisal are China Energy Investment Group Co., Ltd. (hereinafter referred to as "China Energy Group") and China Shenhua Energy Company Limited (hereinafter referred to as "China Shenhua"). The appraised entity is China Shenhua Coal to Liquid and Chemical Co., Ltd. (hereinafter referred to as "Chemical Co.").

(I) Overview of Client I

Enterprise name: China Energy Investment Group Co., Ltd.

Enterprise type: limited liability company (wholly state-owned)

Registered address: No. 22 West Binhe Road, Andingmen, Dongcheng District, Beijing

Legal representative: Zou Lei

Registered capital: RMB13209466.11498 ten thousand

Date of establishment: October 23, 1995

Term of operation: from October 23, 1995 to indefinite term

Unified social credit code: 911100001000182 67J

Business scope: operate state-owned assets within the scope authorized by the State Council; engage in investment and management across industries including coal and other resource products, coal-to-oil, coal chemicals, electricity, heating, ports, transportation, finance, domestic and foreign trade and logistics, real estate, high-tech, and information consulting; Plan, organize, coordinate, and manage the production and operating activities of enterprises affiliated with the Group in the aforementioned industry sectors; sell chemical materials and chemical products (excluding dangerous chemicals), textiles, building materials, machinery, electronic equipment, and office equipment (market entities shall independently select business projects and conduct operating activities in accordance with the law; for projects subject to approval in accordance with the law, operating activities shall be

carried out according to the approved scope after obtaining approval from the relevant authorities; engagement in operating activities prohibited or restricted by national and municipal industrial policies is banned.)

(II) Overview of Client II

Enterprise name: China Shenhua Energy Company Limited

Enterprise type: other joint stock company (listed)

Registered address: No. 22 West Binhe Road, Andingmen, Dongcheng District, Beijing

Legal representative: Lv Zhiren

Registered capital: RMB1986851.9955 ten thousand

Date of establishment: November 8, 2004

Term of operation: from November 8, 2004 to indefinite term

Unified social credit code: 91110000710933024J

Business scope: coal mining (validity period is subject to relevant permits for each coal mine); wholesale operations of coal; project investment; coal washing and processing; development and operation of mineral products; internal transportation by proprietary railways; power generation; provision of supporting services for coal, railway, and power operations; vessel repair; energy and environmental technology development and utilization, technology transfer, technical consultation, technical services; import and export business; sales of chemical products, chemical materials, building materials, and mechanical equipment (excluding dangerous chemicals); property management (market entities shall independently select business projects and conduct operating activities in accordance with the law; for projects subject to approval in accordance with the law, operating activities shall be carried out according to the approved scope after obtaining approval from the relevant authorities; Engagement in operating activities prohibited or

restricted by national and municipal industrial policies is banned.)

(III) Overview of Appraised Entity

1. Basic Information about the Enterprise

Enterprise name: China Shenhua Coal to Liquid and Chemical Co., Ltd.

Enterprise type: limited liability company (wholly owned by the legal person)

Registered address: No. 16 Ande Road, 9/F and 10/F, Dongcheng District, Beijing

Legal representative: Jiang Xingjian

Registered capital: RMB3123711.585277 ten thousand

Date of establishment: June 12, 2003

Term of operation: from June 12, 2003 to indefinite term

Unified social credit code: 91110000710931432M

Business scope: licensed items: operation of hazardous chemicals; wholesale of refined oil products; construction engineering design; construction engineering supervision; construction engineering implementation; construction engineering survey; import and export of toxic chemicals; power generation business, power transmission business, power supply (distribution) business. (For projects that require official approval in accordance with the law, business activities may be carried out only after approval by the relevant authorities; the specific business items shall be subject to the approval documents or licenses issued by the relevant authorities.) General items: wholesale of refined oil (excluding hazardous chemicals); sales of chemical products (excluding chemical products requiring official licensing); sales of synthetic materials; sales of non-metallic minerals and products; coal sales (excluding the conduct of physical coal trading and storage activities by the Company in Beijing); production of chemical products (excluding chemical products requiring administrative

licensing); manufacturing of synthetic materials (excluding hazardous chemicals); manufacturing of basic chemical raw materials (excluding the manufacturing of licensed chemicals such as hazardous chemicals); manufacturing of non-metallic mineral products; engineering management services; engineering technology services (excluding planning management, survey, design, and supervision); technology services, technology development, technology consulting, technology exchange, technology transfer and technology promotion; import and export of goods; import and export of technology; import and export agency; thermal energy production and supply (to be operated by branches). (Except for projects that require official approval in accordance with the law, business activities shall be carried out independently in accordance with the law on the strength of the business license) (no business activities which are prohibited and restricted by the national and municipal industrial policies shall be carried out.)

2. Historical evolution and shareholding structure

(1) Establishment

On March 31, 2003, the State Administration for Industry and Commerce issued the Notice of Pre-approval of Enterprise Name "(Guo) Mingcheng Yuhe Neizi [2003] No. 207)", approving the company's name as "Shenhua Coal to Liquid and Chemical Co., Ltd.".

On May 28, 2003, Beijing Tianzhenghua Certified Public Accountants (北京天正華會計師事務所) issued a capital verification report ([2003] Zhenghua Yanzi No. 028), confirming that as of May 28, 2003, Chemical Co. had received a total registered capital of RMB2 billion contributed by its shareholders.

On June 12, 2003, Chemical Co. obtained the Business License for Enterprise Legal Persons issued by the State Administration for Industry and Commerce.

The shareholding structure of Chemical Co. at its establishment is as follows:

Table 1-1 Names of Shareholders and Percentages of Capital Contribution

No.	Names of Shareholders	Subscribed Registered Capital (RMB in ten thousand)	Paid-in Registered Capital (RMB in ten thousand)	Shareholding Percentage
1	Shenhua Group Corporation Limited	180,000.00	180,000.00	90.00%
2	Guohua Energy Investment Co., Ltd.	20,000.00	20,000.00	10.00%
Total		**200,000.00**	**200,000.00**	**100.00%**

(2) First capital increase

On May 19, 2008, Chemical Co. convened a shareholders' meeting, which approved the increase in the registered capital of Chemical Co. from the original registered capital of RMB200,000 ten thousand to RMB1,060,000 ten thousand, where the capital contribution from Shenhua Group Corporation Limited was changed from RMB180,000 ten thousand to RMB975,000 ten thousand, and the capital contribution from Guohua Energy Investment Co., Ltd. was changed from RMB20,000 ten thousand to RMB85,000 ten thousand. The additional capital contribution was completed in two installments: the first installment of RMB729,126 ten thousand was completed by June 11, 2008, and the remaining part was completed by December 31, 2008.

On June 17, 2008, Tihuasic (Beijing) Certified Public Accountants issued a capital verification report (Tihuasic Yanzi [2008] No. 6-13), confirming that as of June 11, 2008, Chemical Co. had received the additional registered capital of RMB729,126 ten thousand contributed by its shareholders, and the paid-in capital after the change was RMB994,126 ten thousand.

On June 27, 2008, the State Administration for Industry and Commerce issued the Business License for Enterprise Legal Persons after the change.

Upon completion of the registered capital increase, the shareholding

structure of Chemical Co. at its establishment is as follows:

Table 1-2 Names of Shareholders and Percentages of Capital Contribution

No.	Names of Shareholders	Subscribed Registered Capital (RMB in ten thousand)	Paid-in Registered Capital (RMB in ten thousand)	Shareholding Percentage
1	Shenhua Group Corporation Limited	975,000	90,9126	90.00%
2	Guohua Energy Investment Co., Ltd.	85,000	85,000	10.00%
Total		**1,060,000**	**994,126.00**	**100.00%**

(3) Second capital increase

In July 2009, the first equity transfer was conducted, and the registered capital was increased to RMB1,464,714.159902 ten thousand in the second capital increase.

Shenhua Group Corporation Limited and Guohua Energy Investment Co., Ltd. signed a gratuitous equity transfer agreement, which agreed that Guohua Energy Investment Co., Ltd. would transfer all its equity interests in Chemical Co. to Chemical Co. on a gratuitous basis. After the equity transfer, Shenhua Group Corporation Limited held 100% of the equity interests in Chemical Co.

On June 2, 2009, Shenhua Group Corporation Limited made a shareholder resolution, which approved the increase of Chemical Co.'s registered capital from RMB1,060,000 ten thousand to RMB1,464,714.159902 ten thousand. The additional capital contribution was RMB404,714.159902 ten thousand, with the contribution form being monetary and physical assets.

On June 26, 2009, Tihuasic (Beijing) Certified Public Accountants issued a capital verification report (Tihuasic Yanzi [2009] No. 6-5), confirming that as of December 31, 2008, Chemical Co. had received a total of RMB470,588.159902 ten thousand from its shareholder Shenhua Group Corporation Limited, which included the capital contribution for the newly

applied registered capital increase and the supplementary payment for the previously applied registered capital. In particular, Shenhua Group Corporation Limited contributed RMB4,0000 ten thousand in the form of monetary funds, RMB425,800 ten thousand by way of gratuitous transfer of equity interests in its wholly-owned subsidiaries; meanwhile, Chemical Co. was approved to increase its registered capital by RMB4,788.159902 ten thousand by way of capital surplus.

Pursuant to the Notice on the Gratuitous Transfer of Equity Interests in Shenhua Baotou Coal Chemical Co., Ltd. and Shenhua Hulunbeier Coal Processing Company Limited ("Shenhua Qihua [2008] No. 468") issued by Shenhua Group Corporation Limited, it was decided to transfer 100.00% equity interests held by Shenhua Group Corporation Limited in each of Shenhua Baotou Coal Chemical Co., Ltd. and Shenhua Hulunbeier Coal Processing Company Limited to Chemical Co. as capital contribution on a gratuitous basis. Both Shenhua Baotou Coal Chemical Co., Ltd. and Shenhua Hulunbeier Coal Processing Company Limited, whose equity interests were transferred on a gratuitous basis, are wholly-owned subsidiaries of Shenhua Group Corporation Limited. Shenhua Group Corporation Limited contributed a total of RMB425,800.00 ten thousand to increase Chemical Co.'s registered capital by way of gratuitous transfer of equity interests in its wholly-owned subsidiaries. In particular, the equity contribution corresponding to Shenhua Baotou Coal Chemical Co., Ltd. was RMB420,800.00 ten thousand , which was confirmed by Tianhua Xiangtong (Beijing) Assets Appraisal Co., Ltd. (天华祥通(北京)资产评估有限公司) on May 30, 2009 via the asset appraisal report "Tianhua Xiangtong Ping Bao Zi (2009) No. 6-1)"; the equity contribution corresponding to Shenhua Hulunbeier Coal Processing Company Limited was RMB5,000.00 ten thousand , which was confirmed by Tianhua Xiangtong (Beijing) Assets Appraisal Co., Ltd. on March 30, 2009 via the asset appraisal report "Tianhua

Xiangtong Ping Bao Zi (2009) No. 3-8)".

On December 18, 2008, Shenhua Group Corporation Limited issued the Approval on Transfer of Capital Surplus to Paid-in Capital for Coal to Oil Chemical Company "Shenhua Cai [2008] No. 454", deciding that Chemical Co. should increase its registered capital by RMB4,788.159902 through capital surplus transfer.

On July 13, 2009, the State Administration for Industry and Commerce issued the Business License for Enterprise Legal Persons after the change.

Upon completion of the equity transfer and the registered capital increase, the shareholding structure of Chemical Co. at its establishment is as follows:

Table 1-3 Name of Shareholder and Percentage of Capital Contribution

No.	Name of Shareholder	Subscribed Registered Capital (RMB in ten thousand)	Paid-in Registered Capital (RMB in ten thousand)	Shareholding Percentage
1	Shenhua Group Corporation Limited	1,464,714.159902	1,464,714.159902	100.00%
Total		**1,464,714.159902**	**1,464,714.159902**	**100.00%**

(4) Third capital increase

On December 15, 2009, Shenhua Group Corporation Limited issued the Decision on Increase of Capital Contribution, which approved the increase of Chemical Co.'s registered capital from RMB1,464,714.159902 ten thousand to RMB1,477,925.159902 ten thousand.

On March 1, 2010, Tihuasic (Beijing) Certified Public Accountants issued a capital verification report (Tihuasic Yanzi [2010] No. 3-1), confirming that as of December 10, 2009, Chemical Co. had received the additional registered capital of RMB13,211 ten thousand contributed by its shareholder, and the paid-in capital after the change was RMB1,477,925.159902 ten thousand.

On May 26, 2010, the State Administration for Industry and Commerce issued the Business License for Enterprise Legal Persons after the change.

Upon completion of the registered capital increase, the shareholding

structure of Chemical Co. at its establishment is as follows:

Table 1-4 Name of Shareholder and Percentage of Capital Contribution

No.	Name of Shareholder	Subscribed Registered Capital (RMB in ten thousand)	Paid-in Registered Capital (RMB in ten thousand)	Shareholding Percentage
1	Shenhua Group Corporation Limited	1,477,925.159902	1,477,925.159902	100.00%
Total		**1,477,925.159902**	**1,477,925.159902**	**100.00%**

(5) Fourth capital increase

On November 23, 2011, Shenhua Group Corporation Limited issued the Decision on Increase of Capital Contribution, which approved the increase of Chemical Co.'s registered capital from RMB1,477,925.159902 ten thousand to RMB1,758,950.299902 ten thousand with the increased capital contribution of RMB281,025.14 ten thousand.

On November 30, 2011, Tihuasic (Beijing) Certified Public Accountants issued a capital verification report (Tihuasic Yanzi [2011] No. 11-3), confirming that as of November 21, 2011, Chemical Co. had received the additional registered capital of RMB281,025.14 ten thousand contributed by its shareholder, and the paid-in capital after the change was RMB1,758,950.299902 ten thousand.

On December 12, 2011, the State Administration for Industry and Commerce issued the Business License for Enterprise Legal Persons after the change.

Upon completion of the registered capital increase, the shareholding structure of Chemical Co. at its establishment is as follows:

Table 1-5 Name of Shareholder and Percentage of Capital Contribution

No.	Name of Shareholder	Subscribed Registered Capital (RMB in ten thousand)	Paid-in Registered Capital (RMB in ten thousand)	Shareholding Percentage
1	Shenhua Group Corporation Limited	1,758,950.299902	1,758,950.299902	100.00%
Total		**1,758,950.299902**	**1,758,950.299902**	**100.00%**

(6) Fifth capital increase

Shenhua Group Corporation Limited issued the Decision on Increase of Capital Contribution, which approved the increase of Chemical Co.'s registered capital from RMB1,758,950.299902 ten thousand to RMB1,760,462.299902 ten thousand with the increased capital contribution of RMB1,512 ten thousand.

On April 17, 2012, Jonten Certified Public Accountants issued a capital verification report (Jonten [2012] Yanzi No. 00012), confirming that as of December 30, 2011, Chemical Co. had received the additional registered capital of RMB1,512 ten thousand contributed by its shareholder, and the paid-in capital after the change was RMB1,760,462.299902 ten thousand .

On May 28, 2012, the State Administration for Industry and Commerce issued the Business License for Enterprise Legal Persons after the change.

Upon completion of the registered capital increase, the shareholding structure of Chemical Co. at its establishment is as follows:

Table 1-6 Name of Shareholder and Percentage of Capital Contribution

No.	Name of Shareholder	Subscribed Registered Capital (RMB in ten thousand)	Paid-in Registered Capital (RMB in ten thousand)	Shareholding Percentage
1	Shenhua Group Corporation Limited	1,760,462.299902	1,760,462.299902	100.00%
Total		**1,760,462.299902**	**1,760,462.299902**	**100.00%**

(7) Sixth capital increase

On October 5, 2012, Shenhua Group Corporation Limited issued the Decision on Increasing Capital Contribution, resolving to increase the registered capital of Chemical Co. from RMB1,760,462.299902 ten thousand to RMB1,907,436.518145 ten thousand, with an additional capital contribution of RMB146,974.218243 ten thousand.

On February 2, 2013, Beijing Zhongtian Huamao Certified Public Accountants LLP issued a capital verification report (Zhongtian Huamao Yanzi [2013] No. 002), confirming that as of January 31, 2013, Chemical Co.

had received the additional registered capital of RMB146,974.218243 ten thousand contributed by its shareholders, and that the paid-in capital after the change was RMB1,907,436.518145 ten thousand .

On April 3, 2013, the State Administration for Industry and Commerce issued the Business License for Enterprise Legal Persons after the change.

After completion of the registered capital increase, the shareholding structure of Chemical Co. is as follows:

Table 1-7 Name of Shareholder and Percentage of Capital Contribution

No.	Name of Shareholders	Subscribed Registered Capital (RMB in ten thousand)	Paid-in Registered Capital (RMB in ten thousand)	Shareholding Percentage
1	Shenhua Group Corporation Limited	1,907,436.518145	1,907,436.518145	100.00%
Total		**1,907,436.518145**	**1,907,436.518145**	**100.00%**

(8) First capital reduction

On August 5, 2013, Shenhua Group Corporation Limited issued the "Decision on Approving the Spin-off and Capital Reduction of China Shenhua Coal to Liquid and Chemical Co., Ltd.", which resolved to: approve the spin-off of the Baotou Coal Chemical Branch of Chemical Co to establish Shenhua Baotou Coal Chemical Co., Ltd. (subject to the name approved by the administration for industry and commerce), with the Chemical Co. continuing to exist; the spin-off reference date was March 31, 2013; as of the Appraisal Reference Date, the Chemical Co.'s registered capital and paid-in capital were both reduced from RMB1,907,436.518145 ten thousand to RMB1,394,220.518145 ten thousand; the newly established Shenhua Baotou Coal Chemical Co., Ltd. had registered capital and paid-in capital of RMB513,216 ten thousand.

On September 23, 2013, Yinxin Appraisal Co., Ltd. issued the asset appraisal report "Yinxinping Baozi [2013] Hu No. 646", under which, based

on March 31, 2013 as the Appraisal Reference Date, the appraised net asset value of the Chemical Co. was RMB1,394,772.242621 ten thousand , and the net asset value of China Shenhua Coal to Liquid and Chemical Co., Ltd. as confirmed by each capital contributor on the basis of such appraised value was RMB1,227,640.319650 ten thousand .

On September 23, 2013, BDO China Shu Lun Pan Certified Public Accountants LLP issued a capital verification report (Xinkuaishi Baozi [2013] No. 123523), confirming that as of September 23, 2013, Chemical Co. had reduced its share capital by RMB513,216 ten thousand , of which RMB513,216 ten thousand was reduced from the capital contribution of Shenhua Group Corporation Limited.

On December 12, 2013, the State Administration for Industry and Commerce issued the Business License for Enterprise Legal Persons after the change.

After completion of the capital reduction, the shareholding structure of Chemical Co. is as follows:

Table 1-8 Name of Shareholder and Percentage of Capital Contribution

No.	Name of Shareholders	Subscribed Registered Capital (RMB in ten thousand)	Paid-in Registered Capital (RMB in ten thousand)	Shareholding Percentage
1	Shenhua Group Corporation Limited	1,394,220.518145	1,394,220.518145	100.00%
Total		**1,394,220.518145**	**1,394,220.518145**	**100.00%**

(9) Seventh capital increase

On February 3, 2016, Shenhua Group Corporation Limited issued the approval “Shenhua Qi [2016] No. 71” titled the Reply on Matters Relating to the Increase of Registered Capital of China Shenhua Coal to Liquid and Chemical Co., Ltd., resolving that a total of RMB759,943.51 ten thousand of project capital of Chemical Co. be converted into registered capital.

On May 26, 2016, the Beijing Administration for Industry and

Commerce issued the Business License for Enterprise Legal Persons after the change.

After completion of the registered capital increase, the shareholding structure of Chemical Co. is as follows:

Table 1-9 Name of Shareholder and Percentage of Capital Contribution

No.	Name of Shareholders	Subscribed Registered Capital (RMB in ten thousand)	Paid-in Registered Capital (RMB in ten thousand)	Shareholding Percentage
1	Shenhua Group Corporation Limited	2,154,164.028145	2,154,164.028145	100.00%
Total		**2,154,164.028145**	**2,154,164.028145**	**100.00%**

(10) Eighth capital increase

On October 26, 2017, Shenhua Group Corporation Limited issued the Shareholder's Resolution on Amending the Articles of Association of China Shenhua Coal to Liquid and Chemical Co., Ltd., resolving to increase Chemical Co.'s capital contribution from RMB2,154,164.028145 ten thousand to RMB3,073,249.595277 ten thousand, with an additional contribution of RMB919,085.567132 ten thousand.

On November 23, 2017, the Beijing Administration for Industry and Commerce issued the Business License after the change.

After completion of the registered capital increase, the shareholding structure of Chemical Co. is as follows:

Table 1-10 Name of Shareholder and Percentage of Capital Contribution

No.	Name of Shareholders	Subscribed Registered Capital (RMB in ten thousand)	Paid-in Registered Capital (RMB in ten thousand)	Shareholding Percentage
1	Shenhua Group Corporation Limited	3,073,249.595277	3,073,249.595277	100.00%
Total		**3,073,249.595277**	**3,073,249.595277**	**100.00%**

(11) Ninth capital increase

On June 30, 2021, China Energy Group issued the Shareholder's Resolution, resolving to amend the Articles of Association of Chemical Co., whereby the registered capital in the Articles of Association was revised to RMB3,123,543.585277 ten thousand.

On July 30, 2021, the Beijing Municipal Administration for Market Regulation issued the Business License after the change.

After completion of the registered capital increase, the shareholding structure of Chemical Co. is as follows:

Table 1-11 Name of Shareholder and Percentage of Capital Contribution

No.	Name of Shareholders	Subscribed Registered Capital (RMB in ten thousand)	Paid-in Registered Capital (RMB in ten thousand)	Shareholding Percentage
1	Shenhua Group Corporation Limited	3,123,543.585277	3,123,543.585277	100.00%
Total		**3,123,543.585277**	**3,123,543.585277**	**100.00%**

(11) Tenth capital increase

On March 15, 2023, China Energy Group issued the Shareholder's Resolution of China Shenhua Coal to Liquid and Chemical Co., Ltd., approving the change of the registered capital of Chemical Co. from RMB3,123,543.585277 ten thousand to RMB3,123,711.585277 ten thousand.

On March 29, 2023, the Beijing Municipal Administration for Market Regulation issued the Business License after the change.

After completion of the registered capital increase, the shareholding structure of Chemical Co. is as follows:

Table 1-12 Name of Shareholder and Percentage of Capital Contribution

No.	Name of Shareholders	Subscribed Registered Capital (RMB in ten thousand)	Paid-in Registered Capital (RMB in ten thousand)	Shareholding Percentage
1	Shenhua Group Corporation Limited	3,123,711.585277	3,123,711.585277	100.00%
Total		**3,123,711.585277**	**3,123,711.585277**	**100.00%**

As of the Appraisal Reference Date, the shareholding structure of Chemical Co. had not changed.

3. Assets, financial position and operating results

As of the Appraisal Reference Date of July 31, 2025, the audited consolidated financial statement recorded total assets of RMB4,072,274.31 ten thousand , liabilities of RMB2,347,445.02 ten thousand , owners' equity of RMB1,724,829.29 ten thousand and owners' equity attributable to the parent company of RMB1,711,467.75 ten thousand . Among them, current assets amounted to RMB1,070,831.70 ten thousand and non-current assets amounted to RMB3,001,442.61 ten thousand ; current liabilities amounted to RMB1,638,123.93 ten thousand and non-current liabilities amounted to RMB709,321.09 ten thousand . The audited parent company's statements recorded total assets of RMB2,424,434.58 ten thousand , liabilities of RMB1,049,085.48 ten thousand , and owners' equity of RMB1,375,349.10 ten thousand . Among them, current assets amounted to RMB665,974.18 ten thousand and non-current assets amounted to RMB1,758,460.40 ten thousand ; current liabilities amounted to RMB864,773.73 ten thousand and non-current liabilities amounted to RMB184,311.75 ten thousand .

The table below sets out the assets, financial position and operating results in recent years:

4. Principal businesses

China Shenhua Coal to Liquid and Chemical Co., Ltd. is a wholly-owned subsidiary under China Energy Investment Group Co., Ltd. Over the years, the company has focused on research into the clean and efficient conversion of coal and has achieved multiple independent intellectual property rights in the fields of direct and indirect coal liquefaction and coal-based chemicals. It has mastered the core technologies of the coal-to-liquid chemical industry and has successfully constructed and operated the world's only one-million-ton-level coal direct liquefaction demonstration project and Asia's first 100,000-tonne-level carbon dioxide capture and sequestration demonstration project. The company serves as a platform for the preliminary development and construction of energy and chemical projects, a platform for the incubation and engineering demonstration of strategic emerging industries, a platform for the cultivation of specialized talent in the chemical industry, a platform

for the R&D of key generic technologies for coal-to-liquid chemicals, and a platform for technical support and assurance for strategic coal-to-liquid projects.

5. Major accounting policies adopted by the company

The Accounting Standards for Business Enterprises – Basic Standard promulgated by the Ministry of Finance on February 15, 2006 (MOF Order No. 33, revised in July 2014) and 42 specific standards including the Accounting Standards for Business Enterprises No. 1 – Inventories.

(IV) Overview of long-term equity investments

As of the Appraisal Reference Date, China Shenhua Coal to Liquid and Chemical Co., Ltd. had 12 second-tier subsidiaries. As of the Appraisal Reference Date, the original book value of long-term equity investments was RMB22,678,837,819.09, with impairment provisions of RMB9,153,017,938.55, and a net book value of RMB13,525,819,880.54. The companies within the consolidation scope include wholly-owned subsidiaries and holding subsidiaries, while associated companies are not included in the consolidation scope. The details are as follows:

Table 1-15 Breakdown of long-term equity investments

(V) Relationship between the Clients and the Appraised Entity

In this asset appraisal, Client I is China Energy Investment Group Co., Ltd., while both Client II, China Shenhua Energy Company Limited, and the Appraised Entity, China Shenhua Coal to Liquid and Chemical Co., Ltd., are related parties under the control of China Energy Investment Group Co., Ltd. China Shenhua Energy Company Limited proposes to acquire 100% equity interest in China Shenhua Coal to Liquid and Chemical Co., Ltd. held by China Energy Investment Group Co., Ltd. by way of issuance of shares and payment in cash.

(VI) Other users of the asset appraisal report

No other users of the report are stipulated in the asset valuation engagement contract.

Unless otherwise provided by national laws and regulations, any institution or individual that has not been confirmed by the valuation institution and the clients shall not become a user of the valuation report merely by obtaining it.

II. Appraisal Purpose

According to the 18th Minutes of the Chairman's Special Meeting of China Energy Investment Corporation Limited (August 8, 2025), China Shenhua Energy Company Limited plans to issue shares and pay cash to acquire coal, pitheads, coal power and other related assets held by China Energy Investment Corporation Limited. For this purpose, it is necessary to assess the market value of the entire equity interests of China Shenhua Coal Chemical Industry Co., Ltd. held by China Energy Investment Corporation Limited as of the Appraisal Reference Date.

The purpose of this asset appraisal is to reflect the market value of all shareholders' equity of China Shenhua Coal to Liquid and Chemical Co., Ltd. as of the Appraisal Reference Date and to provide a value reference for the aforesaid economic activity.

III. Appraisal Object and Appraisal Scope

The appraisal object is the value of all shareholders' equity of China Shenhua Coal to Liquid and Chemical Co., Ltd. The appraisal scope covers all assets and related liabilities of China Shenhua Coal to Liquid and Chemical Co., Ltd.

As of the Appraisal Reference Date, the audited consolidated financial statement recorded total assets of RMB4,072,274.31 ten thousand, liabilities of RMB2,347,445.02 ten thousand, owners' equity of RMB1,724,829.29 ten thousand and owners' equity attributable to the parent company of RMB1,711,467.75 ten thousand. Among them, current assets amounted to RMB1,070,831.70 ten thousand and non-current assets amounted to RMB3,001,442.61 ten thousand; current liabilities amounted to RMB1,638,123.93 ten thousand and non-current liabilities amounted to

RMB709,321.09 ten thousand.

The audited parent company's statements recorded total assets of RMB2,424,434.58 ten thousand, liabilities of RMB1,049,085.48 ten thousand and owners' equity of RMB1,375,349.10 ten thousand. Among them, current assets amounted to RMB665,974.18 ten thousand and non-current assets amounted to RMB1,758,460.40 ten thousand; current liabilities amounted to RMB864,773.73 ten thousand and non-current liabilities amounted to RMB184,311.75 ten thousand.

The above asset and liability data are extracted from the balance sheet of China Shenhua Coal to Liquid and Chemical Co., Ltd. as of July 31, 2025, audited by Ernst & Young Hua Ming LLP. The appraisal was carried out after the enterprise had undergone an audit.

The entrusted appraisal object and appraisal scope are consistent with the appraisal object and appraisal scope involved in the economic activity.

(I) The distribution and characteristics of physical assets

As of the Appraisal Reference Date, the physical assets of China Shenhua Coal to Liquid and Chemical Co., Ltd. had a book value of RMB417,000.23 ten thousand, accounting for 17.20% of the total assets within the consolidation scope. They mainly include inventories, building assets, equipment assets and construction in progress. These assets have the following characteristics:

1. Distribution and storage locations of physical assets

The physical assets are mainly distributed across the office areas of the headquarters and branches of Chemical Co.

2. Current usage, technical characteristics, and overhaul and renovation/expansion status of physical assets

(1) Inventories

Inventories mainly consist of circulating materials, raw materials, finished goods and work-in-progress. Circulating materials include office supplies required for the enterprise's daily operations. Raw materials mainly include gear oil, bearings, circulation system oil and other materials needed for production, all of which turn over normally. Finished goods mainly include products such as high-density polyethylene, all of which can be normally used and sold. Work-in-progress mainly comprises naphtha and other products that have not yet been completed, all of which can continue to be produced.

(2) Buildings and structures

Building assets comprise 1,258 items in total, including 239 buildings and 1,019 structures. Among them, 19 buildings have obtained property ownership certificates or real estate ownership certificates, with the registered owners being Guohua Energy Investment Co., Ltd., the Ordos Coal to Liquid Branch of China Shenhua Coal to Liquid and Chemical Co., Ltd., and the residential area of China Shenhua Coal to Liquid and Chemical Co., Ltd.; application for the real estate ownership certificate is currently underway for 6 buildings.

The buildings mainly comprise self-constructed production premises such as the main plant, compressor plant, integrated production building, substation main plant, large-equipment assembly and welding plant, integrated maintenance building and warehouses; auxiliary premises such as the production command center, central laboratory building, apartment buildings and canteens, as well as purchased residential properties.

The structures mainly include the perimeter roads, plant roads, coal liquefaction pipe racks, coal-grinding frames, coal-storage frames, 3T biochemical tank, clean-water pool, Evaporation Pond I, Evaporation Pond II, waste-catalyst pool, ferrous sulfate shed, extraction-centrifuge frame and

asphalt-forming frame.

As of the Appraisal Reference Date, the building assets were in good physical condition and in normal use.

(3) Equipment assets

Equipment assets include mechanical equipment, vehicles and electronic equipment.

Mechanical equipment comprises 19,253 items purchased between 2004 and 2025, mainly including the million-ton coal direct liquefaction production line, the 180,000-ton/year indirect coal liquefaction production line, the 100,000-ton/year full-process carbon dioxide capture and sequestration demonstration unit, the 350,000-ton/year coal-liquefaction residue extraction industrial demonstration unit, electrical cables, floating-roof tanks and others. As of the Appraisal Reference Date, except for a small number of filling-station equipment that were not in use, the equipment was generally in good operating condition, with production capacity meeting design requirements and all major systems functioning normally.

Vehicles comprise 134 units, mainly including office vehicles and in-plant tractors and trailers. Except for those that have been scrapped and disposed of, the other vehicles are operating normally and are well maintained.

Electronic equipment comprises 1,237 items, mainly including computers, switches, video-conferencing terminals, projectors and others. As of the Appraisal Reference Date, the electronic equipment was well maintained and all of it was in normal use.

(4) Construction in progress

Construction in progress mainly includes civil works under construction, equipment installation under construction and project materials.

1) Civil works under construction

Civil works under construction mainly include the China Energy Group

Hami Energy Integrated Innovation Base Project, the Baoqing Lignite Comprehensive Utilization Project and others, all of which had not been completed as of the Appraisal Reference Date.

2) Equipment installation under construction

Equipment installation under construction includes the Shendong Mining Area green, high-efficiency and energy-saving heating supporting project for coal-to-liquids, the plant-wide GDS system revamping project for coal-to-liquids, the storage-and-transport center DCS system revamping project, the shallow-sand filter water-saving revamping project for the second circulating-water unit and others, all of which had not been completed as of the Appraisal Reference Date.

3) Project materials

Project materials mainly include corrosion-resistant centrifugal pumps, transparent ground-glass bottles and silicon-carbide radiant heaters, and other materials.

(II) Intangible assets reported by the enterprise, whether recorded or unrecorded in the books

As of the Appraisal Reference Date, the intangible assets reported by the enterprise and recorded in the books mainly comprised land use rights and software. The intangible assets not recorded in the books comprised patent rights. Details are set out below:

1. Intangible assets recorded in the books

(1) Intangible assets – land

The land use rights recorded under the "intangible assets – land" account comprise the land use rights for 20 parcels of land, of which 18 have obtained the land-use certificate or real estate ownership certificate. The remaining two parcels relate to land-occupation compensation paid for the use of land owned

by others, for which ownership certificates cannot be obtained. Of the parcels of land for which certificates have been obtained, 17 have inconsistent registered owners as shown on their land-use certificates. The above land parcels are used as daily operating premises of the Appraised Entity, and their main details are set out in the table below:

Table I-38 Land Use Rights Statement

No.	Certificate Number	Land Location	Land Use	Date of Acquisition	Right Holder	Nature of Right	Certified Area (sq. m)

(2) Intangible Assets – Other

The scope of this valuation includes 72 assets recorded under Intangible Assets - Other account, primarily comprising purchased and self-developed software. These include the Coal Production Dispatch Information System (Integrated Monitoring System), Guoshen Group ERP Project Interface, and Operational Metrics Competition Information System. The details are as follows:

2. Off-Balance-Sheet Intangible Assets

As of the Appraisal Reference Date, the unrecorded intangible assets within the scope of the enterprise's declared valuation were related patent rights, totaling 1,012 items. These patent assets were jointly developed by Chemical Co and its subsidiaries, consisting of 609 invention patents and 403 utility model patents.

(III) Types and Quantity of Off-balance-sheet Assets Declared by the Enterprise

As of the Appraisal Reference Date of July 31, 2025, there are no off-balance-sheet assets within the scope declared by the enterprise for appraisal.

(IV) Asset Types, Quantity, and Book Amount Involved in Conclusions Quoted/ Utilized from Reports Issued by Other Institutions

The book values of various assets and liabilities as of the Appraisal Reference Date in this appraisal report are based on the audit results from the *Audit Report* (Ernst & Young Hua Ming [2025] No. 70073121_A01) issued by Ernst & Young Hua Ming LLP on December 16, 2025, which contained an standard unqualified opinion. The appraisal is conducted on the basis of the audited financial statements.

Apart from this, no content from other institutional reports has been quoted or utilized.

IV. Type of Value

According to the purpose of this appraisal, the type of value determined for this appraisal is Market Value.

Market Value refers to the estimated amount for which an asset should exchange between a willing buyer and a willing seller, each acting knowledgeably, prudently, and without compulsion, in an arm's length transaction as of the Appraisal Reference Date.

V. Appraisal Reference Date

The Appraisal Reference Date for the asset appraisal in this project is July 31, 2025.

This reference date was determined by the client based on comprehensive consideration of factors including the asset scale of the entity

being assessed, the workload, the estimated time required, and compliance requirements.

VI. Appraisal Basis

The appraisal basis followed for this asset appraisal mainly includes the economic action basis, legal and regulatory basis, appraisal standards basis, asset ownership basis, as well as the pricing basis and other reference materials adopted during valuation and calculation. The details are as follows:

(I) Economic Action Basis

1. Minutes of the 18th Chairman's Special Meeting of China Energy Investment Corporation Co., Ltd. (August 8, 2025*)*

(II) Legal and Regulatory Basis

1. Asset Assessment Law of the People's Republic of China (Promulgated by the 21st Session of the Standing Committee of the 12th National People's Congress on July 2, 2016);
2. Company Law of the People's Republic of China (Second Revision adopted at the 7th Session of the Standing Committee of the 14th National People's Congress on December 29, 2023);
3. Civil Code of the People's Republic of China (Adopted at the 3rd Session of the 13th National People's Congress on May 28, 2020);
4. Energy Law of the People's Republic of China (Adopted at the 12th Session of the Standing Committee of the 14th National People's Congress on November 8, 2024);
5. Enterprise Income Tax Law of the People's Republic of China (Amended and adopted at the 7th Session of the Standing Committee of the 13th National People's Congress on December 29, 2018);
6. Regulations for the Implementation of the Enterprise Income Tax Law of

the People's Republic of China (First Revision of the "Decision of the State Council on Amending Some Administrative Regulations" promulgated by State Council Order No. 714 on April 23, 2019);

7. Interim Regulations of the People's Republic of China on Value Added Tax (State Council Order No. 691);
8. "Interim Regulations of the People's Republic of China on Consumption Tax" (Revised and adopted at the 34th Executive Meeting of the State Council on November 5, 2008);
9. Detailed Rules for the Implementation of the Interim Regulations of the People's Republic of China on Value Added Tax (Order No. 50 of the Ministry of Finance and the State Taxation Administration);
10. Stamp Tax Law of the People's Republic of China (Adopted at the 3rd Session of the Standing Committee of the 14th National People's Congress on June 29, 2023);
11. Urban Real Estate Administration Law of the People's Republic of China (Adopted at the 12th Session of the Standing Committee of the 13th National People's Congress on August 26, 2019).
12. Land Administration Law of the People's Republic of China(Adopted at the 12th Session of the Standing Committee of the 13th National People's Congress on August 26, 2019);

9. Asset Assessment Standards Terminology 2020;
10. Asset Assessment Expert Guidance No. 8 - Verification and Validation in Asset Assessment (CAS [2019] No. 39);
11. Asset Assessment Expert Guidance No. 12 - Estimation of Discount Rate in Business Value Assessment Using the Income Approach (CAS [2020] No. 38);

12. Information related to property rights transactions from relevant websites such as the China Securities Regulatory Commission, Shanghai Stock Exchange, and Shenzhen Stock Exchange;
13. Other reference materials.

VII. Appraisal Approaches

(I) Introduction of Appraisal Approaches

Under the Asset Appraisal Practising Standards -- Enterprise Value (ZPX [2018] No. 38) and the Asset Appraisal Practising Standards -- Asset Appraisal Approaches (ZPX [2019] No. 35), the enterprise value appraisal shall select suitable appraisal approach by analyzing the applicability of Income Approach, market approach and Asset-based Approach (three fundamental approaches), according to the appraisal purpose, target, value types, application conditions, data quality and quantity, etc.

Income Approach is to determine the target value by capitalizing or discount the expected revenue. The appraisal professionals shall consider the applicability of Income Approach properly considering the entity nature, asset size, historical operation, future revenue predictability, the sufficiency of obtained materials etc.

Market approach is to determine the target value by comparing the target with comparable listed companies or comparable trading cases. The appraisal professionals shall consider the applicability of market approach according to the sufficiency and reliability of obtained comparable entity's operational and financial data, as well as the number of comparable entities collected.

Asset-based Approach is to determine the target value by appraising the values of various assets and liabilities on or off-balance sheets of the Appraised Entity issued on the Appraisal Reference Date.

(II) Selection of Appraisal Approaches

The purpose of this appraisal is for China Shenhua Energy Company Limited to issue shares and pay cash to acquire 100% equity of China Shenhua Coal to Liquid and Chemical Co., Ltd. held by China Energy Investment Group Co., Ltd.

Asset-based Approach reflects the enterprise value from the perspective of corporate construction, laying a basis for corporate management and examination after realization of economic behavior, so this appraisal adopts the Asset-based Approach.

The Appraised Entity has the foundation and conditions for continuing operation, whose future revenue and risks can be predictable and quantifiable, so this appraisal may adopt Income Approach.

Before or after the Appraisal Reference Date, since recent trading cases of equivalent scale of entities cannot be obtained, there are few comparable entities on the market with the same scale and business structure, thus this appraisal has not adopted the market approach.

Overall, this appraisal will adopt Asset-based Approach and Income Approach.

(III) Asset-based Approach

Asset-based Approach is to appraise the values of various identifiable assets and liabilities on or off-balance sheet of the Appraised Entity or operator issued on the Appraisal Reference Date, to determine the value of target, to be specific, the enterprise value of the entity shall be the sum of appraised values of various elemental assets of the entity less the appraised values of liabilities.

The appraisal approaches for various assets and liabilities are set below:

1. Current assets

(1) Monetary funds

Monetary funds are mainly bank deposits.

The appraisers made confirmation by letters on bank deposit accounts to verify the actual existence of bank deposits, checked for any unrecorded bank deposits, examined the authenticity of items not yet reconciled in the Bank Deposits Statement, and reviewed deposits made after the Appraisal Reference Date. For monetary funds denominated in RMB, the appraised values were determined on the basis of the verified book values. For monetary funds denominated in foreign currency, the appraised values were determined as the verified original currency amounts times the exchange rate published on the Appraisal Reference Date.

(2) Accounts receivable

For accounts receivable, the appraisers verified the bookkeeping records, sampled some original vouchers and other related materials, checked the authenticity of transactions, age, business content, and amounts, and conducted confirmation by letters. The verification results showed that the accounts, statements, and voucher amounts were consistent. Upon verification, the appraisers analyzed the amounts, overdue time and reasons, recovery status, and the debtor's financial condition, credit, and current management situation using historical data and information obtained during the investigation. According to the specific circumstances of the entity, they estimated the appraisal risk loss.

For current accounts with related parties or similar items, if there is sufficient reason to believe that all amounts can be recovered, the likelihood of appraisal risk loss is 0%.

For accounts receivable with significant single amount where the Appraised Entity and the debtor have reached an agreement on the repayment plan, the appraisers determined the appraisal risk loss based on the difference between the present value of the expected future cash flows and the book value. For accounts receivable with insignificant single amount, where the Appraised Entity and the debtor have not determined a repayment plan, the

appraisers estimated the appraisal risk loss of accounts receivable by referring to the method used by the entity for calculating provisions for bad debts.

The appraisers determined the appraised values of accounts receivables on the basis of the verified book values of accounts receivables less the appraisal risk losses.

(3) Prepayments

For prepayments, the appraisers verified the ledger records, checked the original vouchers and related contracts, and confirmed the authenticity of the transactions, as well as the account age, business content, and amounts. They also conducted confirmation by letters and found no abnormalities. Upon verification, the appraisers, using historical data and information obtained from field survey, specifically analyzed the amounts, terms and reasons for the outstanding balances, the recovery status, and the financial position, credit, and current management status of the debtors.

Upon verification, the amounts of the prepayment accounts, statements, and documents are consistent. No supplier bankruptcy, dissolution, or failure to deliver timely under the contract was found. Upon verification, the appraisers determined the appraised value on the basis of the verified book value.

(4) Dividend receivable

For dividend receivable, the appraisers verified the accounting records, examined original vouchers and dividend distribution documents of the Appraised Entity, and other relevant materials to confirm the authenticity of the matter and the accuracy of the amounts. The verification results showed that the amounts in the accounts, statements, and documents were consistent. The appraised value was determined on the basis of the verified book value.

(5) Other receivables

For other receivables, the appraisers verified the bookkeeping records and spot checked some original vouchers and other relevant materials to

confirm the authenticity of transactions, as well as the account age, business content, and amounts. They also conducted confirmations by letter, and the verification results showed that the amounts in the accounts, statements, and documents matched. Upon verification of other receivables, the appraisers, with the help of historical data and current investigations, specifically analyzed the amounts, the terms and reasons for the debts, the recovery status, and the debtor's financial situation, credit, and current management conditions. According to the specific circumstances of the entity, the appraisers adopted the individual recognition method and the aging analysis method to estimate the appraisal risk losses.

For current accounts with related parties and similar items, if there is sufficient reason to believe that all amounts can be recovered, the likelihood of appraisal risk loss is 0%.

For other receivables with significant single amount where the Appraised Entity and the debtor have reached an agreement on the repayment plan, the appraisers determined the appraisal risk loss based on the difference between the present value of the expected future cash flows and the book value. For other receivables with insignificant single amount, where the Appraised Entity and the debtor have not determined a repayment plan, the appraisers estimated the appraisal risk loss of other receivables by referring to the method used by the entity for calculating provisions for bad debts.

The appraisers determined the appraised values of other receivables on the basis of the verified book values of other receivables less the appraisal risk loss.

(6) Inventory

Inventories include raw materials, circulating materials in stock, work-in-progress, and finished goods. The specific methods and procedures for inventory appraisal are as follows:

1) Raw materials

The raw materials primarily comprise flow restrictor plates and air source distributors. The book value comprises the purchase price and reasonable expenses. The valuer verified the authenticity of the materials' existence and the accuracy of their book value by examining relevant purchase invoices, detailed lists, and other supporting documentation. Upon verification, it was established that the raw materials had been in inventory for a relatively short period and exhibited rapid turnover. The book value approximated the market price at the Reference Date. The value was determined by multiplying the actual quantity by the book unit price.

2) Circulating materials in stock

Revolving materials are mainly low-value consumables required for the entity's daily operations, including keyboards, mice, and similar items, whose turnover is normal, with no backlog or damage observed. In this appraisal, vouchers, invoices, and other documents were sampled and compared with the book values, showing little difference. The book value basically reflects the current market value of the circulating materials in stock. Therefore, the appraised value of this portion of circulating materials in stock is determined on the basis of the verified book value.

3) Work-in-progress

Work-in-progress mainly comprises naphtha and other products that have not yet been completed. The appraisers examined relevant purchase invoices, detailed lists and other supporting documentation to verify the composition of the work-in-progress inventory. The valuation was determined based on the verified book value.

4) Finished goods

The finished goods mainly comprises polypropylene resin, linear low-density polyethylene and other products. The appraisal methods adopted are as follows:

Based on the findings of the investigation and analysis of materials provided by the enterprise, the appraisers determined the valuation of finished goods by deducting sales expenses, all taxes, and a certain amount for product sales risk from the tax-exclusive selling price.

Appraised Value = Actual Quantity × Selling Price (excluding tax) × （1 − Product Sales Tax & Surcharge Rate - Selling Expense Rate - Operating Profit Margin × Income Tax Rate - Operating Profit Margin × (1 − Income Tax Rate) × r)

①Selling Price (excluding tax): The selling Price (excluding tax)is determined based on market prices prevailing around the Appraisal Reference Date;

②The product sales tax and surcharge rate primarily comprise the urban maintenance and construction tax and education surcharge, both calculated and paid on the basis of value-added tax;

③The sales expense rate is calculated as the average proportion of sales expenses to sales revenue;

④Operating profit margin = Mainline business profit ÷ Operating revenue;

Mainline business profit = Operating revenue - Operating Costs - Taxes and surcharges - Selling expenses - Administrative expenses - Research and development expenses - Finance costs

⑤Income tax rate shall be based on the rate actually applied by the enterprise;

⑥r denotes a specific rate reflecting market risk associated with the future sale of finished goods, which carries inherent uncertainty. This risk is

determined based on investigations conducted at the Reference Date and subsequent sales realised after that date. Specifically, r is set at 0% for fast-moving products, 50% for standard-selling products, and 100% for slow-moving products.

(7) Other current assets

For other current assets, asset appraisal professionals checked whether the detailed accounts and general ledger, as well as the report balances, were consistent, and whether they matched the subject breakdown. They reviewed accounting records including the amounts, transaction dates, and business content, and spot-checked original accounting vouchers, related payment receipts, contracts, and other documents to verify the authenticity and integrity of the accounting content. They also understood the types of taxes, tax rates, and payment systems the Appraised Entity was responsible for as of the Appraisal Reference Date, along with relevant tax policies and expenses. Upon verification, they determined the appraised value on the basis of the verified book value.

2. Other non-current financial assets

There is a total of 1 other equity instrument investment included in the scope of this appraisal, that is, the investment in Guoneng (Beijing) Sci-Tech Innovation Seed Fund (Limited Partnership), in the total book value of RMB10,000,000.00. The appraisers conducted verification of the causes, book values, and actual conditions of other non-current financial assets, and reviewed investment agreements, resolutions of general meeting, articles of association, and relevant accounting records to determine the authenticity and integrity of these assets. Based on this, they appraised the Investee Entity. The Appraised Entity confirmed that other non-current financial assets were recorded at fair value, hence the appraised value of other non-current financial assets was recognized on the basis of the verified book value.

3. Other equity instrument investments

There is a total of 1 other equity instrument investment included in the scope of this appraisal, that is, the investment in Synfuels China, in the total book value of RMB20,000,000.00. The appraisers conducted verification of the reasons for other equity instrument investment, its book value, and actual conditions, and reviewed investment agreements, resolutions of general meeting, articles of association, and relevant accounting records to determine the authenticity and integrity of other equity instruments. Based on this, they evaluated the Investee Entity. The Appraised Entity confirmed that other equity instrument investment is recorded at fair value, and therefore the appraised value of other equity instrument investment is recognized on the basis of the verified book value.

4. Long-term equity investments

For long-term equity investments, the appraisers first verified the reasons for the long-term investments, their book values, and actual conditions, and reviewed investment agreements, resolutions of general meeting, articles of association, and relevant accounting records to determine the authenticity and integrity of the long-term investments.

For wholly-owned subsidiaries and subsidiaries with more than 50% shareholding, the appraisers evaluated the overall assets of the Investee Entity as of the Appraisal Reference Date, and then calculated its appraised value by multiplying its net assets appraised value on the Appraisal Reference Date by its shareholding percentage:

Appraised value of long-term equity investment = net asset appraised value of Investee Entity upon overall appraisal * shareholding percentage

Where, if the paid-up capital is different with the subscribed capital, then

Appraised value of long-term equity investment = (entire shareholders' equity value of the Investee Entity + unpaid capital amount) * subscribed portion of such shareholders - unpaid contribution of such shareholders

For affiliated companies, the appraisers analyzed the specific situation

of the Investee Entity, under its articles of association, the Appraised Entity does not participate in the management of the affiliated company, which has imposed certain limitations on the current valuation procedures.

For affiliated companies that meet the conditions for a comprehensive valuation, such as Guoneng Baoqing Coal Power Chemical Co., Ltd., the same method applied to the controlling shareholder was adopted in this appraisal. The overall assets of the invested enterprise as of the Appraisal Reference Date were assessed, and the appraisal result was determined by multiplying the assessed net asset value of the invested enterprise as of the Appraisal Reference Date by the equity holding ratio of the entity being evaluated.

For affiliated companies that were able to provide limited cooperation, the appraisal was conducted based on the information that could be collected. For example, for Shaanxi Energy Liangshuijing Mining Co., Ltd., in which a 30% equity stake is held, considering the significant impact of the mining rights held by the enterprise on its overall value, this valuation was based on the mining rights and employed a single income approach.

For affiliated companies that were difficult to cooperate with in carrying out the work, the appraised value is determined by multiplying the net assets listed in the statements as of the Appraisal Reference Date by the shareholding percentage this time.

When determining the appraised values of long-term equity investments, the appraiser did not consider the premiums or discounts arising from factors such as controlling interest or minority interest, nor did they take into account the impact of equity liquidity on the appraisal results.

5. Fixed Assets - Buildings and Structures

(1) Selection of Valuation Methods

In accordance with the requirements of the Asset Valuation Practice Standards - Real Estate, when conducting the valuation on real estates, the applicability of the three fundamental asset valuation methods (market

approach, income approach, and cost approach) and derivative methods (such as hypothetical development method and benchmark land price adjustment method) should be analysed based on the valuation purpose, subject matter, value type, and data collection circumstances, so as to select the appropriate valuation methods.

Based on the structural characteristics and usage nature of the building assets included in the valuation scope, the appraiser analysed the applicability of different valuation methods and ultimately determined the appropriate valuation methods for each asset category as follows:

① For self-constructed building assets owned by enterprises, the cost approach is adopted for its valuation;

② For commercial real estate assets purchased externally by the enterprise or real estates with the potential for separate transfer, the market approach is used for its valuation.

(2) Introduction to Valuation Methods

1) Cost Approach

The cost approach refers to the method that, it calculates the investment required to replace similar real estates based on market conditions and the structural characteristics of the building at the Appraisal Reference Date, which is then multiplied by the building's newness rate after its comprehensive valuation to finally determine the building’s value. The formula is as follows:

Appraised Value = Full Replacement Cost × Newness rate

①Determination of Replacement Cost

As the appraised entity is a general VAT taxpayer, the full replacement cost for buildings and structures assets in this appraisal is tax-exclusive.

The full replacement Cost generally comprises three components: construction and installation engineering costs, pre-operational and other

costs, and capital costs. The formula is:

Full Replacement Cost (excluding tax) = Construction and Installation Cost (excluding tax) + Preliminary and Other Expenses (excluding tax) + Capital Costs

A. Determination of Construction and Installation Costs

For key projects with available budget and final account data, the budget and final account adjustment method is applied, i.e. the appraisers calculate the construction and installation costs of the project based on the budgeted and final accounts quantities, by referencing current standards including the Inner Mongolia Building Construction and Decoration Engineering Budget Quotas (2017 Edition), the Inner Mongolia General Installation Engineering Budget Quotas (2017 Edition) and the Inner Mongolia Municipal Engineering Budget Quotas (2017 Edition), and using the market price information for civil engineering materials in the region where the assessed entity is located on the Reference Date.

For key projects without available budget or final account data, the budget quotas of similar projects are utilised. Simulated quantities are recompiled, and the construction and installation costs of the project under evaluation are calculated based on relevant quotas and applicable price documents as of the Appraisal Reference Date.

For general construction projects of relatively low value, the appraisers shall refer to budget quotas, construction quotas, or estimate indicators for similar building and installation projects. After adjustments based on differences in project costs such as floor height, column spacing, span, finishing standards, and water/electricity facilities, the construction and installation costs for the project under appraisal shall be determined.

B. Determination of Preliminary and Other Expenses

Preliminary and other expenses are determined based on the fee rate standards stipulated by national standards, industry regulations, and local construction management authorities, as well as policy documents governing administrative charges.

C. Determination of Capital Costs

The loan interest rate is determined based on the reasonable construction period of the evaluated entity, by referencing the Loan Market Quotation Rate published by the National Interbank Funding Center authorised by the People's Bank of China on July 21, 2025. The capital cost is calculated uniformly over the construction period using the total sum of construction and installation costs, preliminary expenses and other costs as the base. The formula is as follows:

Funding Cost = [Construction and Installation Cost (including tax) + Preliminary and Other Expenses (including tax)] × Reasonable Construction Period × Loan Interest Rate × 1/2

② Determination of Newness Rate

This valuation determines the remaining service life for each building type, by referencing the economic lifespans of buildings with different structures, through on-site inspections on each building type by appraisers (i.e. inspection on the building's foundation, load-bearing components (beams, slabs, columns), walls, floors, roofs, doors and windows, wall finishes, ceilings, plumbing, ventilation, and electrical systems), based on the Building Condition Rating Standards and the Reference Criteria for Assessing Building Age issued by the former Ministry of Urban and Rural Environmental Construction and Protection, combined with the building's usage status and maintenance history. The newness rate was then calculated using the following formula:

Newness Rate = Remaining Useful Life / (Years Already Used +

Remaining Useful Life) × 100%

③ Determination of Appraised Value

Appraised Value = Replacement Cost (Excluding tax) × Newness Rate

2) Market Approach

The market approach compares the subject property with similar properties that has recently been traded near the Appraisal Reference Date. Known prices of these comparable properties are appropriately adjusted to estimate the subject property's objective and reasonable price or value. The calculation formula is as follows:

P = P case × A × B × C × D × E

Where: P: Appraised value of the subject property; Pcase: Price of comparable transaction example;

A: Transaction condition adjustment factor; B: Transaction date adjustment factor;

C: Regional factor adjustment coefficient; D: Individual factor adjustment coefficient;

E: Adjustment factor for equity status.

6. Fixed assets - Equipment assets

For the purpose of this appraisal, the replacement cost method is primarily adopted for the appraisal under the principle of continued use and based on market price available, by taking into account the characteristics of the equipment appraised and the information collected. For used equipment for which the price could be available in the second-hand market, the market approach would be adopted;

(1) Appraisal of machinery and equipment

The appraised value = full replacement cost× newness rate

1) Full replacement cost for domestic machinery and equipment (excluding tax)

Full replacement cost (excluding tax) = equipment purchase price + transportation & miscellaneous costs + Installation and debugging costs + foundation cost + cost of installation materials and cost of engineering materials/tools issued and consumed + Preliminary and other cost + capital cost - deductible VAT on equipment purchase

A. Purchase price

The purchase price for domestic standard equipment is primarily determined by taking into account the following factors*: inspection into the 2025 Electromechanical Product Price Information Inspection System issued by Machinery Industry Information Research Institute*, online price search, inquiring about the latest market transaction prices from manufacturers or trading companies, and reviewing recent purchase price for similar equipment by the Company. For a small number of equipment where the purchase price is not available for inspection, the price shall be determined by comparing the function and capacity of the same type of equipment produced in the same time and adopting a price change rate for calculation of the purchase price. For non-standard specialized equipment, the installation project cost as of the Appraisal Reference Date shall be determined under the estimated adjustment method, based on the budget and settlement accounts provided by the company by reference to the documents such as China Petroleum and Chemical Corporation Notice [2025] No. 21 and documents relating to local market price adjustments for building materials and standard labor costs.

B. Transportation & miscellaneous cost

Transportation & miscellaneous cost is calculated in accordance with the relevant provisions of China Petroleum and Chemical Corporation Notice [2025] No. 21 regarding the Issuance of the Petrochemical Engineering Construction Cost Quotas (2025). The specific transportation and miscellaneous rates are as shown in the table below:

Table 1-42 Table of Transportation & Miscellaneous Rates

No.	Location of the construction projects	Transportation & miscellaneous rate (%)	Procurement and storage rate(%)
1	Jilin, Liaoning, Hebei, Shandong, Shanxi, Jiangsu, Zhejiang, Anhui, Beijing, Tianjin, Shanghai	4	2.43
2	Henan, Shannxi, Hubei, Hunan, Jiangxi, Sichuan, Chongqing, Fujian, Guangdong, Heilongjiang	4.64	2.87
3	Gansu, Ningxia, Inner Mongolia, Guangxi, Hainan, Guizhou, Qinghai, Yunnan	5.38	3.2
4	Xinjiang, Tibet	6	3.64

The formula for calculation of transportation and miscellaneous cost is as follows:

Equipment freights = equipment purchase price × transportation & miscellaneous rate

If the purchase price includes transportation costs, transportation cost shall not be calculated separately.

C. Installation and debugging cost

Installation and debugging cost is primarily determined by reference to the relevant equipment installation rates specified in the Handbook of Commonly Used Data and Parameters for Asset Appraisal, while considering the complexity of equipment installation and an analysis of the historical expenditures on equipment installation costs by the equipment owner.

For small, non-installation-required equipment, installation costs are not considered.

For non-standard specialized equipment, the installation cost is adjusted

and determined based on verified project estimates or settlement documentation reflecting actual work volume by reference to the Notices on Issuing the Petrochemical Installation Engineering Budget Quotas (2025) and Petrochemical Installation Engineering Cost Quotas (2025) under the China Petroleum and Chemical Corporation Notice [2025] No. 21, and documents relating to local market price adjustments for building materials and standard labor costs.

The formula for calculation of Installation and debugging cost is as follows:

Installation and debugging cost = equipment purchase price × Installation and debugging cost rate

D. Foundation cost

For an equipment requiring a separate foundation project, the foundation cost is determined by reference to the foundation cost rates specified in the Handbook of Commonly Used Data and Parameters for Asset Appraisal based on the estimated calculation or settlement information of the project while taking into account the actual expenditure occurred by the property owner. Whereas no separate foundation is required or the foundation has been constructed collectively during plant construction, and the book value of the equipment is already included in that of the relevant buildings, the foundation cost is not considered;

The formula for calculation of foundation cost is as follows:

Foundation cost = equipment purchase price × foundation cost rate

E. Cost of installation materials and cost of engineering materials/tools issued and consumed

Cost of installation materials and cost of engineering materials/tools

issued and consumed shall be determined by reference to the estimated calculation or settlement information of the project based on fluctuations in industrial product price indices and bulk commodity price indices while taking into account the actual expenditure occurred by the property owner.

Cost of installation materials and cost of engineering materials/tools issued and consumed = equipment purchase price × rate for cost of installation materials and cost of engineering materials/tools issued and consumed

F. Preliminary and other cost

Preliminary and other cost is calculated by reference to the relevant provisions in the Petrochemical Engineering Construction Design Budget Preparation Methods (2018) issued under the China Petroleum and Chemical Corporation Notice [2018] No. 207 and the Petrochemical Engineering Construction Cost Quotas (2025) issued under the China Petroleum and Chemical Corporation Notice [2025] No. 21.

G. Capital Cost

Considering that the machinery and equipment under the appraisal are part of the series of equipment procured for business establishment to production commencement, their production capacity is subject to the operation of the company's overall construction (such as buildings, structures and other equipment). Therefore, the period from its acquisition to operation is aligned with the overall project construction timeline of the enterprise. The applicable interest rate references the 1–5-year Loan Prime Rate (LPR) published by the National Interbank Funding Center authorized by the People's Bank of China on July 21, 2025, assuming that funds are invested evenly during the construction period.

Capital cost = (equipment purchase price + transportation and miscellaneous cost + Installation and debugging cost + foundation cost + cost

of installation materials and cost of engineering materials/tools issued and consumed + preliminary and other cost (tax inclusive) × reasonable construction period × loan interest rate × 1/2

H. Equipment Purchases Eligible for VAT Deduction

Pursuant to the Notice on Issues Concerning the Nationwide Implementation of the VAT Transformation Reform (Cai Shui [2008] No. 170), the Notice on Comprehensively Promoting the Pilot Program for Replacing Business Tax with Value-Added Tax (Cai Shui [2016] No. 36 and Cai Shui [2018] No. 32), and the Circular [2019] No. 39 issued jointly by the Ministry of Finance, the State Taxation Administration and the General Administration of Customs, the corresponding VAT should be deducted from the replacement cost of machinery and equipment that meets the conditions for VAT deduction. The deductible amount shall represent the value-added tax incurred on the purchase price, freight, installation fee, foundation cost, cost of installation materials and cost of engineering materials/tools issued and consumed, preliminary and other cost, and other related expenses.

2) Appraisal of imported machinery and equipment renewed in situ

Due to the early construction of the project, accurate quotations for the imported equipment cannot be obtained. Over the past two decades, domestic equipment has achieved comparable technical standards as those imported ones in terms of technology, processing and manufacturing capabilities and quality. Based on the interviews with lead design units such as Sinopec Engineering Incorporation, and China Chemical Tianchen Engineering Research Institute, it is confirmed that all process routes and technical solutions for domestic coal-to-liquids facilities are now entirely based on domestic technologies. The technical standards, product quality, operation stability and reliability of domestic coal-to-chemicals facilities, sub-facilities,

core equipment and systems not only surpass the early levels of imported equipment, but are also comparable to the latest international technology standards. Subsequent domestic facilities have exclusively adopted domestic equipment, and the preliminary design for the future phase II project of the Appraised Entity also fully incorporates domestically produced equipment. Therefore, the pricing of relevant imported equipment is determined by substitution principles based on the prices of domestically produced products with equivalent technical levels. The appraisal is conducted as if they were domestic equipment.

3)Newness rate of machinery and equipment

Newness rate of machinery and equipment ("N") is calculated based on the remaining service life of the equipment as determined based on its economic service life and the inspection conducted for each component thereof by on-site inspection of its current condition, and review of the information relating to its operation, repair and management records, which represents:

N = Remaining Useful Life ÷ (Years Already Used + Remaining Useful Life)× 100%

4) Determination of appraised value

The appraised value = full replacement cost × newness rate

(2) Appraisal of transport vehicle

1) Determination of full replacement cost of transport vehicle

The prevailing including tax purchase price of the vehicle as of the Appraisal Reference Date is determined based on the sales data available at the local automotive market, the prevailing vehicle market price and other information. On this basis, miscellaneous fees such as vehicle purchase tax and new vehicle registration and license fee are incorporated into the

aforementioned price in accordance with the Vehicle Purchase Tax Law of the People's Republic of China. Pursuant to the Notice on Comprehensively Promoting the Pilot Program for Replacing Business Tax with Value-Added Tax (Cai Shui [2016] No. 36 and Cai Shui [2018] No. 32), and the Circular [2019] No. 39 issued jointly by the Ministry of Finance, the State Taxation Administration and the General Administration of Customs, the full replacement cost for enterprises eligible for VAT deduction is:

Full replacement **cost** (excluding tax) = purchase price + vehicle purchase tax + miscellaneous fees (including license registration fee) - deductible VAT

Deductible VAT = purchase price/1.13×13%

A.Vehicle purchase price

The purchase price of the appraised vehicle shall be determined based on recent market price available from sources such as vehicle market information, the Pacific Auto Network's Vehicle Pricing Database, and the website of Yiche.com, with reference to the latest transaction prices of comparable models in the region where the appraised vehicle is located. For vehicles purchased a long time ago where the purchase price cannot be verified for the original model and specifications, the purchase price shall be determined by reference to similar vehicles with the same displacement.

B.Vehicle purchase tax

According to the relevant provisions of the Vehicle Purchase Tax Law of the People's Republic of China: the taxable amount subject to vehicle purchase tax = taxable price × 10%. The "taxable price for taxpayers purchasing vehicles for their own use shall not include the VAT amount." Therefore: purchase tax = purchase price ÷ (1 + value-added tax rate) × 10%

C. N New vehicle registration & license plate fee

New vehicle registration and license plate fee is determined according to the description and amount provided for such fee in the region where the vehicle is located.

2) Vehicle newness rate

According to relevant provisions of Compulsory Vehicle Scrapping Standards of the Ministry of Commerce, National Development and Reform Commission, Ministry of Public Security, Ministry of Environmental Protection (Decree [2012] No. 12), newness rate for vehicles is determined by the following methods, taking the smaller value as the final Newness Rate:

Age-based Newness Rate = (1 - Years in Use / Regulatory or Economic Service Life) × 100%

Mileage-based Newness Rate = (1 - Miles Driven / Regulatory Mileage Limit) × 100%

Newness Rate = Min (Age-based Newness Rate, Mileage-based Newness Rate)

Simultaneously, necessary inspection and identification were performed on the vehicle being appraised. If inspection results differed significantly from the newness rate determined by the above method, appropriate adjustments were made. If the results were similar, no adjustment was made. That is:

Newness Rate = Min (Age-based Newness Rate, Mileage-based Newness Rate) + a

a: Special vehicle condition adjustment coefficient

Note: Newness rate is not applicable to vehicles appraised directly at used car market prices.

3)Determination of appraised value

The appraised value = full replacement cost × vehicle newness rate

(3) Appraisal of electronic equipment

1)Determination of full replacement cost for electronic equipment

Price of electronic equipment as of the Appraisal Reference Date shall be determined based on the local market information and quotation request via online platforms by collecting the recent market price information. Generally, manufacturers or agents would provide transportation, installation and commissioning services for free. The full replacement cost shall be determined according to the tax-exclusive purchase price:

Full replacement cost (excluding tax) = purchase price – deductible value-added tax

Deductible VAT = purchase price/1.13×13%

Note: Certain electronic equipment operating beyond its service life are appraised under market approach.

2) Electronic equipment newness rate

Newness rate = Remaining Useful Life ÷ (Years Already Used + Remaining Useful Life) ×100%

Note: Newness rate is not applicable to electronic equipment appraised directly at second-hand market prices.

3)Determination of appraised value

The appraised value = full replacement cost × newness rate of electronic equipment

7.Work in progress

According to the WIP features, appraised value types, information collection status and other related conditions, the cost approach is adopted for this appraisal.

(1) Completed works

For works completed on the Appraisal Reference Date whose construction payments have been settled or payable amounts have been recognized, the appraisal should be carried out with fixed asset appraisal approach. If the works are auxiliary to other major works, then such works should be considered in the main works appraisal, and the auxiliary works should not be appraised separately.

(1)Uncompleted works

For work in progress whose commencement date has passed for less than half a year since the Appraisal Reference Date, the appraised value is the verified book value. For work in progress whose commencement date has passed for more than half a year, if the book value does not include capital cost, then the capital cost should be added according to reasonable construction term; if the book value includes capital cost, then the capital cost is zeroed and calculated again.

8. Right-of-use assets

The accounting content of right-of-use assets mainly pertains to the rights of Appraised Entity to use the relevant leased assets during the lease term. The carrying amount of right-of-use assets is primarily composed of the initial measurement amount of lease liabilities and any direct costs incurred during the lease.

Right-of-use assets refer to the tenant’s right to use leased assets during the lease term. The entity shall recognize right-of-use assets and lease liabilities in accordance with the Accounting Standard for Business Enterprises No. 21 -- Leases (Revised).

Appraisers investigated and understood relevant lease subject matters, checked relevant lease contracts, verified the lease term, remaining term, rental level, pending rental payments and others, and looked into whether there is a purchase option, a renewal right, and an early termination right.

Upon verification, the initial cost measurement of the right-of-use assets is accurate, and the depreciation provision is reasonable. This time, the appraised value of the right-of-use assets was determined on the basis of the verified book value.

6. Intangible assets - Land

(1) Selection from appraisal approaches

According to the requirements of the Asset Appraisal Practising Standards -- Real Estate and the Urban Land Pricing Procedures, considering the subject land geography, land use nature, utilization conditions and local land market conditions, appraisers analyzed the applicability of different appraisal approaches, and finalized the reasonable approaches.

1)Applicable approaches and reasons

A. Market comparison approach: The subject is located in Ordos city, with active property trading recently in this area, the transaction prices are open and transparent, it's easy to obtain a large number of land trading cases with similar conditions and similar manner, and the trading time, conditions, regional factors and individual factors of comparable cases are definite, it's easy to reasonably determine the comparable factors correction coefficient, and objectively measure comparable prices, so the market comparison approach is applicable.

B. Cost approach: The subject land lot is for industrial purpose, there are many similar land requisition cases in this area recently, and there are accurate bases of obtaining various costs and expenses consumed in land development, so the cost approach is applicable.

2) Inapplicable approaches and reasons

A.Benchmark land price coefficient correction approach: The benchmark land price in the territory where the subject is located is not yet published, appraisers fail to obtain local benchmark land price related correction system, not meeting the conditions for adopting the benchmark

land price coefficient correction approach, so such approach is not applicable.

B. Income capitalization approach: There is no land lease case in the territory where the subject land lot is located for the purpose of potential rent estimation; meanwhile the buildings on the subject land lot are for self-use by the entity. Although such kind of properties are somewhat universal, similar lands in this area are generally for self-use, rarely for lease, and it's difficult to accurately measure the pure land income by stripping out property rent, so the income capitalization approach is not applicable.

C. Assumed development approach: The subject land lot is for industrial purpose, the properties for similar industrial purpose in the same supply-demand circle are recently mainly for self-construction and self-use, there is few leasing or trading case of mining plant, a stable open plant lease and trading market is not in form, so residual approach (assumed development approach) is not applicable for this appraisal.

Above all, according to subject land lot features and actual conditions, this appraisal adopts market comparison approach and cost approach.

For uncertified land whose book value represents compensation for occupation of other's land, this time it's listed book value.

(2) Introduction of appraisal approaches

Market comparison approach is a method of estimating the objective and reasonable price of a land lot by comparing it with similar land use rights that are substitutable and have recently been traded in the market as of the Appraisal Reference Date, based on the principle of substitution in the market, and making appropriate adjustments to the trading prices of similar land use rights.

Cost approach is an appraisal method that determines the price of land for concession based primarily on the sum of all objective costs incurred in land development, plus objective profit, interest, and applicable taxes.

7.Tangible assets - Others

(1) Outsourced software

To outsourced software, appraisers checked relating certificates, understood the composition of original recognized values, amortization method and period, viewed original contract, invoices, payment vouchers. Upon verification, the amounts of statements were matching. According to other intangible asset features, appraised value types, information collection and other related conditions, appraisers adopted market approach:

1) For outsourced software on sale on reference date, the appraised value should be the market price on reference date;

2) For custom software, the appraised value should be the price inquiry to software developer.

(2) Technology-based intangible assets

Common appraisal approaches for technical intangible assets include market approach, revenue approach and cost approach.

China's technical intangible assets market trading is in early stage, the collection of related fair-trading data is difficult, so this time market approach is not applicable in the appraisal of technical intangible assets.

To joint patents, where Ordos Coal to Liquid Branch of China Shenhua Coal to Liquid and Chemical Co., Ltd. ("Coal to Liquid Branch") and Guoneng Yulin Chemical Co., Ltd. ("Yulin Chemical") participated in the research and development, considering the industry features, the corresponding relationship between their patent rights and revenues is clearly quantifiable, and the value contribution of such technology-based intangible assets may maintain certain continuity, so Income Approach is adopted to appraise such patents. To joint patents where other subsidiaries participated in the research and development, there is no stable, identifiable cash flow connection between specific patent asset and future revenue, there is no corresponding relationship between patents and corporate revenue, the revenue sharing is uncertain, so cost approach is applicable to those patents.

Based on foregoing judgment, apart from Guoneng Yulin Chemical Co., Ltd., other patented parts should be appraised in the calibre of chemical parent company, while subsidiaries should not be appraised separately.

8. Other non-current assets

Appraisers checked breakdown and general ledger, whether the balances were matching, checked whether they were matching with the subject breakdown, checked the amounts, dates, business contents and other billing records, spot checked original recognition vouchers, contracts, agreements and other materials, and proved the authenticity and integrity of other non-current assets. After book values were found correct, appraisers determined the appraised values.

9. Liabilities

Appraisers verified the actual debtors and their amounts of liabilities after the purpose of appraisal was realized, and determined the appraised value according to the liability items and amounts to be undertaken by the owners after the purpose of appraisal was realized.

(IV) Income Approach

1. General

Under the Asset Appraisal Practising Standards -- Enterprise Value, the Income Approach in the enterprise value appraisal is also called cash flow discount approach, that is, an appraisal method to forecast the future cash flow and risk of the enterprise or one of its revenue generating units, choose a matching discount rate, discount and sum up its future cash flow. The basic mindset of Income Approach is to estimate the future expected net cash flow of asset, use applicable discount rate and discount it into present value. Income Approach is applicable when: the entity has the foundation and conditions for continuing operation; there is a stable corresponding relationship between operation and revenue; future revenue and risk may be

predictable and measurable. The biggest difficulty of cash flow discount approach is the forecasting of future expected cash flow, as well as data collection and processing objectivity and reliability etc. When the forecasting of future expected cash flow is objective and fair, and the selection of discount rate is rational, the appraisal results will be objective.

2. Mindset

According to the due diligence status and the Appraised Entity's assets composition and principal business characteristics, this appraisal was to estimate its equity capital value in the calibre of the Appraised Entity's audited financial statements, in the following basic mindset:

(1) Appraisers predicted the expected revenue (net cash flow) of assets and principal businesses that were included in statements, according to historical operational changes and business types, and derived the discounted value of operational assets.

(2) Appraisers defined the non-current assets/ liabilities that were included in statements but not considered in the forecasting of expected revenue (net cash flow), such as monetary fund existing on reference date, dividend receivable/ payable, work in progress not considering gain or loss, and so on, and separately predicted their values.

(3) Appraisers measured the value of long-term equity investment separately which was included in statements but not considered in the estimation of expected revenue.

(4) Appraisers derived the Appraised Entity's corporate value by summing up the values of foregoing assets and liabilities, and after deduction of interest-bearing debt values after reference date, derived its equity capital (entire shareholders' equity) value.

In determining entire shareholders' equity value, appraisers did not consider the premium or discount generated by control and minority equity or other factors, nor consider the influence of equity liquidity on appraisal results.

3. Appraisal models

(1) Basic models

Basic models in this appraisal:

$$E=B-D \quad (1)$$

Where:

E: Appraised Entity's shareholders' equity (net asset) value;

B: Appraised Entity's corporate value;

D: Appraised Entity's interest-bearing debt value;

$$B=P+C \quad (2)$$

Where:

P: Appraised Entity's operational asset value;

C: Appraised Entity's surplus or non-operational asset/liability value on the Appraisal Reference Date;

$$P=\sum_{i=1}^{n}[R_i\times(1+r)^{-i}]+p_n\times(1+r)^{-n} \quad (3)$$

Where:

Ri: Appraised Entity's expected return (free cash flow) in the future year i;

Pn: recoverable value of operating capital, fixed assets, intangible assets and other related assets in the end of operating period;

r: discount rate;

n: Appraised Entity's future operating period;

$$C=C_1+C_2 \quad (4)$$

C_1: current surplus or non-operational asset/liability value on reference date;

C_2: non-current surplus or non-operational asset/liability value on reference date.

(2) Revenue indicator

In this appraisal, free cash flow was used as the revenue indicator of the Appraised Entity's operational capital, defined as:

R = net profit + depreciation & amortization + interest after tax - additional capital + ending asset recovery (5)

Appraisers estimated the free cash flow in future operating period, according to the Appraised Entity's operational history and future market development etc. Operational asset value was derived from discounted and summed free cash flow in future operating period.

(3) Discount rate

Discount rate is determined with WACC model this time.

$$r=r_d\times w_d+r_e\times w_e \quad (6)$$

Where:

W_d: debt ratio of Appraised Entity;

$$w_d=\frac{D}{(E+D)} \quad (7)$$

W_e: equity ratio of Appraised Entity;

$$w_e=\frac{E}{(E+D)} \quad (8)$$

r_d: interest-bearing debt interest rate after income tax;

r_e: cost of equity capital, determined with CAPM this time;

$$r_e=r_f+\beta_e\times(r_m-r_f)+\varepsilon \quad (9)$$

Where:

r_f: risk-free rate of return;

r_m: market expected rate of return;

ε: featured risk adjustment coefficient of Appraised Entity;

β_e: expected market risk coefficient of Appraised Entity's equity capital;

$$\beta_e=\beta_u\times(1+(1-t)\times\frac{D}{E}) \quad (10)$$

β_u: expected unlevered market risk coefficient of comparable company;

$$\beta_u = \frac{\beta_t}{1+(1-t)\frac{D_i}{E_i}} \quad (11)$$

β_t: expected market average risk coefficient of comparable company's shares (assets);

$$\beta_t = 1/3K + 2/3\beta_x \quad (12)$$

Where:

K: average risk value of stock market in certain period, usually assumed K=1;

β_x: historical market average risk coefficient of comparable company's shares (assets);

D_i, E_i: interest-bearing debts and equity capital of comparable company.

4. Revenue period

According to the articles of association of the Appraised Entity, the entity's effective for a long period, and since the entity was operating normally on the Appraisal Reference Date, without limiting the useful life of core assets that might affect the entity's continuing operation or limiting the production period, investor's ownership period and others of the entity, or the above limitations might be canceled and might be used perpetually by continuation. Therefore, the Appraised Entity will be operating perpetually after the Appraisal Reference Date, and the revenue period will be limitless.

VIII. Appraisal Process and Conditions

The appraisal was carried out in four stages:

(I) Preparation

The preparatory works were carried out in early September 2025, mainly including:

1. Negotiation and undertaking

Appraisers understood the basic conditions of Appraised Entity and

subject involved in the undertaken business, clarified the purpose, subject, scope and reference date of appraisal; made comprehensive analysis and evaluation on the competence, independence and business risk based on appraisal purpose, trading background and other specific conditions, and signed the assets appraisal contract.

2. Work plan of appraisal program

Appraisers fully communicated with the client and project related parties, further determined the basic events of assets appraisal and the Appraised Entity's assets and operational status, collected the basic policies, laws, regulations and market conditions for the industry where the Appraised Entity is operating, and on this basis contemplated the initial work plan, and developed the appraisal plan.

3. List of materials and interview outline

Appraisers submitted specific list of due diligence survey materials, as well as list of assets, profit forecast and other forms, and required the Appraised Entity to make appraisal preparation.

4. Tutoring and preparation of materials

Appraisers contacted Appraised Entity workers, tutored them to prepare required materials and fill out related tables according the assets appraisal requirements.

(II) Field Appraisal

Field works were carried out in mid-September 2025, mainly including:

1. Initial understanding

Appraisers listened to the client and Appraised Entity's introduction of the overview of Appraised Entity and the history and status quo of subject assets, and understood the historical succession, financial system, operating conditions, fixed assets technology status and other conditions of the Appraised Entity.

2. Proofreading

Appraisers reviewed and identified the information declared by Appraised Entity, made full collection and verification of title certificates of subject assets, proofread the financial records and data relating to the entity, and made adjustments working with the entity to any problem found.

3. Key inspection

Appraisers made full inspection and verification on the main assets, operating and office premises according to the declared information: inspected and verified the statements and various business contracts against the declared bank deposits and current accounts, to determine their authenticity and analyze their risks; made field survey against the declared physical assets, including inventory taking of electronic devices and mechanical equipment by spot check, and full investigation into house buildings. Meanwhile, appraisers understood the management system and maintenance, rebuilding and expansions, collected information against house buildings; reviewed technical information against dedicated equipment; reviewed the rental contracts against the rental premises etc.

4. Due diligence interview

Through due diligence survey and executive interview, appraisers understood corporate costs and expenses, analyzed corporate future development. Appraisers held seminars with corporate managers in respect of the profit forecast data declared by the entity, and tried to reach agreement on future development, and thus made verification by referring to the principal business and gross profit or others of similar entities in the same industry and in the same field.

5. Appraisal path and method

Appraisers determined specific model and method for assets appraisal, according to the reality and features of subject assets.

6. Estimation

Appraisers determined the appraisal model, computed the appraisal results, and drafted relevant written explanations, based on unanimous knowledge.

(III) Summary

Appraisers summarized the initial appraisal results of various assets and liabilities, and made necessary adjustments, modifications and improvements to the results.

(IV) Submission

After above efforts, appraisers drafted the initial assets appraisal report, made initial review, and then exchanged opinions with the client on the appraisal results. After independent analysis, appraisers made revisions and adjustments according to the firm's inner report review system and procedures, and finally produced the formal assets appraisal report.

IX. Appraisal Assumptions

In this appraisal, the appraisers followed the following assumptions:

(I) General Assumptions

1. Trading

Trading is to assume that all subject assets are in trading process already, the appraisers will estimate the prices according to the trading conditions. Trading assumption is the most fundamental premise of asset appraisal.

2. Open market

Open market is to assume that for the assets traded /to be traded on market, the trading parties are in equal conditions, both of them have sufficient opportunities and time to acquire market information, to make rational judgment on the functions, purposes and trading prices of the assets. Open market assumption is based on open trading of assets on market.

3. Corporate ongoing basis

Ongoing basis is the assumption of entire assets of the Appraised Entity. That is, the entity as an operating entity will continue operation pursuant to its operational objectives in said external conditions. The operator is responsible, capable and undertaking; the entity is operating lawfully, with suitable profits to maintain its operational capacity. Various operating assets of the entity will continue usable in the manner, scale, frequency, conditions and other circumstances and for the purpose the same with current, or with some changes.

(II) Special Assumptions

1. There is no material change in the current national laws, regulations and national macroeconomic conditions, and there is no material change in the political, economic and social environments of the territories where the trading parties are located.

2. There is no material change in the socioeconomic conditions as well as relating interest rate, exchange rate, tax basis and tax rate, policy-based charges and other factors the corporate is subject to.

3. Future management team is diligent and continuing current management model.

4. The appraisal is only based on the existing operational capability on the Reference Date, without considering future expansion due to management, operational strategy, additional investment or other circumstances, or considering future changes in production and operation.

5. All assets in this appraisal are based on the actual amounts on the Appraisal Reference Date, while the prevailing market prices of assets are based on the domestic effective prices on the Appraisal Reference Dates.

6. The fundamental information and financial information provided by the client and the Appraised Entity are true, accurate and complete.

7. The scope of appraisal is contained in the appraisal declaration

rendered by the client and the Appraised Entity, without consideration of potential or contingent asset or liability other than listed by the client and the Appraised Entity.

8. In future period, the kinds and percentages of various expenses incurred by the Appraised Entity will not change largely from current level, which will maintain the recent trend and change synchronously with the operational scale of the entity.

9. The Appraised Entity may maintain its qualification as high new tech enterprise, subject to 15% corporate income tax rate as preferential policy.

10. As the entity's monetary funds or bank deposits are changing frequently or largely during operation, the financial cost appraisal in this report disregards the deposit interest income, exchange gain or loss and other uncertain gains or losses.

11. There is no other force majeure or unpredictable factors that may cause material negative influence on the entity.

12. The cash inflow of Appraised Entity after the Appraisal Reference Date will be average inflow, and the cash outflow will be average outflow.

The appraisal results will be invalidated generally by any change of the foregoing conditions.

X. Appraisal Conclusion

The entire shareholders' equity value of China Shenhua Coal to Liquid and Chemical Co., Ltd. on July 31, 2025 (reference date) is appraised with Asset-based Approach and Income Approach respectively, upon verification, field survey, market investigation and inquiry, estimation and other appraisal procedures, under relevant laws, regulations and assets appraisal standards, based on the Client and corporate management's judgement on future development and operational planning.

(I) Appraisal Results with Asset-based Approach

The appraisal conclusion with Asset-based Approach of the Appraised Entity on reference date is set below:

The book value of total assets is RMB2,424,434.58 ten thousand, and its appraised value is RMB3,544,138.89 ten thousand, representing an increase of RMB1,119,704.31 ten thousand or 46.18%.

The book value of liabilities is RMB1,049,085.48 ten thousand, and its appraised value is RMB1,049,085.48 ten thousand, so there is no change.

The book value of net assets is RMB1,375,349.10 ten thousand, and its appraised value is RMB2,495,053.41 ten thousand, representing an increase of RMB1,119,704.31 ten thousand or 81.41%. The details are listed below:

Table 1-43 Summary of asset appraisal results

Unit: RMB in ten thousand

Item		Book value	Appraised value	Change	Percentage %
		A	B	C=B-A	D=C/A×100
1	Current assets	665,974.18	669,365.06	3,390.88	0.51
2	Non-current assets	1,758,460.40	2,874,773.83	1,116,313.43	63.48
3	Incl.: Long-term equity investment	1,352,581.99	2,128,380.86	775,798.87	57.36
4	Investing properties	-	-	-	
5	Fixed assets	189,727.72	393,781.55	204,053.83	107.55
6	Work in progress	107,605.97	109,077.00	1,471.03	1.37
7	Intangible assets	41,590.06	176,579.76	134,989.70	324.57
8	Other non-current assets	66,954.66	66,954.66	0.00	0.00
9	**Total assets**	**2,424,434.58**	**3,544,138.89**	**1,119,704.31**	**46.18**
10	Current liabilities	864,773.73	864,773.73	-	-
11	Non-current liabilities	184,311.75	184,311.75	-	-
12	**Total liabilities**	**1,049,085.48**	**1,049,085.48**	**-**	**-**
13	**Net assets (shareholders' equity)**	**1,375,349.10**	**2,495,053.41**	**1,119,704.31**	**81.41**

(II) Appraisal Results with Income Approach

The Appraised Entity's appraisal results on July 31, 2025 (reference date) with Income Approach are shown below:

The parent calibre carrying amount of the total Shareholders' equity of China Shenhua Coal to Liquid and Chemical Co., Ltd. was RMB1,375,349.10 ten thousand, and its shareholders' equity value was appraised at RMB2,207,287.02 ten thousand, representing an increase of RMB831,937.92 ten thousand or 60.49%.

(III) Analysis on the Difference of Appraisal Results

The net assets value is RMB2,207,287.02 ten thousand measured with Income Approach, but RMB2,495,053.41 ten thousand measured with Asset-based Approach. The net asset value resulted from Asset-based Approach is RMB287,766.39 ten thousand lower than the asset value resulted from income approach, the differential rate is 11.53%. Such difference is mainly because:

1.Asset-based method appraisal adopted the cost of assets reallocation as the value standard, reflecting the socially necessary labor consumed in asset investment (purchase and construction costs). The purchase and construction costs usually change with the fluctuations of the national economy;

2. Revenue method appraisal adopted the expected revenue of assets as the value standard, reflecting the operating capability (profitability) of assets. Such profitability is affected by marco-economy, governmental control, effective utilization of assets and many other conditions.

The difference is thus caused.

(IV) Choice from Appraisal Results

Income Approach is to appraise corporate value by discounting its expected revenue. Income Approach is influenced by the entity's future profitability, asset quality, operating capability and operational risk largely. In this appraisal, the Appraised Entity's historical operation is unstable, some

product lines are stopped, idle or obsolete, and as chemical industry is vulnerable to environmental effects, the price fluctuations of its products and raw materials are large, and the accuracy of profit forecasting is low.

Asset-based Approach is to reflect the fair value of asset from the perspective of asset reallocation. In this appraisal, the Appraised Entity is a heavy asset entity. The entity provided its detailed asset and liability information, the appraisers collected necessary information externally. We made overall counting and appraisal of the Appraised Entity's assets and liabilities, so the Asset-based Approach is relatively reliable. Therefore, the final conclusion is made from the asset-based results.

From the above analysis, the shareholders' equity value of China Shenhua Coal to Liquid and Chemical Co., Ltd. was RMB2,495,053.41 on the Appraisal Reference Date.

XI. Special Explanations

(I) Conclusion by Quoting Other Institutions

None.

(II) Incomplete Title Information or Flawed Title

1.Within the scope of appraisal declared by the Appraised Entity, some house buildings and land lots are lacking ownership certificates, or the name of certified holder is wrong among other flaws, the entity undertakes such assets are in its ownership, while the potential dispute arising from the title of such assets is not related to the appraising firm. Details of properties lacking ownership certificates are provided in Appendix 2.

Table 1-45 List of Properties Pending Title Certificates

S/N	Building name	Location	Completion time	Actual floor area(m²)	Book value
1	Car oil loading pump room	Dayan oil depot site	Nov 2021	117.76	480,562.39
2	Train oil unloading pump room	Dayan oil depot site	Nov 2021	106.56	387,770.59
3	Auxiliary room	Dayan oil depot site	Nov 2021	481.21	2,740,275.74
4	Integrated sewage pumping station	Dayan oil depot site	Nov 2021	201.16	932,140.98
5	Integrated room	Dayan oil depot site	Nov 2021	371.34	2,212,779.13
6	Guard	Dayan oil depot site	Nov 2021	45.60	300,372.30
Total				**1,323.63**	**7,053,901.13**

Table 1-46 Breakdown of Uncertified Land Lots

(III) Limited Procedure or Incomplete Information

There is no limited procedure or incomplete information in this appraisal.

(IV) Legal, Economic, and Other Pending Event Existing as of the Appraisal Reference Date

As of the Appraisal Reference Date, no pending legal, economic, or other events were found in the Appraised Entity.

(V) Nature and Amount of Guarantees, Leases, and Contingent Liabilities (or Contingent Assets), as well as Their Relationship with the Target

1. Based on the lease agreements, explanations and confirmations provided by Chemical Co. and its controlled subsidiaries, as of July 31, 2025, Chemical Co. and its controlled subsidiaries collectively leased 2 land use right involving an aggregated site area of approximately 1,373,841.00 square meters. The details are as follows:

No.	Lessee	Lessor	Area (sq.m)	Location	Use	Term of lease
1	Research Center	Shanghai Huayi Holdings Group Co., Ltd.	76,841.00	No. 368, Shuangbai Road, Minhang District, Shanghai	Testing and office facilities	September 15, 2004 to September 14, 2054
2	Coal to Liquid Branch	Shangwan Village Committee, Wulanmulun Town, Yijinhuoluo Banner, Ordos, Inner Mongolia Autonomous Region	1,297,000.00	Guojiageta Village & Baijiayan Village, Shangwan Village, Wulanmulun Town, Yijinhuoluo Banner, Ordos, Inner Mongolia Autonomous Region	Construction and operation of renewable energy replacement project for a self-owned power plant with capacity of 2x100MW	May 21, 2025 to May 20, 2045

In particular, Coal to Liquid Branch has leased one parcel of village

collective-owned land, for which it has obtained the relevant decision document from the village collective.

2. Based on the lease agreements, explanations and confirmations provided by Chemical Co. and its controlled subsidiaries, as of July 31, 2025, the details regarding properties leased externally by the Chemical Co. and its controlled subsidiaries are as follows::

No.	Lessee	Lessor	Area (sq.m)	Location	Use	Term of lease
1	Chemical Co.	China Shenhua	8,324.88	No. 16, Ande Road, Dongcheng District, Beijing	Office	January 1, 2025 to December 31, 2027

(VI) Material Subsequent Event

Subsequent event refers to material event before report and after reference date.

On 16 September 2025, Chemical Company secured the exploration licence for the Dabaodang coalfield within Yushen Mining Area of the Northern Shaanxi Jurassic Coalfield through a bid of RMB 20.53 billion, submitted in the name of its 80%-owned subsidiary Guoneng Shaanxi Yushen Mining Co., Ltd. , which had not commenced operations as of the Appraisal Reference Date. Pursuant to the resolution of the fifth meeting of the board of directors of Guoneng Group held on 21 October 2025, it was approved to make a capital contribution to the Chemical Company in an amount not exceeding 24% of the maximum bid amount for the exploration rights tender

(being 80% shareholding ratio × 30% capital contribution ratio), which shall be specifically for Yusheng Mining's participation in bidding for the Dabaodang Coalfield exploration rights.

This appraisal has not considered the impact of the aforementioned Dabaodang Coalfield exploration rights matter on the appraised results. Both parties to the transaction are advised to take note of the matter.

Save for the matters mentioned above, no material subsequent event is not found in the company.

(VII) Defective Economic Behavior That may Have Material Effect on the Conclusion

1. The coal-to-oil subsidiary's under-construction project – the second and third production lines of Phase I of the Shenhua Direct Coal Liquefaction Project - commenced the construction in June 2013 and is currently suspended. As of the Appraisal Reference Date, the construction costs amounted to RMB1.107 billion, with an impairment provision of RMB803 million recognised, resulting in a net book value of RMB304 million. After verification with the enterprise, it is currently impossible to determine the plan for resuming construction. This valuation retains the book value of the project and it is advised for the report users to pay attention to it.

(VIII) Other Explanations

1. The liability of appraisers and firm is to make professional judgment on asset value for the purpose of this report, not involving any judgement on the economic behavior. The appraisal largely relies on the information offered by client and the Appraised Entity. Therefore, appraisal is based on the premises that the economic behavior files, relevant title documents, certificates and accounting vouchers, and relevant legal documents provided by client and the Appraised Entity are authentic and legitimate.

2. During appraisal, the appraisers have observed the appearance of

target building, and as practicable checked the interior decoration and usage, without testing on any structure or material. During equipment survey, due to testing limitation and some equipment still running, the appraisers mainly rely on appearance observation, the recent testing information offered by the Appraised Entity, and inquiry on operators etc.

3. The purpose of asset appraisal carried by the appraisers is to estimate the target value and give professional opinions, not liable for decision making. The conclusion shall not be deemed as a guarantee for the target's realizable price.

4. The profitability forecast of the Appraised Entity obtained by the appraising firm is the basis of revenue method in this report. The appraisers have made necessary investigation, demonstration, analysis and judgment on the profitability forecast offered by the Appraised Entity, considering the orders on hand at reference date and time, as well as other supporting materials offered by the business, financial and other departments of the Appraised Entity. After the Appraised Entity have further modified and improved them upon discussions with the management and major shareholders of the Appraised Entity, the firm has accepted relevant data of the Appraised Entity's profitability forecast. Use of such profitability forecast is not a guarantee for future profitability of the Appraised Entity.

5. The conclusion shall be the entire shareholders' equity value of the Appraised Entity, while the appraisers have not considered the influence of equity liquidity, control, minority equity and other factors.

6. This appraisal is based on the data, statements and related information offered by the Appraised Entity, while Client and the Appraised Entity shall be liable for the integrity and authenticity of the information provided by them.

7. The title certificates and relating information involved in the appraisal report shall be provided by the Appraised Entity, while their integrity and legitimacy shall be the liability of client and the Appraised Entity.

8. Within the effective period after reference date, when the asset quantity and pricing criterion changes, the following principles shall be followed:

(1)When the asset amount changes, the asset amount shall be adjusted accordingly with original appraisal method.

(2)When the asset pricing criterion changes that obviously influences the appraising results, client shall timely engage eligible appraising firm to redetermine the appraised value.

(3)After reference date, client shall take full consideration of such change in actual pricing, and make adjustment accordingly.

9. When the asset quantity changes, the asset amount shall be adjusted accordingly with original appraisal method.

10. The appraisal scope is contained in the asset appraisal breakdown offered by client and the Appraised Entity, regardless of potential or contingent asset or contingent liability beyond the list offered by client and the Appraised Entity.

XII. Limitation of Report Use

(I) This appraisal report can only be used for the purpose specified herein. Meanwhile, the conclusion reflects the fair value of the Appraised Entity in the principle of open market for this purpose, disregarding possible pledge or guarantee in the future, or additional price paid by special trading party or other influencing factors. Moreover, this report disregards macroeconomic policy change, act of god and other force majeure that may affect the asset price. The conclusion will be invalid generally when the foregoing conditions and the ongoing principle or other conditions are changed. The appraising firm shall not be liable for such invalidation.

(II) This appraisal report is effective only when this economic behavior is accordant with national laws and regulations, and approved by relevant

authorities.

(III) This appraisal report is only usable by the specified users of report. The use right of the report is owned by the client. Without permission of the client, this firm shall not publicize the report at will.

(IV) The appraising firm and its appraisers shall not be held liable by the client or other user's improper use of appraisal report beyond laws, regulations and the specified purpose.

(V) Any person or entity shall not become user of asset appraisal report other than the users under laws and regulations and the users agreed by the client or agreed under the asset appraisal contract.

(VI) Without consent of this firm, all or part of the report shall not be excerpted, quoted or disclosed on public media, unless required by laws, regulations or otherwise agreed by the parties.

(VII) Users of asset appraisal report shall correctly understand and use the conclusion. The conclusion is not equal to realizable price of the target. The Conclusion shall not be deemed as a guarantee for the realizable price of the target.

(VIII) Effective Period of Conclusion: Under asset appraisal laws and regulations, the asset appraisal report involving statutory appraisal business is usable after the client has performed asset appraisal supervision and management procedures at law. The conclusion will be effective for 1 year, starting from July 31, 2025 (the Appraisal Reference Date) to July 30, 2026. Upon expiry, the asset appraisal shall be redone.

XIII. Reporting Date

The Reporting Date is December 16, 2025.

This report is prepared in accordance with the Chinese Asset Appraisal Standards

Asset Appraisal Report on the Entire Shareholders' Equity of CHN Energy Wuhai Energy Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

ZH.Q.H.P.B.Z. (2025) No. 6666

(Volume 1 of 1)

China Enterprise Appraisals Co., Ltd.

16 December 2025

Declaration

I. This asset appraisal report is prepared based on the Basic Rules for Asset Appraisal issued by the Ministry of Finance and the Asset Appraisal Practice Standards and Code of Professional Ethics issued by the China Appraisal Society.

II. The asset appraisal agency and its professional appraisers comply with laws, administrative regulations, and asset appraisal standards, adhere to the principles of independence, objectivity, and fairness, and bear legal responsibility for the asset appraisal report they issue.

III. The client or other users of the asset appraisal report shall use the report in accordance with the laws, administrative regulations, and the scope of use stated in the asset appraisal report. If the client or other users of the report misuse the report in violation of the foregoing regulations, the asset appraisal agency and its appraisers shall not bear any responsibility.

This asset appraisal report is only for use by the client, other users of the asset appraisal report as specified in the asset appraisal engagement contract, and users defined by laws or administrative regulations. Other institutions or individuals shall not use this asset appraisal report.

The asset appraisal agency and the appraisers remind the users of the asset appraisal report to correctly understand and use the appraisal conclusion. The appraisal conclusion is not equivalent to the realisable price of the subject asset and shall not be considered a guarantee of the realisable price.

IV. The asset and liability lists, and business forecasts related to the subject asset are provided by the client and the appraised entity, and confirmed through their signatures, seals, or other legally permitted means. The client and other relevant parties are legally responsible for the authenticity, completeness, and legality of the information provided.

V. The asset appraisers have conducted on-site investigations of the subject asset and the assets involved. They have paid necessary attention to the legal ownership status of the subject asset and its assets, verified the ownership documents, disclosed any discovered issues truthfully, and urged the client and other relevant parties to rectify any property right issues to meet the requirements for issuing the asset appraisal report.

VI. The asset appraisal agency and its appraisers have no current or anticipated interests in the subject asset in the asset appraisal report, nor any current or anticipated interests with the relevant parties, and are unbiased towards the relevant parties.

VII. The analysis, judgment, and results in the asset appraisal report issued by the asset appraisal agency are subject to the assumptions and limitations specified in the report. Users of the asset appraisal report shall fully consider the assumptions, limitations, special notes, and their impact on the appraisal conclusion.

VIII. The asset appraisers' investigation of physical assets such as buildings and structures, equipment, construction in progress, and inventories is generally limited to observation of use and maintenance conditions. Internal, hidden, or difficult-to-access parts are not inspected. We do not possess professional qualifications nor have we been engaged to conduct technical inspections or appraisals of the internal quality of these assets. Our appraisal is based on the information provided by the client and other relevant parties. If there are defects in the internal quality of these assets, the appraisal conclusions may be

affected to varying degrees.

Summary of the Asset Appraisal Report

Important Notice

This summary is extracted from the main text of the asset appraisal report. To understand the details of the appraisal project and properly interpret and use the appraisal conclusion, the full text of the asset appraisal report shall be read carefully.

China Energy Investment Corporation Co., Ltd. and China Shenhua Energy Company Limited:

In accordance with the laws, administrative regulations, and asset appraisal standards, China Enterprise Appraisals Co., Ltd. has accepted your commission to appraise the market value of the entire shareholders' equity of CHN Energy Wuhai Energy Co., Ltd. as at the valuation benchmark date, while adhering to the principles of independence, objectivity, and fairness, and following the necessary appraisal procedures. The summary of the asset appraisal report is hereby presented as follows:

Appraisal purpose: China Shenhua Energy Company Limited intends to issue shares and pay cash to acquire assets related to coal, pithead coal power, and other assets held by China Energy Investment Corporation Co., Ltd. To this end, the market value of the entire shareholders' equity held by China Energy Investment Corporation Co., Ltd. in CHN Energy Wuhai Energy Co., Ltd. on the Valuation benchmark date is appraised, providing a value reference for the above economic activities.

Subject asset: The entire shareholders' equity of CHN Energy Wuhai Energy Co., Ltd.

Appraisal scope: The total assets and liabilities of CHN Energy Wuhai Energy Co., Ltd.

As at the valuation benchmark date, the assets within the appraisal scope include current assets, long-term equity investments, other equity instrument investments, fixed assets, construction in progress, right-of-use assets, intangible assets, long-term prepaid expenses, and other non-current assets. The book value of the parent company's total assets was RMB22,033,615,700; liabilities include current liabilities and non-current liabilities, with total liabilities having a book value of RMB11,796,512,100; the book value of net assets was RMB10,237,103,600.

Other non-current assets	10	3,758.87	2,385.25	-1,373.62	-36.54
Total assets	**11**	**2,203,361.57**	**2,593,890.65**	**390,529.08**	**17.72**
III. Current Liabilities	12	696,259.22	696,259.22	0.00	0.00
IV. Non-Current Liabilities	13	483,391.99	476,202.10	-7,189.89	-1.49
Total liabilities	**14**	**1,179,651.21**	**1,172,461.32**	**-7,189.89**	**-0.61**
Net assets	**15**	**1,023,710.36**	**1,421,429.33**	**397,718.97**	**38.85**

As at the valuation benchmark date, CHN Energy Wuhai Energy Co., Ltd.'s total assets on a consolidated basis had a book value of RMB22,555,956,400, total liabilities had a book value of RMB10,423,355,900, and owners' equity had a book value of RMB12,132,600,500, of which RMB11,621,321,400 was attributable to the parent company. The appraised value reached RMB14,214,293,300, reflecting an increase of RMB2,592,971,900, representing an appreciation rate of 22.31%.

Unless otherwise stated, all amounts in this report are expressed in Renminbi (RMB).

This asset appraisal report is solely for providing value reference for the appraisal purposes described in the report. The validity period of the appraisal conclusion is one year from the valuation benchmark date.

Users of the asset appraisal report shall fully consider the assumptions, limitations, special notes, and their impact on the appraisal conclusion.

The content above is extracted from the main text of the asset appraisal report. To understand the details of the appraisal business and correctly interpret the appraisal conclusion, the full text of the asset appraisal report shall be read.

Asset Appraisal Report on the Entire Shareholders' Equity of CHN Energy Wuhai Energy Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

China Energy Investment Corporation Co., Ltd. and China Shenhua Energy Company Limited:

In accordance with the laws, administrative regulations, and asset appraisal standards, China Enterprise Appraisals Co., Ltd. has accepted your commission to appraise the market value of the entire shareholders' equity of CHN Energy Wuhai Energy Co., Ltd. held by China Energy Investment Corporation Co., Ltd. as at the valuation benchmark date, while adhering to the principles of independence, objectivity, and fairness, using both the asset-based approach and the income approach, and following the necessary appraisal procedures. The asset appraisal information is hereby reported as follows:

I. Client, Appraised Entity, and Other Users of the Asset Appraisal Report as Defined in the Asset Appraisal Engagement Contract

The clients for this appraisal are China Energy Investment Corporation Co., Ltd. and China Shenhua Energy Company Limited. The appraised entity is CHN Energy Wuhai Energy Co., Ltd., and other users of the asset appraisal report as stipulated in the asset appraisal engagement contract include users defined by national laws and regulations.

i. Profile of Client 1

Company name: China Energy Investment Corporation Co., Ltd. (hereinafter referred to as "CHN Energy")

Domicile: 22 Xibinhe Road, Andingmen, Dongcheng District, Beijing

Legal representative: Zou Lei

Registered capital: RMB132,094,661,150

Date of incorporation: 23 October 1995

Business term: From 23 October 1995 to indefinite period

Company type: Limited liability company (state-owned)

Unified social credit code: 91110000100018267J

Business scope: Management of state-owned assets within the scope authorised by the State Council; investment and management in industries such as coal and other resource-based products, coal-to-liquid, coal chemical, electricity, heat, ports, various transport industries, finance, domestic and foreign trade, logistics, real estate, high technology, and information consultancy; planning, organising, coordinating, and managing the production and operation activities of group companies in the above industries; sales of chemical materials and products (excluding hazardous chemicals), textiles, building materials, machinery, electric equipment, and office equipment. (Market entities have the right to select the business activities in accordance with laws and regulations; business activities that require approval in accordance with law shall be subject to approval by relevant authorities for an approved scope; business activities are subject to the prohibition and restriction of the city's industrial policies.)

ii. Profile of Client 2

Company name: China Shenhua Energy Company Limited (hereinafter referred to as "China Shenhua")

Domicile: 22 Xibinhe Road, Andingmen, Dongcheng District, Beijing

Legal representative: Lyu Zhiren

Registered capital: RMB19,868,519,955

Date of incorporation: 8 November 2004

Business term: From 8 November 2004 to indefinite period

Company type: Other limited company (listed)

Unified social credit code: 91110000710933024J

Business scope: Coal mining (validity subject to the expiration of related permits for each mine); wholesale coal business; project investment; coal washing, processing; development and operation of mining products; internal railway transportation; electricity generation; provision of supporting services for coal, railway, and electricity operations; ship repair; development and use of energy and environmental protection technologies, technology transfer, consulting, and services; import and export business; sale of chemical products, chemical materials, building materials, machinery and equipment (excluding hazardous chemicals); property management. (Unless otherwise required by law to obtain approval, operating activities are conducted independently with the business licence in accordance with the law.)

2. Shareholders, their shareholding ratios and equity change

Wuhai Energy was established in 1958, originating from the Wuda and Haibowan Mining Bureaus, which were directly under the Ministry of Coal. In 1998, these two bureaus were transferred to the former Shenhua Group, which renamed them Shenhua Group Wuda Mining Company and Shenhua Group Haibowan Mining Company.

On 18 January 2001, the former Shenhua Group issued the *Approval Regarding the Restructuring of Wuda Mining Bureau into Shenhua Group Wuda Coal Industry Co., Ltd.* (Shenhua Yan Zi [2001] No. 035), consenting to the restructuring of Wuda Mining Bureau into "Shenhua Group Wuda Coal Industry Co., Ltd."

On 21 August 2001, the former Shenhua Group issued the *Approval Regarding the Renaming of "Shenhua Group Wuda Coal Industry Co., Ltd." to "Shenhua Group Wuda Mining Co., Ltd."* (Shenhua Yan Zi [2001] No. 476), approving the renaming of "Shenhua Group Wuda Coal Industry Co., Ltd." to Wuda Mining.

Upon establishment, Wuda Mining was wholly owned by the former Shenhua Group, with both registered capital and paid-up capital amounting to RMB201.88 million.

On 23 October 2008, the former Shenhua Group issued the *Notice Regarding Matters Including the Change of the Company Name of Wuda Mining* (Shenhua Qi Hua [2008] No. 404), deciding to integrate Wuhai Coal and Coking, Wuda Mining, Haibowan Mining, and Mengxi Coal Chemical Co., Ltd., and to change the name of Wuda Mining to "Shenhua Wuhai Energy Co., Ltd."

Pursuant to the *Merger Agreement* signed by Shenhua Wuhai Energy, Haibowan Mining, and Wuhai Coal and Coking, and based on documents Shenhua Qi Hua [2009] No. 110 and Shenhua Qi Hua [2009] No. 111 issued by the former Shenhua Group, the following arrangements were agreed: (1) Shenhua Wuhai Energy shall absorb and merge Wuhai Coal and Coking and Haibowan Mining; (2) Upon completion of the merger, Wuhai Coal and Coking and Haibowan Mining shall be dissolved in accordance with the law, with Shenhua Wuhai Energy inheriting all their assets, rights, liabilities, etc.

According to explanations and confirmations provided by Wuhai Energy, as of the date of

this report, Haibowan Mining and Wuhai Coal and Coking have not yet completed deregistration procedures due to reasons including the temporary inability to transfer certain mining rights and real estate ownership certificates held by them to Wuhai Energy. The company will proceed with the deregistration of Haibowan Mining and Wuhai Coal and Coking upon completion of the aforementioned matters.

On 19 February 2019, CHN Energy issued the *Approval on the Change of Company Name and Amendments to Articles of Association of Shenhua Wuhai Energy Co., Ltd.* (CHN Energy Letter [2019] No. 87), approving the change of Wuhai Energy's enterprise name to "CHN Energy Wuhai Energy Co., Ltd."

Since its establishment, the company has undergone multiple capital increases. As of the valuation benchmark date, Wuhai Energy's registered capital was adjusted to RMB26,927.03 million.

As at the valuation benchmark date, the shareholding structure of Wuhai Energy is as follows:

Unit: RMB'0,000

No.	Name of shareholder	Subscribed capital	Subscription ratio (%)	Paid-in capital	Paid-in ratio (%)
1	China Energy Investment Corporation Co., Ltd.	2,692,703.00	100.00	2,692,703.00	100.00
Total		2,692,703.00	100.00	2,692,703.00	100.00

3. Ownership and management structure of the company

The Company does not have a shareholders' meeting. The Party Committee of the Company is elected by the Party members' congress or representatives' congress, with each term generally lasting five years. Upon the expiration of a term, a new election must be held on schedule. The Company has a Board that implements a decision-making system based on collective review, independent voting, and individual accountability. The Board consists of seven directors, including one employee director elected by the employees' (representatives') congress. The chairman is nominated by the shareholders and elected by the Board by a majority vote of all members. The Company's Management typically consists of four to six members, including one general manager and one chief accountant appointed by the Board. The Management is the Company's executive body responsible for operations, implementation, and management.

As at the valuation benchmark date, the organisational structure of Wuhai Energy is as follows:

Net profit	70,064.55	131,079.06	-12,584.11
Net profit attributable to equity holders of the parent company	47,663.32	121,568.72	-4,593.00

The financial condition of the appraised entity over the last two years and the current period is as follows (parent company basis):

Unit: RMB'0,000

Item	31 December 2023	31 December 2024	31 July 2025
Total assets	2,020,578.78	2,126,053.32	2,203,361.57
Total liabilities	1,153,235.63	1,141,205.13	1,179,651.21
Owner's equity	867,343.15	984,848.19	1,023,710.36

The operating condition of the appraised entity over the last two years and the current period is as follows (parent company basis):

Unit: RMB'0,000

Item	2023	2024	January-July 2025
Operating income	658,373.63	676,510.47	275,552.17
Total profits	20,109.80	156,054.86	39,163.04
Net profit	-10,745.98	123,146.13	29,019.84

The financial statements for the valuation benchmark date, 2024, and 2023 of the appraised entity have been audited by Ernst & Young Hua Ming LLP , which expressed unqualified audit opinions.

5.Relationship between the client and the appraised entity

The clients for this appraisal are China Energy Investment Corporation Co., Ltd. and China Shenhua Energy Company Limited. The appraised entity, CHN Energy Wuhai Energy Co., Ltd., is a wholly-owned subsidiary of Client 1 China Energy Investment Corporation Co., Ltd. Client 2 is the intended purchaser of the appraised entity.

iv. Other users of the asset appraisal report as stipulated in the asset appraisal engagement contract

This asset appraisal report is only for use by the clients and the asset appraisal report users as defined by laws and administrative regulations. No other institution or individual may become a user of this asset appraisal report.

II. Appraisal Purpose

China Shenhua Energy Company Limited intends to issue shares and pay cash to acquire assets related to coal, pithead coal power, and other assets held by China Energy Investment Corporation Co., Ltd. To this end, the market value of the entire shareholders' equity held by China Energy Investment Corporation Co., Ltd. in CHN Energy Wuhai Energy Co., Ltd. on the Valuation benchmark date is appraised, providing a value reference for the above economic activities.

On 1 August 2025, China Energy Investment Corporation Limited convened the 18th special meeting of the chairman for the year 2025, which considered and approved the aforementioned matters, required the initiation of an assessment, and produced the Minutes of the Special Meeting of the Chairman.

III. Subject Asset and Appraisal Scope

i. Subject asset

The subject asset is the entire shareholders' equity of CHN Energy Wuhai Energy Co., Ltd.

ii. Appraisal scope

The appraisal scope includes total assets and liabilities of CHN Energy Wuhai Energy Co., Ltd.

As at the valuation benchmark date, the assets within the appraisal scope include current assets, long-term equity investments, other equity instrument investments, fixed assets, construction in progress, right-of-use assets, intangible assets, long-term prepaid expenses, and other non-current assets. The book value of the parent company's total assets was RMB22,033,615,700; liabilities include current liabilities and non-current liabilities, with total liabilities having a book value of RMB11,796,512,100; the book value of net assets was RMB10,237,103,600. As of the valuation benchmark date, the appraisal scope is as follows:

Unit: RMB'0,000

Item		Book value
I. Current Assets	1	1,564,720.97
II. Non-Current Assets	2	638,640.60

Asset Appraisal Report on the Entire Shareholders' Equity of CHN Energy Wuhai Energy Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

Item		Book value
Of which: Long-term equity investments	3	125,990.36
Investment properties	4	0.00
Fixed assets	5	155,308.85
Construction in progress	6	109,147.43
Oil and gas assets	7	0.00
Intangible assets	8	244,435.09
Including: Land use right	9	20,449.34
Other non-current assets	10	3,758.87
Total assets	**11**	**2,203,361.57**
III. Current Liabilities	12	696,259.22
IV. Non-Current Liabilities	13	483,391.99
Total liabilities	**14**	**1,179,651.21**
Net assets	**15**	**1,023,710.36**

As at the valuation benchmark date, total assets on a consolidated basis had a book value of RMB22,555,956,400, total liabilities had a book value of RMB10,423,355,900, and owners' equity had a book value of RMB12,132,600,500, of which RMB11,621,321,400 was attributable to the parent company.

The subject and scope of the engaged appraisal align with the subject asset and scope involved in the economic activities. As of the valuation benchmark date, the book values of assets and liabilities within the appraisal scope have been audited by Ernst & Young Hua Ming LLP, which expressed a standard unqualified audit opinion.

iii. The main assets within the appraisal scope are as follows:

The major assets declared by the enterprise to be included within the appraisal scope include: inventories, long-term equity investments, properties and buildings assets, equipment assets, construction in progress, intangible assets, right-of-use assets, and long-term prepaid expenses. The types and characteristics of the main assets are as follows:

1. Inventories

The inventories included within the appraisal scope consist of raw materials and finished products. The raw materials mainly include production-related raw materials and spare parts, such as diesel for vehicles, cutting pick, coking coal No. 9-2, centrifuges, cable drilling rods, W-shaped steel strips, steel strands for anchor ropes, disposable protective clothing, etc. The finished products include coking coal, mixed coal, and refined coal. The inventories of the appraised entity are mainly stored in various warehouses in the production areas of the mines. As at the valuation benchmark date, the various types of inventory assets are managed by designated personnel and are suitable for normal sales or use.

2. Long-term equity investments

As at the valuation benchmark date, Wuhai Energy has 14 long-term equity investment units, including six wholly-owned subsidiaries, six controlling subsidiaries, and two associated subsidiaries. The specific details are as follows:

Unit: RMB'0,000

14	Shenhua Wuhai Coal and Coking Co., Ltd.	100.00%	169,300.00	0.00

Note 1: The shareholders' capital contributions and contribution ratios of Guoneng Wuhai Energy Mining Area Water and Electricity Management Co., Ltd. upon industrial and commercial registration are as follows: Wuhai Energy contributed RMB42,773,500 with shareholding ratio of 51%; and Zhao Qing and other natural persons totally contributed RMB40,926,500 with shareholding ratio of 49%. On

10 August 2023, Huangbaici Company convened the general meeting to considered and approved the transfer of certain equity of RMB257,600 held by Wuhai Energy to an employee to implement the underground worker share allocation policy. After the transfer, the capital contributions of Wuhai Energy and natural persons are shown in the table above. The aforementioned transfer has yet to complete the industrial and commercial change registration.

Note 2: Through a merger, Shenhua Group Haibowan Mining Co., Ltd. and Shenhua Wuhai Coal Coking Co., Ltd. became part of Wuhai Energy. Due to the transfer of mining rights and exploration rights of the two companies not being completed and changed to Wuhai Energy, both companies are retained as independent legal persons.

3. Properties and buildings assets

The properties and buildings assets included in the appraisal scope are mainly located in the factory areas and office areas of Luotuoshan Coal Washing Plant, Luotuoshan Coal Mine, Laoshidan Coal Mine, Pinggou Coal Mine, Suhaitu Coal Mine, and Wuhai Energy's headquarters, mainly built between 1905 and 2024. The basic overview of these properties and buildings assets is as follows:

(1) Buildings

a) Luotuoshan Coal Washing Plant

Properties and buildings are classified by usage into production, office, and auxiliary buildings. Production buildings mainly include the mechanical repair workshop, pump room, fire pump room, main factory building, and screening and crushing workshop. Office building is the comprehensive office building (central control), and auxiliary production buildings include the security room, medium storage, and spare parts warehouse.

b) Luotuoshan Coal Mine

Properties and buildings are classified by usage into production, office, and auxiliary buildings. Production buildings mainly include the secondary shaft heating room, main shaft heating room, secondary shaft headframe, main shaft hoist room, hoist room, and mechanical repair workshop. Office building is the office building, and auxiliary production buildings include the bathhouse, lamp room, union warehouse, and staff canteen.

c) Laoshidan Coal Mine

Properties and buildings are classified by usage into production, office, and auxiliary buildings. Production buildings mainly include the sewage treatment equipment room, casting workshop, metalworking workshop, north three fan room, nitrogen generation workshop, and fan room. Office buildings include the office building, district team office building, comprehensive team office building, and newly built production command centre office building. Auxiliary production buildings include the staff cultural centre, mine lamp room, union warehouse, and staff bathhouse.

d) Pinggou Coal Mine

Properties and buildings are classified by usage into production, office, and auxiliary buildings. Production buildings mainly include the second panel area fan room, second panel area winch room, distribution room, wind selection building, machine shop, and coal blending workshop. Office building is the office building, and auxiliary production buildings include the staff restaurant, laboratory, and joint buildings.

e) Wuhai Energy Headquarters

Properties and buildings are classified by usage into production, office, dormitory, and auxiliary buildings. Production buildings mainly include pump houses for the Ministry of Agriculture and Forestry, material supply centre pump houses, and vehicle weighing stations for the quality management centre. Office buildings include the R&D centre complex and office buildings for the material supply centre. Dormitory buildings include employee dormitories located in the Binhe residential area. Production auxiliary buildings mainly include the vocational training centre teaching building, student dormitories, the residential building and activity centre at Wuhai Energy Headquarters, etc.

(2) Structures

Structures and other auxiliary facilities mainly include the walls, roads, embankments, and belt corridors located in each coal mine and washing plant. The structures are mainly made of concrete, brick, reinforced concrete, and steel construction.

(3) Overview of pipelines and trenches

The pipes and ditches are mainly the water supply and drainage networks located at Pinggou Coal Mine and Luotuoshan Coal Washing Plant, with pipes made of steel and PVC.

(4) Shaft engineering

The Laoshidan Coal Mine has the main inclined shaft, gentle incline secondary inclined shaft, and return air vertical shaft. Among them:

The main inclined shaft has a tunnelling cross-section of 14.31 ㎡, with a shaft length of 962m, responsible for lifting coal. The shaft includes a pedestrian step and handrails, steel 20b I-beams, grouting pipes, nitrogen pipes, fire-fighting sprinkler pipes, drainage pipes, and ventilation pipes. It also serves as a ventilation shaft and emergency exit.
