The secondary inclined shaft has a net cross-section of 20.04 ㎡, with a shaft length of 4,442m, with a straight-wall half-arch cross-section. The soil section uses reinforced concrete support, and the bedrock section uses mesh and anchor spraying support. The shaft is equipped with fire-fighting sprinkler pipes, communication cables, and monitoring cables. It is responsible for transporting materials, equipment, waste rock, and personnel, and also serves as a ventilation shaft and safety exit.

As at the valuation benchmark date, the properties and buildings assets are well-maintained and can be used normally.

4. Equipment assets

(1) The machinery and equipment declared by the enterprise and included in this appraisal scope totals 6,550 items, purchased and put into use from 1984 to 2025, mainly including tunnelling machines, coal cutters, scraper conveyors, comprehensive self-protection devices, belt conveyors, box transformers, hydraulic supports, transfer machines, crushers, etc. As at the valuation benchmark date, 836 items of equipment are in a scrapped or awaiting scrapping status, six items have no physical assets, 323 items are idle, and the remaining equipment is in normal use.

(2) The vehicles declared by the enterprise and included in this appraisal scope total 217 vehicles, purchased and put into use from 1998 to 2025, mainly including multi-functional rescue equipment vehicles, Iveco light buses, Great Wall brand pickups, water trucks,

mining rescue vehicles, Audi cars, Buick cars, electric tricycles, forklifts, off-road vehicles, and mobile crane transport vehicles, etc. As at the valuation benchmark date, 18 vehicles are in a state awaiting scrapping or scrapped, two vehicles are awaiting repairs, five vehicles are idle, and the remaining vehicles are in normal use.

(3) The electronic devices declared by the enterprise and included in this appraisal scope total 3,471 items, purchased and put into use from 1995 to 2025, mainly including various models of computers, printers, air conditioners, surveillance systems, copiers, scanners, servers, industrial computers, workstations, switches, projectors, cameras, video conferencing system equipment, etc. As at the valuation benchmark date, 381 items of electronic equipment are in a state awaiting scrapping or have already been scrapped, 30 items are idle, and the remaining equipment is in normal use.

5. Construction in progress

(1) The construction in progress includes projects for the Luotuoshan Coal Mine, Wuhai Energy's Laoshidan Coal Mine, Wuhai Energy's Suhaitu Coal Mine, Wuhai Energy's Pinggou Coal Mine, Wuhai Energy's Luotuoshan Coal Washing Plant, and other related engineering projects at Wuhai Energy Headquarters. The main projects under construction are as follows:

a) Luotuoshan Coal Mine Project

Luotuoshan Coal Mine was approved by the National Development and Reform Commission in 2006 and construction began in the same year. However, construction was halted on 1 March 2010 due to a flooding incident. Following the regional government's requirements, the mine conducted supplementary hydrological geological investigations and modified the initial design and safety facilities design. In 2020, safety facility design approval and preliminary design approval were obtained. On 28 June 2021, a resumption notice was issued by the Wuhai Energy Bureau, and the mine officially resumed construction on 17 July 2021. Joint trial operation is scheduled to begin on 12 December 2024.

The Luotuoshan Coal Mine has five shafts, including the main inclined shaft, secondary inclined shaft, gentle inclined shaft, intake vertical shaft, and No. 1 return air vertical shaft. The mine is divided into four mining areas from north to south: Areas 11, 12, 13, and 14. The main inclined shaft is responsible for the main transport tasks, while the secondary inclined shaft is only used as an intake shaft and emergency exit. The gentle inclined shaft uses rubber-tired vehicles for material and personnel transport. The intake vertical shaft is used for ventilation and also serves as a safety exit. The No. 1 return air vertical shaft is used for ventilation and also serves as a safety exit.

b) Emergency Rescue Base Project

Wuhai Energy's Emergency Rescue Base is planned to house one brigade and one direct subordinate team. The project is intended for daily emergency rescue and relief training for various departments (western region of the Autonomous Region, group, and company), indoor simulation training, as well as hosting various competitions. The project investment is approximately RMB113,645,000, with a total planned construction area of approximately 24,111.48 m^2, and the project is in normal construction as at the valuation benchmark date.

c) Luotuoshan Coal Washing Plant New Raw Coal Storage Shed Project

The Luotuoshan Coal Washing Plant New Raw Coal Storage Shed Project specifically includes the construction of a new raw coal shed, coal retaining walls, return coal tunnels, coal reception pits, tunnels from T2 transfer point to the existing coal shed maintenance tunnel, T1 and T2 transfer points, the southern walkway exit, unloading coal walkway escape exit, northern and southern ventilation tunnels, escape tunnels, and other related engineering works. The total project investment is approximately RMB98,674,100.00, and the project began construction in April 2025 and is expected to be completed by October 2026.

d) Wuda Mining Area Ecological Environment Restoration Project

The Wuda Mining Area Ecological Environment Restoration Project includes the construction of a 1,041,900 cubic metre reservoir, associated pump stations, management buildings, and water diversion pipelines, with a project investment of approximately RMB99,509,500.00. It is expected to be completed by December 2025.

e) Laoshidan Coal Mine New 200,000-Ton Reservoir Project

The New 200,000-Ton Reservoir Project had a total of investment of RMB22,489,900.00, and began construction in May 2025 and is expected to be completed by September 2025.

(2) The construction in progress for equipment installation includes 43 items, mainly for the Wuhai Energy Luotuoshan Project, the Secondary Flotation Process Modification Project, the Suhaitu Coal Mine Ecological Environment Restoration Water Supply and Distribution Project, and the New Rainwater and Sewage Separation System Project at the Luotuoshan Coal Washing Plant.

(3) The construction in progress for deferred investments includes design fees, civil defense relocation construction costs, etc.

(4) There is one item of project material, which is a terminal connector \DT-150mm^2. It is managed and maintained by dedicated personnel and the material can be used normally.

6. Long-term prepaid expenses

The long-term prepaid expenses include costs for Adobe software, parking spaces at the Xingtai Binhe area, etc.

7. Intangible assets declared by the enterprise

The intangible assets declared by the company to be included in the appraisal scope include land use rights, mining rights, patent rights, software, software copyrights, and other intangible assets. The types and characteristics of the intangible assets are as follows:

(1) Intangible assets - Land use right

57 land use rights subject to transfer were included in the appraisal scope, covering an area of 2,304,332.70 square metres (excluding 1,464,005.58 square metres of non-physical land area). Of these, 47 have been registered with land ownership certificates, while ten have not. The specific details are as follows:

a) The land registration status for certificates obtained is as shown in the table below:

No.	Registered owner	Land title certificate No.	Parcel name	Land use	Land purpose	Area (m²)	Notes
1	Shenhua Group Haibowan	Wuhai Land and Resources	Marine Resource	Transferred	Industrial land	140,486.54	/

Asset Appraisal Report on the Entire Shareholders' Equity of CHN Energy Wuhai Energy Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

No.	Registered owner	Land title certificate No.	Parcel name	Land use	Land purpose	Area (m²)	Notes
	Mining Co., Ltd.	Bureau Haibowan Branch, State-owned Land Use (2008) No. 04012	Supply Department				
2	Shenhua Wuhai Coal and Coking Co., Ltd.	Wuhai Land and Resources Bureau Haibowan Branch, State-owned Land Use (2007) No. 03781	Luotuoshan Coal Mine Project	Transferred	Industrial land	223,774	/

(2) Intangible assets - Mining rights

The mining rights declared by the enterprise and included in this appraisal scope include nine mining rights, two exploration rights, and three hazard management projects. The details are as follows:

a) Mining rights

The enterprise declared nine mining rights to be included in this appraisal scope. The details are as follows:

No.	Name of mining rights	Licence number	Mining right holder	Mining type	Production scale
1	Shenhua Group Haibowan Mining Co., Ltd. Luotuoshan Coal Mine	C1000002011071120115468	Shenhua Group Haibowan Mining Co., Ltd.	Coal	1.5 million tonnes per year
2	Shenhua Group Haibowan Mining Co., Ltd. Open-pit Coal Mine	C1500002011101120120203	Shenhua Group Haibowan Mining Co., Ltd.	Coal	1.6 million tonnes per year
3	CHN Energy Wuhai Energy Co., Ltd. Huangbaici Coal Mine	C1000002012011140122410	CHN Energy Wuhai Energy Co., Ltd.	Coal	1.8 million tonnes per year
4	Shenhua Wuhai Energy Co., Ltd. Suhaitu Coal Mine	C1000002012011140122378	Shenhua Wuhai Energy Co., Ltd.	Coal	Capacity has been phased out
5	Shenhua Group Haibowan Mining Co., Ltd. Gongwusu Coal Mine Shaft No. 3	C1000002012011140122379	Shenhua Group Haibowan Mining Co., Ltd.	Coal	2.7 million tonnes per year
6	CHN Energy Wuhai Energy Co., Ltd. Laoshidan Coal Mine	C1500002010041120062203	CHN Energy Wuhai Energy Co., Ltd.	Coal	1.8 million tonnes per year
7	CHN Energy Wuhai Energy Co., Ltd. Wuhushan Coal Mine	C1000002012011140122412	CHN Energy Wuhai Energy Co., Ltd.	Coal	2 million tonnes per year

Asset Appraisal Report on the Entire Shareholders' Equity of CHN Energy Wuhai Energy Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

No.	Name of mining rights	Licence number	Mining right holder	Mining type	Production scale
8	Shenhua Group Haibowan Mining Co., Ltd. Pinggou Coal Mine	C1000002012101140127769	Shenhua Group Haibowan Mining Co., Ltd.	Coal	1.8 million tonnes per year
9	Inner Mongolia Limin Coal and Coke Co., Ltd. Coal Mine	C1500002011011120104723	Inner Mongolia Limin Coal and Coking Co., Ltd.	Coal	1.5 million tonnes per year

b) Exploration rights

A. Coal Exploration in the West Part of Hongliusshu Mining Area, Zhuozishan Coalfield, Inner Mongolia (Retained)

Licence number	T1500002008111010018837
Exploration right holder	Shenhua Wuhai Coal and Coking Co., Ltd.
Area	6.0983km²
Mineral type	Not available
Validity period	From 18 November 2024 to 17 November 2029
Issuing authority	Inner Mongolia Autonomous Region Natural Resources Department

B. Approval for Delineating the Mining Area Boundary for Deep Exploration at Kabuqi

Licence number	Land Resources Mining Delimitation [2005] No. 015
Exploration right holder	Shenhua Group Haibowan Mining Co., Ltd.
Area	28.6771km²
Mineral type	Coal
Validity period	The reserved period lasts until the mining registration application is approved, and the mining licence is obtained
Issuing authority	Ministry of Natural Resources

c) Hazard management projects

As at the valuation benchmark date, the environmental risk mitigation projects included in the appraisal scope mainly include the Comprehensive Disaster Management Project for the Goaf Area at Suhaitu Coal Mine, the Hazard Management Project of Eastern Part of Pingou Coal Mine Section III and Fire Point Hazard Management Project for the Open-Pit Coal Mine.

A. Comprehensive Disaster Management Project for the Goaf Area at Suhaitu Coal Mine

The project aims to eliminate the ground subsidence, cracking, regional ecological degradation, and safety hazards caused by outdated mining practices in Wuhai City, as well as to protect coal resources. According to the *Minutes of the First Meeting of the Wuhai City State-owned Resource Management and Public Resource Trading Committee* (W.H.R.M.Z.F.B.G.T. [2017] No. 22), the meeting decided that the Comprehensive Disaster Management Project for the Goaf Area at Suhaitu Coal Mine would be jointly completed by Shenhua Wuhai Energy Co., Ltd. and Inner Mongolia Dongyuan Technology Co., Ltd., and agreed to start the construction of the project, with construction beginning on 22 February 2018. Currently, Suhaitu Coal Mine is implementing the management work for the second area of the Comprehensive Disaster Management Project for the Goaf Area. The area under management is 3.78 square kilometres.

Management method: The area is being subjected to open-cut coal recovery, which fundamentally solves the geological disaster caused by the sudden collapse of large areas of roof under the pressure of stagnant coal pillars, and eliminates environmental pollution and ecological balance destruction caused by underground spontaneous combustion of abandoned coal. At the same time, by conducting open-cut coal recovery in the disaster

management area, the land is being reclaimed to restore good farmland, and hilly land is being transformed into flat land. Green measures are being taken to beautify the environment and purify the air, which can fundamentally improve the surrounding ecological environment of the disaster management area.

B. Hazard Management Project of Eastern Part of Pingou Coal Mine Section III

The eastern part of Pinggou Coal Mine Section III has steep slopes with a 110-metre-high pile of gangue, totaling 270 meters in height, at a 90° angle. Due to long-term wind and oxidation, the surrounding rock of the slope is loose, leading to local collapses, landslides, and numerous ground fissures. Currently, there are disasters such as local collapses, landslides, and subsidence. The exposed coal seam on the steep slope is a Type II self-igniting coal seam, which poses safety risks such as coal seam spontaneous combustion, slope collapse, air leakage in the working face, harmful gases entering the mine, and potential mine fires.

On 29 July 2024, Wuhai Energy submitted the *Request of Pinggou Coal Mine for Hazard Management in the Eastern Part of Section III* to the Haibowan District People's Government. On 9 August 2024, the Haibowan District People's Government approved the project in principle. On 30 August 2024, Haibowan District Emergency Management Bureau issued an approval in principle, agreeing to proceed with the hazard management according to safety production requirements, and stressing the need to review and validate the management rectification plan.

On 31 October 2024, Wuhai Energy organised relevant departments to review the design plan. In principle, the plan was approved, and an official approval document was issued. After the 29th Party Committee meeting of Wuhai Energy in 2024, approval has been granted for the initiation of the Pinggou Coal Mine Hazard Management Project. Region 1 is expected to begin management in January 2027 and be completed by December 2028. Region 2 is expected to begin management in January 2029 and be completed by December 2030.

C. Fire Point Hazard Management Project for the Open-Pit Coal Mine

To address issues arising from outdated coal mining techniques at the Open-Pit Coal Mine, including fires in old goaf areas, ground fissures, regional ecological degradation, and potential safety hazards, according to the *Notice on Approving Wuhai Lutian Mining Company to Conduct Fire Point Management Within Its Mining Rights Area* (Hainan Zheng Zi [2024] No. 246) issued by Hainan District People's Government on 19 September 2024, Wuhai Lutian Mining Company is granted approval in principle to conduct fire point management within its mining rights area, including the junction between the eastern pit of the third mining area and the southern second mining area of the Gongwusu No. 3 Mine, as well as the northern wing of the fourth mining area. The District Energy Bureau is tasked with overseeing the company's fulfillment of its primary responsibilities, and the bureau shall develop scientifically sound plans for fire point management and dynamic clearance based on the actual conditions within the mining rights area. The fire point management, stripping and excavation, and geological restoration project for the south wing of first and fourth mining areas at the Open-Pit Coal Mine received the notice of award on 4 March 2025, and the contract was signed on 27 March 2025. Construction commenced in May 2025. The management area covers 614,000 square metres.

Management method: Open-pit stripping methods will be employed to remediate areas

with potential hazards, addressing risks such as slope landslides and rockfalls. Spontaneous combustion hotspots will be thoroughly eliminated, thereby improving the ecological environment of the open-pit coal mining area, enhancing the surrounding topography and landscape, achieving a fundamental improvement in the regional ecological environment, and ultimately realising the harmonious integration of social, ecological, and economic benefits in the area.

(3) Patents

Among the 281 patent rights declared by the enterprise for inclusion in the appraisal scope, Wuhai Energy holds 93 patent rights, of which the certificate holder of 3 patent rights is Shenhua Wuhai Energy Co., Ltd. (Wuhai Energy's former name); Wuhai Energy holds 188 patent rights with other parties, of which the certificate holder of 76 patent rights is Shenhua Wuhai Energy Co., Ltd. (Wuhai Energy's former name); one patent is jointly owned by the subsidiary Shenhua Wuhai Coal and Coking Co., Ltd. and Shenhua Group Co., Ltd.; one patent is jointly owned by the subsidiary Shenhua Group Haibowan Mining Co., Ltd. and Shenhua Group Co., Ltd. Regarding the aforementioned patents with common ownership or unamended certificate holder, the appraised entity has issued a statement confirming that these patents are either solely owned by it or co-owned with other companies, with no existing or potential ownership disputes. For patents with co-ownership, each party retains the right to apply them in its own production and operation, with resulting benefits and costs borne by the respective parties.

(4) Other intangible assets

The enterprise has declared other intangible assets to be included in the appraisal scope, including software and software copyrights.

a) The enterprise declared 114 items of externally purchased software, mainly including the Wuhai Energy Foundation Project, intelligent asset management system, quality measurement management information system, team construction information management platform expansion, Beijing Join-Cheer network reporting management software, geotechnical water control information management software development, Wuhai Energy's safety production dispatch command system, and HOPE Coal Industry team construction management information system, etc. All of the above software was purchased externally by the appraised entity, with 77 items in normal active use and 37 items in inactive status.

b) The enterprise declared 31 software copyrights to be included in this appraisal scope, all of which have obtained rights certificates. Among them, 11 items are solely owned by the appraised entity, and 20 items are jointly owned by the appraised entity and others. The software copyrights were all developed and obtained through outsourced commissioning by the appraised entity. For detailed information, refer to the "Asset-based Approach Appraisal Details Sheet."

c) The enterprise declared 11 development expenditures to be included in this appraisal scope, mainly including research on the innovative application of 5g-integrated technology in coal mining equipment, research and development on key technologies and complete equipment for integrated intelligent cutting, support, anchoring, transportation, and exploration in driving face, research on safe and efficient intelligent mining technology for camel mountain coal mine under multi-hazard coupling conditions and demonstration project, and research and application of efficient intelligent mining and filling process

technology for weak and extra-thick coal seams and other development projects. As of the valuation benchmark date, the R&D expenditure projects were progressing normally and were commissioned by the appraised entity to external entities for development.

9. Other off-balance-sheet assets declared by the enterprise

The patents and software copyrights declared by the enterprise to be included in the appraisal scope are considered off-balance-sheet assets.

10. Related assets mentioned in other institutions' reports and conclusions

The appraised value of the mining rights in this asset appraisal report was determined with reference to the mining rights appraisal conclusion issued by China Enterprise Appraisals Co., Ltd. The referenced appraisal report is summarised as follows:

(1) Pinggou Coal Mine:

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1066
Subject asset	Shenhua Group Haibowan Mining Co., Ltd. Pinggou Coal Mine Mining Rights
Appraisal scope	The scope of the Pinggou Coal Mine Mining Rights, defined by the coordinate points, and the resource reserves within the defined scope
Valuation benchmark date	31 July 2025
Value Type	Market Value
Appraisal methods	Discounted cash flow method

(2) Laoshidan Coal Mine:

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1067
Subject asset	CHN Energy Wuhai Energy Co., Ltd. Laoshidan Coal Mine Mining Rights
Appraisal scope	The scope of the Laoshidan Coal Mine Mining Rights, defined by the coordinate points, and the resource reserves within the defined scope
Valuation benchmark date	31 July 2025
Value Type	Market Value
Appraisal methods	Discounted cash flow method

(3) Luotuoshan Coal Mine:

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1068
Subject asset	Shenhua Group Haibowan Mining Co., Ltd. Luotuoshan Coal Mine Mining Rights
Appraisal scope	The scope of the Luotuoshan Coal Mine Mining Rights, defined by the coordinate points, and the resource reserves within the defined scope
Valuation benchmark date	31 July 2025
Value Type	Market Value
Appraisal methods	Discounted cash flow method

(4) Huangbaici Coal Mine:

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1069
Subject asset	CHN Energy Wuhai Energy Co., Ltd. Huangbaici Coal Mine Mining Rights
Appraisal scope	The scope of the Huangbaici Coal Mine Mining Rights, defined by the coordinate points, and the resource reserves within the defined scope
Valuation benchmark date	31 July 2025
Value Type	Market Value
Appraisal methods	Discounted cash flow method

(5) Wuhushan Coal Mine:

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1070
Subject asset	CHN Energy Wuhai Energy Co., Ltd. Wuhushan Coal Mine Mining Rights
Appraisal scope	The scope of the Wuhu Mountain Coal Mine Mining Rights, defined by the coordinate points, and the resource reserves within the defined scope
Valuation benchmark date	31 July 2025

Asset Appraisal Report on the Entire Shareholders' Equity of CHN Energy Wuhai Energy Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1070
Value Type	Market Value
Appraisal methods	Discounted cash flow method

(6) Open-pit Coal Mine:

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1071
Subject asset	Shenhua Group Haibowan Mining Co., Ltd. Open-Pit Coal Mine Mining Rights
Appraisal scope	The scope of the Open-pit Coal Mine Mining Rights, defined by the coordinate points, and the resource reserves within the defined scope
Valuation benchmark date	31 July 2025
Value Type	Market Value
Appraisal methods	Income equity method

(7) Limin Coal Mine:

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1072
Subject asset	Inner Mongolia Limin Coal and Coke Co., Ltd. Coal Mine Mining Rights
Appraisal scope	The scope of the Limin Coal Mine Mining Rights, defined by the coordinate points, and the resource reserves within the defined scope
Valuation benchmark date	31 July 2025
Value Type	Market Value
Appraisal methods	Discounted cash flow method

(8) Gongwusu Coal Mine:

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1073
Subject asset	Shenhua Group Haibowan Mining Co., Ltd. Gongwusu Coal Mine Shaft No. 3 Mining Rights
Appraisal scope	The scope of the Gongwusu Coal Mine Mining Rights, defined by the coordinate points, and the resource reserves within the defined scope
Valuation benchmark date	31 July 2025
Value Type	Market Value
Appraisal methods	Discounted cash flow method

IV. Value Type

Based on the appraisal purpose, the value type of the subject asset is determined to be market value.

Market value refers to the estimated value of the subject asset in normal and fair transactions as of the valuation benchmark date, between a willing buyer and a willing seller, each acting rationally and without coercion.

V. Valuation benchmark date

The valuation benchmark date for this report is 31 July 2025.

The valuation benchmark date is determined by the client. The selection of the valuation benchmark date mainly considers the realisation of economic activities and end-of-accounting-period factors. Asset appraisal provides a value reference for assets at a specific point in time. By choosing the end of the accounting period as the valuation benchmark date, it can comprehensively reflect the overall status of the subject assets. At the same time, adhering to the principles of ensuring the appraisal results effectively serve the appraisal purpose, accurately delineating the appraisal scope, conducting precise and efficient verification of assets, and rationally selecting the basis for appraisal, this date was selected as the valuation benchmark date.

VI. Basis of Appraisal

i. Economic behavior basis

1. Minutes of the 18th Special Meeting of the Chairman of China Energy Investment Corporation Co., Ltd. in 2025 (1 August 2025).

ii. Legal and regulatory basis

1. *Asset Appraisal Law of the People's Republic of China* (adopted at the 21st Session of the Standing Committee of the 12th National People's Congress on 2 July 2016);

2. *Company Law of the People's Republic of China* (second amendment at the 7th Session of the Standing Committee of the 14th National People's Congress on 29 December 2023);

3. *Civil Code of the People's Republic of China* (adopted at the 3rd Session of the 13th National People's Congress on 28 May 2020)

4. *Securities Law of the People's Republic of China* (second amendment at the 15th Session of the Standing Committee of the 13th National People's Congress on 28 December 2019)

5. *Vehicle Purchase Tax Law of the People's Republic of China* (approved at the 7th Session of the Standing Committee of the 13th National People's Congress);

6. *Law of the People's Republic of China on the State-owned Assets of Enterprises* (third amendment at the 10th Session of the Standing Committee of the 12th National People's Congress on 31 August 2014);

7. *Law of the People's Republic of China on Enterprise Income Tax* (amended at the 7th Session of the Standing Committee of the 13th National People's Congress on 29 December 2018);

8. *Law of the People's Republic of China on the Administration of Urban Real Estate* (amended at the 12th Session of the Standing Committee of the 13th National People's Congress on 26 August 2019);

9. *Land Administration Law of the People's Republic of China* (approved at the 12th Session of the Standing Committee of the 13th National People's Congress on 26 August 2019);

10. *Resource Tax Law of the People's Republic of China* (adopted at the 12th Session of the Standing Committee of the 13th National People's Congress on 26 August 2019)

11. *Patent Law of the People's Republic of China* (fourth amendment on 17 October 2020);

12. *Copyright Law of the People's Republic of China* (third amendment on 11 November 2020);

13. *Energy Law of the People's Republic of China* (adopted at the 12th Session of the Standing Committee of the 14th National People's Congress on 8 November 2024, effective from 1 January 2025)

14. *Mineral Resources Law of the People's Republic of China* (revised and promulgated on 8 November 2024);

15. *Implementation Regulations of the Enterprise Income Tax Law of the People's Republic of China* (amended by State Council Order No. 714 on 23 April 2019);

16. I*nterim Regulations on the Supervision and Administration of State-Owned Assets of*

Enterprises (amended by State Council Orders No. 378 and No. 588);

17. *Interim Regulations of the People's Republic of China on City and Town Land Use Tax* (fourth amendment by State Council Order No. 17 on 2 March 2019);

18. *Interim Regulations on Value-Added Tax of the People's Republic of China* (second amendment by State Council Order No. 134 on 19 November 2017);

19. *Regulations on the Assets Appraisal and Management of State-owned Assets (*amended by State Council Order No. 91 on 29 November 2020);

20. I*nterim Measures for the Assessment and Management of Enterprises* (Order No. 12 of the SASAC);

21. *Measures for Supervision and Administration of State-owned Assets of Enterprises* (Order No. 32 of the SASAC and the Ministry of Finance);

22. *Notice on Strengthening the Matters Related to the Appraisal Management of the State-owned Assets* (G.Z.W.CH.Q.[2006] No. 274);

23. *Notice on Matters Related to the Review of Appraisal Report of State-owned Assets of Enterprises* (G.Z.CH.Q. [2009] No. 941);

24. *Guideline for the Filing for the Appraisal Project of State-owned Assets of Enterprises* (G.Z.F.CH.Q [2013] No. 64);

25. *Notice on Optimising the Management of Asset Appraisal of State-Owned Enterprises* (G.Z.F.CH.Q.G. [2024] Document No. 8);

26. *Notice on Issuing the Rules for the Implementation of Regulations on the Assets Appraisal and Management of State-owned Assets* (G.Z.B.F. [1992] No. 36);

27. *Notice of the Ministry of Finance and the State Taxation Administration on Several Issues Regarding the National Implementation of VAT Reform* (C.SH. [2008] No. 170);

28. *Notice of the Ministry of Finance and the State Taxation Administration on Implementing the Pilot Programme of Replacing Business Tax with Value-Added Tax in an All-round Manner* (C.SH. [2016] No. 36);

29. *Notice of the Ministry of Finance and the State Taxation Administration on Adjusting VAT Rate* (C.SH. [2018] No. 32);

30. *Implementation Rules for the Interim Regulations on Value-Added Tax of the People's Republic of China* (Order No. 65 of the Ministry of Finance and the State Administration of Taxation);

31. *Announcement on Policies Relevant to Deepening VAT Reform* (Announcement No. 39 in 2019 of the Ministry of Finance, the State Taxation Administration and the General Administration of Customs);

32. *Financial Supervision and Management Measures for the Asset Appraisal Industry* (MOF Order No. 86, amended by MOF Order No. 97);

33. *Accounting Standards for Business Enterprises - Basic Standards*, *Decision of the Ministry of Finance on Amending the Accounting Standards for Business Enterprises - Basic Standards* (MOF Order No. 33, MOF Order -No. 76)

34. *Notice on Further Standardising Bank Letters and Reply Letters* (Ministry of Finance,

C.K. [2020] No. 12);

35. *Regulations on the Transfer of State-Owned Land Use Rights* (MLR Order No. 21);

36. *Interim Regulations on Mining Rights Transfer and Assignment Management* (G.T.Z.F. [2000] No. 309);

37. *Notice on the Mining Rights* Appraisal Management Measures (Trial) (G.T.Z.F. [2008] No. 174);

38. *Notice of the Ministry of Finance, the Ministry of Natural Resources and the State Taxation Administration on the Issuance of the Measures for the Collection of Mining Rights Transfer Revenue* (C.Z. [2023] No. 10);

39. *Announcement on the Implementation Criteria for Relevant Issues on Resource Tax (Announcement* [2020] No. 34 of the Ministry of Finance and the State Taxation Administration);

40. *Announcement of the Ministry of Finance, the State Taxation Administration and the National Development and Reform Commission on Extending the Corporate Income Tax Policy for the Western Development* (Ministry of Finance Announcement No. 23, 2020);

41. Other relevant Laws, regulations, and notices.

iii. Appraisal standards basis

1. *Basic Rules for Asset Appraisal* (C.Z. [2017] No. 43);

2. *Code of Professional Ethics for Asset Appraisal* (Z.P.X. [2017] No. 30);

3. *Asset Appraisal Practice Standards – Appraisal Report* (ZH.P.X. [2018] No. 35);

4. *Asset Appraisal Practice Standards – Appraisal Procedures* (ZH.P.X. [2018] No. 36);

5. *Asset Appraisal Practice Standards – Appraisal Methods* (ZH.P.X. [2019] No. 35);

6. *Asset Appraisal Practice Standards – Engagement Contract* (ZH.P.X. [2017] No. 33);

7. *Asset Appraisal Practice Standards – Appraisal Archives* (ZH.P.X. [2018] No. 37);

8. *Asset Appraisal Practice Standards – Utilisation of Expert Work and Relevant Reports* (ZH.P.X. [2017] No. 35);

9. *Asset Appraisal Practice Standards – Enterprise Value* (ZH.P.X. [2018] No. 38);

10. *Asset Appraisal Practice Standards – Intangible Assets* (ZH.P.X. [2017] No. 37);

11. *Asset Appraisal Practice Standards – Intellectual Property* (ZH.P.X. [2023] No. 14);

12. *Asset Appraisal Practice Standards – Real Estate* (ZH.P.X. [2017] No. 38);

13. *Asset Appraisal Practice Standards – Machinery and Equipment* (ZH.P.X. [2017] No. 39);

14. *Guidelines for Appraisal Reports of State-owned Enterprise Assets* (ZH.P.X. [2017] No. 42);

15. *Guidelines for Quality Control of Asset Appraisal Institutions* (ZH.P.X. [2017] No. 46);

16. *Guidance on Types of Asset Appraisal Value* (ZH.P.X. [2017] No. 47);

17. *Guidance on Legal Ownership of Subject Asset* (ZH.P.X. [2017] No. 48).

18. *Guidelines on Patent Asset Appraisal* (ZH.P.X. [2017] No. 49);

19. *Guidelines on Copyright Asset Appraisal* (ZH.P.X. [2017] No. 50);

20. *Guidance on Determining Mining Rights Appraisal Parameters* (Chinese Association of Mineral Resources Appraisers, October 2008);

21. *Chinese Mineral Rights Appraisal Standards* (Chinese Association of Mineral Resources Appraisers, September 2010);

22. *Chinese Mining Rights Appraisal Standards* (ii) (Chinese Association of Mineral Resources Appraisers, September 2010);

23. *Guiding Opinions on the Mineral Rights Appraisal Standards issued by the Chinese Association of Mineral Resources Appraisers (CMV 13051-2007) — Determination of Types of Solid Mineral Resource Reserves.*

iv. Ownership basis

1. State-owned Property Registration Certificates;

2. Real estate ownership certificate / State-owned land use tights certificate / property ownership certificate;

3. Mining Licences;

4. Patent Certificates;

5. Copyright ownership certificates;

6. Motor Vehicle Registration Certificates;

7. Other relevant ownership certificates.

v. Pricing basis

1. *Basic Construction Financial Rules* (Ministry of Finance Order No. 81, effective from 1 September 2016);

2. *Regulations on the Management of Construction Costs for Basic Construction Projects* (C.J. [2016] No. 504);

3. *Electromechanical Product Information Price Query System* (2025);

4. *Mandatory Scrap Standards for Motor Vehicles*;

5. *Notice of the National Development and Reform Commission on Further Liberalising Professional Service Prices for Construction Projects* (F.G.J.G. [2015] No. 299) (ZH.D.L.D.E. [2015] No. 162);

6. *Budget Standards for Housing and Decoration Engineering in Inner Mongolia* (2017);

7. *Budget Standards for General Installation Engineering in Inner Mongolia* (2017);

8. *Ground Building Engineering Consumption Quotas for Coal Construction* (2015, After-tax Base Price);

9. *Coal Construction Cost Quotas and Price Management Regulations* (2015);

10. *Coal Construction Engineering Cost Quotas and Other Regulations for Coal Construction* (NB/T51064-2016);

11. *Other Costs Standards for Coal Construction* (2015);

12. *Consumption Quotas for Coal Mining Shaft Engineering* (2015, After-tax Base Price);

13. *Comprehensive Quotas for Auxiliary Costs in Coal Mining Shaft Engineering* (2015, After-tax Base Price);

14. *Wuhai City Engineering Cost Information* (July 2025);

15. *Notice on Adjusting Coal Mining Construction Engineering Quotation Standards (2015 Base Price) for Labour Unit Prices and Related Regulations*;

16. *Construction Materials Price Information for Various Cities in Inner Mongolia* (September-October 2025);

17. LPR (loan prime rate) on the valuation benchmark date;

18. Records of on-site inspection by the appraisers and other relevant appraisal information collected;

19. Project feasibility study reports, project investment estimates, design estimates, and other materials provided by the appraised entity;

20. Relevant engineering budget and final accounts data provided by the appraised entity;

21. Engineering contract agreements signed by the appraised entity with relevant parties;

22. Payment progress statistics and related payment vouchers for ongoing projects provided by the appraised entity;

23. Financial statements, audit reports, and data from previous years provided by the appraised entity;

24. Future business plans provided by relevant departments of the appraised entity;

25. Market forecast data for the main products of the appraised entity for the current and future years;

26. Raw material purchase contracts signed by the appraised entity with relevant parties;

27. WIND financial information terminal;

28. iFinD financial terminal;

29. Other materials related to the asset appraisal.

vi. Other reference basis

1. *Terminology of the Rules for Asset Appraisal 2020* (ZH.P.X. [2020] No. 31);

2. *Expert Guidance No. 8 – Verification in Asset Appraisal* (ZH.P.X. [2019] No. 39);

3. *Expert Guidance No. 12 - Measurement of Rate of Discount for the Enterprise Value by the Income Approach* (ZH.P.X. [2020] No. 38);

4. *Expert Guidance No. 16 – Computer Software Copyright Asset Appraisal* (ZH.P.X. [2023] No. 23);

16. *Classifications for Mineral Resources and Mineral Reserves* (GB/T 17766-2020);

17. Asset list and appraisal declaration form provided by the appraised entity;

18. Special audit report issued by Ernst & Young Hua Ming LLP ;

19. Mining rights appraisal report issued by China Enterprise Appraisals Co., Ltd.;

20. Information database of China Enterprise Appraisals Co., Ltd.

VII. Appraisal Methods

The income approach refers to the appraisal method that capitalises or discounts the expected income of the subject asset to determine its value.

The market approach refers to the appraisal method that compares the subject asset with comparable listed companies or transaction cases to determine its value.

The asset-based approach refers to the appraisal method that uses the balance sheets of the subject asset as at the valuation benchmark date to assess the value of the identified on-balance-sheet and off-balance-sheet assets and liabilities.

According to the Asset Appraisal Practice Standards – Enterprise Value, when conducting an enterprise value appraisal, the applicability of the three basic methods—income approach, market approach, and asset-based approach—must be analysed based on the appraisal purpose, subject asset, value type, and data collection, and select the appropriate appraisal method. For cases suitable for different appraisal methods for corporate value appraisal, asset appraisal professionals should use more than one appraisal method.

The appraisal methods selected for this appraisal are: the asset-based approach and the income approach.

i. Reasons for the selection of appraisal methods

Reason for selecting the asset-based approach: As of the valuation benchmark date, the book value of the assets and liabilities within the appraisal scope has already been audited. Each asset and liability of the appraised entity can be identified. The identifiable assets and liabilities can each be individually assessed using an appropriate appraisal method, thus meeting the conditions for applying the asset-based approach.

Reason for selecting the income approach: The appraised entity has the foundation and conditions for ongoing operations, with standardised accounting practices, clear management, stable and defined business sources. The management has detailed plans for the current operations and future development of the company. The future expected income and operational risks can be reasonably predicted, meeting the conditions for using the income approach for appraisal.

Reason for not selecting the market approach: The market approach relies on the existence of an active public market with sufficient market data and comparable transaction cases. The appraised entity is a non-listed company. Listed companies in the same industry differ significantly from the appraised enterprise in terms of business structure, corporate scale, asset allocation and utilisation, operational stage, growth potential, operational risks, financial risks, and others. Furthermore, there were few comparable transactions, mergers, or acquisitions within the same industry near the valuation benchmark date. Reliable operational and financial data from comparable transactions are difficult to obtain, making it impossible to calculate appropriate value ratios. Therefore, the market approach was not adopted for this appraisal.

ii. Introduction to the appraisal methods

1. Income approach

The income approach used in this appraisal is the discounted cash flow (DCF) method to indirectly determine the entire shareholders' equity by evaluating the overall value of the enterprise. The overall value of the enterprise consists of the value of operating assets generated from normal business activities and the value of non-operational assets unrelated to normal business activities. For the determination of the value of operational assets, the Free Cash Flow Discount Model is employed, which uses the future free cash flows of the enterprise for several years as a basis, discounted at an appropriate discount rate and then summed up. The calculation model is as follows:

Entire shareholders' equity value = Enterprise overall value - Interest-bearing debt value

(1) Enterprise overall value

The enterprise overall value refers to the sum of the entire shareholders' equity and the interest-bearing debt value. According to the asset allocation and usage situation of the appraised entity, the formula for calculating the enterprise overall value is as follows:

Enterprise overall value = Operating asset value + Surplus asset value + Non-operating asset value - Non-operating liability value + Long-term equity investment value

a) Operating asset value

Operating assets are those related to the appraised entity's production and business operations, which are involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The calculation formula for operating asset value is as follows:

$$P = \sum_{i=1}^{n} \frac{F_i}{(1+r)^i} + \frac{F_n}{r \times (1+r)^n}$$

Wherein: P: The value of the enterprise's operating assets as of the valuation benchmark date;

F_i: The expected free cash flow of the enterprise in the i-th year after the valuation benchmark date;

F_n: The expected free cash flow of the enterprise at the end of the detailed forecast period;

r: The discount rate (weighted average cost of capital, WACC);

n: The detailed forecast period;

i: The i-th year of the detailed forecast period.

Of which, the free cash flow of the enterprise is calculated as follows:

Enterprise free cash flow = Earnings before interest and taxes + Depreciation and amortisation - Capital expenditures - Increase in working capital + End-of-term asset recovery

Of which, the discount rate (weighted average cost of capital, WACC) is calculated as follows:

$$WACC = K_e \times \frac{E}{E + D} + K_d \times (1 - t) \times \frac{D}{E + D}$$

Where:

K_e: Cost of equity capital;

K_d: Cost of interest-bearing debt capital;

E: Market value of equity;

D: Market value of debt;

t: Tax rate.

Of which, the cost of equity capital is calculated using the Capital Asset Pricing Model (CAPM). The calculation formula is as follows:

$$K_e = r_f + MRP \times \beta_L + r_c$$

Where:

r_f: Risk-free rate of return;

MRP: Market risk premium;

β_L: Systematic risk coefficient of equity;

r_c: Company-specific risk adjustment coefficient.

b) Determination of surplus asset value

Surplus assets are those that exceed the enterprise's operational needs as of the valuation benchmark date, and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date. Surplus assets are analysed and appraised separately.

c) Value of non-operating assets and liabilities

Non-operating assets and liabilities are those that are unrelated to the appraised entity's business operations and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date. Non-operating assets and liabilities are analysed and

appraised separately.

d) Long-term equity investment value

A. An overall appraisal was conducted for long-term equity investments in wholly-owned and controlling subsidiaries. The appraisers first appraise the entire shareholders' equity of the investee, then multiply it by the shareholding percentage to determine the value of the part of the shareholder's equity. The appraisal methods used for the investees and the reasons for selecting the appraisal methods are detailed in the corresponding technical appraisal notes.

B. For affiliated companies, since conditions for appraisal are not met, this appraisal uses the verified financial statements of the affiliated company as at the valuation benchmark date, or the most recent financial statements before the valuation benchmark date, multiplied by the holding ratio as the appraisal value. If the net assets of the affiliated company are negative on the valuation benchmark date or for the most recent financial statement, the appraisal value is zero.

(2) Interest-bearing debt value

Interest-bearing debt refers to liabilities that the appraised entity must pay interest on as of the valuation benchmark date. As of the valuation benchmark date, the appraised entity has no interest-bearing debt.

2. Asset-based approach

(1) Current assets

a) Cash funds, including bank deposits and other monetary funds, are verified by on-site inventory to reverse and verify the book value, which will be used as the appraisal value. For bank deposits, the bank statements, certificates, or bank confirmation are verified to determine the verified value as the appraisal value. For other monetary funds, the appraisers obtained the contracts for the construction guarantee deposits of each household, and the appraised value was determined by the verified book value.

b) For accounts receivable, the appraisers conducted inquiries with the appraised entity regarding its sales credit policies, customer composition and creditworthiness, as well as the historical recovery of accounts receivable. Following the principle of materiality, the appraisers conducted confirmations for large accounts receivable and reviewed relevant contracts and vouchers on a sample basis. Based on the verification of accounts receivable, the appraisers determined the appraisal value according to the recoverable amount for each receivable. For receivables where there is sufficient reason to believe full recovery is possible, the appraisal value is calculated based on the full amount receivable; for receivables where a portion is highly unlikely to be recovered, when the exact unrecoverable amount is difficult to determine, the appraisers analyze the amount, duration and reasons for debt, collection history, and the debtor's current financial position, creditworthiness, and operational status using historical data and findings from on-site investigations. The estimated unrecoverable portion is then deducted as a risk allowance to calculate the appraisal value. Concurrently, the "bad debt allowance" account on the books is valued at zero.

c) For prepayments, the appraisers conducted inquiries with the relevant personnel of the appraised entity to understand the reasons for the formation of the prepayments and the

creditworthiness of the counterparties. Following the principle of materiality, the appraisers conducted confirmations for large accounts receivable and reviewed relevant contracts and accounting vouchers on a sample basis. For prepayments where corresponding goods or rights can be received as per the contract, the verified book value was used as the appraisal value.

d) For other receivables, the appraisers conducted inquiries with the appraised entity regarding its other receivables, customer composition, and creditworthiness, as well as the historical recovery of other receivables. Following the principle of materiality, the appraisers conducted confirmations for large amounts or long overdue other receivables, and reviewed relevant contracts and original accounting voucher on a sample basis. Based on the verification of other receivables, the appraisers determined the appraisal value according to the recoverable amount for each receivable. For receivables where there is sufficient reason to believe full recovery is possible, the appraisal value is calculated based on the full amount receivable; for receivables where a portion is highly unlikely to be recovered, when the exact unrecoverable amount is difficult to determine, the appraisers analyze the amount, duration and reasons for debt, collection history, and the debtor's current financial position, creditworthiness, and operational status using historical data and findings from on-site investigations. The estimated unrecoverable portion is then deducted as a risk allowance to calculate the appraisal value. Concurrently, the "bad debt allowance" account on the books is valued at zero.

e) For outsourced raw materials, the appraisers conducted inquiries with the appraised entity regarding the purchasing model, supply-demand relationships, market price information, etc., related to raw materials. In accordance with the principle of materiality, large procurement contracts and vouchers were reviewed on a sample basis. The appraisers, together with the inventory management personnel of the appraised entity, performed an inventory check and closely examined the quality and performance of the raw materials. The final appraisal was conducted based on the results of the inventory check, which was consistent with the raw material quantity and value as at the valuation benchmark date. As the raw materials purchased by the appraised entity have been acquired recently, have a fast turnover rate, and the book value has not fluctuated significantly from the market price on the valuation benchmark date, the verified book value is used as the appraisal value.

f) Finished goods: The finished goods of the appraised entity are normal sales products. This appraisal uses the selling price-backward method, deducting sales expenses, all taxes and fees, income tax, and an appropriate amount of after-tax net profit based on the sales price as at the valuation benchmark date to determine the appraisal value. The specific appraisal calculation formula is as follows:

Appraisal value of finished products for normal sale = Quantity of finished products × Non-taxable sales unit price of finished products × (1 - Tax and surcharge rate - Sales expense rate - Income tax rate - Net profit margin × Deduction rate)

g) Other current assets: The appraisers have verified that the detailed ledger matches the general ledger and balance sheets, and checked some original vouchers and contracts, verifying the authenticity, business content, and amounts of transactions. Other current assets are appraised at their verified book value.

(2) Long-term equity investments

a) An overall appraisal was conducted for long-term equity investments in wholly-owned

and controlling subsidiaries. The appraisers first appraise the entire shareholder's equity of the investee, then multiply it by the shareholding percentage to determine the value of the part of the shareholder's equity. The appraisal methods used for the investees and the reasons for selecting the appraisal methods are detailed in the corresponding technical appraisal notes.

b) For affiliated companies, since conditions for appraisal are not met, this appraisal uses the verified financial statements of the affiliated company as at the valuation benchmark date, or the most recent financial statements before the valuation benchmark date, multiplied by the holding ratio as the appraisal value. If the net assets of the affiliated company are negative on the valuation benchmark date or for the most recent financial statement, the appraisal value is zero.

(3) Fixed assets - Equipment assets

Equipment assets include machinery, vehicles, and electronic equipment. Depending on the nature of the project and the characteristics of the equipment assets within the appraisal scope, for some old electronic equipment (such as computers), where an active secondary market exists, the appraisal value is calculated based on the second-hand market prices of similar equipment. For other equipment, due to the lack of independent profit-generating capability and the scarcity of similar transaction examples, the income or market approach is not suitable, and therefore the cost method is used.

a) Cost method

The cost method calculation formula is as follows:

Appraised value= Replacement cost × Composite depreciation rate

A. Determination of replacement cost for machinery and equipment

a. For equipment that requires installation, the replacement cost generally includes: purchase price, transportation and miscellaneous fees, installation engineering fees, foundation costs, pre-construction and other costs, and capital costs. For equipment that does not require installation, the replacement cost generally includes: purchase price and transportation and handling fees. According to the regulations in "C.SH.[2008] No. 170, C.SH. [2016] No. 36, C.SH. [2018] No. 32", "*Announcement No. 39 of 2019 by the Ministry of Finance, State Taxation Administration, and General Administration of Customs*", for VAT general taxpayers, if the equipment qualifies for VAT deduction, the equipment replacement cost should exclude the corresponding VAT. The equipment replacement cost calculation formula is as follows:

Equipment requiring installation replacement cost = Equipment purchase price + Transport and handling costs + Foundation costs + Installation costs + Pre-construction and other costs + Capital costs - Deductible VAT

b. Equipment not requiring installation replacement cost = Equipment purchase price + Transport and handling costs - Deductible VAT

I. Equipment purchase price

For large, critical machinery, the purchase price is primarily determined by consulting the market price as at the valuation benchmark date or referencing the contract price of similar equipment at the valuation benchmark date. For small equipment, the purchase price is

determined by checking the market price information for the valuation benchmark date. If the purchase price cannot be found, the purchase price is adjusted using the price index for similar equipment from the same period.

II. Transport and handling fees

If transport and handling fees are not included in the equipment purchase price, they are determined by referring to standard cost indicators from resources like the *Asset Appraisal Common Data and Parameters Handbook* and the *Mechanical Industry Construction Project Budgeting Method and Indices*, taking into account factors such as transportation distance, weight, and volume. The formula for calculating transport and handling fees is as follows:

Transportation and handling fees = Equipment purchase price × Transport and handling fee rate

If transport and handling fees are already included in the equipment purchase price, no additional calculation is made.

III. Equipment foundation costs

The foundation cost for equipment is determined based on the equipment's characteristics, using the purchase price as a base and applying different foundation cost rates. If the equipment does not require a separate foundation, or if the foundation was constructed as part of the plant building, the foundation cost is not considered when calculating the equipment's replacement cost. The specific calculation formula is as follows:

Foundation costs = Equipment purchase price × Foundation cost rate

IV. Determination of equipment installation engineering costs

For equipment that requires installation, the installation engineering fees are estimated using the unit price method, referring to similar equipment installation project budgets (preliminary or final) and other engineering documents, including the *Coal Mining Construction Project Cost Quotas* (NB/T51063-2016) and other relevant standards, as well as recent local pricing information. Alternatively, the *Asset Appraisal Common Methods and Parameters Handbook* and the *Mechanical Industry Construction Project Budgeting Method and Indices* are used, combined with the scale and nature of the equipment installation work to determine the installation fee rate. The installation engineering fee calculation formula is as follows:

Installation engineering fee = Equipment purchase price × Installation engineering fee rate

V. For equipment where the purchase price includes installation engineering costs, or for equipment that does not require installation, installation engineering costs are not included.

For equipment foundations that are inseparable from buildings or separately listed as independent foundations, these are appraised within the corresponding buildings and structures, and installation engineering fees are not recalculated.

VI. Pre-construction and other costs

Pre-construction and other costs include project construction management fees, bidding agency fees, environmental impact assessment fees, surveying and design fees, engineering supervision fees, joint trial operation fees, and others. The rates for these expenses are determined by investigating the average cost levels of similar projects and referring to the

Standards for *Other Expenses of Coal Mining Construction Project* (NBT51064-2016) and other related standards, as well as the specific conditions of this project.

VII. Capital costs

Capital costs are determined based on the appraised entity's reasonable construction period, referencing the RMB loan market interest rate (LPR) published by the People's Bank of China on the valuation benchmark date. The capital cost rate is applied to the sum of the equipment purchase price, transportation and miscellaneous expenses, installation engineering fees, preliminary expenses, and other costs, according to the principle of uniform capital investment.

Capital costs = (Equipment purchase price + Transport and handling costs + Installation costs + Pre-construction and other costs) × Reasonable construction period × Loan benchmark interest rate × 1/2

VIII. Determination of deductible VAT

According to the regulations in "C.SH [2008] No. 170", "C.SH. [2016] No. 36", "C.SH. [2018] No. 32", and the "Announcement No. 39 in 2019 of the Ministry of Finance, the State Taxation Administration and the General Administration of Customs", the input VAT includes VAT on the equipment purchase price (tax rate 13%), VAT on transport and handling fees (tax rate 9%), and VAT on pre-construtction and other costs (tax rate 6%).

B. Determination of replacement costs for vehicles

The reset cost for vehicles is determined by market price information from the local automobile market and other recent vehicle price data. Vehicle purchase tax is calculated according to the *Vehicle Purchase Tax Law of the People's Republic of China*. Licence fees and other expenses are determined based on the relevant regulations at the location where the vehicle is registered. According to "C.SH. [2016] No. 36, C.SH. [2018] No. 32, and Announcement No. 39 of 2019 by the Ministry of Finance, State Taxation Administration, and General Administration of Customs", VAT deduction is calculated for eligible vehicles.

Reset costs = Purchase price + Vehicle purchase tax + Licence fees - Deductible VAT

Where:

Vehicle purchase tax = Vehicle purchase price / (1 + 13%) × Vehicle purchase tax rate

Deductible VAT = Vehicle purchase Price / (1 + 13%) × 13%

C. Determination of replacement costs for electronic equipment

For electronic equipment that requires installation, the appraisal is conducted using the same method as for machinery. For other electronic equipment that does not require installation, the replacement cost is determined based on the market purchase price on the valuation benchmark date. According to the regulations in "C.SH.[2016] No. 36, C.SH. [2018] No. 32, Announcement No. 39 of 2019 by the Ministry of Finance, State Taxation Administration, and General Administration of Customs", for VAT general taxpayers, if the equipment qualifies for VAT deduction, the replacement costs should exclude the corresponding VAT. The equipment replacement cost calculation formula is as follows:

Equipment replacement costs = Equipment purchase price + Transportation and handling costs - Deductible VAT

D. Determination of composite depreciation rate

a. For specialised equipment and general machinery, the composite depreciation rate is mainly based on the equipment's economic service life and its used lifespan. The remaining useful life is determined through on-site inspections of the equipment's usage and technical condition. Some equipment, such as mining supporting equipment, has a remaining useful life closely linked to the mine's remaining service life. The remaining useful life of this equipment is determined based on the shorter of the mine's remaining service life and the equipment's remaining economic life. The composite depreciation rate is then determined using the following formula:

Composite depreciation rate = Remaining service life / (Remaining service life + Used lifespan) × 100%

b. For electronic equipment, air conditioning equipment, and other small equipment, the composite depreciation rate is mainly determined based on its economic lifespan. For large electronic equipment, the work environment and operational status are also taken into account. The calculation formula is as follows:

Age-based depreciation rate = (Economic service life - used lifespan) / Economic service life × 100%

Composite depreciation rate = Age-based depreciation rate × Adjustment coefficient

c. For vehicles, the determination is based on the *Standard for Compulsory Scrapping of Motor Vehicles jointly* ([2012] Order No. 12). issued by the Ministry of Commerce, National Development and Reform Commission, Ministry of Public Security, Ministry of Environmental Protection on 27 December 2012. The theoretical depreciation rate is determined based on either the vehicle's mileage or years of use, using the lower of the two methods (for vehicles without a mandatory scrapping age, the remaining useful life method is used). The final depreciation rate is determined by comparing both the age-based and mileage-based depreciation rates, adjusting as necessary based on the on-site inspection. If the difference between the calculated depreciation rate and the on-site inspection result is negligible, no adjustment is made. The formula is as follows:

Age-based Newness Rate (No Mandatory Scrapping Age) = Remaining Useful Life / (Years of Use + Remaining Useful Life) × 100%

Age-based Newness Rate (With Mandatory Scrapping Age) = (Prescribed Service Life - Years of Use) / Prescribed Service Life × 100%

Mileage-based Newness Rate = (Prescribed Mileage - Mileage Run) / Prescribed Mileage × 100%

E. Determination of the appraisal value

Appraised value = Replacement cost × Composite depreciation rate

b) Market approach

For some old electronic equipment (such as computers) and scrap equipment, where an active secondary market exists, the appraisal value is calculated based on the second-hand prices or scrap prices of similar equipment.

c) For equipment assets with no physical presence, the appraisal amount is zero.

(4) Fixed assets - Properties and buildings

According to the characteristics of various properties and buildings (structures) assets, the type of appraisal, data collection conditions, and other related factors, the market approach is used to appraise employee dormitories in the Xingtai Binhe area, while the cost method is used for the remaining assets.

a) Cost method

The cost method calculation formula is as follows:

Appraised value= Replacement cost × Composite depreciation rate

A. Determination of replacement cost

The replacement cost of general properties and buildings (structures) generally includes construction and installation engineering costs, pre-construction and other costs, and capital costs. The calculation formula is as follows:

Replacement costs = Construction and installation project costs + Pre-construction and other costs + Capital costs - Deductible VAT

a. Construction and installation engineering costs

For large, valuable, and important buildings, the construction and installation project costs are determined using the preliminary and final budget adjustment method, which uses the quantities in the building's final budget as a basis and calculates the construction and installation project costs based on local standards and relevant fee documents.

For general buildings, or when final budget data is incomplete or the building's value is small and structure simple, the comparable method is used to determine the construction and installation costs.

b. Pre-construction and other costs

The pre-construction and other costs are calculated based on the construction investment of the appraised entity, referencing industry, national, or local government fee standards.

c. Capital costs

Capital costs are calculated based on the appraised entity's reasonable construction period, referencing the Loan Prime Rate (LPR) published by the People's Bank of China on the valuation benchmark date. The total sum of construction and installation project costs, preliminary and other fees, etc., is used as the base for calculating the financing costs over the uniform capital investment. The calculation formula of capital costs is as follows:

Capital costs = (Construction and installation cost + Pre-construction and other costs) × Reasonable construction period × Loan benchmark interest rate / 2

d. Deductible VAT

According to "C.SH. [2016] No. 36" and "Announcement No. 39 of 2019 by the Ministry of Finance, State Taxation Administration, and General Administration of Customs", for VAT general taxpayers that meet VAT deduction conditions, the reset cost should exclude the corresponding VAT.

Deductible VAT = Construction and installation project cost / 1.09 × 9% + Construction and installation project cost × Deductible pre-construction and other cost rates / 1.06 × 6%

e. Determination of composite depreciation rate

I. For important buildings (and structures), the economic service life, used lifespan, and on-site inspection of the structure, decoration, and auxiliary equipment are considered to determine the remaining useful life, which is then used to calculate the composite depreciation rate.

Composite depreciation rate = Remaining service life / (Remaining service life + Used lifespan) × 100%

II. For low-value buildings (and structures), the composite depreciation rate is mainly determined based on the economic service life. The calculation formula is as follows:

Composite depreciation rate = (Economic service life - used lifespan) / Economic service life × 100%

III. For buildings (and structures) closely related to coal production, when the remaining service life of the mine is shorter than the remaining useful life, the remaining service life of the mine is used to determine the remaining useful life of the building.

B. Determination of the appraisal value

Appraised value= Replacement cost × Composite depreciation rate

b) Market approach

The market approach refers to comparing the subject asset with similar real estate that has recently been traded on the valuation benchmark date, adjusting the known prices of these comparable properties to estimate the objective and reasonable price or value of the subject asset.

For employee dormitory apartments, where the local real estate market is well-developed and comparable transactions exist, the market approach is used for appraisal. This involves selecting suitable comparable transaction examples, adjusting for transaction conditions, transaction dates, regional factors, and individual factors to determine the market value of the property. The calculation formula is as follows:

Estimated real estate price = Comparable transaction price × Normal transaction conditions / Comparable transaction conditions × Real estate price index at valuation benchmark date / Price index at comparable real estate transaction date × Real estate regional factor at appraisal date / Comparable real estate regional factor × Real estate individual factors at appraisal date / Comparable real estate individual factors

Appraisal using the market approach should proceed as follows:

A. Collect transaction examples;

B. Select comparable examples;

C. Establish a comparable price basis;

D. Make adjustments for transaction conditions;

E. Make adjustments for transaction dates;

F. Conduct regional factor adjustments;

G. Conduct individual factor adjustments;

H. Determine the comparable price.

c) For properties and buildings (and structures) that were demolished on the valuation benchmark date, properties and buildings (and structures) with no physical presence, idle properties and buildings (and structures) with no use value, or properties and buildings (and structures) pending or already scrapped, the appraisal amount is zero.

(5) Shaft engineering

Based on the characteristics of various shaft engineering projects, the appraised value type, data collection conditions, and other related factors, the cost method is primarily used for appraising shaft engineering projects. The cost method calculation formula is as follows:

Appraised value= Replacement cost × Composite depreciation rate

a) Determination of replacement cost

Replacement costs = Comprehensive cost + Pre-construction and other costs + Capital cost − Deductible input tax

A. Comprehensive cost

The comprehensive cost is calculated based on physical engineering quantities and the current coal mining quotas and fee standards.

For large-scale, high-value, and critical shaft engineering project, the comprehensive cost is calculated based on physical engineering quantities and the current coal mining quotas and fee standards.

Engineering cost = Base price of engineering quotas + Measure fees + Company management fees + Profits + Regulatory fees + Other project fees + Regional price differences

Where:

Base price of engineering quotas – The base price is calculated based on the shaft engineering's lifting method, lifting depth, tunnel cross-section, support method, materials, and thickness. The *Consumption Quotas for Coal Mining Shaft Engineering* (2015, After-tax Base Price) and *Comprehensive Quotas for Auxiliary Costs in Coal Mining Shaft Engineering* (2015, After-tax Base Price) are applied. This includes wages, material consumption, machine usage fees, etc., with adjustments made according to relevant regulations.

Other fees — determined in accordance with the "Notice issued by the China Coal Construction Association on *Adjustment of Pricing Basis for Coal Construction Projects under the VAT Reform for the Construction Industry* (ZH.M.J.X.Z. [2016] No. 46)" and the *Notice on Adjusting the Value-Added Tax Rate for Coal Construction Engineering Pricing Basis* (ZH.M.J.X.Z. [2019] No. 37), together with the *Notification on Release of the Consumption Quotas for Coal Mining Shaft Engineering (2015, After-tax Base Price)* (ZH.M.J.X.Z. [2016] No. 115) and the *Supplementary Provisions on the Implementation of the Valuation Standards for Coal-Construction Projects* (ZH.M.J.X.Z. [2016] No. 116), and calculated in combination with the actual construction conditions of the mine.

Labour, materials, and equipment price differences – Adjusted according to the *Notice on Adjusting Coal Construction Engineering Quotation Standards (2015 Base Price) for Labour Unit Prices and Related Regulations (ZH.M.J.X.*Z. [2021] No. 125), *Urumqi City*

Construction Engineering Material Information Price List (Q2 2025), and materials price information provided by the enterprise for the valuation benchmark date.

For general shaft engineering projects, or when final settlement data is incomplete, or when the value is small and the structure is simple, the Analogy Method is used to determine the construction cost.

B. Pre-construction and other costs

Preliminary and other costs include construction unit management fees, engineering supervision fees, surveying and design fees, environmental evaluation fees, and soil and water conservation consulting service fees. These costs are calculated based on the engineering construction investment amount, according to industry, national, or local government fee standards. Preliminary and Other Costs Calculation Formula:

Preliminary and other costs = Engineering cost × Fee rate

c. Capital costs

Financing costs are calculated based on the appraised entity's reasonable construction period, referencing the LPR published by the People's Bank of China on the valuation benchmark date, and considering the appraised entity's loan interest rate adjustments. The total sum of engineering costs, preliminary and other fees, etc., is used as the base for calculating the financing costs over the uniform capital investment.

Financing cost = (Engineering cost + Preliminary and other fees) × Reasonable construction period × Interest rate / 2

2) Determination of composite depreciation rate

Shaft engineering in coal mines differs from surface buildings in that it is a special structure attached to coal resources. Its economic lifespan is closely linked to the coal reserves that can be mined. As coal resources are depleted, the economic lifespan shortens, and when coal resources are exhausted, the economic lifespan ends.

Underground engineering has a complex geological structure, many unpredictable factors, and poor construction conditions. The stability of the tunnels depends on their location, rock layer properties, and mining methods. The service life of each type of tunnel is determined by the coal reserves in the service area.

Therefore, before determining the depreciation rate, the appraisers first reviewed geological reports, mine design data, and understood the position, rock properties, support methods, geological structures, and the impact of mining on the tunnels. They then visited representative tunnels underground to inspect the support conditions and maintenance status and consulted with on-site engineering personnel to verify and review the maintenance records and methods. Finally, based on the coal reserves, remaining reserves, recoverable reserves, and production capacity provided by the geological survey department, the remaining service life of each tunnel was calculated, and the composite depreciation rate was determined. The calculation formula is as follows:

Composite depreciation rate = Remaining service life / (Service life + Remaining service life) × 100%

c) Appraisal value

Appraised value = Replacement cost × Composite depreciation rate

(6) Construction in progress

Based on the characteristics of construction in progress, the appraised value type, and data collection, the cost approach was adopted for the appraisal.

a) Completed Projects

For projects where the main structure is already listed as fixed assets, they are incorporated into the main appraisal. Other completed projects are appraised according to the fixed asset appraisal method.

b) Incomplete Projects

For ongoing projects that started within six months of the valuation benchmark date, due to minor price changes, the appraisal is based on the book value of the ongoing construction after verification, and the residual value after deducting unreasonable expenses is used as the appraised value.

For ongoing projects that started more than six months before the valuation benchmark date, if the book value does not include capital costs, the capital costs are added based on the reasonable construction period, and the capital costs are not calculated if the reasonable construction period is less than six months. If the book value differs significantly from the price level on the valuation benchmark date, the construction costs are adjusted to the valuation benchmark date price level.

c) Pure Expense-Based Construction Projects

Pure expense type ongoing projects have no physical entity. After verifying that the payments made are necessary for future projects or have actual value to the future owners, and confirming that there is no duplicate valuation with related asset projects, the book value after verification is used as the appraised value. Otherwise, the value is treated as zero.

d) Completed but inactive and unfinished, suspended projects

For projects that have been completed but are inactive, or for unfinished projects that have been suspended, due to their long-term inactivity or suspension with no future construction or use, the appraisal is based on the recoverable realizable value as at the valuation benchmark date. If the expense incurred is a pre-operating cost, the appraisal amount will be zero.

(7) Right-of-use assets

The appraisers obtained lease contracts and the asset amortisation schedule for right-of-use assets, verifying lease terms, rent standards, payment methods, and lease periods, using the verified book value as the appraisal value.

(8) Land use rights

According to the *Asset Appraisal Practice Standards – Real Estate*, and referring to the *Regulations for Appraisal on Urban Land*, the main methods for appraising land include the market approach (market comparison method), the income approach (income capitalisation method), the hypothetical development approach (residual method), the cost method (cost approach method), and the benchmark land price adjustment approach (benchmark land price coefficient adjustment method). According to the local real estate market development status, and in conjunction with the specific characteristics and

purposes of the project, the benchmark land price adjustment approach and the market approach are used for the appraisal. A brief introduction to the appraisal method is as follows:

a) Benchmark land price adjustment approach

The benchmark land price adjustment method uses urban benchmark land prices and benchmark land price adjustment tables to assess the value of land. According to the principle of substitution, the regional and individual conditions of the subject asset are compared with the average conditions of the region, and the corresponding adjustment coefficients are selected from the coefficient adjustment table to modify the benchmark land price. This method determines the value of the subject asset on the valuation benchmark date.

The calculation formula for the Benchmark Land Price Adjustment Method is as follows:

$$V = (V1 \times (1 \pm \Sigma K) \times Kr \times Km + Kk) \times Kq$$

Where:

V — The adjusted land price of the appraised land;

V1 — The benchmark land price of land with the same usage in the region where the appraised land is located;

ΣK — The total adjustment coefficient for regional and individual factors of the appraised land;

Km — The usage period adjustment coefficient;

Kq — The date adjustment coefficient;

Kr — The floor area ratio adjustment coefficient;

Kk — The land development degree adjustment coefficient.

b) Market approach

The market approach is used to determine the price of the land being appraised by comparing it to similar land transactions that have occurred recently. Based on the prices of these comparable transactions, adjustments are made for differences in transaction conditions, dates, regional factors, and individual factors to determine the objective and reasonable value of the land. The calculation formula for the market approach is:

$$\text{Formula: } P = PB \times A \times B \times C \times D$$

Where:

P — Estimated land price;

PB — Comparable transaction price;

A — Transaction condition index for the land to be appraised / Transaction condition index for the comparable instance;

B — Land price index at the valuation benchmark date / Land price index at the comparable transaction date;

C — Regional factor index for the land to be appraised / Regional factor index for the comparable transaction;

D — Individual factor index for the land to be appraised / Individual factor index for the comparable transaction.

(9) Mining rights

a) Mining rights

For mining rights, China Energy Investment Corporation Co., Ltd. and China Shenhua Energy Company Limited entrusted China Enterprise Appraisals Co., Ltd. to conduct independent appraisals; the mining rights appraisals in this asset appraisal report reference the appraisal conclusions issued by China Enterprise Appraisals Co., Ltd.

b) Coal resource usage fees

Some mining rights holders collect "coal resource usage fees" by granting mining rights to subsidiaries for extraction and operation.

In this appraisal, the future projected cash flows derived from mining rights are not considered at the owner level, and the appraisal value is zero; the usage fee of mining rights is solely calculated based on the usage fee per tonne and the expected output, and after deducting income tax expenses, the "usage fees of mining rights" appraisal is discounted using the discount rate applied in the mining rights appraisal.

The operating rights holder enjoys the mining and operating income. Therefore, when considering the future projected cash flows derived from mining rights at the level of the actual operator, and valuating the target company with actual operating, the intangible asset - mining rights appraisal is summarised using the mining rights appraisal report's conclusion, while the "usage fees of mining rights" net value (negative) to be paid by the actual operator is listed.

c) Hazard management rights value

The environmental hazard management projects included in this appraisal scope include the Comprehensive Disaster Management Project for the Goaf Area at Suhaitu Coal Mine, and the Hazard Management Project of Eastern Part of Pingou Coal Mine Section III. According to the *Preliminary Design Optimization of Comprehensive Disaster Management Project for the Goaf Area at Suhaitu Coal Mine*, and the *Implementation Plan for Hazard Management Project of Eastern Part of Pingou Coal Mine Section III of CHN Energy Wuhai Energy Co., Ltd.*, the future benefits and risks of the hazard management projects can be quantified in monetary terms, meeting the technical and economic parameters required for the income approach appraisal method—discounted cash flow method. Thus, this appraisal adopts the discounted cash flow method. The calculation formula is as follows:

$$P = \sum_{t=1}^{n} (CI - CO)_t \bullet \frac{1}{(1+i)^t}$$

Where: P — Hazard management project appraisal;

CI — Annual cash inflows;

CO — Annual cash outflows;

i — Discount rate;

t — Year number (t = 1, 2, 3, …, n);

n — Appraisal calculation period.

d) Exploration rights

For exploration rights, due to the inability to obtain the necessary geological survey, preliminary design, mine area general plan, formal feasibility report, and other documents required for mining rights appraisal, it is not possible to model and calculate the market value of the exploration rights as of the valuation benchmark date according to mining rights appraisal standards and theories. Therefore, the related costs for exploration rights are retained based on the audited book value.

(10) Other intangible assets

The enterprise has declared other intangible assets to be included in the appraisal scope, including software, patent assets and software copyrights. Based on the characteristics of other intangible assets, the type of valuation, and the availability of data, the market approach is employed for valuation, as detailed below:

a) For software currently in normal use, since most software was not recently acquired, the software adjustment factor is determined with reference to price increases and average income in the information software industry, and then applied to adjust the original book value to establish the appraisal value of software. For software that has been discontinued and verified by the enterprise as having no remaining value, the appraisal value is zero.

b) Patent assets: Given that China's market for technology-based intangible assets remains in its nascent stage, collecting relevant fair transaction data is relatively challenging. Therefore, the market approach is not feasible for this valuation.

Due to the patent rights held by the appraised entity, and after verification with the appraised entity, all relevant patents were generated during production activities. Some patents were acquired a long time ago and have not been utilized in related production and business operations. Therefore, the income approach is not feasible for this valuation.

Therefore, the cost approach is considered in this appraisal. The appraisal mainly considers the reset cost of patents, including application fees, printing fees, patent registration, printing, substantial review fees, and other related fees.

(11) Long-term prepaid expenses

For the appraisal of long-term prepaid expenses, the appraisers reviewed all original accounting vouchers, contracts, and other relevant documents to verify the authenticity and completeness of the accounting content. For the five parking spaces, the value was already included in the value of the associated properties and was appraised as zero. For office software that has been fully amortised but is still in normal use as of the valuation benchmark date, the cost method is used for the appraisal.

(12) Other non-current assets

Other non-current assets, such as prepayment for construction. The appraisers investigated the origins of other non-current assets and reviewed relevant accounting vouchers. Regarding the prepaid land transfer fee for the Wuhai Public Resource Trading Center Vocational Training Center, since the land use right – Haihe – Vocational Training Center had already been appraised and valued, the appraisal value of the prepaid land transfer fee

was zero; for other non-current asset items, the verified book value was adopted as the appraisal value.

(13) Liabilities

The liabilities of the appraised entity include accounts payable, contract liabilities, employee remuneration payable, taxes payable, other payables, non-current liabilities due within one year, other current liabilities, lease liabilities, long-term payables, and provisions. The appraisers first checked the consistency between the subsidiary accounts and the general ledger, and examined the detailed items. They also sampled relevant accounting vouchers and documents to confirm the accuracy of the debt book values. For current and non-current liabilities, the appraised values are determined based on the actual liabilities borne by the company as verified.

VIII. Appraisal Process and Procedure

The appraisers carried out the appraisal of the assets and liabilities involved in the subject asset from 9 August 2025 to 16 December 2025. The main appraisal procedures and process are as follows:

i. Acceptance of commission

On 9 August 2025, the client and us reached an agreement on the basic matters of the appraisal, including the appraisal purpose, the subject asset, the appraisal scope, the valuation benchmark date, and the rights and obligations of each party. We then negotiated with the client and developed the corresponding appraisal plan.

ii. Preliminary preparation

After accepting the commission, the project team formulated a corresponding work plan based on the appraisal purpose and subject asset, and established the appraisal team. Simultaneously, the team drafted a list of required materials and appraisal forms based on the actual needs of the project.

iii. On-site investigation

The appraisers conducted the necessary asset and liability verification of the subject asset from 18 August 2025 to 31 October 2025, and conducted the necessary due diligence on the operating and management conditions of the appraised entity.

1. Asset verification

(1) Guidance for the Appraised Entity in Completing Forms and Preparing Materials to be Provided to the Appraisal Agency

The evaluators guided the financial and asset management personnel of the appraised entity to accurately complete the assets appraisal details sheet and checklists based on the self-conducted asset verification, while collecting ownership proof documents and other supporting materials such as performance data, technical indicators, etc.

(2) Preliminary review and improvement of the Assets Appraisal Details Sheet submitted by the appraised entity

The appraisers reviewed the relevant documents, understood the detailed status of the assets included in the appraisal scope, and then carefully reviewed the "Assets Appraisal Details Sheet" to check for incomplete or incorrect entries, unclear asset items, and other

issues. Based on experience and the gathered information, the appraisers ensured the accuracy of the sheet and provided feedback to the appraised entity to improve them.

(3) On-Site inspection

Based on the type, quantity, and distribution of assets included in the appraisal scope, the appraisers, with the cooperation of the relevant personnel of the appraised entity, conducted on-site inspections in accordance with the relevant provisions of the asset appraisal standards. Different inspection methods were applied depending on the nature and characteristics of the various assets.

(4) Supplementing, modifying, and improving the Assets Appraisal Details Sheet

Based on the results of the on-site inspection and after thorough communication with the relevant personnel of the appraised entity, the appraisers further refined the "Assets Appraisal Details Sheet" to ensure consistency between the accounts, sheet, and actual assets.

(5) Verification of ownership documentation

The appraisers verified the ownership documentation for assets within the appraisal scope, such as buildings, vehicles, land use rights, patents, and software copyrights. In cases where ownership information was incomplete or unclear, the appraisers requested the enterprise to verify or provide relevant ownership clarification documents.

2. Due diligence

To fully understand the operational management status and risks faced by the appraised entity, the evaluators conducted necessary due diligence. The main contents of the due diligence were as follows:

(1) The history of the appraised entity, its major shareholders and their shareholding ratios, and the necessary ownership and management structure;

(2) The asset, financial, and operational management status of the appraised entity;

(3) The business plan, development plan, and financial forecast information of the appraised entity;

(4) Previous appraisals and transactions related to the appraised entity;

(5) Macro and regional economic factors affecting the appraised entity's operations;

(6) The development status and prospects of the industry in which the appraised entity operates;

(7) Other relevant information.

iv. Data collection

Based on the specific situation of the appraisal project, the evaluators collected appraisal data from various sources, including direct market information, materials provided by the client and other relevant parties, and documents from government departments, professional institutions, and other relevant agencies. The collected appraisal data was then analyzed, summarised, and organised to form the basis for the appraisal estimate.

v. Appraisal estimate

Based on the specific conditions of the various assets, the appraisers selected the appropriate formulas and parameters according to the chosen appraisal methods, performing analysis, calculations, and judgments to form preliminary appraisal conclusions. The project leader summarised the preliminary conclusions for each asset appraisal and drafted the preliminary asset appraisal report.

vi. Internal review

According to our company's appraisal business process management regulations, the project leader submitted the preliminary asset appraisal report for internal review after completion. After the internal review, the appraisers communicated with the client or other relevant parties, as agreed, on the contents of the asset appraisal report, ensuring that the independence of the appraisal conclusions was maintained. After completing the above appraisal procedures, the formal asset appraisal report was issued and submitted.

IX. Appraisal Assumptions

The assumptions for the analysis and estimates in this asset appraisal report are as follows:

i. It is assumed that all appraisal subjects are already in the transaction process, and the appraisal professionals simulate the market to perform the appraisal based on the transaction conditions of the appraised assets.

ii. It is assumed that for assets traded or to be traded in the market, the parties involved in the asset transaction are in an equal position, with both parties having the opportunity and time to obtain sufficient market information. The transaction is voluntary and rational, with both parties able to make rational judgments regarding the asset's function, purpose, and transaction price.

iii. It is assumed that the appraised assets will continue to be used according to their current usage and mode of operation during the period of service at the mine.

iv. It is assumed that there are no significant changes in the relevant national laws, regulations, and policies, and no significant changes in the political, economic, and social environment in the regions where the parties to the transaction are located.

v. Based on the actual condition of the assets on the valuation benchmark date, it is assumed that the enterprise will continue as a going concern during the period of service at the mine.

vi. It is assumed that there will be no significant changes in the interest rate, tax bases and rates, or policy-related levies related to the appraised entity after the valuation benchmark date;

vii. It is assumed that the management team of the appraised entity after the valuation benchmark date will be responsible, stable, and capable of fulfilling their duties.

viii. Unless otherwise stated, it is assumed that the company fully complies with all relevant laws and regulations.

ix. it is assumed that no force majeure or unforeseeable factors will have a significant adverse impact on the appraised entity after the valuation benchmark date.

x. It is assumed that the accounting policies adopted by the appraised entity after the valuation benchmark date will remain consistent in important aspects with the accounting policies used in preparing this asset appraisal report.

xi. It is assumed that, based on the current management approach and management level, the scope and method of operations of the appraised entity will remain consistent with the present.

xii. It is assumed that the cash inflows of the appraised entity after the valuation benchmark date will be average inflows, and the cash outflows will be average outflows.

xiii. It is assumed that the market competition conditions for the products or services of the appraised entity will remain the same as at present.

xiv. It is assumed that in the future, the production and sales of commodity coal will achieve a balance between output and sales;

xv. It is assumed that during the appraisal calculation period, the entity cost for environmental restoration and land reclamation will be equal to the extracted and spent amounts;

xvi. As at the valuation benchmark date, the appraised entity enjoys the preferential enterprise income tax policy for the Western Development, with an enterprise income tax rate of 15% from 1 January 2021 to 31 December 2030; This appraisal assumes that after the preferential enterprise income tax policy for the Western Development expires, a 25% tax rate will be applied;

xvii. It is assumed that China Energy Group Wuhai Energy Co., Ltd. will continue to charge coal resource usage fees to Wuhai Lutian Mining Co., Ltd., Guoneng Wuhai Energy Wuhushan Mining Co., Ltd., Guoneng Wuhai Energy Huangbaici Mining Co., Ltd., and Wuhai Gongwusu Coal Industry Co., Ltd. at the current level;

xviii. It is assumed that Shenhua Group Haibowan Mining Co., Ltd. Pinggou Coal Mine will complete the technological transformation and reach production capacity by 2030, and Shenhua Group Haibowan Mining Co., Ltd. Gongwusu Coal Mine Shaft No. 3 will complete the technological transformation and reach production capacity by 2029.

xix. It is assumed that the mineral resources reserves reviewed in the mining licence will be used as the basis, and the mining licence will be successfully extended in the future.

The conclusions of this asset appraisal report are valid under the above assumptions as of the valuation benchmark date. If there are significant changes in these assumptions, the signing asset appraisers and this appraisal agency will not bear responsibility for deriving different appraisal conclusions due to changes in assumptions.

X. Appraisal Conclusions

i. Income approach appraisal result

As at the valuation benchmark date, CHN Energy Wuhai Energy Co., Ltd.'s parent company had total assets with a book value of RMB22,033,615,700; total liabilities with a book value of RMB11,796,512,100; and net assets with a book value of RMB10,237,103,600. Under the income approach, the entire shareholders' equity of shareholders was RMB12,557,566,000, with an increase of RMB2,320,462,400, representing an appreciation rate of 22.67%.

As at the valuation benchmark date, CHN Energy Wuhai Energy Co., Ltd.'s total assets on a consolidated had a book value of RMB22,555,956,400, total liabilities had a book value of RMB10,423,355,900, and owners' equity had a book value of RMB12,132,600,500, of

which RMB11,621,321,400 was attributable to the parent company. Under the income approach, the entire shareholders' equity was RMB12,557,566,000, with an increase of RMB936,244,700, representing an appreciation rate of 8.06%.

ii. Asset-based approach appraisal result

As at the valuation benchmark date, CHN Energy Wuhai Energy Co., Ltd.'s parent company had total assets with a book value of RMB22,033,615,700, with the appraisal value at RMB25,938,906,500, an increase of RMB3,905,290,800, representing an appreciation rate of 17.72%; total liabilities had a book value of RMB11,796,512,100, with the appraisal value at RMB11,724,613,200, a decrease of RMB71,898,900, representing a decrease rate of 0.61%; and net assets had a book value of RMB10,237,103,600, with the appraisal value at RMB14,214,293,300, an increase of RMB3,977,189,700, representing an appreciation rate of 38.85%.

The detailed results of the asset-based approach are shown in the following summary table:

Summary of Appraisal Results from Asset-Based Approach

Unit: RMB'0,000

Item		Book value	Appraised value	Increase or decrease	Appreciation rate %
		A	B	C = B - A	D = C/A × 100%
I. Current Assets	1	1,564,720.97	1,564,613.84	-107.13	-0.01
II. Non-Current Assets	2	638,640.60	1,029,276.81	390,636.21	61.17

Including: Land use right	9	20,449.34	19,920.53	-528.81	-2.59
Other non-current assets	10	3,758.87	2,385.25	-1,373.62	-36.54
Total assets	**11**	**2,203,361.57**	**2,593,890.65**	**390,529.08**	**17.72**
III. Current Liabilities	12	696,259.22	696,259.22	0.00	0.00
IV. Non-Current Liabilities	13	483,391.99	476,202.10	-7,189.89	-1.49
Total liabilities	**14**	**1,179,651.21**	**1,172,461.32**	**-7,189.89**	**-0.61**
Net assets	**15**	**1,023,710.36**	**1,421,429.33**	**397,718.97**	**38.85**

As at the valuation benchmark date, CHN Energy Wuhai Energy Co., Ltd.'s total assets on a consolidated basis had a book value of RMB22,5555,956,400, total liabilities had a book value of RMB10,423,355,900, and owners' equity had a book value of RMB12,132,600,500, of which RMB11,621,321,400 was attributable to the parent company. The appraised value reached RMB14,214,293,300, reflecting an increase of RMB2,592,971,900, representing an appreciation rate of 22.31%.

iii. Appraisal conclusions

Under the income approach, the entire shareholders' equity was RMB12,557,566,000 and RMB14,214,293,300 under the asset-based approach, with a difference of

RMB1,656,727,300 representing a variance rate of 13.19%.

The two appraisal methods consider different perspectives. The asset-based approach is a appraisal approach that determines the value of the subject asset based on a reasonable appraisal of the enterprise's assets and liabilities, estimating the enterprise's value from the perspective of the value of the assets it currently holds. The income approach, on the other hand, capitalises or discounts the expected future income of the appraised entity to determine its value, estimating the enterprise's value from the perspective of expected income, reflecting the overall profitability of the enterprise's assets.

The appraised entity is a coal mining enterprise, and coal prices are significantly affected by national economic policies and coal supply-demand relationships, introducing considerable uncertainty into key technical parameters and indicators in the income approach. The coal mining industry is a capital-intensive sector, and the main operating assets of the enterprise are largely dependent on the mineable reserves. The initial investment in fixed assets is significant, and the value of the mining rights has already been appraised by a professional appraisal agency. Therefore, the Asset-Based Approach better reflects the value of the enterprise. The conclusion of this appraisal adopts the results from the asset-based approach.

Based on the above analysis, this asset appraisal report adopts the asset-based approach appraisal result, i.e., the entire shareholders' equity of CHN Energy Wuhai Energy Co., Ltd. was RMB14,214,293,300.

XI. Special Matters Statement

The following matters were identified during the appraisal process that may affect the appraisal conclusion but cannot be assessed or estimated by the professional expertise and ability of the appraisers:

i. According to the *Asset Appraisal Law* and the *Guidance on Legal Ownership of Subject Asset*, the client and relevant parties commissioning the asset appraisal business shall be responsible for the authenticity, completeness, and legality of the ownership certificates, financial accounting information, and other materials they provide. The purpose of conducting asset appraisal is to estimate the value of the subject asset and provide professional opinions. Confirming the legal ownership or providing opinions on the legal status of the assets goes beyond the scope of professional asset appraisal. Asset appraisers do not provide guarantees on the legal ownership of the subject asset.

ii. In this asset appraisal report, any discrepancies between the total sum and the sum of individual items in tables or textual representations, where amounts are expressed in ten thousand yuan, are due to rounding.

iii. This appraisal makes use of the audit report EY Hua Ming (2025) Zhuan Zi No. 70066400_A01 issued by Ernst & Young Hua Ming LLP on 16 December 2025 We obtained the audit report through legal channels, and after analyzing and reviewing the contents of the audit report in accordance with the relevant asset appraisal standards, we have prudently used the relevant contents of the audit report. The audited financial data in the audit report forms the basis for the asset appraisal. If this financial data changes, the conclusions of this appraisal may become invalid. According to Article 12 of the *Asset Appraisal Practice Standards – Enterprise Value*: Asset appraisers analyse and assess the use of financial statements based on the chosen appraisal methods. However, it is not the

responsibility of the asset appraisers to offer professional opinions on whether the financial statements fairly reflect the financial status, operating results, or cash flow of the appraised entity as at the valuation benchmark date. We only bear responsibility for improper referencing that may arise in the use of the audit report during the appraisal process.

iv. The appraisal value of the intangible assets—mining rights within the scope of this appraisal refers to the appraisal conclusions of the *Shenhua Group Haibowan Mining Co., Ltd. Pingou Coal Mine Mining Rights Report* (ZH.Q.H.K.P.B.Z. [2025] No. 1066), CHN Energy Wuhai *Energy Co., Ltd. Laoshidan Coal Mine Mining Rights Report* (ZH.Q.H.K.P.B.Z. [2025] No. 1067), *Shenhua Group Haibowan Mining Co., Ltd. Luotuoshan Coal Mine Mining Rights Report* (ZH.Q.H.K.P.B.Z. [2025] No. 1068), CHN Energy Wuhai *Energy Co., Ltd. Huangbaici Coal Mine Mining Rights Report* (ZH.Q.H.K.P.B.Z. [2025] No. 1069), *Appraisal Report on CHN Energy Wuhai Energy Co., Ltd. Wuhushan Coal Mine Mining Rights* (ZH.Q.H.K.P.B.Z. [2025] No. 1070), *Appraisal Report on Shenhua Group Haibowan Mining Co., Ltd. Open-pit Coal Mine Mining Rights* (ZH.Q.H.K.P.B.Z. [2025] No. 1071), *Appraisal Report on Inner Mongolia Limin Coal and Coke Co., Ltd. Coal Mine Mining Rights* (ZH.Q.H.K.P.B.Z. [2025] No. 1072), and *Appraisal Report on Shenhua Group Haibowan Mining Co., Ltd. Gongwusu Coal Mine Shaft No. 3 Mining Rights* (ZH.Q.H.K.P.B.Z. [2025] No. 1073) issued on 16 December 2025.

During this appraisal process, the appraisers communicated and coordinated with mining rights appraisers, who adopted the discounted cash flow method for the appraisal of the mining right. After verifying that the mining rights appraisal report's subject asset, scope, purpose, base date, value type, and other aspects were consistent with this asset appraisal report and in line with the requirements of the economic transaction, the mining rights value involved in this appraisal report directly references the appraisal conclusion issued by China Enterprise Appraisals Co., Ltd. For details on the calculation process and results of the mining rights appraisal, please refer to the mining rights report issued by China Enterprise Appraisals Co., Ltd.

v. Discrepancies between mining rights holders and operators

As at the valuation benchmark date, the enterprise declared eight mining rights within the appraisal scope, of which four have inconsistencies between the registered holder and the actual operator, i.e., the holder of the mining rights has transferred the mining rights to subsidiaries for operation in exchange for a "coal resource usage fee." The specific details are as follows:

No.	Mine name	Mining right holder	Operator	Notes
1	Shenhua Group Haibowan Mining Co., Ltd. Gongwusu Coal Mine Shaft No. 3	Shenhua Group Haibowan Mining Co., Ltd.	Wuhai Gongwusu Coal Industry Co., Ltd.	The mining rights holder and operator are both subsidiaries of Wuhai Energy
2	Shenhua Group Haibowan Mining Co., Ltd. Open-pit Coal Mine	Shenhua Group Haybarn Mining Co., Ltd.	Wuhai Lutian Mining Co., Ltd.	The mining rights holder and operator are both subsidiaries of Wuhai Energy
3	CHN Energy Wuhai Energy Co., Ltd. Huangbaici Coal Mine	CHN Energy Wuhai Energy Co., Ltd.	Guoneng Wuhai Energy Huangbaici Mining Co., Ltd.	The mining rights holder and operator are both subsidiaries of Wuhai Energy
4	CHN Energy Wuhai Energy Co., Ltd. Wuhushan Coal	CHN Energy Wuhai Energy Co., Ltd.	Guoneng Wuhai Energy Wuhushan	The mining rights holder and operator are both

Asset Appraisal Report on the Entire Shareholders' Equity of CHN Energy Wuhai Energy Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

No.	Mine name	Mining right holder	Operator	Notes
	Mine		Mining Co., Ltd.	subsidiaries of Wuhai Energy

For the above-mentioned cases, the appraisal of the book value of the mining rights held by the property holder was zero, and concurrently, the appraisal was conducted separately for the mining rights holder and operator based on the "coal resource usage fee."

vi. Hazard management project matters

As at the valuation benchmark date, the environmental risk mitigation projects included in the appraisal scope mainly include the Comprehensive Disaster Management Project for the Goaf Area at Suhaitu Coal Mine and the Hazard Management Project of Eastern Part of Pingou Coal Mine Section III.

The appraisers verified the approval documents, management plans, production schedules, and related mitigation contracts for the two hazard management projects. This appraisal is based on the production schedule and capacity planning provided by the appraised entity. If the actual production differs from the planned production in the future, the appraisal value will need to be adjusted accordingly.

vii. Explanation of ownership deficiencies

1. The appraised entity, Wuhai Energy, has declared 57 land use rights within the appraisal scope. Among these, two land use rights have not obtained land use certificates (excluding 8 non-physical land items); two are registered under Shenhua Wuhai Energy Co., Ltd. (former name of Wuhai Energy); nine are registered under Shenhua Group Haibowan Mining Co., Ltd. or Shenhua Wuhai Coal Chemical Co., Ltd. (names of the merged companies); and one is registered under Industrial and Commercial Bank of China Wuhai Gongwusu Sub-branch (name of the seller of the externally purchased property). These land use rights have not yet completed the transfer procedures. The enterprise confirms that these lands are actually owned by the enterprise, with no dispute over ownership.

The appraised entity holds one Real Estate Ownership Certificate with certificate number Meng (2024) Hainan District Real Estate Ownership Certificate No. 0007678, which is registered under CHN Energy Wuhai Energy Co., Ltd. The appraised entity provided a statement indicating that according to the minutes of the 42nd meeting of the General Manager's Office of CHN Energy Group, "Researching Matters Related to the Recent Work of Wuhai Energy Company and Coal and Coking Company" (issued 24 March 2018), as of the appraisal benchmark date, this land parcel has been transferred as part of the Xilaifeng-related assets to CHN Energy Coal and Coking Co., Ltd. The property rights no longer belong to the appraised entity, which is currently assisting CHN Energy Coal and Coking Co., Ltd. in handling the property rights transfer procedures for this land parcel and related assets. Therefore, the appraised entity did not include this land parcel in the scope of this appraisal.

The appraised entity, Wuhai Energy, has declared 348 fixed assets – properties and buildings within the appraisal scope, with a total building area of 280,95.69 square metres. Among these, 16 items have obtained property ownership certificates, with a registered area of 8,862.30 square metres, which is registered under Shenhua Wuhai Energy Co., Ltd., CHN Energy Wuhai Energy Co., Ltd., Haibowan Mining Bureau Technical School, and Industrial and Commercial Bank of China Limited Wuhai Gongwusu Sub-branch. Nine items are classified as expenses and do not require certificates. The remaining 323 items

have not obtained property ownership certificates (25 of these have been demolished and 69 items that are awaiting scrapping).

Among the 281 patent rights declared by the appraised entity, Wuhai Energy owns 93 patents, of which three patents are registered under Shenhua Wuhai Energy Co., Ltd. (the former name of Wuhai Energy). Wuhai Energy jointly owns 188 patents with others, of which 76 patents are registered under Shenhua Wuhai Energy Co., Ltd. (the former name of Wuhai Energy). One patent is jointly owned by the subsidiaries, Shenhua Wuhai Coal and Coking Co., Ltd. and Shenhua Group Co., Ltd.; one patent is jointly owned by the subsidiaries, Shenhua Group Haibowan Mining Co., Ltd. and Shenhua Group Co., Ltd. Regarding the jointly owned patents and patents whose registered owner's name has not yet been changed, the appraised entity has provided a statement and guarantees that these patents are either solely owned or co-owned with other companies, and there are no ownership disputes or potential disputes. For jointly owned patents, all parties have the right to apply them in their own production and operations. Therefore, the resulting income and costs are enjoyed and borne by each party.

2. The appraised entity's subsidiary, Tianjie Power, has declared seven land use rights within the appraisal scope. Among these, six land use right has not obtained a land use certificate. The enterprise confirms that these lands are actually owned by the enterprise, with no dispute over ownership. 39 properties and buildings have not obtained property ownership certificates, with a total area of 23,776.14 square metres. The enterprise confirms that these properties are actually owned by the enterprise, with no dispute over ownership.

3. The appraised entity's subsidiary, Huangbaici Mining, owned one land use right that has been subject to a signed transfer contract but lacks a formal land use right certificate. As of the appraisal date, it is accounted for as an advance payment. The enterprise confirms that the aforementioned land is actually owned by the enterprise and that there are no disputes regarding its ownership rights. And 85 properties and buildings that have not obtained property ownership certificates, with a total area of 31,106.77 square metres. The enterprise confirms that these properties are actually owned by the enterprise, with no dispute over ownership. There are 11 vehicles in total, of which four vehicles have discrepancies between the registered owner and the company name, and have not completed the transfer procedures. The enterprise confirms that these vehicles are actually owned by the enterprise, with no dispute over ownership.

4. The appraised entity's subsidiary, Wuhushan Mining, has declared four land use rights within the appraisal scope. Among these, one is registered under Shenhua Group Wuda Wuhushan Mining Co., Ltd. (the predecessor name of the enterprise), and one is registered under Shenhua Wuda Mining Area Water and Electricity Management Co., Ltd. (the predecessor name of an enterprise within the Wuhai Energy system). These land use rights have not yet completed the transfer procedures. The enterprise confirms that these lands are actually owned by the enterprise, with no dispute over ownership. 46 properties and buildings have not obtained property ownership certificates, with a combined area of 23,113.38 square metres. The enterprise pledges that the aforementioned properties are actually owned by the enterprise and that there are no disputes regarding ownership.

5. The appraised entity's subsidiary, Lutian Mining, has declared one land use right within the appraisal scope, registered under Wuhai Lutian Coal Processing Co., Ltd. (name of the

absorbed merged company). The transfer procedures have not been completed. The enterprise confirms that this land is actually owned by the enterprise, with no dispute over ownership. There are 65 properties and buildings within the appraisal scope, with a total building area of 32,105.27 square metres. None of these buildings have property ownership certificates. The appraised entity has provided an explanation of the building status and confirms that the situation is true, and the properties without certificates are actually owned by the enterprise with no ownership disputes.

6. The appraised entity's subsidiary, Hainan Coal Processing, has declared one land use rights that overlaps with land already certified and no physical land exists. The enterprise has issued a statement on the land use right situation, affirming the accuracy of the aforementioned circumstances. All 38 items of properties and buildings have not obtained property ownership certificates, with a combined area of 34,169.33 square metres. The enterprise confirms that these properties are actually owned by the enterprise and that there are no disputes over ownership. Three vehicles are present within the factory premises but lack valid vehicle registration certificates. The enterprise has affirmed that these vehicles are actually owned by the enterprise and that there are no disputes regarding their ownership.

7. The appraised entity's subsidiary, Wuda Coal Processing, has declared 11 properties and buildings that have not obtained property ownership certificates, with a total area of 18,911.37 square metres. The enterprise confirms that these properties are actually owned by the enterprise, with no dispute over ownership. Wuda Coal Processing has signed a transfer contract for one land use right, but has not yet obtained the land use right certificate. The enterprise pledges that the aforementioned land is actually owned by the enterprise and that there are no disputes regarding its ownership.

8. The appraised entity's subsidiary, Limin Coal and Coke, has declared seven land use rights within the appraisal scope. Among these, one has signed a transfer contract but has not obtained a land use certificate. Five of the land use rights are registered under Otog Banner Limin Coal and Coke Co., Ltd. and Otog Banner Limin Coal and Coke Co., Ltd. Residential Complex (former names of the enterprise), and these have not completed the transfer procedures. The enterprise confirms that these lands are actually owned by the enterprise, with no dispute over ownership. The total area of properties and buildings declared by the enterprise within the appraisal scope is 104,522.30 square metres. Among these, 19 properties have obtained property ownership certificates, with a registered area of 12,840.85 square metres, which is registered under Otog Banner Limin Coal and Coke Co., Ltd., which is the former name of the appraised entity and has not yet been updated. The remaining 67 properties (6 of which have been demolished) have not obtained real estate ownership certificates.

9. The appraised entity's subsidiary, Gongwusu Mining, has declared 71 properties and buildings within the valuation scope, with a total area of 50,586.16 square metres, have not obtained property ownership certificates. The subject entity has issued a statement regarding the buildings, affirming the accuracy of the above circumstances and confirming that the unregistered properties are actually owned by it without any ownership disputes. There are 13 vehicles in total. Among them, 3 vehicles within the factory premises have not obtained vehicle registration certificates. The enterprise has committed that these vehicles are actually owned by the enterprise and there are no disputes over their ownership.

10. The appraised entity's subsidiary, Mining Area Water and Electricity Management, has declared five land use rights within the appraisal scope. All of these are registered under Shenhua Wuda Mining Area Water and Electricity Management Co., Ltd. Suhaitu Substation, Shenhua Wuda Mining Area Water and Electricity Management Co., Ltd. South No. 2 Booster Station, Shenhua Wuda Mining Area Water and Electricity Management Co., Ltd. North No. 2 Booster Station, Shenhua Wuda Mining Area Water and Electricity Management Co., Ltd. North No. 1 Booster Station, Shenhua Wuda Mining Area Water and Electricity Management Co., Ltd. Old Shaft No. 25. All of these are the former names of the enterprise, and have not yet completed the transfer procedures. The enterprise confirms that these lands are actually owned by the enterprise, with no dispute over ownership. The appraised entity has declared a total of 26 properties and buildings, of which 13 items lacked property ownership certificates, with a total area of 2,788.83 square metres. Of which 13 items has discrepancies between the registered owner and the entity's current name. The enterprise has affirmed that it actually owns these properties and that there are no disputes regarding their ownership.

11. The appraised entity's subsidiary, Information Company, has declared five properties and buildings within the appraisal scope that have not obtained property ownership certificates, with a total area of 1,749.98 square metres. The enterprise confirms that these properties are actually owned by the enterprise, with no dispute over ownership.

viii. Explanation regarding assets in an abnormal use state

Some assets declared by the enterprise within the appraisal scope are in a non-physical or pending scrap state, as detailed below:

1. The appraised entity, Wuhai Energy, has declared eight land use rights with a book value of RMB38,377,100. These have no corresponding physical land due to being duplicate with certified lands, demolished by the government, etc. For non-physical assets, the appraisal amount is zero.

The appraised entity, Wuhai Energy, has declared 25 items of fixed assets—properties and buildings that have been demolished, 69 items that are awaiting scrapping, 15 demolished items of structures, 9 items that are non-physical and 131 items that are awaiting scrapping. There were three pipeline trenches that have been demolished and 15 items that are awaiting scrapping, two shaft engineering projects that have been demolished and 13 items that are awaiting scrapping. The total book value of the above items was RMB10,646,100. In addition, 6 items without physical objects and 836 items of fixed assets-machinery and equipment were scrapped or awaiting scrapping, two items of vehicles were in repair, and 381 items of electric equipment were awaiting scrapping. The total book value of non-operational machinery and equipment was RMB12,267,400. The appraised entity has declared 114 items of intangible assets—software. Among these, 37 software items have been discontinued, and the net book value of discontinued software was RMB867,700. The appraised entity has declared 281 items of intangible assets—patents, all of which are off-balance sheet assets. Among these, 159 items have been discontinued and 75 items remain unused. For the above-mentioned assets awaiting scrapping assets, the appraisal is based on their recoverable value. For non-physical, discontinued and unused assets, the appraisal amount was zero.

2. The appraised entity's subsidiary, Tianjie Power, has declared 21 items of raw material assets, with a net book value of zero. Three land use rights, with a book value of

RMB1,632,600, are either demolished by the government or revoked, and no physical land exists. Two land use rights, with a book value of RMB220,400, have ownership disputes due to transfer or occupation by residents. For non-physical assets or those with ownership disputes, the appraisal amount was zero. One item of properties and buildings with a net book value of RMB16,400. Four items of structures with a net book value of RMB80,000. 142 items of machinery and equipment with a book value of RMB23,470,200, one item of vehicle with a book value of RMB4,900, and six items of electric equipment with a book value of RMB800. For the aforementioned assets awaiting scrapping, the appraisal was based on their recoverable value. For demolished properties and buildings, the appraisal value was zero.

3. The appraised entity's subsidiary, Hainan Coal Processing, has declared one land use right, with a book value of RMB648,100, which overlaps with certified land. This land was non-existent, and for non-physical land use rights, the appraisal amount was zero. Four items of properties and buildings with a net book value of zero. Six items of structures with a net book value of RMB221,200. 47 items of machinery and equipment with a book value of RMB1,345,100, one item of vehicle with a book value of RMB6,100, and eight items of electric equipment with a book value of RMB0. For the aforementioned assets awaiting scrapping, the appraisal was based on their recoverable value. For non-physical assets, the appraisal value was zero.

4. The appraised entity's subsidiary, Huangbaici Mining, has declared 48 items of properties and buildings with a book value of RMB15,364,600, with an impairment provision of RMB15,228,600. 73 items of structures with a net book value of RMB136,000. Five items of shaft engineering with a book value of RMB3.01 million. 60 items of machinery and equipment with a book value of RMB171,900, two items of vehicle with a book value of RMB25,600, and 30 items of electric equipment with a book value of RMB13,400. For the aforementioned assets awaiting scrapping, the appraisal was based on their recoverable value. Three items of software assets with a book value of zero have been discontinued as at the valuation benchmark date and the appraisal amount was zero.

5. The appraised entity's subsidiary, Wuhushan Mining, has declared 13 items of properties and buildings with a net book value of RMB7,400. 20 items of structures with a net book value of RMB203,000. 12 items of shaft engineering with a net book value of RMB1,701,800. 368 items of machinery and equipment with a book value of RMB10,969,300; one item of electronic equipment with a book value of RMB1,200. Three non-physical assets with a book value of RMB79,800. For the aforementioned assets awaiting scrapping, the appraisal was based on their recoverable value. For non-physical assets, the appraisal value was zero. There were eight items of software assets, of which six have been discontinued as at the valuation benchmark date, with a combined book value of zero. For the software that has been discontinued as at the valuation benchmark date, the appraisal amount was zero.

6. The appraised entity''s subsidiary, Lutian Mining, has declared two items of properties and buildings in a scrapping status and two items have been demolished. Additionally, one item of structures was awaiting scrapping. The net book value of these items was RMB96,800. 11 items of machinery and equipment with a book value of RMB21,600; nine items of electric equipment with a book value of RMB1,200. For the aforementioned assets awaiting scrapping, the appraisal was based on their recoverable value. For non-physical assets, the appraisal value was zero.

7. The appraised entity's subsidiary, Limin Coal and Coke, has declared six items of properties and buildings that have been demolished, with a net book value of RMB19,900. 189 items of machinery and equipment with a book value of RMB17,846,700; one item of vehicles with a book value of RMB5,500; four items of electric equipment with a book value of zero. For the aforementioned assets awaiting scrapping, the appraisal was based on their recoverable value.

8. The appraised entity's subsidiary, Gongwusu Mining, has declared 31 items of machinery and equipment with a book value of RMB32,000; three items of electric equipment with a book value of zero; eight software items with a book value of zero. For the aforementioned assets awaiting scrapping, the appraisal was based on their recoverable value. For non-physical assets, the appraisal value was zero.

9. The appraised entity's subsidiary, Mining Area Water and Electricity Management, has declared 16 items of machinery and equipment with a book value of RMB130,700. For the aforementioned assets awaiting scrapping, the appraisal was based on their recoverable value. For non-physical assets, the appraisal value was zero. One land use right with a book value of RMB8,000 was demolished by the government. No corresponding actual land exists. As at the valuation benchmark date, the government did not agree to compensate for the land. The appraisal amount was zero.

11. The appraised entity's subsidiary, Information Technology, has declared one item of properties and buildings with a book value of RMB47,200; one item of vehicle with a book value of RMB5,200; ten items of electric equipment with a book value of RMB16,500. For the aforementioned assets awaiting scrapping, the appraisal was based on their recoverable value. For non-physical assets, the appraisal value was zero.

ix. Subsequent events

1. According to the project plan, after the valuation benchmark date, Wuhai Energy will transfer its 100% equity in Inner Mongolia Alxa League Tianrong Coal Co., Ltd., 45% equity in Wuhai Shenhua Junzheng Industrial Co., Ltd., and the coal mining rights for Baiyinwusu Coal Mine held by Shenhua Group Haibowan Mining Co., Ltd. through an unpaid transfer.

The audit report used in this appraisal has simulated the stripping of the above assets through non-compensatory transfers.

2. On 29 September 2025, the legal representative of CHN Energy Wuhai Energy Co., Ltd. was changed to Fan Zhongming.

Users of the asset appraisal report should pay attention to the impact of the above special matters on the appraisal conclusion.

XII. Limitations on the Use of the Asset Appraisal Report

i. Scope of use of the asset appraisal report

1. The users of the asset appraisal report are the client and other users as specified by national laws and administrative regulations.

2. The appraisal conclusions revealed in the asset appraisal report are only valid for the appraisal purpose of this project.

3. The appraisal conclusions in the asset appraisal report are valid for one year from the

valuation benchmark date. The client or other users of the asset appraisal report should use the report within the stated validity period of the appraisal conclusions.

4. Without the written consent of the client, the asset appraisal institution and its asset appraisal professionals shall not disclose or provide the contents of the asset appraisal report to any third party, unless otherwise stipulated by law or administrative regulations.

5. Without the consent of the asset appraisal agency, the contents of the asset appraisal report shall not be copied, quoted, or disclosed in public media, except as required by law, administrative regulations, or as agreed by the relevant parties.

ii. If the client or other users of the asset appraisal report do not use the asset appraisal report in accordance with the laws, administrative regulations, and the usage scope outlined in the asset appraisal report, the asset appraisal agency and its professionals shall not bear any responsibility.

iii. Except for the client, other users of the asset appraisal report as agreed in the asset appraisal contract, and those specified by laws or administrative regulations, no other institution or individual may become a user of the asset appraisal report.

iv. Users of the asset appraisal report should correctly understand and use the appraisal conclusions. The appraisal conclusions are not equivalent to the realizable price of the subject asset and should not be regarded as a guarantee of the realizable price of the subject asset.

v. The asset appraisal report is a professional report issued by the asset appraisal agency and its professionals after following legal, administrative, and asset appraisal standards, and completing the necessary asset appraisal procedures according to the commission. The report must be signed by the asset appraisers handling the appraisal and stamped with the appraisal agency's official seal. It can only be formally used after being filed with the state-owned asset supervision and management authority or the enterprise that provided funding.

This report is prepared in accordance with the Chinese Asset Appraisal Standards

Asset Appraisal Report on the Appraisal of the Entire Shareholders' Equity of Inner Mongolia Pingzhuang Coal Group Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

ZH.Q.H.P.B.Z. (2025) No. 6667

(Volume 1 of 1)

China Enterprise Appraisals Co., Ltd.

16 December 2025

Declaration

I. This asset appraisal report is prepared based on the Basic Rules for Asset Appraisal issued by the Ministry of Finance and the Asset Appraisal Practice Standards and Code of Professional Ethics issued by the China Appraisal Society.

II. The asset appraisal agency and its professional appraisers comply with laws, administrative regulations, and asset appraisal standards, adhere to the principles of independence, objectivity, and fairness, and bear legal responsibility for the asset appraisal report they issue.

III. The client or other users of the asset appraisal report shall use the report in accordance with the laws, administrative regulations, and the scope of use stated in the asset appraisal report. If the client or other users of the report misuse the report in violation of the foregoing regulations, the asset appraisal agency and its appraisers shall not bear any responsibility.

This asset appraisal report is only for use by the client, other users of the asset appraisal report as specified in the asset appraisal engagement contract, and users defined by laws or administrative regulations. Other institutions or individuals shall not use this asset appraisal report.

The asset appraisal agency and the appraisers remind the users of the asset appraisal report to correctly understand and use the appraisal conclusion. The appraisal conclusion is not equivalent to the realisable price of the subject asset and shall not be considered a guarantee of the realisable price.

IV. The asset and liability lists, and business forecasts related to the subject asset are provided by the client and the appraised entity, and confirmed through their signatures, seals, or other legally permitted means. The client and other relevant parties are legally responsible for the authenticity, completeness, and legality of the information provided.

V. The asset appraisers have conducted on-site investigations of the subject asset and the assets involved. They have paid necessary attention to the legal ownership status of the subject asset and its assets, verified the ownership documents, disclosed any discovered issues truthfully, and urged the client and other relevant parties to rectify any property right issues to meet the requirements for issuing the asset appraisal report.

VI. The asset appraisal agency and its appraisers have no current or anticipated interests in the subject asset in the asset appraisal report, nor any current or anticipated interests with the relevant parties, and are unbiased towards the relevant parties.

VII. The analysis, judgment, and results in the asset appraisal report issued by the asset appraisal agency are subject to the assumptions and limitations specified in the report. Users of the asset appraisal report shall fully consider the assumptions, limitations, special notes, and their impact on the appraisal conclusion.

VIII. The asset appraisers' investigation of physical assets such as buildings and structures, equipment, construction in progress, and inventories is generally limited to observation of use and maintenance conditions. Internal, hidden, or difficult-to-access parts are not inspected. We do not possess professional qualifications nor have we been engaged to conduct technical inspections or appraisals of the internal quality of these assets. Our appraisal is based on the information provided by the client and other relevant parties. If there are defects in the internal quality of these assets, the appraisal conclusions may be affected to varying degrees.

Summary of the Asset Appraisal Report

Important Notice

This summary is extracted from the main text of the asset appraisal report. To understand the details of the appraisal project and properly interpret and use the appraisal conclusion, the full text of the asset appraisal report shall be read carefully.

China Energy Investment Corporation Co., Ltd. and China Shenhua Energy Company Limited:

China Enterprise Appraisals Co., Ltd. accepts your commission and, in accordance with laws, administrative regulations, and asset appraisal standards, adheres to the principles of independence, objectivity, and fairness. Business scope: The company is prohibited from engaging in businesses that are prohibited by law and regulations, and shall not engage in businesses that require approval until the relevant approval is obtained. For businesses not requiring approval as stipulated by law or regulation, the company may independently choose its business activities.

2. Shareholders, their shareholding ratios and equity change

In 2000, the People's Government of Inner Mongolia Autonomous Region issued the *Approval for the Reform and Development Plan of Pingzhuang Mining Bureau* (N.Z.Z. [2000] No. 55), approving the overall restructuring of Pingzhuang Mining Bureau into Inner Mongolia Pingzhuang Coal Group Co., Ltd. (a wholly state-owned enterprise).

In March 2000, the Economic and Trade Commission of Inner Mongolia Autonomous Region issued the *Approval for the Establishment of Inner Mongolia Pingzhuang Coal Group Co., Ltd.* (N.J.M.Q.F. [2000] No. 104), consenting to the restructuring of Pingzhuang Mining Bureau into Inner Mongolia Pingzhuang Coal Group Co., Ltd.

In July 2000, the Chifeng Administration for Industry and Commerce issued the *Business Licence for Enterprise Legal Person* to Pingzhuang Coal (Registration No.: 1504001000366). At the time of establishment, the equity structure of Pingzhuang Coal was as follows:

Unit: RMB'0,000

No.	Name of shareholder	Subscribed Registered Capital	Paid-in Registered Capital	Shareholding ratio
1	Pingzhuang Mining Bureau	37,605	37,605	100%
Total		**37,605**	**37,605**	**100%**

In June 2001, the investors changed, and the registered capital was reduced from RMB376.05 million to RMB164.51 million.

In April 2001, the Economic and Trade Commission of Inner Mongolia Autonomous Region issued the *Notice on Authorising Inner Mongolia Pingzhuang Coal Group Co., Ltd. to Operate State-owned Assets* (N.J.M.Q.G.F. [2001] No. 247), authorising Pingzhuang Coal to operate state-owned assets managed by the People's Government of Inner Mongolia Autonomous Region. The specific total amount of authorised state-owned assets was as follows: Based on the financial audit report issued by Chifeng Huixing Certified Public Accountants Co., Ltd. on 8 February 2001, Pingzhuang Coal's state-owned net assets were RMB164.51 million. After deducting non-operating assets of RMB61.50 million, the operating net assets of RMB103.01 million constituted the total amount of authorised state-owned assets. The non-operating assets of RMB61.50 million were entrusted to Pingzhuang Coal for management.

In April 2001, the People's Government of Inner Mongolia Autonomous Region issued the *Approval for the Representative of the People's Government of Inner Mongolia Autonomous Region as the Contributor in Inner Mongolia Pingzhuang Coal Group Co.,*

Ltd. (N.Z.Z. [2001] No. 107), approving the State-owned Assets Supervision and Administration Commission of the People's Government of Inner Mongolia Autonomous Region to act as the contributor representing the People's Government of Inner Mongolia Autonomous Region in Pingzhuang Coal.

In May 2001, Pingzhuang Coal published a capital reduction notice in the *Chifeng Daily*, which stated: "The registered capital of Inner Mongolia Pingzhuang Coal Group Co., Ltd. is reduced from RMB376 million to RMB165 million."

In June 2001, the Economic and Trade Commission of Inner Mongolia Autonomous Region issued *the Approval for the Change of Registered Capital of Inner Mongolia Pingzhuang Coal Group Co., Ltd.* (N.J.M.Q.G.F. [2001] No. 404). Based on the appraisal results confirmed by Chifeng Huixing Certified Public Accountants Co., Ltd. (H.S.Y.Z. [2001] No. 9) and *the Notice on Authorising Inner Mongolia Pingzhuang Coal Group Co., Ltd. to Operate State-owned Assets* (N.J.M.Q.G.F. [2001] No. 247) issued by the Economic and Trade Commission of Inner Mongolia Autonomous Region, the Commission approved Pingzhuang Coal to use RMB164,511,372.21 in net assets as its registered capital. After the change was completed, the equity structure of Pingzhuang Coal was as follows:

Unit: RMB'0,000

No.	Name of shareholder	Subscribed Registered Capital	Paid-in Registered Capital	Shareholding ratio
1	State-owned Assets Administration Bureau of Inner Mongolia Autonomous Region	16,451	16,451	100%
Total		**16,451**	**16,451**	**100%**

In September 2002, the Development Planning Commission of Inner Mongolia Autonomous Region and the Department of Finance of Inner Mongolia Autonomous Region issued the *Approval for Forwarding the Transfer of Central-Level Basic Operating Funds Principal and Interest Debts and Liabilities in the Autonomous Region's Coal Industry* (N.J.T.Z. [2002] No. 1612), approving that (1) the total principal and interest of RMB1,315,586.67 in debts and liabilities arising from the departmental loan under the state infrastructure construction fund used by Pingzhuang Mining Bureau shall be fully transferred to *Pingzhuang* Group Co., Ltd. (which should be a clerical error in the document and should in fact refer to Pingzhuang Coal), to be treated as state-owned assets of the Inner Mongolia Autonomous Region; (2) the total principal and interest of RMB934,903,639.34 in debts and liabilities arising from the entrusted loan under the state investment corporation's infrastructure construction fund used by Pingzhuang Mining Bureau shall be fully transferred to *Pingzhuang* Group Co., Ltd. (same as above), to be treated as state-owned assets of the Inner Mongolia Autonomous Region.

In October 2002, the Office of Inner Mongolia Pingzhuang Coal Group Co., Ltd. issued *the Notice on Converting the Balance of Basic Construction Operating Funds into State Capital* (P.M.B.F. [2002] No. 89). As approved by the State Planning Commission and the Ministry of Finance under Document J.T.Z. [2002] No. 454, the debts and liabilities arising from the departmental loan under the state infrastructure construction fund and the entrusted loan under the state investment corporation's infrastructure construction fund used by Pingzhuang Coal were converted into state capital, resulting in a total increase of RMB936,319,226.01 in state capital for Pingzhuang Coal.

In October 2003, the People's Government of Inner Mongolia Autonomous Region

issued the *Approval for the Increase of Registered Capital of Inner Mongolia Pingzhuang Coal Group Co., Ltd.* (N.Z.G.P.Z. [2003] No. 24), approving the increase of Pingzhuang Coal's registered capital from RMB164,510,000 to RMB746,749,341.49. After the change in registered capital was completed, the equity structure of Pingzhuang Coal Industry was as follows:

Unit: RMB'0,000

No.	Name of shareholder	Subscribed Registered Capital	Paid-in Registered Capital	Shareholding ratio
1	State-owned Assets Administration Bureau of Inner Mongolia Autonomous Region	74,675	74,675	100%
Total		**74,675**	**74,675**	**100%**

In September 2003, the State-owned Assets Supervision and Administration Commission of the People's Government of Inner Mongolia Autonomous Region issued the *Notice on Placing Pingzhuang Coal under the Administration of the People's Government* of *Chifeng Municipality* (N.G.Z.B.F. [2003] No. 1). The notice approved that, with effect from 1 September 2003, all assets (including claims and liabilities) and the entire staff of Pingzhuang Coal—which had previously been under the administration of the Government of the Autonomous Region—would be transferred in their entirety to the administration of the People's Government of Chifeng Municipality.

In November 2003, the Administration for Industry and Commerce of Inner Mongolia Autonomous Region issued a new *Business Licence for Enterprise Legal Person* to Pingzhuang Coal. After the transfer of equity was completed, the equity structure of Pingzhuang Coal was as follows:

Unit: RMB'0,000

No.	Name of shareholder	Subscribed Registered Capital	Paid-in Registered Capital	Shareholding ratio
1	Chifeng City Economic Committee	74,675	74,675	100%
Total		**74,675**	**74,675**	**100%**

In April 2008, the People's Government of Chifeng Municipality issued the *Approval for the Transfer of the Equity in Inner Mongolia Pingzhuang Coal Group Co., Ltd*. (C.Z.Z. [2008] No. 62), approving the Chifeng Municipal Economic Committee's transfer of its equity in Pingzhuang Coal to external parties.

In April 2008, the Chifeng Municipal Economic Committee, as Party A, and China Guodian Corporation, as Party B, along with the Inner Mongolia Property Rights Exchange Centre as the certifying party, jointly signed the *Property Rights Transaction Agreement* (Contract No. MJJY-08014), agreeing that the Chifeng Municipal Economic Committee would transfer 48% of its equity in Pingzhuang Coal to China Guodian Corporation for RMB2,091 million.

In April 2008, the Inner Mongolia Property Rights Exchange Centre issued the *Inner Mongolia Property Rights Exchange Centre Transaction Verification Certificate* (N.C.J.Z.Z. [2008] No. 4), confirming that the Chifeng Municipal Economic Committee and China Guodian Corporation had signed the *Property Rights Transaction Agreement* numbered MJJY-08014. Specifically, the Chifeng Municipal Economic Committee transferred its 48% equity in Pingzhuang Coal to China Guodian Corporation. The appraised value of the subject equity was RMB1,961,511,840, and the transaction price was RMB2,091 million. This transfer by the Chifeng Municipal

Economic Committee had been approved by the People's Government of Chifeng Municipality.

In April 2008, the Administration for Industry and Commerce of Inner Mongolia Autonomous Region issued a new *Business Licence* for Enterprise Legal Person to Pingzhuang Coal. After the equity transfer was completed, the equity structure of Pingzhuang Coal Industry was as follows:

Unit: RMB'0,000

No.	Name of shareholder	Subscribed Registered Capital	Paid-in Registered Capital	Shareholding ratio
1	Chifeng City Economic Committee	38,831	38,831	52%
2	China Guodian Corporation	35,844	35,844	48%
Total		**74,675**	**74,675**	**100%**

In May 2008, after research and decision by the Chifeng Municipal Economic Committee, and with approval from the People's Government of Chifeng Municipality as set out in the *Approval for the Gratuitous Transfer of Equity in Inner Mongolia Pingzhuang Coal Group Co., Ltd.* (C.Z.Z. [2008] No. 93), the Chifeng Economic Commission agreed to gratuitously transfer a 3% equity interest in Pingzhuang Coal to China Guodian Corporation.

In June 2008, the State-owned Assets Supervision and Administration Commission of the State Council issued the *Approval for Issues Concerning the Gratuitous Transfer of State-owned Equity in Inner Mongolia Pingzhuang Coal Group Co., Ltd.* (G.Z.C.Q. [2008] No. 514), consenting to the gratuitous transfer of the 3% state-owned equity held by the Chifeng Municipal Economic Committee in Pingzhuang Coal to China Guodian Corporation.

In May 2008, the Chifeng Municipal Economic Committee and China Guodian Corporation signed the *Agreement on the Gratuitous Transfer of Equity in Inner Mongolia Pingzhuang Coal Group Co., Ltd.*, agreeing that the Chifeng Municipal Economic Committee would transfer its 3% equity in Pingzhuang Coal to China Guodian Corporation free of charge, with the transfer base date set as 30 April 2008. From the date of the transfer of rights and obligations, all rights and obligations corresponding to the 3% equity of Pingzhuang Coal would be enjoyed and borne by China Guodian Corporation.

In August 2008, Chifeng Daxin Certified Public Accountants Co., Ltd. issued the *Capital Verification Report* (C.D.X.K.Y.Z. [2008] No. 046). Based on its verification, as of 30 April 2008, following the completion of the above equity transfer and gratuitous transfer, the equity structure of Pingzhuang Coal was as follows: China Guodian Corporation contributed capital of RMB380,842,500, representing a 51% equity interest; the Chifeng Municipal Economic Committee contributed capital of RMB365,907,500, representing a 49% equity interest.

In November 2008, the shareholders' general meeting of Pingzhuang Coal was held, and a resolution was made to agree to the gratuitous transfer of 3% of Pingzhuang Coal's state-owned equity held by the Chifeng Municipal Economic Committee to China Guodian Corporation. The meeting also approved the amendment of the company's articles of association and the registration of the equity change with the Administration for Industry and Commerce of Inner Mongolia Autonomous Region. After the equity transfer was completed, the equity structure of Pingzhuang Coal

Industry was as follows:

Unit: RMB'0,000

No.	Name of shareholder	Subscribed Registered Capital	Paid-in Registered Capital	Shareholding ratio
1	Chifeng City Economic Committee	36,590.75	36,590.75	49%
2	China Guodian Corporation	36,084.24	36,085.24	51%
Total		**74,675.00**	**74,675.00**	**100%**

In April 2009, the People's Government of Chifeng Municipality issued the *Approval on Agreeing to Transfer the Equity Held by the Chifeng Municipal Economic Committee in Pingzhuang Coal* (C.Z.Z. [2009] No. 113), approving the Chifeng Municipal Economic Committee's transfer of 31.82% of its 49% equity in Pingzhuang Coal to China Cinda Asset Management Company, with Pingzhuang Coal handling the specific equity transfer procedures in accordance with relevant regulations.

In July 2009, the Chifeng Municipal Economic Committee and China Cinda Asset Management Company signed the *Equity Transfer Agreement between Chifeng Municipal Economic Committee and China Cinda Asset Management Company*. According to the agreement, the Chifeng Municipal Economic Committee would transfer 31.82% of its equity in Pingzhuang Coal (corresponding to RMB237,615,850 in capital contribution) to China Cinda Asset Management Company. China Cinda Asset Management Company would offset the equity transfer payment to the Chifeng Municipal Economic Committee with its equity in Chifeng Pingzhuang Energy Co., Ltd. and its claims and related rights over the Yuanbaoshan Open-cut Mine.

In July 2009, the shareholders' general meeting of Pingzhuang Coal was held, and a resolution was made agreeing to the Chifeng Municipal Economic Committee's transfer of 31.82% of its equity in Pingzhuang Coal (corresponding to RMB237,615,850 in capital contribution) to China Cinda Asset Management Company. China Guodian Corporation waived its right of first refusal, and the meeting agreed to amend the company's articles of association. After the equity transfer was completed, the equity structure of Pingzhuang Coal Industry was as follows:

Unit: RMB'0,000

No.	Name of shareholder	Subscribed Registered Capital	Paid-in Registered Capital	Shareholding ratio
1	China Guodian Corporation	38,084.250	38,084.250	51.00%
2	China Cinda Asset Management Company	23,761.585	23,761.585	31.82%
3	Chifeng City Economic and Information Technology Committee	12,829.165	12,829.165	17.18%
Total		**74,675.000**	**74,675.000**	**100.00%**

In March 2009, China Guodian Corporation issued the *Notice on the Gratuitous Transfer of Certain State-owned Equity Held by China Guodian Corporation in Its Member Enterprises in the Inner Mongolia Region* (G.D.J.Z. [2009] No. 153), agreeing to transfer its 51% equity in Pingzhuang Coal to Guodian Inner Mongolia Power Co., Ltd. free of charge, effective from 1 January 2009.

In September 2010, Pingzhuang Coal held a shareholders' general meeting and made a resolution agreeing to the gratuitous transfer of the 51% equity held by China Guodian Corporation in Pingzhuang Coal to Guodian Inner Mongolia Power Co., Ltd. After the shareholder change, the equity structure of Pingzhuang Coal was as follows: Guodian Inner Mongolia Power Co., Ltd. held 51%, China Cinda Asset Management Co., Ltd.

(China Cinda Asset Management Company changed its name to "China Cinda Asset Management Co., Ltd." on 29 June 2010) held 31.82%, and the Chifeng Municipal Commission of Economy and Information Technology (the Chifeng Municipal Economic Committee changed its name to "Chifeng Municipal Commission of Economy and Information Technology") held 17.18%. The shareholders also agreed to amend the company's articles of association regarding the gratuitous equity transfer and the shareholders' name change.

In September 2010, Guodian Inner Mongolia Power Co., Ltd., China Cinda Asset Management Co., Ltd., and the Chifeng Municipal Commission of Economy and Information Technology jointly signed the revised articles of association of Pingzhuang Coal.

In September 2010, the Administration for Industry and Commerce of Inner Mongolia Autonomous Region issued a new *Business Licence for Enterprise Legal Person* to Pingzhuang Coal. After the equity transfer was completed, the equity structure of Pingzhuang Coal Industry was as follows:

Unit: RMB'0,000

No.	Name of shareholder	Subscribed Registered Capital	Paid-in Registered Capital	Shareholding ratio
1	Guodian Inner Mongolia Power Co., Ltd.	38,084.250	38,084.250	51.00%
2	China Cinda Asset Management Co., Ltd.	23,761.585	23,761.585	31.82%
3	Chifeng City Economic and Information Technology Committee	12,829.165	12,829.165	17.18%
Total		**74,675.000**	**74,675.000**	**100.00%**

In November 2010, Chifeng Huixing Certified Public Accountants Co., Ltd. issued the *Capital Verification Report for Inner Mongolia Pingzhuang Coal Group Co., Ltd.* (C.H.K.S.Y.Z. [2010] No. 34). According to its verification, as of 31 October 2010, Pingzhuang Coal had converted its capital reserve into registered capital, and, following the change, the registered capital of Pingzhuang Coal amounted to RMB2,354,192,648.59, with the accumulated paid-in capital also amounting to RMB2,354,192,648.59.

In December 2010, Pingzhuang Coal held a shareholders' general meeting and made a resolution to extend the business term until 31 December 2040. The meeting also approved the conversion of the capital reserve to registered capital, increasing the registered capital by RMB1,607,443,307.10, bringing the new registered capital to RMB2,354,192,648.59. The meeting also agreed to amend the company's articles of association due to the change in registered capital. After the change in registered capital was completed, the equity structure of Pingzhuang Coal Industry was as follows:

Unit: RMB'0,000

No.	Name of shareholder	Subscribed Registered Capital	Paid-in Registered Capital	Shareholding ratio
1	Guodian Inner Mongolia Power Co., Ltd.	120,063.83	120,063.83	51.00%
2	China Cinda Asset Management Co., Ltd.	74,910.41	74,910.41	31.82%
3	Chifeng City Economic and Information Technology Committee	40,445.03	40,445.03	17.18%
Total		**235,419.26**	**235,419.26**	**100.00%**

In October 2020, the shareholders' general meeting of Pingzhuang Coal was held, and a resolution was made agreeing to the transfer of 31.82% of its equity held by China Cinda Asset Management Co., Ltd. to China Energy Investment Corporation Co., Ltd.

In October 2020, China Cinda Asset Management Co., Ltd. and China Energy Investment Corporation Co., Ltd. jointly signed the *Property Rights Transaction Agreement (Applicable to Minority Equity Transfer)*, agreeing that China Cinda Asset Management Co., Ltd. would transfer its 31.82% equity in Pingzhuang Coal to China Energy Investment Corporation Co., Ltd. at a transfer price of RMB1,599,394,500.

In November 2020, China Cinda Asset Management Co., Ltd. issued the *Letter of Notice of China Cinda Asset Management Co., Ltd. on the Transfer of Equity in Inner Mongolia Pingzhuang Coal Group Co., Ltd.* to the company, confirming that China Cinda Asset Management Co., Ltd. had received the full payment for the equity transfer on 6 November 2020.

In July 2021, the State Administration for Market Regulation issued the *Decision on Not Proceeding to Further Antitrust Review of the Concentration of Undertakings* (F.L.D.S.C.J.D. [2021] No. 418), deciding not to carry out further review of the acquisition of Pingzhuang Coal's equity by China Energy Investment Corporation Co., Ltd., and approving the concentration. After the equity transfer was completed, the equity structure of Pingzhuang Coal Industry was as follows:

Unit: RMB'0,000

No.	Name of shareholder	Subscribed Registered Capital	Paid-in Registered Capital	Shareholding ratio
1	Guodian Inner Mongolia Power Co., Ltd.	120,063.83	120,063.83	51.00%
2	China Energy Investment Corporation Co., Ltd.	74,910.41	74,910.41	31.82%
3	Chifeng Municipal Bureau of Industry and Information Technology	40,445.03	40,445.03	17.18%
Total		**235,419.26**	**235,419.26**	**100.00%**

Note: (1) On 23 September 2020, the company name of Guodian Inner Mongolia Power Co., Ltd. was changed to "CHN Energy Inner Mongolia Power Co., Ltd."; (2) According to the *Notice on Issuing the Implementation Plan for Chifeng City's Institutional Reform* (C.D.B.F. [2019] No. 3) issued by the General Offices of the CPC Chifeng Municipal Committee and the People's Government of Chifeng Municipality on 11 January 2019, Article 46 states, "Establishing the Chifeng Municipal Bureau of Industry and Information Technology by integrating the responsibilities of the former Chifeng Municipal Commission of Economy and Information Technology and the responsibilities related to the information technology development of relevant agencies. The Chifeng Municipal Bureau of Industry and Information Technology will be a working department of the municipal government, and the Chifeng Municipal Commission of Economy and Information Technology will no longer be retained." As a result, the Chifeng Municipal Commission of Economy and Information Technology changed its name to "Chifeng Municipal Bureau of Industry and Information Technology".

In October 2020, China Energy Investment Corporation Co., Ltd. issued the *Approval on the Gratuitous Transfer of Equity in Inner Mongolia Pingzhuang Coal Group Co., Ltd.* (G.J.N.Y.Z.B.H. [2020] No. 504), consenting to the gratuitous upward transfer of the 51% equity in Pingzhuang Coal held by Guodian Inner Mongolia Power Co., Ltd. to China Energy Investment Corporation Co., Ltd.

In September 2021, CHN Energy Inner Mongolia Power Co., Ltd. and China Energy Investment Corporation Co., Ltd. entered into the *Agreement on the Gratuitous Transfer of Equity in Inner Mongolia Pingzhuang Coal Group Co., Ltd.* Under the agreement, CHN Energy Inner Mongolia Power Co., Ltd. agreed to gratuitously transfer to China Energy Investment Corporation Co., Ltd. its 51% equity in Pingzhuang Coal together with all assets, liabilities and owners' equity corresponding to such equity as

of the transfer base date of 31 December 2020.

In September 2021, the Chifeng Municipal Bureau of Industry and Information Technology and Chifeng State-owned Capital Operation (Group) Co., Ltd. signed the *Gratuitous Transfer of State-Owned Equity Agreement*, agreeing that the Chifeng Municipal Bureau of Industry and Information Technology would transfer 15.08% of its equity in Pingzhuang Coal to Chifeng State-owned Capital Operation (Group) Co., Ltd.

In September 2021, the Chifeng Municipal Bureau of Industry and Information Technology and China Huarong Asset Management Co., Ltd. signed the *Gratuitous Transfer of State-Owned Equity Agreement*, agreeing that the Chifeng Municipal Bureau of Industry and Information Technology would transfer 1.21% of its equity in Pingzhuang Coal to China Huarong Asset Management Co., Ltd.

In September 2021, the Chifeng Municipal Bureau of Industry and Information Technology and Chifeng Yuanbaoshan State-owned Assets Management Co., Ltd. signed the *Gratuitous Transfer of State-Owned Equity Agreement*, agreeing that the Chifeng Municipal Bureau of Industry and Information Technology would transfer 0.89% of its equity in Pingzhuang Coal to Chifeng Yuanbaoshan State-owned Assets Management Co., Ltd.

In September 2021, the shareholders' general meeting of Pingzhuang Coal was held, and a resolution was made agreeing to the following equity transfers: CHN Energy Inner Mongolia Power Co., Ltd. would transfer 51% of its equity in Pingzhuang Coal to China Energy Investment Corporation Co., Ltd. free of charge; Chifeng Municipal Bureau of Industry and Information Technology would transfer 15.08% of its equity in Pingzhuang Coal to Chifeng State-owned Capital Operation (Group) Co., Ltd., 0.89% to Chifeng Yuanbaoshan State-owned Assets Management Co., Ltd., and 1.21% to China Huarong Asset Management Co., Ltd. After the equity transfer was completed, the equity structure of Pingzhuang Coal Industry was as follows:

Unit: RMB'0,000

No.	Name of shareholder	Subscribed Registered Capital	Paid-in Registered Capital	Shareholding ratio
1	China Energy Investment Corporation Co., Ltd.	194,974.24	194,974.24	82.82%
2	Chifeng State-owned Capital Operation (Group) Co., Ltd.	35,501.23	35,501.23	15.08%
3	Chifeng Yuanbaoshan State-owned Assets Management Co., Ltd.	2,095.23	2,095.23	0.89%
4	China Huarong Asset Management Co., Ltd.	2,848.57	2,848.57	1.21%
Total		**235,419.26**	**235,419.26**	**100.00%**

In December 2021, the shareholders' general meeting of Pingzhuang Coal was held, and a resolution was made agreeing to the transfer of 15.08% of the equity held by Chifeng State-owned Capital Operation (Group) Co., Ltd. in Pingzhuang Coal, 1.21% of the equity held by China Huarong Asset Management Co., Ltd., and 0.89% of the equity held by Chifeng Yuanbaoshan State-owned Assets Management Co., Ltd. to China Energy Investment Corporation Co., Ltd. After the transfer was completed, China Energy Investment Corporation Co., Ltd. held 100% of the equity in Pingzhuang Coal.

In December 2021, Chifeng Yuanbaoshan State-owned Assets Management Co., Ltd. and China Energy Investment Corporation Co., Ltd. signed the *Property Rights Transfer Agreement* (Contract No.: G.J.N.Y.J.T. [2021] No. 287), agreeing that Chifeng

Yuanbaoshan State-owned Assets Management Co., Ltd. would transfer its 0.89% equity in Pingzhuang Coal to China Energy Investment Corporation Co., Ltd. at a transfer price of RMB51,809,000. The income and losses from the subject equity during the period from the Valuation benchmark date to the delivery date would be owned and borne by China Energy Investment Corporation Co., Ltd. The property rights transaction was publicly listed on 24 November 2021 by Inner Mongolia Property Rights Exchange Centre Co., Ltd. (G.Z.J.C. No. G32021NM1000067, Project No. 09GQ20210081), and during the listing period, one intended transferee, China Energy Investment Corporation Co., Ltd., emerged.

In December 2021, China Huarong Asset Management Co., Ltd. and China Energy Investment Corporation Co., Ltd. signed the *Equity Transfer Agreement* (Contract No. N.M.G. Y05210014-2), agreeing that China Huarong Asset Management Co., Ltd. would transfer its 1.21% equity in Pingzhuang Coal to China Energy Investment Corporation Co., Ltd. at a transfer price of RMB70,436,900. The income and losses from the subject equity during the period from the Valuation benchmark date to the delivery date would be owned and borne by China Energy Investment Corporation Co., Ltd. The property rights transaction was publicly listed on 24 November 2021 by Shenzhen United Property and Equity Exchange Co., Ltd. (Project No. ZZCQ2011112200023), and during the listing period, one intended transferee, China Energy Investment Corporation Co., Ltd., emerged.

In December 2021, Chifeng State-owned Capital Operation (Group) Co., Ltd. and China Energy Investment Corporation Co., Ltd. signed the *Property Rights Transfer Agreement* (Contract No. G.J.N.Y.J.T. [2021] No. 286), agreeing that Chifeng State-owned Capital Operation (Group) Co., Ltd. would transfer its 15.08% equity in Pingzhuang Coal and the related interests in Baiyinhua Coal Mine to China Energy Investment Corporation Co., Ltd. for a consideration of RMB1,585,755,600. The income and losses from the subject equity during the period from the Valuation benchmark date to the delivery date would be owned and borne by China Energy Investment Corporation Co., Ltd. The property rights transaction was publicly listed on 24 November 2021 by Inner Mongolia Property Rights Exchange Centre Co., Ltd. (G.Z.J.C. No. G32021NM1000068, Project No. 09GQ20210079), and during the listing period, one intended transferee, China Energy Investment Corporation Co., Ltd., emerged. After this capital increase, the equity structure of Pingzhuang Coal Industry was as follows:

Unit: RMB'0,000

No.	Name of shareholder	Subscribed Registered Capital	Paid-in Registered Capital	Shareholding ratio
1	China Energy Investment Corporation Co., Ltd.	235,419.26	235,419.26	100.00%
Total		**235,419.26**	**235,419.26**	**100.00%**

In May 2022, China Energy Investment Corporation Co., Ltd. issued the *Approval for the Asset Allocation and Capital Increase of Inner Mongolia Pingzhuang Coal Group Co., Ltd.* (G.J.N.Y.Z.B.H. [2022] No. 172), agreeing to transfer 51% equity in Inner Mongolia Xilin Xilinhe Coal-Chemical Co., Ltd., held by China Energy Investment Corporation Co., Ltd., to Pingzhuang Coal free of charge, and agreeing to increase Pingzhuang Coal's capital by RMB2 billion. After the capital increase, the registered capital was changed to RMB4,354,192,600.

In December 2022, China Energy Investment Corporation Co., Ltd., as the sole

shareholder of Pingzhuang Coal, made the *Shareholder's Decision on Implementing the Capital Increase*, agreeing to increase Pingzhuang Coal's capital by RMB2 billion, raising the registered capital from RMB2,354,192,600 to RMB4,354,192,600. The decision also agreed to amend the relevant provisions in the company's articles of association concerning the registered capital. After this capital increase, the equity structure of Pingzhuang Coal Industry was as follows:

Unit: RMB'0,000

No.	Name of shareholder	Subscribed Registered Capital	Paid-in Registered Capital	Shareholding ratio
1	China Energy Investment Corporation Co., Ltd.	435,419.26	435,419.26	100.00%
Total		**435,419.26**	**435,419.26**	**100.00%**

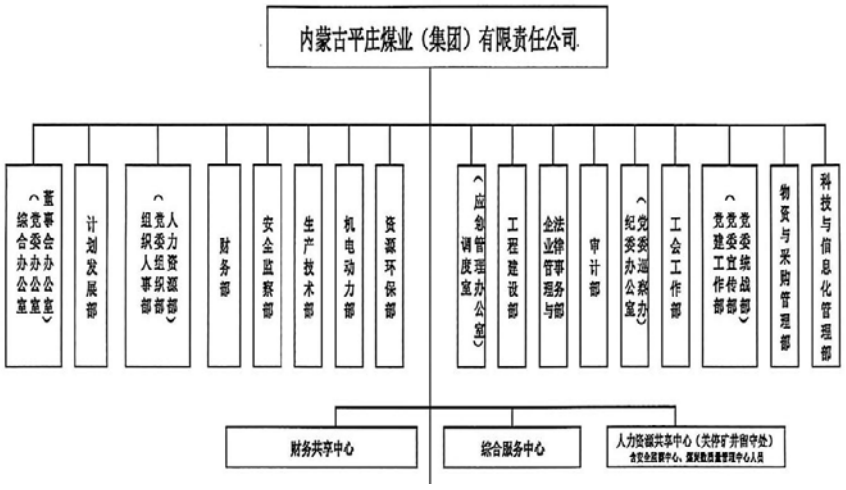
As of the valuation benchmark date, Pingzhuang Coal is a wholly-owned subsidiary of China Energy Investment Corporation Co., Ltd., as detailed below:

Unit: RMB'0,000

No.	Name of shareholder	Subscribed Registered Capital	Paid-in Registered Capital	Shareholding ratio
1	China Energy Investment Corporation Co., Ltd.	435,419.26	435,419.26	100.00%
Total		**435,419.26**	**435,419.26**	**100.00%**

3.Ownership and management structure of the company

As of the valuation benchmark date, the organisational structure of the appraised entity was as follows:



内蒙古平庄煤业（集团）有限责任公司	Inner Mongolia Pingzhuang Coal Group Co., Ltd.
综合办公室（董事会办公室/党委办公室）	General Office (Board of Directors Office/Party Committee Office)
计划发展部	Planning and Development Department
组织人事部（党委组织部/人力资源部）	Organisation and Personnel Department (Party Committee Organisation Department/Human Resources Department)
财务部	Finance Department
安全监察部	Safety Supervision Department
生产技术部	Production Technology Department

机电动力部	Mechanical and Electrical Power Department
资源环保部	Resources and Environmental Protection Department
调度室（应急管理办公室）	Dispatch Room (Emergency Management Office)
工程建设部	Engineering and Construction Department
企业管理与法律事务部	Enterprise Management and Legal Affairs Department
审计部	Audit Department
纪委办公室（党委巡察办）	Disciplinary Inspection Office (Party Committee Inspection Office)
工会工作部	Trade Union Work Department
党建工作部（党委宣传部/党委统战部）	Party Building Work Department (Party Committee Publicity Department/Party Committee United Front Work Department)
物资与采购管理部	Material and Procurement Management Department
科技与信息化管理部	Technology and Information Management Department
财务共享中心	Financial Shared Services Centre
综合服务中心	Comprehensive Service Centre
人力资源共享中心（关停矿井留守处） 含安全监察中心、煤炭数质量管理中心人员	Human Resources Shared Centre (Custodial Office for Closed Mines) Including personnel of the Safety Supervision Centre and Coal Quantity and Quality Management Centre

As of the valuation benchmark date, the appraised entity has six affiliated long-term equity investment units, as detailed below:

Unit: RMB'0,000

No.	Name of investee	Investment date	Shareholding (%)	Investment cost	Book value
1	Inner Mongolia Pingxi Baiyinhua Coal Industry Co., Ltd.	2005-07	100.00	57,990.41	57,990.41
2	Guodian Pingmei Nieleke Energy and Chemical Co., Ltd.	2010-10	100.00	34,000.00	19,687.64
3	Guoneng Mengxi Mining Co., Ltd.	2022-05	100.00	23,064.95	23,064.95
4	Pingneng (Xilin Gol) Coal Sales Co., Ltd.	2010-10	100.00	5,300.00	1,300.00
5	Inner Mongolia Xilinhe Coal Chemical Co., Ltd.	2022-08	51.00	178,092.00	178,092.00
6	Chifeng Mine Safety Inspection and Testing Co., Ltd.	2006-04	100.00	150.00	150.00

The subscribed capital and paid-in capital of long-term equity investments are shown in the following table:

Unit: RMB'0,000

No.	Name of investee	Shareholding	Subscribed capital	Paid-in capital
1	Inner Mongolia Pingxi Baiyinhua Coal Industry Co., Ltd.	100.00%	51,950.00	51,950.00
2	Guodian Pingmei Nieleke Energy and Chemical Co., Ltd.	100.00%	34,000.00	34,000.00
3	Guoneng Mengxi Mining Co., Ltd.	100.00%	23,064.95	23,064.95
4	Pingneng (Xilin Gol) Coal Sales Co., Ltd.	100.00%	5,300.00	5,300.00
5	Inner Mongolia Xilinhe Coal Chemical Co., Ltd.	51.00%	61,551.90	61,551.90
6	Chifeng Mine Safety Inspection and Testing Co., Ltd.	100.00%	150.00	150.00

4.Asset, financial, and operating status for the last two years and the current period

The financial status of the appraised entity for the last two years and the current period (consolidated basis) is as follows:

Unit: RMB'0,000

Asset Appraisal Report on the Appraisal of the Entire Shareholders' Equity of Inner Mongolia Pingzhuang Coal Group Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

Item	31 December 2023	31 December 2024	31 July 2025
Total assets	3,262,804.05	3,321,809.94	3,456,709.16
Total liabilities	2,545,889.69	3,075,803.64	3,104,141.34
Owner's equity	716,914.36	246,006.30	352,567.82
Owner's equity attributable to the parent company	458,420.92	157,199.00	228,496.39

The operational status of the appraised entity for the last two years and the current period (consolidated basis) is as follows:

Unit: RMB'0,000

Item	2023	2024	January-July 2025
Operating income	919,913.28	1,004,501.21	590,499.58
Total profits	177,271.62	-304,850.97	139,197.19
Net profit	122,814.87	-341,849.20	107,529.60
Owner's net profit attributable to the parent company	50,791.99	-164,326.51	72,986.87

The financial status of the appraised entity for the last two years and the current period (parent company basis) is as follows:

Unit: RMB'0,000

Item	31 December 2023	31 December 2024	31 July 2025
Total assets	1,838,632.17	1,750,387.36	1,817,123.39
Total liabilities	1,786,150.35	1,843,277.06	1,912,501.43
Owner's equity	52,481.82	-92,889.70	-95,378.04

The operational status of the appraised entity for the last two years and the current period (parent company basis) is as follows:

Unit: RMB'0,000

Item	2023	2024	January-July 2025
Operating income	242,543.19	334,109.53	224,357.97
Total profits	-53,259.38	6,713.81	-9,637.12
Net profit	-53,241.34	6,713.81	-9,637.12

The financial statements of the appraised entity as of the Valuation benchmark date and for the years 2024 and 2023 have been audited by Ernst & Young Hua Ming LLP , which expressed unqualified audit opinions.

4. Relationship between the client and the appraised entity

The clients of the appraisal are China Energy Investment Corporation Co., Ltd. and China Shenhua Energy Company Limited. One of the clients, China Energy Investment Corporation Co., Ltd., is a shareholder of the appraised entity, and the other client is the intended purchaser of the appraised entity.

iv. Other users of the asset appraisal report as stipulated in the asset appraisal engagement contract

This asset appraisal report is only for use by the client, other users of the asset appraisal report as specified in the asset appraisal engagement contract, and users defined by national laws and regulations. It shall not be used or relied upon by any third party.

II. Appraisal Purpose

China Shenhua Energy Company Limited intends to issue shares and pay cash to acquire assets related to coal, pithead coal power, and other assets held by China Energy Investment Corporation Co., Ltd. To this end, the market value of the entire shareholders' equity held by China Energy Investment Corporation Co., Ltd. in Inner

Mongolia Pingzhuang Coal Group Co., Ltd. on the Valuation benchmark date is appraised, providing a value reference for the above economic activities.

On 1 August 2025, China Energy Investment Corporation Limited held the 18th Chairman's Special Meeting of 2025, and considered and approved the above matters, requested to carry out evaluation work, and form the "Chairman's Special Meeting Minutes".

III. Subject Asset and Appraisal Scope

i. Subject asset

The subject asset is the value of the entire shareholders' equity of Inner Mongolia Pingzhuang Coal Group Co., Ltd.

ii. Appraisal scope

The appraisal scope includes all assets and liabilities of Inner Mongolia Pingzhuang Coal Industry (Group) Co., Ltd. As of the valuation benchmark date, the parent company's assets within the scope of the appraisal include current assets, long-term equity investments, fixed assets, construction-in-progress, intangible assets, and other non-current assets. The total book value of assets was RMB18,171,233,900; liabilities include current liabilities and non-current liabilities, with a total book value of RMB19,125,014,300; the book value of net assets was RMB-953,780,400. As of the valuation benchmark date, the appraisal scope is as follows:

Unit: RMB'0,000

Item		Book value
Current assets	1	160,722.45
Non-current assets	2	1,656,400.94
Of which: Long-term equity investments	3	280,285.01
Investment properties	4	0.00
Fixed assets	5	187,382.03
Construction in progress	6	27,182.53
Oil and gas assets	7	0.00
Intangible assets	8	555,446.80
Including: Land use right	9	6,136.92
Other non-current assets	10	606,104.57
Total assets	**11**	**1,817,123.39**
Current liabilities	12	1,494,231.30
Non-current liabilities	13	418,270.13
Total liabilities	**14**	**1,912,501.43**
Net assets	**15**	**-95,378.04**

As of the valuation benchmark date, the consolidated total assets have a book value of RMB34,567,091,600, with total liabilities amounting to RMB31,041,413,400. The book value of owner's equity was RMB3,525,678,200, with the equity attributable to the parent company being RMB2,284,963,900.

The subject and scope of the engaged appraisal align with the subject asset and scope involved in the economic activities. As of the valuation benchmark date , the book values of assets and liabilities within the appraisal scope have been audited by Ernst & Young Hua Ming LLP , which expressed a standard unqualified audit opinion.

iii. Main assets within the appraisal scope are as follows:

The main assets declared by the enterprise to be included in this appraisal include buildings and structures, equipment, long-term equity investments, intangible assets, etc. The types and characteristics of the main assets are as follows:

1. Buildings and structures assets

The buildings and structures assets included in the appraisal scope include buildings, structures, and other auxiliary facilities held by the subsidiaries of Inner Mongolia Pingzhuang Coal Group Co., Ltd.: Railway Transport Branch, Hongmiao Coal Mine, Yuanbaoshan Open-cut Coal Mine, Gushan Coal Mine, Material Supply Branch, Hydro-power and Heat Supply Branch, Mining Engineering Branch, Financial Department, Senior Technical School, Rescue Team, and Information Centre. In total, 429 buildings with a combined floor area of 337,774.67 square metres were included, together with 673 structures such as site roads, coal bunkers, perimeter walls, trestles, belt corridors and mine pits. The aforementioned buildings and structures were completed between 1958 and 2025, with the main types of building structures being frame-shear, frame, bent-frame, steel, brick-concrete, and mixed structures.

As of the valuation benchmark date, except for certain buildings and structures pending scrapping, the buildings and structures of each subsidiary unit were generally in normal condition with routine maintenance and management in place. The foundations of the principal buildings were stable, with no significant uneven settlement observed; the joints of the main load-bearing components were firm; no noticeable tilting, deformation or cracking was identified; and the associated auxiliary facilities and equipment were functioning normally, with no abnormal damage detected.

2. Equipment assets

The equipment assets included in the appraisal scope include machinery, vehicles, and electronic devices held by the subsidiaries of Inner Mongolia Pingzhuang Coal Group Co., Ltd., including the Railway Transport Company, Hongmiao Coal Mine, Yuanbaoshan Open-cut Coal Mine, Gushan Coal Mine, Coal Sales Branch, Material Supply Branch, Chahasu Branch, Hydro-power and Heat Supply Branch, Mining Engineering Branch, Financial Department, Senior Technical School, Rescue Team, Information Centre, and Mengxi Energy Preparation Office. The specific details are as follows:

The total number of machinery and equipment declared by the enterprise for inclusion in this appraisal is 6,342 items, purchased and put into use between 1959 and 2025. These include crushing stations, bucket wheel excavators, dumping ploughs, belt conveyors, coal funnel cars, single-bucket excavators, rapid loading stations, railway power transmission lines, intermediate hydraulic supports, long-arm hydraulic backhoes, and gantry-type circular stacker-reclaimers, primarily used for coal mining, collection, and transport. As of the valuation benchmark date, except for certain items that had been scrapped, were pending scrapping or idle, the remaining machinery was in normal use.

The total number of vehicles declared by the enterprise for inclusion in this appraisal is 580, purchased and put into use between 1992 and 2025. These vehicles include crawler vehicles, mobile cranes, Terex dump trucks, mining dump trucks, coaches, and off-road vehicles, mainly used for official duties and transport. As of the valuation benchmark date, except for certain vehicles that were missing, scrapped or pending scrapping, the others were in normal use.

The total number of electronic equipment declared by the enterprise for inclusion in this appraisal is 8,569 items, purchased and put into use between 1978 and 2025. These include computers, printers, air conditioners, video surveillance systems, cameras, and plotters, primarily used for daily office operations. As of the valuation benchmark date, except for certain equipment that was scrapped, pending scrapping or idle, the others were in normal use.

3. Long-term equity investments

There are six long-term equity investments within the scope of the appraisal, with the details as follows:

Unit: RMB'0,000

No.	Name of investee	Investment date	Shareholding (%)	Investment cost	Book value
1	Inner Mongolia Pingxi Baiyinhua Coal Industry Co., Ltd.	2005-07	100.00	57,990.41	57,990.41
2	Guodian Pingmei Nieleke Energy and Chemical Co., Ltd.	2010-10	100.00	34,000.00	19,687.64
3	Guoneng Mengxi Mining Co., Ltd.	2022-05	100.00	23,064.95	23,064.95
4	Pingneng (Xilin Gol) Coal Sales Co., Ltd.	2010-10	100.00	5,300.00	1,300.00
5	Inner Mongolia Xilinhe Coal Chemical Co., Ltd.	2022-08	51.00	178,092.00	178,092.00
6	Chifeng Mine Safety Inspection and Testing Co., Ltd.	2006-04	100.00	150.00	150.00

The subscribed capital and paid-in capital of long-term equity investments are shown in the following table:

Unit: RMB'0,000

No.	Name of investee	Shareholding	Subscribed capital	Paid-in capital
1	Inner Mongolia Pingxi Baiyinhua Coal Industry Co., Ltd.	100.00%	51,950.00	51,950.00
2	Guodian Pingmei Nieleke Energy and Chemical Co., Ltd.	100.00%	34,000.00	34,000.00
3	Guoneng Mengxi Mining Co., Ltd.	100.00%	23,064.95	23,064.95
4	Pingneng (Xilin Gol) Coal Sales Co., Ltd.	100.00%	5,300.00	5,300.00
5	Inner Mongolia Xilinhe Coal Chemical Co., Ltd.	51.00%	61,551.90	61,551.90
6	Chifeng Mine Safety Inspection and Testing Co., Ltd.	100.00%	150.00	150.00

4. Investments in other equity instruments

Other equity instrument investments refer to the investee entities in which the appraised entity holds minority equity interests. The specific details of the enterprise's other equity instrument investments are as follows:

Unit: RMB'0,000

No.	Company name	Shareholding percentage (%)	Operating status	Book value (RMB)
1	China Longyuan Power Group Corporation Limited	2.54%	In operation	351,041.89
2	Jingneng (Chifeng) Energy Development Co., Ltd.	5.30%	In operation	2,401.18
Total		/	/	353,443.07

5. Construction in progress

The construction in progress included within the appraisal scope mainly comprises civil works, equipment works and deferred investments.

(1) Civil engineering

The civil works included in the scope of the appraisal mainly consist of the following 15 projects: The new water supply pipeline for the level crossing house, the closure of the line, the road from the liaison bridge to the joint production area, the new gatehouse at the coal preparation plant, the goaf treatment project at Yuanbaoshan open-cut coal mine, the main access road and bridge of the joint area, the right bank pit perimeter road of the Yingjin River, the new production machinery service and storage workshop, the drainage and flood control system reconstruction project, the cultural and sports facilities project for Pingzhuang Mine Area and the cultural palace renovation project, the relocation and demolition of the diversion station, hardening of the crushing-station site and related drainage ditch works (including both site hardening and drainage works), the western dump drainage system, and the 2024 Phase II water-prevention project for residual water treatment on the non-working side of the stope. All projects were under normal construction as of the valuation benchmark date.

(2) Equipment installation projects

There are nine equipment installation projects in total, mainly including the intelligent upgrade and transformation of the crushing station, the upgrade and transformation of the continuous process information system, the relocation of Crushing Station No. 1, the relocation of Crushing Station No. 2, the relocation of Dump-line Belt Conveyor No. 1, the relocation of Dump-line Belt Conveyor No. 2, the relocation of Crushing Station No. 4, and the intelligent upgrading of the drive units of the continuous-process belt conveyors. The commencement dates of these projects ranged from October 2023 to July 2025, with completion expected between August 2025 and December 2025.

(3) Deferred investment

There are 14 items of construction-in-progress deferred investment, with a book value of RMB10,156,452.69. The expenses mainly include supervision fees, design fees, consultation fees, and other upfront and miscellaneous costs such as service fees.

6. Intangible assets

The intangible assets declared by the enterprise for inclusion in this appraisal include land use rights, mining rights, and other intangible assets. The other intangible assets include software, patents, and coal production capacity exchange quotas. The specific details are as follows:

(1) Land use right

The enterprise has declared 72 land use rights for inclusion in the appraisal, all of which have been registered with property title certificates (or state-owned land use certificates). Of these, five parcels were transferred land, and 67 parcels were allocated land. Among the 67 allocated parcels, 13 parcels were registered under the name of Inner Mongolia Pingzhuang Energy Resources Co., Ltd. in their land use right certificates. The details are as follows:

No.	Parcel name	Registered owner	Land title certificate No.	Nature of rights	Usage	Area (m²)	Notes
1	Land for Fengshuigou Section of Transport Department	Inner Mongolia Pingzhuang Coal Industry (Group) Co., Ltd. (Railway Transportation Department).	Y.G.Y. (2012) No. 242	Allocated	Railway land	53,643.20	/

Asset Appraisal Report on the Appraisal of the Entire Shareholders' Equity of Inner Mongolia Pingzhuang Coal Group Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

No.	Parcel name	Registered owner	Land title certificate No.	Nature of rights	Usage	Area (m²)	Notes
2	Land from Fengshuigou to Yingjin River, Transport Department	Inner Mongolia Pingzhuang Coal Industry (Group) Co., Ltd. (Railway Transportation Department).	Y.G.Y. (2012) No. 243	Allocated	Railway land	134,607.50	/
3	Land for Fengshuigou Section No.1, Transport Department	Inner Mongolia Pingzhuang Coal Industry (Group) Co., Ltd. (Railway Transportation Department).	Y.G.Y. (2012) No. 244	Allocated	Railway land	4,169.90	/
4	Land from Majiawan to No.3 Shaft of Yuanbaoshan Mine 1, Transport Department	Inner Mongolia Pingzhuang Coal Industry (Group) Co., Ltd. (Railway Transportation Department).	Y.G.Y. (2012) No. 246	Allocated	Railway land	74,355.60	/
5	Land from Majiawan to No.3 Shaft of Yuanbaoshan Mine 2, Transport Department	Inner Mongolia Pingzhuang Coal Industry (Group) Co., Ltd. (Railway Transportation Department).	Y.G.Y. (2012) No. 245	Allocated	Railway land	161,091.80	The registered area is 161,091.80m², with 81,904.60m² already transferred to the People's Government of Yuanbaoshan District.
6	Land from Majiawan to Yuanbaoshan Mine West Station 1, Transport Department	Inner Mongolia Pingzhuang Coal Industry (Group) Co., Ltd. (Railway Transportation Department).	Y.G.Y. (2012) No. 247	Allocated	Railway land	49,498.80	/
7	Land from Majiawan to Yuanbaoshan Mine West Station 2, Transport Department	Inner Mongolia Pingzhuang Coal Industry (Group) Co., Ltd. (Railway Transportation Department).	Y.G.Y. (2012) No. 248	Allocated	Railway land	43,888.70	/
8	Land from Yuanbaoshan Station to Majiawan, Transport Department	Inner Mongolia Pingzhuang Coal Industry (Group) Co., Ltd. (Railway Transportation Department).	Y.G.Y. (2012) No. 249	Allocated	Railway land	68,975.70	/

For the foregoing real property ownership certificates with the registered holders inconsistent with the appraised entity, the appraised entity has issued a title clarification statement, affirming that the land use rights within the appraisal scope belong to the appraised entity and that no ownership disputes exist.

(2) Mining rights

The enterprise declared a total of eight mining rights within the appraisal scope, including four mining rights and four exploration rights. The specific details are as follows:

1) Mining rights

No.	Name of mining rights	Licence number	Mining right holder	Mining type	Production scale
1	Mining Right of the Yuanbaoshan Open-cut Coal Mine	C10000020111 21140121858	Inner Mongolia Mining (Group) Co., Ltd.	Coal	12 million tonnes per year

2	Mining Right of the Boligou Coal Mine	C1500002021041110151849	Inner Mongolia Mining (Group) Co., Ltd.	Coal	4 million tonnes per year
3	Mining rights for Baiyinhua No. 1 Open-cut Coal Mine, West Ujimqin Banner, Inner Mongolia.	C1000002008091110000935	Inner Mongolia Mining (Group) Co., Ltd.	Coal	12 million tonnes per year
4	Mining Right of the Hesigewula South Open-cut Coal Mine	C1000002020011110149419	Inner Mongolia Xilinhe Coal Chemical Co., Ltd.	Coal	15 million tonnes per year

2) Exploration rights

No.	Exploration right name	Licence number	Exploration right holder	Acquisition date	Expiration date
1	Heidaigou Exploration Right	T1500002008111050019991	Inner Mongolia Mining (Group) Co., Ltd.	7 November 2024	14 August 2029
2	Geological Survey of the Western Area of Jirentai Coal Mine, Nilka County, Xinjiang	T6500002013051010047691	Guodian Pingmei Nieleke Energy and Chemical Co., Ltd.	17 July 2024	17 July 2026
3	Exploration of the Eastern Area of Jinsanjiao Coal Mine, Nilka County, Xinjiang	T6500002009031010026502	Guodian Pingmei Nieleke Energy and Chemical Co., Ltd.	April 22, 2024	April 22, 2026
4	Exploration of the Western Area of the Bituminous Coal Mine at Jirentai, Nilka County	T6500002009031010026626	Nilka County Ruian Coal Co., Ltd.	April 22, 2024	April 22, 2026

(3) Other intangible assets

The enterprise has declared other intangible assets for inclusion in this appraisal, including software, patents, and coal production capacity exchange quotas. The specific details are as follows:

1) Software

There are 41 externally purchased software items, including Glodon engineering cost estimation software, the OA office collaboration system, and others. These software items were all purchased by the appraised entity. Except for two software items that are inactive, the others are in normal use.

2) Patents

The enterprise has declared 13 patents within the appraisal scope, including 5 invention patents, 7 utility model patents, and one design patent. All patents have been granted certificates of rights. Among them, 7 patents are solely owned by the appraised entity, with certificate-listed right holders including Inner Mongolia Pingzhuang Coal Group Co., Ltd., Inner Mongolia Pingzhuang Coal Group Co., Ltd. Yuanbaoshan Open-cut Coal Mine, and Inner Mongolia Pingzhuang Coal Group Co., Ltd. Mining Construction Engineering Branch. The remaining 6 patents are jointly owned by the appraised entity and other companies. Refer to the Asset-based Approach Appraisal Details Sheet for the specific details of aforementioned patents. Regarding the jointly owned patents and patents whose registered owner's name has not yet been changed, the appraised entity has provided a statement and guarantees that these patents are either solely owned or co-owned with other companies, and there are no ownership disputes or potential disputes. For jointly owned patents, all parties have the right to apply them in their own production and operations. Therefore, the resulting income and costs are enjoyed and borne by each party.

3) Coal production capacity replacement quotas

There are six coal production capacity exchange quotas, corresponding to the Yuanbaoshan Open-cut Coal Mine and the Boligou Coal Mine.

4) Software Copyright

There is one software copyright, which is an integrated platform for unmanned aerial vehicle intelligent aerial survey and AI intelligent analysis for open-pit coal mines.

iv. Off-balance-sheet assets declared by the company

The enterprise has not declared off-balance sheet assets.

v. Assets referenced from reports of other institutions

The appraised value of the mining rights in this asset appraisal report was determined with reference to the mining rights appraisal conclusion issued by China Enterprise Appraisals Co., Ltd. The referenced appraisal report is summarised as follows:

1. Yuanbaoshan Open-cut Coal Mine:

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1075
Subject asset	Mining Right of the Yuanbaoshan Open-cut Coal Mine, Inner Mongolia Pingzhuang Coal Group Co., Ltd.
Appraisal scope	The scope of the Mining Right of the Yuanbaoshan Open-cut Coal Mine, defined by the coordinate points, and the resources within the defined scope
Valuation benchmark date	31 July 2025
Value Type	Market Value
Appraisal methods	Discounted cash flow method

2. Boligou Coal Mine, Zhunge'er Coalfield

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1074
Subject asset	Mining Right of the Boligou Coal Mine, Zhunge'er Coalfield, Inner Mongolia Autonomous Region
Appraisal scope	The scope of the Mining Right of the Boligou Coal Mine, Zhunge'er Coalfield, defined by the coordinate points, and the resources within the defined scope
Valuation benchmark date	31 July 2025
Value Type	Market Value
Appraisal methods	Discounted cash flow method

3. Baiyinhua No. 1 Open-cut Coal Mine, West Ujimqin Banner, Inner Mongolia:

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1076
Subject asset	Mining rights for Baiyinhua No. 1 Open-cut Coal Mine, West Ujimqin Banner, Inner Mongolia.
Appraisal scope	The scope of the Mining Right of the Baiyinhua No. 1 Open-cut Coal Mine, West Ujimqin Banner, Inner Mongolia, defined by the coordinate points, and the resources within the defined scope
Valuation benchmark date	31 July 2025
Value Type	Market Value
Appraisal methods	Discounted cash flow method

4. Hesigewula South Open-cut Coal Mine:

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1078
Subject asset	Mining Right of the Hesigewula South Open-cut Coal Mine, Inner Mongolia Xilin Xilinhe Coal-Chemical Co., Ltd.
Appraisal scope	The scope of the Mining Right of the Hesigewula South Open-cut Coal Mine, defined by the coordinate points, and the resources within the defined scope
Valuation benchmark date	31 July 2025

Asset Appraisal Report on the Appraisal of the Entire Shareholders' Equity of Inner Mongolia Pingzhuang Coal Group Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

Value Type	Market Value
Appraisal methods	Discounted cash flow method

IV. Value Type

Based on the appraisal purpose, market conditions, and the specific conditions of the subject asset, the value type of the subject asset is determined to be market value.

Market value refers to the estimated value of the subject asset in normal and fair transactions as of the valuation benchmark date, between a willing buyer and a willing seller, each acting rationally and without coercion.

V. Valuation benchmark date

The Valuation benchmark date for this report is 31 July 2025.

The Valuation benchmark date is determined by the client. The selection of the Valuation benchmark date mainly considers the realisation of economic activities and end-of-accounting-period factors. Asset appraisal provides a value reference for assets at a specific point in time. By choosing the end of the accounting period as the valuation benchmark date, it can comprehensively reflect the overall status of the subject assets. At the same time, adhering to the principles of ensuring the appraisal results effectively serve the appraisal purpose, accurately delineating the appraisal scope, conducting precise and efficient verification of assets, and rationally selecting the basis for appraisal, this date was selected as the valuation benchmark date.

VI. Appraisal Basis

i. Basis for economic activities

Minutes of the 18th Chairman's Special Meeting of China Energy Investment Corporation Co., Ltd. in 2025 (1 August 2025);

ii. Legal and regulatory basis

1. *Asset Appraisal Law of the People's Republic of China* (adopted at the 21st Session of the Standing Committee of the 12th National People's Congress on 2 July 2016);

2. *Company Law of the People's Republic of China* (second amendment at the 7th Session of the Standing Committee of the 14th National People's Congress on 29 December 2023);

3. *Civil Code of the People's Republic of China* (adopted at the 3rd Session of the 13th National People's Congress on 28 May 2020)

4. *Securities Law of the People's Republic of China* (second amendment at the 15th Session of the Standing Committee of the 13th National People's Congress on 28 December 2019)

5. *Law of the People's Republic of China on the State-Owned Assets of Enterprises* (adopted at the 5th Session of the Standing Committee of the 11th National People's Congress on 28 October 2008, effective from 1 May 2009);

6. *Vehicle Purchase Tax Law of the People's Republic of China* (approved at the 7th Session of the Standing Committee of the 13th National People's Congress on 29 December 2018);

7. *Law of the People's Republic of China on Enterprise Income Tax* (second amendment at the 7th Session of the Standing Committee of the 13th National People's Congress on 29 December 2018);

8. *Law of the People's Republic of China on the Administration of Urban Real Estate* (third amendment at the 12th Session of the Standing Committee of the 13th National People's Congress on 26 August 2019);

9. *Land Administration Law of the People's Republic of China* (third amendment at the 12th Session of the Standing Committee of the 13th National People's Congress on 26 August 2019);

10. *Resource Tax Law of the People's Republic of China* (adopted at the 12th Session of the Standing Committee of the 13th National People's Congress on 26 August 2019)

11. *Patent Law of the People's Republic of China* (fourth amendment at the 22nd Session of the Standing Committee of the 13th National People's Congress on 17 October 2020);

12. *Copyright Law of the People's Republic of China* (third amendment at the 23rd Session of the Standing Committee of the 13th National People's Congress on 11 November 2020);

13. *Energy Law of the People's Republic of China* (adopted at the 12th Session of the Standing Committee of the 14th National People's Congress on 8 November 2024, effective from 1 January 2025)

14. *Mineral Resources Law of the People's Republic of China* (amended at the 12th Session of the Standing Committee of the 14th National People's Congress on 8 November 2024);

15. *Implementation Regulations of the Enterprise Income Tax Law of the People's Republic of China* (amended by State Council Order No. 714 on 23 April 2019);

16. *Interim Regulations on the Supervision and Administration of State-owned Assets of Enterprises (*second amendment by State Council Order No. 378 on 2 March 2019);

17. *Interim Regulations of the People's Republic of China on City and Town Land Use Tax* (fourth amendment by State Council Order No. 17 on 2 March 2019);

18. *Interim Regulations on Value-Added Tax of the People's Republic of China* (second amendment by State Council Order No. 134 on 19 November 2017);

19. *Regulations on the Assets Appraisal and Management of State-owned Assets (*amended by State Council Order No. 91 on 29 November 2020);

20. *Interim Measures for the Assessment and Management of Enterprises* (Order No. 12 of the SASAC);

21. *Measures for Supervision and Administration of State-owned Assets of Enterprises* (Order No. 32 of the SASAC and the Ministry of Finance);

22. *Notice on Strengthening the Matters Related to the Appraisal Management of the State-owned Assets* (G.Z.W.CH.Q. [2006] No. 274);

23. *Notice on Matters Related to the Review of Appraisal Report of State-owned Assets of Enterprises* (G.Z.CH.Q. [2009] No. 941);

24. *Guidelines for the Approval of Asset Appraisal Projects in Central Enterprises* (G.Z.F.CH.Q. [2010] No. 71);

25. *Guideline for the Filing for the Appraisal Project of State-owned Assets of Enterprises* (G.Z.F.CH.Q. [2013] No. 64);

26. *Notice on Optimising the Management of Asset Appraisal of State-Owned Enterprises* (G.Z.F.CH.Q.G. [2024] Document No. 8);

27. *Notice on Issuing the Rules for the Implementation of Regulations on the Assets Appraisal and Management of State-owned Assets* (G.Z.B.F. [1992] No. 36);

28. *Notice of the Ministry of Finance and the State Taxation Administration on Several Issues Regarding the National Implementation of VAT Reform* (C.SH. [2008] No. 170);

29. *Notice of the Ministry of Finance and the State Taxation Administration on Implementing the Pilot Programme of Replacing Business Tax with Value-Added Tax in an All-round Manner* (C.SH. [2016] No. 36);

30. *Notice of the Ministry of Finance and the State Taxation Administration on Adjusting VAT Rate* (C.SH. [2018] No. 32);

31. *Implementation Rules for the Interim Regulations on Value-Added Tax of the People's Republic of China* (Order No. 65 of the Ministry of Finance and the State Administration of Taxation);

32. *Announcement on Policies Relevant to Deepening VAT Reform* (Announcement No. 39 in 2019 of the Ministry of Finance, the State Taxation Administration and the General Administration of Customs);

33. *Financial Supervision and Management Measures for the Asset Appraisal Industry* (MOF Order No. 86, amended by MOF Order No. 97);

34. *Accounting Standards for Business Enterprises - Basic Standards, Decision of the Ministry of Finance on Amending the Accounting Standards for Business Enterprises - Basic Standards* (MOF Order No. 33, MOF Order No. 76);

35. *Notice on Further Standardising Bank Letters and Reply Letters* (C.K. [2020] No. 12);

36. *Regulations on the Transfer of State-Owned Land Use Rights* (MLR Order No. 21);

38. *Notice on the Mining Rights Appraisal Management Measures (Trial)* (G.T.Z.F. [2008] No. 174);

39. *Notice of the Ministry of Finance, the Ministry of Natural Resources and the State Taxation Administration on the Issuance of the Measures for the Collection of Mining Rights Transfer Revenue* (C.Z. [2023] No. 10);

40. *Announcement on the Implementation Criteria for Relevant Issues on Resource Tax (Announcement* [2020] No. 34 of the Ministry of Finance and the State Taxation Administration);

41. *Announcement of the Ministry of Finance, the State Administration of Taxation and the National Development and Reform Commission on Extending the Corporate*

Income Tax Policy for the Western Development (Ministry of Finance Announcement No. 23, 2020);

42. *Measures for the Supervision and Administration of State-Owned Equity in Listed Companies* (SASAC, MOF, and CSRC Order No. 36);

43. Other relevant Laws, regulations, and notices.

iii. Basis of appraisal standards

1. *Basic Rules for Asset Appraisal* (C.Z. [2017] No. 43);

2. *Code of Professional Ethics for Asset Appraisal* (ZH.P.X. [2017] No. 30);

3. *Asset Appraisal Practice Standards – Appraisal Report* (ZH.P.X. [2018] No. 35);

4. *Asset Appraisal Practice Standards – Appraisal Procedures* (ZH.P.X. [2018] No. 36);

5. *Asset Appraisal Practice Standards – Appraisal Methods* (ZH.P.X. [2019] No. 35);

6. *Asset Appraisal Practice Standards – Appraisal Engagement Contract* (ZH.P.X. [2017] No. 33);

7. *Asset Appraisal Practice Standards – Appraisal Archives* (ZH.P.X. [2018] No. 37);

8. *Asset Appraisal Practice Standards – Utilisation of Expert Work and Relevant Reports* (ZH.P.X. [2017] No. 35);

9. *Asset Appraisal Practice Standards – Enterprise Value* (ZH.P.X. [2018] No. 38);

10. *Asset Appraisal Practice Standards – Intangible Assets* (ZH.P.X. [2017] No. 37);

11. *Asset Appraisal Practice Standards – Real Estate* (ZH.P.X. [2017] No. 38);

12. *Asset Appraisal Practice Standards – Machinery and Equipment* (ZH.P.X. [2017] No. 39);

13. *Asset Appraisal Practice Standards – Intellectual Property* (ZH.P.X. [2023] No. 14);

14. *Guidelines for Appraisal Reports of State-owned Enterprise Assets* (ZH.P.X. [2017] No. 42);

15. *Guidelines for Quality Control of Asset Appraisal Institutions* (ZH.P.X. [2017] No. 46);

16. *Guidance on Types of Asset Appraisal Value* (ZH.P.X. [2017] No. 47);

17. *Guidance on Legal Ownership of Subject Asset* (ZH.P.X. [2017] No. 48);

18. *Guidance on Patent Asset Appraisal* (ZH.P.X. [2017] No. 49);

19. *Guidance on Copyright Asset Appraisal* (ZH.P.X. [2017] No. 50);

20. *Guidance on Determining Mining Rights Appraisal Parameters* (Chinese Association of Mineral Resources Appraisers, October 2008);

21. *Chinese Mining Rights Appraisal Standards* (Chinese Association of Mineral Resources Appraisers, August 2008);

22. *Chinese Mining Rights Appraisal Standards* (ii) (Chinese Association of Mineral Resources Appraisers, September 2010);

23. *Guidance on the Mineral Rights Appraisal Standard issued by the Chinese Association of Mineral Resources Appraisers (CMV 13051-2007) — Determination of Types of Solid Mineral Resource Reserves*.

iv. Basis of ownership

1. State-owned Property Registration Certificates;

2. Real Estate Certificates;

3. Mining Licences;

4. Patent Certificates;

5. Motor Vehicle Registration Certificates;

6. Relevant Ownership Transfer Contracts;

7. Other relevant ownership certificates.

v. Basis for price determination

1. *Financial Rules for Basic Construction* (MOF Order No. 81);

2. *Regulations on the Management of Construction Costs for Basic Construction Project*s (C.J. [2016] No. 504);

3. *Electromechanical Product Price Information Query System (2025)*;

4. *Standard for Mandatory Scrapping of Motor Vehicles* (Order No. 12 of 2012 of Ministry of Commerce, National Development and Reform Commission, Ministry of Public Security, Ministry of Environmental Protection, effective from 1 May 2013);

5. The gudiance on *Notice of the National Development and Reform Commission on Further Liberalising Professional Service Prices for Construction Projects* (F.G.J.G. [2015] No. 299) (Z.D.L.D.E. [2015] No. 162);

6. *Budget Standards for Housing and Decoration Engineering in Inner Mongolia* (2017);

7. *Budget Standards for General Installation Engineering in Inner Mongolia* (2017);

8. *Ground Building Engineering Consumption Quotas for Coal Construction* (2015, After-tax Base Price);

9. *Coal Construction Cost Quotas and Price Management Regulations* (2015);

10. *Coal Construction Engineering Cost Quotas and Other Regulations for Coal Construction* (NB/T 51064-2016);

VII. Appraisal methods

Income approach refers to various appraisal methods that capitalise or discount the expected income of the subject asset to determine its value.

Market approach refers to various appraisal methods that compare the subject asset with comparable references, using the market price of the comparable references as a basis to determine the value of the subject asset.

Asset-based approach refers to an appraisal method where the value of the subject asset is determined based on the balance sheet of the appraised entity or business on the valuation benchmark date, assessing the value of identifiable on-balance-sheet and off-balance-sheet assets and liabilities.

The methods selected for this appraisal are income approach and asset-based approach.

i. Reasons for the selection of appraisal methods

Reason for selecting the asset-based approach: As of the valuation benchmark date, the book value of the assets and liabilities within the appraisal scope has already been audited. Each asset and liability of the appraised entity can be identified. The identifiable assets and liabilities can each be individually assessed using an appropriate appraisal method, thus meeting the conditions for applying the asset-based approach.

Reason for selecting the income approach: The appraised entity has the foundation and conditions for ongoing operations, with standardised accounting practices, clear management, stable and defined business sources. The management has detailed plans for the current operations and future development of the company. The future expected income and operational risks can be reasonably predicted, meeting the conditions for using the income approach for appraisal.

Reason for not selecting the market approach: The market approach relies on the existence of an active public market with sufficient market data and comparable transaction cases. The appraised entity is a non-listed company. Listed companies in the same industry differ significantly from the appraised enterprise in terms of business structure, corporate scale, asset allocation and utilisation, operational stage, growth potential, operational risks, financial risks, and others. Furthermore, there were few comparable transactions, mergers, or acquisitions within the same industry near the valuation benchmark date. Reliable operational and financial data from comparable transactions are difficult to obtain, making it impossible to calculate appropriate value ratios. Therefore, the market approach was not adopted for this appraisal.

ii. Introduction to the appraisal methods

1. Income approach

The income approach used in this appraisal is the discounted cash flow (DCF) method to indirectly determine the entire shareholders' equity by evaluating the overall value of the enterprise. The overall value of the enterprise consists of the value of operating assets generated from normal business activities and the value of non-operational assets unrelated to normal business activities. For the determination of the value of operational assets, the Free Cash Flow Discount Model is employed, which uses the future free cash

flows of the enterprise for several years as a basis, discounted at an appropriate discount rate and then summed up. The calculation model is as follows:

Entire shareholders' equity value = Enterprise overall value - Interest-bearing debt value

(1) Enterprise overall value

The enterprise overall value refers to the sum of the entire shareholders' equity and the interest-bearing debt value. According to the asset allocation and usage situation of the appraised entity, the formula for calculating the enterprise overall value is as follows:

Enterprise overall value = Operating asset value + Surplus asset value + Non-operating asset value - Non-operating liability value + Long-term equity investment value

a) Operating asset value

Operating assets are those related to the appraised entity's production and business operations, which are involved in the forecast of the enterprise free cash flow after the valuation benchmark date . The calculation formula for operating asset value is as follows:

$$P = \sum_{i=1}^{n} \frac{F_i}{(1+r)^i} + \frac{F_n}{r \times (1+r)^n}$$

Wherein: P: The value of the enterprise's operating assets as of the valuation benchmark date;

F_i: The expected free cash flow of the enterprise in the i-th year after the valuation benchmark date;

F_n: The expected free cash flow of the enterprise at the end of the detailed forecast period;

r: The discount rate (weighted average cost of capital, WACC);

n: The detailed forecast period;

i: The i-th year of the detailed forecast period.

Of which, the free cash flow of the enterprise is calculated as follows:

Enterprise free cash flow = Earnings before interest and taxes (EBIT) + Depreciation and amortisation - capital expenditures - Increase in working capital

Of which, the discount rate (WACC) is calculated as follows:

$$WACC = K_e \times \frac{E}{E+D} + K_d \times (1-t) \times \frac{D}{E+D}$$

Wherein: k_e: Cost of equity capital;

k_d: Cost of debt capital;

E: Market value of equity;

D: Market value of debt;

t: Tax rate.

Of which, the cost of equity capital is calculated using the Capital Asset Pricing Model (CAPM). The calculation formula is as follows:

$$K_e = r_f + MRP \times \beta_L + r_c$$

Where: r_f: Risk-free rate of return;

MRP: Market risk premium;

β_L: Systematic risk coefficient of equity;

r_c: Company-specific risk adjustment coefficient.

2) Surplus asset value

Surplus assets are those that exceed the enterprise's operational needs as of the valuation benchmark date, and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date . The appraised entity's surplus assets include cash. The surplus assets in this appraisal are appraised using the cost method.

3) Value of non-operating asset and liabilities

Non-operating assets and liabilities are those that are unrelated to the appraised entity's business operations and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The non-operating assets and liabilities of the appraised entity include other receivables, inventories and fixed assets in abnormal condition, accounts payable, other payables, and similar items. The cost approach was adopted for this appraisal.

d) Long-term equity investment value

Long-term equity investments refer to the external equity investments made by the enterprise as of the valuation benchmark date. The entire shareholders' equity of the invested entity, as confirmed using an appropriate appraisal method, is multiplied by the shareholding percentage to determine the long-term equity investment value.

(2) Interest-bearing debt value

Interest-bearing debt refers to liabilities that the appraised entity must pay interest on as of the valuation benchmark date.

2. Asset-based approach

(1) Current assets

1) Monetary funds, representing bank deposits, were appraised at their verified book value through verification of bank statements, and bank confirmations.

2) For notes receivable and account receivable financing, the appraisers reviewed the appraised entity's reference ledger for notes receivable, verifying each entry's details including the type, serial number, issuance date, face value, transaction contract number, and the names or entity designations of the payer, acceptor, and endorser, as well as maturity date. The verified book value was used as the appraised value.

3) For accounts receivable and other receivables, the appraisers conducted inquiries with the appraised entity regarding its sales credit policies, customer composition and creditworthiness, as well as the historical recovery of accounts receivable. Following the principle of materiality, the appraisers conducted confirmations for some of the accounts receivable and reviewed relevant contracts. Based on the verification of

accounts receivable, the appraisers determined the appraised value based on the amount that is likely to be collected for each item. For amounts believed to be fully recoverable, the total receivables are used to calculate the appraised value. For amounts that are likely to be unrecoverable, the appraisers estimated the amount based on historical data and on-site investigations, considering factors such as the amount, overdue time, reasons for non-payment, the debtor's financial status, creditworthiness, and operational management. The appraisal value is then calculated after deducting the estimated risk loss. Simultaneously, the "Provision for Bad Debts" item on the balance sheet is considered as zero.

4) For prepayments, the appraisers conducted inquiries with the relevant personnel of the appraised entity to understand the reasons for the formation of the prepayments and the creditworthiness of the counterparties. Following the principle of materiality, the appraisers conducted confirmations for some of the prepayments and reviewed relevant contracts. Based on the verification of prepayments, the appraisers determined the value based on the goods or relevant rights that are likely to be collected for each item. For amounts believed to be fully recoverable, the total prepaid amounts are used to calculate the appraised value. For amounts that are likely to be unrecoverable, the appraisers estimated the goods or related rights that may not be recovered using historical data and on-site investigations. The appraised value is then calculated after deducting the estimated risk loss. Simultaneously, the "Provision for Bad Debts" item on the balance sheet is considered as zero.

5) Inventories

For raw materials, most of the raw materials were purchased close to the valuation benchmark date, and the book value mainly consists of material purchase costs, transportation, and miscellaneous expenses. The appraised value is determined by verifying the quantity of each type of raw material and the market price as of the valuation benchmark date, considering reasonable transportation costs and reasonable losses.

For inventory turnover materials, a Volkswagen Bora car that was received for the purpose of debt repayment was accounted. Due to the existence of an active second-hand market, the market approach is used for evaluation, and the appraised value is calculated based on the second-hand market price of similar equipment;

For finished products, the appraised entity uses actual cost accounting, including purchase costs, processing costs, and other costs. As of the valuation benchmark date , the finished products are normal sales items. The appraised value is determined based on the sales price at the valuation benchmark date , minus sales expenses, taxes and surcharges, and an appropriate amount of after-tax net profit. The specific appraisal calculation formula is as follows:

The appraised value of finished goods for normal sales = Quantity of finished goods × After-tax unit selling price × (1 - Sales tax and surcharge rate - Selling expense rate - Income tax rate - Net profit margin).

Under normal circumstances, a reasonable profit deduction rate of 0.5 is applied for normal sales finished products. The sales price for finished products is taken as the average recent sales price of the appraised entity as of the valuation benchmark date.

g) Other current assets. The appraisers investigated and understood the formation reasons of other current assets and reviewed the relevant evidence, contracts, and books.

After verification, the book values of other current assets are used as the appraised values.

(2) Long-term receivables

The appraisers verified the long-term receivables by reviewing relevant ledgers and vouchers, and used historical data and field investigation results to analyse the amounts of the claims, the duration and causes of the arrears, the recovery status, and the debtors' financial position and creditworthiness. After verification, the appraisers found no discrepancies between the account and actual values, nor any sufficient evidence indicating that the receivables were uncollectible. Therefore, the verified book value was used as the appraised value.

(3) Long-term equity investments

An overall appraisal was conducted for long-term equity investments in wholly-owned and controlling subsidiaries. The appraisers first appraise the entire shareholders' equity value of the investee, then multiply it by the shareholding percentage to determine the value of the part of the shareholder's equity. The appraisal methods used for the investees and the reasons for selecting the appraisal methods are detailed in the corresponding technical appraisal notes.

(4) Other equity instrument investments

For other equity instrument investments, the fair value has been adopted to determine their carrying amount, therefore the verified book value was used as the appraised value.

(5) Buildings and structures

Based on the characteristics of the various types of building and structure assets, the appraised value type, data collection conditions, and other related factors, the cost method is primarily used for appraisal. The cost method calculation formula is as follows:

Appraised value= Replacement cost × Composite depreciation rate

1) Determination of replacement cost

Based on the characteristics, nature, and situation of the building and structure assets within the appraisal scope, the calculation formula for replacement cost in this appraisal is as follows:

Replacement cost = Construction and installation engineering cost + Pre-construction and other costs + Capital cost - Deductible VAT

a. Construction and installation engineering costs

For large, valuable, and important buildings, the construction and installation engineering costs are determined using the preliminary and final budget adjustment method, which uses the quantities in the building's final budget as a basis and calculates the construction and installation engineering costs based on local standards and relevant fee documents.

For general buildings, or when final budget data is incomplete or the building's value is small and the structure is simple, the analogy method or unit cost method is used to determine the construction and installation engineering costs.

b. Pre-construction and other costs

Pre-construction and other costs are calculated based on the engineering investment amount of the projects, in accordance with the fee standards set by the industry, national, or local government regulations.

c. Capital costs

Capital costs are calculated based on the sum of construction and installation engineering costs, pre-construction and other costs, using uniform capital investment over the reasonable construction period. The calculation formula of capital costs is as follows:

Capital costs = (Construction and installation engineering costs + Pre-construction and other costs) × Reasonable construction period × Interest rate × 1 / 2

Based on the scale and nature of the construction project in which the appraised buildings and structures are located and the relevant construction period quotas, the reasonable construction period and interest rate for the subsidiaries of Inner Mongolia Pingzhuang Coal Group Co., Ltd. were determined by referring to the effective Loan Prime Rate (LPR) on the Valuation benchmark date as published by the National Interbank Funding Centre authorised by the People's Bank of China.

d. Deductible VAT

According to relevant VAT documents, for those that qualify for VAT deduction, the replacement cost is reduced by the corresponding VAT.

2) Determination of composite depreciation rate

A. For important buildings (and structures), the economic service life, used lifespan, and on-site inspection of the structure, decoration, and auxiliary equipment are considered to determine the remaining useful life, which is then used to calculate the composite depreciation rate.

Composite depreciation rate = Remaining service life / (Remaining service life + Used lifespan) × 100%

For mining enterprises, the remaining service life of buildings is closely related to the mine's remaining service life. The remaining service life is determined based on the lower of the mine's remaining service life and the building's remaining economic service life.

B. For low-value buildings (and structures), the composite depreciation rate is mainly determined based on the economic service life. The calculation formula is as follows:

Composite depreciation rate = (Economic service life - used lifespan) / Economic service life × 100%

For mining enterprises, the impact of the remaining service life of the mine should also be considered.

3) Determination of appraised value

Appraised value= Replacement cost × Composite depreciation rate

(6) Equipment

Equipment assets include machinery, vehicles, and electronic devices. Based on the nature of this project and the characteristics of the equipment assets within the the appraisal scope, for some older electronic devices (e.g., computers) and vehicles, where

there is an active second-hand market, the appraised value is based on the second-hand or scrap value of similar equipment. For other equipment, which does not have independent profit-generating ability and where there are very few similar transaction examples, it is not suitable to apply the income approach or market approach for appraisal. Therefore, the cost method is used for these equipment appraisals. The cost method calculation formula is as follows:

Appraised value= Replacement cost × Depreciation rate

A. Replacement cost

Based on the characteristics and nature of the equipment within this appraisal scope, as well as the circumstances of the appraised entity, the calculation methods for the replacement costs of various types of equipment in this appraisal are as follows.

a. Machinery and equipment

For equipment that requires installation, the replacement cost generally includes: Equipment purchase price, transport and handling fees, installation engineering fees, pre-construction and other costs, and the capital cost. For equipment that does not require installation, the replacement cost generally includes: Equipment purchase price and transport and handling fees. The calculation formula is as follows:

Equipment requiring installation replacement cost = Equipment purchase price + Transport and handling fees + Installation engineering fees + Pre-construction and other costs + Capital costs - Deductible VAT

Equipment not requiring installation replacement cost = Equipment purchase price + Transport and handling costs - Deductible VAT

I. Equipment purchase price

For major process equipment, the purchase price is primarily determined by consulting the market price as at the Valuation benchmark date or referencing the contract price of similar equipment at the valuation benchmark date. For small equipment, the purchase price is determined by checking the market price information for the valuation benchmark date. For equipment with no market price information, the purchase price is determined by referencing the purchase price for similar equipment.

II. Transport and handling fees

If transport and handling fees are not included in the equipment purchase price, they are determined by referring to standard cost indicators from resources like the *Asset Appraisal Common Data and Parameters Handbook* and the *Mechanical Industry Construction Project Budgeting Method and Indices*, taking into account factors such as transportation distance, weight, and volume.

III. Installation engineering fees

For equipment that requires installation, the installation engineering fees are estimated using the unit price method, referring to similar equipment installation project budgets (preliminary or final) and other engineering documents, including the *Coal Mining Construction Project Cost Quotas* (NB/T 51063-2016) and other relevant standards, as well as recent local pricing information. Alternatively, the *Asset Appraisal Common Methods and Parameters Handbook* and the *Mechanical Industry Construction Project Budgeting Method and Indices* are used, combined with the scale and nature of the

equipment installation work to determine the installation fee rate. The installation engineering fee calculation formula is as follows:

Installation engineering fee = Equipment purchase price × Installation engineering fee rate

For equipment where the purchase price includes installation engineering costs, or for equipment that does not require installation, installation engineering fees are not included.

For equipment foundations that are inseparable from buildings or separately listed as independent foundations, these are appraised within the corresponding buildings and structures, and installation engineering fees are not recalculated.

IV. Pre-construction and other costs

Pre-construction and other costs include project construction management fees, bidding agency fees, environmental impact assessment fees, surveying and design fees, engineering supervision fees, joint trial operation fees, and others. The rates for these expenses are determined by investigating the average cost levels of similar projects and referring to the *Standards for Other Expenses of Coal Mining Construction Project* (NBT 51064-2016) and other related standards, as well as the specific conditions of this project.

V. Capital costs

Capital costs are calculated based on the normal construction period of the project where the equipment is located, using the LPR in effect on the valuation benchmark date. The total of the equipment purchase costs, transport and handling fees, installation fees, pre-construction and other costs is used as the base, with the capital costs calculated based on uniform capital investment. The calculation formula of capital costs is as follows:

Capital costs = (Equipment purchase price + Transport and handling costs + Installation engineering fees + Pre-construction and other costs) × Reasonable construction period × Annual loan interest rate / 2

VI. Deductible VAT

According to the regulations in "C.SH [2008] No. 170", "C.SH. [2016] No. 36", "C.SH. [2018] No. 32", and the "Announcement No. 39 in 2019 of the Ministry of Finance, the State Taxation Administration and the General Administration of Customs", the input VAT includes VAT on the equipment purchase price (tax rate 13%), VAT on transport and handling fees (tax rate 9%), and VAT on pre-construction and other costs (tax rate 6%).

B. Vehicles

For vehicles, the replacement cost is determined by the market price on the valuation benchmark date, adding the vehicle purchase tax and other reasonable costs (such as licence fees). The calculation formula is as follows:

Replacement cost = Vehicle purchase price + Vehicle purchase tax + Licence fees and other costs - Deductible VAT

Where:

Vehicle purchase tax = vehicle purchase cost / (1 + 13%) × 10%.

The vehicle purchase price is mainly determined by consulting local dealers or checking online for market prices; vehicle purchase tax is determined according to the *Vehicle Purchase Tax Law of the People's Republic of China*; licence fees and other costs are determined based on local administrative fee standards and actual vehicle expenses.

C. Electronic equipment

For electronic equipment that requires installation, the appraisal is conducted using the same method as for machinery. For other electronic equipment that does not require installation, the replacement cost is determined based on the market purchase price on the valuation benchmark date.

2) Determination of composite depreciation rate

A. For specialised and general machinery, the depreciation rate is primarily determined based on the equipment's economic service life, used lifespan, and on-site inspections of the equipment's condition and technical status. The remaining service life is then calculated, and the composite depreciation rate is determined using the following formula:

Composite depreciation rate = Remaining service life / (Remaining service life + Used lifespan) × 100%

B. For electronic equipment, office furniture, and other devices, the composite depreciation rate was mainly determined based on their economic service life and the results of on-site inspections. The calculation formula is as follows:

Age-based newness rate = (Economic lifespan - Years of use) / Economic lifespan × 100%

Composite depreciation rate = Age-based depreciation rate × Adjustment coefficient

C. For vehicles, according to the *Standard for Mandatory Scrapping of Motor Vehicles* (Order No. 12 of 2012 of Ministry of Commerce, National Development and Reform Commission, Ministry of Public Security, Ministry of Environmental Protection), the theoretical depreciation rate was determined using either vehicle mileage or service life, based on the lower of the two methods. For vehicles without a prescribed service life, the remaining service life method was used. Adjustments were made based on on-site inspection results. The calculation formula is as follows:

Composite depreciation rate = Depreciation rate × Adjustment coefficient

c) Determination of the appraised value

Appraised value= Replacement cost × Composite depreciation rate

(7) Construction in progress

Based on the characteristics of construction in progress, the appraised value type, and data collection, the cost method was adopted for the appraisal.

a) Completed Projects

For projects where the main structure is already listed as fixed assets, they are incorporated into the main appraisal. Other completed projects are appraised according to the fixed asset appraisal method.

b) Incomplete Projects

For ongoing projects that started within six months of the valuation benchmark date, due to minor price changes, the appraisal is based on the book value of the ongoing construction after verification, and the residual value after deducting unreasonable expenses is used as the appraised value.

For ongoing projects that started more than six months before the valuation benchmark date, if the book value does not include capital costs, the capital costs are added based on the reasonable construction period. If the book value differs significantly from the price level on the valuation benchmark date, the construction costs are adjusted to the Valuation benchmark date price level.

c) Pure Expense-Based Construction Projects

Pure expense type ongoing projects have no physical entity. After verifying that the payments made are necessary for future projects or have actual value to the future owners, and confirming that there is no duplicate valuation with related asset projects, the book value after verification is used as the appraised value. Otherwise, the value is treated as zero.

(8) Land use rights

According to the requirements of the *Asset Appraisal Practice Standards - Real Estate*, the main appraisal methods for land use rights include the market approach, income approach, hypothetical development method, cost method, and benchmark land price method. The appropriate appraisal method is selected based on the appraisal purpose, subject asset, value type, data collection conditions, and the applicability of the above basic appraisal methods.

Based on the appraisal purpose, subject asset, value type, data collection conditions, and the applicability of the appraisal methods, this evaluation adopts the benchmark land price coefficient correction method for the land transfer and the cost approaching method for the allocated land.

1) Cost approaching method

The basic idea of the cost approaching method is to treat all investments in land, including land acquisition costs and infrastructure development costs, as the "basic cost." Using economic principles and the investment theory of equal return on equal investment, the basic cost is added to the profit and interest that should be generated by such an investment, forming the base part of the land price. Additionally, the required return on land ownership is included, and the land price is derived. When using the cost method to evaluate the allocated land, the appreciation of land value is not considered. The basic formula for the cost approaching method is:

$$\text{Basic formula: } V = (E_a + E_d + T + R_1 + R_2) \times (1 + K_1)$$

Where: V = Land price

E_a = Land acquisition cost

E_d = Land development cost

T = Taxes

R_1 = Interest

R_2 = Profit

K_1 = Regional and individual factors adjustment

2) Benchmark land price method

The benchmark land price adjustment method uses urban benchmark land prices and benchmark land price adjustment tables to assess the value of land. According to the principle of substitution, the regional and individual conditions of the subject asset are compared with the average conditions of the region, and the corresponding adjustment coefficients are selected from the coefficient adjustment table to modify the benchmark land price. This method determines the value of the subject asset on the valuation benchmark date .

The calculation formula for the Benchmark Land Price Adjustment Method is as follows:

$$V = (V1\times(1\pm\sum K)\times Kr\times Kq+Kk) \times Km$$

The formula is: V — The adjusted land price of the appraised land;

V1 — The benchmark land price of land with the same usage in the region where the appraised land is located;

$\sum K$ — The sum of the regional factors and individual factors adjustment coefficients for the appraised land;

Km — The usage period adjustment coefficient;

Kq — The date adjustment coefficient;

Kr — The floor area ratio adjustment coefficient;

Kk — The land development degree adjustment coefficient.

(9) Mining rights

Mining rights include mining rights and exploration rights, and the appraisal methods are as follows:

a) For mining rights, China Energy Investment Corporation Co., Ltd. and China Shenhua Energy Company Limited commissioned China Enterprise Appraisals Co., Ltd. to conduct a separate appraisal. The mining rights appraisal results adopted in this asset appraisal report are based on the appraisal conclusions issued by China Enterprise Appraisals Co., Ltd.

2) For exploration rights, due to the inability to obtain geological survey, preliminary design, mine area general plan, formal feasibility report, and other documents required for mining rights appraisal, it is not possible to model and calculate the market value of the exploration rights as of the Valuation benchmark date according to mining rights appraisal standards and theories. Therefore, the related costs for exploration rights are retained based on the audited book value.

(10) Patent rights assets

As the market for technical intangible assets in China is still in its early stages, collecting relevant fair transaction data is relatively difficult. Therefore, the market approach is not operable for this appraisal.

As the patent rights owned by the appraised entity were verified as being developed in the production process, and some patent rights have been held for a long time without

being used in relevant production operations, the income approach is not operable in this appraisal.

In summary, the patent rights were evaluated using the cost method.

Appraised value of patents=Replacement cost ×(1-depreciation rate)

Among them: Replacement cost=Application fee + Printing fee + Other expenses (patent registration, printing, substantive examination fees, etc.)

1-depreciation rate=Remaining useful life/Legal protection period

(11) Other intangible assets

Based on the characteristics of other intangible assets, the appraised value type, data collection conditions, and other related factors, the market approach is used for appraisal as follows: a) For software in normal use, its appraised value was determined by conducting market research on the market prices of similar software and taking into account the current usage of the software to be appraised. b) For software that has been discontinued and verified by the enterprise as having no value, the appraisal is zero; c) For software copyright, the appraisal was based on the relevant agency fees and registration fees incurred in applying for software copyright; d) For the purchased capacity indicators, the value of such assets is included in the mining rights appraisal. Therefore, this appraisal confirms a value of zero for the capacity indicators.

(12) Long-term prepaid expenses

The appraisers investigated the reasons for the long-term deferred expenses and reviewed the accounting vouchers for the long-term deferred expenses. After verification, the original amount of the long-term deferred expenses was found to be true and accurate, and the amortisation balance was correct. The long-term deferred expenses can still provide corresponding rights or assets during the remaining benefit period, and the appraisal value is determined based on the remaining balance to be amortised over the remaining benefit period.

(13) Other non-current assets

The appraisers investigated the reasons for the occurrence of other non-current assets and reviewed the relevant contracts and accounting vouchers. Other non-current assets are valued at the verified book value.

(14) Liabilities

The liabilities of Inner Mongolia Pingzhuang Coal Group Co., Ltd. include accounts payable, advance receipts, contract liabilities, taxes payable, other payables, non-current liabilities due within one year, other current liabilities, and non-current liabilities. The appraisers first verified the consistency between the detailed ledgers and the general ledger, and then checked individual items. Additionally, they randomly checked the relevant accounting vouchers and supporting documents to confirm whether the recorded amounts of the liabilities were accurate. For both current and non-current liabilities, the appraised values were determined based on the verified amounts of liabilities actually borne by the enterprise.

VIII. Implementation Process and Information of the Appraisal Procedure

The appraisers carried out the appraisal of the assets involved in the subject asset from 9 August 2025 to 16 December 2025. The main appraisal procedures and process are as follows:

i. Acceptance of engagement

On 9 August 2025, the client and us reached an agreement on the basic matters of the appraisal, including the appraisal purpose, the subject asset, the appraisal scope, the valuation benchmark date, and the rights and obligations of each party. We then negotiated with the client and developed the corresponding appraisal plan.

ii. Preliminary preparation

After accepting the engagement, the project team, based on the appraisal purpose, the characteristics of the subject asset, and the time plan, formulated a specific appraisal work plan and formed the appraisal team. Simultaneously, the team drafted a list of required materials and appraisal forms based on the actual needs of the project.

iii. On-site investigation

The appraisers conducted the necessary verification of the assets and liabilities involved in the entity to be appraised from 15 August 2025 to 31 October 2025, and carried out the required investigation into the business and management of the entity to be appraised.

1. Asset verification

(1) Guiding the appraised entity to complete forms and prepare materials to be provided to the asset appraisal institution

The appraisers guided the financial and asset management personnel of the appraised entity to carefully and accurately complete the asset information based on the "Assets Appraisal Details Sheet" and its requirements, the material checklist, etc., after their own inventory. They also collected and prepared property ownership certificates and documents reflecting performance, condition, economic, and technical indicators of the assets.

(2) Preliminary review and improvement of the Assets Appraisal Details Sheet submitted by the appraised entity

The appraisers reviewed the relevant documents, understood the detailed status of the assets included in the appraisal scope, and then carefully reviewed the "Assets Appraisal Details Sheet" to check for incomplete or incorrect entries, unclear asset items, and other issues. Based on experience and the gathered information, the appraisers ensured the accuracy of the sheet and provided feedback to the appraised entity to improve them.

(3) On-site inspection

Based on the type, quantity, and distribution of assets included in the appraisal scope, the appraisers, with the cooperation of the relevant personnel of the appraised entity, conducted on-site inspections in accordance with the relevant provisions of the asset appraisal standards. Different inspection methods were applied depending on the nature and characteristics of the various assets.

(4) Supplementing, modifying, and improving the Assets Appraisal Details Sheet

Based on the results of the on-site inspection and after thorough communication with the relevant personnel of the appraised entity, the appraisers further refined the "Assets Appraisal Details Sheet" to ensure consistency between the accounts, sheet, and actual assets.

(5) Verification of ownership certificate documents

The appraisers verified the ownership proof documents for the assets within the appraisal scope, including buildings, vehicles, land use rights, mining rights, and other intangible assets. In cases where ownership information was incomplete or unclear, the appraisers requested the enterprise to verify or provide relevant ownership clarification documents.

2. Due diligence

To fully understand the operational and management status of the appraised entity and the risks it faces, the appraisers conducted necessary due diligence. The main contents of the due diligence were as follows:

(1) The history of the appraised entity, its major shareholders and their shareholding ratios, and the necessary ownership and management structure;

(2) The asset, financial, and operational management status of the appraised entity;

(3) The business plan, development plan, and financial forecast information of the appraised entity;

(4) Previous appraisals and transactions related to the subject asset and appraised entity;

(5) Macro and regional economic factors affecting the production and operation of the appraised entity;

(6) The development status and prospects of the industry in which the appraised entity operates;

(7) Other relevant information.

iv. Data collection

The appraisers collected appraisal materials according to the specifics of the appraisal project, including data independently obtained from markets and other channels, data acquired from the client and other relevant parties, and data from government departments, professional institutions, and other relevant bodies. They then analysed, summarised, and organised the collected materials to form the basis for estimation.

v. Preliminary estimation

Based on the specific conditions of the various assets, the appraisers selected the appropriate formulas and parameters according to the chosen appraisal methods, performing analysis, calculations, and judgments to form preliminary appraisal conclusions. The project leader summarised the preliminary conclusions for each asset appraisal and drafted the preliminary asset appraisal report.

vi. Internal review

According to our company's appraisal business process management regulations, the project leader submitted the preliminary asset appraisal report for internal review after completion. After the internal review, the appraisers communicated with the client or other relevant parties, as agreed, on the contents of the asset appraisal report, ensuring that the independence of the appraisal conclusions was maintained. After completing the above appraisal procedures, the formal asset appraisal report was issued and submitted.

IX. Appraisal Assumptions

The assumptions for the analysis and estimates in this asset appraisal report are as follows:

i. It is assumed that all appraisal targets are in the process of being traded, and the appraisers simulate the market based on the transaction conditions of the appraised assets;

ii. It is assumed that for assets traded in the market, or assets to be traded in the market, both parties in the transaction have equal standing and ample opportunity and time to access market information. The transactions are voluntary and rational, and the parties can make rational judgments about the asset's function, purpose, and transaction price;

iii. It is assumed that the appraised assets will continue to be used for their current purposes and in their current manner during the service lives of the mines;

iv. It is assumed that there will be no significant changes to the relevant national laws, regulations, and policies or the macroeconomic situation, and that the political, economic, and social environment in the regions of the parties involved in the transaction will not change significantly;

v. Given the actual status of the assets on the valuation benchmark date, it is assumed that the company will continue operations during the service lives of the mines;

vi. It is assumed that there will be no significant changes in the interest rates, tax bases, tax rates, policy-based collection fees, or other related factors affecting the appraised entity after the valuation benchmark date;

vii. It is assumed that the management of the appraised entity after the Valuation benchmark date will remain responsible and stable, with the ability to perform their duties;

viii. Unless otherwise stated, it is assumed that the company fully complies with all relevant laws and regulations;

ix. It is assumed that after the valuation benchmark date, there will be no force majeure or unforeseen factors that cause significant adverse effects on the appraised entity;

x. It is assumed that after the valuation benchmark date, the accounting policies used by the appraised entity and those used to prepare this asset appraisal report will remain consistent in significant aspects;

xi. It is assumed that after the valuation benchmark date, the scope and methods of the appraised entity's operations will remain the same, based on the current management practices and level;

xii. It is assumed that after the valuation benchmark date, the appraised entity's cash inflows and cash outflows will be at an average rate;

xiii. It is assumed that after the valuation benchmark date, the appraised entity's products or services will maintain their current market competitiveness;

xiv. It is assumed that the mineral resources reserves reviewed within the mining licence will form the basis for the mining rights, and that the mining licence can be smoothly renewed in the future;

xv. It is assumed that the production and sales of commercial coal in future years would achieve a balance between production and sales;

xvi. It is assumed that during the appraisal calculation period, the unit cost for environmental restoration and land reclamation would be equal to the extracted and spent amounts;

xvii. As of the valuation benchmark date, Inner Mongolia Pingxi Baiyinhua Coal Industry Co., Ltd. enjoys the preferential enterprise income tax policy for the Western Development, with enterprise income tax levied at a rate of 15% from 1 January 2021 to 31 December 2030. This appraisal assumes that after the preferential enterprise income tax policy for the Western Development expires, a 25% tax rate will be applied;

xviii. It is assumed that starting from 2067, Inner Mongolia Pingxi Baiyinhua Coal Industry Co., Ltd. will begin to pay mining rights transfer income annually in accordance with the provisions of the *Notice of the Ministry of Finance, the Ministry of Natural Resources and the State Taxation Administration on the Issuance of the Measures for the Collection of Mining Rights Transfer Revenue* (C.Z. [2023] No. 110);

xix. The mining right for Baiyinhua No. 1 Coal Mine within this appraisal scope currently has a production capacity indicator gap of five million tonnes per year. It is assumed in this appraisal that the enterprise will acquire the corresponding production capacity indicators on a compensatory basis, with a cash outflow of RMB140 per tonne (inclusive of tax) considered in Phase I;

The conclusions of this asset appraisal report are valid under the above assumptions as of the valuation benchmark date. If there are significant changes in these assumptions, the signing asset appraisers and this asset appraisal agency will not bear responsibility for deriving different appraisal conclusions due to changes in assumptions.

X. Appraisal conclusion

i. Income approach appraisal results

As of the valuation benchmark date, the parent company-level total assets of Inner Mongolia Pingzhuang Coal Group Co., Ltd. had a book value of RMB18,171,233,900, while liabilities, comprising current and non-current liabilities, had a total book value of RMB19,125,014,300. The net assets had a book value of RMB-953,780,400. Under the income approach, the value of the entire shareholders' equity amounts to RMB5,088,077,400, representing an increase of RMB6,041,857,800, an appreciation rate of 633.46%.

The consolidated total assets of Inner Mongolia Pingzhuang Coal Group Co., Ltd. had a book value of RMB34,567,091,600, total liabilities had a book value of RMB31,041,413,400, and owners' equity had a book value of RMB3,525,678,200, of which RMB2,284,963,900 was attributable to the parent company. Under the income approach, the value of the entire shareholders' equity amounts to RMB5,088,077,400, representing an increase of RMB2,803,113,500, an appreciation rate of 122.68%.

ii. Asset-Based Approach Appraisal Results

As of the valuation benchmark date , on the parent-company basis, Inner Mongolia Pingzhuang Coal Group Co., Ltd. recorded total assets with a book value of RMB18,171,233,900 and an appraised value of RMB24,656,122,800, representing an appreciation of RMB6,484,888,900 and an appreciation rate of 35.69%. Total liabilities had a book value of RMB19,125,014,300 and an appraised value of RMB19,072,313,500, representing an impairment of RMB52,700,800 and an impairment rate of 0.28%. Owners' equity had a book value of RMB-953,780,400 and

an appraised value of RMB5,583,809,300, representing an appreciation of RMB6,537,589,700 and an appreciation rate of 685.44%.

The detailed results of the asset-based approach are shown in the following summary table:

Summary of Appraisal Results from Asset-Based Approach

Valuation benchmark date : 31 July 2025 Currency unit: RMB'0,000

Item		Book value	Appraised value	Increase or decrease	Appreciation rate %
		A	B	C = B - A	D = C/A × 100%
Current assets	1	160,722.45	160,759.19	36.74	0.02
Non-current assets	2	1,656,400.94	2,304,853.09	648,452.15	39.15
Of which: Long-term equity investments	3	280,285.01	805,199.44	524,914.43	187.28

Total assets	**11**	**1,817,123.39**	**2,465,612.28**	**648,488.89**	**35.69**
Current liabilities	12	1,494,231.30	1,494,231.30	0.00	0.00
Non-current liabilities	13	418,270.13	413,000.05	-5,270.08	-1.26
Total liabilities	**14**	**1,912,501.43**	**1,907,231.35**	**-5,270.08**	**-0.28**
Net assets	**15**	**-95,378.04**	**558,380.93**	**653,758.97**	**685.44**

As of the valuation benchmark date , the consolidated total assets of Inner Mongolia Pingzhuang Coal Group Co., Ltd. had a book value of RMB34,567,091,600, total liabilities had a book value of RMB31,041,413,400, and owners' equity had a book value of RMB3,525,678,200, of which RMB2,284,963,900 was attributable to the parent company. After applying the asset-based approach, the value of the entire shareholders' equity was RMB5,583,809,300, with an increase of RMB3,298,845,400, representing an appreciation rate of 144.37%.

iii. Appraisal conclusion

The value of the entire shareholders' equity was RMB5,088,077,400 under the income approach and RMB5,583,809,300 under the asset-based approach, with a difference of RMB495,731,900 representing a variance rate of 9.74%.

There is a certain discrepancy between the appraisal results of the income approach and the asset-based approach. The main reason for the discrepancy is the different perspectives considered by the two methods.

The appraised entity's core business is coal mining and sales, and its key assets are mining rights. In this appraisal, the asset-based approach uses the discounted cash flow method to assess the mining rights, which aligns closely with the approach used in the income approach. Moreover, the appraisal of the mining rights is based on the coal market conditions, using objective market benchmarks. The results from the asset-based approach reflect the contribution of the mining rights to the company's future earnings, therefore the asset-based approach can more objectively reflect the market value of the appraised entity.

Based on the foregoing analysis, this asset appraisal report adopts the result derived from the asset-based approach as its appraisal conclusion, namely, the appraised value of the entire shareholders' equity of Inner Mongolia Pingzhuang Coal Group Co., Ltd. was RMB5,583,809,300.

Due to objective limitations, this asset appraisal report does not take into account any premium or discount that may arise due to control or lack of control, nor does it consider the impact of liquidity on the value of the subject asset.

XI. Special Notes

The following matters were identified during the appraisal process that may affect the appraisal conclusion but cannot be assessed or estimated by the professional expertise and ability of the appraisers:

i. In this asset appraisal report, if there is a discrepancy between the total values and the sum of the individual items in any tables or written statements (expressed in RMB10,000), it is due to rounding.

ii. This appraisal refers to the audit report issued by Ernst & Young Hua Ming LLP on 16 December 2025, with the report number Ernst & Young Hua Ming (2025) Zhuan Zi No. 80028116 A01. We obtained the audit report through legal channels, and after analyzing and reviewing the contents of the audit report in accordance with the relevant asset appraisal standards, we have prudently used the relevant contents of the audit report. The audited financial data in the audit report forms the basis for the asset appraisal. If this financial data changes, the conclusions of this appraisal may become invalid. According to Article 12 of the *Asset Appraisal Practice Standards – Enterprise Value*: Asset appraisers analyse and assess the use of financial statements based on the chosen appraisal methods. However, it is not the responsibility of the asset appraisers to offer professional opinions on whether the financial statements fairly reflect the financial status, operating results, or cash flow of the appraised entity as at the valuation benchmark date. We only bear responsibility for improper referencing that may arise in the use of the audit report during the appraisal process.

iii. Adoption of appraised value for the intangible assets—mining rights within the scope of this appraisal:

The appraised value of the Mining Right of the Boligou Coal Mine, Zhunge'er Coalfield, Inner Mongolia, an intangible asset within the appraisal scope, was determined with reference to the appraisal conclusion in the *Appraisal Report on the Mining Right of the Boligou Coal Mine, Zhunge'er Coalfield, Inner Mongolia Autonomous Region* (Z.Q.H.K.P.B.Z. [2025] No. 1074) issued by China Enterprise Appraisals Co., Ltd. on 16 December 2025.

The appraised value of the Mining Right of the Yuanbaoshan Open-cut Coal Mine, an intangible asset within the appraisal scope, was determined with reference to the appraisal conclusion in the *Appraisal Report on the Mining Right of the Yuanbaoshan Open-cut Coal Mine of Inner Mongolia Pingzhuang Coal Group Co., Ltd.* (Z.Q.H.K.P.B.Z. [2025] No. 1075) issued by China Enterprise Appraisals Co., Ltd. on 16 December 2025.

The appraised value of the Mining Right of the Baiyinhua No. 1 Open-cut Coal Mine, West Ujimqin Banner, Inner Mongolia, an intangible asset within the appraisal scope, was determined with reference to the appraisal conclusion in the *Appraisal Report on the Mining Right of the Baiyinhua No. 1 Open-cut Coal Mine, West Ujimqin Banner,*

Inner Mongolia (Z.Q.H.K.P.B.Z. [2025] No. 1076) issued by China Enterprise Appraisals Co., Ltd. on 16 December 2025.

The appraised value of the Mining Right of the Hesigewula South Open-cut Coal Mine, an intangible asset within the appraisal scope, was determined with reference to the appraisal conclusion in the *Appraisal Report on the Mining Right of the Hesigewula South Open-cut Coal Mine of Inner Mongolia Xilin Xilinhe Coal-Chemical Co., Ltd.* (Z.Q.H.K.P.B.Z. [2025] No. 1078) issued by China Enterprise Appraisals Co., Ltd. on 16 December 2025.

During this appraisal process, the appraisers communicated and coordinated with mining rights appraisers, who adopted the discounted cash flow method for the appraisal of the mining right. After verifying that the mining rights appraisal report's subject asset, scope, purpose, base date, value type, and other aspects were consistent with this asset appraisal report and in line with the requirements of the economic transaction, the mining rights value involved in this appraisal report directly references the appraisal conclusion issued by China Enterprise Appraisals Co., Ltd. For details on the calculation process and results of the mining rights appraisal, please refer to the mining rights report issued by China Enterprise Appraisals Co., Ltd.

iv. According to the *Asset Appraisal Law* and the *Guidance on Legal Ownership of Subject Asset*, the client and relevant parties engaging the asset appraisal are responsible for the authenticity, completeness, and legality of the ownership certificates, financial accounting information, and other materials they provide. The purpose of conducting asset appraisal is to estimate the value of the subject asset and provide professional opinions. Confirming the legal ownership or providing opinions on the legal status of the assets goes beyond the scope of professional asset appraisal. Asset appraisers do not provide guarantees on the legal ownership of the subject asset.

v. Explanation regarding ownership defects

1. Ownership defects of the appraised entity

(1) The enterprise has declared 72 land use rights for inclusion in the appraisal, all of which have been registered with property title certificates (or state-owned land use certificates). Of these, five parcels were transferred land, and 67 parcels were allocated land. Among the 67 allocated parcels, 13 parcels were registered under the name of Inner Mongolia Pingzhuang Energy Resources Co., Ltd. in their land use right certificates, which is inconsistent with the name of the appraised entity. Details of the relevant land parcels are presented in the Intangible Assets - Land Use Rights Appraisal Details Sheet. For the foregoing real property ownership certificates with the registered holders inconsistent with the appraised entity, the appraised entity has issued a title clarification statement, affirming that the land use rights within the appraisal scope belong to the appraised entity and that no ownership disputes exist.

(2) As of the valuation benchmark date, the enterprise has declared 429 buildings and structures within the appraisal scope. Of these, 315 buildings and structures had not obtained property ownership certificates. Among the 114 buildings with certificates, only one lists the right holder as Inner Mongolia Pingzhuang Coal Group Co., Ltd.; the right holders named on all other certificates are inconsistent with the name of the appraised entity. Details of the buildings and structures are presented in the Fixed Assets - Buildings and Structures Appraisal Details Sheet. For buildings and structures without certificates, as well as those whose real property ownership certificates list right holders inconsistent with the appraised entity, the appraised entity has issued a title

clarification statement, affirming that all buildings and structures within the appraisal scope belong to the appraised entity and that no ownership disputes exist.

(3) The enterprise has declared 580 vehicles within the appraisal scope. Of these, 233 are on-site operating vehicles that do not require vehicle registration certificates; all remaining vehicles have completed registration. Among them, the certificates of five vehicles list the right holder as the Industrial Development Branch of Inner Mongolia Guodian Energy Investment Co., Ltd., which is inconsistent with the appraised entity. For the vehicles whose certificates list right holders inconsistent with the appraised entity, the appraised entity has issued a title clarification statement, affirming that the right to use all vehicles within the appraisal scope belongs to the appraised entity and that no ownership disputes exist.

(4) The enterprise has declared 13 patents within the appraisal scope, including five invention patents, seven utility model patents, and one design patent. All patents have been granted certificates of rights. Among them, seven patents are solely owned by the appraised entity, with certificate-listed right holders including Inner Mongolia Pingzhuang Coal Group Co., Ltd., Inner Mongolia Pingzhuang Coal Group Co., Ltd. Yuanbaoshan Open-cut Coal Mine, and Inner Mongolia Pingzhuang Coal Group Co., Ltd. Mining Construction Engineering Branch. The remaining six patents are jointly owned by the appraised entity and other companies. Refer to the "Asset-based Approach Appraisal Details Sheet" for the specific details of aforementioned patents.

Regarding the jointly owned patents, the appraised entity has provided a statement and guarantees that these patents are either solely owned or co-owned with other companies, and there are no ownership disputes or potential disputes. For jointly owned patents, all parties have the right to apply them in their own production and operations. Therefore, the resulting income and costs are enjoyed and borne by each party.

2. Ownership defects of Inner Mongolia Pingxibaiyinhua Coal Industry Co., Ltd., a subsidiary of the appraised entity

(1) As of the valuation benchmark date, there are 84 building and structure assets recorded on its books. Among them, two items had obtained property ownership certificates, while 82 items had not. Of the uncertified buildings and structures, two structures—the water tank control room and the multi-channel wireless control room—had already been demolished. The primary reason for the lack of certificates is that certain buildings located in the living quarters fall within areas subject to urban planning adjustments, and therefore the land-use category must be modified before property ownership certificates can be processed. The floor areas of the above buildings and structures were determined based on drawings, construction contracts, final account statements, and on-site measurements provided by the appraised entity, and were further verified through field inspections by the appraisers. For the buildings that have not been certified, the appraised entity has issued a statement of ownership, confirming that the buildings within the appraisal scope are owned by it, and there are no property disputes.

(2) The enterprise has declared eight off-balance-sheet patents within the appraisal scope, including seven utility model patents and one invention patent. Refer to the "Asset-based Approach Appraisal Details Sheet" for the specific details of aforementioned patents.

3. Ownership defects of Inner Mongolia Xilin Xilinhe Coal-Chemical Co., Ltd., a subsidiary of the appraised entity

(1) Among the buildings and structures included in the appraisal scope, except for the building located in Fuxin, 56 items have not been registered with property ownership certificates. For all uncertified buildings and structures, the appraised entity has confirmed that the ownership of such assets belongs to it, that no ownership or debt disputes exist, and that it undertakes full responsibility for any ownership- or debt-related matters that may arise.

(2) Within the appraisal scope, there are 67 uncertified vehicles (including seven vehicles pending scrapping, for which vehicle registration certificates are not required). The appraised entity has confirmed that the ownership of such assets belongs to it, that no ownership or debt disputes exist, and that it undertakes full responsibility for any ownership- or debt-related matters that may arise.

(3) The enterprise has declared seven off-balance-sheet utility model patents within the appraisal scope. Of these, two patents are jointly owned by the appraised entity and other companies. Refer to the "Asset-based Approach Appraisal Details Sheet" for the specific details of aforementioned patents.

Regarding the jointly owned patents, the appraised entity has provided a statement and guarantees that these patents are either solely owned or co-owned with other companies, and there are no ownership disputes or potential disputes. For the jointly owned patents, all parties have the right to apply them in their own production and operations. Therefore, the resulting income and costs are enjoyed and borne by each party.

vi.Explanation regarding assets in an abnormal use state

1. Abnormal state of the appraised entity

(1) The buildings and structures within the appraisal scope have been gradually constructed and put into use from the 1950s to the present. As of the valuation benchmark date, there are 21 buildings and structures pending scrapping.

Except for the foregoing, the buildings and structures of each subsidiary unit were generally in normal condition with routine maintenance and management in place. The foundations of the principal buildings were stable, with no significant uneven settlement observed; the joints of the main load-bearing components were firm; no noticeable tilting, deformation or cracking was identified; and the associated auxiliary facilities and equipment were functioning normally, with no abnormal damage detected.

(2) As of the valuation benchmark date, there is one asset in the appraisal scope categorised as equipment with no physical presence; 16 equipment assets classified as equipment are in a scrapped state; and 2,398 assets are in a pending scrapping state.

2. Abnormal state of Inner Mongolia Pingxibaiyinhua Coal Industry Co., Ltd., a subsidiary of the appraised entity

(1) As of the valuation benchmark date, the following issues exist with the buildings and structures within the appraisal scope: Two buildings and structures have been demolished and no longer had physical existence.

Except for the foregoing, the buildings and structures were generally in normal condition with routine maintenance and management in place. The foundations of the principal buildings were stable, with no significant uneven settlement observed; the joints of the main load-bearing components were firm; no noticeable tilting, deformation or cracking was identified; and the associated auxiliary facilities and equipment were functioning normally, with no abnormal damage detected.

(2) As of the valuation benchmark date, there were 67 items of equipment assets in the appraisal scope in a state pending scrapping, six items of transport equipment assets in a state pending scrapping, and 230 items of electronic equipment assets in a state pending scrapping.

3. Abnormal state of Inner Mongolia Xilin Xilinhe Coal-Chemical Co., Ltd., a subsidiary of the appraised entity

As of the valuation benchmark date, there were 109 items of machinery and equipment assets in the appraisal scope in a state pending scrapping, 11 items of transport equipment assets in a state pending scrapping, and 44 items of electronic equipment assets in a state pending scrapping.

4. Abnormal state of Pingneng (Xilingol) Coal Sales Co., Ltd., a subsidiary of the appraised entity

As of the valuation benchmark date, there were 40 electronic equipment assets in the appraisal scope in a state pending scrapping.

vii. Special notes on long-term equity investments of Inner Mongolia Pingxibaiyinhua Coal Industry Co., Ltd.

As of the valuation benchmark date, for the mining rights involved in the operations of Inner Mongolia Pingxibaiyinhua Coal Industry Co., Ltd., a wholly-owned subsidiary of Pingzhuang Coal, the registered holder of the mining licence is Inner Mongolia Pingzhuang Coal Group Co., Ltd. The mining royalty payments have been made by Inner Mongolia Pingxibaiyinhua Coal Industry Co., Ltd., but the change of licence holder has not yet been completed. This appraisal does not take into account the impact of this matter. Users of this report are hereby reminded to pay attention to the potential effects arising from this issue.

viii. Special notes on long-term equity investments of CHN Energy Mengxi Mining Co., Ltd.

CHN Energy Mengxi Mining Co., Ltd. is a wholly-owned subsidiary of Pingzhuang Coal. As of the valuation benchmark date, this company is the construction entity for the Boligou Coal Mine in the Zhunge'er Coalfield, Inner Mongolia. The mine is still under construction. The mining rights for the mine are held by Pingzhuang Coal, and the mining rights payment is made by Pingzhuang Coal. Due to related policy reasons, the mining rights holder has not been changed. For this appraisal, the appraised value of the intangible asset—the mining right—adopts the appraisal conclusion set out in the mining right appraisal report and is consolidated into the appraisal of Pingzhuang Coal. As Mengxi Mining is a wholly-owned operating entity, all economic benefits are fully reflected in the enterprise value under the income approach.

ix. Subsequent events

According to the project plan, after the valuation benchmark date , Inner Mongolia Pingzhuang Coal Group Co., Ltd. intends to transfer its 100% equity interest in two subsidiaries and four business asset groups free of charge. The specific details are as follows:

No.	Name	Type
1	Mengdong Energy Holding Co., Ltd.	Equity
2	Xilingol Mengdong Mining Co., Ltd.	Equity
3	Inner Mongolia Pingzhuang Coal Group Co., Ltd. Laogongyingzi Coal Mine	Asset group
4	Inner Mongolia Pingzhuang Coal Group Co., Ltd. Liujia Coal Mines	Asset group

No.	Name	Type
5	Inner Mongolia Pingzhuang Coal Group Co., Ltd. Fengshuigou Coal Mine	Asset group
6	Inner Mongolia Pingzhuang Coal Group Co., Ltd. West Open-cut Coal Mine	Asset group

The audit report used in this appraisal has simulated the stripping of the above assets through non-compensatory transfers.

Users of the asset appraisal report should pay attention to the impact of the above special matters on the appraisal conclusion.

XII. Statement of the Limitations on the Use of the Asset Appraisal Report

i. Scope of use of the asset appraisal report

1. The users of the asset appraisal report are the client and those specified by national laws and administrative regulations.

2. The appraisal conclusion in the asset appraisal report is only valid for the economic activities related to this project.

3. The validity period of the conclusion in the asset appraisal report is one year from the valuation benchmark date. The client or other users of the asset appraisal report should use the report within the stated validity period of the appraisal conclusions.

4. Without the written consent of the client, the asset appraisal agency and its professionals shall not provide or disclose the contents of the asset appraisal report to any third parties, except as required by laws or administrative regulations.

5. Without the consent of the asset appraisal agency, the contents of the asset appraisal report shall not be copied, quoted, or disclosed in public media, except as required by laws, administrative regulations, or as agreed by the relevant parties.

ii. If the client or other users of the asset appraisal report do not use the asset appraisal report in accordance with the laws, administrative regulations, and the use scope outlined in the asset appraisal report, the asset appraisal agency and its professionals shall not bear any responsibility.

iii. Except for the client, other users of the asset appraisal report as specified in the asset appraisal engagement contract, and those specified by laws or administrative regulations, no other institution or individual may become a user of the asset appraisal report. This asset appraisal report contains several appendices and appraisal detail forms, all of which are an integral part of this report. However, they are only valid when used together with the main body of the report.

iv. The asset appraisal agency and asset appraisers shall not bear any obligations or responsibilities to users of this report who are not authorised, such as those who obtain the report through presentation or other means, outside the scope of its intended use. They will not provide further consultancy based on this report, nor will they provide testimony or attend hearings in court or other legal proceedings, and they reserve the right to hold non-authorised users liable for any losses incurred as a result.

v. Users of the asset appraisal report shall correctly understand and use the appraisal conclusion. The appraisal conclusion is not equivalent to the realisable price of the subject asset and shall not be considered a guarantee of the realisable price.

vi. An asset appraisal report refers to a professional report issued by the asset appraisal agency, based on the law, administrative regulations, and asset appraisal standard requirements, after carrying out the necessary appraisal procedures as entrusted. It

reflects the value of the subject asset for a specific purpose on the valuation benchmark date. This report must be signed by the appraisers responsible for the appraisal and stamped with the asset appraisal agency's official seal. It can only be formally used after being filed with the state-owned asset supervision and management authority or the enterprise that provided funding.

This report is prepared in accordance with the Chinese Asset Appraisal Standards

Asset Appraisal Report on the Appraisal of the Entire Shareholders' Equity of Guodian Construction Investment Inner Mongolia Energy Co., Ltd. Held by CHN Energy Western Energy Investment Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

ZH.Q.H.P.B.Z.(2025) No. 6668

(Volume 1 of 1)

China Enterprise Appraisals Co., Ltd.

16 December 2025

Declaration

I. This asset appraisal report is prepared based on the Basic Rules for Asset Appraisal issued by the Ministry of Finance and the Asset Appraisal Practice Standards and Code of Professional Ethics issued by the China Appraisal Society.

II. The asset appraisal agency and its professional appraisers comply with laws, administrative regulations, and asset appraisal standards, adhere to the principles of independence, objectivity, and fairness, and bear legal responsibility for the asset appraisal report they issue.

III. The client or other users of the asset appraisal report shall use the report in accordance with the laws, administrative regulations, and the scope of use stated in the asset appraisal report. If the client or other users of the report misuse the report in violation of the foregoing regulations, the asset appraisal agency and its appraisers shall not bear any responsibility.

This asset appraisal report is only for use by the client, other users of the asset appraisal report as specified in the asset appraisal engagement contract, and users defined by laws or administrative regulations. Other institutions or individuals shall not use this asset appraisal report.

The asset appraisal agency and the appraisers remind the users of the asset appraisal report to correctly understand and use the appraisal conclusion. The appraisal conclusion is not equivalent to the realisable price of the subject asset and shall not be considered a guarantee of the realisable price.

IV. The asset and liability lists, and business forecasts related to the subject asset are provided by the client and the appraised entity, and confirmed through their signatures, seals, or other legally permitted means. The client and other relevant parties are legally responsible for the authenticity, completeness, and legality of the information provided.

V. The asset appraisers have conducted on-site investigations of the subject asset and the assets involved. They have paid necessary attention to the legal ownership status of the subject asset and its assets, verified the ownership documents, disclosed any discovered issues truthfully, and urged the client and other relevant parties to rectify any property right issues to meet the requirements for issuing the asset appraisal report.

VI. The asset appraisal agency and its appraisers have no current or anticipated interests in the subject asset, nor any current or anticipated interests with the relevant parties, and are unbiased towards the relevant parties.

VII. The analysis, judgment, and results in the asset appraisal report issued by the asset appraisal agency are subject to the assumptions and limitations specified in the report. Users of the asset appraisal report shall fully consider the assumptions, limitations, special notes, and their impact on the appraisal conclusion.

VIII. The asset appraisers' inspection of physical assets such as inventory, fixed assets, and construction in progress is typically limited to observation of use and maintenance conditions. Internal, hidden, or difficult-to-access parts are not inspected. We do not possess professional qualifications nor have we been engaged to conduct technical inspections or appraisals of the internal quality of these assets. Our appraisal is based on information provided by the client and other relevant parties. If there are defects in the internal quality of these assets, the appraisal conclusion may be affected to varying degrees.

Summary of the Asset Appraisal Report

Important Notice

This summary is extracted from the main text of the asset appraisal report. To understand the details of the appraisal project and properly interpret and use the appraisal conclusion, the full text of the asset appraisal report shall be read carefully.

CHN Energy Western Energy Investment Co., Ltd. and China Shenhua Energy Company Limited:

China Enterprise Appraisals Co., Ltd. accepts your engagement and, in accordance with laws, administrative regulations, and asset appraisal standards, adheres to the principles of independence, objectivity, and fairness. The market value of the entire shareholders' equity held by Guodian Construction Investment Inner Mongolia Energy Co., Ltd. on the valuation benchmark date has been appraised according to the necessary appraisal procedures. The summary of the asset appraisal report is hereby presented as follows:

Appraisal purpose: China Shenhua Energy Company Limited intends to issue shares and pay cash to acquire assets related to coal, pithead coal power, and other assets held by CHN Energy Western Energy Investment Co., Ltd. To this end, the market value of the entire shareholder's equity held by CHN Energy Western Energy Investment Co., Ltd. in Guodian Construction Investment Inner Mongolia Energy Co., Ltd. on the valuation benchmark date is appraised, providing a value reference for the above economic activities.

On 1 August 2025, the China Energy Investment Corporation Co., Ltd. convened its 18th Chairman's Special Meeting of 2025. The meeting reviewed and approved the aforementioned matters, mandated the initiation of the appraisal, and produced the "Minutes of the Chairman's Special Meeting".

Subject asset: The entire shareholders' equity value of Guodian Construction Investment Inner Mongolia Energy Co., Ltd.

Appraisal scope: The total assets and liabilities of Guodian Construction Investment Inner Mongolia Energy Co., Ltd.

As at the valuation benchmark date, the assets within the appraisal scope include current assets, long-term equity investments, other equity instrument investments, fixed assets, construction-in-progress, intangible assets, development expenditure, deferred tax assets, long-term prepaid expenses and other non-current assets, with a total book value of RMB15,039,443,700. The liabilities include current liabilities and non-current liabilities, with a total book value of RMB16,201,807,100. The book value of net assets was RMB-1,162,363,400.

Valuation benchmark date: 31 July 2025

Value type: Market value

Appraisal methods: Asset-based approach and income approach

Appraisal conclusion: The asset appraisal report adopts the results from the Asset-Based Approach as the appraisal conclusion. The specific appraisal conclusion is as follows:

As of the valuation benchmark date, the total asset book value of Guodian Construction Investment Inner Mongolia Energy Co., Ltd. was RMB15,039,443,700, with an

appraised value of RMB23,927,184,900, an increase of RMB8,887,741,200, representing an appreciation rate of 59.10%. The total liability book value was RMB16,201,807,100, with an appraised value of RMB16,199,557,100, a decrease of RMB225 million, representing a depreciation rate of 0.01%. The net asset book value was RMB-1,162,363,400, with an appraised value of RMB7,727,627,800, an increase of RMB8,889,991,200, representing an appreciation rate of 764.82%.

The detailed results of the asset-based approach are shown in the following summary table:

Unless otherwise stated, all amounts in this report are expressed in Renminbi (RMB).

This asset appraisal report is solely for providing value reference for the appraisal purposes described in the report. The validity period of the appraisal conclusion is one year from the valuation benchmark date.

Users of the asset appraisal report shall fully consider the assumptions, limitations, special notes, and their impact on the appraisal conclusion.

The content above is extracted from the main text of the asset appraisal report. To understand the details of the appraisal business and correctly interpret the appraisal conclusion, the full text of the asset appraisal report shall be read.

Main Body of Asset Appraisal Report on the Appraisal of the Entire Shareholders' Equity of Guodian Construction Investment Inner Mongolia Energy Co., Ltd. Held by CHN Energy Western Energy Investment Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

CHN Energy Western Energy Investment Co., Ltd. and China Shenhua Energy Company Limited:

China Enterprise Appraisals Co., Ltd. accepts your engagement and, in accordance with laws, administrative regulations, and asset appraisal standards, adheres to the principles of independence, objectivity, and fairness, using the asset-based approach and income approach, and follows the necessary appraisal procedures to evaluate the market value of the entire shareholders' equity of Guodian Construction Investment Inner Mongolia Energy Co., Ltd. held by CHN Energy Western Energy Investment Co., Ltd. for China Shenhua Energy Company Limited's proposed issuance of shares and cash payment for asset acquisition, as of the valuation benchmark date. The asset appraisal information is hereby reported as follows:

I. Client, Appraised Entity, and Other Users of the Asset Appraisal Report as Defined in the Asset Appraisal Engagement Contract

The clients for this appraisal are CHN Energy Western Energy Investment Co., Ltd. and China Shenhua Energy Company Limited. The appraised entity is Guodian Construction Investment Inner Mongolia Energy Co., Ltd. The other users of the asset appraisal report, as stipulated in the asset appraisal engagement contract, include the higher-level competent authorities of the clients and other parties designated by national laws and regulations to use the asset appraisal report.

i. Profile of client 1

Company name: CHN Energy Western Energy Investment Co., Ltd. (hereinafter referred to as "Western Energy")

Domicile: 20th-21st Floor, Block A, Ningdong Energy and Chemical Base Enterprise Headquarters Building, Ningxia

Legal representative: Shi Jianxin

Registered capital: RMB10 billion

Company type: Limited liability company (state-owned)

Unified social credit code: 91641200MADB99DD3A

Date of incorporation: 1 February 2024

Business term: From 1 February 2024 to indefinite period

Permitted projects: coal mining; power generation, power transmission, and power supply (distribution) services; road cargo transportation (excluding hazardous goods) (projects subject to approval as required by law can only be carried out after approval by the relevant authorities). General projects: coal washing and selection; coal and coal product sales; production of chemical products (excluding licensed chemical products); sales of chemical products (excluding licensed chemical products); import and export of goods; network technology services; research and development of carbon reduction, carbon conversion, carbon capture, and carbon storage technologies (excluding licensed

businesses, projects not prohibited or restricted by laws and regulations may be operated independently according to the law).

ii. Profile of client 2

Company name: China Shenhua Energy Company Limited (hereinafter referred to as "China Shenhua")

Domicile: 22 Xibinhe Road, Andingmen, Dongcheng District, Beijing

Legal representative: Lyu Zhiren

Registered capital: RMB19,868,519,955

Company type: Other limited company (listed)

Unified social credit code: 91110000710933024J

Date of incorporation: 8 November 2004

Business term: From 8 November 2004 to indefinite period

Stock code: 601088.SH, 01088.HK

Business scope: Coal mining (validity subject to the expiration of related permits for each mine); wholesale coal business; project investment; coal washing, processing; development and operation of mining products; internal railway transportation; electricity generation; provision of supporting services for coal, railway, and electricity operations; ship repair; development and use of energy and environmental protection technologies, technology transfer, consulting, and services; import and export business; sale of chemical products, chemical materials, building materials, machinery and equipment (excluding hazardous chemicals); property management. (Market entities have the right to select business activities in accordance with laws and regulations; business activities that require approval in accordance with law shall be subject to approval by relevant authorities for an approved scope; no business activities shall be conducted in projects prohibited and restricted by national and municipal industrial policies.)

iii. Profile of the appraised entity

1. Company overview

Company name: Guodian Construction Investment Inner Mongolia Energy Co., Ltd. (referred to as "Inner Mongolia Energy")

Domicile: Bulian Office, Ulan Mulun Town, Ejin Horo Banner

Legal representative: Wang Jianghu

Registered capital: RMB4,134,600,000

Date of incorporation: 18 November 2005

Business term: From 18 November 2005 to 17 November 2040

Company type: Limited liability company (legal person, not invested in or controlled by natural persons)

Unified social credit code: 911506277794974781

2. Shareholders, their shareholding ratios and equity changes

Guodian Construction Investment Inner Mongolia Energy Co., Ltd. was established in November 2005, jointly funded by the former China Guodian Corporation and Hebei Construction & Investment Group Co., Ltd. (formerly known as Hebei Provincial Construction Investment Company). The company's equity structure at the time of its establishment was as follows:

Unit: RMB'0,000

No.	Name of shareholder	Subscribed capital	Subscription ratio (%)	Paid-in capital	Paid-in ratio (%)
1	China Guodian Corporation	206,730.00	50.00	206,730.00	50.00
2	Hebei Construction & Investment Group Co., Ltd.	206,730.00	50.00	206,730.00	50.00
Total		**413,460.00**	**100.00**	**413,460.00**	**100.00**

In May 2007, China Guodian Corporation transferred 50% of its shares to Guodian Power Development Co., Ltd. The shareholding structure after the change is as follows:

Unit: RMB'0,000

No.	Name of shareholder	Subscribed capital	Subscription ratio (%)	Paid-in capital	Paid-in ratio (%)
1	Guodian Power Development Co., Ltd.	206,730.00	50.00	206,730.00	50.00
2	Hebei Construction & Investment Group Co., Ltd.	206,730.00	50.00	206,730.00	50.00
Total		**413,460.00**	**100.00**	**413,460.00**	**100.00**

In October 2024, Guodian Power Development Co., Ltd. and Hebei Construction & Investment Group Co., Ltd. each transferred 50% of their shares to CHN Energy Western Energy Investment Co., Ltd. The shareholding structure after the change is as follows:

Unit: RMB'0,000

No.	Name of shareholder	Subscribed capital	Subscription ratio (%)	Paid-in capital	Paid-in ratio (%)
1	CHN Energy Western Energy Investment Co., Ltd.	413,460.00	100.00	413,460.00	100.00
Total		**413,460.00**	**100.00**	**413,460.00**	**100.00**

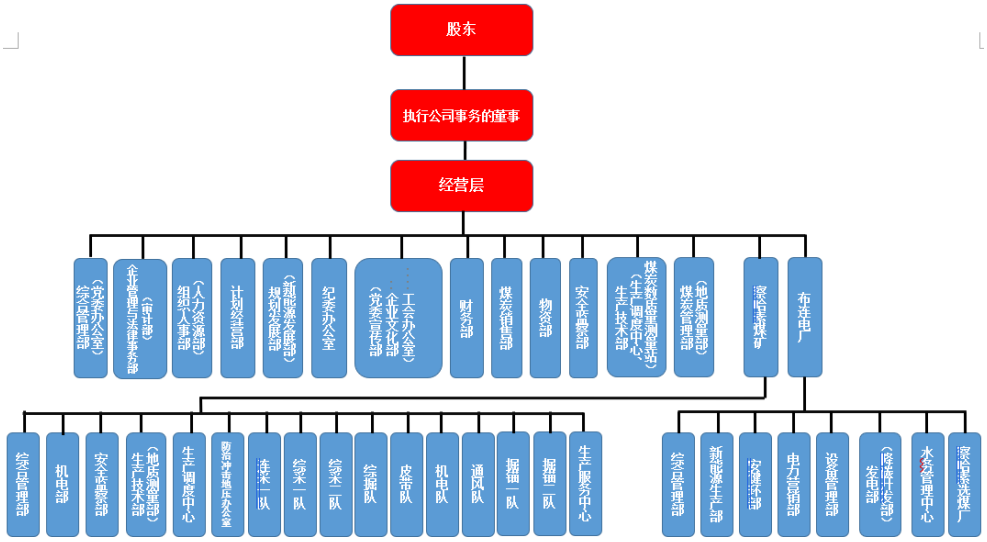
As of the valuation benchmark date, the shareholding structure of Guodian Construction Investment Inner Mongolia Energy Co., Ltd. has not changed again.

3. Ownership and management structure of the company

Inner Mongolia Energy established a Party Committee but does not have a Shareholders' Meeting and the Board of Directors. It appointed one director who is accountable to the shareholder. The company has one general manager, several deputy general managers,

and one chief accountant.

The organisational structure of Inner Mongolia Energy is shown in the diagram below:



股东	Shareholder

As of the valuation benchmark date, Inner Mongolia Construction Investment has two long-term equity investment subsidiaries and one other equity instrument investment. The details are as follows:

Unit: RMB'0,000

Name of investee	Investment date	Shareholding percentage (%)	Accounting method	Investment cost	Book value	
Ordos Railway Investment Co., Ltd.	22 July 2008	30.00	Equity method	27,060.00	27,615.32	
Inner Mongolia Huaxin Guodian Construction Investment Logistics Co., Ltd.	11 March 2010	49.00	Cost method	3,430.00	3,430.00	
Ordos Southern Railway Co., Ltd.	10 September 2010	3.9226	/	20,000.00	29,484.34	

4. Asset, financial, and operating status for the last two years and the current period

The financial status of the appraised entity for the most recent two years and the current period was as follows:

Unit: RMB'0,000

Item	31 December 2023	31 December 2024	31 July 2025
Total assets	1,468,742.91	1,500,173.02	1,503,944.37
Total liabilities	974,742.20	1,719,983.29	1,620,180.71
Owner's equity	494,000.71	-219,810.27	-116,236.34

The operational status of the appraised entity for the most recent two years or and the current period was as follows:

Unit: RMB'0,000

Item	2023	2024	January-July 2025
Operating income	270,534.49	306,577.78	287,242.85
Total profits	-46,319.34	-716,426.24	78,943.12
Net profit	-48,866.49	-718,559.54	86,078.40

The financial statements of the appraised entity as of the valuation benchmark date and for the years 2024 and 2023 have been audited by Ernst & Young Hua Ming LLP , which expressed unqualified audit opinions.

5. Relationship between the client and the appraised entity

The clients for this appraisal are CHN Energy Western Energy Investment Co., Ltd. and China Shenhua Energy Company Limited, both of which are subsidiaries of China Energy Investment Corporation Co., Ltd. The appraised entity is Guodian Construction Investment Inner Mongolia Energy Co., Ltd., a wholly-owned subsidiary of Client One.

iv. Other users of the asset appraisal report as stipulated in the asset appraisal engagement contract

This asset appraisal report is only for use by the client, other users of the asset appraisal report as specified in the asset appraisal engagement contract, and users defined by national laws and regulations. It shall not be used or relied upon by any third party.

II. Appraisal Purpose

China Shenhua Energy Company Limited intends to issue shares and pay cash to acquire assets related to coal, pithead coal power, and other assets held by CHN Energy Western Energy Investment Co., Ltd. To this end, the market value of the entire shareholder's equity held by CHN Energy Western Energy Investment Co., Ltd. in Guodian Construction Investment Inner Mongolia Energy Co., Ltd. on the valuation benchmark date is appraised, providing a value reference for the above economic activities.

On 1 August 2025, the China Energy Investment Corporation Co., Ltd. convened its 18th Chairman's Special Meeting of 2025. The meeting reviewed and approved the aforementioned matters, mandated the initiation of the appraisal, and produced the "Minutes of the Chairman's Special Meeting".

III. Subject Asset and Appraisal Scope

i. Subject asset

The subject asset is the entire shareholders' equity value of Guodian Construction Investment Inner Mongolia Energy Co., Ltd.

ii. Appraisal scope

The appraisal scope includes total assets and liabilities of Guodian Construction Investment Inner Mongolia Energy Co., Ltd. As at the valuation benchmark date, the assets within the appraisal scope include current assets, long-term equity investments, other equity instrument investments, fixed assets, construction-in-progress, intangible assets, development expenditure, deferred tax assets, long-term prepaid expenses and other non-current assets, with a total book value of RMB15,039,443,700. The liabilities include current liabilities and non-current liabilities, with a total book value of RMB16,201,807,100. The book value of net assets was RMB-1,162,363,400. As of the valuation benchmark date, the appraisal scope is as follows:

Unit: RMB'0,000

Item		Book value
Current assets	1	118,275.30
Non-current assets	2	1,385,669.07
Of which: Long-term equity investments	3	31,045.32
Investment properties	4	0.00
Fixed assets	5	652,074.95
Construction in progress	6	148,736.73
Oil and gas assets	7	0.00
Intangible assets	8	224,424.75
Including: Land use right	9	72,838.02
Other non-current assets	10	329,387.30
Total assets	**11**	**1,503,944.37**
Current liabilities	12	941,122.33
Non-current liabilities	13	679,058.37
Total liabilities	**14**	**1,620,180.71**
Net assets	**15**	**-116,236.34**

The subject and scope of the engaged appraisal align with the subject asset and scope

involved in the economic activities. As of the valuation benchmark date, the book value of the assets and liabilities within the appraisal scope has been audited by Ernst & Young Hua Ming LLP , which expressed an unqualified audit opinion.

iii. Main assets within the appraisal scope are as follows

The major assets declared by the enterprise to be included within the appraisal scope include: inventories, long-term equity investments, properties and buildings assets, equipment assets, construction in progress, intangible assets, and development expenditures. The types and characteristics of the main assets are as follows:

1. Inventories

The inventory included in the appraisal scope consists of raw materials, stock turnover materials, and finished products. Raw materials mainly include air heating units, bearings, pin-type belt fasteners, steel belts, shutoff doors, steel pipes, hydraulic cylinders, and hose assemblies. Stock turnover materials primarily include quilts, bedding sets, and composite machine photosensitive drums. Finished products include fine coal and lump coal. The inventories of the appraised entity are mainly stored in various warehouses in the production areas of the mines. As at the valuation benchmark date, the various types of inventory assets are managed by designated personnel and are suitable for normal sales or use.

2. Long-term equity investments and other investments in equity instruments

As of the valuation benchmark date, Inner Mongolia Construction Investment has two long-term equity investment subsidiaries and one other equity instrument investment. The details are as follows:

Unit: RMB'0,000

Name of investee	Investment date	Shareholding percentage (%)	Accounting method	Investment cost	Book value	
Ordos Railway Investment Co., Ltd.	22 July 2008	30.00	Equity method	27,060.00	27,615.32	
Inner Mongolia Huaxin Guodian Construction Investment Logistics Co., Ltd.	11 March 2010	49.00	Cost method	3,430.00	3,430.00	
Ordos Southern Railway Co., Ltd.	10 September 2010	3.9226	/	20,000.00	29,484.34	

* Guodian Construction Investment Inner Mongolia Energy Co., Ltd. has not recorded the second installment of capital contribution totaling RMB19,600,000 to Inner Mongolia Huaxin Guodian Construction Investment Logistics Co., Ltd. under the paid-in capital account.

The subscribed capital and paid-in capital for long-term equity investments and other equity instruments are shown in the table below:

Unit: RMB'0,000

No.	Investee	Equity ratio	subscribed capital	Paid-in capital
1	Ordos Railway Investment Co., Ltd.	30.00%	90,200.00	90,200.00
2	Inner Mongolia Huaxin Guodian Construction Investment Logistics Co., Ltd.	49.00%	3,000.00	3,000.00
3	Ordos Southern Railway Co., Ltd.	3.9226%	550,444.00	550,444.00

* Guodian Construction Investment Inner Mongolia Energy Co., Ltd. has not recorded the second installment of capital contribution totaling RMB19,600,000 to Inner Mongolia Huaxin Guodian Construction Investment Logistics Co., Ltd. under the paid-in capital account.

3. Properties and buildings assets

The properties and buildings assets included in the scope of the appraisal were mainly constructed between 2013 and 2025 and are located within the premises of the Bulian Power Plant, Chahasu Coal Mine, and Chahasu Coal Washery in Bulian Township, Ordos City, Inner Mongolia, under the ownership of Guodian Construction Investment Inner Mongolia Energy Co., Ltd. The basic details of the properties and buildings are as follows:

The buildings at Bulian Power Plant are classified by their use into production, office, and residential buildings. The production buildings mainly include the main plant building, control rooms and supporting rooms, dust collector room, boiler feedwater treatment room, laboratory building, start-up boiler room, and industrial wastewater treatment station. The office buildings mainly include the administrative office building (Building 2), maintenance building 1, fire station building, and the expanded production and maintenance building. The residential buildings mainly include Building 3 (canteen and dining hall), Building 4 (hostel), and Building 5 (hostel). The structures include boiler enclosures, chimneys, No. 2 and No. 3 coal conveyor bridges, turbine cooling towers, intermediate water regulation pools, the 500kV booster station, boiler foundations, turbine generator foundations, the front square of the plant, slope protection, and the ash yard. The pipelines include medium water pipelines, plant fire-fighting pipelines, rainwater drainage pipelines, backup water sources, and industrial wastewater treatment pipelines.

Chahasu Coal Mine is located approximately 38.5 km southeast of Ejin Horo Banner, Ordos City, Inner Mongolia, at a bearing of 147°. Geographical coordinates (2000 National Geodetic Coordinate System): Longitude 109°53′33.354" to 110°01′58.787", Latitude 39°15′46.180" to 39°23′06.179". The buildings at Chahasu Coal Mine are classified by their use into production, office, and residential buildings. The production buildings mainly include the main shaft headframe, auxiliary shaft headframe, joint building, auxiliary shaft tower, mine water treatment station, and heat exchange station. The office buildings mainly include the coal mine conference building, comprehensive building, temporary Building 1, temporary Building 2, and the rescue building. The residential buildings mainly include coal mine Building 1, coal mine Building 4–11, coal mine Building 13, and coal mine Building 14. The structures include ash slurry utilisation discharge holes, material storage shed, auxiliary shaft gantry crane area, material storage area for the mining team, plant roads, main and auxiliary shaft connecting roads, and east wing boundary ventilation well enclosure walls. The pipelines include watering pipes, grouting pipes, heating and ventilation pipes, medium water pipes, and heating pipelines. The shaft engineering mainly includes: main inclined shaft, auxiliary shaft, ventilation shaft, east return air vertical shaft, auxiliary shaft bottom car park, Level 1 east wing return air drift, Level 1 east wing belt conveyor drift, Level 1 east wing auxiliary transport drift, Level 2 coal seam auxiliary transport drift (3-1 coal seam), Level 2 coal seam return air drift (3-1 coal seam), Level 2 coal seam return air drift (2-2 upper coal seam), 31st mining area auxiliary belt conveyor drift, 31st mining area auxiliary transport drift, 31st mining area auxiliary return air drift, west wing auxiliary transport drift, associated drifts, and west wing return air drift and associated drifts.

The buildings at Chahasu Coal Washery are classified by their use into production, office, and residential buildings. The production buildings mainly include the main plant, air compressor room, concentration workshop and pump room, mechanical repair workshop and spare parts warehouse, screening and crushing workshop, and ring water pump room. The office buildings mainly include the integrated control and laboratory office building, mechanical repair workshop and spare parts warehouse, medium

storage room, and gatekeeper room. The residential buildings mainly include restrooms. The structures include the main shaft driving motor room to the raw coal warehouse conveyor bridge, No. 1 transfer point to the raw coal belt conveyor bridge in the screening and crushing workshop, product warehouse to the fast loading station belt conveyor bridge, fine coal conveyor bridge, newly added vehicle loading system, lump coal grading and sales warehouse (10,000 tons), raw coal warehouse, product warehouse (3φ30M), slag storage warehouse (1φ12M), and external coal storage yard. The pipelines mainly include magnetic separation pipes, production pipes, and process pipes.

4. Equipment assets

The equipment assets of Guodian Construction Investment Inner Mongolia Energy Co., Ltd. are primarily located at the Bulian Power Plant, Chahasu Coal Mine, and Chahasu Coal Washery. The basic overview of the equipment assets is as follows:

(1) Machinery

1) Bulian Power Plant's machinery

The Bulian Power Plant's construction project consists of two 660MW ultra-supercritical coal-fired generating units, with a total installed capacity of 1,320MW. Unit 1 was commissioned in March 2013, and Unit 2 was commissioned in June 2013. The specific equipment details are as follows:

A. Thermal System:

The boilers are manufactured by Babcock & Wilcox Beijing Co., Ltd., and the model is B&WB-2082/28.0-M.

The boiler type is ultra-supercritical with a variable-pressure operation direct-current furnace, featuring a single furnace chamber, once-through intermediate reheating, front and rear wall opposed combustion, balanced ventilation, solid slag discharge, and a full-steel suspended structure Π-type boiler.

The boilers are designed based on the maximum continuous load (B-MCR) condition, with a maximum continuous evaporation rate of 2082 t/h, main steam pressure of 28.0 MPa, and a reheater steam outlet temperature of 603°C.

The turbines are manufactured by Shanghai Electric Group Co., Ltd., with the model NZK660-27/600/600. The turbines are ultra-supercritical, once-through intermediate reheating, single-shaft, triple-casing, two-stage exhaust, direct air-cooling condensing steam turbines.

The new steam pressure is 28 MPa, the new steam temperature is 600°C, the reheated steam temperature is 603°C, and the rated speed is 3,000 r/min.

The generators are manufactured by Shanghai Electric Group Co., Ltd., with the model QFSN-660-2 three-phase synchronous generator. The cooling method is water-hydrogen-hydrogen, and the excitation method adopts self-excitation static excitation.

The rated power of the generator is 660 MW, the rated stator voltage is 20 kV, the rated power factor is 0.90, the rated speed is 3,000 r/min, and the frequency is 50 Hz.

Except for the auxiliary steam system, which is designed according to the main pipe system, the rest of the thermal system is designed with unit systems. The thermal cycle uses a seven-stage reheating extraction steam system, equipped with three high-pressure heaters, one deaerator, and three low-pressure heaters.

B. Coal Storage and Transportation System

The coal is directly transported to the power plant's raw coal storage from the fine coal and cleaned middle coal storage areas of Chahasu Coal Mine's industrial square using a coal conveyor bridge.

C. Ash and Slag Removal System

The ash removal system adopts positive pressure dense-phase pneumatic conveying. Electrostatic precipitators and economizer ash hoppers are equipped with senders. Under the action of compressed air, ash is conveyed to the ash storage by pipelines.

The slag removal system adopts air-cooled dry slag removal machines. Each boiler is equipped with an air-cooled dry slag removal machine at the bottom, which cools and transports the slag to the bucket elevator outside the boiler room. The bucket elevator lifts the slag to the slag storage.

D. Water Treatment System

The boiler feedwater treatment system adopts coagulation clarification, ultrafiltration, activated carbon filtration, reverse osmosis, and primary desalting with mixed bed technology. The output is 150 t/h.

The condensate water treatment system adopts a powder resin-covered filter combined with a mixed bed system. The condensate water treatment system of two units shares one external regeneration system.

E. Direct Air-Cooling System

A mechanical ventilation direct air-cooling system (ACC) is used, where the exhaust steam from the two low-pressure cylinders of the turbine is routed through two DN6200 exhaust pipes, each with four DN3000 steam distribution pipes, to distribute exhaust steam to the air-cooled condenser tube bundles. The unit's cooling system is an independent unit cooling system. Each unit has 56 A-frame basic cooling units for the air-cooled condensers, which are arranged in eight groups outside the turbine room. Each group consists of seven cooling units, with a mixed configuration of counter-flow and parallel-flow air-cooled condensers. There are five parallel-flow units and two counter-flow units in each group, with the counter-flow units placed in the middle of each group.

F. Electrical System

The main transformers are manufactured by TBEA Shenyang Transformer Group Co., Ltd., with two DFP-250000/500 transformers.

The electrical main connection adopts a half-breaker connection with two complete series and one half-series. To improve system reliability, the same components are connected to different busbars. The 500 kV distribution device is arranged in a ring layout for outdoor medium-sized distribution equipment.

G. Thermal Control System

A furnace, turbine, and electrical integrated control system is used. The two units share one central control room. The main and auxiliary systems for the boiler, steam turbine, air-cooled island, generating set, plant auxiliary power, bypass system, and small turbines are all implemented within the Distributed Control System (DCS), adopting a furnace, turbine, electrical, and grid integrated control approach.

H. Desulfurisation and Denitrification Systems

The integrated desulphurisation and dust removal system is constructed by Beijing Guodian Longyuan Environmental Engineering Co., Ltd. The desulphurisation process adopts the limestone-gypsum wet desulphurisation method. The system uses a one-boiler-one-tower configuration with counter-current spraying, no bypass flue, and no GGH heat exchange device. An additional 50% booster fan outlet flue gas bypass and a booster fan outlet flue gas waste heat recovery system are added. The system uses a limestone wet ball mill slurry preparation system and is equipped with a wastewater treatment system.

The denitrification system adopts Selective Catalytic Reduction (SCR) denitrification equipment.

2) Chahasu Coal Mine machinery

The Chahasu Coal Mine is designed with a production capacity of 8 million tons per year. The machinery was purchased between 2008 and 2025, primarily including hoisting system equipment, mining face system equipment, ventilation system equipment, underground drainage equipment, mine power supply, fire prevention and extinguishing system, monitoring and control system, and compressed air self-rescue system equipment, distributed across the mine’s surface work areas and underground faces.

A. Hoisting and transportation system equipment:

The auxiliary shaft of the mine is responsible for hoisting personnel, underground materials, and equipment. It is equipped with two hoisting systems, one with a specially made double-layer large cage + balance weight and a pair of specially made traffic cages. The large cage + balance weight hoisting system is responsible for hoisting personnel during shift changes, as well as transporting hydraulic supports and materials using a JJKM-5×6(III) type tower multi-rope friction hoist with a maximum hoisting speed of 9.42 m/s. The other specially made traffic cage hoisting system is responsible for hoisting scattered personnel using a JKM-2.25×4(III) type tower multi-rope friction hoist with a maximum hoisting speed of 7.64 m/s.

The main transportation system adopts belt conveyors, with the main inclined shaft belt conveyor having a width of 1,800 mm, a length of 1,754 m, and a transport capacity of 3,500 t/h.

B. Mining face system equipment:

The mining face coal mining method adopts inclined longwall retreat mining, with full height and full collapse mechanised mining. The main equipment for the recovery face includes MG900/2550-GWD type shearer, SGZ1250/3000 type scraper conveyor, SZZ1550/525 type transfer machine, DJS/160/350/3*630+3*630 type extendable belt conveyor, ZY21000/30/63D type shield hydraulic support, ZYG21000/30/63D type transition support, and YT21000/28/55D type end support. The main equipment for the comprehensive mining preparation working face includes:7LS2A type coal cutter, SGZ1000/2000 type scraper conveyor, DSJ140/200/3×500 belt conveyor, ZY12000/18/35D type shielded hydraulic support. The main equipment for the coal transport entry face includes: EJM340 type combined drilling and anchoring machine for excavation, DSJ100/80/2*200-2,500 mm belt conveyor. The main equipment for the return air entry face includes:EJM340/4-2 type combined drilling and anchoring machine for excavation, DSJ100/80/2*200-2,500 mm belt conveyor.

C. Ventilation system equipment:

The mine ventilation system adopts a zoned ventilation method with mechanical

exhaust, and the main equipment includes FBCDZ№28/2×450 type explosion-proof axial flow fan for coal mines, and GAF33.5-19-1 type fan.

D. Underground drainage equipment:

The mine drainage system consists of the central pump room and central water chamber (the total capacity of the main and auxiliary water chambers is 4,033 m³), adopting a centralised primary drainage method. The central pump room is equipped with three MD580-60×8P mining durable multi-stage centrifugal pumps (one for use, one for backup, and one for maintenance).

E. Power supply system equipment:

The Ulan Mulun 220 kV substation and the Kangbashi 220 kV substation provide dual-circuit power to the mine's 110 kV surface substation. The two circuits are configured with one in use and one on standby, with the standby circuit live and ready for use. The surface 110 kV substation currently has two 40,000 kVA main transformers, converting the 110 kV power supply into 10 kV for underground and surface power supply points.

F. Safety monitoring system equipment:

The safety monitoring system model is KJ90X. The system is equipped with a primary and backup monitoring unit, ensuring dual-machine hot standby and 24-hour continuous operation. It is powered by dual power sources and is equipped with grounding and lightning protection devices.

G. Compressed air self-rescue system:

The mine's compressed air machine room is located on the north side of the auxiliary shaft and is equipped with two M355-A8-2S type air-cooled screw compressors.

3) Chahasu Coal Washery machinery

The machinery at Chahasu Coal Washery were purchased between 2013 and 2025. The main equipment includes the raw coal storage system, screening and crushing system, coal washing system, storage and unloading system, and loading system.

A. Raw Coal Storage System equipment:

The equipment is primarily located at the raw coal storage area, and includes the XZG1118 type coal feeder, Q = 1750 t/h belt conveyor, iron remover, and electric hoist.

B. Screening and Crushing System equipment:

The equipment is primarily located in the screening and crushing workshop, and includes the HDDR24×36 type large coal crusher, SQR24×96 type secondary crusher for large coal, SLG3048 type raw coal de-sliming screen, and SLO3673 single-layer raw coal classification screen.

C. Coal Washing System equipment:

The equipment is mainly located in the coal preparation workshop. Key equipment includes SLG3048 type lump raw coal desliming screen, T26054 type lump coal heavy medium separation tank, SLO2.4×6.1 type lump clean coal deshaling and dewatering screen, Single drum N = 4 kW magnetic separator, and GPJ120 type pressure filter.

D. Storage and Unloading System equipment:

The equipment is primarily located at the product warehouse and loading station, and includes Q = 1,650 t/h scraper conveyor for large coal distribution, GLD1500/5.5 type belt feeder, volumetric hopper-based loading system, and Q = 5,400 t/h belt conveyor

from the product warehouse to the fast-loading station.

E. Loading System equipment:

The equipment is mainly located at the loading station. Key equipment includes Q = 1,000 T/H distribution scraper conveyor and SCS-100 type non-pit heavy vehicle weighbridge.

(2) Vehicles

A total of 99 vehicles is included within the scope of the appraisal, purchased and put into use between 2008 and 2024. These include Audi sedans, Toyota SUVs, Passat sedans, Buick GL8, Haval H9 buses, fire trucks, multifunctional dust suppression vehicles, forklifts, and electric tricycles. As of the valuation benchmark date, among the aforementioned vehicles, three vehicles are awaiting decommissioning, while the remaining vehicles are all in normal use.

As of the valuation benchmark date, 65 of the vehicles are for internal use and do not require vehicle registration certificates, while the remaining vehicles have all been registered, with the registered owner being Guodian Construction Investment Inner Mongolia Energy Co., Ltd.

(3) Electric equipment

A total of 4,030 electronic devices is included within the scope of the appraisal, purchased and put into use between 2006 and 2025. These include computers, printers, copiers, air conditioners, office furniture, kitchen equipment, instruments, and metres. As of the valuation benchmark date, 263 of these electronic devices are awaiting scrapping, while the remaining devices are in normal use.

5. Construction in progress

Construction in progress included in the appraisal scope consists of civil engineering, equipment installation projects and project materials. The specific details are as follows:

(1) Civil engineering

The construction projects included in the scope of the appraisal for civil engineering mainly consist of the Chahasu Coal Mine’s staff bathhouse project, the railway line project, and the Bulian Power Plant - thermal power flexibility retrofit project. The main details of the civil engineering projects are as follows:

The Chahasu Coal Mine’s staff bathhouse project started in December 2022. It is a five-storey frame structure with a building area of 4,460.16 square metres. As of the valuation benchmark date, the foundation construction has been completed, and the remaining work is expected to be finished by December 2026. The estimated project cost is RMB13,198,900.00, with a book value of RMB2,468,839.24. The construction progress and payment ratio is 19.00%.

The railway line project commenced in January 2011, with a total length of 17.112 km. The estimated total investment is RMB 1,226,837,800.00, and the book value is RMB 911,779,878.98. The construction was halted at the end of 2016 due to land ownership issues. According to the group’s documents, the line is intended to connect to the newly built Dongyue Railway. Based on the construction progress of the Dongyue Railway, the project is expected to start in March 2026 and be completed in June 2029. As of the valuation benchmark date, the construction of the embankment, slope protection, and part of the bridge and culvert foundations has been completed.

The Bulian Power Plant - thermal power flexibility retrofit project primarily involves

the construction of 40 wind turbines with a total capacity of 270 MW. As of the valuation benchmark date, the installation and grid connection of six units have been completed. The civil engineering works mainly include auxiliary buildings within the substation, hazardous waste storage, deep well pump room, walls, retaining walls, and external roadworks.

(2) Equipment installation projects

A total of 30 equipment installation projects is included in the scope of the appraisal. These primarily include the Guodian Power Inner Mongolia Ejin Horo Banner Bulian Power Plant's thermal power flexibility retrofit and renewable energy integration project, the intelligent scheduling system construction project for the coal washery, the intelligent coal washery block coal loading system construction project, the Bulian Power Plant-NCS system information upgrade project, the partial 10 kV high-voltage switch modification project, the underground 5G network coverage project at Chahasu Coal Mine, and the heating balance system construction project at Guodian Cconstruction Investment Inner Mongolia Energy Co., Ltd. The Guodian Power Inner Mongolia Ejin Horo Banner Bulian Power Plant's thermal power flexibility retrofit and renewable energy integration project consists of a 270 MW wind power project. This project is being carried out by Shandong Electric Power Construction Third Engineering Co., Ltd. and China Construction Third Engineering Bureau Group Co., Ltd., with each party responsible for the installation of 40 wind turbine units as well as the associated power transformation, distribution, and control systems. As of the valuation benchmark date, six units have been installed and connected to the grid, with the remaining units being installed gradually. Other ongoing equipment installation projects are mainly scattered technical modification projects. As of the valuation benchmark date, the Bulian Power Plant-NCS system information upgrade project, partial 10 kV high-voltage switch modification project, and the Chahasu Coal Mine underground 5G network coverage project have been completed and put into operation, while equipment installation is ongoing for other projects.

(3) Project materials

All materials and supplies procured for construction projects in progress included in the appraisal scope are stored in the company's various material warehouses.

6. Intangible assets declared by the enterprise

The intangible assets declared by the enterprise include land use rights, mining rights, and other intangible assets. The specific details are as follows:

(1) Intangible assets - land use right

The land use rights declared by the enterprise and included in the scope of the appraisal consist of 99 land use rights with certificates and one land requisition fee. The land use rights with certificates are located in Zhasake Town, Ulan Mulun Town, and Ejin Horo Town in Inner Mongolia. As of the valuation benchmark date, no impairment provision has been made for these lands, nor have any additional rights been set on the land. The details of the lands are as follows:

No.	Parcel name	Certificate holder	Land title certificate No.	Nature of rights	Usage	Area (m²)

(2) Intangible assets - mining rights

The enterprise has declared one mining right that is included in the appraisal scope, with a book value as of the valuation benchmark dateof RMB1,435,945,940.40. Mining Licence No.: C1500002024071201571 48; Miner: Guodian Construction Investment Inner Mongolia Energy Co., Ltd.; Mine Name: Chahasu Coal Mine, Dongsheng Coalfield, Ordos City, Inner Mongolia Autonomous Region; Extracted Mineral: Coal; Mining Method: Underground Mining; Production Capacity: 8 million tons/year; Mining Area: 77.9515 square kilometres; Validity Period: Thirty years, from 23 July 2024 to 22 July 2054; Issuing Authority: Inner Mongolia Autonomous Region Department of Natural Resources.

(3) Intangible assets - other intangible assets

The other intangible assets within the scope of the appraisal include: software assets, coal capacity replacement quotas, invention patents, utility model patents, and software copyrights. As of the valuation benchmark date, the other intangible assets included in the scope of the appraisal, except for software and coal production capacity replacement quotas, are off-balance-sheet assets.

1) Software

The enterprise has declared 26 software-related intangible assets within the scope of the appraisal, including: Zhongke Yutai Attendance Software, Computer Terminal Confidential Information Elimination System, Smart Enterprise Application Development Platform, MUSE Full-Range Power Plant Simulation Support Platform

Software3D Visualisation System, Full Data Integration System. These assets were all acquired via purchase. Among them, eight have been discontinued, while the remaining 18 are in normal use.

2) Coal production capacity replacement quotas

There are four coal production capacity replacement quotas, with a total production capacity of 2 million tons/year as of the valuation benchmark date.

3) Patent rights – invention and utility model patents

The enterprise has declared a total of 317 patents within the scope of the appraisal, including 94 invention patents and 223 utility model patents. These patents primarily include: Intelligent Ash Cleaning Closed-loop Control Method, Device, and System for Coal-fired Power Plant Boilers and Horizontal Full-Section Efficient Dust Removal Device for Coal Mines. All of these patents have been granted with valid certificates of rights. Among them, 217 patents are solely owned by Guodian Construction Investment Inner Mongolia Energy Co., Ltd., and 100 are jointly owned with Guoneng Langxinming Environmental Protection Technology Co., Ltd., China University of Mining and Technology, and other companies or institutions. The patents were obtained through independent research and development or outsourced R&D, and have been applied in practice. The annual patent fees have been paid on time. Detailed information can be found in the "Asset-based Approach Appraisal Details Table"

Regarding the jointly owned patents, the appraised entity has provided a statement and guarantees that these patents are either solely owned or co-owned with other companies, and there are no ownership disputes or potential disputes. For jointly owned patents, all parties have the right to apply them in their own production and operations. Therefore, the resulting income and costs are enjoyed and borne by each party.

4) Software copyrights

The enterprise has declared 197 software copyrights within the appraisal scope. All of these copyrights have been authorised by the National Copyright Administration. Among them, 40 software copyrights are solely owned by the appraised entity, with the registered rights holder being Guodian Construction Investment Inner Mongolia Energy Co., Ltd. The remaining 157 software copyrights are jointly owned by the appraised entity and other companies or individuals. The specific details of these software copyrights can be found in the "Asset-based Approach Appraisal Details Table".

Regarding the jointly owned software copyrights, the appraised entity has provided a statement and guarantees that these software copyrights are either solely owned or co-owned with other companies or individuals, and there are no ownership disputes or potential disputes. For the jointly owned software copyrights, all parties have the right to apply them in their own production and operations. Therefore, the resulting income and costs are enjoyed and borne by each party.

iv. Other off-balance-sheet assets declared by the enterprise

The off-balance-sheet assets declared by the enterprise and included in the scope of the appraisal are patent rights and software copyrights. For details, please refer to "Intangible Assets Declared by the Enterprise".

v. Relevant assets referenced from reports of other institutions

The appraised value of the mining rights in this asset appraisal report was determined with reference to the mining rights appraisal conclusion issued by China Enterprise Appraisals Co., Ltd. The referenced appraisal report is summarised as follows:

Asset Appraisal Report on the Appraisal of the Entire Shareholders' Equity of Guodian Construction Investment Inner Mongolia Energy Co., Ltd. Held by CHN Energy Western Energy Investment Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1077
Subject asset	Mining Rights of Chahasu Coal Mine, Dongsheng Coalfield, Ordos City, Inner Mongolia Autonomous Region
Appraisal scope	The delineated boundary of the inflection point coordinates and the remaining resource reserves within the boundary of Chahasu Coal Mine, Dongsheng Coalfield, Ordos City, Inner Mongolia Autonomous Region
valuation benchmark date	31 July 2025
Value type	Market Value
Appraisal method	Discounted Cash Flow Method

IV. Value Type

Based on the appraisal purpose, the value type of the subject asset is determined to be market value.

Market value refers to the estimated value of the subject asset in normal and fair transactions as of the valuation benchmark date, between a willing buyer and a willing seller, each acting rationally and without coercion.

V. valuation benchmark date

The valuation benchmark date for this report is 31 July 2025.

The valuation benchmark date is determined by the client. The selection of the valuation benchmark date mainly considers the realisation of economic activities and end-of-accounting-period factors. Asset appraisal provides a value reference for assets at a specific point in time. By choosing the end of the accounting period as the valuation benchmark date, it can comprehensively reflect the overall status of the appraised assets. At the same time, adhering to the principles of ensuring the appraisal results effectively serve the appraisal purpose, accurately delineating the appraisal scope, conducting precise and efficient verification of assets, and rationally selecting the basis for appraisal, the date closest to the planned realisation date of the relevant economic behavior was selected as the valuation benchmark date.

VI. Basis of Appraisal

i. Basis for economic activities

Minutes of the 18th Chairman's Special Meeting of the China Energy Investment Corporation Co., Ltd. in 2025 (1 August 2025).

ii. Legal and regulatory basis

1. *Asset Appraisal Law of the People's Republic of China* (adopted at the 21st Session of the Standing Committee of the 12th National People's Congress on 2 July 2016);

2. *Company Law of the People's Republic of China* (second amendment at the 7th Session of the Standing Committee of the 14th National People's Congress on 29 December 2023);

3. *Civil Code of the People's Republic of China* (adopted at the 3rd Session of the 13th National People's Congress on 28 May 2020);

4. *Securities Law of the People's Republic of China* (second amendment at the 15th Session of the Standing Committee of the 13th National People's Congress on 28 December 2019);

5. *Law of the People's Republic of China on the State-Owned Assets of Enterprises* (adopted at the 5th Session of the Standing Committee of the 11th National People's Congress on 28 October 2008, effective from 1 May 2009);

6. *Vehicle Purchase Tax Law of the People's Republic of China* (approved at the 7th Session of the Standing Committee of the 13th National People's Congress on 29 December 2018);

7. *Law of the People's Republic of China on Enterprise Income Tax* (second amendment at the 7th Session of the Standing Committee of the 13th National People's Congress on 29 December 2018);

8. *Law of the People's Republic of China on the Administration of Urban Real Estate* (third amendment at the 12th Session of the Standing Committee of the 13th National People's Congress on 26 August 2019);

9. *Land Administration Law of the People's Republic of* China (third amendment at the 12th Session of the Standing Committee of the 13th National People's Congress on 26 August 2019);

10. *Resource Tax Law of the People's Republic of China* (adopted at the 12th Session of the Standing Committee of the 13th National People's Congress on 26 August 2019)

11. *Patent Law of the People's Republic of China* (fourth amendment at the 22nd Session of the Standing Committee of the 13th National People's Congress on 17 October 2020);

12. *Copyright Law of the People's Republic of China* (third amendment at the 23rd Session of the Standing Committee of the 13th National People's Congress on 11 November 2020);

13. *Energy Law of the People's Republic of China* (adopted at the 12th Session of the Standing Committee of the 14th National People's Congress on 8 November 2024, effective from 1 January 2025)

14. *Mineral Resources Law of the People's Republic of China* (amended at the 12th Session of the Standing Committee of the 14th National People's Congress on 8 November 2024);

15. *Implementation Regulations of the Enterprise Income Tax Law of the People's Republic of China* (amended by State Council Order No. 714 on 23 April 2019);

16. *Interim Regulations on the Supervision and Administration of State-owned Assets of Enterprises (*second amendment by State Council Order No. 378 on 2 March 2019);

17. *Interim Regulations of the People's Republic of China on City and Town Land Use Tax* (fourth amendment by State Council Order No. 17 on 2 March 2019);

18. *Interim Regulations on Value-Added Tax of the People's Republic of China* (second amendment by State Council Order No. 134 on 19 November 2017);

19. *Regulations on the Assets Appraisal and Management of State-owned Assets* (amended by State Council Order No. 91 on 29 November 2020);

VII. Appraisal Methods

Income approach refers to various appraisal methods that capitalise or discount the expected income of the subject asset to determine its value.

Market approach refers to various appraisal methods that compare the subject asset with comparable references, using the market price of the comparable references as a basis to determine the value of the subject asset.

Asset-based approach refers to an appraisal method where the value of the subject asset is determined based on the balance sheet of the appraised entity or business on the valuation benchmark date, assessing the value of identifiable on-balance-sheet and off-balance-sheet assets and liabilities.

The appraisal methods selected for this assessment are: Income approach and asset-based approach.

i. Reasons for selecting appraisal methods

Reason for selecting the asset-based approach: As of the valuation benchmark date, the book value of the assets and liabilities within the appraisal scope has already been audited. Each asset and liability of the appraised entity can be identified. The identifiable assets and liabilities can each be individually assessed using an appropriate appraisal method, thus meeting the conditions for applying the Asset-Based Approach.

Reason for selecting the income approach: The appraised entity has the foundation and conditions for continued operations, with standard accounting procedures, clear management, and stable, well-defined business sources. The management team has a detailed plan for the company’s current operations and future development. The future expected income and operational risks can be reasonably predicted, making the income approach applicable.

Reason for not selecting the Market Approach: The Market Approach relies on the existence of an active public market with sufficient market data and comparable transaction cases. The appraised entity is a non-listed company. Listed companies in the same industry differ significantly from the valued enterprise in terms of business structure, corporate scale, asset allocation and utilisation, operational stage, growth potential, operational risks, financial risks, and others. Furthermore, there were few comparable transactions, mergers, or acquisitions within the same industry near the valuation benchmark date. Reliable operational and financial data from comparable transactions are difficult to obtain, making it impossible to calculate appropriate value ratios. Therefore, the market approach was not adopted for this appraisal.

ii. Introduction to the appraisal methods

1. Income approach

The Income Approach used in this appraisal is the discounted cash flow (DCF) method to indirectly determine the entire shareholders’ equity by evaluating the overall value of the enterprise. The overall value of the enterprise consists of the value of operating assets generated from normal business activities and the value of non-operational assets unrelated to normal business activities. For the determination of the value of operational assets, the Free Cash Flow Discount Model is employed, which uses the future free cash

flows of the enterprise for several years as a basis, discounted at an appropriate discount rate and then summed up. The calculation model is as follows:

Entire shareholders' equity value = Enterprise overall value - Interest-bearing debt value

(1) Enterprise overall value

The enterprise overall value refers to the sum of the entire shareholders' equity and the interest-bearing debt value. According to the asset allocation and usage situation of the appraised entity, the formula for calculating the enterprise overall value is as follows:

Enterprise overall value = Operating asset value + Surplus asset value + Non-operating asset value - Non-operating liability value + Long-term equity investment value

1) Operational asset value

Operational assets are those related to the appraised entity's production and business operations, which are involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The calculation formula for operating asset value is as follows:

$$P = \sum_{i=1}^{n} \frac{F_i}{(1+r)^i} + \frac{F_n}{r \times (1+r)^n}$$

Wherein: P: The value of the enterprise's operating assets as of the valuation benchmark date;

F_i: The expected free cash flow of the enterprise in the i-th year after the valuation benchmark date;

F_n: The expected free cash flow of the enterprise at the end of the detailed forecast period;

r: The discount rate (weighted average cost of capital, WACC);

n: The detailed forecast period;

i: The i-th year of the detailed forecast period.

The free cash flow of the enterprise is calculated as follows:

Enterprise free cash flow = Earnings before interest and taxes (EBIT) - Depreciation and amortisation - capital expenditures - Increase in working capital

The discount rate (WACC) is calculated as follows:

$$WACC = K_e \times \frac{E}{E+D} + K_d \times (1-t) \times \frac{D}{E+D}$$

Wherein: K_e: Cost of equity capital;

K_d: Cost of debt capital;

E: Market value of equity;

D: Market value of debt;

t: Tax rate.

Of which, the cost of equity capital is calculated using the Capital Asset Pricing Model (CAPM). The calculation formula is as follows:

$$K_e = r_f + MRP \times \beta_L + r_c$$

Where: r_f: Risk-free rate of return;

MRP: Market risk premium;

β_L: Systematic risk coefficient of equity;

r_c: Company-specific risk adjustment coefficient.

2) Surplus asset value

Surplus assets are those that exceed the enterprise's operational needs as of the valuation benchmark date, and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The appraised entity's surplus assets include cash. The surplus assets in this appraisal are appraised using the cost method.

3) Non-operational asset and liability values

Non-operational assets and liabilities are those that are unrelated to the appraised entity's business operations and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The non-operating assets and non-operating liabilities of the appraised entity include prepaid expenses, other receivables, abnormal inventory, fixed assets, construction in progress, other non-current assets, intangible assets, deferred tax assets, accounts payable, other payables, and provisions. The cost method is used for the appraisal of these items.

4) Long-term equity investment value

Long-term equity investments refer to the external equity investments made by the enterprise as of the valuation benchmark date. The entire shareholders' equity of the invested entity, as confirmed using an appropriate appraisal method, is multiplied by the equity holding percentage to determine the long-term equity investment value.

(2) Interest-bearing debt value

Interest-bearing debt refers to liabilities that the appraised entity must pay interest on as of the valuation benchmark date.

2. Asset-based approach

(1) Current assets

1) Monetary funds, including bank deposits and other monetary funds, are assessed at their verified book value through verification of bank statements and bank confirmations.

2) Accounts receivable, other receivables: The assessors investigated the sales credit policy, customer composition, creditworthiness, and historical accounts receivable recovery of the appraised entity. Following the principle of materiality, the appraisers conducted confirmations for some of the accounts receivable and reviewed relevant contracts. Based on the verification of accounts receivable, the evaluators determined the appraised value based on the amount that is likely to be collected for each item. For amounts believed to be fully recoverable, the total receivables are used to calculate the appraised value. For amounts that are likely to be unrecoverable, the evaluators

estimated the amount based on historical data and on-site investigations, considering factors such as the amount, overdue time, reasons for non-payment, the debtor's financial status, creditworthiness, and operational management. The appraised value is then calculated after deducting the estimated risk loss. Simultaneously, the "Provision for Bad Debts" item on the balance sheet is considered as zero.

3) For prepayments, the appraisers conducted inquiries with the relevant personnel of the appraised entity to understand the reasons for the formation of the prepayments and the creditworthiness of the counterparties. Following the principle of materiality, the appraisers conducted confirmations for some of the prepayments and reviewed the relevant contracts. Based on the verification of advance payments, the assessors determined the value by considering the goods or related rights that could be recovered for each payment. For amounts believed to be fully recoverable, the total prepaid amounts are used to calculate the appraised value.

4) Inventories

For raw materials, it was found that some raw materials, due to being purchased a long time ago, can no longer be used. For such assets with no recoverable value, the appraised value is zero. For some metal assets with recoverable value, the residual value is considered. For other raw materials, which were purchased recently, the price change on the valuation benchmark datewas minimal, and the book value closely reflects the market conditions. The verified book value is used as the appraised value.

For in-stock turnover materials, it was found that these materials turnover quickly. The price change on the valuation benchmark datewas minimal, and the book value closely reflects the market conditions. The verified book value is used as the appraised value.

For Finished Products, the appraised entity uses actual cost accounting, including purchase costs, processing costs, and other costs. As of the valuation benchmark date, the finished products are normal sales items. The appraised value is determined based on the sales price at the valuation benchmark date, minus sales expenses, taxes and surcharges, and an appropriate amount of after-tax net profit. The specific appraisal calculation formula is as follows:

The appraised value of finished goods for normal sales = Quantity of finished goods × After-tax unit selling price × (1 - Sales tax and surcharge rate - Selling expense rate - Income tax rate - Net profit margin)

Under normal circumstances, a reasonable profit deduction rate of 0.5 is applied for normal sales finished products. The sales price for finished products is taken as the average recent sales price of the appraised entity as of the valuation benchmark date.

5) Other current assets: The assessors investigated the reasons for the formation of other current assets for the appraised entity and reviewed the relevant documentation, contracts, and account books. After verification, the book values of other current assets are used as the appraised values.

(2) Long-term equity investments

For each long-term equity investment, the overall value of the shareholder's equity in the investees is first assessed. Then, the value of the shareholder's portion of equity is calculated by multiplying the total shareholder equity by the percentage of ownership held.

(3) Investments in other equity instruments

The other equity instrument investments of the appraised entity are measured at fair

value, and the book value reflects this fair value. For this appraised value, the book value is used to determine the appraised value.

(4) Buildings and structures assets

Based on the characteristics of the various types of building and structure assets, the appraised value type, data collection conditions, and other related factors, the cost method is primarily used for appraisal. The cost method calculation formula is as follows:

Appraised value= Replacement cost × Composite depreciation rate

A. Determination of replacement cost

Based on the characteristics, nature, and situation of the building and structure assets within the appraisal scope, the calculation formula for replacement cost in this appraisal is as follows:

Replacement cost = Construction and installation project cost + Pre-construction and other costs + Capital cost - Deductible VAT

a. Construction and installation project costs

For large, valuable, and important buildings, the construction and installation project costs are determined using the preliminary and final budget adjustment method, which uses the quantities in the building's final budget as a basis and calculates the construction and installation project costs based on local standards and relevant fee documents.

For general buildings, or when final budget data is incomplete or the building's value is small and the structure is simple, the Analogy Method or Unit Cost Method is used to determine the construction and installation costs.

b. Pre-construction and other costs

Preliminary and other construction-related expenses are calculated based on the engineering investment amount of the projects, in accordance with the fee standards set by the industry, national, or local government regulations.

c. Capital costs

Financing costs are calculated based on the sum of construction and installation project costs, preliminary and other costs, using uniform capital investment over the reasonable construction period. The calculation formula of capital costs is as follows:

Financing cost = (Construction and installation project costs + Preliminary and other costs) × Reasonable construction period × Interest rate × 1/2

Based on the scale and nature of the construction project in which the appraised buildings and structures are located and the relevant construction period quotas, the reasonable construction period and interest rate were determined by referring to the effective Loan Prime Rate (LPR) on the valuation benchmark date as published by the National Interbank Funding Centre authorised by the People's Bank of China.

d. Deductible VAT

According to relevant VAT documents, for those that qualify for VAT deduction, the replacement cost is reduced by the corresponding VAT.

B. Determination of composite depreciation rate

For significant buildings and structures, the composite depreciation rate is determined

by considering their economic lifespan, the years of use, and conducting on-site inspections. The actual condition of the structure, decoration, ancillary equipment, and other components is evaluated, and the remaining useful life is estimated, from which the composite depreciation rate is determined.

Composite depreciation rate = Remaining useful life / (Remaining useful life + Years of use) × 100%

For buildings and structures with a small value, the newness rate is mainly determined by their economic lifespan. The calculation formula is as follows:

Age-based newness rate = (Economic lifespan - Years of use) / Economic lifespan × 100%

For mining enterprises, the remaining useful life of buildings is closely related to the mine's remaining service life. The remaining useful life is determined based on the lower of the mine's remaining service life and the building's remaining economic lifespan.

C. Determination of appraised value

Appraised value= Replacement cost × Composite depreciation rate

(5) Shaft engineering

Based on the characteristics of various shaft engineering projects, the appraised value type, data collection conditions, and other related factors, the cost method is primarily used for evaluating shaft engineering projects. The cost method calculation formula is as follows:

Appraised value = Replacement cost × Composite depreciation rate

A. Determination of replacement cost

Replacement cost = construction and installation cost + preliminary and other costs + cost of capital − deductible input VAT

a. Construction and installation cost

The comprehensive cost is calculated based on physical engineering quantities and the current coal mining quotas and fee standards.

The comprehensive cost is calculated based on physical engineering quantities and the current coal mining quotas and fee standards.

Construction and installation cost = Base price of engineering quotas + Measure fees + Company management fees + Profits + Regulatory fees + Other project fees + Regional price differences

Including:

Base price of engineering quotas – The base price is calculated based on the shaft engineering's lifting method, lifting depth, tunnel cross-section, support method, materials, and thickness. The *Consumption Quotas for Coal Mining Shaft Engineering (2015, After-tax Base Price)* and *Comprehensive Quotas for Auxiliary Costs in Coal Mining Shaft Engine*ering *(2015, After-tax Base Price)* are applied. This includes wages, material consumption, machine usage fees, etc., with adjustments made according to relevant regulations.

Other fees — determined in accordance with the Notices issued by the China Coal Construction Association (e.g., ZH.M.J.X.Z. No. [2016] 46 "*Adjustment of Pricing*

Basis for Coal Construction Projects under the VAT Reform for the Construction Industry"" and ZH.M.J.X.Z. No. [2019] 37 "*Notice on Adjusting the Value-Added Tax Rate for Coal Construction Engineering Pricing Basis*"), together with the *Notification on "Release of the 'Consumption Quotas for Coal-Construction Shaft Engineering (2015 ex-tax base price*)"" (ZH.M.J.X.Z. No. [2016] 115) and the "*Supplementary Provisions on the Implementation of the Valuation Standards for Coal-Construction Projects*" (ZH.M.J.X.Z. No. [2016] 116), and calculated in combination with the actual construction conditions of the mine.

Labor, materials, and equipment price differences – Adjusted according to the *Notice on Adjusting Coal Mining Construction Engineering Quotation Standards (2015 Base Price) for Labor Unit Prices and Related Regulations* (ZH.M.J.X.Z. [2021] No. 125), *Urumqi City Construction Engineering Material Information Price List* (Q2 2025), and materials price information provided by the enterprise for the valuation benchmark date.

For general shaft engineering projects, or when final settlement data is incomplete, or when the value is small and the structure is simple, the Analogy Method is used to determine the construction cost.

b. Preliminary and other costs

Preliminary and other costs include construction unit management fees, engineering supervision fees, surveying and design fees, environmental evaluation fees, and soil and water conservation consulting service fees. These costs are calculated based on the engineering construction investment amount, according to industry, national, or local government fee standards. Preliminary and Other Costs Calculation Formula:

Preliminary and other costs = Engineering cost × Fee rate

c. Capital costs

Financing costs are calculated based on the appraised entity's reasonable construction period, referencing the LPR published by the People's Bank of China on the valuation benchmark date, and considering the appraised entity's loan interest rate adjustments. The total sum of engineering costs, preliminary and other fees, etc., is used as the base for calculating the financing costs over the uniform capital investment. The calculation formula of capital costs is as follows:

Financing cost = (Engineering cost + Preliminary and other fees) × Reasonable construction period × Interest rate / 2

d. Deductible Input Tax

Pursuant to relevant VAT regulations, the corresponding VAT shall be deducted from the replacement cost for items meeting VAT deduction criteria.

B. Determination of composite depreciation rate

Shaft engineering in coal mines differs from surface buildings in that it is a special structure attached to coal resources. Its economic lifespan is closely linked to the coal reserves that can be mined. As coal resources are depleted, the economic lifespan shortens, and when coal resources are exhausted, the economic lifespan ends.

Underground engineering has a complex geological structure, many unpredictable factors, and poor construction conditions. The stability of the tunnels depends on their location, rock layer properties, and mining methods. The service life of each type of tunnel is determined by the coal reserves in the service area.

Therefore, before determining the newness rate, the evaluators first reviewed geological

reports, mine design data, and understood the position, rock properties, support methods, geological structures, and the impact of mining on the tunnels. They then visited representative tunnels underground to inspect the support conditions and maintenance status and consulted with on-site engineering personnel to verify and review the maintenance records and methods. Finally, based on the coal reserves, remaining reserves, recoverable reserves, and production capacity provided by the geological survey department, the remaining service life of each tunnel was calculated, and the composite depreciation rate was determined. The calculation formula is as follows:

Composite depreciation rate = remaining service life / (service life + remaining service life) × 100%

C. Appraised value

Appraised value = Replacement cost × Composite depreciation rate

(6) Equipment assets

Equipment assets include machinery, vehicles, and electronic devices. Based on the nature of this project and the characteristics of the equipment assets within the scope of the appraisal, for some older electronic devices (e.g., computers) and vehicles, where there is an active second-hand market, the appraised value is based on the second-hand or scrap value of similar equipment. For other equipment, which does not have independent profit-generating ability and where there are very few similar transaction examples, it is not suitable to apply the income approach or market approach for appraisal. Therefore, the cost approach is used for these equipment appraisals.

The cost method calculation formula is as follows:

Appraised value= Replacement cost × Composite depreciation rate

1) Determination of replacement cost

For equipment that requires installation, the replacement cost generally includes: Equipment purchase price, transport and handling fees, installation engineering costs, preliminary and other expenses, and the cost of capital. For equipment that does not require installation, the replacement cost generally includes: Equipment purchase price and transport and handling fees. The calculation formula is as follows:

Equipment requiring installation replacement cost = Equipment purchase price + Transport and handling fees + Installation engineering fees + Pre-construction and other costs + Capital costs - Deductible VAT

Equipment not requiring installation replacement cost = Equipment purchase price + Transport and handling costs - Deductible VAT

If the equipment foundation is independent or inseparable from the building, the equipment foundation cost is considered within the appraisal of the building and structure assets; otherwise, it is included in the installation engineering costs.

A. Equipment purchase price

The equipment purchase price is primarily determined by consulting the market price on the valuation benchmark datewith the manufacturer or by checking relevant quotation information, such as the current market price or the contract prices of recently purchased similar equipment, as well as the *Thermal Power Engineering Limit Design Reference Cost Index* (2024 Level) published by the China Electric Power Planning & Engineering Institute and the Electric Engineering Cost Information Network. For equipment where the purchase price cannot be found, the price change coefficient of

equipment from the same era and category is used to calculate the purchase price.

B. Transport and handling fees

Transport and handling fees refer to the transportation costs, loading and unloading fees, and other associated costs incurred during the equipment's transportation.

If transport and handling fees are not included in the equipment purchase price, they are determined by referring to standard cost indicators from resources like the *Asset Appraisal Common Data and Parameters Handbook* and the *Mechanical Industry Construction Project Budgeting Method and Indices*, taking into account factors such as transportation distance, weight, and volume.

For thermal power equipment, transport and handling fees are determined according to the *Thermal Power Plant Engineering Construction Budget Preparation and Calculation Regulations* (2018 version) published by the National Energy Administration.

If the equipment quotation includes the delivered price, transport and handling fees are not calculated separately.

C. Installation engineering costs

Installation engineering costs refer to all expenses incurred after the equipment arrives at the construction site, including assembly, positioning, connection, fixing, inspection, testing, and trial operation, until the equipment is in a usable state.

For coal mine and coal washing plant equipment, installation engineering costs are mainly based on the reference rates for installation provided in the *Manual of Commonly Used Data and Parameters for Asset Appraisal*, while also considering the difficulty of installation and the historical expenditure of the appraised entity on equipment installation. After determining the installation engineering rate, the costs are calculated. If the seller's quotation includes installation engineering costs, these are not recalculated.

For power plant equipment, installation engineering costs are primarily determined by referring to preliminary design specifications, relevant technical agreements, and other documentation, to establish the equipment installation quantity and other parameters. The relevant costs are calculated according to the *Thermal Power Plant Engineering Construction Budget Preparation and Calculation Regulations* (2018 version), the *Power Construction Engineering Quotation Norms* (2018 version), and the *Notice on the Adjustment of the Price Level for the 2018 Edition of Power Construction Engineering Budget Norms for the First Half of 2025* (D.E. [2025] No. 34) and Notice on Adjusting the Safety and Civilised Construction Fees (D.E. [2023] No. 9)(hereinafter referred to as "D.E. [2023] No. 9"). The direct engineering costs, additional measures, indirect costs, profits, and taxes are then calculated to determine the installation engineering costs.

The installation engineering fee calculation formula is as follows:

Installation engineering fee = Equipment purchase price × Installation engineering fee rate

D. Preliminary and other expenses

The preliminary and other expenses are calculated based on the construction investment amount provided by the appraised entity, according to industry, national, or local government prescribed fee standards.

E. Cost of capital

For thermal power companies, the cost of capital is determined based on the project's reasonable construction period. The benchmark cost of funds is calculated using the LPR for RMB loans published by the People's Bank of China on the valuation benchmark date, applied to the sum of the equipment purchase price, installation engineering costs, and other expenses. The interest on construction period loans is calculated based on the method of settlement for individual power generation units at the time of completion. The interest calculation formula is as follows:

Construction period loan interest = Interest on construction period loan before first unit starts generation + Interest on construction period loan after first unit starts generation

Wherein: Interest on construction period loan before first unit starts generation = ∑[(Year-beginning loan principal and interest + This year's loan / 2) × Annual interest rate]

Interest on construction period loan after first unit starts generation = ∑[(This year's loan / 2) × Annual interest rate]

For coal mines and coal washing plants, the cost of capital is determined based on the reasonable construction period of the appraised entity, with reference to the LPR for RMB loans published by the People's Bank of China on the valuation benchmark date. The cost of capital is calculated by taking the sum of the equipment purchase price, transport and handling fees, installation engineering costs, and preliminary costs, applying an even distribution of funds over the construction period.

F. Determination of the deductible VAT

According to the documents "C.SH. [2016] No. 36, C.SH. [2018] No. 32", and the "Announcement No. 39 in 2019 of the Ministry of Finance, the State Taxation Administration and the General Administration of Customs", as well as relevant local and industry pricing adjustment documents, for those meeting the VAT deduction conditions, the recoverable VAT is deducted from the replacement cost.

Deductible VAT = Equipment purchase price / 1.13 × 13% + (Transport and handling fees + Installation engineering costs) / 1.09 × 9% + (Preliminary and other expenses − Construction unit management fees − Joint test run cost) / 1.06 × 6%

For transportation equipment, the replacement cost is determined based on the market price on the valuation benchmark date, including vehicle purchase tax, licence fees, and other reasonable expenses. The calculation formula for the replacement cost of transportation equipment is as follows:

Replacement cost = Purchase price + Purchase price / (1 + 13%) × 10% + Licence fees − Deductible VAT in the purchase price

For electronic equipment, the replacement cost is determined based on the market purchase price found by inquiry on active online platforms on the base date. If VAT deduction conditions are met, the corresponding VAT is deducted from the replacement cost.

2) Determination of composite depreciation rate

A. For specialised and general machinery, the newness rate is primarily determined based on the equipment's economic lifespan, years of use, and on-site inspections of the equipment's condition and technical status. The remaining useful life is then calculated, and the composite depreciation rate is determined using the following

formula:

Composite depreciation rate = Remaining useful life / (Remaining useful life + Years of use) × 100%

B. For electronic equipment, air conditioning equipment, and other small equipment, the composite depreciation rate is mainly determined based on its economic lifespan. For large electronic equipment, the work environment and operational status are also taken into account. The calculation formula is as follows:

Age-based newness rate = (Economic lifespan - Years of use) / Economic lifespan × 100%

Composite depreciation rate = Age-based newness rate × Adjustment coefficient

C. For vehicles, according to the *Compulsory Motor Vehicle Scrap Standards* (Order No.12 [2012] of the Ministry of Commerce, National Development and Reform Committee, Ministry of Public Security, and Ministry of Ecology and Environment), the theoretical newness rate is determined using vehicle mileage and usage years, based on the lower of the two. For vehicles without a mandatory scrapping period, the remaining useful life method is used. Finally, the lower of the age-based newness rate and mileage-based newness rate is adjusted based on the observation-based newness rate, forming the composite depreciation rate. The calculation formulas are as follows:

Age-based newness rate (no mandatory scrapping age) = Remaining useful life / (Years of use + Remaining useful life) × 100%

Age-based newness rate (with mandatory scrapping age) = (Prescribed service life - Years of use) / Prescribed service life × 100%

Mileage-based newness rate = (Prescribed mileage - Mileage run) / Prescribed mileage × 100%

Composite depreciation rate = MIN (age-based newness rate, mileage-based newness rate) × Adjustment factor

3) Determination of appraised value

Appraised value= Replacement cost × Composite depreciation rate

(7) Construction in progress

Based on the characteristics of construction in progress, the appraised value type, and data collection, the cost method is used for the appraisal.

1) Completed projects

For projects where the main structure is already listed as fixed assets, they are incorporated into the main appraisal. Other completed projects are appraised according to the fixed asset appraisal method.

2) Incomplete projects

For ongoing projects that started within six months of the valuation benchmark date, due to minor price changes, the appraisal is based on the book value of the ongoing construction after verification, and the residual value after deducting unreasonable expenses is used as the appraised value.

For ongoing projects that started more than six months before the valuation benchmark date, if the book value does not include capital costs, the capital costs are added based on the reasonable construction period. If the book value differs significantly from the

price level on the valuation benchmark date, the construction costs are adjusted to the valuation benchmark date price level.

3) Pure expense-based construction projects

Pure expense type ongoing projects have no physical entity. After verifying that the payments made are necessary for future projects or have actual value to the future owners, and confirming that there is no duplicate valuation with related asset projects, the book value after verification is used as the appraised value. Otherwise, the value is treated as zero.

4) Engineering materials: For various materials used in the project, given their relatively recent acquisition dates, their book costs show minimal fluctuation compared to market prices. Therefore, this appraisal adopts the verified book value as the appraised value.

(8) Land use right

According to the requirements of the *Asset Appraisal Practice Standards– Real Estate*, the main appraisal methods for land use rights include the market comparison method, income approach, hypothetical development method, cost method, and benchmark land price method. The appropriate appraisal method is selected based on the appraisal purpose, subject asset, value type, data collection conditions, and the applicability of the above basic appraisal methods.

For this appraisal, the market comparison method and benchmark land price method are used to assess the value of the land use rights being appraised.

1) Market comparison method

The market comparison method refers to the comparison of the subject asset with similar land transaction examples under the same market conditions, using the substitution principle. Adjustments are made for differences in transaction conditions, transaction dates, regional factors, individual factors, floor area ratio, remaining useful life, and other relevant aspects between the two. The method used to determine the price of the subject asset on the valuation benchmark date. The basic formula for the Market Comparison Method is as follows:

$P = PB \times A \times B \times C \times D \times E$

Wherein: P = Appraised value of the land

PB = Price of the comparable transaction

A: Transaction situation index for the appraised land parcel / Transaction situation index for comparative example land parcels;

B: Land price index on the valuation benchmark datefor the appraised land parcel / Land price index on the transaction date for comparative example land parcels;

C: Regional factors condition index for the appraised land parcel / Regional factors condition index for comparative example land parcels;

D: Individual factors condition index for the appraised land parcel / Individual factors condition index for comparative example land parcels;

E: Duration adjustment index of the appraised land parcel / Duration adjustment index of the comparable example land parcels

2) Benchmark land price method

The benchmark land price method uses urban benchmark land prices and benchmark land price adjustment tables to assess the value of land. According to the principle of substitution, the regional and individual conditions of the subject asset are compared with the average conditions of the region, and the corresponding adjustment coefficients are selected from the coefficient adjustment table to modify the benchmark land price. This method determines the value of the subject asset on the valuation benchmark date.

The calculation formula for the Benchmark Land Price Adjustment Method is as follows:

$V = V1 \times (1 \pm \sum K) \times Kr \times Km \times Kq \times Kk$

Wherein: V — The adjusted land price of the appraised land;

V1 — The benchmark land price of land with the same usage in the region where the appraised land is located;

$\sum K$ — The sum of the regional factors and individual factors adjustment coefficients for the appraised land;

Km — The usage period adjustment coefficient;

Kq — The date adjustment coefficient;

Kr — The floor area ratio adjustment coefficient;

Kk — The land development degree adjustment coefficient.

(9) Mining rights

For the mining rights independently mined by Inner Mongolia Energy, the appraisal was separately conducted by China Enterprise Appraisals Co., Ltd. as engaged by CHN Energy Western Energy Investment Co., Ltd. and China Shenhua Energy Company Limited. The mining rights appraisal in this asset appraisal report references the conclusion from the mining rights appraisal report issued by China Enterprise Appraisals Co., Ltd.

(10) Other intangible assets

The other intangible assets included in the appraisal scope, as declared by the enterprise, consist of software, coal production capacity exchange quotas, patents, and software copyrights.

1) Based on the characteristics of the software assets, the appraised value type, and the data collection conditions, the market method is used for the appraisal. Specifically: For recently purchased software, where market prices have remained relatively stable, the appraisal will refer to the tax-exclusive value of the software purchased by the enterprise. For software that is no longer traded in the market but can still be used for its original purpose, the appraised value will be determined by referencing the market price trends of similar software. For software that has been discontinued as of the valuation benchmark dateand will not be restored for future use, the appraised value is zero.

2) For the coal capacity replacement quotas being replaced by the appraised entity, the appraisal is based on the book value.

3) For patents and copyrights, based on the purpose of this appraisal, their application in practice, their technological maturity, applicability, and expected prospects, patents and copyrights which income data is not available are valued using the cost approach.

(11) Development expenditure

The development expenditures included in the appraisal scope are the expenditures incurred by the appraised entity up to the valuation benchmark datethat meet the conditions for capitalisation and are in the development stage. The appraisers reviewed the project technical development contracts, accounting vouchers, invoices, etc. As of the valuation benchmark date, the development expenditure items are still in the research and development stage and have not yet been recognised as intangible assets. For this appraisal, the value is confirmed based on the verified book value.

(12) Long-term deferred expenses

For the appraisal of long-term deferred expenses, the appraisers reviewed all original entry vouchers, contracts, invoices, etc., to verify the authenticity and completeness of the accounting items. After verification, the original amounts for long-term deferred expenses were confirmed to be accurate, and the amortisation balance was correct. The long-term deferred expenses continue to provide corresponding rights or assets during the remaining benefit period, and the appraised value is determined based on the remaining benefit period and the unamortised balance.

(13) Deferred tax assets

The assessors investigated the reasons for the deferred tax asset, reviewed the relevant accounting regulations for recognising deferred tax assets, and verified the accounting vouchers for the deferred tax assets recognised as of the valuation benchmark date. The deferred tax assets are valued at the verified book value.

(14) Other non-current assets

For prepayment for construction and resource exploration expenses under other non-current assets, the appraisers verified relevant contracts, accounting documents, payment invoices, etc., and the verified book value was used as the appraised value.

(15) Liabilities

The liabilities of the appraised entity include short-term borrowings, accounts payable, contract liabilities, employee remuneration payable, taxes payable, other payables, non-current liabilities due within one year, other current liabilities, long-term borrowings, long-term payables, and provisions. The appraisers first checked the consistency between the detailed ledger and the general ledger, and reviewed the individual items. At the same time, they randomly checked the relevant accounting vouchers and other documentation. Based on the random checks of the vouchers, they confirmed whether the book value of the liabilities was accurate, and the verified book value was used as the appraised value.

VIII. Appraisal Process and Procedure

The appraisers carried out the appraisal of the assets and liabilities involved in the appraised object from 9 August 2025 to 16 December 2025. The main appraisal procedures and process are as follows:

i. Acceptance of commission

On 9 August 2025, the Company and the client reached a verbal agreement on the basic matters of the appraisal business, including the purpose of the appraisal, the subject asset, the appraisal scope, the valuation benchmark date, and the rights and obligations of each party. We then agreed upon and drafted the corresponding appraisal plan with the client.

ii. Preliminary preparation

After accepting the engagement, the project team, based on the appraisal purpose, the characteristics of the subject asset, and the time plan, formulated a specific appraisal work plan and formed the appraisal team. Simultaneously, the team drafted a list of required materials and appraisal forms based on the actual needs of the project.

iii. On-site investigation

From 16 August 2025 to 24 September 2025, the appraisers conducted the necessary inventory verification of the assets and liabilities involved in the subject asset, and performed the required due diligence on the operational and management conditions of the appraised entity.

1. Asset verification

(1) Guidance for the appraised entity in completing forms and preparing materials to be provided to the appraisal agency

The evaluators guided the financial and asset management personnel of the appraised entity to accurately complete the assets appraisal detail sheet and checklists based on the self-conducted asset verification, while collecting ownership proof documents and other supporting materials such as performance data, technical indicators, etc.

(2) Preliminary review and completion of the assets appraisal detail sheet

The evaluators reviewed the relevant documents, understood the detailed status of the assets included in the appraisal scope, and then carefully reviewed the "Assets Appraisal Detail Sheet" to check for incomplete or incorrect entries, unclear asset items, and other issues. Based on experience and the gathered information, the evaluators ensured the accuracy of the sheet and provided feedback to the appraised entity to improve them.

(3) On-site inspection

Based on the type, quantity, and distribution of assets included in the appraisal scope, the evaluators, with the cooperation of the relevant personnel of the appraised entity, conducted on-site inspections in accordance with the relevant provisions of the asset appraisal standards. Different inspection methods were applied depending on the nature and characteristics of the various assets.

(4) Supplementing, modifying, and improving the Assets Appraisal Detail Sheet

Based on the results of the on-site inspection and after thorough communication with the relevant personnel of the appraised entity, the evaluators further refined the "Assets Appraisal Detail Sheet" to ensure consistency between the accounts, sheet, and actual assets.

(5) Verification of ownership documentation

The evaluators verified the ownership proof documents for the assets within the appraisal scope, including buildings, vehicles, land use rights, mining rights, and other intangible assets. In cases where ownership information was incomplete or unclear, the evaluators requested the enterprise to verify or provide relevant ownership clarification documents.

2. Due diligence

To fully understand the operational management status and risks faced by the appraised entity, the evaluators conducted necessary due diligence. The main contents of the due diligence were as follows:

(1) The history of the appraised entity, its major shareholders and their shareholding ratios, and the necessary ownership and management structure;

(2) The asset, financial, and operational management status of the appraised entity;

(3) The business plan, development plan, and financial forecast information of the appraised entity;

(4) Previous appraisals and transactions related to the appraised entity;

(5) Macro and regional economic factors affecting the appraised entity's operations;

(6) The development status and prospects of the industry in which the appraised entity operates;

(7) Other relevant information.

iv. Data collection

Based on the specific situation of the appraisal project, the evaluators collected appraisal data from various sources, including direct market information, materials provided by the client and other relevant parties, and documents from government departments, professional institutions, and other relevant agencies. The collected appraisal data was then analyzed, summarised, and organised to form the basis for the appraisal estimate.

v. Appraisal estimate

Based on the specific conditions of the various assets, the evaluators selected the appropriate formulas and parameters according to the chosen appraisal methods, performing analysis, calculations, and judgments to form preliminary appraisal conclusions. The project leader summarised the preliminary conclusions for each asset appraisal and drafted the preliminary asset appraisal report.

vi. Internal review

According to our appraisal business process management regulations, the project leader submitted the preliminary asset appraisal report for internal review after completion. After the internal review, the evaluators communicated with the client or other relevant parties, as agreed, on the contents of the asset appraisal report, ensuring that the independence of the appraisal conclusions was maintained. After completing the above appraisal procedures, the formal asset appraisal report was issued and submitted.

IX. Appraisal Assumptions

The assumptions for the analysis and estimates in this asset appraisal report are as follows:

i. It is assumed that all appraisal subjects are already in the transaction process, and the appraisal professionals simulate the market to perform the appraisal based on the transaction conditions of the appraised assets;

ii. It is assumed that for assets traded or to be traded in the market, the parties involved in the asset transaction are in an equal position, with both parties having the opportunity and time to obtain sufficient market information. The transaction is voluntary and rational, with both parties able to make rational judgments regarding the asset's function, purpose, and transaction price;

iii. It is assumed that the appraised assets will continue to be used according to their current usage and mode of operation throughout the remaining service life of the mine;

iv It is assumed that there are no significant changes in the relevant national laws, regulations, and policies, and no significant changes in the political, economic, and social environment in the regions where the parties to the transaction are located;

v. Based on the actual condition of the assets on the valuation benchmark date, it is assumed that the enterprise will continue as a going concern throughout the remaining service life of the mine;

vi. It is assumed that there will be no significant changes in the interest rates, tax bases and rates, or policy-related levies related to the appraised entity after the valuation benchmark date;

vii. It is assumed that the management team of the appraised entity after the valuation benchmark datewill be responsible, stable, and capable of fulfilling their duties;

viii. Unless otherwise stated, it is assumed that the company fully complies with all relevant laws and regulations;

ix. It is assumed that no force majeure or unforeseeable factors will have a significant adverse impact on the appraised entity after the valuation benchmark date;

x. It is assumed that the accounting policies adopted by the appraised entity after the valuation benchmark datewill remain consistent in important aspects with the accounting policies used in preparing this asset appraisal report;

xi. It is assumed that, based on the current management approach and management level, the scope and method of operations of the appraised entity will remain consistent with the present;

xii. It is assumed that the cash inflows of the appraised entity after the valuation benchmark datewill be average inflows, and the cash outflows will be average outflows;

xiii. It is assumed that the market competition conditions for the products or services of the appraised entity will remain the same as at present;

xiv. It is assumed that the mineral resource reserves reviewed within the mining licence will form the basis for the mining rights, and that the mining licence can be smoothly renewed in the future;

xv. It is assumed that there will be no significant changes in the mining technology used by the appraised entity in the future;

xvi. It is assumed that in the future, the production and sales of commodity coal will achieve a balance between output and sales;

xvii. It is assumed that the construction projects under development will be completed and connected to the grid on time, and that they will be eligible for relevant tax incentives;

xviii. It is assumed that during the appraisal calculation period, the unit cost for environmental restoration and land reclamation will be equal to the extracted and spent amounts;

xix. As of the valuation benchmark date, the appraised entity enjoys the preferential enterprise income tax policy for the Western Development, with an enterprise income tax rate of 15% from 1 January 2021 to 31 December 2030.

The conclusions of this asset appraisal report are valid under the above assumptions as of the valuation benchmark date. If there are significant changes in these assumptions, the signing asset appraisers and this appraisal agency will not bear responsibility for

deriving different appraisal conclusions due to changes in assumptions.

X. Appraisal Conclusions

i. Income approach appraisal results

As of the valuation benchmark date, the total book value of assets for Guodian Construction Investment Inner Mongolia Energy Co., Ltd. was RMB15,039,443,700; the total book value of liabilities was RMB16,201,807,100; and the net asset book value was RMB-1,162,363,400.

After applying the income approach, the value of the total equity held by the shareholders was RMB7,861,498,800, with an increase of RMB9,023,862,100, representing an appreciation rate of 776.34%.

ii. Asset-based approach appraisal results

As of the valuation benchmark date, the total asset book value of Guodian Construction Investment Inner Mongolia Energy Co., Ltd. is RMB15,039,443,700, with an appraised value of RMB23,927,184,900, an increase of RMB8,887,741,200, representing an appreciation rate of 59.10%. The total liability book value is RMB16,201,807,100, with an appraised value of RMB16,199,557,100, a decrease of RMB225 million, representing a depreciation rate of 0.01%. The net asset book value is RMB-1,162,363,400, with an appraised value of RMB7,727,627,800, an increase of RMB8,889,991,200, representing an appreciation rate of 764.82%.

The detailed results of the asset-based approach are shown in the following summary table:

Summary of Appraisal Results from Asset-based Approach

Valuation benchmark date: 31 July 2025 Unit: RMB'0,000

Item		Book value	Appraised value	Increase or decrease	Appreciation rate %
		A	B	C = B - A	D = C/A × 100%
I. Current Assets	1	118,275.30	119,484.80	1,209.50	1.02
II. Non-Current Assets	2	1,385,669.07	2,273,233.69	887,564.62	64.05
Of which: Long-term equity investments	3	31,045.32	31,702.92	657.60	2.12
Investment properties	4	0.00	0.00	0.00	/
Fixed assets	5	652,074.95	732,939.65	80,864.70	12.40
Construction in progress	6	148,736.73	155,232.89	6,496.16	4.37
Oil and gas assets	7	0.00	0.00	0.00	/
Intangible assets	8	224,424.75	1,023,970.93	799,546.17	356.26
Including: Land use right	9	72,838.02	73,755.47	917.45	1.26
Other non-current assets	10	329,387.30	329,387.30	0.00	0.00
Total assets	11	**1,503,944.37**	**2,392,718.49**	**888,774.12**	**59.10**
III. Current Liabilities	12	941,122.33	941,122.33	0.00	0.00
IV. Non-Current Liabilities	13	679,058.37	678,833.37	-225.00	-0.03
Total liabilities	14	**1,620,180.71**	**1,619,955.71**	**-225.00**	**-0.01**
Net assets	15	**-116,236.34**	**772,762.78**	**888,999.12**	**764.82**

iii. appraisal conclusion

The value of the entire shareholders' equity, based on the income approach, is RMB7,861,498,800, while the value based on the asset-based approach is RMB7,727,627,800. The difference between the two methods is RMB133,871,000, representing a variance of 1.73%.

The two appraisal methods consider different perspectives. The asset-based approach determines the value of the subject asset based on a reasonable assessment of the value

of the company's assets and liabilities, considering the approach of asset re-acquisition; whereas the income approach determines the value of the subject asset by discounting the anticipated earnings of the entity, focusing on the company's future earning capacity, and reflecting the comprehensive profitability of the company's assets.

The appraised entity is a coal-power integrated enterprise, with a high proportion of coal sales, and coal prices are significantly affected by national economic policies, coal supply and demand relations, and other factors. Moreover, with the progress of the "carbon peak and carbon neutrality" goals, the thermal power industry faces pressure to reduce energy consumption, cut emissions, and undergo transformation and upgrading. The energy transition strategy sets new positioning requirements for the thermal power sector, pushing thermal power companies to shift from being mere electricity producers to becoming "stabilisers" and "regulators" in the power system. While ensuring the safety of power supply, they also provide support for the large-scale development of renewable energy. These factors introduce considerable uncertainty in predicting future earnings. The coal mining industry is a capital-intensive sector, and the main operating assets of the enterprise are largely dependent on the mineable reserves. The initial investment in fixed assets is significant, and the value of the mining rights has already been appraised by a professional appraisal agency. Therefore, the Asset-Based Approach better reflects the value of the enterprise. The conclusion of this appraisal adopts the results from the Asset-Based Approach.

Based on the above analysis, the appraisal conclusion in this report uses the asset-based approach, resulting in the value of the total equity of the shareholders in Guodian Construction Investment Inner Mongolia Energy Co., Ltd. being RMB7,727,627,800.

XI. Special Matters Statement

The following matters were identified during the appraisal process that may affect the appraisal conclusion but cannot be assessed or estimated by the professional expertise and ability of the evaluators:

i. According to the *Asset Appraisal Law* and the *Guidance on Legal Ownership of Subject Asset*, the client and relevant parties commissioning the asset appraisal business shall be responsible for the authenticity, completeness, and legality of the ownership certificates, financial accounting information, and other materials they provide. The purpose of conducting asset appraisal is to estimate the value of the subject asset and provide professional opinions. Confirming the legal ownership or providing opinions on the legal status of the assets goes beyond the scope of professional asset appraisal. Asset appraisers do not provide guarantees on the legal ownership of the subject asset.

ii. In this asset appraisal report, any discrepancies between the total sum and the sum of individual items in tables or textual representations, where amounts are expressed in ten thousand yuan, are due to rounding.

iii. This appraisal makes use of the audit report numbered Ernst & Young Hua Ming (2025) Zhuan Zi No. 80028118_A01 issued by Ernst & Young Hua Ming LLP on 16 December 2025. We obtained the audit report through legal channels, and after analyzing and reviewing the contents of the audit report in accordance with the relevant asset appraisal standards, we have prudently used the relevant contents of the audit report. The audited financial data in the audit report forms the basis for the asset appraisal. If this financial data changes, the conclusions of this appraisal may become invalid. According to Article 12 of the *Asset Appraisal Practice Standards – Enterprise Value: Asset* appraisers analyse and assess the use of financial statements based on the chosen appraisal methods. However, it is not the responsibility of the asset appraisers

to offer professional opinions on whether the financial statements fairly reflect the financial status, operating results, or cash flow of the appraised entity as of the valuation benchmark date. We only bear responsibility for improper referencing that may arise in the use of the audit report during the appraisal process.

iv. The appraisal of the intangible asset – mining rights within the appraisal scope refers to the appraisal conclusion provided by China Enterprise Appraisals Co., Ltd. in *Appraisal Report on the Mining Right of the Chahasu Coal Mine, Dongsheng Coalfield, Ordos City, Inner Mongolia Autonomous Region* (ZH.Q.H.K.P.B.Z. (2025) No. 1077), issued on 16 December 2025.

During this appraisal process, the appraisers communicated and coordinated with the mining rights appraisers. The mining rights appraisal was carried out using the discounted cash flow method. After verifying the subject asset, appraisal scope, appraisal purpose, valuation benchmark date, and value type of the mining rights appraisal report, we confirmed that they were consistent with those in this asset appraisal report and met the requirements of the economic transaction involved in this report. We directly referenced the appraisal conclusion provided by China Enterprise Appraisals Co., Ltd. for the mining rights value in this report. For details on the calculation process and results of the mining rights appraisal, please refer to the mining rights report issued by China Enterprise Appraisals Co., Ltd.

v. Explanation regarding ownership defects

As of the valuation benchmark date, the 112 buildings included within the appraisal scope have not been registered for property ownership, with a total building area of 293,400.07 square metres. The appraised entity has provided a statement regarding the buildings, confirming that the information is accurate, and that the properties without ownership certificates are indeed owned by the entity, with no ownership disputes. The enterprise has obtained property compliance certification from the relevant local authorities, and there are no substantive obstacles to future certification.

As of the valuation benchmark date, there are 94 invention patents included in the appraisal scope. Among these, 68 patents are in the substantive examination stage and have not yet received patent certificates. The appraised entity has provided a statement confirming the accuracy of the status of these assets.

vi. Explanation regarding assets in an abnormal use state

As of the valuation benchmark date, some of the assets declared within the appraisal scope are in a pending scrap state, as detailed below:

1. Machinery: 111 items declared by the appraised entity, Inner Mongolia Energy, with a book value of RMB4,926,200; Vehicles: three items, with a book value of RMB23,200; Electronic equipment: 263 items, with a book value of RMB93,900. For the above assets pending disposal, the appraisal is based on their recoverable value. Among the software assets, eight items are no longer in use and will not be restored for use in the future, so the appraisal for these assets is zero.

2. Vehicles: 4 items declared for disposal by the appraised entity’s subsidiary, Inner Mongolia Huaxin Guodian Construction Investment Logistics Co., Ltd., with a book value of RMB70,000; Electronic equipment: 22 items, with a book value of RMB15,400. For the above assets pending disposal, the appraisal is based on their recoverable value.

The owning entities have provided a statement confirming the accuracy of the asset information.

vii. Financial leasing matters

1. The appraised entity and Bank of Communications Financial Leasing Co., Ltd. entered into a leasing contract with contract number Jiao Yin Zu Lin Zi No. 20210069, for certain facilities and equipment at the Bulian Power Plant. The contract term runs from April 2021 to April 2026, totaling 5 years, with a principal amount of RMB500,000,000.

2. The appraised entity and Bank of Communications Financial Leasing Co., Ltd. entered into a leasing contract with contract number Jiao Yin Zu Lin Zi No. 20220108, for the boiler body at the Bulian Power Plant. The contract term runs from May 2022 to May 2026, totaling 4 years, with a principal amount of RMB300,000,000.

3. The appraised entity and Guoneng Financial Leasing Co., Ltd. entered into a financial leasing contract with contract number Guo Neng Rong Zu (2023) Hui Zi No. 0106, for certain equipment and facilities. The contract term runs from July 2023 to July 2028, totaling 5 years, with a principal amount of RMB2,020,000,000.

viii. Ongoing litigation matters as of the valuation benchmark date

1. Dispute over the Construction Contract between Anhui Zhong Jue and Inner Mongolia Energy

On 25 August 2024, Anhui Zhong Jue filed an arbitration application with the Ordos Arbitration Commission, requesting (1) a ruling to terminate the *Industrial Waste Subsurface Green Disposal Project Contract signed between Anhui Zhong Jue and Inner Mongolia Energy*, with Inner Mongolia Energy to bear the investment costs of RMB12,808,000 and the resulting loss of RMB3,842,400, totalling RMB16,650,400; (2) the arbitration fees to be borne by Inner Mongolia Energy. As of the valuation benchmark date, no ruling has been made.

2. Dispute over the Construction Contract between Zhejiang Zhongpu and Inner Mongolia Energy

On 11 August 2024, Zhejiang Zhongpu filed an arbitration application with the Ordos Arbitration Commission, requesting (1) a ruling to terminate the *Industrial Waste Subsurface Green Disposal Project Contract signed between Zhejiang Zhongpu and Inner Mongolia Jiantou*, with Inner Mongolia Energy to bear the investment costs of RMB 8,656,300 and the resulting loss of RMB 865,600, totalling RMB9,521,900; (2) Inner Mongolia Energy to bear the costs for house leasing (RMB 200,000), renovation (RMB616,500), and severance of workers (RMB1,084,200), totalling RMB1,900,700; (3) the arbitration fees to be borne by Inner Mongolia Energy. As of the valuation benchmark date, no ruling has been made.

ix. Contingencies

In September 2025, Inner Mongolia Construction Investment Group received a notice from the Ordos Municipal Bureau of Natural Resources, requiring it to complete the payment procedures for the mining rights transfer revenue of the Chahasu Coal Mine. Currently, China Energy Investment Corporation (CEIC) and Inner Mongolia Construction Investment Group are continuously communicating and negotiating with relevant authorities regarding the above-mentioned matters. CEIC has committed that if Inner Mongolia Construction Investment Group subsequently needs to pay supplementary mining rights transfer revenue for the Chahasu Coal Mine (License No.: C1500002024071210157148), CEIC will be responsible for coordinating and resolving this portion of the mining rights transfer revenue.

x. Supplementary information on business license and organizational structure

The appraised entity has undergone changes in its legal representative, business type, articles of association, and organizational structure after the valuation benchmark date. This report discloses information based on the updated details.

Users of the asset appraisal report should pay attention to the impact of the above special matters on the appraisal conclusion.

XII. Limitations on the Use of the Asset Appraisal Report

i. Scope of use of the asset appraisal report

1. The users of the asset appraisal report are the client and other users as specified by national laws and administrative regulations.

2. The appraisal conclusions revealed in the asset appraisal report are only valid for the appraisal purpose of this project.

3. The appraisal conclusions in the asset appraisal report are valid for one year from the valuation benchmark date. The client or other users of the asset appraisal report should use the report within the stated validity period of the appraisal conclusions.

4. Without the written consent of the client, the asset appraisal institution and its asset appraisal professionals shall not disclose or provide the contents of the asset appraisal report to any third party, unless otherwise stipulated by law or administrative regulations.

5. Without the consent of the asset appraisal agency, the contents of the asset appraisal report shall not be copied, quoted, or disclosed in public media, except as required by law, administrative regulations, or as agreed by the relevant parties.

ii. If the client or other users of the asset appraisal report do not use the asset appraisal report in accordance with the laws, administrative regulations, and the usage scope outlined in the asset appraisal report, the asset appraisal agency and its professionals shall not bear any responsibility.

iii. Except for the client, other users of the asset appraisal report as agreed in the asset appraisal contract, and those specified by laws or administrative regulations, no other institution or individual may become a user of the asset appraisal report. This asset appraisal report contains several appendices and appraisal detail forms, all of which are an integral part of this report. However, they are only valid when used together with the main body of the report.

iv. The asset appraisal agency and asset appraisers shall not bear any obligations or responsibilities to users of this report who are not authorised, such as those who obtain the report through presentation or other means, outside the scope of its intended use. They will not provide further consultancy based on this report, nor will they provide testimony or attend hearings in court or other legal proceedings, and they reserve the right to hold non-authorised users liable for any losses incurred as a result.

v. Users of the asset appraisal report shall correctly understand and use the appraisal conclusion. The appraisal conclusion is not equivalent to the realisable price of the subject asset and shall not be considered a guarantee of the realisable price.

vi. An asset appraisal report refers to a professional report issued by the asset appraisal agency, based on the law, administrative regulations, and asset appraisal standard requirements, after carrying out the necessary appraisal procedures as entrusted. It reflects the value of the subject asset for a specific purpose on the valuation benchmark

date. This report must be signed by the appraisers responsible for the appraisal and stamped with the asset appraisal agency's official seal. It can only be formally used after being filed with the state-owned asset supervision and management authority or the enterprise that provided funding.

This report is prepared in accordance with the Chinese Asset Appraisal Standards

Asset Appraisal Report on the Appraisal of the Entire Shareholder's Equity of CHN Energy Shaanxi Shenyan Coal Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

ZH.Q.H.P.B.Z. (2025) No. 6669

(Volume 1 of 1)

China Enterprise Appraisals Co., Ltd.

16 December 2025

Declaration

I. This asset appraisal report is prepared based on the Basic Rules for Asset Appraisal issued by the Ministry of Finance and the Asset Appraisal Practice Standards and Code of Professional Ethics issued by the China Appraisal Society.

II. The asset appraisal agency and its professional appraisers comply with laws, administrative regulations, and asset appraisal standards, adhere to the principles of independence, objectivity, and fairness, and bear legal responsibility for the asset appraisal report they issue.

III. The client or other users of the asset appraisal report shall use the report in accordance with the laws, administrative regulations, and the scope of use stated in the asset appraisal report. If the client or other users of the report misuse the report in violation of the foregoing regulations, the asset appraisal agency and its appraisers shall not bear any responsibility.

This asset appraisal report is only for use by the client, other users of the asset appraisal report as specified in the asset appraisal engagement contract, and users defined by laws or administrative regulations. Other institutions or individuals shall not use this asset appraisal report.

The asset appraisal agency and the appraisers remind the users of the asset appraisal report to correctly understand and use the appraisal conclusion. The appraisal conclusion is not equivalent to the realisable price of the subject asset and shall not be considered a guarantee of the realisable price.

IV. The asset and liability lists, and business forecasts related to the subject asset are provided by the client and the appraised entity, and confirmed through their signatures, seals, or other legally permitted means. The client and other relevant parties are legally responsible for the authenticity, completeness, and legality of the information provided.

V. The asset appraisers have conducted on-site investigations of the subject asset and the assets involved. They have paid necessary attention to the legal ownership status of the subject asset and its assets, verified the ownership documents, disclosed any discovered issues truthfully, and urged the client and other relevant parties to rectify any property right issues to meet the requirements for issuing the asset appraisal report.

VI. The asset appraisal agency and its appraisers have no current or anticipated interests in the subject asset, nor any current or anticipated interests with the relevant parties, and are unbiased towards the relevant parties.

VII. The analysis, judgment, and results in the asset appraisal report issued by the asset appraisal agency are subject to the assumptions and limitations specified in the report. Users of the asset appraisal report shall fully consider the assumptions, limitations, special notes, and their impact on the appraisal conclusion.

VIII. The asset valuers' investigation of physical assets such as buildings and structures, equipment, construction in progress, and inventories is generally limited to observation of use and maintenance conditions. Internal, hidden, or difficult-to-access parts are not inspected. We do not possess professional qualifications nor have we been commissioned to conduct technical inspections or appraisals of the internal quality of these assets. Our appraisal is based on the information provided by the client and other relevant parties. If there are defects in the internal quality of these assets, the appraisal conclusions may be affected to varying degrees.

Summary of the Asset Appraisal Report

Important Notice

This summary is extracted from the main text of the asset appraisal report. To understand the details of the appraisal project and properly interpret and use the appraisal conclusion, the full text of the asset appraisal report shall be read carefully.

Specific business items are subject to approval results).

2. Shareholders, their shareholding ratios and equity changes

Shaanxi Shenyan Coal Co., Ltd. (former name of Shenyan Coal) was established on 2 November 2009, with capital contributions from Shenhua Group Co., Ltd. and Shaanxi Yanchang Petroleum (Group) Co., Ltd., with a registered capital of RMB1,440,000,000. At the time of its establishment, the company's equity structure was as follows:

No.	Name of shareholder	Contribution amount (in RMB'0,000)	Shareholding (%)	Method of capital contribution
1	Shenhua Group Co., Ltd.	73,440.00	51.00	Currency
2	Shaanxi Yanchang Petroleum (Group) Co., Ltd.	70,560.00	49.00	Currency
Total		**144,000.00**	**100.00**	/

In July 2013, the company increased its registered capital from RMB1,440,000,000 to RMB2,180,000,000 according to the resolution of the shareholders' meeting. Of which, Shenhua Group Co., Ltd. contributed an additional RMB377,400,000 in monetary form, and Shaanxi Yanchang Petroleum (Group) Co., Ltd. contributed an additional RMB362,600,000 in monetary form. After this change, the company's shareholding structure was as follows:

No.	Name of shareholder	Contribution amount (in RMB'0,000)	Shareholding (%)	Method of capital contribution
1	Shenhua Group Co., Ltd.	111,180.00	51.00	Currency
2	Shaanxi Yanchang Petroleum (Group) Co., Ltd.	106,820.00	49.00	Currency
Total		**218,000.00**	**100.00**	/

In August 2016, according to the *Approval Regarding the Transfer of Equity in Shaanxi Shenyan Coal Co., Ltd.* (SH.Y.Q.F. [2016] No. 32) issued by Shaanxi Yanchang Petroleum (Group) Co., Ltd., Shaanxi Yanchang Petroleum (Group) Co., Ltd. transferred 49.00% of its equity in Shenyan Coal to Shaanxi Yanchang Petroleum and Mining Co., Ltd. After this change, the company's shareholding structure was as follows:

No.	Name of shareholder	Contribution amount (in RMB'0,000)	Shareholding (%)	Method of capital contribution
1	Shenhua Group Co., Ltd.	111,180.00	51.00	Currency
2	Shaanxi Yanchang Petroleum and Mining Co., Ltd.	106,820.00	49.00	Currency
Total		**218,000.00**	**100.00**	/

In November 2017, the shareholder of the appraised entity, Shenhua Group Co., Ltd., was renamed to China Energy Investment Corporation Co., Ltd. After this change, the company's shareholding structure was as follows:

Asset Appraisal Report on the Appraisal of the Entire Shareholder's Equity of CHN Energy Shaanxi Shenyan Coal Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

No.	Name of shareholder	Contribution amount (in RMB'0,000)	Shareholding (%)	Method of capital contribution
1	China Energy Investment Corporation Co., Ltd.	111,180.00	51.00	Currency
2	Shaanxi Yanchang Petroleum and Mining Co., Ltd.	106,820.00	49.00	Currency
Total		**218,000.00**	**100.00**	/

In October 2020, Shaanxi Shenyan Coal Co., Ltd. was renamed to CHN Energy Shaanxi Shenyan Coal Co., Ltd. according to the resolution of the shareholders' meeting.

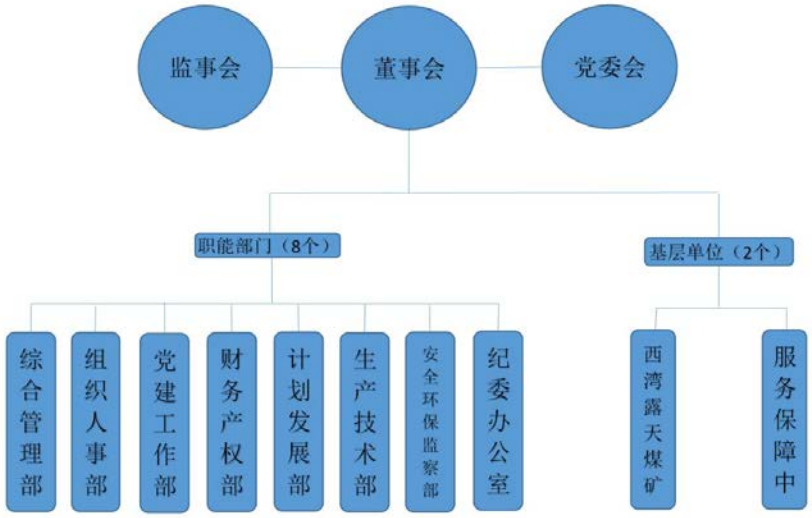
In November 2023, according to the resolution of the shareholders' meeting and the capital increase agreement, China Energy Investment Corporation Co., Ltd. contributed RMB35,914,000, of which RMB11,179,000 was used to subscribe for the newly increased registered capital of Shenyan Coal, and the remaining RMB24,735,000 was included in the capital reserve of Shenyan Coal. After the capital increase, it held a 41.00% equity interest in Shenyan Coal. Shenmu State-owned Capital Investment and Operation Group Co., Ltd. contributed RMB659,927,000, of which RMB205,423,000 was used to subscribe for the newly increased registered capital of Shenyan Coal, and the remaining RMB454,504,000 was included in the capital reserve of Shenyan Coal. After the capital increase, it held a 7.50% equity interest in Shenyan Coal. Shaanxi Yushen Energy Development and Construction Group Co., Ltd. contributed RMB615,932,000, of which RMB191,728,000 was used to subscribe for the newly increased registered capital of Shenyan Coal, and the remaining RMB424,204,000 was included in the capital reserve of Shenyan Coal. After the capital increase, it held a 7.00% equity interest in Shenyan Coal. Yulin Yuyang District Energy Investment Co., Ltd. contributed RMB483,947,000, of which RMB150,644,000 was used to subscribe for the newly increased registered capital of Shenyan Coal, and the remaining RMB333,303,000 was included in the capital reserve of Shenyan Coal. After the capital increase, it held a 5.50% equity interest in Shenyan Coal. After the completion of the above-mentioned capital increases, the registered capital of Shenyan Coal increased to RMB2,738,974,000. After this change, the company's shareholding structure was as follows:

No.	Name of shareholder	Contribution amount (in RMB'0,000)	Shareholding (%)	Method of capital contribution
1	China Energy Investment Corporation Co., Ltd.	112,297.90	41.00	Currency
2	Shaanxi Yanchang Petroleum and Mining Co., Ltd.	106,820.00	39.00	Currency
3	Shaanxi Yushen Energy Development and Construction Group Co., Ltd.	19,172.80	7.00	Currency
4	Shenmu State-owned Capital Investment and Operation Group Co., Ltd.	20,542.30	7.50	Currency
5	Yulin Yuyang District Energy Investment Co., Ltd.	15,064.40	5.50	Currency
Total		**273,897.40**	**100.00**	/

As of the valuation benchmark date, Shenyan Coal's shareholding structure has remained unchanged.

3. Ownership and management structure of the company

As of the valuation benchmark date, the organisational structure of the appraised entity was as follows:



监事会	Board of Supervisors
董事会	Board of Directors
党委会	Party Committee
职能部门（8 个）	Functional departments (8)
综合管理部	General Management Department
组织人事部	Organisation and Human Resources Department

The basic details of the buildings and structures are as follows:

(1) Buildings

The buildings and structures declared by the enterprise and included in this appraisal scope total 56 items, which are primarily classified by their use into production, office, residential, and auxiliary buildings. Production buildings mainly include the machine repair workshop, comprehensive water treatment room, transformation and distribution room for the coal storage warehouse, screening and crushing workshop, 110 kV substation, industrial site boiler room, water treatment system including oily wastewater treatment workshop, oil depot fire pump room, and transformation and distribution room. Office buildings mainly include the comprehensive building for outsourced unit, district team office building, newly constructed district team comprehensive building, electromechanical repair comprehensive building, and coal washing plant comprehensive building. Residential buildings mainly include the dormitory building for outsourced unit, No.1 and No. 2 dormitory buildings, combined building of fire garage and dormitory building, Xiwan Open-cut Coal Mine activity centre, and newly constructed staff apartments. Auxiliary buildings mainly include the Xiwan Mine grease warehouse. The building structures are mainly frame structures, brick-concrete structures, and steel structures. The buildings within the appraisal scope are under normal maintenance and management, and are currently in normal use.

As of the valuation benchmark date, none of the aforementioned buildings have obtained property ownership certificates, and the declared total floor area is 103,991.15 square metres. For the buildings that have not been certified, the appraised entity has issued a statement of ownership, confirming that the buildings within the appraisal scope are owned by it, and there are no property disputes.

As of the valuation benchmark date, the land occupied by the aforementioned buildings has been registered with property rights certificates, with certificate numbers SH. (2019) Y.L.SH.B.D.CH.Q. No. 03453 and SH. (2021) Y.L.SH.B.D.CH.Q. No. 09311. The registered owners are Shaanxi Shenyan Coal Co., Ltd. (the former name of the appraised entity). The land is classified as granted, with land use purposes designated as mining land and industrial land, respectively.

(2) Structures and other auxiliary facilities

The structures and other auxiliary facilities mainly include site roads, stripping roads, perimeter walls, lump coal storage, mixed coal storage, screening and crushing bridges from the screening and crushing workshop to the lump coal storage, conveyor bridges from the screening and crushing workshop to the mixed coal storage, transfer buffer warehouse, soil and water conservation greenery, and the first mining pit in the mining area. The types of structures include steel concrete, concrete, asphalt concrete, gravel, earth and stone, plants, iron works, steel structures, and brick masonry. The structures and other auxiliary facilities within the scope of the appraisal are under normal maintenance and management, and are currently in regular use.

The pipes and trenches mainly consist of the stormwater drainage pipes in the mining site, the integrated heating trench in the industrial area, the water pipes from the main industrial site to the external production system, the heating pipe network in the industrial area, the water supply and drainage pipe network in the industrial area, and the open channel in the open-cut mine. The materials used for the pipes are mainly PE, stainless steel pipes, reinforced concrete pipes, UPVC, and welded steel pipes. The pipes and ditches within the appraisal scope are under normal maintenance and management, and are currently in normal use.

2. Equipment

The equipment declared by the enterprise and included in this appraisal scope mainly includes machinery, vehicles, and electronic devices. The specific details are as follows:

(1) Machinery

The machinery declared by the enterprise and included in this appraisal scope totals 1,359 items, purchased and put into use from 2010 to 2025, mainly including comprehensive self-protection devices, M21 belt conveyors, box transformers, automated three-dimensional storage equipment, graders, crawler dozers, hydraulic shovels, 220-ton discharging trucks, 35 cubic meter electric shovels, apron feeders, crushers, and others. As of the valuation benchmark date, the aforementioned equipment was all in normal use.

(2) Vehicles

The vehicles declared by the enterprise and included in this appraisal scope total 134 units, purchased and put into use from 2010 to 2025, mainly including drainage vehicles, Coaster shuttles, mobile crane transport vehicles, water trucks, internal combustion balance-type 20-ton forklifts, Toyota 2,700 off-road vehicles, Coaster minibuses,

generator vehicles, flat trucks, fleet refueling trucks, and passenger buses. As of the valuation benchmark date, seven of the aforementioned vehicles were in a state awaiting scrapping, while the remaining vehicles are in normal use.

As of the valuation benchmark date, except for 44 vehicles used within the site that do not require a driving licence, all other vehicles have been registered with a driving licence, with the registered owner for all being CHN Energy Shaanxi Shenyan Coal Co., Ltd.

(3) Electronic equipment

The electronic equipment declared by the enterprise and included in this appraisal scope totals 1,833 units, purchased and put into use from 2010 to 2025, mainly including various models of computers, printers, air conditioners, surveillance systems, 3D laser scanning and measurement equipment, wireless dispatch cabinets, servers, lump coal storage grading screen modification - grading screens at the coal washing plant, 3D visualisation systems, explosion-proof intercoms, and others. As of the valuation benchmark date, the aforementioned equipment was all in normal use.

3. Long-term equity investments

The long-term equity investment declared by the enterprise and included in this appraisal scope includes one subsidiary with non-controlling interest. The details of the long-term equity investment are shown in the table below:

No.	Investee	Equity percentage (%)	Investment amount (RMB)	Book value (RMB)	Status
1	Shaanxi Hongqi Shenyan Chemical Engineering Co., Ltd.	30.00	15,000,000.00	33,828,882.49	Normal

The subscribed capital and paid-in capital of long-term equity investments are shown in the following table:

Unit: RMB'0,000

No.	Investee	Subscribed capital	Paid-in capital
1	Shaanxi Hongqi Shenyan Chemical Engineering Co., Ltd.	5,000.00	5,000.00

4. Intangible assets

The intangible assets declared by the company to be included in the appraisal scope include land use rights, mining rights, patent rights, software, software copyrights, and other intangible assets. The specific details are as follows:

(1) Land use rights

The land use rights declared by the enterprise and included in this appraisal scope totals two parcels, both of which have been registered with property rights certificates. Specific details are shown in the table below:

(2) Mining rights

The mining rights declared by the enterprise and included in this appraisal scope include one mining right and one purchase of 2 million tonnes of coal production capacity. The 2 million tonnes of coal production capacity was acquired by the appraised entity through an external purchase in November 2018. The details of the mining right are shown in the table below:

Asset Appraisal Report on the Appraisal of the Entire Shareholder's Equity of CHN Energy Shaanxi Shenyan Coal Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

No.	Name of mining rights	Licence number	Mining right holder	Mining type	Production scale
1	Xiwan Open-cut Coal Mine Mining Right	C6100002014111110138223	CHN Energy Shaanxi Shenyan Coal Co., Ltd.	Coal	13 million tonnes per year

(3) Patent rights

The patents declared by the enterprise and included in this appraisal scope total 50 items, comprising one invention patent and 49 utility model patents, which primarily cover devices for installing air filters in open-cut mining trucks, electric shovel cable trailing devices, coal mining dust suppression spray systems, water sprinkling dust removal equipment for coal, methods and apparatus for determining data transmission networks, and computer-readable storage media. All of the aforementioned patents were obtained through independent research and development, have been applied in practice, and their annual fees have been paid on time. Among these, one patent is co-owned; the registered owner for ten patents is Shaanxi Shenyan Coal Co., Ltd. (the former name of the appraised entity), and no change registration has yet been completed. Refer to the "Asset-based Approach Appraisal Details Table" for the specific details of aforementioned patents.

Regarding the jointly owned patents and patents whose registered owner's name has not yet been changed, the appraised entity has provided a statement and guarantees that these patents are either solely owned or co-owned with other companies, and there are no ownership disputes or potential disputes. For jointly owned patents, all parties have the right to apply them in their own production and operations. Therefore, the resulting income and costs are enjoyed and borne by each party.

(4) Other intangible assets - software and software copyrights

a) Software

The software declared by the enterprise and included in this appraisal scope totals 44 items, which include the Xiwan Open-cut Coal Mine Centralised Monitoring Platform Project, Xiwan Open-cut Coal Mine Dual Prevention Management Platform, Oil Depot Equipment Installation Engineering Tank Area Process Monitoring System, Shenyan Coal Storage System Mobile Terminal Application Project, Service Support Centre Archive Smart Document Management System, Network Security Level Protection System, Truck Tire Monitoring System, and others. All were acquired by the appraised entity through external purchase and are currently in normal use.

b) Software copyrights

The enterprise declared a total of 6 software copyrights within the appraisal scope, all of which have obtained certificates of rights. These copyrights are solely owned by the appraised entity, with the registered owner being CHN Energy Shaanxi Shenyan Coal Co., Ltd. The software copyrights were all developed and obtained through self-development or outsourced commissioning by the appraised entity. For detailed information, refer to the "Asset-based Appraisal Detailed Report."

iv. Off-balance-sheet assets declared by the enterprise

The off-balance-sheet assets declared by the enterprise and included in this appraisal scope consist of patent rights and software copyrights. Refer to "Main assets within the scope" for details.

v. Relevant assets referenced from the reports

The appraised value of the mining rights in this asset appraisal report was determined with reference to the mining rights appraisal conclusion issued by China Enterprise Appraisals Co., Ltd. The referenced appraisal report is summarised as follows:

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1079
Subject asset	Mining right of CHN Energy Shaanxi Shenyan Coal Co., Ltd. for the Xiwan Open-cut Coal Mine in Shenmu City
Appraisal scope	The scope includes the coordinates defined in the mining licence issued by the Shaanxi Provincial Department of Land and Resources on 16 October 2023 (Licence No.: C6100002014111110138223), as well as the resources within the defined area.
Valuation benchmark date	31 July 2025
Value type	Market Value
Appraisal method	Discounted Cash Flow Method

IV. Value Type

Based on the appraisal purpose, market conditions, and the specific conditions of the subject asset, the value type of the subject asset is determined to be market value.

Market value refers to the estimated value of the subject asset in normal and fair transactions as of the valuation benchmark date, between a willing buyer and a willing seller, each acting rationally and without coercion.

V. Valuation benchmark date

The valuation benchmark date for this report is 31 July 2025.

The valuation benchmark date is determined by the client. The selection of the valuation benchmark date mainly considers the realisation of economic activities and end-of-accounting-period factors. Asset appraisal provides a value reference for assets at a specific point in time. By choosing the end of the accounting period as the valuation benchmark date, it can comprehensively reflect the overall status of the subject assets. At the same time, adhering to the principles of ensuring the appraisal results effectively serve the appraisal purpose, accurately delineating the appraisal scope, conducting precise and efficient verification of assets, and rationally selecting the basis for appraisal, this date was selected as the valuation benchmark date.

VI. Appraisal Basis

i. Basis for economic activities

Minutes of the 18th Chairman's Special Meeting of China Energy Investment Corporation Co., Ltd. in 2025 (1 August 2025);

ii. Legal and regulatory basis

1. *Asset Appraisal Law of the People's Republic of China* (adopted at the 21st Session of the Standing Committee of the 12th National People's Congress on 2 July 2016);

2. *Company Law of the People's Republic of China* (second amendment at the 7th Session of the Standing Committee of the 14th National People's Congress on 29 December 2023);

3. *Civil Code of the People's Republic of China* (adopted at the 3rd Session of the 13th National People's Congress on 28 May 2020)

4. *Securities Law of the People's Republic of China* (second amendment at the 15th Session of the Standing Committee of the 13th National People's Congress on 28

December 2019)

5. L*aw of the People's Republic of China on the State-Owned Assets of Enterprises* (adopted at the 5th Session of the Standing Committee of the 11th National People's Congress on 28 October 2008, effective from 1 May 2009);

6. *Vehicle Purchase Tax Law of the People's Republic of China* (approved at the 7th Session of the Standing Committee of the 13th National People's Congress on 29 December 2018);

7. L*aw of the People's Republic of China on Enterprise Income Tax* (second amendment at the 7th Session of the Standing Committee of the 13th National People's Congress on 29 December 2018);

8. *Law of the People's Republic of China on the Administration of Urban Real Estate* (third amendment at the 12th Session of the Standing Committee of the 13th National People's Congress on 26 August 2019);

9. *Land Administration Law of the People's Republic of China* (third amendment at the 12th Session of the Standing Committee of the 13th National People's Congress on 26 August 2019);

10. *Resource Tax Law of the People's Republic of China* (adopted at the 12th Session of the Standing Committee of the 13th National People's Congress on 26 August 2019)

11. *Patent Law of the People's Republic of China* (fourth amendment at the 22nd Session of the Standing Committee of the 13th National People's Congress on 17 October 2020);

12. *Copyright Law of the People's Republic of China* (third amendment at the 23rd Session of the Standing Committee of the 13th National People's Congress on 11 November 2020);

13. *Energy Law of the People's Republic of China* (adopted at the 12th Session of the Standing Committee of the 14th National People's Congress on 8 November 2024, effective from 1 January 2025)

14. *Mineral Resources Law of the People's Republic of China* (amended at the 12th Session of the Standing Committee of the 14th National People's Congress on 8 November 2024);

15. *Implementation Regulations of the Enterprise Income Tax Law of the People's Republic of China* (amended by State Council Order No. 714 on 23 April 2019);

16. *Interim Regulations on the Supervision and Administration of State-owned Assets of Enterprises* (second amendment by State Council Order No. 378 on 2 March 2019);

17. *Interim Regulations of the People's Republic of China on City and Town Land Use Tax* (fourth amendment by State Council Order No. 17 on 2 March 2019);

18. *Interim Regulations on Value-Added Tax of the People's Republic of China* (second amendment by State Council Order No. 134 on 19 November 2017);

19. *Regulations on the Assets Appraisal and Management of State-owned Assets* (amended by State Council Order No. 91 on 29 November 2020);

20. *Interim Measures for the Assessment and Management of Enterprises* (Order No. 12 of the SASAC);

21. *Measures for Supervision and Administration of State-owned Assets of Enterprises* (Order No. 32 of the SASAC and the Ministry of Finance);

22. *Notice on Strengthening the Matters Related to the Appraisal Management of the State-owned Assets* (G.Z.W.CH.Q. [2006] No. 274);

23. *Notice on Matters Related to the Review of Appraisal Report of State-owned Assets of Enterprises* (G.Z.CH.Q. [2009] No. 941);

24. *Guidelines for the Approval of Asset Appraisal Projects in Central Enterprises* (G.Z.F.CH.Q. [2010] No. 71);

25. *Guideline for the Filing for the Appraisal Project of State-owned Assets of Enterprises* (G.Z.F.CH.Q. [2013] No. 64);

26. *Notice on Optimising the Management of Asset Appraisal of State-Owned Enterprises* (G.Z.F.CH.Q.G. [2024] Document No. 8);

27. *Notice on Issuing the Rules for the Implementation of Regulations on the Assets Appraisal and Management of State-owned Assets* (G.Z.B.F. [1992] No. 36);

28. *Notice of the Ministry of Finance and the State Taxation Administration on Several Issues Regarding the National Implementation of VAT Reform* (C.SH. [2008] No. 170);

29. *Notice of the Ministry of Finance and the State Taxation Administration on Implementing the Pilot Programme of Replacing Business Tax with Value-Added Tax in an All-round Manner* (C.SH. [2016] No. 36);

30. *Notice of the Ministry of Finance and the State Taxation Administration on Adjusting VAT Rate* (C.SH. [2018] No. 32);

31. *Implementation Rules for the Interim Regulations on Value-Added Tax of the People's Republic of China* (Order No. 65 of the Ministry of Finance and the State Administration of Taxation);

32. *Announcement on Policies Relevant to Deepening VAT Reform* (Announcement No. 39 in 2019 of the Ministry of Finance, the State Taxation Administration and the General Administration of Customs);

33. *Financial Supervision and Management Measures for the Asset Appraisal Industry* (MOF Order No. 86, amended by MOF Order No. 97);

34. *Accounting Standards for Business Enterprises - Basic Standards* (MOF Order No. 33), *Decision of the Ministry of Finance on Amending the Accounting Standards for Business Enterprises - Basic Standards* (MOF Order No. 76);

35. *Notice on Further Standardising Bank Letters and Reply Letters* (C.K. [2020] No. 12);

36. *Regulations on the Transfer of State-Owned Land Use Rights* (MLR Order No. 21);

37. *Interim Regulations on Mining Rights Transfer and Assignment Management* (G.T.Z.F. [2000] No. 309);

38. *Notice on the Mining Rights Valuation Management Measures (Trial)* (G.T.Z.F. [2008] No. 174);

39. *Notice of the Ministry of Finance, the Ministry of Natural Resources and the State Taxation Administration on the Issuance of the Measures for the Collection of Mining Rights Transfer Revenue* (C.Z. [2023] No. 10);

40. *Announcement on the Implementation Criteria for Relevant Issues on Resource Tax* (Announcement [2020] No. 34 of the Ministry of Finance and the State Taxation Administration);

41. *Announcement of the Ministry of Finance, the State Administration of Taxation and the National Development and Reform Commission on Extending the Corporate Income Tax Policy for the Western Development* (Ministry of Finance Announcement No. 23, 2020);

42. *Measures for the Supervision and Administration of State-Owned Equity in Listed Companies* (SASAC, MOF, and CSRC Order No. 36);

43. Other relevant Laws, regulations, and notices.

iii. Basis of appraisal standards

1. *Basic Rules for Asset Appraisal* (C.Z. [2017] No. 43);

2. *Code of Professional Ethics for Asset Appraisal* (ZH.P.X. [2017] No. 30);

3. *Asset Appraisal Practice Standards – Appraisal Report* (ZH.P.X. [2018] No. 35);

4. *Asset Appraisal Practice Standards – Appraisal Procedures* (ZH.P.X. [2018] No. 36);

5. *Asset Appraisal Practice Standards – Appraisal Methods* (ZH.P.X. [2019] No. 35);

6. *Asset Appraisal Practice Standards – Appraisal Engagement Contract* (ZH.P.X. [2017] No. 33);

7. *Asset Appraisal Practice Standards – Appraisal Archives* (ZH.P.X. [2018] No. 37);

8. *Asset Appraisal Practice Standards – Utilisation of Expert Work and Relevant Reports* (ZH.P.X. [2017] No. 35);

9. *Asset Appraisal Practice Standards – Enterprise Value* (ZH.P.X. [2018] No. 38);

10. *Asset Appraisal Practice Standards – Intangible Assets* (ZH.P.X. [2017] No. 37);

11. *Asset Appraisal Practice Standards – Real Estate* (ZH.P.X. [2017] No. 38);

12. *Asset Appraisal Practice Standards – Machinery and Equipment* (ZH.P.X. [2017] No. 39);

13. *Asset Appraisal Practice Standards – Intellectual Property* (ZH.P.X. [2023] No. 14);

14. *Guidelines for Appraisal Reports of State-owned Enterprise Assets* (ZH.P.X. [2017] No. 42);

15. *Guidelines for Quality Control of Asset Appraisal Institutions* (ZH.P.X. [2017] No. 46);

16. *Guidance on Types of Asset Appraisal Value* (ZH.P.X. [2017] No. 47);

17. *Guidance on Legal Ownership of Subject Asset* (ZH.P.X. [2017] No. 48).

18. *Guidelines on Patent Asset Appraisal* (ZH.P.X. [2017] No. 49);

19. *Guidelines on Copyright Asset Appraisal* (ZH.P.X. [2017] No. 50);

20. *Guidance on Determining Mining Rights Appraisal Parameters* (Chinese Association of Mineral Resources Appraisers, October 2008);

21. *Chinese Mining Rights Appraisal Standards* (Chinese Association of Mineral Resources Appraisers, August 2008);

22. *Chinese Mining Rights Appraisal Standards* (II) (Chinese Association of Mineral Resources Appraisers, September 2010);

23. *Guidance on the Mineral Rights Appraisal Standard issued by the Chinese Association of Mineral Resources Appraisers (CMV 13051-2007) — Determination of Types of Solid Mineral Resource Reserves*.

iv. Basis of ownership

1. State-owned Property Registration Certificates;

2. Real Estate Certificates;

3. Mining Licences;

4. Patent Certificates;

5. Copyright (Intellectual Property) Ownership Documentation;

6. Motor Vehicle Registration Certificates;

7. Relevant Ownership Transfer Contracts;

8. Other relevant ownership certificates.

v. Basis for price determination

1. *Basic Construction Financial Rules* (Ministry of Finance Order No. 81, effective from 1 September 2016);

2. *Regulations on the Management of Construction Costs for Basic Construction Projects* (C.J. [2016] No. 504);

3. *Electromechanical Product Price Information Query System (2025)*;

4. *Standard for Mandatory Scrapping of Motor Vehicles* (Order No. 12 of 2012 of Ministry of Commerce, National Development and Reform Commission, Ministry of Public Security, Ministry of Environmental Protection, effective from 1 May 2013);

5. Guidance on the Implementation of the *Notice of the National Development and Reform Commission on Further Liberalising Professional Service Prices for Construction Projects* (F.G.J.G. [2015] No. 299) (ZH.D.L.D.E. [2015] No. 162);

6. *Ground Building Engineering Consumption Quotas for Coal Construction* (2015, After-tax Base Price);

7. *Coal Construction Cost Quotas and Price Management Regulations* (2015);

8. *Coal Construction Engineering Cost Quotas and Other Regulations for Coal Construction* (NB/T 51064-2016);

VII. Appraisal Method

Income approach refers to various appraisal methods that capitalise or discount the expected income of the subject asset to determine its value.

Market approach refers to various appraisal methods that compare the subject asset with comparable references, using the market price of the comparable references as a basis to determine the value of the subject asset.

Asset-based approach refers to an appraisal method where the value of the subject asset is determined based on the balance sheet of the appraised entity or business on the valuation benchmark date, assessing the value of identifiable on-balance-sheet and off-balance-sheet assets and liabilities.

The methods selected for this appraisal are income approach and asset-based approach.

i. Reasons for the selection of appraisal methods

Reason for selecting the asset-based approach: As of the valuation benchmark date, the book value of the assets and liabilities within the appraisal scope has already been audited. Each asset and liability of the appraised entity can be identified. The identifiable assets and liabilities can each be individually assessed using an appropriate appraisal method, thus meeting the conditions for applying the Asset-based Approach.

Reason for selecting the income approach: The appraised entity has the foundation and conditions for ongoing operations, with standardised accounting practices, clear management, stable and defined business sources. The management has detailed plans for the current operations and future development of the Company. The future expected income and operational risks can be reasonably predicted, meeting the conditions for using the income approach for appraisal.

Reason for not selecting the market approach: The market approach relies on the existence of an active public market with sufficient market data and comparable transaction cases. The appraised entity is a non-listed company. Listed companies in the same industry differ significantly from the valued enterprise in terms of business structure, corporate scale, asset allocation and utilisation, operational stage, growth potential, operational risks, financial risks, and others. Furthermore, near the valuation benchmark date, there were few comparable transactions such as purchases or mergers involving companies in the same industry in China. Reliable operational and financial data from comparable transactions are difficult to obtain, making it impossible to calculate appropriate value ratios. Therefore, the market approach is not adopted for this appraisal.

ii. Introduction to appraisal methods

1. Income approach

This appraisal for enterprise overall value adopts the discounted cash flow method under the income approach to indirectly determine the entire shareholders' equity value. The overall value of the enterprise is composed of the value of operating assets

generated from normal business activities and the value of non-operating assets unrelated to normal business operations. To determine the value of the operating assets, the discounted enterprise free cash flow model is adopted, which adds the enterprise's free cash flows in several years ahead which are discounted through an appropriate discount rate. The calculation model is as follows:

Entire shareholders' equity value = Enterprise overall value - Interest-bearing debt value

(1) Enterprise overall value

The enterprise overall value refers to the sum of the entire shareholders' equity and the interest-bearing debt value. According to the asset allocation and usage situation of the appraised entity, the formula for calculating the enterprise overall value is as follows:

Enterprise overall value = Operating asset value + Surplus asset value + Non-operating asset value - Non-operating liability value + Long-term equity investment value

a) Operational asset value

Operational assets are those related to the appraised entity's production and business operations, which are involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The calculation formula for operating asset value is as follows:

$$P = \sum_{i=1}^{n} \frac{F_i}{(1+r)^i} + \frac{F_n}{r \times (1+r)^n}$$

Wherein: P: The value of the enterprise's operating assets as of the valuation benchmark date ;

F_i: The expected free cash flow of the enterprise in the i-th year after the valuation benchmark date ;

F_n: The expected free cash flow of the enterprise at the end of the detailed forecast period;

r: The discount rate (weighted average cost of capital, WACC);

n: The detailed forecast period;

i: The i-th year of the detailed forecast period.

Of which, the free cash flow of the enterprise is calculated as follows:

Enterprise free cash flow = Earnings before interest and taxes (EBIT) + Depreciation and amortisation - Capital expenditures - Increase in working capital

Of which, the discount rate (WACC) is calculated as follows:

$$WACC = K_e \times \frac{E}{E + D} + K_d \times (1 - t) \times \frac{D}{E + D}$$

Wherein: k_e: Cost of equity capital;

k_d: Cost of debt capital;

E: Market value of equity;

D: Market value of debt;

t: Tax rate.

Of which, the cost of equity capital is calculated using the Capital Asset Pricing Model (CAPM). The calculation formula is as follows:

$$K_e = r_f + MRP \times \beta_L + r_c$$

Where: r_f: Risk-free rate of return;

MRP: Market risk premium;

β_L: Systematic risk coefficient of equity;

r_c: Company-specific risk adjustment coefficient.

b) Surplus Asset Value

Surplus assets are those that exceed the enterprise's operational needs as of the valuation benchmark date, and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The appraised entity's surplus assets include cash. The surplus assets in this appraisal are appraised using the cost method.

c) Non-Operational Asset and Liability Values

Non-operational assets and liabilities are those that are unrelated to the appraised entity's business operations and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date. As of the valuation benchmark date, the non-operating assets of the appraised entity included other receivables, fixed assets in abnormal condition, deferred tax assets, accounts payable, other payables, and expected liabilities. The cost approach was adopted for this appraisal.

d) Long-Term Equity Investment Value

Long-term equity investments refer to the external equity investments made by the enterprise as of the valuation benchmark date. The entire shareholders' equity of the invested entity, as confirmed using an appropriate appraisal method, is multiplied by the equity holding percentage to determine the long-term equity investment value.

(2) Interest-bearing debt value

Interest-bearing debt refers to liabilities that the appraised entity must pay interest on as of the valuation benchmark date.

2. Asset-based approach

(1) Current assets

a) Monetary funds, including bank deposits and other monetary funds, were appraised at their verified book value through verification of bank statements and bank confirmations.

b) For accounts receivable and other receivables, the valuers conducted inquiries with the appraised entity regarding its sales credit policies, customer composition and creditworthiness, as well as the historical recovery of accounts receivable. According to the principle of materiality, confirmation letters were sent for large amounts or long-aging receivables, and related contracts and vouchers were randomly checked. Based on the verification of accounts receivable, the evaluators determined the appraised value based on the amount that is likely to be collected for each item. As at the valuation benchmark date, the accounts receivable included in the appraisal scope were expected

to be fully recovered, therefore they were appraised at their verified book value.

c) For prepayments, the valuers conducted inquiries with the relevant personnel of the appraised entity to understand the reasons for the formation of the prepayments and the creditworthiness of the counterparties. In accordance with the principle of materiality, confirmation requests were sent for prepayments significant in amount or have long aging, etc., and a sample check was performed on the corresponding contracts and vouchers. Based on the verification of advance payments, the assessors determined the value by considering the goods or related rights that could be recovered for each payment. As at the valuation benchmark date, the prepayments included in the appraisal scope were expected to be fully recovered, therefore they were appraised at their verified book value.

d) Inventories

For raw materials, the appraised entity used actual cost accounting, including purchase price, related taxes, transportation fees, loading and unloading fees, insurance fees, and other reasonable costs. Due to the setup of the accounting system, the appraised entity could only provide the total inventory details as of the valuation benchmark date and could not split the details according to financial items such as inventory – raw materials, construction in progress – engineering materials, etc. In this appraisal, the total inventory details as of the valuation benchmark date were listed under inventory – raw materials, and the value is appraised based on the book value of the inventory details.

For Finished Products, the appraised entity uses actual cost accounting, including purchase costs, processing costs, and other costs. As of the valuation benchmark date, the finished products are normal sales items. The appraised value is determined based on the sales price at the valuation benchmark date, minus sales expenses, taxes and surcharges, and an appropriate amount of after-tax net profit. The specific appraisal calculation formula is as follows:

Appraised value of finished goods for normal sales = Quantity of finished goods × After-tax unit selling price × (1 - Sales tax and surcharge rate - Selling expense rate - Income tax rate - Net profit margin × Deduction rate)

Under normal circumstances, a reasonable profit deduction rate of 0.5 is applied for normal sales finished products. The sales price for finished products is taken as the average recent sales price of the appraised entity as of the valuation benchmark date.

(2) Long-term equity investments

Hongqi Shenyang Company has performed well in historical annual profits and can cooperate with the relevant appraisal work; therefore, an overall appraisal was conducted. First, the total equity value of the shareholders of the investee was appraised, and then the partial equity value of the shareholders was calculated by multiplying the proportion of the shares held.

(3) Buildings and structures

Based on the characteristics of the various types of building and structure assets, the appraised value type, data collection conditions, and other related factors, as well as the applicability of the appraisal methods, the analysis is as follows:

Since the appraisal target is self-built industrial buildings and auxiliary facilities, the accounting information is relatively complete, and the physical cost can be fully

measured, the cost method can be used for appraisal; there have been no similar real estate leasing cases in the area where the appraisal target is located recently, the income approach cannot be used for appraisal; there have been no similar real estate transaction cases in the area where the appraisal target is located recently and no sufficient comparable examples can be collected, the market approach cannot be used for appraisal. In summary, the cost method is used for appraisal. The cost method calculation formula is as follows:

Appraised value= Replacement cost × Composite depreciation rate

a) Determination of replacement cost

A. The replacement cost of general buildings and structures generally includes construction and installation engineering fees, pre-construction and other costs, and capital costs. The calculation formula is as follows:

Replacement cost = Construction and installation project cost + Pre-construction and other costs + Capital cost - Deductible VAT

a. Construction and installation project costs

For large, valuable, and important buildings, the construction and installation project costs are determined using the preliminary and final budget adjustment method, which uses the quantities in the building's final budget as a basis and calculates the construction and installation project costs based on local standards and relevant fee documents.

For general buildings, or when final budget data is incomplete or the building's value is small and structure simple, the comparable method is used to determine the construction and installation project costs.

b. Pre-construction and other costs

The pre-construction and other costs are calculated based on the construction investment amount provided by the appraised entity, according to industry, national, or local government prescribed fee standards.

c. Capital costs

Capital costs are calculated based on the appraised entity's reasonable construction period, referencing the Loan Prime Rate (LPR) published by the People's Bank of China on the valuation benchmark date. The total sum of construction and installation project costs, preliminary and other fees, etc., is used as the base for calculating the financing costs over the uniform capital investment. The reasonable construction period for the appraised entity is 2.5 years. The calculation formula of capital costs is as follows:

Capital cost = (Construction and installation project cost + Pre-construction and other costs) × Reasonable construction period × Interest rate × 1/2

d. Deductible VAT

According to relevant VAT documents, for those that qualify for VAT deduction, the full replacement value is reduced by the corresponding VAT.

B. The replacement cost of the first mining pit in the mining area includes construction and installation comprehensive costs, pre-construction and other expenses, and capital costs. The calculation formula is as follows:

Replacement cost = Construction and installation cost + Pre-construction and other costs + Capital costs - Deductible VAT

a. Construction and installation comprehensive costs

The construction and installation project cost was determined based on the physical quantities of work and the latest winning contract price for the enterprise's earth and stone works.

Construction and installation project cost = Earth work cost + Rock blasting cost + Rock transportation cost

b. Pre-construction and other expenses

Pre-construction and other expenses were calculated based on the engineering investment amount of the appraised entity, in accordance with the fee standards set by the industry, national, or local government regulations.

c. Capital costs

The reasonable construction period for the appraised entity is 2.5 years, and the corresponding loan interest rate is 3.19%. The capital cost for the construction period of the first mining pit in the mining area was calculated accordingly.

d. Deductible VAT

According to the provisions of VAT-related documents, for those who meet the conditions for VAT deduction, the replacement cost shall deduct the corresponding VAT.

b) Determination of composite depreciation rate

A. For important buildings (and structures), the economic service life, used lifespan, and on-site inspection of the structure, decoration, and auxiliary equipment are considered to determine the remaining useful life, which is then used to calculate the composite depreciation rate.

Composite depreciation rate = Remaining useful life / (Remaining useful life + Years of use) × 100%

For mining enterprises, the remaining useful life of buildings is closely related to the mine's remaining service life. The remaining useful life is determined based on the lower of the mine's remaining service life and the building's remaining economic lifespan.

B. For low-value buildings (and structures), the composite depreciation rate is mainly determined based on the economic service life. The calculation formula is as follows:

Composite depreciation rate = (Economic lifespan - years of use) / Economic lifespan × 100%

For mining enterprises, the impact of the remaining service life of the mine should also be considered.

C. For the first mining pit in the mining area, it differs from above-ground buildings and structures in that it is a special structure attached to coal resources, closely related to the coal reserves being mined at the coal mine. As the coal resources are extracted, its economic lifespan shortens accordingly. When the coal resources are depleted, its economic lifespan ends.

The underground engineering geological structure is complex, with many unpredictable factors and poor construction conditions. The stability of underground engineering is closely related to its location, the nature of the rock layers, and geological conditions. The service life of underground engineering is determined by the reserves in its service area. Therefore, before determining the composite depreciation rate, the valuers first reviewed the geological reports and coal mine design materials to understand the impact of the position, rock properties, and geological structure of the underground engineering on the project. Second, they conducted on-site inspections of the condition of the first mining pit in the mining area and its maintenance status, and consulted with on-site engineering technicians to check and verify maintenance records and methods. Third, the valuers calculated the years of service based on the completion date of the first mining pit and, using the coal mine's geological reserves, industrial reserves, and recoverable reserves provided by the geological survey department, calculated the remaining service life of the first mining pit in the mining area by level, coal seam, and mining area. Finally, they determined the composite depreciation rate for the first mining pit in the mining area.

c) Determination of the appraised value

Appraised value = Replacement cost × Composite depreciation rate

(4) Equipment

Equipment assets include machinery, vehicles, and electronic devices. Based on the nature of this project and the characteristics of the equipment assets within the scope of the appraisal, for some older electronic devices (e.g., computers) and vehicles, where there is an active second-hand market, the appraised value is based on the second-hand or scrap value of similar equipment. For other equipment, which does not have independent profit-generating ability and where there are very few similar transaction examples, it is not suitable to apply the income approach or market approach for appraisal. Therefore, the cost approach is used for these equipment appraisals. The cost method calculation formula is as follows:

Appraised value = Replacement cost × Composite depreciation rate

a) Replacement cost

Based on the characteristics and nature of the equipment within this appraisal scope, as well as the circumstances of the appraised entity, the calculation methods for the replacement costs of various types of equipment in this appraisal are as follows:

A. Machinery

For equipment that requires installation, the replacement cost generally includes: Equipment purchase price, transport and handling fees, installation engineering fees, pre-construction and other costs, and the capital cost. For equipment that does not require installation, the replacement cost generally includes: Equipment purchase price and transport and handling fees. At the same time, in accordance with the relevant VAT documents, for equipment that meets the VAT deduction conditions, the replacement cost of the equipment should exclude the corresponding VAT. The equipment replacement cost calculation formula is as follows:

Equipment requiring installation replacement cost = Equipment purchase price + Transport and handling fees + Installation engineering fees + Pre-construction and other costs + Capital costs - Deductible VAT

Equipment not requiring installation replacement cost = Equipment purchase price + Transport and handling costs - Deductible VAT

a. Equipment purchase price

For major process equipment, the purchase price is primarily determined by consulting the market price as at the valuation benchmark date or referencing the contract price of similar equipment at the valuation benchmark date. For small equipment, the purchase price is determined by checking the market price information for the valuation benchmark date . For equipment with no market price information, the purchase price is determined by referencing the purchase price for similar equipment.

b. Transport and handling fees

Transport and handling fees refer to the transportation costs, loading and unloading fees, and other associated costs incurred during the equipment's transportation. If transport and handling fees are not included in the equipment purchase price, they are determined by referring to standard cost indicators from resources like the *Asset Appraisal Common Data and Parameters Handbook* and the *Mechanical Industry Construction Project Budgeting Method and Indices*, taking into account factors such as transportation distance, weight, and volume. The formula for calculating transport and handling fees is as follows:

Transportation and handling fees = Equipment purchase price × Transport and handling fee rate

If transport and handling fees are already included in the equipment purchase price, no additional calculation is made.

c. Installation engineering fees

For equipment that requires installation, the installation engineering fees are estimated using the unit price method, referring to similar equipment installation project budgets (preliminary or final) and other engineering documents, including the *Coal Mining Construction Project Cost Quotas* (NB/T51063-2016) and other relevant standards, as well as recent local pricing information. Alternatively, the *Asset Appraisal Common Methods and Parameters Handbook* and the *Mechanical Industry Construction Project Budgeting Method and Indices* are used, combined with the scale and nature of the equipment installation work to determine the installation fee rate. The installation engineering fee calculation formula is as follows:

Installation engineering fee = Equipment purchase price × Installation engineering fee rate

For equipment where the purchase price includes installation engineering costs, or for equipment that does not require installation, installation engineering fees are not included.

For equipment foundations that are inseparable from buildings or separately listed as independent foundations, these are appraised within the corresponding buildings and structures, and installation engineering fees are not recalculated.

d. Pre-construction and other costs

The pre-construction and other costs are calculated based on the construction investment amount provided by the appraised entity, according to industry, national, or local government prescribed fee standards.

e. Capital costs

Capital costs are calculated based on the reasonable construction period of the appraised entity's project, referring to the loan market quotation rate (LPR) published by the National Interbank Funding Centre on the valuation benchmark date. The total cost, including equipment purchase price, transport and handling fees, installation engineering fees, pre-construction and other costs, is used as the basis, assuming that the funds are evenly invested. The reasonable construction period for the appraised entity is 2.5 years. The calculation formula of capital costs is as follows:

Capital costs = (Equipment purchase price + Transport and handling costs + Installation engineering fees + Pre-construction and other costs) × Reasonable construction period × Loan interest rate × 1/2

f. Deductible VAT

VAT was calculated based on the relevant documents, such as "C.SH.[2008] No. 170", "C.SH. [2016] No. 36", "C.SH. [2018] No. 32", "Announcement [2019] No. 39 of the Ministry of Finance, State Taxation Administration, and General Administration of Customs", and the relevant local and industry pricing adjustment documents for deductible VAT. The specific calculation method is as follows:

Deductible VAT = Equipment purchase price / 1.13 × 13% + (Transport and handling fees + Installation engineering fees) / 1.09 × 9% + VAT deductible from pre-construction and other costs

B. Vehicles

For vehicles, the replacement cost is determined by the market price on the valuation benchmark date , adding the vehicle purchase tax and other reasonable costs (such as licence fees). The calculation formula is as follows:

Replacement cost = Vehicle purchase price + Vehicle purchase tax + Licence fees and other costs - Deductible VAT

Including:

Vehicle purchase tax = Vehicle purchase cost / (1 +13%) × 10%.

The vehicle purchase price is mainly determined by consulting local dealers or checking online for market prices; vehicle purchase tax is determined according to the Vehicle Purchase Tax Law of the People's Republic of China; licence fees and other costs are determined based on local administrative fee standards and actual vehicle expenses.

C. Electronic equipment

For electronic equipment that requires installation, the appraisal is conducted using the same method as for machinery. For other electronic equipment that does not require installation, the replacement cost is determined based on the market purchase price on the valuation benchmark date.

Replacement cost = Electronic equipment purchase price / 1.13

b) Determination of composite depreciation rate

A. For specialised and general machinery, the newness rate is primarily determined based on the equipment's economic lifespan, years of use, and on-site inspections of the equipment's condition and technical status. The remaining useful life is then calculated, and the composite depreciation rate is determined using the following

formula:

Composite depreciation rate = Remaining useful life / (Remaining useful life + Years of use) × 100%

B. For electronic equipment, office furniture, and other devices, the composite depreciation rate was mainly determined based on their economic service life and the results of on-site inspections. The calculation formula is as follows:

Age-based newness rate = (Economic lifespan - Years of use) / Economic lifespan × 100%

Composite depreciation rate = Age-based newness rate × Adjustment coefficient

C. For vehicles, according to the *Compulsory Motor Vehicle Scrap Standards* (Order [2012] No.12 of the Ministry of Commerce, National Development and Reform Committee, the Ministry of Public Security, and Environmental Protection Department), the theoretical newness rate is determined using vehicle mileage and usage years, based on the lower of the two. For vehicles without a mandatory scrapping period, the remaining useful life method is used. Finally, a weighted average is calculated between the lower of the age-based newness rate and the mileage-based newness rate, and the observation-based newness rate, to determine the composite depreciation rate. The calculation formula is as follows:

Age-based newness rate (no required useful life) = Remaining useful life / (Years of use + Remaining useful life) × 100%

Age-based newness rate (with required useful life) = (Required useful life - Years of use) / Required useful life × 100%

Mileage-based newness rate = (Standard retirement mileage - Accumulated mileage) / Standard retirement mileage × 100%

Composite depreciation rate = MIN(age-based newness rate, mileage-based newness rate) × 40% + Observation-based newness rate × 60%

c) Determination of the appraised value

Appraised value= Replacement cost × Composite depreciation rate

(5) Construction in progress includes civil works and construction materials. For civil works with a start time more than six months before the valuation benchmark date , if there is little change in the construction and installation project cost during the construction period, the appraisal will be based on the book value, excluding unreasonable costs, plus the capital costs. For construction materials, the appraisal will be confirmed based on the book value.

(6) Intangible assets - land use right

According to the *Asset Appraisal Practice Standards – Real Estate*, the main appraisal methods for land use rights include the market approach, cost method, income approach, hypothetical development method, and benchmark land price method. The choice of appraisal method should be based on the local real estate market development conditions, as well as the specific characteristics of the project and the purpose of the appraisal, to select the appropriate appraisal method. Applicability analysis of appraisal methods is as follows:

Market comparison method: According to market research, there have been many

similar land market transaction cases in the vicinity of the land under appraisal in recent years, and the market method is suitable for the appraisal;

Income method: As the land under appraisal is for enterprise production and operation, its potential income is included in the enterprise's operating profits. However, the accounting of income, costs, and profits from enterprise operations is relatively complex, and it is not easy to determine the profits generated by the land separately. Therefore, the income method is not suitable for the appraisal;

Assumption development method: There are no similar building (structure) transaction cases for proposed projects in the area, and the total price of real estate cannot be reasonably determined. Therefore, the assumption development method is not suitable for the appraisal;

Cost method: The land under appraisal is located in a mature industrial zone, and the cost method cannot consider market transaction factors and cannot reflect the true market value of the land. Therefore, the cost method is not suitable for the appraisal;

Benchmark land price coefficient correction method: The land under appraisal is outside the urban benchmark land price range, therefore the benchmark land price coefficient correction method is not suitable for the appraisal.

A brief introduction to the market approach is as follows:

The market comparison method refers to the comparison of the subject asset with similar land transaction examples under the same market conditions, using the substitution principle. Adjustments are made for differences in transaction conditions, transaction dates, regional factors, individual factors, floor area ratio, remaining useful life, and other relevant aspects between the two. The method used to determine the price of the subject asset on the valuation benchmark date . The basic formula for the Market Comparison Method is as follows:

$P = PB \times A \times B \times C \times D \times E$

Where: P = appraised value of the land

PB: Price of the comparable transaction

A: Transaction situation index for the appraised land parcel / transaction situation index for comparative example land parcels;

B: Land price index on the valuation benchmark date for the appraised land parcel / land price index on the transaction date for comparative example land parcels;

C: Regional factors condition index for the appraised land parcel / regional factors condition index for comparative example land parcels;

D: Individual factors condition index for the appraised land parcel / individual factors condition index for comparative example land parcels;

E: Duration adjustment index of the appraised land parcel / Duration adjustment index of the comparable example land parcels.

(7) Intangible assets - mining rights

a) Mining rights

The appraised value of the mining rights in this asset appraisal report was determined with reference to the mining rights appraisal conclusion issued by China Enterprise

Appraisals Co., Ltd. The summary of the referenced appraisal reports can be found in "Relevant assets referenced from the reports." For details on the calculation process and results of the mining rights appraisal, please refer to the mining rights report issued by China Enterprise Appraisals Co., Ltd.

b) Coal production capacity replacement quotas and interest derived from exploration rights of Xiwan coal mine

For the purchased capacity indicators and interest derived from exploration rights of Xiwan coal mine, these have already been valued as part of the mining rights. Therefore, this appraisal confirmed a value of zero for the capacity indicators.

(8) Intangible assets - patent rights

China's market for technological intangible assets is still in its early stages, collecting relevant fair transaction data is relatively difficult. Therefore, the market approach is not feasible for this assessment. Regarding the patent rights owned by the appraised entity, verification with the entity confirmed that all relevant patent rights were developed during production activities. Some patents were obtained many years ago, and the patent assets are only used briefly in the production and operation of the enterprise, without bringing excess returns or cost savings to the enterprise. Consequently, the income approach was also not feasible for this appraisal. The formula for the cost method is as follows:

Appraised value = Replacement cost × (1 - depreciation rate)

Replacement cost of patents includes agent fee, application fee, printing fee and substantive examination fees, etc.

For self-developed patents, the depreciation rate is determined based on the legal and usable years of intangible assets. The depreciation rate is calculated as follows:

Depreciation rate = (1 - Remaining useful life / Legal useful life) × 100%

(9) Intangible assets - other intangible assets

Based on the characteristics of other intangible assets, the appraisal type, and the data collection, the market approach is adopted for appraisal as follows: a) For software in normal use, since most of the software was not recently purchased, the software adjustment coefficient was determined by referencing the price inflation rate and the average income in the information software industry, which was then used to adjust the original book value to arrive at the software's appraisal; b) for software copyright, as it is formed during the production efforts and is used briefly, without bringing excess profits or cost savings to enterprises, the cost method is used in the appraisal; the formular for the cost method is as follows:

Appraised value = Replacement cost × (1 - depreciation rate)

Replacement cost of software copyright includes agent fee, etc.

For self-developed software copyright, the depreciation rate is determined based on the legal and usable years of intangible assets. The depreciation rate is calculated as follows:

Depreciation rate = (1- Remaining useful life / Legal useful life) × 100%

(10) For development expenditure, the valuers investigated the reasons for the development expenditure and reviewed the original accounting vouchers and other

related materials. The development expenditure was valued based on the verified book value.

(11) For long-term deferred expenses, the valuers investigated the reasons for the long-term deferred expenses and reviewed the relevant accounting vouchers. After verification, the original amount of the long-term deferred expenses was found to be true and accurate, and the amortisation balance was correct. The long-term deferred expenses can still provide corresponding rights or assets during the remaining benefit period, and the appraisal value is determined based on the remaining balance to be amortised over the remaining benefit period.

(12) For deferred tax assets, the valuers investigated the reasons for the deferred tax assets, reviewed the relevant accounting regulations for confirming deferred tax assets, and verified the accounting vouchers for confirming the deferred tax assets as of the valuation benchmark date. The deferred tax assets were determined by multiplying the verified temporary differences by the applicable income tax rate.

(13) For other non-current assets, the valuers investigated and understood the reasons for the occurrence of other non-current assets, and reviewed the relevant accounting vouchers and related documentation. Other non-current assets were valued at their verified book value.

(14) Liabilities

Liabilities of the appraised entity included accounts payable, payroll payable, taxes payable, other payables, non-current liabilities due within one year, and provisions. The appraisers first checked the consistency between the subsidiary accounts and the general ledger, and examined the detailed items. They also sampled relevant accounting vouchers and documents to confirm the accuracy of the debt book values. For current and non-current liabilities, the appraised values are determined based on the actual liabilities borne by the company as verified.

VIII. Implementation Process and Information of the Appraisal Procedure

The appraisers carried out the appraisal of the assets involved in the subject asset from 9 August 2025 to 16 December 2025. The main appraisal procedures and process are as follows:

i. Acceptance of engagement

On 9 August 2025, the client and us reached an agreement on the basic matters of the appraisal, including the appraisal purpose, the subject asset, the appraisal scope, the valuation benchmark date, and the rights and obligations of each party. We then negotiated with the client and developed the corresponding appraisal plan.

ii. Preliminary preparation

After accepting the engagement, the project team, based on the appraisal purpose, the characteristics of the subject asset, and the time plan, formulated a specific appraisal work plan and formed the appraisal team. Simultaneously, the team drafted a list of required materials and appraisal forms based on the actual needs of the project.

iii. On-site investigation

The valuers conducted the necessary verification of the assets and liabilities involved in the appraised entity from 9 August 2025 to 10 September 2025, and carried out the required investigation into the business and management of the appraised entity.

1. Asset verification

(1) Guiding the appraised entity to complete forms and prepare materials to be provided to the asset appraisal institution

The appraisers guided the financial and asset management personnel of the appraised entity to carefully and accurately complete the asset information based on the "Assets Appraisal Detail Sheet" and its requirements, the material checklist, etc., after their own inventory. They also collected and prepared property ownership certificates and documents reflecting performance, condition, economic, and technical indicators of the assets.

(2) Preliminary review and improvement of the Assets Appraisal Detail Sheet

The evaluators reviewed the relevant documents, understood the detailed status of the assets included in the appraisal scope, and then carefully reviewed the "Assets Appraisal Detail Sheet" to check for incomplete or incorrect entries, unclear asset items, and other issues. Based on experience and the gathered information, the evaluators ensured the accuracy of the sheet and provided feedback to the appraised entity to improve them.

(3) On-site inspection

Based on the type, quantity, and distribution of assets included in the appraisal scope, the evaluators, with the cooperation of the relevant personnel of the appraised entity, conducted on-site inspections in accordance with the relevant provisions of the asset appraisal standards. Different inspection methods were applied depending on the nature and characteristics of the various assets.

(4) Supplementing, modifying, and improving the Assets Appraisal Detail Sheet

Based on the results of the on-site inspection and after thorough communication with the relevant personnel of the appraised entity, the evaluators further refined the "Assets Appraisal Detail Sheet" to ensure consistency between the accounts, sheet, and actual assets.

(5) Verification of ownership certificate documents

The evaluators verified the ownership proof documents for the assets within the appraisal scope, including buildings, vehicles, land use rights, mining rights, and other intangible assets. In cases where ownership information was incomplete or unclear, the evaluators requested the enterprise to verify or provide relevant ownership clarification documents.

2. Due diligence

To fully understand the operational and management status of the appraised entity and the risks it faces, the appraisers conducted necessary due diligence. The main contents of the due diligence were as follows:

(1) The history of the appraised entity, its major shareholders and their shareholding ratios, and the necessary ownership and management structure;

(2) The asset, financial, and operational management status of the appraised entity;

(3) The business plan, development plan, and financial forecast information of the appraised entity;

(4) Previous appraisals and transactions related to the appraised entity;

(5) Macro and regional economic factors affecting the production and operation of the appraised entity;

(6) The development status and prospects of the industry in which the appraised entity operates;

(7) Other relevant information.

iv. Data collection

The appraisers collected appraisal materials according to the specifics of the appraisal project, including data independently obtained from markets and other channels, data acquired from the client and other relevant parties, and data from government departments, professional institutions, and other relevant bodies. They then analysed, summarised, and organised the collected materials to form the basis for estimation.

v. Preliminary estimation

Based on the specific conditions of the various assets, the evaluators selected the appropriate formulas and parameters according to the chosen appraisal methods, performing analysis, calculations, and judgments to form preliminary appraisal conclusions. The project leader summarised the preliminary conclusions for each asset appraisal and drafted the preliminary asset appraisal report.

vi. Internal review

According to our company's appraisal business process management regulations, the project leader submitted the preliminary asset appraisal report for internal review after completion. After the internal review, the evaluators communicated with the client or other relevant parties, as agreed, on the contents of the asset appraisal report, ensuring that the independence of the appraisal conclusions was maintained. After completing the above appraisal procedures, the formal asset appraisal report was issued and submitted.

IX. Appraisal Assumptions

The assumptions for the analysis and estimates in this asset appraisal report are as follows:

i. It is assumed that all appraisal targets are in the process of being traded, and the appraisers simulate the market based on the transaction conditions of the appraised assets;

ii. It is assumed that for assets traded in the market, or assets to be traded in the market, both parties in the transaction have equal standing and ample opportunity and time to access market information. The transactions are voluntary and rational, and the parties can make rational judgments about the asset's function, purpose, and transaction price;

iii. It is assumed that the appraised assets will continue to be used for their current purposes and in their current manner during the service lives of the mines;

iv. It is assumed that there will be no significant changes to the relevant national laws, regulations, and policies or the macroeconomic situation, and that the political, economic, and social environment in the regions of the parties involved in the transaction will not change significantly;

v. Given the actual status of the assets on the valuation benchmark date , it is assumed that the company will continue operations during the service lives of the mines;

vi. It is assumed that there will be no significant changes in the interest rates, tax bases, tax rates, policy-based collection fees, or other related factors affecting the appraised entity after the valuation benchmark date ;

vii. It is assumed that the management of the appraised entity after the valuation benchmark date will remain responsible and stable, with the ability to perform their duties;

viii. Unless otherwise stated, it is assumed that the company fully complies with all relevant laws and regulations;

ix. It is assumed that after the valuation benchmark date , there will be no force majeure or unforeseen factors that cause significant adverse effects on the appraised entity;

x. It is assumed that after the valuation benchmark date , the accounting policies used by the appraised entity and those used to prepare this asset appraisal report will remain consistent in significant aspects;

xi. It is assumed that after the valuation benchmark date , the scope and methods of the appraised entity's operations will remain the same, based on the current management practices and level;

xii. It is assumed that after the valuation benchmark date , the appraised entity's cash inflows and cash outflows will be at an average rate;

xiii. According to the *Announcement of the Ministry of Finance, the State Taxation Administration and the National Development and Reform Commission on Continuing the Enterprise Income Tax Policy for the Western Development* (Announcement [2020] No. 23 of the Ministry of Finance), enterprises meeting the conditions in western China can pay corporate income tax at a reduced rate of 15% from 1 January 2021 to 31 December 2030. Therefore, this appraisal assumed that from August 2025 to 2030, the statutory income tax rate under the income approach would be 15%, and from 2031 onwards, the statutory income tax rate would be 25%;

xiv. It was assumed that starting from 2047, the appraised entity would begin to levy mining rights transfer income annually in accordance with the provisions of the *Notice on Printing and Distributing the Mineral Rights Transfer Income Collection Method* (C.Z. [2023] No. 10) issued by the Ministry of Finance, Ministry of Natural Resources, and State Taxation Administration;

xv. It is assumed that during the appraisal calculation period, the unit cost for environmental restoration and land reclamation would be equal to the extracted and spent amounts.

xvi. It is assumed that the appraisal was based on the resource reserves within the scope of the mining licence for Xiwan Open-cut Coal Mine that have been reviewed and filed, and that the said mining licence could be successfully renewed upon expiration;

xvii. It is assumed that the production and sales of commercial coal in future years would achieve a balance between production and sales;

xviii. The mining right for Xiwan Open-cut Coal Mine within this appraisal scope currently has a production capacity indicator gap of 3 million metric tonnes per year. It was assumed in this appraisal that the enterprise would acquire the corresponding production capacity indicators on a compensatory basis, with a cash outflow of RMB140 per metric ton (inclusive of tax) considered in Phase I.

xix. In March 2024, the appraised entity signed a land lease agreement with its subsidiary, Hongqi Shenyan, for a lease term from 15 March 2024 to 14 March 2029. It was assumed that the lease agreement would be renewed under the same terms upon its expiry, extending through to the end of the forecast period.

xx. It is assumed that the High-tech Enterprise Certificate of Shaanxi Hongqi Shenyan Chemical Engineering Co., Ltd., subsidiary of the appraised entity, would remain valid until the end of the forecast period following its expiry in December 2027.

xxi. Shaanxi Hongqi Industrial Explosive Group Co., Ltd., shareholder of Shaanxi Hongqi Shenyan Chemical Engineering Co., Ltd., a subsidiary of the appraised entity, has obtained a Safe Production Licence for Civil Explosive Materials, valid until 5 May 2028. Shaanxi Hongqi Industrial Explosive Group Co., Ltd. has authorised Shaanxi Hongqi Shenyan Chemical Engineering Co., Ltd. to produce civil explosive materials - emulsion explosives (gelatinous) (bulk-loaded), with this authorisation valid until 5 May 2028. In this appraisal it was assumed that the aforementioned Safety Production Licence for Civil Explosive Materials, upon its expiry, could be extended until the end of the forecast period, and that the authorisation granted to Shaanxi Hongqi Shenyan Chemical Engineering Co., Ltd., upon its expiry, could likewise be extended until the end of the forecast period.

The conclusions of this asset appraisal report are valid under the above assumptions as of the valuation benchmark date . If there are significant changes in these assumptions, the signing asset appraisers and this asset appraisal agency will not bear responsibility for deriving different appraisal conclusions due to changes in assumptions.

X. Appraisal Conclusion

i. Income Approach Appraisal Results

As of the appraisal date, the book value of the total assets of CHN Energy Shaanxi Shenyan Coal Co., Ltd. was RMB12,547,522,000; the book value of total liabilities was RMB1,797,597,900; and the book value of net assets was RMB10,749,924,100.

Under the income approach, the value of the entire shareholder's equity amounted to RMB18,453,997,800, representing an increase of RMB7,704,073,700, an appreciation rate of 71.67%.

ii. Asset-based Approach Appraisal Results

As of the appraisal date, CHN Energy Shaanxi Shenyan Coal Co., Ltd. had a book value of total assets of RMB12,547,522,000 and an appraised value of RMB20,557,858,000, an increase of RMB8,010,336,000, representing an appreciation rate of 63.84%; the book value of total liabilities stood at RMB 1,797,597,900 and the appraised value was RMB 1,797,597,900, with no change in value; and the book value of net assets amounted to RMB10,749,924,100 and the appraised value recorded RMB18,760,260,100, an increase of RMB8,010,336,000, representing an appreciation rate of 74.52%.

The detailed results of the asset-based approach are shown in the following summary table:

iii. Appraisal Conclusion

Under the income approach, the value of the entire shareholder's equity was RMB18,453,997,800 under the income approach and RMB18,760,260,100 under the asset-based approach, with a difference of RMB306,262,300 representing a variance rate of 1.63%.

The main reason for the difference in the results from the two methods is that the two approaches consider different perspectives. The asset-based approach is based on the asset replacement method, reflecting the replacement value of the company's existing assets. The income approach, on the other hand, considers the company's profitability, reflecting the comprehensive profitability of the company's assets.

The appraisal conclusion adopts the appraisal results of the asset-based method for the following reasons:

The appraised entity's core business is coal mining and sales, and its key assets are mining rights. In this appraisal, the asset-based approach uses the discounted cash flow method to assess the mining rights, which aligns closely with the approach used in the income approach. Moreover, the appraisal of the mining rights is based on the coal market conditions, using objective market benchmarks. The results from the asset-based approach reflect the contribution of the mining rights to the company's future earnings, therefore the asset-based approach can more objectively reflect the market value of the appraised entity.

Based on the foregoing analysis, this asset appraisal report adopted the result derived from the asset-based approach as its appraisal conclusion, namely, the appraised value of the entire shareholder's equity of CHN Energy Shaanxi Shenyan Coal Co., Ltd. was RMB18,760,260,100.

Due to objective limitations, this asset appraisal report does not take into account any premium or discount that may arise due to control or lack of control, nor does it consider the impact of liquidity on the value of the subject asset.

XI. Special Matters Statement

The following matters were identified during the appraisal process that may affect the appraisal conclusion but cannot be assessed or estimated by the professional expertise

and ability of the evaluators:

i. In this asset appraisal report, if there is a discrepancy between the total values and the sum of the individual items in any tables or written statements (expressed in RMB10,000), it is due to rounding.

ii. This appraisal refers to the Audit Report numbered Ernst & Young Hua Ming (2025) Zhuan Zi No. 80028112 A01 issued by Ernst & Young Hua Ming LLP on 16 December 2025. We obtained the audit report through legal channels, and after analyzing and reviewing the contents of the audit report in accordance with the relevant asset appraisal standards, we have prudently used the relevant contents of the audit report. The audited financial data in the audit report forms the basis for the asset appraisal. If this financial data changes, the conclusions of this appraisal may become invalid. According to Article 12 of the *Asset Appraisal Practice Standards – Enterprise Value*: Asset appraisers analyse and assess the use of financial statements based on the chosen appraisal methods. However, it is not the responsibility of the asset appraisers to offer professional opinions on whether the financial statements fairly reflect the financial status, operating results, or cash flow of the appraised entity as of the valuation benchmark date . We only bear responsibility for improper referencing that may arise in the use of the audit report during the appraisal process.

iii. The appraised value of the Xiwan Coal Mining Rights, an intangible asset within the appraisal scope, was determined with reference to the appraisal conclusion in the *Appraisal Report on Shenmu County Xiwan Open-cut Coal Mine Mining Rights of Shaanxi Shenyan Coal Co., Ltd.* (ZH.Q.H.K.P.B.Z. [2025] No. 1079) issued by China Enterprise Appraisals Co., Ltd. on 16 December 2025.

During this appraisal process, the valuers communicated and coordinated with the mining rights valuers, who adopted the discounted cash flow method for the appraisal of the mining right. After verifying that the mining rights appraisal report's subject asset, scope, purpose, base date, value type, and other aspects were consistent with this asset appraisal report and in line with the requirements of the economic transaction, the mining rights value involved in this appraisal report directly references the appraisal conclusion issued by China Enterprise Appraisals Co., Ltd. For details on the calculation process and results of the mining rights appraisal, please refer to the mining rights report issued by China Enterprise Appraisals Co., Ltd.

iv. According to the *Asset Appraisal Law* and the *Guidance on Legal Ownership of Subject Asset*, the client and relevant parties commissioning the asset appraisal are responsible for the authenticity, completeness, and legality of the ownership certificates, financial accounting information, and other materials they provide. The purpose of conducting asset appraisal is to estimate the value of the subject asset and provide professional opinions. Confirming the legal ownership or providing opinions on the legal status of the assets goes beyond the scope of professional asset appraisal. Asset appraisers do not provide guarantees on the legal ownership of the subject asset.

v. Explanation regarding ownership defects

1. A total of 56 buildings declared by the appraised entity and included in this appraisal scope have not yet obtained property ownership certificates, with a total floor area of 103,991.15 square metres. For the buildings without ownership certificates, the appraised entity has undertaken that these buildings belong to it and that no ownership dispute exists.

2. A total of two land use rights declared by the appraised entity and included in this appraisal scope have both obtained Real Property Certificates, showing Shaanxi Shenyan Coal Co., Ltd. (former name of the appraised entity) as the registered owner. For the above land use rights whose registered owner's name has not yet been changed, the appraised entity has undertaken that the said land use rights are owned by it and that no ownership dispute exists.

3. A total of 50 patents declared by the appraised entity are included within the appraisal scope, comprising one invention patent and 49 utility model patents. Among these, one patent is co-owned; the registered owner for ten patents is Shaanxi Shenyan Coal Co., Ltd. (the former name of the appraised entity), and no change registration has yet been completed. For the above jointly owned patents and patents whose registered owner's name has not yet been changed, the appraised entity has undertaken that the said patents are either solely owned by it or jointly owned with other companies, and that no ownership dispute exists. For jointly owned patents, all parties have the right to apply them in their own production and operations. Therefore, the resulting income and costs are enjoyed and borne by each party. For jointly owned patents, the value of patent rights attributable to the appraised entity in this appraisal was calculated by evenly allocating the total patent value among the number of registered owners.

vi. Explanation regarding assets in an abnormal use state

Certain assets declared by the appraised entity and included in this appraisal scope were pending scrapping. Specifically, there were seven vehicles pending scrapping, with a book value of RMB70,000. For vehicles pending scrapping, the appraisal was based on their recoverable value.

Users of the asset appraisal report should pay attention to the impact of the above special matters on the appraisal conclusion.

XII. Limitations on the Use of the Asset Appraisal Report

i. Scope of use of the asset appraisal report

1. The users of the asset appraisal report are the client and those specified by national laws and administrative regulations.

2. The appraisal conclusion in the asset appraisal report is only valid for the economic activities related to this project.

3. The validity period of the conclusion in the asset appraisal report is one year from the valuation benchmark date . The client or other users of the asset appraisal report should use the report within the stated validity period of the appraisal conclusions.

4. Without the written consent of the client, the asset appraisal agency and its professionals shall not provide or disclose the contents of the asset appraisal report to any third parties, except as required by laws or administrative regulations.

5. Without the consent of the asset appraisal agency, the contents of the asset appraisal report shall not be copied, quoted, or disclosed in public media, except as required by laws, administrative regulations, or as agreed by the relevant parties.

ii. If the client or other users of the asset appraisal report do not use the asset appraisal report in accordance with the laws, administrative regulations, and the use scope outlined in the asset appraisal report, the asset appraisal agency and its professionals shall not bear any responsibility.

iii. Except for the client, other users of the asset appraisal report as specified in the asset appraisal engagement contract, and those specified by laws or administrative regulations, no other institution or individual may become a user of the asset appraisal report. This asset appraisal report contains several appendices and appraisal detail forms, all of which are an integral part of this report. However, they are only valid when used together with the main body of the report.

iv. The asset appraisal agency and asset appraisers shall not bear any obligations or responsibilities to users of this report who are not authorised, such as those who obtain the report through presentation or other means, outside the scope of its intended use. They will not provide further consultancy based on this report, nor will they provide testimony or attend hearings in court or other legal proceedings, and they reserve the right to hold non-authorised users liable for any losses incurred as a result.

v. Users of the asset appraisal report shall correctly understand and use the appraisal conclusion. The appraisal conclusion is not equivalent to the realisable price of the subject asset and shall not be considered a guarantee of the realisable price.

vi. An asset appraisal report refers to a professional report issued by the asset appraisal agency, based on the law, administrative regulations, and asset appraisal standard requirements, after carrying out the necessary appraisal procedures as entrusted. It reflects the value of the subject asset for a specific purpose on the valuation benchmark date . This report must be signed by the appraisers responsible for the appraisal and stamped with the asset appraisal agency's official seal. It can only be formally used after being filed with the state-owned asset supervision and management authority or the enterprise that provided funding.

This report is prepared in accordance with the Chinese Asset Appraisal Standards.

Asset Appraisal Report on the Appraisal of the Entire Shareholders' Equity of Shanxi Jinshen Energy Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

ZH.Q.H.P.B.Z.(2025) No. 6670

(Volume 1 of 1)

China Enterprise Appraisals Co., Ltd.

16 December 2025

Declaration

I. This asset appraisal report is prepared based on the Basic Rules for Asset Appraisal issued by the Ministry of Finance and the Asset Appraisal Practice Standards and Code of Professional Ethics issued by the China Appraisal Society.

II. The asset appraisal agency and its professional appraisers comply with laws, administrative regulations, and asset appraisal standards, adhere to the principles of independence, objectivity, and fairness, and bear legal responsibility for the asset appraisal report they issue.

III. The client or other users of the asset appraisal report shall use the report in accordance with the laws, administrative regulations, and the scope of use stated in the asset appraisal report. If the client or other users of the report misuse the report in violation of the foregoing regulations, the asset appraisal agency and its appraisers shall not bear any responsibility.

This asset appraisal report is only for use by the client, other users of the asset appraisal report as specified in the asset appraisal engagement contract, and users defined by laws or administrative regulations. Other institutions or individuals shall not use this asset appraisal report.

The asset appraisal agency and the appraisers remind the users of the asset appraisal report to correctly understand and use the appraisal conclusion. The appraisal conclusion is not equivalent to the realisable price of the subject asset and shall not be considered a guarantee of the realisable price.

IV. The asset and liability lists, and business forecasts related to the subject asset are provided by the client and the appraised entity, and confirmed through their signatures, seals, or other legally permitted means. The client and other relevant parties are legally responsible for the authenticity, completeness, and legality of the information provided.

V. The asset appraisers have conducted on-site investigations of the subject asset and the assets involved. They have paid necessary attention to the legal ownership status of the subject asset and its assets, verified the ownership documents, disclosed any discovered issues truthfully, and urged the client and other relevant parties to rectify any property right issues to meet the requirements for issuing the asset appraisal report.

VI. The asset appraisal agency and its appraisers have no current or anticipated interests in the subject asset in the asset appraisal report, nor any current or anticipated interests with the relevant parties, and are unbiased towards the relevant parties.

VII. The analysis, judgment, and results in the asset appraisal report issued by the asset appraisal agency are subject to the assumptions and limitations specified in the report. Users of the asset appraisal report shall fully consider the assumptions, limitations, special notes, and their impact on the appraisal conclusion.

VIII. The asset appraisers' inspection of physical assets such as buildings and structures, shaft and tunnel engineering, equipment, inventory, and other tangible assets is generally limited to observation of use and maintenance conditions. Internal, hidden, or difficult-to-access parts are not inspected. We do not possess professional qualifications nor have we been commissioned to conduct technical inspections or appraisals of the internal quality of these assets. Our appraisal is based on the information provided by the client and other relevant parties. If there are defects in the internal quality of these assets, the appraisal conclusions may be affected to varying degrees.

Summary of the Asset Appraisal Report

Important Notice

This summary is extracted from the main text of the asset appraisal report. To understand the details of the appraisal project and properly interpret and use the appraisal conclusion, the full text of the asset appraisal report shall be read carefully.

iii. Profile of the appraised entity

1. Company overview

Name: Shanxi Jinshen Energy Co., Ltd. (hereinafter referred to as "Jinshen Energy")

Registered Address: No. 2 Heping Lane, Qixiang Road, Xinfu District, Xinzhou

Legal Representative: Huang Hua

Registered Capital: RMB574 million

Type: Limited liability company (state-owned)

Unified Social Credit Code: 91140900767119138D

Date of Incorporation: 20 October 2004

Business Term: From 20 October 2004 to 28 February 2029

Business Scope: The distribution of coal through state-approved coal stations via railway (projects subject to approval can only be carried out after approval from the relevant departments).

2. Shareholders, their shareholding ratios and equity change

Jinshen Energy was established on 20 October 2004, funded by Shenhua Group Co., Ltd. and Shanxi Coal Sales Corporation, with a registered capital of RMB30,000,000. At the time of its establishment, the company's equity structure was as follows:

No.	Name of shareholder	Contribution amount (in RMB'0,000)	Shareholding (%)	Method of capital contribution
1	Shenhua Group Co., Ltd.	1,470.00	49.00	Currency
2	Shanxi Coal Sales Corporation	1,530.00	51.00	Currency
Total		**3,000.00**	**100.00**	/

In April 2005, the company increased its registered capital from RMB30,000,000 to RMB255,000,000 according to the resolution of the shareholders' meeting. Of the increase, RMB110,250,000 was contributed by Shenhua Group Co., Ltd. in cash, and RMB114,750,000 was contributed by Shanxi Coal Sales Corporation in cash. After this change, the company's shareholding structure was as follows:

No.	Name of shareholder	Contribution amount (in RMB'0,000)	Shareholding (%)	Method of capital contribution
1	Shenhua Group Co., Ltd.	12,495.00	49.00	Currency
2	Shanxi Coal Sales Corporation	13,005.00	51.00	Currency
Total		**25,500.00**	**100.00**	/

In August 2009, according to a shareholders' meeting resolution, Jinshen Energy's shareholder, Shanxi Coal Sales Corporation, changed its name to Shanxi Coal Sales Group Co., Ltd. due to restructuring; the company’s registered capital increased from RMB255,000,000 to RMB430,000,000. Of the increase, RMB85,750,000 was contributed by Shenhua Group Co., Ltd. in cash, and RMB89,250,000 was contributed by Shanxi Coal Sales Group Co., Ltd. in cash. After this change, the company's shareholding structure was as follows:

No.	Name of shareholder	Contribution amount (in RMB'0,000)	Shareholding (%)	Method of capital contribution
1	Shenhua Group Co., Ltd.	21,070.00	49.00	Currency
2	Shanxi Coal Sales Group Co., Ltd.	21,930.00	51.00	Currency
Total		**43,000.00**	**100.00**	/

In April 2011, according to a shareholders' meeting resolution, the company’s registered capital was increased from RMB430,000,000 to RMB574,000,000. Of the increase, RMB70,560,000 was contributed by Shenhua Group Co., Ltd. in cash, and RMB73,440,000 was contributed by Shanxi Coal Sales Group Co., Ltd. in cash. After this change, the company's shareholding structure was as follows:

No.	Name of shareholder	Contribution amount (in RMB'0,000)	Shareholding (%)	Method of capital contribution
1	Shenhua Group Co., Ltd.	28,126.00	49.00	Currency
2	Shanxi Coal Sales Group Co., Ltd.	29,274.00	51.00	Currency
Total		**57,400.00**	**100.00**	/

In November 2017, the shareholder of Jinshen Energy, Shenhua Group Co., Ltd., changed its name to China Energy Investment Corporation Co., Ltd. After this change, the company's shareholding structure was as follows:

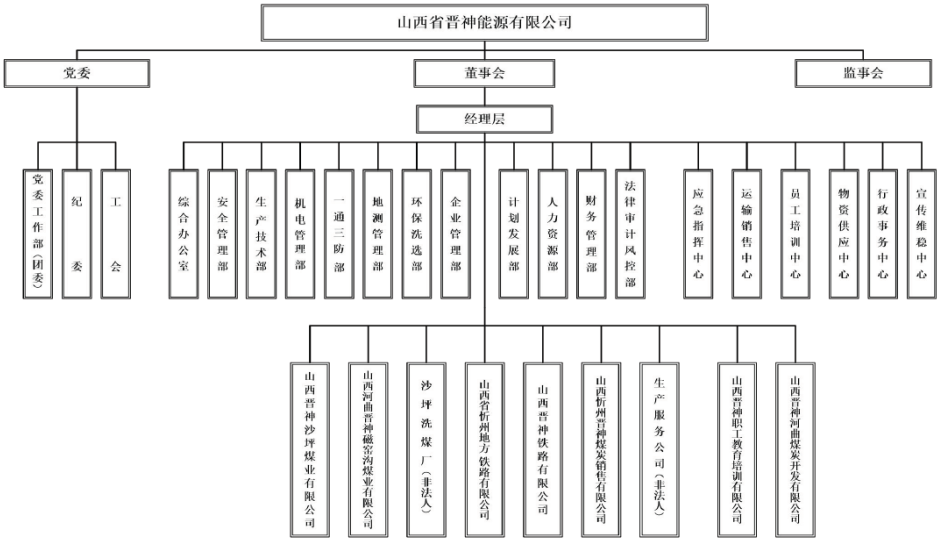
Asset Appraisal Report on the Appraisal of the Entire Shareholders' Equity of Shanxi Jinshen Energy Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

No.	Name of shareholder	Contribution amount (in RMB'0,000)	Shareholding (%)	Method of capital contribution
1	China Energy Investment Corporation Co., Ltd.	28,126.00	49.00	Currency
2	Shanxi Coal Sales Group Co., Ltd.	29,274.00	51.00	Currency
Total		**57,400.00**	**100.00**	/

As of the valuation benchmark date, Jinshen Energy's shareholding structure has remained unchanged.

3. Ownership and management structure of the company

As of the valuation benchmark date, the organisational structure of the appraised entity was as follows:



山西省晋神能源有限公司	Shanxi Jinshen Energy Co., Ltd.
党委	Party Committee
董事会	Board of Directors
监事会	Board of Supervisors
经理层	Management
党委工作部（团委）	Party Committee Work Department (Youth League Committee)
纪委	Disciplinary Inspection Committee
工会	Labour Union
综合办公室	General Office
安全管理部	Safety Management Department
生产技术部	Production Technology Department
机电管理部	Mechanical and Electrical Management Department
一通三防部	One Pass Three Preventive Department
地测管理部	Geological Survey Management Department

6	Shanxi Xinzhou Local Railway Co., Ltd.	100.00	3,000.00	In operation	Xinzhou Railway
7	Jinshen Coal Operations Co., Ltd. under Shanxi Coal Sales Group	49.00	5,000.00	In operation	Jinshen Operations
Total		/	**44,500.00**	/	/

4. Asset, financial, and operating status for the last two years and the current period

The financial condition of the appraised entity over the last two years is as follows (consolidated basis):

Unit: RMB'0,000

Item	31 December 2023	31 December 2024	31 July 2025
Total assets	811,576.96	832,825.16	770,407.37
Total liabilities	186,830.95	190,973.07	118,981.53
Owner's equity	624,746.01	641,852.09	651,425.84
Owner’s equity attributable to the parent company	506,603.40	517,509.42	523,392.50

The financial condition of the appraised entity over the last two years is as follows (parent company basis):

Unit: RMB'0,000

Item	31 December 2023	31 December 2024	31 July 2025
Total assets	427,720.70	399,592.17	334,923.46
Total liabilities	335,419.95	302,734.80	237,939.89
Owner's equity	92,300.75	96,857.37	96,983.57

The operating condition of the appraised entity over the last two years is as follows (consolidated basis):

Unit: RMB'0,000

Item	2023	2024	January-July 2025
Operating income	562,521.24	306,003.67	177,068.47
Total profits	251,644.72	85,984.00	15,281.99
Net profit	181,884.44	62,405.07	9,491.61
Owner's net profit attributable to the parent company	139,910.94	40,410.51	3,691.49

The operating condition of the appraised entity over the last two years is as follows (parent company basis):

Unit: RMB'0,000

Item	2023	2024	January-July 2025
Operating income	557,252.88	307,903.54	177,022.65
Total profits	146,596.26	34,510.76	133.12
Net profit	144,276.28	33,159.98	126.20

The financial statements of the appraised entity as of the appraisal date and for the years 2024 and 2023 have been audited by Ernst & Young Hua Ming LLP, which expressed standard unqualified audit opinions.

5. Relationship between the client and the appraised entity

The clients of this appraisal are China Energy Investment Corporation Co., Ltd. and China Shenhua Energy Co., Ltd. The appraised entity is Shanxi Jinshen Energy Co., Ltd., a subsidiary partly owned by China Energy Investment Corporation Co., Ltd.

iv. Other users of the asset appraisal report as stipulated in the asset appraisal engagement contract

This asset appraisal report is only for use by the client, other users of the asset appraisal report as specified in the asset appraisal engagement contract, and users defined by national laws and regulations. It shall not be used or relied upon by any third party.

II. Appraisal Purpose

China Shenhua Energy Company Limited intends to issue shares and pay cash to acquire assets related to coal, pithead coal power, and other assets held by China Energy Investment Corporation Co., Ltd. To this end, the market value of the entire shareholders' equity of Shanxi Jinshen Energy Co., Ltd., held by China Energy Investment Corporation Co., Ltd. on the valuation benchmark dateis appraised, providing a value reference for the above economic activities.

On 1 August 2025, the China Energy Investment Corporation Co., Ltd. convened its 18th Chairman's Special Meeting of 2025. The meeting reviewed and approved the aforementioned matters, mandated the initiation of the appraisal, and produced the “Minutes of the Chairman's Special Meeting”.

III. Subject Asset and Appraisal Scope

i. Subject asset

The subject asset is the entire shareholders' equity value of Shanxi Jinshen Energy Co., Ltd.

ii. Appraisal scope

The appraisal scope includes total assets and liabilities of Shanxi Jinshen Energy Co., Ltd. As of the valuation benchmark date, the assets within the appraisal scope included current assets, long-term equity investments, fixed assets, and intangible assets. The book value of total assets for the parent company was RMB3,349,234,600; liabilities consisted of current liabilities, with the total book value of liabilities amounting to RMB2,379,398,900; the book value of net assets was RMB969,835,700. As of the valuation benchmark date, the appraisal scope was as follows:

Unit: RMB'0,000

Item		Book value
Current assets	1	251,176.27
Non-current assets	2	83,747.19
Of which: Long-term equity investments	3	81,854.81
Investment properties	4	0.00
Fixed assets	5	1,874.29
Construction in progress	6	0.00
Oil and gas assets	7	0.00
Intangible assets	8	18.09
Including: Land use right	9	0.00
Other non-current assets	10	0.00
Total assets	**11**	**334,923.46**
Current liabilities	12	237,939.89
Non-current liabilities	13	0.00
Total liabilities	**14**	**237,939.89**
Net assets	**15**	**96,983.57**

As of the valuation benchmark date, the consolidated total assets had a book value of RMB7,704,073,700, with total liabilities amounting to RMB1,189,815,300. The book value of owner's equity was RMB6,514,258,400, of which the equity attributable to the parent company was RMB5,233,925,000.

The subject and scope of the engaged appraisal align with the subject asset and scope involved in the economic activities. As of the valuation benchmark date, the book values of assets and liabilities within the appraisal scope have been audited by Ernst & Young Hua Ming LLP, which expressed a standard unqualified audit opinion.

iii. Main assets within the appraisal scope are as follows:

The main assets declared by the company to be included in this appraisal include buildings and structures, equipment, long-term equity investments, intangible assets etc. The types and characteristics of the main assets are as follows:

1.Buildings and structures assets

The buildings and structures within the appraisal scope were mainly built between 2012 and 2016, primarily located 200 metres north of the intersection of Changfeng West Street and Qianfeng Road, in the Shangyuan community of Beihai Yicheng, Bohai New Area, and within the appraised entity's plant area. The basic details of the buildings and structures are as follows:

(1) Buildings

The buildings declared by the enterprise and included in this appraisal scope total 8 items, which are primarily classified by their use into office, residential, and other production buildings. Office buildings include one office floor; residential buildings include office buildings 101 and 102 at the Huanghua Port Office; other production buildings include warehouses on the west side of the metal component processing workshop and the metal component processing workshop. The building structures are mainly steel-concrete structures, brick-concrete structures, and steel structures. Except for 2 buildings awaiting scrapping, the other buildings are being properly maintained and managed, and are in normal use.

As of the valuation benchmark date, the registration status of the buildings and the land they occupy was as follows:

No.	Building Name	Property Certificate No.	Property Certificate Holder	Corresponding Land Certificate No.	Land Certificate Holder
1	Office Building, First Floor	Not registered	Not registered	Not registered	Not registered
2	Office Building - Huanghua Port Office 101	H.G.F.Q.ZH.M.Z. No. 015456	Shanxi Jinshen Energy Co., Ltd.	B.H.G.Y. (2007) No. 014	Shanxi Jinshen Energy Co., Ltd.
3	Office Building - Huanghua Port Office 102	H.G.F.Q.ZH.M.Z. No. 015455	Shanxi Jinshen Energy Co., Ltd.	B.H.G.Y. (2007) No. 014	Shanxi Jinshen Energy Co., Ltd.
4	Warehouse West of the Metal Component Processing Workshop	Shanxi (2021) Hequ County Real Property No. 0016941	Shanxi Jinshen Hequ Coal Development Co., Ltd.	Shanxi (2021) Hequ County Real Property No. 0016941	Shanxi Jinshen Hequ Coal Development Co., Ltd.
5	Metal Component Processing Workshop	Shanxi (2021) Hequ County Real Property No. 0016941	Shanxi Jinshen Hequ Coal Development Co., Ltd.	Shanxi (2021) Hequ County Real Property No. 0016941	Shanxi Jinshen Hequ Coal Development Co., Ltd.
6	Metal Component Processing Workshop Office Renovation Project	Shanxi (2021) Hequ County Real Property No. 0016941	Shanxi Jinshen Hequ Coal Development Co., Ltd.	Shanxi (2021) Hequ County Real Property No. 0016941	Shanxi Jinshen Hequ Coal Development Co., Ltd.
7	Crushing Warehouse and Laboratory (Anchorage Agent Workshop)	Not registered	Not registered	Shanxi (2021) Hequ County Real Property No. 0016941	Shanxi Jinshen Hequ Coal Development Co., Ltd.
8	Old Materials Warehouse	Shanxi (2021) Hequ County Real Property No. 0016941	Shanxi Jinshen Hequ Coal Development Co., Ltd.	Shanxi (2021) Hequ County Real Property No. 0016941	Shanxi Jinshen Hequ Coal Development Co., Ltd.

Note: Shanxi Jinshen Hequ Coal Development Co., Ltd. is a controlling subsidiary of the appraised entity.

For the buildings without property certificates and those occupying subsidiary land, the appraised entity has provided ownership proof documents, including purchase contracts, accounting vouchers, and construction contracts, to prove that these buildings and structures are owned by it. The appraised entity has issued a statement of ownership and guarantees that the buildings within the appraisal scope are owned by it, with no property disputes. If any ownership issues arise, the appraised entity is willing to bear the legal responsibility.

(2) Structures

The enterprise has declared 2 structures within the appraisal scope, including the yard hardening scattered projects at the metal component processing workshop and the steel shed (material warehouse and parking lot). The structures within the appraisal scope are under normal maintenance and management, and are currently in normal use.

2. Equipment assets

The equipment assets declared by the enterprise and included in this appraisal scope mainly include machinery and equipment, vehicles, and electronic equipment. The specific details are as follows:

(1) Machinery

The enterprise has declared a total of 87 items of machinery and equipment within the appraisal scope, purchased and put into use between 2009 and 2021, including a hydrological dynamic monitoring system, particle pollution counters, iron spectrum analyzers, loaders, overpressure trapezoidal grinders, and anchoring agent semi-automatic production line equipment. As of the valuation benchmark date, 60 of the aforementioned devices were pending scrapping, and 2 items were without physical assets.

(2) Vehicles

The enterprise has declared a total of 7 vehicles within the appraisal scope, purchased and put into use between 2009 and 2018, including Toyota SUVs, Volkswagen off-road Audi sedans, and Touareg 2995CC off-road vehicles. As of the valuation benchmark date, one vehicle, a Nissan pickup truck with licence plate number Jin HBB317, was pending scrapping, while the other vehicles were in normal use.

As of the valuation benchmark date, all of the aforementioned vehicles had been registered with vehicle driving permits, with the certificate holder listed as Shanxi Jinshen Energy Co., Ltd.

(3) Electric equipment

The enterprise has declared a total of 231 electronic devices within the appraisal scope, purchased and put into use between 2008 and 2018. These include various models of computers, printers, office furniture, surveillance equipment, video conferencing systems, and plotters. As of the valuation benchmark date, 115 of these devices were pending scrapping, and 111 were without physical assets.

3. Long-term equity investments

The enterprise has declared a total of 7 long-term equity investments within the appraisal scope, including 6 wholly-owned and controlled subsidiaries, and 1 affiliated subsidiary. The details of the long-term equity investments are shown in the table below:

Unit: RMB'0,000

No.	Investee	Equity percentage (%)	Subscribed capital	Paid-in capital	Investment amount	Book value	Status
1	Shanxi Jinshen Hequ Coal Development Co., Ltd.	99.50	1,492.50	1,492.50	1,492.50	1,492.50	In operation
2	Shanxi Jinshen Railway Co., Ltd.	95.00	1,900.00	1,900.00	1,900.00	1,900.00	In operation
3	Shanxi Hequ Jinshen Ciyaogou Coal Industry Co., Ltd.	60.00	14,400.00	14,400.00	14,400.00	14,400.00	In operation
4	Shanxi Xinzhou Jinshen Coal Sales Co., Ltd.	100.00	1,000.00	1,000.00	1,000.00	1,000.00	In operation
5	Shanxi Jinshen Shaping Coal Industry Co., Ltd.	100.00	8,000.00	8,000.00	8,000.00	8,000.00	In operation
6	Shanxi Xinzhou Local Railway Co., Ltd.	100.00	3,000.00	3,000.00	50,000.00	50,000.00	In operation
7	Jinshen Coal Operations Co., Ltd. under Shanxi Coal Sales Group	49.00	2,450.00	2,450.00	2,450.00	5,062.31	In operation
Total		/	**32,242.50**	**32,242.50**	**79,242.50**	**81,854.81**	/

Among them, the subsidiaries Shanxi Hequ Jinshen Ciyaogou Coal Industry Co., Ltd. and Shanxi Jinshen Shaping Coal Industry Co., Ltd. each hold mining rights as follows:

No.	Name of mining rights	Licence number	Mining right holder	Mining type	Production scale
1	Shanxi Jinshen Shaping Coal Industry Co., Ltd.	C1400002009121220052426	Shanxi Jinshen Shaping Coal Industry Co., Ltd.	Coal	8 million tonnes per year
2	Shanxi Hequ Jinshen Ciyaogou Coal Industry Co., Ltd.	C1400002009111220045698	Shanxi Hequ Jinshen Ciyaogou Coal Industry Co., Ltd.	Coal	5 million tonnes per year

4. Intangible assets

The intangible asset declared by the enterprise within the appraisal scope is other intangible assets - software. The software consists of 1 item, the Production Command Centre - Coal Mine Dual Prevention Management Information Platform, which was purchased by the appraised entity and is in normal use.

iv. Off-balance-sheet assets declared by the company

All assets declared by the enterprise within the appraisal scope are on-balance-sheet assets.

v. Relevant assets referenced from other reports

The appraised value of the mining rights in this asset appraisal report was determined with reference to the mining rights appraisal conclusion issued by China Enterprise Appraisals Co., Ltd. The referenced appraisal report is summarised as follows:

(1) Shanxi Hequ Jinshen Ciyaogou Coal Industry Co., Ltd. - Ciyaogou Coal Mine

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1081
Subject asset	Mining rights of Shanxi Hequ Jinshen Ciyaogou Coal Industry Co., Ltd.
Appraisal scope	The mining licence issued by the Department of Land and Resources of Shanxi Province on 31 August 2012 (Licence No. C1400002009111220045698) defines the scope and the remaining resource reserves within the boundary coordinates.
valuation benchmark date	31 July 2025
Value Type	Market Value
Appraisal methods	Discounted cash flow method

(2) Shaping Coal Mine of Shanxi Jinshen Shaping Coal Industry Co., Ltd.

Report No.	ZH.Q.H.K.P.B.Z. [2025] No. 1080
Subject asset	Mining rights of Shanxi Jinshen Shaping Coal Industry Co., Ltd.
Appraisal scope	The mining licence issued by the Natural Resources Department of Shanxi Province on 17 May 2024 (Licence No. C1400002009121220052426) defines the scope and the remaining resource reserves within the boundary coordinates.
valuation benchmark date	31 July 2025
Value Type	Market Value
Appraisal methods	Discounted cash flow method

IV. Value Type

Based on the appraisal purpose, market conditions, and the specific conditions of the subject asset, the value type of the subject asset is determined to be market value.

Market value refers to the estimated value of the subject asset in normal and fair transactions as of the valuation benchmark date, between a willing buyer and a willing seller, each acting rationally and without coercion.

V. valuation benchmark date

The valuation benchmark datefor this report is 31 July 2025.

The valuation benchmark dateis determined by the client. The selection of the valuation benchmark datemainly considers the realisation of economic activities and end-of-accounting-period factors. Asset appraisal provides a value reference for assets at a specific point in time. By choosing the end of the accounting period as the valuation benchmark date, it can comprehensively reflect the overall status of the subject assets. At the same time, adhering to the principles of ensuring the appraisal results effectively serve the appraisal purpose, accurately delineating the appraisal scope, conducting precise and efficient verification of assets, and rationally selecting the basis for appraisal, this date was selected as the valuation benchmark date.

VI. Appraisal Basis

i. Basis for economic activities

Minutes of the 18th Chairman's Special Meeting of the China Energy Investment Corporation Co., Ltd. in 2025 (1 August 2025).

ii. Legal and regulatory basis

1.*Asset Appraisal Law of the People's Republic of China* (adopted at the 21st Session of the Standing Committee of the 12th National People's Congress on 2 July 2016);

VII. Appraisal Methods

Income approach refers to various appraisal methods that capitalise or discount the expected income of the subject asset to determine its value.

Market approach refers to various appraisal methods that compare the subject asset with comparable references, using the market price of the comparable references as a basis to determine the value of the subject asset.

Asset-based approach refers to an appraisal method where the value of the subject asset is determined based on the balance sheet of the appraised entity or business on the valuation benchmark date, assessing the value of identifiable on-balance-sheet and off-balance-sheet assets and liabilities.

The methods selected for this appraisal are income approach and asset-based approach.

i. Reasons for the selection of appraisal methods

Reason for selecting the asset-based approach: As of the valuation benchmark date, the book value of the assets and liabilities within the appraisal scope has already been audited. Each asset and liability of the appraised entity can be identified. The identifiable assets and liabilities can each be individually assessed using an appropriate appraisal method, thus meeting the conditions for applying the asset-based approach.

Reason for selecting the income approach: The appraised entity has the foundation and conditions for ongoing operations, with standardised accounting practices, clear management, stable and defined business sources. The management has detailed plans for the current operations and future development of the company. The future expected

income and operational risks can be reasonably predicted, meeting the conditions for using the income approach for appraisal.

Reason for not selecting the market approach: The market approach relies on the existence of an active public market with sufficient market data and comparable transaction cases. The appraised entity is a non-listed company. Listed companies in the same industry differ significantly from the appraised enterprise in terms of business structure, corporate scale, asset allocation and utilisation, operational stage, growth potential, operational risks, financial risks, and others. Furthermore, there were few comparable transactions, mergers, or acquisitions within the same industry near the valuation benchmark date. Reliable operational and financial data from comparable transactions are difficult to obtain, making it impossible to calculate appropriate value ratios. Therefore, the market approach was not adopted for this appraisal.

ii. Introduction to the appraisal methods

1.Income approach

The income approach used in this appraisal is the discounted cash flow (DCF) method to indirectly determine the entire shareholders' equity by evaluating the overall value of the enterprise. The overall value of the enterprise consists of the value of operating assets generated from normal business activities and the value of non-operational assets unrelated to normal business activities. For the determination of the value of operational assets, the Free Cash Flow Discount Model is employed, which uses the future free cash flows of the enterprise for several years as a basis, discounted at an appropriate discount rate and then summed up. The calculation model is as follows:

Entire shareholders' equity value = Enterprise overall value - Interest-bearing debt value

(1) Enterprise overall value

The enterprise overall value refers to the sum of the entire shareholders' equity and the interest-bearing debt value. According to the asset allocation and usage situation of the appraised entity, the formula for calculating the enterprise overall value is as follows:

Enterprise overall value = Operating asset value + Surplus asset value + Non-operating asset value - Non-operating liability value + Long-term equity investment value

a) Operating asset value

Operating assets are those related to the appraised entity's production and business operations, which are involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The calculation formula for operating asset value is as follows:

$$P = \sum_{i=1}^{n} \frac{F_i}{(1+r)^i} + \frac{F_n}{r \times (1+r)^n}$$

Wherein: P: The value of the enterprise's operating assets as of the valuation benchmark date;

F_i: The expected free cash flow of the enterprise in the i-th year after the valuation benchmark date;

Fn: The expected free cash flow of the enterprise at the end of the detailed forecast period;

r: The discount rate (weighted average cost of capital, WACC);

n: The detailed forecast period;

i: The i-th year of the detailed forecast period.

Of which, the free cash flow of the enterprise is calculated as follows:

Enterprise free cash flow = Earnings before interest and taxes (EBIT) - Depreciation and amortisation - Capital expenditures - Increase in working capital

Of which, the discount rate (WACC) is calculated as follows:

$$WACC = K_e \times \frac{E}{E + D} + K_d \times (1 - t) \times \frac{D}{E + D}$$

Wherein: K_e: Cost of equity capital;

K_d: Cost of debt capital;

E: Market value of equity;

D: Market value of debt;

t: Tax rate.

Of which, the cost of equity capital is calculated using the Capital Asset Pricing Model (CAPM). The calculation formula is as follows:

$$K_e = r_f + MRP \times \beta_L + r_c$$

Where: rf: Risk-free rate of return;

MRP: Market risk premium;

β_L: Systematic risk coefficient of equity;

r_c: Company-specific risk adjustment coefficient.

b) Surplus asset value

Surplus assets are those that exceed the enterprise's operational needs as of the valuation benchmark date, and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The appraised entity's surplus assets include cash. The surplus assets in this appraisal are appraised using the cost method.

c) Non-operating asset and non-operating liability value

Non-operating assets and liabilities are those that are unrelated to the appraised entity's business operations and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The non-operational assets and liabilities of the appraised entity include accounts receivable, other receivables, inventories and fixed assets in abnormal condition, accounts payable, and other payables. The cost method was adopted for this appraisal.

d) Long-term equity investment value

Long-term equity investments refer to the external equity investments made by the enterprise as of the valuation benchmark date. The entire shareholders' equity of the invested entity, as confirmed using an appropriate appraisal method, is multiplied by the shareholding percentage to determine the long-term equity investment value.

(2) Interest-bearing debt value

Interest-bearing debt refers to liabilities that the appraised entity must pay interest on as of the valuation benchmark date. As of the valuation benchmark date, the appraised entity has no interest-bearing debt.

2.Asset-based approach

(1) Current assets

a) Monetary funds, which consists of bank deposits, is verified through bank statements, bank confirmations, etc., with the appraised value determined based on the verified book value.

b) Other receivables, the appraisers conducted inquiries with the appraised entity regarding its sales credit policies, customer composition and creditworthiness, as well as the historical recovery of accounts receivable. According to the principle of materiality, confirmation letters were sent for large amounts or long-aging receivables, and related contracts and vouchers were randomly checked. Based on the verification of accounts receivable, the evaluators determined the appraised value based on the amount that is likely to be collected for each item. For amounts believed to be fully recoverable, the total receivables are used to calculate the appraised value. For amounts that are likely to be unrecoverable, the appraisers estimated the amount based on historical data and on-site investigations, considering factors such as the amount, overdue time, reasons for non-payment, the debtor's financial status, creditworthiness, and operational management. The appraisal value is then calculated after deducting the estimated risk loss. Simultaneously, the "Provision for Bad Debts" item on the balance sheet is considered as zero.

c) Inventories

For raw materials, the appraised entity used actual cost accounting, including purchase price, related taxes, transportation fees, loading and unloading fees, insurance fees, and other reasonable costs. As of the valuation benchmark date, the raw materials had been purchased a long time ago and are awaiting scrapping. For raw materials awaiting scrapping, this appraisal determines the appraisal value based on the recoverable value of the materials.

For inventory goods, the appraised entity uses actual cost accounting, mainly including procurement costs. As of the valuation benchmark date, the inventory goods had been purchased a long time ago, and except for the coal with no physical assets, the other goods are unusable and awaiting scrapping. For inventory goods awaiting scrapping, this appraisal determines the appraisal value based on their recoverable value. For inventory goods with no physical assets, the appraisal value is zero. The inventory write-down provision is assessed at zero.

(2) Long-term equity investments

An overall appraisal was conducted for long-term equity investments in wholly-owned and controlling subsidiaries. The appraisers first appraise the entire shareholders' equity value of the investee, then multiply it by the shareholding percentage to determine the value of the part of the shareholder's equity.

For non-controlling long-term equity investments, as there are no conditions for an overall appraisal, the appraisal value was determined by the net assets as of the valuation benchmark datemultiplied by the shareholding percentage.

(3) Buildings and structures assets

According to the characteristics of different types of building and structure assets, the type of appraisal value, and the data collection situation, the cost method is mainly used for self-built and self-used industrial plants where budget and final account data can be obtained, as their replacement cost better reflects asset value. For purchased commercial properties, the market approach is used since surrounding transaction markets and recent transaction cases exist, and market transaction prices better reflect asset value.

a) Cost approach

The cost approach calculation formula is as follows:

Appraised value= Replacement cost × Composite depreciation rate

A. Determination of replacement cost

The replacement cost for ordinary buildings and structures generally includes construction and installation project costs, pre-construction and other costs, and capital costs. The calculation formula is as follows:

Replacement cost = Construction and installation engineering cost + Pre-construction and other costs + Capital cost - Deductible VAT

a. Construction and installation engineering costs

For large, valuable, and important buildings, the construction and installation project costs are determined using the preliminary and final budget adjustment method, which uses the quantities in the building’s final budget as a basis and calculates the construction and installation project costs based on local standards and relevant fee documents.

For general buildings, or when final budget data is incomplete or the building's value is small and structure simple, the comparable method is used to determine the construction and installation project costs.

b. Pre-construction and other costs

The pre-construction and other costs are calculated based on the construction investment amount provided by the appraised entity, according to industry, national, or local government prescribed fee standards. Since the number of self-built buildings included in the appraisal scope is small and their value is low, no preliminary fees are calculated in this appraisal.

c. Capital costs

Capital costs are calculated based on the appraised entity's reasonable construction period, referencing the Loan Prime Rate (LPR) published by the People’s Bank of China on the valuation benchmark date. The total sum of construction and installation project costs, preliminary and other fees, etc., is used as the base for calculating the financing costs over the uniform capital investment. Since the number of self-built buildings included in the appraisal scope is small, with a low value and insufficient construction period of less than six months, no capital costs are calculated.

d. Deductible VAT

According to relevant VAT documents, for those that qualify for VAT deduction, the replacement cost is reduced by the corresponding VAT.

B. Determination of composite depreciation rate

a. For important buildings and structures, the economic service life, used lifespan, and on-site inspection of the structure, decoration, and auxiliary equipment are considered to determine the remaining useful life, which is then used to calculate the composite depreciation rate.

Composite depreciation rate = Remaining service life / (Remaining service life + Used lifespan) × 100%

b. For small-value buildings and structures, the service life is mainly used to determine the degree of newness. The calculation formula is as follows:

Composite depreciation rate = (Economic service life - used lifespan) / Economic service life × 100%

C. Determination of Appraised Value

Appraised value= Replacement cost × Composite depreciation rate

b) Market approach

The market approach refers to comparing the subject asset with similar real estate that has recently been traded on the valuation benchmark date, adjusting the known prices of these comparable properties to estimate the objective and reasonable price or value of the subject asset.

Appraisal using the market approach should proceed as follows:

A. Collect transaction examples;

B. Select comparable examples;

C. Establish a comparable price basis;

D. Make adjustments for transaction conditions;

E. Make adjustments for transaction dates;

F. Conduct region condition adjustments;

G. Make adjustments for physical conditions;

H. Make adjustments for ownership conditions;

I. Determine the comparable price.

The market approach appraisal formula is as follows:

Appraised Real Estate Price = Comparable Transaction Price × Normal Transaction Conditions / Comparable Transaction Conditions × valuation benchmark datePrice Index / Comparable Transaction Date Price Index × Appraisal Region Condition Factor / Comparable Region Condition Factor × Appraisal Physical Condition Factor / Comparable Physical Condition Factor × Appraisal Ownership Condition Factor / Comparable Ownership Condition Factor

(4) Shaft engineering

Based on the characteristics of various shaft engineering projects, the appraised value type, data collection conditions, and other related factors, the cost method is primarily used for appraising shaft engineering projects. The cost method calculation formula is as follows:

Appraised value = Replacement cost × Composite depreciation rate

a) Determination of replacement cost

Replacement cost = Comprehensive cost + Preliminary and other costs + Cost of capital − Deductible input VAT

A. Comprehensive cost

The comprehensive cost is calculated based on physical engineering quantities and the current coal mining quotas and fee standards.

For large-scale, high-value, and critical shaft engineering project, the comprehensive cost is calculated based on physical engineering quantities and the current coal mining quotas and fee standards.

Engineering cost = Base price of engineering quotas + Measure fees + Company management fees + Profits + Regulatory fees + Other project fees + Regional price differences

Where:

Base price of engineering quotas – The base price is calculated based on the shaft engineering's lifting method, lifting depth, tunnel cross-section, support method, materials, and thickness. The Consumption Quotas for Coal Mining Shaft Engineering (2015, After-tax Base Price) and Comprehensive Quotas for Auxiliary Costs in Coal Mining Shaft Engineering (2015, After-tax Base Price) are applied. This includes wages, material consumption, machine usage fees, etc., with adjustments made according to relevant regulations.

Other fees — determined in accordance with the Notice issued by the China Coal Construction Association on *Adjustment of Pricing Basis for Coal Construction Projects under the VAT Reform for the Construction Industry* ((ZH.M.J.X.Z. [2016] No. 46) and the *Notice on Adjusting the Value-Added Tax Rate for Coal Construction Engineering Pricing Basis* (ZH.M.J.X.Z. [2019] No. 37), together with the *Notification on Release of the Consumption Quotas for Coal Mining Shaft Engineering (2015, After-tax Base Price)* (ZH.M.J.X.Z. [2016] No. 115) and the *Supplementary Provisions on the Implementation of the Valuation Standards for Coal-Construction Projects* (ZH.M.J.X.Z. [2016] No. 116), and calculated in combination with the actual construction conditions of the mine.

Labour, materials, and equipment price differences – Adjusted according to the *Notice on Adjusting Coal Construction Engineering Quotation Standards (2015 Base Price) for Labour Unit Prices and Related Regulations* (ZH.M.J.X.Z. [2021] No. 125), Urumqi City Construction Engineering Material Information Price List (Q2 2025), and materials price information provided by the enterprise for the valuation benchmark date.

For general shaft engineering projects, or when final settlement data is incomplete, or when the value is small and the structure is simple, the Analogy Method is used to determine the construction cost.

B. Preliminary and other costs:

Preliminary and other costs include construction unit management fees, engineering supervision fees, surveying and design fees, environmental evaluation fees, and soil and water conservation consulting service fees. These costs are calculated based on the engineering construction investment amount, according to industry, national, or local government fee standards. Preliminary and Other Costs Calculation Formula:

Preliminary and other costs = Engineering cost × Fee rate

C. Capital costs

Financing costs are calculated based on the appraised entity's reasonable construction period, referencing the LPR published by the People's Bank of China on the valuation benchmark date, and considering the appraised entity's loan interest rate adjustments. The total sum of engineering costs, preliminary and other fees, etc., is used as the base for calculating the financing costs over the uniform capital investment. The calculation formula of capital costs is as follows:

Financing cost = (Engineering cost + Preliminary and other fees) × Reasonable construction period × Interest rate / 2

b) Determination of composite depreciation rate

Shaft engineering in coal mines differs from surface buildings in that it is a special structure attached to coal resources. Its economic lifespan is closely linked to the coal reserves that can be mined. As coal resources are depleted, the economic lifespan shortens, and when coal resources are exhausted, the economic lifespan ends.

Underground engineering has a complex geological structure, many unpredictable factors, and poor construction conditions. The stability of the tunnels depends on their location, rock layer properties, and mining methods. The service life of each type of tunnel is determined by the coal reserves in the service area.

Therefore, before determining the depreciation rate, the appraisers first reviewed geological reports, mine design data, and understood the position, rock properties, support methods, geological structures, and the impact of mining on the tunnels. They then visited representative tunnels underground to inspect the support conditions and maintenance status and consulted with on-site engineering personnel to verify and review the maintenance records and methods. Finally, based on the coal reserves, remaining reserves, recoverable reserves, and production capacity provided by the geological survey department, the remaining service life of each tunnel was calculated, and the composite depreciation rate was determined. The calculation formula is as follows:

Composite depreciation rate = Remaining service life / (Service life + Remaining service life) × 100%

c) Appraisal value

Appraised value = Replacement cost × Composite depreciation rate

(5) Equipment assets

Equipment assets include machinery, vehicles, and electronic devices. Based on the nature of this project and the characteristics of the equipment assets within the scope of the appraisal, for some older electronic devices (e.g., computers) and vehicles, where there is an active second-hand market, the appraised value is based on the second-hand or scrap value of similar equipment. For other equipment, which does not have independent profit-generating ability and where there are very few similar transaction examples, it is not suitable to apply the income approach or market approach for appraisal. Therefore, the cost approach is used for these equipment appraisals. For scrapped equipment, the appraisal is based on the recoverable price. For equipment with no physical presence, the appraisal amount is zero.

The cost method calculation formula is as follows:

Appraised value= Replacement cost × Composite depreciation rate

a) Replacement cost

Based on the characteristics and nature of the equipment within this appraisal scope, as well as the circumstances of the appraised entity, the calculation methods for the replacement costs of various types of equipment in this appraisal are as follows.

A. Machinery

For equipment that requires installation, the replacement cost generally includes: Equipment purchase price, transport and handling fees, installation engineering fees, pre-construction and other costs, and the capital cost. For equipment that does not require installation, the replacement cost generally includes: Equipment purchase price and transport and handling fees. Additionally, according to VAT-related regulations, for VAT general taxpayers, if the equipment meets the VAT deduction conditions, the replacement cost of the equipment should exclude the corresponding VAT. The calculation formula is as follows:

Equipment requiring installation replacement cost = Equipment purchase price + Transport and handling fees + Installation engineering fees + Pre-construction and other costs + Capital costs - Deductible VAT

Equipment not requiring installation replacement cost = Equipment purchase price + Transport and handling costs - Deductible VAT

a. Equipment purchase price

For major process equipment, the purchase price is primarily determined by consulting the market price as at the valuation benchmark date or referencing the contract price of similar equipment at the valuation benchmark date. For small equipment, the purchase price is determined by checking the market price information for the valuation benchmark date. For equipment with no market price information, the purchase price is determined by referencing the purchase price for similar equipment.

b. Transport and handling fees

Transport and handling fees refer to the transportation costs, loading and unloading fees, and other associated costs incurred during the equipment's transportation. If transport and handling fees are not included in the equipment purchase price, they are determined by referring to standard cost indicators from resources like the *Asset Appraisal Common Data and Parametres Handbook* and the *Mechanical Industry Construction Project Budgeting Method and Indices*, taking into account factors such as transportation distance, weight, and volume. The formula for calculating transport and handling fees is as follows:

Equipment transportation and handling fees = Equipment purchase price × Transport and handling fee rate

If transport and handling fees are already included in the equipment purchase price, no additional calculation is made.

c. Installation engineering fees

For equipment that requires installation, the installation engineering fees are estimated using the unit price method, referring to similar equipment installation project budgets

(preliminary or final) and other engineering documents, including the *Coal Mining Construction Project Cost Quotas* (NB/T51063-2016) and other relevant standards, as well as recent local pricing information. Alternatively, the *Asset Appraisal Common Methods and Parametres Handbook* and the *Mechanical Industry Construction Project Budgeting Method and Indices* are used, combined with the scale and nature of the equipment installation work to determine the installation fee rate. The installation engineering fee calculation formula is as follows:

Installation engineering fee = Equipment purchase price × Installation engineering fee rate

For equipment where the purchase price includes installation engineering costs, or for equipment that does not require installation, installation engineering fees are not included.

For equipment foundations that are inseparable from buildings or separately listed as independent foundations, these are appraised within the corresponding buildings and structures, and installation engineering fees are not recalculated.

d. Pre-construction and other costs

The pre-construction and other costs are calculated based on the construction investment amount provided by the appraised entity, according to industry, national, or local government prescribed fee standards. The equipment that requires installation within the appraisal scope is limited, with a low value, so no preliminary costs are calculated in this appraisal.

e. Capital costs

Capital costs are calculated based on the reasonable construction period of the appraised entity's project, referring to the loan market quotation rate (LPR) published by the National Interbank Funding Centre on the valuation benchmark date. The total cost, including equipment purchase price, transport and handling fees, installation engineering fees, pre-construction and other costs, is used as the basis, assuming that the funds are evenly invested. The equipment that requires installation within the appraisal scope is limited, with a low value and a reasonable construction period of less than six months, so financing costs are not calculated in this appraisal.

f. Deductible VAT

VAT was calculated based on the relevant documents, such as "C.SH. [2008] No. 170", "C.SH. [2016] No. 36", "C.SH. [2018] No. 32", "Announcement [2019] No. 39 of the Ministry of Finance, State Taxation Administration, and General Administration of Customs", and the relevant local and industry pricing adjustment documents for deductible VAT. The specific calculation method is as follows:

Deductible VAT = Equipment purchase price / 1.13 × 13% + (Transport and handling fees + Installation engineering fees) / 1.09 × 9% + VAT deductible from pre-construction and other costs

B. Vehicles

For vehicles, the replacement cost is determined by the market price on the valuation benchmark date, adding the vehicle purchase tax and other reasonable costs (such as licence fees). The calculation formula is as follows:

Replacement cost = Vehicle purchase price + Vehicle purchase tax + Licence fees and

other costs - Deductible VAT

Where:

Vehicle purchase tax = Vehicle purchase cost / (1 + 13%) × 10%.

The vehicle purchase price is mainly determined by consulting local dealers or checking online for market prices; vehicle purchase tax is determined according to the *Vehicle Purchase Tax Law of the People's Republic of China*; licence fees and other costs are determined based on local administrative fee standards and actual vehicle expenses.

C. Electronic equipment

For electric equipment that requires installation, the appraisal is conducted using the same method as for machinery. For other electric equipment that does not require installation, the replacement cost is determined based on the market purchase price on the valuation benchmark date.

Replacement cost = Electronic equipment purchase price / 1.13

b) Determination of composite depreciation rate

A. For specialised and general machinery, the depreciation rate is primarily determined based on the equipment's economic service life, used lifespan, and on-site inspections of the equipment's condition and technical status. The remaining service life is then calculated, and the composite depreciation rate is determined using the following formula:

Composite depreciation rate = Remaining service life / (Remaining service life + Used lifespan) × 100%

B. For electronic equipment, office furniture, and other devices, the composite depreciation rate was mainly determined based on their economic service life and the results of on-site inspections. The calculation formula is as follows:

Age-based newness rate = (Economic lifespan - Years of use) / Economic lifespan × 100%

Composite depreciation rate = Age-based depreciation rate × Adjustment coefficient

C. For vehicles, according to the *Compulsory Motor Vehicle Scrap Standards* (Order [2012] No.12 of the Commerce, National Development and Reform Committee, the Ministry of Public Security, and Environmental Protection Department), the theoretical newness rate is determined using vehicle mileage and usage years, based on the lower of the two. For vehicles without a mandatory scrapping period, the remaining useful life method is used. Finally, a weighted average is calculated between the lower of the age-based newness rate and the mileage-based newness rate, and the observation-based newness rate, to determine the composite depreciation rate. The calculation formula is as follows:

Age-based newness rate (no required useful life) = Remaining useful life / (Years of use + Remaining useful life) × 100%

Age-based newness rate (with required useful life) = (Required useful life - Years of use) / Required useful life × 100%

Mileage-based newness rate = (Standard retirement mileage - Accumulated mileage) / Standard retirement mileage × 100%

Composite depreciation rate = MIN (age-based newness rate, mileage-based newness rate) × 40% + Observation-based newness rate × 60%

c) Determination of the appraised value

Appraised value = Replacement cost × Composite depreciation rate

(6) Intangible assets - land use righst

According to the *Asset Appraisal Practice Standards– Real Estate*, the main appraisal methods for land use rights include the market approach, cost approach, income approach, hypothetical development approach, and benchmark land price approach. The choice of appraisal method should be based on the local real estate market development conditions, as well as the specific characteristics of the project and the purpose of the appraisal, to select the appropriate appraisal approach. The market approach is selected for this appraisal, based on the appraisal purpose, subject asset, value type, data collection conditions, and the applicability of the appraisal methods. A brief introduction to the market approach is as follows:

The market comparison approach refers to the comparison of the subject asset with similar land transaction examples under the same market conditions, using the substitution principle. Adjustments are made for differences in transaction conditions, transaction dates, regional factors, individual factors, floor area ratio, remaining useful life, and other relevant aspects between the two. The method used to determine the price of the subject asset on the valuation benchmark date. The basic formula for the Market Comparison Approach is as follows:

$$P = PB \times A \times B \times C \times D \times E$$

Wherein: P = Appraised value of the subject asset;

PB: Price of the comparable transaction;

A: Transaction situation index for the appraised land parcel / transaction situation index for comparative example land parcels;

B: Land price index on the valuation benchmark datefor the appraised land parcel / land price index on the transaction date for comparative example land parcels;

C: Regional factors condition index for the appraised land parcel / regional factors condition index for comparative example land parcels;

D: Individual factors condition index for the appraised land parcel / individual factors condition index for comparative example land parcels;

E: Duration adjustment index of the subject asset / Duration adjustment index of the comparable.

(7) Intangible assets - mining rights

The appraised value of the mining rights in this asset appraisal report was determined with reference to the mining rights appraisal conclusion issued by China Enterprise Appraisals Co., Ltd. The summary of the referenced appraisal reports can be found in "Relevant assets referenced from other reports." For details on the calculation process and results of the mining rights appraisal, please refer to the mining rights report issued by China Enterprise Appraisals Co., Ltd.

(8) Intangible assets - other intangible assets

Based on the characteristics of other intangible assets, the appraisal type, and the data collection, the market approach is adopted for appraisal. For software that is normally in use, since the software was not purchased recently, the adjustment coefficient for the software's appraisal was determined by considering factors such as the general price increase and the average income in the information software industry. The original recorded value of the software was adjusted accordingly to derive the software's appraisal value.

(9) Liabilities

The liabilities of the appraised entity include accounts payable, advance payments, contract liabilities, payable employee compensation, taxes payable, and other payables. The appraisers first checked the consistency between the subsidiary accounts and the general ledger, and examined the detailed items. They also sampled relevant accounting vouchers and documents to confirm the accuracy of the debt book values. For current liabilities, the appraisal values are determined based on the actual liabilities borne by the company as verified.

VIII. Implementation Process and Information of the Appraisal Procedure

The appraisers carried out the appraisal of the assets involved in the subject asset from 9 August 2025 to 16 December 2025. The main appraisal procedures and process are as follows:

i. Acceptance of engagement

On 9 August 2025, the client and us reached an agreement on the basic matters of the appraisal, including the appraisal purpose, the subject asset, the appraisal scope, the valuation benchmark date, and the rights and obligations of each party. We then negotiated with the client and developed the corresponding appraisal plan.

ii. Preliminary preparation

After accepting the engagement, the project team, based on the appraisal purpose, the characteristics of the subject asset, and the time plan, formulated a specific appraisal work plan and formed the appraisal team. Simultaneously, the team drafted a list of required materials and appraisal forms based on the actual needs of the project.

iii. On-site investigation

The appraisers conducted the necessary verification of the assets and liabilities involved in the entity to be appraised from 11 August 2025 to 30 September 2025, and carried out the required investigation into the business and management of the entity to be appraised.

1. Asset verification

(1) Guiding the appraised entity to complete forms and prepare materials to be provided to the asset appraisal institution

The appraisers guided the financial and asset management personnel of the appraised entity to carefully and accurately complete the asset information based on the "Assets Appraisal Details Sheet" and its requirements, the material checklist, etc., after their own inventory. They also collected and prepared property ownership certificates and documents reflecting performance, condition, economic, and technical indicators of the assets.

(2) Preliminary review and improvement of the Assets Appraisal Details Sheet submitted by the appraised entity

The appraisers reviewed the relevant documents, understood the detailed status of the assets included in the appraisal scope, and then carefully reviewed the "Assets Appraisal Details Sheet" to check for incomplete or incorrect entries, unclear asset items, and other issues. Based on experience and the gathered information, the appraisers ensured the accuracy of the sheet and provided feedback to the appraised entity to improve them.

(3) On-site inspection

Based on the type, quantity, and distribution of assets included in the appraisal scope, the appraisers, with the cooperation of the relevant personnel of the appraised entity, conducted on-site inspections in accordance with the relevant provisions of the asset appraisal standards. Different inspection methods were applied depending on the nature and characteristics of the various assets.

(4) Supplementing, modifying, and improving the Assets Appraisal Details Sheet

Based on the results of the on-site inspection and after thorough communication with the relevant personnel of the appraised entity, the appraisers further refined the "Assets Appraisal Details Sheet" to ensure consistency between the accounts, sheet, and actual assets.

(5) Verification of ownership certificate documents

The appraisers verified the ownership documentation for assets within the appraisal scope, such as buildings, vehicles, and other intangible assets. In cases where the ownership information was incomplete or unclear, they requested the enterprise to verify or provide relevant property ownership clarification documents.

2. Due diligence

To fully understand the operational and management status of the appraised entity and the risks it faces, the appraisers conducted necessary due diligence. The main contents of the due diligence were as follows:

(1) The history of the appraised entity, its major shareholders and their shareholding ratios, and the necessary ownership and management structure;

(2) The asset, financial, and operational management status of the appraised entity;

(3) The business plan, development plan, and financial forecast information of the appraised entity;

(4) Previous appraisals and transactions related to the subject asset and appraised entity;

(5) Macro and regional economic factors affecting the production and operation of the appraised entity;

(6) The development status and prospects of the industry in which the appraised entity operates;

(7) Other relevant information.

iv. Data collection

The appraisers collected appraisal materials according to the specifics of the appraisal project, including data independently obtained from markets and other channels, data

acquired from the client and other relevant parties, and data from government departments, professional institutions, and other relevant bodies. They then analysed, summarised, and organised the collected materials to form the basis for estimation.

v. Preliminary estimation

Based on the specific conditions of the various assets, the appraisers selected the appropriate formulas and parametres according to the chosen appraisal methods, performing analysis, calculations, and judgments to form preliminary appraisal conclusions. The project leader summarised the preliminary conclusions for each asset appraisal and drafted the preliminary asset appraisal report.

vi. Internal review

According to our company’s appraisal business process management regulations, the project leader submitted the preliminary asset appraisal report for internal review after completion. After the internal review, the appraisers communicated with the client or other relevant parties, as agreed, on the contents of the asset appraisal report, ensuring that the independence of the appraisal conclusions was maintained. After completing the above appraisal procedures, the formal asset appraisal report was issued and submitted.

IX. Appraisal Assumptions

The assumptions for the analysis and estimates in this asset appraisal report are as follows:

i. It is assumed that all appraisal targets are in the process of being traded, and the appraisers simulate the market based on the transaction conditions of the appraised assets;

ii. It is assumed that for assets traded in the market, or assets to be traded in the market, both parties in the transaction have equal standing and ample opportunity and time to access market information. The transactions are voluntary and rational, and the parties can make rational judgments about the asset’s function, purpose, and transaction price;

iii. It is assumed that the appraised assets will continue to be used for their current purposes and in their current manner throughout the remaining service life of the mine;

iv. It is assumed that there will be no significant changes to the relevant national laws, regulations, and policies or the macroeconomic situation, and that the political, economic, and social environment in the regions of the parties involved in the transaction will not change significantly;

v. Given the actual status of the assets on the valuation benchmark date, it is assumed that the company will continue operations throughout the remaining service life of the mine;

vi. It is assumed that there will be no significant changes in the interest rates, tax bases, tax rates, policy-based collection fees, or other related factors affecting the appraised entity after the valuation benchmark date;

vii. It is assumed that after the valuation benchmark date, the assessed entity's subsidiary Shaping Coal Industry commences annual payment of mining rights transfer revenue starting in 2028, and Ciyaogou Coal Industry commences such payment starting in 2032, in accordance with the provisions of the *Notice of the Ministry of Finance, the Ministry of Natural Resources and the State Taxation Administration on*

the Issuance of the Measures for the Collection of Mining Rights Transfer Revenue (C.Z. [2023] No. 10);

viii. It is assumed that the management of the appraised entity after the valuation benchmark datewill remain responsible and stable, with the ability to perform their duties;

ix. Unless otherwise stated, it is assumed that the company fully complies with all relevant laws and regulations;

x. It is assumed that after the valuation benchmark date, there will be no force majeure or unforeseen factors that cause significant adverse effects on the appraised entity;

xi. It is assumed that after the valuation benchmark date, the accounting policies used by the appraised entity and those used to prepare this asset appraisal report will remain consistent in significant aspects;

xii. It is assumed that after the valuation benchmark date, the scope and methods of the appraised entity's operations will remain the same, based on the current management practices and level;

xiii. It is assumed that after the valuation benchmark date, the appraised entity's cash inflows and cash outflows will be at an average rate;

xiv. It was assumed that during the appraisal calculation period, the unit cost for environmental restoration and land reclamation would be equal to the extracted and spent amounts.

xv. It is assumed that the mineral resources reserves reviewed within the mining licence will form the basis for the mining rights, and that the mining licence can be smoothly renewed in the future;

xvi. It is assumed that the production and sales of commercial coal in future years would achieve a balance between production and sales;

xvii. It is assumed that after the expiry of the lease agreements for the operations required by the appraised entity and its subsidiaries within the appraisal scope, these agreements can be renewed until the end of the forecast period in accordance with the terms of the original agreements;

xviii. Within the scope of this appraisal, mining rights of Ciyaogou Coal Mine of Shanxi Hequ Jinshen Ciyaogou Coal Industry Co., Ltd. still have a capacity gap of 2.6 million tonnes per year; mining rights of Shaping Coal Mine of Shanxi Jinshen Shaping Coal Industry Co., Ltd. still have a capacity gap of 4 million tonnes per year. It is assumed that the company will acquire the corresponding capacity rights on a paid basis, with a cash outflow of RMB140 per tonne (inclusive of tax) considered in the first period.

xix. According to the *Notice from the Office of the Ecological and Environmental Protection Committee of Hequ County*: Existing "high energy consumption, high pollution, and resource-intensive" projects within 1 kilometer of the Yellow River bank will be phased out. The Shaping Coal Washery must be shut down. The Shaping Coal Mine is currently undergoing relocation and reconstruction of its coal washing plant. According to the information provided by the enterprise, this assumption expects the completion of these matters by the end of 2027. Consequently, the company will outsource coal washing from August 2025 to December 2027, after which it will begin utilizing its own coal washing plant for processing.

The conclusions of this asset appraisal report are valid under the above assumptions as of the valuation benchmark date. If there are significant changes in these assumptions, the signing asset appraisers and this asset appraisal agency will not bear responsibility for deriving different appraisal conclusions due to changes in assumptions.

X. Appraisal Conclusion

i. Income approach appraisal results

As of the valuation benchmark date, the total assets of Shanxi Jinshen Energy Co., Ltd. on a parent company basis had a book value of RMB3,349,234,600, with total liabilities amounting to RMB2,379,398,900, and the book value of net assets was RMB969,835,700. Under the income approach, the value of entire shareholders' equity amounted to RMB7,648,368,400, representing an increase of RMB6,678,532,700, an appreciation rate of 688.63%.

As of the valuation benchmark datefor Shanxi Jinshen Energy Co., Ltd., the consolidated total assets had a book value of RMB7,704,073,700, with total liabilities amounting to RMB1,189,815,300. The book value of owner’s equity was RMB6,514,258,400, of which the equity attributable to the parent company was RMB5,233,925,000. Under the income approach, the value of entire shareholders' equity amounted to RMB7,648,368,400, representing an increase of RMB2,414,443,400, an appreciation rate of 46.13%.

ii. Asset-based approach appraisal results

As of the valuation benchmark datefor Shanxi Jinshen Energy Co., Ltd., the parent company’s total assets had a book value of RMB3,349,234,600, with an appraisal value of RMB10,095,158,600, showing an increase of RMB6,745,924,000, representing an appreciation rate of 201.42%. The total liabilities had a book value of RMB2,379,398,900, with an appraisal value of RMB2,379,398,900, showing no change in value. The net assets had a book value of RMB969,835,700, with an appraisal value of RMB7,715,759,700, reflecting an increase of RMB6,745,924,000, or an appreciation rate of 695.57%.

The detailed results of the asset-based approach are shown in the following summary table:

.Summary of Appraisal Results from Asset-based Approach

valuation benchmark date: 31 July 2025 Currency unit: RMB’0,000

Item		Book value	Appraised value	Increase or decrease	Appreciation rate %
		A	B	C = B - A	D = C/A × 100%
Current assets	1	251,176.27	251,159.08	-17.19	-0.01

Oil and gas assets	7	0.00	0.00	0.00	/
Intangible assets	8	18.09	30.33	12.25	67.74
Including: Land use right	9	0.00	0.00	0.00	/
Other non-current assets	10	0.00	0.00	0.00	/
Total assets	**11**	**334,923.46**	**1,009,515.86**	**674,592.40**	**201.42**
Current liabilities	12	237,939.89	237,939.89	0.00	0.00
Non-current liabilities	13	0.00	0.00	0.00	/
Total liabilities	**14**	**237,939.89**	**237,939.89**	**0.00**	**0.00**
Net assets	**15**	**96,983.57**	**771,575.97**	**674,592.40**	**695.57**

As of the valuation benchmark datefor Shanxi Jinshen Energy Co., Ltd., the consolidated total assets had a book value of RMB7,704,073,700, with total liabilities amounting to RMB1,189,815,300. The book value of owner's equity was RMB6,514,258,400, of which the equity attributable to the parent company was RMB5,233,925,000. After applying the asset-based approach, the entire shareholders' equity amounted to RMB7,715,759,700, with an increase of RMB2,481,834,700, representing an appreciation rate of 47.42%.

iii. Appraisal conclusion

The entire shareholders' equity value after applying the income approach was RMB7,648,368,400, while the total equity value after applying the asset-based approach was RMB7,715,759,700. The difference between the two was RMB67,391,300, representing a discrepancy rate of 0.88%.

The main reason for the difference in the results from the two methods is that the two approaches consider different perspectives. The asset-based approach is based on the asset replacement method, reflecting the replacement value of the company's existing assets. The income approach, on the other hand, considers the company's profitability, reflecting the comprehensive profitability of the company's assets.

The appraisal conclusion adopts the appraisal results of the asset-based method for the following reasons:

The appraised entity is a platform company engaged in unified management. The coal purchase and sales business it operates is primarily aimed at maintaining the normal operation of the platform company and is not for profit purposes. Therefore, the result from the income approach is not adopted as the appraisal conclusion. Under the asset-based approach, all assets and liabilities within the appraisal scope as of the valuation benchmark datehave been appraised using appropriate methods. The appraisal results can objectively reflect the market value of the appraised entity's net assets, so the result from the asset-based approach is adopted as the appraisal conclusion.

Based on the above analysis, the conclusion of this asset appraisal report adopts the result from the asset-based approach, meaning the entire shareholders' equity of Shanxi Jinshen Energy Co., Ltd. is RMB7,715,759,700.

Due to objective limitations, this asset appraisal report does not take into account any premium or discount that may arise due to control or lack of control, nor does it consider the impact of liquidity on the value of the subject asset.

XI. Special Notes

The following matters were identified during the appraisal process that may affect the appraisal conclusion but cannot be assessed or estimated by the professional expertise and ability of the appraisers:

i. In this asset appraisal report, any discrepancies between the total sum and the sum of individual items in tables or textual representations, where amounts are expressed in RMB10,000, are due to rounding.

ii. This appraisal has utilised the audit report numbered Ernst & Young Hua Ming (2025) Zhuan Zi No. 80028114_A01issued by Ernst & Young Hua Ming LLP on 16 December 2025. We obtained the audit report through legal channels, and after analyzing and reviewing the contents of the audit report in accordance with the relevant asset appraisal standards, we have prudently used the relevant contents of the audit

report. The audited financial data in the audit report forms the basis for the asset appraisal. If this financial data changes, the conclusions of this appraisal may become invalid. According to Article 12 of the *Asset Appraisal Practice Standards – Enterprise Value*: Asset appraisers analyse and assess the use of financial statements based on the chosen appraisal methods. However, it is not the responsibility of the asset appraisers to offer professional opinions on whether the financial statements fairly reflect the financial status, operating results, or cash flow of the appraised entity as at the valuation benchmark date. We only bear responsibility for improper referencing that may arise in the use of the audit report during the appraisal process.

iii. The appraisal for Shanxi Hequ Jinshen Ciyaogou Coal Industry Co., Ltd. - Ciyaogou Coal Mine, a subsidiary within the scope of this appraisal, references the appraisal conclusion from the *Mining Rights Appraisal Report for Shanxi Hequ Jinshen Ciyaogou Coal Industry Co., Ltd.*, issued by China Enterprise Appraisals Co., Ltd. on 16 December 2025 (ZH.Q.H.K.P.B.Z. [2025] No. 1081). The appraisal for Shanxi Jinshen Shaping Coal Industry Co., Ltd. - Shaping Coal Mine references the appraisal conclusion from the *Mining Rights Appraisal Report for Shanxi Jinshen Shaping Coal Industry Co., Ltd.*, issued by China Enterprise Appraisals Co., Ltd. on 16 December 2025 (ZH.Q.H.K.P.B.Z. [2025] No. 1080).

During this appraisal process, the appraisers communicated and coordinated with mining rights appraisers, who adopted the discounted cash flow method for the appraisal of the mining right. After verifying that the mining rights appraisal report's subject asset, scope, purpose, base date, value type, and other aspects were consistent with this asset appraisal report and in line with the requirements of the economic transaction, the mining rights value involved in this appraisal report directly references the appraisal conclusion issued by China Enterprise Appraisals Co., Ltd. For details on the calculation process and results of the mining rights appraisal, please refer to the mining rights report issued by China Enterprise Appraisals Co., Ltd.

iv. According to the *Asset Appraisal Law* and the *Guidance on Legal Ownership of Subject Asset*, the client and related parties engaging the asset appraisal are responsible for the authenticity, completeness, and legality of the ownership certificates, financial accounting information, and other materials they provide. The purpose of conducting asset appraisal is to estimate the value of the subject asset and provide professional opinions. Confirming the legal ownership or providing opinions on the legal status of the assets goes beyond the scope of professional asset appraisal. Asset appraisers do not provide guarantees on the legal ownership of the subject asset.

v. Explanation regarding ownership defects

1. Two buildings declared by the appraised entity, Jinshen Energy, within the appraisal scope have not been registered with property ownership certificates. Four buildings have their ownership certificates listing Shanxi Jinshen Hequ Coal Development Co., Ltd. (a subsidiary of the appraised entity) as the certificate holder. One piece of land occupied by the buildings does not have specific information. The ownership certificates for five pieces of land list Shanxi Jinshen Hequ Coal Development Co., Ltd. as the certificate holder. Jinshen Energy has committed that the above buildings are owned by it, with no ownership disputes.

2. 13 buildings declared by the appraised entity's controlling subsidiary, Hequ Development, within the appraisal scope have not been registered with property ownership certificates, with a total area of 63,782.04 square metres, of which 59,020.77

square metres occupy land for which Hequ Development is currently processing real estate ownership certificates. Hequ Development has committed that the above buildings are owned by it, with no ownership disputes. The land use rights include 3 pieces of land with a total area of 180,000.01 square metres, of which 43,276.97 square metres have not been registered with property rights certificates and are in the process of registration. Hequ Development has committed that the above land use rights are owned by it, with no ownership disputes.

3. The appraised entity's controlling subsidiary, Jinshen Railway, has declared 106 buildings within the appraisal scope, none of which have property ownership certificates, with a total area of 5,954.87 square metres. Jinshen Railway has committed that these buildings are owned by it, with no ownership disputes. The registration certificates for 7 vehicles list Shanxi Xinzhou Local Railway Co., Ltd. as the certificate holder. Jinshen Railway has committed that these vehicles are owned by it, with no ownership disputes.

4. The appraised entity's controlling subsidiary, Ciyaogou Coal Industry, has declared 6 buildings within the appraisal scope, none of which have property ownership certificates, with a total area of 1,078.24 square metres. Ciyaogou Coal Industry has committed that these buildings are owned by it, with no ownership disputes. One vehicle's registration certificate lists Shanxi Hequ Jinshen Hequ Coal Development Co., Ltd. as the certificate holder. Ciyaogou Coal Industry has committed that this vehicle is owned by it, with no ownership disputes.

5. The appraised entity's wholly owned subsidiary, Xinzhou Sales, has declared 1 vehicle within the appraisal scope, with the registration certificate listing Shanxi Xinzhou Local Railway Co., Ltd. as the certificate holder. Xinzhou Sales has committed that this vehicle is owned by it, with no ownership disputes.

6. The appraised entity's wholly owned subsidiary, Shaping Coal Industry, has declared 46 buildings within the scope of this appraisal, none of which have property ownership certificates, with a total area of 35,568.22 square metres. Of these, 4 buildings occupy land that is temporarily leased. Shaping Coal Industry has committed that these buildings are owned by it, with no ownership disputes. One vehicle does not have a vehicle registration certificate, and for 4 vehicles, the registration certificates list Shanxi Jinshen Hequ Coal Development Co., Ltd. as the certificate holder. Shaping Coal Industry has committed that these vehicles are owned by it, with no ownership disputes. Shaping Coal Industry has also declared 4 pieces of allocated land use rights, for which the state-owned land use certificates have been issued, with the certificates listing Huoshan Coal Mine (one of the coal mines before the integration of Shaping Coal Mine) as the certificate holder. Shaping Coal Industry has committed that these land use rights are owned by it, with no ownership disputes. One land use right cannot provide state-owned land use certificate. The certificate number for this land was listed in the proof of allocated land use issued by the Hequ County Planning and Natural Resources Bureau regarding the land used by Shaping Coal Industry. Shaping Coal Industry has committed that these land use rights are owned by it, with no ownership disputes. One piece of land use rights has a registered area of 5,213.25 square metres, of which 4,178.25 square metres have not yet paid the land transfer fee. In this appraisal, the land value for the unpaid portion of the land transfer fee is not considered in the Asset-Based Approach - Intangible Assets - Land Use Rights section but is considered in the Asset-Based Approach - Intangible Assets - Mining Rights and the Overall Income Approach, with the assumption that the unpaid land transfer fee will be settled. The registered

holder of the four patents is Shanxi Jinshen Energy Co., Ltd. Shaping Coal Washery (a coal preparation plant under the appraised entity). Shaping Coal Industry has committed that the aforementioned patents belong to it, and there are no property rights disputes. The land for Shaping Coal Industry's new ventilation well does not have a land use certificate. Shaping Coal Industry has committed that the new ventilation well assets are owned by it, with no ownership disputes.

7. The appraised entity's wholly owned subsidiary, Xinzhou Railway, has declared 7 buildings within the appraisal scope, none of which have property ownership certificates, with a total area of 1,177.37 square metres. Xinzhou Railway has committed that these buildings are owned by it, with no ownership disputes. Forty buildings have property ownership certificates or state-owned property certificates, with the certificates listing Xinzhou Local Railway Bureau or Shanxi Xinzhou Local Railway Bureau (the former name or abbreviation of Xinzhou Railway) as the certificate holder. The total area of these buildings is 6,042.05 square metres, and Xinzhou Railway has committed that these buildings are owned by it, with no ownership disputes. 10 investment properties do not have property ownership certificates, with a total area of 2,117.55 square metres. Xinzhou Railway has committed that these investment properties are owned by it, with no ownership disputes. One investment property has a property ownership certificate, with the certificate listing Shanxi Xinzhou Local Railway Bureau (the former name of Xinzhou Railway) as the certificate holder. Xinzhou Railway has committed that this investment property is owned by it, with no ownership disputes. Five land use rights have state-owned land use certificates, with the certificates listing Shanxi Xinzhou Local Railway Bureau or Xinzhou Local Railway Bureau Yinta Coal Platform or Xinzhou Local Railway Bureau Huoshan Coal Platform (the former or previous name of Xinzhou Railway along with the coal platform name). Xinzhou Railway has committed that these land use rights are owned by it, with no ownership disputes.

vi. Explanation regarding assets in an abnormal use state

1. The assets awaiting scrapping and without physical presence declared by the appraised entity include: 50 items of raw materials, with a book value of RMB124,700; 9 items of inventory goods, with a book value of RMB67,500; 2 items of buildings, with a book value of RMB167,500; 62 items of machinery and equipment, with a book value of RMB721,200; 1 vehicle, with a book value of RMB7,000; 226 items of electronic equipment, with a book value of RMB130,800. For the aforementioned assets awaiting scrapping, the appraisal was based on their recoverable value. For assets without physical presence, the value is zero.

2. The assets awaiting scrapping and without physical presence declared by the appraised entity's controlling subsidiary, Hequ Development, include:6 items of inventory goods, with a book value of RMB52,000; 12 items of structures, with a book value of RMB4,432,500; 6 items of machinery and equipment, with a book value of RMB744,200; 6 items of electronic equipment, with a book value of RMB18,100; 1 item of long-term prepaid expenses, with a book value of RMB421,000. For the aforementioned assets awaiting scrapping, the appraisal was based on their recoverable value. For assets without physical presence, the value is zero.

3. The assets awaiting scrapping and without physical presence declared by the appraised entity's controlling subsidiary, Jinshen Railway, include: 5 items of raw materials, with a book value of RMB3,813,900; 10 items of buildings, with a book value of RMB1,171,200;4 items of structures, with a book value of RMB387,200; 36

items of machinery and equipment, with a book value of RMB608,800; 4 vehicles, with a book value of RMB13,400; 78 items of electronic equipment, with a book value of RMB30,300. For the aforementioned assets awaiting scrapping, the appraisal was based on their recoverable value. For assets without physical presence, the value is zero.

4. The assets awaiting scrapping and without physical presence declared by the appraised entity's controlling subsidiary, Ciyaogou Coal Industry, include: 38 items of structures, with a book value of RMB4,716,800; 63 items of shaft and tunnel engineering, with a book value of RMB27,335,500; 1,867 items of machinery and equipment, with a book value of RMB7,361,400; 4 vehicles, with a book value of RMB53,800; 265 items of electronic equipment, with a book value of RMB95,300. For the aforementioned assets awaiting scrapping, the appraisal was based on their recoverable value. For assets without physical presence, the value is zero.

5. The assets awaiting scrapping and without physical presence declared by the appraised entity's wholly owned subsidiary, Xinzhou Sales, include:1 item of structure, with a book value of RMB500; 1 item of machinery and equipment, with a book value of RMB400; 3 vehicles, with a book value of RMB23,300; 8 items of electronic equipment, with a book value of RMB15,300. For the aforementioned assets awaiting scrapping, the appraisal was based on their recoverable value. For assets without physical presence, the value is zero.

6. The assets awaiting scrapping and without physical presence declared by the appraised entity's wholly owned subsidiary, Shaping Coal Industry, include: 4 buildings, with a book value of RMB112,800; 33 items of structures, with a book value of RMB5,835,400; 55 items of shaft and tunnel engineering, with a book value of RMB19,542,100; 3,092 items of machinery and equipment, with a book value of RMB56,047,800; 3 vehicles, with a book value of RMB26,100; 549 items of electronic equipment, with a book value of RMB677,200. For the aforementioned assets awaiting scrapping, the appraisal was based on their recoverable value. For assets without physical presence, the value is zero.

7. The assets awaiting scrapping and without physical presence declared by the appraised entity's wholly owned subsidiary, Xinzhou Railway, include: 1 item of inventory goods, with a book value of RMB0.00; 2 items of investment property, with a book value of RMB49,700; 1 item of structure, with a book value of RMB18,100; 5 items of machinery and equipment, with a book value of RMB194,500; 47 items of electronic equipment, with a book value of RMB6,000; 1 item of software, with a book value of RMB0.00. For the aforementioned assets awaiting scrapping, the appraisal was based on their recoverable value. For assets without physical presence, the value is zero.

Users of the asset appraisal report should pay attention to the impact of the above special matters on the appraisal conclusion.

XII. Statement of the Limitations on the Use of the Asset Appraisal Report

i. Scope of use of the asset appraisal report

1.The users of the asset appraisal report are the client and those specified by national laws and administrative regulations.

2.The appraisal conclusion in the asset appraisal report is only valid for the economic activities related to this project.

3.The validity period of the conclusion in the asset appraisal report is one year from the

valuation benchmark date. The client or other users of the asset appraisal report should use the report within the stated validity period of the appraisal conclusions.

4.Without the written consent of the client, the asset appraisal agency and its professionals shall not provide or disclose the contents of the asset appraisal report to any third parties, except as required by laws or administrative regulations.

5.Without the consent of the asset appraisal agency, the contents of the asset appraisal report shall not be copied, quoted, or disclosed in public media, except as required by laws, administrative regulations, or as agreed by the relevant parties.

ii. If the client or other users of the asset appraisal report do not use the asset appraisal report in accordance with the laws, administrative regulations, and the use scope outlined in the asset appraisal report, the asset appraisal agency and its professionals shall not bear any responsibility.

iii. Except for the client, other users of the asset appraisal report as specified in the asset appraisal engagement contract, and those specified by laws or administrative regulations, no other institution or individual may become a user of the asset appraisal report. This asset appraisal report contains several appendices and appraisal detail forms, all of which are an integral part of this report. However, they are only valid when used together with the main body of the report.

iv. The asset appraisal agency and asset appraisers shall not bear any obligations or responsibilities to users of this report who are not authorised, such as those who obtain the report through presentation or other means, outside the scope of its intended use. They will not provide further consultancy based on this report, nor will they provide testimony or attend hearings in court or other legal proceedings, and they reserve the right to hold non-authorised users liable for any losses incurred as a result.

v. Users of the asset appraisal report shall correctly understand and use the appraisal conclusion. The appraisal conclusion is not equivalent to the realisable price of the subject asset and shall not be considered a guarantee of the realisable price.

vi. An asset appraisal report refers to a professional report issued by the asset appraisal agency, based on the law, administrative regulations, and asset appraisal standard requirements, after carrying out the necessary appraisal procedures as entrusted. It reflects the value of the subject asset for a specific purpose on the valuation benchmark date. This report must be signed by the appraisers responsible for the appraisal and stamped with the asset appraisal agency's official seal. It can only be formally used after being filed with the state-owned asset supervision and management authority or the enterprise that provided funding.

This report is prepared in accordance with the Chinese Asset Appraisal Standards

Asset Appraisal Report on the Appraisal of the Entire Shareholders' Equity of CHN Energy Baotou Mining Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. for the Asset Acquisition Project of China Shenhua Energy Company Limited by Issuing Shares and Paying Cash

ZH.Q.H.P.B.Z.(2025) No.6671

(Volume 1 of 1)

China Enterprise Appraisals Co., Ltd.

16 December 2025

DECLARATION

I. This asset appraisal report is prepared based on the Basic Rules for Asset Appraisal issued by the Ministry of Finance and the Asset Appraisal Practice Standards and Code of Professional Ethics issued by the China Appraisal Society.

II. The asset appraisal agency and its professional appraisers comply with laws, administrative regulations, and asset appraisal standards, adhere to the principles of independence, objectivity, and fairness, and bear legal responsibility for the asset appraisal report they issue.

III. The client or other users of the asset appraisal report shall use the report in accordance with the laws, administrative regulations, and the scope of use stated in the asset appraisal report. If the client or other users of the report misuse the report in violation of the foregoing regulations, the asset appraisal agency and its appraisers shall not bear any responsibility.

This asset appraisal report is only for use by the client, other users of the asset appraisal report as specified in the asset appraisal engagement contract, and users defined by laws or administrative regulations. Other institutions or individuals shall not use this asset appraisal report.

The asset appraisal agency and the appraisers remind the users of the asset appraisal report to correctly understand and use the appraisal conclusion. The appraisal conclusion is not equivalent to the realisable price of the subject asset and shall not be considered a guarantee of the realisable price.

IV. The asset and liability lists related to the subject asset are provided by the client and the appraised entity, and confirmed by their signatures, seals, or other legally permitted means. The client and other relevant parties are responsible for the authenticity, completeness, and legality of the information provided.

V. The asset appraisers have conducted on-site investigations of the subject asset and the assets involved. They have paid necessary attention to the legal ownership status of the subject asset and its assets, verified the ownership documents, disclosed any discovered issues truthfully, and urged the client and other relevant parties to rectify any property right issues to meet the requirements for issuing the asset appraisal report.

VI. The asset appraisal agency and its appraisers have no current or anticipated interests in the subject asset, nor any current or anticipated interests with the relevant parties, and are unbiased towards the relevant parties.

VII. The analysis, judgment, and results in the asset appraisal report issued by the asset appraisal agency are subject to the assumptions and limitations specified in the report. Users of the asset appraisal report shall fully consider the assumptions, limitations, special notes, and their impact on the appraisal conclusion.

VIII. The asset appraisers' inspection of physical assets such as equipment is typically limited to observation of use and maintenance conditions. Internal, hidden, or difficult-to-access parts are not inspected. We do not possess the professional capability nor have we been engagement to conduct technical inspections or appraisals of the internal quality of these assets. Our appraisal is based on information provided by the client and other relevant parties. If there are defects in the internal quality of these subject assets, the appraisal conclusion may be affected to varying degrees.

Summary of the Asset Appraisal Report

Unified social credit code: 9115020511452024XD

Date of incorporation: 4 September 1980

Business term: From 4 September 1980 to 31 December 2099

2. History

(1) Company establishment

On 4 September 1980, after approval from the Coal Industry Management Bureau of the Inner Mongolia Autonomous Region Revolutionary Committee, the predecessor of Baotou Mining, the Baotou Mining Bureau of Inner Mongolia Autonomous Region, completed the establishment registration with the Baotou Administration for Industry and Commerce. The enterprise type was public ownership.

(2) Transformation into a limited liability company

On 25 February 1999, the State Coal Industry Bureau issued the *Notice on Issuing the Memorandum of Understanding on Transferring Five Coal Enterprises in Inner Mongolia to Shenhua Group for Operation and Management* (M.B.Z. [1999] No. 40), confirming the transfer of Baotou Mining Bureau and other enterprises in Inner Mongolia to the former Shenhua Group for operation and management.

On 18 January 2001, the former Shenhua Group issued the *Approval on the Restructuring of Baotou Mining Bureau into Shenhua Group Baotou Mining Co., Ltd.* (SH.H.Y.Z. [2001] No. 034), approving the transformation of Baotou Mining Bureau into Shenhua Group Baotou Mining Co., Ltd., and required the company to revise its articles of association as per the audit opinion and submit it to the industry and commerce administration department.

On 9 October 2001, Baotou Administration for Industry and Commerce issued the *Notice on Pre-approval of Enterprise Name* (Y.H.Z. [2001] No. 1608), approving the name "Shenhua Group Baotou Mining Co., Ltd." On 10 April 2004, it consented to extend the name reservation period until the end of June 2004.

On 1 March 2004, Beijing Bokun Certified Public Accountants issued an *Audit Report* (B.K.C.SH.B. [2004] No. 015), stating that as of 31 December 2003, the net assets of Baotou Mining Bureau amounted to RMB66,731,948.48.

On 29 March 2004, Baotou Zhenghua Certified Public Accountants issued a *Capital Verification Report*, stating that as of 31 December 2003, Baotou Mining had received capital of RMB66,731,948 from the net assets of Baotou Mining Bureau as of 31 December 2003.

On 20 April 2004, Baotou Mining completed the registration as a limited liability company, with a registered capital of RMB66.73 million, 100% owned by the former Shenhua Group.

3. Shareholders, their shareholding ratios and equity change

(1) First increase in registered capital to RM167.32 million

On 30 July 2007, Baotou Mining issued an amendment to its articles of association, changing the registered capital to RMB167,328,370.75. On 7 May 2008, Baotou Jinlian Certified Public Accountants issued a *Capital Verification Report* (B.J.L.S.Y.Z. [2008] No. 128), stating that as of 27 December 2007, Baotou Mining had received an additional registered capital of RMB100,598,370.75 in cash from its shareholder, the former Shenhua Group. The paid-in amount of the revised cumulative registered capital was RMB167,328,370.75. On 28 May 2008, Baotou Mining obtained a new *Business Licence of Legal Entity* with registration number 150205000001071 from the Shiguai District Branch of the Baotou Administration for Industry and Commerce.

After the increase in registered capital, Baotou Mining is still 100% owned by the former Shenhua Group, with both the registered capital and paid-in capital amounting to RMB167.32 million.

(2) Second increase in registered capital to RM415.32 million

On 25 May 2009, Baotou Mining issued an amendment to its articles of association, changing the registered capital to RMB415,328,370.75. On 26 May 2009, Baotou Jinlian Certified Public Accountants issued a *Capital Verification Report* (B.J.L.S.Y.Z. [2009] No. 189), stating that as of 26 May 2009, Baotou Mining had received an additional registered capital of RMB248 million in cash from its shareholder, the former Shenhua Group. The paid-in amount of the revised cumulative registered capital was RMB415.32 million. On 10 June 2009, Baotou Mining completed the industrial and commercial registration change for the increase in registered capital.

After the increase in registered capital, Baotou Mining is still 100% owned by the former Shenhua Group, with both the registered capital and paid-in capital amounting to RMB415.32 million.

(3) Third increase in registered capital to RMB1,236.6 million

On 15 September 2010, Baotou Mining issued an amendment to its articles of association, changing the registered capital to RMB1,236.6 million. On 30 September 2010, Inner Mongolia Zhongzheng United Certified Public Accountants issued a *Capital Verification Report* (N.ZH.ZH.Y.Z. [2010] No. 069), stating that as of 28 September 2010, Baotou Mining had received an additional registered capital of RMB821.28 million in cash from its shareholder, the former Shenhua Group. The paid-in amount of the revised cumulative registered capital was RMB1,236.6 million. On 16 December 2010, Baotou Mining obtained a new *Business Licence of Legal Entity* with registration number 150205000001071 from the Shiguai District Branch of the Baotou Administration for Industry and Commerce.

After the increase in registered capital, Baotou Mining is still 100% owned by the former Shenhua Group, with both the registered capital and paid-in capital amounting to RMB1,236.6 million.

(4) Fourth increase in registered capital to RMB2,196.6 million

On 24 February 2011, Baotou Mining issued an amendment to its articles of association, changing the registered capital to RMB2,196.6 million. On 17 June 2011, Inner Mongolia Zhongzheng United Certified Public Accountants issued a *Capital Verification Report* (N.ZH.ZH.Y.Z. [2011] No. 031), stating that as of 7 January 2011, Baotou Mining had received an additional registered capital of RMB960 million in cash from its shareholder, the former Shenhua Group. The paid-in amount of the revised cumulative registered capital was RMB2,196.6 million. On 28 June 2011, Baotou Mining obtained a new *Business Licence of Legal Entity* with registration number 150205000001071 from the Shiguai District Branch of the Baotou Administration for Industry and Commerce.

After the increase in registered capital, Baotou Mining is still 100% owned by the former Shenhua Group, with both the registered capital and paid-in capital amounting to RMB2,196.6 million.

(5) Fifth increase in registered capital to RMB2,378.3 million

On 24 April 2013, Baotou Mining issued an amendment to its articles of association, changing the registered capital to RMB2,378.3 million. On 25 April 2013, Baotou Dayang Certified Public Accountants issued a *Capital Verification Report* (B.D.Y.S.Y.Z. [2013] No. 053), stating that as of 12 June 2012, Baotou Mining had received an additional registered capital of RMB181.7 million in cash from its shareholder, the former Shenhua Group. The paid-in amount of the revised cumulative registered capital was RMB2,378.3 million. On 20 May 2013, Baotou Mining obtained a new *Business Licence of Legal Entity* with registration number 150205000001071 from the Shiguai District Branch of the Baotou Administration for Industry and Commerce.

After the increase in registered capital, Baotou Mining is still 100% owned by the former Shenhua Group, with both the registered capital and paid-in capital amounting to RMB2,378.3 million.

(6) Company name change

In November 2017, Shenhua Group Corporation Limited and China Guodian Corporation merged and were restructured. After the restructuring, the company name was changed to China Energy Investment Corporation Co., Ltd.

In November 2020, the name of Shenhua Group Baotou Mining Co., Ltd. was changed to CHN Energy Baotou Mining Co., Ltd.

As of the valuation benchmark date, the equity structure of CHN Energy Baotou Mining Co., Ltd. is as follows:

No.	Name of shareholder	Registered capital (RMB'0,000)	Ownership percentage (%)	Paid-in capital (RMB'0,000)	Paid-in ratio (%)
1	China Energy Investment Corporation Co., Ltd.	237,830.00	100	237,830.00	100
Total		**237,830.00**	**100**	**237,830.00**	**100**

4. Ownership and management structure of the company

The predecessor of Baotou Mining was the Baotou Mining Bureau of Inner Mongolia Autonomous Region, which was established in 1958 as one of the 156 key construction projects under the national "First Five-Year Plan". In August 1998, it was transferred to the former Shenhua Group for management and later restructured into Shenhua Group Baotou Mining Co., Ltd. In 2011, part of the assets were listed, and CHN Energy Baotou Energy Co., Ltd. was established, with the remaining assets continuing as Baotou Mining. On 16 November 2020, Baotou Mining was renamed CHN Energy Baotou Mining Co., Ltd., forming a management structure where CHN Energy Baotou Energy Co., Ltd. manages Baotou Mining under the model of "one leadership team, two brands".

Baotou Mining has two branches, namely CHN Energy Baotou Mining Co., Ltd. Highway Branch and CHN Energy Baotou Mining Co., Ltd. Container Station, and two wholly-owned subsidiaries, namely Baotou Mining Bureau Construction and Installation Co., Ltd. and Baotou Shiguai Shantytown Relocation Construction Co., Ltd.

5. Main products or services of the appraised entity

As of the valuation benchmark date, the main business of the appraised entity, Baotou Mining, comes from its two branches: CHN Energy Baotou Mining Co., Ltd. Highway Branch and CHN Energy Baotou Mining Co., Ltd. Container Station. The main business of Highway Branch is highway operation, with its main income derived from tolls. Container Station, after years of operation, has ceased production for its self-operated section, and in recent years, its main business has been external leasing.

6. Key financial data for the last two years and the current period

The financial status of the appraised entity for the last two years and the current period is as follows (consolidated basis):

Unit: RMB'0,000

Item	31 December 2023	31 December 2024	31 July 2025
Total assets	545,143.72	497,931.73	457,519.03

Owner's equity attributable to the parent company	134,947.18	441,546.90	440,480.04

The financial status of the appraised entity for the last two years and the current period is as follows (parent company basis):

Unit: RMB'0,000

Item	31 December 2023	31 December 2024	31 July 2025
Total assets	153,892.47	421,709.66	457,477.04
Total liabilities	18,378.03	18,096.83	18,715.47
Owner's equity	135,514.44	403,612.83	438,761.57

The operational status of the appraised entity for the last two years and the current period is as follows (consolidated basis):

Unit: RMB'0,000

Item	2023	2024	January-July 2025
Operating income	16,772.20	13,249.64	9,252.12
Total profits	5,180.79	501,604.59	10,618.13

Net profit	5,124.04	374,662.27	-1,066.27
Owner's net profit attributable to the parent company	5,509.10	302,181.78	-1,066.85

The operational status of the appraised entity for the last two years and the current period as follows (parent company basis):

Unit: RMB'0,000

Item	2023	2024	January-July 2025
Operating income	14,653.89	13,046.47	9,252.12
Total profits	7,130.45	271,919.94	46,831.03
Net profit	7,130.45	263,770.01	35,148.74

The financial statements of the appraised entity as of the valuation benchmark dateand for the years 2024 and 2023 have been audited by Ernst & Young Hua Ming LLP , which expressed unqualified audit opinions.

7. Relationship between the client and the appraised entity

The clients for this appraisal are China Energy Investment Corporation Co., Ltd. and China Shenhua Energy Company Limited. The appraised entity, CHN Energy Baotou Mining Co., Ltd., is a wholly-owned subsidiary of one of the clients, China Energy Investment Corporation Co., Ltd. The other client is the prospective buyer of the appraised entity.

iv. Other users of the asset appraisal report as stipulated in the asset appraisal engagement contract

This asset appraisal report is only for use by the client, other users of the asset appraisal report as specified in the asset appraisal engagement contract, and users defined by national laws and regulations. It shall not be used or relied upon by any third party.

II. Appraisal Purpose

China Shenhua Energy Company Limited intends to issue shares and pay cash to acquire assets related to coal, pithead coal power, and other assets held by China Energy Investment Corporation Co., Ltd. To this end, the market value of the entire shareholders' equity held by China Energy Investment Corporation Co., Ltd. in CHN Energy Baotou Mining Co., Ltd. on the valuation benchmark dateis appraised, providing a value reference for the above economic activities.

On 1 August 2025, the China Energy Investment Corporation Co., Ltd. convened its 18th Chairman's Special Meeting of 2025. The meeting reviewed and approved the aforementioned matters, mandated the initiation of the appraisal, and produced the "Minutes of the Chairman's Special Meeting".

III. Subject Asset and Appraisal Scope

i. Subject asset

The subject asset is the entire shareholders' equity of CHN Energy Baotou Mining Co., Ltd.

ii. Appraisal scope

The appraisal scope includes all assets and liabilities of CHN Energy Baotou Mining Co., Ltd.

As of the valuation benchmark date, the assets within the appraisal scope include current assets, long-term equity investments, fixed assets, intangible assets, deferred tax assets, and other non-current assets. The parent company's total book value of assets was RMB4,574,770,400; liabilities include current liabilities and non-current liabilities, with a total book value of RMB187,154,700; the book value of net assets was RMB4,387,615,700. As of the valuation benchmark date, the appraisal scope is as follows:

Unit: RMB'0,000

Item		Book value
Current assets	1	157,790.64
Non-current assets	2	299,686.40
Of which: Long-term equity investments	3	2,500.00
Investment properties	4	0.00
Fixed assets	5	5,430.19
Construction in progress	6	0.00
Oil and gas assets	7	0.00
Intangible assets	8	42,782.46
Of which: Land use right	9	4,195.30
Other non-current assets	10	248,973.75
Total assets	**11**	**457,477.04**
Current liabilities	12	10,769.45
Non-current liabilities	13	7,946.02
Total liabilities	**14**	**18,715.47**
Net assets	**15**	**438,761.57**

As of the valuation benchmark date, on a consolidated basis, the total book value of assets was RMB4,575,190,300, the total book value of liabilities was RMB170,389,900, and the book value of owner's equity was RMB4,404,800,400, of which the owner's equity attributable to the parent company was RMB4,404,800,400.

The subject and scope of the engaged appraisal align with the subject asset and scope involved in the economic activities. As of the valuation benchmark date, the book values of assets and liabilities within the appraisal scope have been audited by Ernst & Young Hua Ming LLP , which expressed a standard unqualified opinion.

The main assets within the appraisal scope are as follows:

The main assets declared by the enterprise to be included in this appraisal include buildings and structures, equipment, long-term equity investments, etc. The types and characteristics of the main assets are as follows:

1. Buildings and structures

There are 18 buildings and structures in total, mainly including rest rooms, generator rooms, workwear rooms, weighbridge rooms with toilets, large garages, small garages, restaurants, activity centres, boiler and bathhouses, signal towers, integrated service office buildings for the container station, integrated service dormitory buildings for the container station, entrance room projects, garage coloured steel room projects, large garage projects, rest rooms, Tuke office buildings, office building gatehouses, generator rooms, equipment rooms, and weighbridge rooms. The primary uses are for production, living, or office purposes. The main structures include frame structures, brick-concrete, or colour steel. The buildings were mainly self-built, and the structures were constructed between 2009 and 2014. They are distributed in Salaqi Town of Tumed Right Banner and Uxin Banner. The total building area is 15,709.25 square metres. As of the valuation benchmark date, the garage coloured steel room project has no physical presence, while the other assets are in normal use, with daily management and use in

good condition. The Tuke office building, office building gatehouse, generator room, and equipment room have obtained property ownership certificates, with the registered owner being CHN Energy Baotou Mining Co., Ltd. Highway Branch. The remaining properties have not yet obtained property ownership certificates.

There are 81 structures in total, mainly including coal storage sheds, truck scale foundations, cargo platform walls, cargo platform surfaces, stacking area surfaces, concrete pavements, single-track turnouts, special turnouts, external network projects, embankments, box-type bridge embankments, reinforced concrete ties, hard landscaping projects for office and living areas, landscaping projects for station areas, windproof and dust suppression wall projects, drainage ditches, mixing station foundations, water supply and drainage pipelines, etc. The main structures are made of concrete, gravel, reinforced concrete, etc. The structures were primarily self-built between 2009 and 2018. As of the valuation benchmark date, two structures, the septic tanks (filled) and the truck scale renovation project, no longer have physical assets. The remaining structures are in normal use, with daily management and use in good condition.

2. Equipment assets

(1) Machinery and equipment

There are 185 items of machinery and equipment, including 10kV cables and prefabricated substations, inter-plant electrical equipment stations, spare cable stations, pole-mounted substations, low-voltage cable lines, solar boilers, signal equipment - interlocking devices, signal equipment - plant signals, signal equipment - video surveillance, conduction equipment - contact networks, high-voltage station lines, self-service toll machines for toll lanes, and the Tuke service area boiler-to-solar conversion project, which were purchased between 2008 and 2023. As of the valuation benchmark date, the assets are in normal use, with daily management and use in good condition.

(2) Vehicles

There are 25 vehicles, mainly including Nissan pickup trucks, box transport vehicles, sprinkler trucks, and heavy-duty flatbed trucks, which were purchased in 2009 and 2022. As of the valuation benchmark date, the vehicles are in normal use, with daily management and use in good condition.

(3) Electric equipment

There are 129 items of electric equipment, mainly including computers, air conditioners, office furniture, printers, and other office equipment, which were purchased between 2013 and 2025. As of the valuation benchmark date, the equipment is in normal use, with daily management and use in good condition.

3. Long-term equity investments

As of the valuation benchmark date, there are two long-term equity investments, both in wholly-owned subsidiaries. The details of the long-term equity investments are shown in the table below:

Unit: RMB'0,000

No.	Name of investee	Shareholding percentage (%)	Book value	Provision for impairment	Status
1	Baotou Mining Bureau Construction and Installation Co., Ltd.	100.00	2,500.00	0.00	In operation

2	Baotou Shiguai Shantytown Relocation Construction Co., Ltd.	100.00	0.00	0.00	In operation
Total long-term equity investments		/	**2,500.00**	**0.00**	/

The subscribed capital and paid-in capital of long-term equity investments are shown in the table below:

Unit: RMB'0,000

No.	Investee	Equity ratio	subscribed capital	Paid-in capital
1	Baotou Mining Bureau Construction and Installation Co., Ltd.	100.00%	2,500.00	2,500.00
2	Baotou Shiguai Shantytown Relocation Construction Co., Ltd.	100.00%	1000.00	0.00

iii. Intangible assets declared by the enterprise

The intangible assets included in the appraisal scope are: intangible assets - land use right, intangible assets - others and intangible assets - mining right. The types and characteristics of the intangible assets are as follows:

1. Intangible assets - land use right

The appraisal covers five land use rights, of which three have obtained a state-owned land use right certificate or a property ownership certificate. The details are as follows:

No.	Certificate holder	Land title certificate No.	Parcel name	Land use	Land purpose	Area (m^2)
1	Shenhua Group Baotou Mining Co., Ltd.	T.G.Y. (2013) Z. No. 039	Container station living area land	Transferred	Industrial land	95,990.00
2	Shenhua Group Baotou Mining Co., Ltd.	T.G.Y. (2010) Z. No. 017	Container station production area land	Transferred	Industrial land	331,823.00
3	CHN Energy Baotou Mining Co., Ltd., Highway Branch	M. 2023 W.SH.Q.B.D.CH.Q. No. 0010072	Tuke office building land	Transferred	Other commercial service land	10,210.00
4	None	None	Tuke service area land	Transferred	Other commercial service land	42,579.00
5	None	None	Over-limit monitoring station land	Transferred	Other commercial service land	26,628.00

As of the valuation benchmark date, the container station living area land, container station production area land, and Tuke office building land have obtained a state-owned land use right certificate or a property ownership certificate. The Tuke service area land and over-limit monitoring station land have not yet obtained a property ownership certificate but have signed land transfer contracts and paid the land transfer fees. For the land use rights that have not been certified, the appraised entity has issued a statement of ownership, confirming that the land use rights within the appraisal scope are owned by it, and there are no property disputes.

2. Intangible assets - others

The intangible assets - others declared by the company and included in the appraisal scope are highway toll rights and related assets.

The G338 Expressway from Lanjialiang to Galutu Town starts at the Lanjialiang exit of the Baotou - Maoming Expressway and ends at Nanmuluoliang in Uxin Banner. The expressway was constructed using the BOT model, with construction starting in July 2009 and completed in June 2012. In December 2015, the project passed the completion

inspection by the Ordos Municipal Transportation Bureau and was put into formal operation. The main line of the Lanjialiang - Galutu Expressway is 124.45 kilometres long, with two toll stations, one service area, and one overload control station. There are three connecting lines, totalling 17.65 kilometres. According to the *Reply of the People's Government of Inner Mongolia Autonomous Region on Approving the Establishment of Toll Stations on Provincial Expressway 313 from Lanjialiang to Galutu Town* (N.ZH.Z. [2012] No. 120), the establishment of toll stations at Taige Toll Station and Galutu Town Toll Station was approved. Tolls started after the project passed its completion inspection, and the toll period is 28 years.

3. Intangible assets - mining rights

The intangible assets - mining rights declared by the company include three exploration rights, which were acquired through transfer without consideration and are currently in the exploration and development stage. As of the valuation benchmark date, the exploration rights are held by Hulunbuir Dayan Surveying, Planning and Design Co., Ltd. and Inner Mongolia Dayan Mining Group Co., Ltd., and have not yet undergone ownership transfer registration.

iv. Off-balance-sheet assets declared by the enterprise

The company has no declared off-balance-sheet assets.

v. Relevant assets referenced from reports of other institutions

This asset appraisal report does not reference reports of other institutions.

IV. Value Type

Based on the appraisal purpose, market conditions, and the specific conditions of the subject asset, the value type of the subject asset is determined to be market value.

Market value refers to the estimated value of the subject asset in normal and fair transactions as of the valuation benchmark date, between a willing buyer and a willing seller, each acting rationally and without coercion.

V. valuation benchmark date

The valuation benchmark datefor this report is 31 July 2025.

The valuation benchmark dateis determined by the client. The selection of the valuation benchmark datemainly considers the realisation of economic activities and end-of-accounting-period factors. Asset appraisal provides a value reference for assets at a specific point in time. By choosing the end of the accounting period as the valuation benchmark date, it can comprehensively reflect the overall status of the subject assets. At the same time, adhering to the principles of ensuring the appraisal results effectively serve the appraisal purpose, accurately delineating the appraisal scope, conducting precise and efficient verification of assets, and rationally selecting the basis for appraisal, this date was selected as the valuation benchmark date.

VI. Appraisal Basis

i. Basis for economic activities

Minutes of the 18th Chairman's Special Meeting of the China Energy Investment Corporation Co., Ltd. in 2025 (1 August 2025).

ii. Legal and regulatory basis

1. *Asset Appraisal Law of the People's Republic of China* (adopted at the 21st Session of the Standing Committee of the 12th National People's Congress on 2 July 2016);

2. *Company Law of the People's Republic of China* (second amendment at the 7th Session of the Standing Committee of the 14th National People's Congress on 29 December 2023);

3. *Civil Code of the People's Republic of China* (adopted at the 3rd Session of the 13th National People's Congress on 28 May 2020);

4. *Securities Law of the People's Republic of China* (second amendment at the 15th Session of the Standing Committee of the 13th National People's Congress on 28 December 2019);

5. *Law of the People's Republic of China on the State-Owned Assets of Enterprises* (adopted at the 5th Session of the Standing Committee of the 11th National People's Congress on 28 October 2008, effective from 1 May 2009);

6. *Law of the People's Republic of China on Enterprise Income Tax* (second amendment at the 7th Session of the Standing Committee of the 13th National People's Congress on 29 December 2018);

7. *Law of the People's Republic of China on the Administration of Urban Real Estate* (third amendment at the 12th Session of the Standing Committee of the 13th National People's Congress on 26 August 2019);

8. *Land Administration Law of the People's Republic of China* (third amendment at the 12th Session of the Standing Committee of the 13th National People's Congress on 26 August 2019);

9. *Resource Tax Law of the People's Republic of China* (adopted at the 12th Session of the Standing Committee of the 13th National People's Congress on 26 August 2019);

10. *Energy Law of the People's Republic of China* (adopted at the 12th Session of the Standing Committee of the 14th National People's Congress on 8 November 2024, effective from 1 January 2025);

11. *Mineral Resources Law of the People's Republic of China* (amended at the 12th Session of the Standing Committee of the 14th National People's Congress on 8 November 2024);

12. *Implementation Regulations of the Law of the People's Republic of China on Enterprise Income Tax* (amended by State Council Order No. 714 on 23 April 2019);

13. *Interim Regulations on the Supervision and Administration of State-owned Assets of Enterprises* (amended by State Council Orders Nos. 378 and 709);

14. *Interim Regulations of the People's Republic of China on City and Town Land Use Tax* (fourth amendment by State Council Order No. 17 on 2 March 2019);

15. *Interim Regulations on Value-Added Tax of the People's Republic of China* (second amendment by State Council Order No. 134 on 19 November 2017);

16. *Regulations on the Assets Appraisal and Management of State-owned Assets* (amended by State Council Order No. 91 on 29 November 2020);

17. *Interim Measures for the Assessment and Management of Enterprises* (Order No. 12 of the SASAC of the State Council);

18. *Measures for Supervision and Administration of State-owned Assets of Enterprises* (No. 32 of the SASAC of the State Council and the Ministry of Finance);

19. *Notice on Strengthening the Matters Related to the Appraisal Management of the State-owned Assets* (G.Z.W.CH.Q. [2006] No. 274);

20. *Notice on Matters Related to the Review of Appraisal Report of State-owned Assets of Enterprises* (G.Z.CH.Q. [2009] No. 941);

21. *Guidelines for the Approval of Asset Appraisal Projects in Central Enterprises* (G.Z.F.CH.Q. [2010] No. 71);

VII. Appraisal Method

Income approach refers to various appraisal methods that capitalise or discount the expected income of the subject asset to determine its value. This appraisal for enterprise overall value adopts the discounted cash flow method under the income approach to indirectly determine the entire shareholders' equity value.

Market approach refers to various appraisal methods that compare the subject asset with comparable references, using the market price of the comparable references as a basis to determine the value of the subject asset. The two specific methods commonly used under the market approach are the listed company comparison method and the transaction case comparison method.

Asset-based approach refers to an appraisal method where the value of the subject asset is determined based on the balance sheet of the appraised entity or business on the valuation benchmark date, assessing the value of identifiable on-balance-sheet and off-balance-sheet assets and liabilities.

The methods selected for this appraisal are income approach and asset-based approach.

i. Reasons for Selecting Appraisal Methods

Reason for selecting the asset-based approach: As of the valuation benchmark date, the book value of the assets and liabilities within the appraisal scope has already been audited. Each asset and liability of the appraised entity can be identified. The identifiable assets and liabilities can each be individually assessed using an appropriate appraisal method, thus meeting the conditions for applying the asset-based approach.

Reason for selecting the income approach: The appraised entity has the foundation and conditions for ongoing operations, with standardised accounting practices, clear management, stable and defined business sources. The management has detailed plans

for the current operations and future development of the company. The future expected income and operational risks can be reasonably predicted, meeting the conditions for using the income approach for appraisal.

Reason for not selecting the market approach: The market approach relies on the existence of an active public market with sufficient market data and comparable transaction cases. The appraised entity is a non-listed company. Listed companies in the same industry differ significantly from the valued enterprise in terms of business structure, corporate scale, asset allocation and utilisation, operational stage, growth potential, operational risks, financial risks, and others. Furthermore, as of the valuation benchmark date, there were few transactions involving comparable companies in the same industry in China. Reliable operational and financial data from comparable transactions are difficult to obtain, making it impossible to calculate appropriate value ratios. Therefore, the market approach was not adopted for this appraisal.

Therefore, the income approach and the asset-based approach are used for the appraisal.

ii. Introduction to the Appraisal Methods

1. Income approach

The income approach used in this appraisal is the discounted cash flow (DCF) method to indirectly determine the entire shareholders' equity by evaluating the overall value of the enterprise. The overall value of the enterprise consists of the value of operating assets generated from normal business activities and the value of non-operational assets unrelated to normal business activities. For the determination of the value of operational assets, the free cash flow discount model is employed, which uses the future free cash flows of the enterprise for several years as a basis, discounted at an appropriate discount rate and then summed up. The calculation model is as follows:

Entire shareholders' equity value = Enterprise overall value - Interest-bearing debt value

(1) Enterprise Overall Value

The enterprise overall value refers to the sum of the entire shareholders' equity and the interest-bearing debt value. According to the asset allocation and usage situation of the appraised entity, the formula for calculating the enterprise overall value is as follows:

Enterprise overall value = Operating asset value + Surplus asset value + Non-operating asset value - Non-operating liability value + Long-term equity investment value

a) Operating asset value

Operational assets are those related to the appraised entity's production and business operations, which are involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The calculation formula for operating asset value is as follows:

$$P = \sum_{i=1}^{n} \frac{F_i}{(1+r)^i} + \frac{F_n \times (1+g)}{(r-g) \times (1+r)^n}$$

Wherein: P: The value of the enterprise's operating assets as of the valuation benchmark date;

F_i: The expected free cash flow of the enterprise in the i-th year after the valuation benchmark date;

F_n: Forecasted enterprise free cash flow for the end of the forecast period;

r: Discount rate (weighted average cost of capital, WACC);

n: Forecast period;

i: Year i during the forecast period;

g: Perpetuity growth rate.

Of which, the free cash flow of the enterprise is calculated as follows:

Enterprise free cash flow = Earnings before interest and taxes (EBIT) - Depreciation and amortisation - Capital expenditures - Increase in working capital

Of which, the discount rate (WACC) is calculated as follows:

$$WACC = K_e \times \frac{E}{E + D} + K_d \times (1 - t) \times \frac{D}{E + D}$$

Wherein: K_e: Cost of equity capital;

K_d: Cost of debt capital;

E: Market value of equity;

D: Market value of interest-bearing debt;

t: Income tax rate.

Of which, the cost of equity capital is calculated using the Capital Asset Pricing Model (CAPM). The calculation formula is as follows:

$$K_e = r_f + MRP \times \beta + r_c$$

Wherein: rf: Risk-free rate;

MRP: Market risk premium;

β: Systematic risk coefficient for equity;

rc: Company-specific risk adjustment coefficient.

b) Surplus asset value

Surplus assets are those that exceed the enterprise's operational needs as of the valuation benchmark date, and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The surplus assets of the appraised entity are entirely cash. The cost approach is used for the appraisal of surplus assets.

c) Non-operating asset and non-operating liability value

Non-operational assets and liabilities are those that are unrelated to the appraised entity's business operations and are not involved in the forecast of the enterprise free cash flow after the valuation benchmark date. The non-operating assets of the appraised entity include other receivables, intangible assets, and deferred tax assets. Non-operating liabilities include accounts payable, other payables, provisions for liabilities, long-term payables, etc. The cost approach is used for the appraisal of non-operating assets and liabilities.

d) Long-term equity investment value

Long-term equity investments refer to the external equity investments made by the enterprise as of the valuation benchmark date. The entire shareholders' equity of the

invested entity, as confirmed using an appropriate appraisal method, is multiplied by the equity holding percentage to determine the long-term equity investment value.

(2) Interest-Bearing Debt Value

Interest-bearing debt refers to liabilities that the appraised entity must pay interest on as of the valuation benchmark date. As of the valuation benchmark date, the appraised entity has no interest-bearing debt.

2. Asset-based approach

(1) Current assets

a) Cash, which consists of bank deposits, is verified through bank statements, bank confirmations, etc., with the appraised value determined using the verified amounts.

b) Accounts receivable, other receivables: The assessors investigated the sales credit policy, customer composition, creditworthiness, and historical accounts receivable recovery of the appraised entity. Following the principle of materiality, the appraisers conducted confirmations for some of the accounts receivable and reviewed relevant contracts. Based on the verification of accounts receivable, the evaluators determined the appraised value based on the amount that is likely to be collected for each item. For amounts believed to be fully recoverable, the total receivables are used to calculate the appraised value. For amounts that are likely to be unrecoverable, the evaluators estimated the amount based on historical data and on-site investigations, considering factors such as the amount, overdue time, reasons for non-payment, the debtor's financial status, creditworthiness, and operational management. The appraised value is then calculated after deducting the estimated risk loss. Simultaneously, the "Provision for Bad Debts" item on the balance sheet is considered as zero.

c) Prepayments, the appraisers conducted inquiries with the relevant personnel of the appraised entity to understand the reasons for the formation of the prepayments and the creditworthiness of the counterparties. Following the principle of materiality, the appraisers conducted confirmations for some of the prepayments and reviewed relevant contracts. Based on the verification of prepayments, the appraisers determined the value based on the goods or relevant rights that are likely to be collected for each item. If there is sufficient reason to believe that all corresponding goods or related rights can be recovered, the full amount of the prepayment is used to calculate the value. If it is likely that some goods or rights cannot be recovered, and when the amount that cannot be recovered is difficult to determine, the appraisers estimate this portion of the goods or rights that may not be recovered, based on historical data and on-site investigations, and adjust the value by deducting the risk of loss.

d) Other current assets: The assessors investigated the reasons for the formation of other current assets for the appraised entity and reviewed the relevant documentation, contracts, and account books. After verification, the book values of other current assets are used as the appraised values.

(2) Long-term equity investments

An overall appraisal was conducted for long-term equity investments in wholly-owned and controlling subsidiaries. The appraisers first appraise the entire shareholders' equity value of the investee, then multiply it by the shareholding percentage to determine the value of the part of the shareholder's equity. For long-term equity investments in wholly-owned and controlling subsidiaries, the appraisal methods used and the reasons for selecting such methods are as follows:

Jian'an Company's main business is contracting internal projects for Baotou Energy. Since August 2020, no new construction projects have been undertaken, and the income after 2020 mainly comes from the settlement of previous years' projects. The main task of the Shantytown Company is to undertake the relocation and renovation project of the Shiguai Shantytown in Baotou, which is a welfare project not aimed at profit, intended to house residents of the Shiguai Shantytown.

Based on the analysis of the operational situation of the investees, since the asset-based approach can reflect the replacement cost of the appraised enterprise as of the valuation benchmark date, and the relevant data for the assets and liabilities of the investees are easily obtainable, the conditions for applying the asset-based approach are met.

Since Jian'an Company has suspended operations and has not undertaken new projects for many years, it is impossible to predict its future income, costs, and other operating data, making the income approach unsuitable for its appraisal. Since the main business of Shantytown Company is a welfare project not aimed at profit, the income approach is not suitable for its appraisal.

Due to the difficulty in finding comparable listed companies or merger cases for the investees, the market approach is not suitable for the appraisal of the investees.

Therefore, the asset-based approach is used to evaluate the investees.

(3) Fixed assets and intangible assets - land use rights

The fixed assets and intangible assets - land use rights of the appraised entity, Baotou Mining, come from its two branches: CHN Energy Baotou Mining Co., Ltd. Highway Branch and CHN Energy Baotou Mining Co., Ltd. Container Station. Highway Branch's main business is highway operation, and its main income is from tolls, with a toll period of 28 years. Container Station has mainly been in an external leasing status in recent years, with no plans for self-use. The assets within the appraisal scope mainly consist of container station assets and highway assets.

Since the future income from the container station asset group and highway asset group can be reasonably predicted, and the discount rate corresponding to the income risk level can also be reasonably estimated. The income approach is used for the appraisal based on the object, appraisal purpose, and collected data.

◆ Income approach

The income approach is a method for assessing asset value by estimating the present value of expected future income from the appraised asset.

For the appraisal of the container station and road asset groups, the pre-tax cash flow discount model is used for the appraisal, and the specific formula is as follows:

$$P = \sum_{i=1}^{n} \frac{F_i}{(1 + r)^i}$$

Wherein: P: Present value of cash flow from the operating asset group;

F_i: Expected pre-tax cash flow for the year i after the valuation benchmark date;

r: Discount rate (here it is the WACCBT);

n: Duration of existing asset income;

The pre-tax cash flow for the asset group is calculated as follows:

Pre-tax cash flow = EBITDA - Capital expenditure - Increase in working capital + Asset recovery value

This appraisal uses a univariate solution to determine the pre-tax discount rate (WACCBT). The calculation formula is as follows:

$$\sum_{i=1}^{n}\frac{R_i}{(1+r)^i}+\frac{R_{n+1}}{r(1+r)^n}=\sum_{i=1}^{n}\frac{Ra_i}{(1+r_a)^i}+\frac{Ra_{n+1}}{r_a(1+r_a)^n}$$

Wherein: R_i: Expected income (pre-tax cash flow) for year i in the future;

Ra_i: Expected income (post-tax cash flow) for year i in the future;

n: Forecasted period for future income;

r: Pre-tax discount rate;

r_a: Post-tax discount rate.

(4) Intangible assets - others

Other intangible asset included in the appraisal scope is the highway toll rights. The highway toll rights are valued using the income approach. The income approach is a method for assessing asset value by estimating the present value of expected future income from the appraised asset. As a franchise right, the future income from the highway toll rights can be reasonably predicted, and the discount rate corresponding to the income risk level can also be reasonably estimated. The income approach is used for the appraisal based on the object, appraisal purpose, and collected data.

For the appraisal of the highway toll rights-related asset group, the pre-tax cash flow discount model is used for the appraisal, and the specific formula is as follows:

$$P=\sum_{i=1}^{n}\frac{F_i}{(1+r)^i}$$

Wherein: P: Present value of cash flow from the operating asset group;

F_i: Expected pre-tax cash flow for the year i after the valuation benchmark date;

r: Discount rate (here it is the WACCBT);

n: Duration of existing asset income;

The pre-tax cash flow for the asset group is calculated as follows:

Pre-tax cash flow = EBITDA - Capital expenditure - Increase in working capital + Asset recovery value

This appraisal uses a univariate solution to determine the pre-tax discount rate (WACCBT). The calculation formula is as follows:

$$\sum_{i=1}^{n}\frac{R_i}{(1+r)^i}+\frac{R_{n+1}}{r(1+r)^n}=\sum_{i=1}^{n}\frac{Ra_i}{(1+r_a)^i}+\frac{Ra_{n+1}}{r_a(1+r_a)^n}$$

Wherein: R_i: Expected income (pre-tax cash flow) for year i in the future;

Ra_i: Expected income (post-tax cash flow) for year i in the future;

n: Forecasted period for future income;

r: Pre-tax discount rate;

r_a: Post-tax discount rate.

(5) Intangible assets – mining rights

For exploration rights, due to the inability to obtain the necessary geological survey, preliminary design, mine area general plan, formal feasibility report, and other documents required for mining rights appraisal, it is not possible to model and calculate the market value of the exploration rights as of the valuation benchmark dateaccording to mining rights appraisal standards and theories. Therefore, the related costs for exploration rights are retained based on the audited book value.

(6) Deferred tax assets

Deferred tax assets represent income tax assets arising from deductible temporary differences recognised by the appraised entity. The assessors investigated the reasons for the deferred tax asset, reviewed the relevant accounting regulations for recognising deferred tax assets, and verified the accounting vouchers for the deferred tax assets recognised as of the valuation benchmark date. Deferred tax assets are valued at the verified book value.

(7) Other non-current assets

The appraisers investigated the reasons for the occurrence of other non-current assets and reviewed relevant materials. Other non-current assets are valued at the verified book value.

(8) Liabilities

As of the valuation benchmark date, liabilities include accounts payable, employee compensation payable, taxes payable, other payables, and non-current liabilities. The appraisers first checked the consistency between the subsidiary accounts and the general ledger, and examined the detailed items. They also sampled relevant accounting vouchers and documents to confirm the accuracy of the debt book values. For current and non-current liabilities, the appraised values are determined based on the actual liabilities borne by the company as verified.

VIII. Implementation Process and Information of the Appraisal Procedure

The appraisers carried out the appraisal of the assets involved in the subject asset from 9 August 2025 to 16 December 2025. The main appraisal procedures and process are as follows:

i. Acceptance of engagement

On 9 August 2025, the client and us reached an agreement on the basic matters of the appraisal, including the appraisal purpose, the subject asset, the appraisal scope, the valuation benchmark date, and the rights and obligations of each party. We then negotiated with the client and developed the corresponding appraisal plan.

ii. Preliminary preparation

After accepting the engagement, the project team, based on the appraisal purpose, the characteristics of the subject asset, and the time plan, formulated a specific appraisal work plan and formed the appraisal team. Simultaneously, the team drafted a list of required materials and appraisal forms based on the actual needs of the project.

iii. On-site investigation

The appraisers conducted the necessary asset and liability verification of the subject asset from 9 August 2025, to 10 September 2025, and conducted the necessary investigation into the operating and management conditions of the appraised entity.

1. Asset Verification

(1) Guiding the appraised entity to complete forms and prepare materials to be provided to the appraisal institution

The appraisers guided the financial and asset management personnel of the appraised entity to carefully and accurately complete the asset information based on the "Assets Appraisal Detail Sheet" and its requirements, the material checklist, etc., after their own inventory. They also collected and prepared property ownership certificates and documents reflecting performance, condition, economic, and technical indicators of the assets.

(2) Preliminary review and improvement of the Assets Appraisal Detail Sheet

The evaluators reviewed the relevant documents, understood the detailed status of the assets included in the appraisal scope, and then carefully reviewed the "Assets Appraisal Detail Sheet" to check for incomplete or incorrect entries, unclear asset items, and other issues. Based on experience and the gathered information, the evaluators ensured the accuracy of the sheet and provided feedback to the appraised entity to improve them.

(3) On-site inspection

Based on the types, quantities, and distribution of assets included in the appraisal scope, the appraisers, with the cooperation of relevant personnel from the appraised entity, verified the physical assets within the appraisal scope, and understood the status and use of the company's physical assets.

(4) Supplementing, modifying, and improving the Assets Appraisal Detail Sheet

Based on the results of the on-site inspection and after thorough communication with the relevant personnel of the appraised entity, the evaluators further refined the "Assets Appraisal Detail Sheet" to ensure consistency between the accounts, sheet, and actual assets.

(5) Verification of ownership certificate documents

The appraisers reviewed the property ownership certificates for assets included in the appraisal scope, and in cases where the ownership information was incomplete or unclear, they requested the company to verify or provide relevant ownership statements.

2. Due Diligence

To fully understand the operational and management status of the appraised entity and the risks it faces, the appraisers conducted necessary due diligence. The main contents of the due diligence were as follows:

(1) The history of the appraised entity, its major shareholders and their shareholding ratios, and the necessary ownership and management structure;

(2) The asset, financial, and operational management status of the appraised entity;

(3) The operating plans, development strategies, and financial projections of the appraised entity;

(4) Previous appraisals and transaction records of the subject asset and the appraised entity;

(5) Macro and regional economic factors affecting the production and operation of the appraised entity;

(6) The development status and prospects of the industry in which the appraised entity operates;

(7) Other relevant information.

iv. Data collection

The appraisers collected appraisal materials according to the specifics of the appraisal project, including data independently obtained from markets and other channels, data acquired from the client and other relevant parties, and data from government departments, professional institutions, and other relevant bodies. They then analysed, summarised, and organised the collected materials to form the basis for estimation.

v. Preliminary estimation

Based on the specific conditions of the various assets, the evaluators selected the appropriate formulas and parametres according to the chosen appraisal methods, performing analysis, calculations, and judgments to form preliminary appraisal conclusions. The project leader summarised the preliminary conclusions for each asset appraisal and drafted the preliminary asset appraisal report.

vi. Internal review

According to our appraisal business process management regulations, the project leader submitted the preliminary asset appraisal report for internal review after completion. After the internal review, the evaluators communicated with the client or other relevant parties, as agreed, on the contents of the asset appraisal report, ensuring that the independence of the appraisal conclusions was maintained. After completing the above appraisal procedures, the formal asset appraisal report was issued and submitted.

IX. Appraisal Assumptions

The assumptions for the analysis and estimates in this asset appraisal report are as follows:

i. It is assumed that all appraisal targets are in the process of being traded, and the appraisers simulate the market based on the transaction conditions of the appraised assets;

ii. It is assumed that for assets traded in the market, or assets to be traded in the market, both parties in the transaction have equal standing and ample opportunity and time to access market information. The transactions are voluntary and rational, and the parties can make rational judgments about the asset's function, purpose, and transaction price;

iii. It is assumed that the appraised assets will continue to be used for their current purposes and in their current manner;

iv. It is assumed that there will be no significant changes to the relevant national laws, regulations, and policies or the macroeconomic situation, and that the political, economic, and social environment in the regions of the parties involved in the transaction will not change significantly;

v. Given the actual status of the assets on the valuation benchmark date, it is assumed that the company will continue operations;

vi. It is assumed that there will be no significant changes in the interest rates, exchange rates, tax bases, tax rates, policy-based collection fees, or other related factors affecting the appraised entity after the valuation benchmark date;

vii. It is assumed that the management of the appraised entity after the valuation benchmark datewill remain responsible and stable, with the ability to perform their duties;

viii. Unless otherwise stated, it is assumed that the company fully complies with all relevant laws and regulations;

ix. It is assumed that after the valuation benchmark date, there will be no force majeure or unforeseen factors that cause significant adverse effects on the appraised entity;

x. It is assumed that after the valuation benchmark date, the accounting policies used by the appraised entity and those used to prepare this asset appraisal report will remain consistent in significant aspects;

xi. It is assumed that after the valuation benchmark date, the scope and methods of the appraised entity's operations will remain the same, based on the current management practices and level;

xii. It is assumed that after the valuation benchmark date, the appraised entity's cash inflows and cash outflows will be at an average rate;

xiii. It is assumed that after the valuation benchmark date, the appraised entity's products or services will maintain their current market competitiveness;

xiv. It is assumed that the highway toll collection model during the forecast period will remain unchanged.

The conclusions of this asset appraisal report are valid under the above assumptions as of the valuation benchmark date. If there are significant changes in these assumptions, the signing asset appraisers and this appraisal agency will not bear responsibility for deriving different appraisal conclusions due to changes in assumptions.

X. Appraisal Conclusion

i. Income Approach Appraisal Results

As of the valuation benchmark date, the total book value of the parent company's assets for CHN Energy Baotou Mining Co., Ltd. was RMB4,574,770,400; the total book value of liabilities was RMB187,154,700; and the book value of net assets was RMB4,387,615,700. After applying the income approach, the appraised value of the entire shareholders' equity was RMB4,542,612,800, with an increase of RMB154,997,100, representing an appreciation rate of 3.53%.

As of the valuation benchmark date, on a consolidated basis, the total book value of assets for CHN Energy Baotou Mining Co., Ltd. was RMB4,575,190,300; the total book value of liabilities was RMB170,389,900; the book value of owner's equity was RMB4,404,800,400, of which the owner's equity attributable to the parent company was RMB4,404,800,400. After applying the income approach, the appraised value of the entire shareholders' equity was RMB4,542,612,800, with an increase of RMB137,812,400, representing an appreciation rate of 3.13%.

ii. Asset-based Approach Appraisal Results

As of the valuation benchmark date, the total book value of CHN Energy Baotou Mining Co., Ltd. on the parent company basis was RMB4,574,770,400, with an appraised value of RMB4,707,831,900, an increase of RMB133,061,500, representing an appreciation rate of 2.91%. The total book value of liabilities was RMB187,154,700, with an appraised value of RMB171,519,700, a decrease of RMB15,635,000, representing a depreciation rate of 8.35%. The book value of net assets was RMB4,387,615,700, with an appraised value of RMB4,536,312,200, an increase of RMB148,696,500, representing an appreciation rate of 3.39%.

The detailed results of the asset-based approach are shown in the following summary table:

Summary of Appraisal Results from Asset-based Approach

valuation benchmark date: 31 July 2025 Currency Unit: RMB'0,000

Item		Book value	Appraised value	Increase or decrease	Appreciation rate %
		A	B	C = B - A	D = C/A × 100%
Current assets	1	157,790.64	157,790.64	0.00	0.00
Non-current assets	2	299,686.40	312,992.55	13,306.15	4.44
Of which: Long-term equity investments	3	2,500.00	4,217.63	1,717.63	68.71
Investment properties	4	0.00	0.00	0.00	/
Fixed assets	5	5,430.19	6,573.19	1,143.00	21.05
Construction in progress	6	0.00	0.00	0.00	/
Oil and gas assets	7	0.00	0.00	0.00	/

Including: Land use right	9	4,195.30	0.00	-4,195.30	-100.00
Other non-current assets	10	248,973.75	248,973.75	0.00	0.00
Total assets	**11**	**457,477.04**	**470,783.19**	**13,306.15**	**2.91**
Current liabilities	12	10,769.45	9,771.95	-997.50	-9.26
Non-current liabilities	13	7,946.02	7,380.02	-566.00	-7.12
Total liabilities	**14**	**18,715.47**	**17,151.97**	**-1,563.50**	**-8.35**
Net assets	**15**	**438,761.57**	**453,631.22**	**14,869.65**	**3.39**

As of the valuation benchmark date, on a consolidated basis, the total book value of assets for CHN Energy Baotou Mining Co., Ltd. was RMB4,575,190,300; the total book value of liabilities was RMB170,389,900; the book value of owner's equity was RMB4,404,800,400, of which the owner's equity attributable to the parent company was RMB4,404,800,400. After applying the asset-based approach, the value of the entire shareholders' equity was RMB4,536,312,200, with an increase of RMB131,511,800, representing an appreciation rate of 2.99%.

iii. Appraisal Conclusion

The value of the entire shareholders' equity based on the income approach is RMB4,542,612,800, while the value based on the asset-based approach is RMB4,536,312,200. The difference between the two methods is RMB6,300,600, representing a variance of 0.14%.

There is a certain discrepancy between the appraisal results of the income approach and the asset-based approach. The main reason for the discrepancy is the different perspectives considered by the two methods. The asset-based approach appraises the value of the appraised entity from the perspective of asset replacement as of the valuation benchmark date, with core assets appraised using the income approach. The

income approach capitalises or discounts the expected income of the appraised enterprise to determine the value of the subject asset. In this appraisal, since the core assets under the asset-based approach are also appraised using the income approach, the final results of the income approach and the asset-based approach differ slightly. Considering that the income approach appraises the value of the company based on its future profitability, it more intuitively reflects the company's value. Therefore, the appraisal result based on the income approach is adopted.

Based on the above analysis, the appraisal conclusion in this asset appraisal report adopts the result of the income approach, i.e., the value of the entire shareholders' equity in CHN Energy Baotou Mining Co., Ltd. is RMB4,542,612,800.

Due to objective limitations, this asset appraisal report does not take into account any premium or discount that may arise due to control or lack of control, nor does it consider the impact of liquidity on the value of the subject asset.

XI. Special Notes

The following matters were identified during the appraisal process that may affect the appraisal conclusion but cannot be assessed or estimated by the professional expertise and ability of the evaluators:

i. In this asset appraisal report, if there is a discrepancy between the total values and the sum of the individual items in any tables or written statements (expressed in RMB10,000), it is due to rounding.

ii. This appraisal refers to the Audit Report numbered Ernst & Young Hua Ming (2025) Zhuan Zi No. 80028111_A01 issued by Ernst & Young Hua Ming LLP on 16 December 2025. We obtained the audit report through legal channels, and after analysing and reviewing the contents of the audit report in accordance with the relevant asset appraisal standards, we have prudently used the relevant contents of the audit report. The audited financial data in the audit report forms the basis for the asset appraisal. If this financial data changes, the conclusions of this appraisal may become invalid. According to Article 12 of the *Asset Appraisal Practice Standards – Enterprise Value*: Asset appraisers analyse and assess the use of financial statements based on the chosen appraisal methods. However, it is not the responsibility of the asset appraisers to offer professional opinions on whether the financial statements fairly reflect the financial status, operating results, or cash flow of the appraised entity as of the valuation benchmark date. We only bear responsibility for improper referencing that may arise in the use of the audit report during the appraisal process.

iii. According to the *Asset Appraisal Law* and the *Guidance on Legal Ownership of Subject Asset*, the client and relevant parties commissioning the asset appraisal are responsible for the authenticity, completeness, and legality of the ownership certificates, financial accounting information, and other materials they provide. The purpose of conducting asset appraisal is to estimate the value of the subject asset and provide professional opinions. Confirming the legal ownership or providing opinions on the legal status of the assets goes beyond the scope of professional asset appraisal. Asset appraisers do not provide guarantees on the legal ownership of the subject asset.

iv. Explanation regarding ownership defects

1. A total of 18 buildings and structures are included in the appraisal scope. As of the valuation benchmark date, the Tuke office building, office gatehouse, generator room, and equipment room have obtained property ownership certificates, while the

remaining properties have not yet obtained ownership certificates. The total area of the properties without certificates was 12,509.56 square metres. The company confirms that the above properties are actually owned by it, with no ownership disputes.

2. A total of 25 vehicles declared by the company are included in the appraisal scope. Except for six vehicles used within the factory that do not require vehicle registration certificates, the remaining vehicles have obtained vehicle registration certificates as of the valuation benchmark date. The registered right holder for the Hongqi Sedan, Plate No. Meng B930BD does not match the company name, and the name change procedure has not yet been completed. The company confirms that the above vehicles are actually owned by it, with no ownership disputes.

3. A total of five land use rights are included in the appraisal scope. As of the valuation benchmark date, the Tuke service area land and over-limit monitoring station land have not yet obtained property ownership certificates, but the company has signed land transfer contracts and paid the land transfer fees. The company confirms that the above land is actually owned by it, with no ownership disputes.

4. In November 2020, the name of Shenhua Group Baotou Mining Co., Ltd. was changed to CHN Energy Baotou Mining Co., Ltd. As of the valuation benchmark date, the state-owned land use right certificates for the container station residential area and container station production area are still under the name of Shenhua Group Baotou Mining Co., Ltd., and the name change of the registered owner has not yet been completed. The company confirms that the above land is actually owned by it, with no ownership disputes.

5. The intangible assets - mining rights declared by the company consists of three exploration rights. As of the valuation benchmark date, the registered right holders of the exploration rights are Hulunbuir Dayan Surveying, Planning and Design Co., Ltd. and Inner Mongolia Dayan Mining Group Co., Ltd., and the name change procedure for the registered right holders has not yet been completed. The company confirms that the above exploration rights are actually owned by it, with no ownership disputes.

This appraisal did not consider the impact of the aforementioned matters on the appraised value.

v. Explanation regarding assets in an abnormal use state

Some assets declared within the appraisal scope are in a non-physical or pending scrap state, as detailed below:

The appraised entity, Baotou Mining, has declared one non-physical building with a book value of RMB800, and two intangible structures with a book value of RMB28,800. For these non-physical assets, the appraisal value is 0.

Baotou Mining’s subsidiary, Shantytown Company, declared two pieces of electric equipment pending disposal with a book value of RMB0. As these assets no longer have any use value as of the valuation benchmark date, the appraisal value is RMB0.

vi. Baotou Mining's subsidiary, Baotou Shiguai Shantytown Relocation Construction Co., Ltd., has a registered capital of RMB10 million. As of the valuation benchmark date, no capital has been paid in. This appraisal is based on the audited net asset value and does not consider the impact of the aforementioned matters on the appraised value.

vii. As of the valuation benchmark date, the appraised entity has the following legal and economic unresolved matters:

No.	Plaintiff/ Petitioner	Defendant/ Respondent	Accepting court/ Arbitration body	Case cause	Summary of claims	Current legal/arbitration outcome	Current legal stage
1	CHN Energy Baotou Mining Co., Ltd.	Uxin Banner State-owned Asset Investment and Management Co., Ltd.	People's Court of Dongcheng District, Beijing	Loan dispute lawsuit	Request the court to order the defendant to repay the loan principal and interest	The first-instance court ruled that the defendant should pay overdue interest of RMB1,675,917.8 to the plaintiff and rejected other claims. The second-instance court ruled to dismiss the appeal and upheld the original judgment.	Second instance

This appraisal does not consider the impact of the above matters on the appraisal.

viii. In the event of significant matters after the valuation benchmark date, such as exchange rate fluctuations, major national policy adjustments, or substantial changes in the entity's asset ownership, quantity, or value, the report users shall not directly rely on the appraisal conclusion and shall check whether reasonable adjustments have been made to the valuation benchmark dateor the appraisal results.

Users of the asset appraisal report should pay attention to the impact of the above special matters on the appraisal conclusion.

XII. Statement of the Limitations on the Use of the Asset Appraisal Report

i. Scope of use of the asset appraisal report

1. The users of the asset appraisal report are the client and those specified by national laws and administrative regulations.

2. The appraisal conclusion in the asset appraisal report is only valid for the economic activities related to this project.

3. The validity period of the conclusion in the asset appraisal report is one year from the valuation benchmark date. The client or other users of the asset appraisal report should use the report within the stated validity period of the appraisal conclusions.

4. Without the written consent of the client, the asset appraisal agency and its professionals shall not provide or disclose the contents of the asset appraisal report to any third parties, except as required by laws or administrative regulations.

5. Without the consent of the asset appraisal agency, the contents of the asset appraisal report shall not be copied, quoted, or disclosed in public media, except as required by laws, administrative regulations, or as agreed by the relevant parties.

ii. If the client or other users of the asset appraisal report do not use the asset appraisal report in accordance with the laws, administrative regulations, and the use scope outlined in the asset appraisal report, the asset appraisal agency and its professionals shall not bear any responsibility.

iii. Except for the client, other users of the asset appraisal report as specified in the asset appraisal engagement contract, and those specified by laws or administrative regulations, no other institution or individual may become a user of the asset appraisal report. This asset appraisal report contains several appendices and appraisal detail forms,

all of which are an integral part of this report. However, they are only valid when used together with the main body of the report.

iv. The asset appraisal agency and asset appraisers shall not bear any obligations or responsibilities to users of this report who are not authorised, such as those who obtain the report through presentation or other means, outside the scope of its intended use. They will not provide further consultancy based on this report, nor will they provide testimony or attend hearings in court or other legal proceedings, and they reserve the right to hold non-authorised users liable for any losses incurred as a result.

v. Users of the asset appraisal report shall correctly understand and use the appraisal conclusion. The appraisal conclusion is not equivalent to the realisable price of the subject asset and shall not be considered a guarantee of the realisable price.

vi. An asset appraisal report refers to a professional report issued by the asset appraisal agency, based on the law, administrative regulations, and asset appraisal standard requirements, after carrying out the necessary appraisal procedures as entrusted. It reflects the value of the subject asset for a specific purpose on the valuation benchmark date. This report must be signed by the appraisers responsible for the appraisal and stamped with the asset appraisal agency's official seal. It can only be formally used after being filed with the state-owned asset supervision and management authority or the enterprise that provided funding.

Asset Appraisal Report

Regarding China Shenhua Energy Company Limited's Proposed Acquisition of 100% Equity in CHN Energy Shipping Company Held by China Energy Investment Corporation Co., Ltd. by Issuing Shares and Paying Cash

ZLPBZ [2025] No. 5358

China United Assets Appraisal Group Co., Ltd.
December 16, 2025

STATEMENT

I. This Asset Appraisal Report is prepared in accordance with the Basic Standards for Asset Appraisal issued by the Ministry of Finance of the People's Republic of China, and the Practice Standards and Professional Ethics Standards for Asset Appraisal issued by the China Appraisal Society.

II. The Clients or other users of the Asset Appraisal Report shall use the Report in accordance with applicable laws and regulations, and within the scope of use specified herein. Should the Client or other users of the Asset Appraisal Report fails to do so, the Asset Appraisal Institution and its professional asset appraisers shall not be liable for any consequences arising therefrom.

The Asset Appraisal Report is exclusively used by the Client, other designated users as stipulated in the asset appraisal engagement contract, and users mandated by applicable laws and regulations. In addition, no other institution or individual is authorized to be a user of the Asset Appraisal Report.

The Asset Appraisal Institution and its asset appraisers advise users of this Asset Appraisal Report to accurately comprehend and use the appraisal conclusion. The appraisal conclusion should not be deemed as the realizable price of the appraisal object, nor should it be interpreted as a guarantee of the appraisal object's realizable price.

III. The truthfulness, legality, and completeness of the information provided by the Clients and other relevant parties are prerequisites for the appraisal conclusion to be valid. The list of assets and liabilities included in the appraisal scope, as well as the prospective financial information, ownership certificates, and other data required for the appraisal, have been declared and confirmed by the Clients and the Appraised Entity through official seals or other means.

IV. The Asset Appraisal Institution and its asset appraisers have no existing or prospective interests in the Appraisal Object presented in the Asset Appraisal Report; and have no existing or prospective interests in the related parties, and are not biased towards them.

V. The asset appraisers have conducted field surveys of the Appraisal Object and the assets involved in the Asset Appraisal Report; has given due attention to the legal ownership status of the Appraisal Object and its related assets, inspected the legal ownership documentation for the Appraisal Object and its related assets, truthfully disclosed any issues identified, and requested the Clients and other relevant parties to optimize the property rights to satisfy the requirements for issuing the Asset Appraisal Report.

VI. The analyses, judgments, and results presented in the Asset Appraisal Report issued by the Asset Appraisal Institution are subject to the assumptions and limiting conditions stipulated therein. Users of the Asset Appraisal Report should thoroughly consider the assumptions, limiting conditions, instructions on special matters, and their impacts on the appraisal conclusion as specified within the Report.

VII. The Asset Appraisal Institution and its asset appraisers comply with applicable laws, regulations, and asset appraisal standards, adhere to the principles of independence, objectivity, and impartiality, and are legally responsible for the Asset Appraisal Report issued.

CHN Energy Shipping Company

Asset Appraisal Report

Regarding China Shenhua Energy Company Limited's Proposed Acquisition of 100% Equity in CHN Energy Shipping Company Held by China Energy Investment Corporation Co., Ltd. by Issuing Shares and Paying Cash

ZLPBZ [2025] No. 5358

ABSTRACT

China United Assets Appraisal Group Co., Ltd. was engaged by China Shenhua Energy Company Limited and China Energy Investment Corporation Co., Ltd. to assess the market value of the total Shareholders' Equity of CHN Energy Shipping Company as of the Appraisal Reference Date. This appraisal pertains to the economic activity involving China Shenhua Energy Company Limited's proposed acquisition of 100% equity in CHN Energy Shipping Company held by China Energy Investment Corporation Co., Ltd. by issuing shares and paying cash.

The Appraisal Object is the total Shareholders' Equity of CHN Energy Shipping Company. The appraisal scope encompasses all assets and related liabilities of CHN Energy Shipping Company, including current assets, non-current assets, and their corresponding liabilities.

The Appraisal Reference Date is July 31, 2025.

The value type for this appraisal is market value.

This appraisal is performed based on the assumptions of continued use and an open market. Considering the specific circumstances of the Appraisal Object and various influencing factors, both the asset-based approach and income approach were employed for the overall appraisal of CHN Energy Shipping Company, followed by verification and comparison. Taking into account the applicability conditions of the appraisal methods and the achievement of the appraisal goals, the appraisal result derived from the asset-based approach was chosen as the final Appraisal Conclusion.

Based on the judgments on future development trends and business plans by the Clients and the management, and following appraisal procedures including inventory verification, field survey, market research and inquiry, and assessment and estimation, the Appraisal Conclusion for the total Shareholders' Equity of CHN Energy Shipping Company as of the Appraisal Reference Date of July 31, 2025, is described below:

The total Shareholders' Equity had a book value of RMB179,621.84 ten thousand, an appraised value of RMB214,179.65 ten thousand, an appraisal appreciation of RMB34,557.81 ten thousand, and an appreciation rate of 19.24%.

When utilizing this Appraisal Conclusion, report users are specifically reminded to pay attention to the special matters and significant subsequent events stipulated within the report.

According to applicable laws and regulations on asset appraisal, the Asset Appraisal Report involving statutory appraisal business should be used by the Clients after fulfilling relevant asset appraisal supervision and administration procedures. The Appraisal Conclusion is valid for one year, specifically from July 31, 2025 to July 30, 2026.

The above contents are extracted from the main body of the Asset Appraisal Report. To obtain more details of this appraisal engagement

and correctly comprehend the Appraisal Conclusion, please carefully read the main body of the Asset Appraisal Report.

CHN Energy Shipping Company Asset Appraisal Report

Regarding China Shenhua Energy Company Limited's Proposed Acquisition of 100% Equity in CHN Energy Shipping Company Held by China Energy Investment Corporation Co., Ltd. by Issuing Shares and Paying Cash

ZLPBZ [2025] No. 5358

Esteemed China Energy Investment Corporation Co., Ltd. and China Shenhua Energy Company Limited,

Upon the acceptance of your commission, by adhering to applicable laws, regulations, and asset appraisal standards, and upholding the principles of independence, objectivity, and impartiality, China United Assets Appraisal Group Co., Ltd. utilized both the income approach and market approach to appraise the market value of the total Shareholders' Equity of CHN Energy Shipping Company as of the Appraisal Reference Date of July 31, 2025 in accordance with the requisite appraisal procedures. This appraisal pertains to the economic activity involving China Shenhua Energy Company Limited's proposed acquisition of 100% equity in CHN Energy Shipping Company held by China Energy Investment Corporation Co., Ltd. by issuing shares and paying cash. The Asset Appraisal Report is hereby presented as follows:

I. Clients, Appraised Entity, and Other Users of the Asset Appraisal

The Clients for this asset appraisal are China Energy Investment Corporation Co., Ltd. (hereinafter referred to as "CHN Energy") and China Shenhua Energy Company Limited (hereinafter referred to as "China Shenhua"); and the Appraised Entity is CHN Energy Shipping Company (hereinafter referred to as "CHN Energy Shipping").

A. Overview of Client 1

Enterprise Name: China Energy Investment Corporation Co., Ltd. (CHN Energy)

Enterprise Nature: Limited liability company (state-owned sole proprietorship)

Registered Address: No. 22 West Binhe Road, Andingmen, Dongcheng District, Beijing

Legal Representative: Zou Lei

Registered Capital: RMB13,209,466.11498 ten thousand

Date of Establishment: October 23, 1995

Business Term: From October 23, 1995 to indefinite term

Unified Social Credit Code: 91110000100018267J

Business Scope: Operate state-owned assets within the scope authorized by the State Council; Engage in investment and management across industries including coal and other resource products, coal-to-oil, coal chemicals, electricity, heating, ports, transportation, finance, domestic and foreign trade and logistics, real estate, high-tech, and information consulting; Plan, organize, coordinate, and manage the production and operating activities of enterprises affiliated with the Group in the aforementioned industry sectors; Sell chemical materials and chemical products (excluding dangerous chemicals), textiles, building materials, machinery, electronic equipment, and

office equipment. (Market entities shall independently select business projects and conduct operating activities in accordance with the law; For projects subject to approval in accordance with the law, operating activities shall be carried out according to the approved scope after obtaining approval from the relevant authorities; Engagement in operating activities prohibited or restricted by national and municipal industrial policies is banned.)

B. Overview of Client 2

Enterprise Name: China Shenhua Energy Company Limited

Enterprise Nature: Other joint-stock limited company (listed)

Registered Address: No. 22 West Binhe Road, Andingmen, Dongcheng District, Beijing

Legal Representative: Lv Zhiren

Registered Capital: RMB1,986,851.9955 ten thousand

Date of Establishment: November 8, 2004

Business Term: From November 8, 2004 to indefinite term

Unified Social Credit Code: 91110000710933024J

Business Scope: Coal mining (validity period is subject to relevant permits for each coal mine); wholesale operations of coal; project investment; coal washing and processing; development and operation of mineral products; internal transportation by proprietary railways; power generation; provision of supporting services for coal, railway, and power operations; vessel repair; energy and environmental technology development and utilization, technology transfer, technical consultation, technical services; import and export business; sales of chemical products, chemical materials, building materials, and mechanical equipment (excluding dangerous chemicals); property management. (Market entities shall independently select business projects and conduct operating activities in accordance with the law; For projects subject to approval in accordance with the law, operating activities

shall be carried out according to the approved scope after obtaining approval from the relevant authorities; Engagement in operating activities prohibited or restricted by national and municipal industrial policies is banned.)

C. Overview of the Appraised Entity

1. Basic Enterprise Information

Enterprise Name: CHN Energy Shipping Company.

Enterprise Nature: Limited liability company (sole proprietorship of legal person)

Registered Address: Fl.9, No. 6 Caihefang Road, Haidian District, Beijing City

Legal Representative: Zhang Zhiwen

Registered Capital: RMB100,000 ten thousand

Date of Establishment: March 22, 2023

Operating Period: From March 22, 2023 to indefinite term

Unified Social Credit Code: 91110000MACCJ2DF4A

Business Scope: Licensed projects: Waterway general cargo transport; Inter-provincial general cargo vessel transport, intra-provincial vessel transport; Ship repair. (For projects requiring approval by law, operating activities start only after obtaining such approval from relevant authorities. Specific business projects shall be subject to the approval documents or licenses issued by the relevant departments.) General projects: Engaging in international container vessel and general cargo vessel transport; Domestic shipping agency; International shipping agency; Domestic cargo transportation agency; International cargo transportation agency; Vessel sales; Vessel leasing; Information consulting services (excluding licensed information consulting services); Sales of petroleum products (excluding hazardous chemicals). (Business activities are conducted independently in accordance with the law, based on the business license, except for projects

requiring approval by law.) (Operating activities are prohibited for projects restricted or forbidden by national and local industrial policies.)

2. History and Shareholder Structure

China Energy Shipping Company was established on March 22, 2023, with full capital contribution from China Energy Investment Corporation Co., Ltd. Its registered capital is RMB100,000 ten thousand, which was fully paid in on April 27, 2023.

As of the Appraisal Reference Date, the paid-in capital of China Energy Shipping Company reaches RMB1,524,144,400 ten thousand, which is inconsistent with the registered capital of RMB100,000 ten thousand stated in the Articles of Association. The main reasons include:

First, CHN Energy made a cash capital injection of RMB500,000,000.00 into CHN Energy Shipping Company on March 24, 2025, for the initial operations of a newly established subsidiary. Second, pursuant to the CHN Energy Shipping Company's third board of directors' resolution in 2024 and approved by CHN Energy, it was agreed that CHN Energy Shipping Company would convert RMB2,414.44 ten thousand of its 2023 distributable profits into capital. Regarding the aforementioned matters, CHN Energy Shipping Company's Business Compliance Department is currently submitting an application to CHN Energy for changes to its Articles of Association.

Furthermore, with CHN Energy's approval, it has been agreed that CHN Energy Shipping Company would convert RMB13,416.26 ten thousand of its 2024 distributable profits into capital. Currently, CHN Energy Shipping Company is awaiting the completion of board deliberation procedures before proceeding with relevant accounting treatments.

As of the Appraisal Reference Date, the shareholder names, capital contribution amounts, and capital contribution ratios are described as follows:

Table 1 Capital Contribution Amount and Capital Contribution Ratio

Shareholder Name	Subscribed Capital Contribution Amount (RMBin ten thousand)	Subscribed Shareholding Ratio (%)	Paid-in Capital Contribution Amount (RMB in ten thousand)	Paid-in Shareholding Ratio (%)
China Energy Investment Corporation Co., Ltd.	100,000	100	100,000	100
Total	100,000	100	100,000	100

3. Assets, Financial Status, and Operating Status

(1) Consolidated Financial Statement Status

As of the Appraisal Reference Date of July 31, 2025, the consolidated financial statements reported total assets of RMB533,926.10 ten thousand, liabilities of RMB306,166.48 ten thousand, owners' equity of RMB227,759.62 ten thousand, and owners' equity attributable to the parent company of RMB181,882.58 ten thousand. For the period January-July 2025, the consolidated financial statements reported operating revenue of RMB285,754.77 ten thousand, net profit of RMB18,178.45 ten thousand, and net profit attributable to the parent company of RMB18,219.92 ten thousand.

(2) Financial Position from Parent Company Statements

As of the Appraisal Reference Date of July 31, 2025, the parent company statements reported total assets of RMB335,174.26 ten thousand, total liabilities of RMB155,552.42 ten thousand, and net assets of RMB179,621.84 ten thousand. For the period January-July 2025, the parent company statements reported operating revenue of RMB120,956.03 ten thousand, and net profit of RMB10,940.03 ten thousand.

The assets and financial position for recent years are presented in the following tables:

4. Core Business Overview

China Energy Shipping Company is a shipping asset management and

operation platform established by CHN Energy following the optimization of its shipping industry management and control at the end of 2022. Established on March 22, 2023, with a registered capital of RMB1,000,000,000.00, it holds qualifications for domestic waterway transport, waterway transport agency, and international non-vessel operating common carrier transport. Its primary business encompasses coastal and along-river shipping, concurrently engaging in international ocean shipping. China Energy Shipping Company mainly provides guaranteed transportation services for the CHN Energy's internal power plants and coal operating branches in coastal areas and the middle and lower reaches of the Yangtze River, while also offering maritime and Yangtze River middle and lower reach transportation services to external Shenhua coal users.

5. Major Accounting Policies Implemented by CHN Energy Shipping Company

The Enterprise Accounting Standards - Basic Standards (CZBL No. 33, revised in July 2014) promulgated by the Ministry of Finance of the People's Republic of China on February 15, 2006, and 41 specific standards, including Enterprise Accounting Standards No. 1 - Inventory.

D. Overview of Long-term Equity Investments

A total of 4 long-term equity investments are included in this appraisal. As of the Appraisal Reference Date, their original book Value reached RMB1,367,955,927.90, with no impairment provision made. Companies within the consolidation scope include wholly-owned subsidiaries and controlled subsidiaries; associate companies are not within the consolidation scope. Specific details are presented below:

Total	20,000,000	100	0	100

As of the Appraisal Reference Date of July 31, 2025, the statements reported total assets of RMB683.77 ten thousand, total liabilities of RMB0.00 ten thousand, and net assets of RMB683.77 ten thousand. For the period January-July 2025, the statements reported operating revenue of RMB895.27 ten thousand, and net profit of RMB5.27 ten thousand.

E. Relationship between the Clients and the Appraised Entity

The Clients for this asset appraisal are China Energy Investment

Corporation Co., Ltd. and China Shenhua Energy Company Limited, with China Energy Investment Corporation Co., Ltd. being the controlling shareholder of China Shenhua Energy Company Limited. The Client, China Energy Investment Corporation Co., Ltd., is the shareholder of the Appraised Entity, CHN Energy Shipping Company, holding a 100% shareholding ratio. The Client, China Shenhua Energy Company Limited, intends to acquire 100% equity in CHN Energy Shipping Company held by China Energy Investment Corporation Co., Ltd.

F. Other Users of the Asset Appraisal Report

The Asset Appraisal Engagement Contract does not stipulate other report users.

Except as otherwise provided by applicable laws and regulations, no institution or individual shall become a user of the Asset Appraisal Report by virtue of obtaining it prior to the confirmation of the Appraisal Institution and the Clients.

II. Purpose of Appraisal

According to the 18th Chairman's Special Meeting Minutes of 2025 (August 8, 2025) of China Energy Investment Corporation Co., Ltd., China Shenhua Energy Company Limited intends to acquire coal, pit-mouth coal-fired power generation, and other related assets held by China Energy Investment Corporation Co., Ltd. by issuing shares and paying cash.

The purpose of this asset appraisal is to reflect the market value of the total Shareholders' Equity of CHN Energy Shipping Company as of the Appraisal Reference Date, thereby providing a value reference for the aforementioned economic activity.

III. Appraisal Object and Appraisal Scope

The Appraisal Object is the value of the total Shareholders' Equity of CHN Energy Shipping Company. The Appraisal Scope includes all assets and related Liabilities of CHN Energy Shipping Company. As of the Appraisal Reference Date, the audited consolidated financial statements reported total assets of RMB533,926.10 ten thousand, liabilities of RMB306,166.48 ten thousand, owners' equity of RMB227,759.62 ten thousand, and owners' equity attributable to the parent company of RMB181,882.58 ten thousand. The audited parent company statements reported total assets of RMB335,174.26 ten thousand, liabilities of RMB155,552.42 ten thousand, and net assets of RMB179,621.84 ten thousand. Specifically, current assets totaled RMB85,751.91 ten thousand, and non-current assets amounted to RMB249,422.35 ten thousand; Current liabilities reached RMB48,195.42 ten thousand, and non-current liabilities totaled RMB107,357.00 ten thousand.

The aforementioned data on assets and liabilities are extracted from the Balance Sheet of CHN Energy Shipping Company as of July 31, 2025, audited by Ernst & Young Hua Ming LLP. The appraisal is performed based on the audited financial data of Shenhua Coal Sales Co., Ltd.

Appraisal object and appraisal scope as commissioned are consistent with those involved in the economic activity.

A. Overview of Principal Assets

As of the Appraisal Reference Date, the book value of physical assets belonging to the parent company of CHN Energy Shipping Company reached RMB97,867.41 ten thousand, representing 29.20% of total assets. These physical assets primarily comprise inventories, vessels, and electronic devices.

5. Inventories

Inventories primarily include fuel oil and diesel, which are currently in normal operation.

6. Vessels

The vessels, primarily comprising 6 bulk carriers such as CHN Energy 603, were acquired in 2024. As of the Appraisal Reference Date, these vessels are in normal use.

7. Electronic Devices

A total of 116 electronic devices, primarily computers and printers, were purchased between 2023 and 2024. These devices are mainly located within CHN Energy Shipping's office areas. As of the Appraisal Reference Date, these electronic devices are in good physical condition and in normal use.

B. Intangible Assets Whether Recorded or Unrecorded in the Books, as Declared by the Appraised Entity

As of the Appraisal Reference Date, the intangible assets recorded in the books and declared by the entity being appraised primarily comprise 3 customized software. The unrecorded intangible assets consist of 7 patents. Details are provided below.

Table 12 Intangible Assets - Other Bookkeeping Status

No.	Content or Name	Date of Acquisition	Original Book Value	Book Value	Usage Status
1	Intelligent Prediction and Vessel Operation Command System for Power Plant Inventory	December 10, 2024	4,398,000.00	4,104,800.00	In normal use
2	Shipping Company Business Plan and Financial Synergy Digital Intelligent Control System Construction Project	December 5, 2024	4,545,280.00	4,242,261.36	In normal use
3	Supporting Software System for Vessel-mounted CCTV Monitoring System	July 31, 2025	401,435.97	398,090.67	In normal use

Table 13 Overview of Patent Rights

No.	Applicant	Patent Category	Patent Name	Patent No./ Application No.	Patent Application Date
1	CHN Energy Shipping Company	Invention Publication	A Method, Device, Equipment, Medium, and Program Product for Determining Ship Inclination	CN202511033697.7	2025/7/25
2	CHN Energy Shipping Company	Invention Publication	Onboard Tugboat Status Monitoring System, Method, Device, Equipment, Medium, and Product	CN202411891325.3	2024/12/20
3	CHN Energy Shipping Company	Invention Publication	A Method and Device for Sea State Recognition	CN202411762473.5	2024/12/3
4	CHN Energy Shipping Company	Invention Publication	A Method and Device for Measuring Shore-Based Ship Attitude	CN202411762472.0	2024/12/3
5	CHN Energy Shipping Company	Invention Publication	A Method and Device for Ship Collision Early Warning	CN202411762065.X	2024/12/3
6	CHN Energy Shipping Company	Invention Publication	A Method and Device for Evaluating the Performance Capability of Ship Smoke Alarms	CN202311746268.5	2023/12/18
7	CHN Energy Shipping Company	Invention Publication	Ship Facility Operation and Maintenance Method, Device, Equipment, and Storage Medium	CN202311678892.6	2023/12/8

C. Types and Quantities of Off-balance Sheet Assets Declared by the Appraised Entity

As of the Appraisal Reference Date, there were no off-balance sheet assets within the scope declared for appraisal by the Appraised Entity.

D. Types, Quantities, and Book Values of Assets Involved in Conclusions from Reports Issued by Other Institutions

The book values of assets and liabilities on the Appraisal Reference Date in this Asset Appraisal Report are determined based on the audit results from the standard unqualified Audit Report of CHN Energy Shipping Company (Ernst & Young Hua Ming (2025) Zhuan Zi No. 80028128_A01) issued by Ernst & Young Hua Ming LLP on December 16, 2025. This appraisal is performed based on the Appraised Entity's audited financial statements.

No other institutional report contents were cited apart from this.

IV. Value Type

In accordance with the purpose of this appraisal, the value type for this

appraisal is determined to be market value.

Market value refers to the estimated value of the Appraisal Object in a normal, arm's-length transaction on the Appraisal Reference Date, assuming buyers and sellers acting rationally and voluntarily and without any compulsion.

V. Appraisal Reference Date

The Appraisal Reference Date for this asset appraisal is July 31, 2025.

The Appraisal Reference Date is determined by the Clients after a comprehensive consideration of factors such as the Appraised Entity's asset scale, workload, estimated time required, and compliance requirements.

VI. Appraisal Basis

The appraisal basis followed for this asset appraisal primarily includes the economic activity basis, legal and regulatory basis, appraisal standards basis, asset ownership basis, as well as pricing basis and other references used during assessment and estimation, specifically as follows:

A. Economic Activity Basis

The 18th Chairman's Special Meeting Minutes of 2025 (August 8, 2025) of China Energy Investment Corporation Co., Ltd.

B. Legal and Regulatory Basis

1. Asset Appraisal Law of the People's Republic of China (Promulgated at the Twenty-first Session of the Standing Committee of the Twelfth National People's Congress on July 2, 2016);

2. Company Law of the People's Republic of China (Second Revision, adopted at the Seventh Session of the Standing Committee of the Fourteenth National People's Congress on December 29, 2023);

3. Civil Code of the People's Republic of China (Adopted at the Third

Session of the Standing Committee of the Thirteenth National People's Congress on May 28, 2020);

4. Enterprise Income Tax Law of the People's Republic of China (Amended and adopted at the Seventh Session of the Standing Committee of the Thirteenth National People's Congress on December 29, 2018);

5. Regulations on the Implementation of the Enterprise Income Tax Law of the People's Republic of China (First revision of the Decision of the State Council on Amending Certain Administrative Regulations promulgated by Decree of the State Council No. 714 of the People's Republic of China on April 23, 2019);

6. Provisional Regulations of the People's Republic of China on Value-added Tax (Decree of the State Council No. 691);

7. Implementation Rules for the Provisional Regulations of the People's Republic of China on Value-added Tax (Decree of the Ministry of Finance and the State Taxation Administration No. 50);

8. Stamp Tax Law of the People's Republic of China (Adopted at the Third Session of the Standing Committee of the Fourteenth National People's Congress on June 29, 2023);

9. Opinions of the Ministry of Finance of the People's Republic of China on Reforming the Administrative Management Method of State-owned Asset Appraisal and Strengthening the Supervision and Administration of Asset Appraisal (GBF [2001] No. 102);

10. Notice on Issues Concerning Strengthening the Administration of State-owned Enterprise Asset Appraisal (GZWCQ [2006] No. 274);

11. Notice on Matters Concerning the Review and Approval of State-owned Enterprise Asset Appraisal Reports (GZCQ [2009] No. 941);

12. Administrative Measures for State-owned Asset Appraisal (Decree of the State Council No. 91);

13. Implementation Rules for the Administrative Measures for State-owned Asset Appraisal (GZBF [1992] No. 36);

14. Provisional Regulations on the Supervision and Administration of State-owned Enterprise Assets (Decree of the State Council No. 378, revised by Decree of the State Council No. 588);

15. Administrative Measures for the Supervision and Administration of State-owned Enterprise Property Rights Transactions (Decree of the State-owned Assets Supervision and Administration Commission No. 32);

16. Provisional Measures for the Administration of State-owned Enterprise Asset Appraisal (Decree of the State-owned Assets Supervision and Administration Commission of the State Council No. 12);

17. Guiding Opinions on the Filing Work for State-owned Enterprise Asset Appraisal Projects (GZFCQ [2013] No. 64);

18. Law of the People's Republic of China on State-owned Enterprise Assets (Adopted at the Fifth Session of the Standing Committee of the Eleventh National People's Congress on October 28, 2008);

19. Administrative Measures for the Financial Supervision and Administration of the Asset Appraisal Industry (Decree of the Ministry of Finance of the People's Republic of China No. 86);

20. Notice on Matters Concerning the Agreement Transfer of State-owned Property Rights of Central Enterprises (GZFCQ [2010] No. 11);

21. Notice on Optimizing the Asset Appraisal Management of Central Enterprises (GZFCQG [2024] No. 8);

22. Administrative Measures for the Major Asset Reorganization of Listed Companies (CSRC Order No. 166, revised on March 20, 2020);

23. Implementation Rules for Non-public Issuance of Shares by Listed Companies (CSRC Order No. 73, revised on February 14, 2020);

24. Operational Rules for Transactions of State-owned Enterprise Assets

(GZFCQG [2025] No. 17);

25. Other laws, regulations, and rules related to the appraisal work.

C. Basis of Appraisal Standards

1. Asset Appraisal Standards - Basic Standards (CQ [2017] No. 43);

2. Professional Ethics Standards for Asset Appraisal (CAS [2017] No. 30);

3. Professional Standards for Asset Appraisal - Asset Appraisal Procedures (CAS [2018] No. 36);

4. Professional Standards for Asset Appraisal - Asset Appraisal Report (CAS [2018] No. 35);

5. Professional Standards for Asset Appraisal - Asset Appraisal Engagement Contract (CAS [2017] No. 33);

6. Professional Standards for Asset Appraisal - Asset Appraisal Files (CAS [2018] No. 37);

7. Professional Standards for Asset Appraisal - Utilizing Expert Work and Related Reports (CAS [2017] No. 35);

8. Professional Standards for Asset Appraisal - Enterprise Value (CAS [2018] No. 38);

9. Professional Standards for Asset Appraisal - Appraisal Methods (CAS [2019] No. 35);

10. Guidelines for Business Quality Control of Asset Appraisal Institution (CAS [2017] No. 46);

11. Guiding Opinions on Asset Appraisal Value Types (CAS [2017] No. 47);

12. Guiding Opinions on Legal Ownership of Asset Appraisal Object (CAS [2017] No. 48);

13. Guidelines for State-owned Enterprise Asset Appraisal Reports (CAS [2017] No. 42).

D. Basis for Asset Ownership

1. Vessel Ownership Registration Certificate and related property right declarations;

2. Contracts or vouchers for the acquisition of significant assets;

3. Other reference documents.

E. Pricing Basis

1. Notice of the Ministry of Finance and the State Taxation Administration on Comprehensively Launching the Pilot Program for Replacing Business Tax with Value-added Tax (CS [2016] No. 36);

2. Announcement of the Ministry of Finance, the State Taxation Administration, and the General Administration of Customs on Policies Regarding Deepening Value-added Tax Reform (Ministry of Finance, State Taxation Administration, General Administration of Customs Announcement 2019 No. 39);

3. Announcement on the Loan Prime Rate (LPR) Appraisal Reference Date Authorized by the National Interbank Funding Center;

4. 2025 Mechanical and Electrical Products Price Information Inquiry System;

5. Price information database of China United Assets Appraisal Group Co., Ltd.;

6. Future earnings forecast data provided by the Clients and other relevant parties in accordance with the law;

7. Other reference documents.

F. Other Reference Documents

1. Audit Report of CHN Energy Shipping Company (Ernst & Young Hua Ming (2025) Zhuan Zi No. 80028128_A01) issued by Ernst & Young Hua Ming LLP;

2. Enterprise Accounting Standards - Basic Standards (Ministry of Finance Order No. 33);

3. Enterprise Accounting Standards - Application Guide (CK [2006] No.18);

4. Enterprise Accounting Standard No. 1 - Inventories and 40 other specific standards (CK [2006] No. 3);

5. Handbook of Common Methods and Parameters for Asset Appraisal (China Machine Press 2011 Edition);

6. iFind Information Financial Terminal;

7. Investment Appraisal (written by Damodaran [US], translated by Lin Qian [Canada], Tsinghua University Press);

9. Asset Appraisal Standards - Terminology 2020;

10. Expert Guidance for Asset Appraisal No. 8 - Verification and Validation in Asset Appraisal (CAS [2019] No. 39);

11. Expert Guidance for Asset Appraisal No. 12 - Measurement of Discount Rate in Enterprise Value Assessment Using the Income Approach (CAS [2020] No. 38);

12. Relevant information on property rights transactions from the official websites of the China Securities Regulatory Commission, Shanghai Stock Exchange, Shenzhen Stock Exchange, and other related bodies;

13. Other reference documents.

VII. Appraisal Methodology

A. Introduction to Appraisal Methods

In accordance with the Professional Standards for Asset Appraisal -

Enterprise Value (CAS [2018] No. 38) and Professional Standards for Asset Appraisal - Asset Appraisal Methods (CAS [2019] No. 35), when engaging in enterprise value appraisal, the applicability of three basic methods, namely, income approach, market approach, and asset-based approach, shall be analyzed, and the appropriate appraisal method is selected based on factors such as the purpose of appraisal, appraisal object, value type, conditions for the application of appraisal methods, and the quality and quantity of data underlying the application of appraisal methods.

The income approach in enterprise value appraisal involves determining the value of the appraisal object by capitalizing or discounting expected returns. Asset appraisal professionals should appropriately assess the applicability of the income approach by considering the enterprise nature, asset scale, historical operating performance, predictability of future earnings, and the sufficiency of the appraisal data obtained.

The market approach in enterprise value appraisal involves determining the value of the appraisal object by comparing it with comparable listed companies or comparable transaction cases. Asset appraisal professionals should consider the applicability of the market approach based on the sufficiency and reliability of the comparable enterprises' operating and financial data obtained, and the number of comparable enterprises available for collection.

The asset-based approach in enterprise value appraisal involves determining the value of the appraisal object by appraising the value of identifiable on-balance sheet and off-balance sheet assets and liabilities, based on the Balance Sheet of the Appraised Entity on the Appraisal Reference Date.

B. Selection of Appraisal Method

The Purpose of Appraisal can be described as China Shenhua Energy Company Limited's proposed acquisition of 100% equity in CHN Energy

Shipping Company held by China Energy Investment Corporation Co., Ltd. by issuing shares and paying cash.

The asset-based approach reflects the enterprise value from a construction perspective, providing a basis for enterprise operation, management, and assessment after the economic activity is realized. Therefore, the asset-based approach is selected for this appraisal.

The Appraised Entity possesses the foundation and conditions for going concern, and its future earnings and risks can be predicted and quantified. Therefore, the income approach can be adopted for this appraisal.

Before and after the Appraisal Reference Date, as recent transaction cases involving enterprises of comparable scale are unavailable, and there are few comparable listed companies with similar scale and business structure in the market, the market approach was not selected for this appraisal.

In summary, it is determined to adopt the asset-based approach and income approach for this appraisal.

C. Asset-based Approach

The asset-based approach involves determining the value of the appraisal object by appraising the value of identifiable assets and liabilities, both on and off the Balance Sheet of the Appraised Entity or operating unit as of the Appraisal Reference Date. Specifically, it involves calculating the enterprise value by summing the appraised value of various constituent assets and subtracting the appraised value of the liabilities.

The appraisal methods for assets and liabilities are presented below:

1. Current Assets

(1) Monetary assets

Monetary assets primarily consist of bank deposits.

Confirmation letters were sent for bank deposit accounts to verify the actual existence of bank deposits, and to check for any unrecorded bank

deposits, examining the authenticity of outstanding items in the Bank Reconciliation Statement, and reviewing inflows after the Appraisal Reference Date. For monetary assets denominated in RMB, the Appraised Value is determined based on the verified book value. For foreign currency-based monetary assets, the Appraised Value is determined by multiplying the verified original currency amount by the exchange rate on the Appraisal Reference Date.

(2) Accounts Receivable

For the appraisal of accounts receivable, the appraisers should verify the bookkeeping records, and sample a portion of original vouchers, and other relevant documents. They should confirm the authenticity of transactions, the age of accounts, business contents and business amounts, and performed confirmations to ensure consistent verification results across the ledger, statements, and detailed list. Based on the verification of accounts receivable, the appraisers should engage in specific analyses on the amount, duration, and reasons for outstanding debts, collection status, debtor's funds, creditworthiness, and operational management status by leveraging historical data and current investigative findings. The appraisal risk loss is then estimated based on the specific circumstances of the Appraised Entity.

For receivables and other amounts from/to related parties where there is sufficient reason to believe they are fully recoverable, the probability of appraisal risk loss is determined to be 0%;

For individually significant accounts receivable where the Appraised Entity and the debtor have agreed upon a repayment plan, the appraisal risk loss is determined by the difference when the present value of future estimated cash flows is lower than the book value. For individually non-significant accounts receivable where the Appraised Entity and the debtor have not determined a repayment plan, the appraisal risk loss is estimated by

referencing the method used in corporate accounting for calculating provision for bad debts.

The Appraised Value of accounts receivable is determined by deducting the appraisal risk loss from the verified book value of accounts receivable.

(3) Prepayments

For the appraisal of prepayments, the appraisers should verify bookkeeping records, examine original vouchers and relevant contracts, confirm the authenticity of transactions, the age of accounts, business contents, and business amounts. Confirmations should be obtained to prove that there is no anomaly. Based on the accurate verification of prepayments, and utilizing historical data and insights gathered from field surveys, the appraisers should specifically analyze the amounts, outstanding periods and reasons, collection status of payments, and the financial, credit, and operational management status of the debtors.

Upon verification, the amounts in the prepayment accounts, statements, and invoices are consistent. No instances were found where suppliers were bankrupt, dissolved, or unable to provide goods on time as per contract. Based on the accurate verification of prepayments, the appraisers determined the Appraised Value using the verified book value.

(4) Inventories

Inventories include solely raw materials. No provision for inventory impairment has been made. The specific appraisal methods and procedures for inventories are described below:

1) Raw materials

Raw materials primarily consist of fuel oil, diesel, and other supplies necessary for vessels. An on-site investigation revealed that the enterprise utilizes actual cost accounting for its raw materials. Based on the foregoing, an analysis of the book value was performed. For certain raw materials

purchased close to the Appraisal Reference Date, which are in normal circulation and show no signs of backlog or damage, this appraisal included a sample review of their purchase contracts, invoices, and other supporting documents. A comparative analysis with their book value revealed no significant discrepancies, indicating that the book value largely reflects the current market value of these raw materials. Consequently, for this portion of raw materials, the appraised value was determined based on the verified book value. The appraisal value of No. 0 diesel shall be determined based on the prevailing market price on the Appraisal Reference Date.

(5) Contract Assets

For the appraisal of contract assets, the appraisers verified bookkeeping records, inspected original vouchers and relevant contracts, and confirmed the authenticity of transaction details, aging of accounts, scope of business, and amounts. No anomalies were found. Based on the verified accuracy of advance payments, and utilizing historical data and current investigative findings, the appraisers specifically analyzed the amounts, debt period and reasons, collection status of payments, and the debtor's capital, credit, and business management status. The appraised value was determined based on the verified book value.

(6) Other current assets

For the appraisal of other current assets, the asset appraisers verified the consistency of the subsidiary ledger with the general ledger and balance sheet balances, checked for consistency with the detailed list of assets to be appraised, reviewed accounting records including transaction amounts, occurrence dates, and business content, and spot-checked original booking vouchers, relevant payment vouchers, and contracts to ascertain the authenticity and completeness of their accounting content. The asset appraisers ascertained the types of taxes, tax rates, payment systems, and

other tax policies and expense conditions that the Appraised Entity was obligated to bear as of the Appraisal Reference Date. Based on verified accuracy, the Appraised Value was determined using the verified book value.

2. Long-term Equity Investments

For long-term equity investments, we first gathered evidence and verified the reasons for their formation, their book value, and actual status. We also reviewed investment agreements, resolutions of shareholders' meetings, articles of association, and relevant accounting records to ascertain the authenticity and completeness of these long-term investments.

For wholly-owned subsidiaries and controlled subsidiaries with a shareholding ratio of 50% or more, the overall assets of the invested entity at the Appraisal Reference Date were subjected to appraisal. The Appraised Value was then determined by multiplying the Appraised Value of the invested entity's net assets at the Appraisal Reference Date by the Appraised Entity's shareholding ratio:

Appraised Value of Long-term Equity Investments = Appraised Value of Net Assets after Overall Appraisal of the Invested Entity × Shareholding Ratio

Specifically, if there is a discrepancy between paid-in capital and subscribed capital, then:

Appraised Value of Long-term Equity Investments = (Appraised Value of Shareholders' Equity of the Invested Entity + Unpaid Subscribed Capital Contribution Amount) × Subscribed Capital Contribution Ratio of the Shareholder - Unpaid Subscribed Capital Contribution Amount of the Shareholder

For associate companies, a specific analysis of the invested enterprise is performed. As per the Articles of Association, the Appraised Entity being

appraised does not participate in the operational affairs of the associate companies. Therefore, the appraised value for this assessment is determined by multiplying the net assets, as presented in the accounting statements on the Appraisal Reference Date, by the equity ratio.

In determining the appraised value of long-term equity investments, the appraisers did not account for premiums or discounts resulting from factors such as controlling interest and minority equity, nor did they consider the impact of equity liquidity on the appraisal results.

3. Fixed Assets - Electronic Devices

Based on the purpose of this appraisal, and in accordance with the going concern principle and market prices, coupled with the characteristics of the assets under appraisal and the collected data, the market approach is adopted for vessels, while the cost approach is employed for electronic devices.

(1) Market Approach

For vessel assets, the market approach entails collecting transaction data from the second-hand vessel market. Several second-hand vessels are selected as comparative instances, matching the type, deadweight tonnage, service life, and transaction time of the vessels under appraisal. Through a comparative analysis between the vessels under appraisal and each comparative instance, adjustment or correction coefficients are determined for deadweight tonnage, service life, transaction time, transaction conditions, shipbuilding country, and other relevant factors. Subsequently, the corrected prices of these comparative instances are arithmetically averaged to ascertain the appraised value of the vessels under appraisal.

The calculation formula is expressed as follows:

$$P = \sum(Pi \times Ai \times Bi \times Ci \times Di \times Ei \times Fi) \ /n$$

P - Appraised value of the vessel under appraisal;

Pi - Transaction price of the i-th comparative instance;

Ai - Adjustment coefficient for the deadweight tonnage of the i-th comparative instance;

Bi - Adjustment coefficient for the transaction time of the i-th comparative instance;

Ci - Adjustment coefficient for the transaction conditions of the i-th comparative instance;

Di - Adjustment coefficient for the sale age of the i-th comparative instance;

Ei - Adjustment coefficient for the shipbuilding country of the i-th comparative instance;

Fi - Adjustment coefficient for other factors of the i-th comparative instance;

n - Number of Comparative Instances

Determination of comparative instances and prices for vessel market transactions:

Through market research, vessels identical or similar to the subject of appraisal are selected as comparative instances from the current trading market. When selecting comparative instances, primary consideration is given to fundamental performance elements such as the type and deadweight tonnage of the trading vessels. Concurrently, the vessel's build date, country of build, transaction date, and comparable vessels that have already been transacted are also considered.

Determination of adjustment coefficient:

Vessel Type: For the purpose of this appraisal, vessel type refers to the tonnage-based classification of bulk carriers, primarily including: Handymax, Supramax, Panamax, Kamsarmax, Capesize, etc. Comparative instances must be selected from cases of the same or similar type as the vessels under appraisal.

Deadweight tonnage adjustment coefficient: The deadweight tonnage adjustment coefficient indicates the influence of a vessel's cargo capacity on its transaction price. Based on statistical data concerning the price levels of used vessels in international and domestic shipping markets, the unit ton price for similar types of vessels within a specific deadweight tonnage range and comparable age is fundamentally consistent. For this appraisal, the deadweight tonnage adjustment coefficient is determined based on the deadweight tonnage ratio.

Transaction time adjustment coefficient: The transaction time adjustment coefficient is determined by the price index ratio. This appraisal determines the transaction time adjustment coefficient using the Shanghai Shipping Price Index (SPI).

Transaction condition adjustment coefficient: The transaction condition adjustment coefficient is determined by considering the impact of factors such as transaction volume, transaction motivation, delivery location, payment method, the presence of any additional transaction terms, and the vessel's actual condition at the time of transaction on the vessel's price.

Useful life adjustment coefficient: The scrapping period for Chinese bulk carriers is 33 years, and the useful life impacts vessel prices. For this appraisal, the adjustment coefficient for useful life is determined based on the ratio of the difference in useful life to the scrapping period.

Shipbuilding country adjustment coefficient: The varying technological advancement and construction costs across shipbuilding countries affect the useful life of vessels, consequently influencing the transaction price of used vessels. The shipbuilding country adjustment coefficient is determined through an analysis of international shipping market conditions and vessel prices in various countries.

Other factors adjustment coefficient: Other factors primarily include

differences in the vessel's navigable area, technical condition, and main equipment. The technical condition of the vessel includes whether it has sustained marine damage, its routine maintenance, and upkeep, among other factors.

Determination of the appraised value:

Each adjustment coefficient is determined based on the elements of the comparative instances, and the adjusted price is calculated. After analyzing and confirming the reasonableness of the adjusted price, the final appraised value is determined by its arithmetic mean.

(1) Replacement Cost Approach

1) Full replacement cost for electronic devices

Based on local market information and recent market price data from Zhongguancun Online and PConline, the price of electronic equipment on the valuation date is determined. Generally, manufacturers or agents provide complimentary transportation, installation, and debugging services, with the full replacement cost determined by its tax-exclusive purchase price:

Full Replacement Cost (Excluding Tax) = Purchase Price - Deductible Value-Added Tax

Deductible VAT Amount = Purchase Price / 1.13 × 13%

For electronic device purchased previously, for which comparable models are no longer available on the current market but which remains operational, its full replacement cost is determined by reference to the tax-inclusive price in the second-hand equipment market.

2) Newness Rate for Electronic Devices

Newness Rate = [Remaining Useful Life ÷ (Used Life + Remaining Useful Life)] × 100%

Note: For electronic equipment directly appraised at second-hand market prices, calculating the newness rate is not required.

3) Determination of Appraised Value

Appraised Value = Full Replacement Cost × Newness Rate

4. Right-of-Use Assets

The accounting scope of right-of-use assets primarily encompasses the right of the Appraised Entity to utilize relevant leased assets throughout the lease term. The book cost of right-of-use assets primarily comprises the initial measurement amount of lease liabilities and direct costs incurred at the inception of the lease, among other components.

Right-of-use assets are defined as the lessee's right to utilize leased assets throughout the lease term. Enterprises shall account for and recognize right-of-use assets and lease liabilities in accordance with the stipulations of Accounting Standard for Business Enterprises No. 21 - Leases (Revised).

The appraisers investigated and understood the relevant leased assets, reviewed the pertinent lease contracts, verified details such as the lease term, remaining lease period, rental rates, and outstanding lease payments, and ascertained the presence of purchase options, renewal options, and early termination rights. Upon verification, the initial cost measurement of the right-of-use assets is accurate, and the depreciation provision is reasonable. For this appraisal, the appraised value of the right-of-use assets is determined based on their verified book value.

5. Intangible Assets - Others

1) Appraisal of Purchased Software

For purchased software, the appraisers reviewed relevant supporting documentation to understand the composition of the original recorded value, the amortization method, and the amortization period. They also examined original contracts, invoices, and payment vouchers. Verification confirmed that the amounts in the accounts and financial statements are consistent. Based on the characteristics of other intangible assets, the value type, and the data

collected, the market approach is adopted for the appraisal. For customized software, the replacement cost determined by the price index adjustment method as of the valuation date is taken as the appraised value.

2) Patent Appraisal

(1) Selection of appraisal method

Common appraisal methods for technology-based intangible assets include the market approach, income approach, and cost approach.

Given that the market for technology-based intangible assets in China is still in its nascent stages, and it is relatively difficult to collect relevant fair transaction data, the market approach is not applicable for the appraisal of technology-based intangible assets in this appraisal.

As a shipping enterprise, the Appraised Entity's core earnings primarily depend on external macroeconomic factors such as freight index. The technology-based intangible assets included in this appraisal cannot establish a stable, identifiable cash flow correlation between specific patent assets and future earnings, nor have they formed a corresponding relationship with the Appraised Entity's earnings. Their revenue-sharing situation remains uncertain; thus, the income approach is not applicable to this appraisal of technology-based intangible assets.

Therefore, the cost approach is adopted to perform asset appraisal on technology-based intangible assets.

(2) Appraisal model

Appraised Value = Replacement Cost × (1 - Intangible Assets Depreciation Rate)

Replacement Cost = R&D Costs + Reasonable Profit + Application and Registration Fees

R&D Costs: Including design fees, material costs, labor costs, and management fees.

Reasonable Profit: Calculated based on R&D costs, in accordance with the return on invested capital in the same industry.

Application and Registration Fees: Including official fees for the registration application, registration agent fees, and official fees for the registration authorization.

Depreciation Rate: Calculated using the remaining economic life prediction method, which is a method by which the appraisers determine the newness rate through predicting and judging the remaining economic life of the intangible assets. The calculation formula is expressed as:

Depreciation Rate = Used Years / (Used Years + Remaining Economic Life) × 100%

6. Long-Term Deferred Expenses

The long-term deferred expenses pertain to the office renovation costs for the 10th-11th floors of the Shuohuang Development Building, utilized by the shipping company. During the inventory process, appraisers reconciled the subsidiary ledger with the general ledger and reported balance, verified consistency with the Appraisal Details Schedule, examined accounting records including the Amount of funds, date of occurrence, and business scope, and sampled original accounting vouchers and contracts to ascertain the authenticity and completeness of their accounting content. Upon verification, the original incurred amount of the long-term deferred expenses is confirmed as true and accurate, the amortized balance is correct, and these long-term deferred expenses continue to represent corresponding rights or assets throughout their future benefit period. The appraised value is thus determined based on the remaining balance to be amortized over the residual benefit period.

7. Deferred Income Tax Assets

Deferred income tax assets primarily comprise lease liabilities, publicity

expenses and staff education fund. During the inventory check, the appraisers cross-referenced the subsidiary ledger with the general ledger and balance sheet balances, verified consistency with the detailed list of assets, and reviewed accounting records, including transaction amounts, dates of occurrence, and business descriptions, to confirm the authenticity and completeness of the deferred income tax assets. Based on this verification, the confirmed book value was established as the Appraised Value.

8. Other Non-current Assets

Other non-current assets primarily consist of advance payments for significant engineering projects. During the inventory verification, the appraisers cross-referenced the subsidiary ledger with the general ledger and reported balances, and confirmed consistency with the Appraisal Details Schedule. They reviewed accounting records including the amount of funds, transaction dates, and business scope, and selectively examined original accounting vouchers, contracts, agreements, and other relevant documentation to substantiate the authenticity and completeness of other non-current assets. Upon confirming accuracy, the appraised value was established based on the verified book value.

9. Liabilities

The Appraised Value is determined by verifying and confirming the actual debtor and amount of each liability after the realization of the appraisal purpose, based on the liability items and amounts that the owner of the Property Rights is actually required to bear after the realization of the appraisal purpose.

D. Income Approach

1. Overview

According to the Professional Standards for Asset Appraisal - Enterprise Value, the income approach in enterprise value appraisal, also known as the

discounted cash flow method, involves forecasting the future cash flows and their associated risks for an enterprise or a revenue-generating unit, selecting a corresponding discount rate, and then discounting and summing these future cash flows. The fundamental principle of the income approach is to estimate the future anticipated net cash flow of the assets and convert them into present value using an appropriate discount rate to derive the Appraised Value. The fundamental conditions for applying the income approach are described below: the enterprise possesses the basis and conditions for going concern; there is a relatively stable correlation between its operations and earnings; its future earnings and risks can be predicted and quantified. The primary challenge in utilizing the discounted cash flow method lies in forecasting future expected cash flows, as well as ensuring the objectivity and reliability of data collection and processing. When the forecast of future expected cash flows is relatively objective and fair, and an appropriate discount rate is adopted, the appraisal result will demonstrate strong objectivity.

2. Appraisal Ideas

Based on the findings of this due diligence and the asset composition and principal business characteristics of the Appraised Entity, the equity capital value of the Appraised Entity is appraised using its parent company statements. The fundamental appraisal approach for this appraisal is described as follows:

(1)For assets and principal businesses within the scope of the report, expected returns (net cash flow) are projected based on historical operating trends and business types, then discounted to derive the value of the operating assets;

(2)Current assets (liabilities) such as monetary assets, and dividends receivable (payable) existing on the Appraisal Reference Date, which are within the scope of the report but not included in the expected returns (net

cash flow) forecast, as well as non-current assets (liabilities) like dormant or idle equipment, real estate, and construction in progress not recognized in profit and loss, are defined as redundant or non-operating assets (liabilities) existing on the Appraisal Reference Date, and their value is estimated separately;

(3)The value of long-term equity investments that are included within the scope of the financial statements but are not factored into the estimation of expected returns (net cash flow) are separately calculated;

(4)Summing the values of the aforementioned assets and liabilities yields the enterprise value of the Appraised Entity. After deducting the value of interest-bearing debt as of the Appraisal Reference Date, the equity capital (Shareholders' Equity) value of the Appraised Entity is obtained.

In determining the value of Shareholders' Equity, the appraisers have not considered premiums or discounts arising from factors such as controlling interest and minority equity, nor has the appraisers considered the impact of equity liquidity on the appraisal results.

3. Appraisal Model

(1) Basic model

The basic model for this appraisal is:

$$E = B - D \qquad (1)$$

wherein:

E: Shareholders' Equity (Net Assets) Value of the Appraised Entity;

B: Enterprise Value of the Appraised Entity;

D: Interest-Bearing Debt Value of the Appraised Entity;

$$B = P + I + \mathrm{C} \qquad (2)$$

wherein:

P: Operating Assets Value of the Appraised Entity;

I: Long-term Investment Value of the Appraised Entity on the Appraisal

Reference Date;

C: Value of Surplus or Non-Operating Assets (Liabilities) of the Appraised Entity on the Appraisal Reference Date;

$$P = \sum_{i=1}^{n} \frac{R_i}{(1+r)^i} + \frac{R_{n+1}}{r(1+r)^n} \quad (3)$$

wherein:

R_i: Expected returns (Free Cash Flow) of the Appraised Entity in the i-th future year;

r: Discount rate;

n: The future operating period of the Appraised Entity;

$$C = C_1 + C_2 \quad (4)$$

C_1: The value of surplus or non-operating assets (liabilities) classified as current at the Appraisal Reference Date;

C_2: The value of surplus or non-operating assets (liabilities) classified as non-current at the Appraisal Reference Date.

(2) Income indicator

The enterprise's free cash flow is adopted as the income indicator for the Appraised Entity's operating assets, which is fundamentally defined as:

R= Net Profit + Depreciation and Amortization + After-tax Interest - Additional Capital (5)

Based on the Appraised Entity's operating history and future market development, its free cash flow for the future operating period is estimated. The value of the enterprise's operating assets is obtained by discounting and summing the free cash flow over the future operating period.

(3) Discount rate

This appraisal adopts the weighted average cost of capital (WACC) model to determine the discount rate r.

$$r = r_d \times w_d + r_e \times w_e \quad (6)$$

wherein:

W_d: The average debt ratio of the industry;

$$w_d = \frac{D}{(E+D)} \quad (7)$$

W_e: The average equity ratio of the industry;

$$w_e = \frac{E}{(E+D)} \quad (8)$$

r_d: The after-tax interest rate on interest-bearing debt;

r_e: cost of equity capital; this appraisal determines the cost of equity capital r_e according to the Capital Asset Pricing Model (CAPM);

$$r_e = r_f + \beta_e \times (r_m - r_f) + \varepsilon \quad (9)$$

wherein:

r_f: Risk-free rate of return;

r_m: Market expected rate of return;

ε: The specific risk adjustment coefficient of the Appraised Entity;

β_e: The expected market risk coefficient for the equity capital of the Appraised Entity;

$$\beta_e = \beta_u \times (1 + (1-t) \times \frac{D}{E}) \quad (10)$$

β_u: The expected unlevered market risk coefficient for comparable companies;

$$\beta_u = \frac{\beta_t}{1+(1-t)\frac{D_i}{E_i}} \quad (11)$$

β_t: The expected average market risk coefficient for the stock (assets) of comparable companies;

$$\beta_t = 34\%K + 66\%\beta_x \quad (12)$$

wherein:

K: The average risk value of the stock market over a certain period, usually assumed K=1;

β_x: The historical average market risk coefficient for the stock (assets) of

comparable companies;

D_i and E_i: The interest-bearing debt and equity capital of comparable companies, respectively.

4. Earnings Period

According to the Appraised Entity's Articles of Association, the business term of the enterprise is long-term. As the Appraised Entity was operating normally on the Appraisal Reference Date, there are no restrictions on the useful life of core assets affecting the enterprise's continued operation, nor on the enterprise's production and operation term or the investors' ownership term. Alternatively, such restrictions can be lifted, and the enterprise can operate in perpetuity through extensions. Therefore, it is assumed that the Appraised Entity will operate as a going concern beyond the Appraisal Reference Date, with a corresponding indefinite earnings period.

VIII. Implementation Process and Status of Appraisal Procedures

The entire appraisal work is divided into four stages:

A. Appraisal Preparation Stage

The Appraisal Preparation Stage was in early September 2025, and the main tasks of this stage are described below:

1. Project Negotiation and Acceptance of Project Engagement

In this stage, we understand the basic information of the Appraised Entity and the Appraisal Object involved in the proposed engagement, and clarify the Purpose of Appraisal, Appraisal Object, Scope of Appraisal, and Appraisal Reference Date; Based on specific circumstances, including the purpose of appraisal and the transaction background, a comprehensive analysis and appraisal of professional competence, independence, and business risks are conducted, leading to the signing of an asset appraisal engagement contract.

2. Determination of the Appraisal Plan and Preparation of the Work

Schedule

After thorough communication with the Clients and all relevant intermediaries for the project, and further confirming the fundamental aspects of the asset appraisal, as well as the Appraised Entity's assets and operating status, basic policies, laws, and regulations pertinent to the Appraised Entity's industry are collected, along with market operating conditions. Building upon this, a preliminary work plan is drafted, and an appraisal plan is formulated.

3. Submittal of the Document Checklist and Interview Outline

Based on the characteristics of the assets to be appraised, a targeted due diligence document checklist is submitted, including sample forms for asset lists and profit forecasts, requiring the Appraised Entity to undertake appraisal preparation work.

4. Guidance on Form Completion and Appraisal Data Preparation

We liaise with relevant staff of the Appraised Entity to guide them in preparing the necessary data and completing the relevant forms in accordance with asset appraisal requirements.

B. On-site Appraisal Stage

The project team's on-site work period is scheduled for mid-September 2025, with the following main tasks during this stage:

1. Preliminary understanding of the overall situation

We receive briefings from the Clients and relevant personnel of the Appraised Entity regarding the Appraised Entity's overall situation and the history and current status of the assets to be valued. This includes understanding the Appraised Entity's historical evolution, financial system, operating status, and technical conditions of its fixed assets.

2. Reviewing and verifying materials

The declaration materials provided by the Appraised Entity are reviewed and authenticated. Property rights certificates for the assets to be valued are

thoroughly collected and verified, and cross-referenced with the enterprise's relevant financial records. Any discrepancies identified are addressed and adjusted in coordination with the enterprise.

3. Key inventory check

Based on the declared materials, comprehensive inventory check and verification are conducted for the primary assets and operational and office premises. For the reported bank deposits and intercompany balances, bank statements and various business contracts are verified to confirm their authenticity and analyze associated risks. A physical site inspection was conducted on the reported fixed assets, with electronic equipment and machinery being inventoried through sampling. For special-purpose equipment, technical documentation was reviewed. For leased premises, the lease agreements were examined.

4. Due diligence interview

Through due diligence and interviews with senior executives, we gain an understanding of the enterprise's cost and expense, and its future development trends are analyzed. For the profit forecast data declared by the enterprise, discussions are held with enterprise management personnel to reach a consensus on future development trends as much as possible. This is then verified and checked by inquiring about the principal business, gross profit situation, and other relevant aspects of enterprises in the same industry and field.

5. Determining appraisal methods

Based on the actual conditions and characteristics of the assets to be valued, the specific asset appraisal model and methods are determined.

6. Estimation and appraisal

Based on the agreed-upon understanding, the appraisal model is determined, the appraisal results are calculated, and relevant written

explanations are drafted.

C. Appraisal Summary Stage

We analyze and summarize the preliminary appraisal results for various assets and liabilities, and implement necessary adjustments, modifications, and improvements to the appraisal results.

D. Report Submission Stage

Based on the foregoing work, a preliminary asset appraisal report is drafted; following an initial review, opinions on the appraisal results are exchanged with the Clients. After an independent analysis of relevant opinions, revisions and adjustments are made in accordance with the Appraisal Institution's internal asset appraisal report review system and procedures, culminating in the issuance of the official asset appraisal report.

IX. Appraisal Assumptions

In this appraisal, the appraisers adhered to the following appraisal assumptions:

A. General Assumptions

1. Transaction Assumption

The transaction assumption posits that all assets to be valued are already in the process of transaction, and the appraiser performs appraisal based on simulated market conditions, including the transaction terms of the assets to be valued. The transaction assumption is one of the most fundamental prerequisite assumptions for asset appraisal.

2. Open Market Assumption

The open market assumption posits that for assets traded or intended to be traded in the market, both parties to the asset transaction are in equal positions and have the opportunity and time to obtain sufficient market

information to make rational judgments regarding the asset's function, intended use, and transaction price. The open market assumption is predicated on the basis that assets can be openly bought and sold in the market.

3. Going Concern Assumption of the Enterprise

The going concern assumption for an enterprise is an appraisal premise made by treating the enterprise's entire assets as the appraisal object. This implies that the enterprise, as an operating entity, will continue its operations within its external environment in accordance with its business objectives. Enterprise management is responsible for and capable of fulfilling its duties; The enterprise operates lawfully and is able to generate appropriate profits to sustain its ongoing operational capability. Regarding the various operating assets of the enterprise, they are assumed to continue to be used in their current purpose, manner, scale, frequency, and environment, or to be utilized following certain modifications.

B. Special Assumptions

1. There are no significant changes in the current relevant laws, regulations, and policies, nor in the national macroeconomic situation; there are no significant changes in the political, economic, and social environment of the regions where all parties to this transaction are located;

2. There are no significant changes in the socio-economic environment in which the enterprise operates, nor in relevant interest rates, exchange rates, tax bases and tax rates, or policy-related levies;

3. The enterprise's future operational management team performs its duties diligently and maintains its existing operational management model;

4. The appraisal is based solely on the existing operational capacity as of the Appraisal Reference Date. No consideration is given to potential future expansions in operational capacity resulting from changes in management, operational strategies, or additional investments, nor to subsequent changes

in production and operations that may occur;

5. All assets in this appraisal are predicated on their actual inventory as of the Appraisal Reference Date, with the current market prices of relevant assets based on prevailing domestic prices as of the Appraisal Reference Date;

6. This appraisal assumes that the fundamental and financial data provided by the Clients and the Appraised Entity are true, accurate, and complete;

7. The appraisal scope is strictly limited to the appraisal declaration forms furnished by the Clients and the Appraised Entity; it does not account for any potential contingent assets or contingent liabilities beyond the lists provided by the Clients and the Appraised Entity;

8. This appraisal assumes that, throughout the prospective forecast period, the categories and proportions of the Appraisal Object's various period expenses will not deviate significantly from their current structure but will maintain their recent trends, adjusting proportionally with shifts in operational scale;

9. Given the frequent and significant fluctuations in the enterprise's monetary assets, including bank deposits, during its operations, the appraisal of financial expenses in this report does not account for interest income from deposits or uncertain gains and losses such as exchange differences;

10. The parameter values used in this appraisal calculation do not take into account the impact of inflation;

11. There are no other force majeure or unforeseen factors that would have a significant adverse impact on the enterprise.

12. It is assumed that, subsequent to the appraisal Reference Date, the Appraised Entity's cash inflows and outflows occur at an average rate.

Should the aforementioned conditions change, the appraisal results would generally become invalid.

X. Appraisal Conclusion

Based on the assessment of future development trends and business plans by the Clients and the enterprise's management, and in accordance with relevant laws, regulations, and asset appraisal standards, the total shareholders' equity of CHN Energy Shipping Company was valued as of the Appraisal Reference Date of July 31, 2025, using both the asset-based approach and the income approach. This appraisal followed established procedures, including inventory checks, on-site inspections, market surveys and confirmations, and assessment and estimation.

A. Appraisal Conclusion from Asset-based Approach

By leveraging the asset-based approach, the Appraisal Conclusion for the Appraised Entity as of the Appraisal Reference Date of July 31, 2025, is described below:

Total Assets had a book value of RMB335,174.26 ten thousand and an appraised value of RMB369,732.07 ten thousand, representing an appraisal appreciation of RMB34,557.81 ten thousand, with an appreciation rate of 10.31%.

Liabilities had a book value of RMB155,552.42 ten thousand and an appraised value of RMB155,552.42 ten thousand, indicating no change in appraisal appreciation or depreciation.

Net Assets had a book value of RMB179,621.84 ten thousand and an appraised value of RMB214,179.65 ten thousand, representing an appraisal appreciation of RMB34,557.81 ten thousand, with an appreciation rate of 19.24%. For details, refer to the table below.

Table 14 Summary Table of Asset Appraisal Results

Appraisal Reference Date: July 31, 2025

Unit: RMB in ten thousand

CHN Energy Shipping Company Asset Appraisal Report Regarding China Shenhua Energy Company Limited's Proposed Acquisition of 100% Equity in CHN Energy Shipping Company Held by China Energy Investment Corporation Co., Ltd. by Issuing Shares and Paying Cash

Items		Book Value	Appraised Value	Appreciation or Depreciation	Appreciation Rate (%)
		A	B	C=B-A	D=C/A×100
1	Current Assets	85,751.91	85,780.07	28.16	0.03
2	Non-current Assets	249,422.35	283,952.00	34,529.65	13.84
3	Including: Long-term Equity Investments	136,795.59	154,773.55	17,977.96	13.14
4	Fixed Assets	97,760.51	114,221.13	16,460.62	16.84
5	Intangible Assets	874.52	965.59	91.07	10.41
6	Other Non-current Assets	13,991.73	13,991.73	-	-
7	**Total Assets**	**335,174.26**	**369,732.07**	**34,557.81**	**10.31**
8	Current Liabilities	48,195.42	48,195.42	-	-
9	Non-current Liabilities	107,357.00	107,357.00	-	-
10	**Total Liabilities**	**155,552.42**	**155,552.42**	**-**	**-**
11	**Net Assets (Shareholders' Equity)**	**179,621.84**	**214,179.65**	**34,557.81**	**19.24**

B. Appraisal Conclusion from Income Approach

By leveraging the income approach, the appraisal conclusion for the Appraised Entity as of the Appraisal Reference Date is presented as follows: The Shareholders' Equity had a book value of RMB179,621.84 ten thousand, an appraised value of RMB152,508.05 ten thousand, an appraisal depreciation of RMB27,113.79 ten thousand, and a depreciation rate of 15.09%.

C. Analysis of Differences in Appraisal Results

The total Shareholders' Equity value calculated in this appraisal using the income approach reaches RMB152,508.05 ten thousand, which is RMB61,671.60 ten thousand or 28.79% lower than the total Shareholders' Equity Value of RMB214,179.65 ten thousand calculated using the asset-based approach. The main reasons for the differences between the two appraisal methods are explained below:

1. The Asset-based Approach Appraisal uses the replacement cost of

assets as the value standard, reflecting the socially necessary labor consumed by asset investment (construction cost). This construction cost typically fluctuates with changes in the national economy;

2. The Income Approach Appraisal uses the expected returns of assets as the value standard, reflecting the operating capacity (profitability) of the assets. This profitability is typically influenced by various factors such as the macro economy, government control, and the effective utilization of assets.

In summary, this leads to a discrepancy between the two appraisal methods.

D. Selection of Appraisal Results

The Appraised Entity is a shipping asset management and operation platform established by the CHN Energy following its shipping industry control optimization at the end of 2022, which was incorporated on March 22, 2023. As a newly established management and operation platform, the key parameters of the income approach (primarily volume) are significantly influenced by its integrated operations, while freight rates are subject to substantial market price fluctuations. The asset-based approach reflects the fair market value of assets from a replacement cost perspective. Considering the specifics of this appraisal, the Appraised Entity provided comprehensive data on its assets and liabilities, and the appraisers also gathered the necessary external information for the asset-based approach. We performed a thorough inventory check and appraisal of the Appraised Entity's assets and liabilities. Consequently, the appraisal results derived from the asset-based approach are comparatively more reliable; therefore, this appraisal adopts the asset-based approach's appraisal results as the final Appraisal Conclusion.

Based on the above analysis, the value of the total Shareholders' Equity of CHN Energy Shipping Company as of the Appraisal Reference Date is determined to be RMB214,179.65 ten thousand.

XI. Instructions on Special Matters

A. Circumstances Involving Citation of Conclusions from Reports Issued by Other Institutions.

None.

B. Incomplete Property Rights Documentation or Property Rights Deficiencies

None.

C. Circumstances where appraisal procedures are restricted or appraisal data is incomplete

None.

D. Outstanding legal and economic matters existing on the Appraisal Reference Date

None.

E. Nature, amount, and relationship with the Appraisal Object regarding guarantees, leasing, contingent liabilities (contingent assets), and other related matters

As of the Appraisal Reference Date, the Appraised Entity currently occupies the premises under lease, and the right-of-use assets are as shown in the table below. For this appraisal, future lease payments required by the contract are projected, and it is assumed that the Appraised Entity will be able to continue leasing the premises at the current rent level after the contract expires, with no significant impact on future operations due to the inability to secure the premises.

Table 15 Right-of-Use Assets Table

No.	Asset Name	Formation Date	Expiration Date	Periodic Rent (RMB)
1	Shuohuang Development Building Office Space Lease - CHN Energy Shipping Company (Fl. 10 and Fl. 11)	March 22, 2023	April 17, 2026	20,392,695.27
2	Shuohuang Development Building Parking Space Lease - CHN Energy Shipping Company	March 22, 2023	April 17, 2026	358,800.00
3	Office Lease - CHN Energy Shipping Company Leases Room 108, Basement Floor, Shuohuang Development Building	August 1, 2024	April 17, 2026	445,082.02

F. Significant Subsequent Events

This appraisal concerns three vessels owned by Tianjin Guoneng Shipping Co., Ltd., which were listed for sale around the Reference Date. Among them, Guodian 8 was successfully auctioned shortly after the Appraisal Reference Date, and its appraised value was determined based on the transaction price. Guodian 10 and Guodian 26 were sold in November and December 2025, respectively, both at their starting bid prices. For this appraisal, the appraised values of Guodian 10 and Guodian 26 were determined based on their starting bid prices. This matter has no impact on the conclusions of this appraisal.

G. Defects in the economic activity corresponding to this appraisal that may significantly impact the Appraisal Conclusion

None.

H. Other Matters Requiring Explanation

1. The legal liability of the appraiser and Appraisal Institution is to render professional judgments on the asset Value for the Purpose of Appraisal as described in this report, and does not extend to the appraiser and Appraisal Institution making any judgments regarding the economic activity corresponding to this Purpose of Appraisal. The asset appraisal process is, to a significant extent, dependent on the relevant information provided by the Clients and the Appraised Entity. Therefore, the appraisal work is predicated on the authenticity and legality of the economic activity documents, asset ownership documents, certificates, accounting vouchers, and legal documents provided by the Clients and the Appraised Entity.

2. During the appraisal process, when inspecting the equipment, due to limitations in detection methods and the fact that some equipment was in operation, the appraisal primarily relied on the appraisers' visual observations, recent inspection reports provided by the Appraised Entity, and inquiries with relevant operating personnel to determine the equipment's condition.

3. The objective of the appraisers in performing asset appraisal services is to estimate the value of the Appraisal Object and render a professional opinion, without assuming responsibility for the decisions made by the relevant parties. The Appraisal Conclusion should not be considered a guarantee of the Realizable Price of the Appraisal Object.

4. The profit forecast of the Appraised Entity obtained by the Appraisal Institution forms the basis for the Income Approach Appraisal in this Appraisal Report. Regarding the profit forecast provided by the Appraised Entity, the appraisers conducted necessary investigations, demonstrations, analyses, and judgments, considering the outstanding orders as of the Appraisal Reference Date, as well as other supporting materials furnished by the Appraised Entity's business and financial departments. After multiple

discussions with the Appraised Entity's Management and its major shareholders, and subsequent revisions and refinements by the Valued Entity, the Appraisal Institution accepted the relevant data from the Appraised Entity's profit forecast. The Appraisal Institution's use of the Appraised Entity's profit forecast does not constitute a guarantee of the Appraised Entity's future profitability.

5. This Appraisal Conclusion represents the value of the total Shareholders' Equity of the Appraised Entity. The appraisers have not considered the impact of factors such as equity liquidity, controlling interest, and minority equity.

6. The Clients and the Appraised Entity are responsible for the authenticity and completeness of the data, statements, and relevant information provided by the Appraised Entity, which fall within the scope of this appraisal.

7. The certificates of ownership and related information referenced in the Appraisal Report are provided by the Appraised Entity. The Clients and the Appraised Entity shall bear legal liability for their authenticity and legality.

8. Should the number of assets and pricing standards change during the validity period after the Appraisal Reference Date, the following principles shall apply:

(1)When the number of assets changes, the amount of assets shall be adjusted accordingly based on the original appraisal methods;

(2)When asset pricing standards change and materially affect the asset appraisal results, the Clients shall promptly engage a qualified asset appraisal institution to re-determine the Appraised Value.

(3)After the Appraisal Reference Date, the Clients shall give full consideration to and make corresponding adjustments for changes in the number of assets and pricing standards when establishing the actual pricing

of the assets.

9. When the number of assets changes, the amount of assets shall be adjusted accordingly based on the original appraisal methods;

10. The Appraisal Scope is limited to the asset appraisal detailed schedule provided by the Clients and the Appraised Entity, and does not encompass potential contingent assets and contingent liabilities beyond the lists provided by the Clients and the Appraised Entity.

XII. Instructions on Usage Restrictions of the Appraisal Report

1. This Appraisal Report shall only be used for the specific purpose and uses stipulated within this report. Concurrently, the appraisal conclusion of this appraisal reflects the current fair market price, determined according to open market principles for the valued entity under the purpose of this appraisal. It does not account for the impact on the appraisal price from potential future mortgages, guarantees, or additional payments that may be made by specific transacting parties. Furthermore, this report does not consider the impact on asset prices resulting from changes in national macroeconomic policies, natural forces, or other force majeure events. The appraisal conclusion will generally become invalid if the aforementioned conditions, the going concern principle followed in the appraisal, or other circumstances change. The Appraisal Institution shall not bear relevant legal liability for any invalidation of the Appraisal Results caused by changes in these conditions.

2. The precondition for the validity of this Appraisal Report is that this economic activity complies with the relevant provisions of national laws and regulations and has obtained approval from the relevant departments.

3. This Appraisal Report may only be used by designated users specified therein. The right to use this Appraisal Report belongs to the Clients. Without

the Clients' permission, this Asset Appraisal Institution will not disclose it to others.

4. The Asset Appraisal Institution and its appraisers shall not be held liable if the Clients or other users of the Asset Appraisal Report fail to use it within the scope specified by laws, administrative regulations, and the Asset Appraisal Report itself.

5. No entities or individuals other than the Clients, the other users of the Asset Appraisal Report as stipulated in the Asset Appraisal Engagement Contract, and the users of the Asset Appraisal Report as prescribed by laws and administrative regulations, shall be permitted to use the Asset Appraisal Report.

6. Without the consent and review of this Appraisal Institution, no part or all of the Appraisal Report may be excerpted, cited, or disclosed in public media, except where otherwise stipulated by laws and regulations or agreed upon by the relevant parties.

7. Users of the Asset Appraisal Report shall correctly understand and utilize the Appraisal Conclusion. The Appraisal Conclusion is not equivalent to the realizable price of the Appraisal Object, and the Appraisal Conclusion shall not be construed as a guarantee of the realizable price of the Appraisal Object.

8. Validity Period of the Appraisal Conclusion: In accordance with relevant asset appraisal laws and regulations, for asset appraisal reports pertaining to statutory appraisal engagements, the Clients must utilize the report only after completing the asset appraisal supervision and administration procedures as mandated by laws and regulations. The appraisal results are valid for one year, calculated from the Appraisal Reference Date of July 31, 2025 until July 30, 2026. If this period is exceeded, a new asset appraisal will be required.

XIII. Date of the Appraisal Report

The Date of Appraisal Report is December 16, 2025.

This Report is prepared in accordance with China's Asset Appraisal Standards

Shenhua Coal Transport & Marketing Co., Ltd.

Asset Appraisal Report

Regarding China Shenhua Energy Company Limited's Proposed Acquisition of 100% Equity in Shenhua Coal Transport & Marketing Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. by Issuing Shares and Paying Cash

ZLPBZ [2025] No. 5359

China United Assets Appraisal Group Co., Ltd.
December 16, 2025

STATEMENT

I. This Asset Appraisal Report is prepared in accordance with the Basic Standards for Asset Appraisal issued by the Ministry of Finance of the People's Republic of China, and the Practice Standards and Professional Ethics Standards for Asset Appraisal issued by the China Appraisal Society.

II. The Clients or other users of the Asset Appraisal Report shall use the Report in accordance with applicable laws and regulations, and within the scope of use specified herein. Should the Client or other users of the Asset Appraisal Report fail to do so, the Asset Appraisal Institution and its professional asset appraisers shall not be liable for any consequences arising therefrom.

The Asset Appraisal Report is exclusively used by the Client, other designated users as stipulated in the asset appraisal engagement contract, and users mandated by applicable laws and regulations. In addition, no other institution or individual is authorized to be a user of the Asset Appraisal Report.

The Asset Appraisal Institution and its asset appraisers advise users of this Asset Appraisal Report to accurately comprehend and use the appraisal conclusion. The appraisal conclusion should not be deemed as the realizable price of the appraisal object, nor should it be interpreted as a guarantee of the appraisal object's realizable price.

III. The truthfulness, legality, and completeness of the information provided by the Clients and other relevant parties are prerequisites for the appraisal conclusion to be valid. The list of assets and liabilities included in the appraisal scope, as well as the prospective financial information, ownership certificates, and other data required for the appraisal, have been declared and confirmed by the Clients and the Appraised Entity through official seals or other means.

IV. The Asset Appraisal Institution and its asset appraisers have no existing or prospective interests in the Appraisal Object presented in the Asset Appraisal Report; and have no existing or prospective interests in the related parties, and are not biased towards them.

V. The asset appraisers have conducted field surveys of the Appraisal Object and the assets involved in the Asset Appraisal Report; has given due attention to the legal ownership status of the Appraisal Object and its related assets, inspected the legal ownership documentation for the Appraisal Object and its related assets, truthfully disclosed any issues identified, and requested the Clients and other relevant parties to optimize the property rights to satisfy the requirements for issuing the Asset Appraisal Report.

VI. The analyses, judgments, and results presented in the Asset Appraisal Report issued by the Asset Appraisal Institution are subject to the assumptions and limiting conditions stipulated therein. Users of the Asset Appraisal Report should thoroughly consider the assumptions, limiting conditions, instructions on special matters, and their impacts on the appraisal conclusion as specified within the Report.

VII. The Asset Appraisal Institution and its asset appraisers comply with applicable laws, regulations, and asset appraisal standards, adhere to the principles of independence, objectivity, and impartiality, and are legally responsible for the Asset Appraisal Report issued.

Shenhua Coal Transport & Marketing Co., Ltd.

Asset Appraisal Report

Regarding China Shenhua Energy Company Limited's Proposed Acquisition of 100% Equity in Shenhua Coal Transport & Marketing Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. by Issuing Shares and Paying Cash

ZLPBZ [2025] No. 5359

ABSTRACT

China United Assets Appraisal Group Co., Ltd. was engaged by China Shenhua Energy Company Limited and China Energy Investment Corporation Co., Ltd. to assess the market value of the total Shareholders' Equity of Shenhua Coal Transport & Marketing Co., Ltd. as of the Appraisal Reference Date. This appraisal pertains to the economic activity involving China Shenhua Energy Company Limited's proposed acquisition of 100% equity in Shenhua Coal Transport & Marketing Co., Ltd. held by China Energy Investment Corporation Co., Ltd. by issuing shares and paying cash.

The Appraisal Object is the total Shareholders' Equity of Shenhua Coal Transport & Marketing Co., Ltd. The appraisal scope encompasses all assets

and related liabilities of Shenhua Coal Transport & Marketing Co., Ltd., including current assets, non-current assets, and their corresponding liabilities.

The Appraisal Reference Date is July 31, 2025.

The value type for this appraisal is market value.

This appraisal is performed based on the assumptions of continued use and an open market. Considering the specific circumstances of the Appraisal Object and various influencing factors, both the asset-based approach and income approach were employed for the overall appraisal of Shenhua Coal Transport & Marketing Co., Ltd., followed by verification and comparison. Taking into account the applicability conditions of the appraisal methods and the achievement of the appraisal goals, the appraisal result derived from the asset-based approach was chosen as the final Appraisal Conclusion.

Based on the judgments on future development trends and business plans by the Clients and the management, and following appraisal procedures including inventory verification, field survey, market research and inquiry, and assessment and estimation, the Appraisal Conclusion for the total Shareholders' Equity of Shenhua Coal Transport & Marketing Co., Ltd. as of the Appraisal Reference Date of July 31, 2025, is described below:

The total Shareholders' Equity had a book value of RMB71,527.01 ten thousand, an appraised value of RMB86,102.61 ten thousand, an appraisal appreciation of RMB14,575.60 ten thousand, and an appreciation rate of 20.38%.

When utilizing this Appraisal Conclusion, report users are specifically reminded to pay attention to the special matters and significant subsequent events stipulated within the report.

According to applicable laws and regulations on asset appraisal, the Asset Appraisal Report involving statutory appraisal business should be used by the Clients after fulfilling relevant asset appraisal supervision and administration procedures. The Appraisal Conclusion is valid for one year,

specifically from July 31, 2025 to July 30, 2026.

The above contents are extracted from the main body of the Asset Appraisal Report. To obtain more details of this appraisal engagement and correctly comprehend the Appraisal Conclusion, please carefully read the main body of the Asset Appraisal Report.

Shenhua Coal Transport & Marketing Co., Ltd.

Asset Appraisal Report

Regarding China Shenhua Energy Company Limited's Proposed Acquisition of 100% Equity in Shenhua Coal Transport & Marketing Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. by Issuing Shares and Paying Cash

ZLPBZ [2025] No. 5359

Esteemed China Energy Investment Corporation Co., Ltd. and China Shenhua Energy Company Limited,

Upon the acceptance of your commission, by adhering to applicable laws, regulations, and asset appraisal standards, and upholding the principles of independence, objectivity, and impartiality, China United Assets Appraisal Group Co., Ltd. utilized both the income approach and market approach to appraise the market value of the total Shareholders' Equity of Shenhua Coal Transport & Marketing Co., Ltd. as of the Appraisal Reference Date of July 31, 2025 in accordance with the requisite appraisal procedures. E. Relationship between the Clients and the Appraised Entity

The Clients for this asset appraisal are China Energy Investment Corporation Co., Ltd. and China Shenhua Energy Company Limited, with China Energy Investment Corporation Co., Ltd. being the controlling shareholder of China Shenhua Energy Company Limited. The Client, China Energy Investment Corporation Co., Ltd., is the shareholder of the Appraised

Entity, Shenhua Coal Transport & Marketing Co., Ltd., holding a 100% shareholding ratio. The Client, China Shenhua Energy Company Limited, intends to acquire 100% equity in Shenhua Coal Transport & Marketing Co., Ltd. held by China Energy Investment Corporation Co., Ltd.

F. Other Users of the Asset Appraisal Report

The Asset Appraisal Engagement Contract does not stipulate other report users.

Except as otherwise provided by applicable laws and regulations, no institution or individual shall become a user of the Asset Appraisal Report by virtue of obtaining it prior to the confirmation of the Appraisal Institution and the Clients.

II. Purpose of Appraisal

According to the 18th Minutes of the Chairman's Special Meeting of China Energy Investment Corporation Limited (August 8, 2025), China Shenhua Energy Company Limited plans to issue shares and pay cash to acquire coal, pitheads, coal power and other related assets held by China Energy Investment Corporation Limited.

The purpose of this asset appraisal is to reflect the market value of the total Shareholders' Equity of Shenhua Coal Transport & Marketing Co., Ltd. as of the Appraisal Reference Date, thereby providing a value reference for the aforementioned economic activity.

III. Appraisal Object and Appraisal Scope

The Appraisal Object is the value of the total Shareholders' Equity of Shenhua Coal Transport & Marketing Co., Ltd. The Appraisal Scope includes all assets and related Liabilities of Shenhua Coal Transport & Marketing Co., Ltd. As of the Appraisal Reference Date, the audited consolidated financial statements reported total assets of RMB434,254.58ten thousand, liabilities of

RMB359,198.50 ten thousand, owners' equity of RMB75,056.08 ten thousand, and owners' equity attributable to the parent company of RMB75,056.08 ten thousand. The audited parent company statements reported total assets of RMB383,729.73 ten thousand, total liabilities of RMB312,202.72 ten thousand, and net assets of RMB71,527.01 ten thousand. Specifically, current assets totaled RMB342,342.97 ten thousand, and non-current assets amounted to RMB41,386.76 ten thousand; Current liabilities reached RMB312,202.72 ten thousand, and non-current liabilities totaled RMB0.

The aforementioned data on assets and liabilities are extracted from the Balance Sheet of Shenhua Coal Transport & Marketing Co., Ltd. as of July 31, 2025, audited by Ernst & Young Hua Ming LLP. The appraisal is performed based on the audited financial data of Shenhua Coal Transport & Marketing Co., Ltd.

Appraisal object and appraisal scope as commissioned are consistent with those involved in the economic activity.

A. Overview of Principal Assets

As of the Appraisal Reference Date, the book value of physical assets belonging to the parent company of Shenhua Coal Transport & Marketing Co., Ltd. reached RMB2,857.08 ten thousand, representing 0.74% of total assets. These physical assets primarily comprise inventories, buildings and structures, and electronic devices.

1. Inventories

Inventories primarily consist of coal purchase costs (thermal coal) and transshipment costs. The thermal coal is available for normal sale.

2. Buildings and Structures

There are 50 buildings and structures, predominantly including frame structures, brick-concrete structures, and steel-concrete structures, located in

Beijing, Hebei, Guangdong, Shanxi, Shanghai, and other regions across China. They are primarily used for employee accommodation, rental, or are idle.

3. Electronic Devices

A total of 8 electronic devices, primarily laptop computers and printers, were purchased between 2006 and 2011. As of the Appraisal Reference Date, these devices no longer existed physically.

B. Intangible Assets Whether Recorded or Unrecorded in the Books, as Declared by the Appraised Entity

As of the Appraisal Reference Date, the Appraised Entity declared 6 invention patents that were not recorded in the books, as detailed below.

All patent rights included in this appraisal were jointly applied for by the Appraised Entity and other parties, with joint ownership. The parties have not established any agreements concerning these jointly owned patent rights. This appraisal considers only the contribution of the patent rights to the Appraised Entity itself, and does not factor in the impact of joint ownership on the appraised amount of the patent rights.

C. Types and Quantities of Off-balance Sheet Assets Declared by the Appraised Entity

As of the Appraisal Reference Date, there were no off-balance sheet assets within the scope declared for appraisal by the Appraised Entity.

D. Types, Quantities, and Book Values of Assets Involved in Conclusions from Reports Issued by Other Institutions

The book values of all assets and liabilities on the Appraisal Reference Date in this Asset Appraisal Report are determined based on the audit results of the Audit Report of Shenhua Coal Transportation and Marketing Co., Ltd. (Ernst & Young Hua Ming (2025) Zhuan Zi No. 80028119_A01) issued by the Ernst & Young Hua Ming LLP on December 16, 2025, with a standard unqualified opinion. The valuation was conducted on the basis of the audit on the company.

No other institutional report contents were cited apart from this.

IV. Value Type

In accordance with the purpose of this appraisal, the value type for this appraisal is determined to be market value.

Market value refers to the estimated value of the Appraisal Object in a normal, arm's-length transaction on the Appraisal Reference Date, assuming buyers and sellers acting rationally and voluntarily and without any compulsion.

V. Appraisal Reference Date

The Appraisal Reference Date for this asset appraisal is July 31, 2025.

The Appraisal Reference Date is determined by the Clients after a comprehensive consideration of factors such as the Appraised Entity's asset scale, workload, estimated time required, and compliance requirements.

VI. Appraisal Basis

The appraisal basis followed for this asset appraisal primarily includes the economic activity basis, legal and regulatory basis, appraisal standards basis, asset ownership basis, as well as pricing basis and other references used during assessment and estimation, specifically as follows:

A. Economic Activity Basis

18th Minutes of the Chairman's Special Meeting of China Energy Investment Corporation Limited (August 8, 2025)

B. Legal and Regulatory Basis

1. Asset Appraisal Law of the People's Republic of China (Promulgated at the Twenty-first Session of the Standing Committee of the Twelfth National People's Congress on July 2, 2016);

2. Company Law of the People's Republic of China (Second Revision, adopted at the Seventh Session of the Standing Committee of the Fourteenth National People's Congress on December 29, 2023);

3. Civil Code of the People's Republic of China (Adopted at the Third Session of the Standing Committee of the Thirteenth National People's Congress on May 28, 2020);

4. Enterprise Income Tax Law of the People's Republic of China (Amended and adopted at the Seventh Session of the Standing Committee of the Thirteenth National People's Congress on December 29, 2018);

5. Regulations on the Implementation of the Enterprise Income Tax Law of the People's Republic of China (First revision of the Decision of the State Council on Amending Certain Administrative Regulations promulgated by Decree of the State Council No. 714 of the People's Republic of China on April 23, 2019);

6. Provisional Regulations of the People's Republic of China on Value-

added Tax (Decree of the State Council No. 691);

7. Implementation Rules for the Provisional Regulations of the People's Republic of China on Value-added Tax (Decree of the Ministry of Finance and the State Taxation Administration No. 50);

8. Stamp Tax Law of the People's Republic of China (Adopted at the Third Session of the Standing Committee of the Fourteenth National People's Congress on June 29, 2023);

9. Urban Real Estate Administration Law of the People's Republic of China (Adopted at the Twelfth Session of the Standing Committee of the Thirteenth National People's Congress on August 26, 2019);

10. Land Administration Law of the People's Republic of China (Adopted at the Twelfth Session of the Standing Committee of the Thirteenth National People's Congress on August 26, 2019);

11. Provisional Regulations of the People's Republic of China on Urban Land Use Tax (December 31, 2006, Decree of the State Council No. 483);

12. Opinions of the Ministry of Finance of the People's Republic of China on Reforming the Administrative Management Method of State-owned Asset Appraisal and Strengthening the Supervision and Administration of Asset Appraisal (GBF [2001] No. 102);

13. Notice on Issues Concerning Strengthening the Administration of State-owned Enterprise Asset Appraisal (GZWCQ [2006] No. 274);

14. Notice on Matters Concerning the Review and Approval of State-owned Enterprise Asset Appraisal Reports (GZCQ [2009] No. 941);

15. Administrative Measures for State-owned Asset Appraisal (Decree of the State Council No. 91);

16. Implementation Rules for the Administrative Measures for State-owned Asset Appraisal (GZBF [1992] No. 36);

17. Provisional Regulations on the Supervision and Administration of State-owned Enterprise Assets (Decree of the State Council No. 378, revised

by Decree of the State Council No. 588);

18. Administrative Measures for the Supervision and Administration of State-owned Enterprise Property Rights Transactions (Decree of the State-owned Assets Supervision and Administration Commission No. 32);

19. Provisional Measures for the Administration of State-owned Enterprise Asset Appraisal (Decree of the State-owned Assets Supervision and Administration Commission of the State Council No. 12);

20. Guiding Opinions on the Filing Work for State-owned Enterprise Asset Appraisal Projects (GZFCQ [2013] No. 64);

21. Law of the People's Republic of China on State-owned Enterprise Assets (Adopted at the Fifth Session of the Standing Committee of the Eleventh National People's Congress on October 28, 2008);

22. Administrative Measures for the Financial Supervision and Administration of the Asset Appraisal Industry (Decree of the Ministry of Finance of the People's Republic of China No. 86);

23. Notice on Matters Concerning the Agreement Transfer of State-owned Property Rights of Central Enterprises (GZFCQ [2010] No. 11);

24. Notice on Optimizing the Asset Appraisal Management of Central Enterprises (GZFCQG [2024] No. 8);

25. Administrative Measures for the Major Asset Reorganization of Listed Companies (CSRC Order No. 166, revised on March 20, 2020);

26. Implementation Rules for Non-public Issuance of Shares by Listed Companies (CSRC Order No. 73, revised on February 14, 2020);

27. Operational Rules for Transactions of State-owned Enterprise Assets (GZFCQG [2025] No. 17);

28. Other laws, regulations, and rules related to the appraisal work.

C. Basis of Appraisal Standards

1. Asset Appraisal Standards - Basic Standards (CQ [2017] No. 43);

2. Professional Ethics Standards for Asset Appraisal (CAS [2017] No. 30);

3. Professional Standards for Asset Appraisal - Asset Appraisal Procedures (CAS [2018] No. 36);

4. Professional Standards for Asset Appraisal - Asset Appraisal Report (CAS [2018] No. 35);

5. Professional Standards for Asset Appraisal - Asset Appraisal Engagement Contract (CAS [2017] No. 33);

6. Professional Standards for Asset Appraisal - Asset Appraisal Files (CAS [2018] No. 37);

7. Professional Standards for Asset Appraisal - Utilizing Expert Work and Related Reports (CAS [2017] No. 35);

8. Professional Standards for Asset Appraisal - Enterprise Value (CAS [2018] No. 38);

9. Professional Standards for Asset Appraisal - Appraisal Methods (CAS [2019] No. 35);

10. Guidelines for Business Quality Control of Asset Appraisal Institution (CAS [2017] No. 46);

11. Guiding Opinions on Asset Appraisal Value Types (CAS [2017] No. 47);

12. Guiding Opinions on Legal Ownership of Asset Appraisal Object (CAS [2017] No. 48);

13. Guidelines for State-owned Enterprise Asset Appraisal Reports (CAS [2017] No. 42).

D. Basis for Asset Ownership

1. Immovable Property Right Certificate and related property right declarations;

2. Contracts or vouchers for the acquisition of significant assets;

3. Other reference documents.

E. Pricing Basis

1. Notice of the Ministry of Finance and the State Taxation Administration on Comprehensively Launching the Pilot Program for Replacing Business Tax with Value-added Tax (CS [2016] No. 36);

2. Announcement of the Ministry of Finance, the State Taxation Administration, and the General Administration of Customs on Policies Regarding Deepening Value-added Tax Reform (Ministry of Finance, State Taxation Administration, General Administration of Customs Announcement 2019 No. 39);

3. Announcement on the Loan Prime Rate (LPR) Appraisal Reference Date Authorized by the National Interbank Funding Center;

4. 2025 Mechanical and Electrical Products Price Information Inquiry System;

5. Price information database of China United Assets Appraisal Group Co., Ltd.;

6. Future earnings forecast data provided by the Clients and other relevant parties in accordance with the law;

7. Other reference documents.

F. Other Reference Documents

1. Audit Report of Shenhua Coal Transportation and Marketing Co., Ltd. (Ernst & Young Hua Ming (2025) Zhuan Zi No. 80028119_A01) issued by the Ernst & Young Hua Ming LLP;

2. Enterprise Accounting Standards - Basic Standards (Ministry of Finance Order No. 33);

3. Enterprise Accounting Standards - Application Guide (CK [2006] No.18);

4. Enterprise Accounting Standard No. 1 - Inventories and 40 other

specific standards (CK [2006] No. 3);

13. Other reference documents.

VII. Appraisal Methodology

A. Introduction to Appraisal Methods

In accordance with the Professional Standards for Asset Appraisal - Enterprise Value (CAS [2018] No. 38) and Professional Standards for Asset Appraisal - Asset Appraisal Methods (CAS [2019] No. 35), when engaging in enterprise value appraisal, the applicability of three basic methods, namely, income approach, market approach, and asset-based approach, shall be analyzed, and the appropriate appraisal method is selected based on factors such as the purpose of appraisal, appraisal object, value type, conditions for

the application of appraisal methods, and the quality and quantity of data underlying the application of appraisal methods.

The income approach in enterprise value appraisal involves determining the value of the appraisal object by capitalizing or discounting expected returns. Asset appraisal professionals should appropriately assess the applicability of the income approach by considering the enterprise nature, asset scale, historical operating performance, predictability of future earnings, and the sufficiency of the appraisal data obtained.

The market approach in enterprise value appraisal involves determining the value of the appraisal object by comparing it with comparable listed companies or comparable transaction cases. Asset appraisal professionals should consider the applicability of the market approach based on the sufficiency and reliability of the comparable enterprises' operating and financial data obtained, and the number of comparable enterprises available for collection.

The asset-based approach in enterprise value appraisal involves determining the value of the appraisal object by appraising the value of identifiable on-balance sheet and off-balance sheet assets and liabilities, based on the Balance Sheet of the Appraised Entity on the Appraisal Reference Date.

B. Selection of Appraisal Method

The Purpose of Appraisal can be described as China Shenhua Energy Company Limited's proposed acquisition of 100% equity in Shenhua Coal Transport & Marketing Co., Ltd. held by China Energy Investment Corporation Co., Ltd. by issuing shares and paying cash.

The asset-based approach reflects the enterprise value from a construction perspective, providing a basis for enterprise operation, management, and assessment after the economic activity is realized. Therefore, the asset-based approach is selected for this appraisal.

The Appraised Entity possesses the foundation and conditions for going concern, and its future earnings and risks can be predicted and quantified. Therefore, the income approach can be adopted for this appraisal.

Before and after the Appraisal Reference Date, as recent transaction cases involving enterprises of comparable scale are unavailable, and there are few comparable listed companies with similar scale and business structure in the market, the market approach was not selected for this appraisal.

In summary, it is determined to adopt the asset-based approach and income approach for this appraisal.

C. Asset-based Approach

The asset-based approach involves determining the value of the appraisal object by appraising the value of identifiable assets and liabilities, both on and off the Balance Sheet of the Appraised Entity or operating unit as of the Appraisal Reference Date. Specifically, it involves calculating the enterprise value by summing the appraised value of various constituent assets and subtracting the appraised value of the liabilities.

The appraisal methods for assets and liabilities are presented below:

1. Current Assets

(1) Monetary assets

Monetary assets primarily consist of bank deposits.

Confirmation letters were sent for bank deposit accounts to verify the actual existence of bank deposits, and to check for any unrecorded bank deposits, examining the authenticity of outstanding items in the Bank Reconciliation Statement, and reviewing inflows after the Appraisal Reference Date. For monetary assets denominated in RMB, the Appraised Value is determined based on the verified book value. For foreign currency-based monetary assets, the Appraised Value is determined by multiplying the verified original currency amount by the exchange rate on the Appraisal

Reference Date.

(1) Notes Receivable

For the appraisal of notes receivable, the appraiser should verify the consistency of the subsidiary ledger with the general ledger and balance sheet balance, check for consistency with the detailed list, and review the consistency of the notes' face amount, transaction date, business content, and stated interest rate with the accounting records to confirm the authenticity and completeness of the notes receivable. Based on this, the appraisers should check whether the verified amounts across the ledger, statements, and detailed list are consistent, whether the notes receivable are recorded accurately, whether the amounts are precise, and make sure that no interest was unrecorded, so as to determine the Appraised Value using the verified book value.

(2) Accounts Receivable

For the appraisal of accounts receivable, the appraisers should verify the bookkeeping records, and sample a portion of original vouchers, and other relevant documents. They should confirm the authenticity of transactions, the age of accounts, business contents and business amounts, and performed confirmations to ensure consistent verification results across the ledger, statements, and detailed list. Based on the verification of accounts receivable, the appraisers should engage in specific analyses on the amount, duration, and reasons for outstanding debts, collection status, debtor's funds, creditworthiness, and operational management status by leveraging historical data and current investigative findings. The appraisal risk loss is then estimated based on the specific circumstances of the Appraised Entity.

For receivables and other amounts from/to related parties where there is sufficient reason to believe they are fully recoverable, the probability of appraisal risk loss is determined to be 0%;

For individually significant accounts receivable where the Appraised

Entity and the debtor have agreed upon a repayment plan, the appraisal risk loss is determined by the difference when the present value of future estimated cash flows is lower than the book value. For individually non-significant accounts receivable where the Appraised Entity and the debtor have not determined a repayment plan, the appraisal risk loss is estimated by referencing the method used in corporate accounting for calculating provision for bad debts.

The Appraised Value of accounts receivable is determined by deducting the appraisal risk loss from the verified book value of accounts receivable.

(3) Prepayments

For the appraisal of prepayments, the appraisers should verify bookkeeping records, examine original vouchers and relevant contracts, confirm the authenticity of transactions, the age of accounts, business contents, and business amounts. Confirmations should be obtained to prove that there is no anomaly. Based on the accurate verification of prepayments, and utilizing historical data and insights gathered from field surveys, the appraisers should specifically analyze the amounts, outstanding periods and reasons, collection status of payments, and the financial, credit, and operational management status of the debtors.

Upon verification, the amounts in the prepayment accounts, statements, and invoices are consistent. No instances were found where suppliers were bankrupt, dissolved, or unable to provide goods on time as per contract. Based on the accurate verification of prepayments, the appraisers determined the Appraised Value using the verified book value.

(4) Inventories

Inventories include solely finished goods (stock merchandise). No provision for inventory impairment has been made. The specific appraisal methods and procedures for inventories are described below:

1) Finished Goods

Finished Goods primarily consist of coal procurement costs and transshipment costs. The following appraisal methods are often adopted:

For coal procurement costs, the appraisers analyzed the investigation findings and information provided by the enterprise, determining the Appraised Value for finished goods by deducting sales expenses, all taxes, and certain product sales risk from the untaxed sales price;

Transshipment costs directly attributable to the corresponding coal primarily include uncapitalized port fees, shipping fees, and other related expenses incurred during trade. As the corresponding coal was appraised based on its selling price, this portion was appraised as 0;

Transshipment costs not directly attributable to the corresponding coal primarily include uncapitalized port fees, shipping fees, and other related expenses incurred during trade. This appraisal involved a spot check of vouchers and other relevant documentation, confirming the accuracy of the book value. For this portion, the Appraised Value was determined using the verified book value.

Appraised Value = Actual Quantity × Tax-Exclusive Selling Price × (1 - Product Sales Tax and Surcharge Rate - Sales Expense Rate - Operating Profit Margin × Income Tax Rate - Operating Profit Margin × (1 - Income Tax Rate) × r)

A. Tax-exclusive selling price is determined according to the sales contract price effective after the Appraisal Reference Date;

B. Product sales tax and surcharge mainly include urban construction tax and education surcharge, calculated based on value-added Tax.

C. The sales expense rate is calculated by averaging the rate of various sales expenses to sales revenue;

D. Operating Profit Margin = Operating Profit ÷ Operating Revenue;

E. The income tax rate is the actual income tax rate implemented by the enterprise.

F.r represents a specific rate. Given the inherent market risks and uncertainties associated with future product sales, this risk is determined based on the findings from the investigation on the Appraisal Reference Date and the sales realized after the Appraisal Reference Date. Specifically, for best-selling products, r is 0; for general sales products, r is 50%; and for barely salable products, r is 100%.

(5) Other current assets

For the appraisal of other current assets, the asset appraisers verified the consistency of the subsidiary ledger with the general ledger and balance sheet balances, checked for consistency with the detailed list of assets to be appraised, reviewed accounting records including transaction amounts, occurrence dates, and business content, and spot-checked original booking vouchers, relevant payment vouchers, and contracts to ascertain the authenticity and completeness of their accounting content. The asset appraisers ascertained the types of taxes, tax rates, payment systems, and other tax policies and expense conditions that the Appraised Entity was obligated to bear as of the Appraisal Reference Date. Based on verified accuracy, the Appraised Value was determined using the verified book value.

2. Long-term Equity Investments

For long-term equity investments, we first gathered evidence and verified the reasons for their formation, their book value, and actual status. We also reviewed investment agreements, resolutions of shareholders' meetings, articles of association, and relevant accounting records to ascertain the authenticity and completeness of these long-term investments.

For wholly-owned subsidiaries and controlled subsidiaries with a shareholding ratio of 50% or more, the overall assets of the invested entity at the Appraisal Reference Date were subjected to appraisal. The Appraised Value was then determined by multiplying the Appraised Value of the invested entity's net assets at the Appraisal Reference Date by the Appraised

Entity's shareholding ratio:

Appraised Value of Long-term Equity Investments = Appraised Value of Net Assets after Overall Appraisal of the Invested Entity × Shareholding Ratio

Specifically, if there is a discrepancy between paid-in capital and subscribed capital, then:

Appraised Value of Long-term Equity Investments = (Appraised Value of Shareholders' Equity of the Invested Entity + Unpaid Subscribed Capital Contribution Amount) × Subscribed Capital Contribution Ratio of the Shareholder - Unpaid Subscribed Capital Contribution Amount of the Shareholder

In determining the Appraised Value of long-term equity investments, the appraisers did not account for premiums or discounts resulting from factors such as controlling interest and minority equity, nor did they consider the impact of equity liquidity on the appraisal results.

3. Fixed Assets - Buildings and Structures

(1) Selection of Appraisal Methods

Based on the purpose of this appraisal and considering the structural characteristics and nature of use of the buildings and structures included in the appraisal scope, the appropriate appraisal methods for various buildings and structures were ultimately determined as follows:

①For assets such as commercial properties acquired by the enterprise or real estate that possesses the potential for independent transfer, the market approach is employed for its appraisal;

②Regarding the Daqin Railway line: On December 1, 2025, Shenhua Group conducted a technical appraisal of this asset and determined that it no longer held any utilization value. Therefore, the Appraised Value of this asset

is presented at its book value;

③ Regarding Room 1803, Building 4, Capital Normal University (Beijing): This property is a collectively funded and co-built residential property that Beijing Shenhua Changyun High-tech Coal Blending Co., Ltd. (hereinafter referred to as "Changyun") acquired from Capital Normal University (Beijing) (hereinafter referred to as CNU) in February 2000. At the time of purchase, the application was made in an individual's name, but Changyun actually paid the housing funds of RMB349,535 (with a building area of 65.95 m^2, RMB5,300/m^2). This property has always been school-owned property without a property certificate. In October 2005, when Changyun divested its assets, the accounting records for this property were transferred to Shenhua Coal Transport & Marketing Co., Ltd. In February 2025, Changyun and the CNU State-owned Assets Department confirmed that this property could not undergo property rights changes or other related procedures. For this appraisal, the appraised value of this property is presented at its book value;

④Regarding the following parking spaces, no relevant certificates of ownership were found upon verification. The Finance Department and Management Department jointly reviewed historical documents; however, the information obtained could not meet the conditions for appraisal due to the passage of time. Furthermore, due to changes in management structure and personnel turnover, no personnel with relevant knowledge of the situation were available. Therefore, the appraised value of these parking spaces is presented at their book value.

No.	Building Name	Location	Type	Time of Acquisition	Original Book Value (RMB)	Net Book Value (RMB)
1	Jiulong Garden	Beijing	Underground parking spaces	December 1, 2003	126,000.00	8,382.27
2	Jiulong Garden	Beijing	Underground parking spaces	December 1, 2003	126,000.00	8,382.27

Shenhua Coal Transport & Marketing Co., Ltd. Asset Appraisal Report Regarding China Shenhua Energy Company Limited's Proposed Acquisition of 100% Equity in Shenhua Coal Transport & Marketing Co., Ltd. Held by China Energy Investment Corporation Co., Ltd. by Issuing Shares and Paying Cash

No.	Building Name	Location	Type	Time of Acquisition	Original Book Value (RMB)	Net Book Value (RMB)

Total					**7,050,361.00**	**2,831,152.29**

(2) Introduction to Appraisal Methods - Market Approach

The market approach involves determining the objective and reasonable price or value of the appraisal object by comparing it with similar real estate that has been transacted recently as of the Appraisal Reference Date, and making appropriate adjustments to the known prices of these similar real estate. The calculation formula is expressed below:

P=P case*A*B*C*D*E

wherein: P: Appraised Value of the property under appraisal; P case: Price of comparable transaction;

A: Transaction condition adjustment coefficient; B: Transaction date adjustment coefficient;

C: Regional factor adjustment coefficient; D: Individual factor adjustment coefficient;

E: Equity status factor adjustment coefficient.

4. Intangible Assets - Others

(1) Patent rights

Common appraisal methods for patent rights include the market approach, income approach, and cost approach.

Given that the market for technology-based intangible assets in China is still in its nascent stages, and it is relatively difficult to collect relevant fair transaction data, the market approach is not applicable for the appraisal of technology-based intangible assets in this appraisal.

As a coal trading enterprise, the Appraised Entity's core earnings primarily depend on external macroeconomic factors such as coal market prices and coal trading volume. The technology-based intangible assets included in this appraisal cannot establish a stable, identifiable cash flow correlation between specific patent assets and future earnings, nor have they formed a corresponding relationship with the Appraised Entity's earnings. Their revenue-sharing situation remains uncertain; thus, the income approach is not applicable to this appraisal of technology-based intangible assets.

Therefore, the cost approach is adopted to perform asset appraisal on technology-based intangible assets.

Appraised Value = Replacement Cost × (1 - Intangible Assets Depreciation Rate)

Replacement Cost = R&D Costs + Reasonable Profit + Application and Registration Fees

R&D Costs: Including design fees, material costs, labor costs, and management fees.

Reasonable Profit: Calculated based on R&D costs, in accordance with the return on invested capital in the same industry.

Application and Registration Fees: Including official fees for the registration application, registration agent fees, and official fees for the registration authorization.

Depreciation Rate: Calculated using the remaining economic life prediction method, which is a method by which the appraisers determine the newness rate through predicting and judging the remaining economic life of the intangible assets. The calculation formula is expressed as:

Depreciation Rate = Used Years / (Used Years + Remaining Economic Life) × 100%

5. Deferred Income Tax Assets

Deferred income tax assets primarily comprise deductible temporary differences arising from the provision for bad debts on other receivables and impairment provisions for fixed assets. During the inventory check, the appraisers cross-referenced the subsidiary ledger with the general ledger and balance sheet balances, verified consistency with the detailed list of assets, and reviewed accounting records, including transaction amounts, dates of occurrence, and business descriptions, to confirm the authenticity and completeness of the deferred income tax assets. Based on this verification, the confirmed book value was established as the Appraised Value.

6. Liabilities

The Appraised Value is determined by verifying and confirming the actual debtor and amount of each liability after the realization of the appraisal

purpose, based on the liability items and amounts that the owner of the Property Rights is actually required to bear after the realization of the appraisal purpose.

D. Income Approach

1. Overview

According to the Professional Standards for Asset Appraisal - Enterprise Value, the income approach in enterprise value appraisal, also known as the discounted cash flow method, involves forecasting the future cash flows and their associated risks for an enterprise or a revenue-generating unit, selecting a corresponding discount rate, and then discounting and summing these future cash flows. The fundamental principle of the income approach is to estimate the future anticipated net cash flow of the assets and convert them into present value using an appropriate discount rate to derive the Appraised Value. The fundamental conditions for applying the income approach are described below: the enterprise possesses the basis and conditions for going concern; there is a relatively stable correlation between its operations and earnings; its future earnings and risks can be predicted and quantified. The primary challenge in utilizing the discounted cash flow method lies in forecasting future expected cash flows, as well as ensuring the objectivity and reliability of data collection and processing. When the forecast of future expected cash flows is relatively objective and fair, and an appropriate discount rate is adopted, the appraisal result will demonstrate strong objectivity.

2. Appraisal Ideas

Based on the findings of this due diligence and the asset composition and principal business characteristics of the Appraised Entity, the equity capital value of the Appraised Entity is appraised using its parent company statements. The fundamental appraisal approach for this appraisal is described as follows:

(1)For assets and principal businesses within the scope of the report, expected returns (net cash flow) are projected based on historical operating trends and business types, then discounted to derive the value of the operating assets;

(2)Current assets (liabilities) such as monetary assets, and dividends receivable (payable) existing on the Appraisal Reference Date, which are within the scope of the report but not included in the expected returns (net cash flow) forecast, as well as non-current assets (liabilities) like dormant or idle equipment, real estate, and construction in progress not recognized in profit and loss, are defined as redundant or non-operating assets (liabilities) existing on the Appraisal Reference Date, and their value is estimated separately;

(3)The value of long-term equity investments that are included within the scope of the financial statements but are not factored into the estimation of expected returns (net cash flow) are separately calculated;

(4)Summing the values of the aforementioned assets and liabilities yields the enterprise value of the Appraised Entity. After deducting the value of interest-bearing debt as of the Appraisal Reference Date, the equity capital (Shareholders' Equity) value of the Appraised Entity is obtained.

In determining the value of Shareholders' Equity, the appraisers have not considered premiums or discounts arising from factors such as controlling interest and minority equity, nor has the appraisers considered the impact of equity liquidity on the appraisal results.

3. Appraisal Model

(1) Basic model

The basic model for this appraisal is:

$$E = B - D \qquad (1)$$

wherein:

E: Shareholders' Equity (Net Assets) Value of the Appraised Entity;

B: Enterprise Value of the Appraised Entity;

D: Interest-Bearing Debt Value of the Appraised Entity;

$$B = P + I + C \quad (2)$$

wherein:

P: Operating Assets Value of the Appraised Entity;

I: Long-term Investment Value of the Appraised Entity on the Appraisal Reference Date;

C: Value of Surplus or Non-Operating Assets (Liabilities) of the Appraised Entity on the Appraisal Reference Date;

$$P = \sum_{i=1}^{n} \frac{R_i}{(1+r)^i} + \frac{R_{n+1}}{r(1+r)^n} \quad (3)$$

wherein:

R_i: Expected returns (Free Cash Flow) of the Appraised Entity in the i-th future year;

r: Discount rate;

n: The future operating period of the Appraised Entity;

$$C = C_1 + C_2 \quad (4)$$

C_1: The value of surplus or non-operating assets (liabilities) classified as current at the Appraisal Reference Date;

C_2: The value of surplus or non-operating assets (liabilities) classified as non-current at the Appraisal Reference Date.

(2) Income indicator

The enterprise's free cash flow is adopted as the income indicator for the Appraised Entity's operating assets, which is fundamentally defined as:

R= Net Profit + Depreciation and Amortization + After-tax Interest - Additional Capital (5)

Based on the Appraised Entity's operating history and future market development, its free cash flow for the future operating period is estimated. The value of the enterprise's operating assets is obtained by discounting and

summing the free cash flow over the future operating period.

(3) Discount rate

This appraisal adopts the weighted average cost of capital (WACC) model to determine the discount rate r.

$$r = r_d \times w_d + r_e \times w_e \quad (6)$$

wherein:

W_d: Industry average debt ratio;

$$w_d = \frac{D}{(E+D)} \quad (7)$$

W_e: Industry average equity ratio;

$$w_e = \frac{E}{(E+D)} \quad (8)$$

r_d: The after-tax interest rate on interest-bearing debt;

r_e: cost of equity capital; this appraisal determines the cost of equity capital r_e according to the Capital Asset Pricing Model (CAPM);

$$r_e = r_f + \beta_e \times (r_m - r_f) + \varepsilon \quad (9)$$

wherein:

r_f: Risk-free rate of return;

r_m: Market expected rate of return;

ε: The specific risk adjustment coefficient of the Appraised Entity;

β_e: The expected market risk coefficient for the equity capital of the Appraised Entity;

$$\beta_e = \beta_u \times (1 + (1-t) \times \frac{D}{E}) \quad (10)$$

β_u: The expected unlevered market risk coefficient for comparable companies;

$$\beta_u = \frac{\beta_t}{1+(1-t)\frac{D_i}{E_i}} \quad (11)$$

β_t: The expected average market risk coefficient for the stock (assets) of comparable companies;

$$\beta_t = 34\%K + 66\%\beta_x \quad (12)$$

wherein:

K: The average risk value of the stock market over a certain period, usually assumed K=1;

β_x: The historical average market risk coefficient for the stock (assets) of comparable companies;

D_i and E_i: The interest-bearing debt and equity capital of comparable companies, respectively.

4. Earnings Period

According to the Appraised Entity's Articles of Association, the business term of the enterprise is long-term. As the Appraised Entity was operating normally on the Appraisal Reference Date, there are no restrictions on the useful life of core assets affecting the enterprise's continued operation, nor on the enterprise's production and operation term or the investors' ownership term. Alternatively, such restrictions can be lifted, and the enterprise can operate in perpetuity through extensions. Therefore, it is assumed that the Appraised Entity will operate as a going concern beyond the Appraisal Reference Date, with a corresponding indefinite earnings period.

VIII. Implementation Process and Status of Appraisal Procedures

The entire appraisal work is divided into four stages:

A. Appraisal Preparation Stage

The Appraisal Preparation Stage was in early September 2025, and the main tasks of this stage are described below:

1. Project Negotiation and Acceptance of Project Engagement

In this stage, we understand the basic information of the Appraised Entity and the Appraisal Object involved in the proposed engagement, and clarify the Purpose of Appraisal, Appraisal Object, Scope of Appraisal, and Appraisal

Reference Date; Based on specific circumstances, including the purpose of appraisal and the transaction background, a comprehensive analysis and appraisal of professional competence, independence, and business risks are conducted, leading to the signing of an asset appraisal engagement contract.

2. Determination of the Appraisal Plan and Preparation of the Work Schedule

After thorough communication with the Clients and all relevant intermediaries for the project, and further confirming the fundamental aspects of the asset appraisal, as well as the Appraised Entity's assets and operating status, basic policies, laws, and regulations pertinent to the Appraised Entity's industry are collected, along with market operating conditions. Building upon this, a preliminary work plan is drafted, and an appraisal plan is formulated.

3. Submittal of the Document Checklist and Interview Outline

Based on the characteristics of the assets to be appraised, a targeted due diligence document checklist is submitted, including sample forms for asset lists and profit forecasts, requiring the Appraised Entity to undertake appraisal preparation work.

4. Guidance on Form Completion and Appraisal Data Preparation

We liaise with relevant staff of the Appraised Entity to guide them in preparing the necessary data and completing the relevant forms in accordance with asset appraisal requirements.

B. On-site Appraisal Stage

The project team's on-site work period is scheduled for mid-September 2025, with the following main tasks during this stage:

1. Preliminary understanding of the overall situation

We receive briefings from the Clients and relevant personnel of the Appraised Entity regarding the Appraised Entity's overall situation and the history and current status of the assets to be valued. This includes

understanding the Appraised Entity's historical evolution, financial system, operating status, and technical conditions of its fixed assets.

2. Reviewing and verifying materials

The declaration materials provided by the Appraised Entity are reviewed and authenticated. Property rights certificates for the assets to be valued are thoroughly collected and verified, and cross-referenced with the enterprise's relevant financial records. Any discrepancies identified are addressed and adjusted in coordination with the enterprise.

3. Key inventory check

Based on the declared materials, comprehensive inventory check and verification are conducted for the primary assets and operational and office premises. For the reported bank deposits and intercompany balances, bank statements and various business contracts are verified to confirm their authenticity and analyze associated risks. On-site inspections are performed for the declared physical assets. Concurrently, for buildings and structures, the management system and details of maintenance, renovation, and expansion are examined, and relevant documentation is collected. For leased premises, leasing contracts and other pertinent documents are reviewed.

4. Due diligence interview

Through due diligence and interviews with senior executives, we gain an understanding of the enterprise's cost and expense, and its future development trends are analyzed. For the profit forecast data declared by the enterprise, discussions are held with enterprise management personnel to reach a consensus on future development trends as much as possible. This is then verified and checked by inquiring about the principal business, gross profit situation, and other relevant aspects of enterprises in the same industry and field.

5. Determining appraisal methods

Based on the actual conditions and characteristics of the assets to be

valued, the specific asset appraisal model and methods are determined.

6. Estimation and appraisal

Based on the agreed-upon understanding, the appraisal model is determined, the appraisal results are calculated, and relevant written explanations are drafted.

C. Appraisal Summary Stage

To analyze and summarize the preliminary appraisal results for various assets and liabilities, and implement necessary adjustments, modifications, and improvements to the appraisal results.

D. Report Submission Stage

Based on the foregoing work, a preliminary asset appraisal report is drafted; following an initial review, opinions on the appraisal results are exchanged with the Clients. After an independent analysis of relevant opinions, revisions and adjustments are made in accordance with the Appraisal Institution's internal asset appraisal report review system and procedures, culminating in the issuance of the official asset appraisal report.

IX. Appraisal Assumptions

In this appraisal, the appraisers adhered to the following appraisal assumptions:

A. General Assumptions

1. Transaction Assumption

The transaction assumption posits that all assets to be valued are already in the process of transaction, and the appraiser performs appraisal based on simulated market conditions, including the transaction terms of the assets to be valued. The transaction assumption is one of the most fundamental prerequisite assumptions for asset appraisal.

2. Open Market Assumption

The open market assumption posits that for assets traded or intended to be traded in the market, both parties to the asset transaction are in equal positions and have the opportunity and time to obtain sufficient market information to make rational judgments regarding the asset's function, intended use, and transaction price. The open market assumption is predicated on the basis that assets can be openly bought and sold in the market.

3. Going Concern Assumption of the Enterprise

The going concern assumption for an enterprise is an appraisal premise made by treating the enterprise's entire assets as the appraisal object. This implies that the enterprise, as an operating entity, will continue its operations within its external environment in accordance with its business objectives. Enterprise management is responsible for and capable of fulfilling its duties; The enterprise operates lawfully and is able to generate appropriate profits to sustain its ongoing operational capability. Regarding the various operating assets of the enterprise, they are assumed to continue to be used in their current purpose, manner, scale, frequency, and environment, or to be utilized following certain modifications.

B. Special Assumptions

1. There are no significant changes in the current relevant laws, regulations, and policies, nor in the national macroeconomic situation; there are no significant changes in the political, economic, and social environment of the regions where all parties to this transaction are located;

2. There are no significant changes in the socio-economic environment in which the enterprise operates, nor in relevant interest rates, exchange rates, tax bases and tax rates, or policy-related levies;

3. The enterprise's future operational management team performs its duties diligently and maintains its existing operational management model;

4. The appraisal is based solely on the existing operational capacity as of the Appraisal Reference Date. No consideration is given to potential future expansions in operational capacity resulting from changes in management, operational strategies, or additional investments, nor to subsequent changes in production and operations that may occur;

5. All assets in this appraisal are predicated on their actual inventory as of the Appraisal Reference Date, with the current market prices of relevant assets based on prevailing domestic prices as of the Appraisal Reference Date;

6. This appraisal assumes that the fundamental and financial data provided by the Clients and the Appraised Entity are true, accurate, and complete;

7. The appraisal scope is strictly limited to the appraisal declaration forms furnished by the Clients and the Appraised Entity; it does not account for any potential contingent assets or contingent liabilities beyond the lists provided by the Clients and the Appraised Entity;

8. This appraisal assumes that, throughout the prospective forecast period, the categories and proportions of the Appraisal Object's various period expenses will not deviate significantly from their current structure but will maintain their recent trends, adjusting proportionally with shifts in operational scale;

9. Given the frequent and significant fluctuations in the enterprise's monetary assets, including bank deposits, during its operations, the appraisal of financial expenses in this report does not account for interest income from deposits or uncertain gains and losses such as exchange differences;

10. The values of the parameters used in this assessment do not take into account the impact of inflation.

11. There are no other force majeure or unforeseen factors that would have a significant adverse impact on the enterprise.

12. It is assumed that, subsequent to the appraisal Reference Date, the

Appraised Entity's cash inflows and outflows occur at a uniform rate.

Should the aforementioned conditions change, the appraisal results would generally become invalid.

X. Appraisal Conclusion

Based on the assessment of future development trends and business plans by the Clients and the enterprise's management, and in accordance with relevant laws, regulations, and asset appraisal standards, the total shareholders' equity of Shenhua Coal Transport & Marketing Co., Ltd. was valued as of the Appraisal Reference Date of July 31, 2025, using both the asset-based approach and the income approach. This appraisal followed established procedures, including inventory checks, on-site inspections, market surveys and confirmations, and assessment and estimation.

A. Appraisal Conclusion from Asset-based Approach

By leveraging the asset-based approach, the Appraisal Conclusion for the Appraised Entity as of the Appraisal Reference Date of July 31, 2025, is described below:

Total Assets had a book value of RMB383,729.73 ten thousand, and an appraised value of RMB398,305.33 ten thousand, resulting in an appraisal appreciation of RMB14,575.60 ten thousand, with an appreciation rate of 3.80%.

Liabilities had a book value of RMB312,202.72 ten thousand and an appraised value of RMB312,202.72 ten thousand, indicating no change in appraisal appreciation or depreciation.

Net assets had a book value of RMB71,527.01 ten thousand and an appraised value of RMB86,102.61 ten thousand, resulting in an appraisal appreciation of RMB14,575.60 ten thousand, with an appreciation rate of 20.38%. Please refer to the table below for details.

Table 12 Summary Table of Asset Appraisal Results

Appraisal Reference Date: July 31, 2025

Unit: RMB in ten thousand

Items		Book Value	Appraised Value	Appreciation or Depreciation	Appreciation Rate (%)
		A	B	C=B-A	D = C/A × 100
1	Current Assets	342,342.97	342,243.37	-99.60	-0.03
2	Non-current Assets	41,386.76	56,061.96	14,675.20	35.46
3	Including: Long-term Equity Investment	38,899.80	44,204.02	5,304.22	13.64
4	Fixed Assets	2,328.12	11,697.63	9,369.51	402.45
5	Other Non-current Assets	158.84	158.84	0.00	0.00
6	**Total Assets**	**383,729.73**	**398,305.33**	**14,575.60**	**3.80**
7	Current Liabilities	312,202.72	312,202.72	-	-
8	Non-current Liabilities	-	-	-	
9	**Total Liabilities**	**312,202.72**	**312,202.72**	**-**	**-**
10	**Net Assets (Shareholders' Equity)**	**71,527.01**	**86,102.61**	**14,575.60**	**20.38**

B. Appraisal Conclusion from Income Approach

By leveraging the income approach, the appraisal conclusion for the Appraised Entity as of the Appraisal Reference Date is presented as follows: The Shareholders' Equity had a book value of RMB71,527.01 ten thousand, an appraised value of RMB72,955.50 ten thousand, an appraisal appreciation of RMB1,428.49 ten thousand, and an appreciation rate of 2.00%.

C. Analysis of Differences in Appraisal Results

The total Shareholders' Equity value calculated in this appraisal using the income approach reaches RMB72,955.50 ten thousand, which is RMB13,147.11 ten thousand or 15.27% lower than the total Shareholders' Equity Value of RMB86,102.61 ten thousand calculated using the asset-based approach. The main reasons for the differences between the two appraisal methods are explained below:

1. The Asset-based Approach Appraisal uses the replacement cost of

assets as the value standard, reflecting the socially necessary labor consumed by asset investment (construction cost). This construction cost typically fluctuates with changes in the national economy;

2. The Income Approach Appraisal uses the expected returns of assets as the value standard, reflecting the operating capacity (profitability) of the assets. This profitability is typically influenced by various factors such as the macro economy, government control, and the effective utilization of assets.

In summary, this leads to a discrepancy between the two appraisal methods.

D. Selection of Appraisal Results

The Appraised Entity is a trading company specializing in import and export trade. The income approach is significantly influenced by national policies and group-level strategic planning. The asset-based approach reflects the fair market value of assets from a replacement cost perspective. Considering the specifics of this appraisal, the Appraised Entity provided comprehensive data on its assets and liabilities, and the appraisers also gathered the necessary external information for the asset-based approach. We performed a thorough inventory check and appraisal of the Appraised Entity's assets and liabilities. Consequently, the appraisal results derived from the asset-based approach are comparatively more reliable; therefore, this appraisal adopts the asset-based approach's appraisal results as the final Appraisal Conclusion.

Based on the above analysis, the value of the total Shareholders' Equity of Shenhua Coal Transport & Marketing Co., Ltd. as of the Appraisal Reference Date is determined to be RMB86,102.61 ten thousand.

XI. Instructions on Special Matters

A. Circumstances Involving Citation of Conclusions from Reports

Issued by Other Institutions.

None.

B. Incomplete Property Rights Documentation or Property Rights Deficiencies

1. As of the Appraisal Reference Date, the following real estate properties included in the Appraisal Scope have not yet obtained house ownership certificates or real estate property certificates:

Table 13 Real estate properties without house property rights certificates

No.	Building Name	Property Usage	Building Area (m^2)
1	Room 1803, Building 4, Capital Normal University (Beijing)	Residential Property	65.95
2	Jiulong Garden	Parking Space	1.00
3	Jiulong Garden	Parking Space	1.00
4	Jiulong Garden	Parking Space	1.00
5	Langqin Garden	Parking Space	1.00
6	Zizhu Garden	Parking Space	1.00
7	Huitong Garden	Parking Space	1.00

C. Circumstances where appraisal procedures are restricted or appraisal data is incomplete

For the following parking spaces, no relevant certificate of ownership was found upon verification. The Finance Department and Management

Department jointly reviewed historical documents; however, the information obtained was insufficient to meet the appraisal conditions due to passage of time. Additionally, due to changes in management structure and personnel turnover, there are no employees familiar with the relevant circumstances. In this appraisal, due to the lack of fundamental information for parking spaces, the Appraised Value is presented as the book value. This is brought to the attention of the report users.

No.	Building Name	Location	Type	Time of Acquisition	Original Book Value (RMB)	Net Book Value (RMB)

D. Outstanding legal and economic matters existing on the Appraisal Reference Date

As of the Appraisal Reference Date, the enterprise has the following outstanding litigation matters. This appraisal did not consider the impact of outstanding litigation on the Appraisal Conclusion.

No.	Plaintiff/Applicant	Defendant/Respondent	Subject Matter of Litigation (RMB in ten thousand)	Cause of Action	Litigation Claims (Brief Summary)	Adjudication/Arbitration Results to Date
1	Shenhua Coal Transport & Marketing Co., Ltd.	Datong Tongren Pharmaceutical Chain Limited Liability Company	23.25	Property Leasing Dispute	Request the court to order the defendant to pay the plaintiff RMB95,000 for rent from November 1, 2022, to October 31, 2023; a late payment penalty of RMB28,500 for overdue rent from November 1, 2022, to October 31, 2023; RMB62,465.75 for rent from November 1, 2023, to June 28, 2024; a late payment penalty of RMB18,739.73 for overdue rent from November 1, 2023, to June 28, 2024; and a late vacating penalty of RMB27,745.21 for failing to vacate the premises from June 29, 2024, to September 19, 2024, totaling RMB232,450.7; further request that the litigation costs for this case be borne by the defendant.	The court hearing has not yet commenced.

No.	Plaintiff/Applicant	Defendant/Respondent	Subject Matter of Litigation (RMB in ten thousand)	Cause of Action	Litigation Claims (Brief Summary)	Adjudication/Arbitration Results to Date
2	Chengtai Development (International) Co., Ltd.	Shenhua Coal Transport & Marketing Co., Ltd.	USD1,015,981.8 (approximately RMB7,111,873)	Dispute over Removal of Obstruction	Requesting the court to order the defendant to remove the obstruction, sign the transaction instructions, and assist the plaintiff in withdrawing the existing balance of USD1,015,981.8 (approximately RMB7,111,873) from the escrow account for the plaintiff, thereby restoring the plaintiff's rights; Requesting the court to order the defendant to bear all litigation costs and attorney fees for this case.	On October 21, 2025, the Beijing Haidian District People's Court rendered a first-instance judgment with the following outcomes: 1. The balance in the escrow account shall be co-owned proportionally by Chengtai and Shenhua, with Shenhua holding a 90% share and Chengtai holding a 10% share. 2. All other claims and counterclaims from all parties are rejected.

E. Nature, amount, and relationship with the Appraisal Object regarding guarantees, leasing, contingent liabilities (contingent assets), and other related matters

None.

F. Significant Subsequent Events

Subsequent events refer to significant matters occurring after the Appraisal Reference Date but prior to the issuance of the Appraisal Report.

No significant subsequent events of the company were identified.

G. Defects in the economic activity corresponding to This appraisal that may significantly impact the Appraisal Conclusion

None.

H. Other Matters Requiring Explanation

1. The legal liability of the appraiser and Appraisal Institution is to render professional judgments on the asset Value for the Purpose of Appraisal as described in this report, and does not extend to the appraiser and Appraisal Institution making any judgments regarding the economic activity corresponding to this Purpose of Appraisal. The asset appraisal process is, to a significant extent, dependent on the relevant information provided by the Clients and the Appraised Entity. Therefore, the appraisal work is predicated on the authenticity and legality of the economic activity documents, asset ownership documents, certificates, accounting vouchers, and legal documents provided by the Clients and the Appraised Entity.

2. During the appraisal process, the appraisers observed the exterior of the valued buildings and structures and, where feasible, inspected their interior finishes and usage, without conducting any structural or material tests.

3. The objective of the appraisers in performing asset appraisal services is to estimate the value of the Appraisal Object and render a professional opinion, without assuming responsibility for the decisions made by the relevant parties. The Appraisal Conclusion should not be considered a guarantee of the Realizable Price of the Appraisal Object.

4. The profit forecast of the Appraised Entity obtained by the Appraisal Institution forms the basis for the Income Approach Appraisal in this Appraisal Report. Regarding the profit forecast provided by the Appraised Entity, the appraisers conducted necessary investigations, demonstrations, analyses, and judgments, considering the outstanding orders as of the Appraisal Reference Date, as well as other supporting materials furnished by the Appraised Entity's business and financial departments. After multiple discussions with the Appraised Entity's Management and its major shareholders, and subsequent revisions and refinements by the Valued Entity, the Appraisal Institution accepted the relevant data from the Appraised Entity's profit forecast. The Appraisal Institution's use of the Appraised

Entity's profit forecast does not constitute a guarantee of the Appraised Entity's future profitability.

5. This Appraisal Conclusion represents the value of the total Shareholders' Equity of the Appraised Entity. The Appraiser has not considered the impact of factors such as equity liquidity, controlling interest, and minority equity.

6. The Clients and the Appraised Entity are responsible for the authenticity and completeness of the data, statements, and relevant information provided by the Appraised Entity, which fall within the scope of this appraisal.

7. The certificates of ownership and related information referenced in the Appraisal Report are provided by the Appraised Entity. The Clients and the Appraised Entity shall bear legal liability for their authenticity and legality.

8. Should the number of assets and pricing standards change during the validity period after the Appraisal Reference Date, the following principles shall apply:

(1) When the number of assets changes, the amount of assets shall be adjusted accordingly based on the original appraisal methods;

(2) When asset pricing standards change and materially affect the asset appraisal results, the Clients shall promptly engage a qualified asset appraisal institution to re-determine the Appraised Value.

(3) After the Appraisal Reference Date, the Clients shall give full consideration to and make corresponding adjustments for changes in the number of assets and pricing standards when establishing the actual pricing of the assets.

9. When the number of assets changes, the amount of assets shall be adjusted accordingly based on the original appraisal methods;

10. The Appraisal Scope is limited to the asset appraisal detailed schedule provided by the Clients and the Appraised Entity, and does not

encompass potential contingent assets and contingent liabilities beyond the lists provided by the Clients and the Appraised Entity.

11. Daqin Railway Wansheng Daqin Special Line: Original book value of RMB11,000,000.00, net book value of RMB7,589,147.23, with full impairment provision recognized. In 2002, Beijing Wansheng Daqin Coal Co., Ltd. owed coal payments to Shenhua Coal Transport & Marketing Co., Ltd. The court ruled that 55% equity in the Daqin Railway Wansheng Daqin Special Line would be used to offset the debt, with both parties retaining user rights. On December 1, 2025, Shenhua Group conducted a technical appraisal of this asset and determined that it had no further utilization value. For this appraisal, the appraised value of this asset is presented at its book value. This is brought to the attention of the report users.

12. Room 1803, Building 4, Capital Normal University (Beijing): Original book value of RMB351,249.70, net book value of RMB 151,931.97, with no impairment provision recognized. This property is a collectively funded and co-built residential property that Beijing Shenhua Changyun High-tech Coal Blending Co., Ltd. (hereinafter referred to as "Changyun") purchased in February 2000 from Capital Normal University of Beijing (hereinafter referred to as CNU). At the time of purchase, the application was made in an individual's name, but Changyun actually paid the housing funds of RMB349,535.00 (with a building area of 65.95 m^2, RMB5,300.00/m^2). This property has always been school-owned property without a property certificate. In October 2005, when Changyun divested its assets, the accounting records for this property were transferred to Shenhua Coal Transport & Marketing Co., Ltd. In February 2025, Changyun and the CNU State-owned Assets Department confirmed that procedures such as change in property rights could not be processed for this property. For this appraisal, the appraised value of this property is presented at its book value. This is brought to the attention of the report users.

XII. Instructions on Usage Restrictions of the Appraisal Report

1. This Appraisal Report shall only be used for the specific purpose and uses stipulated within this report. Concurrently, the appraisal conclusion of this appraisal reflects the current fair market price, determined according to open market principles for the valued entity under the purpose of this appraisal. It does not account for the impact on the appraisal price from potential future mortgages, guarantees, or additional payments that may be made by specific transacting parties. Furthermore, this report does not consider the impact on asset prices resulting from changes in national macroeconomic policies, natural forces, or other force majeure events. The appraisal conclusion will generally become invalid if the aforementioned conditions, the going concern principle followed in the appraisal, or other circumstances change. The Appraisal Institution shall not bear relevant legal liability for any invalidation of the Appraisal Results caused by changes in these conditions.

2. The precondition for the validity of this Appraisal Report is that this economic activity complies with the relevant provisions of national laws and regulations and has obtained approval from the relevant departments.

3. This Appraisal Report may only be used by designated users specified therein. The right to use this Appraisal Report belongs to the Clients. Without the Clients' permission, this Asset Appraisal Institution will not disclose it to others.

4. The Asset Appraisal Institution and its appraisers shall not be held liable if the Clients or other users of the Asset Appraisal Report fail to use it within the scope specified by laws, administrative regulations, and the Asset Appraisal Report itself.

5. No entities or individuals other than the Clients, the other users of the Asset Appraisal Report as stipulated in the Asset Appraisal Engagement

Contract, and the users of the Asset Appraisal Report as prescribed by laws and administrative regulations, shall be permitted to use the Asset Appraisal Report.

6. Without the consent and review of this Appraisal Institution, no part or all of the Appraisal Report may be excerpted, cited, or disclosed in public media, except where otherwise stipulated by laws and regulations or agreed upon by the relevant parties.

7. Users of the Asset Appraisal Report shall correctly understand and utilize the Appraisal Conclusion. The Appraisal Conclusion is not equivalent to the realizable price of the Appraisal Object, and the Appraisal Conclusion shall not be construed as a guarantee of the realizable price of the Appraisal Object.

8. Validity Period of the Appraisal Conclusion: In accordance with relevant asset appraisal laws and regulations, for asset appraisal reports pertaining to statutory appraisal engagements, the Clients must utilize the report only after completing the asset appraisal supervision and administration procedures as mandated by laws and regulations. The appraisal results are valid for one year, calculated from the Appraisal Reference Date of July 31, 2025 until July 30, 2026. If this period is exceeded, a new asset appraisal will be required.

XIII. Date of the Appraisal Report

The Date of Appraisal Report is December 16, 2025.

THE PROPOSED ACQUISITION BY CHINA SHENHUA ENERGY COMPANY LIMITED OF 100% EQUITY INTERESTS IN CHINA ENERGY PORT CO., LTD. HELD BY CHINA ENERGY INVESTMENT CORPORATION LIMITED BY ISSUING SHARES AND PAYING CASH

ASSET VALUATION REPORT

ZLPBZ [2025] No.[5360]

China United Assets Appraisal Group Co., Ltd.

December 16, 2025

STATEMENT

I. This Asset Appraisal Report is prepared in accordance with the Basic Standards for Asset Appraisal issued by the Ministry of Finance of the People's Republic of China, and the Practice Standards and Professional Ethics Standards for Asset Appraisal issued by the China Appraisal Society.

II. The Clients or other users of the Asset Appraisal Report shall use the Report in accordance with applicable laws and regulations, and within the scope of use specified herein. Should the Client or other users of the Asset Appraisal Report fail to do so, the Asset Appraisal Institution and its professional asset appraisers shall not be liable for any consequences arising therefrom.

The Asset Appraisal Report is exclusively used by the Client, other designated users as stipulated in the asset appraisal engagement contract, and users mandated by applicable laws and regulations. In addition, no other institution or individual is authorized to be a user of the Asset Appraisal Report.

The Asset Appraisal Institution and its asset appraisers advise users of this Asset Appraisal Report to accurately comprehend and use the appraisal conclusion. The appraisal conclusion should not be deemed as the realizable price of the appraisal object, nor should it be interpreted as a guarantee of the appraisal object's realizable price.

III. The truthfulness, legality, and completeness of the information provided by the Clients and other relevant parties are prerequisites for the appraisal conclusion to be valid. The list of assets and liabilities included in the appraisal scope, as well as the prospective financial information, ownership certificates, and other data required for the appraisal, have been

declared and confirmed by the Clients and the Appraised Entity through official seals or other means.

IV. The Asset Appraisal Institution and its asset appraisers have no existing or prospective interests in the Appraisal Object presented in the Asset Appraisal Report; and have no existing or prospective interests in the related parties, and are not biased towards them.

V. The asset appraisers have conducted field surveys of the Appraisal Object and the assets involved in the Asset Appraisal Report; has given due attention to the legal ownership status of the Appraisal Object and its related assets, inspected the legal ownership documentation for the Appraisal Object and its related assets, truthfully disclosed any issues identified, and requested the Clients and other relevant parties to optimize the property rights to satisfy the requirements for issuing the Asset Appraisal Report.

VI. The analyses, judgments, and results presented in the Asset Appraisal Report issued by the Asset Appraisal Institution are subject to the assumptions and limiting conditions stipulated therein. Users of the Asset Appraisal Report should thoroughly consider the assumptions, limiting conditions, instructions on special matters, and their impacts on the appraisal conclusion as specified within the Report.

VII. The Asset Appraisal Institution and its asset appraisers comply with applicable laws, regulations, and asset appraisal standards, adhere to the principles of independence, objectivity, and impartiality, and are legally responsible for the Asset Appraisal Report issued.

THE PROPOSED ACQUISITION BY CHINA SHENHUA ENERGY COMPANY LIMITED OF 100% EQUITY INTERESTS IN CHINA ENERGY PORT CO., LTD. HELD BY CHINA ENERGY INVESTMENT CORPORATION LIMITED BY ISSUING SHARES AND PAYING CASH

ASSET VALUATION REPORT

ZLPBZ [2025] No.[5360]

ABSTRACT

China United Assets Appraisal Group Co., Ltd. accepted the engagement of China Energy Investment Corporation Limited and China Shenhua Energy Company Limited to assess the market value of the entire shareholders' equity of China Energy Port Co., Ltd. as at the Appraisal Reference Date in relation to the economic activities of the proposed acquisition by China Shenhua Energy Company Limited of 100% equity interests in China Energy Port Co., Ltd. held by China Energy Investment Corporation Limited by issuing shares and paying cash.

The Valuation Target represents the entire shareholders' equity of China Energy Port Co., Ltd., and the scope of valuation covers all assets and related liabilities of China Energy Port Co., Ltd., including current assets, non-current assets and corresponding liabilities.

The Appraisal Reference Date is 31 July 2025.

The type of value under the valuation is market value.

The valuation is conducted on the premise of continued use and an open market, taking into account the actual circumstances of the Valuation Target. After comprehensively considering all kinds of factors that may affect the valuation, asset-based approach and income approach have been adopted for the overall valuation of China Energy Port Co., Ltd. followed by cross-checking and comparison. Considering the applicability of the valuation approaches and the need to satisfy the purpose of this valuation, the valuation results obtained by adopting the income approach were selected as the final conclusion of this valuation.

Based on the judgment of assessed entities and the company' management on the future development trend and business planning, after conducting valuation procedures such as checking and verification, on-site inspection, market research and inquiries, assessment and estimation, the valuation conclusion of the entire shareholders' equity of China Energy Port Co., Ltd. as at the Appraisal Reference Date of 31 July 2025 is as follows:

The book value of the entire shareholders' equity is RMB19,167.23 ten thousand , and the appraised value is RMB47,359.85 ten thousand, representing an appreciation of RMB28,192.62 ten thousand, with an appreciation rate of 147.09%.

When using the valuation conclusion, the users of this report are hereby reminded to pay attention to the special notes and material subsequent events set out herein.

According to the laws and regulations related to asset valuation, asset valuation reports involving valuation of business for legal compliance purposes shall only be used upon the performance of the supervisory and

administrative procedures regarding asset valuation by the Clients as required by law and regulations. The valuation conclusion shall be effective for a period of one year commencing from 31 July 2025 to 30 July 2026.

The above content is extracted from the full text of the Asset Valuation Report. For details of the valuation and correct understanding of the valuation conclusion, please read the full text of the Asset Valuation Report.

THE PROPOSED ACQUISITION BY CHINA SHENHUA ENERGY COMPANY LIMITED OF 100% EQUITY INTERESTS IN CHINA ENERGY PORT CO., LTD. HELD BY CHINA ENERGY INVESTMENT CORPORATION LIMITED BY ISSUING SHARES AND PAYING CASH

ASSET VALUATION REPORT

ZLPBZ [2025] No. [5360]

To China Energy Investment Corporation Limited and China Shenhua Energy Company Limited,

4. Status of Core Business

China Energy Port is a major initiative of China Energy to consolidate the achievements of the three-year action plan for state-owned enterprise reform, promote the creation of world-class demonstration enterprises, and advance the reform of state-owned capital investment companies.

As of the Reference Date, China Energy Port's main business is responsible for the coal unloading business, mechanized sampling business, and rapid coal quality inspection business at Huanghua Port and Tianjin Port, operating smoothly. For these three businesses, the enterprise recognizes revenue using the net method based on the upstream and downstream business contract revenue and costs. Among them, the coal quality rapid inspection business mainly serves the self-produced coal of China Energy within Huanghua Port and Tianjin Port, and the mechanized sampling business mainly serves the purchased coal at Huanghua Port and Tianjin Port. Overall, China Energy Port has formed a "dual-port" operation pattern with Huanghua Port as the core and Tianjin Port as a supplement, and the high-margin mechanized sampling and scaled coal unloading businesses jointly support the enterprise's good performance.

5. Significant Accounting Policies Adopted by the Company

The Accounting Standards for Business Enterprises – General Standards (Ministry of Finance Order No. 33, revised in July 2014) and 41 concrete standards including Accounting Standard for Business Enterprises No. 1 – Inventories issued by the Ministry of Finance on 15 February 2006 are adopted.

(IV) Relationship between the Clients and the Appraised Entity

China Energy Investment Corporation Limited, Principal I of this asset valuation, is the controlling shareholder of China Shenhua Energy Company Limited, Principal II, and China Energy Port Co., Ltd., the appraised entity; China Shenhua Energy Company Limited, Principal II, intends to acquire 100% equity interests in China Energy Port Co., Ltd., the appraised entity, held by China Energy Investment Corporation Limited, Principal I.

(V) Other Users of the Asset Valuation Report

The asset valuation engagement contract does not specify other report users.

Unless otherwise stipulated by the laws and regulations of the PRC, no organization or individual shall be a user of the valuation report by mere possession of this Asset Valuation Report unless they are confirmed as such by the valuation agency and the clients.

II. PURPOSE OF VALUATION

According to the 18th Minutes of the Chairman's Special Meeting of China Energy Investment Corporation Limited (August 8, 2025), China Shenhua Energy Company Limited intends to acquire 100% equity interests in China Energy Port Co., Ltd. held by China Energy Investment Corporation Limited in consideration of the issuance of shares and the payment of cash.

The purpose of this asset valuation is to reflect the market value of the entire shareholders' equity interests of China Energy Port Co., Ltd. as of the Appraisal Reference Date, providing value reference for the aforementioned economic activities.

III. TARGET AND SCOPE OF VALUATION

The Valuation Target is the entire shareholders' equity of China Energy Port Co., Ltd. The scope of valuation covers all assets and related liabilities of China Energy Port Co., Ltd. As of the Appraisal Reference Date, the parent company's audited statements showed total assets of RMB23,918.84 ten thousand, total liabilities of RMB4,751.61 ten thousand, and net assets of RMB19,167.23 ten thousand. Among these, current assets amounted to RMB15,733.00 ten thousand, non-current assets amounted to RMB8,185.84 ten thousand; current liabilities amounted to RMB4,713.28 ten thousand, and non-current liabilities amounted to RMB38.33 ten thousand.

The data regarding the abovementioned assets and liabilities was extracted from the balance sheet of China Energy Port Co., Ltd. as at 31 July 2025 audited by Ernst & Young Hua Ming LLP, based on which the valuation was conducted.

The Valuation Target and scope of valuation are in line with those involved in the economic activities.

(I) Information of major assets

As of the Appraisal Reference Date, the total assets in the parent company statements of China Energy Port Co., Ltd. amounted to RMB23,918.84 ten thousand. Major assets include current assets, long-term equity investments, fixed assets, construction in progress, intangible assets and right-of-use assets. As of the Appraisal Reference Date, the

appraised entity's assets were not mortgaged or pledged.

Among them:

1. Long-term equity investments

Long-term equity investments are the appraised entity's equity investments in China Energy (Taizhou) Harbour Administration Co., Ltd.

Table 4 List of Long-term Equity Investments

Unit: RMB

No.	Name of the Investee	Investment Date	Investment Cost	Shareholding Percentage	Book Value		
					Original Book Value	Impairment Provision	Net Book Value
1	China Energy (Taizhou) Harbour Administration Co., Ltd.	2024-08	35,000,000.00	70%	35,000,000.00	-	35,000,000.00

2. Fixed assets

All fixed assets are electronic equipment, mainly research and development equipment, computers, projectors, etc., all of which are in normal use.

3. Construction in progress

Construction in progress includes the ongoing and uncompleted phase I project of China Energy Hainan Ledong Port , the construction project of intelligent coal quality control system at Huanghua Port (Coal Port Area), and the Taizhou project of China Energy Port Co., Ltd. The book value mainly represents the preliminary expenses of the projects.

4. Intangible assets

Intangible assets are externally purchased customized office software for the Port Finance Smart Management Cloud Platform , which is in normal use.

5. Right-of-use assets

The right-of-use asset refers to the enterprise's paid lease of the 8th and 9th floors of the Port Development Building and the conference center of its annex building in Canghai Road, Cangzhou Bohai New Area from its related party, China Energy Huanghua Harbour Administration Co., Ltd., used for office operations. The lease term is from 1 January 2023, to 31 December 2025.

(II) Information on intangible assets recorded or unrecorded in the books declared by the enterprise

The intangible assets declared by the enterprise for valuation are office software recorded in the books, which is the Port Finance Smart Management Cloud Platform purchased by the enterprise. As of the Appraisal Reference Date, there are no unrecorded intangible assets in the scope of the enterprise's declaration.

(III) Type and quantity of off-balance sheet assets declared by the enterprise

As of the Appraisal Reference Date of 31 July 2025, there are no off-balance sheet assets in the scope of the enterprise's declaration for valuation.

(IV) Type, quantity and book value of assets involved in making reference to (utilizing) the conclusions of reports issued by other institutions

The book values of all assets and liabilities on the Appraisal Reference Date in this Asset Appraisal Report are determined based on the audit results of the Audit Report of China Energy Port Co., Ltd. (Ernst & Young Hua Ming (2025) Zhuan Zi No. 80028105_A01) issued by the Ernst & Young Hua Ming LLP on December 16, 2025, with a standard unqualified opinion. The valuation was conducted on the basis of the audit on the company.

In addition, there is no reference to (utilization of) the conclusions of reports issued by other institutions.

IV. TYPE OF VALUE

Based on the purpose of this valuation, the value type of this valuation is defined as market value.

Market value refers to the estimated amount of the value of normal and fair transactions of the Valuation Target on the Appraisal Reference Date when the willing buyer and willing seller act rationally without any coercion.

V.APPRAISAL REFERENCE DATE

The Reference Date for the asset valuation of this project is 31 July 2025.

This Reference Date is determined by the Clients taking into consideration the amount of assets, workload, estimated time required, compliance and other factors of the appraised entity.

VI. BASIS OF VALUATION

The basis of valuation on which this asset valuation was conducted mainly includes the basis of economic activities, the basis of laws and regulations, the basis of valuation criteria, the basis of asset ownership, as

well as the pricing basis used in the valuation and other reference information, as follows:

(I) Basis of economic activities

18th Minutes of the Chairman's Special Meeting of China Energy Investment Corporation Limited (August 8, 2025)

(II) Basis of laws and regulations

1. The Asset Appraisal Law of the People's Republic of China (passed at the 21st session of the 12th Standing Committee of the National People's Congress on 2 July 2016);
2. The Company Law of the People's Republic of China (amended for the second time at the 7th session of the 14th Standing Committee of the National People's Congress on 29 December 2023);
3. The Civil Code of the People's Republic of China (passed at the 3rd session of the 13th National People's Congress on 28 May 2020);
4. The Law of the People's Republic of China on the State-Owned Assets of Enterprises (passed at the 5th session of the 11th Standing Committee of the National People's Congress on 28 October 2008);
5. The Enterprise Income Tax Law of the People's Republic of China (passed at the 7th session of the 13th Standing Committee of the National People's Congress on 29 December 2018);
6. The Securities Law of the People's Republic of China (amended for the second time at the 15th session of the 13th Standing Committee of the National People's Congress on 28 December 2019);
7. Provisional Regulations of Value Added Tax of the People's Republic of

China (Decree No. 691 of the State Council, passed at the 191st executive meeting of the State Council on 30 October 2017);

8. Detailed Rules for the Implementation of the Provisional Regulations on Value Added Tax of the People's Republic of China (Decree No. 50 of the Ministry of Finance and State Administration of Taxation);

9. Notice on Several Issues Concerning the National Implementation of Value-Added Tax Reform (Cai Shui [2008] No. 170);

10. Notice on Implementing the Pilot Program of Replacing Business Tax with Value-Added Tax in an All-round Manner (Cai Shui [2016] No. 36);

11. Announcement on Relevant Policies for Deepening the Value-Added Tax Reform (Announcement No. 39 of 2019 of the Ministry of Finance, the State Administration of Taxation and the General Administration of Customs);

12. Measures for the Administration of State-owned Assets Appraisal (Issued under Decree No. 91 of the State Council on 16 November 1991, revised in accordance with the Decision of the State Council on Amending and Repealing Certain Administrative Regulations (Decree No. 732 of the State Council) on 29 November 2020);

13. Detailed Rules for the Implementation of the Administrative Measures for State-owned Assets Assessment (Guo Zi Ban Fa [1992] No. 36);

14. Interim Regulations on the Supervision and Management of State-owned Assets of Enterprises (Decree No. 378 of the State Council, revised in 2019);

15. Interim Measures on the Administration of Assessment of State-owned Assets of Enterprises (Decree No. 12 of the State-owned Assets Supervision and Administration Commission of the State Council, 25 August 2005);

16. Notice on Issues Relating to Strengthening the Administration of State-owned Assets Appraisal of Enterprises (Guo Zi Wei Chan Quan [2006] No. 274);

17. Circular on Matters regarding the Review of the Valuation Reports on State-owned Assets of Enterprises (Guo Zi Chan Quan [2009] No. 941);

18. Notice on Issuing the Guidelines for the Filing of Enterprises' State-owned Assets Appraisal Projects (Guo Zi Fa Chan Quan [2013] No. 64);

19. Measures for the Supervision and Administration of the Transactions of State-Owned Assets of Enterprises (Decree No. 32 of the SASAC of the State Council and the Ministry of Finance, 2016);

20. Notice on Matters related to Agreement-based Transfer of the State-owned Property Rights of Central Enterprises (Guo Zi Chan Quan Fa [2010] No. 11);

21. Measures for the Supervision and Administration of State-Owned Shares of Listed Companies (Decree No. 36 of the State-owned Assets Supervision and Administration Commission, the Ministry of Finance and the China Securities Regulatory Commission);

22. Other laws, regulations and rules related to the valuation work.

(III) Basis of valuation criteria

1. Basic Standards for Asset Valuation (Cai Zi [2017] No. 43);

2. Code of Ethics for Asset Valuation (CAS [2017] No. 30);

3. Practice Standards for Asset Valuation – Asset Valuation Procedures (CAS [2018] No. 36);

4. Practice Standards for Asset Valuation – Asset Valuation Approaches (CAS [2019] No. 35);

5. Guiding Opinions on Types of Value under Asset Valuation (CAS [2017] No. 47);

6. Practice Standards for Asset Valuation – Asset Valuation Report (CAS [2018] No. 35);

7. Practicing Standards for Asset Valuation – Corporate Values (CAS [2018] No. 38);

8. Guidelines for Valuation Reports on State-owned Assets of Enterprises (CAS [2017] No. 42);

9. Practice Standards for Asset Valuation – Asset Valuation Engagement Contract (CAS [2017] No. 33);

10. Practice Standards for Asset Valuation – Asset Valuation Files (CAS [2018] No. 37);

11. Guidelines for Quality Control of Business of Asset Valuation Agency (CAS [2017] No. 46);

12. Guiding Opinions on Legal Ownership of Asset Valuation Target (CAS [2017] No. 48);

13. Practicing Standards for Asset Valuation – Engagement of Experts and Relevant Reports (CAS [2017] No. 35);

14. Guidelines for Asset Evaluation Experts No. 8 – Verification in Asset Valuation (CAS [2019] No. 39);

15. Other standards related to the valuation work.

(IV) Basis of asset ownership

1. Major asset purchase contracts or evidences;

2. Other reference materials.

(V) Basis of price determination

1. The benchmark exchange rate of RMB announced by the State Administration of Foreign Exchange on the Reference Date;

2. The announcement on loan prime rate (LPR) on the Reference Date promulgated by the National Interbank Funding Center under authorization published by the People's Bank of China;

3. Information on forecast of future earnings provided by the clients and other concerned parties according to the laws;

4. Relevant information from the price information database of China United Assets Appraisal Group Co., Ltd.;

5. Important business contracts and information;

6. Other reference materials.

(VI) Other reference materials

1. Audit Report of China Energy Port Co., Ltd. (Ernst & Young Hua Ming (2025) Zhuan Zi No. 80028105_A01) issued by the Ernst & Young Hua Ming LLP on December 8, 2025;

2. iFinD Finance Terminal;

3. Investment Valuation (by Damodanran (US), translated by Lin Qian (Canada), published by Tsinghua University Press);

6. 41 specific standards, including Accounting Standards for Business Enterprises – General Standards (Decree No. 33 of the Ministry of Finance, announced by the Ministry of Finance on 15 February 2006 and amended in July 2014) and Accounting Standards for Business Enterprises No.1 – Inventory;

7. Relevant information on the websites of China Securities Regulatory Commission, Shanghai Stock Exchange and Shenzhen Stock Exchange;

8. Other reference information.

VII. VALUATION APPROACHES

(I) Introduction to Valuation Approaches

Pursuant to the provisions of the Asset Valuation Practicing Standards – Enterprise Value (CAS [2018] No. 38) and the Asset Valuation Practicing Standards – Asset Valuation Approaches (CAS [2019] No. 35), when the enterprise valuation business is performed, the applicability of the three basic approaches, namely the income approach, the market approach and the asset-based approach, shall be analyzed and a valuation approach shall be selected based on the purpose of valuation, the Valuation Target, the type of value, the applicable conditions of the valuation approaches, and the quality and quantity of data relied upon for the application of the valuation approaches.

The income approach for enterprise valuation refers to the valuation approach that determines the value of a Valuation Target by capitalising or

discounting its expected income. Professional valuers shall appropriately consider the applicability of the income approach based on factors such as the nature of the enterprise, asset scale, historical operating conditions, predictability of future earnings, and the adequacy of the valuation information obtained.

The market approach for enterprise valuation refers to the valuation approach that compares the Valuation Target with comparable listed companies or comparable transaction cases to determine the value of the Valuation Target. Professional valuers shall consider the applicability of the market approach based on the sufficiency and reliability of the comparable enterprises' operating and financial data obtained and the number of comparable enterprises available.

The asset-based approach for enterprise valuation refers to the valuation approach that determines the value of the Valuation Target by appraising the value of its various identifiable assets and liabilities on the balance sheet and off-balance sheet, with reference to the balance sheet of the appraised entity as at the Appraisal Reference Date.

(II) Selection of Valuation Approaches

The purpose of this valuation is the acquisition of 100% equity interests in China Energy Port Co., Ltd. held by China Energy Investment Corporation Limited by way of the proposed issuance of shares and payment in cash by China Shenhua Energy Company Limited.

The asset-based approach reflects the value of the enterprise from the perspective of enterprise construction and provides a basis for the operation management and assessment of the enterprise after the economic activities have been completed, therefore the asset-based approach is selected for the valuation.

The appraised entity has the foundations and conditions to continue as a

going concern, the future income and risk of which can be forecasted and quantified, and therefore the income approach can be selected for the valuation.

Given that recent transaction cases involving enterprises of the same scale are unavailable before and after the Appraisal Reference Date, and there are relatively few comparable listed companies on the market with the same scale and business structure, the market approach is not adopted for this valuation.

In the light of the foregoing, it is determined that the asset-based approach and the income approach shall be adopted for the valuation.

(III) Asset-Based Approach

The asset-based approach refers to the valuation approach that determines the value of the Valuation Target by appraising the value of its various identifiable assets and liabilities on the balance sheet and off-balance sheet, with reference to the balance sheet of the appraised entity or operating entity as at the Appraisal Reference Date, that is, the approach of calculating the enterprise value by adding up the appraised value of assets which are the various elements that constitute the enterprise and deducting the appraised value of liabilities.

Set forth below are the valuation approaches for various assets and liabilities:

1. Current assets

(1)Monetary funds

Monetary funds are entirely bank deposits. For this valuation, confirmation letters in respect of bank deposit accounts were sent to certify the authenticity of the bank deposits, and checks were also conducted for any unrecorded bank deposits, the authenticity of outstanding accounts in the "bank deposit balance reconciliation statements" and the income subsequent

to the Appraisal Reference Date. The appraised value is determined at the verified book value of RMB bank deposits.

(2)Accounts receivable

For the valuation of accounts receivable, the valuers understood the existence and completeness of the accounts receivable. Based on the verification of their accuracy, and the information obtained from historical data and on-site due diligence, specific analysis was conducted on the amount, time and reason for the outstanding accounts, recovery status, funds, credit, and current conditions of operation and management of the debtors, and other relevant matters. After reviewing that the factors such as probability of default, loss given default, and exposure at default considered by the enterprise in calculating expected credit losses comply with relevant regulatory requirements, and after full discussion with the relevant personnel of the enterprise and the certified public accountant, the valuation risk loss was calculated with reference to the calculation method of loss provision for the enterprise accounting.

The amount of the valuation risk loss is determined in accordance with the aforementioned valuation approach for determining the enterprise's expected credit losses, and the provision for bad debts for this valuation is nil. The appraised value is determined by the total amount of accounts receivable less the amount of the valuation risk loss.

(3)Prepayments

For the valuation of prepayments, the valuers, based on the verification of their accuracy and the information obtained from historical data and on-site due diligence, specifically analyzed the amount, time and reason for the outstanding accounts, recovery status, funds, credit, and current conditions of operation and management of the debtors, and assessed whether the debtor had become bankrupt, completed de-registration, or was unable to provide goods or services on time as stipulated in the contract. In the absence of the

above-mentioned anomalies, the verified book value is determined as the appraised value.

(4)Other current assets

For the valuation of other current assets, the valuers verified whether the valuation schedules match the financial statements, and reviewed accounting records such as payment amount, time of occurrence, and business content to confirm the authenticity and completeness of the assets. Based on the verification of their accuracy, the appraised value is determined at the verified book value.

2. Long-term equity investment

For long-term equity investment, evidence was first obtained and verified regarding the reason for the long-term investment, its book value and actual conditions, and the investment agreement(s), resolutions of the shareholders' general meeting(s), articles of association, and relevant accounting records were reviewed to confirm the authenticity and completeness of the long-term investment.

For controlling subsidiaries with more than 50% shareholding, the overall assets of the investee as at the Appraisal Reference Date were appraised, and the appraised value was determined by multiplying the appraised value of the net assets of the investee at the Appraisal Reference Date by the shareholding percentage of the appraised entity:

Appraised value of long-term equity investment = appraised value of net assets of the investee after overall appraisal × shareholding percentage

In this valuation, the valuer has not considered premiums or discounts arising from factors such as controlling or minority interests, and the impact of equity liquidity on the valuation results has not been considered when determining the appraised value of long-term equity investment.

3. Fixed Assets – Equipment

According to the purpose of this valuation, the replacement cost

approach is adopted mainly for valuation on sustainable use basis based on the market price, in combination with the characteristics of the equipment included in the scope of valuation and the information collected.

(1)Valuation of Electronic Equipment

1) Determination of full replacement price of electronic equipment

Based on local market information and recent market prices available on Zhongguancun Online and PConline, the price of electronic equipment as at the Appraisal Reference Date is determined. In general, manufacturers or agents provide free transportation and installation and commissioning, and the full replacement price is determined based on the purchase price excluding tax:

Full replacement price (excluding tax) = Purchase price – deductible value-added tax

Deductible value-added tax = Purchase price/1.13 × 13%

2) Newness rate of electronic equipment

Newness rate = [remaining useful life ÷ (used life + remaining useful life)] × 100%

3) Determination of appraised value

Appraised value = full replacement price × newness rate of electronic equipment

4. Construction in progress

Considering the characteristics of the construction in progress under this valuation, the cost approach is adopted for the valuation, targeting the type and specific conditions of the construction in progress.

When applying the cost approach to the valuation of construction in progress, the valuers inquired about relevant contracts and invoices, and understood the progress and payment status of the project. Through the verification of the book assets of the Valuation Target and in combination with the actual progress of the construction in progress, the payment of the

construction in progress was determined. After verification and on-site inspection, it was confirmed that the accounts of the Valuation Target are consistent with the actual assets, and the expenses incurred are reasonable, authentic, and meet the capitalization conditions.

For projects with a short reasonable construction period, where the change in the replacement cost of the project is insignificant, the appraised value is determined at the verified book value for valuation, provided that the book value of the construction in progress is verified to be correct; for in-progress projects that commenced long before the Appraisal Reference Date (with a reasonable construction period exceeding six months), capital costs shall be taken into consideration. When calculating capital costs, unreasonable construction periods shall be excluded, and the calculation is determined based on the reasonable construction period of the construction in progress and the even investment of capital.

5. Right-of-use assets

The accounting content of right-of-use assets mainly refers to the right-of-use assets formed by the leasing of properties by the asset entities.

Right-of-use assets refer to the right of the lessee to use the leased assets during the lease term. The enterprise accounts for and recognises right-of-use assets and lease liabilities in accordance with the Accounting Standards for Business Enterprises No. 21 – Leases (Revised).

The valuers verified the general ledger, detailed ledgers, and accounting statements, and examined valuation schedules of the enterprise, and reviewed the relevant original receipts and lease contracts. An analysis was conducted on the initial measurement of each leased asset and the accuracy and reasonableness of the amortisation amount, which complies with the accounting regulations of the lease accounting standards. The book value reasonably reflects the equity value of the relevant right-of-use assets enjoyed by the enterprise as at the Appraisal Reference Date. Therefore, the appraised

value in this valuation is determined at the verified book value.

6. Intangible assets

Intangible assets are comprised of software only. For purchased software, the valuers reviewed the relevant supporting documents, understood the composition of the original book value, the method and period of amortisation, and reviewed the original contracts. Verification showed that the amounts in the accounts and statements were consistent. Since the software is customised, this valuation refers to the PPI Index (Computer, Communication and other Electronic Equipment Manufacturing) and its original book value to determine its full replacement price, and the appraised value is determined by deducting the software upgrade and modification expenses from the full replacement price (excluding tax).

7. Liabilities

The actual debtors and amounts of various liabilities were checked and verified upon realization of the valuation purpose, and the appraised value is determined based on the actual items and amounts of liabilities to be borne by the property owners upon the realization of the valuation purpose.

(IV) Income Approach

1. Overview

Pursuant to the Asset Valuation Practicing Standards – Enterprise Value, the income approach for enterprise valuation, also known as the discounted cash flow method, refers to the valuation approach that determines the value by forecasting the future cash flow and its risks for the enterprise or a specific revenue-generating unit, selecting a matching discount rate, and summing up the discounted future cash flows. The basic idea of the income approach is to derive the appraised value by estimating the future expected net cash flow of the assets which are then discounted to the present value with an appropriate discount rate. The basic conditions for applying the income approach are: the

enterprise has the foundations and conditions to continue as a going concern; there is a stable corresponding relation between its operation and income; and the future income and risk can be forecasted and quantified. The greatest difficulty in using the approach of discounted cash flow is to predict the expected future cash flow, and the objectivity and reliability of data collection and processing. If the forecast of expected future cash flow is reasonably objective and fair and the discount rate is reasonable, the appraisal result will be objective.

2. Valuation concept

This valuation estimates the value of the appraised entity's equity capital using its standalone financial statements according to the due diligence results and the asset composition and characteristics of principal operations of the appraised entity. The basic concept for the valuation is as follows:

(1)For the assets and principal business included in the scope of the financial statements, the expected return (net cash flow) was estimated in accordance with the trend of changes in historical operating conditions and business type and discounted to arrive at the value of the operating assets;

(2)For current assets (liabilities) such as monetary funds, dividends receivable (payable) existing at the Reference Date, and non-current assets (liabilities) such as dormant or idle equipment, real estate and construction in progress for which no profit or loss has been taken into account, which are included in the scope of the financial statements but not considered in the forecast of expected earnings (net cash flow), they are defined as surplus or non-operating assets (liabilities) existing at the Reference Date and their value is estimated separately;

(3)For long-term equity investment included in the scope of the financial statements but not considered in the estimation of expected earnings (net cash flow), their value is estimated separately;

(4)The enterprise value of the appraised entity is arrived at by the sum

of values of the abovementioned assets and liabilities, and the value of equity capital (entire shareholders' equity interests) of the appraised entity is arrived at after deducting the value of interest-bearing debts as at the Reference Date.

When determining the value of the entire shareholders' equity interests, the valuer has not considered premiums or discounts arising from factors such as controlling or minority interests, and the impact of equity liquidity on the valuation results has not been considered.

3. Valuation model

(1)Basic Model

The basic model for this valuation was:

$$E = B - D \quad (1)$$

In the formula:

E: Value of entire shareholders' equity interests (net assets) of the appraised entity;

B: Enterprise value of the appraised entity;

D: Value of interest-bearing debts of the appraised entity;

$$B = P + I + C \quad (2)$$

In the formula:

P: Value of the operating assets of the appraised entity;

I: Value of the long-term investment of the appraised entity as at the Reference Date;

C: Value of surplus or non-operating assets (liabilities) existing at the Reference Date of the appraised entity;

$$P = \sum_{i=1}^{n} \frac{R_i}{(1+r)^i} + \frac{R_{n+1}}{r(1+r)^n} \quad (3)$$

In the formula:

R_i: Expected earnings (free cash flow) in the i year in the future of the appraised entity;

r：Discount rate;

n：Future operating period of the appraised entity;

$$C = C_1 + C_2 \quad (4)$$

C_1：Value of current surplus or non-operating assets (liabilities) existing on the Reference Date;

C_2：Value of non-current surplus or non-operating assets (liabilities) existing on the Reference Date.

(2)Income Indicators

In this valuation, the free cash flow of an enterprise was used as the income indicator for the operating assets of the appraised entity. Its basic definition is as follows:

R =Net profit + depreciation and amortization + interest after tax - additional capital + reversal of VAT to be deducted (5)

The expected free cash flow of the appraised entity in the future operating period was estimated according to its operation history, market development in the future and etc. The free cash flow over the future operating period was discounted and summed to arrive at the operating asset value of the appraised entity.

(3)Discount Rate

In this valuation, the weighted average cost of capital model (WACC) is used to determine the discount rate r

$$r = r_d \times w_d + r_e \times w_e \quad (6)$$

In the formula:

W_d：Debt ratio of the appraised entity;

$$w_d = \frac{D}{(E+D)} \quad (7)$$

W_e：Equity ratio of the appraised entity;

$$w_e = \frac{E}{(E+D)} \quad (8)$$

r_d: Interest rate of interest-bearing debts after income tax;

r_e: Equity capital cost r_e, which is determined by the Capital Asset Pricing Model (CAPM) in this valuation;

$$r_e = r_f + \beta_e \times (r_m - r_f) + \varepsilon \quad (9)$$

In the formula:

r_f: Risk-free return rate;

r_m: Expected market yield;

ε: Risk adjustment coefficient based on characteristics of the appraised entity;

β_e: Expected market risk coefficient of equity capital of the appraised entity;

$$\beta_e = \beta_u \times (1 + (1 - t) \times \frac{D}{E}) \quad (10)$$

β_u: Expected leverage-free market risk coefficient of the comparable company;

$$\beta_u = \frac{\beta_t}{1+(1-t)\frac{D_i}{E_i}} \quad (11)$$

β_t: Expected market average risk coefficient of the shares (assets) of the comparable company;

$$\beta_t = 34\%K + 66\%\beta_x \quad (12)$$

In the formula:

K: Average risk value of the stock market during a certain period, which is generally assumed to be K=1;

β_x: Historical market average risk coefficient of the shares (assets) of the comparable company;

D_i、E_i: Interest-bearing debts and equity capital of the comparable company, respectively.

4. Income Period

According to the articles of association of the appraised entity, the operating period of the enterprise is long-term, and as the appraised entity operated normally as at the Appraisal Reference Date, there were no limitations imposed on the useful life of the core assets affecting the continuing operation of the enterprise, and no limitations imposed on the production and operating period of the enterprise, the period of ownership of investors, etc., or such limitations can be removed and the said assets can be used perpetually through extension. Therefore, this valuation assumes that the appraised entity will operate perpetually subsequent to the Appraisal Reference Date, and the corresponding income period is indefinite.

VIII. IMPLEMENTATION AND STATUS OF VALUATION PROCEDURES

The overall valuation is conducted in four phases:

(I) Preparation phase of valuation

The main work in the preparation phase is as follows:

1. Project negotiation and acceptance of project engagement

To understand the basic information of the appraised entity and the Valuation Target involved in the proposed engagement, and clarify the purpose of valuation, the Valuation Target and scope of valuation, and the Appraisal Reference Date; to conduct comprehensive analysis and evaluation on professional competence, independence and business risks according to the specific circumstances such as the purpose of valuation and the transaction background, and to enter into the asset valuation engagement contract.

2. Determination of the preparation for the valuation plan

Subsequent to full communication with the Clients and the relevant intermediaries of the project, the basics of asset valuation and the assets and operating conditions of the appraised entity were further determined, and the

basic policies, laws and regulations of the industry where the appraised entity is located and the market operating conditions of the industry were collected, based on which, a preliminary work plan was formulated and a valuation plan was developed.

3. Submission of information checklist and interview outline

Based on the characteristics of the assets to be appraised, a targeted due diligence information checklist, as well as sample forms such as asset list and profit forecast, were submitted, and the appraised entity was requested to prepare for the valuation work.

4. Guidance on filling forms and preparation of valuation information

Contacting relevant staff of the appraised entity to guide the appraised entity to prepare the information required for the valuation and fill in the relevant forms in accordance with the requirements of asset valuation.

(II) On-site valuation phase

The project team's on-site work was conducted in mid-August 2025, and the main work in the on-site phase is as follows:

1. Preliminary understanding of the overall situation

To listen to the introduction of the general situation of the appraised entity and the history and current status of the assets to be appraised by the Clients and the relevant personnel of the appraised entity, and to understand the history, financial system, operating conditions, technical status of fixed assets of the appraised entity.

2. Review and verification of information

To audit and identify the declaration information provided by the appraised entity, to comprehensively collect and check the title certificates of the assets to be appraised, and to check the relevant financial records of the enterprise, and to assist the enterprise in taking correction measures to the issues identified.

3. Key Inventory Verification

Based on the declaration information, a comprehensive inventory verification was conducted on the main assets and business and office premises: for the reported intercompany balances, their reconciliation statements, confirmation letters, and various business contracts were verified to confirm their actual existence and analyze their risks; on-site inspections were conducted on the reported tangible assets, including spot checks on electronic equipment. At the same time, for general equipment, price information was collected through market research and online inquiries; for leased office premises, the lease contracts for the office premises were reviewed.

4. Due Diligence Interview

Through due diligence and interviews with senior management, the industrial positioning of the appraised entity and its market share, and the appraised entity's costs and expenses were understood, and therefore the appraised entity's future development trend was analyzed. In view of the profit forecast data declared by the appraised entity, discussions were held with the appraised entity's management personnel to achieve consensus on the future development trend as much as possible, and then verification was conducted by inquiring about the main business, gross profit, and market distribution channels of enterprises in the same industry and field.

5. Determination of valuation approach and method

Based on the actual conditions and characteristics of the assets to be appraised, the specific model and method for asset valuation are determined.

6. Conducting assessment and estimation

Based on the consensus reached, the valuation model is determined, and the valuation result is calculated, and the relevant written explanation is drafted.

(III) Summary phase of valuation

To analyze and summarize the preliminary results of the valuation of various assets and liabilities, and to make necessary adjustments, modifications, and improvements to the valuation results.

(IV) Report submission phase

The preliminary Asset Valuation Report was drafted based on the above processes, and opinions were exchanged with the Clients on the valuation results after the preliminary review. Upon independent analysis of the relevant opinions, the report was modified and adjusted in accordance with the internal review system and procedure for the Asset Valuation Report of the valuation agency, and then the final Asset Valuation Report was issued.

IX. VALUATION ASSUMPTIONS

In this valuation, the valuers followed the below valuation assumptions:

(I) General assumptions

1. Transaction assumption

The transaction assumption is that all assets to be appraised are already in the process of the transaction, and the valuers will make estimation based on a simulated market according to (among others) the transaction conditions of assets to be appraised. The transaction assumption is a fundamental premise for asset valuation to be carried out.

2. Open market assumption

The open market assumption is that the parties to an assets transaction in the market or a proposed assets transaction in the market are on an equal footing with each other and have access to sufficient market information and time to make a rational judgment on the function and use of the assets and their transaction price. The open market assumption is based on the assumption that assets are publicly traded in the market.

3. Enterprise going-concern assumption

The enterprise going-concern assumption is a valuation assumption made by taking the overall assets of the enterprise as the Valuation Target. That is, the enterprise, as an operating entity, will continue to operate in accordance with its operating objectives in the external environment in which it is located. The enterprise operator is responsible for and capable of taking responsibility; the enterprise operates legally and can obtain appropriate profits to maintain its going-concern ability. For various operating assets of the enterprise, they can continue to be used according to their current purpose and manner, scale, frequency, environment, etc., or on the basis of some changes.

(II) Special assumptions

1. This valuation assumes that the external economic environment as at the Appraisal Reference Date remains unchanged, and there are no significant changes in the current macro-economy in the PRC;

2. There are no significant changes in the socio-economic environment in which the enterprise operates, and there are no significant changes in the effective policies on taxation, tax rates, etc.;

3. The future management team of the enterprise has exercised due diligence and has continued to maintain the existing business management model;

4. The valuation is only based on the existing operating capacity as at the Reference Date. No consideration has been given to the possible expansion of operating capacity in the future due to management, operating strategies and additional investment, nor to subsequent changes in production and operation;

5. All assets in this valuation are premised on the actual stock as at the Appraisal Reference Date, and the prevailing market price of the relevant assets is based on the effective domestic price as at the Appraisal Reference Date;

6. This valuation assumes that the underlying information and financial information provided by the Clients and the appraised entity are true, accurate and complete;

7. In view of the frequent changes in the production and operation process of the enterprise's monetary funds or its bank deposits, and that idle funds have been considered as surplus assets, interest income generated from the deposits and other uncertain gains and losses (other than interest-bearing debts) were not taken into account in the valuation.

8. It is assumed that the cash inflow from the appraised entity subsequent to the Appraisal Reference Date flow in evenly and cash outflow of the appraised entity subsequent to the Appraisal Reference Date flow out evenly.

9. As at the Appraisal Reference Date, China Energy Port is leasing floors 8-9 of the Port Development Building and the meeting centre of the annex building from its associated unit, China Energy Huanghua Harbour Administration Co., Ltd., located on Canghai Road, Cangzhou Bohai New Area, for office operations. This valuation assumes that the enterprise will continue to use the property under a paid lease arrangement in the future, and that future operations will not be materially affected by the inability to obtain the property.

When the above conditions change, the valuation conclusions may usually become invalid.

X.VALUATION CONCLUSION

Based on the judgment and business planning of the appraised entity and its management team on the future development trend, and in accordance with relevant laws and regulations as well as the Asset Valuation Standards, the asset-based approach and income approach were adopted to appraise the value of the entire shareholders' equity interests of China Energy Port Co., Ltd. as of the Appraisal Reference Date (being 31 July 2025) through necessary

valuation procedures including checking and verification, on-site inspection, market survey and confirmation as well as assessment and estimation.

(I) Conclusion of valuation by using the asset-based approach

Using the asset-based approach, the valuation conclusion of the appraised entity as of the Appraisal Reference Date (being 31 July 2025) is as follows:

The book value, appraised value and the incremental value of the valuation of total assets were RMB23,918.84 ten thousand, RMB23,960.77 ten thousand and RMB41.93 ten thousand, respectively, representing an appreciation rate of 0.18%.

The book value and appraised value of liabilities were RMB4,751.61 ten thousand and RMB4,751.61 ten thousand, respectively, and there was no change (whether increase or decrease) in the appraised value.

The book value, appraised value and the incremental value of the valuation of net assets were RMB19,167.23 ten thousand, RMB19,209.16 ten thousand and RMB41.93 ten thousand respectively, representing an appreciation rate of 0.22%. See the table below for details.

Table 5 Summary of asset valuation results

Appraisal Reference Date: 31 July 2025

Unit: RMB in ten thousand

Items		Book value	Appraised Value	Increase or Decrease in Value	Appreciation rate (%)
		A	B	C=B-A	D=C/A×100
1	Current assets	15,733.00	15,733.00	-	-
2	Non-current assets	8,185.84	8,227.77	41.93	0.51
3	Including: Long-term equity investment	3,500.01	3,502.67	2.66	0.08
4	Investment properties	-	-	-	

	Items	Book value	Appraised Value	Increase or Decrease in Value	Appreciation rate (%)
		A	B	C=B-A	D=C/A×100
5	Fixed assets	1,249.81	1,252.42	2.61	0.21
6	Construction in progress	970.73	983.41	12.68	1.31
7	Intangible assets	315.65	339.63	23.98	7.60
7-1	Including: Land use rights	-	-	-	
8	Other non-current assets	2,149.64	2,149.64	-	-
9	**Total assets**	**23,918.84**	**23,960.77**	**41.93**	**0.18**
10	Current liabilities	4,713.28	4,713.28	-	-
11	Non-current liabilities	38.33	38.33	-	-
12	**Total liabilities**	**4,751.61**	**4,751.61**	**-**	**-**
13	**Net assets (owners' equity)**	**19,167.23**	**19,209.16**	**41.93**	**0.22**

(II) Conclusion of valuation by using the income approach

Using the income approach, the valuation conclusion of the appraised entity as of the Appraisal Reference Date (being 31 July 2025) is as follows:

The book value, appraised value and the incremental value of the valuation of the entire shareholders' equity interests were RMB19,167.23 ten thousand, RMB47,359.85 ten thousand and RMB28,192.62 ten thousand, representing an appreciation rate of 147.09%.

(III) Analysis of difference between the valuation conclusions

In the valuation, the value of net assets (entire shareholders' equity interests) calculated under the income approach was RMB47,359.85 ten thousand, which was RMB28,150.69 ten thousand or 146.55% higher than that of RMB19,209.16 ten thousand calculated under the asset-based approach. The major reasons for the difference between the two valuation approaches are:

1. The asset-based approach is based on the cost of asset replacement as the value standard, reflecting the necessary social labor consumed by asset

investment (acquisition and construction costs), and such acquisition and construction costs usually change with the changes in the national economy;

2. In the income approach, the expected earnings on assets is adopted as the value standard, reflecting the operating capability (profitability) of the assets. Such profitability is often subject to the impacts of various factors such as the macro economy, government control and efficient use of assets.

Given the above, there is a difference between the conclusions from the two valuation approaches.

(IV) Selection of valuation conclusions

The appraised entity (China Energy Port) is a significant measure implemented by China Energy to consolidate the achievements of the three-year action plan for state-owned enterprise reform, promote the establishment of a world-class demonstration enterprise, and advance the reform of state-owned capital investment companies. As of the Appraisal Reference Date, the principal businesses of China Energy Port are responsible for the truck coal clearance business, mechanical sampling business, and coal quality quick inspection business at Huanghua Port and Tianjin Port, and its operation is stable. Overall, China Energy Port has formed a "dual-port" operation structure with Huanghua Port as the core and Tianjin Port as a supplement. The high-gross-margin mechanical sampling business and the large-scale truck coal clearance business jointly support the enterprise's good performance, and it has a relatively stable revenue foundation in the future, and its future earnings and risks can be estimated. At the same time, in addition to the value generated by individual assets, various intangible assets formed by comprehensive factors such as management experience, market channels, and customers cannot be reflected under the asset-based approach. Therefore, the conclusion based on the income approach can better reflect the value of the enterprise, and the conclusion of the income approach is adopted

as the final valuation conclusion for this valuation.

Through the above analysis, the value of the entire shareholders' equity interests of China Energy Port Co., Ltd. as at the Reference Date is determined to be RMB47,359.85 ten thousand.

XI. EXPLANATION ON OTHER SPECIFIC MATTERS

(I) Reference to conclusions of reports issued by other institutions

The book values of all assets and liabilities on the Appraisal Reference Date in this Asset Appraisal Report are determined based on the audit results of the Audit Report of China Energy Port Co., Ltd. (Ernst & Young Hua Ming (2025) Zhuan Zi No. 80028105_A01) issued by the Ernst & Young Hua Ming LLP on December 8, 2025, with a standard unqualified opinion. The valuation was conducted on the basis of the audit on the company.

Other than this, no reference is made to contents of reports issued by other institutions.

(II) Incomplete ownership information or defective ownership

None identified.

(III) Restricted valuation procedure or incomplete valuation information

None identified.

(IV) Legal, economic or other outstanding matters as at the Appraisal Reference Date

None identified.

(V) Nature and amounts of guarantees, leases and contingent liabilities (or contingent assets) and relation with Valuation Target

As of the Reference Date, China Energy Port leased the 8th and 9th floors of the Port Development Building and the conference center of its annex building in Canghai Road, Cangzhou Bohai New Area from its related party, China Energy Huanghua Harbour Administration Co., Ltd. on a paid basis, used for office operations. The details of the lease are as follows:

No.	Lessor	Location	Lease purpose	Leased area (m^2)	Lease term	Annual rent (tax inclusive)|	Method of rent payment
1	China Energy Huanghua Harbour Administration Co., Ltd.	8th and 9th floors of the Port Development Building and the conference center of its annex building	Office	7,199.70	January 2023 to December 2025	RMB626.88 ten thousand in 2023, and RMB913.69 ten thousand annually from 2024 to 2025	Paid annually

(VI) Significant subsequent events

Subsequent events refer to significant events that occurred between the Appraisal Reference Date and the date of issuance of the valuation report.

No significant subsequent events were found in the company.

(VII) Defects in the economic activities corresponding to the valuation that may have a significant impact on valuation conclusion

None identified.

(VIII) Explanation of other matters

1. It is the legal responsibility for the valuer and the valuation agency to make professional judgment on the value of the assets for the valuation purposes described in this report, and no judgment whatsoever would be made by the valuer and the valuation agency as to the economic activities corresponding to the valuation purpose. To a large extent, the valuation relies

on the information provided by the Clients and the appraised entity. Therefore, valuation is based on the authenticity and legality of the relevant economic activity documents, relevant asset ownership documents, license and accounting vouchers and the relevant legal documents provided by the Clients and the appraised entity.

2. During the valuation process, when conducting equipment inspection, the condition of the equipment is determined mainly based on the appearance observation of the valuer and inquiries from relevant operators due to limitations in testing methods and some equipment being in operation.

3. The purposes of the valuers conducting the asset valuation are to estimate the value of the Valuation Target and to give professional opinions thereof, and accept no responsibilities for the decision-making of the relevant parties. The valuation conclusion shall not be considered as a guarantee of the realizable value of the Valuation Target.

4. The Clients and the appraised entity are held responsible for the authenticity and completeness of the data, statements and the relevant information which were provided by the appraised entity and were used within the scope of this valuation.

5. The Clients and the appraised entity are held responsible for the authenticity and legality of the ownership documentary proof and relevant information which are provided by the appraised entity and are referred to in the valuation report.

6. In the event that any changes in the quantity and the pricing standard of assets occurred within the term of validity after the Appraisal Reference Date, the principles set out below shall be followed:

(1) In the event that quantity of assets changes, corresponding adjustments shall be made to the quantity of assets according to the original valuation approach;

(2) In the event that the pricing standard of the assets changes and

imposes obvious impacts on the asset valuation results, the Clients shall timely engage qualified asset valuation agency to redetermine the appraised value.

7. The profit forecast of the appraised entity obtained by the valuation agency is based on the income approach used in this valuation report. The valuer conducted necessary investigation, analysis, and judgment on the profit forecast of the appraised entity. Following multiple discussions with the management and major shareholders of the appraised entity, as well as further amendments and improvement made by the appraised entity, the valuation agency is satisfied about the relevant data of the profit forecast of the appraised entity. The utilization of the profit forecast of the appraised entity by the valuation agency is not a guarantee of future profitability of the appraised entity.

The conclusion of this valuation is based on the assumption that the management of the Valuation Target make accurate judgments on the development trend in future and related plans will be duly implemented, and that the enterprise continues its operations. If the future actual operation conditions of the enterprise deviate from the operation plans, and the appraised entity and the incumbent management of the appraised entity fail to adopt effective remedies in time to correct such deviation, the conclusion of this valuation will change substantially. Therefore, users of this report are strongly advised to pay close attention in this regard.

8. The scope of the valuation is based solely on the valuation schedules provided by the Clients and the appraised entity, and does not take into account contingent assets and contingent liabilities that may exist outside the list provided by the Clients and the appraised entity.

9. In this valuation, the valuer has not considered premiums or discounts arising from factors such as controlling or minority interests.

XII. LIMITATIONS ON THE USE OF THE ASSET VALUATION REPORT

(I) This valuation report may only be used according to the objectives and purposes as stated herein. Meanwhile, the valuation conclusion reflects the prevailing market fair value for the purposes of the valuation based on the open market principle, without considering the impact of mortgages and guarantees that the appraised entity may be subject to in the future, nor the impact of additional price which may be paid by special trading parties on the appraised value. Meanwhile, the effects of changes in national macroeconomic policies, the natural force and other force majeure on the price of assets are not taken into account. In general, if the aforesaid conditions and other situations such as going concern basis changes used for valuation, the valuation conclusion will become invalid. The valuation agency is not liable for invalidity of the valuation conclusion due to changes of such conditions.

(II) This valuation report is only valid when the economic activities comply with the national laws and regulations and the valuation report is approved by relevant authorities.

(III) The valuation report may only be used by users expressly stated herein. The right to use this report is vested in the Clients. The valuation agency will not make the report public without the approval of the Clients.

(IV) The asset valuation agency and its valuers shall not bear responsibilities if the Clients or other users of the Asset Valuation Report fail(s) to use the Asset Valuation Report in accordance with the provisions of laws and administrative regulations or within the scope of use as specified in the Asset Valuation Report.

(V) Except for the Clients, other users of this Asset Valuation Report designed in the asset valuation entrustment contract and users of the Asset Valuation Report stipulated by laws and administrative regulations, any other agencies or individuals cannot be users of the Asset Valuation Report.

(VI) Save as required by laws and regulations or otherwise agreed upon by relevant parties concerned, the extraction, reference or disclosure of the whole or any part of contents of this valuation report in any public media shall be subject to approval and review of such contents by the valuation agency.

(VII) The users of the Asset Valuation Report shall correctly understand and use the valuation conclusion. The valuation conclusion is not equivalent to the realisable price of the Valuation Target, and the valuation conclusion shall not be considered as a guarantee of the realisable price of the Valuation Target.

(VIII) Validity for use of the valuation conclusions: according to relevant laws and regulations on asset valuation, the Asset Valuation Report involving statutory valuation business must be used by the Clients after performing the asset valuation supervision and management procedures in accordance with the requirements of relevant laws and regulations. The valuation conclusions shall be valid for a term of one year, calculated from 31 July 2025 (the Appraisal Reference Date) to 30 July 2026. If the period exceeds one year, the asset valuation shall be redetermined.

XIII. DATE OF ASSET VALUATION REPORT

The Asset Valuation Report is dated December 16, 2025.

DRAFT
Date: 24 December 2025
File: 3123.039

China Shenhua Energy Company Limited
Shenhua Tower, 22 Andingmen Xibinhe Road
Dongcheng District, Beijing
People's Republic of China

Attention: Mr. Zhang Changyan
Executive Director

Subject: Competent Person's Report
Forty-Seven Coal Mines And Exploration Right Areas Under Subsidiaries of China Energy Investment Corporation Limited
Heilongjiang, Shanxi, Shaanxi Provinces And Inner Mongolia, Ningxia, Xinjiang Autonomous Regions
People's Republic of China

Dear Ladies and Gentlemen:

John T. Boyd Company (BOYD) was engaged in September 2025 by China Shenhua Energy Company Limited (China Shenhua) to prepare a Competent Person's Report (CPR) for forty-seven (47) coal mines and coal exploration right areas, which are currently held by multiple subsidiaries of China Energy Investment Corporation Limited (chn). The subject properties are located in various coal-producing provinces (regions) of the People's Republic of China (PRC) including Heilongjiang, Inner Mongolia, Ningxia, Shaanxi, Shanxi and Xinjiang. We understand China Shenhua intends to acquire the subsidiaries of China Energy which control the subject properties, and this CPR will be included in the circular to be filed on The Stock Exchange of Hong Kong (HKEx) upon this acquisition.

During September 2025, a team of BOYD's technical specialists completed visits to the subsidiaries controlling the subject coal assets. Our report relies on source documentation provided by the subsidiaries of China Energy, information collected during site visit observations and discussions with corresponding technical and management personnel, and BOYD's extensive Chinese and international mining industry experience. All estimates of coal resources and reserves are prepared in accordance with the 2012 Australasian Code for Reporting of Exploration Results, Mineral Resources, and Ore Reserves (JORC Code). The effective date of our resource/reserve estimates is 31 July 2025.

Mr. Ronald L. Lewis, the Managing Director and Chief Operating Officer of John T. Boyd Company Headquarter, is our designated lead Competent Person (CP) on this assignment. He directed the work of the supporting technical specialists and takes overall responsibility for this CPR.

Respectfully submitted,

JOHN T. BOYD COMPANY

GLOSSARY AND DEFINITIONS

ad	Air dried, as in coal quality reporting.
APT	Arbitrage pricing theory.
Baotou Mining	China Energy Baotou Mining Co., Ltd.
BM	Bolter-miners.
BOYD	John T. Boyd Company.
CAPEX	Capital expenditure.
CAPM	Capital asset pricing model.
Cash (Production) Cost	All cash costs directly associated with coal production, including, but not limited to, raw materials, salary and wages, labor benefits, power, repairs, coal processing, transport of coal from mine to loading point, general administrative expense, and selling expenses.
CDS	Credit Default Swap.
China Shenhua	China Shenhua Energy Company Limited.
China Energy	China Energy Investment Corporation Limited
CM	Continuous Miner.
Coal Reserve	The economically mineable part of a Measured or Indicated Coal Resource. It includes diluting materials and allowances for losses that may occur when the material is mined. Appropriate assessments, which may include feasibility studies, have been carried out and include consideration of the modification by realistically assumed mining, metallurgical, economic, marketing, legal, environmental, social, and governmental factors. These assessments demonstrate at the time of reporting that extraction could reasonably be justified. Coal Reserves are subdivided in order of increasing confidence into Probable Coal Reserves and Proved Coal Reserves.
Coal Resource	A concentration or occurrence of coal of intrinsic economic interest in or on the Earth's crust in such form and quantity that there are reasonable prospects for eventual economic extraction. The location, quantity, quality, geological characteristics, and continuity of a Coal Resource are known, estimated, or interpreted from specific geological evidence and knowledge. Coal Resources are

	subdivided, in order of increasing geological confidence, into Inferred, Indicated, and Measured categories.
Coal Seam	Portion of the strata that contains solid fossil fuel.
CP	Competent Person.
CPP	Coal Preparation Plant, facility used to process raw coal using mechanical washing or chemical methods.
CPR	Competent Person' Report.
CV	Calorific value, heat content of the coal seam.
d	Dry basis, as in coal quality reporting.
daf	Dry, ash free basis, as in coal quality reporting.
DCF	Discounted Cash Flow.
Dip	Angle that stratum makes with the horizontal.
EHSM	Environmental, Health and Safety Guidelines for Mining.
ERP	Equity Risk Premium.
Face (working face)	Mine location where active coal extraction is taking place.
Feasibility Study	In international practice, this study assesses in detail the technical soundness and economic viability of an undeveloped mining project and serves as the basis for the investment decision and as a bankable document for project financing. The study is based on a detailed mine plan and constitutes an audit of all geological, engineering, environmental, legal, and economic information accumulated on the project. Generally, a separate environmental impact study is required.
FSR	Feasibility Study Report.
FM	Fully Mechanized (LW face), mining method in which the working face is equipped with hydraulic shields, AFC, and shearer.
FM LW	Fully-Mechanized Longwall.
FM LW SLC	FM LWs equipment with sublevel caving capability.
GAAP	Generally accepted accounting principles.
Gate	Room-and-pillar development around a longwall face supporting its operation.

Geologic Report	Compiled by a Chinese exploration team or company after exploration activity is completed in a designated area. The report generally details geologic data, including location and geography, exploration data, regional geology, mining characteristics, coal seams, hydrology, geotechnical aspects, environmental aspects, coal resource/reserve tonnages, and resource assessment. Supporting maps, cross sections, and figures may also be provided.
Gob	Spoil material allowed to subside behind the longwall retreat.
Inner Mongolia Construction Investment.....	Guodian Construction and Investment Inner Mongolia Energy Co., Ltd.
Guoyuan Power.....	China Energy Guoyuan Power Co., Ltd.
HKEx.....	The Stock Exchange of Hong Kong.
Hr	Hour.
Indicated Coal Resource	That part of a Coal Resource for which tonnage, densities, shape, physical characteristics, quality, and mineral content can be estimated with a reasonable level of confidence. It is based on exploration, sampling, and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings, and drill holes. The locations are too widely or inappropriately spaced to confirm geological and/or quality continuity but are spaced closely enough for continuity to be assumed.
Inferred Coal Resource	That part of a Coal Resource for which tonnage, quality, and mineral content can be estimated with a low level of confidence. It is inferred from geological evidence and assumed, but not verified, geological and/or quality continuity. It is based on information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings, and drill holes which may be limited or of uncertain quality and reliability.
In-Place Resource.....	Coal resources in the ground, in situ or un-mined condition.
Jinshen Energy	Shanxi Jinshen Energy Co., Ltd.
JORC	Joint Ore Reserves Committee of The Australasian Institute of Mining and Metallurgy, Australian Institute of Geoscientists and Minerals Council of

	Australia.
JORC Code	Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (2012 Edition).
Kcal/kg	Kilocalorie per kilogram, measure of coal heat content.
km	Kilometer.
kW	Kilowatt.
LOM	Life-of-mine.
LW	Longwall, underground mining technique, used interchangeably with equipment used in this technique.
m	Meter.
m^2	Square meter.
m^3	Cubic meter.
m^3/min	Cubic meter per minute.
m/s	Meters per second.
Marketable Reserves	Saleable coal product from Recoverable Reserves after accounting for mining and processing losses, where applicable.
Measured Coal Resource	That part of a Coal Resource for which tonnage, densities, shape, physical characteristics, quality, and mineral content can be estimated with a high level of confidence. It is based on detailed and reliable exploration, sampling, and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings, and drill holes. The locations are spaced sufficiently close to confirm geological and quality continuity.
Methane	A colorless, odorless, explosive gas (CH_4) typically associated with coal seams.
Mine Plan	The current documentation of the state of development and exploitation of a deposit during its economic life, including current mining plans. It is generally made by the operator of the mine. The study takes into consideration the quantity and quality of the minerals extracted during the reporting time, changes in economic viability categories due to changes in prices and costs, development of relevant technology, newly imposed environmental

	or other regulations, and data on exploration conducted concurrently with mining.
Mining Rights	The mining rights granted by the relevant authorities to conduct mining activities within the People's Republic of China, specifying the mining method, the validity period, and the annual output level. Seams and elevations may also be specified.
mm	Millimeter.
Mt	Million tonnes.
Mtpa	Million tonnes per annum.
Non-Cash Cost	Additional mine costs including depreciation, amortization and special accounting treatments unique to the coal industry in China.
NPV	Net present value.
OP	Open pit.
OSD	Out-of-seam dilution, i.e., roof and floor rock recovered with the coal seam during the normal mining process.
Outcrop	The part of the coal formation exposed to the surface.
Out-of-Seam	Non-coal material above and below the coal seam recovered during mining.
Overburden	Waste rock material overlying a coal seam.
Panel	An area of coal designated for extraction using longwall mining within which a series of blocks (longwall faces) are developed.
Partings	Rock material within mineable coal seams usually extracted with the coal.
PDR	Preliminary Design Report, official documented report of the final design study conducted by a recognized Chinese mine design institute. The Preliminary Design study is undertaken after an FSR has been issued for the subject project. The PDR is a more detailed, comprehensive version of the FSR and generally expands the FSR with additional mine planning analysis, including detailed mine opening and construction plans from initial work to full production status, and serves as a guide for mine construction and development.
Pillar	Column of coal left behind for support.

Pingzhuang Coal	Inner Mongolia Pingzhuang Coal (Group) Co., Ltd.
PRC	The People's Republic of China.
Prefeasibility Study.....	The study that provides a preliminary assessment of the economic viability of a deposit and forms the basis for justifying further investigations (detailed exploration and feasibility). It usually follows a successful exploration campaign and summarizes all geological, engineering, environmental, legal, and economic information accumulated to date.
Probable Coal Reserve	The economically mineable part of an Indicated, and in some circumstances, Measured Coal Resource. It includes diluting materials and allowances for losses that may occur when the material is mined. Appropriate assessments, which may include feasibility studies, have been conducted and include consideration of realistic mining, metallurgical, economic, marketing, legal, environmental, social, and governmental factors. These assessments demonstrate at the time of reporting that extraction could reasonably be justified.
Productivity.....	Measurements of worker efficiency usually expressed in terms of tonnes per unit of time, for example, tonnes per employee-year.
Proved Coal Reserve	The economically mineable part of a Measured Coal Resource. It includes diluting materials and allowances for losses that may occur when the material is mined. Appropriate assessments that may include feasibility studies, have been conducted and include consideration of realistic mining, metallurgical, economic, marketing, legal, environmental, social, and governmental factors. These assessments demonstrate at the time of reporting that extraction could reasonably be justified.
Raw Coal.....	Coal on an as-mined basis, which may be sold directly or processed if necessary.
Recoverable Coal.....	Portion of coal reserve available for mining exclusive of coal losses due to mining.
Recoverable Reserves	Proved and Probable reserves prior to adjustment for preparation plant yield. Refers to that portion of the coal seam that can be recovered with the mining techniques specified in the feasibility or design study. The portion of in-place seam tonnage recovered during the mining but before OSD and coal processing consideration.

Refuse	Low heat content material remaining after commercial coal has been produced from raw coal using crushing, screening, and processing methods. Heat content typically is sufficient for utilization in specially designed boilers for power generation.
RMB	Renminbi, the Chinese currency.
RH	Roadheader.
ROM	Run-of-mine, the as-mined material as it leaves the mine.
Saleable Product	May include varying proportions of raw and clean coal.
S.G.	Specific gravity.
Shearer	Equipment used to extract coal from a fully mechanized longwall face.
Shenyan Coal	China Energy Shaanxi Shenyan Coal Co., Ltd.
Strike	The course or bearing of an inclined coal seam or stratum on a level surface; the direction of a horizontal line perpendicular to the dip.
Tonne.	Metric ton equal to 1,000 kilograms.
tph	Tonnes-per-hour.
UG	Underground.
VAT	Value-Added Tax
VM	Volatile Matter, index for coal quality.
WACC	Weighted Average Cost of Capital.
Wuhai Energy	China Energy Wuhai Energy Co., Ltd.
Xinjiang Energy	China Energy Xinjiang Energy and Chemical Co., Ltd.
Yield	Saleable portion of the raw coal processed in a coal preparation plant relative to the total tonnes processed.
yr.	Year.
YTM	Yield to maturity.

1.0 INTRODUCTION

1.1 Introduction

BOYD was engaged by China Shenhua in September 2025 to prepare a CPR according to the JORC Code and Chapter 18 of the HKEx Listing Rules, covering the estimated coal resources and coal reserves as of 31 July 2025, for twenty-eight (28) coal mines and nineteen (19) coal exploration right areas, which are controlled by eight (8) subsidiary companies of China Energy, namely, China Energy Baotou Mining Co., Ltd. (Baotou Mining), China Energy Guoyuan Power Co., Ltd. (Guoyuan Power), China Energy Shaanxi Shenyan Coal Co., Ltd. (Shenyan Coal), China Energy Wuhai Energy Co., Ltd. (Wuhai Energy), China Energy Xinjiang Energy and Chemical Co., Ltd. (Xinjiang Energy), Guodian Construction and Investment Inner Mongolia Energy Co., Ltd. (Inner Mongolia Construction Investment), Inner Mongolia Pingzhuang Coal (Group) Co., Ltd. (Pingzhuang Coal) and Shanxi Jinshen Energy

Co., Ltd. (Jinshen Energy). The subject coal mines and exploration right areas are summarized in Table 1-1.

Table 1-1 Summary of Subject Coal Mines and Exploration Areas

Note: *China Energy's share of the title owner of the mining/exploration rights.
**UG = Underground, OP = Open-pit.

In terms of revenue and coal output, China Energy has been the largest coal enterprise in PRC since its establishment in 2017 following the merger of China

Guodian Corporation and Shenhua Group. The subject coal properties are all controlled by China Energy. The subject coal mines and exploration areas are distributed widely in the major coal-producing regions of China's northern provinces (autonomous regions) including Heilongjiang, Inner Mongolia, Ningxia, Shaanxi, Shanxi, and Xinjiang. The infrastructure and coal markets are well developed in most of these regions due to the decades-long history of coal mining, power generation and/or coal chemical businesses. Promotion of large-scale coal mining operations in Xinjiang by the regional and central governments in recent years has stimulated the fast grow of local logistic and infrastructure development. The general locations of the subject mines and exploration right areas are shown in Figure 1.1 following this text.

The coal mines and exploration areas under China Energy's portfolio are distributed across a vast geographical expanse in China, and the geological complexities range from simple to complex, necessitating tailored approaches to exploration and coal extraction. In Inner Mongolia and Xinjiang, most of the subject coal mines are generally located in low-population areas, allowing for expansive operations with minimal community impact, whereas mines in Shanxi and Shaanxi face challenges posed by nearby villages, requiring careful environmental and social management to maintain normal operation. The operational status of these mines varies widely: most mines from Pingzhuang and Wuhai have been active for decades, reflecting a rich history of production; some others are undergoing consolidation due to the requirements of local authorities. Some new mines are under construction to meet growing energy demands; and certain older mines are approaching the end of their operational life, facing closure in the near future.

Evaluating these properties demands a meticulous understanding of each mine's unique geological and operational context, combined with industry expertise specific to China's complex regulatory and market environment. The exploration areas, predominantly greenfield, are generally located near existing coal mines, offering potential for future development but vary in their stages of planning. Some exploration projects are driven by China Energy's long-term strategic goals to expand its resource base, while others face delays or modifications due to local industrial policies, environmental regulations, or regional economic priorities.

The operational diversity of the portfolio is further highlighted by the mix of open-pit and underground mining methods. Most of the open-pit mines are located in Xinjiang and eastern Inner Mongolia due to favorable geological conditions and accessibility, with several exceptions in Heilongjiang (Chaoyang Open-pit) and Shaanxi (Xiwan Open-pit). Underground operations, meanwhile, are more prevalent in areas with deeper coal seams.

The coal produced from these mines serves multiple purposes, primarily fueling

power generation, which remains a cornerstone of China's energy mix, but also supplying the chemical industry, local heating market, and distant end consumers through extensive transportation networks.

Recent annual production for each of the mines is shown in Table 1-2.

Table 1-2 Historical Production

	Historical Production (Mt)			
Company / Mine	2022	2023	2024	Jan.-Jul. 2025

Among the mines, Luotuoshan's test run commenced in December 2024; Pinggou has been idled since 2015 and application for resume operation after mine renovation is underway; Suhaitu was approved to mine remaining underground barrier pillars using open-pit method; Hongshaquan No. 2 Open-pit started test run in December 2023; Boligou is a new underground operation under construction. Although some fluctuation of coal output could be observed in some mines in the past three years, the overall annual output for the subject China Energy mines appears stable.

Mr. Jisheng (Jason) Han, Vice President and Mr. Yongliang (Darren) Xing, Senior Geologist completed visits to the subject companies in September 2025. Due to the constrained schedule of this project, only a number of selected mines and exploration areas were visited. When visiting each company, the BOYD team collected source data, discussed historic performance and current status as well as future plans of each subject mine and exploration area with corresponding technical staff and management personnel.

1.2 Mining/Exploration Rights

Mining and exploration rights for the subject properties are all controlled by China Energy. Table 1-3 shows the mining/exploration right information, as provided by the subsidiary companies of China Energy.

Table 1-3 Mining/Exploration Right Certificates

Shaping	C14000020091212200524I6	2.4	8.0	990 to 700	22.5915	05/2024	12/2042

Xinjiang Energy holds 48.42% of Xinjiang Shenxing Energy Company Limited (Shenxing Energy). Shenxing Energy is currently applying to the government authorities for the modification of the Wucaiwan No. 5 Open-pit Exploration License

to larger area of 55.10 km^2. In June 2025, the Natural Resources Bureau of Changji Prefecture, Xinjiang, issued an "Official Reply on Soliciting Opinions Regarding the Exploration Change and Renewal of the Wucaiwan No. 5 Open-pit Mining Field in Zhundong Coalfield, Jimsar County, Xinjiang Autonomous Region" stating that the bureau has consented to process the change and renewal procedures for the exploration license. After reviewing the provided documentation, we have reasonably assumed that the exploration license will be successfully modified.

BOYD is not qualified nor have we completed an independent legal review of the status of the subject mining and exploration rights. As part of our technical study, we reviewed the documentation for the certificates related to current mining and future operations as well as exploration status. It is our understanding that corresponding subsidiaries of China Energy directly hold the mining/exploration rights (direct control as authorized by the Ministry of Natural Resources [MNR]) for all the mines and exploration areas. There are no known legal claims or proceedings that could influence its rights to explore or mine as of the date of this report.

On the basis of documentation provided to us, subsidiary companies under China Energy have valid mining rights certificates for the presently operating mines for the specified periods. By PRC law, the maximum holding period (term) for mining right permits is 30 years. The MNR has the legal authority to renew an existing mining right permit that is expiring. We assume all mining rights will be extended as necessary to cover the life of the operations.

1.3 Qualifications

BOYD has prepared numerous CPRs for a number of well-known Chinese mining companies, including China Shenhua Energy Company Limited and Inner Mongolia Yitai Coal Company Limited. These reports cover a large number of underground and openpit coal mines in China.

Our initial work for China Shenhua was for the company's IPO on the Hong Kong Exchange in 2005, and since then has included a series of reports which updated our initial report, and for new acquisitions.

BOYD was retained by Inner Mongolia Yitai Coal Company Limited as the technical advisor for the company's IPO on the Hong Kong Exchange in 2012. BOYD prepared a CPR for its coal mines and a Valuation Report for five coal mines it acquired.

BOYD personnel are familiar with geologic conditions and mining practices in the various coalfields and regions in PRC through many years of consulting services in the country.

While the primary information (written and verbal) relied upon by BOYD in preparing this CPR was provided by or at the direction of China Shenhua and China Energy, the basis of our professional opinion is founded on the technical expertise and extensive Chinese and international experience of the contributing BOYD team members. To ensure that our interpretation of the data was reasonable, follow-up discussions were conducted with company representatives after our initial analysis to confirm our findings and, where necessary, to collect additional information.

The findings and conclusions presented in this report are supported by the text, tables, and figures contained herein.

1.4 Project Team

The BOYD project team has extensive professional experience in preparing CPRs for coal mining operations and preparation plants.

Included in this team are:

Mr. Ronald L. Lewis – Managing Director and Chief Operating Officer, BS (Civil Engineering)

Mr. Lewis has over 50 years of experience in assessment and evaluation of coal mining companies, with specialized expertise in the areas of coal/mineral reserve estimation, open pit and underground mine analysis, and economic assessment of mining operations. He is a Registered Professional Mining Engineer within the United States and a recognized expert in mining property valuation. Mr. Lewis is a Registered Member of the Society for Mining, Metallurgy, and Exploration, Inc., and is qualified as a Competent Person as defined in the JORC Code and HKEx Chapter 18 requirements. Mr. Lewis has independent status as required by Rule 18.22.

Mr. Lewis is our designated lead CP on this assignment. He directed the work of the supporting technical specialists and takes overall responsibility for this CPR.

Mr. Jisheng (Jason) Han —Vice President, MS (Mining Engineering)

Mr. Han has 29 years of mining engineering experience focused on ground control, geomechanics, general mining engineering, and assessment of mining operations. Experienced in roof bolting and other support design, underground structure stability analysis, remedy reinforcement design, ground control problems associated with multi-seam coal mining and ground subsidence study, feasibility study of mine projects, evaluation of underground mine plans, mining operations, operating costs, mine staffing, capital requirements, mining technique upgrade, and productivity. Expertise has been developed in mine feasibility, economic analysis of mining operations and operational assessments. Additional mine engineering expertise in ventilation analysis, evaluation of coal quality, geological impacts on mine operations and valuation of mining operations. Mr. Han is a Registered Member of the Society for Mining, Metallurgy, and Exploration, Inc., and is qualified as a Competent Person

as defined in the JORC Code and HKEx Chapter 18 requirements. Mr. Han has independent status as required by Rule 18.22.

Mr. Han served as the Contributing CP on this assignment. He is responsible for the site inspections, mining and processing operations review, and economic analysis of all coal mines in this project. Additionally, as the Project Manager of the US team, he works jointly with the Project Manager of the Chinese team to oversee the overall planning, schedule, and quality control of the project, coordinates the technical teams, and assists the Lead Competent Person in ensuring all deliverables comply with the JORC Code and the requirements of Chapter 18 of the HKEX Listing Rules.

Mr. Rongjie (Jeff) Li – Managing Director - China, MS (Geochemistry), BE (Geology)

Mr. Li has 19 years of consulting geological based experience in mineral deposits on design and management of exploration programs, and interpretation of exploration data, evaluation of depositional features impacting mineability and utilization, preparation of resource/reserve estimates, technical and economic assessment of mining operations, and valuations of mineral assets. Mr. Li is a Registered Member of the Society for Mining, Metallurgy, and Exploration, Inc., and is qualified as a Competent Person as defined in the JORC Code and HKEx Chapter 18 requirements. Mr. Li has independent status as required by Rule 18.22.

Mr. Li served as the Contributing CP on this assignment. He is responsible for the geological review, underground resource/reserve estimates and economic analysis of all coal mines in this project. Furthermore, as the Project Manager of the Chinese team, he works jointly with the Project Manager of the US team to oversees the overall planning, schedule and quality control of the project, coordinates the technical team, and assists the Lead CP in ensuring all deliverables comply with the JORC Code and the requirements of Chapter 18 of the HKEX Listing Rules.

Mr. Andrés Ignacio Montoya Palacio – Senior Specialist/Engineer, BS (Mining Engineering)

Mr. Montoya has 20 years of consulting experience in geologic modeling, resource and reserve estimation, surface mine design, and production scheduling. Mr. Montoya has independent status as required by Rule 18.22.

Mr. Montoya is responsible for the modelling, resource/reserve estimates of open-pit mines on this assignment.

Mr. Yongliang (Darren) Xing – Senior Geologist, MS (Mineralogy), BE (Geology)

Mr. Xing has 15 years of experience in metal mines (iron, laterite nickel, gold, copper-cobalt, etc.) and other deposits (graphite, coal, etc.), involving the design and management of exploration programs and the interpretation of exploration data, and has extensive experience in 3D deposit modelling and resource/reserve estimation. Mr. Xing has independent status as required by Rule 18.22.

Mr. Xing is responsible for the site inspections and providing technical support for this assignment, including the geological review and the estimates of the underground resources and reserves.

Mr. Gregory M. Stanish – Director of Geological Services, BS (Geosciences)
Mr. Stanish has 19 years of geological based consulting experience in mineral deposits related to the design and oversight of mineral property exploration and sampling programs, geotechnical sampling, interpretation of exploration data, evaluation of depositional features impacting mineability and utilization, mineral resource/reserve estimation, technical review and assessment of mine plans, and the preparation of technical reports for public filing. Mr. Stanish is a Registered Professional Geologist within the United States, a Registered Member of the Society for Mining, Metallurgy, and Exploration, Inc., and is qualified as a Competent Person as defined in the JORC Code and HKEx Chapter 18 requirements. Mr. Stanish has independent status as required by Rule 18.22.

Mr. Stanish is responsible for providing technical support for this assignment, including the modelling, resource/reserve estimates of the open-pit mines.

Mr. Diego Alejandro Restrepo Galeano – Senior Geologist, MS (Mining), BS (Geology)
Mr. Restrepo has 17 years of consulting experience in exploration, geologic modeling, resource estimation, mine planning and economic analysis, strategic raw materials supply planning, and post-mining land reclamation involving coal, building materials, and sedimentary mineral deposits in North America, Central America, South America and Europe. Mr. Restrepo is qualified as a Competent Person as defined in the CCRR code (Colombian Reporting Code, CRISCO member). Mr. Restrepo has independent status as required by Rule 18.22.

Mr. Restrepo is responsible for providing technical support for this assignment, including the modelling, resource/reserve estimates of the open-pit mines.

Mr. Adalberto Guerrero Pérez – Senior Mining Engineer, MS (Mining Engineering), BS (Mining Engineering)
Mr. Guerrero has over 20 years of experience in mine planning, design, and operations for underground and surface projects across Latin America and Central America. His expertise includes resource and reserve estimation, feasibility studies, mine optimization, cost reduction strategies, and regulatory compliance, mine design, and production scheduling. Mr. Guerrero. has independent status as required by Rule 18.22.

Mr. Guerrero is responsible for providing technical support for this assignment, including the modelling, resource/reserve estimates of the open-pit mines.

Mr. Bowen Zhu – Mining Engineer, MS (Mining Engineering), BE (Geology)
Mr. Zhu has 5 years of diverse experience including technical support related to mining analysis, geological sampling, and geotechnical engineering. Mr. Zhu has independent status as required by Rule 18.22.

Mr. Zhu is responsible for collecting, reviewing and filing source data.

In addition, 14 other technical staff were assigned to the project to assist with drafting resources/reserves figures.

1.5 Report Disclaimer

In preparing this report, we have relied on reported exploratory drilling results and other data, as provided by China Shenhua and China Energy. We have exercised reasonable care in reviewing the information provided and believe data provided are both reasonable and representative. We have no reason to believe that the material provided is incorrect or inconsistent with our knowledge of the areas (regions) being studied. Our report has been completed in accordance with generally accepted standards and practices employed in the international mining industry. Although we have compared key information provided by China Shenhua and China Energy with expected values, the results and conclusions of this report are reliant on the accuracy of the information provided. In particular, due to the restrictions imposed by the "Directory of National Secrets in Surveying and Mapping Geographic Information Management Work" of the People's Republic of China, detailed surface topographic information and other restricted geographic data related to the Xinjiang Energy mines and exploration areas were intentionally not provided. Therefore, the strip ratio and economic evaluation for these mines and areas in this report are primarily based on low-precision data obtained from public channels, as well as assumptions and derivations made in accordance with industry standards and professional judgment. Based on the aforementioned low-precision data, the evaluation of the strip ratio and economic viability may have the following limitations:

- Limited Evaluation Accuracy: Due to the lack of high-precision topographic and geological data, the calculation of the strip ratio may not accurately reflect the actual mining conditions of the mine, potentially leading to deviations between the evaluation results and the actual mining situation.
- Dependence on Assumptions: The economic evaluation in this report relies on certain assumptions, including but not limited to: topography obtained from public domain is representative of actual site, etc. If actual conditions deviate from these assumptions, the evaluation results may be inaccurate.
- Potential Risks: Data limitations may affect the comprehensive evaluation of the mine's operational efficiency, cost structure, and economic feasibility, thereby potentially impacting the profitability and estimates of coal resources/reserves.

The CP has prepared this report in a professional, objective, and prudent manner in accordance with Chapter 18 of the Main Board Listing Rules and the JORC Code. However, due to the aforementioned data limitations, the strip ratio and economic evaluation in this report are best judgments based on currently available information and do not constitute a guarantee of future actual mining results or economic

performance. The CP shall not be liable for any estimation deviations or investment losses resulting from insufficient data precision, legal restrictions, or other uncontrollable factors.

The readers of this report therefore are advised to fully consider the data limitations and related risks. No content in this report shall be deemed as an endorsement of the profitability, operational prospects, or investment value of the related properties. The CP shall not be responsible for any direct or indirect losses arising from the use or reliance on this report.

Our expertise is in technical and financial mining issues and the CP is not qualified to represent any findings of a legal or accounting nature. BOYD's independent analyses of the available data have been developed in a manner consistent with JORC Code coal resource reporting standards. We believe our conclusions are reasonable assessments of the information provided.

Respectfully submitted.

JOHN T. BOYD COMPANY
By:

Ronald L. Lewis, CP
Managing Director and COO

2.0 EXECUTIVE SUMMARY

2.1 Location and Mines

BOYD was engaged by China Shenhua in September 2025 to prepare a CPR according to the JORC Code and Chapter 18 of the HKEx Listing Rules, covering the estimated coal resources/reserves as of 31 July 2025, for twenty-eight (28) coal mines and nineteen (19) coal exploration right areas as follows:

Table 2-1 Summary of Subject Coal Mines and Exploration Areas

Mine/Exploration Right Area	Share of China Energy*	Mining Method**	Status	Location	
				Area	Province/Region

Note: UG = Underground, OP = Open-pit.

The coal produced from these mines serves multiple purposes, primarily fueling power generation, which remains a cornerstone of China's energy mix, but also supplying the chemical industry, local heating market, and distant end consumers through extensive transportation networks.

2.2 Mining/Exploration Rights

Mining and exploration rights for the subject mines and areas are all controlled by China Energy. Table 2-2 shows the mining/exploration right information, as provided by the subsidiary companies of China Energy.

Xinjiang Energy holds 48.42% of Xinjiang Shenxing Energy Company Limited (Shenxing Energy). Shenxing Energy is currently applying to the government authorities for the modification of the Wucaiwan No. 5 Open-pit Exploration License to

larger area of 55.10 km^2. In June 2025, the Natural Resources Bureau of Changji Prefecture, Xinjiang, issued an "Official Reply on Soliciting Opinions Regarding the Exploration Change and Renewal of the Wucaiwan No. 5 Open-pit Mining Field in Zhundong Coalfield, Jimsar County, Xinjiang Autonomous Region" stating that the bureau has consented to process the change and renewal procedures for the exploration license. After reviewing the provided documentation, we have reasonably assumed that the exploration license will be successfully modified。

2.3 Geology

On a global basis, the geologic setting, or nature, of the mining/exploration rights areas included in this report is judged to vary from simple to complex. At most of the mines, the coal seams have moderate dips between 5 and 20 degrees. However, in some areas of the Zhundong and Zhunnan coalfields in Xinjiang Autonomous Region, the coal seams dip increase to 30 degrees due to folding. The Wudong Coal Mine is an isolated case. The coal seams within its area form a large syncline between the northern and southern regions. The coal seams in the northern region have dips between 40 and 50 degrees, whereas in the southern region the dips reaches 85 degrees. Typically, the mines in Heilongjiang, Shanxi, Shaanxi and Erdos area of the Inner Mongolia Autonomous Region have favorable geologic settings, with gentle seam dips and less faulting and folds. The mines in other areas typically have moderate to complex geologic settings due to faulting, seam splitting and thinning and sand channel erosion. The presence of burnt areas in coal seams near outcrops is common in Xinjiang coal mines. It is also one of the factors that complicate the occurrence of coal seams.

2.3.1 Stratigraphy

The mining/exploration rights areas included in this report are located in various coalfields located spanning nine coal bearing formations from the four major coal forming periods across northern China, as shown below:

Age of Coal Bearing Strata	Coal Bearing Formation
Carboniferous and Permian	Shanxi and Taiyuan
Cretaceous	Damoguaihe
Cretaceous	Yimin and Damoguaihe
Cretaceous	Fuxin
Jurassic	Yanan
Jurassic	Xishanyao and Badaowan
Neogene and Paleogene	Fujin

The strata are typically interbedded with numerous coal seams, separated by shale, siltstone, sandstone, and limestone. The coalfields are covered by poorly consolidated Quaternary alluvial deposits ranging in depth from 0 m to 120 m, typically between 20 m and 80 m thick.

2.3.2 Coal Seams

All of the coalfields reported on in this document contain multiple coal seams. While the names of the coal seams vary across different coalfields, they generally adhere to one of two methods, as illustrated below:

- The descending stratigraphic order approach,
- The ascending stratigraphic order approach.

The descending stratigraphic order approach is used in most coalfields, except for the Zhundong and Zhunnan coalfields in the Junggar Basin and the Houxia Coalfield in Tuokexun County of Xinjiang Autonomous Region. This approach is to assign major seam groups a number in stratigraphically descending order (the upper most seam being the lowest number). Within a seam group there may be several seams which are designated a superscript number, also assigned in descending order (e.g., 5^{-1}). When a seam splits, the splits are typically labeled as upper, middle, or lower (e.g., 5^{-1U}, 3L, etc.). If there is further splitting, an additional number is then assigned in the superscript (e.g., 5^{-1U-1}).

Whilst the ascending stratigraphic order approach is used in the Zhundong, Zhunnan and Houxia coalfields. Under this approach, the major seam is labeled with a letter in stratigraphically ascending order (the lower most seam being Seam A). When a seam splits, the splits are typically labeled with a number in stratigraphically ascending order (e.g., B1, B2, etc.). If there is further splitting of the upper or lower split, an additional label of either upper, middle or lower is then assigned (e.g., B1U, B1L, etc.).

2.3.3 Structure

The structural setting in the coalfields varies from simple to moderate in the Permian and Carboniferous age coalfields, simple to moderate in the Jurassic and Cretaceous age coalfields, and moderate in the Paleogene and Neogene coalfield.

While the seams in the Permian and Carboniferous coalfields (i.e. Hedong, Helanshan, Zhunge'er, Ningdong and Zhuozishan) are typically flat lying with dips of 4 to 15 degrees (with the exception of two mines in Zhuozishan Coalfield, the 22-degree dip at Gongwusu and 17-degree dip at Hongliushu West), all the deposits are impacted by simple to moderate faulting. The Hedong Coalfield features a gently west-dipping north-south-trending monocline with secondary broad folds. Faults are sparse and small-scale, with limited fractures. In the Helanshan, Ningdong and Zhuozishan coalfields, there are major faults having vertical displacements of over 100 m that separate the mine area into mining districts. Major faults greater than 10 m were identified by seismic surveys. However, during mining many smaller faults were identified. These smaller faults have varying impacts on mining. In the thicker seam at mines in these coalfields, there is moderate impact on mining since the fault throw is less than the seam thickness. However, in the thinner seams, these faults can

completely displace the seam and therefore have a more significant impact on mining. Though the coal-bearing strata in the Zhunge'er Coalfield is favorably flat lying with a 5-degree dip, we expect the moderate faulting in the Boligou mine to impact the longwall layout in future mining operations.

The structural setting of the coal bearing strata underlying the Jurassic coalfields in the Shaanxi Province (i.e., the Dongsheng and Shaanbei coalfields) is generally simple. The seams are flat lying with a 1-to-3-degree dip, few faults, and sand erosion encountered occasionally during mining operations. The structural setting of the Jurassic coalfields in the Xinjiang Autonomous Region (i.e. the Dananhu, Zhundong, Zhunnan, Nileke and Houxia coalfields) is typically moderate. However, the Dananhu West F1 South Exploration Right area is subject to significant faulting and has a more complex structural setting. The Jurassic coal-bearing strata of the Helanshan Coalfield also has complex structures due to active faulting activities in the region.

Coal seams in the cretaceous coalfields (i.e., the Baiyinhua, Hesigewula, Yuanbaoshan and Yimin coalfields) are typically subject to moderate splitting and multiple in-seam partings. Moderate faulting is also a complicating factor for the Yimin Coalfield.

Of all the coalfields described in this report, the Baoqing Coalfield is the only one formed during the Neogene and Paleogene. Its favorable structure results from a gently northwest-dipping monocline, with minimal faulting impacting the open-pit mining operation.

2.4 Source Data

Typically, each mine has exploration reports from various stages of its development. Additional resource and reserve verification reports are required when applying for mining rights or during mining tenure modifications. Updated geological reports typically incorporate all essential data from previous versions. We have examined the different editions of the geological reports for each mine to ensure that our estimates utilize all valid geological data. The data used included available drill logs, quality data, and the complete exploration report with resource maps, figures, and cross sections. While we used the data as a base for our study, we prepared our own resource maps for use in our independent estimation of coal resources/reserves in accordance with the JORC Code.

Exploration drillings of each mine were conducted by exploration teams licensed by the PRC government. There are extensive written standards on all aspects of the exploration programs that must be followed. All programs must include collection of data on coal occurrence and quality, hydrology, and geotechnical characteristics of

strata, spontaneous combustion and explosiveness of coal, coalbed methane, etc. Exploration results are presented in reports that must be approved by the government in order for the mining company to apply for exploration and mining right certificates. Due to these detailed regulated procedures, drilling data, exploration reports, and mine design reports prepared in PRC are very consistent in content and presentation.

The Chinese Geological Reports were prepared in accordance with Chinese government requirements and mining standards for use by Chinese regulatory authorities. They cannot and have not been disclosed as public reports under the JORC Code. Based on our review of these geological reports, we consider the disclosed resources to be representative or analogous to Inventory Coal. Therefore, after reviewing the reports, we have independently estimated the resources and reserves using the borehole data and coal quality data contained within them.

In addition to the geological data, we were provided with mine and processing plant design reports, historical operational data, mine plans, and future projections, all of which were analyzed to derive the technical and economic parameters for reserve estimation.

Furthermore, the CP visited each subject companies and discussed current mine development plans with appropriate technical personnel. Current mine maps and plans were also provided for the purpose of this report.

2.5 Resource Classification

The CP prepared resource/reserve estimates for the subject mines in accordance with the JORC Code (2012 Edition).

Based on our detailed review of the geologic setting of each seam at each mine, we have assigned the following drill hole spacing criteria for each category of classification of geologic assurance (reliability).

Table 2-3 Drill Hole Spacing by Classification

Geologic Setting	Measured (m)	Indicated (m)	Inferred (m)
Simple	750	1,500	<2,500
Moderate	500	1,000	<2,000
Complex	400	800	<1,600

2.6 Resource/Reserve Estimates

Estimates of coal resources are reported on an in situ ("in place") seam basis (coal plus partings). Reserve estimates are based on measured and indicated resources (exclude inferred) and are presented on a run-of-mine (ROM) or recoverable basis,

and on a marketable (product) basis. Recoverable Reserves represent the seam tonnage recovered by the mine plan, including out-of-seam dilution (OSD) (roof and floor rock mined with the coal seam) and increases in moisture content incurred during the normal mining process. Marketable Reserves represent the tonnage that is produced as salable product and includes allowances for processing losses incurred and increased moisture from coal washing.

The CP has conducted independent economic analyses for the subject mines and concluded that there is reasonable expectation that the estimated reserves are economically mineable.

We have estimated coal resources for all the subject mining and exploration rights, except Suhaitu Mine and Kabuqi Deep Exploration Area. Suhaitu Mine had depleted its coal resources years ago, and is currently recovering the remaining coal pillars left by previous mining activities using open-pit method in the name of environmental protection (prevent future spontaneous combustion and prepare the mined-out area for reclamation), as approved by the local government. Kabuqi Deep Exploration Area is the deeper area located under the Pinggou Mine, while the exploration right for this area has not been approved by the time our report is prepared, according to the source data provided by Wuhai Energy, the authorized mining elevation of Pinggou Mine overlaps with the upper part of Kabuqi Deep Exploration Area, therefore the coal resources occurred in the 16-1 seam and 16-2 seam which are situated within the overlapped elevation range have been included in our resources and reserve estimation for Pinggou Mine, however the lower 17 seam and 18 seam are not included, as the drilling data of these two seams are too limited to support a resource estimation according to JORC Code.

Our resource and reserve tonnage estimates (on a 100% ownership basis) for the mines included in this report, as of 31 July 2025, are as follows:

Total Marketable Reserves are 11,549.01 Mt. Approximately 48% of the marketable reserves are in the proved classification.

2.7 Coal Quality

The age of the coal-bearing strata within the mining/exploration rights areas ranges from the Late Carboniferous-Early Permian to the Jurassic and the Cretaceous, as

well as the Paleogene and Neogene. Typical coal quality characteristics at each geological period are summarized in the following table:

Table 2-6 General Coal Quality by Geological Period

Geological Period	Typical Coal Rank & Type	Key Quality Characteristics	Depositional Environment & Notes
Late Carboniferous to Early Permian	Bituminous coal (Coking coal in Wuhai Area)	Variable sulfur content in the Carboniferouos seams	Coastal/Paralic, seawater influence led to higher sulfur & pyrite content
Jurassic	Low-rank bituminous coal, occasional anthracite	Low to medium ssh, generally low sulfur, high calorific value	Inland/Lacustrine, oxidizing conditions led to high inertinite and low sulfur. Excellent for power generation and gasification
Cretaceous	Primarily lignite, followed by low-rank bituminous coal	Highly variable, can range from low ash & sulfur to high volatile matter characteristic of low-rank coal.	Inland/Basin, quality is highly dependent on the specific local basin conditions
Paleogene and Neogene	Lignite	High moisture, migh volatile matter, variable ash & sulfur, low heat value	Wet, forested swamps, low thermal maturity

From an utilization perspective, the mines located in the Carboniferous-Permian Zhuozishan Coalfield in the Wuhai area of Inner Mongolia produce high-value coking coal. All other Carboniferous-Permian coalfields in various locations produce thermal coal products. The Jurassic Shaanbei and Dongsheng coalfields in the Yulin and Dongsheng areas produce high-quality thermal and chemical coal, while other Jurassic coalfields in this report yield thermal coal of satisfactory quality. All coalfields in Cretaceous Age and Paleogene-Neogene Age produce low-quality thermal coal.

Since all drill holes are continuously cored, there are quality data for all holes that intersect one or more coal seams which meet the Chinese minimum thickness and core recovery requirements. The resource and reserve figures in this report show core holes having coal quality data.

2.8 Current Mine Operations

2.8.1 Mines

This study covers the mining operations of the following twenty-eight (28) mines under the seven (7) subsidiary companies of China Energy. Among these mines, eleven (11) are open-pit operations and seventeen (17) are underground operations. The subject mines are summarized as shown in Table 2-7:

Table 2-7 Summary of Subject Mines

Subtotal - Pingzhuang Coal	35.25	34.80	37.62	21.57
Shanxi Jinshen Energy Co., Ltd.				
Ciyaogou	5.52	5.70	4.21	2.52
Shaping	5.34	4.65	2.11	0.80
Subtotal - Jinshen Energy	10.86	10.35	6.32	3.32
Total	190.56	198.10	197.82	108.86

As shown, the historical product coal outputs are generally stable over the past three years, although there have been some fluctuations among individual mines. With the addition of coal output tonnages from the new mines, some existing operations produced less than their designated capacities due to various reasons, including market and sales considerations, mine renovations, and temporary transition between old and new mining districts. Chahasu, for example, had to reduce production in 2023 and 2024 due to issues encountered while updating its mining right registration.

The open-pit mines, characterized by their large-scale operations, accounted for approximately 71% of total production. The average output capacity of the subject open-pit mines is approximately 16.7 Mtpa, considerably higher than that of underground mines, which average approximately 4.0 Mtpa. Most of the large open-pit operations are located in eastern Inner Mongolia and Xinjiang, where the coal seams feature shallow occurrence and substantial thickness. In contrast, Wuhai Energy's underground operations have remained relatively small in scale, mainly due to the limitations resulting from the historical consolidation of smaller mines. The Renjiazhuang, Sandaogou and Chahasu underground mines have relatively high output capacities and are located in the well-known Ningdong, Shenfu and Dongsheng coalfields, respectively, where the most of China's large underground coal mines are concentrated. The Ciyaogou and Shaping mines of Jinshen Energy are well-equipped modern underground operations located in Shanxi Province. The decline in Shaping's output in 2023 was caused by the mandatory shutdown of the Shaping coal preparation plant (CPP) following an environmental protection campaign along the Yellow River, which required the closure of all industrial facilities within 1.0 km of the Yellow River that discharge liquid pollutants.

2.8.3 Staffing

Historical staffing for the subject China Energy mines is summarized as follows:

Table 2-9 Historical Staffing

Company / Mine	Year 2022	2023	2024	Jan.-Jul. 2025
China Energy Guoyuan Power Co., Ltd.	Historical No. of Personnel			
Chaoyang Open-pit	91	113	188	194

Baiyinhua No.1 Open-pit	1,248	1,328	1,180	1,250
Boligou	-	-	-	-
Hesigewula South Open-pit	693	700	715	704
Yuanbaoshan Open-pit	1,500	1,498	1,450	1,413
Shanxi Jinshen Energy Co., Ltd.				
Ciyaogou	613	615	628	619
Shaping	854	861	1,010	903
Subtotal - Open-pit	5,303	5,648	5,857	6,340
Subtotal - Underground	11,456	11,522	11,348	11,566
Total	16,759	17,170	17,205	17,906

For open-pit mines, it is a common practice to contract stripping work to third-party contractors. The personnel shown in the table does not include the staff from contractors. The overall staffing of the subject China Energy mines remains generally stable, with slight fluctuations less than 3%.

The historical labor productivity, in terms of open-pit and underground operations, is summarized as follows (the labor productivity numbers for 2025 are annualized):

Table 2-10 Historical Labor Productivity

	Year			
	2022	2023	2024	Jan. - Jul. 2025
Operations	Product Tonnes, Mt			
Open-Pit	138.19	151.09	157.49	84.02
Underground	52.37	47.01	40.33	24.84
Total	190.56	198.10	197.82	108.86
	Historical No. of Personnel			
Open-Pit	5,303	5,648	5,857	6,340
Underground	11,456	11,522	11,348	11,566
Total	16,759	17,170	17,205	17,906
	Labor Productivity, Product Tonnes / Employee-Year			
Open-Pit	26,060	26,750	26,890	22,720
Underground	4,570	4,080	3,550	3,680
Overall	11,370	11,540	11,500	10,420

The labor productivity for the open-pit operations averages 25,520 tonnes/employee-year, which is comparable to that of other large open-pit coal mines in China.

The labor productivity for the underground operations averages approximately 3,970 tonnes/employee-year, which appears slightly lower than the average level of underground fully-mechanized longwall (FM LW) coal mines in China. It is our opinion that this lower productivity mainly results from the relatively small-scale and lower output of the underground operations of Wuhai Energy. The overall average labor productivity for the subject China Energy operations during the period from January 2022 to July 2025 is approximately 11,200 tonnes/employee-year.

2.8.4 Capital Expenditures

Historical capital expenditures for the subject China Energy mines from January 2022 to July 2025, are summarized as follows:

Table 2-11 Historical Capital Expenditures

	Historical Capital Expenditures, RMB millions			
Company / Mine	2022	2023	2024	Jan. - Jul. 2025
China Energy Guoyuan Power Co., Ltd.				
Chaoyang Open-pit	56.4	52.9	57.0	36.7
Dananhu No.2 Open-pit	18.3	229.6	196.1	210.9

Suhaitu	12.0	7.7	279.8	1.0
Wuhushan	149.8	113.6	210.9	-
Subtotal - Wuhai Energy	700.8	495.8	1,300.9	44.9
China Energy Xinjiang Energy and Chemical Co., Ltd.				
Heishan Open-pit	148.7	218.8	140.3	48.5
Hongshaquan No.1 Open-pit	43.7	30.5	108.1	28.3
Hongshaquan No.2 Open-pit	-	39.8	586.2	57.9
Tunbao	17.5	126.8	120.2	43.1
Wudong	400.5	49.9	59.8	27.4
Zhundong Open-pit	162.1	246.6	214.9	19.8
Subtotal - Xinjiang Energy	772.5	712.4	1,229.5	225.0
Guodian Construction and Investment Inner Mongolia Energy Co., Ltd.				
Chahasu	15.3	9.0	11.7	0.2
Inner Mongolia Pingzhuang Coal (Group) Co., Ltd.				
Baiyinhua No.1 Open-pit	149.3	62.1	36.1	198.5
Boligou	3.6	81.1	310.7	348.4
Hesigewula South Open-pit	279.6	153.8	83.3	22.6
Yuanbaoshan Open-pit	27.8	-	15.6	-
Subtotal - PingZhuang Coal	460.2	297.0	445.7	569.5
Shanxi Jinshen Energy Co., Ltd.				
Ciyaogou	40.2	132.2	162.2	69.4
Shaping	32.5	169.6	320.8	27.5
Subtotal - Jinshen Energy	72.7	301.8	483.0	96.9
Total	3,126.4	2,598.9	4,371.2	1,566.6

The largest capital spending is attributed to new mine construction including surface facilities, major mine expansion, major production equipment replacement, safety-related facilities upgrading, coal preparation facilities upgrading, etc. The overall sustaining capital for the open-pit mines averages approximately RMB7.1 per tonne of output capacity, which appears moderate for the large size open-pit operations. The average sustaining capital spending for the underground mines is approximately RMB29.6 per tonne of output capacity, which in our opinion appears slightly higher and reasonable compared with the average of underground FM LW mines in China, mainly due to the recent commencement of mine technical upgrading and new mine.

2.8.5 Operating Costs

Historical operating costs for the period January 2022 to July 2025, by mine are summarized as follows:

Table 2-12 Historical Operating Costs

				Jul.				Jan.-Jul.
	2022	2023	2024	2025	2022	2023	2024	2025
	Historical Operating Costs (RMB / tonne)

Inner Mongolia Pingzhuang Coal (Group) Co., Ltd.								
Baiyinhua No.1 Open-pit	262	295	223	137	350	352	271	180
Boligou	-	-	-	-	-	-	-	-
Hesigewula South Open-pit	75	86	81	83	97	105	100	102
Yuanbaoshan Open-pit	143	156	147	120	176	190	177	148
Shanxi Jinshen Energy Co., Ltd.								
Ciyaogou	171	153	198	208	218	199	244	255
Shaping	130	142	201	300	174	189	273	508

Operating costs of the subject open-pit mines during the period from January 2022 to July 2025 averaged approximately RMB150 per product tonne, which appears comparable to other open-pit coal mines with similar output (mostly in northern China). Average operating costs for the Wuhai Energy underground mines exceed RMB500 per product tonne, which is higher than the industrial average, resulting from the longer operating years and lower output level than the actual capacities. Operating costs for the underground mines of the subject companies other than Wuhai Energy generally appear normal. The operating costs for all the subject underground mines averages RMB294 per product tonne. The operating costs of all the subject China Energy mines are approximately RMB191 per product tonne.

2.9 Future Operations

2.9.1 Output

The subsidiary companies of China Energy provided the projections for ROM coal production for the subject mines, mostly following their authorized output capacity. The commercial (product) coal output was not provided. The output projections for the subject China Energy mines for the period August 2025 to 2029 are summarized as follows:

Table 2-13 Output Projections

	Production Projections (Mt)

Total	80.67	210.64	224.97	239.87	246.18

Fluctuations in the output projections for a mine in particular years generally include: market considerations, mining condition changes or area shifting, completion of mine technical upgrades or new mine construction, etc. Most of the mines will produce coal within their current authorized capacity, except for the Lutian, Hongshaquan No.2 Open-pit mines, which are considering applications for higher capacities which are reflected in the output projections. According to the mine management, the technical upgrade construction of Pinggou Mine of Wuhai Energy is expected to commence in October 2026 and complete in March 2029. Suhaitu will stop operation once the excavation of residual coal is completed, and coal output data are not available. Construction of the new Boligou Mine of Pingzhuang Coal is projected to be completed by the end of 2027 and the mine is expected to attain design capacity in 2028. We have not identified significant geological or mining-related issues during our review that would prevent the subject mines from achieving projected output levels. Productivity levels required to achieve output projections are reasonable and realistic based on the recent operating history.

2.9.2 Staffing

Projected staffing for the subject China Energy mines is summarized as follows:

Table 2-14 Staffing Projections

	Year				
Company / Mine	2025	2026	2027	2028	2029
China Energy Guoyuan Power Co., Ltd.	Projected No. of Personnel				
Chaoyang Open-pit	208	208	207	206	206
Dananhu No.2 Open-pit	231	236	241	246	246

Subtotal - Open-pit	6,375	6,307	6,285	6,269	6,222
Subtotal - Underground	11,790	11,899	12,243	12,289	12,250
Total	18,165	18,206	18,528	18,558	18,472

The open-pit mines plan to continue outsourcing the stripping work to third-party contractors. The personnel shown in the table does not include the staff from contractors. The overall staffing level of the subject China Energy mines remains generally stable with only slight fluctuations.

The projected labor productivity, in terms of open-pit and underground mining operations, is summarized as follows:

Table 2-15 Projected Labor Productivity

Operations	Aug.-Dec. 2025	2026	2027	2028	2029
	Projected Product Tonnes, Mt				
Open-Pit	60.28	162.00	174.90	187.40	188.40
Underground	20.39	48.64	50.07	52.47	57.78
Total	80.67	210.64	224.97	239.87	246.18
	Projected No. of Personnel				
Open-Pit	6,375	6,307	6,285	6,269	6,222
Underground	11,790	11,899	12,243	12,289	12,250
Total	18,165	18,206	18,528	18,558	18,472
	Labor Productivity, Product Tonnes / Employee-Year				
Open-Pit	22,690	25,690	27,830	29,890	30,280
Underground	4,150	4,090	4,090	4,270	4,720
Overall	10,660	11,570	12,140	12,930	13,330

The labor productivity for the open-pit operations averages 27,250 tonnes/employee-year, which is approximately 7% higher than the historical performance due to the output increase from the open-pit mines. The labor productivity for the underground operations averages approximately 4,260 tonnes/employee-year, which appears comparable to the historical performance. It is our opinion that the overall labor productivity projection of the subject mines appear achievable.

2.9.3 Capital Expenditures

Projected capital expenditures for the subject China Energy mines are summarized as follows:

Table 2-16 Capital Expenditures Projection

Note: N/A = Not Available

Capital expenditure projections data provided were not complete, with the missing data mainly for the normal operating mines. Based on our experience in China, the sustaining capital for underground and open-pit mines generally falls in the range approximately RMB15-30 per ROM tonne capacity and RMB5-15 per ROM tonne capacity, respectively. The capital spending projections for the mines under expansion, technical upgrading and new mine construction were provided. Upon review, the

projected capital expenditure generally appears reasonable to achieve the target output capacity within the projected timeframe for these mines.

2.9.4 Operating Costs

Projected operating costs for the period from August 2025 to 2029 by mine, on per tonne basis and total RMB, are summarized as follows:

Table 2-17 Unit Operating Cost Projection

2.10 Coal Preparation Plants

The subject China Energy mines own and operate a portfolio of coal preparation plants which process coals produced from their respective mining operations.

The current coal processing capacity by the CPPs (or surface production systems if no CPP is built) as provided by China Energy companies are summarized as follows:

Table 2-19 Coal Processing Capacity by Mine

Mine CPP	ROM Feed Capacity

Wuhai Energy is the only subsidiary company producing coking coal among the subject entities, while the mines under the other subsidiaries produce thermal coal mainly used for power generation, chemical production, and domestic heating. As long as the coal quality can satisfy the requirements of the customers, the coal processing facilities may not operate necessarily at their full capacity to process all the ROM coal. Detailed CPP production data from each processing facility, such as percentage of ROM being processed, tonnage breakdown of products, etc., vary substantially by plant and by different years.

Typical shipped quality of the primary products from the subject mines, as reported by the subsidiaries of China Energy, are as follows:

Table 2-20 Typical Product Quality

	Typical Product Coal Quality			
	%			kcal/kg

2.11 Environmental Overview

We have completed an overview of environmental practices and policies at the China Energy Coal mines, and opines that environmental protection plans of the operations are in compliance with relevant PRC and Provincial laws and regulations. The subject mines have made diligent efforts to incorporate responsible environmental protection policies and practices into their operations and mine designs.

2.12 Risk Assessment

Given the large number of companies and assets under review, including both producing coal mines of different scales and mining methods and non-producing exploration right areas, it is not practical to evaluate risks on a mine-by-mine/area-by-area basis. The subject portfolio comprises operations that differ in geology, mine

design, production maturity, and regional conditions; however, they generally operate under comparable technical standards and regulatory frameworks. To provide a coherent and balanced overview, this report adopts a consolidated risk assessment framework, focusing on the overall risk exposure of the project package rather than on individual sites. Based on our independent assessment of the mining operations, we concludes that the subject China Energy mines and exploration areas are medium in overall risk, with elevated risks to the high level for certain aspects in some mines, for the following reasons:

- Supportive of Medium Risk:
  - Most of the operating mines of China Energy are mature operations with extensive operational experience, and all the properties are in established coalfields where general mining conditions are known and necessary infrastructure to support coal production and marketing are in place.
  - Overall ranking of the geologic setting of the defined resources/reserves within the subject mining/exploration right areas is moderate to complex.
  - Reserves to be mined during the risk assessment period are generally reasonably explored by drilling and mining experience to date, although local abnormalities are frequently encountered during actual underground operations.
  - While not anticipated, naturally occurring events, such as flooding due to excessive rainfall or an earthquake, could occur, but their impact would be regional in extent (i.e., not unique to the subject mines).
  - Typical of all coal mining operations, production may be temporarily interrupted, which, depending on the duration and magnitude of the interruption, could significantly impact total company performance.
  - Except for routine production risks that all coal mine operators experience, we have not identified any other extraordinary risks related to the future operation of the subject mines over the assessment period. The subject underground mines are at general industry risk for fires, explosions and flooding.
  - The exploration-stage tenements are classified as presenting a medium level of risk. Although these projects are still in the resource delineation stage and have not yet reached production feasibility, the current exploration results indicate stable coal-bearing formations with continuous seam development and favorable regional geology. The exploration activities have been conducted in accordance with national standards, and no material geological or permitting issues have been identified to date. However, uncertainties remain with respect to future drilling results, resource conversion, and permitting schedules. These uncertainties are typical for projects at this stage of development and are therefore assessed as representing a medium, rather than high, level of technical and investment risk.
- Supportive of High Risk:
  - Most of the operating Wuhai Energy mines feature limited coal resource bases and long histories of coal extraction, which on one hand means limited

availability of remaining coal resources/reserves, and on the other hand implies relatively more complicated mine working systems. The Laoshidan and Lutian mines will deplete their reserves during the assessment period.

- Approximately half of the underground mines (Renjiazhuang, Huangbaici, Laoshidan, Luotuoshan, Pinggou, Tunbao and Wudong) are ranked as high-gas mines, among which Tunbao are also ranked as bump-prone mines. This had brought in strict inspection and monitoring policies, such as reduced authorized output level and higher capital expenditures/costs on degasification and bump control facilities and operations. Although these mines have made detailed plans to understand and control the gas and bump risks, accidents do not appear totally impossible. It is likely similar or more strict policies could be issued if any accidents related to gas or bump occur.
- At projected output rates and current pricing, mining of the thicker seams is generally economic. However, if coal prices were to decline, and/or mining operations enter thinner seams, some mines may not be economic for certain periods because of locally complicated geological conditions, thinner coal seams, and lower productivity.
- Many of the China Energy mines are operated to supply coal to jointly developed power plants. If the planned consumption from the power plants declines due to delayed expansion of projects, while the regional coal mines release production capacity rapidly, a substantial oversupply of thermal coal may occur in the local market. In such a case, the imbalance between supply and demand could result in a notable decline in coal prices. Prolonged price depression would directly weaken the project's profitability and cash flow, and under adverse market conditions, the mine could even operate at a loss. Therefore, the synchronization between mine operations and the commissioning of the power plants is considered a critical factor for maintaining the mines' economic viability.

Our risk assessment for the China Energy mines in the period from 2025 to 2031 is summarized in the following matrix:

	Risk Assessment		
Hazard/Risk Issue	Severity	Probability	Overall
Geologic			
Overall (General)	Minor to Major	Possible to Likely	Medium
Unforeseen Anomalies	Minor to Moderate	Possible	Low to Medium
Reserve Availability	Minor	Likely	Medium to High
Naturally Occurring Events			
Weather	Minor to Major	Possible	Low
Earthquakes	Minor to Major	Possible	Low
Operational Productional			
Routine Operational Risks	Minor to Moderate	Possible	Medium
LW Subsidence	Minor to Moderate	Possible	Low to Medium
Major Events			
Major Equipment Fire	Minor to Major	Possible	Low
Explosions	Minor to Major	Unlikely	Low
Floods	Minor to Major	Unlikely	Low
Bumps / Pit Wall Failures	Moderate to Major	Possible	Low to Medium
Flooding of Pit	Minor	Possible	Low
External – Regulation	Moderate to Major	Possible	Medium to High
Market - Commercial	Moderate to Major	Possible	Medium

2.13 Economic Analysis

The CP prepared a Discounted Cash Flow (DCF) analysis to estimate the Net Present Value (NPV) of each of the subject mining operations. Our Base Case NPV results at

a discount rate of 7.1% as of 31 July 2025 are all positive, as summarized in the following table:

Table 2-22 China Energy NPV at Different Discount Rates

	NPV Under Various Sensitivity Cases (RMB Millions)					
Mine	6.0%	7.0%	Base Case (7.1%)	8.0%	9.0%	10.0%

Shaping	304	197	186	109	35	(26)

As a result, we conclude there is reasonable expectation that the Coal Reserves reported for the mines are economically mineable as of 31 July 2025.

2.14 Conclusions

Based on our review of the coal resource data and the methodology used to estimate the resources and reserves, which were supplemented by visits to the site and interactions with China Energy personnel, we have a high degree of confidence that the resource and reserve estimates shown in this report are a reasonable

representation for the China Energy Coal mines.

BOYD has reviewed the documentation provided by China Energy with regard to the company's coal resource holdings. To the extent supported by the documentation, we have accepted that China Energy holds the mining rights evaluated in this report for the documented periods.

3.0 GEOLOGY AND RESOURCES/RESERVES

The portfolio of 47 mining/exploration concessions detailed in this report comprises 28 mining licenses (17 underground and 11 open-pit) and 19 exploration licenses (17 potential underground and 2 potential open-pit). These deposits are situated within coalfields across northern China, specifically in the provinces of Heilongjiang, Shanxi, Shaanxi, and Ningxia, and the Xinjiang and Inner Mongolia autonomous regions.

To present the geological characteristics and resource/reserve status of these coal mines in a structured manner, this chapter is divided into two parts.

Part 1: Overview
This section provides a high-level summary, discussing the collective geological characteristics of all coal mines from an overarching perspective. It covers aspects such as regional geology, stratigraphy, coal seams, geological structures, primary data, resource/reserve classification, and the methodologies used for resource and reserve estimation.

Part 2: Detailed Analysis by Mine Grouping
This section details the geological characteristics and presents the estimation parameters and results for resources and reserves. The subject coal mines are organized into groups based on their holding company, coalfield, and mining method. This grouping allows for a focused discussion of mines sharing similar geological structures and operational practices within the same coalfield.

Part1 Overview

3.1 Geology

On a global basis, the geologic settings, or nature, of the mining/exploration rights areas included in this report are judged to vary from simple to complex. At most of the mines, the coal seams have a moderate dip of between 5 and 20 degrees. However, in some areas of the Zhundong and Zhunnan coalfields in Xinjiang Autonomous Region, the coal seams dip increases to 30 degrees due to folding. The Wudong Coal Mine is an isolated case. The coal seams within its area form a large syncline between the northern and southern regions. The coal seams in the northern region have dips between 40 and 50 degrees, whereas in the southern region the dips reach up to 85 degrees. Typically, the mines in Heilongjiang, Shanxi, Shaanxi and Erdos area of the Inner Mongolia Autonomous Region have favorable geologic settings, with gentle seam dips and less faulting and folds. The mines in other areas typically have moderate to complex geologic settings due to faulting, seam splitting and thinning and sand channel erosion. The presence of burnt areas in coal seams near outcrops is common in Xinjiang coal mines. It is also one of the factors that complicate the occurrence of coal seams.

3.1.1 Stratigraphy

The mining/exploration rights areas included in this report are located in various coalfields located spanning nine coal bearing formations from the four major coal forming periods across northern China, as shown below:

Age of Coal Bearing Strata	Coal Bearing Formation
Carboniferous and Permian	Shanxi and Taiyuan
Cretaceous	Damoguaihe
Cretaceous	Yimin and Damoguaihe
Cretaceous	Fuxin
Jurassic	Yanan
Jurassic	Xishanyao and Badaowan
Neogene and Paleogene	Fujin

The strata are typically interbedded with numerous coal seams, separated by shale, siltstone, sandstone, and limestone. The coalfields are covered by poorly consolidated Quaternary alluvial deposits ranging in depth from 0 m to 120 m, typically between 20 m and 80 m thick.

3.1.2 Coal Seams

All of the coalfields reported on in this document contain multiple coal seams. While the names of the coal seams vary across different coalfields, they generally adhere to one of two methods, as illustrated below:

- The descending stratigraphic order approach,
- The ascending stratigraphic order approach.

The descending stratigraphic order approach is used in most coalfields, except for the Zhundong and Zhunnan coalfields in the Junggar Basin and the Houxia Coalfield in Tuokexun County of Xinjiang Autonomous Region. This approach is to assign major seam groups a number in stratigraphically descending order (the upper most seam being the lowest number). Within a seam group there may be several seams which are designated a superscript number, also assigned in descending order (e.g., 5^{-1}). When a seam splits, the splits are typically labeled as upper, middle, or lower (e.g., 5^{-1U}, 3L, etc.). If there is further splitting, an additional number is then assigned in the superscript (e.g., 5^{-1U-1}).

Whilst the ascending stratigraphic order approach is used in the Zhundong, Zhunnan and Houxia coalfields. Under this approach, the major seam is labeled with a letter in stratigraphically ascending order (the lower most seam being Seam A). When a seam splits, the splits are typically labeled with a number in stratigraphically ascending order (e.g., B1, B2, etc.). If there is further splitting of the upper or lower split, an additional label of either upper, middle or lower is then assigned (e.g., B1U, B1L, etc.).

3.1.3 Structure

The structural setting in the coalfields varies from simple to moderate in the Permian and Carboniferous age coalfields, simple to moderate in the Jurassic and Cretaceous age coalfields, and moderate in the Paleogene and Neogene coalfield.

While the seams in the Permian and Carboniferous coalfields (i.e. Hedong, Helanshan, Zhunge'er, Ningdong and Zhuozishan) are typically flat lying with dips of 4 to 15 degrees (with the exception of two mines in Zhuozishan Coalfield, the 22-degree dip at Gongwusu and 17-degree dip at Hongliushu West), all the deposits are impacted by simple to moderate faulting. The Hedong Coalfield features a gently west-dipping north-south-trending monocline with secondary broad folds. Faults are sparse and small-scale, with limited fractures. In the Helanshan, Ningdong and Zhuozishan coalfields, there are major faults having vertical displacements of over 100 m that separate the mine area into mining districts. Major faults greater than 10 m were identified by seismic surveys. However, during mining many smaller faults were identified. These smaller faults have varying impacts on mining. In the thicker seam at mines in these coalfields, there is moderate impact on mining since the fault throw is less than the seam thickness. However, in the thinner seams, these faults can

completely displace the seam and therefore have a more significant impact on mining. Though the coal-bearing strata in the Zhunge'er Coalfield is favorably flat lying with a 5-degree dip, we expect the moderate faulting in the Boligou mine to impact the longwall layout in future mining operations.

The structural setting of the coal bearing strata underlying the Jurassic coalfields in the Shaanxi Province (i.e., the Dongsheng and Shaanbei coalfields) is generally simple. The seams are flat lying with a 1-to-3-degree dip, few faults, and sand erosion encountered occasionally during mining operations. The structural setting of the Jurassic coalfields in the Xinjiang Autonomous Region (i.e. the Dananhu, Zhundong, Zhunnan, Nileke and Houxia coalfields) is typically moderate. However, the Dananhu West F1 South Exploration Right area is subject to significant faulting and has a more complex structural setting. The Jurassic coal-bearing strata of the Helanshan Coalfield also has complex structures due to active faulting activities in the region.

Coal seams in the cretaceous coalfields (i.e., the Baiyinhua, Hesigewula, Yuanbaoshan and Yimin coalfields) are typically subject to moderate splitting and multiple in-seam partings. Moderate faulting is also a complicating factor for the Yimin Coalfield.

Of all the coalfields described in this report, the Baoqing Coalfield is the only one formed during the Neogene and Paleogene. Its favorable structure results from a gently northwest-dipping monocline, with minimal faulting impacting the open-pit mining operation.

To illustrate the structural setting, we have included one structure map showing cross section locations, and two cross sections for each mine. These figures are listed and contained in Appendix A.

3.2 Source Data

3.2.1 Data Defining Coal Occurrence and Quality

Typically, each mine has exploration reports from various stages of its development. Additional resource and reserve verification reports are required when applying for mining rights or during mining tenure modifications. Updated geological reports typically incorporate all essential data from previous versions. We have examined the different editions of the geological reports for each mine to ensure that our estimates utilize all valid geological data. The data used included available drill logs, quality data, and the complete exploration report with resource maps, figures, and cross sections. While we used the data as a base for our study, we prepared our own resource maps for use in our independent estimation of coal resources/reserves in accordance with the JORC Code.

Exploration drillings of each mine were conducted by exploration teams licensed by the PRC government. There are extensive written standards on all aspects of the exploration programs that must be followed. All programs must include collection of data on coal occurrence and quality, hydrology, and geotechnical characteristics of strata, spontaneous combustion and explosiveness of coal, coalbed methane, etc. Exploration results are presented in reports that must be approved by the government in order for the mining company to apply for exploration and mining right certificates. Due to these detailed regulated procedures, drilling data, exploration reports, and mine design reports prepared in PRC are very consistent in content and presentation.

The Chinese Geological Reports were prepared in accordance with Chinese government requirements and mining standards for use by Chinese regulatory authorities. They cannot and have not been disclosed as public reports under the JORC Code. Based on our review of these geological reports, we consider the disclosed resources to be representative or analogous to Inventory Coal. Therefore, after reviewing the reports, we have independently estimated the resources and reserves using the borehole data and coal quality data contained within them.

The types of data defining coal occurrence, and the procedures used to obtain the data, are the same for all of the subject properties. All exploration was conducted to Chinese standards and included the following procedures:

- All holes were continuously core drilled using standard Chinese drilling equipment. Core drills used water and mud media, double split core barrels with carbide bits, and core diameter was typically 6.5 -7.5 cm.
- Holes were drilled vertically in all mines except Wudong, which utilized directional inclined holes for exploring steeply dipping coal seams ranging 45 to 85 degrees.
- All core was logged and sampled by on-site geologists. The core was photographed. Select holes were geotechnically logged and geotechnical samples were taken.
- The entire core for all mineable coal seams was sampled and there was no subsampling. Partings greater than 0.01 m thick were removed from the coal seam and sampled separately. Separate parting, roof and floor samples (each 0.1 m thick) were also taken.
- Core recovery was determined by measuring the sample length and weight, which was later compared with the geophysical logs that were run after the hole was completed. According to Chinese Standards, the minimum acceptable linear and weight recovery requirements are 75% and 60%, respectively. Seam cores with lower recoveries were not analyzed per Chinese standards. While these minimum recoveries are lower than some international standards, actual core recoveries were generally higher.

- All samples were packaged in double-layer heavy-duty plastic sampling bags, which were then wrapped and sealed with adhesive tape to ensure the samples remain free from damage or contamination during storage and transportation. All samples taken were temporarily stored at the field office of the exploration team and are regularly sent to the designated laboratory by a designated person.
- Upon completion of drilling, all drill holes were geophysically logged. Logs run include natural gamma, density, resistivity, calliper, and vertical deviation.
- Drill holes were plugged and locations were surveyed using either the 1954 Beijing Coordinate System, the 1980 Xi'an Coordinate System, or the 2000 National Coordinate System. The system used was subject to variation based on the drilling program's implementation timeline. The topographic control is appropriate for both the flat and hilly terrain.
- Samples taken for analytical testing were delivered to a licensed laboratory where individual samples were weighed, air dried, crushed, and riffled according to Chinese standards. Subsamples of the riffled samples are taken for various analyses, with the remainder of the sample retained for future analyses.
- According to Chinese Standards, the laboratories conduct quality control procedures, including sending duplicates to other labs and internal audits.

3.2.2 Other Data

In addition to the geological data described above, we were provided with mine and processing plant design reports, historical operational data, mine plans, and future projections, all of which were analyzed to derive the technical and economic parameters for reserve estimation.

Furthermore, the CP visited each subject companies and discussed current mine development plans with appropriate technical personnel. Current mine maps and plans were also provided for the purpose of this report.

3.3 Resource/Reserve Classification

In the estimation and reporting of reserves, modifying factors (mining, processing, metallurgical, infrastructure, economic, marketing, legal, environment, social, and government factors) must be considered. Two major factors typically used to classify coal resource/reserves are:

- Geologic assurance of existence.
- Economic viability.

All systems require that the degree of geological assurance of existence be separated into various categories based on the spacing of points of observation (drill holes, mine measurements, and outcrop measurements). Economic viability of resources is determined by a scoping study or preliminary economic assessment that identifies that there are reasonable prospects for eventual economic extraction. Economic viability

of reserves must be determined by a prefeasibility or feasibility study. Typically, the determination of resources is conducted first, and if warranted, is followed by the determination of reserves.

All of the subject mines had Chinese standard resource reports that were followed by mine design reports. Since our independent estimates of coal resources are being prepared after the mine design reports and development of the available mine plans, our estimates exclude some areas that may have had reasonable prospects for eventual economic extraction prior to the mining studies, but now lie in mining barriers. Therefore, the areas covered in our resource estimates do not match prior estimates prepared before the mining studies.

The CP prepared resource estimates for all subject mines in accordance with the JORC Code (2012 Edition).

The following definitions are provided by the JORC Code, and used in this report:

> 'Coal Resource' is a concentration or occurrence of solid material of economic interest in or on the Earth's crust in such form, grade (or quality), and quantity that there are reasonable prospects for eventual economic extraction. The location, quantity, grade (or quality), continuity and other geological characteristics of a Coal Resource are known, estimated or interpreted from specific geological evidence and knowledge, including sampling. Coal Resources are sub-divided, in order of increasing geological confidence, into Inferred, Indicated and Measured categories.
>
> An 'Inferred Coal Resource' is that part of a Coal Resource for which quantity and grade (or quality) are estimated on the basis of limited geological evidence and sampling. Geological evidence is sufficient to imply but not verify geological and grade (or quality) continuity. It is based on exploration, sampling and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes.
>
> An 'Indicated Coal Resource' is that part of a Coal Resource for which quantity, grade (or quality), densities, shape and physical characteristics are estimated with sufficient confidence to allow the application of Modifying Factors in sufficient detail to support mine planning and evaluation of the economic viability of the deposit.
>
> A 'Measured Coal Resource' is that part of a Coal Resource for which quantity, grade (or quality), densities, shape, and physical characteristics are estimated with confidence sufficient to allow the application of Modifying Factors to support detailed mine planning and

final evaluation of the economic viability of the deposit.

Coal Reserves are those portions of Coal Resources that, after the application of all Modifying Factors, result in an estimated tonnage and grade which, in the opinion of the Competent Person making the estimates, can be the basis of a technically and economically viable project, after taking account of material relevant Modifying Factors. Deriving a Coal Reserve without a mine design or mine plan through a process of factoring of the Coal Resource is unacceptable.

A 'Probable Coal Reserve' is the economically mineable part of an Indicated, and in some circumstances, a Measured Coal Resource. The confidence in the Modifying Factors applying to a Probable Coal Reserve is lower than that applying to a Proved Coal Reserve.

A 'Proved Ore Reserve' is the economically mineable part of a Measured Coal Resource. A Proved Ore Reserve implies a high degree of confidence in the Modifying Factors.

The JORC Code requires that all resources must have a reasonable prospect for eventual economic extraction. The criteria used by the CP to determine resources that meet this requirement are discussed in the following resource/reserve section of this report.

In developing the appropriate drill hole spacing for reliability classification, both the structural setting and depositional setting were evaluated. As discussed in the geology section of this report, the geologic setting, or nature, of the resource areas is judged to vary from simple to complex.

The structural setting of the individual mining rights areas varies from simple to complex. The strata are mostly flat lying or moderately dipping, however moderate to severe faulting is a complicating factor. Post-sedimentary palaeochannels and coal burning along the outcrop are also complicating factors in some specific mines.

The depositional setting varies from simple to moderate. Splitting and thinning of some of the coal seams is also a complicating factor to the geologic setting.

Based on our detailed review of the geologic setting of each seam at each mine, we judge the overall geologic setting to be simple to complex and have assigned the following drill hole spacing criteria for classification of estimated resources:

Geologic Setting	Measured (m)	Indicated (m)	Inferred (m)
Simple	750	1,500	<2,500
Moderate	500	1,000	<2,000
Complex	400	800	<1,600

While some areas of the deposits are considered complex due to severe faulting, most were excluded from our resource/reserve estimates, or in a few cases given a low mining recovery.

Resource and reserve classification of each coal seam are shown on the resource/reserve maps included in Appendix A.

3.4 Resource/Reserve Estimate Approach

The estimates of coal resources/reserves presented herein have been independently prepared by the CP using drilling and other source data provided by the subject companies, and calculation procedures developed by the CP.

3.4.1 Resources

In general, our approach in preparing estimates of the coal resources included the following:

- Independent review and interpretation of the source exploration data.
- Review of seam correlation.
- Identification of coal seam occurrence greater than 0.7 m thick for metallurgical coal, 0.8 m thick for bituminous thermal coal, and 1.5 m thick for lignite for underground mines, and 0.5 m thick for open-pit mines.
- Exclusion of barrier areas underlying protected surface structures (e.g., mine facilities, major highways, major streams, and populated areas that are not planned to be relocated) and barrier areas along main roadway development for mine plans.
- Preparation of coal isopach maps within the identified resource areas.
- Review of seam quality.

The seam resource maps provided were used as the starting point for our estimates, and were updated by the CP to include newer features, such as changes in the mining right area, mine barriers, etc.

Based on our economic evaluation of the past and current mining practices (see Chapter 4), the above mentioned minimum seam thickness cutoffs were selected as being appropriate to define coal resources and coal reserves.

Estimates of in situ coal resources were prepared using computer mapping software (AutoCAD) for all mapped resource areas for the underground mines, and Carlson SurvCADD for the open-pit mines.

3.4.2 Reserves

In general, our approach to preparing estimates of coal reserves included the following:

- A LW mine plan was developed for each underground resource area using the provided life of mine or five-year plans, the main roadway layout from the mine design report and current plans. Most panel layouts are of similar orientation as required for geotechnical considerations. A pit shell was developed for each open-pit resource area using the provided pit crest and pit bottom lines.
- Underground mine plans were not developed for resource areas that could not be logically accessed from the main roadways, nor for small or irregular resource areas that could not support a logical panel layout. Open-pit mine plans were not developed for resource areas that could not support a reasonable pit.
- Areas of inferred resources were not included in the mine plans.

After the mine plan was developed for the resource area, estimates of reserves were prepared within the defined mine plan for each coal seam, by mining rights area.

3.5 Coal Resources/Reserve Estimates

Resource estimates were prepared from the seam maps showing the resource areas and reserves for those portions of the resource areas included in the mine plan (subject to confirmation of economic mineability).

Resource estimates are inclusive of reserves as they include the entire resource area both outside and within the mine plan. Reserves are only estimated within the defined mine plan (and in accordance with the JORC Code do not include areas of inferred resource).

3.5.1 Resource Estimates

Estimates of coal resources are stated on an in-situ seam (coal plus partings) basis and assume 100% ownership of the coal. Our estimates for underground mines were prepared by defining, measuring and then aggregating areas of equal coal thickness (as defined on the coal isopach maps), by resource classification and by LW face. Our estimates for open-pit mines were prepared by data compilation, data validation, geologic modeling, classification assignment, and resource calculation.

The resource estimation for Mining/Exploration Rights considers the following key factors: coal specific gravity (S.G.), seam dip, in-seam parting thickness and parting S.G. During our resources estimates, all partings with mining potential alongside coal are included in the resource tonnages. During open-pit mining operation, partings exceeding 50 cm are typically stripped separately.

In situ coal density of each seam varies from 1.23 to 1.50. The in-seam partings are assigned a S.G. of 2.1. The reserve factor table for each subject company in Part 2 provides details of the specific additional parameters used to estimate the resources

for each mine/seam.

We have estimated coal resources for all the subject mining and exploration rights, except Suhaitu Mine and Kabuqi Deep Exploration Area. Suhaitu Mine had depleted its coal resources years ago, and is currently recovering the remaining coal pillars left by previous mining activities using open-pit method in the name of environmental protection (preventing future spontaneous combustion and prepare the mined-out area for reclamation), as approved by the local government. Kabuqi Deep Exploration Area is the deeper area located under the Pinggou Mine, while the exploration right for this area has not been approved by the time our report is prepared, according to the source data provided by Wuhai Energy, the authorized mining elevation of Pinggou Mine overlaps with the upper part of Kabuqi Deep Exploration Area, therefore the coal resources occurred in the 16-1 seam and 16-2 seam which are situated within the overlapped elevation range have been included in our resources and reserve estimation for Pinggou Mine, however the lower 17 seam and 18 seam are not included, as the drilling data of these two seams are too limited to support a resource estimation according to JORC Code.

Our resource tonnage estimates (on a 100% ownership basis) for the mines included in this report, as of 31 July 2025, are as follows:

3.5.2 Reserve Estimates

The CP completed an economic analysis for all the mines to determine if the projected mine operations are economically viable (see Chapter 8), as of 31 July 2025. This analysis concludes that the identified reserves at the subject mines which have reasonable expectations to be economically mineable.

Reserves are presented on a ROM or recoverable basis, and on a marketable basis. Recoverable Reserves represent the seam tonnage to be recovered by the corresponding mine plan, including the coal seam and OSD (roof and floor rock recovered with the coal seam during the normal mining process) and moisture gained during mining. Marketable Reserves represent the salable tonnage and include allowances for losses during coal handling and processing and increased moisture as the result of the washing process.

All the subject mines produce coal, and all the exploration right areas plan to produce coal, either by underground LW methods or open-pit methods. Actual and planned underground mines in thick seams (greater than 6 m) use sub-level caving LWs and in thinner seams conventional LW systems are used. All open-pit mines use the shovel-truck method to extract coal seams.

Due to the lack of mine designs and authorization for mining rights, none of the exploration rights included in this report have undergone reserve estimation. We have only estimated the reserves for the mining rights areas, with the exception of Suhaitu.

Underground mine plan recovery is estimated based on the geologic complexity (both structural and depositional), the shape of the mine plan area, the coal seam thickness and mining equipment (shields and shearers) installed. Mine plans are developed in order to maximize recovery of the resources. However, 100% recovery of these theoretical plans is rarely achieved, since: (a) geologic features and mine development scheduling can result in shortening or removal of projected panel areas, and (b) selected mining equipment may not be able to cut the full seam vertically in some areas due to a change in the seam thickness.

The maximum achievable plan recovery within the underground mine LW plan areas is 95% (for LWs that have been set up, with gate roads and cuts developed). Most of the subject mines have been in production for years and projected mining is considered low risk. The reserve areas are restricted to LW areas (i.e., areas not suitable for LW mining are excluded). In assigning the estimated likely plan recoveries for each LW, we have used: (1) 75% in areas where backfill LW mining technical is applied, (2) 80% to 85% for uniform LWs with few geologic anomalies, and (3) 90% to 95% for uniform LWs that have been set up. The irregular shaped areas, which have limited coal tonnage, have been considered as resource areas, since the projected mine plan does not recover coal in these areas.

Vertical mining recovery is determined by the type of LW equipment installed on the LW face. The subject companies use two types of FM LW equipment, one with and the other without sublevel caving capabilities (FM LW SLC and FM LW. respectively), depending on seam height.

In the +6 m thick seams, FM LW SLC equipment is typically installed. When using this equipment within a developed panel, 100% of the lower ply of the seam (varies from 3.0 m to 4.5 m) is recovered by the shearer. Then doors installed in the shields are opened, and the overlying roof coal collapses through the doors. When rock roof material is seen, the doors are closed. Based on discussion with the technical personnel from each subject mine and the CP's experience on FM LW SLC mining method in China, we estimate that approximately 80% of the collapsed roof coal is recovered. Therefore, the overall coal seam recovery within a panel is the combined 100% recovery of the bottom ply and 80% of the thickness of the roof coal.

FM LW equipment having a maximum 4.5 m operating height is applied in the thinner seams where seam height warrants, as well as the lower profile equipment for thinner splits. Vertical mining recovery of the FM LW is determined by the maximum cutting height of the equipment installed on the LW face, as well as the competency of the roof rocks. If seam height changes and there are sufficient reserves, the mines routinely change to higher or lower profile equipment to maximize coal recovery. For areas that have a seam thickness greater than the height that the equipment can fully cut, the mineable coal thickness equals the maximum cutting height of the equipment. When the dilution from the roof rock of a coal seam is an identified issue, it is a common practice for an underground coal mine to leave the top 0.2 m to 0.3 m of the coal seam to avoid roof rock dilution, resulting in a lower vertical coal recovery. Based on the historical performance, the subject mines do not have this kind of issue.

When the coal seam is thinner than the minimum cutting height of the equipment installed on the LW face, OSD thickness is determined by the difference between the seam thickness and minimum cutting height. Considering the widespread faulting in the subject mines, we assumed 0.05 m, 0.1 m and 0.2 m of additional OSD for FM LW in thinner seams, FM LW SLC in thicker seams, and FM LW SLC in the very thick seams, and 3% of OSD for open-pit mines. An as received density of 2.3 S.G. is assigned to OSD. Moisture gain from mine spray water is estimated at 2% for underground mines. These factors are typical for Chinese LW and open-pit operations.

Coal produced underground or in the pit is transported to the plant, where the ROM product is screened and processed. All the active mines have 100% of the produced raw coal processed in their CPPs, except for the Renjiazhuang, Wudong and Ciyaogou mines which sell raw coal products after crushing and screening.

The flexibility of coal preparation processes and final product schemes in coal

preparation plants enables these plants to adapt to processing ROM coal from different coal seams of corresponding mines. Given that geological conditions vary across different mines and coal seams, the saleable coal yield of ROM coal from different seams also differs. To reasonably reflect the saleable coal yield of each coal seam and based on our extensive experience in Chinese coal industry, we have made a reasonable assumption that the yield of the pure coal content for each seam is 95%, with a rejection rate of waste materials at 80%. Accordingly, the product coal yield for each respective coal seam has been calculated.

All mines produce thermal coal products, except the Wuhai Energy mines, which also produce coking coal. The thermal products include both clean and mixed products. Further information on coal preparation is contained in Chapter 5 of this report.

Our reserves tonnage estimates (on a 100% ownership basis) for the mines included in this report, as of 31 July 2025, are as follows:

3.6 Coal Quality

The age of the coal-bearing strata within the mining/exploration rights areas ranges from the Late Carboniferous-Early Permian to the Jurassic and the Cretaceous, as well as the Paleogene and Neogene. Typical coal quality characteristics at each geological period are summarized in the following table:

Table 3-3 General Coal Quality by Geological Period

Geological Period	Typical Coal Rank & Type	Key Quality Characteristics	Depositional Environment & Notes
Late Carboniferous to Early Permian	Bituminous coal (Coking coal in Wuhai Area)	Variable sulfur content in the Carboniferouos seams	Coastal/Paralic, seawater influence led to higher sulfur & pyrite content
Jurassic	Low-rank bituminous coal, occasional anthracite	Low to medium ssh, generally low sulfur, high calorific value	Inland/Lacustrine, oxidizing conditions led to high inertinite and low sulfur. Excellent for power generation and gasification
Cretaceous	Primarily lignite, followed by low-rank bituminous coal	Highly variable, can range from low ash & sulfur to high volatile matter characteristic of low-rank coal.	Inland/Basin, quality is highly dependent on the specific local basin conditions
Paleogene and Neogene	Lignite	High moisture, migh volatile matter, variable ash & sulfur, low heat value	Wet, forested swamps, low thermal maturity

From an utilization perspective, the mines located in the Carboniferous-Permian Zhuozishan Coalfield in the Wuhai area of Inner Mongolia produce high-value coking coal. All other Carboniferous-Permian coalfields in various locations produce thermal coal products. The Jurassic Shaanbei and Dongsheng coalfields in the Yulin and Dongsheng areas produce high-quality thermal and chemical coal, while other Jurassic coalfields in this report yield thermal coal of satisfactory quality. All coalfields in Cretaceous Age and Paleogene-Neogene Age produce low-quality thermal coal.

Since all drill holes are continuously cored, there are quality data for all holes that intersect one or more coal seams which meet the Chinese minimum thickness and core recovery requirements. The resource and reserve figures in this report show core holes having coal quality data.

Part 2 Detailed Analysis by Mine Grouping

This section details the geological characteristics and presents the estimation parameters and results for resources and reserves. The subject coal mines are organized into groups based on their holding company, coalfield, and mining method. This grouping allows for a focused discussion of mines sharing similar geological structures and operational practices within the same coalfield.

3.7 Baotou Mining/Exploration Rights

Baotou Mining holds three exploration rights (as shown in the following table) which are located next to each other in Yinmin Coalfield.

Table 3-4 Coalfields and Coal Bearing Strata – Baotou Mining

Mining/Exploration Right	Coalfield	Age of Coal Bearing Strata	Coal Bearing Formation
China Energy Baotou Mining Co., Ltd.			
Exploration Rights			
Yinminhe East Backup	Yimin	Cretaceous	Yimin and Damoguaihe
Yinminhe East No.2	Yimin	Cretaceous	Yimin and Damoguaihe
Yinminhe East Peripheral	Yimin	Cretaceous	Yimin and Damoguaihe

Regional Geology

The Yimin Basin is located in the eastern part of the Hailar Depression within the Neocathaysian Third Subsidence Zone. It is a fault-depression coal basin controlled by the Ajitu Yihongde Fault (F26) and the Yiminhe Fault (F19), trending northeast. The basin's primary basement consists of the Xing'anling Group, overlain by the coal-bearing Jalawur Group.The Yimin basin's internal structure comprises three secondary tectonic units, arranged from south to north: the Yimin Syncline, Wumuchang Anticline, and Menggenchulu Syncline. These subunits are separated by major faults, forming relatively independent coal-bearing basins. The Yimin Coalfield is situated within the Menggenchulu Syncline.

Structure

The Yimin Coalfield is located in the northeastern part of the Yimin Basin. The area features a broad, gentle syncline with an axial trend of northeast. Strata dips are generally around 5 degrees, increasing locally to 25 degrees near faults. Dips gradually steepen from the axial zone towards the limbs, with the southeastern limb being slightly steeper than the northwestern limb. The structure exhibits gentle undulations both along its strike and down its dip.

Stratigraphy

The stratigraphic sequence in the Eastern Yimin River Area, from oldest to youngest, comprises the Lower Cretaceous Damoguaihe and Yimin Formations of the Jalawur

Group, and the Quaternary. The primary coal-bearing strata are the Damoguaihe and Yimin Formations. The Damoguaihe Formation consists of tuffaceous clastic, coal-bearing, and mudstone members, with lithology dominated by tuffaceous-cemented clastic rocks and mudstone. The Yimin Formation is the most important coal-bearing unit in the area, characterized by sandy conglomerates and extra-thick coal seams. The formation generally thickens from west to east.

Coal Seams

The coal-bearing strata consist of the Yimin and Damoguaihe Formations, containing over 20 coal seams. More than 10 of these are primary minable seams, with the majority located in the Yimin Formation (e.g., 15-1 Upper, 16-1, 16-3), while the Damoguaihe Formation contains fewer minable seams (e.g., 26-1, 26-3 Lower).

Seam thickness varies significantly. The main seam, 16-3, averages over 10 m, classifying it as an extra-thick seam. Seam structures are mostly simple to moderately complex, typically containing up to 5 partings of mudstone or siltstone.

Burial depth differs notably between the formations: Yimin Formation seams are shallower, while Damoguaihe Formation seams are deeper. Roof and floor lithology are predominantly mudstone, siltstone, and various sandy conglomerates. The following tables show the detailed characteristics of each seam at each of the subject mine:

Table 3-5 Coal Seams of Exploration Rights in Yimin Coalfield

		Thickness (m)			Distance from the	Seam Depth	Seam	Seam

Data Defining Coal Occurrence and Quality

To ensure the completeness and reliability of the data used for resources and reserves estimates, we have been provided with the relevant geological reports for the subject mines, as follows:

= Exploration Report for the Yiminhe East Backup, July 2010
= Exploration Report for the Yiminhe East Peripheral, May 2008
= Exploration Report for the Yiminhe East No.2 Mine, July 2009

We have reviewed these geological reports to ensure our data remains current and valid. The following table summarizes the available exploration data for each exploration right area:

Exploration Right Area	Area (km^2)	No. of Drill Holes
Yiminhe East Backup	29.94	61
Yiminhe East No.2	80.92	108
Yiminhe East Peripheral	36.02	61

Resource/Reserve Classification

Based on our detailed review of the geologic setting of the seam at each area, we judge the overall geologic setting to be moderate and have assigned the following drill hole spacing criteria for classification of estimated resources:

Exploration Right Area	Seam	Geologic Setting	Measured (m)	Indicated (m)	Inferred (m)
Yiminhe East Backup	All Seams	Moderate	500	1,000	<2,000
Yiminhe East No.2	All Seams	Moderate	500	1,000	<2,000
Yiminhe East Peripheral	All Seams	Moderate	500	1,000	<2,000

Resource and reserve classification of each coal seam are shown on the resource/reserve maps included in Appendix A.

The JORC Code requires that all reports include comment on items listed in Table 1 of the Code. Appendix B, '*Table 1 – Yimin Coalfield',* shows the items listed for the subject exploration rights in Yimin Coalfield, along with our comments on the table.

Resources Estimate

Estimates of in situ coal resources were prepared using computer mapping software

(AutoCAD) for all mapped resource areas. The following parameters were used for resources reporting:

Table 3-6 Resources Estimates Parameters – Yimin Coalfield

		Max.	S.G.		Thickness (m)

Note: 1. Figures may not add due to rounding

In-Situ Coal Quality

Since all drill holes are continuously cored, there are quality data for all holes that intersect one or more coal seams which meet the Chinese minimum thickness and core recovery requirements. As shown in the above tables, coal quality is well defined.

All coal seams in Yimin Coalfield are classified as lignite. The coal quality data from the various exploration right areas shown in the above table are all very similar. The sulfur content of each seam is low, belonging to low-sulfur and extra-low-sulfur coal. According to China's coal exploration standards, in-situ coal samples typically do not contain visible partings. However, in actual production, ROM coal will include unavoidable in-seam partings and OSD. Consequently, the actual quality of the ROM coal will be inferior to the quality indicated in the table.

Reserve estimate was conducted exclusively for mining rights and there are no reserves reported for the subject exploration rights.

Figures listed at the end of this chapter and contained in Appendix A show the structure, cross-sections and resource areas for the individual coal seams.

3.8 Guoyuan Power Mining/Exploration Rights

Guoyuan Power holds seven mining rights and five exploration rights (as shown in the following table) which are located in various location across northern China in Provinces of Heilongjiang, Shanxi, Shaanxi, Ningxia and Xinjiang Autonomous Region.

Table 3-8 Coalfields and Coal Bearing Strata – Guoyuan Power

Mining/Exploration Right	Coalfield	Age of Coal Bearing Strata	Coal Bearing Formation
China Energy Guoyuan Power Co., Ltd.			
Mining Rights			
Chaoyang Open-pit	Baoqing	Neogene and Paleogene	Fujin and Baoquanling
Dananhu No.2 Open-pit	Dananhu	Jurassic	Xishanyao
Renjiazhuang	Ningdong	Carboniferous and Permian	Shanxi and Taiyuan
Shangyuquan	Hedong	Carboniferous	Taiyuan
Sandaogou	Shaanbei	Jurassic	Yanan
Exploration Rights			
Dananhu West F1 South	Dananhu	Jurassic	Xishanyao
Dananhu West No.1 East	Dananhu	Jurassic	Xishanyao
Dananhu West No.3	Dananhu	Jurassic	Xishanyao
Data	Hedong	Carboniferous and Permian	Shanxi and Taiyuan
Huangbai	Hedong	Carboniferous and Permian	Shanxi and Taiyuan

As shown in the above table, the subject Guoyuan Power mines are located in seven different coal fields formed in various geological periods.

3.8.1 Baoqing Coalfield

The Chaoyang Open-pit is the only one of the subject mines located in the youngest Baoqing Coalfield, which is formed in the Neogene and Paleogene Age. On a global basis, the geologic settings, or nature, of the Chaoyang Open-pit is judged to vary from simple to moderate. While the strata are flat-lying, complex structure containing multiple partings of the coal seams is a complicating factor for the seam in most of the mine areas.

Regional Geology

The regional area structure is a fault-bounded basin formed within a regional tectonic context. The northern sedimentary boundary is controlled by the Chaoyang-Dagushan Fault, while the southern and eastern boundaries are constrained by northeast-trending Paleozoic uplifts. The basement exhibits undulating topography. Distinct folding and faulting occurred within the Paleogene-Neogene strata. These structures had limited impact on the Neogene coal-bearing strata, generating only minor folds and small-scale dislocations. The overall morphology of the Neogene coal-bearing basin is a broad, gentle monocline, with strata striking 30 to 60 degrees and dipping at angles of 3 degrees–5 degrees.

Structure

The overall structural framework of the area is a NE-trending monocline with slight undulations. Strata dip at 3 degrees–5 degrees, exhibiting gentle and consistent attitudes with minimal variation along both strike and dip directions. Apart from the

boundary fault (Chaoyang-Dagushan Fault F1) and the central F2 fault, subordinate synclines and minor faults are developed south of mine property. Fault displacements generally range from 0 to 20 m, with limited lateral extension within the area. The coal seams are unaffected by magmatic activity.

Stratigraphy

The stratigraphic sequence in the Baoqing Coalfield is clearly defined and ascends from the bottom as follows:

- Carboniferous–Permian basement rocks, primarily composed of metamorphic siltstone and medium-grained sandstone
- The Paleogene Baoquanling Formation, which is a secondary coal-bearing stratum containing several sporadically minable coal seams, displaying an angular unconformity with the underlying basement
- The Neogene Fujin Formation, which is the primary coal-bearing stratum in the region. It hosts the extensively developed No. 10 Seam and exhibits conformable or disconformable contact with the underlying Baoquanling Formation
- The uppermost Quaternary unconsolidated deposits, ranging from 30 to 230 m in thickness

Coal Seams

The No. 10 Seam is an extra-thick, main minable seam developed throughout the entire area. It has a complex structure, containing 3 to 8 partings, and has an average thickness of 14.9 m within the resources area. The seam is thicker in the central part of the property and gradually thins towards the eastern and western sides.

Data Defining Coal Occurrence and Quality

To ensure the completeness and reliability of the data used for resources and reserves estimates, we have been provided with all the relevant historical versions of the geological reports for the subject mines, as follows:

= Chaoyang Open-pit Mine Construction Geological Report, December 2019
= Production Geology Report for the Chaoyang Open-pit Mine, May 2024

We have compared the two versions of reports to ensure our data remains current and valid. Throughout its exploration history, the Chaoyang Open-pit Mine has completed a total of 335 boreholes, all of which have been incorporated into our geological modeling.

Resource/Reserve Classification

Based on our detailed review of the geologic setting of the No.10 Seam at Chaoyang Openpit, we judge the overall geologic setting to be simple to complex and have

assigned the following drill hole spacing criteria for classification of estimated resources:

Mining Right Area	Seam	Geologic Setting	Measured (m)	Indicated (m)	Inferred (m)
Chaoyang	10	Simple to Moderate	500	1,000	<2,000

Resource and reserve classification of each coal seam are shown on the resource/reserve maps included in Appendix A.

The JORC Code requires that all reports include comment on items listed in Table 1 of the Code. Appendix B, '*Table 1 – Baoqing Coalfield',* shows the items listed for the Baoqing Coalfield, along with our comments on the table.

Resources Estimate

Estimates of in situ coal resources were prepared using Carlson SurvCADD for the Chaoyang Open-pit. The following parameters were used for resources reporting:

- Coal S.G.: 1.23
- Parting S.G: 2.1
- Minimum coal thickness: 0.5 m
- Maximum parting thickness: 0.5 m

The resources area is delineated by the authorized mine boundary, with vertical mining elevation limits between +20 m to +90 m. Our resources tonnage estimates (on a 100% ownership basis) for the Chaoyang Open-pit, as of 31 July 2025, are as follows:

Table 3-9 Coal Resources Estimates – Chaoyang Open-pit

	Average Thickness (m)			In-Place Resources (Mt)				% of	In-Situ Coal Quality %				CV (net,ad)
Seam	Coal	Parting	Seam	Measured	Indicated	Inferred	Total	Resource	Moist. (ad)	Ash (d)	St (d)	Vol (daf)	kcal/kg
Mining Right													
Chaoyang Open-pit													
10	10.01	-	10.01	268.05	237.92	436.42	942.39	100	9.4	22.3	0.27	61.4	3,960
Total				268.05	237.92	436.42	942.39	100					

Note: 1. Figures may not add due to rounding
2. The reported coal resources are inclusive of the coal reserves.

In-Situ Coal Quality

Since all drill holes are continuously cored, there are quality data for all holes that intersect one or more coal seams which meet the Chinese minimum thickness and core recovery requirements. As shown in the above tables, coal quality is well defined.

The coal quality data shown in the above table indicates that the Chaoyang Open-pit produces extra-low-sulfur lignite product. According to China's coal exploration standards, in-situ coal samples typically do not contain visible partings. However, in actual production, ROM coal will include unavoidable in-seam partings and OSD. Consequently, the actual quality of the ROM coal will be inferior to the quality indicated

in the table.

Reserves Estimate

Reserves are presented on a ROM or recoverable basis, and on a marketable basis. Recoverable Reserves represent the seam tonnage to be recovered by the corresponding mine plan, including the coal seam and OSD (roof and floor rock recovered with the coal seam during the normal mining process). Marketable Reserves represent the salable tonnage and include allowances for losses during coal handling and processing. The following parameters were used for reserves reporting:

- Minimum coal thickness: 0.5 m
- Maximum parting thickness: 0.5 m
- Coal seam recovery: 98%
- OSD rate: 3%
- Product Yield: 96%

The determination of these parameters integrated our communication with the mine's technical personnel and our extensive experience in Chinese open-pit coal mining. ROM coal from Chaoyang operation is directly sold after crushing and screening. The 96% yield of saleable coal accounts for the removal of in-seam partings and OSD during screening, along with routine coal handling losses.

We have reviewed the mine's historical operations, and we believe that Chaoyang will be capable of maintaining its authorized output of 11 Mtpa. Based on the mine's historical performance and communication with the mine's technical personnel, we have developed a LOM plan to confirm the technical feasibility of the recoverable reserves. This LOM plan is presented in the accompanying DCF table following Chapter 8.

According to the Life of Mine (LOM) plan, the Chaoyang Open-pit Mine has an overall stripping ratio of 6.16 m³/t. The detailed annual stripping ratios for the 20-year period are presented below:

Year	Aug. - Dec. 2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044
ROM Product (Mt)	2.67	11.00	11.00	11.00	11.00	11.00	11.00	11.00	11.00	11.00	11.00	11.00	11.00	11.00	11.00	11.00	11.00	11.00	11.00	11.00
Stripping Ratio (m^3/t)	5.38	5.38	4.20	4.20	4.20	4.20	4.20	4.20	5.98	5.98	5.98	5.98	5.98	6.20	6.20	6.20	6.20	6.20	6.20	6.20

The CP completed an economic analysis for the mine to determine if the projected mine operation is economically viable (see Chapter 8), as of 31 July 2025. This analysis concludes that the identified reserves at Chaoyang Open-pit have reasonable

expectations to be economically mineable. Our reserves tonnage estimates (on a 100% ownership basis) for the Chaoyang Open-pit, as of 31 July 2025, are as follows:

Table 3-10 Coal Reserves Estimates – Chaoyang Open-pit

	Recoverable Reserves (Mt)			Processing	Marketable Reserves (Mt)			% of
Seam	Proved	Probable	Total	Yield %	Proved	Probable	Total	Reserves
				Chaoyang Open-pit				
10	258.13	230.69	488.82	96	250.15	216.85	467.00	100
Total	258.13	230.69	488.82	96	250.15	216.85	467.00	100

Note: 1. Figures may not add due to rounding

Product Coal Quality

Due to the unavailability of industrial analysis data for partings and OSD, it is not feasible to predict future coal quality. However, based on the historically stable quality of the saleable coal, we anticipate that future product quality will remain consistent with past performance, as detailed in the table below:

Typical Product Coal Quality			
%			kcal/kg
Ash (Ad)	Moisture (Mt)	Sulfur (St,d)	CV (Qnet.ar)
25.2	49.2	0.2	2,110

Figures listed at the end of this chapter and contained in Appendix A show the structure, cross-sections and resource/reserve areas for the individual coal seams.

3.8.2 Dananhu Coalfield

There are one mining right (Dananhu No.2 Open-pit) and three exploration rights (Dananhu West F1 South, Dananhu West No.1 East and Dananhu West No.3) located in the Dananhu Coalfield of the Jurassic Age. On a global basis, the geologic settings, or nature, of the five subject properties are judged to vary from simple to moderate. While the strata are flat-lying, complex structure containing multiple partings of the coal seams is a complicating factor for the seam in most of the mine areas.

Regional Geology

The Dananhu Coalfield is located within the Dananhu Depression, which forms part of the Turpan-Hami Intermontane Depression in the North Tianshan Geosynclinal Fold Belt. Its tectonic evolution was primarily controlled by the Yanshanian and Himalayan orogenies, resulting in an overall simple structural framework characterized by gently dipping strata. The target mines are distributed within the western section of the Dananhu area.

Structure

The overall strata attitude in the Dananhu Coalfield is gentle, with dips generally ranging from 3 to 13 degrees, and locally nearly horizontal. On the southern limb of the Nanhu Syncline, dips are typically 14° to 26°. The general structural trend is approximately east-west, dominated by EW-trending folds that control coal seam occurrence and zoning. A NE-trending normal fault, F1, with a 70° dip and a throw of 60–400 m, is developed within the area. No magmatic intrusions are observed.

Stratigraphy

Exposed strata in the area include the Jurassic and Quaternary systems, comprising, from oldest to youngest: the Lower Jurassic Sangonghe Formation, Middle Jurassic Xishanyao Formation and Toutunhe Formation, and the Quaternary.The primary coal-bearing stratum is the Middle Jurassic Xishanyao Formation, a continental coal-bearing sedimentary sequence. It is divided into three lithological members. The main coal-bearing unit is the Middle Xishanyao Formation. In contrast, the Upper Xishanyao and Lower Xishanyao exhibit poor coal content, with unstable and largely unminable seams.

Coal Seams

There are up to 22 minable coal seams in the Dananhu Coalfield. The seam structure is predominantly simple to moderately complex, with localized complex zones, and typically contains 0 to 5 partings. The immediate roof and floor strata consist mainly of siltstone, mudstone, and fine sandstone, with localized occurrences of carbonaceous mudstone and coarse sandstone. The following tables show the detailed characteristics of each seam at each of the subject mine:

Table 3-11 Coal Seams of Mining Rights in Dananhu Coalfield

Data Defining Coal Occurrence and Quality

To ensure the completeness and reliability of the data used for resources and reserves estimates, we have been provided with all the relevant historical versions of the geological reports for the subject mines, as follows:

- Dananhu No.2 Open-pit:
  - = Exploration Report for the Dananhu No.2 Mine, December 2006
  - = Special Hydrogeological Exploration for the Initial Mining Area of the Northern Open-pit Coal Mine, Dananhu Mining Area, May 2011
  - = 2016 Annual Reserves Verification Report
  - = 2024 Annual Reserves Verification Report
  - = Annual Reserves Reports and Ledgers of Mined Resource Reserves for the Period 2018 to 2024 and the First Half of 2025
- Dananhu West F1 South:
  - = Exploration Report for the Dananhu West F1 South, 2022
- Dananhu West No.1 East:
  - = Exploration Report for the Dananhu West No.1 East, July 2021
- Dananhu West No.3:
  - = Exploration Report for the Dananhu West No.3, April 2018

We have compared the different versions of the provided geological reports to ensure

our data remains current and valid. The following table summarizes the available exploration data for each mining/exploration right area:

Mining/Exploration Right Area	Area (km^2)	No. of Drill Holes
Mining Rights		
Dananhu No.2 Open-pit	40.52	204
Exploration Rights		
Dananhu West F1 South	61.09	119
Dananhu West No.1 East	15.54	22
Dananhu West No.3	42.36	80

Resource/Reserve Classification

Based on our detailed review of the geologic setting of each seam at each mine, we judge the overall geologic setting to be moderate to complex and have assigned the following drill hole spacing criteria for classification of estimated resources:

Mining/Exploration Rights	Seam	Geologic Setting	Measured (m)	Indicated (m)	Inferred (m)
Dananhu No.2 Open-pit	All Seams	Moderate	500	1,000	<2,000
Dananhu West F1 South	All Seams	Complex	400	800	<1,600
Dananhu West No.1 East	All Seams	Moderate	500	1,000	<2,000
Dananhu West No.3	All Seams	Moderate	500	1,000	<2,000

Resource and reserve classification of each coal seam are shown on the resource/reserve maps included in Appendix A.

The JORC Code requires that all reports include comment on items listed in Table 1 of the Code. Appendix B, '*Table 1 – Dananhu Coalfield',* shows the items listed for the Dananhu Coalfield, along with our comments on the table.

Resources Estimate

Estimates of in situ coal resources were prepared using computer mapping software (AutoCAD) for all mapped resource areas for the underground mining/exploration

rights, and Carlson SurvCADD for the Dananhu No.2 Open-pit. The following parameters were used for resources reporting:

Table 3-13 Resources Estimates Parameters – Dananhu Coalfield

			S.G.		Thickness (m)

The resources areas of mining rights are delineated by the authorized mine boundary, with vertical mining elevation limits of each mine. While the resources areas of exploration rights are only delineated by the property boundary since there are no elevation limits for exploration rights. Our resources tonnage estimates (on a 100%

ownership basis) for subject mining/exploration right areas in Dananhu coalfield, as of 31 July 2025, are as follows:

Table 3-14 Coal Resources Estimates – Dananhu Coalfield

2. The reported coal resources are inclusive of the coal reserves.

In-Situ Coal Quality

Since all drill holes are continuously cored, there are quality data for all holes that intersect one or more coal seams which meet the Chinese minimum thickness and core recovery requirements. As shown in the above tables, coal quality is well defined. The quality data shown in the above tables indicate that all coal seams in Dananhu

Coalfield contain low to extra-low sulfur, medium ash low-rank long-flame coal and lignite. According to China's coal exploration standards, in-situ coal samples typically do not contain visible partings. However, in actual production, ROM coal will include unavoidable in-seam partings and OSD. Consequently, the actual quality of the ROM coal will be inferior to the quality indicated in the table.

Reserves Estimate

Reserve estimation was conducted exclusively for mining rights. Reserves are presented on a ROM or recoverable basis, and on a marketable basis. Recoverable Reserves represent the seam tonnage to be recovered by the corresponding mine plan, including the coal seam and OSD (roof and floor rock recovered with the coal seam during the normal mining process), and moisture gained during underground mining. Marketable Reserves represent the salable tonnage and include allowances for losses during coal handling and processing.

The following parameters were used for reserves reporting for Dananhu No.2 Open-pit:

- Minimum coal thickness: 0.5 m
- Maximum parting thickness: 0.5 m
- Coal seam recovery: 98%
- OSD rate: 3%
- Product Yield: 96%

The determination of these parameters integrated our communication with the mine's technical personnel and our extensive experience in Chinese underground and open-pit coal mining. ROM coal from Dananhu No.2 Open-pit is directly sold after crushing and screening. The product yields of saleable coal accounts for the removal of in-seam partings and OSD during screening, along with routine coal handling losses.

We have reviewed the historical operations for the mine, and we believe that the mine will be capable of maintaining stable output of 13 Mtpa. Based on the mines' historical performance and communication with the mines' technical personnel, we have developed a LOM plan for each of the mining right to confirm the technical feasibility of the recoverable reserves. The LOM plans are presented in the accompanying DCF table following Chapter 8.

According to the Life of Mine (LOM) plan, the Dananhu No.2 Open-pit has an overall

stripping ratio of 4.9 m³/t. The detailed annual stripping ratios for the 20-year period are presented below:

Year	Aug. - Dec. 2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044
ROM Product (Mt)	4.57	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00
Stripping Ratio (m^3/t)	3.00	3.00	3.00	3.00	3.00	3.00	3.00	3.00	3.50	3.50	3.50	3.50	3.50	3.50	3.50	3.50	3.50	3.50	3.50	3.50

The CP completed an economic analysis for the mine to determine if the projected mine operations are economically viable (see Chapter 8), as of 31 July 2025. This analysis concludes that the identified reserves at the subject mines have reasonable expectations to be economically mineable. Our reserves tonnage estimates (on a 100% ownership basis) for Dananhu No.2 Open-pit, as of 31 July 2025, are as follows:

Product Coal Quality

Due to the unavailability of industrial analysis data for partings and OSD, it is not feasible to predict future coal quality. However, based on the historically stable quality

of the saleable coal, we anticipate that future product quality will remain consistent with past performance, as detailed in the table below:

Typical Product Coal Quality				
	%			kcal/kg
Mine	Ash (Ad)	Moisture (Mt)	Sulfur (St,d)	CV (Qnet.ar)
Dananhu No.2 Open-pit	26.1	25.8	0.62	3,370

Figures listed at the end of this chapter and contained in Appendix A show the structure, cross-sections and resource/reserve areas for the individual coal seams.

3.8.3 Hedong Coalfield

There are three Guoyuan Power properties, including one mining right (Shangyuquan) and two exploration rights (Data and Huangbai), are located in the Hedong Coalfield of the Carboniferous and Permian Age. On a global basis, the geologic settings, or nature, of Hedong Coalfield is judged to vary from simple to moderate. While the strata are gently dipping, seam splitting, sand erosion and occasional faulting are complicating factors for the seam in Hedong Coalfield.

Regional Geology

The Hedong Coalfield is situated at the northern terminus of the Baode-Linxian Block Sag within the Ordos Depression of the North China Plate. Regional structural trends predominantly align NE-NNE, with localized NW-trending structures. Key tectonic features include: 1) the Qingshui Graben, comprising two 310 degrees striking normal faults extending southeast from Shaanxi; 2) the Fanjialiang-Xinyao Syncline, a NNW-trending broad fold with Shanxi Formation at its core; 3) the Tianqiao Horst formed by three 300 degrees striking normal faults exposing Ordovician strata; and 4) the Tiejiangpu Graben with three NEE-trending normal faults (>250 m displacement) exposing purple mudstone. The structural domain is characterized by fault-block systems and broad folds, with negligible magmatic activity.

Structure

The Hedong Coalfield forms a gently NW-dipping monocline with dip angles typically ranging from 3 degrees to 5 degrees. The southern sector develops three broad, gentle folds consisting of one syncline and two anticlines, all trending NW-SE with limb dips of approximately 2 degrees-3 degrees. These folds exhibit simple geometry and high structural reliability. A total of 25 normal faults has been identified, with 11 exposed during mining of the No. 8 Seam and 13 in the No. 13 Seam. These faults generally display displacements of 0.3-3.6 meters, characterized by limited scale and non-conductive hydrologic properties, resulting in minimal impact on mining operations. No magmatic intrusions have been documented within the mining area. Overall, the structural framework is dominated by small-scale normal faults and broad folds,

indicating low to moderate structural complexity throughout the deposit.

Stratigraphy

The stratigraphic sequence from oldest to youngest comprises: Ordovician Upper Majiagou Formation; Carboniferous Benxi and Taiyuan Formations; Permian Shanxi, Lower Shihezi, and Upper Shihezi Formations; Triassic Liujiagou Formation; Neogene Baode and Jingle Formations; and Quaternary deposits. The Taiyuan and Shanxi Formations are the principal coal-bearing units, containing stable minable seams (including No. 12, 13, 9, 10, 11, and 8). The Upper Shihezi Formation and Pleistocene strata are predominantly composed of sandstone, mudstone, and unconsolidated sediments. The entire sedimentary succession demonstrates remarkable stability with well-defined marker beds, resulting in highly predictable stratigraphic architecture.

Coal Seams

The coal-bearing strata in Hedong Coalfield contains 8 to19 coal seams with cumulative thicknesses of 20 to 40 m. The Taiyuan Formation consistently hosts the principal minable seams, particularly Nos. 10, 11, and 13, which demonstrate regional stability and significant thickness. The Shanxi Formation contains supplementary minable seams including No. 8 and locally No. 9. The following tables show the detailed characteristics of each seam at each of the subject mine:

Table 3-16 Coal Seams in Hedong Coalfield

		Thickness (m)			Distance from the	Seam Depth	Seam	Seam

Data Defining Coal Occurrence and Quality

To ensure the completeness and reliability of the data used for resources and reserves estimates, we have been provided with all the relevant historical versions of the geological reports for the subject mines, as follows:

- Shangyuquan Mine:
  - = Annual Reserves Verification Reports for Years 2021 to 2024
  - = Geological Classification Report for the Shangyuquan Mine, May 2022
  - = Geology Report for the Shangyuquan Mine, March 2022
- Data Mine:
  - = Exploration Geology Report for the Data Mine, January 2023
- Huangbai Mine:
  - = Exploration Geological Classification Report for the Huangbai Mine, May 2004
  - = Additional Exploration Geology Report for the Huangbai Mine, June 2012

We have reviewed different versions of the provided geological reports for each mine to ensure our data remains current and valid. The following table summarizes the available exploration data for each mining/exploration right area:

Mining/Exploration Right Area	Area (km^2)	No. of Drill Holes
Mining Rights		
Shangyuquan	29.78	79
Exploration Rights		
Data	16.73	14
Huangbai	53.31	61

Resource/Reserve Classification

Based on our detailed review of the geologic setting of each seam at each mine, we judge the overall geologic setting to be simple to moderate and have assigned the following drill hole spacing criteria for classification of estimated resources:

Mining/Exploration Rights	Seam	Geologic Setting	Measured (m)	Indicated (m)	Inferred (m)
Shangyuquan	13	Simple	750	1,500	<2,500
	Other Seams	Moderate	500	1,000	<2,000
Data	All Seams	Moderate	500	1,000	<2,000
Huangbai	All Seams	Moderate	500	1,000	<2,000

Resource and reserve classification of each coal seam are shown on the resource/reserve maps included in Appendix A.

The JORC Code requires that all reports include comment on items listed in Table 1 of the Code. Appendix B, '*Table 1 – Hedong Coalfield',* shows the items listed for the Hedong Coalfield, along with our comments on the table.

Resources Estimate

Estimates of in situ coal resources were prepared using computer mapping software

(AutoCAD) for all mapped resource areas. The following parameters were used for resources reporting:

Table 3-17 Resources Estimates Parameters – Hedong Coalfield

			S.G.		Thickness (m)	
Mining/Exploration Right	Seam	Dip	Coal	Parting	Min. Coal	Max. Parting
Shangyuquan	9	7	1.50	2.1	0.8	0.8
	10U	7	1.54	2.1	0.8	0.8
	10	7	1.45	2.1	0.8	0.8

	10U	7	1.49	2.1	0.8	0.8
	10	7	1.48	2.1	0.8	0.8
	11U	7	1.39	2.1	0.8	0.8
	11	7	1.45	2.1	0.8	0.8
	13	7	1.48	2.1	0.8	0.8

The resources areas of mining rights are delineated by the authorized mine boundary, with vertical mining elevation limits of each mine. While the resources areas of exploration rights are only delineated by the property boundary since there are no elevation limits for exploration rights. Our resources tonnage estimates (on a 100% ownership basis) for Shangyuquan Mining Right, Data Exploration Right and Huangbai Exploration Right, as of 31 July 2025, are as follows:

Table 3-18 Coal Resources Estimates – Hedong Coalfield

	Average Thickness (m)			In-Place Resources (Mt)				% of	In-Situ Coal Quality

Total				1,393.08	892.48	576.39	2,861.96						

Note: 1. Figures may not add due to rounding
2. The reported coal resources are inclusive of the coal reserves.
3.* CV is in b.ad. basis.

In-Situ Coal Quality

Since all drill holes are continuously cored, there are quality data for all holes that intersect one or more coal seams which meet the Chinese minimum thickness and core recovery requirements. As shown in the above tables, coal quality is well defined.

The quality data shown in the above tables indicate that all coal seams in Hedong Coalfield contain medium to high ash, medium sulfur high-rank bituminous coal. According to China's coal exploration standards, in-situ coal samples typically do not contain visible partings. However, in actual production, ROM coal will include unavoidable in-seam partings and OSD. Consequently, the actual quality of the ROM coal will be inferior to the quality indicated in the table.

Reserves Estimate

Reserve estimation was conducted exclusively for mining rights. Reserves are presented on a ROM or recoverable basis, and on a marketable basis. Recoverable Reserves represent the seam tonnage to be recovered by the corresponding mine plan, including the coal seam and OSD (roof and floor rock recovered with the coal seam during the normal mining process), and moisture gained during underground mining. Marketable Reserves represent the salable tonnage and include allowances for losses during coal handling and processing. The following parameters were used for reserves reporting for the Shangyuquan Mine:

Table 3-19 Reserves Estimates Parameters – Shangyuquan Mine

			Recoverable Reserves									
			Shearer (m)		Shield (m)		SC			Plan	Moist.	Product
		Mining		max.	Cap. Range		Cut	Caving	OSD	Rec.	Gain	Yield
Mine	Seam	Method	Dia	thk	min.	max.	Thk	%	(m)	%	%	%
Shangyuquan	9	-	-	-	-	-	-	-	-	-	-	-
	10U	SC	2.0	3.9	1.9	3.8	3.6	80	0.05	85	2	75
	10	SC	2.0	3.9	1.9	3.8	3.6	80	0.10	85	2	65
	10L	FM	1.5	3.3	1.2	2.4	-	-	0.10	85	2	65
	11U	FM	1.5	3.3	1.2	2.4	-	-	0.10	85	2	91
	11	SC	2.0	3.9	1.9	3.8	3.6	80	0.10	85	2	91
		FM	1.5	3.3	1.2	2.4	-	-	-	-	-	-
	11L	FM	1.5	3.3	1.2	2.4	-	-	0.10	85	2	91
	12	FM	1.5	3.3	1.2	2.4	-	-	0.10	85	2	92
	13	SC	2.5	4.5	2.4	4.2	3.9	80	0.10	85	2	72

Note: Seams without parameters indicate thin thickness, for which only resources have been estimated.

The determination of these parameters integrated our communication with the mine's technical personnel and our extensive experience in Chinese underground coal mining. ROM coal from Shangyuquan Mine is processed using JIG system for coarse raw coal and 3-Product HMC for fine raw coal. The product yields of saleable coal accounts for the removal of in-seam partings and OSD during screening, along with routine coal handling losses.

We have reviewed Shangyuquan Mine's historical operations, and we believe that it will be capable of maintaining stable output of 7 Mtpa in the future. Based on the mines' historical performance and communication with the mines' technical personnel, we

have developed a LOM plan for Shangyuquan Mine to confirm the technical feasibility of the recoverable reserves. This LOM plan is presented in the accompanying DCF table following Chapter 8.

The CP completed an economic analysis for the mine to determine if the projected mine operation is economically viable (see Chapter 8), as of 31 July 2025. This analysis concludes that the identified reserves at the subject mine have reasonable expectations to be economically mineable. Our reserves tonnage estimates (on a 100% ownership basis) for Shangyuquan Mine, as of 31 July 2025, are as follows:

Table 3-20 Coal Reserves Estimates – Shangyuquan Mine

	Recoverable Reserves (Mt)			Processing	Marketable Reserves (Mt)			% of

Note: Figures may not add due to rounding

Product Coal Quality

Due to the unavailability of industrial analysis data for partings and OSD, it is not feasible to predict future coal quality. However, based on the historically stable quality of the saleable coal, we anticipate that future product quality will remain consistent with past performance, as detailed in the table below:

Typical Product Coal Quality				
	%			kcal/kg
Mine	Ash (Ad)	Moisture (Mt)	Sulfur (St,d)	CV (Qnet.ar)
Shangyuquan	32.1	10.3	0.86	4,270

Figures listed at the end of this chapter and contained in Appendix A show the structure, cross-sections and resource/reserve areas for the individual coal seams.

3.8.4 Ningdong Coalfield

The Renjiazhuang Mine is the only one of the subject mines located in the Ningdong Coalfield, which is located in the Shanxi and Taiyuan Formation of the Carboniferous and Permian Age. On a global basis, the geologic settings, or nature, of the Renjiazhuang Mine is judged to be moderate. While the strata are moderately dipping,

complex structure containing multiple partings of the coal seams is a complicating factor for the seam in most of the mine areas.

Structure

The Ningdong Coalfield's structural system originated from Late Jurassic E-W compression, forming a predominantly S-N trending tectonic framework characterized by one major anticline, two synclines, and associated submeridional faults. The region-scale anticline traverses the entire area, preserving complete coal-bearing sequences in its southern segment. Faults align with the fold axes, with the S-N trending F3 thrust fault (displacement >300 m) defining the primary structural geometry. Secondary NE- and NW-trending normal and reverse faults (displacement 30-128 m) locally displace seams, causing thickness variations and pinch-outs. This S-N structural system fundamentally controls coal seam distribution, thickness, and stability.

Stratigraphy

The Ningdong Coalfield contains coal-bearing strata from the Carboniferous Taiyuan Formation and the Permian Shanxi and Lower Shihezi Formations. These are overlain by the Upper Shihezi and Shiqianfeng Formations, and most areas are covered by unconsolidated Tertiary-Quaternary deposits, which are 90–220 m thick. The Shanxi Formation (averaging 71 m thick), a typical continental clastic sequence, contains up to 13 coal seams, while the transitional marine-continental Taiyuan Formation (averaging 79 m thick) contains up to10 coal seams. These are underlain by the Benxi Group (approximately 416 m thick) of mudstone, sandstone and bauxite, with an Ordovician carbonate series at the base. Stratigraphic contacts are predominantly conformable or disconformable.

Coal Seams

The Shanxi and Taiyuan formations host 23 coal seams, with reserves quantified for 8 key layers. Seams 3 (avg. 3.32 m), 5 (avg. 6.03 m), and 9 (avg. 6.66 m) constitute the principal minable seams, demonstrating high stability and economic significance. Remaining seams show variable thickness and minability influenced by structural and sedimentary controls, with local thinning or unworkable sections. Therefore, our estimate of resources/reserves only includes Seams 3, 5 and 9. The following tables show the detailed characteristics of each seam:

Table 3-21 Coal Seams in Ningdong Coalfield

		Thickness (m)			Distance from the	Seam Depth	Seam	Seam
Mine	Seam	Coal	Parting	Seam	Upper Seam (m)	Range (m)	Dip (deg.)	Occurrence
Renjiazhuang	3	2.9	0.05	2.9	-	203 - 651	17-E	Moderate
	5	4.6	0.21	4.8	39	204 - 1,345	17-E	Moderate
	9	4.8	0.68	5.4	71	234 - 1,270	17-E	Moderate

Data Defining Coal Occurrence and Quality

To ensure the completeness and reliability of the data used for resources and reserves estimates, we have been provided with all the relevant historical versions of the geological reports for the subject mines, as follows:

- Annual Reserves Verification Reports for Years 2013 to 2024
- Detailed Exploration Report for the Renjiazhuang Hongshiwan Mine, Hengcheng Exploration Area, July 2006

We have reviewed these reports provided to ensure our data remains current and valid. The Renjiazhuang Mine has completed a total of 175 drill holes, all of which have been used for our estimates.

Resource/Reserve Classification

Based on our detailed review of the geologic setting of each seam at Renjiazhuang Mine, we judge the overall geologic setting to be moderate and have assigned the following drill hole spacing criteria for classification of estimated resources:

Mining Right	Seam	Geologic Setting	Measured (m)	Indicated (m)	Inferred (m)
Renjiazhuang	All Seams	Moderate	500	1,000	<2,000

Resource and reserve classification of each coal seam are shown on the resource/reserve maps included in Appendix A.

The JORC Code requires that all reports include comment on items listed in Table 1 of the Code. Appendix B, '*Table 1 –Ningdong Coalfield',* shows the items listed for the Renjiazhuang Mine, along with our comments on the table.

Resources Estimate

Estimates of in situ coal resources were prepared using computer mapping software (AutoCAD) for all mapped resource areas. The following parameters were used for resources reporting:

Table 3-22 Resources Estimates Parameters – Renjiazhuang Mine

			S.G.		Thickness (m)	
Mining/Exploration Right	Seam	Dip	Coal	Parting	Min. Coal	Max. Parting
Renjiazhuang	3	17	1.44	2.1	0.8	0.8
	5	17	1.43	2.1	0.8	0.8
	9	17	1.43	2.1	0.8	0.8

The resources areas of the mine are delineated by the authorized mine boundary, with vertical mining elevation limits between +500 m to +1,100 m. Our resources tonnage

estimates (on a 100% ownership basis) for the Renjiazhuang Mine, as of 31 July 2025, are as follows:

Table 3-23 Coal Resources Estimates – Renjiazhuang Mine

	Average Thickness (m)			In-Place Resources (Mt)				% of	In-Situ Coal Quality				
									%				CV (net,ad)
Seam	Coal	Parting	Seam	Measured	Indicated	Inferred	Total	Resources	Moist. (ad)	Ash (d)	St (d)	Vol (daf)	kcal/kg
Mining Right													
Renjiazhuang													
3	2.88	0.05	2.93	29.39	4.31	0.38	34.09	20.5	1.9	22.0	0.65	38.2	5,660
5	4.63	0.21	4.84	36.31	10.09	0.43	46.83	28.1	1.5	27.1	1.22	38.1	5,350
9	4.76	0.68	5.44	68.54	12.77	4.25	85.56	51.4	1.2	20.7	2.73	40.9	6,010
Total				134.24	27.17	5.07	166.48	100					

Note: 1. Figures may not add due to rounding
2. The reported coal resources are inclusive of the coal reserves.

In-Situ Coal Quality

Since all drill holes are continuously cored, there are quality data for all holes that intersect one or more coal seams which meet the Chinese minimum thickness and core recovery requirements. As shown in the above tables, coal quality is well defined.

The quality data shown in the above tables indicate that all coal seams in Ningdong Coalfield contain medium to high ash, low to high sulfur high-rank bituminous coal. According to China's coal exploration standards, in-situ coal samples typically do not contain visible partings. However, in actual production, ROM coal will include unavoidable in-seam partings and OSD. Consequently, the actual quality of the ROM coal will be inferior to the quality indicated in the table.

Reserves Estimate

Reserves are presented on a ROM or recoverable basis, and on a marketable basis. Recoverable Reserves represent the seam tonnage to be recovered by the corresponding mine plan, including the coal seam and OSD (roof and floor rock recovered with the coal seam during the normal mining process), and moisture gained during underground mining. Marketable Reserves represent the salable tonnage and include allowances for losses during coal handling and processing. The following parameters were used for reserves reporting for the Renjiazhuang Mine:

Table 3-24 Reserves Estimates Parameters – Renjiazhuang Mine

			Recoverable Reserves									
			Shearer (m)		Shield (m)		SC			Plan	Moist.	Product
		Mining		max.	Cap. Range		Cut	Caving	OSD	Rec.	Gain	Yield
Mine	Seam	Method	Dia	thk	min.	max.	Thk	%	(m)	%	%	%
Renjiazhuang	3	FM	2.0	3.7	1.8	3.7	-	-	0.20	85	2	90
		FM	2.5	5.2	2.3	5.0	-	-	-	-	-	-
	5	FM	2.5	5.2	2.3	5.0	-	-	0.20	85	2	90
	9	FM	2.5	5.2	2.3	5.0	-	-	0.20	85	2	83

The determination of these parameters integrated our communication with the mine's technical personnel and our extensive experience in Chinese underground mining. ROM coal from the Renjiazhuang Mine is processed by a 3-Product Heavey Media

Cyclone (HMC) system to process fine coal product, with the coarse product selling on raw basis. The product yields of saleable coal accounts for the removal of in-seam partings and OSD, and moisture gain during screening and washing, along with routine coal handling losses.

We have reviewed the historical operation data, and we believe that Renjiazhuang will be capable of maintaining stable output of 4 Mtpa in the future. Based on the mines' historical performance and communication with the mines' technical personnel, we have developed a LOM plan for Renjiazhuang Mine to confirm the technical feasibility of the recoverable reserves. It is our opinion that the reserves will be depleted by 2045. This LOM plan is presented in the accompanying DCF table following Chapter 8.

The CP completed an economic analysis for the mine to determine if the projected mine operation is economically viable (see Chapter 8), as of 31 July 2025. This analysis concludes that the identified reserves at Renjiazhuang Mine have reasonable expectations to be economically mineable. Our reserves tonnage estimates (on a 100% ownership basis) for the Renjiazhuang Mine, as of 31 July 2025, are as follows:

Table 3-25 Coal Reserves Estimates – Renjiazhuang Mine

	Recoverable Reserves (Mt)			Processing	Marketable Reserves (Mt)			% of
Seam	Proved	Probable	Total	Yield %	Proved	Probable	Total	Reserves
				Renjiazhuang				
3	14.44	2.04	16.48	90	12.93	1.87	14.80	20.6
5	20.41	5.89	26.29	90	18.19	5.55	23.74	33.0
9	35.50	4.51	40.01	83	29.49	3.89	33.38	46.4
Total	70.35	12.44	82.79	87	60.61	11.30	71.91	100

Note: Figures may not add due to rounding

Product Coal Quality

Due to the unavailability of industrial analysis data for partings and OSD, it is not feasible to predict future coal quality. However, based on the historically stable quality of the saleable coal, we anticipate that future product quality will remain consistent with past performance, as detailed in the table below:

Typical Product Coal Quality				
	%			kcal/kg
Mine	Ash (Ad)	Moisture (Mt)	Sulfur (St,d)	CV (Qnet.ar)
Renjiazhuang	33.9	4.5	2.36	4,710

Figures listed at the end of this chapter and contained in Appendix A show the structure, cross-sections and resource/reserve areas for the individual coal seams.

3.8.5 Shaanbei Coalfield

The Sandaogou Mine is the only one of the subject Guoyuan Power mines located in the Shaanbei Coalfield, which is located in the Yan'an Formation of the Jurassic Age. On a global basis, the geologic settings, or nature, of the Sandaogou Mine is judged to be simple to moderate. While the strata are flat-lying, coal seams splitting and thinning are complicating factors for the seams in some areas.

Regional Geology

The Jurassic Shaanbei Coalfield is situated on the Northern Shaanxi Slope, which forms the eastern flank of the Ordos Syncline. Regional data indicate that the basement is influenced by several major structural trends: the Wubao–Jingbian EW-trending zone, the Baode–Wuqi NE-trending zone, and the Yulin West–Shenmu West NE-trending zone. These basement structures exerted a certain degree of control on the formation and distribution of the coalfield.

Structure

The structure of Shaanbei Coalfield is characterized by broad, gentle undulations and a series of post-depositional disconformities formed by large-scale crustal uplift. No major faults or magmatic activity have been discovered. The strata generally form a monocline gently dipping to the northwest at about 1 degree. Along the Yaozhen area following the Tuwei River, the contour lines of the coal seam floor are relatively dense, suggesting the possible presence of minor faults in this zone.

Stratigraphy

The coalfield's stratigraphic sequence, from oldest to youngest, comprises:

- the Upper Triassic Yongping Formation
- Lower Jurassic Fuxian Formation
- Middle Jurassic Yan'an Formation
- Zhiluo Formation
- Anding Formation
- Lower Cretaceous Luohe Formation
- Neogene, and Quaternary

The primary coal-bearing stratum is the Middle Jurassic Yan'an Formation. It is predominantly composed of sandstone, siltstone, sandy mudstone, mudstone, coal seams, and carbonaceous mudstone. Yan'an formation contains 7 to 8 layers of minable coal seams, with 4 being the principal minable layers.

Coal Seams

The major seam is 5-2, which is minable across the entire area. It has a thickness of 2.0 to 7.0 m and a simple structure. Secondary minable seams include 4-3, 4-4, and 5-2U, with average thicknesses ranging from 0.80 to 1.91 m. The immediate roof and

floor of the coal seams are predominantly composed of mudstone and silty mudstone, providing relatively stable ground conditions. The following tables show the detailed characteristics of each seam:

Table 3-26 Coal Seams of Sandaogou Mine in Shaanbei Coalfield

		Thickness (m)			Distance from the	Seam Depth	Seam	Seam
Mine	Seam	Coal	Parting	Seam	Upper Seam (m)	Range (m)	Dip (deg.)	Occurrence
Sandaogou	4-3	1.3	-	1.3	-	11 - 1,290	2-W	Eratic
	4-4	1.1	-	1.1	14	12 - 1,306	2-W	Eratic
	5-2U	2.2	0.07	2.2	14	2 - 1,307	2-W	Uniform
	5-2	4.4	0.21	4.6	19	19 - 1,305	2-W	Uniform

Data Defining Coal Occurrence and Quality

To ensure the completeness and reliability of the data used for resources and reserves estimates, we have been provided with all the relevant historical versions of the geological reports for the subject mines, as follows:

= Exploration Report for the Sandaogou Mine, November 2002
= Reserves Verification Report for the Sandaogou Mine, August 2011

We have reviewed the two different versions of the geological reports provided to ensure our data remains current and valid. The Sandaogou Mine has completed a total of 164 drill holes, all of which have been used for our estimates.

Resource/Reserve Classification

Based on our detailed review of the geologic setting of each seam at Sandaogou Mine, we judge the overall geologic setting to be simple to moderate and have assigned the following drill hole spacing criteria for classification of estimated resources:

Mine	Seam	Geologic Setting	Measured (m)	Indicated (m)	Inferred (m)
Sandaogou	4-3	Moderate	500	1,000	<2,000
	4-4	Moderate	500	1,000	<2,000
	5-2U	Moderate	500	1,000	<2,000
	5-2	Simple	750	1,500	<2,500

Resource and reserve classification of each coal seam are shown on the resource/reserve maps included in Appendix A.

The JORC Code requires that all reports include comment on items listed in Table 1 of the Code. Appendix B, '*Table 1 –Shaanbei Coalfield',* shows the items listed for the Sandaogou Mine in the Shaanbei Coalfield, along with our comments on the table.

Resources Estimate

Estimates of in situ coal resources were prepared using computer mapping software (AutoCAD) for all mapped resource areas. The following parameters were used for resources reporting:

Table 3-27 Resources Estimates Parameters – Sandaogou Mine

			S.G.		Thickness (m)	
Mining/Exploration Right	Seam	Dip	Coal	Parting	Min. Coal	Max. Parting
Sandaogou	4-3	2	1.29	2.1	0.8	0.8
	4-4	2	1.31	2.1	0.8	0.8
	5-2U	2	1.32	2.1	0.8	0.8
	5-2	2	1.31	2.1	0.8	0.8

The resources areas of the mine are delineated by the authorized mine boundary, with vertical mining elevation limits between +1,033 m to +1,258 m. Our resources tonnage estimates (on a 100% ownership basis) for the Sandaogou Mine, as of 31 July 2025, are as follows:

Table 3-28 Coal Resources Estimates – Sandaogou Mine

									In-Situ Coal Quality				
	Average Thickness (m)			In-Place Resources (Mt)				% of	%				CV (net,ad
Seam	Coal	Parting	Seam	Measured	Indicated	Inferred	Total	Resources	Moist. (ad)	Ash (d)	St (d)	Vol (daf)	kcal/kg
						Mining Right							
						Sandaogou							
4-3	1.29	-	1.29	-	-	59.80	59.80	7.6	8.9	7.3	0.29	34.7	6,400
4-4	1.03	-	1.03	-	-	35.93	35.93	4.6	8.8	7.7	0.27	35.1	6,310
5-2U	2.18	0.07	2.25	-	51.67	8.30	59.97	7.7	8.4	8.2	0.26	35.1	6,640
5-2	4.68	0.21	4.89	-	297.56	329.10	626.66	80.1	8.2	7.7	0.20	34.6	6,400
Total				-	349.23	433.13	782.36	100					

Note: 1. Figures may not add due to rounding
2. The reported coal resources are inclusive of the coal reserves.

In-Situ Coal Quality

Since all drill holes are continuously cored, there are quality data for all holes that intersect one or more coal seams which meet the Chinese minimum thickness and core recovery requirements. As shown in the above tables, coal quality is well defined. The quality data shown in the above tables indicate that all coal seams in Sandaogou Mine contain low ash, low sulfur, high heating value long-flame coal. According to China's coal exploration standards, in-situ coal samples typically do not contain visible partings. However, in actual production, ROM coal will include unavoidable in-seam partings and OSD. Consequently, the actual quality of the ROM coal will be inferior to the quality indicated in the table.

Reserves Estimate

Reserves are presented on a ROM or recoverable basis, and on a marketable basis. Recoverable Reserves represent the seam tonnage to be recovered by the corresponding mine plan, including the coal seam and OSD (roof and floor rock recovered with the coal seam during the normal mining process), and moisture gained during underground mining. Marketable Reserves represent the saleable tonnage and include allowances for losses during coal handling and processing. The following

parameters were used for reserves reporting for the Sandaogou Mine:

Table 3-29 Reserves Estimates Parameters – Sandaogou Mine

			Recoverable Reserves									
			Shearer (m)		Shield (m)		SC			Plan	Moist.	Product
		Mining		max.	Cap. Range		Cut	Caving	OSD	Rec.	Gain	Yield
Mine	Seam	Method	Dia	thk	min.	max.	Thk	%	(m)	%	%	%
Sandaogou	4-3	-	-	-	-	-	-	-	-	-	-	-
	4-4	-	-	-	-	-	-	-	-	-	-	-
	5-2U	FM	1.5	3.3	1.4	2.8	-	-	0.10	85	2	97
	5-2	FM	1.5	3.3	1.4	2.8	-	-	0.20	85	2	96

Note: 1. Seams without parameters indicate thin thickness, for which only resources have been estimated.

The determination of these parameters integrated our communication with the mine's technical personnel and our extensive experience in Chinese underground mining. ROM coal from the Sandaogou Mine is sold on raw basis after crushing and screening. The product yields of saleable coal accounts for the removal of in-seam partings and OSD during screening, along with routine coal handling losses.

We have reviewed the historical operation data, and we believe that Sandaogou will be capable of maintaining stable output of 9 Mtpa in the future. Based on the mines' historical performance and communication with the mines' technical personnel, we have developed a LOM plan for Sandaogou Mine to confirm the technical feasibility of the recoverable reserves. This LOM plan is presented in the accompanying DCF table following Chapter 8.

The CP completed an economic analysis for the mine to determine if the projected mine operation is economically viable (see Chapter 8), as of 31 July 2025. This analysis concludes that the identified reserves at Sandaogou Mine have reasonable expectations to be economically mineable. Our reserves tonnage estimates (on a 100% ownership basis) for the Sandaogou Mine, as of 31 July 2025, are as follows:

Table 3-30 Coal Reserves Estimates – Sandaogou Mine

	Recoverable Reserves (Mt)			Processing	Marketable Reserves (Mt)			% of
Seam	Proved	Probable	Total	Yield %	Proved	Probable	Total	Reserves
				Sandaogou				
4-3	-	-	-	-	-	-	-	-
4-4	-	-	-	-	-	-	-	-
5-2U	-	16.87	16.87	97	-	16.28	16.28	9.0
5-2	-	170.75	170.75	96	-	164.52	164.52	91.0
Total	-	187.62	187.62	96	-	180.80	180.80	100

Note: Figures may not add due to rounding

Product Coal Quality

Due to the unavailability of industrial analysis data for partings and OSD, it is not feasible to predict future coal quality. However, based on the historically stable quality of the saleable coal, we anticipate that future product quality will remain consistent with

past performance, as detailed in the table below:

Typical Product Coal Quality				
	%			kcal/kg
Mine	Ash (Ad)	Moisture (Mt)	Sulfur (St,d)	CV (Qnet.ar)
Sandaogou	13.8	13.3	0.20	5,570

Figures listed at the end of this chapter and contained in Appendix A show the structure, cross-sections and resource/reserve areas for the individual coal seams.

3.9 Shenyan Coal Mining Right

Shenyan Coal holds the rights to the open-pit Xiwan mine, which is located in the eastern part of the Yushen Mining Area in the Jurassic Shaanbei Coalfield. On a global basis, the geologic settings, or nature, of the Xiwan Open-pit is judged to vary from simple to moderate. The strata are flat-lying with minimal thickness variations and a simple structure.

Regional Geology

The Shaanbei Coalfield is situated on the eastern limb of the Ordos Syncline. The basement of the coal-bearing basin is dominated by several major structural zones: the Wubao-Jingbian E-W trending zone, the Baode-Wuqi NE-trending zone, and the Yulin West-Shenmu West NE-trending zone. These structural zones exerted a discernible control on the formation and spatial distribution of the coalfield.

Structure

The Xiwan Open-pit area exhibits gently inclined strata, forming a monocline with a general north-northeast strike and northwest dip direction, and dip angles of approximately 1 degree. This monocline is superimposed by broad, gentle undulations. The area lacks significant fault development and shows no evidence of magmatic activity.

Stratigraphy

The stratigraphic sequence in Xiwan Open-pit area is clearly defined and ascends from the bottom as follows:

- Middle Jurassic Yan'an Formation
- Middle Jurassic Zhiluo Formation
- Neogene Pliocene Baode Formation
- Middle Pleistocene Lishi Formation
- Upper Pleistocene Salawusu Formation
- Holocene aeolian sand and alluvium

The Middle Jurassic Yan'an Formation constitutes the principal coal-bearing stratum in the area. The open-pit operation currently targets minable 2-2 Seam contained within top section of the Yan'an Formation.

Coal Seams

The Yan'an Formation hosts 11 coal seams, with 5 minable seams (seams 2-2, 3-1, 4-3, 5-3 ,5-3L). Currently, only the 2-2 seam is being extracted by open-pit methods. The remaining minable seams represent potential targets for future underground mining operations.

The No. 2-2 Seam is a thick, main minable seam developed throughout the entire area. It has a simple structure, containing 1 to 3 partings, and has an average thickness of 9.84 m within the resources area. The seam thickness exhibits minimal yet systematic variation. The following tables show the detailed characteristics of each seam:

Table 3-31 Coal Seams in Shenyan Coal Mining Right

		Thickness (m)			Distance from the	Seam Depth	Seam	Seam
Mine	Seam	Coal	Parting	Seam	Upper Seam (m)	Range (m)	Dip (deg.)	Occurrence
China Energy Shaanxi Shenyan Coal Co., Ltd.								
Xiwan	2-2	10.80	0.21	11.01		20 - 280	1-NW	Uniform
Open-pit	3-1	2.18	2.78	4.96	45	80 - 320	1-NW	Uniform
	4-3	1.75	0.14	1.89	50	150 - 380	1-NW	Uniform
	5-3U	2.07	0.32	2.39	40	220 - 450	1-NW	Uniform
	5-3L	1.63	0.25	1.88	5	230 - 450	1-NW	Eratic
	5-4	0.83	0.38	1.21	15	240 - 460	1-NW	Eratic

Data Defining Coal Occurrence and Quality

To ensure the completeness and reliability of the data used for resources and reserves estimates, we have been provided with all the relevant historical versions of the geological reports for the subject mines, as follows:

- = Exploration Report for the Xiwan Open-pit Mine, September 2007
- = Geological Classification Report for the Xiwan Open-pit Mine, December 2024
- = 2024 Annual Reserves Verification Report for the Xiwan Mine
- = Hydrogeological Survey Report for the Xiwan Mine, October 2024
- = Production Geology Report for the Xiwan Open-pit Mine, November 2024

We have compared the different versions of the provided geological reports to ensure our data remains current and valid. Throughout its exploration history, the Xinwan Open-pit Mine has completed a total of 382 boreholes, all of which have been incorporated into our geological modeling.

Resource/Reserve Classification

Based on our detailed review of the geologic setting of each seam at Xiwan Openpit,

we judge the overall geologic setting to be simple to complex and have assigned the following drill hole spacing criteria for classification of estimated resources:

Mine	Seam	Geologic Setting	Measured (m)	Indicated (m)	Inferred (m)
Xiwan	2-2	Simple	750	1,500	<2.500
Open-pit	3-1	Moderate	500	1,000	<2,000
	4-3	Moderate	500	1,000	<2,000
	5-3U	Moderate	500	1,000	<2,000
	5-3L	Moderate	500	1,000	<2,000
	5-4	Moderate	500	1,000	<2,000

Resource and reserve classification of each coal seam are shown on the resource/reserve maps included in Appendix A.

The JORC Code requires that all reports include comment on items listed in Table 1 of the Code. Appendix B, '*Table 1 –Shaanbei Coalfield',* shows the items listed for the Xiwan Mine, along with our comments on the table.

Resources Estimate

Estimates of in situ coal resources were prepared using Carlson SurvCADD for the Xiwan open-pit. The following parameters were used for resources reporting:

- Coal S.G.: 1.23
- Parting S.G: 2.1
- Minimum coal thickness: 0.5 m
- Maximum parting thickness: 0.5 m

The resources area is delineated by the authorized mine boundary, with vertical mining elevation limits between +873 m to +1099 m. Our resources tonnage estimates (on a 100% ownership basis) for the Xiwan Open-pit, as of 31 July 2025, are as follows:

Table 3-32 Coal Resources Estimates – Xiwan Open-pit

	Average Thickness (m)			In-Place Resources (Mt)				% of	In-Situ Coal Quality				
									%				CV (net,ad)
Seam	Coal	Parting	Seam	Measured	Indicated	Inferred	Total	Resouces	Moist. (ad)	Ash (d)	St (d)	Vol (daf)	kcal/kg
Mining Right													
Xiwan Open-pit													
2-2	10.80	0.21	11.01	193.11	273.83	127.59	594.53	51.0	6.7	6.6	0.65	38.9	6,670
3-1	2.18	2.78	4.96	34.54	67.93	76.40	178.87	15.3	6.4	7.1	0.62	39.2	6,700
4-3	1.75	0.14	1.89	-	75.07	45.98	121.05	10.4	6.2	7.6	0.29	35.8	6,740
5-3U	2.07	0.32	2.39	-	63.71	26.77	90.48	7.8	5.5	8.3	0.39	37.4	6,700
5-3L	1.63	0.25	1.88	-	84.69	43.12	127.81	11.0	5.1	10.2	0.39	36.4	6,570
5-4	0.83	0.38	1.21	-	40.89	11.99	52.88	4.5	5.3	13.3	0.50	37.5	6,420
Total				227.65	606.12	331.85	1,165.62	100					

Note: 1. Figures may not add due to rounding
2. The reported coal resources are inclusive of the coal reserves.

In-Situ Coal Quality

Since all drill holes are continuously cored, there are quality data for all holes that intersect one or more coal seams which meet the Chinese minimum thickness and core recovery requirements. As shown in the above tables, coal quality is well defined.

The quality data shown in the above tables indicate that all coal seams in Shaanbei Coalfield contain low ash, low sulfur, high heating value long-flame coal. According to China's coal exploration standards, in-situ coal samples typically do not contain visible partings. However, in actual production, ROM coal will include unavoidable in-seam partings and OSD. Consequently, the actual quality of the ROM coal will be inferior to the quality indicated in the table.

Reserves Estimate

According to the provided open-pit mine design, coal seams below the 2-2 Seam will be designed for underground mining methods after the closure of the open-pit mine, due to their significant depth. Therefore, our reserve estimation for the Xiwan Open-pit is limited solely to the 2-2 Seam.

Reserves are presented on a ROM or recoverable basis, and on a marketable basis. Recoverable Reserves represent the seam tonnage to be recovered by the corresponding mine plan, including the coal seam and OSD (roof and floor rock recovered with the coal seam during the normal mining process). Marketable Reserves represent the salable tonnage and include allowances for losses during coal handling and processing. The following parameters were used for reserves reporting:

- Minimum coal thickness: 0.5 m
- Maximum parting thickness: 0.5 m
- Coal seam recovery: 98%
- OSD rate: 3%
- Product Yield: 97%

The determination of these parameters integrated our communication with the mine's technical personnel and our extensive experience in Chinese open-pit coal mining. ROM coal from Xiwan operation is directly sold after crushing. The 97% yield of saleable coal accounts for routine coal handling losses.

We have reviewed the mine's historical operations, and we believe that Xiwan will be capable of maintaining its authorized output of 13 Mtpa. Based on the mine's historical performance and communication with the mine's technical personnel, we have developed a LOM plan to confirm the technical feasibility of the recoverable reserves. Based on the LOM plan the overall stripping ratio of the Xiwan Open-pit is 9.4 m^3/t. The 20-year LOM details are shown as below:

Year	Aug. - Dec. 2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044
ROM Product (Mt)	5.01	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00	13.00
Stripping Ratio (m^3/t)	8.71	8.71	8.71	10.03	10.03	10.17	10.17	10.17	11.29	11.29	7.53	7.53	7.53	7.53	7.53	7.53	7.53	7.53	7.53	7.53

The CP completed an economic analysis for the mine to determine if the projected mine operation is economically viable (see Chapter 8), as of 31 July 2025. This

analysis concludes that the identified reserves at Xiwan Open-pit have reasonable expectations to be economically mineable. Our reserves tonnage estimates (on a 100% ownership basis) for the Xiwan Open-pit, as of 31 July 2025, are as follows:

Table 3-33 Coal Reserves Estimates – Xiwan Open-pit

	Recoverable Reserves (Mt)			Processing	Marketable Reserves (Mt)			% of
Seam	Proved	Probable	Total	Yield %	Proved	Probable	Total	Reserves
Xiwan Open-pit								
2-2	192.85	273.64	466.49	97	187.06	265.43	452.50	100

Note: Figures may not add due to rounding

Product Coal Quality

Due to the unavailability of industrial analysis data for partings and OSD, it is not feasible to theoretically predict future coal quality. However, based on the historically stable quality of the saleable coal, we anticipate that future product quality will remain consistent with past performance, as detailed in the table below:

Typical Product Coal Quality			
%			kcal/kg
Ash (Ad)	Moisture (Mt)	Sulfur (St,d)	CV (Qnet.ar)
8.3	11.4	0.67	6,160

Figures listed at the end of this chapter and contained in Appendix A show the structure, cross-sections and resource/reserve areas for the individual coal seams.

3.10 Wuhai Energy Mining/Exploration Rights

Wuhai Energy holds nine mining rights and two exploration rights (as shown in the following table) which are all located in the Wuhai area of the Inner Mongolia Autonomous Region.

Table 3-34 Coalfields and Coal Bearing Strata – Wuhai Energy

Mining/Exploration Right	Coalfield	Age of Coal Bearing Strata	Coal Bearing Formation
China Energy Wuhai Energy Co., Ltd.			
Mining Rights			
Gongwusu	Zhuozishan	Carboniferous and Permian	Shanxi and Taiyuan
Huangbaici	Helanshan	Carboniferous and Permian	Shanxi and Taiyuan
Laoshidan	Zhuozishan	Carboniferous and Permian	Shanxi and Taiyuan
Limin	Zhuozishan	Carboniferous and Permian	Shanxi and Taiyuan
Luotuoshan	Zhuozishan	Carboniferous and Permian	Shanxi and Taiyuan
Lutian	Zhuozishan	Carboniferous and Permian	Shanxi and Taiyuan
Pinggou	Zhuozishan	Carboniferous and Permian	Shanxi and Taiyuan
Suhaitu	Helanshan	Carboniferous and Permian	Shanxi and Taiyuan
Wuhushan	Helanshan	Carboniferous and Permian	Shanxi and Taiyuan
Exploration Rights			
Kaqibu Deep Exploration Area	Zhuozishan	Carboniferous and Permian	Shanxi and Taiyuan
Hongliushu West	Zhuozishan	Carboniferous and Permian	Shanxi and Taiyuan

As shown in the above table, the subject Guoyuan Power mines are located in two different coal fields formed in the same geological periods.

3.10.1 Helanshan Coalfield

There are three Wuhai Energy mining rights, i.e. Huangbaici Coal Mine, Wushushan Coal Mine and Suhaitu Coal Mine, located in the Helanshan Coalfield. On a global basis, the geologic settings, or nature, of these mines are judged to be moderate. While the strata are gently dipping, complex faulting and folding structure are the complicating factors for the seams in Helanshan Coalfield.

Regional Geology

The three subject mines are situated within the Wuda Mining Area, which was developed near NS-trending structures by the late Mesozoic Yanshanian movement. The subsequent Cenozoic Himalayan orogeny superimposed roughly EW-trending structures, which cut the earlier systems, forming multiple isolated coal-bearing synclines, including the Wuda syncline. Thrust by the Wuda reverse fault, the syncline's western limb forms an east-dipping monocline. Central strata strike NS and dip east, bending eastward and closing at the ends.

Structure

The three subject mines are located in the central western limb of the Wuda Syncline. Due to truncation by the Wuda thrust fault on the eastern side, the field forms a broadly east-dipping monoclinal structure, striking approximately north-south with dips of 3–13°, increasing to 12–17° near the fault.

The structure of the subject mines is dominated by faults, with folds mainly developed in the eastern area near the Wuda thrust fault. These folds have roughly north-south trending axes and are generally normal and slightly asymmetric, with local overturning. Major folds include the Liangjiagou (striking over1000 m, symmetrical), Bei 111 (striking over 400 m, locally tight and overturned), and Chenjiagou (striking over 600 m, tight in the north, gentle in the south).

Stratigraphy

The Helanshan Coalfield is located between the Alxa and Ordos Blocks, representing a marginal depression-type coalfield. The stratigraphic division of this area is similar to that of the North China Region. Exposed strata include the Qingbaikou, Sinian, Cambrian, Ordovician, Carboniferous, Permian, Tertiary, and Quaternary Systems.

The Upper Carboniferous Taiyuan Formation and Lower Permian Shanxi Formation constitute the primary coal-bearing strata in the region. These formations are dominated by continental and transitional facies deposits, with marine facies being underdeveloped.

Coal Seams

Although the Helanshan Coalfield contains coal seams in both the Taiyuan and Shanxi Formations, the upper Shanxi Formation seams within the subject mining areas have been largely mined out. Current mining operations are exclusively targeting the deeper coal seams within the Taiyuan Formation. Suhaitu Mine had depleted its coal resources years ago and is currently recovering the remaining coal pillars left by previous mining activities using open-pit method in the name of environmental protection (prevent future spontaneous combustion and prepare the mined-out area for reclamation), as approved by the local government. Therefore, the current operation at Suhaitu is not a mining project from the perspective of mining economics, but an environmental remediation project. Consequently, we did not perform resource and reserve estimation for Suhaitu.

The following tables show the detailed characteristics of each seam at Huangbaici and Wushushan mines:

Table 3-35 Coal Seams of Mining Rights in Helanshan Coalfield

		Thickness (m)			Distance from the	Seam Depth	Seam	Seam
Mine	Seam	Coal	Parting	Seam	Upper Seam (m)	Range (m)	Dip (deg.)	Occurrence

	17	1.5	0.18	1.6	3	132 -390	10-E	Moderate

Data Defining Coal Occurrence and Quality

To ensure the completeness and reliability of the data used for resources and reserves estimates, we have been provided with all the relevant historical versions of the geological reports for the subject mines, as follows:

- Huangbaici Mine:
  - Reserves Verification Report for the Huangbaici Mine，2019
  - Annual Reserves Verification Reports for the Huangbaici Mine for Years 2020 to 2025
- Wuhushan Mine:
  - Detailed Exploration Report for the Wuhushan No.1 Mine, Wuda Mining Area, Northern Helan Mountain Coalfield, October 1964
  - Supplementary Hydrogeological Exploration Report for the Wuda Mining Area, April 2011
  - Reserves Verification Report for the Wuhushan Mine, Wuda Mining Area, Helan Mountain Coalfield, February 2019
  - Production Geology Report for the Wuhushan Mining Company, China Energy Wuhai Energy, November 2024
  - Annual Reserves Verification Reports for the Wuhushan Mine for Years 2020 to 2024

We have compared the different versions of the provided geological reports to ensure our data remains current and valid. The following table summarizes the available exploration data for each mining/exploration right area:

Mining/Exploration Right Area	Area (km^2)	No. of Drill Holes
China Energy Wuhai Energy Co., Ltd.		
Mining Rights		
Huangbaici	5.79	28
Wuhushan	8.08	50

Resource/Reserve Classification

Based on our detailed review of the geologic setting of these Wuhai Energy mines located in the Helanshan Coalfield, we judge the overall geologic setting to be moderate and have assigned the following drill hole spacing criteria for classification of estimated resources:

Mining/Exploration Rights	Seam	Geologic Setting	Measured (m)	Indicated (m)	Inferred (m)
Huangbaici	All Seams	Moderate	500	1,000	<2,000
Wuhushan	All Seams	Moderate	500	1,000	<2,000

Resource and reserve classification of each coal seam are shown on the resource/reserve maps included in Appendix A.

The JORC Code requires that all reports include comment on items listed in Table 1 of the Code. Appendix B, '*Table 1 – Helanshan Coalfield',* shows the items listed for the Helanshan Coalfield, along with our comments on the table.

Resources Estimate

Estimates of in situ coal resources were prepared using computer mapping software

(AutoCAD) for all mapped resource areas for the underground mines. The following parameters were used for resources reporting:

Table 3-36 Resources Estimates Parameters – Helanshan Coalfield

Mining/Exploration Right	Seam	Max. Dip	S.G. Coal	S.G. Parting	Thickness (m) Min. Coal	Thickness (m) Max. Parting
Huangbaici	10	7	1.45	2.1	0.7	0.7
	12	7	1.39	2.1	0.7	0.7
	13U2	7	1.50	2.1	0.7	0.7
	13	7	1.35	2.1	0.7	0.7
	15	7	1.45	2.1	0.7	0.7
	16	7	1.35	2.1	0.7	0.7
	17	7	1.35	2.1	0.7	0.7
Wuhushan	9	10	1.29	2.1	0.7	0.7
	10	10	1.31	2.1	0.7	0.7
	12	10	1.36	2.1	0.7	0.7
	13U2	10	1.50	2.1	0.7	0.7
	13	10	1.40	2.1	0.7	0.7
	15	10	1.40	2.1	0.7	0.7
	16	10	1.55	2.1	0.7	0.7
	17	10	1.50	2.1	0.7	0.7

The resources areas of mining rights are delineated by the authorized mine boundary, with vertical mining elevation limits of each mine. Our resources tonnage estimates (on a 100% ownership basis) for Huangbaici Mining Right and Wuhushan Mining Right, as of 31 July 2025, are as follows:

Table 3-37 Coal Resources Estimates – Helanshan Coalfield

Seam	Average Thickness (m) Coal	Parting	Seam	In-Place Resources (Mt) Measured	Indicated	Inferred	Total	% of Resouces	In-Situ Coal Quality % Moist. (ad)	Ash (d)	St (d)	Vol (daf)	CV (net,ad) kcal/kg

Subtotal				33.89	21.68	1.87	57.43	100					
Total				75.46	26.35	10.21	112.01						

Note: 1. Figures may not add due to rounding
2. The reported coal resources are inclusive of the coal reserves.
3.* CV is in b.ad. basis.

From the perspective of mining economics, Suhaitu is not a mining project, and according to JORC 2012, there is no resource.

In-Situ Coal Quality

Since all drill holes are continuously cored, there are quality data for all holes that intersect one or more coal seams which meet the Chinese minimum thickness and core recovery requirements. As shown in the above tables, coal quality is well defined.

The quality data shown in the above tables indicate that all coal seams in Helanshan Coalfield contain medium to high ash, low to high sulfur coking coal. According to China's coal exploration standards, in-situ coal samples typically do not contain visible partings. However, in actual production, ROM coal will include unavoidable in-seam partings and OSD. Consequently, the actual quality of the ROM coal will be inferior to the quality indicated in the table.

Reserves Estimate

Reserves are presented on a ROM or recoverable basis, and on a marketable basis. Recoverable Reserves represent the seam tonnage to be recovered by the corresponding mine plan, including the coal seam and OSD (roof and floor rock recovered with the coal seam during the normal mining process), and moisture gained during underground mining. Marketable Reserves represent the salable tonnage and include allowances for losses during coal handling and processing. The following parameters were used for reserves reporting for the Huangbaici Coal Mine and Wushushan Coal Mine:

Table 3-38 Reserves Estimates Parameters – Huangbaici and Wuhuhan Mine

			Recoverable Reserves									
			Shearer (m)		Shield (m)		SC			Plan	Moist.	Product
		Mining		max.	Cap. Range		Cut	Caving	OSD	Rec.	Gain	Yield
Mine	Seam	Method	Dia	thk	min.	max.	Thk	%	(m)	%	%	%

	12	FM	2.0	4.0	1.7	3.5	-	-	0.10	85	2	82
	13U2	FM	1.4	3.0	1.0	2.4	-	-	0.05	85	2	84
	13	-	-	-	-	-	-	-	-	-	-	-
	15	FM	1.4	3.0	1.0	2.4	-	-	0.05	85	2	86
	16	FM	1.4	3.0	1.0	2.4	-	-	0.05	85	2	86
	17	-	-	-	-	-	-	-	-	-	-	-
Wuhushan	9	FM	2.0	4.0	1.7	3.5	-	-	0.10	85	2	86
	10	FM	2.0	4.0	1.7	3.5	-	-	0.05	85	2	82
	12	FM	2.5	4.8	2.4	5.0	-	-	0.20	85	2	82
	13U2	FM	2.0	4.0	1.7	3.5	-	-	0.05	85	2	71
	13	-	-	-	-	-	-	-	-	-	-	-
	15	FM	2.0	4.0	1.7	3.5	-	-	0.05	85	2	71
	16	FM	2.0	4.0	1.7	3.5	-	-	0.05	85	2	60
	17	FM	2.0	4.0	1.7	3.5	-	-	0.05	85	2	72

Note: 1. Seams without parameters indicate thin thickness, for which only resources have been estimated.

The determination of these parameters integrated our communication with the mine's technical personnel and our extensive experience in Chinese underground coal mining. ROM coal from Huangbaici and Wuhushan are mixed for processing at Wuhai Energy's five coal processing plants (Hainan CPC Gongwusu Plant, Hainan CPC Laoshidan Plant, Limin Processing Plant, Luotuoshan Processing Plant and Wuda Processing Plant) based on clients' requirements on product coal quality, while the majority of the

ROM from Huangbaici and Wuhushan are processed at Wuda Processing Plant. The Gongwusu Plant and Wuda Plant employ TDS systems for refuse removing and the processed material enter into 3-Product HMC system to produce final commercial product, while at the other three plants, coal are processed with Drum Crusher or Roller Crusher before being conveyed to the 3-Product HMC systems. The product yields of saleable coal accounts for the removal of in-seam partings and OSD during screening, along with routine coal handling losses.

We have reviewed the historical operations of the Wuhai Energy's mines located within the Helanshan Coalfield, and we believe that the mines will be capable of maintaining stable output of current production level in the future. Based on the mines' historical performance and communication with the mines' technical personnel, we have developed the LOM plans for the subject mines to confirm the technical feasibility of the recoverable reserves. These LOM plans are presented in the accompanying DCF table following Chapter 8.

The CP completed an economic analysis for the mines to determine if the projected mine operations are economically viable (see Chapter 8), as of 31 July 2025. This analysis concludes that the identified reserves at the subject mines have reasonable

expectations to be economically mineable. Our reserves tonnage estimates (on a 100% ownership basis) for the subject mines, as of 31 July 2025, are as follows:

Table 3-39 Coal Reserves Estimates – Huangbaici and Wuhushan Mines

Product Coal Quality

Due to the unavailability of industrial analysis data for partings and OSD, it is not feasible to predict future coal quality. However, based on the historically stable quality of the saleable coal, we anticipate that future product quality will remain consistent with past performance, as detailed in the table below:

Typical Product Coal Quality				
	%			kcal/kg
Mine	Ash (Ad)	Moisture (Mt)	Sulfur (St,d)	CV (Qnet.ar)
Huangbaici	9.0	10.5	2.00	6,600
Wuhushan	9.0	10.5	2.00	6,600

Figures listed at the end of this chapter and contained in Appendix A show the structure, cross-sections and resource/reserve areas for the individual coal seams.

3.10.2 Zhuozishan Coalfield

There are eight Wuhai Energy properties located in the Zhuozishan Coalfield, which is

formed in the Carboniferous and Permian Age. On a global basis, the geologic settings, or nature, of these mines is judged to be moderate. While the strata are mostly gently dipping, seam splitting and complex faulting are the complicating factors for the seams in Zhuozishan Coalfield.

Regional Geology

The region is located on the eastern limb of the Gongwusu Anticline, characterized by an east-dipping monoclinal structure. Strata strike SN–NNE with dips of 10–30°, generally steeper at shallow depths and gentler in deeper sections. Folding is weakly developed, featuring only three minor structures: the Gongwusu Anticline (NNE-trending, about 7 km long, shallow seams at the axis suitable for open-pit mining), the A1 Anticline (approximately 2.5 km long, disrupted by the F10 thrust fault), and the S1 Syncline.

Structure

Faults are the dominant structural feature, with 62 identified (31 confirmed, 22 basically confirmed, 1 preliminarily controlled). These include 19 thrust and 43 normal faults, mostly with throws <30 m. Early NS-trending thrust faults strongly control structure, while later EW-trending normal faults often cut them. Major thrusts include Xilaifeng (throw 100 to 500 m, significantly influencing coal seams and Ordovician groundwater), Hongliushu and its branches (35 to 220 m), and F10 (0 to 110 m). Key normal faults (e.g., F11, F12, XF1, DF10) mostly dip east with throws of 10–40 m. No magmatic activity is observed. Overall, the structure is dominated by monocline, with minor folds and numerous but controllable faults, moderately impacting mining layout. The structural complexity is rated as moderate.

Stratigraphy

The Zhuozishan Coalfield is situated on the western margin of the Ordos Syncline, at the northern terminus of the Helanshan Fold Belt. The stratigraphic sequence ranges from the Ordovician Zhuozishan Formation to the Quaternary, with the Ordovician limestone as the basement. Overlying strata include the Carboniferous Benxi Formation and Taiyuan Formation, Permian Shanxi Formation, Lower Shihezi Formation, Upper Shihezi Formation, Triassic Shiqianfeng Formation, Neogene, and Quaternary. The primary coal-bearing strata are the Taiyuan and Shanxi Formations.

Coal Seams

Although the Zhuozishan Coalfield contains coal seams in both the Taiyuan and Shanxi Formations, the upper Shanxi Formation seams within the subject mining areas have been largely mined out. Current mining operations are exclusively targeting the deeper

coal seams within the Taiyuan Formation. The following tables show the detailed characteristics of each seam at subject mines in Zhuozishan Coalfield:

Table 3-40 Coal Seams of Mining/Exploration Rights in Zhuozishan Coalfield

		Thickness (m)			Distance from the	Seam Depth	Seam	Seam
Mine	Seam	Coal	Parting	Seam	Upper Seam (m)	Range (m)	Dip (deg.)	Occurrence

Kabuqi Deep Exploration Area is the deeper area located under the Pinggou Mine, while the exploration right for this area has not been approved by the time our report is prepared, according to the source data provided by Wuhai Energy, the authorized mining elevation of Pinggou Mine overlaps with the upper part of Kabuqi Deep Exploration Area, therefore the coal resources occurred in the 16-1 seam and 16-2 seam which are situated within the overlapped elevation range have been included in our resources and reserve estimation for Pinggou Mine, however the lower 17 seam and 18 seam are not included, as the drilling data of these two seams are too limited to support a resource estimation according to JORC Code.

Data Defining Coal Occurrence and Quality

To ensure the completeness and reliability of the data used for resources and reserves estimates, we have been provided with all the relevant historical versions of the geological reports for the subject mines, as follows:

- Gongwusu Mine:
  - = Detailed Exploration Report for the Gongwusu Mining Area, Zhuozishan Coalfield, November 1965
  - = Supplementary Production Geology Exploration Report for the Gongwusu Open-pit Mine, November 1989
  - = Reserves Verification Report for the Gongwusu Mine, February 2019
  - = Annual Reserves Verification Reports for the Gongwusu Mine for Years 2020 to 2024

- Laoshidan Mine:
  - = Production Geology Report for the Laoshidan Mine, April 2019
  - = 2019 Reserves Verification Report for the Laoshidan Mine, May
  - = Laoshidan Mine Production Construction Geological Report, June 2019
  - = Production Geology Report for the Laoshibdan Mine, July 2023
  - = Annual Reserves Verification Reports for the Laoshibdan Mine for Years 2020 to 2024
- Luotuoshan Mine:
  - = Detailed Exploration Report for the Luotuoshan Mining Area, Zhuozishan Coalfield, December 1972
  - = Detailed Exploration Report for the Luotuoshan Mine, November 1984
  - = Luotuoshan Mine Construction Geological Report, September 2024
- Lutian Mine:
  - = Reserves Verification Report for the Lutian Mine, April 2012
  - = Lutian Mine No.4 Mining Area Construction Geological Report, June 2003
  - = Production Geology Report for the Lutian Mine, August 2024
  - = Annual Reserves Verification Reports for the Lutian Mine for Years 2020 to 2024
- Pinggou Mine:
  - = Detailed Geological Report for Pinggou and Jiudonggou Mine, February 1964
  - = Reserve Assessment Report for Pinggou Mine, 2007
  - = Geological Report for Pinggou Mine, January 2013
  - = Geological Report for Extended Exploration for Pinggou Mine, July 2013
  - = Resource/Reserve Assessment Report for Pinggou Mine, 2019
  - = Pinggou Mine Production Geological Report, July 2024
- Hongliushu Mine:
  - = Coal Exploration Report for Hongliushu Mine, June 2006

We have compared the different versions of the geological reports provided to ensure our data remains current and valid. The following table summarizes the available exploration data for each mining/exploration right area:

Mining/Exploration Right Area	Area (km^2)	No. of Drill Holes
China Energy Wuhai Energy Co., Ltd.		
Mining Rights		
Gongwusu	14.76	92
Laoshidan	9.78	106
Limin	7.99	53
Luotuoshan	11.57	92
Lutian	6.75	145
Pinggou	15.65	127
Exploration Rights		
Hongliushu West	6.10	15

Resource/Reserve Classification

Based on our detailed review of the geologic setting of these Wuhai Energy mines

located in the Zhuozishan Coalfield, we judge the overall geologic setting to be moderate and have assigned the following drill hole spacing criteria for classification of estimated resources:

Mining/Exploration Rights	Seam	Geologic Setting	Measured (m)	Indicated (m)	Inferred (m)
Gongwusu	All Seams	Moderate	500	1,000	<2,000
Laoshidan	All Seams	Moderate	500	1,000	<2,000
Limin	All Seams	Moderate	500	1,000	<2,000
Luotuoshan	All Seams	Moderate	500	1,000	<2,000
Lutian	All Seams	Moderate	500	1,000	<2,000
Pinggou	All Seams	Moderate	500	1,000	<2,000
Hongliushu West	All Seams	Moderate	500	1,000	<2,000

Resource and reserve classification of each coal seam are shown on the resource/reserve maps included in Appendix A.

The JORC Code requires that all reports include comment on items listed in Table 1 of the Code. Appendix B, '*Table 1 – Zhuozishan Coalfield',* shows the items listed for each mine in the Zhuozishan Coalfield, along with our comments on the table.

Resources Estimate

Estimates of in situ coal resources were prepared using computer mapping software

(AutoCAD) for all mapped resource areas. The following parameters were used for resources reporting:

Table 3-41 Resources Estimates Parameters – Zhuozishan Coalfield

		Max.	S.G.		Thickness (m)	
Mining/Exploration Right	Seam	Dip	Coal	Parting	Min. Coal	Max. Parting
Gongwusu	9	22	1.52	2.1	0.7	0.7

West	14	17	1.45	2.1	0.7	0.7
	17	17	1.45	2.1	0.7	0.7

The resources areas of mining rights are delineated by the authorized mine boundary, with vertical mining elevation limits of each mine. While the resources areas of exploration rights are only delineated by the property boundary since there are no elevation limits for exploration rights. Our resources tonnage estimates (on a 100% ownership basis) for Gongwusu Mining Right, Laoshidan Mining Right, Limin Mining

Right, Luotuoshan Mining Right, Lutian Mining Right, Pinggou Mining Right and Hongliushu West Exploration Right, as of 31 July 2025, are as follows:

Table 3-42 Coal Resources Estimates – Zhuozishan Coalfield

Note: 1. Figures may not add due to rounding
2. The reported coal resources are inclusive of the coal reserves.

In-Situ Coal Quality

Since all drill holes are continuously cored, there are quality data for all holes that intersect one or more coal seams which meet the Chinese minimum thickness and core recovery requirements. As shown in the above tables, coal quality is well defined.

The quality data shown in the above tables indicate that all coal seams in Zhuozishan Coalfield contain medium to high ash, low to high sulfur coking coal. According to China's coal exploration standards, in-situ coal samples typically do not contain visible partings. However, in actual production, ROM coal will include unavoidable in-seam partings and OSD. Consequently, the actual quality of the ROM coal will be inferior to the quality indicated in the table.

Reserves Estimate

Reserves are presented on a ROM or recoverable basis, and on a marketable basis. Recoverable Reserves represent the seam tonnage to be recovered by the corresponding mine plan, including the coal seam and OSD (roof and floor rock recovered with the coal seam during the normal mining process), and moisture gained during underground mining. Marketable Reserves represent the salable tonnage and include allowances for losses during coal handling and processing. The following parameters were used for reserves reporting for the Gongwusu Coal Mine, Laoshidan Coal Mine, Limin Coal Mine, Luotuoshan Coal Mine, Lutian Coal Mine and Pinggou Coal Mine:

Table 3-43 Reserves Estimates Parameters – Zhuozishan Coalfield

			Recoverable Reserves									
			Shearer (m)		Shield (m)		SC			Plan	Moist.	Product
		Mining		max.	Cap. Range		Cut	Caving	OSD	Rec.	Gain	Yield

	16-2	FM	2.5	5.0	2.5	5.0	-	-	0.05	85	2	70

Note: 1. Seams without parameters indicate thin thickness, for which only resources have been estimated.

The determination of these parameters integrated our communication with the mine's technical personnel and our extensive experience in Chinese underground coal mining. ROM coal from Gongwusu Coal Mine, Laoshidan Coal Mine, Limin Coal Mine, Luotuoshan Coal Mine, Lutian Coal Mine and Pinggou Coal Mine are mixed for processing at Wuhai Energy's five coal processing plants (Hainan CPC Gongwusu Plant, Hainan CPC Laoshidan Plant, Limin Processing Plant, Luotuoshan Processing Plant and Wuda Processing Plant) based on clients' requirements on product coal quality. The Gongwusu Plant and Wuda Plant employ TDS systems for refuse removing and the processed material enter into 3-Product HMC system to produce final commercial product, while at the other three plants, coal is processed with Drum Crusher or Roller Crusher before being conveyed to the 3-Product HMC systems. The product yields of saleable coal accounts for the removal of in-seam partings and OSD during screening, along with routine coal handling losses.

We have reviewed the historical operations of the Wuhai Energy's mines located within the Zhuozishan Coalfield, and we believe that the mines will be capable of maintaining stable output of current production level in the future. Based on the mines' historical

performance and communication with the mines' technical personnel, we have developed the LOM plans for the subject mines to confirm the technical feasibility of the recoverable reserves. These LOM plans are presented in the accompanying DCF table following Chapter 8.

The CP completed an economic analysis for the mines to determine if the projected mine operations are economically viable (see Chapter 8), as of 31 July 2025. This analysis concludes that the identified reserves at the subject mines have reasonable expectations to be economically mineable. Our reserves tonnage estimates (on a 100% ownership basis) for the subject mines, as of 31 July 2025, are as follows:

Table 3-44 Coal Reserves Estimates – Zhuozishan Coalfield

Note: Figures may not add due to rounding

Product Coal Quality

Due to the unavailability of industrial analysis data for partings and OSD, it is not feasible to predict future coal quality. However, based on the historically stable quality of the saleable coal, we anticipate that future product quality will remain consistent with past performance, as detailed in the table below:

Typical Product Coal Quality				
	%			kcal/kg
Mine	Ash (Ad)	Moisture (Mt)	Sulfur (St,d)	CV (Qnet.ar)
Gongwusu	10.5	9.8	2.50	5,860
Laoshidan	11.0	10.8	1.80	5,880
Limin	11.7	9.4	0.89	6,010
Luotuoshan	12.9	10.0	0.71	5,890
Lutian	11.7	9.4	0.89	6,010

Pinggou Mine is starting a mine technical upgrade and the product coal quality is not available. It's our opinion that Pinggou's product quality will be close to its adjacent Luotuoshan Mine.

Figures listed at the end of this chapter and contained in Appendix A show the structure, cross-sections and resource/reserve areas for the individual coal seams.

3.11 Xinjiang Energy Mining/Exploration Rights

Xinjiang Energy holds six mining rights and five exploration rights (as shown in the following table) which are located in various locations in Xinjiang Autonomous Region.

Table 3-45 Coalfields and Coal Bearing Strata – Xinjiang Energy

Mining/Exploration Right	Coalfield	Age of Coal Bearing Strata	Coal Bearing Formation
China Energy Xinjiang Energy and Chemical Co., Ltd.			
Mining Rights			
Heishan Open-pit	Houxia	Jurassic	Xishanyao

Hongshaquan No.2 Open-pit	Zhundong	Jurassic	Xishanyao and Badaowan
Tunbao	Zhunnan	Jurassic	Xishanyao
Wudong	Zhunnan	Jurassic	Xishanyao
Zhundong Open-pit	Zhundong	Jurassic	Xishanyao
Exploration Rights			
Jiangjunmiao	Zhundong	Jurassic	Xishanyao and Badaowan
Liuhuanggou No.4	Zhunnan	Jurassic	Xishanyao
Wucaiwan No.2	Zhundong	Jurassic	Xishanyao and Badaowan
Wucaiwan No.3	Zhundong	Jurassic	Xishanyao and Badaowan
Wucaiwan No.5	Zhundong	Jurassic	Xishanyao and Badaowan

As shown in the above table, the subject Xinjiang Energy mines are located in three different Jurassic coal fields.

3.11.1 Houxia Coalfield

The Heishan Open-pit is the only one of the subject mines located in the Houxia Coalfield. On a global basis, the geologic settings, or nature, of the Heishan Open-pit is judged to vary from simple to moderate. While the strata are flat-lying, complex structure containing multiple partings of the coal seams is a complicating factor for the seam in most of the mine areas.

Regional Geology

The Houxia Coalfield is situated at the junction of the North Tianshan Orogenic Belt and the southern margin of the Junggar Basin, belonging to an intermontane depression-type coalfield. Its formation and evolution were primarily controlled by the Yanshanian and Himalayan tectonic movements. The regional structural trend is nearly east-west, consistent with the tectonic grain of the North Tianshan.

Based on sedimentary basin and structural characteristics, the coalfield can be subdivided into several mining areas, including the Heishan Mining Area. The Heishan Open-pit Mine is located within this Heishan Mining Area.

Structure

The Houxia Coalfield features a simple geological structure, primarily a south-dipping monocline (dipping at 13 to 25 degrees). Several reliably identified faults are present. A combustion metamorphic rock (burned rock) belt, formed from ancient coal seam ignition, trends east-west. It reaches a maximum depth of 240 m, as confirmed by drilling and geophysical surveys. No magmatic rocks are found within the coal measures. Overall, the geological structure of the mining area is classified as simple.

Stratigraphy

The Heishan Mining Area contains strata ranging from the Paleozoic (Silurian, Carboniferous, Permian) to the Mesozoic (Triassic, Jurassic) and Cenozoic (Neogene, Quaternary) from oldest to youngest. The coal-bearing strata are specifically the Lower Jurassic Badaowan Formation and the Middle Jurassic Xishanyao Formation. In the Houxia Coalfield, all mineable coal seams are in the Xishanyao Formation.

Coal Seams

The Xishanyao Formation contains 15 coal seams, 9 of which are minable.

The major seams are Nos. 9, 13-1 and No. 13-2. These are stable to relatively stable seams, minable across the entire area, with No. 13-1 and No. 13-2 being extra-thick. The seam structure ranges from simple to complex, typically containing 0 to12 layers of carbonaceous mudstone partings. The immediate roof and floor strata are predominantly siltstone, fine-grained sandstone, and coarse-grained sandstone, with

localized carbonaceous mudstone. The following tables show the detailed characteristics of each seam:

Table 3-46 Coal Seams of Heishan Open-pit in Houxia Coalfield

Mine	Seam	Thickness (m) Coal	Parting	Seam	Distance from the Upper Seam (m)	Seam Depth Range (m)	Seam Dip (deg.)	Seam Occurrence
Heishan	6	1.34	2.66	4	-	11 - 274	20-S	Eratic
Open-pit	7	1.46	3.31	4.77	10	6 - 274	20-S	Moderate
	8	2.35	4.78	7.13	16	5 - 310	20-S	Eratic
	9	6.85	2.72	9.57	48	5 - 365	20-S	Moderate
	11	4.32	5.74	10.06	45	4 - 422	20-S	Moderate
	12-1	1.75	0.8	2.55	31	4 - 471	20-S	Eratic
	13-1	17.15	0.32	17.47	71	234 - 581	20-S	Uniform
	13-2	28.4	2.32	30.72	90	10 - 665	20-S	Uniform

Data Defining Coal Occurrence and Quality

To ensure the completeness and reliability of the data used for resources and reserves estimates, we have been provided with all the relevant historical versions of the geological reports for the subject mines, as follows:

- = Detailed Exploration Report for the Xiao'erbulake (Heishan)-Tixiong Gou Area, March 2007
- = Exploration Report for the Xiao'erbulake-Tixiong Gou Open-pit Mine, Heishan Mining Area, April 2009
- = Geohazard Risk Assessment Report for the Heishan Open-pit Mine Construction Project, Ltd., December 2012
- = Slope Engineering Geological Exploration Report for the Initial Mining Area of the Tuokexun Heishan Open-pit Mine, October 2014
- = Special Hydrogeological Exploration Report for the Heishan Open-pit Mine, March 2015
- = 2016 Reserves Verification Report for the Heishan Mine

We have compared the different versions of the provided geological reports to ensure our data remains current and valid. A total of 164 drill holes has been completed at the Heishan Open-pit during historical exploration and mine operations, and all of these have been used for our estimates.

Resource/Reserve Classification

Based on our detailed review of the geologic setting of each seam at Heishan Open-pit, we judge the overall geologic setting to be simple to moderate and have assigned the following drill hole spacing criteria for classification of estimated resources:

Mine	Seam	Geologic Setting	Measured (m)	Indicated (m)	Inferred (m)
Heishan	6	Moderate	500	1,000	<2,000
Open-pit	7	Moderate	500	1,000	<2,000
	8	Moderate	500	1,000	<2,000
	9	Moderate	500	1,000	<2,000
	11	Moderate	500	1,000	<2,000
	12-1	Moderate	500	1,000	<2,000
	13-1	Simple	750	1,500	<2,500
	13-2	Simple	750	1,500	<2,500

Resource and reserve classification of each coal seam are shown on the resource/reserve maps included in Appendix A.

The JORC Code requires that all reports include comment on items listed in Table 1 of the Code. Appendix B, '*Table 1 – Houxia Coalfield',* shows the items listed for the Heishan Open-pit in Houxia Coalfield, along with our comments on the table.

Resources Estimate

Estimates of in situ coal resources were prepared using Carlson SurvCADD for the Heishan Open-pit. The following parameters were used for resources reporting:

Table 3-47 Resources Estimates Parameters – Heishan Open-pit

		Max.	S.G.		Thickness (m)	
Mine	Seam	Dip	Coal	Parting	Min. Coal	Max. Parting
Heishan	6	20	1.33	2.1	0.8	0.8
Open-pit	7	20	1.33	2.1	0.8	0.8
	8	20	1.31	2.1	0.8	0.8
	9	20	1.32	2.1	0.8	0.8
	11	20	1.33	2.1	0.8	0.8
	12-1	20	1.34	2.1	0.8	0.8
	13-1	20	1.31	2.1	0.8	0.8
	13-2	20	1.31	2.1	0.8	0.8

The resources area is delineated by the authorized mine boundary, with vertical mining elevation limits between +1,600 m to +3,023 m. Our resources tonnage estimates (on a 100% ownership basis) for the Heishan Open-pit, as of 31 July 2025, are as follows:

Table 3-48 Coal Resources Estimates – Heishan Open-pit

	Average Thickness (m)			In-Place Resources (Mt)				% of	In-Situ Coal Quality %				CV (net,ad)
Seam	Coal	Parting	Seam	Measured	Indicated	Inferred	Total	Resouces	Moist. (ad)	Ash (d)	St (d)	Vol (daf)	kcal/kg
						Mining Right							
						Heishan Open-pit							
6	1.69	-	1.69	5.18	16.45	29.20	50.83	3.2	3.7	8.6	-	40.6	6,770
7	2.92	-	2.92	1.79	9.65	45.28	56.72	3.6	3.8	11.5	-	41.7	6,450
8	4.58	-	4.58	5.66	22.08	78.00	105.74	6.6	3.5	10.1	-	40.3	6,190
9	8.07	-	8.07	28.91	79.81	129.67	238.39	15.0	3.9	10.3	-	40.4	6,400
11	6.43	-	6.43	16.35	44.47	117.30	178.12	11.2	3.5	11.9	-	40.5	6,490
12-1	2.59	-	2.59	6.30	16.52	48.44	71.26	4.5	3.2	9.8	-	38.6	6,750
13-1	8.53	-	8.53	-	0.23	96.68	96.91	6.1	2.1	4.8	-	38.5	7,290
13-2	26.35	-	26.35	134.07	319.99	342.34	796.40	50.0	3.1	7.9	-	37.5	6,800
Total				198.26	509.20	886.91	1,594.37	100					

Note: 1. Figures may not add due to rounding
2. The reported coal resources are inclusive of the coal reserves.

In-Situ Coal Quality

Since all drill holes are continuously cored, there are quality data for all holes that intersect one or more coal seams which meet the Chinese minimum thickness and core recovery requirements. As shown in the above tables, coal quality is well defined.

The quality data shown in the above tables indicate that all coal seams in Houxia Coalfield contain medium to high ash, high heating value long-flame and non-caking coal. According to China's coal exploration standards, in-situ coal samples typically do

not contain visible partings. However, in actual production, ROM coal will include unavoidable in-seam partings and OSD. Consequently, the actual quality of the ROM coal will be inferior to the quality indicated in the table.

Reserves Estimate

Reserves are presented on a ROM or recoverable basis, and on a marketable basis. Recoverable Reserves represent the seam tonnage to be recovered by the corresponding mine plan, including the coal seam and OSD (roof and floor rock recovered with the coal seam during the normal mining process). Marketable Reserves represent the salable tonnage and include allowances for losses during coal handling and processing. The following parameters were used for reserves reporting:

- Minimum coal thickness: 0.5 m
- Maximum parting thickness: 0.5 m
- Coal seam recovery: 98%
- OSD rate: 3%
- Product Yield: 95%

The determination of these parameters integrated our communication with the mine's technical personnel and our extensive experience in Chinese open-pit coal mining. ROM coal from Heishan operation is directly sold after crushing and screening. The 95% yield of saleable coal accounts for the removal of in-seam partings and OSD during screening, along with routine coal handling losses.

We have reviewed the mine's historical operations, and we believe that Heishan will be capable of maintaining its authorized output of 16 Mtpa. Based on the mine's historical performance and communication with the mine's technical personnel, we have developed a LOM plan to confirm the technical feasibility of the recoverable reserves. This LOM plan is presented in the accompanying DCF table following Chapter 8.

According to the Life of Mine (LOM) plan, the Heishan Open-pit Mine has an overall stripping ratio of 9.37 m³/t. The detailed annual stripping ratios for the 20-year period are presented below:

Year	Aug. - Dec. 2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044
ROM Product (Mt)	6.05	16.00	16.00	16.00	16.00	16.00	16.00	16.00	16.00	16.00	16.00	16.00	16.00	16.00	16.00	16.00	16.00	16.00	16.00	16.00
Stripping Ratio (m^3/t)	8.90	8.90	8.90	8.90	8.90	8.90	8.90	10.10	10.10	10.10	10.10	10.10	10.10	10.50	10.50	10.50	10.50	10.50	10.50	10.50

The CP completed an economic analysis for the mine to determine if the projected mine operation is economically viable (see Chapter 8), as of 31 July 2025. This analysis concludes that the identified reserves at Heishan Open-pit have reasonable

expectations to be economically mineable. Our reserves tonnage estimates (on a 100% ownership basis) for the Heishan Open-pit, as of 31 July 2025, are as follows:

Table 3-49 Coal Reserves Estimates – Heishan Open-pit

	Recoverable Reserves (Mt)			Processing	Marketable Reserves (Mt)			% of
Seam	Proved	Probable	Total	Yield %	Proved	Probable	Total	Reserves
				Heishan Open-pit				
6	7.05	12.40	19.45	96	6.90	11.78	18.68	3.2
7	5.05	9.36	14.41	95	4.80	8.89	13.69	2.4
8	10.65	18.16	28.81	95	10.12	17.25	27.37	4.7
9	32.59	62.40	94.99	95	30.96	59.28	90.24	15.6
11	17.81	38.15	55.96	95	16.92	36.24	53.16	9.2

13-2	115.93	257.25	373.18	95	110.13	244.39	354.52	61.5
Total	195.47	411.55	607.02	95	185.9	391.0	576.9	100

Note: Figures may not add due to rounding

Product Coal Quality

Due to the unavailability of industrial analysis data for partings and OSD, it is not feasible to theoretically predict future coal quality. However, based on the historically stable quality of the saleable coal, we anticipate that future product quality will remain consistent with past performance, as detailed in the table below:

Typical Product Coal Quality			
%			kcal/kg
Ash (Ad)	Moisture (Mt)	Sulfur (St,d)	CV (Qnet.ar)
9.8	7.3	0.62	6,290

Figures listed at the end of this chapter and contained in Appendix A show the structure, cross-sections and resource/reserve areas for the individual coal seams.

3.11.2 Zhundong Coalfield

Zhundong Coalfield is one of the major coalfields in Xinjiang Autonomous Region. There are three mining rights (Hongshaquan No.1, Hongshaquan No.2 and Zhundong Open-pits) and four exploration rights (Jiangjunmiao, Wucaiwan No.2, Wucaiwan No.3, Wucaiwan No.5) are located in the Zhundong Coalfield of the Jurassic Age. On a global basis, the geologic settings, or nature, of the subject properties are judged to be moderate. While the strata are moderately dipping and the major seams are favorably thick, the complex structure containing folds and faults is a complicating factor for the seams in each of the mine areas.

Regional Geology

Located in the Kalamaili foredeep belt on the eastern margin of the Junggar Basin, the Zhundong Coalfield constitutes an independent tectonic-sedimentary unit. Its structural

framework was shaped by multiple tectonic cycles, with the Yanshanian movement playing a decisive role in reforming the Jurassic coal measures and forming the present structural and coal accumulation framework. The region features a Variscan folded basement and sedimentary cover from Carboniferous to Quaternary, with primary coal-bearing strata in the Jurassic Xishanyao and Badaowan Formations. Multi-phase tectonic events ultimately created the current structural pattern of interwoven uplifts and depressions.

Structure

The Zhundong Coalfield exhibits a complex internal structure, where folds and faults of varying scales govern the spatial distribution of coal seams. Three typical coal-controlling structural types have developed: compound synclinal folds, imbricate thrust structures, and nappe structures, forming a unique structural control pattern. Overall, coal seam distribution follows a "three-zone" differentiation trend: thicker in the west and thinner in the east, deeper in the north and shallower in the south.

- Western Thick-Seam Zone (Wucaiwan-Jiangjunmiao): Dominated by the Xishanyao Formation's B1 coal seam, with single-layer thickness generally exceeding 50m. Simple structure, primarily monoclinal, suitable for large-scale open-pit mining. All the subject properties of Xinjiang Energy are located in this zone.
- Eastern Thin-Seam Zone (Laojunmiao-Xiheishan): Seam thickness reduces to 20 to 40m, split into 2 to 3 layers, with dip angles increasing to 8 to 13 degrees.
- Northern Deep Zone (Dajing-Zhangpenggou): Burial depth increases to 500 to 700m, requiring underground mining methods.

Stratigraphy

The coalfield contains a complete continental sedimentary sequence from the Permian to the Quaternary, including Permian, Triassic, Jurassic, Cretaceous, and Quaternary strata. The coal-bearing formations are Jurassic, specifically the Middle Jurassic Xishanyao Formation (Coal Group B) and the Lower Jurassic Badaowan Formation (Coal Group A). These were deposited in continental environments, predominantly fluvial, lacustrine, and swamp facies. The Xishanyao Formation is the primary coal-bearing unit, characterized by thick, widely distributed, and stable seams, making it the main target for current mining. The Badaowan Formation also contains coal, but the seams are thinner (avg. 10 to 15 m) and often deeply buried (partly over 500 m deep), limiting extraction to localized underground mining.

Coal Seams

The Zhundong Coalfield is primarily hosted in the Middle-Lower Jurassic Xishanyao Formation, with the Badaowan Formation containing locally workable seams. The Xishanyao Formation contains multiple thick to extra-thick seams, such as the widely

distributed and stable B1 and B2 seams, which average 20 to24 m and 8 to19 m in thickness respectively. Seam structures are generally simple, with roofs and floors mainly composed of mudstone, siltstone, and sandstone. Overall, the coalfield features stable, thick coal seams suitable for large-scale mining. The following tables show the detailed characteristics of each seam at each subject property:

Table 3-50 Coal Seams of Mining Rights in Zhundong Coalfield

		Thickness (m)			Distance from the	Seam Depth	Seam	Seam

Data Defining Coal Occurrence and Quality

To ensure the completeness and reliability of the data used for resources and reserves estimates, we have been provided with all the relevant historical versions of the

geological reports for the subject mines, as follows:

- Hongshaquan No.1 Open-pit:
  - = Supplementary Exploration Report for the Hongshaquan No.1 Open-pit Mine, Xiheishan Mining Area, May 2025
- Hongshaquan No.2 Open-pit:
  - = Exploration for the Hongshaquan No.2 Open-pit Mine, August 2010
  - = Supplementary Exploration Report for the Hongshaquan No.2 Open-pit Mine, September 2022
  - = 2024 Annual Reserves Verification Report for the Hongshaquan No.2 Open-pit Mine
  - = Monitoring Statement for the Hongshaquan No.2 Open-pit Mine, Xiheishan Mining Area, First Half of 2025
- Jiangjunmiao Exploration Right:
  - = Exploration Report for the Jiangjunmiao Open-pit Mine, September 2013
- Wucaiwan No.2 Exploration Right:
  - = Exploration Report for the Lucaogou Exploration Area (Underground Mining Section), December 2012
- Wucaiwan No.3 Exploration Right:
  - = Exploration Report for the Lucaogou Exploration Area (Underground Mining Section), December 2012
- Wucaiwan No.5 Exploration Right:
  - = Exploration Report for the Wucaiwan No.5 Open-pit Mine, November 2011
  - = Feasibility Study Report for the Wucaiwan No.5 Open-pit Mine, April 2025

We have compared the different versions of the provided geological reports to ensure our data remains current and valid. The following table summarizes the available exploration data for each mining/exploration right area:

Mining/Exploration Right Area	Area (km^2)	No. of Drill Holes
Mining Rights		
Hongshaquan No.1 Open-pit	74.19	731
Hongshaquan No.2 Open-pit	102.98	731
Zhundong Open-pit	40.08	113
Exploration Rights		
Jiangjunmiao	121.63	264
Wucaiwan No.2	43.80	282
Wucaiwan No.3	68.14	282
Wucaiwan No.5	0.09	83

Xinjiang Energy holds 48.42% of Xinjiang Shenxing Energy Company Limited (Shenxing Energy). Shenxing Energy is currently applying to the government authorities for the modification of the Wucaiwan No. 5 Open-pit Exploration License to larger area of 55.10 km^2. In June 2025, the Natural Resources Bureau of Changji Prefecture, Xinjiang, issued an "Official Reply on Soliciting Opinions Regarding the Exploration Change and Renewal of the Wucaiwan No. 5 Open-pit Mining Field in Zhundong Coalfield, Jimsar County, Xinjiang Autonomous Region" stating that the

bureau has consented to process the change and renewal procedures for the exploration license. After reviewing the provided documentation, we have reasonably assumed that the exploration license will be successfully modified, and accordingly, we have conducted a resource estimate for applied area of 55.10 km^2, which includes 83 drill holes.

Resource/Reserve Classification

Based on our detailed review of the geologic setting of each seam at each mine, we judge the overall geologic setting to be simple to moderate and have assigned the following drill hole spacing criteria for classification of estimated resources:

Mining/Exploration Rights	Seams	Geologic Setting	Measured (m)	Indicated (m)	Inferred (m)
Hongshaquan No.1 Open-pit	B1, B4	Simple	750	1500	<2,500
	Other Seams	Moderate	500	1000	<2,000
Hongshaquan No.2 Open-pit	B2, B4	Simple	750	1500	<2,500
	Other Seams	Moderate	500	1000	<2,000
Zhundong Open-pit	BM, B2, B1	Simple	750	1500	<2,500
	Other Seams	Moderate	500	1000	<2,000
Jiangjunmiao	B2	Simple	750	1500	<2,500
	Other Seams	Moderate	500	1000	<2,000
Wucaiwan No.2	B1	Simple	750	1500	<2,500
	Other Seams	Moderate	500	1000	<2,000
Wucaiwan No.3	B1	Simple	750	1500	<2,500
	Other Seams	Moderate	500	1000	<2,000
Wucaiwan No.5	B1	Simple	750	1500	<2,500
	Other Seams	Moderate	500	1000	<2,000

Resource and reserve classification of each coal seam are shown on the resource/reserve maps included in Appendix A.

The JORC Code requires that all reports include comment on items listed in Table 1 of the Code. Appendix B, '*Table 1 – Zhundong Coalfield',* shows the items listed for the Zhundong Coalfield, along with our comments on the table.

Resources Estimate

Estimates of in situ coal resources were prepared using computer mapping software (AutoCAD) for all mapped resource areas for the underground mining/exploration

rights, and Carlson SurvCADD for the open-pit mining/exploration rights. The following parameters were used for resources reporting:

Table 3-52 Resources Estimates Parameters – Zhundong Coalfield

The resources areas of mining rights are delineated by the authorized mine boundary, with vertical mining elevation limits of each mine. While the resources areas of exploration rights are only delineated by the property boundary since there are no elevation limits for exploration rights. Our resources tonnage estimates (on a

100% ownership basis) for the subject mining/exploration rights, as of 31 July 2025, are as follows:

Note: 1. Figures may not add due to rounding
2. The reported coal resources are inclusive of the coal reserves.
3.* CV is in b.ad. basis.

In-Situ Coal Quality

Since all drill holes are continuously cored, there are quality data for all holes that intersect one or more coal seams which meet the Chinese minimum thickness and core recovery requirements. As shown in the above tables, coal quality is well defined.

The quality data shown in the above tables indicate that all coal seams in Zhundong Coalfield contain medium ash, low to extra-low sulfur, high heating value low-rank bituminous coal (long-flame and non-caking coal). According to China's coal exploration standards, in-situ coal samples typically do not contain visible partings. However, in actual production, ROM coal will include unavoidable in-seam partings and OSD. Consequently, the actual quality of the ROM coal will be inferior to the quality indicated in the table.

Reserves Estimate

Reserve estimate was conducted exclusively for mining rights. Reserves are presented on a ROM or recoverable basis, and on a marketable basis. Recoverable Reserves represent the seam tonnage to be recovered by the corresponding mine plan, including the coal seam and OSD (roof and floor rock recovered with the coal seam during the normal mining process), and moisture gained during underground mining. Marketable Reserves represent the salable tonnage and include allowances for losses during coal handling and processing. The following parameters were used for reserves reporting for the Hongshaquan No.1, Hongshaquan No.2 and Zhundong open-pits:

- Minimum coal thickness: 0.5 m
- Maximum parting thickness: 0.5 m
- Coal seam recovery: 98%
- OSD rate: 3%
- Product Yield: 95% for Hongshaquan No.1 and Hongshaquan No.2, and 96% for Zhundong Open-pit.

The determination of these parameters integrated our communication with the mine's technical personnel and our extensive experience in Chinese open-pit coal mining. ROM coal from the three open-pit mines is crushed and screened before being processed by the Intelligent Dry Separator (TDS) system. Raw coal produced by TDS system is further processed with HMV at Hongshanquan No.1, but is sold on a raw basis at Hongshanquan No.2 and Zhundong open-pits. The product yields of saleable coal accounts for the removal of in-seam partings and OSD during screening, along with routine coal handling losses.

We have reviewed the historical operations for all the three open-pits, and we believe that they will be capable of maintaining stable outputs at the same level as in history. Based on the mines' historical performance and communication with the mines'

technical personnel, we have developed a LOM plan for each of the properties to confirm the technical feasibility of the recoverable reserves. The LOM plans are presented in the accompanying DCF table following Chapter 8.

According to the Life of Mine (LOM) plan, the overall stripping ratio of the subject open-pits are as follows:

Open-Pit	Overall Stipping Ratio (m^3/t)
Hongshanquan No.1	4.76
Hongshanquan No.2	7.07
Zhundong	5.45

The detailed annual stripping ratios for the 20-year period are presented below:

The CP completed an economic analysis for the mines to determine if the projected open-pit operations are economically viable (see Chapter 8), as of 31 July 2025. This analysis concludes that the identified reserves at the subject mining rights have reasonable expectations to be economically mineable. Our reserves tonnage

estimates (on a 100% ownership basis) for Hongshaquan No.1, Hongshaquan No.2 and Zhundong open-pits, as of 31 July 2025, are as follows:

Table 3-54 Coal Reserves Estimates – Xinjiang Energy Open-pits in Zhundong Coalfield

Product Coal Quality

Due to the unavailability of industrial analysis data for partings and OSD, it is not feasible to predict future coal quality. However, based on the historically stable quality

of the saleable coal, we anticipate that future product quality will remain consistent with past performance, as detailed in the table below:

Typical Product Coal Quality				
	%			kcal/kg
Mine	Ash (Ad)	Moisture (Mt)	Sulfur (St,d)	CV (Qnet.ar)
Hongshaquan No.1 Open-pit	7.5	23.6	0.41	4,950
Hongshaquan No.2 Open-pit	9.5	23.0	0.85	4,730
Zhundong Open-pit	7.2	28.5	0.63	4,270

Figures listed at the end of this chapter and contained in Appendix A show the structure, cross-sections and resource/reserve areas for the individual coal seams.

3.11.3 Zhunnan Coalfield

There are two mining rights (Tunbao and Wudong) and one exploration right (Liuhuanggou No.4) are located in the Jurassic Zhunnan Coalfield. On a global basis, the geologic settings, or nature, of the Tunbao Mine is judged to be moderate. While the strata are moderately dipping, seam splitting, sand erosion and moderate faulting are complicating factors for the seam in most of the mine areas. The geological setting of the Wudong Mine is considered complex due to the significant dip of the seams on both sides of the major syncline, which divides the mine into two sub-areas.

Regional Geology

The Zhunnan Coalfield is tectonically located on the southern margin of the Junggar Block, within the mid-eastern part of the North Tianshan Foreland Depression. It is bounded to the north by the Central Uplift of the Junggar Basin and to the south by the North Tianshan Orogenic Belt, forming a typical foreland basin coal-accumulating unit. The basin initiated from the Permian to Triassic, entered a major coal-forming period during the Jurassic, and experienced intense tectonic compression and modification from the Cretaceous to the Cenozoic. During the Himalayan Orogeny, the collision between the Indian and Eurasian plates caused the North Tianshan to thrust strongly over the Junggar Basin. This formed the present structural pattern -steep in the south and gentle in the north - and led to deep burial and complex deformation of the coal measures.

Structure

The formation of the Zhunnan Coalfield is primarily controlled by the North Tianshan Fault Zone and its associated foreland thrust-nappe system. The coalfield's structure is dominated by thrust faults, accompanied by associated strike-slip and normal faults. Folds are commonly linked to the thrusts, forming a thrust-fold belt. Fold axial traces generally trend NWW, consistent with the regional structural grain.

Based on structural complexity, the Zhunnan coalfield can be divided into three zones:

- Southern Foreland Strong Deformation Zone: adjacent to the North Tianshan, this zone is extremely complex, featuring dense faulting, steep dips (often >60 degrees), and intensely crumpled coal seams or tectonic coal.
- Central Thrust-Fold Zone: moderately complex, characterized by broad anticlines/synclines and thrust faults. This is the main area for current coal mining.
- Northern Monocline Zone: structurally simple, with gentle strata dips and stable coal seams.

The Tunbao Mining Right and the Liuhuanggou Exploration Right are adjacent to each other, featuring a northwest-dipping monocline with a dip angle of approximately 18 degrees. The Wudong Mine is divided into northern and southern sections by the NE-SW trending Badaowan Syncline, with the southern limb dipping at 83 to 89 degrees and the northern limb dipping at 43 to 51 degrees.

Stratigraphy

The coalfield's stratigraphic sequence, from oldest to youngest, includes the Permian, Triassic, Jurassic, Cretaceous, and Quaternary systems. The primary coal-bearing strata are the Lower Jurassic Badaowan Formation and the Middle Jurassic Xishanyao Formation. The Xishanyao Formation serves as the principal coal-bearing unit, typically containing thick coal seams. These seams are predominantly medium to thick and range from simple to complex in structure, commonly incorporating multiple partings.

Coal Seams

Due to the structural variations as described in the previous structural section, many of the coal seams present in the Wudong Mine do not extend into the Tunbao and Liuhuanggou No. 4 mining areas. As a result, the Wudong Mine contains significantly more coal seams than the latter. The following tables show the detailed characteristics of each seam at each subject property:

Table 3-55 Coal Seams of Mining/Exploration Rights Areas in Zhunnan Coalfield

		Thickness (m)			Distance from the	Seam Depth	Seam	Seam
Mine	Seam	Coal	Parting	Seam	Upper Seam (m)	Range (m)	Dip (deg.)	Occurrence

Data Defining Coal Occurrence and Quality

To ensure the completeness and reliability of the data used for resources and reserves

estimates, we have been provided with all the relevant historical versions of the geological reports for the subject mines, as follows:

- Tunbao Mine:
  - = Reserves Verification Report for the Changjitunbao Mine, May 2022
  - = 2024 Annual Reserves Verification Report for the Tunbao Mine
  - = Production Geology and Geological Classification Report, October 2024
- Wudong Mine:
  - = Production Geology Report for the Xiaohonggou Mine, October 2005 (part of Wudong Mine)
  - = Reserves Verification Report for the Tiechanggou Mine, November 2005 (part of Wudong Mine)
  - = Exploration Geological Report for the Tiechanggou Mine, February 2006 (part of Wudong Mine)
  - = Production Geology Exploration Report for the Jiangou Mine, July 2005 (part of Wudong Mine)
  - = Reserves Verification Report for the Wudong No.4 Mine, December 2007
  - = Reserves Splitting Report for the Wudong Mine, May 2011
  - = Wudong Mine Construction Geological Report, May 2018
  - = Production Geology Report for the Wudong Mine, February 2022
  - = Annual Reserves Verification Reports for the Wudong Mine for Years 2013 to 2024
- Liuhuanggou No.4 Exploration Right:
  - = Exploration Report for the Liuhuanggou No.4 Mine, 2009

We have compared the different versions of the geological reports provided to ensure our data remains current and valid. The following table summarizes the available exploration data for each mining/exploration right area:

Mining/Exploration Right Area	Area (km^2)	No. of Drill Holes
Mining Rights		
Tunbao	6.14	88
Wudong	19.94	1,012
Exploration Rights		
Liuhuanggou No.4	15.66	28

Resource/Reserve Classification

Based on our detailed review of the geologic setting of each seam at each mine, we judge the geologic setting of coal seams vary between moderate to complex and have assigned the following drill hole spacing criteria for classification of estimated resources:

Mining/Exploration Rights	Seam	Geologic Setting	Measured (m)	Indicated (m)	Inferred (m)
Tunbao	All Seams	Moderate	500	1,000	<2,000
Wudong	All Seams	Complex	400	800	<1,600
Liuhuanggou No.4	All Seams	Moderate	500	1,000	<2,000

Resource and reserve classification of each coal seam are shown on the resource/reserve maps included in Appendix A.

The JORC Code requires that all reports include comment on items listed in Table 1 of the Code. Appendix B, '*Table 1 – Zhunnan Coalfield',* shows the items listed for each mining/exploration right in the Zhunnan Coalfield, along with our comments on the table.

Resources Estimate

Estimates of in situ coal resources were prepared using computer mapping software (AutoCAD) for all mapped resource areas. The following parameters were used for resources reporting:

Table 3-56 Resources Estimates Parameters – Zhunnan Coalfield

		Max.	S.G.		Thickness (m)	
Mine	Seam	Dip	Coal	Parting	Min. Coal	Max. Parting

	15-2	18	1.34	2.1	0.8	0.8

The resources areas of mining rights are delineated by the authorized mine boundary, with vertical mining elevation limits of each mine. While the resources areas of exploration rights are only delineated by the property boundary since there are no elevation limits for exploration rights. Our resources tonnage estimates (on a 100% ownership basis) for Tunbao and Wudong mining rights and Liuhuanggou No.4 Exploration right, as of 31 July 2025, are as follows:

Table 3-57 Coal Resources Estimates – Zhunnan Coalfield

Note: 1. Figures may not add due to rounding
2. The reported coal resources are inclusive of the coal reserves.

In-Situ Coal Quality

Since all drill holes are continuously cored, there are quality data for all holes that intersect one or more coal seams which meet the Chinese minimum thickness and core recovery requirements. As shown in the above tables, coal quality is well defined.

The quality data shown in the above tables indicates that all coal seams in Zhunnan Coalfield contain medium to high ash, medium sulfur high-rank bituminous coal. According to China's coal exploration standards, in-situ coal samples typically do not contain visible partings. However, in actual production, ROM coal will include unavoidable in-seam partings and OSD. Consequently, the actual quality of the ROM coal will be inferior to the quality indicated in the table.

Reserves Estimate

Reserve estimation was conducted exclusively for mining rights. Reserves are presented on a ROM or recoverable basis, and on a marketable basis. Recoverable Reserves represent the seam tonnage to be recovered by the corresponding mine plan, including the coal seam and OSD (roof and floor rock recovered with the coal seam during the normal mining process), and moisture gained during underground mining. Marketable Reserves represent the salable tonnage and include allowances for losses during coal handling and processing. The following parameters were used for reserves reporting for the Tunbao and Wudong mines:

Table 3-58 Reserves Estimates Parameters – Zhunnan Coalfield

			Recoverable Reserves									
			Shearer (m)		Shield (m)		SC			Plan	Moist.	Product
		Mining		max.	Cap. Range		Cut	Caving	OSD	Rec.	Gain	Yield
Mine	Seam	Method	Dia	thk	min.	max.	Thk	%	(m)	%	%	%
Tunbao	5	SC	1.8	3.2	2.0	3.5	3.5	80.0	0.20	85	2	80
	9	SC	1.8	3.2	2.0	3.5	3.5	80.0	0.10	85	2	81

	B5-6	SC	2.3	4.0	2.2	4.2	3.0	80	0.20	85	2	81
Wudong	B1-2	SC	2.3	4.0	2.2	4.2	3.0	80	0.20	85	2	88
(South)	B3-6	SC	2.3	4.0	2.2	4.2	3.0	80	0.20	85	2	92
	B21-29	SC	2.3	4.0	2.2	4.2	3.0	80	0.20	85	2	93

Note: Seams without parameters indicate thin thickness, for which only resources have been estimated.

The determination of these parameters integrated our communication with the mine's technical personnel and our extensive experience in Chinese underground coal mining. ROM coal from Tunbao Mine is processed by Telligent Dry Separator (TDS) system, followed by HMV system. ROM coal from Wudong is processed TDS only. The product yields of saleable coal accounts for the removal of in-seam partings and OSD during screening, along with routine coal handling losses.

We have reviewed the historical operations for both mines, and we believe that they will be capable of maintaining stable outputs at the same level as in history. Based on

the mines' historical performance and communication with the mines' technical personnel, we have developed a LOM plan for each of the two mining rights to confirm the technical feasibility of the recoverable reserves. The LOM plans are presented in the accompanying DCF table following Chapter 8.

The CP completed an economic analysis for each of the mines to determine if the projected mine operations are economically viable (see Chapter 8), as of 31 July 2025. This analysis concludes that the identified reserves at the subject mines have reasonable expectations to be economically mineable. Our reserves tonnage estimates (on a 100% ownership basis) for Tunbao and Wudong mines, as of 31 July 2025, are as follows:

Table 3-59 Coal Reserves Estimates – Tunbao Mine and Wudong Mine

Product Coal Quality

Due to the unavailability of industrial analysis data for partings and OSD, it is not feasible to predict future coal quality. However, based on the historically stable quality of the saleable coal, we anticipate that future product quality will remain consistent with past performance, as detailed in the table below:

Typical Product Coal Quality				
	%			kcal/kg
Mine	Ash (Ad)	Moisture (Mt)	Sulfur (St,d)	CV (Qnet.ar)
Tunbao	23.5	11.6	0.01	4,940
Wudong	26.5	7.8	0.74	5,160

Figures listed at the end of this chapter and contained in Appendix A show the structure,

cross-sections and resource/reserve areas for the individual coal seams.

3.12 Inner Mongolia Construction Investment Mining Right

Inner Mongolia Construction Investment only holds the Chahasu mining right which is located in Ordos City of central Inner Mongolia Autonomous Region.

The Chahasu Mine is situated in the eastern part of Dongsheng Coalfield, which is formed in the Jurassic Period. On a global basis, the geologic settings, or nature, of the Chahasu Mine is judged to vary from simple to moderate. While the strata are flat-lying, sand erosion and coal seam thinning are complicating factors in some mine areas.

Structure

The Dongsheng Coalfield is an intracontinental coal-accumulating basin, which located in the northern sector of the Dongsheng–Jingbian Monocline, within the Yishan Monocline Zone of the Ordos Basin. The Ordos Basin forms a broad, gently sloping asymmetrical syncline characterized by a wide, gently dipping eastern limb and a comparatively steeper western limb. Structural complexity is largely confined to the margins of the basin, while the interior remains tectonically simple.

Stratigraphy

The basement of the Dongsheng coal-bearing basin is composed of the Upper Triassic Yanchang Formation. Successively overlying the basement, in ascending order, are Jurassic, Cretaceous, Neogene Pliocene, and Quaternary strata.

The coal-bearing strata belong to the Jurassic system and include, from bottom to top, the Lower–Middle Jurassic Fuxian Formation, Yan'an Formation, and Middle Jurassic Zhiluo Formation, the Yan'an Formation serves as the primary coal-bearing unit. The Jurassic System exhibits a parallel unconformity with the underlying Triassic strata.

Coal Seams

The Yan'an Formation hosts 21 coal seams, with reserves quantified for 8 key layers. Seams 3-1 and 5-2U are the principal minable seams, demonstrating high stability and

economic significance. The following tables show the detailed characteristics of each seam in the Chahasu Mining Right:

Table 3-60 Coal Seams of Chahasu Mine in Dongsheng Coalfield

Mine	Seam	Thickness (m) Coal	Parting	Seam	Distance from the Upper Seam (m)	Seam Depth Range (m)	Seam Dip (deg.)	Seam Occurrence
Chahasu	2-2U	2.2	0.01	2.2	-	221 - 449	2-NW	Moderate
	3-1	4.0	0.21	4.2	39	258 - 485	2-NW	Moderate
	4-1	1.7	0.11	1.8	20	288 - 513	2-NW	Moderate

	6-2U	3.7	0.15	3.9	22	361 - 592	2-NW	Eratic
	6-2M	1.4	0.07	1.5	5	364 - 543	2-NW	Uniform

Data Defining Coal Occurrence and Quality

For the purpose of resources and reserves estimates, Chahasu Mine provided us with the following geological report for our review:

= Reserves Verification Report for the Chahasu Mine, 2024

We have reviewed the report to ensure our data remains current and valid. The Chahasu Mine has completed a total of 214 drill holes, all of which have been used for our estimates

Resource/Reserve Classification

Based on our detailed review of the geologic setting of each seam at Chahasu Mine, we judge the overall geologic setting to be moderate and have assigned the following drill hole spacing criteria for classification of estimated resources:

Mine	Seam	Geologic Setting	Measured (m)	Indicated (m)	Inferred (m)
Chahasu	All Seams	Moderate	500	1,000	<2,000

Resource and reserve classification of each coal seam are shown on the resource/reserve maps included in Appendix A.

The JORC Code requires that all reports include comment on items listed in Table 1 of the Code. Appendix B, '*Table 1 –Dongsheng Coalfield',* shows the items listed for the Chahasu Mine, along with our comments on the table.

Resources Estimate

Estimates of in situ coal resources were prepared using computer mapping software

(AutoCAD) for all mapped resource areas. The following parameters were used for resources reporting:

Table 3-61 Resources Estimates Parameters – Chahasu Mine

		Max.	S.G.		Thickness (m)	
Mine	Seam	Dip	Coal	Parting	Min. Coal	Max. Parting
Chahasu	2-2U	2	1.29	2.1	0.8	0.8
	3-1	2	1.31	2.1	0.8	0.8
	4-1	2	1.30	2.1	0.8	0.8
	5-1	2	1.31	2.1	0.8	0.8
	5-2	2	1.30	2.1	0.8	0.8
	6-1M	2	1.31	2.1	0.8	0.8
	6-2U	2	1.31	2.1	0.8	0.8
	6-2M	2	1.29	2.1	0.8	0.8

The resources areas of the mine are delineated by the authorized mine boundary, with vertical mining elevation limits between +740m to +1,040 m. Our resources tonnage estimates (on a 100% ownership basis) for the Chahasu Mine, as of 31 July 2025, are as follows:

Table 3-62 Coal Resources Estimates – Chahasu Mine

Total				649.04	285.03	158.71	1,092.78	100					

Note: 1. Figures may not add due to rounding
2. The reported coal resources are inclusive of the coal reserves.

In-Situ Coal Quality

Since all drill holes are continuously cored, there are quality data for all holes that intersect one or more coal seams which meet the Chinese minimum thickness and core recovery requirements. As shown in the above tables, coal quality is well defined.

The quality data shown in the above tables indicate that all coal seams in Dongsheng Coalfield contain low ash, low to extra-low sulfur, high heating value low-rank bituminous coal (long-flame and non-caking coal). According to China's coal exploration standards, in-situ coal samples typically do not contain visible partings. However, in actual production, ROM coal will include unavoidable in-seam partings and OSD. Consequently, the actual quality of the ROM coal will be inferior to the quality indicated in the table.

Reserves Estimate

Reserves are presented on a ROM or recoverable basis, and on a marketable basis.

Recoverable Reserves represent the seam tonnage to be recovered by the corresponding mine plan, including the coal seam and OSD (roof and floor rock recovered with the coal seam during the normal mining process), and moisture gained during underground mining. Marketable Reserves represent the salable tonnage and include allowances for losses during coal handling and processing. The following parameters were used for reserves reporting for the Chahasu Mine:

Table 3-63 Reserves Estimates Parameters – Chahasu Mine

			Recoverable Reserves

		FM	3.2	6.3	3.0	6.3	-	-				
	6-2M	FM	1.1	2.2	1.2	2.2	-	-	0.05	85	2	89

Note: 1. Seams without parameters indicate thin thickness, for which only resources have been estimated.

The determination of these parameters integrated our communication with the mine's technical personnel and our extensive experience in Chinese underground mining. ROM coal from the Chahasu Mine is processed by a Heavy Media Vessel (HMV) system to produce fine coal products, and by a Telligent Dry Separator (TDS) system to produce coarse product. The product yields of saleable coal accounts for the removal of in-seam partings and OSD, and moisture gain during screening and washing, along with routine coal handling losses.

We have reviewed the historical operation data, and we believe that Chahasu Mine will be capable of maintaining its authorized output of 8 Mtpa in the future. Based on the mines' historical performance and communication with the mines' technical personnel, we have developed a LOM plan for Chahasu Mine to confirm the technical feasibility of the recoverable reserves.

The CP completed an economic analysis for the mine to determine if the projected mine operation is economically viable (see Chapter 8), as of 31 July 2025. This analysis concludes that the identified reserves at Chahasu Mine have reasonable

expectations to be economically mineable. Our reserves tonnage estimates (on a 100% ownership basis) for the Chahasu Mine, as of 31 July 2025, are as follows:

Table 3-64 Coal Reserves Estimates – Chahasu Mine

Product Coal Quality

Due to the unavailability of industrial analysis data for partings and OSD, it is not feasible to predict future coal quality. However, based on the historically stable quality of the saleable coal, we anticipate that future product quality will remain consistent with past performance, as detailed in the table below:

Typical Product Coal Quality				
	%			kcal/kg
Mine	Ash (Ad)	Moisture (Mt)	Sulfur (St,d)	CV (Qnet.ar)
Chahasu	7.1	15.2	0.39	5,830

Figures listed at the end of this chapter and contained in Appendix A show the structure, cross-sections and resource/reserve areas for the individual coal seams.

3.13 Pingzhuang Coal Mining /Exploration Rights

Pingzhuang Coal holds five mining rights and five exploration rights (as shown in the following table) which are located in various location across Inner Mongolia Autonomous Region and Xinjiang Autonomous Region.

Table 3-65 Coalfields and Coal Bearing Strata – Pingzhuang Coal

Mining/Exploration Right	Coalfield	Age of Coal Bearing Strata	Coal Bearing Formation
Inner Mongolia Pingzhuang Coal (Group) Co., Ltd.			
Mining Rights			
Baiyinhua No.1 Open-pit	Baiyinhua	Cretaceous	Damoguaihe
Boligou	Zhunge'er	Carboniferous and Permian	Shanxi and Taiyuan
Hesigewula South Open-pit	Hesigewula	Cretaceous	Damoguaihe
Yuanbaoshan Open-pit	Yuanbaoshan	Cretaceous	Fuxin
Exploration Rights			
Heidaigou	Jungar	Carboniferous and Permian	Shanxi and Taiyuan
Jinsanjiao East	Nileke	Jurassic	Xishanyao and Badaowan
Jirentai Youyan West	Nileke	Jurassic	Xishanyao and Badaowan
Jirentai West	Nileke	Jurassic	Xishanyao and Badaowan

As shown in the above table, the subject Pingzhuang Coal mines are located in six different coal fields formed in various geological periods.

3.13.1 Baiyinhua Coalfield

The Baiyinhua No.1 Open-pit is the only one of the subject mines located in the Baiyinhua Coalfield, which is formed in the Cretaceous Period. On a global basis, the geologic settings, or nature, of the Baiyinhua No.1 Open-pit is judged to be moderate. While the strata are flat-lying, complex structure containing multiple partings of the coal seams is a complicating factor for the seam in most of the mine areas.

Regional Geology

The Baiyinhua Coalfield occupies the northeastern segment of the Wunit Faulted Depression at the eastern termination of the Erlian Basin. The coalfield constitutes a classic graben-style rift basin system. The NE-trending Wunit Faulted Depression extends approximately 326 km in length and 9 to16 km in width. It is bounded to the north by the Chagan Aobao–Arongqi Deep Fault Zone, to the south by the Xilaimiao–Daqing Pasture Major Fault, to the west by the Sonid Uplift, and to the east by the Greater Khingan Range Uplift Belt.

Structure

The Baiyinhua No.1 Open-pit is located in the southwestern part of the Baiyinhua Coalfield. The mine area is characterized by a NE-trending, WS-plunging asymmetrical syncline, measuring approximately 4.65 km in axial length and 4.3 km in width. The northwestern limb of the syncline exhibits gentler dips of around 5 degrees, while the southeastern limb is slightly steeper, with dips ranging from 5 to 9 degrees. Local undulations are present along both limbs. A limited number of small-scale normal faults, all striking NW–SE with displacements under 20 m, are developed within the mine area.

No magmatic intrusions have been identified within the coal-bearing strata.

Stratigraphy

The stratigraphic column within the mine area comprises, in ascending order, the Lower Cretaceous Damoguaihe Formation, Neogene Pliocene series, and Quaternary deposits. The characteristics are as follows:

- Damoguaihe Formation: Averaging 261.17 m in thickness, this unit consists predominantly of dark gray mudstone and lignite, interbedded with fine-grained sandstone and pebbly coarse-grained sandstone.
- Neogene: With an average thickness of 11.23 m, this succession is composed of semi-consolidated mudstone and sandy conglomerate.
- Quaternary: Averaging 11.18 m thick, these are unconsolidated sediments dominated by sandy soil and loam.

The Damoguaihe Formation represents the sole coal-bearing unit, hosting three coal seam groups.

Coal Seams

The Damoguaihe Formation hosts 13 coal seams, with reserves quantified for 11 key layers. Seams 1, 2 and 3-1 constitute the principal minable seams, demonstrating high stability and economic significance. The following tables show the detailed characteristics of each seam:

Table 3-66 Coal Seams of Mining Rights in Baiyinhua Coalfield

		Thickness (m)			Distance from the	Seam Depth	Seam	Seam
Mine	Seam	Coal	Parting	Seam	Upper Seam (m)	Range (m)	Dip (deg.)	Occurrence
Baiyinhua	1-1	2.1	0.40	2.5	-	10 - 180	4-NW, 7-SE	Eratic
No.1	1	5.1	0.85	5.9	25	0 - 190	4-NW, 7-SE	Moderate
Open-pit	2U	2.2	4.92	7.1	45	30 - 240	4-NW, 7-SE	Eratic
	2	14.9	2.05	16.9	35	0 - 270	4-NW, 7-SE	Uniform
	2L	1.2	1.90	3.1	5	10 - 250	4-NW, 7-SE	Eratic
	3-1-1	6.5	0.66	7.2	60	30 - 330	4-NW, 7-SE	Moderate
	3-1-2	1.9	0.56	2.4	20	60 - 330	4-NW, 7-SE	Eratic
	3-1	14.4	2.37	16.8	70	60 - 390	4-NW, 7-SE	Eratic
	3-1L	1.6	6.09	7.7	10	90 - 390	4-NW, 7-SE	Eratic
	3-2U	1.6	2.35	4.0	20	140 - 390	4-NW, 7-SE	Eratic
	3-2	6.7	1.32	8.0	20	110 - 400	4-NW, 7-SE	Eratic

Data Defining Coal Occurrence and Quality

To ensure the completeness and reliability of the data used for resources and reserves estimates, we have been provided with all the relevant historical versions of the geological reports for the subject mines, as follows:

= Exploration Report for the Baiyinhua No.1 Open-pit Mine, October 2004
= Supplementary Exploration Report for the Baiyinhua No.1 Open-pit Mine, August 2008
= Supplementary Exploration Report for the Baiyinhua No.1 Open-pit Mine, August 2024

We have reviewed the different versions of the geological reports provided to ensure our data remains current and valid. The Baiyinhua No.1 Open-pit has completed a total of 166 drill holes, all of which have been used for our estimates.

Resource/Reserve Classification

Based on our detailed review of the geologic setting of each seam at Baiyinhua No.1 Open-pit, we judge the overall geologic setting to be moderate and have assigned the following drill hole spacing criteria for classification of estimated resources:

Mining/Exploration Rights	Seam	Geologic Setting	Measured (m)	Indicated (m)	Inferred (m)
Baiyinhua No.1 Open-pit	All Seams	Moderate	500	1,000	<2,000

Resource and reserve classification of each coal seam are shown on the resource/reserve maps included in Appendix A.

The JORC Code requires that all reports include comment on items listed in Table 1 of the Code. Appendix B, '*Table 1 –Baiyinhua Coalfield',* shows the items listed for the Baiyinhua No.1 Open-pit, along with our comments on the table.

Resources Estimate

Estimates of in situ coal resources were prepared using Carlson SurvCADD for the Baiyinhua No.1 Open-pit. The following parameters were used for resources reporting:

Table 3-67 Resources Estimates Parameters – Baiyinhua Coalfield

			S.G.		Thickness (m)	
Mining/Exploration Right	Seam	Dip	Coal	Parting	Min. Coal	Max. Parting
Baiyinhua	1-1	4, 7	1.32	2.1	0.5	0.5
No.1	1	4, 7	1.35	2.1	0.5	0.5
Open-pit	2U	4, 7	1.33	2.1	0.5	0.5
	2	4, 7	1.33	2.1	0.5	0.5
	2L	4, 7	1.33	2.1	0.5	0.5
	3-1-1	4, 7	1.34	2.1	0.5	0.5
	3-1-2	4, 7	1.34	2.1	0.5	0.5
	3-1	4, 7	1.34	2.1	0.5	0.5
	3-1L	4, 7	1.34	2.1	0.5	0.5
	3-2U	4, 7	1.33	2.1	0.5	0.5
	3-2	4, 7	1.33	2.1	0.5	0.5

The resources area is delineated by the authorized mine boundary, with vertical mining elevation limits between +650 m to +1050 m. Our resources tonnage estimates (on a

100% ownership basis) for the Baiyinhua No.1 Open-pit, as of 31 July 2025, are as follows:

Table 3-68 Coal Resources Estimates – Baiyinhua Coalfield

	Average Thickness (m)			In-Place Resources (Mt)				% of	In-Situ Coal Quality %				CV (net,ad)

Total				675.98	74.07	0.26	750.31	100					

Note: 1. Figures may not add due to rounding
2. The reported coal resources are inclusive of the coal reserves.

In-Situ Coal Quality

Since all drill holes are continuously cored, there are quality data for all holes that intersect one or more coal seams which meet the Chinese minimum thickness and core recovery requirements. As shown in the above tables, coal quality is well defined.

The quality data shown in the above tables indicate that all coal seams in Baiyinhua Coalfield contain medium to high ash, low sulfur lignite. According to China's coal exploration standards, in-situ coal samples typically do not contain visible partings. However, in actual production, ROM coal will include unavoidable in-seam partings and OSD. Consequently, the actual quality of the ROM coal will be inferior to the quality indicated in the table.

Reserves Estimate

Reserves are presented on a ROM or recoverable basis, and on a marketable basis. Recoverable Reserves represent the seam tonnage to be recovered by the corresponding mine plan, including the coal seam and OSD (roof and floor rock recovered with the coal seam during the normal mining process). Marketable Reserves represent the salable tonnage and include allowances for losses during coal handling and processing. The following parameters were used for reserves reporting:

- Minimum coal thickness: 0.5 m
- Maximum parting thickness: 0.5 m
- Coal seam recovery: 98%
- OSD rate: 3%
- Product Yield: 95%

The determination of these parameters integrated our communication with the mine's technical personnel and our extensive experience in Chinese open-pit coal mining. ROM coal from Baiyinhua No.1 operation is processed by Telligent Dry Separator (TDS)

system and crushing system. The 95% yield of saleable coal accounts for routine coal handling losses.

We have reviewed the mine's historical operations, and we believe that Baiyinhua No.1 will be capable of maintaining its authorized output of 12 Mtpa. Based on the mine's historical performance and communication with the mine's technical personnel, we have developed a LOM plan to confirm the technical feasibility of the recoverable reserves. The LOM plans are presented in the accompanying DCF table following Chapter 8.

According to the Life of Mine (LOM) plan, the Baiyinhua No.1 Open-pit has an overall stripping ratio of 5.41 m³/t. The detailed annual stripping ratios for the 20-year period are presented below:

Year	Aug. - Dec. 2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044
ROM Product (Mt)	6.22	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00
Stripping Ratio (m^3/t)	4.60	4.60	4.60	4.60	4.60	4.60	4.77	4.90	5.00	5.08	5.15	5.20	5.25	5.29	5.32	5.35	5.38	5.40	5.40	5.40

The CP completed an economic analysis for the mine to determine if the projected mine operation is economically viable (see Chapter 8), as of 31 July 2025. This analysis concludes that the identified reserves at Baiyinhua No.1 Open-pit have reasonable expectations to be economically mineable. Our reserves tonnage estimates (on a 100% ownership basis) for the Baiyinhua No.1 Open-pit, as of 31 July 2025, are as follows:

Table 3-69 Coal Reserves Estimates – Baiyinhua No.1 Open-pit

	Recoverable Reserves (Mt)			Processing	Marketable Reserves (Mt)			% of
Seam	Proved	Probable	Total	Yield %	Proved	Probable	Total	Reserves

Note: Figures may not add due to rounding

Product Coal Quality

Due to the unavailability of industrial analysis data for partings and OSD, it is not feasible to predict future coal quality. However, based on the historically stable quality of the saleable coal, we anticipate that future product quality will remain consistent with past performance, as detailed in the table below:

Typical Product Coal Quality

	%			kcal/kg
Mine	Ash (Ad)	Moisture (Mt)	Sulfur (St,d)	CV (Qnet.ar)
Baiyinhua No.1 Open-pit	25.8	30.4	0.67	3,260

Figures listed at the end of this chapter and contained in Appendix A show the structure, cross-sections and resource/reserve areas for the individual coal seams.

3.13.2 Hesigewula Coalfield

The Hesigewula South Open-pit is the only one of the subject mines located in the Hesigewula Coalfield, which was formed in the Cretaceous Period. On a global basis, the geologic settings, or nature, of the Hesigewula South Open-pit is judged to be moderate. While the strata are flat-lying, complex structure containing multiple partings of the coal seams is a complicating factor for the seam in most of the mine areas.

Regional Geology

The Hesigewula Coalfield is situated within the Hesigewula Pasture Coal Basin, a fault-depression basin with a distinct NE-trending, S-shaped elongated planform. The basin is tectonically affiliated with the Siberian Plate, specifically the Southeast Siberian Continental Margin Accretionary Belt and the Dong Ujimqin–Zhalantun Volcanic Passive Continental Margin. The basin is primarily controlled by NNE-trending structures. Its western, northern, and southern margins are defined by erosional boundaries, while the eastern margin is bounded by the F1 Fault.

Structure

The Hesigewula South Open-pit Mining Area is located in the southern part of the Hesigewula Coalfield. The area is characterized by a broad, gentle syncline with an axial orientation of NE and a slightly eastern-offset axis. Both limbs of the syncline generally dip at approximately 10°. Fault development within the mining area is limited. Only two oblique-slip normal faults, designated F5 and F6, have been identified. No intrusive igneous rocks have been observed in the area.

Stratigraphy

The mining area exposes, in ascending order, the following principal stratigraphic units:

- Upper Jurassic Manketou'ebo Formation

- Upper Jurassic Baiyingaolao Formation
- Lower Cretaceous Damoguaihe Formation
- Quaternary System

The Lower Cretaceous Damoguaihe Formation serves as the exclusive coal-bearing unit in the area. It maintains unconformable contact with the underlying Baiyingaolao Formation.

Coal Seams

The Damoguiaihe Formation hosts 19 coal seams, with 14 minable seams. Currently, Seam 3-4 and other seams above are being extracted by open-pit methods. The remaining minable seams represent potential targets for future underground mining operations. The following tables show the detailed characteristics of each seam:

Table 3-70 Coal Seams of Mining Rights in Hesigewula Coalfield

Mine	Seam	Thickness (m)			Distance from the Upper Seam (m)	Seam Depth Range (m)	Seam Dip (deg.)	Seam Occurrence
		Coal	Parting	Seam				
Hesigewula	1-1	29.0	4.29	33.3	-	12 - 138	10-NW, SE	Eratic
South	2-1	32.1	1.53	33.6	105	0 - 277	10-NW, SE	Uniform
Open-pit	2-2	5.9	1.83	7.7	40	17 - 336	10-NW, SE	Moderate
	2-3	2.0	1.05	3.1	20	3 - 342	10-NW, SE	Eratic
	3-1	11.4	1.50	12.9	80	6 - 430	10-NW, SE	Uniform
	3-3	2.0	0.48	2.5	15	35 - 436	10-NW, SE	Eratic
	3-4	4.0	0.66	4.6	15	14 - 462	10-NW, SE	Moderate
	3-5	1.7	0.63	2.4	15	26 - 491	10-NW, SE	Moderate
	3-7	1.6	0.43	2.0	15	77 - 507	10-NW, SE	Eratic
	3-8	1.6	0.35	2.0	5	53 - 476	10-NW, SE	Eratic
	4-1	5.9	1.16	7.1	25	37 - 540	10-NW, SE	Moderate
	4-2	2.1	0.6	2.7	20	92 - 546	10-NW, SE	Eratic
	4-6	2.0	0.3	2.3	130	48 - 516	10-NW, SE	Eratic
	4-7	2.0	0.4	2.4	40	90 - 465	10-NW, SE	Eratic

The primary minable coal seams within the designed open-pit limit are the 2-1 and 3-1 seams. The 2-1 seam has an average thickness of 33.6 m and exhibits a relatively simple structure. It is predominantly a single or simple seam, typically containing 0 to 7 partings. The 3-1 Seam averages 12.9 m in thickness but displays a complex internal structure, generally containing 1 to 5 partings.

Data Defining Coal Occurrence and Quality

To ensure the completeness and reliability of the data used for resources and reserves estimates, we have been provided with all the relevant historical versions of the geological reports for the subject mines, as follows:

= Exploration Report for the Hesigewula South Open-pit Mine, 2006
= 2024 Reserves Verification Report for the Hesigewula South Open-pit Mine

We have compared the two reports to ensure our data remains current and valid. Throughout its exploration history, the Hesigewula South Open-pit has completed a total of 390 boreholes, all of which have been incorporated into our geological modeling.

Resource/Reserve Classification

Based on our detailed review of the geologic setting of each seam at Hesigewula South Open-pit, we judge the overall geologic setting to be moderate and have assigned the following drill hole spacing criteria for classification of estimated resources:

Mining/Exploration Rights	Seam	Geologic Setting	Measured (m)	Indicated (m)	Inferred (m)
Hesigewula South Open-pit	All Seams	Moderate	500	1000	<2,000

Resource and reserve classification of each coal seam are shown on the resource/reserve maps included in Appendix A.

The JORC Code requires that all reports include comment on items listed in Table 1 of the Code. Appendix B, '*Table 1 –Hesigewula Coalfield',* shows the items listed for the Hesigewula South Open-pit, along with our comments on the table.

Resources Estimate

Estimates of in situ coal resources were prepared using Carlson SurvCADD for the Hesigewula South Open-pit. The following parameters were used for resources reporting:

Table 3-71 Resources Estimates Parameters – Hesigewula Coalfield

		Max.	S.G.		Thickness (m)	
Mining/Exploration Right	Seam	Dip	Coal	Parting	Min. Coal	Max. Parting
Hesigewula	1-1	10	1.28	2.1	0.5	0.5
South	2-1	10	1.28	2.1	0.5	0.5
Open-pit	2-2	10	1.28	2.1	0.5	0.5
	2-3	10	1.40	2.1	0.5	0.5
	3-1	10	1.32	2.1	0.5	0.5
	3-3	10	1.30	2.1	0.5	0.5
	3-4	10	1.32	2.1	0.5	0.5
	3-5	10	1.32	2.1	0.5	0.5
	3-7	10	1.30	2.1	0.5	0.5
	3-8	10	1.21	2.1	0.5	0.5
	4-1	10	1.34	2.1	0.5	0.5
	4-2	10	1.31	2.1	0.5	0.5
	4-6	10	1.36	2.1	0.5	0.5
	4-7	10	1.32	2.1	0.5	0.5

The resources area is delineated by the authorized mine boundary, with vertical mining elevation limits between +300 m to +925 m. Our resources tonnage estimates

(on a 100% ownership basis) for the Hesigewula South Open-pit, as of 31 July 2025, are as follows:

Table 3-72 Coal Resources Estimates – Hesigewula Coalfield

									In-Situ Coal Quality				
	Average Thickness (m)			In-Place Resources (Mt)				% of	%				CV (b,ad)

Note: 1. Figures may not add due to rounding

2. The reported coal resources are inclusive of the coal reserves.

In-Situ Coal Quality

Since all drill holes are continuously cored, there are quality data for all holes that intersect one or more coal seams which meet the Chinese minimum thickness and core recovery requirements. As shown in the above tables, coal quality is well defined.

The quality data shown in the above tables indicate that all coal seams in Hesigewula Coalfield contain medium to high ash, low sulfur (except for Seam 1-1 that has medium sulfur content) lignite. According to China's coal exploration standards, in-situ coal samples typically do not contain visible partings. However, in actual production, ROM coal will include unavoidable in-seam partings and OSD. Consequently, the actual quality of the ROM coal will be inferior to the quality indicated in the table.

Reserves Estimate

Our reserve estimates do not include the deeper seam below Seam 3-4, as they will potentially be extracted by underground mining in the future. Reserves are presented on a ROM or recoverable basis, and on a marketable basis. Recoverable Reserves represent the seam tonnage to be recovered by the corresponding mine plan, including the coal seam and OSD (roof and floor rock recovered with the coal seam during the normal mining process). Marketable Reserves represent the salable tonnage and include allowances for losses during coal handling and processing. The following parameters were used for reserves reporting:

- Minimum coal thickness: 0.5 m
- Maximum parting thickness: 0.5 m
- Coal seam recovery: 98%
- OSD rate: 3%

- Product Yield: 95%

The determination of these parameters integrated our communication with the mine's technical personnel and our extensive experience in Chinese open-pit coal mining. ROM coal from Hesigewula South operation is directly sold after crushing. The 95% yield of saleable coal accounts for routine coal handling losses.

We have reviewed the mine's historical operations, and we believe that Hesigewula South Open-pit will be capable of maintaining its authorized output of 15 Mtpa. Based on the mine's historical performance and communication with the mine's technical personnel, we have developed a LOM plan to confirm the technical feasibility of the recoverable reserves. The LOM plans are presented in the accompanying DCF table following Chapter 8.

According to the Life of Mine (LOM) plan, the Hesigewula South Open-pit has an overall stripping ratio of 4.09 m³/t. The detailed annual stripping ratios for the 20-year period are presented below:

Year	Aug. - Dec. 2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044
ROM Product (Mt)	6.29	15.00	15.00	15.00	15.00	15.00	15.00	15.00	15.00	15.00	15.00	15.00	15.00	15.00	15.00	15.00	15.00	15.00	15.00	15.00
Stripping Ratio (m^3/t)	3.20	3.80	3.13	2.13	2.13	2.13	2.13	4.80	4.80	4.80	4.80	4.80	4.80	4.80	4.80	4.80	4.80	4.80	4.80	4.80

The CP completed an economic analysis for the mine to determine if the projected mine operation is economically viable (see Chapter 8), as of 31 July 2025. This analysis concludes that the identified reserves at Hesigewula South Open-pit have reasonable expectations to be economically mineable. Our reserves tonnage estimates (on a 100% ownership basis) for the Hesigewula South Open-pit, as of 31 July 2025, are as follows:

Table 3-73 Coal Reserves Estimates – Hesigewula South Open-pit

	Recoverable Reserves (Mt)			Processing	Marketable Reserves (Mt)			% of
Seam	Proved	Probable	Total	Yield %	Proved	Probable	Total	Reserves
Hesigewula South Open-pit								
1-1	3.56	-	3.56	95	3.39	-	3.39	31.7
2-1	232.18	-	232.18	95	220.57	-	220.57	56.2
2-2	87.48	-	87.48	95	83.11	-	83.11	4.9

3-4	60.05	0.35	60.40	95	57.05	0.33	57.38	4.9
Total	554.28	1.74	556.02	95	526.56	1.66	528.22	100

Note: Figures may not add due to rounding

Product Coal Quality

Due to the unavailability of industrial analysis data for partings and OSD, it is not

feasible to predict future coal quality. However, based on the historically stable quality of the saleable coal, we anticipate that future product quality will remain consistent with past performance, as detailed in the table below:

Typical Product Coal Quality				
	%			kcal/kg
Mine	Ash (Ad)	Moisture (Mt)	Sulfur (St,d)	CV (Qnet.ar)
Hesigewula South Open-pit	12.0	39.1	0.51	3,300

Figures listed at the end of this chapter and contained in Appendix A show the structure, cross-sections and resource/reserve areas for the individual coal seams.

3.13.3 Nileke Coalfield

There are three Pingzhuang Coal properties (Jinsanjiao East, Jirentai Youyan West, and Jirentai West), which located in the Nileke Coalfield of the Jurassic Age. On a global basis, the geologic settings, or nature, of Nileke Coalfield is judged to be moderate to complex. While the strata are gently to moderately dipping, seam splitting, sand erosion, folds and occasional faulting are complicating factors for the seam in Nileke Coalfield.

Regional Geology

The Nileke Coalfield is situated within the Nileke Intermontane Depression, located in the eastern segment of the Tianshan Latitudinal Tectonic Belt and represents the eastern extension of the Yili Depression. The Nileke Intermontane Depression is bounded to the north and south by the F5 and F6 reverse faults, forming a rift graben basin.

Structure

The tectonic deformation of the Nileke Intermontane Depression is characterized by broadly E–W trending, gentle folds, such as the Hujiertai Syncline (W1). Associated with intense thrust-nappe activity, Paleozoic strata have been overthrust onto the Jurassic succession. This deformation has generated numerous folds and faults within the coal-bearing sequence, which collectively controls the occurrence and distribution of the coal seams.

The three exploration areas covered by the project are adjacent to each other and situated on the northern limb of the Hujirtai Syncline (W1). The overall structure is characterized by a monocline. The strata generally strike approximately E–W and dip southward. Dip angles vary between 7° and 59°, typically ranging from 7° to 30°, exhibiting a pattern of steeper dips at shallow depths that become gentler with

increasing depth. In the western part of the exploration area, the strata trend shifts toward the southwest, gradually transitioning into the western limb of the syncline. Fault structures are poorly developed within the exploration areas. The dominant structural features are broad, gentle folds.

Stratigraphy

The exploration area exhibits a complete stratigraphic sequence, with the following units exposed in ascending order:

- Lower Carboniferous Dahalajunshan Formation
- Lower Jurassic Badaowan and Sangonghe Formations
- Middle Jurassic Xishanyao Formation
- Paleogene System
- Quaternary System

Coal deposition is recorded in the Lower Jurassic Badaowan Formations and Middle Jurassic Xishanyao Formations, with the Xishanyao Formation representing the principal coal-bearing unit.

Coal Seams

The Xishanyao Formation in the exploration area hosts 19 coal seams, with reserves quantified for 14key layers. Seams 9, 8, 4, 1, 0 constitute the principal minable seams,

demonstrating high stability and economic significance. The following tables show the detailed characteristics of each seam:

Table 3-74 Coal Seams of Exploration Rights in Nileke Coalfield

		Thickness (m)			Distance from the	Seam Depth	Seam	Seam

Data Defining Coal Occurrence and Quality

To ensure the completeness and reliability of the data used for resources and reserves estimates, we have been provided with all the relevant historical versions of the geological reports for the subject exploration rights, as follows:

- Jinsanjiao East:
  - = Exploration Report for the Eastern Part of the Jinsanjiao East Mine, August 2010
- Jirentai Youyan West:
  - = Exploration Report for the Jirentai Western Exploration Area, June 2013
- Jirentai West:
  - = Exploration Report for the Jirentai West Mine, May 2009

We have compared these reports to ensure our data remains current and valid. The following table summarizes the available exploration data for each exploration right area:

Mining/Exploration Right Area	Area (km^2)	No. of Drill Holes
Exploration Rights		
Jinsanjiao East	4.18	15
Jirentai Youyan West	6.09	20
Jirentai West	36.00	80

Resource Classification

Based on our detailed review of the geologic setting of each seam at each exploration right, we judge the overall geologic setting to be moderate to complex and have assigned the following drill hole spacing criteria for classification of estimated resources:

Mining/Exploration Rights	Seam	Geologic Setting	Measured (m)	Indicated (m)	Inferred (m)
Jinsanjiao East	C5	Complex	400	800	<1,600
	Other Seams	Moderate	500	1,000	<2,000
Jirentai Bituminous West	C5	Complex	400	800	<1,600
	Other Seams	Moderate	500	1,000	<2,000
Jirentai West	C5	Complex	400	800	<1,600
	Other Seams	Moderate	500	1,000	<2,000

The JORC Code requires that all reports include comment on items listed in Table 1 of the Code. Appendix B, '*Table 1 – Nileke Coalfield',* shows the items listed for the Nileke Coalfield, along with our comments on the table.

Resources Estimate

Estimates of in situ coal resources were prepared using computer mapping software

(AutoCAD) for all mapped resource areas. The following parameters were used for resources reporting:

Table 3-75 Resources Estimates Parameters – Nileke Coalfield

		Max.	S.G.		Thickness (m)	
Mining/Exploration Right	Seam	Dip	Coal	Parting	Min. Coal	Max. Parting

Note: Figures may not add due to rounding

In-Situ Coal Quality

Since all drill holes are continuously cored, there are quality data for all holes that intersect one or more coal seams which meet the Chinese minimum thickness and core recovery requirements. As shown in the above tables, coal quality is well defined.

The quality data shown in the above tables indicate that all coal seams in Nileke Coalfield contain ultra-low to low ash, ultra-low sulfur low-rank bituminous coal. According to China's coal exploration standards, in-situ coal samples typically do not contain visible partings. However, in actual production, ROM coal will include unavoidable in-seam partings and OSD. Consequently, the actual quality of the ROM coal will be inferior to the quality indicated in the table.

Reserve estimate was conducted exclusively for mining rights and there are no reserves reported for the subject exploration rights in Nileke Coalfield.

Figures listed at the end of this chapter and contained in Appendix A show the structure, cross-sections and resource areas for the individual coal seams.

3.13.4 Yuanbaoshan Coalfield

The Yuanbaoshan Open-pit is the only one of the subject mines located in the Yuanbaoshan Coalfield, which is formed in the Cretaceous Period. On a global basis, the geologic settings, or nature, of the Yuanbaoshan Open-pit is judged to be moderate. While the strata are gently dipping, complex structure containing multiple partings of the coal seams is a complicating factor for the seam in most of the mine areas.

Regional Geology

The Yuanbaoshan Coalfield is situated at the intersection of the Tianshan–Yinshan Latitudinal Tectonic Belt and the NNE-trending Neocathaysian Second Subsidence Zone. The regional structural framework comprises a series of NE–SW trending, echelon-arranged fault-depressed coal-bearing basins.

Structure

The Yuanbaoshan Coalfield exhibits a gently undulating fold structure with an overall NE–SW tectonic trend. The strata predominantly dip SE, with dip angles ranging from 4° to 47° and generally between 8° and 18°.The coalfield is composed of three synclines and two anticlines, which collectively form its gently undulating folded structure. From southwest to northeast, these structures are:

- Laoyao Short-Axis Syncline
- Longtoushan Anticline
- Nanhuang Syncline (central area)
- Wujia Anticline (northeastern area)
- Fengshuigou Short-Axis Syncline (northeastern area)

The Yuanbaoshan Open-pit Mine constitutes part of the Nanhuang Syncline. The syncline axis trends NE 25° and plunges from southwest to northeast with a plunge angle of 3° to 5°. Stratal dips predominantly range from 3° to 14°, generally averaging 8°. Faulting within the mine area is dominated by NE- and NW-trending normal faults, with displacements typically under 30 meters.

Stratigraphy

The Yuanbaoshan Coalfield contains the following stratigraphic sequence in ascending order:

- Archeozoic Presinian System
- Paleozoic Ordovician-Silurian Systems
- Permian System
- Mesozoic Cretaceous System
- Neogene System

- Quaternary System

The Lower Cretaceous Jiufotang Formation and Fuxin Formation constitute the coal-bearing sequences of the Yuanbaoshan Coalfield. The Fuxin Formation serves as the exclusive coal-bearing unit in the Yuanbaoshan Open-pit Mine area.

Coal Seams

The Fuxin Formation hosts 12 coal seams, with reserves quantified for 7 key layers. Currently, only the 7seam and stratigraphically higher seam are being extracted by open-pit methods. The remaining minable seams represent potential targets for future underground mining operations. The following tables show the detailed characteristics of each seam:

Table 3-77 Coal Seams of Mining Right in Yuanbaoshan Coalfield

		Thickness (m)			Distance from the	Seam Depth	Seam	Seam
Mine	Seam	Coal	Parting	Seam	Upper Seam (m)	Range (m)	Dip (deg.)	Occurrence
Yuanbaoshan	4	9.9	1.85	11.8	-	61 - 226	15-SE	Moderate
Open-pit	5	17.1	2.46	19.6	70	19 - 323	15-SE	Moderate
	6	24.1	2.65	26.8	80	24 - 468	15-SE	Moderate
	7	6.1	1.60	7.7	15	44 - 506	15-SE	Moderate

The primary minable coal seams within the designed open-pit limit are the 5 and 6 seams. The 5 seam has an average thickness of 19.6 m and exhibits a relatively simple structure, containing an average of 12 partings. The 6 Seam averages 26.8 m in thickness but displays a complex internal structure, containing 13 partings.

Defining Coal Occurrence and Quality

To ensure the completeness and reliability of the data used for resources and reserves estimates, we have been provided with all the relevant historical versions of the geological reports for the subject mines, as follows:

= Detailed Exploration Report, June 1980
= Production Geology, Hydrogeology and Engineering Geology Handover Report for the Yuanbaoshan Open-pit Mine, August 1997
= Reserves Verification Report, February 2014
= 2024 Reserves Verification Report for the Yuanbaoshan Mine

We have compared the different versions of the provided geological reports to ensure our data remains current and valid. Throughout its exploration history, the Yuanbaoshan Open-pit has completed a total of 312 boreholes, all of which have been incorporated into our geological modeling.

Resource/Reserve Classification

Based on our detailed review of the geologic setting of each seam at Yuanbaoshan

Open-pit, we judge the overall geologic setting to be moderate and have assigned the following drill hole spacing criteria for classification of estimated resources:

Mining/Exploration Rights	Seam	Geologic Setting	Measured (m)	Indicated (m)	Inferred (m)
Yuanbaoshan Open-pit	All seams	Moderate	500	1,000	<2,000

Resource and reserve classification of each coal seam are shown on the resource/reserve maps included in Appendix A.

The JORC Code requires that all reports include comment on items listed in Table 1 of the Code. Appendix B, '*Table 1 –Yuanbaoshan Coalfield',* shows the items listed for the Yuanbaoshan Open-pit, along with our comments on the table.

Resources Estimate

Estimates of in situ coal resources were prepared using Carlson SurvCADD for the Yuanbaoshan Open-pit. The following parameters were used for resources reporting:

Table 3-78 Resources Estimates Parameters – Yuanbaoshan Coalfield

		Max.	S.G.		Thickness (m)	
Mining/Exploration Right	Seam	Dip	Coal	Parting	Min. Coal	Max. Parting
Yuanbaoshan	4	15	1.25	2.10	0.50	0.50
Open-pit	5	15	1.26	2.10	0.50	0.50
	6	15	1.26	2.10	0.50	0.50
	7	15	1.35	2.10	0.50	0.50

The resources area is delineated by the authorized mine boundary, with vertical mining elevation limits between +120 m to +482 m. Our resources tonnage estimates (on a 100% ownership basis) for the Yuanbaoshan Open-pit, as of 31 July 2025, are as follows:

Table 3-79 Coal Resources Estimates – Yuanbaoshan Coalfield

									In-Situ Coal Quality				
	Average Thickness (m)			In-Place Resources (Mt)				% of	%				CV (net,ad)
Seam	Coal	Parting	Seam	Measured	Indicated	Inferred	Total	Resouces	Moist. (ad)	Ash (d)	St (d)	Vol (daf)	kcal/kg
						Mining Right							
						Yuanbaoshan Open-pit							
4	9.93	1.85	11.78	13.72	5.01	7.18	25.91	8.6	16.3	11.6	0.94	47.7	6,010
5	17.14	2.46	19.60	49.05	17.11	30.80	96.96	32.2	16.2	12.7	1.05	43.5	5,860
6	24.14	2.65	26.79	119.86	19.96	28.99	168.81	56.1	14.4	13.3	1.78	43.0	5,990
7	6.06	1.60	7.66	8.94	0.25	0.04	9.23	3.1	13.1	17.5	1.31	42.2	5,730
Total				191.57	42.33	67.01	300.91	100					

Note: 1. Figures may not add due to rounding
2. The reported coal resources are inclusive of the coal reserves.

In-Situ Coal Quality

Since all drill holes are continuously cored, there are quality data for all holes that intersect one or more coal seams which meet the Chinese minimum thickness and core recovery requirements. As shown in the above tables, coal quality is well defined.

The quality data shown in the above tables indicate that all coal seams in Yuanbaoshan Coalfield contain low ash, low to medium heating lignite coal. According to China's coal exploration standards, in-situ coal samples typically do not contain visible partings. However, in actual production, ROM coal will include unavoidable in-seam partings and OSD. Consequently, the actual quality of the ROM coal will be inferior to the quality indicated in the table.

Reserves Estimate

Reserves are presented on a ROM or recoverable basis, and on a marketable basis. Recoverable Reserves represent the seam tonnage to be recovered by the corresponding mine plan, including the coal seam and OSD (roof and floor rock recovered with the coal seam during the normal mining process). Marketable Reserves represent the salable tonnage and include allowances for losses during coal handling and processing. The following parameters were used for reserves reporting:

- Minimum coal thickness: 0.5 m
- Maximum parting thickness: 0.5 m
- Coal seam recovery: 98%
- OSD rate: 3%
- Product Yield: 95%

The determination of these parameters integrated our communication with the mine's technical personnel and our extensive experience in Chinese open-pit coal mining. ROM coal from Yuanbaoshan operation is directly sold after crushing and screening. The 95% yield of saleable coal accounts for routine coal handling losses.

We have reviewed the mine's historical operations, and we believe that Yuanbaoshan will be capable of maintaining its authorized output of 12 Mtpa. Based on the mine's historical performance and communication with the mine's technical personnel, we have developed a LOM plan to confirm the technical feasibility of the recoverable reserves. Based on the LOM plan the overall stripping ratio of the Yuanbaoshan Open-pit is 4.49 m^3/t. It is our opinion that the reserves will be depleted by 2037. The LOM details are shown as below:

Year	Aug. - Dec. 2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037
ROM Product (Mt)	4.32	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00	12.00	5.42
Stripping Ratio (m^3/t)	6.25	6.17	6.17	6.17	6.17	6.17	6.17	6.17	4.33	4.33	4.33	4.33	2.00

The CP completed an economic analysis for the mine to determine if the projected mine operation is economically viable (see Chapter 8), as of 31 July 2025. This analysis concludes that the identified reserves at Yuanbaoshan Open-pit have reasonable expectations to be economically mineable. Our reserves tonnage

estimates (on a 100% ownership basis) for the Yuanbaoshan Open-pit, as of 31 July 2025, are as follows:

Table 3-80 Coal Reserves Estimates – Yuanbaoshan Open-pit

Seam	Recoverable Reserves (Mt) Proved	Probable	Total	Processing Yield %	Marketable Reserves (Mt) Proved	Probable	Total	% of Reserves
Yuanbaoshan Open-pit								
4	6.17	0.64	6.81	95	5.86	0.61	6.47	4.6
5	34.60	6.55	41.15	95	32.87	6.22	39.09	27.6
6	95.35	5.89	101.24	95	90.58	5.60	96.18	67.9
7	-	-	-	-	-	-	-	-
Total	136.12	13.08	149.20	95	129.31	12.43	141.74	100

Note: Figures may not add due to rounding

Product Coal Quality

Due to the unavailability of industrial analysis data for partings and OSD, it is not feasible to predict future coal quality. However, based on the historically stable quality of the saleable coal, we anticipate that future product quality will remain consistent with past performance, as detailed in the table below:

Typical Product Coal Quality				
	%			kcal/kg
Mine	Ash (Ad)	Moisture (Mt)	Sulfur (St,d)	CV (Qnet.ar)
Yuanbaoshan Open-pit	30.2	25.6	1.47	3,480

Figures listed at the end of this chapter and contained in Appendix A show the structure, cross-sections and resource/reserve areas for the individual coal seams.

3.13.5 Zhunge'er Coalfield

There are two Pingzhuang Coal properties, including one mining right (Boligou) and one exploration right (Heidaigou), are located in the Zhunge'er Coalfield of the Carboniferous and Permian Age. On a global basis, the geologic settings, or nature, of Zhunge'er Coalfield is judged to be moderate. While the strata are gently dipping, seam splitting, sand erosion and moderate faulting are complicating factors for the seam in Zhunge'er Coalfield.

Regional Geology

The Zhunge'er Coalfield is situated on the northeastern margin of the Ordos Basin, in the western part of the Sino-Korean Paraplatform. Its tectonic evolution has been primarily controlled by the Yinshan Giant Latitudinal Tectonic Belt and the Neocathaysian Structural System.

During the Himalayan Orogeny, the uplift of the Tibetan Plateau induced peripheral rifting around the Ordos Basin, while the basin interior experienced regional uplift, collectively forming the present-day structural geomorphology.

Structure

The Boligou and Heidaigou mining/ exploration areas are located in the northern and central sectors of the Zhunge'er Coalfield, respectively. Their structural characteristics are summarized as follows:

The Boligou mining area is situated in the northern Zhunge'er Coalfield, on the western flank of the Yaogou Anticline. The area is characterized by a monocline striking NNE–SSW and dipping NW, with generally gentle strata attitudes and dips averaging approximately 5 degrees. Superimposed on the monocline are local, very broad and gentle undulations. Faulting is relatively well-developed, dominated by normal faults with vertical displacements generally under 10 meters. No magmatic intrusions have been identified within the mining area.

The Heidaigou exploration area is situated in the central Zhunge'er Coalfield, on the western flank of the Changtan Flexure. The area is characterized by a monocline structure striking NNE and dipping NWW, with strata generally inclined at approximately 5 degrees. No faults or magmatic intrusions have been identified within the area.

Stratigraphy

The subject mining/ exploration areas contains the following stratigraphic sequence in ascending order:

- Middle Ordovician Majiagou Formation
- Upper Carboniferous Taiyuan Formation
- Lower Permian Shanxi Formation
- Lower Permian Lower Shihezi Formation
- Upper Permian Upper Shihezi Formation
- Upper Permian Shiqianfeng Group
- Lower Triassic Liujiagou Formation
- Quaternary System

The Upper Carboniferous Taiyuan Formation and Lower Permian Shanxi Formation constitute the primary coal-bearing sequences in the region

Coal Seams

The Shanxi and Taiyuan formations in the Boligou Mine host 9 coal seams, with reserves quantified for 6 key layers. Seams 6 (avg. 13.4 m) constitute the principal minable seams, demonstrating high stability and economic significance. The following

tables show the detailed characteristics of each seam.

The Shanxi and Taiyuan formations in the Heidaigou exploration area host 9 coal seams, with reserves quantified for 6 key layers. Seams 6 (avg. 13.1 m), 9 (avg. 4.74 m), constitute the principal minable seams, demonstrating high stability and economic significance. The following tables show the detailed characteristics of each seam.

Table 3-81 Coal Seams of Mining/Exploration Right in Zhunge'er Coalfield

		Thickness (m)			Distance from the	Seam Depth	Seam	Seam
Mine	Seam	Coal	Parting	Seam	Upper Seam (m)	Range (m)	Dip (deg.)	Occurrence
Boligou	4	1.4	0.05	1.5	-	262 - 480	5-NW	Eratic
	5	2.3	0.47	2.8	16	272 - 503	5-NW	Eratic
	6U	2.4	0.47	2.9	19	288 - 487	5-NW	Eratic
	6	11.2	2.23	13.4	27	296 - 525	5-NW	Moderate
	8	1.9	0.50	2.4	14	325 - 546	5-NW	Eratic
	9	1.5	0.17	1.7	9	341 - 554	5-NW	Eratic
Heidaigou	4	2.6	0.8	3.5	-	442-608	5-SW	Moderate
	5	1.4	0.3	1.7	7	448-608	5-SW	Eratic
	6U	3.5	0.4	3.9	19	470-640	5-SW	Moderate
	6	11.8	1.3	13.1	7	481-652	5-SW	Eratic
	6L	3.1	0.8	3.8	17	498-661	5-SW	Eratic to Modera
	9	3.9	0.9	4.7	10	507-673	5-SW	Moderate

Data Defining Coal Occurrence and Quality

To ensure the completeness and reliability of the data used for resources and reserves estimates, we have been provided with all the relevant historical versions of the geological reports for the subject mines, as follows:

- Boligou Mine:
  - = Detailed Exploration Report for the Boligou Mine, June 2008
  - = Reserves Verification Report for the Boligou Mine, March 2009
  - = Supplementary Exploration Report for the Boligou Mine, April 2024
- Heidaigou Exploration Right:
  - = Exploration Report for the Heidaigou Mine, April 2008

We have compared the different versions of the provided geological reports to ensure our data remains current and valid. The following table summarizes the available exploration data for each mining/exploration right area:

Mining/Exploration Right Area	Area (km^2)	No. of Drill Holes
Mining Rights		
Boligou	18.15	35
Exploration Rights		
Heidaigou	21.42	46

Resource/Reserve Classification

Based on our detailed review of the geologic setting of each seam at each mine/exploration, we judge the overall geologic setting to be moderate and have

assigned the following drill hole spacing criteria for classification of estimated resources:

Mining/Exploration Rights	Seam	Geologic Setting	Measured (m)	Indicated (m)	Inferred (m)
Boligou	All Seams	Moderate	500	1,000	<2,000
Heidaigou	All Seams	Moderate	500	1,000	<2,000

Resource and reserve classification of each coal seam are shown on the resource/reserve maps included in Appendix A.

The JORC Code requires that all reports include comment on items listed in Table 1 of the Code. Appendix B, '*Table 1 –Zhunge'er Coalfield',* shows the items listed for the Zhunge'er Coalfield, along with our comments on the table.

Resources Estimate

Estimates of in situ coal resources were prepared using computer mapping software (AutoCAD) for all mapped resource areas. The following parameters were used for resources reporting:

Table 3-82 Resources Estimates Parameters – Zhunge'er Coalfield

			S.G.		Thickness (m)	
Mining/Exploration Right	Seam	Dip	Coal	Parting	Min. Coal	Max. Parting
Boligou	4	5	1.44	2.10	0.80	0.80
	5	5	1.42	2.10	0.80	0.80
	6U	5	1.45	2.10	0.80	0.80
	6	5	1.41	2.10	0.80	0.80
	8	5	1.42	2.10	0.80	0.80
	9	5	1.40	2.10	0.80	0.80
Heidaigou	4	5	1.42	2.10	0.80	0.80
	5	5	1.43	2.10	0.80	0.80
	6U	5	1.40	2.10	0.80	0.80
	6	5	1.42	2.10	0.80	0.80
	6L	5	1.39	2.10	0.80	0.80
	9	5	1.40	2.10	0.80	0.80

The resources areas of mining rights are delineated by the authorized mine boundary, with vertical mining elevation limits of Boligou Mine. While the resources areas of exploration rights are only delineated by the property boundary since there are no elevation limits for Heidaigou exploration right. Our resources tonnage estimates (on

a 100% ownership basis) for Boligou Mine and Heidaigou Exploration, as of 31 July 2025, are as follows:

Table 3-83 Coal Resources Estimates – Zhunge'er Coalfield

Note: 1. Figures may not add due to rounding

2. The reported coal resources are inclusive of the coal reserves.

3.* CV is in b.ad. basis.

In-Situ Coal Quality

Since all drill holes are continuously cored, there are quality data for all holes that intersect one or more coal seams which meet the Chinese minimum thickness and core recovery requirements. As shown in the above tables, coal quality is well defined.

The quality data shown in the above tables indicate that all coal seams in Zhunge'er Coalfield contain medium ash, low sulfur low-rank bituminous coal. According to China's coal exploration standards, in-situ coal samples typically do not contain visible partings. However, in actual production, ROM coal will include unavoidable in-seam partings and OSD. Consequently, the actual quality of the ROM coal will be inferior to the quality indicated in the table.

Reserves Estimate

Reserve estimation was conducted exclusively for mining rights. Reserves are presented on a ROM or recoverable basis, and on a marketable basis. Recoverable Reserves represent the seam tonnage to be recovered by the corresponding mine plan, including the coal seam and OSD (roof and floor rock recovered with the coal seam during the normal mining process), and moisture gained during underground mining. Marketable Reserves represent the salable tonnage and include allowances for losses

during coal handling and processing. The following parameters were used for reserves reporting for the Boligou Mine:

Table 3-84 Reserves Estimates Parameters – Boligou

			Recoverable Reserves									
			Shearer (m)		Shield (m)		SC			Plan	Moist.	Product
		Mining		max.	Cap. Range		Cut	Caving	OSD	Rec.	Gain	Yield
Mine	Seam	Method	Dia	thk	min.	max.	Thk	%	(m)	%	%	%
Boligou	4	-	-	-	-	-	-	-	-	-	-	-
	5	SC	1.8	4.2	2.3	4.8	3.5	80	0.10	85	2	76
	6U	-	-	-	-	-	-	-	-	-	-	-
	6	SC	1.8	4.2	2.3	4.8	3.5	80	0.20	85	2	80
	8	SC	1.8	4.2	2.3	4.8	3.5	80	0.05	85	2	72
	9	-	-	-	-	-	-	-	-	-	-	-

Note: 1. Seams without parameters indicate thin thickness, for which only resources have been estimated.

The determination of these parameters integrated our communication with the mine's technical personnel and our extensive experience in Chinese underground coal mining. ROM coal from Boligou Mine is designed to be processed by Telligent Dry Separator (TDS) system and Heavy Media Vessel (Heavy Media Vessel) system. The product yields of saleable coal accounts for the removal of in-seam partings and OSD during screening and washing, along with routine coal handling losses.

We have reviewed the preliminary design of the Boligou Mine and coal preparation plant, and we believe that they will be capable of its authorized output of 4 Mtpa in the future. Based on the mines' future production plan and communication with the mines' technical personnel, we have developed a LOM plan for Boligou Mine to confirm the technical feasibility of the recoverable reserves. These LOM plans are presented in the accompanying DCF table following Chapter 8.

The CP completed an economic analysis for the mine to determine if the projected mine operations are economically viable (see Chapter 8), as of 31 July 2025. This analysis concludes that the identified reserves at the subject mines have reasonable expectations to be economically mineable. Our reserves estimates (on a 100% ownership basis) for Boligou Mine, as of 31 July 2025, are as follows:

Table 3-85 Coal Reserves Estimates – Boligou

	Recoverable Reserves (Mt)			Processing	Marketable Reserves (Mt)			% of
Seam	Proved	Probable	Total	Yield %	Proved	Probable	Total	Reserves
				Boligou				
4	-	-	-	-	-	-	-	-
5	12.54	0.26	12.80	76	9.58	0.20	9.78	9.9

Note: Figures may not add due to rounding

Product Coal Quality

The Boligou Coal Mine is currently in the construction phase. The coal preparation plant has been designed based on the specific conditions of the Boligou Mine and incorporates operational experience from surrounding producing mines. The plant is planned to produce two blended coal products with minimum net calorific values (as received) of:

- Product A: Qnet,ar > 4,300 kcal/kg
- Product B: Qnet,ar > 5,000 kcal/kg

In our opinion, the design of the Boligou coal preparation plant is rational, and the plant is expected to produce qualified coal products according to design specifications.

Figures listed at the end of this chapter and contained in Appendix A show the structure, cross-sections and resource/reserve areas for the individual coal seams.

3.14 Jinshen Energy Mining Rights

Jinshen Energy holds the mining rights for the Ciyaogou and Shaping mines, which are located in the northern part of the Carboniferous and Permian Hedong Coalfield in Xinzhou City, in the northwestern part of Shanxi Province. On a global basis, the geological settings, or nature, of Hedong Coalfield is judged to be moderate. While the strata are gently dipping, seam splitting, sand erosion and occasional faulting are complicating factors for the seam in Hedong Coalfield.

Regional Geology

As previously mentioned during the introduction of Guoyuan Power mines, the Hedong Coalfield is situated at the northern terminus of the Baode-Linxian Block Sag within the Ordos Depression of the North China Plate. Regional structural trends predominantly align NE-NNE, with localized NW-trending structures. Key tectonic features include: 1) the Qingshui Graben, comprising two 310 degrees striking normal faults extending southeast from Shaanxi; 2) the Fanjialiang-Xinyao Syncline, a NNW-trending broad fold with Shanxi Formation at its core; 3) the Tianqiao Horst formed by three 300 degrees striking normal faults exposing Ordovician strata; and 4) the Tiejiangpu Graben with three NEE-trending normal faults (>250 m displacement) exposing purple mudstone. The structural domain is characterized by fault-block systems and broad folds, with negligible magmatic activity.

Structure

The subject two mines are situated in the northern part of Hedong Coalfield. The mining area is characterized by a monocline dipping to the northwest and west, with superimposed gentle folding. Strata exhibit consistent, low-angle dips generally ranging from 3 to 5 degrees. Minor faulting is present, with typical displacements under

4 meters. These structures are not considered to pose significant geotechnical or operational risks to mine safety. No magmatic intrusions have been identified within the mining lease area.

Stratigraphy

The mine area contains a well-defined stratigraphic sequence, in ascending order: Ordovician, Carboniferous, Permian, Neogene, and Quaternary systems. Coal deposit is confined to the Upper Carboniferous Taiyuan Formation and the Permian Shanxi Formation, with the Taiyuan Formation serving as the primary coal-bearing unit. Lithologically, the Taiyuan Formation is dominated by sandstone, mudstone, limestone, and carbonaceous mudstone.

Coal Seams

The coal-bearing strata in the Ciyaogou and Shaping mines host 9 to 11 coal seams, with most of the mineable seams located in the Taiyuan Formation. The following tables show the detailed characteristics of each seam:

Table 3-86 Coal Seams of Ciyaogou and Shaping mines in Hedong Coalfield

		Thickness (m)			Distance from the	Seam Depth	Seam	Seam
Mine	Seam	Coal	Parting	Seam	Upper Seam (m)	Range (m)	Dip (deg.)	Occurrence
Ciyaogou	10-2	5.74	0.57	6.30	-	46 - 168	4-W	Uniform
	13	11.91	1.15	13.06	18	10 - 220	4-W	Uniform
Shaping	9	3.06	0.25	3.31	-	21 - 201	4-W	Moderate
	10	1.69	0.09	1.78	5	31 - 213	4-W	Moderate
	11	1.86	0.03	1.89	7	35 - 218	4-W	Moderate
	12	1.58	0.02	1.60	10	4 - 233	4-W	Moderate
	13U	5.29	0.05	5.34	4	107 - 215	4-W	Eratic
	13	13.28	1.66	14.93	7	5 - 238	4-W	Moderate

Data Defining Coal Occurrence and Quality

To ensure the completeness and reliability of the data used for resources and reserves estimates, we have been provided with all the relevant historical versions of the geological reports for the subject mines, as follows:

- Ciyaogou Mine:
  - = Production Geology Report for the Ciyaogou Mine, April 2023
- Shaping Mine:
  - = Supplementary Exploration Geological Report for the Shaping Mine, August 2021

We have compared the geological reports provided to ensure our data remains current

and valid. The following table summarizes the available exploration data for each mining right area:

Mining/Exploration Right Area	Area (km^2)	No. of Drill Holes
Mining Rights		
Ciyaogou	10.62	62
Shaping	22.59	121

Resource/Reserve Classification

Based on our detailed review of the geologic setting of each seam at each mine, we judge the overall geologic setting to be simple to moderate and have assigned the following drill hole spacing criteria for classification of estimated resources:

Mine	Seam	Geologic Setting	Measured (m)	Indicated (m)	Inferred (m)
Ciyaogou	All Seams	Moderate	500	1,000	<2,000
Shaping	All Seams	Moderate	500	1,000	<2,000

Resource and reserve classification of each coal seam are shown on the resource/reserve maps included in Appendix A.

The JORC Code requires that all reports include comment on items listed in Table 1 of the Code. Appendix B, '*Table 1 – Hedong Coalfield',* shows the items listed for Ciyaogou and Shaping mines in the Hedong Coalfield, along with our comments on the table.

Resources Estimate

Estimates of in situ coal resources were prepared using computer mapping software (AutoCAD) for all mapped resource areas. The following parameters were used for resources reporting:

Table 3-87 Resources Estimates Parameters – Ciyaogou and Shaping Mines

		Max.	S.G.		Thickness (m)	
Mine	Seam	Dip	Coal	Parting	Min. Coal	Max. Parting
Ciyaogou	10-2	4	1.42	2.1	0.8	0.8
	13	4	1.41	2.1	0.8	0.8
Shaping	9	4	1.47	2.1	0.8	0.8
	10	4	1.41	2.1	0.8	0.8
	11	4	1.38	2.1	0.8	0.8
	12	4	1.42	2.1	0.8	0.8
	13U	4	1.42	2.1	0.8	0.8
	13	4	1.40	2.1	0.8	0.8

The resources areas of mining rights are delineated by the authorized mine boundary, with vertical mining elevation limits of each mine. Our resources tonnage estimates (on

a 100% ownership basis) for Ciyaogou Mine and Shaping Mine, as of 31 July 2025, are as follows:

Table 3-88 Coal Resources Estimates – Ciyaogou and Shaping Mines

									In-Situ Coal Quality				
	Average Thickness (m)			In-Place Resources (Mt)				% of	%				CV (net,ad)
Seam	Coal	Parting	Seam	Measured	Indicated	Inferred	Total	Resouces	Moist. (ad)	Ash (d)	St (d)	Vol (daf)	kcal/kg

Subtotal				340.00	37.84	-	377.84	100					
Total				450.77	42.56	-	493.32						

Note: 1. Figures may not add due to rounding
2. The reported coal resources are inclusive of the coal reserves.
3.* CV is in b.ad. basis.

In-Situ Coal Quality

Since all drill holes are continuously cored, there are quality data for all holes that intersect one or more coal seams which meet the Chinese minimum thickness and core recovery requirements. As shown in the above tables, coal quality is well defined.

The quality data shown in the above tables indicate that all coal seams in Hedong Coalfield contain medium to high ash, high-rank bituminous coal. The upper seams (No.9 and above) are in the Shanxi Formation and typically has lower sulfur content, while the lower seams are in the Taiyuan Formation and typically has medium to high sulfur content. According to China's coal exploration standards, in-situ coal samples typically do not contain visible partings. However, in actual production, ROM coal will include unavoidable in-seam partings and OSD. Consequently, the actual quality of the ROM coal will be inferior to the quality indicated in the table.

Reserves Estimate

Reserves are presented on a ROM or recoverable basis, and on a marketable basis. Recoverable Reserves represent the seam tonnage to be recovered by the corresponding mine plan, including the coal seam and OSD (roof and floor rock recovered with the coal seam during the normal mining process), and moisture gained during underground mining. Marketable Reserves represent the salable tonnage and

include allowances for losses during coal handling and processing. The following parameters were used for reserves reporting for the subject two mines:

Table 3-89 Reserves Estimates Parameters – Ciyaogou and Shaping Mines

			Recoverable Reserves									
			Shearer (m)		Shield (m)		SC			Plan	Moist.	Product
		Mining		max.	Cap. Range		Cut	Caving	OSD	Rec.	Gain	Yield
Mine	Seam	Method	Dia	thk	min.	max.	Thk	%	(m)	%	%	%
Ciyaogou	10-2	SC	2.5	5.0	2.7	4.5	4.0	80	0.20	85	2	86
	13	SC	2.5	5.0	2.7	4.5	4.0	80	0.20	85	2	87
Shaping	9	FM	2.0	4.4	1.7	3.5	-	-	0.10	85	2	84
		SC	2.5	4.9	2.7	4.5	4.3	80				
	10	FM	1.5	3.3	1.2	2.4	-	-	0.05	85	2	87
	11	FM	1.5	3.3	1.2	2.4	-	-	0.05	85	2	92
	12	FM	1.5	3.3	1.2	2.4	-	-	0.05	85	2	86
	13U	SC	2.5	4.9	2.7	4.5	4.3	80	0.20	85	2	93
	13	SC	2.5	4.9	2.7	4.5	4.3	80	0.20	85	2	82

The determination of these parameters integrated our communication with the mine's technical personnel and our extensive experience in Chinese underground coal mining. ROM coal from Ciyaogou Mine is processed by a 3-Product Heavey Media Cyclone (HMC) system. ROM coal from Shaping is currently sold directly after crushing and screening now, but a new processing plant is being designed to use the same separation technology as the Ciyaogou Mine. The product yields of saleable coal accounts for the removal of in-seam partings and OSD during screening, along with routine coal handling losses.

We have reviewed the historical operations for both mines, and we believe that they will be capable of maintaining authorized output of 5Mtpa for Ciyaogou Mine and 8 Mtpa for Shaping Mine. Based on the mines' historical performance and communication with the mines' technical personnel, we have developed a LOM plan for each of the two mining rights to confirm the technical feasibility of the recoverable reserves. It is our opinion that the reserves of Ciyaogou Mine will be depleted by 2040, the reserves of Shaping Mine will be depleted by 2043 The LOM plans are presented in the accompanying DCF table following Chapter 8.

The CP completed an economic analysis for the mine to determine if the projected mine operations are economically viable (see Chapter 8), as of 31 July 2025. This analysis concludes that the identified reserves at the subject mines have reasonable expectations to be economically mineable. Our reserves tonnage estimates (on a

100% ownership basis) for Ciyaogou Mine and Shaping Mine, as of 31 July 2025, are as follows:

Table 3-90 Coal Reserves Estimates – Ciyaogou and Shaping Mines

	Recoverable Reserves (Mt)			Processing	Marketable Reserves (Mt)			% of
Seam	Proved	Probable	Total	Yield %	Proved	Probable	Total	Reserves
				Ciyaotou				
10-2	4.16	-	4.16	86	3.56	-	3.56	6.2

Total	216.33	10.15	226.48	85	183.02	8.96	191.97	

Note: Figures may not add due to rounding

Product Coal Quality

Due to the unavailability of industrial analysis data for partings and OSD, it is not feasible to predict future coal quality. However, based on the historically stable quality of the saleable coal, we anticipate that future product quality will remain consistent with past performance, as detailed in the table below:

Typical Product Coal Quality				
	%			kcal/kg
Mine	Ash (Ad)	Moisture (Mt)	Sulfur (St,d)	CV (Qnet.ar)
Ciyaogou	27.3	9.3	1.41	4,730
Shaping	41.8	9.1	1.05	3,520

Figures listed at the end of this chapter and contained in Appendix A show the structure, cross-sections and resource areas for the individual coal seam

3.15 Conclusions

Based on our review of the coal resource data, the methodology we used to define the resources/reserves, and the CP's visits to the subject companies and interactions with the subject mine personnel, we have a high degree of confidence that the estimates provided in this report are a reasonable representation of the coal resources and coal reserves controlled at the subject mining/exploration right areas.

The CP has reviewed the documentation provided by the subject companies with regard to the company's coal resource holdings. To the extent supported by the documentation, we have accepted that each subject company holds the mining/exploration rights evaluated in this report for the documented periods.

The following figures (maps) were prepared to illustrate the estimated coal resources and reserves for each mining/exploration right area, and are contained in Appendix A to this report:

4.0 MINE OPERATIONS

4.1 Introduction

This chapter discusses the mining operations of the following twenty-eight (28) mines under the seven (7) subsidiary companies of China Energy. Among these mines, eleven (11) are open-pit operations and seventeen (17) are underground operations. The subject mines are summarized as shown in Table 4-1:

Table 4-1 Summary of Subject Mines

Mine	Mining Method	Authorized (Mtpa)	Technology Utilized (OP)	(UG)	Mining
China Energy Guoyuan Power Co., Ltd.					
Chaoyang Open-pit	OP	11.0	Outsourced	-	Shovel-Truck

Note: OP=Open-pit; UG=Underground; FM LW=Fully-Mechanized Longwall; SLC=Sublevel Caving; RH=Roadheader; BM=Bolter Miner; CM=Continuous Miner

The mines are mostly located in well-known coal-producing regions in Heilongjiang, Inner Mongolia, Ningxia, Shaanxi, Shanxi, Xinjiang provinces/autonomous regions, and are administered by China Energy through its subsidiary entities. Among them, Guoyuan Power holds the most extensive distribution of mines, a result of its role as one of the nation-wide power supply companies. Wuhai Energy operates locally in the

Wuhai area, and most of its mines are relatively smaller, older underground operations with lengthy operating histories. Except for the Tunbao and Wudong underground mines, the other Xinjiang Energy's mines are large and relatively new open-pit operations, which is a result of the central and Xinjiang regional coal development strategy in recent years. Pingzhuang Coal is a company with long operating history. The subject mines in eastern Inner Mongolia are all large open-pit operations mining lignite. Shenyan Coal and Jinshen Energy are two joint-ventures cooperated between China Energy and local companies.

The Suhaitu Mine of Wuhai Energy used to be an underground operation and depleted its coal resources suitable for FM LW mining. After acquired permission from the local administration, the mine is recovering remaining coal (barrier pillars, etc.) left by previous underground mining using open-pit methods, to prevent future spontaneous combustion and facilitate land reclamation.

Except for the Chaoyang Open-pit located at Baoqing, Heilongjiang and the Xiwan Open-pits located at Yulin, Shaanxi, most of the open-pit mines are located in eastern Inner Mongolia and eastern Xinjiang. Most of the open-pit mines have experienced several rounds of expansions to reach their current output capacities. In most cases, the stripping work is outsourced to third-party contractors, while the coal mining is performed in-house. Shovel (excavator)-truck, and semi-mobile crushing/belt transportation are the mostly adopted open-pit mining technologies, with larger capacities averaging approximately 16 Mtpa for the subject open-pit mines.

For the underground operations, FM LW (sometimes with SLC capability) is the only mining method used, which is typical of Chinese underground coal mines. The modern underground FM LW coal mining method has been widely used in nearly every major coal-producing region in China and under the various geological conditions encountered in the subject mines. Generally, the mines in Shaanxi and Inner Mongolia have geologic settings which are highly favorable for LW mining methods. Some of the mines in this region are among the most productive and efficient coal mines in the world. In most cases, the major FM LW mining equipment is manufactured domestically. Typically, the threshold seam thickness for sublevel caving mining is approximately 4.5-6.0 m, although sometimes the decision is made upon other factors. China is the country with most FM LW SLC mining operations. As observed during this study, the FM LW SLC method is adopted in most of the subsidiary companies of China Energy, including Guoyuan Power, Wuhai Energy, Xinjiang Energy, Pingzhuang Coal and Jinshen Energy.

FM LW (without roof coal caving) mining features one cut to recover the full thickness of the seam, making the face management easier with fewer operational steps. However, due to the faster face advance rate, this method generally requires faster

roadway development speeds. FM LW SLC mining, on the other hand, requires more face operations to recover the roof coal by another set of armored face conveyors (AFC) through caving from the rear part of the shields. Comparatively, the FM LW SLC method requires less roadway development for the same level of coal production, as well as better accommodation to seam thickness fluctuations. We has reviewed the feasibility studies or design reports of each mine as provided and concludes that the mine designs follow the general practices of the mining industry in China, and generally appear reasonable and appropriate.

The major drivage equipment used in roadway development in the subject underground mines include roadheaders (RH), bolter-miners (BM) and continuous miners (CM). Drilling and blasting is occasionally used for entry development in rock.

It was also noted that most of the mines have implemented digital and advanced technologies, which cover a wide range of operational activities at the mines, including equipment operation monitoring, personnel and equipment positioning, hazard monitoring and management, etc. Capital expenditures for the implementation of new technologies are included in each of the mines budgets. It is our opinion that the application of digital and advanced technologies can significantly improve the management and safety of the mines.

Most of the subject mines have received the necessary regulatory approvals for operation, including mining rights certificates, mine manager production safety certificates, mine manager's qualification certificates, production safety certificates, and operating mine business licenses. The Luotuoshan Mine of Wuhai Energy just completed a series of technical renovations and began its test run in December 2024. The Boligou Mine of Pingzhuang Coal is under construction and is expected to start operation in 2027.

Our review of the subject operations is based on China Energy's internally prepared historical operating data, five-year mine plans and business projection submittals, discussions with corporate and mine management, financial, and engineering staff, and our site visit observations. Mine plan forecasts were evaluated for reasonableness and consistency with recent operating history. BOYD representatives visited a number of the subject mines in September 2025. Visits to everyone of the subject mines were deemed not practical given the extremely tight schedule of this assignment.

As indicated by the mine design documents, mine surface facilities provide accommodation for all aspects of the mining operations, including administration and mine manager offices, materials and parts storage, machinery shops, electrical and maintenance areas, locker rooms and bathhouse areas, conference rooms, engineering facilities, mine monitoring and communications station, etc. Living

quarters for single men and other public facilities are located near the mine site.

All mines have safety monitoring systems, which are located in the dispatching stations in the administration buildings. These systems are continuously staffed and are connected by internet with central offices and the mine facilities. As observed at the mines we visited, the systems are generally well designed and track multiple underground and surface sensors for air velocities, gas analyses (methane, carbon monoxide, carbon dioxide, oxygen), status of ventilation controls (doors, etc.), surface fan telemetry, temperatures, and electrical system monitoring, which has been an industry standard throughout the country.

Due to the depth of the seams in the subject underground mine areas, the mines are accessed by vertical shafts and/or inclines for coal hoisting and transportation of material, equipment, waste rock, and personnel. Air return shafts are used to discharge the exhaust air (or contaminated air) that has passed through all underground working areas. Depending on the mine configuration (distance of the working faces from the original air shafts), supplemented air return shafts are constructed to provide ventilation to the extended sections of the mines.

LW and development faces are scheduled to effectively operate 330 days per year on a 7-day per week basis. Major festival periods and national holidays total 15 (idle operating) days annually. Mine and equipment examinations, repair periods, LW face moves, and mine site outages account for the balance of the non-operating days. Labor staffing levels are low during the major festival periods, and the mine is idle for maintenance activities during these periods.

In only a few mines, trolley or battery locomotives and mine cars provide underground material, personnel, and equipment transportation. Travel times from the surface to the working site vary depending on location of the production (working) faces. Rail is installed underground for vehicle travel and the rail system is of high quality with drainage ditches and culverts constructed in the roadways.

In most of the subject underground mines, rubber-tyre vehicles provide underground material, personnel, and equipment transportation. The mine roadways for vehicle travel always have hardened (concrete) surfaces and drainage ditches and culverts for facilitating high-speed traffic. Service transportation using rubber-tyre vehicles provides significantly improved flexibility and convenience to underground operations.

Compressed air is used to drive pneumatic picks, rock drills, nitrogen-making equipment, and shotcreting machines. Owing to the tendency for spontaneous combustion, most of the subject underground mines employ nitrogen injection to suppress spontaneous coal combustion. Surface and underground mobile nitrogen-

making equipment produces nitrogen that is injected into gob areas. Pipelines are installed to deliver the nitrogen to the mined-out gob areas.

Development faces utilize mobile face fans, which provide forced, blowing ventilation through flexible tubing. Roadheaders are widely used for roadway development in coal seams, with the drill and blast method used when development is in rock strata.

ROM coal produced underground is either hoisted to the surface through skip systems installed in the main shafts, and/or transported via belt conveyor systems installed in the main inclines. On the surface, the ROM coal is transferred to screening facilities with the recovered and sized raw coal then being added (as a new coal product) or recovered and conveyed to a processing plant (if available) where the coal is further processed. The coal products are transferred to surface storage yards or silos for truck/rail loading. Waste rock is generally stored at different locations before being recovered for other usages.

Specific information regarding each of the subject mines is summarized as follows.

Guoyuan Power

4.1.1 Chaoyang Open-pit

The Chaoyang Open-pit is located at Baoqing, Heilongjiang Province and is operated by Baoqing Coal-Power-Chemical Company. Construction of the mine commenced in July 2009 and the 11 Mtpa output capacity was attained in December 2020. The lignite coal produced at the mine is mainly used to supply the parallel 2×600 MW coal-fired power plant, with the electricity generated being transmitted to the Heilongjiang power grid.

The minefield extends approximately 25 km along strike and 6 km along dip, covering an area of 122.5 km², with a final open-pit area of 76.8 km². The mine exploits a single seam, the No. 10 Seam, averaging 12.22 m in thickness with a dip angle of 3–5°. The maximum mining depth is 155 m, and the average stripping ratio is 6.16 m³/t.

Currently the stripping work is conducted by third-party contractors at a price of approximately RMB8 per cubic meter. Stripping equipment includes 5–8 m³excavators (20 units) and 90–100 t dump trucks (141 units), with an average capacity of 180,000 m³/day. Coal extraction is self-operated using 7 m³ excavators (4 units) and 100 t dump trucks (17 units). Mining currently takes place on two coal benches (±0 m and –8 m). A majority of the waste is trucked to the in-pit dump (now reaching the +104 m elevation with 19 Mm³ of residual capacity), with a small fraction (approximately 10%) of the waste is disposed at an external dump. A new external dump is being developed on the northern side, with a designed capacity of 40 Mm³.

Due to limited demand, the mine only operated at approximately 6.5 Mtpa over the past three years. According to the mine's management, coal production will ramp up to reach the design capacity of 11 Mtpa in 2029.

4.1.2 Dananhu No. 2 Open-pit

The Dananhu No.2 Open-pit is located at Hami, Xinjiang and is next (west) to Dananhu No. 1 Mine. Construction of the mine commenced in August 2013 and the mine started operation in July 2015 with the initial capacity of 10 Mtpa. In 2022, an increased capacity of 13 Mtpa was approved. The coal produced is mainly used to supply the nearby Dananhu Power Plant.

The minefield extends approximately 6.2 km along east-west and 5.9 km along north-south, covering an area of 21.6 km². There are totally twenty mineable coal seams within the mine with a total thickness approximately 55 m. The strata here feature a dip angle of 3-8°. The stripping ratio for the initial mining district and the whole mine is approximately 3.6 and 4.9 m³/t, respectively.

Currently the stripping work is outsourced to third-party contractors. Equipment deployed includes 13 excavators (6–12 m³) and 67 dump trucks (100 t). Coal extraction is self-operated with a team equipped with 8 m³ excavators (4 units), 10 m³ excavators (2 units) and 100 t dump trucks (24 units). Mining currently takes place on thirteen coal benches. Majority of the waste (approximately 60%) is trucked to the external dump, and the rest (approximately 40%) of the waste is disposed of at the in-pit dump. The stripping contractors are compensated at RMB11.6/m^3 for external waste dump and RMB8.07/m^3 for in-pit dump. Land acquisition has been smooth and the current available land will support the operation for the next three years or more.

4.1.3 Renjiazhuang

The Renjiazhuang Mine is located at the edge of the Maowusu Desert near Lingwu City, Ningxia Hui Autonomous Region. Construction of the underground mine began in January 2005, and test run commenced in March 2008. The mine was initially designed with a capacity of 2.4 Mtpa, and current approved capacity is 4.0 Mtpa.

The mine is developed with three inclined shafts: a main incline, an auxiliary incline, and a return-air incline. The No. 3 Seam was the initial production seam, characterized by stable occurrence, average thickness of 3.32 m, and extracted by FM LW method. The No. 5 Seam is another primary seam for the mine, also stable across the field, with an average thickness of 6.03 m but with relatively large variation, which makes FM LW SLC the better option to mine this seam.

The mine currently operates below its approved capacity due to unfavorable coal market conditions. A CPP plant has been constructed on site, although the current

washing volume remains low. In some designated areas, backfilling mining is planned, mainly to dispose of solid waste generated by nearby power plants and the CPP, rather than for enhanced coal recovery. Surface conditions are favorable, with sparse population and limited existence of constructions over the mine area.

Coal from Renjiazhuang Mine is primarily used to supply the Lingzhou Power Plant and the Ningdong Chemical Industry Base, located approximately 10 km southeast of the mine.

4.1.4 Shangyuquan

The Shangyuquan Mine is located in Hequ County, Shanxi Province, with convenient access to both highway and railway networks. Construction of the mine began in April 2004, and the initial design capacity of 3.0 Mtpa was attained in October 2006. In 2022, the mine was approved to produce coal at 7.0 Mtpa after a major capacity expansion. The mine is classified as a low-gas underground operation with favorable geological and mining conditions. The coal-bearing strata have a dip angle of 2-8º.

The mine adopts horizontal adits to access the coal seams which are mined using a single production level. Coal seams are generally consistent in thickness with low gas content, making the deposit particularly suitable for fully mechanized longwall mining. The coal haulage system is formed by a series of belt conveyors to transport coal from the LW face to the surface. Service transportation relies on rubber-tyre vehicles, which significantly simplifies underground logistics.

The mine has five recoverable coal seams named from No. 9 to No. 13. The No. 9 Seam is nearly depleted, with only three panels remaining. Present operations are focused on the No. 10 Seam, with an average thickness of 5–6 m. The current producing longwall panel is LW1021010, operated with FM LW SLC technology, in which the shearer cuts 3.8 m while the top coal is recovered by caving. Two development sections are active, both equipped with a bolter-miner unit, ensuring timely preparation of longwall faces and smooth production continuity.

Villages are present on the surface above certain mining areas, but relocation and compensation schemes have been established in cooperation with the local government. These measures are scheduled to be implemented years before mining beneath the affected areas, preventing disruption to coal production.

ROM coal is processed in the CPP constructed at the mine site, with a product coal yield of approximately 70%. The product coal is primarily supplied to the designated Hequ Power Plant.

4.1.5 Sandaogou

The Sandaogou Mine is located in Fugu County, Shaanxi Province. Construction of the underground mine began in June 2006, and it officially commenced production in September 2018. The original designed capacity was 5.0 Mtpa, and in 2019 the approved capacity was increased to 9.0 Mtpa. The region enjoys convenient highway and railway access and is one of China's major underground coal mining areas, with several adjacent operations owned by China Energy. Sandaogou serves as the dedicated coal supplier for the nearby Fugu Power Plant (2×600 MW + 4×1000 MW).

The deposit here features a simple monocline structure striking northwest and dipping southwest–west, with an average dip angle of 1–3°. No significant faults or folds are present. Seven mineable seams exist within the field. The mine is accessed by a main adit, an auxiliary adit and a return-air incline. Mining is planned on a single production level, with initial operations in seams 5-2U and 5-2.

Currently one FM LW face is operated in District III to mine the 5-2U Seam (3.2 m in thickness), and one high-profile FM LW face is deployed in District VIII to mine the 5-2 Seam (6.5 m). Development of roadways is undertaken by two CM development units, and two RH sections. This arrangement appears balanced and capable of satisfying LW face operations and replacement.

A small number of villages are located above the mining area, which are planned to be fully relocated before the particular underground area is mined. The major highway, Dafu Highway, and the power plant are protected by leaving permanent barrier pillars to avoid subsidence.

Sandaogou does not operate a CPP. ROM coal is subject only to simple screening before being directly supplied to the Fugu Power Plant.

Shenyan Coal

4.1.6 Xiwan

The Xiwan Open-pit Mine is located in Shenmu City, Shaanxi Province. Construction of the mine began in August 2015, trial operation started in July 2017, and commercial production commenced in June 2019. The mine's output capacity of 13.0 Mtpa was approved in 2021.

The deposit features simple geology with nearly flat strata, characterized as a monocline with an inclination of about 1°. No significant faults (throw >10 m), folds, or magmatic intrusions are present. The mine exploits the No. 2-2 Seam, which has a dip angle of less than 1° and an average thickness of 11.13 m (ranging 9.30–12.12 m). Coal benches are mined at full height in single passes by coal excavators.
The initial mining district operates one coal bench, 11.1 m high, with an east–west

strike length of 2,300 m. Overburden stripping extends for 3,000 m along strike, employing nine benches (9 m for soil, 15 m for rock). Stripping is undertaken by both contractors and in-house fleets, including 48 excavators and 224 trucks, giving a stripping capacity of 6.6 Mm³ per month. Coal production is self-operated with eight 35 m³ excavators. The mine is equipped with 51 × 220 t trucks, handling both coal and waste. All waste is disposed of in an in-pit dump.

The current overall stripping ratio is 7.26 m³/t in the initial area and approximately 9.4 m³/t across the mine. A major local road (Daqing Road) crosses the mining area and is scheduled for relocation by 2028.

Coal products are sized and crushed without further processing. About 51% of output is marketed through China Energy (Shenhua), with the remaining 49% sold locally. Belt conveyors link the mine to rail and truck loading facilities.

Wuhai Energy

4.1.7 Gongwusu

The Gongwusu Mine is located 47 km south of the Hainan District of Wuhai City, Inner Mongolia. The underground mine was originally constructed in 1978 with a design capacity of 1.2 Mtpa and started production in December 1988. Due to limitations in coal transportation, the mine suspended operations between 1990 and 1999, before resuming in 2000. Following several stages of technical upgrades, its production capacity was steadily increased, and in March 2010 the mine was approved for 2.7 Mtpa. From December 2014 to February 2024, mining activities were restricted to elevations above +1,000 m due to mining right certificate constraints. With the renewal of its mining right certificate in 2024, the permitted mining elevation range was extended from +1,300 m to +400 m.

The mine has two industrial sites located in the northern and southern parts of the mine area. Inclines are used to access underground, with production level on the +1,000 m elevation. The mine is divided into northern and southern districts by the F11 and F12 faults. In total, six shafts have been sunk: in the north, the No. 9 Seam main incline, service incline, intake shaft, No. 16 Seam main incline, and its ventilation shaft; in the south, one return air shaft. The northern district hosts the main bottom development at the +1,000 m level, which connects to the southern district via a system of main haulage roadways. Faulting is relatively frequent, which shortens panel lengths and complicates continuity of mining, presenting challenges for annual production planning and face replacement.

Currently, the mine has no active longwall production panels. The District 21 is under preparation and is expected to be ready for production in June 2026. The first panel to enter production will be LW211606 in the No. 16 Seam, with a coal thickness of 8.5 m.

It will be mined using FM LW SLC methods, with a shearer cutting height of 3.5 m and 5 m of top coal recovered by caving. The mine plans to produce 1.0 Mt in 2026, 2.15 Mt in 2027, and ramp up to its approved capacity of 2.70 Mt in 2028. Other thinner seams (1.0–3.8 m) are planned to be mined by standard FM LW methods without caving.

The transportation system currently consists of two coal haulage systems, creating redundancy and inefficiency. A program is underway to integrate and optimize these systems, while at the same time upgrading the service transportation system from rail to rubber-tyre vehicles, with completion targeted for March 2026. The mine's long haulage distances and complex roadway systems, resulting from multi-seam mining and numerous short panels, add to operational and safety management challenges.

ROM coal from the mine is planned to be transported to the nearby Hainan CPP for washing. The CPP is scheduled for reconstruction beginning in 2026, with an estimated construction period of 18 months.

Overall, the mine faces challenges from complex faulting, multiple seam extraction, and transportation inefficiencies. However, ongoing technical upgrades aim to make substantial improvements and achieve steady output growth.

4.1.8 Huangbaici

The Huangbaici Mine is located 7.5 km northwest of Wuda District, Wuhai City, Inner Mongolia. The underground mine benefits from convenient transportation, with two railways adjacent to the mine area and multiple highways providing regional access. The deposit is a monocline structure with strata striking roughly north–south and dipping east at 3–13°, locally steeper. Several major faults are present, giving the mine an overall medium geological complexity. Gas content is high, requiring pre-drainage from both surface and underground before mining.

The mine has undergone two stages of development. The first level was developed by adits and commenced production in May 1964, and subsequently abandoned in 1998. Construction of the second level began in April 1987 and was completed in November 1990, developed by inclines and shafts. The current approved capacity is 1.8 Mtpa. Current mine access system consists of three inclines (main incline, service incline and man-riding incline), an air-return incline in the northwest, and a air- return shaft located in the central-southern part of the area.

Mining has focused on seams No. 9, No. 10, and No. 12, all located above the +950 m elevation. The No. 9 Seam has been depleted, while the No. 12 Seam still has five panels of varying length available. The No. 12 Seam averages 4.5 m thick and is mined by FM LW method. The mine typically operates one or two FM LW panels, supported

by three RH development faces. No surface villages are present above the mine. Due to previous delays in the mining right certificate renewal, output has been below capacity. The mine is expected to reach its approved level next year in 2026.

All ROM coal is processed through the Huangbaici CPP, which consists of both the original and new plants. The plants use jigging, heavy-media flotation, and cyclone separation technologies, with products transferred to storage facilities before shipment by rail and road.

4.1.9 Laoshidan

The Laoshidan Mine is located in the west wing of the Zhuozishan Coalfield in Hainan District, Wuhai City, Inner Mongolia. The mine benefits from well-developed regional infrastructure, with both railway and highway networks in close proximity. The underground mine area extends in a northeast–southwest orientation, measuring 7.12 km in length and 1.7 km in width, with a total area of 9.78 km². The approved mining elevations range from +1,250 m to +775 m. It is in an independent area, with no producing mines adjacent to its boundaries.

Mine construction first commenced in 1965. The production capacity was increased several times from the original 0.6 Mtpa to the current approved 1.8 Mtpa (2022). Structurally, the deposit was originally characterized by a broad syncline, but local faulting has caused significant variation in seam dip, resulting in a moderate geological complexity. Although multiple coal seams are present, the No. 9 and No. 12 seams have been depleted, and current and future operations are focused on the No. 16 Seam.

The mine is accessed by a main incline, a service incline and an air-return shaft. A single mining level is arranged within the No. 16 Seam. Only District North III remains with four available longwall panels. The current production is from LW16402, in which the seam thickness averages 8.8 m. FM LW SLC technology is applied, in which the shearer cuts 3.5 m, and the remaining 5.3 m of top coal is recovered by caving.

To extend mine life, management is studying the potential for backfilling to recover local barrier pillars left from historical operations, although the profitability of such methods has not yet been demonstrated in practice. All ROM coal is processed in the on-site CPP using heavy-medium cyclones and flotation. Product coal recovery is approximately 70%. The mine's management estimates a remaining service life of approximately 10 years for Laoshidan.

4.1.10 Limin

The Limin Mine is located in Qipanjing Town, Otog Banner, Inner Mongolia, approximately 10 km from Gongwusu Station on the Wuhai–Gongwusu dedicated coal

railway line. National Highway 109 runs through the center of the mining area from southeast to northwest, providing convenient access.

The underground mine was consolidated in 2012 from smaller adjacent operations to form a single 0.6 Mtpa operation and was subsequently upgraded in 2018 to a 1.5 Mtpa operation. It is designated to supply coal from the No. 9 and No. 16 seams to the Limin Coke Plant.

Currently, two mining districts are in operation: District 161 in the No. 16 Seam and District 093 in the No. 9 Seam. Development in District 093 has been significantly slowed by numerous faults encountered in the seam, while District 161 benefits from more favorable geological conditions with limited faulting. The active longwall panel is LW 030902 in the No. 9 Seam, operating with FM LW method.

The No. 9 and No. 16 seams have average coal thicknesses of approximately 2.7 m and 5.1 m, respectively. Consideration has been given to employing backfilling methods to recover coal pillars left from previous mining, although the profitability of such recovery remains uncertain.

ROM coal from underground is processed at the onsite CPP, with a reported historical clean coal yield of approximately 70%.

4.1.11 Luotuoshan

The Luotuoshan Mine is located in Haibowan District, Wuhai City, on the western limb of the Zaozishan Coalfield anticline in western Inner Mongolia. The underground mine enjoys convenient transportation, with the Jingzang Expressway and the Haibowan–Gongwusu highway running through the center of the mine area and a regional railway spur located only a few kilometers away.

The geology of the mine is complex, characterized by numerous faults and disturbed structures. In addition, mine-out areas from local coal mines are distributed within and around the mine, particularly in the No. 9 and No. 16 seams, where accumulated water may be present. The primary mineable seams are the No. 9-2, No. 10, No. 16-1, and No. 16-2, with a combined thickness of 10.41 m. However, the mine is currently approved to extract only the No. 9-2 and No. 10 seams.

Construction of the mine commenced in May 2006, but was suspended on March 1, 2010, due to a major flooding accident. Work resumed on April 18, 2014, before being suspended again between December 2015 and June 2021 because of market conditions. Construction formally resumed in July 2021, and since December 2024 the mine has been in the stage of test run.

The mine is designed with a main incline, a service incline, a gently dipping incline, an

intake shaft, and a No. 1 air-return shaft. Mining uses FM LW method, with a single panel planned to sustain a production capacity of 1.5 Mtpa. The first panel, LW 110901, has advanced approximately 400 m. Due to high gas content, pre-drainage of gas is required before mining. Development work is carried out by two RH headings and one drill-and-blast heading.

ROM coal is processed at the Luotuoshan CPP. The product mix includes coking coal as clean coal and middlings for power generation.

4.1.12 Lutian

The Lutian Mine is located in Gongwusu Town, approximately 45 km southeast of Wuhai City, Inner Mongolia, and forms part of the Zhuozishan Coalfield. The mine was originally developed as an open-pit operation in the early 1970s, and started production in 1980 with a designed capacity of 1.2 Mtpa, later expanded to 1.6 Mtpa. In 2001, the operation was converted into an underground mine, with a current approved production capacity of 1.2 Mtpa.

The geological structure of the area is dominated by a gentle syncline, accompanied by several near north–south trending thrust faults and east–west trending normal faults. The overall structural complexity is considered moderate. Construction of the last mining district commenced in June 2004, and the district was brought into production in June 2007.

Currently, the mine is exploiting the No. 17 Seam, which has an average thickness of 1.2 m and dip angles ranging from 10° to 14°. The mine shafts include a main incline, a service incline, a man-riding incline, and an air-return shaft. The current mining depth ranges between 141 m and 162 m.

At present, one FM LW panel (LW 041701) is in operation, supported by one RH development face working on the roadways for LW 041702. The last panel in the No. 17 Seam is the short panel LW 041703. Upon the completion of these panels, the mine will enter the closure phase.

ROM coal from the mine is processed by dry beneficiation and sizing before being sold. As part of the mine closure and residual resource recovery plan, the operator is considering the option of recovering certain remaining coal pillars through future open-pit mining, although the economic feasibility has yet to be confirmed.

4.1.13 Pinggou

The Pinggou Mine is located in Kabuqi Town, Haibowan District, Wuhai City, Inner Mongolia, only about 10 km from the city center, with convenient access to both railway and highway transportation. The underground mine was initially constructed in 1958

with a designed capacity of 0.45 Mtpa. After several stages of technical upgrades, production capacity reached 1.8 Mtpa by 2010.

The original mining right certificate permitted mining between +1,220 m and +1,100 m elevations. In practice, mining had been extended to as low as +880 m, which resulted in production suspension since November 2016. Recently, the mining right certificate has been updated to allow mining down to +750 m. Based on the new license, a technical upgrade design report is prepared in May 2025. A government-designated ancient rock art protection zone is located on the surface above the mine. Coal pillars must be reserved beneath this area during underground mining to prevent disturbance to the protected site.

The original underground mine was developed by three inclines from the surface, namely the main incline, service incline, and man-riding incline, along with multiple air-return shafts in different districts. Due to the long suspension period, reusing most of these facilities is not practical. According to the technical upgrade design, only one incline will be reused for personnel travel, and three new accesses will be constructed, namely, the main incline, service incline and air-return shaft. A single working level is proposed at the +980 m elevation.

The mine area is divided into three sub-areas by a series of faults and further divided into six mining districts by grouping nearby coal seams. The initial operation after upgrade is in the Sub-area III. One FM LW face and two RH faces are employed to accomplish coal mining and roadway excavation. Coal produced from Pinggou will be processed at the Luotuoshan CPP which has sufficient redundant capacity. Construction of mine technical upgrade is expected to commence in October 2026 and be completed by March 2029.

There are five minable seams within the property, four of which have already been partially mined. Faulting is relatively well developed in the area, and the structural complexity is considered moderate. Gas content is high, and pre-drainage is expected to be required before resuming production in the future.

4.1.14 Suhaitu

Suhaitu used to be an underground mine located west of Huangbaici Mine. The underground operation was terminated after the coal resources were depleted. Currently the mine is recovering the remaining coal pillars left by previous mining activities using open-pit methods in the name of environmental protection (to prevent future spontaneous combustion and prepare the mined-out area for reclamation), as approved by the local government. No coal resources are estimated for Suhaitu in this report.

4.1.15 Wuhushan

The Wuhushan Mine shares its northern boundary with the Huangbaici Mine and is located about 7.5 km northwest of Wuda District, Wuhai City. The underground mine was initially constructed in 1970, and the current approved production capacity is 2.0 Mtpa.

The strata generally strike north–south and dip east, with the northern and southern ends gradually turning eastward and closing. The dip angle is typically 8–10°. Numerous faults are present, dominated by thrust faults with some normal faults, though influence on the coal seams and coal quality is limited.

The mine is accessed by four inclines: the main incline, service incline, man-riding incline, and the No. 4 reverse incline. In addition, there are two air-return inclines servicing operation in the No. 9 and No. 12 seams. A single mining level has been established at +950 m elevation.

The current minable seams are the No. 9, No. 10, and No. 12 seams, with average thicknesses of 2.8 m, 2.0 m, and 4.3 m, respectively. A single set of FM LW equipment is used for both the No. 9 and No. 10 seams, while the No. 12 seam is mined with a separate set. Remaining resources include one longwall panel in the No. 9 seam, five panels in the No. 10 seam, and five panels in the No. 12 seam. Deeper seams are also mineable, however, they are not included in the current mining right certificate. Mining of those seams would require updating the certificate and paying additional mining rights fees. The currently active panel is LW 011008.

At present, the mine has three development faces: two in the No. 12 seam and one in the No. 9 seam, equipped with RH and bolter-miner units.

A CPP with a capacity of 2.1 Mtpa is located near the mine portal. The CPP employs dense medium separation for coal washing and is equipped with loading facilities connected to both rail and truck transport systems.

Xinjiang Energy

4.1.16 Heishan Open-pit

The Heishan Mine is located approximately 90 km northwest of Tuokexun County and about 65 km south of Urumqi City, Xinjiang. The mine area is connected to Provincial Highway S103 via a local road, providing convenient transportation conditions.

The coal-bearing strata form a monocline structure with dip angles ranging from 13° to 25°, containing multiple thick coal seams with an average cumulative thickness exceeding 100 m. The Heishan Open-pit commenced construction in April, 2013, and the current pit limits extend approximately 2.4 km in the north-south direction and 3.6

km east-west. The lowest stripping level is at +2,325 m elevation, and the lowest mining level is at +2,300 m, giving a maximum mining depth of 225 m. The mine's approved production capacity is 16.0 Mtpa, officially granted in May 2024.

Coal mining in the initial district follows the coal outcrop along strike, advancing down-dip to the south. After reaching the southern boundary, the operation will turn eastward, and by late 2025, internal in-pit dumping conditions are expected to be established, allowing for overburden disposal within the mined-out area. Currently, the northern truck external dump has been completed, while the southern truck dump and northern spreader dump remain in use. The truck dumping benches in the internal dump are designed with 30 m height, while external dump benches are 20 m high.

The mine employs horizontal benching for both coal extraction and overburden stripping. The operational bench height is 15 m, with working slope angles of 70°.

Currently, coal mining activities are managed internally, while stripping operations are fully outsourced. The minimum working platform width is 60.5 m under the contractor phase, increasing to 65 m after the transition to a fully self-operated mode with upgraded equipment. The stripping operations utilize two 8 m^3 and four 12 m^3 excavators, and 45 trucks of 90 t capacity handle the haulage.

The land acquisition process proceeded smoothly without significant obstacles. The stripping ratio in the initial mining district is approximately 8 m^3/t, and 10 m^3/t in the second district. Coal will be transported out of the area by truck after screening and sizing.

4.1.17 Hongshaquan No. 1 Open-pit

The Hongshaquan No. 1 Open-pit Mine is located approximately 78 km northeast of Qitai County, Xinjiang. The mine area is well connected by a network of railways, national highways, and provincial roads, providing excellent transportation access. The local terrain generally slopes from southeast to northwest and is characterized by an eroded hilly plain. The mine forms part of the Western Heishan Block of the Zhundong Coalfield, where several large-scale coal operations are planned, with a projected combined capacity of 145 Mtpa upon full development.

The approved production capacity of Hongshaquan No. 1 Open-pit is 30.0 Mtpa. The deposit contains four main seams, namely, B4, B3, B2, and B1, with a total coal thickness of approximately 46 m. The current open-pit extends 3.5 km east–west and 1.5 km north–south. Depending on coal thickness, bench heights of 15 m and 20 m are adopted for coal mining.

All overburden stripping operations are outsourced, using 10 m^3 excavators and 100 t

mine trucks, at an average stripping cost of approximately RMB12/t. Coal mining is self-managed, equipped with 12 m³ excavators and 130 t haul trucks. The current stripping ratio is approximately 4.5 m³/t, and in-pit dumping has been fully implemented.

No villages or residential areas are located within the mining boundary, and land acquisition has proceeded smoothly.

The mine operates two ROM coal processing systems with capacities of 10 Mtpa and 15 Mtpa, respectively, and a third system is currently under construction. Transportation of the product coal is by rail, truck, and belt conveyor. A belt conveyor connects the mine with the nearby power plant, which currently consumes coal at approximately 6.5–7.0 Mtpa. The product coal calorific value ranges between 4,800 and 5,000 kcal/kg.

4.1.18 Hongshaquan No. 2 Open-pit

The Hongshaquan No. 2 Open-pit is next to and shares its eastern boundary with the Hongshaquan No. 1 Open-pit. The logistics and geological conditions of the two mines are similar. Currently, the Hongshanquan No. 2 Open-pit is under construction with the Phase I output capacity of 10 Mtpa. According to Xinjiang Energy, the mine is expected to eventually expand to a 30 Mtpa operation, and the design report is under preparation.

As of July 2025, the mine pit extends approximately 2.5 x 1.7 km, and only external dumping of stripping material is practiced. The external dump has sufficient volume available for mine construction. Currently most of the mine construction works including stripping, blasting and coal mining are outsourced. Upon completion of the initial construction, coal mining will be self-managed.

4.1.19 Tunbao

The Tunbao Mine is located in Liuhuanggou Town, Changji City, Xinjiang. A highway on the southeast side of the mine connects to Provincial Roads 101 and 104, and it is about 42 km east to Urumqi City. The underground mine is mainly accessed by road. The area belongs to the Zhunnan Coalfield in Changji, where many coal mines are distributed nearby, and supporting infrastructure is well developed.

Tunbao started initial mine construction in 2006 and officially put into production in 2010 with an initial capacity of 1.2 Mtpa. Its current approved production capacity is 2.7 Mtpa. The mine field is a simple northwest-dipping monocline, with coal-bearing strata dipping at angles between 13° and 24°. Faults are mainly concentrated in the southeastern part of the mine field, while other areas have sparse faulting and no magmatic intrusions have been found.

The mine is accessed through a main incline, a service incline, and an air-return shaft.

There are three mining levels at elevations of +850 m, +600 m, and +500 m. The first level was completed and sealed in August 2018, and the current production level is the second one. The current longwall panel is LW WII02040502, extracting the No. 4 and No. 5 seams together using FM LW SLC methods. The shearer cuts the lower 3.2 m coal layer, while the 4.8 m top coal is recovered by caving. Three development sections are deployed for drivage work, using mainly RH and bolter miners.

There are no villages or residential areas within the mining boundary. The mine is classified as high-gas and has a weak bump-prone hazard, which imposes certain operational constraints. Historically, the mine operated with a single-wing layout, leading to production continuity challenges. A dual-wing layout transformation is currently in progress, and full production is expected by 2027.

ROM coal is processed at the surface using dry separation to produce clean coal, middlings, fines, and waste rock. The CPP has a capacity of about 3.0 Mtpa. The expected raw coal throughput in 2025 is 0.7 Mt. Coal products are transported by truck to nearby power plants and cement plants, and a portion is sold locally for residential heating.

4.1.20 Wudong

The Wudong Mine is located 34 km northeast of Urumqi, Xinjiang, with direct access by both railway and highway, providing convenient transportation. The surface topography is hilly, sloping from south to north, and the area is dissected by gullies. Due to a long history of coal mining in the region, numerous subsidence pits have developed over mined-out areas, and surface vegetation is sparse. The folding and fault structures in the area are weakly developed, with an overall moderate degree of structural complexity. Wudong is classified as a high-gas and bump-prone mine.

Wudong Mine was formed through the consolidation of four smaller underground mines. After integration, the designed production capacity of the mine was set at 6.0 Mtpa. The mine is developed by inclines and divided into two production levels and multiple mining districts. The northern district is equipped with a main incline, a service incline, and an air-return shaft; the southern district has a newly constructed service shaft and air-return shaft; and the western district plans to build a main incline, a service incline, and an air-return shaft. The overall system is relatively complex.

According to coal seam dip angle, thickness, and spacing, different mining methods are applied in various districts, including FM LW and FM LW SLC. The original design planned for four longwall panels to operate simultaneously in order to achieve the designed production capacity. However, due to factors such as unbalanced development vs. LW retreating speed, mine hazards and market conditions, the mine currently only operates at approximately 3.0 Mtpa.

At present, mining is conducted at the first level, extracting the B1-2 and B3-6 seams. Because of the relatively steep dip, vertical sections are established every 25 m, with longwall panels arranged along the thickness direction within each section. The FM LW SLC method is adopted for coal recovery.

According to the design, coal produced from the northern and southern districts is processed by washing, while coal from the western district will be treated by dry air separation.

4.1.21 Zhundong Open-pit

The Zhundong Open-pit Mine is located approximately 110 km north of Jimusa'er County and 218 km from Urumqi, Xinjiang. The mine area is connected to the provincial highway network and has direct railway access, providing convenient transportation and well-developed infrastructure. The Zhundong Coalfield is a greatly developed, large-scale national coal base, surrounded by numerous planned and operating coal mines.

Construction of the Zhundong Open-pit began in 2006, and its production capacity has been gradually expanded to the current approved level of 35.0 Mtpa. The mine area is characterized by a gently inclined monocline with minimal variation in strike and dip, and no significant fault disturbance. The overall structural complexity of the open-pit is classified as simple. The coal-bearing strata comprise three groups, namely, A, B, and C, with the B group containing thick, high-quality seams and serving as the main mining horizon.

During initial development, mining advanced westward to the western boundary, after which operations turned southward. The maximum mining depth has reached approximately 240 m. The stripping ratios for the first, second, and third mining districts are approximately 3.0, 3.5 - 4.5, and 6 - 7 m^3/t, respectively. All overburden removal is outsourced, with a current stripping contract rate of RMB10.4/m^3. Coal extraction is self-managed, utilizing 8–12 m^3 excavators and 100 t mining trucks. The current ratio of internal to external dumping is approximately 7:3.

Coal products from the mine are primarily supplied to nearby power plants and aluminum smelting industries, with a smaller portion transported externally for sale.

Guodian Construction and Investment

4.1.22 Chahasu

The Chahasu Mine is located in Wulanmulun Town, Yijinhuoluo Banner, within the Xinjie mine group area of the Dongsheng Coalfield. The underground mine has a designed production capacity of 8.0 Mtpa. This region is one of the largest coal-producing areas in China, surrounded by a number of the country's most advanced

underground coal mines. The surrounding railway and highway networks are well-developed, providing excellent transportation and infrastructure conditions.

The Chahasu Mine area is characterized by a monocline structure dipping to the southwest, with a gentle inclination of 1–3 degrees. No folds or igneous intrusions have been identified within the lease area. Faults are rare, generally with displacements of less than 3 m and short extension lengths. The mine has low gas content and little risk of bump hazard, indicating simple geological conditions overall. There are 11 mineable coal seams in the area, making it suitable for the development of a large-scale modern underground mine.

The mine is developed using a mixed multi-level system consisting of a main incline, a service shaft, and an air-return shaft. Currently, production is ongoing in the No. 2-2U and No. 3-1 coal seams, both mined by FM LW methods. The active working face in the 2-2U seam is LW 32-215, with a seam thickness of 2.7 m; in the 3-1 seam, the active working face is LW 32302, with a seam thickness of 5.2 m. The mine operates three development teams, all equipped with bolter-miners, ensuring continuous face preparation in both seams.

The Chahasu CPP with matching capacity (8.0 Mtpa) has been constructed adjacent to the mine. The plant adopts heavy medium vessel for lump coal and produces low-ash clean coal. The fine coal product is mainly supplied to the Bulianta Power Plant for combustion.

Pingzhuang Coal

4.1.23 Baiyinhua No. 1 Open-pit

The Baiyinhua No. 1 Open-pit Mine is located in Bayinhua Town, West Ujimqin Banner, Xilingol League, within the southwestern part of the Baiyinhua Coalfield. The mine extends approximately 4.65 km from southwest to northeast and 4.49 km from northwest to southeast, covering an area of about 19.92 km². The site is accessible via provincial highway S307 to Xilinhot, and a dedicated coal railway line passes through the mining area, providing excellent transportation conditions.

The mine was consolidated from three small local open-pit operations, each originally constructed in 1973. Following integration in 2008, the design production capacity was set at 7.0 Mtpa. Construction commenced in 2010, and production officially began in January 2016. In April 2022, the approved capacity was increased to 12.0 Mtpa.

The regional topography is characterized by plateau-like low mountains and gently sloping hills. The coal-bearing strata occur in a synclinal structure trending northeast and dipping southwest, with dip angles of 5 - 9°. The total coal-bearing sequence is approximately 261 m thick, with a total mineable coal thickness of approximately 42 m

from four main seams.

The designed surface boundary measures approximately 4.73 km east-west by 4.38 km north-south, with a maximum mining depth of approximately 400 m. The average stripping ratio is 5.43 m³/t. Overburden stripping is fully outsourced, using truck-shovel methods, at a current contract price of RMB10.5/t. Coal mining is self-managed, employing two 12 m³ electric shovels, one 15 m³ and two 7.5 m³ hydraulic excavators, and a fleet of fourteen 91 t mining trucks. Semi-mobile crushing stations and belt conveyor system are installed for material handling.

At present, full in-pit dumping has not yet been achieved. External dump sites are located on both the northern and southern sides of the pit, providing sufficient waste disposal capacity. ROM coal is crushed and screened on site, and the products are transported off-site either by truck or via rail. Product coal is mainly used for power and chemical industries.

4.1.24 Boligou

The Boligou Mine is located in Xuejiawan Town, Jungar Banner, with a mining area of 18.1463 km² and a designed capacity of 4.0 Mtpa. Construction officially commenced in December 2024, and the underground mine is currently in the early development stage. Commissioning and production are expected by July 2027.

Xuejiawan lies at the core of the Jungar coal production region, where more than 40 mines are planned, with a total capacity of approximately 292.8 Mtpa. The area is well-developed, with extensive transportation networks and supporting infrastructure.

The Boligou Mine is located on the western limb of the Yaogou Anticline in the northern part of the Zhunge'er Coalfield. The strata generally dip northwestward, with a NNE–SSW strike and an average dip angle of around 5°, forming a simple monocline structure. Six coal seams are mineable, among which the No. 6 Seam, with an average thickness of 12.6 m, is the principal seam.

According to the design report, mine development will include one main incline, one service shaft, and one air-return shaft. The mine will operate at a single level within the No. 6 Seam at the +890 m elevation. Depending on seam thickness, FM LW SLC mining will be used in the thick No. 6 Seam, while other seams will adopt FM LW mining. Development drivage will be conducted by one RH section and one bolter-miner section.

Railways, highways, and high-voltage transmission lines traverse the surface above the mining area, where barrier pillars will be left for protection. Additionally, multiple villages of varying sizes are located within the mine boundary and will be relocated

prior to mining beneath each area.

A CPP matching the mine's capacity (4.0 Mtpa) will be constructed, employing a combination of dry processing and dense media floatation for coal washing. Clean coal products will be conveyed via a belt system to the Longwangqu railway loading station for rail transport to external markets. Commissioning and production of the mine and CPP are expected by June 2028.

4.1.25 Hesigewula South Open-pit

The Hesigewula South Open-pit Mine is located in Wulagai, Xilingol League, Inner Mongolia, and forms an important part of the Eastern Inner Mongolia large-scale coal production base. The Hesigewula Coalfield is divided into open-pit and underground mining areas; currently, only the open-pit section is under development, while the underground area remains undeveloped.

The open-pit section, operated as the Hesigewula South Open-pit Mine, obtained its mining right certificate in 2020, with construction commencing the same year and commercial production beginning in 2023. The mine has an approved production capacity of 15.0 Mtpa.

The Hesigewula Coalfield extends approximately 45 km in length and 5 km in width, characterized by shallow and thick coal seams. The geological conditions are generally simple and structurally stable, making the deposit well-suited for open-pit mining. The mine extracts seven coal seams, with Seams 2-1 and 3-1 being the primary production seams. The overall stripping ratio is approximately 4.1 m^3/t.

All overburden stripping is outsourced, utilizing the truck–shovel system with a contract stripping cost of RMB 10/m^3. Coal mining is managed internally using four 12 m^3 electric shovels, two 7.5 m^3 excavators, and thirty-one 100 t trucks. The production process integrates a truck–shovel–semi-mobile crusher–belt conveyor system for efficient material handling.

During the initial years of operation, due to local steeper coal seam dips, overburden is dumped externally. By the fourth year of full production, in-pit dumping will be partially implemented, and by the tenth year, the mine is expected to achieve complete in-pit dumping.

After crushing, raw coal is transported via belt conveyors to surface storage areas, from which the product is rail-transported primarily to power plants for electricity generation.

4.1.26 Yuanbaoshan Open-pit

The Yuanbaoshan Open-pit Mine is located in Yuanbaoshan District, Chifeng City, within the eastern central part of the Yuanbaoshan Coalfield. The mining area covers approximately 12.87 km^2. The original design capacity was 5.0 Mtpa. Construction began in 1990, and production commenced in 2005. In 2019, the approved production capacity was increased to 12.0 Mtpa.

The mine is situated close to Chifeng City, with several expressways passing nearby. Passenger and dedicated mining railways connect directly to the area, providing excellent transportation access. The local topography consists of low mountains and hilly terrain. A few villages exist within the mining boundary and are scheduled for complete relocation.

Structurally, the area represents an incomplete, gently inclined syncline, with one flank truncated by faults. Most strata dip at 3–14°, with an average dip angle of approximately 8°. Multiple coal seams are present, with a cumulative thickness of approximately 84 m. Among these, the No. 5 and No. 6 seams are the main mineable seams. The average stripping ratio is approximately 4.73 m^3/t.

The upper overburden, consisting of topsoil and Quaternary sand–gravel layers, is stripped using a bucket-wheel excavator–belt conveyor–spreader continuous mining system. Currently, approximately 60% of the stripping work is outsourced. The lower rock and coal seams are mined using a shovel (excavator)–truck–semi-mobile crushing station–belt conveyor–spreader semi-continuous system, along with a excavator–truck discontinuous system. Coal extraction is conducted in-house.

The main production equipment includes bucket-wheel excavators, belt conveyors, spreaders, crushing stations, four 12 m^3 electric shovels, five 7 m^3 excavators, thirty-three 91-ton trucks, and five TR100 autonomous mining trucks. The mine has not yet reached its designed capacity and is expected to achieve full production by 2026.

The coal type is mature lignite, with a calorific value of approximately 3,000–4,000 kcal/kg. The primary markets include the Yuanbaoshan Power Plant, as well as nearby heating market in Jilin and Liaoning Provinces.

Jinshen Energy

4.1.27 Ciyaogou

The Ciyaogou Mine is located approximately 18 km southeast of Hequ County, Shanxi Province. The region hosts numerous coal mines, with well-developed transportation networks and supporting infrastructure. The underground mine was originally constructed in 2012 with an initial production capacity of 1.2 Mtpa and was later upgraded to an approved capacity of 5.0 Mtpa in September 2021.

The coal-bearing strata in the Ciyaogou Mine exhibit a gentle monocline structure with simple geological conditions. The mine is classified as a low-gas mine and contains four mineable seams: No. 10-1, No. 10-2, No. 11, and No. 13. The mine is developed with a main incline, a service (horizontal) adit, and an air-return incline, and is mined at two production levels. The first level (at +924 m elevation) has been fully mined out, while current operations are focused on the second level at +890 m elevation.

At present, the mine is producing from the No. 13 Seam, with the active longwall panel LW 13104 employing FM LW SLC methods. The average coal seam thickness is 11.5 m, with the shearer cutting height of 4.4 m, and the remaining top coal recovered through caving. There is one development team equipped with a bolter-miner, achieving a monthly roadway advance rate of approximately 1,100 m.

All surface villages are planned for relocation prior to mining of the areas below.

A third-party coal preparation plant (CPP) is located on the surface, providing washing services at a processing cost of approximately RMB 20/t. The final product coal is transported by rail for external sales.

4.1.28 Shaping

The Shaping Mine is located in Hequ County, Shanxi Province. The underground mine commenced construction in August 2007 and started production in 2010 with an initial capacity of 2.4 Mtpa. The mine produces long-flame to non-caking coal. The approved mining depth range covers coal seams No. 6 to No. 14, between +990 m and +700 m elevations, within a monocline structure of overall simple geological conditions. In August 2013, the mine's capacity was increased to 4.0 Mtpa, and by September 2021, it had reached 8.0 Mtpa, with the Safety Production License obtained in December 2024.

Mining of the No. 8U and No. 8 seams has been completed. Current production focuses on the No. 9 and No. 13 seams. The No. 9 seam is mined by FM LW methods, with a seam thickness of 2.5–3.5 m. The No. 13 seam employs FM LW SLC mining, and the current face shearer cut 4.3 m of coal and the top coal of 12.5 m is recovered by caving.

The mine is accessed by four openings: a main incline, a service adit, an intake incline, and an air-return shaft. There are five development teams, equipped with bolter-miners, continuous miners (CMs), and roadheaders (RHs). The overall exploration degree is relatively high. No village relocation is required for mining operations.

The original CPP, built in December 2005 with a capacity of 5.0 Mtpa, used a combination of heavy medium (HM) and hydrocyclone processes. However, due to

Yellow River environmental discharge restrictions, all related facilities within 1 km distance from the Yellow River were ordered to close, and the main washing equipment of Shaping CPP was dismantled in 2024.

A new CPP is planned and expected to be completed by the end of 2027. During this interim period, the mine must adjust its production scheduling to prioritize high-quality, low-cost coal zones (raw coal with calorific value above 3,500 kcal/kg) to sustain operations through the construction phase. Raw coal above 3,500 kcal/kg can be sold directly after screening, while coal below that threshold must be transported off-site for contract washing, at a comprehensive cost exceeding RMB 100/t.

Historically, the CPP achieved an average yield of around 70%, with a product target of 4,500 kcal/kg clean coal. The mine primarily markets its coal through Shenhua's sales channels.

4.1.29 Summary

In reviewing the data provided regarding these mines in operation, we concluded that the mine design documents are typical of those we have reviewed over our extensive experience in China. Most of these mines appear to generally follow the design guidelines issued by industry authorities, and the design reports address salient aspects of mine operation (if applicable for underground mines or open-pit mines) including, but not limited to, local economy and infrastructure, power and water supply, regional geology and resource conditions, geotechnical and hydrogeological conditions, mine access design, mine layout and underground workings, development arrangement, transportation, ventilation and safety, mine hazard control (methane, fire, dust, flooding, geothermal, bump, etc., and evacuation plans), hoisting, pumping, as well as outlined mine economic assessments. As operations continue, necessary mine extension designs or mine modification/upgrade designs are routinely carried out to cope with the changed situations. In discussion with the personnel of the subsidiaries under China Energy, management and technical staff demonstrated full awareness of the operational details and issues at each mine during our inquiry.

4.2 Current Operations

4.2.1 Output

Coal output for the subject China Energy mines from January 2022 to July 2025 is summarized as follows:

Table 4-2 Historical Production

	Historical Production (Mt)			
Company / Mine	2022	2023	2024	Jan.-Jul. 2025
China Energy Guoyuan Power Co., Ltd.				
Chaoyang Open-pit	6.51	6.55	6.78	4.33
Dananhu No.2 Open-pit	10.12	11.56	12.04	6.43

Subtotal - Jinshen Enrgy	10.86	10.35	6.32	3.32
Total	190.56	198.10	197.82	108.86

As shown, the historical product coal outputs are generally stable over the past three years, although there have been some fluctuations among individual mines. With the addition of coal output tonnages from the new mines, some existing operations produced less than their designated capacities due to various reasons, including market and sales considerations, mine renovations, and temporary transition between old and new mining districts. Chahasu, for example, had to reduce production in 2023

and 2024 due to issues encountered with its mining right registration update.

The open-pit mines, characterized by their large-scale operations, accounted for approximately 71% of total production. The average output capacity of the subject open-pit mines is approximately 16.7 Mtpa, considerably higher than that of underground mines, which average approximately 4.0 Mtpa. Most of the large open-pit operations are located in eastern Inner Mongolia and Xinjiang, where the coal seams feature shallow occurrence and substantial thickness. In contrast, Wuhai Energy's underground operations have remained relatively small in scale, mainly due to the limitations resulting from the historical consolidation from smaller mines. The Renjiazhuang, Sandaogou and Chahasu underground mines have relatively high output capacities and are located in the well-known Ningdong, Shenfu and Dongsheng coalfields, respectively, where the most of China's large underground coal mines are concentrated. The Ciyaogou and Shaping mines of Jinshen Energy are well-equipped modern underground operations located in Shanxi Province. The decline in Shaping's output in 2023 was caused by the mandatory shutdown of the Shaping CPP following an environmental protection campaign along the Yellow River, which required the closure of all industrial facilities within 1.0 km of the Yellow River that discharge liquid pollutants.

4.2.2 Staffing

Historical staffing for the subject China Energy mines is summarized as follows:

Table 4-3 Historical Staffing

	Year			
Company / Mine	2022	2023	2024	Jan.-Jul. 2025
China Energy Guoyuan Power Co., Ltd.	Historical No. of Personnel

Shanxi Jinshen Energy Co., Ltd.				
Ciyaogou	613	615	628	619
Shaping	854	861	1,010	903
Subtotal - Open-pit	5,303	5,648	5,857	6,340
Subtotal - Underground	11,456	11,522	11,348	11,566
Total	16,759	17,170	17,205	17,906

For open-pit mines, it is a common practice to contract stripping work to third-party contractors. The personnel shown in the table does not include the contractors' employees. The overall staffing of the subject China Energy mines has remained generally stable, with slight fluctuations less than 3%.

The historical labor productivity, in terms of open-pit and underground operations, is summarized as follows (the labor productivity numbers for 2025 are annualized):

Table 4-4 Historical Labor Productivity

	Year			
	2022	2023	2024	Jan. - Jul. 2025
Operations	Product Tonnes, Mt			
Open-Pit	138.19	151.09	157.49	84.02
Underground	52.37	47.01	40.33	24.84
Total	190.56	198.10	197.82	108.86
	Historical No. of Personnel			
Open-Pit	5,303	5,648	5,857	6,340
Underground	11,456	11,522	11,348	11,566
Total	16,759	17,170	17,205	17,906
	Labor Productivity, Product Tonnes / Employee-Year			
Open-Pit	26,060	26,750	26,890	22,720
Underground	4,570	4,080	3,550	3,680
Overall	11,370	11,540	11,500	10,420

The labor productivity for the open-pit operations averages 25,520 tonnes/employee-year, which is comparable to that of other large open-pit coal mines in China.

The labor productivity for the underground operations averages approximately 3,970 tonnes/employee-year, which appears slightly lower than the average level of underground FM LW coal mines in China. It is our opinion that this lower productivity mainly results from the relatively small-scale and lower output of the underground operations of Wuhai Energy. The overall average labor productivity for the subject China Energy operations during the period from 2022 to July 2025 is approximately 11,200 tonnes/employee-year.

4.2.3 Capital Expenditures

Historical capital expenditures for the subject China Energy mines from January 2022 to July 2025, are summarized as follows:

Table 4-5 Historical Capital Expenditures

	Historical Capital Expenditures, RMB millions

Total	3,126.4	2,598.9	4,371.2	1,566.6

The largest capital spending is attributed to new mine construction including surface facilities, major mine expansion, major production equipment replacement, safety-related facilities upgrading, coal preparation facilities upgrading, etc. The overall sustaining capital for the open-pit mines averages approximately RMB7.1/tonne of output capacity, which appears moderate for the large size open-pit operations. The average sustaining capital spending for the underground mines is approximately RMB29.6/tonne of output capacity, which in our opinion appears slightly higher and reasonable compared with the average of underground FM LW mines in China, mainly due to the recent commencement of mine upgrades and construction of new mines.

4.2.4 Operating Costs

Historical operating costs for January 2022 to July 2025, by mine are summarized as follows:

Table 4-6 Historical Operating Costs

				Jul.				Jan.-Jul.

Shaping	130	142	201	300	174	189	273	508

Operating costs of the subject open-pit mines during the period from 2022 to July 2025 averaged approximately RMB150 per product tonne, which appears comparable to other open-pit coal mines with similar output (mostly in northern China). Average operating costs for the Wuhai Energy underground mines exceed RMB500 per product tonne, which is higher than the industrial average, resulting from the longer operating years and lower output level than the actual capacities. Operating costs for the underground mines of the subject companies other than Wuhai Energy generally appear normal. The operating costs for all the subject underground mines averages RMB294 per product tonne. The operating costs of all the subject China Energy mines are approximately RMB191 per product tonne.

4.3 Future Operations

4.3.1 Output

The subsidiary companies of China Energy provided the projections for ROM coal production for the subject mines, mostly following the authorized output capacity. The commercial (product) coal output was not provided. The output projections for the subject China Energy mines for August 2025 to 2029 are summarized as follows:

Table 4-7 Output Projections

	Production Projections (Mt)

Fluctuations in the output projections for an individual mine in particular years may be caused by: market considerations, mining condition change or area shifting, completion of mine technical upgrade or new mine construction, etc. Most of the mines

will produce coal within the current authorized capacity, with exceptions of the Lutian, Hongshaquan No.2 Open-pit mines, which are considering application for a higher capacity (which is reflected in the output projections). According to the mine management, the technical upgrade construction of the Pinggou Mine of Wuhai Energy is expected to commence in October 2026 and complete in March 2029. Suhaitu will stop operation once the excavation of residual coal is completed, and coal output data are not available. Construction of the new Boligou Mine of Pingzhuang Coal is projected to be completed by the end of 2027 and the mine is expected to attain design capacity in 2028. We have not identified significant geological or mining-related issues during our review that would prevent the subject mines from achieving projected output levels. LW performances required to attain output projections are reasonable and realistic based on the recent operating history.

4.3.2 Staffing

Projected staffing for the subject China Energy mines is summarized by mine as follows:

Table 4-8 Staffing Projections

	Year				
Company / Mine	2025	2026	2027	2028	2029
China Energy Guoyuan Power Co., Ltd.	Projected No. of Personnel				
Chaoyang Open-pit	208	208	207	206	206

Shaping	918	933	947	962	977
Subtotal - Open-pit	6,375	6,307	6,285	6,269	6,222
Subtotal - Underground	11,790	11,899	12,243	12,289	12,250
Total	18,165	18,206	18,528	18,558	18,472

The open-pit mines plan to continue the practice to outsource stripping work to third-party contractors. The personnel shown in the table does not include the contractors' employees. The overall staffing level of the subject China Energy mines remains generally stable with only slight fluctuations.

The projected labor productivity, in terms of open-pit and underground operations, is summarized as follows:

Table 4-9 Projected Labor Productivity

Operations	Aug.-Dec. 2025	2026	2027	2028	2029
	Projected Product Tonnes, Mt				
Open-Pit	60.28	162.00	174.90	187.40	188.40
Underground	20.39	48.64	50.07	52.47	57.78
Total	80.67	210.64	224.97	239.87	246.18
	Projected No. of Personnel				
Open-Pit	6,375	6,307	6,285	6,269	6,222
Underground	11,790	11,899	12,243	12,289	12,250
Total	18,165	18,206	18,528	18,558	18,472
	Labor Productivity, Product Tonnes / Employee-Year				
Open-Pit	22,690	25,690	27,830	29,890	30,280
Underground	4,150	4,090	4,090	4,270	4,720
Overall	10,660	11,570	12,140	12,930	13,330

The labor productivity for the open-pit operations averages 27,250 tonnes/employee-year, which is approximately 7% higher than the historical performance due to the output increase from the open-pit mines. The labor productivity for the underground operations averages approximately 4,260 tonnes/employee-year, which appears comparable to the historical performance. It is our opinion that the overall labor productivity projection of the subject mines appear achievable.

4.3.3 Capital Expenditures

Projected capital expenditures for the subject China Energy mines by mine are summarized as follows:

Table 4-10 Capital Expenditures Projection

	Projected Capital Expenditures, RMB millions

Note: N/A = Not Available

Capital expenditure projections data provided were not complete, with the missing data mainly for the normal operating mines. Based on our experience in China, the sustaining capital for underground and open-pit mines generally falls in the range approximately RMB15-30/ROM tonne capacity and RMB5-15/ROM tonne capacity, respectively. The capital spending projections for the mines under expansion, technical upgrading and new mine construction were provided. Upon review, the projected capital expenditures generally appear reasonable to achieve the targeted production

levels for these mines within the projected timeframe.

4.3.4 Operating Costs

Projected operating costs for August 2025 to 2029 by mine, on per tonne basis and total RMB, are summarized as follows:

Table 4-11 Unit Operating Cost Projection

	Aug.-Dec. 2025	2026	2027	2028	2029	Aug.-Dec. 2025	2026	2027	2028	2029

Future operating cost projections were not provided for some mines. It is expected that such mines should have comparable operating costs as historical performance for similar output level. We reviewed the projections of detailed operating costs by category for the mines which provided such data. Our comments regarding China Energy mines' internal operating cost projections are as follows:

- The Salaries and Welfare costs reflect the projected level of employee numbers.
- Material, Power and Repairs costs appear reasonable as compared with historical performance.
- Subsidence Compensation is paid to local government and villagers for the relocation of residents and management of subsided surface. The subject mines have accumulated experience in planning and managing subsidence related issues and the projections for Subsidence Compensation costs appear reasonable.
- Depreciation costs are calculated using the straight-line method for fixed assets according to established asset depreciation lives and salvage value estimations.
- The Amortization is composed mainly of the amortization of Mining Rights fees paid by the company. In acquiring the mining rights, the mines had to pay off the resource charges upfront or in the earlier years of operation. This cost is amortized throughout the life of the mine operation.

- Safety Production and Production Maintenance ("Keep Simple Production") fees are considered as non-cash cost accruals (according to GAAP) for income tax calculations, although the monies may be utilized for mine-related projects.

It is our opinion that the projected operating costs are generally comparable to China Energy mines' historical performance and appear reasonable given the projected production levels. Economic viability of the mines' coal reserves is discussed in Chapter 8 of this report.

5.0 COAL PREPARATION

5.1 Introduction

The China Energy owns and operates a portfolio of coal preparation plants which process coals produced from their respective mining operations.

For the subject open-pit mines, coal preparation arrangement follows the general practice in the coal industry in China. During the design of the system, the general coal haulage direction is first determined according to the open-pit layout and advancing orientation of the mining area. The location of the crushing station is then selected by considering both the haulage distance and spatial constraints. Raw coal is transported by mine trucks to the crushing station, where it is unloaded into receiving hoppers, crushed, and screened. The coal is subsequently conveyed by belt conveyors to the transfer station. If a surface CPP is included in the system, the raw coal from the crushing station is delivered to the second stage crushing workshop or intelligent dry separation workshop for further processing. Some open-pit operations only employ crushing and screening for coal preparation, while some mines are equipped with intelligent dry separation systems to further separate waste rock from coal. The CPPs typically have coal yards or silos for various products such as lump coal, fine or mixed coal, and refuse depending on the product combinations. According to the customer's requirements for coal quality and sizes, the products are sized, stored and transported out accordingly after crushing and screening.

The underground mines generally have the CPPs built close to the mine openings, from where the raw coal is transported to the CPPs through series of conveyor belts. The coal is crushed first to certain sizes and screened, the being processed using various separation technologies. Storage facilities including silos or coal yards are used to store various products. Although generally the processing capacity matches (or exceeds) the mine's output capacity, the CPPs might not operate at full capacity if the raw coal could satisfy the requirements just after simple crushing and screening. Among the mine and CPP operations, Suhaitu has completed normal operation and will be closed after recovery of the remaining barrier pillars. Ciyaogou does not have coal processing facilities and processing of ROM coal is outsourced to a nearby third-party processing plant. Operation of the original Shaping CPP was terminated due to local environmental protection policy change and a new CPP will be constructed at a new location. The current coal processing capacity by the CPPs (or surface production

systems if no CPP is built) as provided by the China Energy subsidiaries are summarized as follows:

Table 5-1 Coal Processing Capacity by Mine

5.2 Historical Performance

Annual capacity is based on a typical operating schedule of 5,280 hours per year (16 operating hours per day, 330 operating days annually), with the allowances for mechanical availability, utilization, and efficiency for CPP. Historical operating hours

were provided for some of the CPPs. Using this data, we calculated the historical availability and utilization for these CPPs, which is summarized as follows:

Table 5-2 CPP Historical Performance

	Operated hours				Availability (%)				Utilization (%)			
CPP	2022	2023	2024	Jan.-Jul 2025	2022	2023	2024	Jan.-Jul 2025	2022	2023	2024	Jan.-Jul 2025

Hainan CPC Laoshidan Plant	-	-	4,290	2,679	-	-	81	87	-	-	49	52
Limin	5,383	5,786	4,945	3,562	102	110	94	116	61	66	56	70
Luotuoshan	1,493	2,902	2,539	2,334	28	55	48	76	17	33	29	46
Wuda	-	1,788	3,378	2,422	-	58	64	79	-	35	39	47
China Energy Xinjiang Energy and Chemical Co., Ltd.												
Heishan Open-pit	-	2,034	4,184	2,786	-	92	79	90	-	56	48	55
Tunbao	2,588	3,565	3,505	1,769	49	68	66	57	30	41	40	35
Wudong	969	1,706	1,523	1,218	18	32	29	40	11	19	17	24
Wudong West	3,278	3,338	2,344	1,010	62	63	44	33	37	38	27	20
Guodian Construction and Investment Inner Mongolia Energy Co., Ltd.												
Chahasu	4,236	3,347	2,362	2,005	80	63	45	65	48	38	27	39
Shanxi Jinshen Energy Co., Ltd.												
Shaping	6,297	4,991	2,172	2,987	119	95	41	97	72	57	25	58

Notes:

1. Scheduled hours are assumed as 5,280/year (16 hrs/day x 330 days/yr).
2. Availability equals Operating Hours divided by Scheduled Hours.
3. Utilization equals Operating Hours divided by 8,760 hours (total hours in year).
4. Laoshidan CPP and Gongwusu CPP were successively consolidated into Hainan coal processing center(Hainan CPC) in 2024 and 2025, respectively.

Although there is variation between CPPs, availability and utilization are high at the Shangyuquan and Limin CPPs, which operated for a high number of hours annually (close to or in excess of 5,280 hours per year) during the last three years. While a CPP can operate at these elevated operating hour levels for short periods of time, extended periods of high utilization requires committed and expanded maintenance, and may result in increased equipment downtime and plant outages. The other CPPs have been operating in relatively lower annual hours, which are mainly determined by local market conditions or where some of the coal products are likely acceptable even without processing. The CPPs in this case has higher flexibility in operation.

5.3 Production and Coal Quality

Wuhai Energy is the only subsidiary company producing coking coal among the subject entities, while the mines under the other subsidiaries produce thermal coal mainly used for power generation, with some being used for chemical industry and domestic heating. As long as the coal quality can satisfy the requirements of the customers, the coal processing facilities may not operate necessarily at their full capacity to process all the ROM coal. Detailed CPP production data from each processing facility, such as percentage of ROM being processed, tonnage breakdown of products, etc., vary substantially by plant and by year.

Typical, shipped quality of the primary coal products from the subject mines, as reported by the subsidiaries of China Energy, are as follows:

Table 5-3 Typical Product Quality

	Typical Product Coal Quality

5.4 Circuitry

Most of the subject mine CPPs produce multiple coal products by utilizing jig, screening, heavy media, and Intelligent Dry Separating (TDS) technologies. When needed, the China Energy subsidiaries have modernized the plants by equipment/system replacement as well as technical upgrades.

For the subject open-pit mines, the shovel–truck system combined with a semi-mobile crushing station is the most common and mature configuration for excavation, haulage, and primary crushing. In this system, large electric or hydraulic shovels load raw coal or overburden into mining trucks, which haul the material over a short distance to a

semi-mobile crushing station located near the pit edge or within the pit. The station is typically equipped with heavy-duty feeders and primary crushers such as gyratory or toothed-roll crushers. After crushing, the material is conveyed to the surface transfer station or the coal preparation plant.

As the open-pit mining area advances or changes location, the semi-mobile crushing station can be relocated accordingly to maintain optimal spatial arrangement and haulage distance. When the pit geometry evolves to the point that the existing setup becomes less efficient or spatially constrained, system modification or additional installations are often introduced to adapt to the new mining conditions. The surface coal preparation plant generally adopts crushing and screening processes to further size and classify the coal according to customer requirements. Product coal silos or stockyards are usually constructed near the plant for storage and blending. For nearby power plants, coal is typically transported via belt conveyor systems, while for long-distance markets, railway or truck loading facilities are provided to ensure timely dispatch of different product grades.

The TDS system operates on the principle of density differentiation using X-rays. Variations in transmitted X-ray intensity form an image that reflects density contrasts within the material. Through an intelligent recognition system, materials of different densities are displayed in distinct colors, enabling precise and automatic separation based on color variations.

This technology offers high accuracy, a simple system configuration, wide particle-size adaptability, and low environmental impact. By applying advanced image analysis and real-time tracking, it ensures precise coal-gangue discrimination with minimal coal loss. The system operates entirely without water or dense medium, eliminating the need for slurry treatment, pumps, or filtration units, thereby simplifying the process flow and significantly reducing both energy consumption and production costs. It is our opinion that, provided the product coal meets the specifications required by the consuming power plant, the intelligent dry separation technology is preferable to other processing methods.

When the heavy media approach is adopted for the subject China Energy CPPs, typical circuitry at the plants are as follows, although the details at an individual CPP may vary:

1. ROM is initially screened to remove the finer size fractions (typically less than 50 mm).
2. ROM coarse coal is processed using heavy media or jig technology.
3. Heavy Media Cyclones are used (especially in Guoyuan Power and Wuhai Energy CPPs) for finer coal processing.

4. Slimes are processed using froth flotation.
5. Product slimes are dewatered depending on size by a combination of centrifuges, and/or filter presses. In some cases, slime dryer is used to further reduce moisture.
6. Slime refuse reports to thickeners; thickener sludge is dewatered with filter presses.

Clarified water from the thickener, as well as filter press filtrate, are re-circulated through the plant, resulting in a closed-loop, no-discharge water plant system. Make-up water is obtained from the associated underground mines or nearby water plants.

Primary processing technology used by the subject CPPs are summarized as follows:

Table 5-4 CPP Primary Separation Technology

Shaping	8.0	1,400	Roller Crusher, HMV

Note:
1. HMC - Heavey Media Cyclone
2. HMV - Heavy Media Vessel
3. TDS - Intelligent Dry Separator

Most of the primary process equipment are sourced from domestic Chinese equipment manufacturers. The TDS technology is a relatively new separating technology adopted in China; however, considerable design and application experience has been attained

demonstrating the system's simple configuration, strong adaptability, low environmental impact, and high degree of automation, making it a reliable and efficient solution for dry coal preparation.

5.5 Coal Handling/Storage and Transportation

ROM coal is delivered from the respective mines via conveyor belts, and stored in raw coal silos or storage yard. The subject CPPs, located within close proximity to mine portals or open-pits, also have direct rail or highway access for facilitating delivery of coal products. ROM and product coal storage capacities of the subject CPPs are summarized as follows:

Table 5-5 Summary of CPP Silos

	Coal Storage Facilities			
Mine CPP	Raw		Products	
China Energy Guoyuan Power Co., Ltd.	Silos	Capacity, Kt	Silos	Capacity (Kt)
Chaoyang Open-pit	-	-	2	20.0
Dananhu No.2 Open-pit	-	-	3	90.0

Shaping	3	4.0	2	2.0

Depending on the distance of customer locations, product coal transportation utilizes different methods such as conveyor belt, rail or truck. Many of the subject China Energy

mines have power plants built nearby and conveyor belt is the most effective transportation approach. When rail and truck methods are employed, loading facilities are available at the coal storage locations. The arrangement of China Energy coal processing, storage and transportation is typical of the general practice in the China coal industry and has demonstrated the capability to satisfy mine operation and product coal handling requirements.

6.0 ENVIRONMENTAL OVERVIEW

6.1 Introduction

Mining and associated activities are inherently disruptive to the natural environment. The resulting impacts encompass both environmental pollution and ecological disturbance. These effects may include delayed impacts on ecosystems and ground water, variations in the magnitude and extent of the impact over time, and sustained environmental pressures throughout the entire life of the mining operation. Major influencing factors include: landscape change resulting from open pit excavation activities, generation and disposal of coal refuse materials resulting from mining and processing (screening) operations, fugitive dust, noise, wastewater and solid wastes pollution, as well as the sustained and cumulative impact of surface subsidence on landform, surface structures, the ecological environment and ground water.

BOYD personnel visited some of the subject operations in September 2025. The ecological and environmental conditions of the subject operations were assessed with a focus on air pollution, wastewater, noise, solid waste pollution control measures and regulation compliance, cumulative impact of surface subsidence likely resulting from future mining activity, and ecological protection and rehabilitation measures, as well as issues regarding protection of environmentally sensitive surface features. Information related to environmental protection was provided by or at the direction of China Energy. We reviewed the source data and discussed environmental issues with mine management.

6.2 Guidelines of the World Bank

The World Bank's explicit standards regarding environmental protection relating to mining activities are set forth in the "Environmental, Health and Safety Guidelines for Mining" (EHSM) and "Environmental, Health and Safety General Guidelines". The World Bank guidelines and principles support the view that coal mining activities affect the environment and require that mitigation measures be taken to protect the environment and reduce the impact of coal mining activities. Responsible environmental management on the part of the mining enterprises includes establishing the policies and practices companies must employ to protect the environment and minimize the impact of mining and related activities. While many PRC environmental regulations are also included in the EHSM, the EHSM guidelines vary in the application of specific guideline requirements. In some instances, the PRC environmental regulations specify stricter environmental measures. Based on our document review and experience, it is our view that environmental protection measures have been well documented in the project design reports, in the

environmental impact assessment reports, and in the annual summaries of environmental protection provided to us for the subject mines and CPPs.

6.3 Environmental Protection Regulations

The primary domestic environmental protection laws and regulations of the PRC applicable to the subject operations include:

1. National Laws

- Environmental Protection Law (2014 Amendment, effective on 1 January 2015).
- Environmental Impact Assessment Law (2018 Amendment, effective on 29 December 2018).
- Law on Prevention and Control of Water (2016 Amendment, effective on 1 January 2017).
- Law on the Prevention and Control of Atmospheric Pollution (2018 Amendment, effective 26 October 2018).
- Law on Prevention of Solid Waste Environmental Pollution (2020 Amendment, effective on 1 September 2020).
- Law on Prevention and Control of Noise Pollution (2022 Amendment, effective on 5 June 2022).
- Law on Prevention and Control of Soil Pollution (2018 Amendment, effective on 1 January 2019).
- Law on Prevention and Control of Desertification (2018 Amendment, effective on 26 October 2018).
- Law on Protection of Wildlife (2022 Amendment, effective on 30 December 2022).
- Law on Water and Soil Conservation (2010 Amendment, effective on 1 March 2011).
- Circular Economy Promotion Law of the People's Republic of China (effective on 1 January 2009).
- Railway Law of the People's Republic of China (effective on 24 May, 2015).
- Law of the People's Republic of China on Protection of Petroleum and Natural Gas Pipelines, effective on 1 October 2010.
- Law of the People's Republic of China on Coal Industry (2016 Revision), effective on 7 November 2016.

- Law of the People's Republic of China on the Promotion of Clean Production (Revised and effective on 26 October 2018).
- Law of the People's Republic of China on the Protection of Cultural Relics (revised on 4 November 2017).
- Forest Law of the People's Republic of China (effective on 1 July 2020).
- Grassland Law of the People's Republic of China (amendment on 29 April, 2021)
- Wetland Conservation Law of the People's Republic of China (amendment), effective on 24 December 2021

2. Administrative Laws and Regulations promulgated by State Council

- Regulations on the Administration of Project Construction Environmental Protection (State Council Decree No.682, effective on 1 October 2017).
- Regulations on the Protection of Basic Farmland (2011 Amendment, effective on 8 January 2011).
- Regulations on Grain for Green (State Council Decree No.367, effective on 20 January 2003).
- Regulations on Land Reclamation (State Council Decree No.592, effective on 5 March 2011).
- Regulations on the Implementation of Law on Water and Soil Conservation (State Council Decree No.120, revised and effective on 8 January 2011).
- Regulations of the People's Republic of China on Nature Reserves, Decree No. 687 of The State Council, 7 October 2017.
- Regulations of the People's Republic of China on the Protection of Wild Plants, Decree No. 687 of The State Council, 7 October 2017.
- Regulations on the Power Facilities Protection, Decree No. 239 of The State Council, January 8, 2011.
- Regulations on the Highway Safety Protection, Decree No. 593 of the State Council, July 1, 2011.
- Regulations on the Railway Safety Management, Decree No. 639 of The State Council, January1, 2014.
- Regulations on Groundwater Management, Decree No. 748 of the State Council, December 1, 2021.

3. Rules and Regulations promulgated by various Ministries under the State Council

- Administrative Measures for Comprehensive Utilization of Coal Refuse (Joint

Decree No.18 by 10 Ministries including NDRC and Ministry of Environmental Protection, effective on 22 December 2014).

- Administrative Measures for Quality Control of Commercial Coal (Tentative) (Joint Decree No.16 by 6 Ministries including NDRC and Ministry of Environmental Protection, effective on 1 January 2015).
- Opinions on the Delineation and Strict Implementation of Ecological Protection Red Lines (issued by General Office of the CPC Central Committee and General Office of the State Council on 7 February 2017).
- Implementing Advice on Expediting the Construction of Green Mines (issued by 6 Ministries including Ministry of Land and Resources, GTZG [2017] No.4).
- Catalogue for Guiding Industrial Restructuring (2019 Version) (issued by NDRC on 30 October 2019, FGDQG [2019] No.1683).
- Directory for Classified Administration of Environmental Impact Assessment of Construction Project (Ministry of Ecology and Environment Decree No.16, effective on 1 January 2021).
- Tentative Measures for Public Involvement in Environmental Impact Assessment (Ministry of Ecology and Environment Decree No.4, issued on 16 July 2018).
- Circular on the Distribution of Policies regarding Mine Ecological Protection and Pollution Prevention and Control Technology (issued by former State Environmental Protection Administration on 7 September 2005, HF [2205] No.109).
- Circular on Further Enhancing Environmental Risk Management with Environmental Impact Assessment (issued by former Ministry of Environmental Protection in July 2012, HF [2012] No.77).
- Circular on Practically Enhancing Environmental Risk Prevention and Strict Management of Environmental Impact Assessment (issued by former Ministry of Environmental Protection in August 2012, HF [2012] No.98).
- Circular on the Implementation of Action Plan on Prevention and Control of Air Pollution and Strict Management of Entry Criteria for Environmental Impact Assessment (issued by the General Office of former Ministry of Environmental Protection on 25 March 2014, HB [2014] No.30).
- Notice on Further Strengthening Environmental Impact Assessment Management of Coal Resources Development, Ministry of Ecology and Environment, National Development and Reform Commission, National Energy Administration, HHP (2020) No. 63, 2020.11.4.
- Opinions of the State Council on Resolving Excess Capacity in the Coal

Industry to Achieve Development, the State Council, GF [2016] No.7, 6 February 2016.

- Regulations on Wetland Protection and Management, Decree No. 48 of the State Forestry Administration, Revised and implemented on 1 January 2018.
- Circular on the Implementation of Action Plan on Prevention and Control of Air Pollution and Strict Management of Entry Criteria for Environmental Impact Assessment (issued by the General Office of former Ministry of Environmental Protection on 25 March 2014, HB [2014] No.30).
- Notice on Strengthening and Improving the Protection of Permanent Basic Farmland, Ministry of Natural Resources and Ministry of Agriculture and Rural Affairs, ZRZG (2019) No.1, 3 January, 2019.
- Guiding Opinions on Strengthening the Prevention and Control of Ecological Environmental Sources in Construction Projects with High Energy Consumption and High Emission, Ministry of Ecology and Environment, HHP (2021) No.45, 31 May, 2021.
- Opinions on Strengthening the Linkage Work of Planning Environmental Impact Assessment and Construction Project Environmental Impact Assessment, Ministry of Environmental Protection, HF (2015) No. 178, 4 January 2016.
- Notice on Strengthening Environmental Impact Assessment Management with Improving Environmental Quality as the Core, Ministry of Environmental Protection, HHP (2016) No.150, 27 October 2016.
- Implementation Opinions on Strengthening In & Post-process Supervision of Environmental Impact Assessment of Construction Projects, Ministry of Environmental Protection, HHP (2018) No. 11, 25 January 2018.
- Guiding Opinions on Coordinating and Strengthening the Work Related to Coping with Climate Change and Ecological Environment Protection, Ministry of Ecology and Environment, HZH (2021) No. 4, 11 January 2021.
- Regulations on the Prevention and Control of Pollution in Drinking Water Source Protection Areas ([89] HGZD No. 201), Ministry of Environmental Protection, (Order No. 16 of the Ministry of Environmental Protection), December 2010.
- Notice of the National Development and Reform Commission and other Ministries on Matters Related to the Implementation of the Reduction and Replacement to Strictly Control New Coal Production Capacity, FGNY (2016) No. 1602, 23 July 2016.
- Outline of the Plan for Ecological Protection and High-quality Development in the Yellow River Basin, the State Council, implemented on 8 October 2021.

- National Ecological Function Regionalization (Announcement [2015] No.61 of Ministry of Environmental Protection and Chinese Academy of Sciences, 13 November 2015).
- Outline of National Protection Plan for Ecologically Fragile Areas, Ministry of Environmental Protection, HF (2008) No. 92, 27 September 2008.
- National Mineral Resources Planning (2016-2020), GH (2016) No. 178, 2 November 2016.
- National Principal Functional Regionalization (issued by State Council, GF [2010] No.46, 21 December 2010).
- National Prevention and Control Plan for Groundwater Pollution (2011-2020) (State Council, GH [2011] No.119, 10 October 2011).
- The 13th Five-Year Plan for the Development of the Coal Industry, National Development and Reform Commission, December 2016.
- Measures for the Management of National Non-profit Forests, State Forestry Administration and Ministry of Finance, LZF (2017) No.34, implemented on 8 May 2017.
- Standards for Pollution Control on Hazardous Waste Storage (GB18597-2023).

4. Environmental Protection Plan and Regionalization

- National Ecological Function Regionalization (Amendment) (Announcement [2015] No.61 of Ministry of Environmental Protection, 13 November 2015).
- National Principal Functional Regionalization (issued by State Council, GF [2010] No.46, 21 December 2010).
- National Prevention and Control Plan for Groundwater Pollution (2011-2020) (State Council, GH [2011] No.119, 10 October 2011).
- Outline of the National 13th Five-Year Plan for Ecological Protection (Ministry of Environmental Protection, HST [2016] No.151, 27 October 2016).
- Circular of the State Council on Distribution of the Implementation Plan for Prevention and Control of Atmospheric Pollution (State Council, GF [2013] No.37, 10 September 2013).
- Circular of the State Council on Distribution of the Implementation Plan for Prevention and Control of Water Pollution (State Council, GF [2015] No.17, 2 April 2015).
- Circular of the State Council on Distribution of the Implementation Plan for Prevention and Control of Soil Pollution (State Council, GF [2016] No.31, 28 May 2016).

- Circular on Strengthening the Management of Environmental Impact Assessment System with the Core Target of Improving Environmental Quality (HHP [2016] No.150, 3 November 2016).
- 14th Five-Year Plan of Coal Industry Development of Inner Mongolia Autonomous Region, NNMKZ (2022) No.102, 15 February 2022.
- The 14th Five-Year Plan for the National Economic and Social Development of the Inner Mongolia Autonomous Region and the Outline of the 2035 Vision Goals, issued on 11 March, 2021.
- The 14th Five-Year Plan for the National Economic and Social Development of Ordos City and the Outline of the 2035 Vision Goals, issued on 5 March 2021.
- The 14th Five-Year Plan for Ecological Environment Protection of the Inner Mongolia Autonomous Region, September 2021.
- The 14th Five-Year Plan for Ecological Environment Protection of Ordos, 2021.
- Opinions of Inner Mongolia Autonomous Region People's Government on Implementing Ecological Environment Zoning Control by "Three Lines, One List (Ecological Protection Red Line, Environmental Quality Bottom Line, Resource Utilization Top Line and Ecological Environment Access List", 29 December 2020.
- Opinions of Ordos People's Government on Implementing Ecological Environment Zoning Control by "Three Lines, One List (Ecological Protection Red Line, Environmental Quality Bottom Line, Resource Utilization Top Line and Ecological Environment Access List", 17 September 2021.
- Plan of Ordos for Ecological and Environmental Protection (2000-2030).
- Major Function Regionalization of the Inner Mongolia Autonomous Region, July 2012.

5. Standard and Technical Code

- Technical Guidelines for Environmental Impact Assessment of Construction Project – General Program (HJ2.1-2016).
- Technical Guidelines for Environmental Impact Assessment – Atmospheric Environment (HJ2.2-2018).
- Technical Guidelines for Environmental Impact Assessment – Surface Water Environment (HJ2.3-2018).
- Technical Guidelines for Environmental Impact Assessment – Acoustic Environment (HJ2.4-2021).

- Technical Guidelines for Environmental Impact Assessment – Ecological Impact (HJ19-2022).
- Technical Guidelines for Environmental Impact Assessment – Groundwater Environment (HJ610-2016).
- Technical Guidelines for Environmental Risk Assessment on Projects (HJ169-2018).
- Technical Guidelines for Environmental Impact Assessment – Soil Environment (Tentative) (HJ964-2018).
- Technical Guidelines for Environmental Impact Assessment – Coal Mining and Processing (HJ619-2011).
- Technical Specifications for the Application and Issuance of Pollutants Emission Permits-General (HJ942-2018).
- Technical Specifications for the Application and Issuance of Pollutants Emission Permits-Boiler (HJ953-2018).
- Code for Coal Pillar Left for Building, Water Body, Railway and Main Openings and Roadways and Underlying Coal Mining ", State Administration of Safety Supervision, State Coal Mine Safety Administration, National Energy Administration, National Railway Administration, AJZMZ (2017) No. 66, May 2017.
- Rules for Water Control in Coal Mines, State Coal Mine Safety Administration, June 2018.
- Evaluation Index System of Cleaner Production in Coal Mining and Processing, issued in August 2019.

6. Local Rules and Regulations

In addition to the national laws and regulations, each province (or autonomous region) generally has principal environmental protection laws and rules regulating local mining operations. Such laws, rules and regulations may update from time to time and must be followed during mining-related activities.

6.4 Environmental Management

The objectives of environmental management are to proactively manage any human activities negatively impacting environmental quality and to coordinate the relationship between the economy and the environment. An established environmental management system can improve employees' environmental protection awareness, regulate the enterprises' management, and conduct production using methods and practices that minimize any adverse environmental

impacts. Therefore, pollution is controlled, and environmental quality is protected. Finally, a balance between environmental, social, and economic profit is achieved.

Based on our discussion with China Energy management and our review of environmental protection related documentation, we understand that an environmental protection management organization is established at each operation and designated managers are assigned and tasked with the responsibility of enacting necessary environmental protection policies and environmental management systems for the operation. Environmental protection efforts related to pollution prevention, control, and treatment; land reclamation; environmental facilities management; and soil and water conservation are routinely undertaken by the management organization.

Primary responsibilities of the environmental protection management are as follows:

- Supervising and reviewing the implementation of laws and regulations relating to environmental protection, as well as environmental standards.
- Reviewing long-term and annual plans regarding environmental protection related to the mines and supervising and monitoring subsequent implementation.
- Establishing an environmental protection system, including inspecting and supervising responsibilities.
- Establishing and carrying out the environmental protection plan, working with the enterprise leader to fulfill environmental protection obligations.
- Leading and organizing environmental protection monitoring, inspecting environmental protection facilities operation, and preparing files to document monitoring results.
- Coordinating regional environmental management.
- Accepting inspection and supervision from different levels of environmental protection authorities, submitting environmental protection files, and reporting performance regularly to administrative authorities.

6.5 Surface Land Subsidence

LW mining is the principal method of underground coal extraction used throughout the Chinese coal industry. Impacts to the overlying surface resulting from underground mining activities are primarily manifested by the following: surface subsidence and landscape changes (which impact scenery and surface water body flowing condition); fracturing, collapse and caving of the subsurface strata overlying the coal seams and areas being mined (which influence underground water level, water quality, vegetation growth to the ecological and underground water

environment). Accumulated impact of past and ongoing coal mining may result in permanent damage to the regional ecologic and underground environment. Therefore, PRC has an administrative licensing system to control the environmental impact related to mining, and to regulate and monitor mine operator activities to protect the mine ecology and to recover the environment, including environmental impact assessment, water and soil conservation plan, geological environment protection and land reclamation plan. The mine should strive to establish a proactive environmental policy based on sustainable and scientific development. The mine development should incorporate a balance between environmental, social, and economic benefit.

Environmental impact assessment reports and geological environment protection and land reclamation plans that conform to the regulations of national laws and statutes are prepared by the subject China Energy mines. As mining continues and subsidence occurs, ecological environment remediation and land reclamation will be conducted. Most of the subject underground mines plan to relocate villagers potentially endangered by subsidence. Some maintain roads, power lines, and water bodies impacted by mining are protected by leaving barrier pillars if relocation is not practical. The mines are expected to cooperate with the daily supervision and inspection from administrative authorities responsible for environmental oversight. Our review concludes that the surface subsidence management plans for the mines proposed in various reports are expected to fulfill their obligation to comply with environmental protection regulations if fully executed.

6.6 Soil and Water Conservation

In accordance with the PRC Soil and Water Conservation Law and the administrative licensing system, soil and water conservation plans were prepared. The mines accept administrative review and conduct soil and water conservation policies and practices, which is done simultaneously with the ongoing mining operation.

Based on the objective of minimizing the impact of mining and associated activities on water and soil loss, key prevention and control locations are identified, such as industrial site, offsite road, dedicated railway, refuse disposal site, water pipes, power lines, and subsidence area. Appropriate measures, such as engineering, vegetation, and temporary prevention, are established to address corresponding requirements and standards. Measures to be taken in each district as indicated in the reports are as follows:

- Subsidence area - Simple reclamation, such as fissure (surface crack) filling and land management is conducted.
- Consolidation of Soil and Water Conservation during Construction - Disturbance

of farming lands and vegetation is minimized during construction to control the loss of water and soil.

- Site Landscaping - In order to minimize disturbance due to fugitive dust and noise from the mine site, trees and shrubs are planted along the border between the mine construction site and villages. To achieve better working environments for employees, landscaping projects are conducted within and around the mining area.
- Treatment of Mining Impacts - For land, farmlands, and vegetation disturbed due to the impacts of mining activities, land reclamation planning will be conducted based upon the sequence of mining districts and in compliance with related requirements of the Regulations on Land Reclamation and the Soil and Water Conservation Law. Land reclamation expenses should be increased to encourage land users to conduct the reclamation, with the support and coordination of the township authorities. Refuse material generated from the mines is used as fill material for reclamation projects to the extent possible.
- Continuous Monitoring of Soil and Water Conservation Status – Routine site inspections and investigations are conducted to monitor the effectiveness of the soil and water conservation efforts. Results are documented and available for inspection by local authorities.

6.7 Refuse and Waste Rock Disposal

Waste rock (refuse) generated during the construction of the mines and CPPs will be transported by truck to the designated disposal sites. During operation, waste rock will be used for backfilling underground, as has been practiced more and more at the underground mines of Wuhai Energy. The waste rock backfilling system is designed to operate independently of the regular production system of the mines, ensuring no mutual interference. The backfilling plan is technically and economically feasible. For the open-pit mines, waste rock is placed in out-of-pit dump sites during the early stages of operation. As mining progresses and mined-out areas become available, in-pit dumping is gradually adopted, eventually transitioning to a fully in-pit waste disposal system.

6.8 Wastewater Disposal

The protection and conservation of water sources is strictly regulated by existing environmental protection laws and statutes.

Wastewater is generated mainly from domestic facilities and pit/underground pumping. Mine water is pumped to sedimentation tanks, where the wastewater that settles through inclined tubes in the tank is filtered through automatic water clarifiers

to remove suspended solids. The filtered water is sent to the clean water tank for disinfection with chlorine dioxide, prior to discharge into the water transmission pipeline networks to be fully reused. Water processing and pollution control measures generally meet the requirements of environmental protection regulations.

Strict local wastewater management regulations may have material impact on mine operations. For example, due to the Yellow River environmental discharge restrictions, all related facilities within 1 km distance from the Yellow River were ordered to close, which resulted in the dismantle of the Shaping CPP in 2024. Shaping Mine has to build a replacement CPP at a new location. Construction of the new Shaping CPP is expected to be completed by the end of 2027.

6.9 Air Pollution Control

Emissions from the coal-fired boilers and fugitive dust generated during normal mining and related activities, such as loading and handling of coal, coal waste, and ash from boiler operation, constitute the main sources of air pollution. Appropriate measures were designed to mitigate air pollution and to ensure that emissions meet the requirements of the environmental impact assessment and air pollution control laws and statutes. Local authorities require implementation of the following environmental protection measures to control air pollution:

- Dry dust capture units to be used during drilling operations to reduce dust released into the air.
- Blast parameters should be carefully designed to minimize dust and water spray must be used to suppress the dust generated.
- Water spray should be performed frequently at working sites and on the roads.
- Dust collectors are installed at crushing/screening stations, transfer stations and coal storage areas to control the fugitive dust.

6.10 Noise Pollution Control

Typically, equipment installed at the mines' industrial sites generates most of the noise pollution with the primary noise sources being ventilation fans, air compressors, pumps, etc. According to requirements of the approved environmental impact assessment, measures such as noise insulation, noise absorption, and vibration reduction will be taken.

Based on the EIAs of the mines, the following abatement measures have been instituted to minimize noise pollution:

- Functional layouts are utilized to maintain adequate distances between high noise generating equipment and buildings with low noise requirements, such as office buildings, dormitories, etc. Distance abatement, vegetation and shrubs are often employed for noise reduction.
- Equipment with relatively high noise levels, such as ventilation fans and air compressors, are equipped with noise insulation and reduction devices and diffusers with sound absorbing materials.
- Pumps and fans are mounted on shock-absorbing foundations; inlet and outlet pipes are equipped with flexible joints. Sound insulation is also installed.

6.11 "Cleaner Production"

As stated in the PRC Law on Promotion of Cleaner Production, "cleaner production" refers to the practice of making continuous design improvements, employing cleaner energy and materials, adopting advanced techniques and equipment, improving management and implementing a comprehensive program in order to: reduce source pollution; enhance comprehensive utilization of resources; and reduce or avoid generation and emission of pollutants during production, service, and product usage so that hazards to human health and the environment can be alleviated or even eliminated. The subject China Energy mines are designed in accordance with cleaner production standards to control pollution and to increase the resource application rate.

6.12 Implementing "Three-Simultaneous System"

Based on the communication with the management teams of the companies under China Energy, the new mines under planning/construction will make diligent efforts to implement environmental protection measures during construction and commencement of operation in the future. The mines will prepare their environmental impact assessment and establish and implement measures of environmental protection in a timely manner. Environmental protection facilities will be inspected and put into operation simultaneously with mining operations in accordance with requirements of the "Three-Simultaneous System" of environmental protection.

6.13 Land Reclamation

Land reclamation is a key task for mines at various sites when mining operation is completed, or dump sites which reached the design refuse receiving capacity and

finished service. Advance planning for land reclamation is required prior to mine closure or reclamation operations are needed. Land reclamation should attain the following standards upon operational shut-down, closure of the mine or a dump location is no more used:

1. Backfilling, leveling, and other work necessary to restore surface lands impacted by mining to a usable condition suitable for farming or sustaining vegetation.
2. Sealing and backfilling of exploratory trenches, shafts, inclines, and drill holes, etc. resulting from mining activities that cannot be used for other purposes.
3. Proper closure and reclamation of storage sites for tailings, waste rock, waste residue, and the placement of surface soil to ensure these sites are stable and safe, and to avoid impacting farming land and causing environmental pollution.
4. Constructing permanent irrigation facilities including trenches and pipelines.
5. Constructing trenches and raised ridges to facilitate dewatering during summer storms.
6. Plant trees and grasses at mining sites and waste storage yards.
7. Routine and long-term monitoring of land reclamation.

6.14 Environmental Protection Laws and Statutes Compliance

The subject China Energy mines generally operate in compliance with environmental protection laws and statues, although some individual mines were reported being subject to minor administrative penalties related to environmental protection. The mines corrected their practices after paying the penalties. There were not any other significant environmental pollutions, environmental protection claims, petitions due to environmental pollution matters, nor other environmental protection noncompliance reported.

7.0 RISK ASSESSMENT

7.1 Introduction

Coal mining operations are unlike other industrial facilities in that mines can be engineered or planned to a design capacity or cost structure, but there are inherent uncontrollable natural and external factors that can prevent the attainment of specific production, cost, and revenue targets. Mining operations are conducted in the earth's strata rather than within a homogeneous and controlled work environment.

There is inherent geologic risk, and mine operators must therefore contend with periodic adverse or variable geological conditions that cannot be fully anticipated in advance of actual mining activity. While the occurrences of these physical conditions are beyond the control of site management, it should not be interpreted that coal mining is inherently risky. On the contrary, there are established measures that mine operators utilize to minimize the operational and financial impacts associated with such encounters. Many regional coal mining operations have a demonstrated track record in sustaining consistent and predictable levels of performance.

Assessment of risk associated with any enterprise is largely subjective in nature and relies on the relevant experience of the professional completing the study in the specific industry and operating venue applicable to the subject enterprise. There are three general categories of business risk inherent in a mining operation, namely: geological, operational, and market. For purposes of this study and in accordance with HKEx guidelines, we define risk in three broad categories of severity, as follows:

- Major Risk: A factor that would have a materially adverse effect (15% to 20% or higher) on project cash flow for the risk assessment period, possibly leading to project failure, if the specific risk occurred and was not corrected.
- Moderate Risk: A factor that would have significant adverse effect (10% to 15%) on project cash flow for the risk assessment period, if the specific risk occurred and was not corrected.
- Minor Risk: A factor that would have minimal or no adverse effect (less than 10%) on project cash flow for the risk assessment period, if the specific risk occurred and was not corrected.

However, equally or perhaps more important, is the probability or likelihood that the specific risk will occur. For this study, a risk assessment period is considered with the following probability of occurrence ratings:

- Likely: Event is likely to occur.
- Possible: Event may occur.
- Unlikely: Event is unlikely to occur.

The overall risk assessment combines these two components, severity and probability, to determine the final overall risk assessment, as shown below:

Probability of Risk Occurring (within 7 years)	Severity (Consequence) of Risk		
	Minor	Moderate	Major
	Overall Risk Assessment		
Likely	Medium	High	High
Possible	Low	Medium	High
Unlikely	Low	Low	Medium

The risk assessment period for this study is 2025 to 2031 and our risk assessment is based on Chinese coal industry conditions as of the end of July 2025 and does not reflect subsequent industry developments.

7.2 General Assessment

Given the large number of companies and assets under review, including both producing coal mines of different scales and mining methods and non-producing exploration right areas, it is not practical to evaluate risks on a mine-by-mine/area-by-area basis. The subject portfolio comprises operations that differ in geology, mine design, production maturity, and regional conditions; however, they generally operate under comparable technical standards and regulatory frameworks. To provide a coherent and balanced overview, this report adopts a consolidated risk assessment framework, focusing on the overall risk exposure of the project package rather than on individual sites. Based on our independent assessment of the mining operations, we conclude that the subject China Energy mines and exploration areas are medium in overall risk, with elevated risks to the high level for certain aspects in some mines, for the following reasons:

- Supportive of Medium Risk:
  - Most of the operating mines of China Energy are mature operations with extensive operational experience, and all the properties are in established coalfields where general mining conditions are known and necessary infrastructure in place to support coal production and marketing are in place.
  - Overall ranking of the geologic setting of the defined resources/reserves within the subject mining/exploration right areas is moderate to complex.
  - Reserves to be mined during the risk assessment period are generally reasonably explored by drilling and mining experience to date, although local abnormalities are frequently encountered during actual underground operations.

- While not anticipated, naturally occurring events, such as flooding due to excessive rainfall or an earthquake, could occur, but their impact would be regional in extent (i.e., not unique to the subject mines).
- Typical of all coal mining operations, production may be temporarily interrupted, which, depending on the duration and magnitude of the interruption, could significantly impact total company performance.
- Except for routine production risks that all coal mine operators experience, we has not identified any other extraordinary risks related to the future operation of the subject mines over the assessment period. The subject underground mines are at general industry risk for fires, explosions and flooding.
- The exploration-stage tenements are classified as presenting a medium level of risk. Although these projects are still in the resource delineation stage and have not yet reached production feasibility, the current exploration results indicate stable coal-bearing formations with continuous seam development and favorable regional geology. The exploration activities have been conducted in accordance with national standards, and no material geological or permitting issues have been identified to date. However, uncertainties remain with respect to future drilling results, resource conversion, and permitting schedules. These uncertainties are typical for projects at this stage of development and are therefore assessed as representing a medium, rather than high, level of technical and investment risk.

- Supportive of High Risk:
  - Most of the operating Wuhai Energy mines feature limited coal resource bases and long histories of coal extraction, which on one hand means limited availability of remaining coal resources/reserves, and on the other hand implies relatively more complicated mine working systems. The Laoshidan and Lutian mines will deplete their reserves during the assessment period.
  - Approximately half of the underground mines (Renjiazhuang, Huangbaici, Laoshidan, Luotuoshan, Pinggou, Tunbao and Wudong) are ranked as high-gas mines, among which Tunbao is also ranked as bump-prone mines. This had brought in strict inspection and monitoring policies, such as reduced authorized output level and higher capital expenditures/costs on degasification and bump control facilities and operations. Although these mines have made detailed plans to understand and control the gas and bump risks, accidents do not appear totally impossible. It is likely similar or more strict policies could be issued if any accidents related to gas or bump occur.
  - At projected output rates and current pricing, mining of the thicker seams is generally economic. However, if coal prices were to decline, and/or mining

operations enter thinner seams, some mines may not be economic for certain periods because of locally complicated geological conditions, thinner coal seam, and lower productivity.

- Many of the China Energy mines are operated to supply coal to jointly developed power plants. If the planned consumption from the power plants declines due to delayed expansion of projects, while the regional coal mines release production capacity rapidly, a substantial oversupply of thermal coal may occur in the local market. In such a case, the imbalance between supply and demand could result in a notable decline in coal prices. Prolonged price depression would directly weaken the project's profitability and cash flow, and under adverse market conditions, the mine could even operate at a loss. Therefore, the synchronization between mine operations and the commissioning of the power plants is considered a critical factor for maintaining the mines' economic viability.

Under this approach, each principal risk domain—geologic, reserves, operational, event, regulatory, and market—has been analyzed on a portfolio basis. Within each domain, mines or subsidiaries that exhibit relatively higher exposure are specifically highlighted as representative cases. This method ensures that the overall risk profile of the project package is clearly understood while the distinctive higher-risk conditions of certain operations are properly recognized in the corresponding risk discussions. The following text provides an expanded discussion of mining-related risks and our assessment of the risk profile for the subject China Energy mines.

7.3 Geologic Risk

7.3.1 General Geologic Risk

On a global basis, the geologic settings for the subject mine/exploration areas are judged to range from simple to complex. While the strata dip is generally manageable, splitting and thinning of the coal seams is a complicating factor for specific seams and significant faulting is present in most of the subject mine areas. The resource/reserve areas are generally well explored.

Risk Assessment

Severity: Minor to Major

Probability: Possible to Likely

Overall: Medium

7.3.2 Unforeseen Geologic Anomalies

The risk from unforeseen geologic anomalies is considered low to medium for the subject mines. These operations can generally mine through disruptions and displacements of coal seams with relatively minor impacts to output.

Unforeseen geological anomalies that extend over large areas could disrupt underground mine operations and require alterations of mining plans. Such an event can result in the cessation of production activities for an undefined but extended period (measured in months, and perhaps years). China Energy is highly experienced with potential impacts of geological anomalies and has redundant production capacity to replace output from affected areas. The subject mine reserve areas, particularly areas to be mined within the risk assessment period, are reasonably defined by drilling, minimizing the risk of unforeseen geologic anomalies. Faulting occurrences are well-mapped.

Routine exploration and reconnaissance using drilling, geophysical logging, and seismic surveying methods are successful in identifying larger displacement faults, but only partially successful in defining minor displacement faults in advance of mining. It is reasonable to expect that minor displacement faults may be encountered in future mining, but the impact on overall performance is not likely to be material over an extended period. Undetected faulting may result in reserve loss, the magnitude of which would be determined by the extent and degree of faulting.

Risk Assessment

Severity: Minor to Moderate
Probability: Possible
Overall: Low to Medium

7.4 Reserves

Based on the CP's independent estimates, most of the subject mines have sufficient remaining reserves to remain operational over the assessment period. However, the Laoshidan and Lutian mines are likely to deplete their remaining reserves within the assessment period, which in our opinion poses a major risk to the mines' operation. These mines have long operating history, and the potential of significantly increasing resource base is minimal. It is our opinion that the management of the mine, Wuhai Energy and China Energy should prepare mine closure plans to cope with the situation. Mines with coal reserves sufficient for less than 20 years include Huangbaici, Luotuoshan, Wuhushan, Yuanbaoshan Open-pit and Ciyaogou. We suggests these mines conduct necessary studies and additional exploration activities to evaluate the possibility of increasing their reserves and therefore mitigate the related closure risks.

The other mines appear to have sufficient reserve base to support the planned output level for over 20 years, and the associated risk for reserve depletion during the assessment period is low.

Risk Assessment
Severity: Major
Probability: Likely
Overall: Medium to High

7.5 Operational Risks – Naturally Occurring Events

7.5.1 Weather

Extraordinary weather occurrences (e.g., excessive rainfall) can result in disruption to the mining operations caused by power outages and loss of access into the mine site (movement of mine personnel, receipt of necessary operating supplies, etc.) and from the mine site (inability to load trucks or trains to dispatch coal to market, etc.).

Risk Assessment
Severity: Minor to Major
Probability: Possible
Overall: Low

7.5.2 Earthquakes

Available geologic background data report that while the general location of the China Energy mines in Heilongjiang, Shanxi, Shaanxi, Inner Mongolia, Ningxia and Xinjiang is known to be seismically active, large scale destructive events are rare.

Any naturally occurring events would affect the broader region where the China Energy mines operate, and the impacts would be felt industry-wide.

Risk Assessment
Severity: Minor to Major
Probability: Possible
Overall: Low

7.6 Operational Production Risks

There are two primary types of operational risks associated with coal mining: production and event. The first category of risk includes those variations in physical mining conditions, mechanical failures, and operational activities that can temporarily disrupt production activities.

7.6.1 Routine Operational Risks

The most common routine operational risks for surface and underground mines are as follows:

- Roof control issues and roof falls.
- Poor mining conditions (poor roof, floor, ribs).
- Water accumulations/soft floor conditions.
- Ventilation disruptions and concentrations of methane gas.
- Variations in seam consistency, thickness, and structure.
- Failures or breakdowns of operating equipment and supporting infrastructure.

The preceding conditions and circumstances can adversely affect production in the short term but are not regarded as significant to the long-term mining operations. Mine-level management is experienced and capable of dealing with these risks. We does not regard the issues listed above as being material to China Energy's mining operations or otherwise significantly compromising projected financial performance over the long term, although some short-term variance to projected output and financial performance should be anticipated.

Risk Assessment

Severity: Minor to Moderate
Probability: Possible
Overall: Medium

7.6.2 LW Subsidence

China Energy's underground mining operations primarily utilize LW mining practices, which by design cause subsidence of the overlying strata. The damage caused by LW subsidence is an issue in many countries and regions where LW mining techniques are utilized, and mining companies are sometimes restricted as to where LW mining operations can be performed.

In PRC, typical practice is to relocate affected surface structure owners depending on the value of the underlying coal and the physical extent of the surface structures. The mining company has the option to require surface structure owners be moved, but must provide appropriate compensation to affected owners.

The surface lands above some of the China Energy LW mining areas are populated residential areas and/or large commercial or industrial structures. Plans are in place to move the affected residential areas and/or commercial and industrial structures in a timely manner and include compensation to the structure owners and related

inhabitants. In some cases, backfilling methods are used to control the subsidence within acceptable scale. Subsidence-related costs are well-identified in future mine plans with little uncertainty as to the extent of structure relocations. Consequently, undermining of structures is not a significant issue for the subject mines, and the company is in the position of remediating damages. Depending on the physical extent and population density, villages and larger populated areas are generally relocated unless the costs are prohibitive relative to the coal recovered. The other underground mines, however, are located in very rural areas with few residents.

Structures considered as not suitable for undermining include national highways, mine physical plants, CPPs, coal chemical production plants, railways, railway loading stations, cement plants, pipelines, archaeological sites and transformers. These surface structures are explicitly excluded from future mine plans and reserve estimates.

Proper mine design and planning can either avoid or minimize the damage from subsidence in protected surface areas. While subsidence is a by-product of LW mining, mitigation actions taken by the mine operator can remediate surface damage.

Risk Assessment

Severity: Minor to Moderate

Probability: Possible

Overall: Low to Medium

7.7 Event Risks

The second type of major risk is categorized as event risk. Items in this category are rare, but significant occurrences are confined to an individual mine and ultimately have a pronounced impact on production activities and corresponding financial outcomes for that mine. Following such events, mines are subject to increased inspection/examinations and subsequent penalties and/or actions imposed by the PRC regulatory authorities. Examples of production-related event risks for underground mines are:

- Major underground fires.
- Explosions.
- Flooding of the underground workings.
- Bumps.

Operations Risks – Naturally Occurring Events (Section 7.5) also fall into the "event risk" category.

7.7.1 Major Underground and Equipment Fires

The potential for major underground fires is significant in any underground coal mining operation due to the combustible nature of the material being mined and the industrial setting with machinery using combustible diesel fuel and lubrication. Fires generally occur from explosions (see below), equipment fires, belt conveyor system fires, or spontaneous combustion. Equipment fires rarely result in major mine fires due to on-board extinguisher systems and in-mine firefighting gear. A major event due to an out-of-control equipment fire is a potential but small risk.

Belt conveyor fires pose a higher order of risk due to their extended and generally untended expanse. Belt conveyors have moving parts that can be prone to friction. Monitoring systems and effective belt patrol and maintenance programs are critical to avoiding major events. These practices also result in improved belt availability and performance. Because of the potential for fires, belt conveyors are monitored for products of combustion, and potential event-prone areas such as transfer points have water spray installations designed to engage if an elevated temperature is detected. Generally, these measures are adequate to avoid belt fires, but the potential is always present if the systems are not managed properly.

A major source of mine fires is spontaneous combustion, which is a common occurrence throughout the international mining industry. Spontaneous combustion typically occurs in areas that are not well-ventilated, where the combination of self-heating and oxygen is adequate to support sustained heating until a fire breaks out. In well-ventilated areas, the heat is carried away; in tightly sealed areas, the oxygen supply does not support sustained combustion. LW gob areas are especially susceptible to spontaneous combustion incidents. If not controlled, the combustion can inflame the surrounding workings and ignite methane, if present.

The underground mines are rated as having probability of spontaneous combustion at various level of likelihood. This propensity is well-recognized by the company and mine plans take this into account. Proper sealing of gob areas and appropriate ventilation designs may reduce the oxidation process and prevent spontaneous combustion. Alternatively, measures for rendering sealed areas inert, such as nitrogen injection and mud injection, are planned by the mines. Eliminating gob ventilation also serves to minimize the potential for gob fires due to spontaneous combustion. The potential for spontaneous combustion incidents will remain a significant risk issue for the subject mines, but one that can be minimized with proper planning and good mine management practices.

For open-pit mines, major earth-moving equipment and coal loading fleets are subject to fires on occasion. Generally, this is not a significant risk unless the piece of equipment is a key piece such as a large dragline. The subject open-pit mines utilize

a large fleet of shovels/excavators and trucks for earth-moving and coal loading. The loss of an individual truck or shovel is not significant to operations that employ multiple trucks and shovels and have extensive redundancy in the equipment fleets.

Risk Assessment

Severity: Minor to Major

Probability: Possible

Overall: Low

7.7.2 Explosions

Coal mine explosions typically are initiated by methane ignitions followed by coal dust explosions. Coal dust itself does not typically ignite, although under certain conditions it is possible. The coal resources in the subject mines are generally rated as explosive in dust form as is the case for nearly all coals in the world. The key to preventing explosions is the prevention of methane ignitions. In this regard, the subject mines are projected to have relatively low in situ methane content.

The mine staff is trained and experienced in taking state-mandated precautions for avoiding methane ignitions, including:

- Monitoring of airways for potential buildup of methane levels.
- Use of flame-proof enclosures for electrical controls and power-related components.
- Use of methane monitors and automatic de-energizing circuits on LW face equipment.
- Ban of personal smoking materials.
- Routine sealing of areas where mining has been completed.
- Installation of water curtains in the event an ignition occurs.
- Ventilation systems are designed to effectively remove methane from the mines at concentrations that are intrinsically safe (less than 1% of atmosphere).

If diligent practices are pursued, the risk of explosion can be minimized. The occasions of explosions have been relatively rare (although not eliminated) in the advanced international underground coal mining industries. Given present practices, the risk of an explosion is low in our view.

Risk Assessment

Severity: Minor to Major

Probability: Unlikely

Overall: Low

7.7.3 Floods

Risk from floods occurring in the underground mine workings can take two forms. One possibility is intercepting unmapped flooded workings. These incidents have periodically occurred in every major coal mining country.

In the planned mining areas for the subject mines, mining prior to China Energy's operation of the mines has either not occurred or is relatively limited, and prior mining activity will not be a threat to planned mining. An accidental flooding from uncharted works is unlikely in the subject mines.

A second risk arises from the potential inflow of ground water contained in faults and fissures and from surface and ground water entering the mine because of LW subsidence. Historically, potential inflow of water from faults has not been a significant issue for the China Energy mines. Owing to the depth of mining, ground water inflow issues have also been insignificant.

Based on discussions with engineering and geologic personnel, we would rate the potential for disruption to mining operations from inrushes of water as minor. Water inflows at the subject mines are generally typical of the region and are within the capabilities of the water-handling systems. Effective pumping systems include redundant primary sump pumps that control water inflows from the coal seam and overlying/underlying strata.

Open pit mines are generally designed to pump routine water inflows that accumulate in pits preventing mining operations to continue. The largest routine water inflows is easily controlled by standard pit pumping systems. However, water inflows can exceed design projections at times due either to unusual precipitation events or more typically encountering uncharted aquifers. Generally, pit flooding incidents are not catastrophic and mining operations can quickly mobilize to remove non-routine pit water accumulations (typically aquifers tend to release water in large amounts initially followed by much lower inflows). Neither mine reported incidences of pit flooding. As for major precipitation events, the mines are operating in a region where the climatic conditions are semi-arid.

Risk Assessment

Severity: Minor to Major

Probability: Unlikely

Overall: Low

7.7.4 Bumps / Pit Wall Failures

A coal mine bump (or rock burst) is a seismic jolt occurring within an underground mine due to the explosive collapse of one or more support pillars. Risk from mining induced bumps occurring in the underground mine workings generally increases as the mines become deeper and disturbance from mining operations gets intensified. Bump incidents have occurred in every major coal mining country. During our review, no bump cases were reported for the China Energy mines, although Tunbao is designed as bump-prone mines.

Bumps are severe accidents which can result in remarkable damage to underground equipment and mine workings, likely associated with miners' injuries/fatalities. Investigation of such accidents may require temporary suspension of operation and cause major time and income loss. Measures to reduce the possibility of mine bump are proposed in the mine design reports, which appears prudent in our opinion.

Pit wall failures occur in open-pit mines when pit slope angles exceed critical rock strength thresholds. Pit slopes are generally designed according to site ground conditions and historical experience. However, ground condition determinations are approximate at best and failures can occur. Generally, pit wall failures are not catastrophic events and mining operations can recover fairly quickly from these events.

Risk Assessment

Severity: Moderate to Major

Probability: Possible

Overall: Low to Medium

7.8 External Risk – Regulations

Various levels of government are involved in the promulgation and enforcement of regulations under which the China Energy mines must operate. These include operating standards and requirements, and the payment of fees and taxes. While governmental regulation policies are industry-wide, and beyond the control of China Energy, the company is responsible for operating their mines and facilities in compliance with all governmental regulations now in effect (or any future regulations).

Based on our review, we opine that China Energy has implemented appropriate environmental protection measures in response to national and local environmental protection laws regarding mining operations. Generally, the company's environmental protection work is comparable to similar mining enterprises elsewhere in the PRC. While the particulars of current environmental practices may need to be upgraded at some mines, there do not appear to be environmental constraints to future coal mining operations. In our opinion, in meeting the relevant requirements as required by natural laws, the environmental protection practices of China Energy comply with the PRC and World Bank's requirements for environmental protection related to coal mining activities.

To our knowledge, China Energy has paid all required resource fees to obtain mining rights, and all governmental taxes and fees.

The ability of China Energy to increase or sustain projected output levels over time is subject to government approval and permitting. Mining assets will continue to be subjected to economic, political, and legal developments within the PRC. Furthermore, domestic coal prices are largely impacted by the government through regulation, taxes, tariffs, and the national rail system. Passage of more restrictive or onerous government regulations could have adverse effects on future China Energy operations, but such a risk would be industry-wide and is unquantifiable at this time. An example of regulatory risk is the recent April 2016 circular issued by the State Administration of Coal Mine Safety requiring that all mines reduce their legal production capacity by 16% (reducing standard operating days from 330 to 276 or 276/330 [0.84 factor]) regardless of individual mine economic circumstances. This policy directive was abated in November 2016 as coal shortages were in evidence and coal prices were increasing.

Chinese mine operators are subject to similar regulations that can be arbitrarily put into effect. Thus, regulatory risks are significant and in some instances these risks are tied directly to controlling Chinese coal market developments such as excess coal supplies discussed in the Market Risk section.

Risk Assessment

Severity: Moderate to Major
Probability: Possible
Overall: Medium to High

7.9 Market Risk

A substantial reduction in market prices would have a material adverse impact on the financial performance of the China Energy mines. Such an event would occur if there

were surplus alternative coals from other suppliers, or a reduction in demand from China Energy's current customer base.

In the period 2013 to 2016, PRC coal demand on a composite industry basis appeared to have ceased growing, which provided a basis for considering that Chinese coal demand had peaked. The demand for coal for industrial use declined during the period, which offset increases in demand for coal for power generation. Coal prices, reacting to lower overall demand, decreased during the period. The central government imposed the 276- working day rule in March 2016 in part to support coal prices. The rule was abated in November 2016 as coal prices began to recover. Coal prices rebounded sharply in 2017 from the low-price coal market environment experienced in 2013 to 2016 period and leveled off in early 2018. In more recent years, the government set price limits to prevent sharp price hikes due to tight supply, which may potentially damage the national economy as a whole.

In some other years, international and domestic energy markets may suggest relatively tight supply during the assessment period. The government had been encouraging major coal producing companies to ensure coal supply, which implies optimistic price assumptions.

Most of the China Energy mines are key suppliers of thermal/chemical-making coal with well-established markets for its coal products. It is our opinion that new competitors are unlikely to generate surplus production capacity within the assessment period. There are high barriers to entry, as new mine development requires significant capital investment and government approvals (see External Risk – Regulation). On the other hand, if the planned consumption from the power plants declines due to delayed expansion of projects, while the regional coal mines release production capacity rapidly, a substantial oversupply of thermal coal may occur in the local market. In such a case, the imbalance between supply and demand could result in a notable decline in coal prices and mine profitability. The Xinjiang area is more affected by the supply-consumption balance due to the rapid release of new output capacity and power plant construction in recent years.

We anticipate the mines' location near their customer base will stabilize market conditions for the company over the risk assessment study period.

Risk Assessment

Severity: Moderate to Major
Probability: Possible
Overall: Medium

7.10 Summary of Risk Assessment (2025-2031)

The following section presents the Consolidated Risk Matrix summarizing the overall risk profile of the combined project package. This matrix integrates the results of the portfolio-based assessment described above, representing the aggregate exposure of all operating, construction, and planned assets during the assessment period (2025–2031). It reflects both the frequency and the potential impact of material risks identified across the portfolio, with weighting qualitatively assigned according to the scale and significance of each operation. Individual mines with notably higher risk levels, as highlighted in preceding sections, have been duly considered in deriving

the consolidated matrix. We conclude that the subject China Energy mines and exploration areas are medium in overall risk.

	Risk Assessment		
Hazard/Risk Issue	Severity	Probability	Overall

8.0 ECONOMIC ANALYSIS

8.1 Background

The 2012 Edition of the JORC Code requires that the Competent Person demonstrates that the reserves reported in the CPR are "economically mineable". The JORC Code specifies that *"Economically mineable" implies that extraction of the Ore Reserves has been demonstrated to be viable under reasonable financial assumptions.*

Accordingly, we have performed an economic analysis for each of the subject operating mines, except for Suhaitu. The Suhaitu Mine is recovering remaining coal (barrier pillars, etc.) left by previous underground mining using open-pit methods, to prevent future spontaneous combustion and facilitate land reclamation. No coal reserves for the Suhaitu Mine are reportable under JORC Code and, therefore, an economic analysis is not necessary.

Our economic analyses for the subject China Energy mines incorporate a DCF-NPV approach as specified by the JORC Code based on the geological, technical, and operational data presented in this report. The analyses are based on a specific analysis of projected income (net after-tax cash flow) of each mine over its 30-year operational period up to 2054. The subject China Energy mines are evaluated as standalone operations although the mines are managed by a central group that may provide services. The purpose of the analyses is to demonstrate the economic viability of the reported coal reserves and the analysis does not necessarily reflect current mine plans or optimize asset NPVs.

Our economic analyses reflect PRC coal industry circumstances as of the end of July 2025 and do not reflect subsequent pricing trends or regulatory developments. Coal pricing reflects calendar year 2022 to 2025 results.

8.2 Major Assumptions

Our mine economic analyses are based upon the following major assumptions:

- No material changes in government policies and regulation occur during the projection period.
- Approval will be granted for the target mines to renew and retain their mining rights, contingent upon payment of the mining right fees for the remaining reserves. The estimation of the amount of the mining right fees follows the same approach as that when the mine acquired the current mining rights.

- Geological conditions over the projection period are consistent with recent experience.
- Mining operations are not interrupted by external factors, such as mine accidents that result in extended shutdowns or periods of low productivity.
- Operating costs do not experience material fluctuations other than because of variations in output and seam conditions.
- Imposition of government taxes, fees, and other charges does not materially increase over the projection period.
- Company management operating performance remains competent and responsible.
- Force majeure events such as natural disasters do not occur during the projection period.

8.3 Pricing

Coal from the subject China Energy mines is sold on various basis (raw or processed) to either parallel power plants at internal prices or external customers at market prices. Generally, the internal prices are lower than the market prices. The market coal prices for the period from 2022 to July 2025 on a VAT-inclusive (value-

added tax [VAT] included) for each of the operating mines are shown in the following Table 8-1:

Table 8-1 Historical Composite Prices

	Historical Price (RMB/tonne)

The historical coal prices across the subject mines showed significant fluctuations between 2020 and 2025. Overall, prices for most mines increased substantially from 2020 to a peak in 2022, followed by a general declining trend from 2023 onwards into 2025. Some mines, particularly those under Wuhai Energy Co., Ltd., experienced extreme volatility, with prices at mines like Gongwusu and Wuhushan more than doubling from 2020 to 2022 before falling sharply by 2025. The historical prices indicates a notable market correction or price decrease for the year 2025 across nearly all operations.

To adopt reasonable prices for economic analysis, we assume the current market conditions will persist until 2026, followed by a gradual increase. Accordingly, in our economic analysis, the prices for 2026 are based on the average prices of each mine from January to July 2025. The prices for 2027 are based on the average prices of the preceding two years, for 2028 on the average prices of the preceding three years, and for 2029 and beyond on the average prices of the preceding four years.

8.4 Discount Rate

The discount rate is a critical input in any DCF valuation analysis. The following section discusses the methodology and assumptions we utilized to estimate a reasonable discount rate for the subject China Energy mines.

8.4.1 Peer Group Analysis

For the development of a discount rate, we reviewed the financial structure of twelve companies that primarily operate coal mining and preparation businesses and supply coal-related products into the domestic and international markets. The peer group analyzed and recent information regarding their current financial position are shown in the following table:

		(CNY 000's)				Percentage:	
Stock No.	Stock Name	Market Capitalization	Total Debt	Total Equity	Total Capitalization	Total Debt	Total Equity
						39.0%	61.0%
601898	China Coal Energy Co. Ltd.	137,474,700	99,639	155,714	255,353	39.0%	61.0%
600188	Yankuang Energy	112,677,600	124,342	84,443	208,785	59.6%	40.4%
601001	Jinneng Holding Shanxi Coal Ind.	21,289,460	2,335	18,321	20,656	11.3%	88.7%
900948	Inner Mongolia Yitai Coal Co. Ltd.	5,820,860	27,153	47,650	74,802	36.3%	63.7%
601225	Shaanxi Coal Industry Co. Ltd.	195,742,000	25,406	88,963	114,369	22.2%	77.8%
600546	Shanxi Coal International Energy Co.	19,289,300	10,818	15,942	26,760	40.4%	59.6%
600348	Shan Xi Hua Yang	25,180,350	27,099	33,250	60,349	44.9%	55.1%
600403	Henan Dayou Energy	8,726,470	6,436	4,845	11,281	57.0%	43.0%
601666	Pingdingshan Tianan Coal Mining Co.	19,532,610	28,184	26,997	55,181	51.1%	48.9%
600121	Zhengzhou Coal Industry	19,532,610	4,006	1,679	5,685	70.5%	29.5%
601101	Beijing Haohua Energy Res. Co.	10,411,180	6,843	11,914	18,756	36.5%	63.5%
600508	Shanghai Datun Energy Res. Co. Ltd.	8,759,340	2,221	12,854	15,075	14.7%	85.3%
Weighted Average:						37.9%	62.1%

Source: Reuters September 11, 2025

The China-based peer group companies are listed on the Shanghai Stock Exchange.

8.4.2 Weighted Average Cost of Capital

The weighted average cost of capital (WACC) is a required component of a DCF valuation. Simplistically, a company has two primary sources of capital: debt and equity. The WACC is the weighted average of the expected returns required by the providers of these two capital sources. Mathematically, the required return of each source of funding is multiplied by its respective weight in the company's capital structure. The sum of the weighted components equals the WACC. The basic formula for computing the after-tax WACC is as follows:

$$WACC = (k_e \, x \, W_e) + [k_d \, x \, W_d]$$

Where:

k_e = Cost of equity
k_d = After-tax cost of debt (i.e., pretax cost of debt * (1 – effective tax rate))
W_e = Percentage of equity capital in the capital structure
W_d = Percentage of debt capital in the capital structure

The peer group's financial statements and their associated public trading data points were reviewed to determine debt levels, market capitalizations, beta values (both levered and unlevered) and effective tax rates to compute the WACC for the Shenhua mining operations. As shown above, the peer group's capital structure includes both equity and long-term debt. Consequently, it is reasonable to assume that the capital structure of China Energy will also encompass both equity and debt. As such, a discount rate using the WACC approach is appropriate for discounting the target company's projected cash flow. Derivation of the components of WACC for China Energy mines is discussed below.

8.4.3 Equity Cost of Capital

The cost of equity is the return required by equity investors, which adequately compensates them for the risk assumed by investing in a given company's equity. There are several models that can be used to estimate the cost of equity, including the capital asset pricing model (CAPM), the buildup method, Fama-French three-factor model, and the arbitrage pricing theory (APT). For purposes of this analysis, we utilized the "build-up" approach.

The equity cost of capital is generally defined as the sum of a risk-free rate and a risk premium. The build-up model divides the risk premium into three main subcomponents: (1) an equity risk premium, (2) a size premium, and (3) a country and/or company-specific risk premium. The formula for the equity cost of capital using the build-up method is shown below:

$$k_e = R_f + ERP * \beta_L + R_{CP} + R_{SP} + R_{CS}$$

Where:

- The risk-free rate (R_f) is the theoretical return associated with an investment where the expected return equals the actual return. For the valuation of a Chinese company, the nominal risk-free rate is the yield on 10-year People's Republic of China (PRC) government bonds. As of July 1, 2025, the yield on the PRC 10-year government bond was 1.70%.
- The equity risk premium (ERP) is defined as the expected return on a fully diversified portfolio of equity securities less the expected rate of return on a risk-free security (i.e., ERP is the level of risk-reward that equity investors in the stock market would require as compensation for the level of risk undertaken versus a risk-free investment). For purposes of this analysis, We utilized ERP data for Chinese publicly traded companies published by the

Stern School of Business at New York University[1] as of July 1, 2025. The ERP value (5.25%) is adjusted for the target company's levered beta (1.27).

- Country risk premium (R_{CP}) published by the Stern School of Business at New York University as of July 1, 2025, was 1.04%.
- The size risk premium (R_{SP}) is a factor added to the cost of equity and refers to the excess return that an investor would require as compensation for the risk associated with investing in a small or start-up company. Size premium is based on research from the Center for Research in Security Prices that groups companies into deciles based upon market capitalization. Due to Shenhua's expected large-company status, we elected not to apply a company-size risk premium.
- Company-specific risk premiums (R_{CS}) are intended to account for any unsystematic risk not already captured by other risk factors.
  Some reasons utilized for the inclusion of company-specific risk premiums in a cost of equity estimate include projection risk, customer concentration risk, inferior management team, key employee risk, and limited liquidity. For this project, there are no additional company-specific risks present that would require inclusion of an additional risk premium.

Based on these factors, the cost of equity for China Energy is estimated to be 9.38%.

8.4.4 Debt Cost of Capital

The cost of debt is the interest rate that a company pays on its debt, which is typically based on the anticipated return on a bond if the bond is held until maturity (i.e., the yield to maturity (YTM) on its long-term debt). For companies that do not have publicly traded debt from which to derive YTM, the cost of debt can be viewed as the rate a prudent debt investor would require on comparable long-term interest-bearing debt. As such, we built an estimated after-tax cost of debt using the following equation:

$$k_d = [R_f + Country\ Borrowing\ Spread + R_{CP}\ ]\ x\ (1 - t)$$

Where:

- The risk-free rate (R_f) is again the yield on the 10-year PRC government bonds.
- Country Borrowing Spread is based on China's three-month interbank offered rate, which is the interest rate at which banks lend funds to one another in the

[1] Damodaran Online, https://pages.stern.nyu.edu/~adamodar/New_Home_Page/datacurrent.html#discrate. Updated values as of January 9, 2025, and July 1, 2025.

international interbank rate. As of July 31, 2025, the three-month interbank offered rate published by China's Central Bank was 1.57%.

- Country risk premium (R_{CP}) is again 1.04%.
- According to the Stern School of Business at New York University, as of January 9, 2025, the effective tax rate for coal and related energy companies was 20.76%.

Based on these factors, the cost of debt for Shenhua is estimated to be 3.41%.

8.4.5 Discount Rate Utilized

The following table summarizes the steps utilized to derive the nominal after-tax WACC:

Cost of Capital Build Up		Comment
$Weighted\ Average\ Cost\ of\ Capital = [(ke * We) + (k_d * W_d)]$		
% Equity Weighting (We)	62.1	From peer group analysis.
Cost of Equity (ke)	9.4	From above.
% Debt Weighting (Wd)	37.9	From peer group analysis.
After-Tax Cost of Debt*	3.4	From above.
Nominal after-tax WACC %	7.1	With the impact of inflation
PRC Inflation Rate %	-	FocusEconomics.com
Real after-tax WACC %	7.1	Without the impact of inflation.

* Based on an effective tax rate of 20.76%

Based on the results of the above analysis, we estimates the nominal after-tax WACC rate (and the real after-tax WACC rate) to be 7.1%, as of 31 July 2025. Given our experience related to coal industry valuations, it is our opinion that a 6.0% to 10.0% after-tax discount rate is appropriate for an established operating mining company such as China Energy.

8.5 Economic Analysis

8.5.1 Basic Assumptions

The DCF method was selected as the appropriate method to complete the economic analyses. Consistent with international guidelines, the discount rate of 7.1% was adopted to calculate the NPV of the base case for the economic analysis. The

following economic parameters and assumptions are used to develop our base case DCF-NPV models for the subject mines:

1. Coal production, staffing, operating cost, and capital expenditures projections are based on the August 2025 to 2029 plans provided by China Energy, adjusted and extended by the CP to 2054, or the end of mine life when it's less than 30 years.
2. ROM output projections for most of the mines adhere to authorized output limits established by the provincial administrative authorities. Sales tonnages are developed according to historical yield performance or our independent analysis if no historical records were available.
3. Sales prices are expressed in constant RMB including VAT. The VAT is 13% of revenue with credit adjustment of 35% of raw materials + power + repairs/maintenance + capital expenditures.
4. Annual cash flow projections are calculated on an after-tax basis, with capital expenditures deducted in the year incurred. A PRC income tax rate of 25% is utilized, except for the mines qualified for the PRC's special policies, which utilized a PRC income tax rate of 15% during the period of 2020 to 2030 and 25% thereafter, based on the *Notice of the State Administration of Taxation on The Issue of Enterprise Income Tax concerning the In-depth Implementation of the Strategy for the Large-scale Development of the Western Region*.
5. Mid-year discounting and the 7.1% discount rate are used to calculate NPV.
6. Mine level general and administrative costs are included; corporate general and administrative charges are not included.
7. Sustaining capital spending (including CPPs) are projected based on historical CAPEX (2022-2025), China Energy projections and our experience. These mature mining operations are relatively steady-state operations with little need for high levels of sustaining capital. Sustaining capital spending ranges from RMB5 (open-pit mines) to RMB30 (underground mines) per commercial tonne of output at typical projected output levels.
8. The working capital/parts/inventory charge is projected based on two months of cash operating requirements (including CPP operating expenses VAT, resource tax and sales taxes) and will be recovered in the year of mine closure.
9. Decommissioning expense charges are projected in the final year of mine operation for mines that will be closed before 2054.
10. Depreciation is a standard pro-forma non-cash charge. Unique to PRC coal industry accounting are the production maintenance fee ("keep simple production"), shaft and roadway depreciation and the safety fund fee. According to GAAP, these charges are generally considered to be non-cash deductions to taxable income. China Energy mines also take a charge for amortization of the

fees paid for mining rights. The production maintenance fee and safety fund fee for each mine are summarized as follows:

Table 8-2 China Energy Non-cash Charges

	(RMB/t)	
Company / Mine	Production Maintenance Fee	Safety Fund

13. Our LW face sequencing for this analysis projects mining of thinner coal resources included in our reserve analysis where necessary to avoid sterilization by undermining. Generally, this practice adversely impacts mine performance (lower output and higher operating costs). Lower profile LW faces are installed for the period needed to recover the thinner resources. We believe that China Energy has the financial, management, technical, and labor staffing resources to accomplish shorter term LW face installations in thinner coal resources.

8.5.2 NPV at Different Discount Rates

As shown in Table 8-4, Discounted Cash Flow Analysis (DCF), following this text, our Base Case NPV results at the discount rate of 7.1% as of 31 July 2025 are all positive, as summarized in the following table:

Table 8-4 China Energy NPV at Different Discount Rates

The sensitivity analysis indicates that:

- The product prices are key factors affecting the NPVs of all subject mines, especially for those located in Inner Mongolia Wuhai Region and all mines located in Xinjiang Autonomous Region.
- The impact of CAPEX on NPV is large for all mines, especially for some of the Wuhai mines (i.e. Gongwusu, Huangbaici, Laoshidan and Limin) and some mines in Xinjiang Autonomous Region (i.e. Hongshanquan No.1 and No.2, Tunbao and Zhundong Open-pit), indicating that capital expenditure and financing costs are critical to mine economics.
- Cash costs also have a great impact on NPV, especially for the mines listed above, indicating that operating cost control is critical for these mines.

8.6 Conclusion

Based on our NPV analyses and pricing for various products, as reported by China Energy, the China Energy mines meet NPV hurdle requirements and the CP concludes there is reasonable expectation that the reserve tonnages reported for these mines are economically mineable (and qualify as reserves), as of the end of July 2025.

APPENDIX B-1 JORC Code, 2012 Edition – Table 1 – Baiyinhua Coalfield

The Baiyinhua No.1 Open-pit Mine controlled by Inner Mongolia Pingzhuang Coal (Group) Co., Ltd. Is located in the Baiyinhua Coalfield.

Section 1 Sampling Techniques and Data

The coal drilling activities of the Baiyinhua Coalfield dates back to the 2004and ends in 2008. There are some drilling activities after 2008, but they are not for coal core drilling. The coal drilling techniques employed in 2004 and 2008 are difficult to trace with precision. The phased coal mine geological reports compiled according to Chinese standards also lack detailed descriptions of the sampling/drilling techniques used in each phase. Through interviews with technical personnel from mines and exploration teams previously responsible for these projects, we learned that the exploration work in the target coalfield was exclusively conducted by state-owned, specialized coal exploration teams. Their exploration results were required to undergo review and approval by management authorities at various levels. Consequently, the drilling technologies adopted by these different teams uniformly complied with relevant nationally issued specifications. Although the specific historical drilling techniques are difficult to retrace, based on our review of the borehole data from each mine and its comparison with production data, we confirm that this data is generally consistent with the information exposed during mining operations.

Criteria	JORC Code explanation	Commentary
Sampling techniques	• *Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.* • *Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.* • *Aspects of the determination of mineralisation that are Material to the Public Report.* • *In cases where 'industry standard' work has been done this would be relatively simple (eg 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg*	• The exploration activities date too far back in history, and the relevant information can no longer be traced.

Criteria	JORC Code explanation	Commentary
	submarine nodules) may warrant disclosure of detailed information.	
Drilling techniques	• *Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).*	• The exploration activities date too far back in history, and the relevant information can no longer be traced.
Drill sample recovery	• *Method of recording and assessing core and chip sample recoveries and results assessed.* • *Measures taken to maximise sample recovery and ensure representative nature of the samples.* • *Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.*	• The exploration activities date too far back in history, and the relevant information can no longer be traced.
Logging	• *Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.* • *Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.* • *The total length and percentage of the relevant intersections logged.*	• The exploration activities date too far back in history, and the relevant information can no longer be traced.
Sub-sampling techniques and sample preparation	• *If core, whether cut or sawn and whether quarter, half or all core taken.* • *If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.* • *For all sample types, the nature, quality and appropriateness of the sample preparation technique.* • *Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.* • *Measures taken to ensure that the sampling is representative of the in situ material collected, including for instance results for field*	• The exploration activities date too far back in history, and the relevant information can no longer be traced.

Criteria	JORC Code explanation	Commentary
	duplicate/second-half sampling. • *Whether sample sizes are appropriate to the grain size of the material being sampled.*	
Quality of assay data and laboratory tests	• *The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.* • *For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.* • *Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established.*	• The exploration activities date too far back in history, and the relevant information can no longer be traced.
Verification of sampling and assaying	• *The verification of significant intersections by either independent or alternative company personnel.* • *The use of twinned holes.* • *Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.* • *Discuss any adjustment to assay data.*	• The exploration activities date too far back in history, and the relevant information can no longer be traced.
Location of data points	• *Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.* • *Specification of the grid system used.* • *Quality and adequacy of topographic control.*	• The coordinate system is the 1954 Beijing Coordinate system, and the elevation system adopts the 1956 Yellow Sea elevation reference. Total stations are set up using nearby control points, and the position of the survey point in the plane is determined using the Tianbao 5700 Dynamic GPS. • The surveying instruments used for borehole positioning hold valid annual inspection certificates issued by the quality control department. These instruments demonstrate stable and reliable performance, and the measurement methods employed are correct

Criteria	JORC Code explanation	Commentary
		and appropriate. A 10% random re-survey was conducted on 75 engineering boreholes in this area using the repeat observation method. The coordinate discrepancies between the two datasets range as follows: ΔX 0.020–0.125 m, ΔY 0.018–0.146 m, and ΔH 0.002–0.053 m. • The re-survey results confirm that the engineering survey outcomes in this area are accurate, and their precision meets the requirements of relevant regulations and specifications.
Data spacing and distribution	• *Data spacing for reporting of Exploration Results.* • *Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.* • *Whether sample compositing has been applied.*	• The drilling grid in the eastern part of the mining area, covering approximately one-third of the total area, is 250×250 meters, while a 500×500 meter grid is adopted in the remaining majority of the region. This drilling spacing is sufficient to classify the majority of the resources in the Baiyinhua mining area as the **Measured** category. The data spacing is adequate to establish geological and quality continuity • Sample compositing is not applicable to coal.
Orientation of data in relation to geological structure	• *Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.* • *If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.*	• For coal seams, as long as full seam interval sampling is achieved, the sampling orientation has virtually no impact on the results. • There is no bias for coal.
Sample security	• *The measures taken to ensure sample security.*	• The exploration activities date too far back in history, and the relevant information can no longer be traced.
Audits or	• *The results of any audits or reviews of sampling techniques and data.*	• There are no known audits or reviews of sampling techniques and

Criteria	JORC Code explanation	Commentary
reviews		data. This is not routine practice in the Chinese coal industry.

Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

Criteria	JORC Code explanation	Commentary
Mineral tenement and land tenure status	• *Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.* • *The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.*	• Baiyinhua No.1 Open-pit Coal Mine: Type of Mining Right: Mining Right Mining Right Name: Baiyinhua No.1 Open-pit Coal Mine, Xi Ujimqin Banner, Inner Mongolia Mining Right Number: C1000002008091110000935 Area: 19.9154 km² Location: Yuanbaoshan District, Chifeng City, Inner Mongolia Autonomous Region Ownership: Inner Mongolia Pingzhuang Coal (Group) Co., Ltd. (100% owned by China Energy Investment Corporation) • According to the current status survey, the Baiyinhua No.1 Open-pit Mine does not involve environmentally sensitive points requiring special protection, such as nature reserves, scenic spots, water source protection zones, or cultural relics and historic sites. • The mining right certificate for the mine is within the valid period. No known impediments to maintaining and renewing such mining certificate were identified.
Exploration done by other parties	• *Acknowledgment and appraisal of exploration by other parties.*	• In order to complete a resources/reserves estimates for the subjected mining rights located in the Baiyinhua Coalfield, we were provided with two exploration report issued by the Inner Mongolia Autonomous Region Coalfield Geology Bureau 104 Exploration Team in 2004 and 2008, respectively. Both exploration programs of the two reports include collection of data on coal occurrence and quality, hydrology,

Criteria	JORC Code explanation	Commentary
		and geotechnical characteristics of strata, spontaneous combustion and explosiveness of coal, coalbed methane, etc. Based on the Chinese mining regulation, the results of exploration are presented in the form of an Exploration Report that must be approved by the government in order to apply for exploration and mining right certificates. Due to these detailed regulated procedures, drilling data, exploration reports, and mine design reports prepared in PRC are very consistent in content and presentation. • It's the CP's opinion that the reports are reliable, and the drill hole data in the report was used for resources/reserves estimates.
Geology	• *Deposit type, geological setting and style of mineralisation.*	• Coal deposit. • The geologic settings of the Baiyinhua No.1 Open-pit is judged to be moderate. While the strata are flat-lying, complex structure containing multiple partings of the coal seams is a complicating factor for the seam in most of the mine areas. • Regional Geology: The Baiyinhua Coalfield occupies the northeastern segment of the Wunit Faulted Depression at the eastern termination of the Erlian Basin. The coalfield constitutes a classic graben-style rift basin system. The NE-trending Wunit Faulted Depression extends approximately 326 km in length and 9 to16 km in width. It is bounded to the north by the Chagan Aobao–Arongqi Deep Fault Zone, to the south by the Xilaimiao–Daqing Pasture Major Fault, to the west by the Sonid Uplift, and to the east by the Greater Khingan Range Uplift Belt. • Structure: The Baiyinhua No.1 Open-pit is located in the southwestern part of the Baiyinhua Coalfield. The mine area is characterized by a NE-trending, WS-plunging asymmetrical syncline,

Criteria	JORC Code explanation	Commentary
		measuring approximately 4.65 km in axial length and 4.3 km in width. The northwestern limb of the syncline exhibits gentler dips of around 5 degrees, while the southeastern limb is slightly steeper, with dips ranging from 5 to 9 degrees. Local undulations are present along both limbs. A limited number of small-scale normal faults, all striking NW–SE with displacements under 20 m, are developed within the mine area. No magmatic intrusions have been identified within the coal-bearing strata.

Drill hole Information	• *A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:*
	  ○ *easting and northing of the drill hole collar*
	  ○ *elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar*
	  ○ *dip and azimuth of the hole*
	  ○ *down hole length and interception depth*
	  ○ *hole length.*
	• *If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.*
		• Not applicable as no Exploration Results included in the report.

Data aggregation methods	• *In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.* • *Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.*	• Not applicable as no Exploration Results included in the report.

Criteria	JORC Code explanation	Commentary
	• *The assumptions used for any reporting of metal equivalent values should be clearly stated.*	
Relationship between mineralisation widths and intercept lengths	• *These relationships are particularly important in the reporting of Exploration Results.* • *If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.* • *If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known').*	• Not applicable as no Exploration Results included in the report.
Diagrams	• *Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.*	• Not applicable as no Exploration Results included in the report.
Balanced reporting	• *Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.*	• Not applicable as no Exploration Results included in the report.
Other substantive exploration data	• *Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.*	• Not applicable as no Exploration Results included in the report.
Further work	• *The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling).* • *Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.*	• There is currently no further exploration planned.

Section 3 Estimation and Reporting of Mineral Resources

(Criteria listed in section 1, and where relevant in section 2, also apply to this section.)

Criteria	JORC Code explanation	Commentary
Database integrity	• *Measures taken to ensure that data has not been corrupted by, for example, transcription or keying errors, between its initial collection and its use for Mineral Resource estimation purposes.* • *Data validation procedures used.*	• Collected coal mine geological reports, including drilling data, are available in both PDF and editable Word/Excel formats. The competent persons converted the data from the editable versions into the database for this resource estimate. The database was verified using Carlson SURVCAD before modeling. • The completed model was cross-checked and validated against the attached maps in the geological reports. • If any errors preventing further progress were identified during the process, the cause was investigated based on error prompts, and comparisons were made with the PDF version data for verification. No data anomalies were detected during this estimate process.
Site visits	• *Comment on any site visits undertaken by the Competent Person and the outcome of those visits.* • *If no site visits have been undertaken indicate why this is the case.*	• The Competent Person, Mr. Jisheng Han and BOYD Senior Geologist, Mr. Yongliang Xing visited Inner Mongolia Pingzhuang Coal (Group) Co., Ltd. in September 2025. During the site visit, the Competent Person collected source data, reviewed exploration history and records, discussed historic performance and current status as well as future plans of each subject mine and exploration area with corresponding technical staff and management personnel.
Geological interpretation	• *Confidence in (or conversely, the uncertainty of) the geological interpretation of the mineral deposit.* • *Nature of the data used and of any assumptions made.* • *The effect, if any, of alternative interpretations on Mineral Resource estimation.* • *The use of geology in guiding and controlling Mineral Resource*	• Collected coal mine geological reports are available in both PDF and editable Word/Excel formats. The Qualified Person converted the data from the editable versions into the database for this resource estimation. The database was verified using Carlson SURVCAD before modeling. The completed model was cross-checked and

Criteria	JORC Code explanation	Commentary
	estimation. • *The factors affecting continuity both of grade and geology.*	validated against the attached maps in the geological reports. If any errors preventing further progress were identified during the process, the cause was investigated based on error prompts, and comparisons were made with the PDF version data for verification. No data anomalies were detected during this estimate process. • Due to the layered continuity and large-scale occurrence of coal seams, the geological interpretation reliability for coal seams in mature mining areas like the Baiyinhua No. 1 Open-pit Mine is high. The competent persons for this report, through the review of borehole logs and geophysical logs for seam correlation, as well as subsequent model representation, consider the geological interpretation of the Baiyinhua No. 1 Open-pit Mine to be highly reliable. • The geological interpretation utilizes the following assumptions: - Variations in coal seam thickness are linear and follow a regular pattern. - Sudden and significant changes in coal seam thickness over short distances typically indicate structural abnormalities, such as: = Syndepositional structures leading to seam splitting and thinning. = Post-depositional structures including erosion by paleochannels, and magmatic erosion. • Factors compromising coal seam continuity encompass: - Seam splitting and thinning. - Erosion by paleochannels/up-lifting to surface/ igneous

	characterisation). • *In the case of block model interpolation, the block size in relation to the average sample spacing and the search employed.* • *Any assumptions behind modelling of selective mining units.* • *Any assumptions about correlation between variables.* • *Description of how the geological interpretation was used to control the resource estimates.* • *Discussion of basis for using or not using grade cutting or capping.* • *The process of validation, the checking process used, the comparison of model data to drill hole data, and use of reconciliation data if available.*	the extent of the resources was constrained by mine boundary, authorized mining elevation and topo showing the current pit-shell. The key parameters and assumptions used for the resource estimation include: a density of 2.1 for partings, partings thicker than 0.5 m can be separately stripped in open-pit production, and a minimum minable coal seam thickness of 0.5 meters. • The critical step in coal modeling data validation lies in seam correlation, which is conducted *prior to* database establishment. The Qualified Person (QP) first assesses the rationality of seam correlation through a comprehensive review of borehole data. Owing to the characteristics of layered deposits, upon model completion, the model itself can be integrated with geological rationality analysis to identify any anomalous data.
Moisture	• *Whether the tonnages are estimated on a dry basis or with natural moisture, and the method of determination of the moisture content.*	• All resource tonnages are estimated and report on natural moisture basis.
Cut-off parameters	• *The basis of the adopted cut-off grade(s) or quality parameters applied.*	• The cut-off grades used: Ash content Ad: 40% Sulphur content St,d: 3% • Calorific Value Qnet,d: 15.7 MJ/kg.
Mining factors or assumptions	• *Assumptions made regarding possible mining methods, minimum mining dimensions and internal (or, if applicable, external) mining dilution. It is always necessary as part of the process of determining reasonable prospects for eventual economic extraction to consider potential mining methods, but the assumptions made regarding mining methods and parameters when estimating Mineral Resources may not always be rigorous. Where this is the case, this should be*	• The following assumptions are made specifically for open-pit mining: partings thicker than 0.5 m can be separately stripped in open-pit production, and a minimum minable coal seam thickness of 0.5 meters.

Criteria	JORC Code explanation	Commentary
	reported with an explanation of the basis of the mining assumptions made.	
Metallurgical factors or assumptions	• *The basis for assumptions or predictions regarding metallurgical amenability. It is always necessary as part of the process of determining reasonable prospects for eventual economic extraction to consider potential metallurgical methods, but the assumptions regarding metallurgical treatment processes and parameters made when reporting Mineral Resources may not always be rigorous. Where this is the case, this should be reported with an explanation of the basis of the metallurgical assumptions made.*	• No metallurgical factors or assumptions used for coal resources estimates.
Environmental factors or assumptions	• *Assumptions made regarding possible waste and process residue disposal options. It is always necessary as part of the process of determining reasonable prospects for eventual economic extraction to consider the potential environmental impacts of the mining and processing operation. While at this stage the determination of potential environmental impacts, particularly for a greenfields project, may not always be well advanced, the status of early consideration of these potential environmental impacts should be reported. Where these aspects have not been considered this should be reported with an explanation of the environmental assumptions made.*	• The subject open-pit mine provided preliminary design report which covers dump site descriptions and environmental impact assessment report. The Baiyinhua Coalfield area is a regional coal-producing center, where approval process for waste dump site acquisition has been smooth, and no obstacle in obtaining future sites for waste storage was identified. Our estimation is based on the assumption that future production is highly unlikely to be impacted by environmental issues.
Bulk density	• *Whether assumed or determined. If assumed, the basis for the assumptions. If determined, the method used, whether wet or dry, the frequency of the measurements, the nature, size and representativeness of the samples.* • *The bulk density for bulk material must have been measured by methods that adequately account for void spaces (vugs, porosity, etc), moisture and differences between rock and alteration zones within the deposit.* • *Discuss assumptions for bulk density estimates used in the*	• The competent persons have reviewed the bulk density data corresponding to each sample in the received borehole data. The arithmetic mean for each coal seam was adopted as the fundamental parameter for calculating the seam's resources. • In accordance with standard Chinese exploration practice, bulk density data for partings within coal seams is typically not prioritized, resulting in a limited dataset. Based on industry experience, the competent persons have assumed a value of 2.1 for this parameter. • The competent persons confirm that the adoption of these bulk

Criteria	JORC Code explanation	Commentary
	evaluation process of the different materials.	density values and the aforementioned assumption are appropriate.
Classification	• *The basis for the classification of the Mineral Resources into varying confidence categories.*	• The resource was classified as Measured, Indicated, and inferred in accordance with the JORC Code (2012 Edition) and Australasia Institute of Mining and Metallurgy (AusIMM) guidelines.
	• *Whether appropriate account has been taken of all relevant factors (ie relative confidence in tonnage/grade estimations, reliability of input data, confidence in continuity of geology and metal values, quality, quantity and distribution of the data).*	• Resource classification considered geological factors (structural and sedimentary) and continuity of coal quality, sample spacing and the quality of the data.
	• *Whether the result appropriately reflects the Competent Person's view of the deposit.*	• The results reflect the competent persons' view.
Audits or reviews	• *The results of any audits or reviews of Mineral Resource estimates.*	• Internal technical reviews were undertaken by peer Competent Persons as part of its routine governance process. These reviews did not identify material issues affecting the coal resources estimate.
Discussion of relative accuracy/ confidence	• *Where appropriate a statement of the relative accuracy and confidence level in the Mineral Resource estimate using an approach or procedure deemed appropriate by the Competent Person. For example, the application of statistical or geostatistical procedures to quantify the relative accuracy of the resource within stated confidence limits, or, if such an approach is not deemed appropriate, a qualitative discussion of the factors that could affect the relative accuracy and confidence of the estimate.*	• Data protocols and estimation techniques used in the Mineral Resource adhere to the guidelines outlined in the JORC Code (2012 Edition).
	• *The statement should specify whether it relates to global or local estimates, and, if local, state the relevant tonnages, which should be relevant to technical and economic evaluation. Documentation should include assumptions made and the procedures used.*	• The coal resources estimate may exhibit minor variance due to equipment-dependent minimum mining height, coal-seam thickness undulation, and assumptions regarding the maximum thickness of parting that is to be mined together with coal. While these factors may

Criteria	JORC Code explanation	Commentary
	• *These statements of relative accuracy and confidence of the estimate should be compared with production data, where available.*	introduce limited systematic and unavoidable deviation, their overall impact on resource accuracy is negligible.

Section 4 Estimation and Reporting of Ore Reserves

(Criteria listed in section 1, and where relevant in sections 2 and 3, also apply to this section.)

Criteria	JORC Code explanation	Commentary
Mineral Resource estimate for conversion to Ore Reserves	• *Description of the Mineral Resource estimate used as a basis for the conversion to an Ore Reserve.* • *Clear statement as to whether the Mineral Resources are reported additional to, or inclusive of, the Ore Reserves.*	• In estimating coal resources, the following steps were used: - Independent review and interpretation of the source exploration data. - Review of seam correlation. - Identification of coal seam occurrence greater than 0.5 m thick for bituminous thermal coal as presented at the Baiyinhua Coalfield. - Exclusion of barrier areas underlying protected surface structures (e.g., mine facilities, major highways, major streams, and populated areas that are not planned to be relocated). - Preparation of coal isopach maps within the identified resource areas. - Review of seam quality. • The Coal Resources reported are inclusive of the Coal Reserves. Coal Reserve estimation has only been undertaken for those portions of the Measured and Indicated Resources that satisfy the applicable Modifying Factors.
Site visits	• *Comment on any site visits undertaken by the Competent Person and*	• The Competent Person, Mr. Jisheng Han and BOYD Senior

Criteria	JORC Code explanation	Commentary
	the outcome of those visits. • *If no site visits have been undertaken indicate why this is the case.*	Geologist, Mr. Yongliang Xing visited Inner Mongolia Pingzhuang Coal (Group) Co., Ltd. in September 2025. During the site visit, the Competent Person collected source data, reviewed exploration history and records, discussed historic performance and current status as well as future plans of each subject mine and exploration area with corresponding technical staff and management personnel.
Study status	• *The type and level of study undertaken to enable Mineral Resources to be converted to Ore Reserves.* • *The Code requires that a study to at least Pre-Feasibility Study level has been undertaken to convert Mineral Resources to Ore Reserves. Such studies will have been carried out and will have determined a mine plan that is technically achievable and economically viable, and that material Modifying Factors have been considered.*	• A Preliminary Design Report for Baiyinhua No.1 Open-pit was provided, which is the typical mine design report for open-pit coal mines in China, generally considered comparable to or higher than the Feasibility Study level. The mine plan and economics were carefully reviewed in detail and concluded as viable to support Coal Reserves estimate.
Cut-off parameters	• *The basis of the cut-off grade(s) or quality parameters applied.*	• Coal reserves estimation was limited to the Measured and Indicated Resource areas. The cut-off grades used: Ash content Ad: 40% Sulphur content St,d: 3% Calorific Value Qnet,d: 15.7 MJ/kg
Mining factors or assumptions	• *The method and assumptions used as reported in the Pre-Feasibility or Feasibility Study to convert the Mineral Resource to an Ore Reserve (i.e. either by application of appropriate factors by optimisation or by preliminary or detailed design).* • *The choice, nature and appropriateness of the selected mining method(s) and other mining parameters including associated design issues such as pre-strip, access, etc.*	• Preliminary Design Report for the mine was provided, which has the necessary mining design details for coal reserve estimation. The mining method selected for the open-pit mine was shovel-truck approach with semi-mobile crushing/bot transportation arrangement. • The coal seams in the Baiyinhua Coalfield feature shallow occurrences with generally simple geological settings. The dry weather and weak water-bearing strata are benefit for open-pit

Criteria	JORC Code explanation	Commentary
		mining. In addition, this area has only sparsely distributed population. The shovel-truck mining method is widely used in open-pit coal mines in China with abundant successful experiences. The selection of mining method in the mine is considered appropriate.
	• *The assumptions made regarding geotechnical parameters (eg pit slopes, stope sizes, etc), grade control and pre-production drilling.*	• Geotechnical parameters are designed based on the geotechnical testing of rock and coal strata. Baiyinhua No.2 Open-pit Min has years of operating history. Major mining and geotechnical parameters are as follows:  Parameter / Unit / Mining / Stripping Bench Height / m / 13.5 / 13.5 Working Width / m / 30 / 20 Bench Face Angle / ° / 65 / Soil:50 Rock:65 Safety Offset / m / 1 / 1 Blast Pile Projection Distance / m / 0 / 4 Road Width / m / 17 / 17 Safety Clearance / m / 5 / 5 Minimum Working Bench Width / m / 50 / 40
	• *The major assumptions made and Mineral Resource model used for pit and stope optimisation (if appropriate).*	• Not applicable
	• *The mining dilution factors used.*	• OSD of 3% was considered for all the seams during mining.
	• *The mining recovery factors used.*	• A 98% recovery factor was used for the open-pit mine.

Criteria	JORC Code explanation	Commentary
	• *Any minimum mining widths used.*	• Minimum mining working bench width used was 50 m for Baiyinhua No.1 Open-pit.
	• *The manner in which Inferred Mineral Resources are utilised in mining studies and the sensitivity of the outcome to their inclusion.*	• In Coal Reserve estimation, Inferred Coal Resources were excluded.
	• *The infrastructure requirements of the selected mining methods.*	• Baiyinhua Coalfield is located in the eastern part of Inner Mongolia Autonomous Region, which is major coal-producing area with numerous mines in operation and planned. Infrastructure needed for open-pit mining operations are conveniently available such as power supply, transportation network, water supply, Telecommunication network, etc.
Metallurgical factors or assumptions	• *The metallurgical process proposed and the appropriateness of that process to the style of mineralisation.*	• Baiyinhua No.1 Open-pit has crusher systems to produce coal at different sizes. The 350-50 mm coal is processed using TDS technology. The proposed coal processing arrangements are considered appropriate and can satisfy the requirement of product coal quality by their customers.
	• *Whether the metallurgical process is well-tested technology or novel in nature.*	• The crushing and screening and TDS technologies are all widely adopted coal processing technologies and have been well tested throughout the coal industry in China.
	• *The nature, amount and representativeness of metallurgical test work undertaken, the nature of the metallurgical domaining applied and the corresponding metallurgical recovery factors applied.*	• Test work undertaken for the Baiyinhua No.1 Open-pit does not involve metallurgical testing. Instead, coal processing test work has been completed to assess the performance of crushing and screening and TDS dry separation. The test work is considered representative of the coal seams included in the Coal Reserve estimate. Yield (recovery) factors applied to the Coal Reserve estimate are derived from the test work and available operational data.
	• *Any assumptions or allowances made for deleterious elements.*	• No deleterious elements
	• *The existence of any bulk sample or pilot scale test work and the*	• The subject open-pit mine has well-established coal processing

Criteria	JORC Code explanation	Commentary
	degree to which such samples are considered representative of the orebody as a whole.	history, thus no bulk sample or pilot scale test work is needed.
	• *For minerals that are defined by a specification, has the ore reserve estimation been based on the appropriate mineralogy to meet the specifications?*	• Calorific Value parameter and ash content in coal quality are the main focus for thermal coal. In the Coal Reserve estimation process, such parameters have been reviewed and demonstrated in the product coal quality.
Environmental	• *The status of studies of potential environmental impacts of the mining and processing operation. Details of waste rock characterisation and the consideration of potential sites, status of design options considered and, where applicable, the status of approvals for process residue storage and waste dumps should be reported.*	• The subject open-pit mine provided preliminary design report which covers dump site descriptions and environmental impact assessment report. The Baiyinhua Coalfield area is a regional coal-producing center, where approval process for waste dump site acquisition has been smooth, and no obstacle in obtaining future sites for waste storage was identified. Our estimation is based on the assumption that future production is highly unlikely to be impacted by environmental issues.
Infrastructure	• *The existence of appropriate infrastructure: availability of land for plant development, power, water, transportation (particularly for bulk commodities), labour, accommodation; or the ease with which the infrastructure can be provided, or accessed.*	• Baiyinhua Coalfield is located in the eastern part of Inner Mongolia Autonomous Region. Due to the well-developed coal industry and designated energy base status, infrastructure needed for open-pit mining operations are conveniently available such as power supply, transportation network, water supply, etc.
Costs	• *The derivation of, or assumptions made, regarding projected capital costs in the study.*	• Capital expenditure projections for the period from August 2025 to December 2029 were provided covering civil constructions, equipment purchases, etc. Sustaining capital at RMB5/t of coal producing capacity was assumed which is typical for large open-pit mines in China.
	• *The methodology used to estimate operating costs.*	• Operating cost projections for the period from August 2025 to December 2029 were provided by the mine based on historical

Criteria	JORC Code explanation	Commentary
		performance and adjusted for certain changes such as stripping ratio. The competent person extended the projection period to the year when the Coal Reserves are depleted.
	• *Allowances made for the content of deleterious elements.*	• No deleterious elements.
	• *The derivation of assumptions made of metal or commodity price(s), for the principal minerals and co- products.*	• The historical three-year average price (VAT inclusive) was used for our economic analysis of the mine. Baiyinhua No.1 Open-pit: RMB268.75/t
	• *The source of exchange rates used in the study.*	• Exchange rates: not applicable
	• *Derivation of transportation charges.*	• Transportation charges are included in the operating costs and related to stripping ratio, which are adjusted accordingly in future operation projections.
	• *The basis for forecasting or source of treatment and refining charges, penalties for failure to meet specification, etc.*	• Processing cost projections are based on historical performance and included in overall mining operation costs. No case of failure to meet quality specification was reported and penalties for such failure were not considered in forecasting.
	• *The allowances made for royalties payable, both Government and private.*	• The mine already paid the mining right fees in obtaining the mining rights. Such fees were amortized over operating years.
Revenue factors	• *The derivation of, or assumptions made regarding revenue factors including head grade, metal or commodity price(s) exchange rates, transportation and treatment charges, penalties, net smelter returns, etc.*	• Geological conditions over the projection period are consistent with recent experience; no material coal quality change.
	• *The derivation of assumptions made of metal or commodity price(s), for the principal metals, minerals and co-products.*	• The historical three-year average price (VAT inclusive) was used for our economic analysis of the mine. Baiyinhua No.1 Open-pit: RMB268.75/t
Market assessment	• *The demand, supply and stock situation for the particular commodity, consumption trends and factors likely to affect supply and demand*	• Most of coal product from the subject open-pit mine will supply the nearby power plants and local market. The Baiyinhua Coalfield is one

</table>

Criteria	JORC Code explanation	Commentary
	government and statutory approvals. There must be reasonable grounds to expect that all necessary Government approvals will be received within the timeframes anticipated in the Pre-Feasibility or Feasibility study. Highlight and discuss the materiality of any unresolved matter that is dependent on a third party on which extraction of the reserve is contingent.	
Classification	• *The basis for the classification of the Ore Reserves into varying confidence categories.*	• Once Coal Resources of various categories were estimated, Coal Reserves were estimated after applying the mine plan to the resource areas. Under normal conditions as in the subject open-pit mine cases, the basis for the classification of the Coal Reserves into varying confidence categories is derived from the categories of Coal Resources, i.e., the Proven Reserves are from the Measured Resources, and the Probable Reserves are from the Indicated Resources.
	• *Whether the result appropriately reflects the Competent Person's view of the deposit.*	• They do.
	• *The proportion of Probable Ore Reserves that have been derived from Measured Mineral Resources (if any).*	• None.
Audits or reviews	• *The results of any audits or reviews of Ore Reserve estimates.*	• Internal technical reviews were undertaken by peer Competent Persons as part of its routine governance process. These reviews did not identify material issues affecting the Ore Reserve estimate.
Discussion of relative accuracy/ confidence	• *Where appropriate a statent of the relative accuracy and confidence level in the Ore Reserve estimate using an approach or procedure deemed appropriate by the Competent Person. For example, the application of statistical or geostatistical procedures to quantify the relative accuracy of the reserve within stated confidence limits, or, if such an approach is not deemed appropriate, a qualitative discussion*	• The Ore Reserve estimate for the open-pit operations may exhibit minor variance due to equipment-dependent minimum mining height, coal-seam thickness undulation, and assumptions regarding OSD and extraction losses. These factors may introduce limited deviation, but the overall impact on reserve accuracy is expected to be small.

Criteria	JORC Code explanation	Commentary
	of the factors which could affect the relative accuracy and confidence of the estimate. • *The statement should specify whether it relates to global or local estimates, and, if local, state the relevant tonnages, which should be relevant to technical and economic evaluation. Documentation should include assumptions made and the procedures used.* • *Accuracy and confidence discussions should extend to specific discussions of any applied Modifying Factors that may have a material impact on Ore Reserve viability, or for which there are remaining areas of uncertainty at the current study stage.* • *It is recognised that this may not be possible or appropriate in all circumstances. These statements of relative accuracy and confidence of the estimate should be compared with production data, where available.*	• The accuracy statement relates primarily to the global Coal Reserve estimate. Local accuracy may vary slightly in zones where seam thickness fluctuates or equipment recovery is constrained. • Uncertainty is mainly associated with modifying factors such as mining equipment mining height, operational OSD assumptions, and recovery/loss parameters. These factors influence extraction thickness and mined tonnage but remain within normal ranges for surface mining operations. • No reconciliation against long-term production is available. Confidence is therefore based on equipment capability, geological interpretation, and modifying factor assumptions.

APPENDIX B-2 JORC Code, 2012 Edition – Table 1 – Baoqing Coalfield

The Chaoyang Open-pit Mine controlled by China Energy Guoyuan Power Co., Ltd. is located in the Baoqing Coalfield.

Section 1 Sampling Techniques and Data

The drilling activities of the Baoqing Coalfield dates back to the 1990s. The drilling techniques employed in historical exploration across various mines are difficult to trace with precision. The phased coal mine geological reports compiled according to Chinese standards also lack detailed descriptions of the sampling/drilling techniques used in each phase. Through interviews with technical personnel from mines and exploration teams previously responsible for these projects, we learned that the exploration work in the target coalfield was exclusively conducted by state-owned, specialized coal exploration teams. Their exploration results were required to undergo review and approval by management authorities at various levels. Consequently, the drilling technologies adopted by these different teams uniformly complied with relevant nationally issued specifications. The latest drilling activity at Baoqing Coalfield was completed in 2007. Although the specific historical drilling techniques are difficult to retrace, based on our review of the borehole data from each mine and its comparison with production data, we confirm that this data is generally consistent with the information exposed during mining operations.

Criteria	JORC Code explanation	Commentary
Sampling techniques	• *Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.* • *Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.* • *Aspects of the determination of mineralisation that are Material to the Public Report.* • *In cases where 'industry standard' work has been done this would be relatively simple (eg 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required, such as where there is coarse gold that has inherent sampling*	• The exploration activities date too far back in history, and the relevant information can no longer be traced.

Criteria	JORC Code explanation	Commentary
	problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.	
Drilling techniques	• *Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).*	• The exploration activities date too far back in history, and the relevant information can no longer be traced.
Drill sample recovery	• *Method of recording and assessing core and chip sample recoveries and results assessed.* • *Measures taken to maximise sample recovery and ensure representative nature of the samples.* • *Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.*	• The exploration activities date too far back in history, and the relevant information can no longer be traced.
Logging	• *Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.* • *Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.* • *The total length and percentage of the relevant intersections logged.*	• The exploration activities date too far back in history, and the relevant information can no longer be traced.
Sub-sampling techniques and sample preparation	• *If core, whether cut or sawn and whether quarter, half or all core taken.* • *If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.* • *For all sample types, the nature, quality and appropriateness of the sample preparation technique.* • *Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.* • *Measures taken to ensure that the sampling is representative of the in*	• The exploration activities date too far back in history, and the relevant information can no longer be traced.

Criteria	JORC Code explanation	Commentary
	situ material collected, including for instance results for field duplicate/second-half sampling. • *Whether sample sizes are appropriate to the grain size of the material being sampled.*	
Quality of assay data and laboratory tests	• *The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.* • *For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.* • *Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established.*	• The exploration activities date too far back in history, and the relevant information can no longer be traced.
Verification of sampling and assaying	• *The verification of significant intersections by either independent or alternative company personnel.* • *The use of twinned holes.* • *Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.* • *Discuss any adjustment to assay data.*	• The exploration activities date too far back in history, and the relevant information can no longer be traced.
Location of data points	• *Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.* • *Specification of the grid system used.* • *Quality and adequacy of topographic control.*	In the Exploration report it's documented as follows: • The coordinate system is the 2000 National Coordinate system, and the elevation system adopts the 1985 Yellow Sea elevation reference. Total stations are set up using nearby control points, and the position of the survey point in the plane is determined using the drone radar combined with RTK manual measurement. The measurement accuracy is at the centimeter level. • The surveying instruments used for borehole positioning hold valid

Criteria	JORC Code explanation	Commentary
		annual inspection certificates issued by the quality control department. These instruments demonstrate stable and reliable performance, and the measurement methods employed are correct and appropriate. A more than 10% random re-survey was conducted on 422 engineering boreholes in this area using the repeat observation method. The plane error of 98% of the drilling holes is within ±0.10 to ±0.15 meters. Elevation error: ≤ ±0.05 meters • The re-survey results confirm that the engineering survey outcomes in this area are accurate, and their precision meets the requirements of relevant regulations and specifications.
Data spacing and distribution	• *Data spacing for reporting of Exploration Results.* • *Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.* • *Whether sample compositing has been applied.*	• The drilling grid of the subject Guoyuan Power property in Baoqing Coalfield are as follows: • As shown in that above table, Chaoyang Open-pit is moderately defined by drill holes. The data spacing is adequate to establish reasonable geological and quality continuity. • Sample compositing is not applicable to coal.
Orientation of data in relation to geological structure	• *Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.* • *If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.*	• For coal seams, as long as full seam interval sampling is achieved, the sampling orientation has virtually no impact on the results. • There is no bias for coal.

	Mining Area			Rsources %		
Mining	Initial	Successive	Backup	Measured	Indicated	Inferred
Chaoyang	250	500	1,000	28	25	47

Criteria	JORC Code explanation	Commentary
Sample security	• *The measures taken to ensure sample security.*	• The exploration activities date too far back in history, and the relevant information can no longer be traced.
Audits or reviews	• *The results of any audits or reviews of sampling techniques and data.*	• There are no known audits or reviews of sampling techniques and data. This is not routine practice in the Chinese coal industry.

Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

Criteria	JORC Code explanation	Commentary
Mineral tenement and land tenure status	• *Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.* • *The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.*	• Chaoyang Open-pit Mine: Type of Mining Right: Mining Right Mining Right Name: China Energy Baoqing Coal Power and Coal Chemical Co., Ltd. Chaoyang Open-pit Mine Mining Right Number: C1000020090611100207 51 Area: 122.5073 km² Location: Baoqing County, Shuangyashan City, Heilongjiang Province Ownership: China Energy Baoqing Coal Power and Coal Chemical Co., Ltd. (90% owned by China Energy Investment Corporation directly and/or via subsidiaries) According to the EIA and/or exploration report of the project, the Chaoyang Open-pit Mine does not involve environmentally sensitive points requiring special protection, such as nature reserves, scenic spots, water source protection zones, or cultural relics and historic sites. • Related coal mine in the Baoqing Coalfield is Chaoyang Open-pit Mine. The mining right certificate for the mine is within the valid period. No known impediments to maintaining and renewing such

Criteria	JORC Code explanation	Commentary
		mining certificate were identified.
Exploration done by other parties	• *Acknowledgment and appraisal of exploration by other parties.*	• In order to complete a resources/reserves estimates for the subjected mining rights located in the Baoqing Coalfield, the following exploration reports were provided for our review: - Geological Report on Coal Prospecting in the Fangsheng Area, Baoqing County, Heilongjiang Province, 1991 - 1993. - Reconnaissance Geological Report of the Chaoyang Area, Baoqing County, Heilongjiang Province,1993 - 1996 - Interim Geological Summary of the Detailed Exploration & Open-pit Exploration Design for the Chaoyang Exploration Area, Baoqing County, Heilongjiang Province, 2004 - Coal Exploration Report of the Chaoyang Exploration Area, Baoqing County, Heilongjiang Province, 2005 - Specialized Hydrogeological and Engineering Geological Investigation Report for the Initial Mining Area of Chaoyang Open-pit Coal Mine, Baoqing County, Heilongjiang Province, 2007 • All programs include collection of data on coal occurrence and quality, hydrology, and geotechnical characteristics of strata, spontaneous combustion and explosiveness of coal, coalbed methane, etc. Based on the Chinese mining regulation, the results of exploration are presented in the form of an Exploration Report that must be approved by the government in order to apply for exploration and mining right certificates. Due to these detailed regulated procedures, drilling data, exploration reports, and mine design reports prepared in PRC are very consistent in content and presentation.

Criteria	JORC Code explanation	Commentary
		• It's the CP's opinion that the reports are reliable, and the drill hole data in the report was used for resources/reserves estimates.
Geology	• *Deposit type, geological setting and style of mineralisation.*	• The geologic settings of the Chaoyang Open-pit Coal Mine is judged to vary from simple to moderate. While the strata are flat-lying, complex structure containing multiple partings of the coal seams is a complicating factor for the seam in most of the mine areas. • The regional area structure is a fault-bounded basin formed within a regional tectonic context. The northern sedimentary boundary is controlled by the Chaoyang-Dagushan Fault, while the southern and eastern boundaries are constrained by northeast-trending Paleozoic uplifts. The basement exhibits undulating topography. Distinct folding and faulting occurred within the Paleogene-Neogene strata. These structures had limited impact on the Neogene coal-bearing strata, generating only minor folds and small-scale dislocations. The overall morphology of the Neogene coal-bearing basin is a broad, gentle monocline, with strata striking 30 to 60 degrees and dipping at angles of 3 degrees–5 degrees. • The overall structural framework of the area is a NE-trending monocline with slight undulations. Strata dip at 3 degrees–5 degrees, exhibiting gentle and consistent attitudes with minimal variation along both strike and dip directions. Apart from the boundary fault (Chaoyang-Dagushan Fault F1) and the central F2 fault, subordinate synclines and minor faults are developed south of mine property. Fault displacements generally range from 0 to 20 m, with limited lateral extension within the area. The coal seams are unaffected by magmatic activity.

Criteria	JORC Code explanation	Commentary
Drill hole Information	• *A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:* o *easting and northing of the drill hole collar* o *elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar* o *dip and azimuth of the hole* o *down hole length and interception depth* o *hole length.* • *If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.*	• Not applicable as no Exploration Results included in the report.
Data aggregation methods	• *In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.* • *Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.* • *The assumptions used for any reporting of metal equivalent values should be clearly stated.*	• Not applicable as no Exploration Results included in the report.
Relationship between mineralisation widths and intercept lengths	• *These relationships are particularly important in the reporting of Exploration Results.* • *If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.* • *If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known').*	• Not applicable as no Exploration Results included in the report.

Criteria	JORC Code explanation	Commentary
Diagrams	• *Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.*	• Not applicable as no Exploration Results included in the report.
Balanced reporting	• *Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.*	• Not applicable as no Exploration Results included in the report.
Other substantive exploration data	• *Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.*	• Not applicable as no Exploration Results included in the report.
Further work	• *The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling).* • *Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.*	• There is currently no further exploration planned.

Section 3 Estimation and Reporting of Mineral Resources

(Criteria listed in section 1, and where relevant in section 2, also apply to this section.)

Criteria	JORC Code explanation	Commentary
Database integrity	• *Measures taken to ensure that data has not been corrupted by, for example, transcription or keying errors, between its initial collection and its use for Mineral Resource estimation purposes.* • *Data validation procedures used.*	• Collected coal mine geological reports, including drilling data, are available in both PDF and editable Word/Excel formats. The competent persons converted the data from the editable versions into the database for this resource estimate. The database was verified using Carlson SURVCAD before modeling.

Criteria	JORC Code explanation	Commentary
		• The completed model was cross-checked and validated against the attached maps in the geological reports. • If any errors preventing further progress were identified during the process, the cause was investigated based on error prompts, and comparisons were made with the PDF version data for verification. No data anomalies were detected during this estimate process.
Site visits	• *Comment on any site visits undertaken by the Competent Person and the outcome of those visits.* • *If no site visits have been undertaken indicate why this is the case.*	• The Competent Person, Mr. Jisheng Han and BOYD Senior Geologist, Mr. Yongliang Xing visited China Energy Guoyuan Power Co., Ltd. in September 2025. During the site visit, the Competent Person collected source data, reviewed exploration history and records, discussed historic performance and current status as well as future plans of each subject mine and exploration area with corresponding technical staff and management personnel.
Geological interpretation	• *Confidence in (or conversely, the uncertainty of) the geological interpretation of the mineral deposit.*	• Collected coal mine geological reports are available in both PDF and editable Word/Excel formats. The Competent Person converted the data from the editable versions into the database for this resource estimation. The database was verified using Carlson SURVCAD before modeling. The completed model was cross-checked and validated against the attached maps in the geological reports. If any errors preventing further progress were identified during the process, the cause was investigated based on error prompts, and comparisons were made with the PDF version data for verification. No data anomalies were detected during this estimate process. • Due to the layered continuity and large-scale occurrence of coal seams, the geological interpretation reliability for coal seams in mature mining areas like the Chaoyang Open-pit Mine is high. The competent persons for this report, through the review of borehole logs and geophysical logs for seam correlation, as well as subsequent

Criteria	JORC Code explanation	Commentary
		model representation, consider the geological interpretation of the Chaoyang Open-pit Mine to be highly reliable.
	• *Nature of the data used and of any assumptions made.* • *The effect, if any, of alternative interpretations on Mineral Resource estimation.* • *The use of geology in guiding and controlling Mineral Resource estimation.*	• The geological interpretation utilizes the following assumptions: - Variations in coal seam thickness are linear and follow a regular pattern. - Sudden and significant changes in coal seam thickness over short distances typically indicate structural abnormalities, such as: = Syndepositional structures leading to seam splitting and thinning. = Post-depositional structures including erosion by paleochannels, and magmatic erosion.
	• *The factors affecting continuity both of grade and geology.*	• Factors compromising coal seam continuity encompass: - Seam splitting and thinning. - Erosion by paleochannels/up-lifting to surface/ igneous intrusions. - Faulting. - outcrop.
Dimensions	• *The extent and variability of the Mineral Resource expressed as length (along strike or otherwise), plan width, and depth below surface to the upper and lower limits of the Mineral Resource.*	• The resources area is delineated by the authorized mine boundary, covering an area of 122.5073 km², with vertical mining elevation limits between +28 m to -90 m.
Estimation and modelling techniques	• *The nature and appropriateness of the estimation technique(s) applied and key assumptions, including treatment of extreme grade values, domaining, interpolation parameters and maximum distance of extrapolation from data points. If a computer assisted estimation method was chosen include a description of computer software and*	• The model of the Chaoyang Open-pit Coal Mine was developed using Carlson SURVCAD software based on the original data in the 2000 National Coordinate system. The model database includes the collar coordinates and elevation of each borehole, the top and bottom depths of each lithology, and the coal quality data of each coal seam.

Criteria	JORC Code explanation	Commentary
	parameters used. • *The availability of check estimates, previous estimates and/or mine production records and whether the Mineral Resource estimate takes appropriate account of such data.* • *The assumptions made regarding recovery of by-products.* • *Estimation of deleterious elements or other non-grade variables of economic significance (eg sulphur for acid mine drainage characterisation).* • *In the case of block model interpolation, the block size in relation to the average sample spacing and the search employed.* • *Any assumptions behind modelling of selective mining units.* • *Any assumptions about correlation between variables.* • *Description of how the geological interpretation was used to control the resource estimates.* • *Discussion of basis for using or not using grade cutting or capping.* • *The process of validation, the checking process used, the comparison of model data to drill hole data, and use of reconciliation data if available.*	The SURVCAD software can generate triangulated surface models for the roof and floor of each coal seam, thereby enabling the estimation of the spatial volume between them. The resource estimation is then calculated based on the apparent density of each seam. • The modeling utilized all borehole data within the mining area, and the extent of the resources was constrained by mine boundary, authorized mining elevation and topo showing the current pit-shell. The key parameters and assumptions used for the resource estimation include: a density of 2.1 for partings, partings thicker than 0.5 m can be separately stripped in open-pit production, and a minimum minable coal seam thickness of 0.5 meters. • The critical step in coal modeling data validation lies in seam correlation, which is conducted *prior to* database establishment. The Competent Person (CP) first assesses the rationality of seam correlation through a comprehensive review of borehole data. Owing to the characteristics of layered deposits, upon model completion, the model itself can be integrated with geological rationality analysis to identify any anomalous data.
Moisture	• *Whether the tonnages are estimated on a dry basis or with natural moisture, and the method of determination of the moisture content.*	• All resource tonnages are estimated and report on natural moisture basis.
Cut-off parameters	• *The basis of the adopted cut-off grade(s) or quality parameters applied.*	• The cut-off grades used: Ash content Ad: 40% Sulphur content St,d: 3% Calorific Value Qnet,d: 15.7 MJ/kg

Criteria	JORC Code explanation	Commentary
Mining factors or assumptions	• *Assumptions made regarding possible mining methods, minimum mining dimensions and internal (or, if applicable, external) mining dilution. It is always necessary as part of the process of determining reasonable prospects for eventual economic extraction to consider potential mining methods, but the assumptions made regarding mining methods and parameters when estimating Mineral Resources may not always be rigorous. Where this is the case, this should be reported with an explanation of the basis of the mining assumptions made.*	• The following assumptions are made specifically for open-pit mining: partings thicker than 0.5 m can be separately stripped in open-pit production, and a minimum minable coal seam thickness of 0.5 meters.
Metallurgical factors or assumptions	• *The basis for assumptions or predictions regarding metallurgical amenability. It is always necessary as part of the process of determining reasonable prospects for eventual economic extraction to consider potential metallurgical methods, but the assumptions regarding metallurgical treatment processes and parameters made when reporting Mineral Resources may not always be rigorous. Where this is the case, this should be reported with an explanation of the basis of the metallurgical assumptions made.*	• No metallurgical factors or assumptions used for coal resources estimates.
Environmental factors or assumptions	• *Assumptions made regarding possible waste and process residue disposal options. It is always necessary as part of the process of determining reasonable prospects for eventual economic extraction to consider the potential environmental impacts of the mining and processing operation. While at this stage the determination of potential environmental impacts, particularly for a greenfields project, may not always be well advanced, the status of early consideration of these potential environmental impacts should be reported. Where these aspects have not been considered this should be reported with an explanation of the environmental assumptions made.*	• The subject open-pit mine provided preliminary design report which covers dump site descriptions and environmental impact assessment report. The Baoqing Coalfield area is a regional coal-producing center, where approval process for waste dump site acquisition has been smooth, and no obstacle in obtaining future sites for waste storage was identified. Our estimation is based on the assumption that future production is highly unlikely to be impacted by environmental issues.
Bulk density	• *Whether assumed or determined. If assumed, the basis for the assumptions. If determined, the method used, whether wet or dry, the*	• The competent persons have reviewed the bulk density data corresponding to each sample in the received borehole data. The

Criteria	JORC Code explanation	Commentary
	frequency of the measurements, the nature, size and representativeness of the samples. • *The bulk density for bulk material must have been measured by methods that adequately account for void spaces (vugs, porosity, etc), moisture and differences between rock and alteration zones within the deposit.* • *Discuss assumptions for bulk density estimates used in the evaluation process of the different materials.*	arithmetic mean for each coal seam was adopted as the fundamental parameter for calculating the seam's resources. • In accordance with standard Chinese exploration practice, bulk density data for partings within coal seams is typically not prioritized, resulting in a limited dataset. Based on industry experience, the competent persons have assumed a value of 2.1 for this parameter. • The competent persons confirm that the adoption of these bulk density values and the aforementioned assumption are appropriate.
Classification	• *The basis for the classification of the Mineral Resources into varying confidence categories.* • *Whether appropriate account has been taken of all relevant factors (ie relative confidence in tonnage/grade estimations, reliability of input data, confidence in continuity of geology and metal values, quality, quantity and distribution of the data).* • *Whether the result appropriately reflects the Competent Person's view of the deposit.*	• The resource was classified as Measured, Indicated, and inferred in accordance with the JORC Code (2012 Edition) and Australasia Institute of Mining and Metallurgy (AusIMM) guidelines. • Resource classification considered geological factors (structural and sedimentary) and continuity of coal quality, sample spacing and the quality of the data. The results reflect the competent persons' view.
Audits or reviews	• *The results of any audits or reviews of Mineral Resource estimates.*	• Internal technical reviews were undertaken by peer Competent Persons as part of its routine governance process. These reviews did not identify material issues affecting the coal resources estimate.
Discussion of relative accuracy/ confidence	• *Where appropriate a statement of the relative accuracy and confidence level in the Mineral Resource estimate using an approach or procedure deemed appropriate by the Competent Person. For example, the application of statistical or geostatistical procedures to quantify the relative accuracy of the resource within stated confidence limits, or, if such an approach is not deemed appropriate, a qualitative discussion of the factors that could affect the relative accuracy and*	• Data protocols and estimation techniques used in the Mineral Resource adhere to the guidelines outlined in the JORC Code (2012 Edition). • The coal resources estimate may exhibit minor variance due to equipment-dependent minimum mining height, coal-seam thickness undulation, and assumptions regarding the maximum thickness of parting that is to be mined together with coal. While these factors may

Criteria	JORC Code explanation	Commentary
	confidence of the estimate. • *The statement should specify whether it relates to global or local estimates, and, if local, state the relevant tonnages, which should be relevant to technical and economic evaluation. Documentation should include assumptions made and the procedures used.* • *These statements of relative accuracy and confidence of the estimate should be compared with production data, where available.*	introduce limited systematic and unavoidable deviation, their overall impact on resource accuracy is negligible.

Section 4 Estimation and Reporting of Ore Reserves

(Criteria listed in section 1, and where relevant in sections 2 and 3, also apply to this section.)

Criteria	JORC Code explanation	Commentary
Mineral Resource estimate for conversion to Ore Reserves	• *Description of the Mineral Resource estimate used as a basis for the conversion to an Ore Reserve.* • *Clear statement as to whether the Mineral Resources are reported additional to, or inclusive of, the Ore Reserves.*	• In estimating coal resources, the following steps were used: - Independent review and interpretation of the source exploration data. - Review of seam correlation. - Identification of coal seam occurrence greater than 0.5 m thick for lignite thermal coal as presented at the Baoqing Coalfield. - Exclusion of barrier areas underlying protected surface structures (e.g., mine facilities, major highways, major streams, and populated areas that are not planned to be relocated). - Using database to create geologic model, apply pit shell and other boundaries - Using parameters such as hole spacing, minimum

Criteria	JORC Code explanation	Commentary
		recoverable seam thickness, OSD, recovery, etc. to calculate tonnages - Preparation of coal isopach maps within the identified resource areas. - Review of seam quality. • The Coal Resources reported are inclusive of the Coal Reserves. Coal Reserve estimation has only been undertaken for those portions of the Measured and Indicated Resources that satisfy the applicable Modifying Factors.
Site visits	• *Comment on any site visits undertaken by the Competent Person and the outcome of those visits.* • *If no site visits have been undertaken indicate why this is the case.*	• The Competent Person, Mr. Jisheng Han and BOYD Senior Geologist, Mr. Yongliang Xing visited Guoyuan Power in September 2025. During the site visit, the Competent Person collected source data, reviewed exploration history and records, discussed historic performance and current status as well as future plans of each subject mine and exploration area with corresponding technical staff and management personnel.
Study status	• *The type and level of study undertaken to enable Mineral Resources to be converted to Ore Reserves.* • *The Code requires that a study to at least Pre-Feasibility Study level has been undertaken to convert Mineral Resources to Ore Reserves. Such studies will have been carried out and will have determined a mine plan that is technically achievable and economically viable, and that material Modifying Factors have been considered.*	• A Preliminary Design Report for Chaoyang Open-pit was provided, which is the typical mine design report for open-pit coal mines in China, generally considered comparable to or higher than the Feasibility Study level. The mine plan and economics were carefully reviewed in detail and concluded as viable to support Coal Reserves estimate.
Cut-off parameters	• *The basis of the cut-off grade(s) or quality parameters applied.*	• Coal reserves estimation was limited to the Measured and Indicated Resource areas. The cut-off grades used: Ash content Ad: 40% Sulphur content St,d: 3%

Criteria	JORC Code explanation	Commentary
		Calorific Value Qnet,d: 15.7 MJ/kg
Mining factors or assumptions	• *The method and assumptions used as reported in the Pre-Feasibility or Feasibility Study to convert the Mineral Resource to an Ore Reserve (i.e. either by application of appropriate factors by optimisation or by preliminary or detailed design).*	• Preliminary Design Report for the mine was provided, which has the necessary mining design details for coal reserve estimation. The mining method selected for the open-pit mine was shovel-truck approach with semi-mobile crushing/bot transportation arrangement.
	• *The choice, nature and appropriateness of the selected mining method(s) and other mining parameters including associated design issues such as pre-strip, access, etc.*	• The coal seams in the Baoqing Coalfield feature shallow occurrences with generally simple geological settings. The shovel-truck mining method is widely used in open-pit coal mines in China with abundant successful experiences. The selection of mining method in the mine is considered appropriate.
	• *The assumptions made regarding geotechnical parameters (eg pit slopes, stope sizes, etc), grade control and pre-production drilling.*	• Geotechnical parameters are designed based on the geotechnical testing of rock and coal strata. Chaoyang Open-pit Mine has years of operating history. Major mining and geotechnical parameters are as follows:  Parameter / Unit / Mining / Stripping Bench Height: m / 8 / 8 Working Width: m / 12 / 12 Bench Face Angle: ° / 60 / 60 Safety Offset: m / 8 / 8 Road Width: m / 15 / 15 Safety Clearance: m / 5 / 5 Minimum Working Bench Width: m / 40 / 40
	• *The major assumptions made and Mineral Resource model used for pit and stope optimisation (if appropriate).*	• Not applicable

Criteria	JORC Code explanation	Commentary
	• *The mining dilution factors used.* • *The mining recovery factors used.* • *Any minimum mining widths used.* • *The manner in which Inferred Mineral Resources are utilised in mining studies and the sensitivity of the outcome to their inclusion.* • *The infrastructure requirements of the selected mining methods.*	• OSD of 3% was considered for all the seams during mining. • A 98% recovery factor was used for the open-pit mine. • Minimum mining working bench width used was 40 m for Chaoyang Open-pit. • In Coal Reserve estimation, Inferred Coal Resources were excluded. • Baoqing Coalfield is located in the eastern part of Heilongjiang Province, which is major coal-producing base in northeastern China. Infrastructure needed for open-pit mining operations are conveniently available such as power supply, transportation network, water supply, Telecommunication network, etc.
Metallurgical factors or assumptions	• *The metallurgical process proposed and the appropriateness of that process to the style of mineralisation.* • *Whether the metallurgical process is well-tested technology or novel in nature.* • *The nature, amount and representativeness of metallurgical test work undertaken, the nature of the metallurgical domaining applied and the corresponding metallurgical recovery factors applied.* • *Any assumptions or allowances made for deleterious elements.* • *The existence of any bulk sample or pilot scale test work and the degree to which such samples are considered representative of the orebody as a whole.* • *For minerals that are defined by a specification, has the ore reserve*	• Chaoyang Open-pit has crusher systems to produce coal at different sizes. The coal is used to supply the nearby power plant and local thermal market. The processing arrangements are considered appropriate and can satisfy the requirement of product coal quality by their customers. • The crushing and screening technologies are all widely adopted and have been well tested throughout the coal industry in China. • Test work undertaken for the Chaoyang Open-pit does not involve metallurgical testing. The crushing and screening process is relatively simple. Yield (recovery) factors applied to the Coal Reserve estimate are derived from the test work and available operational data at approximately 96%. • No deleterious elements • The subject open-pit mine has well-established coal processing history, thus no bulk sample or pilot scale test work is needed. • Calorific Value parameter and ash content in coal quality are the main

Criteria	JORC Code explanation	Commentary
	estimation been based on the appropriate mineralogy to meet the specifications?	focus for thermal coal. In the Coal Reserve estimation process, such parameters have been reviewed and demonstrated in the product coal quality.
Environmental	• *The status of studies of potential environmental impacts of the mining and processing operation. Details of waste rock characterisation and the consideration of potential sites, status of design options considered and, where applicable, the status of approvals for process residue storage and waste dumps should be reported.*	• The subject open-pit mine provided preliminary design report which covers dump site descriptions and environmental impact assessment report. The Baoqing Coalfield area is a regional coal-producing center, where approval process for waste dump site acquisition has been smooth, and no obstacle in obtaining future sites for waste storage was identified.
Infrastructure	• *The existence of appropriate infrastructure: availability of land for plant development, power, water, transportation (particularly for bulk commodities), labour, accommodation; or the ease with which the infrastructure can be provided, or accessed.*	• Baoqing Coalfield is located in the eastern part of Heilongjiang Province. Due to the well-developed coal industry and designated energy base status in northeastern China, infrastructure needed for open-pit mining operations are conveniently available such as power supply, transportation network, water supply, etc.
Costs	• *The derivation of, or assumptions made, regarding projected capital costs in the study.*	• Capital expenditure projections for the period from August 2025 to December 2029 were provided covering civil constructions, equipment purchases, etc. Sustaining capital at RMB5/t of coal producing capacity was assumed which is typical for large open-pit mines in China.
	• *The methodology used to estimate operating costs.*	• Operating cost projections for the period from August 2025 to December 2029 were provided by the mine based on historical performance and adjusted for certain changes such as stripping ratio. The competent person extended the projection period to thirty years.
	• *Allowances made for the content of deleterious elements.*	• No deleterious elements.
	• *The derivation of assumptions made of metal or commodity price(s), for the principal minerals and co- products.*	• The historical three-year average price (VAT inclusive) was used for our economic analysis of the mine.

Criteria	JORC Code explanation	Commentary
		Chaoyang Open-pit: RMB187.75/t
	• *The source of exchange rates used in the study.* • *Derivation of transportation charges.*	• Exchange rates: not applicable • Transportation charges are included in the operating costs and related to stripping ratio, which are adjusted accordingly in future operation projections.
	• *The basis for forecasting or source of treatment and refining charges, penalties for failure to meet specification, etc.*	• Processing cost projections are based on historical performance and included in overall mining operation costs. No case of failure to meet quality specifications was reported and penalties for such failure were not considered in forecasting.
	• *The allowances made for royalties payable, both Government and private.*	• The mine already paid the mining right fees in obtaining the mining rights. Such fees were amortized over operating years.
Revenue factors	• *The derivation of, or assumptions made regarding revenue factors including head grade, metal or commodity price(s) exchange rates, transportation and treatment charges, penalties, net smelter returns, etc.*	• Geological conditions over the projection period are consistent with recent experience; no material coal quality change.
	• *The derivation of assumptions made of metal or commodity price(s), for the principal metals, minerals and co-products.*	• The historical three-year average price (VAT inclusive) was used for our economic analysis of the mine. Chaoyang Open-pit: RMB187.75/t
Market assessment	• *The demand, supply and stock situation for the particular commodity, consumption trends and factors likely to affect supply and demand into the future.* • *A customer and competitor analysis along with the identification of likely market windows for the product.* • *Price and volume forecasts and the basis for these forecasts.* • *For industrial minerals the customer specification, testing and acceptance requirements prior to a supply contract.*	• Most of coal product from the subject open-pit mine will supply the nearby power plants and local market. The Baoqing Coalfield is one of the major coal producing areas in northeastern China. The coal products from the mine have consistent coal quality and are expected to continue their market share. • Coal prices have been slowly declining over the 2024-2025 period. The historical three-year average price was used for our economic analysis of the mine.
Economic	• *The inputs to the economic analysis to produce the net present value*	• The projection on output, operating costs, capital expenditures, tax

Criteria	JORC Code explanation	Commentary
	(NPV) in the study, the source and confidence of these economic inputs including estimated inflation, discount rate, etc.	rates, working capital, etc. are used to produce the NPV. The discount rate was derived from the study of peer group analysis, weighted average cost of capital, equity cost of capital and debt cost of capital. Based on the results of the above analysis, we estimate the nominal after-tax WACC rate (and the real after-tax WACC rate) to be 7.1%, as of 31 July 2025.
	• *NPV ranges and sensitivity to variations in the significant assumptions and inputs.*	NPV Under Various Sensitivity Cases (RMB Millions) Base Case Mine | 6.0% | 7.0% | (7.1%) | 8.0% | 9.0% | 10.0% Chaoyang Open-pit | 1,881 | 1,593 | 1,562 | 1,350 | 1,144 | 968
Social	• *The status of agreements with key stakeholders and matters leading to social licence to operate.*	• The mine recognizes its social responsibility and has maintained cordial relationship with local government and society. No social issues affecting or disrupting mine operations were reported.
Other	• *To the extent relevant, the impact of the following on the project and/or on the estimation and classification of the Ore Reserves:* • *Any identified material naturally occurring risks.* • *The status of material legal agreements and marketing arrangements.* • *The status of governmental agreements and approvals critical to the viability of the project, such as mineral tenement status, and government and statutory approvals. There must be reasonable grounds to expect that all necessary Government approvals will be received within the timeframes anticipated in the Pre-Feasibility or Feasibility study. Highlight and discuss the materiality of any unresolved matter that is dependent on a third party on which extraction of the reserve is contingent.*	• No such factors that will have impact on the project and/or on the estimation and classification of the Coal Reserves have been identified. It has been rare that under normal situations, operating coal mines in China would not receive government approvals to continue mine operations.
Classification	• *The basis for the classification of the Ore Reserves into varying confidence categories.*	• Once Coal Resources of various categories were estimated, Coal Reserves were estimated after applying the mine plan to the resource areas. Under normal conditions as in the subject open-pit mine cases,

Criteria	JORC Code explanation	Commentary
		the basis for the classification of the Coal Reserves into varying confidence categories is derived from the categories of Coal Resources, i.e., the Proven Reserves are from the Measured Resources, and the Probable Reserves are from the Indicated Resources.
	• *Whether the result appropriately reflects the Competent Person's view of the deposit.*	• They do.
	• *The proportion of Probable Ore Reserves that have been derived from Measured Mineral Resources (if any).*	• None.
Audits or reviews	• *The results of any audits or reviews of Ore Reserve estimates.*	• Internal technical reviews were undertaken by peer Competent Persons as part of its routine governance process. These reviews did not identify material issues affecting the Ore Reserve estimate.
Discussion of relative accuracy/ confidence	• *Where appropriate a statent of the relative accuracy and confidence level in the Ore Reserve estimate using an approach or procedure deemed appropriate by the Competent Person. For example, the application of statistical or geostatistical procedures to quantify the relative accuracy of the reserve within stated confidence limits, or, if such an approach is not deemed appropriate, a qualitative discussion of the factors which could affect the relative accuracy and confidence of the estimate.*	• The Ore Reserve estimate for the open-pit operations may exhibit minor variance due to equipment-dependent minimum mining height, coal-seam thickness undulation, and assumptions regarding OSD and extraction losses. These factors may introduce limited deviation, but the overall impact on reserve accuracy is expected to be small.
	• *The statement should specify whether it relates to global or local estimates, and, if local, state the relevant tonnages, which should be relevant to technical and economic evaluation. Documentation should include assumptions made and the procedures used.*	• The accuracy statement relates primarily to the global Coal Reserve estimate. Local accuracy may vary slightly in zones where seam thickness fluctuates or equipment recovery is constrained.
	• *Accuracy and confidence discussions should extend to specific discussions of any applied Modifying Factors that may have a material impact on Ore Reserve viability, or for which there are*	• Uncertainty is mainly associated with modifying factors such as mining equipment mining height, operational OSD assumptions, and recovery/loss parameters. These factors influence extraction thickness and mined tonnage but remain within normal ranges for

Criteria	JORC Code explanation	Commentary
	remaining areas of uncertainty at the current study stage. • *It is recognised that this may not be possible or appropriate in all circumstances. These statements of relative accuracy and confidence of the estimate should be compared with production data, where available.*	surface mining operations. • No reconciliation against long-term production is available. Confidence is therefore based on equipment capability, geological interpretation, and modifying factor assumptions.

APPENDIX B-3 JORC Code, 2012 Edition – Table 1 – Dananhu Coalfield

One mining right (Dananhu No.2 Open-pit Mine) and three exploration right areas (Dananhu West F1 South, Dananhu West No.1 East and Dananhu West No.3) held by China Energy Guoyuan Power Co., Ltd. are located in the Dananhu Coalfield.

Section 1 Sampling Techniques and Data

There was no coal drilling activities in Dananhu No.2 Open-pit since 2006. Coal drilling and sampling techniques employed are difficult to trace with precision. Though the geological reports were compiled according to Chinese standards, but lack detailed descriptions of the sampling/drilling techniques used during drilling. Through interviews with technical personnel from mines and exploration teams previously responsible for these projects, we learned that the exploration work in the target coalfield was exclusively conducted by state-owned, specialized coal exploration teams. Their exploration results were required to undergo review and approval by management authorities at various levels. Consequently, the drilling technologies adopted by these different teams uniformly complied with relevant nationally issued specifications. Although the specific historical drilling techniques are difficult to retrace, based on our review of the borehole data from each mine and its comparison with production data, we confirm that this data is generally consistent with the information exposed during mining operations. The exploration programs for Dananhu West F1 South, Dananhu West No.1 East and Dananhu West No.3 were completed in 2022, 2021 and 2018. The comments in this section are based on the practice of these drilling programs.

Criteria	JORC Code explanation	Commentary
Sampling techniques	• *Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.* • *Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.* • *Aspects of the determination of mineralisation that are Material to the Public Report.* • *In cases where 'industry standard' work has been done this would be relatively simple (eg 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases more explanation may be required,*	• All coal seam samples were collected in accordance with China's "Regulations on the Collection of Coal Samples for Coal Resource Exploration". All seams with a thickness greater than the minimum minable thickness (0.8 m for the coal seams in Dananhu Coalfield) are sampled by core logging. The sampling thickness for each interval is typically less than 3 meters. For multi-layer coal seams, each individual coal layer is to be sampled separately, while partings and carbonaceous mudstone are also sampled independently. When the thickness of a parting exceeds 0.10 meters, only 0.10 meters is collected. The samples are described layer by layer according to specified requirements. After sorting and cleaning, the length and weight recovery rates are calculated. Finally, the samples are packaged, boxed, and sent to the testing laboratory along with the sample submission forms and coal

Criteria	JORC Code explanation	Commentary
	such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.	sample summary sheets.
Drilling techniques	• *Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).*	• Core drilling was employed. Hard rock strata are drilled using PDC (Polycrystalline Diamond Compact) bits or surface-set diamond bits. Double split core barrels were used for coal. Coal Core diameter is 63.5 mm. All holes are vertical holes.
Drill sample recovery	• *Method of recording and assessing core and chip sample recoveries and results assessed.*	• Core recovery was determined by measuring the sample length and weight, which was later compared with the geophysical logs that were run after the hole was completed. According to Chinese Standard, the minimum acceptable linear and weight recovery requirements are 75% and 60%, respectively. Seam cores with lower recoveries were not analyzed per Chinese standards. While these minimum recoveries are lower than some international standards, actual core recoveries were generally higher.
	• *Measures taken to maximise sample recovery and ensure representative nature of the samples.*	• During rock stratum drilling, a single-tube core barrel is typically employed. When the drillers determine that the coal seam has been entered based on the returning drilling mud, they switch to a double-tube coal coring tool and appropriately adjust the drilling rate and pressure to ensure coal core recovery.
	• *Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.*	• There was no obvious relationship found between coal core recovery and coal quality.
Logging	• *Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.* • *Whether logging is qualitative or quantitative in nature. Core (or*	• All core samples were lithologically logged and described using standardized codes for rock type, grain size, color, and Rock Quality Designation (RQD). Core photos were taken before logging. Logging was initially recorded on paper forms at the site and then entered into a spreadsheet in the office afterwards.

Criteria	JORC Code explanation	Commentary
	costean, channel, etc) photography. • *The total length and percentage of the relevant intersections logged.*	• All drill holes also underwent geophysical logging to verify parameters such as the thickness of lithological strata in the coal-bearing sequence, coal seam structure, hole diameter, and deviation. Logs run include natural gamma, density, resistivity, calliper, and vertical deviation.
Sub-sampling techniques and sample preparation	• *If core, whether cut or sawn and whether quarter, half or all core taken.* • *If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.* • *For all sample types, the nature, quality and appropriateness of the sample preparation technique.* • *Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.* • *Measures taken to ensure that the sampling is representative of the in situ material collected, including for instance results for field duplicate/second-half sampling.* • *Whether sample sizes are appropriate to the grain size of the material being sampled.*	• Sub-sampling techniques are not applicable to coal. The entire core for all mineable coal seams was sampled and there was no subsampling.
Quality of assay data and laboratory tests	• *The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.* • *For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.* • *Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established.*	• Samples taken for analytical testing were delivered to a licensed laboratory where individual samples were weighed, air dried, crushed, and riffled according to Chinese standards. Subsamples of the riffled samples are taken for various analyses, with the remainder of the sample retained for future analyses. • The laboratories conduct quality control procedures, including sending duplicates to other labs and internal audits.

Criteria	JORC Code explanation	Commentary
Verification of sampling and assaying	• *The verification of significant intersections by either independent or alternative company personnel.*	• Due to large-scale occurrence and consistent coal quality, the verification of significant intersections is not applicable to coal projects.
	• *The use of twinned holes.*	• Twinned holes were generally not drilled.
	• *Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.*	• Data recoding field work, such as core logging, sampling records were handwritten and was scanned and transferred to electronic version after the field work was completed. Laboratories use electronic data entry system at each testing station.
	• *Discuss any adjustment to assay data.*	• No adjustments were made to the assay data.
Location of data points	• *Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.*	• The coordinate system is the 1954 Beijing Coordinate system, and the elevation system adopts the 1956 Yellow Sea elevation reference. Total stations are set up using nearby control points, and the position of the survey point in the plane is determined using the Topcon GTS-602 type GPS. The accuracy of the control points was evaluated using two sets of coordinate differences. The maximum difference between the two sets of coordinates was 0.17 meters, and the elevation difference was 0.12 meters.
	• *Specification of the grid system used.*	• The surveying instruments used for borehole positioning hold valid annual inspection certificates issued by the quality control department. These instruments demonstrate stable and reliable performance, and the measurement methods employed are correct and appropriate. A more than 10% random re-survey was conducted on 44 engineering boreholes in this area using the repeat observation method. The plane error of 98% of the drilling holes is within ±0.10 to ±0.15 meters. Elevation error: ≤ ±0.05 meters
	• *Quality and adequacy of topographic control.*	• The re-survey results confirm that the engineering survey outcomes in this area are accurate, and their precision meets the requirements of relevant regulations and specifications.

<table>

(100% owned by China Energy directly and/or via subsidiaries) Currently no available information on material social and environmental issues. • Related coal mine in the Dananhu Coalfield include Dananhu No.2 Open-pit; exploration right areas include Dananhu West F1 South, Dananhu West No.1 East and Dananhu West No.3. The mining right certificates and exploration right certificates for these are all valid. No known impediments to maintaining and renewing such mining and exploration certificates were identified.
Exploration done by other	• *Acknowledgment and appraisal of exploration by other parties.*	• In order to complete a resources/reserves estimates for the subjected mining/exploration rights located in the Dananhu Coalfield, the

Criteria	JORC Code explanation	Commentary
parties		following exploration reports were provided for our review: - Dananhu No.2 Open-pit: = Exploration Report for the Dananhu No.2 Mine, December 2006 = Special Hydrogeological Exploration for the Initial Mining Area of the Northern Open-pit Coal Mine, Dananhu Mining Area, May 2011 = 2016 Annual Reserves Verification Report = 2024 Annual Reserves Verification Report = Annual Reserves Reports and Ledgers of Mined Resource Reserves for the Period 2018 to 2024 and the First Half of 2025 - Dananhu West F1 South: = Exploration Report for the Dananhu West F1 South, 2022 - Dananhu West No.1 East: = Exploration Report for the Dananhu West No.1 East, July 2021 - Dananhu West No.3: = Exploration Report for the Dananhu West No.3, April 2018 • All programs include collection of data on coal occurrence and quality, hydrology, and geotechnical characteristics of strata, spontaneous combustion and explosiveness of coal, coalbed methane, etc. Based on the Chinese mining regulation, the results of exploration are presented in the form of an Exploration Report that must be approved by the government in order to apply for exploration and mining right certificates. Due to these detailed regulated procedures, drilling data, exploration reports, and mine design reports prepared in PRC are very consistent in content and presentation.

Criteria	JORC Code explanation	Commentary
		• It's the CP's opinion that the reports are reliable, and the drill hole data in the report was used for resources/reserves estimates.
Geology	• *Deposit type, geological setting and style of mineralisation.*	• The geologic settings of the Guoyuan Power properties in Dananhu Coalfield are judged to vary from simple to moderate. While the strata are flat-lying, complex structure containing multiple partings of the coal seams is a complicating factor for the seam in most of the mine areas. • Regional Geology: The Dananhu Coalfield is located within the Dananhu Depression, which forms part of the Turpan-Hami Intermontane Depression in the North Tianshan Geosynclinal Fold Belt. Its tectonic evolution was primarily controlled by the Yanshanian and Himalayan orogenies, resulting in an overall simple structural framework characterized by gently dipping strata. The target mines are distributed within the western section of the Dananhu area. • Structure: The overall strata attitude in the Dananhu Coalfield is gentle, with dips generally ranging from 3 to 13 degrees, and locally nearly horizontal. On the southern limb of the Nanhu Syncline, dips are typically 14° to 26°. The general structural trend is approximately east-west, dominated by EW-trending folds that control coal seam occurrence and zoning. A NE-trending normal fault, F1, with a 70° dip and a throw of 60–400 m, is developed within the area. No magmatic intrusions are observed.
Drill hole Information	• *A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:* ○ *easting and northing of the drill hole collar* ○ *elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar*	• Not applicable as no Exploration Results included in the report.

Criteria	JORC Code explanation	Commentary
	○ *dip and azimuth of the hole* ○ *down hole length and interception depth* ○ *hole length.* • *If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.*	
Data aggregation methods	• *In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.* • *Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.* • *The assumptions used for any reporting of metal equivalent values should be clearly stated.*	• Not applicable as no Exploration Results included in the report.
Relationship between mineralisation widths and intercept lengths	• *These relationships are particularly important in the reporting of Exploration Results.* • *If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.* • *If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known').*	• Not applicable as no Exploration Results included in the report.
Diagrams	• *Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.*	• Not applicable as no Exploration Results included in the report.
Balanced	• *Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades*	• Not applicable as no Exploration Results included in the report.

Criteria	JORC Code explanation	Commentary
reporting	*and/or widths should be practiced to avoid misleading reporting of Exploration Results.*	
Other substantive exploration data	• *Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.*	• Not applicable as no Exploration Results included in the report.
Further work	• *The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling).* • *Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.*	• There is currently no further exploration planned.

Section 3 Estimation and Reporting of Mineral Resources

(Criteria listed in section 1, and where relevant in section 2, also apply to this section.)

Criteria	JORC Code explanation	Commentary
Database integrity	• *Measures taken to ensure that data has not been corrupted by, for example, transcription or keying errors, between its initial collection and its use for Mineral Resource estimation purposes.* • *Data validation procedures used.*	• Collected coal mine geological reports, including drilling data, are available in both PDF and editable Word/Excel formats. The competent persons converted the data from the editable versions into the database for this resource estimate. The Dananhu No.2 Open-pit database was verified using Carlson SURVCAD before modelling. Databases of other mining/exploration rights were verified in the spreadsheet by checking the maximum, minimum, average, and duplicates, seam sequence checking. • The completed model was cross-checked and validated against the attached maps in the geological reports. • If any errors preventing further progress were identified during the

Criteria	JORC Code explanation	Commentary
		process, the cause was investigated based on error prompts, and comparisons were made with the PDF version data for verification. No data anomalies were detected during this estimate process.
Site visits	• *Comment on any site visits undertaken by the Competent Person and the outcome of those visits.* • *If no site visits have been undertaken indicate why this is the case.*	• The Competent Person, Mr. Jisheng Han and BOYD Senior Geologist, Mr. Yongliang Xing visited China Energy Guoyuan Power Co., Ltd. in September 2025. During the site visit, the Competent Person collected source data, reviewed exploration history and records, discussed historic performance and current status as well as future plans of each subject mine and exploration area with corresponding technical staff and management personnel.
Geological interpretation	• *Confidence in (or conversely, the uncertainty of) the geological interpretation of the mineral deposit.* • *Nature of the data used and of any assumptions made.* • *The effect, if any, of alternative interpretations on Mineral Resource estimation.* • *The use of geology in guiding and controlling Mineral Resource estimation.* • *The factors affecting continuity both of grade and geology.*	• Collected coal mine geological reports are available in both PDF and editable Word/Excel formats. The Competent Person converted the data from the editable versions into the database for this resource estimation. The database was verified using Carlson SURVCAD before modeling for the open-pit mines, and using excel tools for underground mining/exploration rights. The completed model or seam figure was cross-checked and validated against the attached maps in the geological reports. If any errors preventing further progress were identified during the process, the cause was investigated based on error prompts, and comparisons were made with the PDF version data for verification. No data anomalies were detected during this estimate process. • Due to the layered continuity and large-scale occurrence of coal seams, the geological interpretation reliability for coal seams in mature mining areas like the Dananhu Coalfield is high. The competent persons for this report, through the review of borehole logs and geophysical logs for coal quality, seam correlation, as well as subsequent model representation, consider the geological

Criteria	JORC Code explanation	Commentary
		interpretation of the subject mining right areas and/or exploration right areas to be highly reliable. • The geological interpretation utilizes the following assumptions: - Variations in coal seam thickness are linear and follow a regular pattern. - Sudden and significant changes in coal seam thickness over short distances typically indicate structural abnormalities, such as: = Syndepositional structures leading to seam splitting and thinning. = Post-depositional structures including erosion by paleochannels, and magmatic erosion. • Factors compromising coal seam continuity encompass: - Seam splitting and thinning. - Erosion by paleochannels/up-lifting to surface/ igneous intrusions. - Faulting. - outcrop.
Dimensions	• *The extent and variability of the Mineral Resource expressed as length (along strike or otherwise), plan width, and depth below surface to the upper and lower limits of the Mineral Resource.*	• The resources areas of the mining rights are delineated by the authorized mine boundary, with vertical mining elevation limits as follows: - Dananhu No.2 Open-pit: +727 m to -47 m • The resources areas of the exploration rights (i.e. Dananhu West F1 South, Dananhu West No.1 East and Dananhu West No.3) are only delineated by the authorized mine boundary

Criteria	JORC Code explanation	Commentary

Mine	Seam	Thickness (m) Coal	Parting	Seam	Distance from the Upper Seam (m)	Seam Depth Range (m)	Seam Dip (deg.)	Seam Occurrence
Dananhu	3	4.8	0.57	5.4	-	10 - 402	8 - Syncline	Moderate
No.2	5	3.4	0.04	3.4	15	38 - 410	8 - Syncline	Moderate
