REASONS FOR AND BENEFITS OF THE DISPOSAL AND USE OF PROCEEDS

As disclosed in the 2025 interim report of the Company, riding on the successive introductions of policies in the new energy industry, the Group will continue to leverage its extensive experience and market insights in the clean energy field, concentrate its efforts on achieving breakthroughs in its core business, facilitate the construction of approved projects, and strategically prioritize high-return, low-risk and high-quality energy projects, and actively fostering new business sectors such as high-end curtain walls, smart energy-saving buildings, and new materials to adapt to market changes and customer demands. The Group will routinely phase out or revitalize inefficient and non-performing assets, actively promoting the transformation of its asset structure toward high-quality and efficient assets.

The Disposal is in line with the Group's strategy to optimize its asset structure and improve efficiency in the operations. The segregation of low-quality assets and operations having a weak profitability and gloomy prospects would enable the Group to streamline its operations, which will help reduce systemic risks and promote the Group's overall sustainability. In addition, the Disposal will help optimize resources allocation, improve cost management and allow the Group to focus on implementing its core business strategies.

In view of the above, the Directors (including the independent non-executive Directors) consider that the terms of the Equity Transfer Agreement are on normal commercial terms, and the Disposal is fair and reasonable and in the interests of the Company and the Shareholders as a whole.

The proceeds from the Disposal will be used for general working capital of the Group.

Upon completion of the Disposal, the Disposal Company will cease to be a subsidiary of the Company, and the financial results of the Disposal Company will no longer be consolidated into the financial statements of the Group.
